Phase 2	1/3/2022			255	
Concrete Pour for Building 2	3/26/2019	5/6/2019		30	
Building Construction	5/18/2019	12/6/2019		145	
Architectual Coatings	11/1/2019	12/12/2019		30	
Paving/Landscape/Site Finishes	3/11/2019			50	

Notes:

1. Construction of Phase 1 and Phase 2 will occur concurrently within a one year period.
2. Modeling for each building is contained within the initial year for a worst case emissions scenario, regardless of when during the year construction may actually start.
3. Construction Activities are anticipated to occur 5 days per week (Monday thru Friday Only)
4. Assumes the same size buildings will be developed regardless of operational use.
5. Architectural Coating phase assumes 100 g/L of VOCs associated with the coatings for the building as well as parking lot painting.
6. All construction activities are modeled based on total size of building and acres of site. Therefore two buildings the size of the Intensive Ecommerce buildings were modeled.
7. While the High Cube Warehouse is anticipated to have 10,000 sqft of refrigerated area per building, the fact that it is refrigerated does not add to any of the construction emission calculations.
8. All construction information taken from Source 2 unless otherwise stated.

Construction Project Design Features

1. Utilize Tier 3 construction equipment - **incorporated through mitigation in CalEEMod**
2. Require construction equipment to turn off when not in use. - Not incorporated into the modeling.
3. Use locally produced and/or manufactured building materials for at least 10% of the construction materials used for the project. - Not Incorporated into the modeling.
4. Use "green" building materials, such as those materials that are resource efficient and recycled and manufactured in environmentally friendly way, for at least 10% of the project. - Not Incorporated into the modeling.
5. Reuse and recycle construction and demolition waste (including, but not limited to, soil, vegetation, concrete, lumber, metal, and cardboard). - Not Incorporated into the modeling.

Construction Phases and Equipment Summary

The following provides the equipment estimated by CalEEMod to be used during each phase of site construction. The equipment is based on the size of the site and studies completed by SCAQMD. The following abbreviations are used in the following sections.

= number of each type of equipment that would operate on a max day.

Hrs/day = estimated hours per day each piece of equipment would operate (This is not representative of the total length of the construction day)

HP = horse power of the equipment.

LF = Load factor for the equipment

Phase 1 Construction

Excavation/Mass Site Grading (Whole Site)

Phase Type Grading

Soil Import/Export

0 Cubic/yards of soil import

128,487 cubic/yards soil export (Onsite soil and pipeline along western export)

8566 trucks

<i>Equipment Type</i>	<i>#</i>	<i>Hrs/day</i>	<i>HP</i>	<i>LF</i>	
<i>Graders</i>	1		8 Default	Default	
<i>Rubber Tired Dozers</i>	1		8 Default	Default	
<i>Scrapers</i>	10		8 Default	Default	
<i>Water Truck</i>	1		4 Default	Default	Off Highway Truck

Road Construction

Phase Type Site Preparation

Soil Import/Export

0 Cubic/yards of soil import

0 cubic/yards soil export

0 trucks

<i>Equipment Type</i>	<i>#</i>	<i>Hrs/day</i>	<i>HP</i>	<i>LF</i>	
<i>Excavator</i>	2	8	Default	Default	
<i>Rubber Tired Dozer</i>	3	8	Default	Default

Construction Trips and Vehicle Miles Traveled²

Phase Name	Worker		Vendor		Haul	
	# Trips	VMt/Trip	# Trips	VMt/Trip	# Trucks	VMt/Trip
Phase 1 Construction						
Excavation/Mass Site Grading	60	20	20	20	8566	20
Road Construction	34	20	10	20	0	20
Concrete Pour for Building 1	50	20	4	20	3,744	20
Building Construction	60	20	20	20	0	0
Architectural Coatings	8	20	2	20	0	0
Paving/Landscape/Site Finishes	30	20	10	20	2,011	20
Phase 2 Construction						
Concrete Pour for Building 2	50	20	4	20	4,365	20
Building Construction	60	20	20	20	0	0
Architectual Coatings	8	20	2	20	0	0
Paving/Landscape/Site Finishes	30	20	10	20	3,293	20

Note:

- 1 All trips indicated in this table are one-way trips
- 2 Worker and Vendor trips are number of one-way trips per day. Haul trips are total number of round trips associated with the phase.
- 3 Concrete trucks assume approximately 10 cubic yards per foot, with approximately
10 cy per truck
274 sqft per 10 cubic yards
1,024,822 bldg sqft = Bldg 1
3,744 concrete trucks for Bldg 1
1,195,030 bldg sqft - Bldg 2
4,365 bldg sqft

Operational Assumptions

The project as proposed could have one of two operations, either a High Cube Warehouse or an Intensive Ecommerce facility. The type of operations would not change the size of the buildings but would change the number of employees and therefore would impact the utility consumption and VMT. Therefore, each of these scenarios are modeled separately. It is assumed that the High Cube Warehouse option would have 10,000 square feet of refrigerated space per building. Additional Assumptions for each of the scenarios is as follows.

Operational Related Project Design Features

Note that these project design features are not individually incorporated into the modeling unless otherwise indicated. As most do not have enough information to determine an exact reduction in emissions, it is assumed that the combined incorporation of these measures would, at a minimum, meet the existing requirements of the Title 24 standard that is in effect at the time the building is being constructed. Under the current construction schedule it would be the 2016 Title 24 efficiencies for the first building and the 2019 Title 24 efficiencies for the second building.

1. Buildings will be designed to provide CalGreen Standards with Leadership in Energy and Environmental Design (LEED) features for potential certification. This includes design considerations related to the building envelope, HVAC, lighting, and power systems. Additionally the architectural expression such as roofs and windows in the buildings will relate to conserving energy.
2. Install efficient lighting and lighting control systems. Solar or light-emitting diodes (LEDs) will be installed for outdoor lighting. The site and buildings will be designed to take advantage of daylight, such that the use of daylight is an integral part of the lighting systems in buildings. Lighting will incorporate motion sensors that turn them off when not in use.
3. Use trees and landscaping on west and south exterior building walls to reduce energy use.
4. For future office, install energy efficient heating and cooling systems, appliances and equipment, and control systems that are Energy Star rated.
5. For future office, refrigerants and HVAC equipment will be selected to minimize or eliminate the emission of compounds that contribute to ozone depletion and global warming. Ventilation and HVAC systems will be designed to meet or exceed the minimum outdoor air ventilation rates described in the American Society of Heating Refrigeration, and Air Cooling engineers (ASHREA) standards and/or per California Title 24 requirements.
6. For future office, implement design features to increase the efficiency of the building envelope (i.e., the barrier between conditioned and unconditioned spaces). This includes installation of insulation to minimize heat transfer and thermal bridging and to limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.
7. Incorporate Energy Star rated windows, space heating and cooling equipment, light fixtures,, appliances, or other applicable electrical equipment.
8. Install solar ready infrastructure so that solar panels could be included over any future parking locations internal to the project.
9. Design buildings to have "solar ready" roofs that will structurally accommodate later installation of rooftop solar panels. Building operators providing rooftop solar panels will submit plans for panels prior to occupancy.

10. Surface parking lots will be well landscaped to reduce heat island effect. Parking lot landscaping will be planted with 15- gallon trees, one per every four parking stalls. The trees may be clustered, but a minimum of one cluster will be provided for each 100 feet of parking row. Trees will be selected and placed to provide canopy and shade
11. Install water-efficient irrigation systems and devices, such as soil moisture based irrigation controls and sensors for landscaping according to the California Department of Water Resources model Efficient Landscape Ordinance.
12. Install landscape irrigation infrastructure along the property frontage to deliver and use reclaimed water, should reclaimed water supplies become available through the City.
13. Design buildings to be water-efficient. Install water-efficient fixtures and appliances (e.g., EPA WaterSense labeled products).
14. Restrict water methods (e.g., prohibit systems that apply water to non-vegetated surfaces) and control runoff.
15. Restrict the use of water for cleaning outdoor surfaces and vehicles.
16. Implement low-impact development practices that maintain the existing hydrologic character of the site to manage storm water and protect the environment. The project will retain storm water runoff on-site and construct basins to hold and filter water.
17. Implement a comprehensive water conservation strategy through methods that are appropriate for the project and location.
18. Provide education about water conservation and available programs and incentives to the building operators to distribute to employees.
19. Provide interior and exterior storage areas for recyclables and green waste and keep adequate recycling containers located in public areas.
20. The property operator will provide readily available information provided by the City for employee education about reducing waste and available recycling services.
21. Limit idling time for commercial vehicles to no more than five minutes, including delivery and construction vehicles, per ARB requirements.
22. Provide electric vehicle charging facilities to encourage the use of low or zero-emission vehicles.
23. Provide adequate bicycle parking near building entrances to promote cyclist safety, security, and convenience.
24. Provide facilities that encourage bicycle commuting (e.g., locked bicycle storage or covered or indoor bicycle parking).
25. Electrical outlets will be provided in loading dock areas to provide power for trucks when refrigeration is needed. This allows trucks with refrigerated cargo to keep their cargo cool without using their engines, minimizing idling time to reduce air emissions and use of fuel onsite.

Operational Assumptions - High Cube Warehouse

Land Use	Building SQFT	Building KFS	(seat/ room/ space)	Acres	CalEEMod Land Use Type
High Cube Warehouse					
Bldg 1 Industrial	20,000	20.00	-	84.38	Refrigerated Warehouse No Rail
Bldg 1 Industrial	2,199,852	2,199.85	-		Non-Refrig. Warehouse No Rail
Bldg 1 parking lot	-	-	-	58.08	parking lot
Roadways/utilities	-	-	-	3.70	other asphalt
				146.16	Total
Intensive Ecommerce					
bldg 1 industrial	2,219,852	2,219.85	-	84.38	Non-Refrig. Warehouse No Rail
bldg 1 parking lot	-	-	-	58.08	parking lot
Roadways/utilities				3.70	other asphalt
Number of employees:					
					acres
High Cube Warehouse	1,563			Vanburen	0.5
Intensive Ecommerce	3,171			Western Way	3
				Utilities	0.2

Note: Total building is anticipated to be 2,026,101 square feet however to maintain consistency with the original two building scenario, the modeled square footage is the total of the two buildings.

Construction

Construction Schedule

Phases / Activity	Modeled Schedule		
	Start (month/date/ year)	Finish (month/date/ year)	Days
Phase 1	1/1/2019	5/1/2020	349
Road Construction/Utilities	1/1/2019		30
Excavation/Mass Grading	1/1/2019		54
Concrete Pour for Building	1/1/2019		45
Building Construction	1/1/2019		262
Architectural Coatings	1/1/2019		44
Paving/Landscape/Site Finishes	1/1/2019		75

Notes:

1. Construction Activities are anticipated to occur 5 days per week (Monday thru Friday Only)
2. Assumes the same size buildings will be developed regardless of operational use.
3. Architectural Coating phase assumes 100 g/L of VOCs associated with the coatings for the building as well as parking lot painting.
4. While the High Cube Warehouse is anticipated to have 20,000 sqft of refrigerated area per building, the fact that it is refrigerated does not add to any of the construction emission calculations.
5. See Full Schedule for actual schedule. Modeled start dates adjusted for each phase for most conservative equipment emissions.

Construction Project Design Features

1. Utilize Tier 3 construction equipment - incorporated through the mitigation tab in CalEEMod
2. Require construction equipment to turn off when not in use. - Not incorporated into the modeling.
3. Use locally produced and/or manufactured building materials for at least 10% of the construction materials used for the project. - Not Incorporated into the modeling.
4. Use "green" building materials, such as those materials that are resource efficient and recycled and manufactured in environmentally friendly way, for at least 10% of the project. - Not Incorporated into the modeling.
5. Reuse and recycle construction and demolition waste (including, but not limited to, soil, vegetation, concrete, lumber, metal, and cardboard). - Not Incorporated into the modeling.

Construction Phases and Equipment Summary

The following provides the equipment estimated by CalEEMod to be used during each phase of site construction. The equipment is based on the size of the site and studies completed by SCAQMD. The following abbreviations are used in the following sections.

= number of each type of equipment that would operate on a max day.

Hrs/day = estimated hours per day each piece of equipment would operate (This is not representative of the total length of the construction day)

HP = horse power of the equipment.

LF = Load factor for the equipment

Phase 1 Construction

Road Construction/Utilities (Whole Site)

Phase Type Grading

Soil Import/Export

0 Cubic/yards of soil import

0 cubic/yards soil export (Onsite soil and pipeline along western export)

0 trucks

<u>Equipment Type</u>	<u>#</u>	<u>Hrs/day</u>	<u>HP</u>	<u>LF</u>	
Excavator	2	8	Default	Default	
Rubber Tired Dozer	3	8	Default	Default	
Tractors/Loaders/Backhoes	3	8	Default	Default	
Trenchers	2	8	Default	Default	
Water Truck	1	4	Default	Default	Off Highway Truck

Excavation/Mass Grading

Phase Type Site Preparation

Soil Import/Export

0 Cubic/yards of soil import

220,000 cubic/yards soil export

14,667 trucks

<u>Equipment Type</u>	<u>#</u>	<u>Hrs/day</u>	<u>HP</u>	<u>LF</u>	
Graders	1	8	Default	Default	
Rubber Tired Dozers	1	8	Default	Default	
Scrapers	10	8	Default	Default	
Water Truck	1	4	Default	Default	Off Highway Truck

Concrete Pour for Building

Phase Type Building Construction

<u>Equipment Type</u>	<u>#</u>	<u>Hrs/day</u>	<u>HP</u>	<u>LF</u>	
Forklift	1	18	Default	Default	
Generator Set	8	20	Default	Default	
Water Truck	1	8	Default	Default	Off Highway Truck
Boom Pump	1	24	Default	Default	Off Highway Truck
Rollers	1	20	Default	Default	
Tractors/Loaders/Backhoes	1	20	Default	Default	
Laser Screed ^a	2	24	65	0.31	Other Const Equip
Ride on Finisher ^a	8	24	31	0.45	Other Const Equip
Light Tower	Assumes they are powered from the generators				
Soft Cut Machine ^a	5	24	27	0.43	Other Const Equip

This is a continuous pour scenario and assumes that all days of the concrete pour would occur 24 hours per day.

Building Construction - All But crain operation which is only 14 days of the total

Phase Type Building Construction

<u>Equipment Type</u>	<u>#</u>	<u>Hrs/day</u>	<u>HP</u>	<u>LF</u>
Crane	1	8	Default	Default
Forklift	3	8	Default	Default
Generator Set	3	8	Default	Default
Tractors/Loaders/Backhoes	3	8	Default	Default
welder	3	8	Default	Default

*Note the crane will only operate for 24 days

Architectural Coatings

Phase Type Architectural Coating

<u>Equipment Type</u>	<u>#</u>	<u>Hrs/day</u>	<u>HP</u>	<u>LF</u>
Air Compressors	3	8	Default	Default
				Revised
				Interior Exterior
				7,080 404,544

*Note: Inside area for warehouse coating is the same as for office buildings which his not accurate. Indoor Architectural coating area for warehouses is significantly less than that of an office building. Therefore project specific

values are used.

Paving/Landscape/Site Finishes

Phase Type Paving

58.08 acres to be paved

<u>Equipment Type</u>	<u>#</u>	<u>Hrs/day</u>	<u>HP</u>	<u>LF</u>

Scrapers	1	8	Default	Default	
Tractors/loaders/backhoes	3	8	Default	Default	
Blade	1	8	Default	Default	Skid Steer

Construction Trips and Vehicle Miles Traveled²

Phase Name	Worker		Vendor		Haul	
	# Trips	VMt/Trip	# Trips	VMt/Trip	# Trucks	VMt/Trip
<i>Phase 1 Construction</i>						
Road Construction/Utilities	30	20	10	20	0	20
Excavation/Mass Grading	60	20	20	20	14,667	20
Concrete Pour for Building	75	20	4	20	7,672	20
Building Construction	120	20	20	20		0
Architectural Coatings	20	20	2	20		0
Paving/Landscape/Site Finishes	30	20	10	20	3,419	20

Note:

- 1 All trips indicated in this table are one-way trips
- 2 Worker and Vendor trips are number of one-way trips per day. Haul trips are total number of round trips associated with the phase.

1. Assumptions

c. Operational Assumptions

Operational Assumptions

The project as proposed could have one of two operations, either a High Cube Warehouse or an Intensive Ecommerce facility. The type of operations would not change the size of the buildings but would change the number of employees and therefore would impact the utility consumption and VMT. Therefore, each of these scenarios are modeled separately. It is assumed that the High Cube Warehouse option would have 10,000 square feet of refrigerated space per building. Additional Assumptions for each of the scenarios is as follows.

Operational Related Project Design Features

Note that these project design features are not individually incorporated into the modeling unless otherwise indicated. As most do not have enough information to determine an exact reduction in emissions, it is assumed that the combined incorporation of these measures would, at a minimum, meet the existing requirements of the Title 24 standard that is in effect at the time the building is being constructed. Under the current construction schedule it would be the 2016 Title 24 efficiencies for the first building and the 2019 Title 24 efficiencies for the second building.

1. Buildings will be designed to provide CalGreen Standards with Leadership in Energy and Environmental Design (LEED) features for potential certification. This includes design considerations related to the building envelope, HVAC, lighting, and power systems. Additionally the architectural expression such as roofs and windows in the buildings will relate to conserving energy.
2. Install efficient lighting and lighting control systems. Solar or light-emitting diodes (LEDs) will be installed for outdoor lighting. The site and buildings will be designed to take advantage of daylight, such that the use of daylight is an integral part of the lighting systems in buildings. Lighting will incorporate motion sensors that turn them off when not in use.
3. Use trees and landscaping on west and south exterior building walls to reduce energy use.
4. For future office, install energy efficient heating and cooling systems, appliances and equipment, and control systems that are Energy Star rated.
5. For future office, refrigerants and HVAC equipment will be selected to minimize or eliminate the emission of compounds that contribute to ozone depletion and global warming. Ventilation and HVAC systems will be designed to meet or exceed the minimum outdoor air ventilation rates described in the American Society of Heating Refrigeration, and Air Cooling engineers (ASHREA) standards and/or per California Title 24 requirements.
6. For future office, implement design features to increase the efficiency of the building envelope (i.e., the barrier between conditioned and unconditioned spaces). This includes installation of insulation to minimize heat transfer and thermal bridging and to limit air leakage through the structure or within the heating and cooling distribution system to minimize energy consumption.
7. Incorporate Energy Star rated windows, space heating and cooling equipment, light fixtures,, appliances, or other applicable electrical equipment.
8. Install solar ready infrastructure so that solar panels could be included over any future parking locations internal to the project.
9. Design buildings to have "solar ready" roofs that will structurally accommodate later installation of rooftop solar panels. Building operators providing rooftop solar panels will submit plans for panels prior to occupancy.

10. Surface parking lots will be well landscaped to reduce heat island effect. Parking lot landscaping will be planted with 15- gallon trees, one per every four parking stalls. The trees may be clustered, but a minimum of one cluster will be provided for each 100 feet of parking row. Trees will be selected and placed to provide canopy and shade
11. Install water-efficient irrigation systems and devices, such as soil moisture based irrigation controls and sensors for landscaping according to the California Department of Water Resources model Efficient Landscape Ordinance.
12. Install landscape irrigation infrastructure along the property frontage to deliver and use reclaimed water, should reclaimed water supplies become available through the City.
13. Design buildings to be water-efficient. Install water-efficient fixtures and appliances (e.g., EPA WaterSense labeled products).
14. Restrict water methods (e.g., prohibit systems that apply water to non-vegetated surfaces) and control runoff.
15. Restrict the use of water for cleaning outdoor surfaces and vehicles.
16. Implement low-impact development practices that maintain the existing hydrologic character of the site to manage storm water and protect the environment. The project will retain storm water runoff on-site and construct basins to hold and filter water.
17. Implement a comprehensive water conservation strategy through methods that are appropriate for the project and location.
18. Provide education about water conservation and available programs and incentives to the building operators to distribute to employees.
19. Provide interior and exterior storage areas for recyclables and green waste and keep adequate recycling containers located in public areas.
20. The property operator will provide readily available information provided by the City for employee education about reducing waste and available recycling services.
21. Limit idling time for commercial vehicles to no more than five minutes, including delivery and construction vehicles, per ARB requirements.
22. Provide electric vehicle charging facilities to encourage the use of low or zero-emission vehicles.
23. Provide adequate bicycle parking near building entrances to promote cyclist safety, security, and convenience.
24. Provide facilities that encourage bicycle commuting (e.g., locked bicycle storage or covered or indoor bicycle parking).
25. Electrical outlets will be provided in loading dock areas to provide power for trucks when refrigeration is needed. This allows trucks with refrigerated cargo to keep their cargo cool without using their engines, minimizing idling time to reduce air emissions and use of fuel onsite.

Operational Assumptions - High Cube Warehouse

		500 meter threshold used					
	Site Size	126.62 site acreage					
		5 LST Acre comparison					

The screening criteria for NO_x were developed based on the 1-hour NO₂ CAAQS of 0.18 ppm. However, since the publication of the SCAQMD's guidance, the USEPA has promulgated a 1-hour NO₂ NAAQS of 0.100 ppm based on a 98th percentile value, which is more stringent than the CAAQS. In order to determine if Project emissions would result in an exceedance of the 1 hour NO₂ NAAQS, an approximated LST was estimated to evaluate the federal 1-hour NO₂ standard, as the SCAQMD significance threshold has not been updated to reflect this standard. Calculated by scaling the NO₂ LST for by the ratio of 1-hour NO₂ standards (federal/state)(i.e., 780 lb/day * (0.10/0.18) = 433 lb/day).

Mitigation:

- 1 Increase length of Architectural Phase to 40days**
- 2 Use Tier 4 Final Equipment - with the exception of speciality equipment such as laser screed, ride-on finisher, and soft cut machine**
- 3 On road haul trucks are 2010 or newer**

Unmitigated Total	91.91
Non - AC Emissions	4.62
AC Emissions	87.29
% reduction	0.25
Mit AC Emissions	65.46
Mit Max Total	70.09

Mitigation: Either: 10 g/l Architectural Coating or;

- 1 Increase Architectural Coating Phase to 40 days per building.
- 2 Include 2010 Model Year Trucks or newer
- 3 **Use Tier 4 Final Equipment - with the exception of specialty equipment such as laser screed, ride-on finisher, and soft cut machine**

Maximum Daily Mitigated Construction Emissions

LST Analysis

	ROG	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}	
Max 2019		186	425		15	11	
5		433	22,530		207	105	
Significant		No	No		No	No	
					50	26	Operational

500 meter threshold used

5 LST Acre comparison

The screening criteria for NO_x were developed based on the 1-hour NO₂ CAAQS of 0.18 ppm. However, since the publication of the SCAQMD's guidance, the USEPA has promulgated a 1-hour NO₂ NAAQS of 0.100 ppm based on a 98th percentile value, which is more stringent than the CAAQS. In order to determine if Project emissions would result in an exceedance of the 1 hour NO₂ NAAQS, an approximated LST was estimated to evaluate the federal 1-hour NO₂ standard, as the SCAQMD significance threshold has not been updated to reflect this standard. Calculated by scaling the NO₂ LST for by the ratio of 1-hour NO₂ standards (federal/state)(i.e., 780 lb/day * (0.10/0.18) =433 lb/day).

1 1. Reduction of Emissions from Mobile Sources

Use 2015 or newer truck fleet for Buliding 1 and 2018 or newer truck fleet for Building 2

Maximum Daily Unmitigated Construction Emissions - One Building Option

LST Analysis

	ROG	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}	
Max 2019		152	170		19	12	
5		433	22,530		207	105	
Significant		No	No		No	No	
					50	26	Operational
	SRA	24					
	Receptor Distance	1500 meters from Site					
		500 meter threshold used					
	Site Size	146.16 site acreage					
		5 LST Acre comparison					

The screening criteria for NO_x were developed based on the 1-hour NO₂ CAAQS of 0.18 ppm. However, since the publication of the SCAQMD's guidance, the USEPA has promulgated a 1-hour NO₂ NAAQS of 0.100 ppm based on a 98th percentile value, which is more stringent than the CAAQS. In order to determine if Project emissions would result in an exceedance of the 1 hour NO₂ NAAQS, an approximated LST was estimated to evaluate the federal 1-hour NO₂ standard, as the SCAQMD significance threshold has not been updated to reflect this standard. Calculated by scaling the NO₂ LST for by the ratio of 1-hour NO₂ standards (federal/state)(i.e., 780 lb/day * (0.10/0.18) =433 lb/day).

Mitigation:

- 1 Increase length of Architectural Phase to 40days**
- 2 Use Tier 4 Final Equipment - with the exception of speciality equipment such as laser screed, ride-on finisher, and soft cut machine**
- 3 On road haul trucks are 2010 or newer**

Receptor Distance 1500 meters from Site

500 meter threshold used

Site Size 146.16 site acreage

5 LST Acre comparison

The screening criteria for NO_x were developed based on the 1-hour NO₂ CAAQS of 0.18 ppm. However, since the publication of the SCAQMD's guidance, the USEPA has promulgated a 1-hour NO₂ NAAQS of 0.100 ppm based on a 98th percentile value, which is more stringent than the CAAQS. In order to determine if Project emissions would result in an exceedance of the 1 hour NO₂ NAAQS, an approximated LST was estimated to evaluate the federal 1-hour NO₂ standard, as the SCAQMD significance threshold has not been updated to reflect this standard. Calculated by scaling the NO₂ LST for by the ratio of 1-hour NO₂ standards (federal/state)(i.e., 780 lb/day * (0.10/0.18) =433 lb/day).

Threshold		No	No		No	No

Operational: SRA 24, 500 meter, 5-acre

Emissions represent onsite emissions only. Energy and Area source emissions are strictly onsite emissions. However, travel around the site would be approximately 3 miles or less. On average onsite mobile source emissions are 11 Percent of total trips. Therefore, mobile source emissions associated with the LST screening level are restricted to those emissions associated with 3 miles of travel per trip.

0.11 % of trips

The screening criteria for NO_x were developed based on the 1-hour NO₂ CAAQS of 0.18 ppm. However, since the publication of the SCAQMD's guidance, the USEPA has promulgated a 1-hour NO₂ NAAQS of 0.100 ppm based on a 98th percentile value, which is more stringent than the CAAQS. In order to determine if Project emissions would result in an exceedance of the 1 hour NO₂ NAAQS, an approximated LST was estimated to evaluate the federal 1-hour NO₂ standard, as the SCAQMD significance threshold has not been updated to reflect this standard. Calculated by scaling the NO₂ LST for by the ratio of 1-hour NO₂ standards (federal/state)(i.e., 780 lb/day * (0.10/0.18) =433 lb/day).

12/21/2018

Note: Consumer products are grossly overstated for industrial land uses. An average per square foot emission factor for all land use types is applied in CalEEMod. However VOC emissions from industrial land uses is roughly 2 percent of total VOC emissions statewide. Therefore, in order to more accurately approximate the VOC emissions from an industrial project, only 20 percent of the consumer product emissions reported in CalEEMod are included in the emissions estimates. This is still estimated to be a highly conservative estimate of VOC emissions.

0.2 % of CalEEMod Output Associated with Industrial Land Uses

Mitigation:

1 1. Reduction of Emissions from Mobile Sources

Use 2015 or newer truck fleet for Building 1 and 2018 or newer truck fleet for Building 2

Mobile	15	9		3	1
Total	15	9		3	1
Threshold	433	22,530		50	26
Exceed Threshold	No	No		No	No

Operational: SRA 24, 500 meter, 5-acre

Emissions represent onsite emissions only. Energy and Area source emissions are strictly onsite emissions. However, travel around the site would be approximately 3 miles or less. On average onsite mobile source emissions are 11 Percent of total trips. Therefore, mobile source emissions associated with the LST screening level are restricted to those emissions associated with 3 miles of travel per trip.

0.11 % of trips

The screening criteria for NO_x were developed based on the 1-hour NO₂ CAAQS of 0.18 ppm. However, since the publication of the SCAQMD's guidance, the USEPA has promulgated a 1-hour NO₂ NAAQS of 0.100 ppm based on a 98th percentile value, which is more stringent than the CAAQS. In order to determine if Project emissions would result in an exceedance of the 1 hour NO₂ NAAQS, an approximated LST was estimated to evaluate the federal 1-hour NO₂ standard, as the SCAQMD significance threshold has not been updated to reflect this standard. Calculated by scaling the NO₂ LST for by the ratio of 1-hour NO₂ standards (federal/state)(i.e., 780 lb/day * (0.10/0.18) =433 lb/day).

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

NOTE: Due to Project Design Features to use Tier 3 equipment the "Mitigated" CalEEMod scenario represents the Unmitigated Project Emissions. Offsite Emissions modeled outside of CalEEMod.

3.2 Road Construction/Utilities - 2019

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

NOTE: Due to Project Design Features to use Tier 3 equipment the "Mitigated" CalEEMod scenario represents the Unmitigated Project Emissions. Offsite Emissions modeled outside of CalEEMod.

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

NOTE: Modeling represents only the Mitigated scenario. Unmitigated Emissions Modeled Separately. Offsite Emissions modeled outside of CalEEMod.

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

NOTE: Due to Project Design Features to use Tier 3 equipment the "Mitigated" CalEEMod scenario represents the Unmitigated Project Emissions. Offsite Emissions modeled outside of CalEEMod.

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

NOTE: Due to Project Design Features to use Tier 3 equipment the "Mitigated" CalEEMod scenario represents the Unmitigated Project Emissions. Offsite Emissions modeled outside of CalEEMod.

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

NOTE: Modeling represents only the Mitigated scenario. Unmitigated Emissions Modeled Separately. Offsite Emissions modeled outside of CalEEMod.

**Veterans Industrail Park
Road Dust**

Veterans Industrail Park

Road Dust

Paved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,P} = (k (sL)^{0.91} \times (W)^{1.02})$

Where:

$EF_{Dust,P}$ = Paved Road Dust Emission Factor (having the same units as k)
 k = particle size multiplier
 sL = road surface silt loading (g/m^2)
 W = average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	0.9979	0.2449
sL	0.1	0.1
W	2.4	2.4
$EF_{Dust,P}$	3.00E-01	7.36E-02

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k (s / 12)^1 \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)
 k = particle size multiplier
 s = surface material silt content (%)
 Sp = mean vehicle speed (mph)
 M = surface material moisture content (%)
 C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

**Veterans Industrail Park - One Building Scenario
Road Dust**

Veterans Industrail Park - One Building Scenario

Road Dust

Paved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,P} = (k (sL)^{0.91} \times (W)^{1.02})$

Where:

$EF_{Dust,P}$ = Paved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

sL = road surface silt loading (g/m^2)

W = average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	0.9979	0.2449
sL	0.1	0.1
W	2.4	2.4
$EF_{Dust,P}$	3.00E-01	7.36E-02

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k (s / 12)^1 \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01
