1. Introduction

1.1 OVERVIEW

The Los Angeles Unified School District (LAUSD or District) is proposing a comprehensive modernization of Burroughs Middle School (Burroughs MS), located at 600 South McCadden Place, Los Angeles, California 90005 (Project or proposed Project) (COLIN ID: 10366806). Burroughs MS is within Local District West. The proposed Project is designed to address the most critical physical concerns of the buildings and grounds at the campus while upgrading, renovating, modernizing, and reconfiguring the campus to provide facilities that are safe, secure, and better aligned with the current instructional program. A detailed description of the proposed Project's components and design is provided below. The proposed Project is required to undergo an environmental review pursuant to the California Environmental Quality Act (CEQA). This Initial Study provides a preliminary evaluation of the potential environmental consequences associated with the Project.

1.2 BACKGROUND

On July 31, 2008, the LAUSD Board of Education (BOE) adopted a Resolution Ordering an Election and Establishing Specifications of the Election Order for the purpose of placing Measure Q, a $7 billion bond measure, on the November election ballot to fund the renovation, modernization, construction, and expansion of school facilities. On November 4, 2008, the bond passed. The nationwide economic downturn in 2009 resulted in a decline in assessed valuation of real property, which restricted the District's ability to issue Measure Q bonds and the remaining unissued Measures R and Y funds. Once assessed valuation improved, the BOE could authorize the issuance of bond funds.[1]

On December 10, 2013, the District refined their School Upgrade Program (SUP) to reflect the intent and objectives of Measure Q as well as the updated needs of District school facilities and educational goals.[2] Between July 2013 and November 2015, the SUP was analyzed under CEQA criteria in a Program Environmental Impact Report (EIR). On November 10, 2015, the BOE certified the Final SUP Program EIR.[3]

On March 10, 2015, LAUSD's Board approved pre-design and due diligence activities necessary to develop a Project definition for a Comprehensive Modernization Project at Burroughs MS.[4] The Project is intended to provide facilities that are safe, secure, and aligned with the instructional program. On February 9, 2016, the

1 LAUSD Board of Education Report. December 10, 2013. Report Number 143 – 13/14. Subject: SUP.
2 LAUSD Board of Education Report. December 10, 2013. Report Number 143 – 13/14. Subject: SUP.
3 LAUSD Regular Meeting Stamped Order Of Business. 333 South Beaudry Avenue, Board Room, 1 p.m., Tuesday, November 10, 2015 (Board of Education Report No. 159 – 15/16).
4 LAUSD Board of Education Report. March 10, 2015. Report Number 373 – 14/15. Subject: Identification of 11 School Sites for the Development of Comprehensive Modernization Projects.

Board approved the Project definition for Burroughs MS (Project Site or Campus).[5] This approval authorizes LAUSD's Facilities Services Division to proceed with Project design and the completion of related technical and regulatory processes including those required under the CEQA.

1.3 PROJECT NEED

The proposed Project has been developed under the LAUSD's SUP to improve student health, safety and education through the modernization of school facilities. Burroughs MS was identified as one of 11 schools in the District most in need of an upgrade due to the physical condition of the facilities. Based on an assessment of the following conditions, these 11 proposed school sites were identified as having a multitude of critical physical conditions that may pose a health and safety risk or negatively impact a school's ability to deliver the instructional program and/or operate:[6]

- The physical condition of a school's buildings and grounds/outdoor areas identified by the 10-year Facilities Condition Index (FCI), a comparative indicator of the relative condition of a school's facilities in relation to the current replacement value. Where applicable, the FCI score is adjusted to reflect projects underway and the improved conditions that will be provided.
- The seismic risk factor identified using the Federal Emergency Management Agency's (FEMA) Hazus-MH model for determining the probability of failure based on the predicted earthquake magnitude generated by specific faults, year of construction, type of construction, number of stories, and code and construction quality at the time of construction.
- Size of food service facility, multi-purpose room/auditorium, and library determined by an assessment of the difference between the size of the core facility and the design standard for a new facility.
- Size of play space determined by an assessment of the difference between the size of a school's play area and the size recommended under the Rodriguez Consent Decree.
- Percentage of classrooms in portable buildings calculated based on the number of classrooms in portable buildings versus the number of classrooms in permanent buildings.
- Adequacy of controlled public access point based on an assessment of whether a campus has a secured single point of entry, an intercom/camera system that controls visitor access to the school site, or neither.
- Site density determined by an analysis of the amount of square footage per student at a school site.

Some of the buildings on the Project site, including the Administrative/Auditorium Building (Bldg. 1), Boy's Gymnasium (Bldg. 2), Classroom Building (Bldg. 7), and Shop Building (Bldg. 9), are on the Assembly Bill (AB 300) (Corbett) Seismic Safety Inventory of California Public Schools, Department of General Services Building List. The AB 300 list identifies those school buildings that are of concrete tilt-up construction and those with non-wood frame walls that do not meet the minimum requirements of the 1976 Uniform Building Code (UBC). AB 300 identified 269 of the LAUSD's nearly 13,000 buildings for seismic evaluation. In 2006, upon further

[5] LAUSD Board of Education Report. February 9, 2016. Report Number 246-15/16. Subject: Amendment to the Facilities Services Division Strategic Execution Plan to Approve Project Definitions for Three Comprehensive Modernization Projects.
[6] Los Angeles Unified School District (LAUSD). 2015a. *Board of Education Report 373-14/15* . March.

analysis by LAUSD staff, including site visits and field investigations, a total of 667 buildings were identified for seismic evaluation based upon AB 300 criteria and LAUSD's higher standards.[7] Since that time, seismic evaluations have been performed on school buildings identified to be the most seismically vulnerable, and projects have been developed to address the buildings determined to be in the greatest need of structural upgrades.[8]

1.4 CALIFORNIA ENVIRONMENTAL QUALITY ACT

The environmental compliance process is governed by the CEQA[9] and the State CEQA Guidelines.[10] CEQA was enacted in 1970 by the California Legislature to disclose to decision-makers and the public the significant environmental effects of projects and to identify ways to avoid or reduce the environmental effects through feasible alternatives or mitigation measures. Compliance with CEQA applies to California government agencies at all levels: local, regional, and state agencies, boards, commissions, and special districts (such as school districts and water districts).

LAUSD is the lead agency for this proposed Project, and is therefore required to conduct an environmental review to analyze the potential environmental effects associated with the proposed Project.

California Public Resources Code (PRC) Section 21080(a) states that analysis of a project's environmental impact is required for any "discretionary projects proposed to be carried out or approved by public agencies…" In this case, LAUSD has determined that an initial study is required to determine whether there is substantial evidence that construction and operation of the proposed Project would result in environmental impacts. An initial study is a preliminary environmental analysis to determine whether an EIR, a mitigated negative declaration (MND), or a negative declaration (ND) is required for a project.[11]

When an initial study identifies the potential for significant environmental impacts, the lead agency must prepare an EIR,[12] however, if all impacts are found to be less-than-significant or can be mitigated to a less-than-significant level, the lead agency can prepare a ND or MND that incorporates mitigation measures into the project.[13]

1.5 ENVIRONMENTAL PROCESS

A "project" means the whole of an action that has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment, and that is any of the following:

[7] LAUSD. AB-300 Criteria Building List. Web. <http://www.laschools.org/new-site/ab300/LAUSD-AB300-CRITERIA-BUILDING-LIST.pdf>
[8] LAUSD. Seismic Safety of School Buildings. Web. <http://www.laschools.org/new-site/ab300/?keyword=roosevelt&destination=ab300>
[9] California PRC Sections 21000 et seq.
[10] CCR, Title 14, Sections 15000 et seq.
[11] 14 CCR Section 15063.
[12] 14 CCR Section 15064.
[13] 14 CCR Section 15070.

- An activity directly undertaken by any public agency including but not limited to public works construction and related activities clearing or grading of land, improvements to existing public structures, enactment and amendment of zoning ordinances, and the adoption and amendment of local General Plans or elements thereof pursuant to Government Code Sections 65100-65700.
- An activity undertaken by a person which is supported in whole or in part through public agency contacts, grants, subsidies, loans, or other forms of assistance from one or more public agencies.
- An activity involving the issuance to a person of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies (California Code of Regulations [CCR] Section 15378[a]).

The proposed actions by LAUSD constitute a "project" because the activity would result in a direct physical change in the environment and would be undertaken by a public agency. All "projects" in the State of California are required to undergo an environmental review to determine the environmental impacts associated with implementation of the project.

1.5.1 Initial Study

This Initial Study was prepared in accordance with CEQA and the CEQA Guidelines, as amended, to determine if the project could have a significant impact on the environment. The purposes of this Initial Study, as described in the State CEQA Guidelines Section 15063, are to 1) provide the lead agency with information to use as the basis for deciding whether to prepare an EIR or ND; 2) enable the lead agency to modify a project, mitigating adverse impacts before an EIR is prepared, thereby enabling the project to qualify for a negative declaration; 3) assist the preparation of an EIR, if one is required; 4) facilitate environmental assessment early in the design of a project; 5) provide documentation of the factual basis for the finding in an ND that a project will not have a significant effect on the environment; 6) eliminate unnecessary EIRs; and 7) determine whether a previously prepared EIR could be used with the project. The findings in this Initial Study have determined that an EIR is the appropriate level of environmental documentation for this project.

2.5.2 Environmental Impact Report

The EIR includes information necessary for agencies to meet statutory responsibilities related to the proposed Project. State and local agencies will use the EIR when considering any permit or other approvals necessary to implement the project. A preliminary list of the environmental topics that have been identified for study in the EIR is provided in the Initial Study Checklist (Chapter 4).

Following consideration of any public comments on the Initial Study, the Draft EIR will be completed and then circulated to the public and affected agencies for review and comment. One of the primary objectives of CEQA is to enhance public participation in the planning process; public involvement is an essential feature of CEQA. Community members are encouraged to participate in the environmental review process, request to be notified, monitor newspapers for formal announcements, and submit substantive comments at every possible opportunity afforded by the District. The environmental review process provides several opportunities for the public to participate through public notice and public review of CEQA documents and public meetings.

Additionally, LAUSD is required to consider comments from the scoping process in the preparation of the Draft EIR and to respond to Draft EIR public comments in the Final EIR.

2.5.3 Tiering

This type of project is one of many that were analyzed in the LAUSD SUP Program EIR (Program EIR) that was certified by the LAUSD BOE on November 10, 2015.[14] LAUSD's Program EIR meets the criteria for a Program EIR under CEQA Guidelines Section 15168 (a)(4) as one "prepared on a series of actions that can be characterized as one large project and are related…[a]s individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways."

The Program EIR enables LAUSD to streamline future environmental compliance and reduces the need for repetitive environmental studies.[15] The Program EIR serves as the framework and baseline for CEQA analyses of later projects through a process known as "tiering." Under CEQA Guidelines Sections 15152(a) and 15385, "Tiering" refers to using the analysis of general matters contained in a broader EIR (such as one prepared for a program) with later EIRs and negative declarations on narrower projects; incorporating by reference the general discussions from the broader EIR; and concentrating the later EIR or negative declaration solely on the issues specific to the later project.[16]

The Program EIR is applicable to all projects implemented under the SUP. The Program EIR provides the framework for evaluating environmental impacts related to ongoing facility upgrade projects planned by the District.[17] Due to the extensive number of individual projects anticipated to occur under the SUP, projects were grouped into four categories based on the amount and type of construction proposed. The four categories of projects are as follows:[18]

- Type 1 – New Construction on New Property
- Type 2 – New Construction on Existing Campus
- Type 3 – Modernization, Repair, Replacement, Upgrade, Remodel, Renovation, and Installation
- Type 4 – Operational and Other Campus Changes

The proposed Project is categorized as Type 2 – New Construction on Existing Campus, which includes demolition and new building construction on existing campuses and the replacement of school buildings on the same location, and Type 3 – Modernization, Repair, Replacement, Upgrade, Remodel, Renovation, and Installation, which includes modernization and infrastructure upgrades. The evaluation of environmental

[14] LAUSD. 2015. Program EIR for the SUP. Available at: http://achieve.lausd.net/ceqa.
[15] LAUSD. 2015. Program EIR for the SUP . Available at: http://achieve.lausd.net/ceqa.
[16] CEQA Guidelines Section 15152(a).
[17] Ibid, at 4-8.
[18] Ibid, at 1-7.

impacts related to Type 2 and Type 3 projects, and the appropriate project design features (PDFs) and mitigation measures to incorporate, are provided in the Program EIR.

The proposed Project is considered a site-specific project under the Program EIR; therefore, this EIR is tiered from the SUP Program EIR. The Program EIR is available for review online at http://achieve.lausd.net/ceqa and at LAUSD's Office of Environmental Health and Safety (OEHS), 333 South Beaudry Avenue, 21st Floor, Los Angeles, CA 90017.

2.5.4 Project Plan and Building Design

The Project is subject to the California Department of Education (CDE) design and siting requirements, and the school architectural designs are subject to review and approval by the California Division of the State Architect (DSA). The proposed Project, along with all other SUP-related projects, is required to comply with specific design standards and sustainable building practices. Certain standards assist in reducing environmental impacts, such as the California Green Building Code,[19] LAUSD Standard Conditions of Approval (SC), and the Collaborative for High-Performance Schools (CHPS) criteria.[20]

Collaborative for High-Performance Schools. The proposed Project would include CHPS criteria points under seven categories: Integration, Indoor Environmental Quality, Energy, Water, Site, Materials and Waste Management, and Operations and Metrics. LAUSD is committed to sustainable construction principles and has been a member of the CHPS since 2001. CHPS has established criteria for the development of high-performance schools to create a better educational experience for students and teachers by designing the best facilities possible. CHPS-designed facilities are healthy, comfortable, energy efficient, material efficient, easy to maintain and operate, commissioned, environmentally responsive site, a building that teaches, safe and secure, community resource, stimulating architecture, and adaptable to changing needs. The proposed Project would comply with CHPS and LAUSD sustainability guidelines. The design-build team would be responsible in incorporating sustainability features for the proposed Project, including onsite treatment of stormwater runoff, "cool roof" building materials, lighting that reduces light pollution, water and energy-efficient design, water-wise landscaping, collection of recyclables, and sustainable and/or recycled-content building materials.

Project Design Features. PDFs are environmental protection features that modify a physical element of a site-specific project and are depicted in a site plan or documented in the project design plans. PDFs may be incorporated into a project design or description to offset or avoid a potential environmental impact and do not require more than adhering to a site plan or project design. Unlike mitigation measures, PDFs are not special actions that need to be specifically defined or analyzed for effectiveness in reducing potential impacts.

[19] California Green Building Standards Code, Title 24, Part 11, of the CCR.

[20] The Board of Education's October 2003 Resolution on Sustainability and Design of High Performance Schools directs staff to continue its efforts to ensure that every new school and modernization project in the District, from the beginning of the design process, incorporate CHPS criteria to the extent possible.

Standard Conditions of Approval. LAUSD Standard Conditions of Approval (SC) are uniformly applied development standards and were adopted by the LAUSD Board in November 2015.[21] The SCs have been updated since the adoption of the 2015 version in order to incorporate and reflect changes in the recent laws, regulations and the LAUSD's standard policies, practices and specifications. The SCs were compiled from established LAUSD standards, guidelines, specifications, practices, plans, policies, and programs, as well as typically applied mitigation measures. The SCs are divided into the 18 LAUSD CEQA environmental topics (Appendix G of the CEQA Guidelines plus Pedestrian Safety).[22] For each SC, compliance is triggered by factors such as the project type, existing conditions, and type of environmental impact. Compliance with every SC is not required.

Mitigation Measures. If, after incorporation and implementation of federal, state, and local regulations; CHPS prerequisite criteria; PDFs; and SCs, there are still significant environmental impacts, then feasible and project-specific mitigation measures are required to reduce impacts to less than significant levels. Mitigation under CEQA Guidelines Section 15370 includes:

- Avoiding the impact altogether by not taking a certain action or parts of an action.
- Minimizing impacts by limiting the degree or magnitude of the action and its implementation.
- Rectifying the impact by repairing, rehabilitating, or restoring the impacted environment.
- Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action.
- Compensating for the impact by replacing or providing substitute resources or environments.

Mitigation measures must further reduce significant environmental impacts above and beyond compliance with federal, state, and local laws and regulations; PDFs; and SCs.

The specific CHPS prerequisite criteria and SCs are identified in the tables under each CEQA topic.[23] Federal, state, regional, and local laws, regulations, plans, and guidelines; CHPS criteria; PDFs; and LAUSD conditions are considered part of the project and are included in the environmental analysis.[24]

1.6 IMPACT TERMINOLOGY

The following terminology is used to describe the level of significance of impacts.

- A finding of ***no impact*** is appropriate if the analysis concludes that the project would not affect the particular topic area in any way.

[21] LAUSD. 2015. Program EIR for the SUP. Available at: http://achieve.lausd.net/ceqa. (see Table 4-1 and Appendix F of the Program EIR).

[22] As of September 2016, an additional environmental topic has since been required by the State Office of Planning and Research (Tribal Cultural Resources). The LAUSD Environmental Checklist now has 19 topics.

[23] CHPS criteria are summarized. The full requirement can be found at http://www.chps.net/dev/Drupal/California.

[24] Where the LAUSD Standard Conditions of Approval identifies actions to be taken, it is understood that the Project proponent would implement all LAUSD actions for this Project.

- An impact is considered ***less than significant*** if the analysis concludes that it would cause no substantial adverse change to the environment and requires no mitigation.
- An impact is considered ***less than significant with mitigation incorporated*** if the analysis concludes that it would cause no substantial adverse change to the environment with the inclusion of environmental commitments or other enforceable mitigation measures.
- An impact is considered ***potentially significant*** if the analysis concludes that it could have a substantial adverse effect on the environment. If any impact is identified as potentially significant, an EIR is required.

1.7 ORGANIZATION OF THE INITIAL STUDY

The content and format of this report are designed to meet the requirements of CEQA and the State CEQA Guidelines. The conclusions in this initial study are that the proposed Project would have no significant impacts with the incorporation of mitigation. This report contains the following sections:

Chapter 1, *Introduction* identifies the purpose and scope of the ND and supporting Initial Study and the terminology used.

Chapter 2, *Environmental Setting* describes the existing conditions, surrounding land uses, general plan designations, and existing zoning at the proposed Project site and surrounding area.

Chapter 3, *Project Description* identifies the location, background, and describes the proposed Project in detail.

Chapter 4, *Environmental Checklist and Analysis* presents the LAUSD CEQA checklist, an analysis of environmental impacts, and the impact significance finding for each resource topic. This section identifies the CHPS criteria, PDFs, SCs, and mitigation measures, as applicable. Bibliographical references and individuals cited for information sources and technical data are footnoted throughout this CEQA Initial Study; therefore, a stand-alone bibliography section is not required.

Chapter 5, *List of Preparers* identifies the individuals who prepared the MND and supporting Initial Study and technical studies and their areas of technical specialty.

Appendices have data supporting the analysis or contents of this CEQA Initial Study.

2. Environmental Setting

2.1 PROJECT LOCATION

Burroughs MS is located approximately 5 miles west of downtown Los Angeles. Primary regional access is provided by Interstate 10 (I-10), approximately 2 miles to the south of the Project site and 10 miles east of the Pacific Ocean (**Figure 1**). Major arterials providing regional and sub-regional access to the project vicinity include Wilshire Boulevard, immediately south of the Project site, and South La Brea Avenue, approximately 0.5 miles west of the Project site (**Figure 2**). The Assessor's Parcel Number (APN) for the Project site is 5507-017-900. **Figure 3**, Existing Site Plan, shows the existing site plan and buildings. Various buildings and landscapes on the Project site are considered "character defining" as shown in **Figure 4**. The campus is located within the Hancock Park Historic Preservation Overlay Zone (HPOZ).

2.2 SURROUNDING LAND USES

The 10.53-acre campus is located at 600 South McCadden Place, within the Wilshire Community Plan Area of the City of Los Angeles. The campus is located within the neighborhood of Hancock Park, and is bordered by West 6th Street to the north, South McCadden Place to the west, Wilshire Boulevard to the south, and single-family residences that front South June Street to the east

2.3 CAMPUS HISTORY

The original plans for Burroughs Middle School were drawn in 1923 and were constructed shortly thereafter. The original school plant was constructed in the northwest corner of the school property, at the corner of Sixth Street and S. McCadden Place. By 1925, the school was officially named John Burroughs Junior High School. Additional buildings were added, renovated, and demolished from 1927 – 1987.[25] The original campus was composed of four unreinforced masonry (URM) buildings in the Italian Renaissance Revival style, all of which have been designated as a historic resource under CEQA and were structurally refurbished at different points in time after the 1933 Long Beach Earthquake. For the 2016-2017 school year, total enrollment at Burroughs MS was 1,786 students.[26] Burroughs MS is the home of the Magnet Center, a program that services 508 students.[27] The Magnet Center is an advanced academic program that focuses on mathematics, language arts,

[27] Burroughs Middle School, 2018. *Magnet Program.* Available at: https://www.burroughsms.org/apps/pages/index.jsp?uREC_ID=379194&type=d&pREC_ID=859005. Accessed February 6th, 2018.

science, and social studies. The program is designed to meet the needs of students who require an academically demanding curriculum.

The campus has been assigned a California Historic Resources status code of "3S" and "3CS", noting that the campus appears individually eligible for the National Register of Historic Places (NRHP) through survey evaluation and is eligible for the California Register (CR) as an individual property through survey evaluation. Figure 4 shows the campus and character-defining features that account for its eligibility as a historical resource.

2.4 EXISTING CONDITIONS

Burroughs MS is an operational middle school serving students in grades six through eight. The campus is comprised of 25 buildings and structures, including 14 portable buildings all over 30 years old. Buildings at the project site include: a two-story Administrative and Auditorium Building, various classroom buildings, Food Service/Lunch Shelter Building, Gymnasium, and portable buildings. The school is also developed with landscaped areas containing playfields and ornamental landscaping with trees, shrubs, and grass.

2.5 GENERAL PLAN AND EXISTING ZONING

The City of Los Angeles General Plan Land Use designation for the school property is 'Public Facilities'. The land use element of the General Plan is comprised of 35 community plans; they are the official guide to the future development of the City of Los Angeles.

The zoning for the school property is [Q]PF-1XL-HPOZ. PF (Public Facilities), the designation for the use and development of publicly owned land, including public elementary and secondary schools. [Q] means additional restrictions on building design, landscape buffer, signs, etc.; '1' is Height District No. 1; and 'XL' is Extra Limited Height District where no building or structure shall exceed two stories, nor shall the highest point of the roof of any building or structure exceed 30 feet in height. A Historic Preservation Overlay Zone (HPOZ), is commonly known as a historic district, provides for review of proposed exterior alterations and additions to historic properties within designated districts.

LAUSD anticipates that it would comply with Government Code Section 53094 to render the local City of Los Angeles Zoning Ordinance inapplicable to the proposed Project.

2.6 NECESSARY APPROVALS

It is anticipated that approval required for the proposed Project would include, but may not be limited to, the following:

Responsible Agencies

- City of Los Angeles, Public Works Department. Permit for curb, gutter, and other offsite improvements
- City of Los Angeles, Fire Department. Approval of plans for emergency access and emergency evacuation
- City of Los Angeles, Department of Transportation. Approval of haul route

Reviewing Agencies

- South Coast Air Quality Management District (SCAQMD). Approval of Construction Emission/Dust Control Plan, architectural coatings
- Los Angeles Regional Water Quality Control Board (RWQCB). Approval of water quality management plan
- State Water Resources Control Board (SWRCB) Notice of Intent (NOI) to obtain permit coverage. General Construction Permit regulates stormwater and nonstormwater discharges associated with construction activities
- California Department of General Services, DSA. Approval of site-specific project construction drawings

2. Environmental Setting

This page intentionally left blank.

3. Project Description

The proposed Project would result in demolition of and/or modifications to existing buildings, potentially including historic buildings and resources. However, the project would be designed to preserve and enhance significant (primary) character-defining features associated with the campus (Figure 4). Additionally, the proposed Project would be designed and implemented in a manner that complies with the LAUSD Design Guidelines and Treatment Approaches for Historic Schools.[28]

Upon completion of project construction, the Burroughs MS would have 71 classrooms including 6 existing classrooms, 31 remodeled classrooms, and 34 new classrooms. Approximately 8,000 sf of existing area is to remain (with minor renovations). **Table 1** and Figure 3 show details about the characteristics of the existing buildings to be demolished and/or renovated.

The Project would be designed to preserve and enhance significant (primary) character-defining features associated with the campus. Additionally, the proposed Project would be designed and implemented in a manner that complies with the LAUSD Design Guidelines and Treatment Approaches for Historic Schools.[29]

As outlined in Table 1 and shown in **Figure 5**, the proposed Project would include demolition of the following facilities:

- Shop Building (Bldg. 9)
- Cafeteria-Classroom Building (Bldg.20)
- Flammable Storage Building (Bldg. 13)
- Girls' Locker Building (Bldg. 17)
- Approximately 18 standard and specialty classrooms located in 12 relocatable or portable buildings

The total demolition footprint of the proposed Project would be approximately 60,500 sf.

The proposed Project would include construction of the following facilities that would be designed, constructed, and furnished/equipped to current code requirements and District design standards:

- Two-Story Specialty Classroom Building (Bldg. A)
  - Approximately three specialty classrooms and support spaces[30] on the first floor
  - Approximately seven standard classrooms and support spaces on the second floor

[28] LAUSD. January 2015. Los Angeles Unified School District Design Guidelines and Treatment Approaches for Historic Schools. Los Angeles, CA.
[29] LAUSD. January 2015. LAUSD Design Guidelines and Treatment Approaches for Historic Schools. Los Angeles, CA.
[30] Support spaces include storage, custodian rooms, and boys' and girls' restrooms.

3. Project Description

- Three-Story Food Services + MPR/ Classroom/ Lockers (Bldg. B)
  - Approximately one student store, boys' and girls' lockers, food services, and indoor dining/MPR facilities on the first floor
  - Approximately 14 standard classrooms on the second floor
  - Approximately 2 standard classrooms and 8 science classrooms on the third floor
- Maintenance and Operation (Bldg. M+O)

The total construction footprint of the proposed Project would be approximately 88,000 sf.

Modernization and/or upgrades would be completed for the following buildings:

- Administrative/Library/Auditorium (Bldg. 1)
- Boy's Gymnasium Building (Bldg. 2)
- Classroom Building (Bldg. 7)
- AA-610 (Bldg. 4)
- Art Building (Bldg. 14)
- AA-1143 (Bldg. 18)

The proposed Project would modify and remodel 104,500 sf of building space (90,000 sf not including basement areas).

Figure 6 shows the proposed site plan and **Table 2** summarizes the changes to the campus. Upgrades to the Administrative/Library/Auditorium Building, Gymnasium Building, and Classroom Building would entail seismic retrofits. Seismic retrofitting would be completed in compliance with the seismic safety requirements of the LAUSD Supplemental Geohazard Assessment Scope of Work, California Building Code, Division of State Architect, and California Department of Education.

Site upgrades that would be completed throughout the campus include:

- Site-wide infrastructure, including plumbing, electrical, and storm drain
- Site-wide upgrades to remove identified and prioritized barriers to program accessibility
- Landscape, hardscape, and exterior paint

The project would include improvements as required by the ADA, Division of the State Architect (DSA), CEQA, Office of the Independent Monitor (OIM) for ADA program accessibility, and any other required improvements or mitigations to ensure compliance with local, state, and/or federal facilities requirements.

TABLE 1
CHARACTERISTICS OF EXISTING BUILDINGS

Building ID	Building DSA Number	Building Name	Year Built	Building Square Footage	Building Type
Buildings to be Demolished/Removed					
9	A749	Shop Building	1926	9,032	Permanent

Figure 6
Site Plan

3. Project Description

This page intentionally left blank.

3.1 CIRCULATION, ACCESS AND PARKING

Currently, the school's pedestrian main entrance is located off South McCadden Place. The proposed Project is designed to improve circulation, access (including the path of travel) and parking at the campus. The main access point to the campus would continue to be off South McCadden Place. The northern surface parking entrance will be repositioned on West 6th Street and the parking lot would be expanded. As part of the project, the southern surface parking lot along South McCadden Place and Wilshire Boulevard, would be reconfigured and ingress/egress driveways would be added on Wilshire Boulevard, in addition to access from McCadden. Bus drop-off /pickup would be relocated from its current location along McCadden Place to a designated bus loading zone within the Wilshire Boulevard parking lot. By moving the bus loading zone onsite, it is anticipated that traffic congestion in the surrounding neighborhood would be reduced during the student drop off and pick up times.

3.2 LANDSCAPE IMPROVEMENTS

The Burroughs MS campus is developed with: 1) buildings; 2) paved areas including parking lots, hardcourts, and walkways; and 3) landscaped areas including turf playfields (i.e., football field and baseball/softball field) and ornamental landscaping with trees, shrubs, and grass. There are currently 195 trees within and along the boundaries of the Project site. There are a total of two protected native coast live oaks on the campus and 37 City of Los Angeles-protected street trees along Wilshire Boulevard, South McCadden Place, and West 6th Street.

Landscape improvements may include repair or replacement of irrigation systems, including: lawn sprinklers and sprinkler controls; trees, shrubs, and other vegetation; landscaping plant material; utilitarian landscape components, such as sprinkler piping; and fencing and freestanding exterior walls. Historic landscaping (significant primary landscape, Figure 4) along the northwestern boundary of the Project site would be preserved.[31] Any protected trees or significant trees that would be removed as part of the Project would be replaced in accordance with the requirements of the City of Los Angeles Tree Ordinance.

3.3 INFRASTRUCTURE

The Project site is currently served by existing utilities that are at the end of their service life and need replacement. Site-wide infrastructure improvements would be completed as part of the proposed Project for electrical, gas, sewer, water, and drainage.

[31] PCR Services, Character Defining- Features Memorandum (CDFM) for John Burroughs Middle School, 600 South McCadden Place, Los Angeles, California 90005, Prepared for Los Angeles Unified School District (LAUSD), July 28, 2015.

3.4 UTILITY PROVIDERS

Los Angeles Department of Water and Power (LADWP) provides electric and potable water service to the Project site. The Southern California Gas Company (SCGC) provides natural gas to the Project site. The City of Los Angeles Bureau of Sanitation is the sewer service provider for the Project site.

3.5 SECURITY AND SAFETY FEATURES

With the exception of the northwest boundary of Burroughs MS along South McCadden Place and West 6th Street, the perimeter of the campus is surrounded by an 8-foot metal security fence. There is currently electronic access control at the school entrances and parking lots. The improvements to the Project site would include similar fencing and security features. Additionally, new internal fencing would be installed to allow for potential community use of athletic areas that can be accessed separately from the academic core of the campus. All new structures would be equipped with fire suppression sprinkler systems and lighting on the exterior walls. All entries would be illuminated to provide safe access. The new parking lots would have lighting that would be focused and shielded to reduce glare and light spillover. Lighting intensity from the new sources would be reduced to no more than 2 foot-candles onto adjacent residences. New sources of lighting would include hoods, filtering louvers, glare shields, and landscaping. Further, site lighting would be designed to have minimal offsite impact and contribution to sky glow by controlling the amount of uplight. Outdoor lighting of architecture and landscape features and interior lighting would be designed to minimize light trespass to the outside from the interior.

3.6 SUSTAINABILITY FEATURES

LAUSD is committed to sustainable construction principles, and has been a member of the Collaborative for High Performance Schools (CHPS) since 2001. CHPS has established criteria for the development of high performance schools to create a better educational experience for students and teachers by designing the best facilities possible. CHPS-designed facilities are energy efficient, material efficient, easy to maintain and operate, environmentally responsive, safe and secure, a community resource, and adaptable to changing needs.

School facilities seeking CHPS certification complete a scorecard and must achieve a certain number of points to be certified. Some of the sustainable design features that would be incorporated into the proposed Project include easy access to public transportation, provision of bicycle racks, onsite treatment of stormwater runoff, "cool-roof" building materials, lighting that reduces light pollution, water- and energy-efficient design, water-wise landscaping, collection of recyclables, and sustainable and/or recycled-content building materials. The proposed Project's new buildings and structures would be designed to reduce energy use below current levels by incorporating modernized and energy-efficient features, which may include lighting, windows, electrical transformers, building insulation, or installation of irrigation smart controllers, etc. All new construction would exceed by 10 percent or more the California Title 24, Part 6 energy efficient standards.

3.7 REMOVAL ACTION WORKPLAN

Based on historic uses onsite, soils underneath pavement are affected by arsenic historically applied as an herbicide. LAUSD is currently overseeing preparation of the Removal Action Workplan (RAW) for the proposed Project. The RAW includes a description of the contamination, excavation dimensions for the proposed Project, methodology, transportation and disposal, confirmation sampling plan, methods to ensure worker and public health and safety, and cleanup goals. Further, community notices will be distributed in accordance with LAUSD policy. All cleanup activities under the RAW would adhere to applicable state and local policies and regulations regarding excavation, removal and disposal of affected materials. The volume of impact soil that is addressed by the soil removal action is estimated to be 160 cubic yards (cy).

3.8 CONSTRUCTION PHASING

The proposed Project would be developed in two 18-month phases following a 3-year construction phasing schedule. Construction activities would commence first quarter of 2020 and be completed first quarter of 2023. The construction schedule would have limited to no overlap between phases. All construction would occur during daytime hours, specifically 7:00 a.m. to 7:00 p.m. Monday through Friday and 8:00 a.m. to 6:00 p.m. Saturdays.[32]

[32] No construction would occur during Sunday or Holidays per the City of Los Angeles regulations.

3. Project Description

This page intentionally left blank.

4. Environmental Checklist

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☒ Aesthetics	☒ Hazards & Hazardous Materials	☐ Public Services
☐ Agriculture & Forestry Resources	☐ Hydrology & Water Quality	☐ Recreation
☒ Air Quality	☐ Land Use & Planning	☒ Transportation/Traffic
☐ Biological Resources	☐ Mineral Resources	☐ Tribal Cultural Resources
☒ Cultural Resources	☒ Noise	☐ Utilities & Service Systems
☐ Geology & Soils	☒ Pedestrian Safety	☒ Mandatory Findings of Significance
☐ Greenhouse Gas Emissions	☐ Population & Housing	

HAVE CALIFORNIA NATIVE AMERICAN TRIBES TRADITIONALLY AND CULTURALLY AFFILIATED WITH THE PROJECT AREA REQUESTED CONSULTATION PURSUANT TO PUBLIC RESOURCES CODE SECTION 21080.3.1?

No Native American tribes have requested notification or consultation through the Public Resources Code Section 21080.3.1 process.

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process (see Public Resources Code Section 21083.3.2). Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code Section 5097.94 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code Section 21082.3(c) contains provisions specific to confidentiality.[33]

[33] Final Text for tribal cultural resources update to Appendix G: Environmental Checklist Form. 2016, September 29. The AB 52 regulations adopted by the California Natural Resources Agency were approved by the Office of Administrative Law, and will appear in the California Code of Regulations. Copies of the rulemaking materials can be found at: http://resources.ca.gov/ceqa.

4. Environmental Checklist

DETERMINATION

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions on the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☒ I find the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

TITLE

4. Environmental Checklist

The Burroughs MS Comprehensive Modernization Project would be constructed on an operating school campus that is eligible as a historic resource and is located in a residential urban neighborhood. As such, the District is primarily concerned about potential impacts to the following environmental factors, as documented in the CEQA Environmental Checklist (Appendix G of the CEQA Guidelines) and LAUSD's CEQA policies and practices: aesthetics; air quality (construction); cultural resources (construction); geology and soils (construction); hazards and hazardous materials (construction); noise (construction); pedestrian safety (construction); and traffic (construction). Detailed technical studies (with supporting appendices, where necessary) for these environmental factors will be implemented directly into the EIR.

The operational activities proposed at Burroughs MS would be consistent with the current operations. It is anticipated that campus operations would be more efficient or would be otherwise improved following implementation of the proposed project, which would result in new and upgraded facilities, and would not result in substantive changes to the existing operation of the school. Project implementation would not provide for an increase in the number of students attending the school or staff required to operate the school. As such, operational activities associated with the proposed project are not additive to those operations analyzed in the Program EIR and would not be expected to result in substantial changes that have not previously been identified in the Program EIR. As such, the following environmental impact analysis focuses primarily on the potential impacts related to construction of the proposed project. Operational impacts, where evaluated, are provided as a supplementary or supporting discussion.

4. Environmental Checklist

4.1 AESTHETICS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
I. AESTHETICS. Would the project:				
a. Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, or other locally recognized desirable aesthetic natural feature within a state scenic highway?	☐	☐	☐	☒
c. Substantially degrade the existing visual character or quality of the site and its surroundings?	☒	☐	☐	☐
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☒	☐	☐	☐

4.1.1 Discussion

The Program EIR includes Standard Conditions of Approval (SCs) for minimizing impacts to aesthetic resources of the existing environment in areas where future projects would be implemented under the SUP. Applicable SCs related to aesthetic resource impacts associated with the proposed Project are provided in **Table 3. 1-1**.

TABLE 3.1-1
AESTHETIC RESOURCES STANDARD CONDITIONS OF APPROVAL

Applicable SCs	Description
SC-AE-1	**School Design Guide** This document outlines measures for re-use rather than destruction of historical resources. Requires the consideration of architectural appearance/consistency and other aesthetic factors during the preliminary design review for a proposed school upgrade project. Architectural quality must consider compatibility with the surrounding community.
SC-AE-2	**School Design Guide** This document outlines measures to reduce aesthetic impacts around schools, such as shrubs and ground treatments that deter taggers, vandal-resistant and graffiti-resistant materials, painting, etc.
SC-AE-3	LAUSD shall assess a proposed project's consistency with the general character of the surrounding neighborhood, including any proposed changes to the density, height, bulk, and setback of new building (including stadium), addition, or renovation. Where feasible, LAUSD shall make appropriate design changes to reduce or eliminate viewshed obstruction and degradation of neighborhood character. Such design changes could include, but are not limited to, changes to campus layout, height of buildings, landscaping, and/or the architectural style of buildings.
SC-AE-7	LAUSD shall reduce the lighting intensity from the new sources on adjacent residences to no more than two foot-candles, measured at the residential property line. LAUSD shall utilize hoods, filtering louvers, glare shields, and/or landscaping as necessary to achieve the standard. The lamp enclosures and poles shall also be painted to reduce reflection. Following installation of lights the lighting contractor shall review and adjust lights to ensure the standard is met.

Applicable SCs	Description
SC-AE-8	Design site lighting and select lighting styles and technologies to have minimal impact offsite and minimal contribution to sky glow. Minimize outdoor lighting of architectural and landscape features and design interior lighting to minimize trespass outside from the interior. International Dark-Sky Association (IDA) and the Illuminating Engineering Society (IES) Model Lighting Ordinance (MLO) shall be used a guide for environmentally responsible outdoor lighting. The MLO outdoor lighting has outdoor lighting standards that reduce glare, light trespass, and skyglow. The Joint IDA-IESNA Model Outdoor Lighting Ordinance (MLO) uses lighting zones (LZ0 4) which allow the District to vary the stringency of lighting restrictions according to the sensitivity of the area as well as consideration for the community. The MLO also incorporates the Backlight-Uplight-Glare (BUG) rating system for luminaires, which provides more effective control of unwanted light. IDA IESNA Model establishes standards to: • Limit the amount of light that can be used • Minimize glare by controlling the amount of light that tends to create glare • Minimize sky glow by controlling the amount of uplight
SC-CUL-1	Design Build Team to Include Qualified Historic Architect For campuses with qualifying historical resources under CEQA, the Design-Build team shall include a qualified Historic Architect. The Historic Architect shall provide input to ensure ongoing compliance, as project plans progress, with the *Secretary of the Interior's Standards* and LAUSD requirements and guidelines for the treatment of historical resources (specific requirements follow in SC-CUL-2). For projects involving structural upgrades to historic resources, the Design-Build team shall include a qualified Structural Engineer with a minimum of eight (8) years of demonstrated project-level experience in Historic Preservation. The Historic Architect/s shall meet the Secretary of the Interior's Professional Qualifications Standards and the standards described on page 8 of the *LAUSD Design Guidelines and Treatment Approaches for Historic Schools*. The Historic Architect shall provide input throughout the design and construction process to ensure ongoing compliance with the above-mentioned standards.
SC-CUL-2	Role of Historic Architect on Design-Build Team The tasks of the Historic Architect on the Design-Build team shall include (but not necessarily be limited to) the following: 1. The Historic Architect shall work with the Design Builder and LAUSD to ensure that project components, including new construction and modernization of existing facilities, continue to comply with applicable historic preservation standards, including the Secretary of the Interior's Standards for the Treatment of Historic Properties and LAUSD Design Guidelines and Treatment Approaches for Historic Schools. The Historic Architect shall work with the Design-Builder throughout the design process to develop project options that facilitate compliance with the applicable historic preservation standards. 2. For new construction, the Historic Architect shall work with the Design-Builder and LAUSD to identify options and opportunities for (1) ensuring compatibility of scale and character for new construction, site and landscape features, and circulation corridors, and (2) ensuring that new construction is designed and sited in such a way that reinforces and strengthens, as much as feasible, character-defining site plan features, landscaping, and circulation corridors throughout campus. 3. For modernization and upgrade projects involving contributing (significant) buildings or features, the Historic Architect shall work with the Design-Builder and LAUSD to ensure that specifications for design and implementation of projects comply with the applicable historic preservation standards. 4. The Historic Architect shall participate in design team meetings through all phases of the project through 100 percent construction drawings, pre-construction, and construction phases. 5. The Historic Architect shall produce brief memos, at the 50 percent and 100 percent construction drawings stages, demonstrating how principal project components and treatment approaches comply with applicable historic preservation standards, including the Secretary of the Interior's Standards for the Treatment of Historic Properties and LAUSD Design Guidelines and Treatment Approaches for Historic Schools. The memos will be reviewed by LAUSD and incorporated into the Mitigation Monitoring and Report Plan (MMRP) for the project.

4. Environmental Checklist

Applicable SCs	Description
	6. The Historic Architect shall participate in pre-construction and construction monitoring activities to ensure continuing conformance with Secretary's Standards and/or avoidance of a material impairment of the historical resources. 7. The Historic Architect shall provide specialized Construction Specifications Institute (CSI) specifications for architectural features or materials requiring restoration, removal, or onsite storage. This shall include detailed instructions on maintaining and protecting in place relevant features. The Design-Builder and Historic Architect shall be responsible for incorporating LAUSD's recommended updates and revisions during the design development and review process.

4.1.2 Impact Analysis

Would the project:

a) Have a substantial adverse effect on a scenic vista?

No Impact. Scenic vistas generally include extensive panoramic views of natural features, unusual terrain, or unique urban or historic features, for which the field of view can be wide and extend into the distance, and focal views that focus on a particular object, scene or feature of interest. Based on the City of Los Angeles General Plan, the proposed Project is not considered a scenic vista.[34] The Project site is located in the Wilshire Community Plan Area, approximately 5 miles west of downtown Los Angeles. The Wilshire Community Plan Area has a pattern of low to medium density residential uses interspersed with areas of higher density residential uses. Long narrow corridors of commercial activity can be found along major streets including Wilshire Boulevard.[35]

The nearest scenic vista from the campus is the Santa Monica Mountains, located approximately 3.2 miles north of the campus. The proposed Project would not obstruct existing views of the Santa Monica Mountains. Therefore, the project would have no impact on scenic vistas. No mitigation or further study is required.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. The California Scenic Highway Program seeks to preserve and protect areas of outstanding natural beauty that are visible from state highways. Table 5.1-1 of the SUP PEIR lists highways and corridors considered eligible for Scenic Highway Designation. The Project site is not located near a Scenic Highway, Byway, Route, or Corridor designated by the California Department of Transportation (Caltrans) or the Los Angeles County General Plan. The nearest eligible State Scenic Highway is State Route 1 (Pacific Coast Highway) located approximately 9.8 miles west of the Project site. The nearest officially designated State Scenic Highway is State Route 2 (SR-2) (Angeles Crest Highway) located approximately 12.6 miles northeast of the

[34] City of Los Angeles, 2001. *City of Los Angeles General Plan, Conservation Element*. September 26, 2001.
[35] City of Los Angeles, 2005. *Wilshire Community Plan*. Available at: https://planning.lacity.org/complan/pdf/wilcptxt.pdf, accessed August 10, 2017.

Project site. The Project site is not observable from either of these highways. Impacts related to scenic resources within a state scenic highway would not occur and no further analysis will be included in the EIR.

c) Substantially degrade the existing visual character or quality of the site and its surroundings?

Potentially Significant Impact. Given the historic character of the campus, incompatible architecture associated with new building construction could have an adverse impact on the visual character or quality of the Project site. While the proposed Project would not substantially alter the main views of the existing campus, specifically the historic buildings and landscapes from the front of the campus (main entrance), construction of new buildings has the potential to conflict with the existing historic buildings by disrupting the existing views or context of the historic buildings (through changes to the landscape or the scale, architecture, or height of the new buildings) on the campus. Under the proposed Project, new and renovated buildings would be consistent with the general character of existing buildings on campus and the surrounding neighborhood in terms of architectural style, density, bulk, and setback. This consistency would be confirmed through incorporation of SC-CUL-1 and SC-CUL-2.

During project construction, there would be standard construction equipment on site, including small cranes, stockpiled materials, and construction-area barriers and fencing, that may introduce a potential impact to the existing visual character and quality of the Project site. However, these elements would be considered a temporary impact, as they would be removed from the site after completion of construction activities. Further, during construction, work areas would be screened from public view and from the students of Burroughs Middle School through the use of temporary barriers.

While the new three-story building would be the tallest structure on campus, it would be fully integrated with the campus in terms of scale, materials, and landscaping. Further, LAUSD adheres to a variety of design standards that apply to the project, which would ensure that the proposed Project is aesthetically compatible with the neighborhood in which it is located. The design standards include the incorporation of a set of Best Management Practices (BMPs) during design, construction, and operation.

Burroughs MS campus was assigned California Historical Resource status codes of "3S" and "3CS," which means it appears to be eligible for the National Register of Historic Places (National Register) and California Register of Historical Resources (California Register) as an individual property through survey evaluation.[36] As such, under CEQA, the entire campus meets the definition of a historical resource. Further, the Project site is located within the Hancock Park HPOZ. A historical resources study will be conducted for the proposed Project. The historical study and EIR will provide further analysis on historic structures and visual character. The proposed Project thus could potentially substantially degrade the existing visual character or quality of the site and its surroundings, which will be analyzed in the Draft EIR.

[36] Leslie J. Heumann, SAIC, *DPR Primary Record Form for Burroughs Middle School,* Prepared for LAUSD March 15, 2002.

4. Environmental Checklist

d) Create a new source of substantial light or glare which would adversely affect daytime or nighttime views in the area?

Potentially Significant Impact.

4.1.2.1 LIGHT IMPACTS

The campus contains two primary sources of light: light emanating from building interiors that passes through windows and light from exterior sources (e.g., street lighting, parking lot lighting, building illumination, security lighting, and landscape lighting). Depending on the location of the light source and its proximity to adjacent light-sensitive use, light introduction can be a nuisance, affecting adjacent areas and further diminishing the view of the clear night sky in an urban setting like the Project site. Light spillage is typically defined as unwanted illumination from light fixtures on adjacent properties.

The Project site is located within a commercial and residential area. Existing lighting conditions in the project area include light emanating from building interiors, security lights and the surrounding commercial and residential land uses, as well as nearby street lighting. There are residential uses located north, east, and west of the Project site. There are no additional sensitive land uses in the immediate vicinity of the proposed Project.

The perimeter of the proposed buildings would have new light fixtures attached to exterior walls. All entries would be illuminated to provide safe access. The new parking lot along the southern boundary and northeastern corner of the Project site would also have security lighting on poles, that would be focused and shielded downward to reduce glare and light spillover. The project's proposed landscaping, parking and security lighting is expected to contribute to ambient nighttime illumination in the project vicinity. Design features listed in SC-AE-7 and SC-AE-8 such as hoods and filtering louvers would be incorporated to ensure that these new sources would not create light spill-over greater than 2 foot-candles onto adjacent properties. Outdoor lighting of architectural and landscape features and interior lighting would be designed to minimize light trespass to the outside from the interior. Further, site lighting would be designed to have minimal offsite impact and contribution to sky glow. Implementation of SC-AE-7 and SC-AE-8 would ensure that site lighting would have minimal offsite impacts. No further analysis is required in the Draft EIR.

4.1.2.2 GLARE, SHADE AND SHADOW IMPACTS

Buildings with large facades constructed of reflective surfaces (e.g., brightly colored building façades, metal surfaces, and reflective glass) could increase existing levels of daytime glare. The proposed facilities would be constructed with limited high-glare materials. As described previously, SC-AE-6 and SC-AE-7 provide measures and performance standards to reduce glare impacts to pedestrians, residences, drivers and sports teams.

Shading impacts are influenced by the height and bulk of a structure, the time of year, the duration of shading during the day, and the proximity of shade-sensitive land uses, or receptors. Shading also affects the visual character and quality of a project relative to surrounding land uses. The consequences of shadows on land uses can be positive, including cooling effects during warm weather; or negative, such as loss of warmth during

cooler weather and loss of natural light for landscaping and human activity. In order to determine whether shading impacts would have a significant impact on the physical environment, a shade and shadow study would be prepared that shows the adjacent offsite, shade-sensitive uses that would receive shadows and the nature of shading that would occur. In order to adequately address these conditions, this topic will be analyzed further in the Draft EIR.

4.2 AGRICULTURE AND FORESTRY RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
II. AGRICULTURE AND FORESTRY RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. -- Would the project:				
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b. Conflict with existing zoning for agricultural use, or a Williamson Act Contract?	☐	☐	☐	☒
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526) or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☒
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

4.2.1 Impact Analysis

Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The Project site is currently developed and is void of any agricultural uses. The California Department of Conservation Important Farmland Map for Los Angeles identified the Project site as urban and built-up land. Further, there is no Prime Farmland, Unique Farmland, or Farmland of Statewide Importance located adjacent to the Project site.[37] Therefore, no impact to Prime Farmland, Unique Farmland, or Farmland of Statewide Importance would occur. This issue will not be further addressed in the Draft EIR.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. A Williamson Act Contract requires private landowners to voluntarily restrict their land to agriculture and compatible open-space uses. The Project site is void of agricultural uses and does not include land enrolled in a Williamson Act Contract.[38] Therefore, no impact would occur regarding conversion of existing agricultural uses or Williamson Act contracts. This issue will not be further addressed in the Draft EIR.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact. The proposed Project would not conflict with existing zoning of forest land or cause rezoning of forest land, timberland, or timberland zoned for Timberland Production. The project area is currently zoned as [Q] PF-1XL-HPOZ. The proposed Project does not involve any changes to current General Plan land use or zoning designations for forest land, or timberland. Additionally, there are no timberland zoned production areas within the Project site or surrounding areas. Therefore, no impact to forest land or timberland would occur, and this issue will not be further addressed in the Draft EIR.

37 California Department of Conservation (CDC), 2017. California Important Farmland Finder. Available at: http://maps.conservation.ca.gov/ciff/ciff.html, accessed August 10, 2017.

38 CDC, 2016.*Los Angeles County Williamson Act FY 2016/2016 Map.*. 2016.

4. Environmental Checklist

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. The Project site and surrounding areas contain no forest land. Thus, implementation of the proposed Project would result in no impacts related to the loss or conversion of forest land to non-forest use. This issue will not be further addressed in the Draft EIR.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. The Project site is developed with school facilities and impervious surfaces. No changes to the existing environment would occur from implementation of the proposed Project that could result in conversion of farmland to nonagricultural use or forest land to non-forest use. Thus, no impact would occur, and this issue will not be further discussed in the Draft EIR.

4.3 AIR Quality

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a. Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐
b. Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	☒	☐	☐	☐
c. Result in a cumulatively considerable net increase of any criteria pollutant for which the region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	☒	☐	☐	☐
d. Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
e. Create objectionable odors affecting a substantial number of people?	☐	☐	☒	☐

4.3.1 Discussion

The Program EIR includes SCs for reducing impacts to air quality in areas where future projects would be implemented under the SUP. Applicable SCs related to project air quality impacts are provided in **Table 3.3-1**, below.

TABLE 3.3-1
AIR QUALITY STANDARD CONDITIONS OF APPROVAL

Applicable SCs	Description
SC-AQ-2	LAUSD's construction contractor shall ensure that construction equipment is properly tuned and maintained in accordance with manufacturer's specifications, to ensure excessive emissions are not generated by unmaintained equipment.
SC-AQ-3	LAUSD's construction contractor shall: • Maintain slow speeds with all vehicles. • Load impacted soil directly into transportation trucks to minimize soil handling. • Water/mist soil as it is being excavated and loaded onto the transportation trucks. • Water/mist and/or apply surfactants to soil placed in transportation trucks prior to exiting the site. • Minimize soil drop height into transportation trucks or stockpiles during dumping. • During transport, cover or enclose trucks transporting soils, increase freeboard requirements, and repair trucks exhibiting spillage due to leaks.

4. Environmental Checklist

	• Cover the bottom of the excavated area with polyethylene sheeting when work is not being performed. • Place stockpiled soil on polyethylene sheeting and cover with similar material. • Place stockpiled soil in areas shielded from prevailing winds.
SC-AQ-4	LAUSD shall prepare an air quality assessment: If site-specific review of a school construction project identifies potentially significant adverse regional and localized construction air quality impacts, then LAUSD shall implement all feasible measures to reduce air emissions below the South Coast Air Quality Management District's (SCAQMD) regional and localized significance thresholds. LAUSD shall mandate that construction bid contracts include the measures identified in the air quality assessment. Measures shall reduce construction emissions during high-emission construction phases from vehicles and other fuel driven construction engines, activities that generate fugitive dust, and surface coating operations. Specific air emission reduction measures include, but are not limited to, the following: Exhaust Emissions • Schedule construction activities that affect traffic flow to off-peak hours (e.g. between 10:00 AM and 3:00 PM). • Consolidate truck deliveries and/or limit the number of haul trips per day. • Route construction trucks off congested streets. • Employ high pressure fuel injection systems or engine timing retardation. • Utilize ultra-low sulfur diesel fuel, containing 15 ppm sulfur or less (ULSD) in all diesel construction equipment. • Use construction equipment rated by the United States Environmental Protection Agency as having Tier 3 (model year 2006 or newer) or Tier 4 (model year 2008 or newer) emission limits for engines between 50 and 750 horsepower. • Restrict non-essential diesel engine idle time, to not more than five consecutive minutes. • Utilize electrical power rather than internal combustion engine power generators as soon as feasible during construction. • Utilize electric or alternatively fueled equipment, if feasible. • Utilize construction equipment with the minimum practical engine size. • Utilize low-emission on-road construction fleet vehicles. • Ensure construction equipment is properly serviced and maintained to the manufacturer's standards. Fugitive Dust • Apply non-toxic soil stabilizers according to manufacturers' specification to all inactive construction areas (previously graded areas inactive for ten days or more). • Replace ground cover in disturbed areas as quickly as possible. • Sweep streets at the end of the day if visible soil material is carried onto adjacent public paved roads (recommend water sweepers with reclaimed water). • Install wheel washers where vehicles enter and exit unpaved roads onto paved roads, or wash off trucks and any equipment leaving the site each trip. • Pave construction roads that have a traffic volume of more than 50 daily trips by construction equipment, and/or 150 daily trips for all vehicles. • Pave all construction access roads for at least 100 feet from the main road to the project site. • Water the disturbed areas of the active construction site at least three times per day, except during periods of rainfall. • Enclose, cover, water twice daily, or apply non-toxic soil binders according to manufacturers' specifications to exposed piles (i.e., gravel, dirt, and sand) with a five percent or greater silt content. • Suspend all excavating and grading operations when wind speeds (as instantaneous gusts) exceed 25 miles per hour (mph).

- Apply water at least three times daily, except during periods of rainfall, to all unpaved road surfaces.
- Limit traffic speeds on unpaved road to 15 mph or less.
- Prohibit high emission causing fugitive dust activities on days where violations of the ambient air quality standard have been forecast by SCAQMD.
- Tarp and/or maintain a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
- Limit the amount of daily soil and/or demolition debris loaded and hauled per day.

General Construction

- Utilize ultra-low VOC or zero-VOC surface coatings.
- Phase construction activities to minimize maximum daily emissions.
- Configure construction parking to minimize traffic interference.
- Provide temporary traffic control during construction activities to improve traffic flow (e.g., flag person).
- Develop a trip reduction plan for construction employees.
- Implement a shuttle service to and from retail services and food establishments during lunch hours.
- Increase distance between emission sources to reduce near-field emission impacts.
- Require construction contractors to document compliance with the identified mitigation measures.

4.3.2 Impact Analysis

Would the project:

a) Conflict with or obstruct implementation of the applicable air quality plan?

Potentially Significant Impact. The Project site is located within the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The SCAB is a 6,600-square-mile coastal plain bounded by the Pacific Ocean to the southwest and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east.

Therefore, SCAQMD's 2016 AQMP[39] is the applicable air quality plan for the proposed Project. The proposed Project may generate air emissions which could conflict with or obstruct implementation of the AQMP. The Draft EIR will provide a more in depth consistency analysis related to the City's General Plan and applicable air quality plans and will describe potential effects associated with any inconsistencies.

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?

[39] SCAQMD, 2016. *Final Air Quality Management Plan*. Available at: http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2016-air-quality-management-plan/final-2016-aqmp/final2016aqmp.pdf?sfvrsn=15, accessed August 10, 2017.

Potentially Significant Impact. The proposed Project may violate any air quality standard or contribute substantially to an existing or projected air quality violation. The Draft EIR will thus analyze this impact and will identify applicable air quality standards and the federal and state attainment status for pollutants within the SCAB. The Draft EIR will also include an analysis of the estimated emissions associated with construction and operation of the proposed Project, and will also include an analysis of cumulative impacts associated with emissions of criteria pollutants.

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?

Potentially Significant Impact. A significant impact would occur if implementation of the proposed Project resulted in a cumulative net increase in any criteria pollutant above the SCAQMD significance threshold. The SCAQMD's approach for assessing cumulative air quality impacts is based on the AQMP forecasts of attainment of ambient air quality standards in accordance with the requirements of the federal and state Clean Air Acts. The Draft EIR will identify applicable air quality standards and the federal and state attainment status for pollutants within the SCAB and will analyze this impact. The Draft EIR will also include an analysis of the estimated emissions associated with construction and operation of the proposed Project, and will also include an analysis of cumulative impacts associated with emissions of criteria pollutants.

d) Expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact. Sensitive receptors include residences, schools, playgrounds, childcare centers, athletic facilities, churches, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. The Project site is an active school site surrounded by residential uses. The proposed Project could potentially expose sensitive receptors to substantial pollutant concentrations. Mitigation measures for diesel equipment and dust control that are recommended by SCAQMD will be evaluated as part of the Draft EIR to avoid or reduce the impacts to construction workers and occupants of nearby residents, if necessary.

e) Create objectionable odors affecting a substantial number of people?

Less Than Significant Impact. Potential sources that may emit odors during construction activities include equipment exhaust and architectural coatings. Odors from these sources would be localized and generally confined to the Project site. Development of the proposed Project would utilize typical construction techniques, and the odors would be typical of most construction sites. Additionally, the odors would be temporary, and construction activity would be required to comply with SC-AQ-2 through SC-AQ-4, and SCAQMD Rules 402 and 1113.15. Therefore, the proposed Project would result in less-than-significant impacts associated with odor nuisance.

According to the SCAQMD *California Environmental Quality Act (CEQA) Air Quality Handbook*, land uses that are associated with odor complaints include agricultural uses, wastewater treatment plants, food processing

plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding.[40] The proposed Project would not include any of these odor-producing uses; odors associated with project operation will be limited to onsite waste generation and disposal and minor odors generated during food preparation activities for the onsite food service operations. Furthermore, all trash receptacles would be covered and properly maintained to minimize odors and would be emptied on a regular basis. Therefore, implementation of the proposed Project would not generate objectionable odors affecting a substantial number of people. Impacts related to odors would be less than significant, and no further analysis is required in the EIR.

4.4 BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES. Would the project:				
a. Have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in the City or regional plans, policies, regulations by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh vernal pool, coastal, etc.) Through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐
e. Conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance (e.g., oak trees or California walnut woodlands)?	☐	☐	☒	☐
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

[40] SCAQMD, 2014. *CEQA Air Quality Handbook*. Available at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook, accessed August 10, 2017.

4. Environmental Checklist

4.4.1 Discussion

The analysis below is based in part on the Arborist Report[41] prepared for the proposed Project (Appendix B).

The Program EIR includes SCs for minimizing impacts to biological resources of the existing environment in areas where future projects would be implemented under the SUP. Applicable SCs related to biological resource impacts associated with the proposed Project are provided in **Table 3.4-1**.

TABLE 3.4-1
BIOLOGICAL RESOURCES STANDARD CONDITIONS OF APPROVAL

Applicable SCs	Description
SC-BIO-1	LAUSD qualified biologist shall identify sensitive species and their habitat within or near proposed project site. LAUSD will conduct a literature search, which shall consider a one-mile radius beyond the project construction site and shall be performed by a qualified biologist with knowledge of local biological conditions as well as the use and interpretation of the data sources identified below. Where appropriate, in the opinion of the biologist, the literature search shall be supplemented with a site visit and/or aerial photo analysis. Resources and information that shall be investigated for each site should include, but not be limited to: • USFWS • National Marine Fisheries Services (NMFS) • CDFW • California Native Plant Society (CNPS) • County and/or city planning or environmental offices for sensitive species, habitat, and/or heritage trees that may not exist on published databases. • CNDDB • CNPS Rare Plant Inventory • Local Audubon Society • Los Angeles County Department of Regional Planning for information on Significant Ecological Areas • California Digital Conservation Atlas for district-wide location of reserves, plan areas, and land trusts that may overlap with project sites. <u>Biological Resources Report</u> If the LAUSD qualified biologist determines that a school construction project will affect an identified sensitive plant, animal, or habitat, a biological resources report shall be prepared. To provide a complete assessment of the flora and fauna within and adjacent to a site-specific project impact area, with particular emphasis on identifying endangered, threatened, sensitive, and locally unique species and sensitive habitats, the biological resources report shall include the following. • Information on regional setting that is critical to the assessment of rare or unique resources • A thorough, recent floristic-based assessment of special status plans and natural communities, following the CDFW's *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities*. CDFW recommends that floristic, alliance- and/or association-based mapping and vegetation impact assessments be conducted at the project site and neighboring vicinity. The *Manual of California Vegetation (Sawyer et al.)* should also be used to inform this mapping and assessment. Adjoining habitat areas should be included in this assessment where site activities could lead to direct or indirect6 impacts offsite. Habitat mapping at the alliance level will help establish baseline vegetation conditions.

[41] Jan C. Scow, *Tree Inventory and Protected Tree Report for Renovation of Burroughs Middle School 600 S. McCadden Place, Los Angeles, CA 90005*, June 7, 2017.

	• A current inventory of the biological resources associated with each habitat type onsite and within the area of potential effect. CDFW's California Natural Diversity Data Base (CNDDB) should be contacted to obtain current information on any previously reported sensitive species and habitat, including Significant Natural Areas identified under Chapter 12 of the Fish and Game Code. • An inventory of rare, threatened, and endangered, and other sensitive species onsite and within the area of potential effect. Species to be addressed should include all those identified in CEQA Guidelines Section 15380, including sensitive fish, wildlife, reptile, and amphibian species. Seasonal variations in use of the project area should also be addressed. Focused species-specific surveys, conducted at appropriate time of year and time of day when sensitive species are active or otherwise identifiable, are required. Acceptable species-specific survey procedures should be developed in consultation with the CDFW and USFWS. • A discussion of the potential adverse impacts from light, noise, human activity, exotic species, and drainage. Drainage analysis should address project-related changes on drainage patterns on and downstream from the site; the volume, velocity, and frequency of existing and post- project surface flows; polluted runoff; soil erosion and/or sedimentation in streams and water bodies; and post-project fate of runoff from the project site. • Discussions about direct and indirect project impacts on biological resources, including resources in nearby public lands, open space, adjacent natural habitats, wetland and riparian ecosystems, and any designated and/or proposed or existing reserve lands (e.g., preserve lands associated with a NCCP). Impacts on, and maintenance of, wildlife corridor/movement areas, including access to undisturbed habitats in adjacent areas. • Mitigation measures for adverse project-related impacts to sensitive plants, animals, and habitats. Measures should emphasize avoidance and reduction of biological impacts. For unavoidable impacts, onsite habitat restoration or enhancement should be outlined. If onsite measures are not feasible or would not be biologically viable, offsite measures through habitat creation and/or acquisition and preservation in perpetuity should occur. This measure should address restrictions on access, proposed land dedications, monitoring and management programs, control of illegal dumping, water pollution, increased human intrusion, etc. • Plans for restoration and vegetation shall be prepared by qualified biologist with expertise in southern California ecosystems and native plant vegetation techniques. Plans shall include, at a minimum: - location of the mitigation site - plant species to be used, container sizes, and seeding rates - schematic depicting the mitigation area - planting schedule - irrigation method - measures to control exotic vegetation - specific success criteria - detailed monitoring program - contingency measures should the success criteria not be met - identification of the party responsible for meeting the success criteria and providing for conservation of the site in perpetuity. LAUSD shall consult with the U.S. Army Corps of Engineers, USFWS and/or the CDFW and comply with any permit conditions or directives from those agencies regarding the protection, relocation, creation, and/or compensation.
SC-BIO-2	LAUSD shall protect sensitive species from harmful exposure to light by shielding light sources, redirecting light sources, or using low intensity lighting.
SC-BIO-3	LAUSD shall comply with the following: • Project activities (including, but not limited to, staging and disturbances to native and nonnative vegetation, structures, and substrates) should occur outside of avian breading season to avoid take of birds or their eggs. Depending on the avian species present, a qualified biologist may determine that a change in the breeding season dates is warranted. • If avoidance of the avian breeding season is not feasible, beginning 30 days prior to the initiation of the project activities, a qualified biologist with experience in conducting breeding bird surveys shall conduct weekly bird surveys to detect protected native birds occurring in

4. Environmental Checklist

	suitable nesting habitat that is to be disturbed and (as access to adjacent areas allows) any other such habitat within 300 feet of the disturbance area (within 500 feet for raptors). The surveys shall continue on a weekly basis with the last survey being conducted no more than three days prior to the initiation of project activities. If a protected native bird is found, LAUSD shall delay all project activities within 300 feet of the suitable nesting habitat (within 500 feet for suitable raptor nesting habitat) until August 31. Alternatively, the qualified biologist could continue the surveys in order to locate any nests. If an active nest is located, project activities within 300 feet of the nest (within 500 feet for raptor nests), or as determined by a qualified biologist, shall be postponed until the nest is vacated and juveniles have fledged and there is no evidence of a second attempt at nesting. Flagging, stakes, and/or construction fencing shall be used to demarcate the inside boundary of the 300- or 500-foot buffer between the project activities and the nest. Project personnel, including all contractors working on site, shall be instructed on the sensitivity of the area. LAUSD shall provide results of the recommended protective measures to document compliance with applicable State and Federal laws pertaining to the protection of native birds. • If the qualified biologist determines that a narrower buffer between the project activities and observed active nests is warranted, a written explanation as to why (e.g., species-specific information; ambient conditions and birds' habituation to them; and the terrain, vegetation, and birds' lines of sight between the project activities and the nest and foraging areas) shall be submitted to LAUSD OEHS project manager. Construction contractors can then reduce the demarcated buffer. • No construction shall occur within the fenced next zone until the young have fledged, are no longer being fed by the parents, have left the nest, and will no longer by impacted the construction. • A biological monitor shall be present on site during all grubbing and clearing of vegetation to ensure that these activities remain outside the demarcated buffer and that the flagging, stakes, and/or construction fencing are maintained, and to minimize the likelihood that active nests are abandoned or fail due to project activities. The biological monitor shall send weekly monitoring reports to LAUSD OEHS project manager during the grubbing and clearing of vegetation, and shall notify LAUSD immediately if project activities damage avian nests.
SC-BIO-4	LAUSD shall comply with the following: • Mitigation shall not include translocation of rare plants. CDFW, in most cases does not recommend translocation, salvage, and/or transplantation of rare, threatened, or endangered plant species, in particular oak trees, as compensation for adverse effects because successful implementation of translocation is rare. Even if translocation is initially successful, it will typically fail to persist over time. • **Permanent conservation of habitat.** To ensure the conservation of sensitive plant species, the preferred method is permanent conservation of habitat containing these species; any translocation proposed shall only be an experimental component of a larger, more robust plan. • **Off-site acquisition of woodland habitat.** Due to the inherent difficulty in creating functional woodland habitat with associated understory components, the preferred method is off-site acquisition of woodland habitat in the local area. All acquired habitat shall be protected under a conservation easement and deeded to a local land conservancy for management and protection. • **Creation of oak woodlands**. Any creation of functioning woodlands shall be of similar composition, structure, and function of the affected oak woodland. The new woodland shall mimic the function, demonstrate recruitment, plant density, and percent basil, canopy, and vegetation cover, as well as other measurable success criteria before the measure is deemed a success. - All seed and shrub sources used for tree and understory species in the new planting site shall be collected or grown from on-site sources or from adjacent areas and shall not be purchased from a supplier. This method should reduce the risk of introducing diseases and pathogens into areas where they might not currently exist. - Oaks should be replaced by planting acorns because this has been shown to result in greater oak survival. Monitoring efforts, including the exclusion of herbivores, shall be employed to maximize seedling survival during the monitoring period. - Monitoring period for oak woodland shall be at least 10 years with a minimum of seven years without supplemental irrigation. This allows the trees to go through one typical

	drought cycle. This should also be the minimal time needed to see signs of stress and disease and determine the need for replacement plantings. LAUSD shall request CDFW review and comment on any translocation plans, habitat preservation, habitat creation and/or restoration plans.
SC-BIO-5	LAUSD shall comply with CDFW recommendations as listed below:[42] • Project development or conversion that results in a reduction of wetland acreage or wetland habitat values shall not occur unless, at a minimum, replacement or preservation results in "no net loss" of either wetland habitat values or acreage. • All wetlands and watercourses, whether intermittent or perennial, should be retained and provided with substantial setbacks which preserve the riparian and aquatic values and maintain their value to on-site and off-site wildlife populations. • A jurisdictional delineation of creeks and their associated riparian habitats shall be conducted as part of the biological resources report. The delineation should be conducted pursuant to the USFWS wetland definition. Implementation of recommended measures shall compensate for affected mature riparian corridors and loss of function and value of wildlife corridors.

4.4.1.1 DESCRIPTION OF BASELINE CONDITIONS

The Project site is an active middle school campus that has been previously disturbed, cleared of native vegetation, and currently contains school buildings, facilities, and scattered landscaped vegetation. An arborist survey was completed for the proposed Project.[43] The survey inventoried 156 trees and noted two protected native coast live oak (*Quercus agrifolia*) (which are protected by the City of Los Angeles) in the Project site and 37 City of Los Angeles-protected street trees on the three streets that border the campus.

The trees (and buildings and structures) on the campus have the potential to serve as nesting sites for birds and bats; however, the Project site is located in a highly urbanized area of the City of Los Angeles. The campus has been fully developed and does not contain any habitat to support candidate, sensitive, or special-status species; riparian habitat; or other natural habitats such as wetlands. Special-status plant and wildlife species are those that are candidates, proposed, or listed as threatened or endangered by the United States Fish and Wildlife Service (USFWS) or the California Department of Fish and Wildlife (CDFW), and plant species that are considered sensitive by the California Native Plant Society (CNPS). According to a CDFW California Natural Diversity Database (CNDDB) search of the Hollywood, California United States Geologic Survey (USGS) 7.5-minute topographic quadrangle map, and surrounding 8 quadrangle maps, there are 27 species in the vicinity of the Project site that are considered special status by local, state, and federal agencies (Appendix B). However, the Project site does not contain suitable habitat necessary to support special-status wildlife species.[44] To manage the preservation of these species, and the more than 180 species identified as threatened or endangered by the City of Los Angeles General Plan, Significant Ecological Areas (SEAs) have been identified throughout the City on the basis of existing known habitats of sensitive or endangered species. The Project site is not located near or within an SEA and the nearest SEA is Griffith Park and is located approximately 4.5 miles north of the Project site.[45]

[42] Recommendations as listed in CDFW SUP Draft EIR comment letter dated August 4, 2014.
[43] Ibid.
[44] California Department of Fish and Wildlife (CDFW), California Natural Diversity Database. July 30, 2017.
[45] Los Angeles County Department of Regional Planning, 2017. Planning and Zoning Information, GIS-Net 3. SEA Layer. Available at : http://gis.planning.lacounty.gov/GIS-NET3_Public/Viewer.html, accessed August 10, 2017.

4.4.2 Impact Analysis

Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

No Impact. The Project site is located on an active middle school campus that contains no native vegetation capable of supporting any special-status plant or wildlife species. The Project site is entirely developed and surrounded by residential development in all directions. The Project site and surrounding area are not mapped within a SEA. The Project site does not contain any species that are identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or protected by the CDFW or USFWS (Appendix B).[46] The likelihood of species dispersal, whether plants or wildlife, from surrounding areas to the Project site is extremely low. Therefore, the project would have no impact on special-status species and this issue will not be further discussed in the EIR.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

No Impact. The Project site does not contain any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or USFWS. The Project site is entirely developed and does not contain any natural drainages or water courses, which would potentially support riparian habitat, or natural undeveloped areas that may contain any other sensitive natural community. Therefore, there would be no impact and no further analysis is required in the EIR.

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. Generally, the entire school campus is developed with buildings, parking lots, hardscape including walkways and hardcourts, and landscaped areas including playfields. The Project site does not contain any federally protected wetlands as defined by Section 404 of the Clean Water Act (including but not limited to, marsh, vernal pool, coastal etc.). Additionally, no wetlands protected by CDFW and/or the Regional Water Quality Control Board (RWQCB) occur on the Project site. The Project site is entirely developed and does not contain any waterways or undeveloped land capable of supporting federally protected wetlands. Therefore, no impact to wetlands would occur through direct removal, filling, hydrological interruption, or other means. This issue will not be further discussed in the EIR.

[46] California Department of Fish and Wildlife (CDFW), California Natural Diversity Database. July 30, 2017.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less than Significant Impact. The Project site does not contain any water courses or greenbelts for wildlife movement, or native vegetation and undeveloped land capable of supporting fish or the movement of wildlife, particularly corridors that facilitate movement of species between larger stands of native habitat. The nearest identified habitat linkage occurs in the Santa Monica Mountains 3 miles north of the Project site, well outside the potential impact area for the proposed Project. Therefore, the proposed Project would have no impact on the movement of any wildlife species or impede the use of migratory wildlife corridors.

Tree removal and building demolition may have the potential to disrupt birds that are nesting in the trees or buildings during breeding season (February 1 through August 31). Construction related noise and vibration also have the potential to disrupt birds during the avian breeding season. Additionally, the Project site contains buildings that may be used by bats as nursery sites during the bat maternity roosting season of March through August. Therefore, construction activities (including demolition) have the potential to impact nesting birds or maternity roosting bats. However, the proposed Project would implement SC-BIO-3 as necessary. Following the completion of a pre-construction clearance survey, the implementation of measures provided in SC-BIO-3 would reduce impacts to less than significant. These measures include commencing tree removal and demolition activities outside of avian nesting season and bat maternity roosting season. Therefore, impacts would be less than significant and no further analysis is required in the EIR.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less Than Significant Impact. The Project site is located within an entirely developed area surrounded by residential and commercial development within the City of Los Angeles and is not located within any SEA protecting biological resources.[47] The Project site contains trees for landscape fronting Wilshire Boulevard, South McCadden Place, and West 6th Street that are considered significant character defining features of the Project site. Additionally, the Project site contains two Coast live oak (Quercus agrifolia) trees that are considered protected under the City of Los Angeles Municipal Code Sections 46.00 et seq.

Construction of the proposed Project may require the removal of street trees and trees onsite. The Project would include a landscape plan to offset the loss of trees on the Project site. All recommendations contained in the project-specific Arborist Protected Tree Report are incorporated into the proposed Project during construction. Replacement trees will be planted at the appropriate size at maturity for the space, and will be selected from the LAUSD Approved Plant List.[48] In accordance with the City of Los Angeles' Protected Tree Ordinance and District Tree Guidelines, LAUSD will complete the City's tree removal permit process, as

[47] Ibid.

[48] LAUSD, LAUSD Approved Plants List, 2012, http://www.laschools.org/documents/download/sustainability%2Fwater_conservation%2FCopy_of_Updated_Plant_List_2012.pdf

appropriate. Therefore, impacts conflicting with local policies and ordinances, including tree protection ordinances, would be less than significant and no further analysis is required in the EIR.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The Project site is not located within a Habitat Conservation Plan, Natural Community Conservation Plan, or similar plan.[49] The Project site is not located within or proximate to any SEA, Land Trust, or Conservation Plan. Therefore, no impact resulting from a conflict with an adopted conservation plan would occur and this issue will not be further analyzed in the EIR.

4.5 CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
V. CULTURAL RESOURCES: Would the project:				
a. Cause a substantial adverse change in significance of a historical resource as defined in State CEQA §15064.5?	☒	☐	☐	☐
b. Cause a substantial adverse change in significance of an archaeological resource pursuant to State CEQA §15064.5?	☒	☐	☐	☐
c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☒	☐	☐	☐
d. Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☒	☐

4.5.1 Impact Analysis

Would the project:

a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?

Potentially Significant Impact. During the Phase I Survey conducted on March 15, 2002, Burroughs MS was assigned a California Historical Resource Status Code of 3S and 3CS, which means the campus appears eligible for National Register and California Register through survey evaluation.[50] A historic resources technical report and cultural resources analysis will be prepared as part of the Draft EIR, which will identify any historic resources within the Project site and surrounding area. The Draft EIR will also evaluate the potential for implementation of the project to substantially change the significance of an identified historical resource and will include mitigation measures to reduce impacts to historical resources, if necessary.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Potentially Significant Impact. While the project is disturbed due to prior development, demolition, and redevelopment, ground-disturbing activities associated with construction of the project could result in the inadvertent discovery of unknown archaeological resources. A cultural resources analysis, including a records search, will be prepared as part of the Draft EIR. The Draft EIR will identify any known archaeological resources within the Project site or within the surrounding area as well as evaluate potential impacts to these resources from development of the project, if any. If significant impacts to archeological resources are

[50] Leslie J. Heumann, SAIC, *DPR Primary Record Form for Burroughs Middle School*, Prepared for LAUSD March 15, 2002.

identified, the Draft EIR will include mitigation measures, if necessary, to reduce these impacts to extent feasible.

c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Potentially Significant Impact. Ground-disturbing activities, such as excavation or trenching, during construction of the project could have the potential to encounter the undisturbed alluvium soils, which have the potential to contain unknown paleontological resources. The Draft EIR will describe in greater detail the paleontological setting of the project area as well as evaluate the potential for impacts to paleontological resources associated with construction of the project. Further, if necessary, mitigation measures will be developed to reduce impacts to a level of less than significant

d) Disturb any human remains, including those interred outside of dedicated cemeteries.

Less than Significant Impact. No known cemeteries or other burial places are known to exist within the Project site and the proposed Project is unlikely to disturb human remains. However, because the proposed Project would involve ground-disturbing activities, it is possible that such actions could unearth, expose, or disturb previously unknown human remains. In the event that human remains are encountered, the District would comply with State Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98. Pursuant to these codes, in the event of the discovery of unrecorded human remains during construction, construction excavations shall be halted and the County Coroner shall be notified. If the human remains are determined to be Native American, the California Native American Heritage Commission shall be consulted to designate a Most Likely Descendant who shall recommend appropriate measures to the landowner regarding the treatment of the remains. Compliance with these protocols would reduce impacts to a less than significant level. No further analysis of this topic in an EIR is required and no mitigation measures are required.

4.6 GEOLOGY AND SOILS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. GEOLOGY AND SOILS. Would the project:				
a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving :				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii. Strong seismic ground shaking?	☐	☐	☒	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☐	☒
iv. Landslides?	☐	☐	☐	☒
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potential result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☐	☒	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒

4.6.1 Discussion

The following evaluation of geology and soils is based, in part, on the Preliminary Geotechnical Hazards Evaluation prepared for the Project site in August 2015[51] and the Supplemental Consultation letter prepared for the Project site in August 2017.[52] The Preliminary Geotechnical Hazards Evaluation assessed geologic and soil conditions at and in the immediate vicinity of the proposed Project site.

[51] Amec Foster Wheeler, 2015. Report of Preliminary Geotechnical Investigation Proposed Modernization, John Burroughs Middle School, 600 South McCadden Place, Los Angeles, California. August 10, 2015.

[52] Amec Foster Wheeler, 2016. *Supplemental Consultation Proposed Modernization, John Burroughs Middle School, 600 South McCadden Place, Los Angeles, California.* August 30, 2016.

4. Environmental Checklist

The Program EIR includes SCs for minimizing impacts to geology and soils of the existing environment in areas where future projects would be implemented under the SUP. Applicable SCs related to geology and soils impacts associated with the proposed Project are provided in **Table 3.6-1**.

TABLE 3.6-1
GEOLOGY AND SOILS STANDARD CONDITIONS OF APPROVAL

Applicable SCs	Description
SC-GEO-1	**OEHS CEQA Specification Manual, Appendix G, Supplemental Geohazard Assessment Scope of Work.** This document outlines the procedures and scope for LAUSD geohazard assessments.
SC-HWQ-1	**Stormwater Technical Manual** This manual establishes design requirements and provides guidance for the cost-effective improvement of water quality in new and significantly redeveloped LAUSD school sites. These guidelines are intended to improve water quality and mitigate potential impacts to the Maximum Extent Practicable (MEP). While these guidelines meet current post-construction Standard Urban Stormwater Mitigation Plan (SUSMP) requirements. The guidelines address the mandated post-construction element of the NPDES program requirements.
SC-HWQ-2	**Compliance Checklist for Storm Water Requirements at Construction Sites.** This checklist has requirements for compliance with the General Construction Activity Permit and is used by OEHS to evaluate permit compliance. Requirements listed include a SWPPP; BMPs for minimizing storm water pollution to be specified in a SWPPP; and monitoring storm water discharges to ensure that sedimentation of downstream waters remains within regulatory limits.

4.6.2 Impact Analysis

Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

i)Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to Division of Mines and Geology Special Publication 42.)

No Impact. The Alquist-Priolo Earthquake Fault Zoning Act requires the delineation of zones along active faults in California. The purpose of the Alquist-Priolo Act is to regulate development and prohibit construction on or near active fault traces to reduce hazards associated with fault rupture. The Alquist-Priolo Earthquake Fault Zones are the regulatory zones that include surface traces of active faults. There are no active faults crossing the Project site, and the Project site is not located within an Alquist-Priolo Earthquake Fault Zone.[53] The closest historically active surface faults are the Hollywood Fault, located approximately 2.8 miles north of the Project site, and the Newport-Inglewood Fault Zone, located approximately 3.6 miles southwest of the

[53] Amec Foster Wheeler, 2015. Report of Preliminary Geotechnical Investigation Proposed Modernization, John Burroughs Middle School, 600 South McCadden Place, Los Angeles, California. August 10, 2015.

Project site.[54] Therefore, there would be no impact associated with rupture of a known earthquake fault. This issue will not be analyzed further in the Draft EIR.

ii) Strong seismic ground shaking?

Less than Significant Impact. The Project site is located in a seismically active region. The City, as with all of Southern California, is subject to strong ground shaking. The closest historically active surface faults are the Hollywood Fault located approximately 2.8 miles north of the Project site and the Newport-Inglewood Fault Zone located approximately 3.6 miles southwest of the Project site. These faults could have the potential to generate strong seismic ground shaking at the Project site during an earthquake event.[55] The proposed Project would be required to comply with the geotechnical and seismic design requirements of the most recent version of the California Building Code (CBC) (Title 24), which requires structural design that can accommodate ground accelerations expected from known active faults. In addition, implementation of the proposed Project would seismically retrofit the administrative and auditorium building (including the library), classroom building, and the practice gym. Seismic retrofitting would be in compliance with the seismic safety requirements of the LAUSD Supplemental Geohazard Assessment Scope of Work, CBC, Division of State Architect, California Department of Education, and recommendations contained in the Preliminary Geotechnical Investigation.[56] . The retrofitting activities would include, but would not be limited to bracing and construction and reinforcing of walls. Therefore, implementation of the proposed Project would result in less-than-significant impacts associated with strong seismic ground shaking. No further analysis is required in the Draft EIR.

iii) Seismic-related ground failure, including liquefaction?

No Impact. Liquefaction is a seismic phenomenon where unconsolidated and/or near-saturated soils lose cohesion and are converted to a fluid state as a result of severe vibratory motion. The geotechnical evaluation for the proposed Project determined that the site is not within an area zoned by the state as being susceptible to liquefaction.[57] In addition, the historic high groundwater is deeper than 50 to 70 feet below grade, keeping the potential for soil saturation low. Therefore, no impacts associated with liquefaction would occur and no further analysis of this issue will be included in the Draft EIR.

iv) Landslides?

No Impact. The Project site is not located within an earthquake-induced landslide potential zone.[58] Further, LAUSD policy dictates that schools will not be constructed in areas that are prone to landslides. LAUSD has conducted a comprehensive site-specific geotechnical investigation, which also includes an assessment of existing landslide potential on and next to the Project site, as well as the potential for the project to increase landslide hazards on or adjacent to the site. Implementation of the project would not expose people or

[54] Ibid.
[55] Ibid.
[56] Ibid.
[57] Ibid.
[58] Ibid.

structures to substantial adverse hazards due to landslides, and there would be no impact in this regard. This issue will not be further analyzed in the Draft EIR.

b) Result in substantial soil erosion or the loss of topsoil?

Less than Significant Impact The proposed Project would include grading and earthmoving activities at the Project site that could expose soils to erosion from heavy winds, rainfall, or runoff. Because project construction would disturb more than 1 acre of soil, the project would be required to comply with SC-GEO-1 Geohazard Assessment Scope of Work, including the National Pollutant Discharge Elimination System (NPDES) Construction General Permit. In compliance with this permit and SC-HWQ-1 and SC-HWQ-2, a Storm Water Pollution Prevention Program (SWPPP) would be prepared and implemented, which would require erosion control, sediment control, and BMPs to minimize loss of topsoil or substantial erosion. Construction contractors are responsible for implementation of the SWPPP, which includes maintenance, inspection, and repair of erosion and sediment control measures and water quality BMPs throughout the construction period. Once constructed, disturbed areas would be protected by coverings such as structures, pavement, concrete, or vegetation, and the potential for long-term erosion or loss of topsoil would be reduced to less than significant. Therefore, with implementation of these requirements and associated BMPs, erosion related to construction activities and operation of the proposed Project would be less than significant and no mitigation is required. This issue will not be further analyzed in the Draft EIR.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less than Significant Impact. As stated above, the Project site is developed with generally flat topography. With the exception of the area in the immediate vicinity of the existing cafeteria-classroom building and the adjacent lunch shelter, records documenting the placement and compaction of the existing fill soils are not available; therefore, the existing fill soils are not considered suitable for support of new structures on conventional spread/continuous footings. Therefore, project development may result in potentially significant impacts regarding unstable soils. However, DSA would require the preparation of a project-specific, design-level Geotechnical Investigation Report to supplement the Preliminary Geotechnical Report (Appendix C) and would further require that all recommendations contained in the project-specific geotechnical report be incorporated into proposed Project design and implemented during construction. The investigation shall include recommendations applicable to foundation design, earthwork, shoring and site preparation that will minimize the effects of anticipated ground shaking and any other identified geologic hazards. Such recommendations may include but not be limited to removal and replacement of existing unsuitable fill and loose native soils with properly compacted engineered fill, or placement of soils for foundations and pads. The analyses shall be prepared in accordance with applicable City ordinances and policies and consistent with the most recent version of the California Building Code (CBC) and Seismic Hazards Mapping Act, which requires structural design that can mitigate potential risks from geologic or seismic hazards. Implementation of these features, and those contained in the geotechnical report will use proven methods, generally accepted by registered engineers, to reduce the risk for geologic hazards, such as those from unsuitable soils.

Potential impacts associated with unstable soils would be less than significant; therefore, this issue will not be further analyzed in the EIR.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Less than Significant Impact. Expansive soils are predominantly comprised of clays, which expand in volume when water is absorbed and shrink when the soil dries. Expansion is measured by shrink-swell potential, which is the volume change in soil with a gain in moisture. Soils with a moderate to high shrink-swell potential can cause damage to buildings and infrastructure. The upper clayey soils (both fill and natural) are expansive, and will shrink and swell with fluctuations in moisture content.[59] Future facilities within the project area may be exposed to potential significant impacts regarding expansive soils. However, as stated above in impact c), DSA would require the preparation of a project-specific, design-level Geotechnical Investigation Report to supplement the Preliminary Geotechnical Report (Appendix C) and would further require that all recommendations contained in the project-specific geotechnical report be incorporated into proposed Project design and implemented during construction. The investigation shall include recommendations applicable to foundation design, earthwork, shoring and site preparation that will minimize the effects of anticipated ground shaking and any other identified geologic hazards. Such recommendations may include but not be limited to removal and replacement of existing unsuitable fill and loose native soils with properly compacted engineered fill, or placement of soils for foundations and pads. The analyses shall be prepared in accordance with applicable City ordinances and policies and consistent with the most recent version of the California Building Code (CBC) and Seismic Hazards Mapping Act, which requires structural design that can mitigate potential risks from geologic or seismic hazards. Implementation of these features, and those contained in the geotechnical report will use proven methods, generally accepted by registered engineers, to reduce the risk for geologic hazards, such as those from unsuitable soils. Potential impacts associated with unstable soils would be less than significant; therefore, this issue will not be further analyzed in the EIR.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. The proposed Project would not include the installation or use of septic tanks or alternative wastewater disposal systems. The proposed Project would connect to the existing sanitary sewer system for wastewater disposal. Thus, no impact related to alternative wastewater disposal systems would occur and no further analysis is warranted in the EIR.

---

[59] Ibid.

4.7 GREENHOUSE GAS EMISSIONS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GREENHOUSE GAS EMISSIONS. Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

4.7.1 Discussion

The PEIR includes SCs for minimizing impacts related to greenhouse gas (GHG) emissions in areas where future projects would be implemented under the SUP. Applicable SCs related to GHG emissions impacts associated with the proposed Project are provided in **Table 3.7-1**.

TABLE 3.7-1
GREENHOUSE GAS EMISSIONS STANDARD CONDITIONS OF APPROVAL

Applicable SCs	Description
SC-GHG-1	During school operation, LAUSD shall perform regular preventative maintenance on pumps, valves, piping and tanks to minimize water loss.
SC-GHG-2	LAUSD shall utilize automatic sprinklers set to irrigate landscaping during the early morning hours to reduce water loss from evaporation.
SC-GHG-3	LAUSD shall reset automatic sprinkler timers to water less during cooler months and rainy season.
SC-GHG-4	LAUSD shall develop a water budget for landscape (both non-recreational and recreational) and ornamental water use to conform to the local water efficient landscape ordinance. If no local ordinance is applicable, then use the landscape and ornamental budget outlined by the California Department of Water Resources.
SC-GHG-5	LAUSD shall ensure that the time dependent valued energy of the proposed Project design is at least 10 percent, with a goal of 20 percent less than a standard design that is in minimum compliance with the California Title 24, Part 6 energy efficiency standards that are in force at the time the project is submitted to the Division of the State Architect.

4.7.2 Impact Analysis

Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less Than Significant Impact. As described in the SUP PEIR, modernization projects are anticipated to reduced operational emissions due to increased energy efficiency. In addition, the proposed project would not increase the number of students or faculty at the school and therefore, would not increase GHG emissions associated operations. With respect to all SUP projects, implementation of SCs GHG 1 through GHG 5 would ensure that the proposed Project would not indirectly or directly result in a significant impact on the environment. Therefore, with project implementation and adherence to SCs GHG-1 through GHG-5, the project would not indirectly or directly result in a significant impact on the environment. Therefore, impacts would be less than significant and no further analysis is required in the EIR.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less than Significant Impact. As described in the SUP PEIR, implementation of the SUP would be consistent with plans adopted for the purpose of reducing GHG emissions, such as the SCAG Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), California Assembly Bill 32, California Air Resources Board Scoping Plan, and other statewide strategies to reduce GHG emissions.[60] Development of the proposed Project would replace and modernize facilities at Burroughs MS, but it would not increase the number of students or faculty at the school and therefore, would not increase GHG emissions. As such, the project would not conflict with the goals of the RTP/SCS.

Additionally, SUP-related projects, including the proposed Project, would comply with the District's GHG emission reduction measures. LAUSD's School Design Guide requires construction contractors to reuse, recycle, and salvage non-hazardous materials generated during demolition and/or new construction, as materials recovery would minimize the need to produce and transport new materials, thereby reducing emissions from mobile sources and energy use.[61] With respect to all SUP projects, implementation of SCs GHG-1 through GHG-5 would ensure that the proposed Project would not conflict with any plans, policies or regulations adopted for the purpose of reducing GHG emissions. Therefore, with project implementation and adherence to SCs GHG-1 through GHG-5 and compliance with Title 24, the project would not conflict with plans, policies, or regulations adopted for the purpose of reducing GHG emissions. Therefore, impacts would be less than significant and no further analysis is required in the EIR.

[60] LAUSD. 2015. School Upgrade Program Final Environmental Impact Report, http://achieve.lausd.net/ceqa. Adopted by the Board of Education on November 10, 2015. Pg. 5.7-18 to 5.7-19.

4.8 HAZARDS AND HAZARDOUS MATERIALS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☒	☐	☐	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☒	☐	☐	☐
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for the people residing or working in the area?	☐	☐	☐	☒
g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	☐	☐	☐	☒

4. Environmental Checklist

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
i. Be located on a site that is (a) a current or former hazardous waste disposal site or solid waste disposal site and, if so, has the waste been removed; (b) a hazardous substance release site identified by the State Department of Health Services in a current list adopted pursuant to Section 25356 for removal or remedial action pursuant to Chapter 6.8 of Division 20 of the Health and Safety Code; or a site that contains one or more pipelines, situated underground or above ground, which carries hazardous substances, acutely hazardous materials or hazardous wastes, unless the pipeline is a natural gas line which is used only to supply natural gas to that school or neighborhood?	☐	☐	☐	☒
j. Be located within one-fourth of a mile of any facilities which might be reasonably anticipated to emit hazardous or acutely hazardous substances or waste?	☐	☐	☐	☒
k. Be located on a site where the property line is less than the following distance from the edge of respective power line easements? 100 feet of a 50-133 kV line, 150 feet of a 220-230 kV line, or 350 feet of a 500-550 kV line.	☐	☐	☐	☒
l. Be located on a site that is within 1,500 feet of a railroad track easement?	☐	☐	☐	☒
m. Be located on a site that is adjacent to or near a major arterial roadway or freeway that may pose a safety hazard?	☒	☐	☐	☐
n. Be located on a site that is near a reservoir, water storage tanks, or high-pressure water pipelines?	☐	☐	☒	☐
o. Be located within 1,500 feet of a pipeline that may pose a safety hazard?	☐	☐	☒	☐
p. Be located on a site that contains, or is near, propane tanks that can pose a safety hazard?	☐	☐	☒	☐
q. Be located on a site that does not have a proportionate length to width ratio to accommodate the building layout, parking and playfields that cannot be safely supervised?	☐	☐	☐	☒
r. Be located on a site where the existing or proposed zoning of the surrounding properties is incompatible with schools and may pose a health or safety risk to students?	☐	☐	☐	☒
s. Be located on a site with a traffic pattern for school buses that can pose a safety hazard?	☒	☐	☐	☐

t. Be located on a site that is within 2,000 feet of a significant disposal of hazardous waste?	☐	☐	☐	☒

4.8.1 Discussion

The following evaluation of hazards and hazardous materials is based, in part, on the Phase I Environmental Site Assessment (Phase I ESA) prepared for the Project site in May 2016.[62] The Phase I ESA, which is included as Appendix D of this IS, provides an assessment of environmental conditions as they exist on the Burroughs MS property.

4.8.2 Impact Analysis

Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than Significant Impact. Proposed project construction activities would involve transport, use, and disposal of hazardous materials such as solvents, oils, grease, and cleaning fluids. In addition, hazardous materials may be needed for fueling and servicing construction equipment on the Project site. The use of these materials during project construction would be short-term in nature, and would occur in accordance with standard construction practices. All transport, handling, use, and disposal of substances such as petroleum products related to construction would comply with all federal, state, and local laws regulating the management and use of hazardous materials. These laws include but are not limited to: the Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), federal Clean Air Act that regulates asbestos as a hazardous air pollutant and the Occupational Safety and Health Administration (OSHA) that regulates asbestos as a potential worker safety hazard. Construction activities that involve hazardous materials would be governed by several agencies, including the California Environmental Protection Agency (CalEPA), Caltrans, California Division of Occupational Safety and Health (Cal/OSHA), Department of Toxic Substances Control (DTSC), and the Los Angeles Fire Department. BMPs would be in place to ensure the lawful and proper storage and use of these materials and thus potential impacts would be would be less than significant. As discussed in the Program EIR, the types and amounts of hazardous materials that are now handled by LAUSD are not expected to substantially change upon construction of individual projects or upon completion of the SUP in its entirety. The amounts of hazardous materials handled at a given campus would remain relatively small and would be subject to federal, state, and local health and safety requirements. LAUSD would continue to implement its existing programs, practices, and procedures for handling hazardous materials, which would be extended to all new facilities. Proposed Project impacts from

[62] WorleyParsons, 2016. *Phase I Environmental Site Assessment, John Burroughs Middle School, 600 South McCadden Place, Los Angeles, CA.* May 18, 2016.

construction activities would thus be less than significant. No further analysis of these impacts is required in the Draft EIR.

An important component of the SUP is to eliminate hazards associated with asbestos and lead-based paint in existing buildings to be demolished, as would be the case with the proposed Project. With respect to asbestos-containing materials (ACM), the PEIR provides a complete protocol for the handing of ACM, including required procedures whenever ACM would be disturbed, in compliance with federal and state regulations.

The federal Clean Air Act regulates asbestos as a hazardous air pollutant, which subjects it to regulation by the SCAQMD under its Rule 1403. OSHA also regulates asbestos as a potential worker safety hazard. The Asbestos-Containing Materials in Schools rule (Code of Federal Regulations [CFR] Title 40, Part 763) requires local education agencies to inspect school buildings for asbestos-containing building materials, prepare asbestos management plans, and perform asbestos response actions to prevent or reduce asbestos hazards. Compliance with asbestos regulations and requirements is the responsibility of the District's Facilities Environmental Technical Unit (FETU).

The Phase I ESA for the proposed Project indicated that based on the age of the existing buildings. it is possible that ACM are present in building materials.[63] All ACM must be removed by licensed asbestos abatement contractors or by trained and certified FETU personnel using specific handling procedures. In addition, construction contractors are required to comply with the requirements of the District's Standard Specification Section 13280, "Asbestos Abatement and Asbestos Related Disturbance" during any project where ACM may be disturbed. Compliance with federal and state regulations and the District guidelines and procedures would ensure the reduced risk of release of hazardous building materials into the environment. Therefore, impacts associated with the handling and disposal of ACM would be less than significant. No further analysis of these impacts is required in the Draft EIR.

The Phase I ESA for the proposed Project indicated that based on the age of the existing site buildings, it is possible that LBP has been applied to the exterior finishes of the buildings. Therefore, it is possible that LBP residue is present in soils around the perimeters of the existing and former buildings.[64] Specific procedures for handling building materials that may contain lead include, but are not limited to, lead abatement performed by contractors certified by the California Department of Public Health, review of assessment reports addressing the impact to lead-based materials, written approval by the District's environmental representative of the abatement work plan, and transportation of lead-related waste under a Uniform Hazardous Waste Manifest. In addition, construction contractors are required to comply with the requirements of the District's Standard Specification Section 13282, "Lead Abatement and Lead Related Construction Work" during any project where lead-containing materials may be disturbed. Compliance with federal and state regulations and the District guidelines and procedures would ensure that impacts associated with the handling and disposal of LBP would be less than significant. Long-term operation of the proposed Project would involve very little transport, storage, use, or disposal of hazardous materials and substances. LAUSD's OEHS developed and implemented

[63] WorleyParsons, 2016. *Phase I Environmental Site Assessment, John Burroughs Middle School, 600 South McCadden Place, Los Angeles, CA.* May 18, 2016.
[64] Ibid.

a Chemical Hygiene Plan to minimize employee and student exposure to hazardous chemicals in schools with laboratories. Site administrators are required to appoint a chemical safety coordinator to implement the Chemical Hygiene Plan and to assist the site administrator in complying with hazardous material management, conducting employee trainings, and established laboratory safety protocols. The types of hazardous materials associated with operation of a school would generally be limited to those associated with janitorial, maintenance, and repair activities, such as commercial cleansers, paints, aerosol cans, lubricants, and automotive supplies (by-products), etc. The amounts and use of these materials would be limited, and the transport, storage, use, and disposal of these materials would be subject to federal, state, and local health and safety requirements. Such requirements would be incorporated into the design and operation of the project, such as providing for and maintaining safety data sheets, appropriate storage areas for hazardous materials, and installing or affixing appropriate warning signs and labels. Therefore, the proposed Project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. No further analysis of these impacts is required in the Draft EIR.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Potentially Significant Impact. A significant impact would occur if the proposed Project created a significant hazard to the public or environment due to a reasonably foreseeable release of hazardous materials. According to the Phase I ESA, electrical transformers, compressed gas cylinders, an idle emergency generator, and historical uses of gas fueling stations and one incinerator are or were present on site.[65] Therefore, there is the potential for various hazardous materials to be located in soils and building materials at the Project site and to cause a significant impact. Further site assessment is in progress and this issue will be further evaluated in the Draft EIR.

The Project site is located in an area designated by the City of Los Angeles Department of Building and Safety (LADBS) as a Methane Zone due to known deposits of petroleum tar and naturally-occurring oil field gases in the geologic formations in the site vicinity. Oil field gases are typically comprised of significant concentrations of methane, which is flammable and would represent a fire hazard if allowed to seep into an enclosed space. Oil field gases may also contain trace amounts of various sulfide compounds, including hydrogen sulfide, which though acutely toxic, is readily detectable at non-hazardous concentrations by its distinct 'rotten egg' odor. Although no incidents of noticeable oil field gas seepage have been reported in the immediate vicinity of the site, a fire due to gas seepage did occur in 1985 in the area of 3rd and Fairfax, approximately 1.5 miles west-northwest of the site. Conceivably gas seepage could occur at the site if geologic conditions were to change due to seismic activity or gas pathways were to open up as a result of construction activities in the vicinity of the site.

As a precautionary measure, all new buildings and paved areas planned at the site will incorporate provisions for gas mitigation equivalent to those set forth in the Los Angles Building Code, Division 71, and the Methane

[65] Ibid.

Mitigation Standards established by the LADBS. Implementation of appropriate gas mitigation measures will reduce the potential risk to students, staff, and visitors from oil field gas seepage. This topic will be evaluated further in the EIR.

The Draft EIR will analyze the potential for the release of hazardous materials and the risk of exposing persons to any hazardous materials. The Draft EIR will identify any potentially significant impacts associated with the proposed Project and recommend mitigation measures, as necessary.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Potentially Significant Impact. The proposed Project would be implemented on a school site surrounded by residential uses. Further, the Wilshire Private School is located across Wilshire Boulevard to the south of the Project site. The proposed Project would involve the excavation and removal of impacted soil. Dust control measures would be implemented during remedial activities to reduce the potential for fugitive dust and migration of contaminants in compliance with requirements contained in SCAQMD Rule 402. Removal of impacted soil would be completed in conformance with federal, state, and local hazardous waste/materials regulations, as well as with any applicable District standards. Compliance with regulatory requirements would ensure that the proposed Project would not result in hazardous emissions, materials or substances within 0.25 miles of an existing school. The Draft EIR will further analyze the potential for the release of hazardous materials and the risk of exposing persons to any hazardous materials. The Draft EIR will identify any potentially significant impacts associated with the proposed Project and recommend mitigation measures, as necessary.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. Government Code Section 65962.5, amended in 1992, requires CalEPA to develop and update annually the Cortese List, which is a list of hazardous waste sites and other contaminated sites. While Government Code Section 65962.5 makes reference to the preparation of a list, many changes have occurred related to web-based information access since 1992, and information regarding the Cortese List is now compiled on the websites of DTSC, the State Water Board, and CalEPA. DTSC maintains the EnviroStor database, which includes sites on the Cortese List and also identifies potentially hazardous sites where cleanup actions (such as removal action) or extensive investigations are planned or have occurred. Review of the EnviroStor database showed that the Project site is not identified on any of the above database lists. According to both the EnviroStor[66] and GeoTracker[67] databases, there are no documented hazardous materials at the Project site. The proposed Project would not be located on a site that is included on a list of hazardous materials sites pursuant

[66] DTSC, 2017. EnviroStor Database. Available at: https://www.envirostor.dtsc.ca.gov/public/, accessed August 16, 2017.
[67] SWRCB, 2017. GeoTracker Map. Available at: https://geotracker.waterboards.ca.gov/, accessed August 16, 2017.

to Government Code Section 65962.5, and therefore no impact would occur. No further analysis will be included in the Draft EIR.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

No Impact. The nearest airport to the Project site is the Santa Monica Airport, located approximately 6.8 miles southwest of the Project site. The proposed Project is not located within the Santa Monica Land Use Plan Airport Influence Area. Therefore, the proposed Project would not create a safety hazard from proximity to a public airport. No impact would occur and this issue will not be discussed further in the Draft EIR.

f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

No Impact. The Project site is not located within two miles of an operating airport. There are 54 private-use heliports within the City of Los Angeles.[68] The Project site does not include a private-use heliport. The nearest private heliport, the Beverly Center Heliport is located approximately 2.5 miles northwest of the Project site. Demolition and new construction at the existing school site would not create any new safety hazards associated with a private airstrip or heliport operations. Therefore, the proposed Project would not create a safety hazard from proximity to a private airstrip. No impact would occur, and this issue will not be further discussed in the Draft EIR.

g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact. The Project site is an existing school campus that would adhere to LAUSD's emergency response plans. During construction, emergency response procedures would be governed by the District's emergency response protocol and the contractor's emergency response plan. Construction of the proposed Project would involve the transport of equipment and materials on public roadways. Other than delivery of materials and supplies to the Project site and the hauling of debris and soil from the Project site, construction of the proposed Project would be confined within the campus boundaries.

Upon completion of the proposed Project, District-wide emergency response plans, policies, and guidance developed by LAUSD would be extended to the new facilities. In addition, LAUSD developed a district-wide Emergency Operations Plan (EOP) that assigns responsibilities and provides a framework for coordination of response and recovery efforts in the event of an emergency. District schools are also required to comply with California Code Sections 32281-32289, dealing with the preparation of Safe School Plans (SSPs), which must be reviewed and updated every year. As noted in the PEIR, the proposed Project would conform to local ordinances and would not interfere with an existing emergency response or evacuation plan(s); for the City of Los Angeles, these plans include but are not limited to: the City's Emergency Operations Master Plan, Local

[68] Airnav.com. 2017. Airports in Los Angeles. Available at: http://www.airnav.com/airports/get, accessed August 11, 2017.

Hazard Mitigation Plan, the Los Angeles County Operational Area Emergency Response Plan, and the County All-Hazards Mitigation Plan. All construction, modernization, and repair work would not impede emergency access into the surrounding community.

Public schools are considered critical community facilities and are often used as evacuation centers during disasters. Project construction would be completed in phases which would allow partial use of the campus in the event of an emergency. Implementation of the proposed Project includes seismic retrofits to the Administrative/Library/Auditorium Building, Gymnasium Building, and Classroom Building, which would benefit emergency response by making improvements that would comply with current seismic standards and constructing buildings that could be used as evacuation points in the event of a disaster. Therefore, impacts related to interference with adopted emergency evacuation and response plans would be less than significant, and this issue will not be discussed further in the Draft EIR.

h) Expose people or structures to a significant risk of loss, injury or death involving wild land fires, including where wild lands are adjacent to urbanized areas or where residences are intermixed with wild lands?

No Impact. The Project site is located within a highly urbanized area of the City and does not contain dense vegetation (flammable brush) considered to be wildlands. In addition, the Project site is not located within or adjacent to a California Department of Forestry and Fire (CalFire) Fire Hazard Severity Zone.[69] Therefore, the risk for wildland fire is low and implementation of the proposed Project would not expose people of structures to a significant risk involving wildland fires. No impact would occur, and this issue will not be further discussed in the Draft EIR.

i)Be located on a site that is (a) a current or former hazardous waste disposal site or solid waste disposal site and, if so, has the waste been removed; (b) a hazardous substance release site identified by the State Department of Health Services in a current list adopted pursuant to Section 25356 for removal or remedial action pursuant to Chapter 6.8 of Division 20 of the Health and Safety Code; or a site that contains one or more pipelines, situated underground or above ground, which carries hazardous substances, acutely hazardous materials or hazardous wastes, unless the pipeline is a natural gas line which is used only to supply natural gas to that school or neighborhood?

No Impact. The Project site has operated as a middle school campus since 1923. According to both EnviroStor[70] and GeoTracker[71] databases and the Phase I ESA, the Project site is not located on any documented current or former hazardous waste disposal site or solid waste disposal site. The proposed Project location is also not listed as a hazardous substance release site as identified by the State Department of Health Services in a current list adopted pursuant to Section 25356 for removal or remedial action pursuant to Chapter

[69] California Department of Forestry and Fire (CalFire). 2011. Very High Fire Hazard Severity Zones: Los Angeles.
[70] DTSC, 2017. EnviroStor Database. Available at: https://www.envirostor.dtsc.ca.gov/public/, accessed August 16, 2017.
[71] SWRCB, 2017. GeoTracker Map. Available at: https://geotracker.waterboards.ca.gov/, accessed August 16, 2017.

6.8 of Division 20 of the Health and Safety Code. Based on the National Pipeline Mapping System data, there are no pipelines near the Project site.[72] No impact is anticipated to occur as a result of the proposed Projectand this issue will not be further discussed in the Draft EIR.

j) Be located within one-fourth of a mile of any facilities which might be reasonably anticipated to emit hazardous or acutely hazardous substances or waste?

No Impact. According to the EnviroStor and GeoTracker databases and the Phase I ESA prepared for the Project site[73], the Project site is not located within 0.25 miles of a facility that might emit hazardous or acutely hazardous substances or waste. Therefore, no impact would occur and this issue will not be further discussed in the Draft EIR.

k) Be located on a site where the property line is less than the following distance from the edge of respective power line easements? 100 feet of a 50-133 kV line, 150 feet of a 220-230 kV line, or 350 feet of a 500-550 kV line.

No Impact. Pursuant to CCR, Title 5, Section 14010(c), the property line for a new school site shall not be the following minimum distances from the edge of a high-voltage power line easement: 100 feet for 50-133 kV lines; 150 feet for 220-230 kV lines; and 350 feet for 500-550 kV lines. No high-voltage power transmission lines are located within the vicinity of the campus. No 50-133 kV lines, 220-230 kV lines, or 500-550 kV lines were observed within 100, 150, or 350 feet of the campus.[74] The new facilities would be constructed within the existing campus and would not place any new buildings or structures closer to existing utility lines. No impact would occur and this issue will not be further discussed in the Draft EIR.

l) Be located on a site that is within 1,500 feet of a railroad track easement?

No Impact. The Los Angeles County Metro railroad tracks are located approximately 1.5 miles (over 8,000 feet) east of the Project site. Therefore, because the Project site is not located within 1,500 feet of a railroad track, no impact would occur, and this issue will not be further discussed in the Draft EIR.

m) Be located on a site that is adjacent to or near a major arterial roadway or freeway that may pose a safety hazard?

Potentially Significant Impact. The I-110 freeway is located approximately 2.5 miles northeast of the Project site, and the I-10 freeway is located approximately 1.9 miles south of the Project site. The campus frontage is located on South McCadden Place (a two-lane local street), Wilshire Boulevard, and West 6th Street (four-lane arterial roadways). There are sidewalks on each street adjacent to the Project site. The intersection of South McCadden and West 6th Street is signalized, with pedestrian crossing signals and crosswalk pavement markings.

[72] National Pipeline Mapping System (NPMS). NPMS Public Map Viewer. Available at https://www.npms.phmsa.dot.gov/default.aspx. Accessed August 11, 2017.
[73] WorleyParsons, 2016. *Phase I Environmental Site Assessment, John Burroughs Middle School, 600 South McCadden Place, Los Angeles, CA.* May 18, 2016.
[74] Ibid.

The proposed Project's location near these major arterial roadways may pose a safety hazard. Pedestrian safety impacts will be further discussed in the Draft EIR.

n, o) Be located on a site that is near a reservoir, water storage tanks, or high-pressure water pipelines? Be located within 1,500 feet of a pipeline that may pose a safety hazard.

Less Than Significant Impact. According to the Phase I ESA[75] conducted for the proposed Project, no infrastructure, including water storage tanks, high-pressure water lines, and/or hazardous pipelines are located near the Project site. Further, the nearest reservoir to the Project site is the Hollywood Reservoir, located approximately 3.6 miles north of the Project site. Therefore, impacts related to proximity to reservoirs, water storage tanks, high-pressure water pipelines and hazardous pipelines would be less than significant and this issue will not be further analyzed in the Draft EIR.

p) Be located on a site that contains, or is near, propane tanks that can pose a safety hazard?

Less than Significant Impact. No propane tanks are known to be present within the Project site. However, propane tanks could be located at residential properties to the north, east, south across Wilshire Boulevard and west of the Project site. Local regulations pertaining to the storage, transportation, and use of propane would require proper storage, transportation and use of propane tanks. Compliance with existing regulations would reduce the potential safety hazards to individuals on the Project site. Impacts would be less than significant and this issue will not be further analyzed in the Draft EIR.

q) Be located on a site that does not have a proportionate length to width ratio to accommodate the building layout, parking and playfields that cannot be safely supervised?

No Impact. The Project site is an existing school campus with adequate length-to-width ratio to accommodate the building layout, parking, and playfields that can be safely supervised. No impacts would occur, and this issue will not be further analyzed in the Draft EIR.

r) Be located on a site where the existing or proposed zoning of the surrounding properties is incompatible with schools and may pose a health or safety risk to students?

No Impact. The Project site is located within an existing school campus. The Project site is surrounded primarily by residential and commercial designations, which are not considered incompatible with schools. Because the campus is currently in operation and the proposed Project would not include any offsite modifications, the surrounding land uses would not generate or create any additional health or safety risks to students. No impacts would occur and this issue will not be further analyzed in the Draft EIR.

[75] Ibid.

4. Environmental Checklist

s) Be located on a site with a traffic pattern for school buses that can pose a safety hazard?

Potentially Significant Impact. The proposed Project would include newdriveways for bus ingress/egress along Wilshire Boulevard. Drop-off and pick-up pperational changes would occur onsite.. Potential impacts regarding unsafe traffic patterns could thus occur and will be further analyzed in the Draft EIR.

t) Be located on a site that is within 2,000 feet of a significant disposal of hazardous waste?

No Impact. The Project site is located within an existing operating school campus. Surrounding land uses include residential and commercial land uses. According to a search of DTSC Hazardous Waste and Substances Site (Cortese List), the Project site is not within 2,000 feet of a significant disposal of hazardous waste.[76] Therefore, no impact would occur, and this issue will not be analyzed further in the Draft EIR.

---

4. Environmental Checklist

4.9.1 Discussion

The Program EIR includes SCs for minimizing impacts related to hydrology and water quality of the existing environment in areas where future projects would be implemented under the SUP. Applicable SCs related to hydrology and water quality impacts associated with the proposed Project are provided in **Table 3.9-1**.

TABLE 3.9-1
HYDROLOGY AND WATER QUALITY STANDARD CONDITIONS OF APPROVAL

Applicable SCs	Description
SC-HWQ-1	**Stormwater Technical Manual** This manual establishes design requirements and provides guidance for the cost-effective improvement of water quality in new and significantly redeveloped LAUSD school sites. These guidelines are intended to improve water quality and mitigate potential impacts to the Maximum Extent Practicable (MEP). While these guidelines meet current post-construction Standard Urban Stormwater Mitigation Plan (SUSMP) requirements. The guidelines address the mandated post-construction element of the NPDES program requirements.
SC-HWQ-2	**Compliance Checklist for Storm Water Requirements at Construction Sites.** This checklist has requirements for compliance with the General Construction Activity Permit and is used by OEHS to evaluate permit compliance. Requirements listed include a SWPPP; BMPs for minimizing storm water pollution to be specified in a SWPPP; and monitoring storm water discharges to ensure that sedimentation of downstream waters remains within regulatory limits.

4.9.2 Impact Analysis

Would the project:

a) Violate any water quality standards or waste discharge requirements?

Less than Significant Impact. The Project site is located within a dense urban area of the City of Los Angeles, and is currently connected to the City's network of stormwater drainage facilities, which ultimately convey surface water runoff to the Pacific Ocean. Construction of the proposed Project would include site grading. Sediment associated with earthmoving activities and exposed soil is the most common pollutant associated with construction sites. Other pollutants associated with construction include debris/trash and other materials generated during construction activities; hydrocarbons from leaks or spills of fuels, oils, and other fluids associated with construction equipment; and paints, concrete slurries, asphalt materials, and other hazardous materials. Stormwater and non-stormwater runoff could potentially carry these pollutants off site and into the City's drainage system. However, all earthwork activities would be completed in accordance with LAUSD standards and applicable regulations pertaining to stormwater runoff. The SUP PEIR requires all new SUP construction projects to comply with regulatory requirements if they would disturb greater than 1 acre, as would occur for the proposed Project. LAUSD would implement SC-HWQ-1 and SC-HWQ-2, which requires compliance with LAUSD's Stormwater Technical Manual and the District's General Construction Activity Permit. All new construction projects would be required to prepare and implement a sediment and erosion control plan that follow the BMPs outlined by the SWRCB to comply with a Construction General Permit, including development of a SWPPP, as a required by the RWQCB's NPDES The SWPPP would identify site-

specific BMPs to control erosion, sediment, and other potential construction-related pollutants, including, but not limited to, the following:

- Proper storage, use, and disposal of construction materials;
- Removal of sediment from surface runoff before it leaves the Project site by silt fences or other similar devices around the site perimeter;
- Protection of all storm drain inlets on site or downstream of the Project site to eliminate entry of sediment;
- Prevention of tracking soil off site through use of a gravel strip or wash facilities at exits from the Project site;
- Protection or stabilization of stockpiled soils.

LAUSD developed a program-wide SWPPP in 2005, with updates completed in 2007 and 2009. LAUSD's construction contracting protocol for new and existing sites that would undergo land disturbance provides BMPs designed to prevent or minimize stormwater pollution, including submission of a SWPPP.

Adherence to LAUSD standards and applicable regulations, compliance with the NPDES Construction General Permit, and preparation and implementation of a SWPPP prior to construction, would identify site-specific BMPs for erosion control, sediment, and other potential construction-related pollutants. The NPDES Construction General Permit and SWPPP would maintain water quality in accordance with the RWQCB standards, such that construction of the proposed Project would not violate any water quality standards or waste discharge requirements. Therefore, construction-related impacts to water quality would be less than significant. This issue will not be further discussed in the EIR.

b) Substantially deplete groundwater supplies or interfere with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned land uses for which permits have been granted)?

Less than Significant Impact. LADWP supplies water to the Project site. According to its Urban Water Management Plan (UWMP), LADWP's three main sources of water are the Los Angeles Aqueducts, local groundwater, and imported supplemental water purchased from the Metropolitan Water District of Southern California (MWD). In 2009/2010, the City relied on approximately 75,000 acre-feet of groundwater, meeting approximately 14 percent of the City's total annual demand.[77]

Although overall square footage of buildings would decrease and the new facilities would be more efficient, it is assumed that water demand would remain the same as the existing conditions due to landscaping and associated irrigation systems. Therefore, there would be no net deficit in aquifer volume or lowering of the groundwater table near the Project site as the proposed Project would result in water demand similar to existing conditions. SUP-related projects would not result any substantial changes in the quantity of groundwater

[77] LADWP. 2015. *Urban Water Management Plan.* April, 27, 2016.

supplies. Furthermore, no groundwater extraction activities would occur under the proposed Project, nor would any wells be constructed. The proposed Project would replace existing impervious surfaces with other impervious surfaces. Therefore, compliance with applicable laws, regulations, and LAUSD standards during project construction and operation would ensure impacts associated with groundwater supply and groundwater recharge would be less than significant. This issue will not be further discussed in the EIR.

c) Substantially alter the existing drainage pattern of area, including through the alteration of the course of a stream or river, in a manner, which would result in substantial erosion or siltation on or off-site?

Less than Significant Impact. Construction of the proposed Project would temporarily alter the localized drainage pattern at the Project site due to ground-disturbing activities, such as grading and excavation, construction of new building foundations, and trenching for utility improvements. Such alterations in the drainage pattern may temporarily result in erosion or siltation and/or increase the rate or amount of surface runoff if substantial drainage is rerouted. However, compliance with the NPDES Construction General Permit, which requires the development of a SWPPP, would minimize the potential for erosion or siltation and flooding through the implementation of BMPs. Therefore, impacts associated with substantial erosion or siltation and temporary drainage alterations during construction would be less than significant.

The Project site is located within a dense urban area within the City of Los Angeles with an existing network of stormwater drainage facilities, which ultimately convey surface water to the Pacific Ocean. Currently, the Project site is developed with buildings, landscaping, and paved parking areas. Implementation of the proposed Project would not significantly change surface drainage at the Project site, as similar uses would be constructed compared to existing uses.

The proposed Project would employ CHPS criteria, which are intended to avoid water quality impacts and velocity increases where possible. Implementation of the CHPS criteria and LAUSD standard BMPs requiring the collection of surface runoff in stormwater collection system designed for 25-year peak runoff rates, would reduce siltation or erosion impacts to a less-than-significant level. SUP projects, including the proposed Project, would employ features outlined in the LAUSD Technical Manual to reduce the impacts of erosion and siltation, including incorporation of CHPS standards and BMPs relating to the use of native and drought-tolerant landscaping.

Compliance with applicable laws, regulations, and LAUSD SC-HWQ-2 during project construction and operation would ensure that impacts associated with drainage, temporary drainage alterations and erosion are less than significant. This issue will not be further discussed in the EIR.

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner, which would result in flooding on- or off-site?

Less than Significant Impact. As stated in Response IX (c) above, the proposed Project would not substantially alter the local drainage pattern. The proposed Project would use minimal water during construction and operation and would thereby not generate a large amount of runoff as a result of site activities. No stream or river traverses the Project site. BMPs discussed above would control drainage on site, thereby reducing its potential to cause flooding from occurring onsite or offsite. Therefore, flooding impacts resulting from drainage pattern alteration would be less than significant. This issue will not be further discussed in the EIR.

e) Create or contribute runoff water, which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less than Significant Impact. Construction of the proposed Project would temporarily alter flow at the Project site due to ground-disturbing activities, such as grading and excavation, construction of new building foundations, and trenching for new utilities. However, compliance with the NPDES Construction General Permit, which requires development of a SWPPP, would minimize the potential for onsite and offsite flooding as the result of changes to the existing drainage patters through implementation of BMPs. Therefore, impacts associated with onsite and offsite flooding due to temporary drainage alterations during construction would be less than significant.

The Project vicinity is mostly developed with drainage flows over the street network into an urban drainage system that collects rain run-off in the Project vicinity. Rainwater enters gutters in the nearby roadway system and into the storm drain system. The Project would not alter the street networks in the Project vicinity nor their existing offsite drainage systems. The Project would include a new athletic field, which would be larger than the existing field, new landscaped areas, including the central courtyard and a landscaped buffer along McCadden Place, which would increase the amount of pervious surface area. In addition, in accordance with NPDES requirements, the proposed Project would be required to control the rate of surface runoff, and ensure that runoff would not exceed the capacity of the existing or planned stormwater drainage system on site. The proposed drainage system would reduce the overall expected runoff created by the new development. The proposed Project condition is expected to produce 16.892 cubic feet per second (cfs). The proposed Project would include LID compliance with a drainage system that would collect stormwater from area drains, roof drains and convey it to a storage tank. All the stormwater runoff would be treated by hydrodynamic separation unit that serves as a method of pre-treatment prior to be stored in the underground tank. The cleaned water would be stored and pumped out for irrigation purposes. Overflow would be discharged to the curb and gutter on the street via sidewalk culvert. Thus, no long-term runoff would be created that would exceed the capacity of the existing and planned stormwater drainage system and impacts would be less than significant. This issue will not be further discussed in the EIR.

4. Environmental Checklist

f) Otherwise substantially degrade water quality?

Less than Significant Impact. Refer to Response IX (a) above. Construction of the proposed Project would include site grading and excavation. Sediment associated with earthmoving activities and exposed soil is the most common pollutant associated with construction sites. Other pollutants associated with construction include debris/trash and other materials generated during construction activities. Stormwater and non-stormwater runoff could potentially carry these pollutants offsite and into the City's drainage system. However, all earthwork activities would be completed in accordance with LAUSD standards and applicable regulations pertaining to stormwater runoff, such as SC-HWQ-1, which requires compliance with LAUSD's Stormwater Technical Manual and LAUSD' General Construction Activity Permit. All new construction projects would be required to prepare and implement a sediment and erosion control plan that follow the BMPs outlined by the State Water Resources Control Board to comply with a Construction General Permit, including development of a SWPPP, as a required by the RWQCB NPDES. Adherence to LAUSD standards and applicable regulations, compliance with the NPDES Construction General Permit, and preparation and implementation of a SWPPP prior to construction, would identify site-specific BMPs for erosion control, sediment, and other potential construction-related pollutants. The NPDES Construction General Permit and SWPPP would maintain water quality in accordance with the RWQCB standards, such that construction of the proposed Project would not violate any water quality standards. Construction impacts with regard to water quality would be less than significant, and this issue will not be discussed further in the EIR.

g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

No Impact. No housing would be developed as part of the proposed Project. According to the project-specific geotechnical evaluation, the Project site is not located within a Federal Emergency Management Agency (FEMA) mapped flood hazard zone.[78] The Project site is located within Zone X, which is defined by FEMA as areas determined to be outside of the 0.2 percent annual chance flood plain. Therefore, the proposed Project would not result in placing structures in a 100-year flood hazard area. Thus, no impacts to housing from flooding would occur, and this issue will not be discussed further in the EIR.

[78] FEMA,2008. Flood Insurance Rate Map (FIRM) Los Angeles County, CA Panel 06037C of 1605F, http://fema.maps.arcgis.com/home/webmap/viewer.html?webmap=cbe088e7c8704464aa0fc34eb99e7f30&extent=-118.35691102661187,34.05765775515707,118.31536897338812,34.069389850579796, accessed August 11, 2017.

h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?

No Impact. As discussed in the Response IX (g) above, the proposed Project is not located within a Federal Emergency Management Agency (FEMA) mapped flood hazard zone. The Project site is located within Zone X, which is defined by FEMA as areas determined to be outside of the 0.2 percent annual chance flood plain. Therefore, the proposed Project would not result in placing structures within 100-year flood hazard areas that would impede or redirect flood flows. Thus, no impacts to structures from flooding would occur and this issue will not be discussed further in the EIR.

i)Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

Less than Significant Impact. Earthquake-induced flooding is inundation caused by failure of old dams or other water-retaining structures due to earthquakes. According to the project-specific geotechnical evaluation, the site is located within a potential inundation area for an earthquake-induced dam failure from the Hollywood Reservoir, which is located approximately 3.5 miles to the north.[79] However, this dam, as well as others in California, is continually monitored by various governmental agencies (such as the State of California Division of Safety of Dams and the U.S. Army Corps of Engineers) to guard against the threat of dam failure. Therefore, the potential for inundation at the site as a result of an earthquake-induced dam failure is considered low. Potential impacts related to flooding, including failure of a levee or dam, would be less than significant. This issue will not be further discussed in the EIR.

j) Inundation by seiche, tsunami, or mudflow?

Less than Significant Impact. Seiches are seismically or wind induced tidal phenomena that occur in enclosed bodies of water. The Project site is not located adjacent to or near a standing body of water. The nearest body of water is the Hollywood Reservoir, which is located approximately 3.5 miles north of the Project site. Due to its distance from the reservoir, the proposed Project is not expected to expose people or structures to a significant risk of loss, injury, or death involving inundation by seiche. Therefore, less than significant impacts from inundation by seiche would occur.

A tsunami is a sea wave of local or distant origin that results from large-scale seafloor displacements associated with earthquakes, major submarine landslides, or exploding volcanic islands. Tsunamis generally affect coastal communities and low-lying river valleys. According to the Project-specific geotechnical evaluation, the Project site is located 10 miles east of the Pacific Ocean and is not within a tsunami inundation zone.[80] No impact would occur.

[79] Amec Foster Wheeler, 2015. Report of Preliminary Geotechnical Investigation Proposed Modernization, John Burroughs Middle School, 600 South McCadden Place, Los Angeles, California. August 10, 2015.
[80] Ibid.

4. Environmental Checklist

Mudflows occur on steep slopes where vegetation is not sufficient to prevent rapid erosion, or on gentle slopes if other conditions are met such as large sudden rainfall events. Mudflows contain large amounts of water, silt, sand, boulders, organic material, and other debris. The Project site and immediate surrounding area are relatively flat and do not contain major hills or steep slopes. Therefore, the Project site is not at risk for mudflows. No impact from tsunamis and mudflows would occur. Further, inundation involving a seiche from the Hollywood Reservoir is not expected. Impacts would be less than significant and this issue will not be further discussed in the EIR.

4.10 LAND USE AND PLANNING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
X. LAND USE AND PLANNING. Would the project:				
a. Physically divide an established community?	☐	☐	☐	☒
b. Conflict with applicable land use plan, policy or regulation of an agency with jurisdiction over the project (including but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒
c. Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☒

4.10.1 Discussion

Projects implemented under the SUP are anticipated to have less than significant impacts to land use and planning within the LAUSD service area. The project-specific analysis provided below determined that implementation of the proposed Project would have no impacts to land use and planning in the project area.

4.10.2 Impact Analysis

Would the project:

a) Physically divide an established community?

No Impact. The proposed Project does not include any action that could divide an established community. The physical division of an established community generally refers to the construction of a feature such as an interstate highway or railroad tracks, or removal of a means of access, such as a local road or bridge that would impact mobility within an existing community or between a community and outlying area. The proposed Project lies entirely on an existing campus within an established LAUSD school boundary. The project area is designated as public facilities and would not result in any zoning changes or changes in usage.[81] Because the proposed Project would be constructed on an established school campus, no physical division of an established community would occur. No further analysis in the EIR is required.

[81] City of Los Angeles. ZIMAS, Planning and Zoning Map. Available at: http://zimas.lacity.org/, accessed August 11, 2017.

b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

No Impact. As described in the Program EIR, the proposed Project would be consistent with the Regional Transportation Plan/Sustainable Communities Strategy. The proposed Project's consistency with the SCAQMD's air quality management plan will be assessed in the Air Quality section of the Draft EIR.

Further, the California legislature granted school districts the power to exempt school property from local zoning requirements, provided the school district complies with the terms of Government Code Section 53094. As lead agency for the proposed Project, LAUSD will comply with Government Code Section 53094 to render the local City of Los Angeles Zoning Ordinance inapplicable to the proposed Project. Following a two-thirds vote of the Board of Education, LAUSD can exempt a school site from such local zoning requirements. Within 10 days of the action, the Board must provide the City of Los Angeles with notice of this action.

Even if it were not exempt, the City of Los Angeles General Plan use designation for the Project site is "Public Facilities". The City of Los Angeles Municipal Code Zoning Plan has designated the proposed Project as "PF: Public Facilities," a zone for the use and development of publicly owned land, including public elementary and secondary schools. Therefore, the proposed Project would be consistent with all applicable land use plans.[82] No impacts would occur and this issue will not be further analyzed in the EIR.

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?

No Impact. No habitat reserves established under the Natural Communities Conservation Plan/Habitat Conservation Plan (NCCP/HCP) are located within the District, and no other habitat conservation plans are in the District. Therefore, the Project site would not be located in or conflict with a HCP/NCCP and no impacts would occur. This issue will not be discussed further in the EIR.

---

[82] American Legal Publishing Corporation. City of Los Angeles Zoning Code, Section 12.04.09, PF Public Facilities Zone. Available at : http://library.amlegal.com/nxt/gateway.dll?f=templates&fn=default.htm&vid=amlegal:la_all_mc, accessed August 11, 2017.

4.11 MINERAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. MINERAL RESOURCES. Would the project:				
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

4.11.1 Discussion

Projects implemented under the SUP are anticipated to have less than significant impacts to mineral resources within the LAUSD service area. The project-specific analysis provided below determined that implementation of the proposed Project would have no impacts to mineral resources in the project area.

4.11.2 Impact Analysis

Would the project:

a) and b) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

No Impact. There are no known mineral resources within the Project site, and no known operational mineral resource recovery sites at the Project site or in the vicinity.[83] The proposed Project is located on an existing school campus. Further, the surrounding area has been developed with residential and commercial uses. The proposed Project is zoned as PF and the nearest mineral resources recovery site is more than 4.5 miles east of the campus.[84] The proposed Project would not result in any impacts to mineral resources since it would not result in the loss of identified mineral resources that would be of value to the region or the state. Therefore, no impacts related to mineral resources would occur and no further analysis will be provided in the EIR.

4.12 NOISE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. NOISE. Would the project result in:				
a. Exposure of persons to or generation of noise in level in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☒	☐	☐	☐
b. Exposure of people to or generation of excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐
c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	☒	☐	☐	☐
d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	☒	☐	☐	☐
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

4.12.1 Impact Analysis

Would the project:

a) Result in exposure of persons to or generation of noise in level in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Impact. Construction and operational activities associated with the project development have the potential to create noise impacts that may adversely affect surrounding residential and commercial uses. Noise levels from mobile and stationary sources may increase where construction of new buildings and other facilities are proposed Therefore, it is recommended that relevant noise standards and temporary and periodic noise levels associated with project construction be further evaluated within the Draft EIR.

b) Exposure of people to generation or excessive groundborne vibration or groundborne noise levels?

Potentially Significant Impact. Groundborne vibration and groundborne noise could occur during the construction phase of the proposed Project. Therefore, it is recommended that relevant vibration standards and temporary and vibration levels which could occur during construction and operation of the project be further evaluated within the Draft EIR.

c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Potentially Significant Impact. Implementation of the proposed Project has the potential to create stationary and mobile noise impacts that could adversely affect surrounding residential uses. These increases will occur as development occurs within the project area. The Draft EIR will evaluate potential long-term noise impacts associated with the proposed Project.

d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Potentially Significant Impact. Construction activities associated with the proposed Project have the potential to create temporary increases in noise levels. The EIR will evaluate potential construction noise impacts associated with the proposed Project.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The nearest airport to the project area is the Santa Monica Airport, located approximately 6.8 miles southwest of Burroughs MS. The proposed Project is not located within an airport land use plan or within 2 miles of a public airport or public use airport. No impact would occur, and this issue will not be further discussed in the Draft EIR.

f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The project area is not located within the vicinity of a private airstrip. No impacts would occur, and this issue will not be further discussed in the Draft EIR.

4. Environmental Checklist

4.13 PEDESTRIAN SAFETY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. PEDESTRIAN SAFETY. Would the project:				
a. Substantially increase vehicular and/or pedestrian safety hazards due to a design feature or incompatible uses?	☒	☐	☐	☐
b. Create unsafe routes to schools for students walking from local neighborhoods?	☒	☐	☐	☐
c. Be located on a site that is adjacent to or near a major arterial roadway or freeway that may pose a safety hazard?	☒	☐	☐	☐

4.13.1 Impact Analysis

Would the project:

a) - b) Substantially increase vehicular and/or pedestrian safety hazards due to a design feature or incompatible uses?

Potentially Significant Impact. The proposed Project would use the existing network of regional and local roadways that serve the project area. The Project area is mainly a residential community with various commercial properties. New vehicular/bus ingress/egress driveways will be located along Wilshire Boulevard. The bus driveway would allow for drop-off and pick-up. The vehicular ingress/egress points would only allow for parking rather than drop-off and pick-up. Project-related impacts to vehicle and pedestrian safety will be analyzed further in the Draft EIR.

c) Be located on a site that is adjacent to or near a major arterial roadway or freeway that may pose a safety hazard?

Potentially Significant Impact. The proposed Project would be implemented at an existing school site, which is bound by Wilshire Boulevard., South McCadden, and West 6th Street. The proximity of Wilshire Boulevard and West 6th Street, each of which is a 4-lane roadway, could pose a safety hazard to students and staff accessing the Project site. A project-specific traffic / pedestrian safety study that includes analysis of existing roadway hazards will be prepared for the proposed Project. This topic will be analyzed further in the Draft EIR.

4.14 POPULATIONS AND HOUSING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. POPULATION AND HOUSING. Would the project:				
a. Induce substantial population growth in an area either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☐	☒
b. Displace substantial numbers of existing housing necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
c. Displace substantial numbers of people necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

4.14.1 Impact Analysis

a)- c) No Impact. The proposed Project site is currently an operational middle school serving students in grades 6 through 8. The proposed Project would not be designed or intended to increase the student population; rather, the proposed Project is intended to provide the appropriate facilities within the current capacity. No direct or indirect population growth in the area is anticipated. There are no residents on the Project site, and the proposed Project would not result in population or housing displacement of the surrounding community. Students that are displaced by classroom demolition during construction would be relocated/housed in temporary onsite (interim relocatable) classrooms while the new facilities are being constructed. Therefore, no impacts related to population and housing would occur. This issue will not be further discussed in the EIR.

4. Environmental Checklist

4.15 PUBLIC SERVICES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. PUBLIC SERVICES. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
a. Fire protection?	☐	☐	☒	☐
b. Police protection?	☐	☐	☒	☐
c. Schools?	☐	☐	☒	☐
d. Parks?	☐	☐	☐	☒
e. Other public facilities?	☐	☐	☐	☒

4.15.1 Impact Analysis

XV. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

a) Fire protection?

Less than Significant Impact. Fire protection services would be provided by the LAFD. Fire Station 61, located 0.65 mile from the Project site at 5821 West 3rd Street Los Angeles, CA 90036, which would be the primary responder.[85]

Construction of the proposed Project may result in a temporary increase in demand for fire protection and emergency medical services. However, the proposed Project would not result in an increase in student capacity at Burroughs MS. Implementation of the proposed Project would not generate increased demand for fire protection and emergency services due to a significant increase in people on the campus. Response times would not be affected by the proposed Project because LAFD is already serving the Project site. The proposed Project would not generate the need for a new fire station, as the project is growth accommodating, not growth inducing, since it would accommodate existing and expected students that already reside within the enrollment boundaries of the school. In addition, the

[85] LAFD, Official Website, Station Finder. Available at: http://www.lafd.org/fire-stations/station-results?st=581&address=600%20south%20mccadden%20place, accessed August 11, 2017.

project would be required to comply with LAFD and City of Los Angeles Department of Building and Safety regulations for water availability, fire hydrant pressure, and accessibility for firefighting equipment. Compliance with applicable state, City and District requirements, including installation of fire sprinklers, fire alarm devices, emergency access, and evacuation procedures, would also ensure that impacts to fire protection services would remain less than significant. Therefore, no new or expanded fire protection services or facilities would be required, and impacts related to fire protection would be less than significant. This issue will not be further discussed in the EIR.

b) Police protection?

Less than Significant Impact. LAUSD operates its own police department, the Los Angeles School Police Department (LASPD), which provides security for the schools and centers within its jurisdiction. The Project site lies within the West Division of the LASPD. The City of Los Angeles Police Department (LAPD) would be the secondary provider of police protection within the proposed Project area. The Wilshire Community Police Station located at 4861 Venice Boulevard. in Los Angeles, approximately 1.1 miles from the Project site, would supplement police projection along with the LASPD.[86]

Demand for police protection is generally created by an increase in the population within a service area. The proposed Project would not increase student capacity at Burroughs MS. Implementation of the proposed Project would not generate increased demand for police services, because the project is growth accommodating, not growth inducing, since it would accommodate existing and expected students that already reside within the enrollment boundaries of the school. During construction, the proposed Project has the potential to result in temporary demand for police services during construction from possible trespass, theft, or vandalism. However, the construction areas would be fenced and would remain secured during non-work hours. Any increase in police demand would be temporary and would not require construction of new or expanded police facilities. Further, the project would comply with LAUSD standards regarding emergency response procedures and school safety, as required. Therefore, the proposed Project would not result in an increase of student capacity nor would it result in new operations requiring additional police protection. This issue will not be further discussed in the EIR.

c) Schools?

Less than Significant Impact. The proposed Project would not increase the student population nor would it displace the current student population to offsite locations. Students temporarily displaced by construction activities would be placed in interim classrooms onsite. No other LAUSD campuses or

[86] LAPD, official website, http://www.lapdonline.org/wilshire_community_police_station, accessed August 11, 2017.
LASPD, official website, http://www.laspd.com/about.html, accessed August 11, 2017..
LAUSD, official website, *http://achieve.lausd.net/Page/2649*, accessed August 11, 2017.

facilities outside of Burroughs MS would be impacted by the proposed Project. Therefore, impacts would be less than significant and this issue will not be discussed further in the Draft EIR.

d) Parks?

No Impact. The proposed Project would not interfere with or have adverse impacts related to parks. The proposed Project would not involve new housing or long-term employment opportunities that would increase the population or lead to an increase in the need for new or altered parks. The proposed Project would enhance the existing recreational facilities in the area. The recreational facilities on the campus are available to the community for use pursuant to the Civic Center Act (CA Ed. Code Sections 38130 – 38139). No park-related impacts would occur and no further analysis in the Draft EIR is required.

e) Other public facilities?

No Impact. The proposed Project would not result in substantial adverse impacts associated with the need for new or physically altered public facilities and/or services. The project would not involve the construction of homes or result in an increase in population. The surrounding residential area would not be affected by the proposed Project, and therefore, no impact would occur. This issue will not be further discussed in the Draft EIR.

4.16 RECREATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. RECREATION.				
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐

4.16.1 Impact Analysis

Would the project:

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact. The proposed Project would include active and passive areas located throughout the project site, including play fields, a courtyard, and several other landscaped areas. As a result, the recreational facilities in the area would be enhanced by providing improved recreational spaces that would be accessible to the community. The proposed Project would not increase the number of students enrolled at the campus and is not growth inducing. Therefore, the project would not increase the use of regional facilities such that substantial physical deterioration of the facility would occur. No impacts would occur, and this issue will not be further discussed in the EIR.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

Less than Significant Impact. The proposed Project includes recreational facilities; however, it would not require the construction or expansion of recreational facilities outside existing LAUSD-owned property. The proposed Project would include upgrades to athletic facilities on the Burroughs MS campus, which would be accessible to the community and would therefore be an enhancement of recreational facilities available to the community. Potential environmental impacts associated with the proposed Project (which includes improvements to the recreational facilities) are analyzed in this IS and the forthcoming EIR. No significant adverse physical effect on the environment is expected as a result of the proposed Project. Therefore, environmental impacts related to community recreational facilities would be less than significant.

4.17 TRANSPORTATION AND CIRCULATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. TRANSPORTATION & CIRCULATION. Would the project:				
a. Conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	☒	☐	☐	☐
b. Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	☐	☐	☐	☒
c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☒
d. Substantially increase hazards to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐
e. Result in inadequate emergency access?	☒	☐	☐	☐
f. Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	☒	☐	☐	☐

4.17.1 Impact Analysis

Would the project:

a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?

Potentially Significant Impact. Project implementation would not increase the number of students attending the school or staff required to operate the school, and therefore would not generate new (permanent) traffic to the study area. Project-related construction activities would temporarily increase vehicle trips throughout the

project area and on surrounding roadways. A project-specific traffic/pedestrian safety study will be prepared for the proposed Project, and the methodology, findings, and conclusions of the analysis (including consultation with / input from the Los Angeles Department of Transportation) will be provided in the EIR.

b) Conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

No Impact. Level of service standards established by jurisdictions/agencies are intended to regulate long-term (permanent) traffic increases associated with new development and do not apply to short-term (temporary) traffic increases that occur during construction. Potential impacts associated with the proposed Project would be limited to construction activity; i.e., increased vehicle trips generated by the project would cease when construction is completed. Project implementation would not result in any long-term ongoing effects related to traffic and congestion. No impacts would occur, and this issue will not be further discussed in the EIR.

c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location, that results in substantial safety risks?

No Impact. The nearest airport (Santa Monica Airport) is located approximately 6.8 miles southwest from the Project site. Project construction would not change air traffic patterns. In addition, the proposed Project would not involve the installation of structures that could interfere with air space. No impact would occur, and this issue will not be further discussed in the EIR.

d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Potentially Significant Impact. The proposed Project would use the existing network of regional and local roadways that serve the project area. In addition, vehicular drop-off and pickup zones would be located in the curb lane adjacent to the campus on South McCadden Place, and new vehicular/bus ingress/egress driveways would be located along Wilshire Boulevard. The bus driveway would allow for drop-off and pick-up. The vehicular ingress/egress points would only allow for parking rather than drop-off and pick-up. While the student drop-off and pickup operations have been planned to minimize vehicular queuing in traffic lanes on the local street system (and to reduce queuing that currently occurs), the design could cause a permanent alteration to the local vehicular circulation patterns. Traffic generated during construction activity would be compatible with the mix of vehicle types (autos and trucks) currently using regional and local roadways. Analysis of potential increased traffic safety hazards will be analyzed in the Draft EIR.

e) Result in inadequate emergency access?

Potentially Significant Impact. The roadway network serving the Project site currently accommodates the movements of emergency vehicles that travel in the area. The proposed Project is not anticipated to interfere with local emergency response. However, implementation of the proposed Project would result in the construction of buildings that may require additional trucks and other vehicles to access the project area. As

such, the potential exists for construction truck traffic to impede adequate emergency access along adjacent roadways. These potential impacts will be analyzed further in the Draft EIR.

f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?

Potentially Significant Impact. The Project site vicinity is served by the County of Los Angeles Metropolitan Transit Authority (Metro), with a bus stop for Route 20 located on Wilshire Boulevard at South McCadden Place. In general, adopted policies, plans, and programs pertaining to public transit, bicycle, and pedestrian travel are intended to be used for long-term planning purposes and do not apply to construction activities. Project implementation would not directly or indirectly eliminate alternative modes of transportation, transportation corridors, or facilities. Further, the proposed Project would not prevent the use of any roads on which public transit routes operate (e.g., the existing Route 20 and a proposed Commuter Bus Lane on Wilshire Boulevard). There would be no increase in the number of students attending the school or staff required to operate the school, and therefore there would not be any new (permanent) traffic generated on roads used as public transit routes. Project-related construction activities, however, would temporarily increase vehicle trips throughout the project area and on surrounding roadways, which could affect the performance or safety of alternative modes of travel. Impacts related to alternative transportation will be analyzed further in the EIR.

4.18 TRIBAL CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code §21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code §5020.1(k), or	☐	☐	☐	☒
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code §5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code §5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☒

4.18.1 Discussion

The SUP PEIR includes SCs for minimizing impacts related to tribal cultural resources within the existing environment in areas where future projects would be implemented under the SUP. Applicable SCs related to tribal cultural resources impacts associated with the proposed Project are provided in **Table 3.18-1**.

TABLE 3.18-1
TRIBAL CULTURAL RESOURCES STANDARD CONDITIONS OF APPROVAL

Applicable SCs	Description
SC-TCR-1	All work shall stop within a 30-foot radius of the discovery. Work shall not continue until the discovery has been evaluated by a qualified archaeologist and the local Native American representative has been contacted and consulted to assist in the accurate recordation and recovery of the resources.

4.18.2 Impact Analysis

Would the project:

Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code §21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code §5020.1(k)

No Impact. To date the District has not received any tribal requests to be notified about projects in the District. However, in the unlikely event that construction-related ground disturbance results in the discovery of potential resources, SC-TCR-1 would be implemented to avoid potential impacts to Tribal resources. Therefore, the proposed Project would have no impact on Tribal cultural resources as defined in Public Resources Code Section 21074. This impact will not be further discussed in the Draft EIR.

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code §5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code §5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

No Impact. To date, LAUSD has not received any requests for notification or consultation from California Native American Tribes regarding resources defined by Public Resources Code Section 21074. No Tribal cultural resources were identified in the Project site and there is no substantial evidence that Tribal cultural resources have the likelihood of being discovered on the campus. Therefore, the proposed Project would have no impact on Tribal cultural resources as defined in Public Resources Code Section 21074.

4.19 UTILITIES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. UTILITIES. Would the project:				
a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☒	☐
b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐
c. Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐
d. Have sufficient water supplies available to serve the project from existing entitlements and resource, or are new or expanded entitlements needed?	☐	☐	☒	☐
e. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
f. Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	☐	☐	☒	☐
g. Comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☒	☐

4.19.1 Discussion

The Program EIR includes SCs for minimizing impacts to utilities and service system in the existing environment in areas where future projects would be implemented under the SUP. Applicable SCs related to project-specific impacts to utilities and service systems associated with the proposed Project are provided in **Table 3.19-1**.

Table 3.19-1
Utilities and Service Systems Standard Conditions of Approval

Applicable SCs	Description
SC-USS-1	**School Design Guide.** Construction and demolition waste shall be recycled to the maximum extent feasible. LAUSD has established a minimum non-hazardous construction and demolition debris recycling requirement of 75% by weight as defined in Specification 01340, Construction & Demolition Waste Management. **Guide Specifications 2004 - Section 01340, Construction & Demolition Waste Management.** This section of the LAUSD Specifications includes procedures for preparation and implementation, including reporting and documentation, of a Waste Management Plan for reusing, recycling, salvage or disposal of non-hazardous waste materials generated during demolition and/or new construction (Construction & Demolition (C&D) Waste), to foster material recovery and re-use and to minimize disposal in landfills. Requires the collection and separation of all C&D waste materials generated onsite, reuse or recycling onsite, transportation to approved recyclers or reuse organizations, or transportation to legally designated landfills, for the purpose of recycling salvaging and/or reusing a minimum of 75% of the C&D waste generated.
SC-USS-2	LAUSD shall coordinate with the City of Los Angeles Department of Water and Power or other appropriate jurisdiction and department prior to the relocation or upgrade of any water facilities to reduce the potential for disruptions in service.

4.19.2 Impact Analysis

Would the project:

a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Less than Significant Impact. The LADWP provides wastewater services for the Project site. The Project site is located within the Hyperion Treatment System, which includes the Hyperion Treatment Plant (HTP). The HTP is designed to treat 450 million gallons per day (mgd), but it experiences a lower average dry-weather water flow, resulting in available treatment capacity.[87]

Construction of the proposed Project would generate a minimal volume of wastewater and would nominally increase wastewater generation. Implementation and operation of the proposed Project would not change the existing uses or introduce new uses that would exceed the wastewater treatment requirements of the Los Angeles RWQCB. As discussed previously in Section 3.9, *Hydrology and Water Quality*, the proposed Project would be required to prepare a SWPPP outlining the BMPs to be implemented to avoid or minimize runoff discharges. The SWPPP would include erosion control BMPs to control and minimize erosion and sedimentation discharged from the Project site. Additionally, any wastewater discharge from the proposed Project site would be required to comply with the NPDES permit requirements. Therefore, compliance with

[87] LACSD. Hyperion Water Reclamation Plant. Available at : https://www.lacitysan.org/san/faces/home/portal/s-lsh-wwd/s-lsh-wwd-cw/s-lsh-wwd-cw-p/s-lsh-wwd-cw-p-hwrp?_afrLoop=12007486421795403&_afrWindowMode=0&_afrWindowId=null#!%40%40%3F_afrWindowId%3Dnull%26_afrLoop%3D12007486421795403%26_afrWindowMode%3D0%26_adf.ctrl-state%3Duriakjnp6_243, accessed August 11, 2017.

these existing regulations would ensure impacts related to wastewater treatment requirements would be less than significant. This impact will not be further discussed in the Draft EIR.

b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental impacts?

Less than Significant Impact. The proposed Project would be constructed in two 18-month phases, with construction work anticipated to begin in 2020 and be completed by 2023. The proposed Project is estimated to require on average approximately 150 construction personnel per day for the heaviest period of construction. During construction, water would be required for activities such as dust control; however, these activities would be limited and temporary and would not consume large amounts of water. While wastewater at the Project site would be primarily generated by construction activities and construction workers, due to the temporary nature of the construction activities and the minimal number of construction workers, the amount of construction-related wastewater that would be generated is not expected to be substantial. Therefore, impacts associated with project construction would be less than significant. This impact will not be further discussed in the Draft EIR.

The proposed Project would not result in increased enrollment or capacity. Therefore, implementation of the proposed Project would not increase total water consumption within the District, and would not require construction of new or expanded water treatment facilities. Impacts related to project operation would be less than significant and will not be further discussed in the Draft EIR.

c) Require or result in the construction of new stormwater drainage facilities, or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less than Significant Impact. As discussed previously in Section 3.9, *Hydrology and Water Quality*, construction of the proposed Project would require implementation of a SWPPP, which would outline construction BMPs for site drainage and implement an appropriate combination of monitoring and resource impact avoidance. Operation of the proposed Project would decrease imperviousness on the Project site when compared to the existing condition. As discussed in 3.9, *Hydrology and Water Quality*, the post-development drainage areas would still drain to the same storm drain system. However, the Project would include a system that serves as a method of pretreatment for the collected site runoff. Implementation of the Project would treat and reduce the amount of water that is currently flowing across the Project site and into the nearby storm water drainage system. The Project design features would comply with all applicable regulatory requirements. Further, the project would not alter drainage patterns. The proposed Project would not require or result in construction or expansion of stormwater drainage facilities offsite. The proposed Project site is located in a developed area of the City of Los Angeles, which contains an existing stormwater collection and conveyance system. The Project site is an existing school campus, and the proposed Project would include PDFs that would increase the pervious surfaces and landscaping features that would reduce stormwater runoff from the Project site. Compliance with NPDES permit requirements, applicable laws, regulations, and standard PDFs and practices during construction and operation would ensure that impacts associated with runoff would not exceed the capacities of existing stormwater drainage systems. Incorporation of LAUSD SC-USS-1 and SC-USS-2 would ensure that

impacts would be less than significant. Therefore, the proposed Project would not require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, and impacts would be less than significant. No further analysis of these impacts will be included in the EIR.

d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?

Less than Significant Impact. Construction of the proposed Project would require water use for construction activities, such as dust control measures. However, these activities would be limited and temporary and thus would not consume large quantities of water such that additional supplies would be required. Therefore, short-term impacts associated with requiring additional water supply would be less than significant. These impacts will not be further discussed in the Draft EIR.

Although overall square footage of buildings would increase and efficiencies may reduce the amount of water used in the building, it is assumed that water demand would remain the same as the existing conditions due to the addition of landscaped areas and associated irrigation systems. Therefore, the demand for non/potable water supply would be accommodated by existing supplies. Therefore, the long-term impact to non/potable water supply would be less than significant. No further analysis will be included in the EIR.

e) Result in a determination by the wastewater treatment provider that would serve the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less than Significant Impact. During construction of the proposed Project, wastewater at the Project site would be primarily generated by construction activities and construction workers. However, due to the temporary nature of the construction activities and the limited number of construction workers, the amount of construction-related wastewater that would be generated is not expected to be substantial. Therefore, short-term impacts associated with wastewater treatment would be less than significant. No further analysis will be included in the EIR.

Although overall square footage of permanent buildings would increase, it is assumed that wastewater treatment demand would remain the same as existing conditions. The proposed Project would not increase student capacity. Therefore, demand for wastewater treatment would be accommodated by existing capacities. Therefore, the long-term impact to wastewater treatment capacity would be less than significant. No further analysis will be included in the EIR.

f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Less than Significant Impact. Excavated soil would be either directly loaded into staged trucks or temporarily stockpiled on plastic liners next to the excavation areas until it could be loaded out for offsite disposal. The soil would then be transported offsite to an appropriate licensed facility for disposal, based on previous waste profile characterization results.

The excavated soil would be segregated and managed as non-hazardous, non-RCRA hazardous, or RCRA hazardous waste.

Non-hazardous soils would be transported to an approved Class 3 landfill for disposal or use as daily cover. Non-RCRA and RCRA hazardous soils would be transported to a licensed and properly permitted Class 1 disposal facility or an out-of-state facility permitted to accept hazardous waste. The Class 1 disposal facility that accepts the RCRA hazardous soil may require that the soil be treated prior to disposal pursuant to the land ban restrictions found at Title 40, CCR, Part 376.

All non-RCRA hazardous or RCRA hazardous wastes would be disposed of at a California Class I land disposal facility or an out-of-state landfill permitted to accept such wastes. The waste management facilities listed below may be selected for this Project:

- Kettleman Hills Facility, 35251 Old Skyline Road, Kettleman, California 93239, Phone: (559) 386-9711
- Clean Harbors Buttonwillow, LLC, 2500 West Lokern Road, Buttonwillow, California, 93206, Phone: (661) 762-6200

The Kettleman Hills Facility has a remaining capacity of 500,000 cy[88] and the Clean Harbors Buttonwillow Facility has a remaining capacity of 4,900,000 cy.[89] The total combined permitted remaining capacities for Class I land disposal facilities is more than 5,000,000 cy. The disposal of up to 160 cy of soil would represent less than 1 percent of the combined permitted remaining capacities, and the Project would not exceed or significantly reduce the available landfill capacities.

Prior to project construction, demolition of buildings would occur, totaling approximately 52,000 square feet. Demolition of 52,000 square feet would generate up to 2,000 tons of debris. The Project site is served by the Los Angeles County Sanitation District (LACSD), which includes sanitary landfills, recycle centers, materials recovery/transfer facilities, and energy recovery facilities. The nearest such facility, the Puente Hills Materials Recovery Facility (MRF) accepts construction/demolition waste. The Puente Hills MRF is permitted to receive up to 4,400 tons per day and accepts on average approximately 2,760 tons per day.[90]The proposed Project would generate less than 3,000 tons per day Thus, it is anticipated that the Puente Hills MRF would have sufficient capacity to accept the project-related debris and would be able to accommodate the proposed Project's solid waste disposal needs during construction. Therefore, the short-term impact associated with construction would be less than significant. This impact will not be further discussed in the Draft EIR.

Because the proposed Project would not increase the number of students or staff who access the school, operation of the proposed Project is expected to generate similar quantities of solid waste compared to existing conditions. Compliance with all applicable regulations related to reducing solid waste would ensure proper

[88] Chemical Waste Management, Inc., Remaining Landfill Capacity: https://www.wmsolutions.com/pdf/brochures/CWM_Kettleman_Hills_Brochure.pdf
[89] Nielsen, David, Clean Harbors Buttonwillow, telephone conversation on March 31, 2016.
[90] LACSD. Puente Hills Materials Recovery Facility. Available at: http://www.lacsd.org/solidwaste/swfacilities/mrts/phmrf/phmrffactsheet.asp, accessed August 11, 2017.

handling and disposal of solid waste associated with operation of the proposed Project. Additionally, all solid waste facilities serving the project area have remaining intake capacity. Compliance with existing regulations would ensure that operation of the proposed Project would result in a less than significant impact. No further analysis will be included in the EIR.

g) Comply with federal, state, and local statutes and regulations related to solid waste?

Less than Significant Impact. The proposed Project would comply with all applicable federal, state, and local statutes and regulations related to the handling and disposal of solid waste materials. Construction debris would be handled and disposed of according to District Specification 01 4524, LAUSD's SCs (including but not limited to: SC-USS-1), and the applicable local and regional standards. As discussed previously in Response XIX (g), operation of the proposed Project would generate similar quantities of solid waste compared to existing conditions, and would require disposal within a landfill. Compliance with all applicable regulations related to reducing solid waste would ensure proper handling and disposal of solid waste associated with the proposed Project. The proposed Project would comply with the recycling requirement in AB 341, as well as the construction and demolition (C&D) waste recycling/reuse requirement in California Green Building Standards Code Section 5.408. LAUSD's School Design Guide & Specification 01340, Construction and Demolition Waste Management, further requires the collection and separation of all C&D waste materials generated on site for reuse or recycling on site, transportation to approved recyclers or reuse organizations, or transportation to legally designated landfills, for the purpose of recycling salvaging and/or reusing a minimum 75 percent of the C&D waste generated. Therefore, impacts would be less than significant and no further analysis is required in the EIR.

4.20 MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. MANDATORY FINDINGS OF SIGNIFICANCE.				
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b. Does the project have impacts which are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects).	☒	☐	☐	☐
c. Does the project have environmental effects which cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

4.20.1 Impact Analysis

Does the project:

a) Have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Potentially Significant Impact. As discussed in Section 3.4, *Biological Resources***,** the proposed Project would not impact any endangered fauna or flora. Further, because of the developed, residential nature of the project vicinity, construction and operation of the proposed Project would not impact the habitat or population level of fish or wildlife species, nor would it threaten a plant or animal community, nor impact the range of a rare or endangered plant or animal. This impact will not be further discussed in the Draft EIR.

As discussed in Section 3.5*, Cultural Resources***,** as excavation occurs, cultural resources may be impacted. The EIR will address the project's potential impact on cultural resources, and mitigation measures will be recommended, if necessary.

4. Environmental Checklist

b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Potentially Significant Impact. Implementation of the proposed Project could contribute considerably to cumulative impacts. Each of the issues identified above as potentially significant will be evaluated for cumulative impacts within the EIR. Mitigation measures will be provided, if necessary.

c) Have environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly?

Potentially Significant Impact. Implementation of the proposed Project could result in significant impacts that may result in substantial adverse effects on human beings. These potential effects will be addressed in the EIR, and mitigation measures will be recommended, if necessary.

LAUSD BURROUGHS MIDDLE SCHOOL COMPREHENSIVE MODERNIZATION PROJECT

Air Quality and Greenhouse Gas Emissions Technical Report

Executive Summary

Los Angeles Unified School District (LAUSD) proposes a Comprehensive Modernization to Burroughs Middle School (Burroughs MS) (proposed Project), located at 600 South McCadden Place, Los Angeles, California. Burroughs MS is within Local District West. The proposed Project is designed to address the most critical physical concerns of the buildings and grounds at the campus while upgrading, renovating, modernizing, and reconfiguring the campus to provide facilities that are safe, secure, and better aligned with the current instructional program.

In accordance with the requirements under the California Environmental Quality Act (CEQA), this technical report provides an estimate of air quality and greenhouse gas emissions for the proposed Project and the potential impacts from associated construction and operational activities. This report includes the categories and types of emission sources resulting from the proposed Project, the calculation procedures used in the analysis, and any assumptions or limitations.

This report summarizes the potential for the proposed Project to conflict with implementation of an applicable air quality plan; to result in a cumulatively considerable net increase of criteria pollutant emissions; to expose sensitive receptors to substantial pollutant concentrations; to result in other emissions (such as odors) that adversely affect a substantial number of people; to generate substantial greenhouse gas emissions; or to conflict with applicable greenhouse reduction plans, policies, or regulations. The findings of the analyses are as follows:

- The proposed Project would be consistent with air quality policies set forth by the LAUSD, the South Coast Air Quality Management District (SCAQMD), and the Southern California Association of Governments (SCAG).
- The proposed Project would not result in a significant cumulative air quality impact.
- The incremental increase in onsite emissions from construction and operation of the proposed Project would not exceed the localized significance thresholds set forth by the SCAQMD. Thus, the proposed Project would not result in a localized violation of applicable air quality standards or expose off-site receptors to substantial levels of regulated air contaminants.
- Proposed Project construction and operations would not result in significant levels of odors.

- Greenhouse gas emissions associated with the Project would not exceed the emissions threshold of 3,000 MT CO_2e annual emissions. Therefore, the Project would result in less than significant GHG emissions based on applicable thresholds of significance as evaluated in this technical report.
- The proposed Project would be consistent with greenhouse gas reduction strategies as set for by the LAUSD, SCAG, the City of Los Angeles, and the State of California.

Table 1, *Air Quality and Greenhouse Gas Emissions Impacts*, summarizes the School Upgrade Program (SUP) Program EIR's conclusions regarding the air quality and greenhouse gas emissions impacts of the SUP, as well as the findings of this Project-specific analysis.

TABLE 1
AIR QUALITY AND GREENHOUSE GAS EMISSIONS IMPACTS

Environmental Threshold	Program EIR Level of Impact Significance	Project-Specific Level of Impact Significance	Applicable Standard Conditions of approval (SCs)
Air Quality – Would the project:			
A) Conflict with or obstruct implementation of the applicable air quality plan?	Less than Significant	Less than Significant	SC-AQ-1
B) Generate short-term air pollutant emissions, either directly or indirectly, that may have a significant impact on the environment?	Potentially Significant and Unavoidable	Less than Significant	SC-AQ-2 SC-AQ-3
C) Generate long-term air pollutant emissions, either directly or indirectly, that may have a significant impact on the environment?	Less than Significant	Less than Significant	SC-AQ-2 SC-AQ-3
D) Expose sensitive receptors to substantial pollutant concentrations?	Potentially Significant and Unavoidable	Less than Significant	SC-AQ-4
E) Create objectionable odors affecting a substantial number of people?	Less than Significant	Less than Significant	SC-AQ-5
Greenhouse Gas Emissions– Would the project:			
A) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	Less than Significant	Less than Significant	SC-GHG-1 SC-GHG-2 SC-GHG-3 SC-GHG-4 SC-GHG-5
B) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	Less than Significant	Less than Significant	SC-GHG-1 SC-GHG-2 SC-GHG-3 SC-GHG-4 SC-GHG-5

LAUSD BURROUGHS MIDDLE SCHOOL COMPREHENSIVE MODERNIZATION PROJECT

Air Quality and Greenhouse Gas Emissions Technical Report

1. Introduction

This air quality technical report was prepared by ESA to support an Environmental Impact Report (EIR) for the proposed Burroughs Middle School Comprehensive Modernization Project (proposed Project) located in the City of Los Angeles, California.

Ongoing master planning activities and facility site assessments conducted for Los Angeles Unified School District (LAUSD or District) facilities over the last several years have identified school sites throughout the District that exhibit critical physical conditions. The School Upgrade Program (SUP) implemented by LAUSD outlines a series of capital improvements intended to rehabilitate and modernize these schools so they are safe, healthy, and functional places to learn.

LAUSD prepared a Program Environmental Impact Report (SCH No. 2013111046) to evaluate the direct and indirect environmental effects of the SUP program.[1] The SUP Program EIR (Program EIR) was certified by the LAUSD Board on November 10, 2015[2].

The purpose of this report is to provide a detailed technical air quality analysis of the proposed Project. ESA conducted this air quality assessment to evaluate the potential air quality impacts associated with construction activities, mobile sources, and other aspects of the proposed Project construction that have the potential to generate criteria air pollutant emissions. The objectives of this Air Quality and Greenhouse Gas Emissions Technical Report are to:

- Evaluate the construction criteria air pollutants associated with proposed Project development and the potential for regional and localized air quality impacts based on applicable standards and thresholds;
- Evaluate greenhouse gas emissions associated with the proposed Project development;

1 Los Angeles Unified School District. 2015. School Upgrade Program Final Environmental Impact Report, http://achieve.lausd.net/ceqa. Adopted by the Board of Education on November 10, 2015.

2 Los Angeles Unified School District, Board of Education. Regular Board Meeting -November 10, 2015. http://laschoolboard.org/11-10-15RegBd.

- Provide, if needed, air quality and/or greenhouse gas emissions mitigation measures as required to meet applicable air quality and/or greenhouse gas emissions standards and thresholds as specified by the South Coast Air Quality Management District (SCAQMD) and the LAUSD Standard Conditions (SCs) identified in the Program EIR.

1.1 Existing Conditions

Burroughs MS is an operational middle school serving students in grades six through eight. The campus is comprised of 25 buildings and structures, including 14 portable buildings. Buildings at the Project site include: two-story Administrative and Auditorium Building, various classroom buildings, Food Service/Lunch Shelter Building, Gymnasium, and portable buildings. The school is also developed with landscaped areas containing playfields and ornamental landscaping with trees, shrubs, and grass.

1.2 Project Location

Burroughs MS is located approximately 5 miles west of downtown Los Angeles. Primary regional access is provided by Interstate 10 (I-10), approximately 2 miles to the south of the Project site and 10 miles east of the Pacific Ocean (**Figure 1**, *Project Vicinity*). Major arterials providing regional and sub-regional access to the project vicinity include Wilshire Boulevard, immediately south of the Project site, and South La Brea Avenue, approximately 0.5 miles west of the Project site (**Figure 2**, *Project Location*). The Assessor's Parcel Number (APN) for the Project site is 5507-017-900. The campus is located within the Hancock Park Historic Preservation Overlay Zone (HPOZ).

1.3 Project Description

The proposed Project would result in demolition of and/or modifications to existing buildings, potentially including historic buildings and resources. However, the Project would be designed to preserve and enhance significant (primary) character-defining features associated with the campus. Additionally, the proposed Project would be designed and implemented in a manner that complies with the LAUSD Design Guidelines and Treatment Approaches for Historic Schools.[3]

Upon completion of Project construction, the Burroughs MS would have 71 classrooms including 6 existing classrooms, 38 remodeled classrooms, and 27 new classrooms. Approximately 7,000 square feet of existing area is to remain (with minor renovations such as new paint). **Table 2**, *Proposed Project (Demolition, Remodel, and Construction)* shows details about the characteristics of the existing buildings to be demolished and/or renovated.

[3] LAUSD. January 2015. Los Angeles Unified School District Design Guidelines and Treatment Approaches for Historic Schools. Los Angeles, CA.

		Total	**27**	**51,469**	**116,815**	**76,036**	

sf = Square footage

As outlined in Table 2, the proposed Project would include demolition of the following facilities:

- Cafeteria-Classroom Building (Bldg. 20)
- Flammable Storage Building (Bldg. 13)
- Girls' Locker Building (Bldg. 17)
- Approximately 28 standard and specialty classrooms located in 13 relocatable or portable buildings

The total demolition footprint of the proposed Project would be approximately 51,500 square feet.

The proposed Project would include construction of the following facilities that would be designed, constructed, and furnished/equipped to current code requirements and District design standards:

- Two One-Story Specialty Classroom Buildings (Bldg. A)
  - Approximately three specialty classrooms (instrumental music, maker space, and flexible drama) and support spaces[4] on the first floor
- Three-Story Food Services + MPR/Classroom/Lockers (Bldg. B)
  - Approximately one student store, boys' and girls' lockers, food services, and indoor dining/MPR facilities on the first floor
  - Approximately 14 standard classrooms on the second floor
  - Approximately 2 standard classrooms and 8 science classrooms on the third floor

The total construction footprint of the proposed Project would be approximately 76,000 square feet.

Modernization and/or upgrades would be completed for the following buildings:

- Administrative/Library/Auditorium (Bldg. 1)
- Boys' Gymnasium Building (Bldg. 2)
- Classroom Building (Bldg. 7)
- AA-610 (Bldg. 4)
- All Purpose Building (Bldg. 14)
- AA-1143 (Bldg. 18)

The proposed improvements to existing buildings include the following:

- Administrative/Library/Auditorium (Bldg. 1)
  - Seismic retrofit
  - Reconfiguration of interior walls while maintaining existing stairs and central corridors
  - Construction of an ADA compliant entry ramp on the west side of the building

[4] Support spaces include storage, custodian rooms, and boys' and girls' restrooms.

  - Renovate and reconfigure the south basement section to accommodate M&O functions, including general storage, receiving storage, restrooms, and plant manager. A new freight-sized elevator would be installed on the east side of the Auditorium in order to access the basement area.
  - Auditorium upgrades
    - Fix broken seats and install seat padding and upholstery
    - Install automatic seat uplift for egress compliance
    - Provide designated aisle seats for ADA compliance
    - Install additional aisle lighting
    - Alter seating layout to provide accessible route to the performance area
    - Install handrails where required in seating aisles
    - Install guardrails in the balcony
    - Construct new control booth under balcony seating
    - Remove the fire curtain
    - Install guardrails around backstage technical circulation levels and grid iron
    - Install fall arrest points for workers at the first row of balcony
    - Install smoke vents or a smoke evacuation system over the stage
    - Replace all cotton drapery with inherently flame-retardant (IFR) drapes
    - Repair stage floor
    - Relocate balcony rail lighting
    - Remove interior wall backstage
    - Reinforce the gridiron
    - Electrical upgrades
    - Upgrade the lighting system including switching to light-emitting diode (LED) lights

- Boys' Gymnasium Building (Bldg. 2)
  - Seismic retrofit
  - Minor reconfiguration of interior walls (Practice Gym will remain the same size)

- Classroom Building (Bldg. 7)
  - Seismic retrofit
  - Reconfiguration of interior walls while maintaining existing stairs and central corridors

- Shop Building (Bldg. 9)
  - Seismic retrofit
  - Reconfiguration of interior walls and entry points to accommodate seven classrooms (six standard and one special education) and support spaces

- General Classroom Buildings (Bldgs. 4, 14, 18)
  - Interior and exterior paint and finish upgrades

The proposed Project would modify and remodel 117,000 square feet of building space (100,000 square foot not including basement areas).

Upgrades to the Administrative/Library/Auditorium Building, Gymnasium Building, and Classroom Building would entail seismic retrofits. Seismic retrofitting would be completed in compliance with the seismic safety requirements of the LAUSD Supplemental Geohazard Assessment Scope of Work, California Building Code, Division of Stat Architect, and California Department of Education.

Site upgrades that would be completed throughout the campus include:

- Site-wide infrastructure, including plumbing, electrical, and storm drain
- Site-wide upgrades to remove identified and prioritized barriers to program accessibility
- Landscape, hardscape, and exterior paint

The Project would include improvements as required by the ADA, Division of the State Architect (DSA), CEQA, Office of the Independent Monitor (OIM) for ADA program accessibility, and any other required improvements or mitigations to ensure compliance with local, state, and/or federal facilities requirements.

1.3.1 Sustainability Features

LAUSD is committed to sustainable construction principles, and has been a member of the Collaborative for High Performance Schools (CHPS) since 2001. CHPS has established criteria for the development of high performance schools to create a better educational experience for students and teachers by designing the best facilities possible. CHPS-designed facilities are energy efficient, material efficient, easy to maintain and operate, environmentally responsive, safe and secure, a community resource, and adaptable to changing needs.

School facilities seeking CHPS certification complete a scorecard and must achieve a certain number of points to be certified. Some of the sustainable design features that would be incorporated into the proposed Project include easy access to public transportation, provision of bicycle racks, onsite treatment of stormwater runoff, “cool-roof” building materials, lighting that reduces light pollution, water- and energy-efficient design, water-wise landscaping, collection of recyclables, and sustainable and/or recycled-content building materials. The proposed Project’s new buildings and structures would be designed to reduce energy use below current levels by incorporating modernized and energy-efficient features, which may include lighting, windows, electrical transformers, building insulation, or installation of irrigation smart controllers, etc. All new construction would exceed by 10 percent or more the California Title 24, Part 6 energy efficiency standards.

1.3.2 Contaminated Soil Removal

A Preliminary Environmental Assessment Equivalent (PEA-E) was conducted at the site in 2017 by Leighton Consulting, Inc.[5] Field sampling and analysis was conducted to determine whether historical uses have resulted in hazardous substances at the Project site as part of the PEA-E. The results of the laboratory analysis showed levels of arsenic and lead concentrations were above residential screening thresholds. A Remedial Action Workplan (RAW)[6], describing the contamination, excavation dimensions, methodology, transportation and disposal, confirmation sampling plan, methods to ensure worker and public health safety, and cleanup goals, has been prepared. The contaminated soils would be removed prior to construction of each phase with methods intended to reduce dust emissions. Further, community notices will be distributed in accordance with LAUSD policy. All cleanup activities under the RAW would adhere to applicable state and local policies and regulations regarding excavation, removal, and disposal of affected materials. The volume of impacted soil that is addressed by the soil removal action is estimated to be 160 cubic yards (cy). However, as a worst-case analysis and to account for additional materials encountered during removal, this air quality and greenhouse gas assessment assumes the removal of 500 cy.

1.4 Updated and Project-Specific Conditions

1.4.1 Regional Air Quality

The Project site is located within the South Coast Air Basin (Air Basin). The distinctive climate of the Air Basin is determined primarily by its terrain and geographical location. Regional meteorology is dominated by a persistent high-pressure area which commonly resides over the eastern Pacific Ocean. Seasonal variations in the strength and position of this pressure cell cause changes in the weather patterns of the area. Warm summers, mild winters, infrequent rainfall, moderate daytime on-shore breezes, and moderate humidity characterize local climatic conditions. This normally mild climatic condition is occasionally interrupted by periods of hot weather, winter storms, and hot easterly Santa Ana winds.

The Air Basin is an area of high air pollution potential, particularly from June through September. This condition is generally attributed to the large amount of pollutant emissions, light winds and shallow vertical atmospheric mixing. This frequently reduces pollutant dispersion, thus causing elevated air pollution levels. Pollutant concentrations in the Air Basin vary with location, season and time of day. Ozone concentrations, for example, tend to be lower along the coast, higher in the near inland valleys and lower in the far inland areas of the Air Basin and adjacent desert.

Certain air pollutants have been recognized to cause notable health problems and consequential damage to the environment either directly or in reaction with other pollutants, due to their presence in elevated concentrations in the atmosphere. Such pollutants have been identified and regulated as part of the overall endeavor to prevent further deterioration and facilitate improvement in air quality. The following pollutants are regulated by the United States

[5] Leighton Consulting, Inc. Draft Final Preliminary Environmental Assessment Equivalent Document for Burroughs Middle School Comprehensive Modernization Project, October 2017

[6] Leighton Consulting, Inc. Final Draft Removal Action Workplan for Burroughs Middle School Comprehensive Modernization Project, February 2018

Environmental Protection Agency (US EPA) and are subject to emissions control requirements adopted by federal, state and local regulatory agencies. These pollutants are referred to as "criteria air pollutants" as a result of the specific standards, or criteria, which have been adopted for them. A brief description of the health effects of these criteria air pollutants are provided below.

Ozone (O_3): O_3 is a secondary pollutant formed by the chemical reaction of Volatile Organic Compounds (VOCs) and Nitrogen Oxides (NO_X) under favorable meteorological conditions such as high temperature and stagnation episodes. O_3 concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable. An elevated level of O_3 irritates the lungs and breathing passages, causing coughing and pain in the chest and throat, thereby increasing susceptibility to respiratory infections and reducing the ability to exercise. Effects are more severe in people with asthma and other respiratory ailments. Long-term exposure may lead to scarring of lung tissue and may lower lung efficiency.

Volatile Organic Compounds (VOCs). VOCs are typically formed from combustion of fuels and/or released through evaporation of organic liquids. These are compounds comprised primarily of atoms of hydrogen and carbon. Internal combustion associated with motor vehicle usage is the major source of hydrocarbons, as are architectural coatings. Emissions of VOCs themselves are not "criteria" pollutants; however, they contribute with NO_X to formation of O_3 and are regulated as O_3 precursor emissions.

Nitrogen Dioxide (NO_2) and Nitrogen Oxides (NO_X): NO_X is a term that refers to a group of compounds containing nitrogen and oxygen. The primary compounds of air quality concern include NO_2 and nitric oxide (NO), which can quickly oxidize in the atmosphere to form NO_2. Ambient air quality standards have been promulgated for NO_2, which is a reddish-brown, reactive gas. The principle form of NO_X produced by combustion is NO, but NO reacts quickly in the atmosphere to form NO_2, creating the mixture of NO and NO_2 referred to as NO_X. Major sources of NO_X emissions include power plants, large industrial facilities, and motor vehicles. Emissions of NO_X are a precursor to the formation of ground-level ozone. NO_2 can potentially irritate the nose and throat, aggravate lung and heart problems, and may increase susceptibility to respiratory infections, especially in people with asthma. According to the California Air Resources Board (CARB), "NO_2 is an oxidizing gas capable of damaging cells lining the respiratory tract. Exposure to NO_2 along with other traffic-related pollutants, is associated with respiratory symptoms, episodes of respiratory illness and impaired lung functioning. Studies in animals have reported biochemical, structural, and cellular changes in the lung when exposed to NO_2 above the level of the current state air quality standard. Clinical studies of human subjects suggest that NO_2 exposure to levels near the current standard may worsen the effect of allergens in allergic asthmatics, especially in children."[7] NO_2 also contributes to the formation of particulate matter. The terms "NO_X" and "NO_2" are sometimes used interchangeably. However, the term "NO_X" is primarily used when discussing emissions, usually from combustion-related activities. The term "NO_2" is primarily used when discussing ambient air quality standards. More specifically, NO_2 is regulated as a criteria air pollutant under the Clean Air Act and subject to the ambient air quality standards, whereas NO_X and NO are not. In cases where the thresholds of significance, or impact

7 California Air Resources Board, "Nitrogen Dioxide – Overview," http://www.arb.ca.gov/research/aaqs/caaqs/no2-1/no2-1.htm. Accessed December 2017.

analyses are discussed in the context of NO_X emissions, it is based on the conservative assumption that all NO_X emissions would oxidize in the atmosphere to form NO_2.

Carbon Monoxide (CO): Carbon monoxide is primarily emitted from combustion processes and motor vehicles due to incomplete combustion of fuel. Elevated concentrations of CO weaken the heart's contractions and lower the amount of oxygen carried by the blood. It is especially dangerous for people with chronic heart disease. Inhalation of CO can cause nausea, dizziness, and headaches at moderate concentrations and can be fatal at high concentrations.

Sulfur Dioxide (SO_2): Major sources of SO_2 include power plants, large industrial facilities, diesel vehicles, and oil-burning residential heaters. Emissions of sulfur dioxide aggravate lung diseases, especially bronchitis. It also constricts the breathing passages, especially in asthmatics and people involved in moderate to heavy exercise. Sulfur dioxide potentially causes wheezing, shortness of breath, and coughing. High levels of particulates appear to worsen the effect of sulfur dioxide, and long-term exposures to both pollutants leads to higher rates of respiratory illness.

Particulate Matter (PM10 and PM2.5): The human body naturally prevents the entry of larger particles into the body. However, small particles including fugitive dust, with an aerodynamic diameter equal to or less than ten microns (PM10) and even smaller particles with an aerodynamic diameter equal to or less than 2.5 microns (PM2.5), can enter the body and are trapped in the nose, throat, and upper respiratory tract. These small particulates could potentially aggravate existing heart and lung diseases, change the body's defenses against inhaled materials, and damage lung tissue. The elderly, children, and those with chronic lung or heart disease are most sensitive to PM10 and PM2.5. Lung impairment can persist for two to three weeks after exposure to high levels of particulate matter. Some types of particulates could become toxic after inhalation due to the presence of certain chemicals and their reaction with internal body fluids. The elderly, children, and those with chronic lung, or heart, disease are most sensitive to PM10 and PM2.5. In children, studies have shown associations between particulate matter exposure and reduced lung function and increased respiratory symptoms and illnesses.[8] Lung impairment can persist for two to three weeks after exposure to high levels of particulate matter. Some types of particulates could become toxic after inhalation due to the presence of certain chemicals and their reaction with internal body fluids.

Lead (Pb): Lead is emitted from industrial facilities and from the sanding or removal of old lead-based paint. Smelting or processing the metal is the primary source of lead emissions, which is primarily a regional pollutant. Lead affects the brain and other parts of the body's nervous system. Exposure to lead in very young children impairs the development of the nervous system, kidneys, and blood forming processes in the body.

1.4.2 Local Air Quality

Existing Ambient Air Quality in the Project Area

The SCAQMD maintains a network of air quality monitoring stations located throughout the Air Basin to measure ambient pollutant concentrations. The monitoring area most representative of

8 California Air Resources Board, "Particulate Matter – Overview," http://www.arb.ca.gov/research/aaqs/caaqs/pm/pm.htm. Accessed December 2017.

the Project site is the Central Los Angeles County Coastal Monitoring Area (Station 087). Criteria pollutants monitored at this station include O_3, NO_2, CO, SO_2, PM10, PM2.5, and Pb. The most recent data available from the SCAQMD for these monitoring stations are from years 2013 to 2017.[9] The pollutant concentration data for these years are summarized in **Table 3,** *Pollutant Standards and Ambient Air Quality Data from Representative Monitoring Station*.

TABLE 3
POLLUTANT STANDARDS AND AMBIENT AIR QUALITY DATA FROM REPRESENTATIVE MONITORING STATION

Pollutant/Standard a	2013	2014	2015	2016	2017

Sensitive Receptors

Certain population groups, such as children, elderly, and acutely and chronically ill persons (especially those with cardio-respiratory diseases), are considered more sensitive to the potential effects of air pollution than others. The nearest sensitive receptors are the existing students at Burroughs Middle School and residential uses surrounding the school (located as near as 15 feet from construction activity).

All other air quality sensitive receptors are located at greater distances from the Project site, and would be less impacted by Project emissions.

1.4.3 Existing Greenhouse Gas Environment

Global Climate Change

Global climate change refers to changes in average climatic conditions on Earth as a whole, including changes in temperature, wind patterns, precipitation and storms. Historical records indicate that global climate changes have occurred in the past due to natural phenomena; however, data indicates that the current global conditions differ from past climate changes in rate and magnitude. The current changes in global climate have been attributed to anthropogenic (human-caused) activities by the Intergovernmental Panel on Climate Change (IPCC).[10] The term greenhouse gas (GHG) refers to gases that trap long-wave radiation or heat in the atmosphere, which heats the surface of the Earth. Without human intervention, the Earth maintains an approximate balance between the GHG emissions in the atmosphere and the storage of GHGs in the oceans and terrestrial ecosystems. GHGs are the result of both natural and anthropogenic activities. Forest fires, decomposition, industrial processes, landfills, and consumption of fossil fuels for power generation, transportation, heating, and cooking are the primary sources of GHG emissions.

The Federal Government and State of California recognized that anthropogenic GHG emissions are contributing to changes in the global climate, and that such changes are having and will have adverse effects on the environment, the economy, and public health. While worldwide contributions of GHG emissions are expected to have widespread consequences, it is not possible to link particular changes to the environment of California, or elsewhere, to GHGs emitted from a particular source or location. In other words, emissions of GHGs have the potential to cause global impacts, rather than local impacts. Increased concentrations of GHGs in the Earth's atmosphere have been linked to global climate change and such conditions as rising surface temperatures, melting icebergs and snowpack, rising sea levels, and the increased frequency and magnitude of severe weather conditions. Existing climate change models also show that climate warming portends a variety of impacts on agriculture, including loss of microclimates that support specific crops, increased pressure from invasive weeds and diseases, and loss of productivity due to changes in water reliability and availability. In addition, rising temperatures

[10] Intergovernmental Panel on Climate Change, Climate Change 2007: The Physical Science Basis, Contribution of Working Group I to the Fourth Assessment Report of the Intergovernmental Panel on Climate Change, Summary for Policy Makers, 2007, https://www.ipcc.ch/report/ar4/wg1/.

and shifts in microclimates associated with global climate change are expected to increase the frequency and intensity of wildfires.

State law defines GHGs to include the following compounds: carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6).[11] The most common GHG that results from human activity is CO_2, which represents 76 percent of total anthropogenic GHG emissions in the atmosphere (as of 2010 data),[12] followed by CH_4 and N_2O. Scientists have established a Global Warming Potential (GWP) to gauge the potency of each GHG's ability to absorb and re-emit long-wave radiation. The GWP of a gas is determined using CO_2 as the reference gas with a GWP of 1 over 100 years. For example, a gas with a GWP of 10 is 10 times more potent than CO_2 over 100 years. The sum of each GHG multiplied by its associated GWP is referred to as carbon dioxide equivalents (CO_2e). The measurement unit CO_2e is used to report the combined potency of GHG emissions.

These GWP ratios are available from the IPCC. Historically, GHG emission inventories have been calculated using the GWPs from the IPCC's Second Assessment Report (SAR). In 2007, the IPCC updated the GWP values based on the latest science available at the time in its Fourth Assessment Report (AR4). The updated GWPs in the IPCC AR4 have begun to be used in recent GHG emissions inventories. In 2013, the IPCC again updated the GWP values based on the latest science in its Fifth Assessment Report (AR5).[13] However, United Nations Framework Convention on Climate Change (UNFCCC) reporting guidelines for national inventories require the use of GWP values from the IPCC Fourth Assessment Report (AR4). To comply with international reporting standards under the UNFCCC, official emission estimates for California and the U.S. are reported by the United States using AR4 GWP values, which have replaced the previously required use of IPCC Second Assessment Report (SAR) GWP values. Therefore, statewide and national GHG inventories have not yet updated their GWP values to the AR5 values, and they continue to use the AR4 GWPs. By applying the GWP ratios, project-related CO_2e emissions can be tabulated in metric tons per year. Typically, the GWP ratio corresponding to the warming potential of CO_2 over a 100-year period is used as a baseline. Compounds that are regulated as GHGs are discussed below.

Carbon Dioxide (CO_2): CO_2 is the most abundant GHG in the atmosphere and is primarily generated from fossil fuel combustion from stationary and mobile sources. CO_2 is the reference gas (GWP of 1) for determining the GWPs of other GHGs.

Methane (CH_4): CH_4 is emitted from biogenic sources (i.e., resulting from the activity of living organisms), incomplete combustion in forest fires, landfills, manure management, and leaks in

Accessed: December 2017.

natural gas pipelines. The GWP of CH_4 is 21 in the IPCC SAR, 25 in the IPCC AR4, and 28 in the IPCC AR5.

Nitrous Oxide (N_2O): N_2O produced by human-related sources including agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuel, adipic acid production, and nitric acid production. The GWP of N_2O is 310 in the IPCC SAR, 298 in the IPCC AR4, and 265 in the IPCC AR5.

Hydrofluorocarbons (HFCs): HFCs are fluorinated compounds consisting of hydrogen, carbon, and fluorine. They are typically used as refrigerants in both stationary refrigeration and mobile air conditioning systems.

Perfluorocarbons (PFCs): PFCs are fluorinated compounds consisting of carbon and fluorine. They are primarily created as a byproduct of aluminum production and semiconductor manufacturing.

Sulfur Hexafluoride (SF_6): SF_6 is a fluorinated compound consisting of sulfur and fluoride. It is a colorless, odorless, nontoxic, nonflammable gas. It is most commonly used as an electrical insulator in high voltage equipment that transmits and distributes electricity.

The CARB compiles the State's GHG emissions inventory. The most updated inventory is referred to as the 2017 edition, which reports the State's GHG emissions inventory from calendar year 2015. Based on the 2015 GHG inventory data (i.e., the latest year for which data are available from CARB, California emitted 440.4 million metric tons of CO_2e ($MMTCO_2e$) including emissions resulting from imported electrical power.[14] Between 1990 and 2015, the population of California grew by approximately 9.3 million (from 29.8 to 39.1 million).[15] This represents an increase of approximately 31 percent from 1990 population levels. In addition, the California economy, measured as gross state product, grew from $773 billion in 1990 to $2.49 trillion in 2015 representing an increase of approximately 222 percent (just over three times the 1990 gross state product).[16] Despite the population and economic growth, California's net GHG emissions only grew by approximately 2.2 percent. According to CARB, the declining trend coupled with the state's GHG reduction programs (such as the Renewables Portfolio Standard, LCFS, vehicle efficiency standards, and declining caps under the Cap and Trade Program) demonstrate that California is on track to meet the 2020 GHG reduction target codified in California Health and Safety Code (HSC), Division 25.5, also known as The Global Warming

Effects of Global Climate Change

The scientific community's understanding of the fundamental processes responsible for global climate change has improved over the past decade, and its predictive capabilities are advancing. However, there remain significant scientific uncertainties in, for example, predictions of local effects of climate change, occurrence, frequency, and magnitude of extreme weather events, effects of aerosols, changes in clouds, shifts in the intensity and distribution of precipitation, and changes in oceanic circulation. Due to the complexity of the Earth's climate system and inability to accurately model it, the uncertainty surrounding climate change may never be completely eliminated. Nonetheless, the IPCC's *Fifth Assessment Report, Summary for Policy Makers* states that, "it is *extremely likely* that more than half of the observed increase in global average surface

17 California Energy Commission, Inventory of California Greenhouse Gas Emissions and Sinks 1990 to 2004, 2006, https://planning.lacity.org/eir/8150Sunset/References/4.E.%20Greenhouse%20Gas%20Emissions/GHG.20_CEC%20GHG%20Emissions%20and%20Sinks.pdf . Accessed December 2017.

temperature from 1951 to 2010 was caused by the anthropogenic increase in greenhouse gas concentrations and other anthropogenic forc[es [*sic*] together."[18]

A report from the National Academy of Sciences concluded that 97 to 98 percent of the climate researchers most actively publishing in the field support the tenets of the IPCC in that climate change is very likely caused by human (i.e., anthropogenic) activity.[19] According to CARB, the potential impacts in California due to global climate change may include: loss in snow pack; sea level rise; more extreme heat days per year; more high ozone days; more large forest fires; more drought years; increased erosion of California's coastlines and sea water intrusion into the Sacramento and San Joaquin Deltas and associated levee systems; and increased pest infestation.[20] Below is a summary of some of the potential effects that could be experienced in California as a result of global warming and climate change.

In 2009, the California Natural Resources Agency (CNRA) published the *California Climate Adaptation Strategy* as a response to the Governor's Executive Order S-13-2008.[21] In 2014, the CNRA rebranded the first update of the 2009 adaptation strategy as the *Safeguarding California Plan*.[22] A 2017 update to *Safeguarding California* is now undergoing public review.[23] In 2016, the CNRA released *Safeguarding California: Implementation Action Plans* in accordance with Executive Order B-30-15, identifying a lead agency to lead adaptation efforts in each sector. *Safeguarding California* lists specific recommendations for state and local agencies to best adapt to the anticipated risks posed by a changing climate. In accordance with the 2009 *California Climate Adaptation Strategy*, the CEC was directed to develop a website on climate change scenarios and impacts that would be beneficial for local decision makers. The website, known as Cal-Adapt, became operational in 2011.[24] The information provided on the Cal-Adapt website represents a projection of potential future climate scenarios comprised of local average values for temperature, sea level rise, snowpack and other data representative of a variety of models and scenarios, including potential social and economic factors. According to the Cal-Adapt website, the portion of the state in which the Project site is located could result in an average increase in temperature of approximately 2°F) by 2070-2090, compared to the baseline 1961-1990 period.

2. Regulatory Setting

A number of statutes, regulations, plans and policies have been adopted which address air quality and climate change concerns. The Project site and vicinity is subject to regulations developed and implemented at the federal, State, and local levels. At the federal level, the US EPA is responsible for implementation of the federal Clean Air Act (CAA). Some portions of the CAA (e.g., certain mobile source requirements and other requirements) are implemented directly by the US EPA. Other portions of the CAA (e.g., stationary source requirements) are implemented through delegation of authority to State and local agencies.

2.1 Federal

2.1.1 Federal Clean Air Act

The federal CAA was the first federal legislation regarding air pollution control. At the federal level, the US EPA is responsible for implementation of certain portions of the CAA including mobile source requirements. Other portions of the CAA, such as stationary source requirements, are implemented by state and local agencies.

Under Title I, Nonattainment Provisions, the CAA establishes federal air quality standards, known as National Ambient Air Quality Standards (NAAQS), for the following criteria pollutants O_3, NO_2, CO, SO_2, PM10, PM2.5, and Pb. It also specifies future dates for achieving compliance with the NAAQS and mandates that states submit and implement a State Implementation Plan (SIP) for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards would be met. The 1990 amendments to the CAA identify specific emission reduction goals for basins not meeting the NAAQS. These amendments require both a demonstration of reasonable further progress toward attainment and incorporation of additional sanctions for failure to attain or to meet interim milestones. **Table 5,** *Ambient Air Quality Standards*, shows the NAAQS currently in effect for each criteria pollutant.

Title II of the CAA, Mobile Source Provisions, pertains to mobile sources such as cars, trucks, buses, and planes. Reformulated gasoline, automobile pollution control devices, and vapor recovery nozzles on gas pumps are a few of the mechanisms the US EPA uses to regulate mobile air emission sources. The provisions of Title II have resulted in tailpipe emission standards for vehicles, which have strengthened in recent years to improve air quality. For example, the standards for NO_X emissions have lowered substantially and the specification requirements for cleaner burning gasoline are more stringent.

TABLE 5
AMBIENT AIR QUALITY STANDARDS

Pollutant	Average Time	California Standards [a]		National Standards [b]		
		Concentration [c]	Method [d]	Primary [c, e]	Secondary [c, f]	Method [g]

[a] California standards for O_3, CO (except 8-hour Lake Tahoe), SO_2 (1 and 24 hour), NO_2nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

[b] National standards (other than O_3, PM10, PM2.5, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The O_3 standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m^3 is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard.

[c] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[d] Any equivalent procedure which can be shown to the satisfaction of CARB to give equivalent results at or near the level of the air quality standard may be used.

[e] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

[f] National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[g] Reference method as described by the USEPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the USEPA.

[h] On October 1, 2015, the national 8-hour O_3 primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[i] To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb.

[j] On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated non-attainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

[k] On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 µg/m^3 to 12.0 µg/m^3.

[l] CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[m] The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 µg/m^3 as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated non-attainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

[n] In 1989, CARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

2.1.2 United States Environmental Protection Agency

The US EPA is responsible for implementing federal policy to address global climate change. The federal government administers a wide array of public-private partnerships to reduce the GHG intensity generated by the United States. These programs focus on energy efficiency, renewable energy, methane and other non-carbon dioxide (CO_2) gases, agricultural practices, and implementation of technologies to achieve GHG reductions. The US EPA implements several voluntary programs that substantially contribute to the reduction of GHG emissions. All of these

programs play a significant role in encouraging voluntary reductions from large corporations, consumers, industrial and commercial buildings, and many major industrial sectors.

- The State Climate and Energy Partner Network that allows for the exchange of information between federal and state agencies regarding climate and energy,
- The Climate Leaders program for companies,
- The Energy Star labeling system for energy-efficient products, and
- The Green Power Partnership for organizations interested in buying green power.

On December 7, 2009, the US EPA Administrator signed two distinct findings regarding GHGs under Section 202(a) of the federal CAA. The US EPA adopted a Final Endangerment Finding for the six defined GHGs CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6.[25] The Endangerment Finding is required before US EPA can regulate GHG emissions under Section 202(a)(1) of the CAA in fulfillment of the U.S. Supreme Court decision. The US EPA also adopted a Cause or Contribute Finding in which the US EPA Administrator found that GHG emissions from new motor vehicle and motor vehicle engines are contributing to air pollution, which is endangering public health and welfare. These findings do not, by themselves, impose any requirements on industry or other entities. However, these actions were a prerequisite for implementing GHG emissions standards for vehicles.

On May 19, 2009, the President announced a national policy for fuel efficiency and emissions standards in the United States auto industry.[26] The adopted Federal standard applies to passenger cars and light-duty trucks for model years 2012 through 2016. The rule surpasses the prior Corporate Average Fuel Economy standards and requires an average fuel economy standard of 35.5 miles per gallon (mpg) and 250 grams of CO_2 per mile by model year 2016, based on USEPA calculation methods. These standards were formally adopted on April 1, 2010. In August 2012, standards were adopted for model year 2017 through 2025 passenger cars and light-duty trucks. By 2025, vehicles are required to achieve 54.5 mpg (if GHG reductions are achieved exclusively through fuel economy improvements) and 163 grams of CO_2 per mile. According to USEPA, a model year 2025 vehicle would emit one-half of the GHG emissions from a model year 2010 vehicle.[27]

On December 7, 2009, the USEPA Administrator signed two distinct findings regarding GHGs under Federal Clean Air Act Section 202(a). USEPA adopted a Final Endangerment Finding for the six defined GHGs (CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6) on December 7, 2009. The Endangerment Finding is required before USEPA can regulate GHG emissions under Clean Air

[25] United States Environmental Protection Agency, Endangerment and Cause or Contribute Findings for Greenhouse Gases under the Section 202(a) of the Clean Air Act, https://www.epa.gov/climate-change/endangerment-and-cause-or-contribute-findings-greenhouse-gases-under-section-202a. Accessed December 2017.

[26] On March 15, 2017, the Trump Administration announced its intention to direct USEPA to reconsider the model year 2017–2025 cars and light-truck emissions standards, but did not rescind California's waiver. Therefore, the standards remain in effect. See: The White House, Remarks by President Trump at American Center for Mobility | Detroit, MI, March 15, 2017, https://www.whitehouse.gov/the-press-office/2017/03/15/remarks-president-trump-american-center-mobility-detroit-mi, accessed December 2018.

[27] United States Environmental Protection Agency (USEPA), EPA and NHTSA Set Standards to Reduce Greenhouse Gases and Improve Fuel Economy for Model Years 2017–2025 Cars and Light Trucks, EPA-420-F-12-051, August 2012, https://nepis.epa.gov/Exe/ZyPDF.cgi/P100EZ7C.PDF?Dockey=P100EZ7C.pdf, accessed December 2018.

Act Section 202(a)(1) consistent with the United States Supreme Court's decision. The USEPA also adopted a Cause or Contribute Finding in which the USEPA Administrator found that GHG emissions from new motor vehicle and motor vehicle engines are contributing to air pollution that is endangering public health and welfare. These findings do not themselves impose any requirements on industry or other entities. However, these actions were a prerequisite for implementing GHG emissions standards for vehicles.

Standards for GHG emissions and fuel efficiency for medium- and heavy-duty trucks have been jointly developed by USEPA and the National Highway Traffic Safety Administration (NHTSA). The Phase 1 standards apply to combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles for model years 2014 through 2018 and result in a reduction in fuel consumption from 6 to 23 percent over the 2010 baseline, depending on the vehicle type.[28] USEPA and NHTSA are in the process of considering adoption of the Phase 2 standards that would cover model years 2021 through 2027 and require the phase in of a 5 to 25 percent reduction in fuel consumption over the 2017 baseline depending on the compliance year and vehicle type.[29]

2.2 State

2.2.1 California Air Resources Board

CARB, a part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California. In this capacity, CARB conducts research, sets state ambient air quality standards (California Ambient Air Quality Standards [CAAQS]), compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB has primary responsibility for the development of California's SIP, for which it works closely with the federal government and the local air districts. The SIP is required for the State to take over implementation of the federal CAA from the US EPA.

In 2004, CARB adopted an Airborne Toxic Control Measure (ACTM) to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter and other toxic air contaminants (Title 13 California Code of Regulations [CCR], Section 2485). The measure applies to diesel-fueled commercial vehicles with gross vehicle weight ratings greater than 10,000 pounds that are licensed to operate on highways, regardless of where they are registered. This measure generally does not allow diesel-fueled commercial vehicles to idle for more than five (5) minutes at any given location with certain exemptions for equipment in which idling is a

[28] USEPA, EPA and NHTSA Adopt First-Ever Program to Reduce Greenhouse Gas Emissions and Improve Fuel Efficiency of Medium- and Heavy-Duty Vehicles, EPA-420-F-11-031, August 2011, https://nepis.epa.gov/Exe/ZyPDF.cgi/P100BOT1.PDF?Dockey=P100BOT1.pdf, accessed December 2018.

[29] USEPA, Greenhouse Gas Emissions and Fuel Efficiency Standards for Medium- and Heavy-Duty Engines and Vehicles—Phase 2, Federal Register 81(206), October 25, 2016, https://www.gpo.gov/fdsys/pkg/FR-2016-10-25/pdf/2016-21203.pdf, accessed December 2018.

necessary function such as concrete trucks. While this measure primarily targets diesel particulate matter emissions, it has co-benefits of minimizing GHG emissions from unnecessary truck idling.

In 2008, CARB approved the Truck and Bus regulation to reduce particulate matter and nitrogen oxide emissions from existing diesel vehicles operating in California (13 CCR, Section 2025, subsection (h)). CARB has also promulgated emission standards for off-road diesel construction equipment of greater than 25 horsepower such as bulldozers, loaders, backhoes and forklifts, as well as many other self-propelled off-road diesel vehicles. The regulation adopted by the CARB on July 26, 2007, aims to reduce emissions by installation of diesel soot filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission-controlled models. While these regulations primarily target reductions in criteria air pollutant emission, they have co-benefits of minimizing GHG emissions due to improved engine efficiencies.

2.2.2 California Clean Air Act

The California Clean Air Act, signed into law in 1988, requires all areas of the state to achieve and maintain the CAAQS by the earliest practical date. The CAAQS apply to the same criteria pollutants as the federal Clean Air Act but also include state-identified criteria pollutants, which include sulfates, visibility-reducing particles, hydrogen sulfide, and vinyl chloride. CARB has primary responsibility for ensuring the implementation of the California Clean Air Act, responding to the federal Clean Air Act planning requirements applicable to the state, and regulating emissions from motor vehicles and consumer products within the state. Table 5 shows the CAAQS currently in effect for each of the criteria pollutants as well as the other pollutants recognized by the state. As shown in Table 5, the CAAQS include more stringent standards than the NAAQS for most of the criteria air pollutants.

Health and Safety Code Section 39607(e) requires CARB to establish and periodically review area designation criteria. **Table 6,** *South Coast Air Basin Attainment Status (Los Angeles County)* provides a summary of the attainment status of the Los Angeles County portion of the Air Basin with respect to the state standards. The Air Basin is designated as attainment for the California standards for sulfates, hydrogen sulfide, and vinyl chloride. As shown in Table 6, the Air Basin is currently in nonattainment for ozone, PM10, and PM2.5 under the CAAQS.

The Clean Air Act also specifies future dates for achieving compliance with the NAAQS and mandates that states submit and implement a State Implementation Plan (SIP) for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards would be met. The 1990 amendments to the Clean Air Act identify specific emission reduction goals for basins not meeting the NAAQS. These amendments require both a demonstration of reasonable further progress toward attainment and incorporation of additional sanctions for failure to attain, or meet, interim milestones.

TABLE 6
SOUTH COAST AIR BASIN ATTAINMENT STATUS (LOS ANGELES COUNTY)

Pollutant	National Standards	California Standards
Ozone (1-hour standard)	N/A [a]	Non-attainment
Ozone (8-hour standard)	Non-attainment – Extreme	Non-attainment
Carbon Monoxide	Attainment	Attainment
Nitrogen Dioxide	Attainment	Attainment
Sulfur Dioxide	Attainment	Attainment
PM10	Attainment	Non-attainment
PM2.5	Non-attainment – Serious	Non-attainment
Lead	Non-attainment (Partial) [b]	Attainment
Visibility Reducing Particles	N/A	Unclassified
Sulfates	N/A	Attainment
Hydrogen Sulfide	N/A	Attainment
Vinyl Chloride	N/A	N/A [c]

N/A = not applicable

[a] The NAAQS for 1-hour ozone was revoked on June 15, 2005, for all areas except Early Action Compact areas.

[b] Partial Nonattainment designation – Los Angeles County portion of the Air Basin only for near-source monitors.

[c] In 1990 the California Air Resources Board identified vinyl chloride as a toxic air contaminant and determined that it does not have an identifiable threshold. Therefore, the California Air Resources Board does not monitor or make status designations for this pollutant.

SOURCE: United States Environmental Protection Agency, The Green Book Non-attainment Areas for Criteria Pollutants, https://www.epa.gov/green-book. Accessed November 2017; California Air Resources Board, Area Designations Maps/State and National, http://www.arb.ca.gov/desig/adm/adm.htm. Accessed December 2017.

Title II of the Clean Air Act pertains to mobile sources, such as cars, trucks, buses, and planes. Reformulated gasoline, automobile pollution control devices, and vapor recovery nozzles on gas pumps are a few of the mechanisms the US EPA uses to regulate mobile air emission sources. The provisions of Title II have resulted in tailpipe emission standards for vehicles, which have strengthened in recent years to improve air quality. For example, the standards for NO_X emissions have lowered substantially and the specification requirements for cleaner burning gasoline are more stringent.

2.2.3 Air Quality and Land Use Handbook

The CARB published the Air Quality and Land Use Handbook in April 2005 to serve as a general guide for considering impacts to sensitive receptors from facilities that emit toxic air contaminant (TAC) emissions. The recommendations provided therein are voluntary and do not constitute a requirement or mandate for either land use agencies or local air districts.

2.2.4 On-Road and Off-Road Vehicle Rules

In 2004, CARB adopted an Airborne Toxic Control Measure (ATCM) to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter (DPM) and

other TACs (Title 13 California Code of Regulations [CCR], Section 2485).[30] The measure applies to diesel-fueled commercial vehicles with gross vehicle weight ratings greater than 10,000 pounds that are licensed to operate on highways, regardless of where they are registered. This measure does not allow diesel-fueled commercial vehicles to idle for more than 5 minutes at any given time.

In 2008 CARB approved the Truck and Bus regulation to reduce NO_X, PM10, and PM2.5 emissions from existing diesel vehicles operating in California (13 CCR, Section 2025).[31] The requirements were amended in December 2010 and apply to nearly all diesel fueled trucks and busses with a gross vehicle weight rating greater than 14,000 pounds. For the largest trucks in the fleet, those with a gross vehicle weight rating greater than 26,000 pounds, there are two methods to comply with the requirements. The first way is for the fleet owner to retrofit or replace engines, starting with the oldest engine model year, to meet 2010 engine standards, or better. This is phased over eight years, starting in 2015 and would be fully implemented by 2023, meaning that all trucks operating in the State subject to this option would meet, or exceed, the 2010 engine emission standards for NO_X and DPM by 2023. The second option, if chosen, requires fleet owners, starting in 2012, to retrofit a portion of their fleet with diesel particulate filters achieving at least 85 percent removal efficiency, so that by January 1, 2016 their entire fleet was equipped with diesel particulate filters. However, diesel particulate filters do not typically lower NO_X emissions. Thus, fleet owners choosing the second option must still comply with the 2010 engine emission standards for their trucks and busses by 2020.

In addition to limiting exhaust from idling trucks, CARB promulgated emission standards for off-road diesel construction equipment of greater than 25 horsepower (hp) such as bulldozers, loaders, backhoes and forklifts, as well as many other self-propelled off-road diesel vehicles. The regulation adopted by the CARB on July 26, 2007, aims to reduce emissions by installation of diesel soot filters and encouraging the retirement, replacement, or repower, of older, dirtier engines with newer emission controlled models (13 CCR, Section 2449).[32] Implementation is staggered based on fleet size (which is the total of all off-road horsepower under common ownership or control), with the largest fleets to begin compliance January 1, 2014. Each fleet must demonstrate compliance through one of two methods. The first option is to calculate and maintain fleet average emissions targets, which encourages the retirement, or repowering, of older equipment and rewards the introduction of newer cleaner units into the fleet. The second option is to meet the Best Available Control Technology (BACT) requirements by turning over, or installing, Verified Diesel Emission Control Strategies (VDECS) on a certain percentage of its total fleet horsepower. The compliance schedule requires that BACT turn overs, or retrofits

(VDECS installation), be fully implemented by 2023 in all equipment in large and medium fleets and across 100 percent of small fleets by 2028.

2.2.5 California Greenhouse Gas Reduction Targets

The Governor announced on June 1, 2005, through Executive Order S-3-05,[33] the following GHG emission reduction targets:

- By 2010, California shall reduce GHG emissions to 2000 levels;
- By 2020, California shall reduce GHG emissions to 1990 levels; and
- By 2050, California shall reduce GHG emissions to 80 percent below 1990 levels.

In accordance with Executive Order S-3-05, the Secretary of CalEPA is required to coordinate efforts of various agencies, which comprise the California Climate Action Team (CAT), in order to collectively and efficiently reduce GHGs. These agencies include CARB, the Secretary of the Business, Transportation and Housing Agency, Department of Food and Agriculture, the Resources Agency, the California Energy Commission, and the Public Utilities Commission. The CAT provides periodic reports to the Governor and Legislature on the state of GHG reductions in the state as well as strategies for mitigating and adapting to climate change. The first CAT Report to the Governor and the Legislature in 2006 contained recommendations and strategies to help meet the targets in Executive Order S-3-05. The 2010 CAT Report, finalized in December 2010, expands on the policies in the 2006 assessment.[34] The new information detailed in the CAT Report includes development of revised climate and sea-level projections using new information and tools that became available and an evaluation of climate change within the context of broader social changes, such as land-use changes and demographic shifts.

On April 29, 2015, Governor Brown issued Executive Order B-30-15. Therein, the Governor directed the following:

- Established a new interim statewide reduction target to reduce GHG emissions to 40 percent below 1990 levels by 2030.
- Ordered all state agencies with jurisdiction over sources of GHG emissions to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 reduction targets.
- Directed CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of million metric tons of carbon dioxide equivalent.

In response to the 2030 GHG reduction target, CARB adopted the 2017 Climate Change Scoping Plan at a public meeting held in December 2017.[35] The 2017 Scoping Plan outlines the strategies the State will implement to achieve the 2030 GHG reduction target, which build on the Cap-and-

35 California Air Resources Board, California's 2017 Climate Change Scoping Plan, November 2017. Available at: https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf. Accessed January 2018.

Trade Regulation, the Low Carbon Fuel Standard (LCFS), improved vehicle, truck and freight movement emissions standards, increasing renewable energy, and strategies to reduce methane emissions from agricultural and other wastes by using it to meet our energy needs. The 2017 Scoping Plan also comprehensively addresses GHG emissions from natural and working lands of California, including the agriculture and forestry sectors. The 2017 Scoping Plan considered a number of different alternatives to achieve the 2030 GHG reduction goal. The "Scoping Plan Scenario" was ultimately adopted and relies on the continuation of ongoing and statutorily required programs and continuation of the Cap-and-Trade Program. The Scoping Plan Scenario was modified from the January 2017 Proposed Scoping Plan to reflect AB 398, including removal of the 20 percent GHG reduction measure for refineries.[36]

CARB states that the Scoping Plan Scenario "is the best choice to achieve the State's climate and clean air goals".[37] Under the Scoping Plan Scenario, the majority of the reductions would result from continuation of the Cap-and-Trade regulation. Additional reductions are achieved from electricity sector standards (i.e., utility providers to supply 50 percent renewable electricity by 2030), doubling the energy efficiency savings at end uses, additional reductions from the LCFS, implementing the short-lived GHG strategy (e.g., hydrofluorocarbons), and implementing the mobile source strategy and sustainable freight action plan. The alternatives are designed to consider various combinations of these programs as well as consideration of a carbon tax in the event the Cap-and-Trade regulation is not continued. However, in July 2017, the California Legislature voted to extend the Cap-and-Trade regulation to 2030.

2.2.6 California Health and Safety Code, Division 25.5 – California Global Warming Solutions Act of 2006

In 2006, the California State Legislature adopted Assembly Bill (AB) 32 (codified in the California Health and Safety Code [HSC], Division 25.5 – California Global Warming Solutions Act of 2006), which focuses on reducing GHG emissions in California to 1990 levels by 2020. HSC Division 25.5 defines GHGs as CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6 and represents the first enforceable statewide program to limit emissions of these GHGs from all major industries with penalties for noncompliance. The law further requires that reduction measures be technologically feasible and cost effective. Under HSC Division 25.5, CARB has the primary responsibility for reducing GHG emissions. CARB is required to adopt rules and regulations directing state actions that would achieve GHG emissions reductions equivalent to 1990 statewide levels by 2020. In 2016, the California State Legislature adopted Senate Bill (SB) 32 and its companion bill AB 197, and both were signed by Governor Brown. SB 32 and AB 197 amends HSC Division 25.5 and establishes a new climate pollution reduction target of 40 percent below 1990 levels by 2030 and includes provisions to ensure the benefits of state climate policies reach into disadvantaged communities.

[36] California Air Resources Board, California's 2017 Climate Change Scoping Plan, November 2017, Page 23. Available at: https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf . Accessed January 2018.

[37] California Air Resources Board, California's 2017 Climate Change Scoping Plan, November2017. Available at: https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf . Accessed January 2018.

A specific requirement of AB 32 was to prepare a Climate Change Scoping Plan for achieving the maximum technologically feasible and cost-effective GHG emission reduction by 2020 (Health and Safety Code section 38561 (h)). CARB developed an AB 32 Scoping Plan that contains strategies to achieve the 2020 emissions cap.[38] The initial scoping plan was approved in 2008. It contained a mix of recommended strategies that combined direct regulations, market-based approaches, voluntary measures, policies, and other emission reduction programs calculated to meet the 2020 statewide GHG emission limit and initiate the transformations needed to achieve the State's long-range climate objectives.[39] The first update to the Scoping Plan was approved by CARB in May 2014 and built upon the initial Scoping Plan with new strategies and recommendations.[40]

As required by HSC Division 25.5, CARB approved the 1990 GHG emissions inventory, thereby establishing the emissions limit for 2020. The 2020 emissions limit was originally set at 427 $MMTCO_2e$ using the GWP values from the IPCC SAR. CARB also projected the state's 2020 GHG emissions under business-as-usual (BAU) conditions – that is, emissions that would occur without any plans, policies, or regulations to reduce GHG emissions. CARB originally used an average of the state's GHG emissions from 2002 through 2004 and projected the 2020 levels at approximately 596 $MMTCO_2e$ (using GWP values from the IPCC SAR). Therefore, under the original projections, the state must reduce its projected 2020 emissions by 28.4 percent in order to meet the 1990 target of 427 $MMTCO_2e$. In 2014, CARB revised the target using the GWP values from the IPCC AR4 and determined that the 1990 GHG emissions inventory and 2020 GHG emissions limit is 431 $MMTCO_2e$. CARB also updated the State's projected 2020 emissions estimate to account for the effect of the 2007–2009 economic recession, new estimates for future fuel and energy demand, and the reductions required by regulation that were recently adopted for motor vehicles and renewable energy. CARB's projected statewide 2020 emissions estimate using the GWP values from the IPCC AR4 is 509.4 $MMTCO_2e$. Therefore, the emission reductions necessary to achieve the 2020 emissions target of 431 $MMTCO_2e$ would be 78.4 $MMTCO_2e$, or a reduction of GHG emissions by approximately 15.4 percent. In the 2017 Climate Change Scoping Plan Update, CARB provides the estimated projected statewide 2030 emissions and the level of reductions necessary to achieve the 2030 target of 40 percent below 1990 levels. CARB's projected statewide 2030 emissions takes into account 2020 GHG reduction policies and programs. A summary of the GHG emissions reductions required under HSC Division 25.5 is provided in **Table 7,** *Estimated Greenhouse Gas Emissions Reductions Required by HSC Division 25.5*.

TABLE 7
ESTIMATED GREENHOUSE GAS EMISSIONS REDUCTIONS REQUIRED BY HSC DIVISION 25.5

Emissions Scenario	GHG Emissions ($MMTCO_2e$)
2008 Scoping Plan (IPCC SAR)	
2020 BAU Forecast (CARB 2008 Scoping Plan Estimate)	596
2020 Emissions Target Set by HSC Division 25.5 (i.e., 1990 Level)	427
Reduction below BAU Necessary to Achieve 1990 Levels by 2020	169 (28.4%) [a]
2011 Scoping Plan (GHG Estimates Updated in 2014 to Reflect IPCC AR4 GWPs)	
2020 BAU Forecast (CARB 2011 Scoping Plan Estimate)	509.4
2020 Emissions Target Set by HSC Division 25.5 (i.e., 1990 Level)	431
Reduction Necessary to Achieve 1990 Levels by 2020	78.4 (15.4%) [b]
2017 Scoping Plan	
2030 BAU Forecast ("Reference Scenario" which includes 2020 GHG reduction policies and programs)	389
2030 Emissions Target Set by HSC Division 25.5 (i.e., 40% below 1990 Level)	260
Reduction below Business-As-Usual Necessary to Achieve 40% below 1990 Level by 2030	**129 (33.2%)** [c]

$MMTCO_2e$ = million metric tons of carbon dioxide equivalents

[a] 596 – 427 = 169 / 596 = 28.4%
[b] 509.4 – 431 = 78.4 / 509.4 = 15.4%
[c] 389 – 260 = 129 / 389 = 33.2%

SOURCE: California Air Resources Board, Final Supplement to the AB 32 Scoping Plan Functional Equivalent Document (FED), Attachment D, August 19, 2011; California Air Resources Board, 2020 Business-As-Usual (BAU) Emissions Projection, 2014 Edition, http://www.arb.ca.gov/cc/inventory/data/bau.htm. Accessed October 2016; California Air Resources Board, The 2017 Climate Change Scoping Plan Update, November 2017. https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf. Accessed May 2018.

In its Climate Change Scoping Plan, CARB has acknowledged that land use-driven emissions are highly complex: "While it is possible to illustrate the [GHG] inventory many different ways, no chart or graph can fully display how diverse economic sectors fit together. California's economy is a web of activity where seemingly independent sectors and subsectors operate interdependently and often synergistically."[41] GHG emissions and reductions in the land use sector are complicated to assess given that emissions are influenced by reduction measures separate from the land use sector, such as the LCFS, vehicle emissions standards, and entities regulated under the Cap-and-Trade program including refineries and utility providers. These measures will impact other sectors of the economy and will also impact existing development in addition to new land use development. In its report, *California Environmental Quality Act Guidelines Update Proposed Thresholds of Significance*, the Bay Area Air Quality Management District (BAAQMD) evaluated the reduction in land use emissions needed in order to be consistent with AB 32.[42] CARB included the following sectors for land use emissions: Transportation (on-road passenger

41 California Air Resources Board, Climate Change Scoping Plan, December 2008, https://www.arb.ca.gov/cc/scopingplan/document/adopted_scoping_plan.pdf. Accessed May 2017.

42 Bay Area Air Quality Management District, California Environmental Quality Act Guidelines Update Proposed Thresholds of Significance, May 2010, http://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/proposed_thresholds_report_-may_3_2010_final.pdf?la=en. Accessed: May 2017.

vehicles; on-road heavy-duty), electric power (electricity; cogeneration), commercial and residential (residential fuel use; commercial fuel use) and recycling and waste (domestic wastewater treatment). Table 2 of the BAAQMD document presents the results of this analysis, which shows that the 26.2 percent reduction from statewide land-use driven GHG emissions would be necessary to meet the AB 32 goal of returning to the 1990 emission levels by 2020, which is lower than the statewide reduction of 28.5 percent required based on the original 2008 Climate Change Scoping Plan projections.

2.2.7 SB 97

SB 97, enacted in 2007, directed the State Office of Planning and Research (OPR) to develop California Environmental Quality Act (CEQA) Guidelines "for the mitigation of GHG emissions or the effects of GHG emissions." In December 2009, OPR adopted amendments to the CEQA Guidelines, Appendix G Environmental Checklist, which created a new resource section for GHG emissions and indicated criteria that may be used to establish significance of GHG emissions. Appendix F of the CEQA Guidelines states that, in order to ensure that energy implications are considered in project decisions, the potential energy implications of a project shall be considered in an EIR, to the extent relevant and applicable to the project. Appendix F further states that a project's energy consumption and proposed conservation measures may be addressed, as relevant and applicable.

2.2.8 Title 24, Building Standards Code and CALGreen Code

The California Energy Commission first adopted the Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations, Title 24, Part 6) in 1978 in response to a legislative mandate to reduce energy consumption in the state. Although not originally intended to reduce GHG emissions, increased energy efficiency, and reduced consumption of electricity, natural gas, and other fuels would result in fewer GHG emissions from residential and nonresidential buildings subject to the standard. The standards are updated periodically to allow for the consideration and inclusion of new energy efficiency technologies and methods.

Part 11 of the Title 24 Building Energy Efficiency Standards is referred to as the California Green Building Standards (CALGreen) Code. The purpose of the CALGreen Code is to "improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in the following categories: (1) Planning and design; (2) Energy efficiency; (3) Water efficiency and conservation; (4) Material conservation and resource efficiency; and (5) Environmental air quality." (CBSC, 2010) The CALGreen Code is not intended to substitute for, or be identified as, meeting the certification requirements of any green building program that is not established and adopted by the California Building Standards Commission. When the CALGreen Code went into effect in 2009, compliance through 2010 was voluntary. As of January 1, 2011, the CALGreen Code is mandatory for all new buildings constructed in the state. The CALGreen Code establishes mandatory measures for new residential and non-residential buildings. Such mandatory measures include energy efficiency, water conservation, material conservation, planning and design and overall environmental quality (CBSC, 2010). The

CALGreen Code was updated in 2016 to include new mandatory measures for residential as well as nonresidential uses; the new measures took effect on January 1, 2017 (17 CCR §§ 95800 to 96023). The CALGreen code was most recently updated in 2018, to go through final approval at the end of 2018, with new measures taking effect on January 1, 2020.

2.2.9 California Green Building Code

In January 2011, the 2010 CALGreen became effective. Building off of the initial 2008 California Green Building Code, the 2010 CALGreen Code represents a more stringent building code that requires, at a minimum, that new buildings and renovations in California meet certain sustainability and ecological standards. The 2010 CALGreen Code has mandatory Green Building provisions for all new residential buildings that are three stories, or fewer (including hotels and motels), and all new non-residential buildings of any size that are not additions to existing buildings.

In January 2017, the 2016 California Building Standards Code became effective that also included the latest 2016 CALGreen Code. The mandatory provisions of the code are anticipated to reduce 3 MMT of GHG emissions by 2020, reduce water use by 20 percent, or more, and divert 50 percent of construction waste from landfills. In January 2017, the 2016 California Energy Code (Title 24, Part 6) became effective, which is also part of the CALGreen Code (Title 24, Part 11, Chapter 5.2).

2.3 Regional

2.3.1 South Coast Air Quality Management District

The SCAQMD has jurisdiction over an area of approximately 10,743 square miles. This area includes all of Orange County, Los Angeles County except for the Antelope Valley, the non-desert portion of western San Bernardino County, and the western and Coachella Valley portions of Riverside County. The Air Basin is a sub-region of the SCAQMD jurisdiction. While air quality in this area has improved, the Air Basin requires continued diligence to meet air quality standards.

Air Quality Management Plan

The SCAQMD has adopted a series of Air Quality Management Plans (AQMP) to meet the CAAQS and NAAQS. The SCAQMD and CARB have adopted the 2016 AQMP, which incorporates scientific and technological information and planning assumptions regarding air quality, including the SCAG 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), and emission inventory methodologies for various source categories.[43] The 2016 AQMP was adopted by the AQMD Governing Board on March 3, 2017.[44]

43 South Coast Air Quality Management District, Air Quality Management Plan (AQMP), Final 2016 AQMP, http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan. Accessed November 2017.

44 South Coast Air Quality Management District, Air Quality Management Plan (AQMP), Final 2016 AQMP, http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan. Accessed November 2017.

The purpose of the 2016 AQMP is to bring the Air Basin into attainment with NAAQS for 24-hour PM2.5. SCAQMD has since determined that this deadline was impractical due to drought conditions in the region.[45] In 2016, US EPA approved reclassification of the Air Basin from "moderate" to "serious" non-attainment for the 24-hour PM2.5 standard, which has a new attainment deadline of December 31, 2019. The 2016 AQMP demonstrates that the 24-hour standard will be met by 2019 with no additional reductions beyond already adopted and implemented measures. The 2016 AQMP also intensifies the scope and pace of continued air quality improvement efforts toward meeting the 2024 and 2032 8-hour ozone standard deadline with new measures designed to reduce reliance on the CAA Section 182(e)(5) long-term measures for NO_X and VOC reductions. SCAQMD expects exposure reductions to be achieved through implementation of new and advanced control technologies as well as improvement of existing technologies.

The control measures in the 2016 AQMP consist of 8-hour ozone control measures and PM2.5 control measures designed to achieve the ozone and PM2.5 NAAQS by statutory deadlines. The AQMP includes ten $PM_{2.5}$ control measures, 15 stationary source 8-hour ozone measures, and 15 early action measures for mobile sources. In general, the SCAQMD's control strategy for stationary and mobile sources is based on the following approaches: (1) available cleaner technologies; (2) best management practices; (3) incentive programs; (4) development and implementation of near-zero technologies and vehicles and control methods; and (5) emission reductions from mobile sources. Control strategies in the AQMP with potential applicability to short-term emissions from construction activities associated with the Project include strategies denoted in the AQMP as MOB-08 and MOB-10, which are intended to reduce emissions from on-road and off-road heavy-duty vehicles and equipment. Descriptions of measures MOB-08 and MOB-10 are provided below:

> **MOB-08 – Accelerated Retirement of Older On-Road Heavy-Duty Vehicles:** This proposed measure seeks to replace heavy-duty vehicles with newer, or new, vehicles that at a minimum, meet the 2010 on-road heavy-duty NO_X exhaust emissions standard of 0.2 grams per brake horsepower-hour (g/bhp-hr). Given that exceedances of the 24-hour $PM_{2.5}$ air quality standard occur in the state, priority will be placed on replacing older diesel trucks that operate primarily at the warehouse and distribution centers. Funding assistance of up to $50,000 per vehicle is proposed and the level of funding will depend upon the NO_X emissions certification level of the replacement vehicle. In addition, a provision similar to the Surplus Off-Road Option for NO_X (SOON) provision of the statewide In-Use Off-Road Fleet Vehicle Regulation will be sought to ensure that additional NO_X emission reduction benefits are achieved.
>
> **MOB-10 – Extension of the SOON Provision for Construction/Industrial Equipment:** This measure seeks to continue the (SOON) provision of the statewide In-Use Off-Road Fleet Vehicle Regulation beyond 2023 through the 2031 timeframe. To implement the SOON program in this timeframe, funding of at least $10 million per year would be sought to help fund the repower, or replacement, of older Tier 0 and Tier 1

[45] South Coast Air Quality Management District, Air Quality Management Plan (AQMP), Final 2016 AQMP, http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan. Accessed November 2017.

equipment, with reductions that are considered surplus to the statewide regulation with Tier 4 or cleaner engines.

Regulations and Rules

Several SCAQMD rules adopted to implement portions of the AQMP may apply to construction or operation of the Project. The Project may be subject to the following SCAQMD rules and regulations:

Regulation IV – Prohibitions: This regulation sets forth the restrictions for visible emissions, odor nuisance, fugitive dust, various air emissions, fuel contaminants, start-up/shut-down exemptions and breakdown events. The following is a list of rules which may apply to the Project:

Rule 401 – Visible Emissions: This rule states that a person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any one hour which is as dark or darker in shade as that designated No. 1 on the Ringelmann Chart or of such opacity as to obscure an observer's view.

Rule 402 – Nuisance: This rule states that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

Rule 403 – Fugitive Dust: This rule requires projects to prevent, reduce or mitigate fugitive dust emissions from a site. Rule 403 restricts visible fugitive dust to the project property line, restricts the net PM10 emissions to less than 50 micrograms per cubic meter ($\mu g/m^3$) and restricts the tracking out of bulk materials onto public roads. Additionally, projects must utilize one or more of the best available control measures (identified in the tables within the rule). Mitigation measures may include adding freeboard to haul vehicles, covering loose material on haul vehicles, watering, using chemical stabilizers and/or ceasing all activities. Finally, a contingency plan may be required if so determined by the US EPA.

Regulation XI – Source Specific Standards: Regulation XI sets emissions standards for different specific sources. The following is a list of rules which may apply to the Project:

Rule 1113 – Architectural Coatings: This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories.

Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters and Small Boilers and Process Heaters: This rule requires manufacturers, distributors, retailers, refurbishers, installers, and operators of new and existing units to reduce NO_X emissions from natural gas-fired water heaters, boilers, and process heaters as defined in this rule.

Regulation XIV – Toxics and Other Non-Criteria Pollutants: Regulation XIV sets requirements for new permit units, relocations, or modifications to existing permit units

which emit toxic air contaminants or other non-criteria pollutants. The following is a list of rules which may apply to the Project:

Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities: This rule requires owners and operators of any demolition or renovation activity and the associated disturbance of asbestos-containing materials, any asbestos storage facility, or any active waste disposal site to implement work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of asbestos-containing materials.

Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants: This rule requires owners and operators of any earth-moving activities of soil with applicable toxic air contaminant(s) of concern (greater than 50 cubic yards) to conduct ambient PM10 monitoring, implement dust control measures, notification, signage, and recordkeeping.

Air Quality Guidance Documents

The SCAQMD published a *CEQA Air Quality Handbook* (the Handbook) to provide local governments with guidance for analyzing and mitigating project-specific air quality impacts. The Handbook provides standards, methodologies, and procedures for conducting air quality analyses in CEQA documents and was used extensively in the preparation of this analysis. However, the SCAQMD is currently in the process of replacing the Handbook with the *Air Quality Analysis Guidance Handbook*. While this process is underway, the SCAQMD recommends using CalEEMod or another approved model to calculate emissions from land use projects.[46]

In June 2003, the SCAQMD published a document called the *Localized Significance Threshold Methodology* that is intended to provide voluntary guidance for lead agencies in analyzing localized air quality impacts from projects.[47] The document was revised in July 2008 to incorporate additional guidance regarding PM2.5 emissions.[48] The *Localized Significance Threshold Methodology* was also used in the preparation of this assessment.

The SCAQMD has also adopted land use planning guidance in the May 2005 *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*[49] which, like the CARB Handbook, also considers impacts to sensitive receptors from facilities that emit TACs. SCAQMD's distance recommendations are the same as those provided by CARB (e.g., the same siting criteria for distribution centers and dry-cleaning facilities). The SCAQMD's document introduces land use-related policies that rely on design and distance parameters to

manage potential health risk. The guidance consists of voluntary initiatives recommended for consideration by local planning agencies.

Greenhouse Gases

The SCAQMD adopted a "Policy on Global Warming and Stratospheric Ozone Depletion" on April 6, 1990. The policy commits the SCAQMD to consider global impacts in rulemaking and in drafting revisions to the Air Quality Management Plan. In March 1992, the SCAQMD Governing Board reaffirmed this policy and adopted amendments to the policy to include the following directives:

- Phase out the use and corresponding emissions of chlorofluorocarbons, methyl chloroform (1,1,1-trichloroethane or TCA), carbon tetrachloride, and halons by December 1995;
- Phase out the large quantity use and corresponding emissions of hydrochlorofluorocarbons by the year 2000;
- Develop recycling regulations for hydrochlorofluorocarbons (e.g., SCAQMD Rules 1411 and 1415);
- Develop an emissions inventory and control strategy for methyl bromide; and
- Support the adoption of a California GHG emission reduction goal.

After AB 32 was passed, SCAQMD formed a Climate Change Committee along with a Greenhouse Gases CEQA Significance Thresholds Working Group and the SoCal Climate Solutions Exchange Technical Advisory Group. On September 5, 2008, the SCAQMD Board approved the SCAQMD Climate Change Policy, which outlines actions the District will take to assist businesses and local governments in implementing climate change measures, decrease the agency's carbon emissions, and provide information to the public regarding climate change. In 2008, SCAQMD released draft guidance regarding interim CEQA GHG significance thresholds.[50] On December 5, 2008, the SCAQMD Governing Board adopted the staff proposal for interim GHG significance thresholds for stationary source/industrial projects, and related rules, and plans where the SCAQMD is the lead agency. The GHG Significance Threshold Working Group evaluated potential GHG significance thresholds; however, the SCAQMD has yet to adopt a GHG significance threshold for land use development projects (e.g., mixed-use/commercial projects).[51] The aforementioned Working Group has been inactive since 2011.

2.3.2 Regional Comprehensive Plan and Guide and Congestion Management Plan

SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino and Imperial Counties and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG is the federally designated metropolitan planning organization (MPO) for the majority of the southern California region and

50 South Coast Air Quality Management District, Board Meeting, December 5, 2008, Agenda No. 31, http://www3.aqmd.gov/hb/2008/December/0812ag.html. Accessed December 2017.

51 South Coast Air Quality Management District, Greenhouse Gases CEQA Significance Thresholds, http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ghg-significance-thresholds. Accessed December 2017.

is the largest MPO in the nation. With regard to air quality planning, SCAG has prepared the Regional Transportation Plan (RTP) and Regional Transportation Improvement Program (RTIP), which address regional development and growth forecasts and form the basis for the land use and transportation control portions of the AQMP and are utilized in the preparation of the air quality forecasts and consistency analysis included in the AQMP. The RTP, RTIP, and AQMP are based on projections originating within local jurisdictions.

2.4 Local

2.4.1 City of Los Angeles

Local jurisdictions, such as the City of Los Angeles (City), have the authority and responsibility to reduce air pollution through its land use decision-making authority. Specifically, the City is responsible for the assessment and mitigation of air emissions resulting from its land use decisions. The City's General Plan Air Quality Element includes City-wide goals, objectives, and policies related to air quality resources. A number of these goals, objectives, and policies are relevant to the proposed Project, and are related to traffic mobility, minimizing particulate emissions from construction activities, discouraging single-occupancy vehicle trips, managing traffic congestion during peak hours, and increasing energy efficiency in City facilities and private developments.

The City of Los Angeles is also responsible for the implementation of transportation control measures as outlined in the AQMP. Through capital improvement programs, local governments can fund infrastructure that contributes to improved air quality by requiring such improvements as bus turnouts as appropriate, installation of energy-efficient streetlights, and synchronization of traffic signals. In accordance with CEQA requirements and the CEQA review process, the City assesses the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits and monitors and enforces implementation of such mitigation measures.

The City of Los Angeles has incorporated the California Green Building (CALGreen) Standards Code, with amendments in its 2017 Los Angeles Green Building Code. The City's ordinance requires applicable projects to comply with specified provisions to reduce energy consumption.

2.4.2 Los Angeles Unified School District Program EIR

The SUP Program EIR includes Standard Conditions of Approval (SCs) for reducing impacts on air quality in areas where future projects would be implemented under the SUP. Applicable SCs related to Project air quality impacts are provided in **Table 8**, *Air quality Standard Conditions of Approval*, below.

TABLE 8
AIR QUALITY STANDARD CONDITIONS OF APPROVAL

Applicable SCs	Description
SC-AQ-1	LAUSD shall complete a Health Risk Assessment for new campus locations that would place classrooms or play areas within close proximity (less than 0.25 mile) of existing sources of adverse emissions. LAUSD shall identify all permitted and non-permitted stationary sources, freeways and other busy traffic corridors, railyards, and large agricultural operations within 0.25 mile of the project. Once identified, make a determination about the need for qualitative evaluation, screening level evaluation in accordance with air district specific guidance and tools, or a refined evaluation with air dispersion modeling, to determine if risks constitute an actual or potential endangerment of public health to persons who would attend or be employed at the school. For freeways and other busy traffic corridors within 500 feet, air dispersion modeling must be used to make the health risk determination (no screening, no qualitative discussion, etc.). The Health Risk Assessment shall comply with **'Air Toxics Health Risk Assessment (HRA)'**. This document includes guidance on HRA protocols for permitted, non-permitted, and mobile sources that might reasonably be anticipated to emit hazardous air emissions and result in potential long-term and short-term health impacts to student and staff at the school site. The HRA must find that health risks are below criteria thresholds. If health risks which exceed air district criteria thresholds are identified, the school campus shall be redesigned or relocated to a site farther from the emissions generator.
SC-AQ-2	LAUSD's construction contractor shall ensure that construction equipment is properly tuned and maintained in accordance with manufacturer's specifications, to ensure excessive emissions are not generated by unmaintained equipment.
SC-AQ-3	LAUSD's construction contractor shall: • Maintain speeds of 15 miles per hour (mph) or less with all vehicles. • Load impacted soil directly into transportation trucks to minimize soil handling. • Water/mist soil as it is being excavated and loaded onto the transportation trucks. • Water/mist and/or apply surfactants to soil placed in transportation trucks prior to exiting the site. • Minimize soil drop height into haul trucks or stockpiles during dumping. • During transport, cover or enclose trucks transporting soils, increase freeboard requirements, and repair trucks exhibiting spillage due to leaks. • Cover the bottom of the excavated area with polyethylene sheeting when work is not being performed. • Place stockpiled soil on polyethylene sheeting and cover with similar material. • Place stockpiled soil in areas shielded from prevailing winds.
SC-AQ-4	LAUSD shall analyze air quality impacts: If site-specific review or monitoring data of a school construction project identifies potentially significant adverse regional and localized construction air quality impacts, then LAUSD shall implement all feasible measures to reduce air emissions below the South Coast Air Quality Management District's (SCAQMD) regional and localized significance thresholds. Construction bid contracts shall include protocols that reduce construction emissions during high-emission construction phases from vehicles and other fuel driven construction engines, activities that generate fugitive dust, and surface coating operations. The Construction Contractor shall be responsible for documenting compliance with the identified protocols. Specific air emission reduction protocols include, but are not limited to, the following: **Exhaust Emissions** • Schedule construction activities that affect traffic flow to off-peak hours (e.g. between 10:00 AM and 3:00 PM). • Consolidate truck deliveries and limit the number of haul trips per day. • Route construction trucks off congested streets, as permitted by local jurisdiction haul routes. • Employ high pressure fuel injection systems or engine timing retardation. • Utilize ultra-low sulfur diesel fuel, containing 15 ppm sulfur or less (ULSD) in all diesel construction equipment.

Applicable SCs	Description
	• Use construction equipment rated by the United States Environmental Protection Agency as having at least Tier 3 (model year 2006 or newer) or Tier 4 (model year 2008 or newer) emission limits for engines between 50 and 750 horsepower. • Restrict non-essential diesel engine idle time, to not more than five consecutive minutes. • Utilize electrical power rather than internal combustion engine power generators. • Utilize electric or alternatively fueled equipment, as feasible. • Utilize construction equipment with the minimum practical engine size. • Utilize low-emission on-road construction fleet vehicles. • Ensure construction equipment is properly serviced and maintained to the manufacturer's standards. **Fugitive Dust** • Apply non-toxic soil stabilizers according to manufacturers' specification to all inactive construction areas (previously graded areas inactive for ten days or more). • Replace ground cover in disturbed areas as quickly as possible. • Sweep streets at the end of the day if visible soil material is carried onto adjacent public paved roads (recommend water sweepers with reclaimed water). • Install wheel washers where vehicles enter and exit unpaved roads onto paved roads, or wash off trucks and any equipment leaving the site each trip. • Pave unimproved construction roads that have a traffic volume of more than 50 daily trips by construction equipment, and/or 150 daily trips for all vehicles. • Pave all unimproved construction access roads for at least 100 feet from the main road to the Project site. • Enclose, cover, water twice daily, or apply non-toxic soil binders according to manufacturers' specifications to exposed piles (i.e., gravel, dirt, and sand) with a five percent or greater silt content. • Suspend all excavating and grading operations when wind speeds (as instantaneous gusts) exceed 25 miles per hour (mph). • Water disturbed areas of the active construction and unpaved road surfaces at least three times daily, except during periods of rainfall. • Limit traffic speeds on unpaved roads to 15 mph or less. • Prohibit fugitive dust activities on days where violations of the ambient air quality standard have been forecast by SCAQMD. • Tarp and/or maintain a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials. • Limit the amount of daily soil and/or demolition debris loaded and hauled per day. **General Construction** • Utilize ultra-low VOC or zero-VOC surface coatings. • Phase construction activities to minimize maximum daily emissions. • Configure construction parking to minimize traffic interference. • Provide temporary traffic control during construction activities to improve traffic flow (e.g., flag person). • Prepare and implement a trip reduction plan for construction employees. • Implement a shuttle service to and from retail services and food establishments during lunch hours. • Increase distance between emission sources to reduce near-field emission impacts.

According to the Program EIR, projects implemented under the SUP are anticipated to have less than significant and potentially significant impacts on air quality within the LAUSD service area. However, the Project-specific analysis provided below concludes that implementation of the Burroughs Middle School Comprehensive Modernization Project would have less than significant impacts on the surrounding community.

The SUP Program EIR includes SCs for minimizing impacts related to GHG emissions in areas where future projects would be implemented under the SUP. Applicable SCs related to greenhouse gas emissions impacts associated with the proposed Project are provided in **Table 9,** *Greenhouse Gas Emissions Standard Conditions of Approval*. Projects implemented under the SUP are anticipated to have less than significant and potentially significant impacts related to climate change within the LAUSD service area with the incorporation of SCs. The Project-specific analysis provided below determined that implementation of the proposed Project would have less-than-significant impacts related to climate change with the incorporation of SCs.

TABLE 9
GREENHOUSE GAS EMISSIONS STANDARD CONDITIONS OF APPROVAL

Applicable SCs	Description
SC-GHG-1	During school operation, LAUSD shall perform regular preventative maintenance on pumps, valves, piping and tanks to minimize water loss.
SC-GHG-2	LAUSD shall utilize automatic sprinklers set to irrigate landscaping during the early morning hours to reduce water loss from evaporation.
SC-GHG-3	LAUSD shall reset automatic sprinkler timers to water less during cooler months and rainy season.
SC-GHG-4	LAUSD shall develop a water budget for landscape (both non-recreational and recreational) and ornamental water use to conform to the local water efficient landscape ordinance. If no local ordinance is applicable, then use the landscape and ornamental budget outlined by the California Department of Water Resources.
SC-GHG-5	LAUSD shall ensure that the time dependent valued energy shall be at least 10% with a goal of 20% less than a standard design that is in minimum compliance with the Title 24, Part 6 energy efficiency standards that are in force at the time the project is submitted to the Division of the State Architect..

3. Significance Thresholds

3.1 Air Quality Thresholds

Pursuant to Appendix G of the State *CEQA Guidelines*, the Project would result in a significant impact related to air quality if it would:

a) Conflict with or obstruct the implementation of the applicable air quality plan;

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation;

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors);

d) Expose sensitive receptors to substantial pollutant concentrations; or

e) Create objectionable odors affecting a substantial number of people.

Pursuant to the State CEQA Guidelines (Section 15064.7), a lead agency may consider using, when available, the significance criteria established by the applicable air quality management district or air pollution control district when making determinations of significance. The Project would be under the SCAQMD's jurisdiction. SCAQMD has established air quality significance criteria in its CEQA Air Quality Handbook. These criteria are based on the recognition that the

Air Basin is a distinct geographic area with a critical air pollution problem for which ambient air quality standards have been promulgated to protect public health.[52] The potential air quality impacts of the Project are, therefore, evaluated according to the most recent criteria adopted by the SCAQMD in connection with its CEQA Air Quality Handbook, Air Quality Analysis Guidance Handbook, and subsequent SCAQMD guidance as discussed previously.[53]

3.1.1 Construction Emissions

The SCAQMD has established numerical emission indicators of significance for construction. The numerical emission indicators are based on the recognition that the Air Basin is a distinct geographic area with a critical air pollution problem for which ambient air quality standards have been promulgated to protect public health.[54] Given that construction impacts are temporary and limited to the construction phase, the SCAQMD has established numeric indicators of significance specific to construction activity. Based on the indicators in the SCAQMD CEQA Air Quality Handbook, the Project would potentially cause or contribute to an exceedance of an ambient air quality standard if the following would occur:

- Regional construction emissions from both direct and indirect sources would exceed any of the following SCAQMD prescribed daily regional emissions criteria:[55]
  - 75 pounds a day for VOC;
  - 100 pounds per day for NO_X;
  - 550 pounds per day for CO;
  - 150 pounds per day for SO_2;
  - 150 pounds per day for PM10; or
  - 55 pounds per day for PM2.5.

In addition, the SCAQMD has developed a methodology to assess the potential for localized emissions to cause an exceedance of applicable ambient air quality standards or ambient concentration limits. Impacts would be considered significant if the following would occur:

- Maximum daily localized emissions of NO_X and/or CO during construction are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the Project site greater than the most stringent ambient air quality standards for NO_2 and/or CO.[56]

52 South Coast Air Quality Management District, CEQA Air Quality Handbook (1993) 6-2.

53 While the SCAQMD CEQA Air Quality Handbook contains significance thresholds for lead, Project construction and operation would not include sources of lead emissions and would not exceed the established thresholds for lead. Unleaded fuel and unleaded paints have virtually eliminated lead emissions from commercial and residential land use projects such as the Project. As a result, lead emissions are not further evaluated in this Draft EIR.

54 South Coast Air Quality Management District, CEQA Air Quality Handbook (1993) 6-2.

55 South Coast Air Quality Management District, SCAQMD Air Quality Significance Thresholds, (March 2015), http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2. Accessed October 2017.

56 South Coast Air Quality Management District, Final Localized Significance Threshold Methodology, (2008). Available: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds. Accessed October 2017.

- Maximum daily localized emissions of PM10 and/or PM2.5 during construction are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the Project site to exceed 10.4 μg/m^3 over 24 hours (SCAQMD Rule 403 control requirement).

As discussed in detail in Section 4 *Methodology*, the SCAQMD has established screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance thresholds, and, therefore not cause, or contribute to, an exceedance of the applicable ambient air quality standards, or ambient concentration limits without project-specific dispersion modeling. This analysis uses the screening criteria to evaluate impacts from localized emissions for a 1-acre site located within 25 meters from a sensitive receptor in the Central Los Angeles County Monitoring Area:

- 161 pounds per day for NO_X;
- 1,861 pounds per day for CO;
- 16 pounds per day for PM10; or
- 8 pounds per day for PM2.5.

3.1.2 Operational Emissions

The SCAQMD has established numerical emission indicators of significance for operations. The numerical emission indicators are based on the recognition that the Air Basin is a distinct geographic area with a critical air pollution problem for which ambient air quality standards have been promulgated to protect public health.[57] The SCAQMD has established numeric indicators of significance in part based on Section 182(e) of the Clean Air Act which identifies 10 tons per year of VOC as a significance level for stationary source emissions in extreme non-attainment areas for ozone.[58] The Air Basin is designated as extreme non-attainment for ozone. The SCAQMD converted this significance level to pounds per day for ozone precursor emissions (10 tons per year × 2,000 pounds per ton ÷ 365 days per year = 55 pounds per day). The numeric indicators for other pollutants are also based on federal stationary source significance levels. Based on the indicators in the SCAQMD CEQA Air Quality Handbook, the Project would potentially cause or contribute to an exceedance of an ambient air quality standard if the following would occur:

- Regional operational emissions exceed any of the following SCAQMD prescribed daily regional emissions criteria:[59]
  - 55 pounds a day for VOC;
  - 55 pounds per day for NOX;
  - 550 pounds per day for CO;
  - 150 pounds per day for SO2;

57 South Coast Air Quality Management District, CEQA Air Quality Handbook (1993) 6-2.

58 South Coast Air Quality Management District, CEQA Air Quality Handbook (1993) 6-1.

59 South Coast Air Quality Management District, SCAQMD Air Quality Significance Thresholds, (March 2015), http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2. Accessed October 2017.

- 150 pounds per day for PM10; or
- 55 pounds per day for PM2.5.

In addition, the SCAQMD has developed a methodology to assess the potential for localized emissions to cause an exceedance of applicable ambient air quality standards. Impacts would be considered significant if the following were to occur:

- Maximum daily localized emissions of NO_X and/or CO during operation are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the Project site greater than the most stringent ambient air quality standards for NO_2 and/or CO.[60]
- Maximum daily localized emissions of PM10 and/or PM2.5 during operation are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the Project site to exceed 2.5 $\mu g/m^3$ over 24 hours (SCAQMD Rule 1303 allowable change in concentration).

the SCAQMD has established screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance thresholds, and, therefore, not cause, or contribute to, an exceedance of the applicable ambient air quality standards, or ambient concentration limits without Project-specific dispersion modeling. This analysis uses the screening criteria to evaluate impacts from localized emissions for a 5-acre site located within 25 meters from a sensitive receptor in the Central Los Angeles County Monitoring Area:

- 161 pounds per day for NO_X;
- 1,861 pounds per day for CO;
- 4 pounds per day for PM10; or
- 2 pounds per day for PM2.5.

3.1.3 Carbon Monoxide Hotspots

With respect to the formation of CO hotspots, the Project would be considered significant if the following would occur:

- The Project would cause or contribute to an exceedance of the CAAQS one-hour or eight-hour CO standards of 20 or 9.0 parts per million (ppm), respectively.

60 South Coast Air Quality Management District, SCAQMD Air Quality Significance Thresholds, (March 2015), http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2. Accessed October 2017.

3.1.4 Toxic Air Contaminants

Based on criteria set forth by the SCAQMD, the Project would expose sensitive receptors to substantial concentrations of toxic air contaminants if any of the following were to occur:[61]

- The Project would emit carcinogenic materials or TACs that exceed the maximum incremental cancer risk of ten in one million or a cancer burden greater than 0.5 excess cancer cases (in areas greater than or equal to 1 in 1 million) or
- An acute or chronic hazard index of 1.0.

3.1.5 Odors

Based on the criteria in Appendix G of the State *CEQA Guidelines*, the Project would be considered potentially significant for odors if the Project would create objectionable odors affecting a substantial number of people.

3.2 Greenhouse Gas Emissions Thresholds

Pursuant to Appendix G of the State *CEQA Guidelines*, the Project would result in a significant impact related to GHG emissions if it would:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

As discussed in the Program EIR, for projects that are not exempt or where no qualifying GHG reduction plans are directly applicable, the SCAQMD proposed a "bright-line" screening-level threshold of 3,000 $MTCO_2e$ annually for all land use projects. The SCAQMD proposed this "bright-line" screening-level threshold "to achieve the same policy objective of capturing 90 percent of the GHG emissions from new development projects in the residential/commercial sectors."[62] In the California Air Pollution Control Officers Association (CAPCOA) *CEQA and Climate Change* white paper (January 2008), CAPCOA suggested a possible quantitative threshold option that would capture 90 percent of GHG emissions from future discretionary development projects. According to CAPCOA, the "objective was to set the emission threshold low enough to capture a substantial fraction of future residential and nonresidential development that will be constructed to accommodate future statewide population and job growth, while setting the emission threshold high enough to exclude small development projects that will contribute a relatively small fraction of the cumulative statewide GHG emissions."[63] A 90 percent

63 California Air Pollution Control Officer's Association, CEQA and Climate Change, (2008) 42-43.

capture rate would "exclude the smallest proposed developments from potentially burdensome requirements … to mitigate GHG emissions."[64] The SCAQMD's proposed screening level of 3,000 $MTCO_2e$ per year is a South Coast Air Basin-specific level that would meet CAPCOA's intent for the suggested quantitative threshold option and is consistent with the Program EIR. Therefore, this threshold is used to evaluate Project GHG emissions.

4. Methodology

The methodology to evaluate potential impacts to regional and local air quality and climate change that may result from the construction and long-term operations of the proposed Project is conducted as follows. Detailed assumptions, modeling, and calculations are provided in Appendix A of this report.

4.1 Consistency with Air Quality Plan

The SCAQMD is required, pursuant to the CAA, to reduce emissions of criteria pollutants for which the Air Basin is in non-attainment of the NAAQS (e.g., O_3 and PM2.5). The SCAQMD's AQMP contains a comprehensive list of pollution control strategies directed at reducing emissions and achieving the NAAQS. These strategies are developed, in part, based on regional growth projections prepared by the SCAG. As part of its air quality planning, SCAG has prepared the Regional Comprehensive Plan and Guide and the RTP/SCS, which provide the basis for the land use and transportation components of the AQMP and are used in the preparation of the air quality forecasts and the consistency analysis included in the AQMP. Both the Regional Comprehensive Plan and AQMP are based, in part, on projections originating with county and city general plans.

The 2016 AQMP was prepared to accommodate growth, reduce the high levels of pollutants within the areas under the jurisdiction of SCAQMD, return clean air to the region, and minimize the impact on the economy. Projects that are consistent with the assumptions used in the AQMP do not interfere with attainment because the growth is included in the projections utilized in the formulation of the AQMP. Thus, projects, uses, and activities that are consistent with the applicable growth projections and control strategies used in the development of the AQMP would not jeopardize attainment of the air quality levels identified in the AQMP, even if they exceed the SCAQMD's numeric indicators.

4.2 Air Quality Construction Emissions

Construction of the proposed Project has the potential to generate temporary criteria pollutant emissions through the use of heavy-duty construction equipment, such as excavators and forklifts, and through vehicle trips generated from worker trips and haul trucks traveling to, and from, the Project site. In addition, fugitive dust emissions would result from demolition and various soil-handling activities. Mobile source emissions, primarily NO_X, would result from the use of construction equipment such as dozers and loaders. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of construction activity, and

64 California Air Pollution Control Officer's Association, CEQA and Climate Change, (2008) 43-44.

prevailing weather conditions. The assessment of construction air quality impacts considers each of these potential sources.

Daily regional emissions during construction are forecasted by assuming conservative construction activities (i.e., assuming all construction occurs at the earliest feasible date) and applying the mobile source and fugitive dust emissions factors. The emissions are estimated using the CalEEMod (Version 2016.3.2) software, an emissions inventory software program recommended by the SCAQMD. CalEEMod is based on outputs from OFFROAD and EMFAC, which are emissions estimation models developed by CARB and used to calculate emissions from construction activities, including on-and off-road vehicles. Default CalEEMod inputs were used for the modeling unless project specific details were available to adjust the Project input values based on construction equipment and schedule information from similar land use development projects in the LAUSD. These values were then applied to the construction phasing assumptions used in the criteria pollutant analysis to generate criteria pollutant emissions values for each construction activity. Detailed construction equipment lists, construction scheduling, and emissions calculations are provided in Appendix A of this report.

Construction of the proposed Project was assumed to begin in 2020. Construction may commence at a later date than that analyzed in this air quality impact analysis. If this occurs, construction impacts should be less than those analyzed herein, because a more energy-efficient and cleaner burning construction equipment fleet mix are expected in the future, pursuant to State regulations that require construction equipment fleet operators to phase-in less polluting heavy-duty equipment. As a result, should the proposed Project commence construction at a later date, air quality impacts are anticipated to be less than the impacts disclosed herein. Sub-phases of construction would include soil removal, demolition, grading, building construction, paving, and architectural coating. Emissions from these activities are estimated by construction phase. The maximum daily emissions are predicted values for the worst-case day and do not necessarily represent the emissions that would occur for every day of Project construction. The maximum daily emissions are compared to the SCAQMD daily regional numeric indicators.

4.3 Air Quality Operational Emissions

With respect to SUP modernization projects, the Program EIR states that operational activities would be less than significant, as these projects would not increase capacity to existing schools and net project emissions would be minimal. Additionally, overall District enrollment is forecast to decrease over the next ten years and operational emissions are not expected to increase in the long-term.[65]

The proposed Project would replace and upgrade facilities on the campus of Burroughs MS, but it would not increase the number of students, or faculty, at the school, and would not introduce major new emission sources. No new vehicle trips would be generated, and there would be no increase in mobile source emissions. Furthermore, building upgrades and replacement of old, energy-inefficient structures with those that use less energy would reduce emissions from space

65 Los Angeles Unified School District. 2015. School Upgrade Program Final Environmental Impact Report, http://achieve.lausd.net/ceqa. Adopted by the Board of Education on November 10, 2015

heating and other onsite sources. Therefore, there would be no net increase in regional emissions of any criteria pollutant, and the impact would be less than significant. Additionally, the District is required to comply with all applicable SCs, and would implement SC-AQ-5 to further reduce Project-related operational impacts. Therefore, operational emissions are not discussed further in this document.

4.4 Substantial Criteria Pollutant Concentrations

4.4.1 Localized emissions

The localized effects from the on-site portion of the emissions are evaluated at nearby sensitive receptor locations potentially impacted by the proposed Project according to the SCAQMD's Localized Significance Threshold Methodology (June 2003, revised July 2008), which relies on onsite mass emission rate screening tables and project-specific dispersion modeling, where appropriate. The localized significance thresholds are only applicable to NO_X, CO, PM10, and PM2.5. The SCAQMD has established screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance thresholds, and, therefore, would not cause, or contribute to, an exceedance of the applicable ambient air quality standards without Project-specific dispersion modeling. The screening criteria depend on: (1) the area in which the Project is located, (2) the size of the project site, and (3) the distance between the project site and the nearest sensitive receptor (e.g., residences, schools, hospitals). The Project site is located in the Central Los Angeles County area and no more than 5 acres would be worked on at a time. The nearest sensitive receptors would be the students onsite at Burroughs MS during construction of the Project and residences adjacent to the Project site. Therefore, to ensure a conservative analysis, the screening criteria was applied to a 5-acre site in Central Los Angeles with a 25-meter receptor distance. According to the SCAQMD, projects with boundaries located closer than 25 meters to the nearest receptor should use the local significance thresholds (LSTs) for receptors located at 25 meters.[66]

4.4.2 Carbon Monoxide Hotspots

Emissions of CO are produced in greatest quantities from motor vehicle combustion and are usually concentrated at, or near, ground level because they do not readily disperse into the atmosphere, particularly under cool, stable (i.e., low or no wind) atmospheric conditions. Localized areas where ambient concentrations exceed state and/or federal standards are termed CO hotspots. The potential for the Project to cause, or contribute, to the formation of offsite CO hotspots are evaluated based on prior dispersion modeling conducted by SCAQMD in the Los Angeles Area, as discussed in the Program EIR.

The proposed Project would replace, or upgrade, facilities on the campus of Burroughs MS, but it would not increase the number of students, or faculty, at the school, and would not introduce major new emission sources. No new operational vehicle trips would be generated, and there

66 South Coast Air Quality Management District, Final Localized Significance Threshold Methodology, (2008). Available: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds. Accessed November 2017.

would be no increase in mobile source CO emissions. Therefore, CO Hotspots are not discussed further in this document.

4.4.3 Toxic Air Contaminants

The greatest potential for TAC emissions during construction would be related to diesel particulate matter emissions associated with heavy-duty equipment during demolition, excavation and grading activities. Construction activities associated with the Project would be sporadic, transitory, and short-term in nature. During long-term operations, TACs could be emitted as part of periodic maintenance operations, cleaning, painting, etc., and from periodic visits from delivery trucks and service vehicles. However, these uses are expected to be occasional and result in minimal exposure to offsite sensitive receptors. The potential for the Project to result in significant health risk impacts are evaluated based on guidance provided in the Program EIR.

4.5 Odors

Potential odor impacts are evaluated by conducting a screening-level analysis followed by a more detailed analysis as necessary. The screening-level analysis consists of reviewing the Project's site plan and Project description to identify new, or modified, odor sources. If it is determined that the Project would introduce a potentially significant new odor source, or modify an existing odor source, then downwind sensitive receptor locations are identified, and a site-specific analysis is conducted to determine Project impacts.

4.6 GHG Emissions Estimates

The Climate Action Registry General Reporting Protocol provides procedures and guidelines for calculating and reporting GHG emissions from general and industry-specific activities. Although no numerical thresholds of significance have been adopted, and no specific protocols are available for land use projects, the General Reporting Protocol provides a framework for calculating and reporting GHG emissions from the Project. The GHG emissions provided in this section is consistent with the General Reporting Protocol framework. This technical report provides an estimate of the GHG emissions from Project construction. The following Project-related emission sources have been evaluated:

1. Construction Activities – Fossil fueled on- and off-road vehicles and equipment needed for grading, building construction, paving, and architectural coating.

CARB believes that consideration of so-called indirect emissions provides a more complete picture of the GHG footprint of a facility: "As facilities consider changes that would affect their emissions – addition of a cogeneration unit to boost overall efficiency even as it increases direct emissions, for example – the relative impact on total (direct plus indirect) emissions by the facility should be monitored. Annually reported indirect energy usage also aids the conservation awareness of the facility and provides information" to CARB to be considered for future strategies by the industrial sector. For these reasons, CARB has proposed requiring the calculation of direct and indirect GHG emissions as part of the HSC Division 25.5 reporting requirements. Additionally, the Office of Planning and Research directs lead agencies to "make a good-faith effort, based on available information, to calculate, model, or estimate…GHG

emissions from a project, including the emissions associated with vehicular traffic, energy consumption, water usage and construction activities." Therefore, direct and indirect emissions have been calculated for the Project.

For purposes of this analysis, it is considered reasonable and consistent with criteria pollutant calculations to consider those GHG emissions resulting from Project-related incremental (net) increase in the use of on-road mobile vehicles, electricity, and natural gas compared to existing conditions. This includes Project construction activities such as demolition, hauling, and construction worker trips. Since potential impacts resulting from GHG emissions are long-term rather than acute, GHG emissions are calculated on an annual basis. CalEEMod outputs GHG emissions of CO_2, CH_4, N_2O, and CO_2e. In order to report total GHG emissions using the CO_2e metric, the GWP ratios corresponding to the warming potential of CO_2 over a 100-year period is used in this analysis.

The General Reporting Protocol provides a range of basic calculation methods. However, they are typically designed for existing buildings, or facilities, and are not directly applicable to planning and development situations where the buildings, or facilities, do not yet exist. As a result, this section relies on calculation guidance from state and regional agencies with scientific expertise in quantifying GHG emissions, such as CARB and the SCAQMD. GHG emissions for the Project are estimated using the CalEEMod (Version 2016.3.2) software.

The CAPCOA has provided guidance on mitigating, or reducing, GHG emissions from land use development projects. In September 2010, CAPCOA released a guidance document titled *Quantifying Greenhouse Gas Mitigation Measures* which provides GHG reduction values for recommended mitigation measures.[67] The CAPCOA guidance document was utilized in this analysis for quantifying reductions from physical and operational Project characteristics and Project Sustainability Features in CalEEMod.

4.6.1 Construction Emissions

Construction of the proposed Project has the potential to generate GHG emissions through the use of heavy-duty construction equipment and through vehicle trips generated from construction workers traveling to, and from, the Project site. Construction emissions can vary from day to day, depending on the level of activity, the specific type of operation, and the prevailing weather conditions. The number and types of construction equipment, vendor trips (e.g., transport of building materials), and worker trips were based on relatively conservative assumptions for a project of this type and scale as provided in the CalEEMod model. A complete listing of the construction equipment by phase and construction phase duration assumptions used in this analysis is included in Appendix A of this Technical Report.

The CO_2e emissions are calculated for the construction period. The SCAQMD guidance, *Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold*, recognizes that construction-related GHG emissions from projects "occur over a relatively short-

67 California Air Pollution Control Officers Association, Quantifying Greenhouse Gas Mitigation Measures, 2010.

term period of time" and that "they contribute a relatively small portion of the overall lifetime project GHG emissions."[68] The guidance recommends that construction project GHG emissions should be "amortized over a 30-year project lifetime, so that GHG reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies."[69] In accordance with SCAQMD guidance, GHG emissions from construction have been amortized over the 30-year lifetime of the Project (i.e., total construction GHG emissions were divided by 30 to determine an annual construction emissions estimate comparable to operational emissions, and the significance threshold).

Emissions Sources

Construction of the Project would result in one-time GHG emissions of CO_2 and smaller amounts of CH_4 from heavy-duty construction equipment. Construction emissions are forecasted by assuming a conservative estimate of construction activities (i.e., assuming all construction occurs at the earliest feasible date) and applying the off-road emissions factors. The output values used in this analysis are adjusted to be Project-specific based on equipment types and the construction schedule. These values are applied to the construction phasing assumptions to generate GHG emissions values for each construction year.

Construction of the Project would also contribute to regional GHG emissions from haul trucks and worker vehicles. The emissions from mobile sources were calculated with the trip rates, trip lengths and emission factors for running from EMFAC2014 through CalEEMod.

4.6.2 Operational Emissions

The proposed Project would replace or upgrade facilities on the campus of Burroughs MS, but it would not increase the number of students, or faculty, at the school, and would not introduce major new emission sources. No new vehicle trips would be generated, and there would be no increase in mobile source emissions. Furthermore, building upgrades and replacement of old, energy-inefficient structures with those that use less energy would reduce emissions from space heating and other onsite sources. Therefore, there would be no net increase in GHGs, and the impact would be less than significant. Additionally, the District is required to comply with all applicable SCs, which will further reduce Project-related operational impacts. Therefore, operational emissions are not discussed further in this document.

68 South Coast Air Quality Management District, Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold, 2008, page 3-9, http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/ghgattachmente.pdf. Accessed July 2017.

69 South Coast Air Quality Management District, Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold, 2008, page 3-9.

5. Environmental Impacts

5.1 Consistency with Air Quality Plan

The Project site is located within the Air Basin. The SCAQMD is required, pursuant to the CAA, to reduce emissions of criteria pollutants for which the Air Basin is in non-attainment (i.e., ozone, PM10, and PM2.5). The Project would be subject to the SCAQMD's AQMP, which contains a comprehensive list of pollution control strategies directed at reducing emissions and achieving ambient air quality standards. A project is consistent with the AQMP if it is consistent with the population, housing and employment assumptions that were used in the development of the AQMP. Neither the Burroughs MS Comprehensive Modernization Project nor the SUP as a whole is a large, regionally significant project that would affect the regional growth projections made by the SCAG and used by the SCAQMD in formulating its AQMP. The student and faculty population at the school would not increase as a result of the Project.

5.1.1 Construction

Under this criterion, the SCAQMD recommends that lead agencies demonstrate that a project would not directly obstruct implementation of an applicable air quality plan and that a project be consistent with the assumptions (typically land-use related, such as resultant employment or residential units) upon which the air quality plan is based. Being relatively small in number and temporary in nature, construction jobs under the Project would not conflict with the long-term employment projections upon which the AQMP is based. Control strategies in the AQMP with potential applicability to short-term emissions from construction activities include strategies denoted in the AQMP as MOB-08 and MOB-10, which are intended to reduce emissions from on-road and off-road heavy-duty vehicles and equipment by accelerating replacement of older, emissions-prone engines with newer engines meeting more stringent emission standards. The Project would not conflict with implementation of these strategies as the construction contractor hired would be in compliance with the current requirements for fleet emissions. Additionally, the Project would comply with CARB requirements to minimize short-term emissions from on-road and off-road diesel equipment. The Project would also comply with SCAQMD regulations for controlling fugitive dust pursuant to SCAQMD Rule 403 and implement SC-AQ-2 through SC-AQ-4. SC-AQ-2 would obligate construction contractors to have off-road equipment properly tuned and maintained in accordance with the manufacturer's specifications. SC-AQ-3 would implement methods for reducing onsite dust emissions during soil removal. These methods would include: maintain slow speeds for vehicles, applying water/mist to dirt as it is loaded and unloaded, minimize soil drop heights, covering haul truck loads, and using polyethylene sheeting during to cover excavated areas and dirt stockpiles. SC-AQ-4 is intended to reduce construction exhaust and fugitive dust emissions with a number of features, including, but not limited to: restricting diesel engine idling times to no more than five consecutive minutes, utilizing ultra-low sulfur diesel fuel, utilizing off-road construction equipment that is compliant with Tier 3 engine standards at a minimum, applying soil stabilizers, replacing ground cover as soon as possible, and installing wheel washers.

Compliance with these requirements is consistent with, and meets, or exceeds, the AQMP requirements for control strategies intended to reduce emissions from construction equipment and

activities. Because the Project would not conflict with the control strategies intended to reduce emissions from construction equipment, the Project would not conflict with, or obstruct, implementation of the AQMP. Additionally, the projected emissions from the Project would not exceed the SCAQMD's regional significance thresholds, as discussed below in Section 5.2-1. Thus, the Project would not be considered by SCAQMD to be a substantial source of air pollutant emissions, and would not conflict, or obstruct, implementation of the AQMP. Therefore, impacts would be less than significant with respect to construction activities.

5.2 Regional Emissions

5.2.1 Construction Emissions

The worst-case daily emissions were calculated as maximum daily construction emissions for each phase by year. Detailed emissions calculations are provided in Appendix A. Results of the criteria pollutant calculations are presented in **Table 10,** *Maximum Daily Unmitigated Regional Construction Emissions (pounds per day)*. As shown therein, construction-related daily emissions for the criteria and precursor pollutants (VOC, NO_X, CO, SO_X, PM10, and PM2.5) would be below the SCAQMD numeric indicators. These calculations include compliance with appropriate dust control measures required to be implemented during each phase of development, as required by SCAQMD Rule 403 (Control of Fugitive Dust) and SC-AQ-2 through SC-AQ-4. As discussed previously, SC-AQ-2 would obligate construction contractors to have off-road equipment properly tuned and maintained in accordance with the manufacturer's specifications. SC-AQ-3 would implement methods for reducing onsite dust emissions during soil removal. SC-AQ-4 is intended to reduce construction exhaust and fugitive dusts emissions with a number of features including utilizing off-road construction equipment that is compliant with Tier 3 engine standards (at a minimum) and applying soil stabilizers. Therefore, with respect to regional emissions from construction activities, impacts would be less than significant.

With respect to all SUP projects, including the proposed Project, the Program EIR states that construction activities may generate short-term emissions that exceed significance thresholds. Though construction emissions for this Project are not expected to exceed regional thresholds, the District will implement SCs AQ-2, SC-AQ-3, and AQ-4 to ensure that construction emissions would have minimal impacts. Also, criteria pollutant emissions would occur outside of SCAQMD's jurisdiction during transportation of contaminated soil to Buttonwillow, California. Transportation of contaminated soil would occur within the San Joaquin Valley Air Pollution District (SJVAPD). The Project would be substantially below the SJVAPD's Thresholds of Significance for all criteria pollutants, as shown in **Table 11,** San Joaquin Valley Air Basin Hauling Emissions (Tons per Year). Emissions associated with the transportation of contaminated soil within SCAQMD boundaries is included in maximum daily emissions shown for Phase 2F Demolition and Soil Remediation.

[b] Emissions include fugitive dust control measures consistent with SCAQMD Rule 403.

The SCAB is designated as non-attainment for O3, PM10, and PM2.5 under federal and/or state ambient air quality standards. Construction of the Project would not generate emissions that would contribute to basin-wide air pollutant emissions. Therefore, the Project would not contribute to a cumulatively considerable net increase of criteria pollutants and impacts would be less than significant.

5.3 Cumulatively Considerable Non-Attainment Pollutants

Short-term pollutants would be generated by construction of the proposed Project. The Project site currently operates as a middle school and would continue do so after construction. The proposed Project would not introduce any new long-term pollutants when operational. Therefore, only short-term construction emissions were evaluated for cumulative impacts.

Since the District has no control over the timing or sequencing of the related projects, any quantitative analysis of related projects to ascertain daily construction emissions that assumes multiple, concurrent construction projects would be speculative. For this reason, the SCAQMD's methodology to assess a project's cumulative impact differs from the cumulative impacts methodology employed for other environmental topics. The SCAQMD recommends that Project-specific air quality impacts of the proposed Project be used to determine the potential cumulative impacts to regional air quality. The proposed Project would result in the emission of criteria pollutants for which the area is in non-attainment during construction. A significant impact may occur if a project would add a cumulatively considerable contribution of a federal or state non-attainment pollutant. The Air Basin is currently in non-attainment for O_3, PM10, and PM2.5.

The emissions from construction of the proposed Project are not predicted to exceed the SCAQMD regional (see Section 5.2), or localized (see Section 5.4), impact thresholds, and, therefore, are not expected to cause, or substantially contribute to, ground level concentrations that exceed the NAAQS or CAAQS. Furthermore, the District would implement SC-AQ-2, SC-AQ-3, and SC-AQ-4 to ensure that construction emissions would minimize off-site impacts.[70, 71]

[70] Los Angeles Unified School District, 2015. School Upgrade Program Final Environmental Impact Report, http://achieve.lausd.net/ceqa. Adopted by the Board of Education on November 10, 2015. Pgs 5.3-28 to 5.3-30.

[71] Los Angeles Unified School District, 2015. School Upgrade Program Final Environmental Impact Report, http://achieve.lausd.net/ceqa. Adopted by the Board of Education on November 10, 2015. Pgs. 5.3-27 to 5.3-28.

Therefore, the Project would not result in a cumulatively considerable net increase for non-attainment pollutants, or O_3 precursors, and would result in a less than significant impact for construction emissions.

5.4 Substantial Pollutant Concentrations

5.4.1 Localized Construction Emissions

The localized construction air quality analysis was conducted using the methodology described in the SCAQMD *Localized Significance Threshold Methodology* (June 2003, revised July 2008).[72] The screening criteria provided in the *Localized Significance Threshold Methodology* were used to determine localized construction emissions thresholds for the Project. The maximum daily localized emissions for each of the construction phases and localized significance thresholds are presented in **Table 12,** *Maximum Unmitigated Localized Construction Emissions (Pounds Per Day)* [A]. As shown therein, maximum localized construction emissions for sensitive receptors would not exceed the localized thresholds for NO_X, CO, PM10, and PM2.5. Therefore, with respect to localized construction emissions, impacts would be less than significant.

a Totals may not add up exactly due to rounding in the modeling calculations Detailed emissions calculations are provided in Appendix A.
b Emissions include fugitive dust control measures consistent with SCAQMD Rule 403.

The health-based ambient air quality standards for ozone are as concentrations of ozone and not as tonnages of their precursor pollutants (i.e., NO_X and VOCs). It is not necessarily the tonnage of precursor pollutants that causes human health effects, but the concentration of resulting ozone or particulate matter. Because of the complexity of ozone formation and the non-linear relationship of ozone concentration with its precursor gases, and given the state of environmental science modeling in use at this time, it is infeasible to convert specific emission levels of NO_X or VOCs emitted in a particular area to a particular concentration of ozone in that area. Meteorology, the presence of sunlight, seasonal impacts, and other complex chemical factors all combine to determine the ultimate concentration and location of ozone.[73,74]

As expressed in the *amicus curiae* brief submitted for the *Sierra Club v. County of Fresno* case (*Friant Ranch Case*), the CEQA criteria pollutants significance thresholds from the air district were set at emission levels tied to the region's attainment status, they are emission levels at which stationary pollution sources permitted by the air district must offset their emissions and CEQA projects must use feasible mitigations, and they are not intended to be indicative of any localized human health impact that a project may have. [75,76] Therefore, just because a project exceeds the mass regional emissions threshold (i.e., pounds per day VOC thresholds) from project-related activities does not necessarily indicate that a project will cause or contribute to the exposure of sensitive receptors to ground-level concentrations in excess of health-protective levels.

The primary health concern with exposure to VOC emissions is the secondary formation of ozone. Based on discussions with air quality management district staff, and as the *amicus curiae*

Application for Leave to File Brief of Amicus Curiae Brief of San Joaquin Valley Unified Air Pollution Control District in Support of Defendant and Respondent, County of Fresno and Real Party In Interest and Respondent, Friant Ranch, L.P. In the Supreme Court of California. Sierra Club, Revive the San Joaquin, and League of Women Voters of Fresno v. County of Fresno.

briefs submitted for the Friant Ranch Case suggested, because of the complexity of ozone formation and given the state of environmental science modeling in use at this time, it is infeasible to determine whether, or the extent to which, a single project's precursor (i.e., NO_X and VOCs) emissions would potentially result in the formation of secondary ground-level ozone and the geographic and temporal distribution of such secondary formed emissions. [77, 78] As previously stated, meteorology, the presence of sunlight, seasonal impacts, and other complex chemical factors all combine to determine the ultimate concentration and location of ozone. Furthermore, available models today are designed to determine regional, population-wide health impacts, and cannot accurately quantify ozone-related health impacts caused by NO_X or VOCs emissions from local level (project level). Notwithstanding these scientific constraints, the disconnect between Project level VOC emissions and ozone-related health impact cannot be bridged at this time.

However, since construction of the Project would not exceed the regional significance thresholds, the Project is not anticipated to contribute to health impacts related to these pollutants.

5.4.2 Toxic Air Contaminants

The proposed Project would require approximately one week to remove a maximum of 500 cubic yards of contaminated soil. Project-related construction also has the potential to expose sensitive receptors to substantial pollutant concentrations of TACs. TAC are pollutants for which neither California nor the federal government, has set ambient air quality thresholds, but which still pose health risks to sensitive individuals. The primary TAC of concern from construction is DPM. Inhalation of DPM has been linked to increased cancer risk and chronic health hazards.

The proposed Project includes the modernization and upgrade of facilities on the Burroughs MS campus. The Program EIR states that modernization projects would not cause a change in toxic air contaminant exposure levels.[79] Therefore, health risk impacts for the proposed Project would be less than significant.

5.5 Odors

Potential activities that may emit odors during construction activities include the use of architectural coatings and solvents and the combustion of diesel fuel in on-and off-road equipment. As discussed in the Regulatory Setting, Section 2, of this technical report, SCAQMD Rule 1113 would limit the amount of VOCs in architectural coatings and solvents. In addition, the proposed Project would comply with the applicable provisions of the CARB Air Toxics Control Measure regarding idling limitations for diesel trucks. Through mandatory compliance with SCAQMD Rules, no construction activities, or materials, are expected to create objectionable odors affecting a substantial number of people. Therefore, construction of the Project would result in less than significant impacts.

---

77 SCAQMD, 2016. Communication with SCAQMD Staff, Jillian Wong (Planning and Rules Manager) and Michael Krause (Planning and Rules Manager), DTSC, and ESA PCR, August 26, 2016.

78 Models available today are designed to determine regional, population-wide health impacts, and cannot accurately quantify ozone-related health impacts caused by NO_X or VOC emissions from a project level.

5.6 Greenhouse Gas Emissions

5.6.1 Construction

The proposed Project would replace and modernize existing structures at the Burroughs Middle School campus. **Table 13***, Project-Specific Construction GHG Emissions (metric tons)* shows the proposed Project's GHG emissions.

TABLE 13
PROJECT-SPECIFIC CONSTRUCTION GHG EMISSIONS (METRIC TONS)

Emissions Source Year	CO_2e (metric tons) a
2020	169
2021	824
2022	818
2023	1,320
2024	871
2025	181
Total	**4,182**
Annual (Amortized over 30 years)	**139**
Threshold	**3,000**
Threshold Exceeded?	**No**

[a] Totals may not add up exactly due to rounding in the modeling calculations

SOURCE: ESA, 2019

Although construction activities would increase GHG emissions, those emissions would be relatively minor and would cease after completion of construction. As shown in Table 12, the highest anticipated construction-related emissions associated with the proposed Project would be 1,320 $MTCO_2e$ in the year 2023. Typically, GHG construction emissions are amortized over 30 years and added to operational emissions. The proposed Project is expected to add a total of 4,182 $MTCO_2e$ over the 4.5 years of construction. The total Project GHG emissions amortized over 30 years would be the equivalent of 139 $MTCO_2e$ over the course of a 30-year period and would be less than the SCAQMD's interim threshold of 3,000 $MTCO_2e$ per year. Based on this, construction impacts would be less than significant. No mitigation or further studies are required.

5.6.2 Consistency with Adopted Plan, Policy or Regulation

As described in the Program EIR, implementation of the SUP would be consistent with plans adopted for the purpose of reducing GHG emissions, such as the SCAG Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), California Assembly Bill 32, California Air Resources Board Scoping Plan, and other statewide strategies to reduce GHG emissions.[80] Development of the proposed Project would replace and modernize facilities at Burroughs MS,

[80] Ibid. Pgs 5.7-18 to 5.7-19.

but it would not increase the number of students, or faculty, at the school, and, therefore, would not increase GHG emissions. As such, the Project would not conflict with the goals of the RTP/SCS.

Additionally, SUP-related projects, including the proposed Project, would comply with the District's GHG emission reduction measures. LAUSD's School Design Guide requires construction contractors to reuse, recycle, and salvage non-hazardous materials generated during demolition and/or new construction, as materials recovery would minimize the need to produce and transport new materials, thereby reducing emissions from mobile sources and energy use.[81] With respect to all SUP projects, implementation of SCs GHG-1 through GHG-5 would ensure that the proposed Project would not conflict with applicable plans, policies or regulations adopted for the purpose of reducing GHG emissions. Therefore, with adherence to SCs GHG-1 through GHG-5 and compliance with Title 24, the Project would not conflict with plans, policies, or regulations adopted for the purpose of reducing GHG emissions. Therefore, impacts would be less than significant. No mitigation or further studies are required.

6. Cumulative Impacts

6.1 Air Quality

The Project would result in the emission of criteria pollutants for which the region is in non-attainment during construction. The Air Basin fails to meet national standards for O_3 and PM2.5, and, therefore is considered a federal "non-attainment" area for these pollutants.

The SCAQMD has provided guidance on an acceptable approach to addressing the cumulative impacts issue for air quality as discussed below:[82]

> *As Lead Agency, the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR… Projects that exceed the Project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant.*

Consistent with accepted and established SCAQMD cumulative impact evaluation methodologies, the potential for the Project to result in cumulative impacts is assessed based on the SCAQMD thresholds.

As shown in Table 10, regional emissions calculated for the Project would be less than the applicable SCAQMD daily significance thresholds. The thresholds are designed to assist the

81 Los Angeles Unified School District, Office of Environmental Health and Safety, School Upgrade Program Final Environmental Impact Report, http://achieve.lausd.net/ceqa, Adopted by the Board of Education on November 10, 2015. Pg. 5.7-18 to 5.7-19.

82 South Coast Air Quality Management District, Cumulative Impacts White Paper, Appendix D, http://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/cumulative-impacts-working-group/cumulative-impacts-white-paper-appendix.pdf?sfvrsn=4, accessed May 2017.

region in attaining the applicable State and national ambient air quality standards. These standards apply to both primary (criteria and precursor) and secondary pollutants (O_3). Although the Project site is located in a region that is in non-attainment for O_3 and PM2.5, the emissions associated with the Project would not be cumulatively considerable as the emissions would fall below SCAQMD daily significance thresholds. In addition, the Project would be consistent with the AQMP, which is intended to bring the Air Basin into attainment for all criteria pollutants.

The SCAQMD's methodology to assess a project's cumulative impact differs from the cumulative impacts methodology employed for other environmental topics such as traffic, which are typically based on the number, types, and proximity to related projects. The SCAQMD recommends that Project-specific air quality impacts be used to determine the potential cumulative impacts to regional air quality.

With respect to the Project's short-term construction-related air quality emissions and cumulative conditions, the SCAQMD has developed strategies to reduce criteria pollutant emissions outlined in the AQMP pursuant to the federal CAA mandates. Construction of the Project would comply with SCAQMD Rule 403 requirements and the ATCM to limit heavy duty diesel motor vehicle idling to no more than 5 minutes at any given time (per SC-AQ-4). Per SCAQMD rules and mandates, as well as the CEQA requirement that significant impacts be mitigated to the extent feasible, these same requirements (i.e., Rule 403 compliance, the implementation of all feasible mitigation measures, and compliance with adopted AQMP emissions control measures) would also be imposed on all construction projects in the Air Basin, which would include the cumulative projects in the Project area. As shown above in Table 10 and Table 11, regional and localized construction emissions associated with the Project would not exceed the SCAQMD daily significance thresholds. As such, the Project's contribution to cumulatively significant construction impacts to air quality would not be cumulatively considerable and cumulative impacts would be less than significant for regional and localized criteria pollutants during construction.

6.2 Greenhouse Gas Emissions

In 2010, annual worldwide man-made emissions of GHGs were approximately 49,000 $MMTCO_2e$ including ongoing emissions from industrial and agricultural sources and emissions from land use changes (e.g., deforestation).[83] Emissions of CO_2 from fossil fuel use and industrial processes account for 65 percent of the total while CO_2 emissions from all sources accounts for 76 percent of the total. CH_4 emissions account for 16 percent and N_2O emissions for 6.2 percent. In 2015, the United States was the world's second largest emitter of carbon dioxide at 5,200 MMT (China was the largest emitter of carbon dioxide at 10,700 MMT).[84]

83 Intergovernmental Panel on Climate Change, Climate Change 2014: Synthesis Report Contribution of Working Groups I, II, and III to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change, Summary for Policy Makers, 2014, http://ipcc.ch/report/ar5/syr/. Accessed March 2017.

84 PBL Netherlands Environmental Assessment Agency and the European Commission Joint Research Center, Trends in Global CO2 Emissions 2016 Report, 2016, http://www.pbl.nl/sites/default/files/cms/publicaties/pbl-2016-trends-in-global-co2-emisions-2016-report-2315.pdf. Accessed March 2017.

As previously discussed, CARB compiles GHG inventories for the State of California. In 2015, California emitted 440.4 $MMTCO_2e$ including emissions resulting from imported electrical power. Between 1990 and 2015, the population of California grew by approximately 31 percent. The California economy grew by 222 percent. Despite the population and economic growth, California's net GHG emissions only grew by approximately 2.2 percent.

A cumulatively considerable impact would occur where the impact of the Project in addition to the related projects would be significant. However, in the case of global climate change, a cumulative impacts analysis differs from other environmental issues areas, such as air quality. The proximity of the Project to other related projects or other GHG emission generating activities is not directly relevant to the determination of a cumulative impact because climate change is a global condition. According to CAPCOA, "GHG impacts are exclusively cumulative impacts; there are no non-cumulative GHG emission impacts from a climate change perspective."[85] Moreover, although the State requires MPOs and other planning agencies to consider how region-wide planning decisions can impact global climate change, there is currently no established non-speculative method to assess the cumulative impact of proposed independent private-party development projects.

Although HSC Division 25.5 sets a statewide target for 2020 GHG emissions, the implementing tools of the law (e.g., CARB's *Climate Change Scoping Plan*) are clear that the reductions are not expected to occur uniformly from all sources or sectors. CARB has set targets specific to the transportation sector (land use-related transportation emissions), for example, and under SB 375 SCAG must incorporate these GHG-reduction goals into the RTP and demonstrate that its SCS, or Alternative Planning Strategy, is consistent with the Regional Housing Needs Assessment. One of the goals of this process is to ensure that the efforts of State, regional and local planning agencies accommodate the contemporaneous increase in population and employment with a decrease in overall GHG emissions. For example, adopting zoning designations that reduce density in areas which are expected to experience growth in population and housing needs, is seen as inconsistent with anti-sprawl goals of sustainable planning. Although development under a reduced density scenario results in lower GHG emissions from the use of that land compared to what is currently or hypothetically allowed (by creating fewer units and fewer attributable vehicle trips), total regional GHG emissions will likely fail to decrease at the desired rate or, worse, increase if regional housing and employment needs of an area are met with a larger number of less-intensive development projects. Therefore, it is not simply a cumulative increase in regional development or the resultant GHG emissions that threatens GHG reduction goals.

With implementation of effective planning policies, the land use sector can accommodate growth and still be consistent with statewide plans to reduce GHG emissions. To that end, various agencies are required to develop programs to guide future building and transportation development towards minimized resource consumption and lowered resultant pollution.

85 California Air Pollution Control Officers Association, CEQA & Climate Change: Evaluating and Addressing Greenhouse Gas Emissions from Projects Subject to the California Environmental Quality Act, 2008.

As discussed above, the Project would be consistent with plans adopted for the purpose of reducing GHG emissions, such as the SCAG Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), California Assembly Bill 32, California Air Resources Board Scoping Plan, and other statewide strategies to reduce GHG emissions.[86] Development of the proposed Project would replace and modernize facilities at Burroughs MS, but it would not increase the number of students, or faculty, at the school, and, therefore, would not increase GHG emissions. As such, the Project would not conflict with the goals of the RTP/SCS.

Additionally, SUP-related projects, including the proposed Project, would comply with the District's GHG emission reduction measures. LAUSD's School Design Guide requires construction contractors to reuse, recycle, and salvage non-hazardous materials generated during demolition and/or new construction, as materials recovery would minimize the need to produce and transport new materials, thereby reducing emissions from mobile sources and energy use.[87] With respect to all SUP projects, implementation of SCs GHG-1 through GHG-5 would ensure that the proposed Project would not conflict with applicable plans, policies or regulations adopted for the purpose of reducing GHG emissions. Therefore, with adherence to SCs GHG-1 through GHG-5 and compliance with Title 24, the Project would not conflict with plans, policies, or regulations adopted for the purpose of reducing GHG emissions. Additionally, the Project would not exceed the implemented significance threshold of 3,000 MT CO_2e annually. Therefore, Project impacts are not cumulatively considerable.

Schedule and Equipment

ESA

Burroughs Middle School Comprehensive Modernization Project
Schedule and Equipment Assumptions

Construction Model Assumptions

	Phase	CalEEMod Phase Type	Start Date	End Date	Work Days [2]	# of Workers [3]	# of Worker Trips per day
	PHASE 1						
1A	Build Site Access	Paving	8/1/2020	8/16/2020	10	150	300
	Build LAN Room	Building Construction	8/17/2020	8/27/2020	9	150	300
1B	Demolition	Demolition	8/28/2020	9/27/2020	21	50	100
1C	Electrical and LV Trench	Tenching	9/28/2020	11/27/2020	45	50	100
1D	Utilities Installation	Tenching	11/28/2020	12/28/2020	21	50	100
	Temporary Parking	Paving	12/29/2020	1/28/2021	23	50	100
	Bungalow Installation	Building Construction	1/29/2021	4/29/2021	65	50	100
	PHASE 2						
2A	Seismic Modification (B-1)	Modification/Grading	2/1/2021	6/21/2023	623	50	100
2B	Demolition (B-20, B-26, B-17, B-19)	Modification/Grading	2/21/2021	3/23/2021	22	50	100
	Construction (Building B)	Building Construction	3/1/2021	6/19/2023	601	50	100
2C	Seismic Modification (B-7)	Modification/Grading	8/1/2022	11/24/2023	345	50	100
2D	Seismic Modification (B-2)	Modification/Grading	7/1/2023	6/25/2024	257	50	100
2E	Seismic Modification (B-9)	Modification/Grading	7/1/2023	4/26/2024	215	50	100
2F	Demolition	Demolition	7/1/2023	7/31/2023	21	150	300
	Construction (Building A)	Building Construction	8/1/2023	9/24/2024	301	50	100
2G	Seismic Modification (B-4, B-14, B-18)	Modification/Grading	7/1/2023	2/26/2024	171	50	100
2I	Southern Parking Lot	Paving	7/1/2023	12/28/2023	129	50	100
	PHASE 3						
3A	Demo Interim Housing	Demolition	9/1/2024	2/28/2025	130	50	100
3B	Construction of New Field	Modification/Grading	9/1/2024	2/28/2025	130	50	100
3C	Demolition (B-8)	Demolition	9/1/2024	10/1/2024	22	50	100
	North Parking Lot	Paving	10/24/2024	3/23/2025	107	50	100

Notes:

1 *Source: Construction Phasing(date 1/3/19)*

2 *5 work days per week (Monday - Friday)*

3 *Average 50 workers per day during school year, then 150 workers per day during summer. 150 workers assumed when any part of activity occurs during summer for worst case*

B-25/B-3/B-16	4,280
Total	**82,511**

Phase 3

3A

Demo Interim Hou	11,520

3C

B-8	2,520

Phase	Building Sqft	Building Volume (ft^3)	Building Debris Volume (CY)[1]	Building Waste Density (tons/CY)[2]	tons
1B	2,272	22,720	210	0.5	105
2B	35,834	358,340	3,318	0.5	1,659
2F	82,511	825,110	7,640	0.5	3,820
3A	11,520	115,200	1,067	0.5	533
3C	2,520	25,200	233	0.5	117

Notes:

[1] Per CALEEMOD user's guide, 1 ft3 building volume = 0.25 ft3 waste volume.

[2] Building waste density is assumed to be 0.5 ton/CY per CALEEMOD User's Guide.

Phase	Building Debris Volume (CY)[1]	Mean Truck Capacity[3] (CY)	Total Truck Trips (Round Trip)	Total Truck Trips (One-Way)	Demo Duration	Trips per day
1 (soil removal)[4, 5]			-	250	5	50
1B	210	16	13	26	21	1
2B	3,318	16	207	415	22	19
2F	7,640	16	477	955	21	45
3A	1,067	16	67	133	130	1
3C	233	16	15	29	22	1

[3] Per CalEEMod, Hauling trips based on 16 CY per load

[4] Assumed 250 Truck trips

[5] calculated outside of CalEEMod

Concrete Estimates

1. GHG emission factors are obtained from the CARB GHG emissions inventory, with the following query: 1A3biii - Fuel Combustion Activities - Transport - Road Transportation - Heavy-duty Trucks and Buses, Sector Transportation : On Road : Heavy-duty Vehicles : Heavy-duty Trucks

https://www.arb.ca.gov/cc/inventory/doc/docs1/1a3biii_onroad_heavy-dutyvehicles_heavy-dutytrucks_fuelcombustion_distillate_ch4_2015.htm

2. GWP is based on IPCC Fourth Assessment Report. https://www.ipcc.ch/publications_and_data/ar4/wg1/en/ch2s2-10-2.html

Architectural Coating

ESA

Burroughs Middle School Comprehensive Modernization Project
Architectural Coating

CalEEMod assumes the total surface for architectural coating equals:		
Nonresidential Coating Area	2	times the square footage
	75%	interior
	25%	exterior
Parking Lot Coating Area	6%	of the square footage
	0%	exterior for surface lot

Source: SCAQMD, CEQA Air Quality Handbook, (1993) A9-124.

Non-Residential Land Uses			
Land Use	**Area (sf)**	**Interior (sf)**	**Exterior (sf)**
2B Building Construction	66,452	99,678	33,226
2F Building Construction	9,584	14,376	4,792
1A Paving	52,272	3,032	-
1D Paving	60,984	3,537	-
2I Paving	17,424	1,011	-
3C Paving	26,136	1,516	-
Project Total	**232,852**	**123,149**	**38,018**

CalEEMod Summer Output

ESA

LAUSD Burroughs - Unmitigated

South Coast Air Basin, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Junior High School	95.16	1000sqft	2.18	95,160.00	0
Other Asphalt Surfaces	2.00	Acre	2.00	87,120.00	0
Other Non-Asphalt Surfaces	2.00	Acre	2.00	87,120.00	0
Parking Lot	1.00	Acre	1.00	43,560.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	11			**Operational Year**	2025
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	1227.89	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

CalEEMod Winter Output

ESA

LAUSD Burroughs - Unmitigated

South Coast Air Basin, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Junior High School	95.16	1000sqft	2.18	95,160.00	0
Other Asphalt Surfaces	2.00	Acre	2.00	87,120.00	0
Other Non-Asphalt Surfaces	2.00	Acre	2.00	87,120.00	0
Parking Lot	1.00	Acre	1.00	43,560.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	11			**Operational Year**	2025
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	1227.89	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

CalEEMod Annual Output

ESA

LAUSD Burroughs - Unmitigated

South Coast Air Basin, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Junior High School	95.16	1000sqft	2.18	95,160.00	0
Other Asphalt Surfaces	2.00	Acre	2.00	87,120.00	0
Other Non-Asphalt Surfaces	2.00	Acre	2.00	87,120.00	0
Parking Lot	1.00	Acre	1.00	43,560.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	11			**Operational Year**	2025
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	1227.89	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

EXECUTIVE SUMMARY

Burroughs Middle School Comprehensive Modernization Project City of Los Angeles, California Archaeological and Paleontological Resources Report

The Los Angeles Unified School District (LAUSD or District) has retained Environmental Science Associates (ESA) to prepare an Environmental Impact Report (EIR) pursuant to the statutes of the California Environmental Quality Act (CEQA) for the Burroughs Middle School Comprehensive Modernization Project (proposed Project). The proposed Project is a site-specific school upgrade and modernization project being completed by LAUSD under the School Upgrade Program (SUP). The SUP Environmental Impact Report (Program EIR) was certified by LAUSD on November 10, 2015.[1] The proposed Project would include the demolition and removal of approximately 60,000 square feet (sf) of existing buildings, construction of new facilities totaling approximately 86,000 sf, and modernization of about 93,000 sf of buildings. LAUSD is the lead agency pursuant to CEQA.

The 10.4-acre proposed Project site is located at 600 South McCadden Place, within the Wilshire Community Plan Area of the City of Los Angeles and approximately 5 miles northwest of Downtown Los Angeles. It is bounded by West 6th Street to the north, Wilshire Boulevard to the south, single-family residences that front South June Street to the east, and South McCadden Place to the west. Specifically, the proposed Project site is located in Section 22, Township 1 South, Range 14 West, of the Hollywood 7.5-minute United States Geological Survey (USGS) topographic quadrangle.

A records search was conducted at the South Central Coastal Information Center (SCCIC), housed at California State University Fullerton on December 6, 2017. The records search indicates that 22 cultural resources studies have been conducted within ½-mile of the proposed Project and that none of these studies have included the Project site. The records search results also indicate that no archaeological resources have been previously recorded within the ½-mile radius, or within the Project site.

[1] LAUSD. 2015. School Upgrade Program Final Environmental Impact Report, http://achieve.lausd.net/ceqa. Adopted by the Board of Education on November 10, 2015.

A Sacred Lands File (SLF) check conducted by the California Native American Heritage Commission (NAHC) on November 29, 2017 indicated that no Native American cultural resources are known to be located within the proposed Project site.

Because the Project site is fully developed and no natural ground surface exposures exists, an archaeological resources survey was not conducted.

Archival research indicates that the proposed Project site has the potential for both historic-period and prehistoric archaeological resources. The southern portion of the Project site was developed with a small building as early as 1894. At around this same time, an unnamed tributary/drainage from Ballona Creek is depicted in topographic maps within the western portion of the Project site. Review of the geotechnical report prepared for the proposed Project indicates that fill soils with significant amounts of debris (including brick fragments) were encountered in the Project site. Given this, the Project site has the potential to contain historic-period archaeological resources, both those associated with former uses of the property and within the imported fill soils, as indicated by the brick fragment remnants exposed during the geotechnical investigation for the Project. Moreover, the Project site is located in the immediate vicinity of a historical-period thoroughfare, Wilshire Boulevard, and the La Brea Tar Pits (used during prehistoric and ethnographic time periods), located approximately one mile west of the Project site. Specifically, the route of Wilshire Boulevard, located immediately south of the Project site, is known to have been used during prehistoric times by the Gabrielino as a route to the La Brea Tar Pits, an important source of resources. Lastly, the former drainage (composed of Quaternary Alluvium deposits) that once crossed the Project site may have attracted prehistoric and historic period inhabitants to the area. The alluvial deposits associated with the drainage have the potential to contain buried and preserved archaeological sites.

Based on the results of these studies, the Project site has high potential for containing buried archaeological resources. Since the proposed Project includes ground disturbance, implementation of the proposed Project could result in a significant impact to archaeological resources that qualify as historical resources or unique archaeological resources under CEQA. The Project will incorporate LAUSD's Standard Conditions of Approval (SC), SC-CUL-7 through SC-CUL-13, to ensure that potential impacts remain less than significant. These conditions include retention of an on-call qualified archaeologist (SC-CUL-7), implementation of an archaeological resources monitoring program (SC-CUL-9), halting and re-directing work in the event of a discovery until it is evaluated for significance (SC-CUL-8 and SC-CUL-10), cultural resources sensitivity training (SC-CUL-11), Phase III Data Recovery/Mitigation Program if an unanticipated significant resource is discovered and cannot be avoided (SC-CUL-12), and consultation with local Native American representatives regarding documentation and recovery of Native American resources (SC-CUL-13). Incorporation of these SCs would ensure that the Project would have a less than significant impact on archaeological resources.

The surficial geology of the Project site consists of younger Quaternary Alluvium across the southeastern corner and older Quaternary Alluvium across the remainder of the site. A paleontological records search was conducted by the Natural History Museum of Los Angeles County (LACM) on December 11, 2017. The results indicate that while no fossil localities are

known from the Project site, significant fossil vertebrate remains can be found within older Quaternary Alluvium deposits at relatively shallow depth in the general area. Three fossil localities (LACM 1198, 5599, and 1814) are located approximately 0.10 to 0.62 miles away from the Project site that have produced fossil specimens of mastodon, camel, and bovid at depths from 2 to 17 feet below ground surface. LACM 1814 is associated with asphalt impregnated sands like those of the Rancho La Brea asphalt deposits found at Hancock Park, located west of the Project site. These have yielded millions of fossil specimens. A review of geologic mapping and the scientific literature indicates that the surficial older Quaternary Alluvium has the potential to preserve significant fossil resources at any depth. Furthermore, the younger Quaternary Alluvium is likely underlain by older Quaternary Alluvium at an unknown depth.

ESA recommends that the Project comply with SC-CUL-14 to ensure that potential impacts to paleontological resources remain less than significant, and identifies the following mitigation measures: paleontological resources sensitivity training (CUL-1), paleontological monitoring (CUL-2), halting and redirecting work if discovery is made until it is evaluated for significance (CUL-3), and coordination with the paleontological staff of the La Brea Tar Pits & Museum.

Burroughs Middle School Comprehensive Modernization Project City of Los Angeles, California

Archaeological and Paleontological Resources Report

1. Introduction

The Los Angeles Unified School District (LAUSD or District) has retained Environmental Science Associates (ESA) to prepare an Environmental Impact Report (EIR) pursuant to the statutes of the California Environmental Quality Act (CEQA) for the Burroughs Middle School Comprehensive Modernization Project (proposed Project). The proposed Project is a site-specific school upgrade and modernization project being completed by LAUSD under the School Upgrade Program (SUP). The SUP Environmental Impact Report (Program EIR) was certified by LAUSD on November 10, 2015.[2] The proposed Project would include the demolition and removal of approximately 60,000 square feet (sf) of existing buildings, construction of new facilities totaling approximately 86,442 sf, and modernization of about 93,000 sf of buildings. LAUSD is the lead agency pursuant to CEQA. This report documents the results of an archaeological and paleontological resources assessment conducted by ESA in support of the EIR for the proposed project. Because the proposed Project site is fully developed, an archaeological field survey was not conducted.

ESA personnel involved in the preparation of this report are as follows: Monica Strauss, M.A., R.P.A., Project Director; Michael Bever, PhD., R.P.A., Principal Investigator; Alyssa Bell, Ph.D., Paleontological Principal Investigator and report author; Fatima Clark, B.A., report author; and Jessie Lee, GIS specialist. Resumes of key personnel are included in **Appendix A**.

1.1 Project Location

The 10.4-acre proposed Project site is located within the Wilshire Community Plan Area of the City of Los Angeles, approximately five miles northwest of downtown Los Angeles (**Figure 1**). The proposed Project is located at 600 South McCadden Place and is bounded by West 6th Street to the north, Wilshire Boulevard to the south, single-family residences that front South June Street to the east, and South McCadden Place to the west. Specifically, the proposed Project site is located in Section 22, Township 1 South, Range 14 West, of the Hollywood 7.5-minute USGS topographic quadrangle (**Figure 2**).

Project Location

1.2 Project Description

The proposed Project would include renovations, modernizations, and new construction at Burroughs Middle School, including the demolition and removal of buildings (Shop Building, Girls' Locker Building, Cafeteria-Classroom Building and approximately 12 classrooms located in portable buildings). The Project would include the construction of buildings (a two-story Specialty Classroom Building, a three-story Food Services/Multi-Purpose Room Building, and Classroom/Lockers Building). The Project includes building modifications and the remodeling of 31 classrooms. Lastly, the Project would result in demolition of potentially historic buildings. However, the Project would be designed to preserve and enhance character-defining features associated with the campus.

Site upgrades that would be completed throughout the campus include: site-wide infrastructure, including plumbing, electrical and storm drain; site-wide upgrades to remove identified and prioritized barriers to program accessibility; and landscape, hardscape, and exterior paint. Landscape improvements may include repair or replacement of irrigation systems, including: lawn sprinklers and sprinkler controls; trees, shrubs, and other vegetation; landscaping plant material; utilitarian landscape components, such as sprinkler piping; and fencing and freestanding exterior walls.

2. Setting

2.1 Environmental Setting

The proposed Project site is currently a middle school composed of a number of standing buildings, as well as landscaped and hardscaped surfaces. The Project site is located in a highly urbanized portion of the Los Angeles Basin in an area dominated by residential and business development.

2.2 Geologic Setting

The Project site is situated in the Los Angeles Basin, in the northern Peninsular Ranges geomorphic province. The Peninsular Ranges extend from the Los Angeles coastline east to the San Bernardino Fault and from the San Diego coastline to the Colorado Desert and is characterized by northwest-trending mountains and valleys (Norris and Webb, 1990). The Los Angeles Basin is a structural depression approximately 50 miles long and 20 miles wide (Ingersoll and Rumelhart, 1999). The Los Angeles basin developed as a result of tectonic forces along the San Andreas fault zone, with subsidence occurring 18 – 3 million years ago (Mya) (Critelli et al., 1995). While sediments dating back to the Cretaceous (66 million years ago) are preserved in the basin, continuous sedimentation began in the middle Miocene (around 13 million years ago) (Yerkes et al., 1965). Since that time, eroded sediments from the surrounding highlands have been deposited in the basin, resulting in thousands of feet of accumulation (Yerkes et al., 1965). Most of these sediments were marine in nature, until sea level dropped in the Pleistocene and deposition of the terrestrial alluvial sediments that compose the uppermost units in the Los Angeles Basin began.

The Los Angeles Basin is subdivided into four structural blocks, with the Project site occurring in the Central Block, where sediments range from 32,000 to 35,000 feet thick (Yerkes et al., 1965). The Central Block is wedge-shaped, extending from the Santa Monica Mountains in the northwest, where it is about 10 miles wide, to the San Joaquin Hills in the southeast, where it widens to around 20 miles across (Yerkes et al., 1965).

The rapid sedimentation of the Los Angeles Basin resulted in the preservation of the organic content of much of the marine sediments, forming the most productive oil-producing district in California (Yerkes et al., 1965). The Project site is to the immediate southeast of the Salt Lake Oil Field which is roughly centered along Beverly Boulevard (Dibblee and Ehrenspeck, 1991). These oil-producing sediments are relevant to the paleontology of the area, as they are the cause of the world-famous La Brea Tar Pits, located at Hancock Park about one mile west of the Project site. The asphaltic sands of the La Brea Tar Pits form when petroleum seeps upward into the overlying alluvial sediments (Spencer et al., 2003). In places where the petroleum reached the surface, sticky pools of asphalt were left behind as the lighter petroleum products evaporated (Akersten et al., 1983). These pools would then trap most organisms that came into contact with them, including everything from pollen and plant seeds to mammoths, analogous to how fly-paper or quick sand works (Harris, 2015). The deposits at the La Brea Tar Pits are recognized as one of the densest fossil deposits in the world.

2.3 Cultural Setting

2.3.1 Prehistoric Overview

The chronology of southern California is typically divided into three general time periods: the Early Holocene (9,600 cal B.C. to 5,600 cal B.C.), the Middle Holocene (5,600 cal B.C. to 1,650 cal B.C.), and the Late Holocene (1,650 cal B.C. to cal A.D. 1769). This chronology is manifested in the archaeological record by particular artifacts and burial practices that indicate specific technologies, economic systems, trade networks, and other aspects of culture.

While it is not certain when humans first came to California, their presence in southern California by about 9,600 cal B.C. has been well documented. At Daisy Cave, on San Miguel Island, cultural remains have been radiocarbon dated to between 9,150 and 9,000 cal B.C. (Byrd and Raab, 2007). During the Early Holocene (9,600 cal B.C. to 5,600 cal B.C.), the climate of Southern California became warmer and more arid and human populations, who likely lived in small bands, appear to have resided mainly in coastal or inland desert areas. As the climate dried, they began to exploit a wider range of plant and animal resources (Byrd and Raab, 2007).

During the Middle Holocene (5,600 cal B.C. to 1,650 cal B.C.), there is evidence for the processing of acorns for food and a shift toward a more generalized economy. The first confirmed evidence of human occupation in the Los Angeles area is associated with the Millingstone cultures, which appeared in California around 6,000-5,000 cal B.C. (Byrd and Raab, 2007; Wallace,1955; Warren, 1968). Millingstone cultures were characterized by the collection and processing of plant foods, particularly acorns, and the hunting of a wider variety of game animals (Byrd and Raab, 2007; Wallace, 1955). Millingstone cultures also established more permanent settlements that were located primarily on the coast and in the vicinity of estuaries, lagoons,

lakes, streams, and marshes where a variety of resources, including seeds, fish, shellfish, small mammals, and birds, were exploited. Early Millingstone occupations are typically identified by the presence of handstones (manos) and millingstones (metates), while those Millingstone occupations dating later than approximately 3,000 B.C. contain a mortar and pestle complex as well, signifying the exploitation of acorns in the region.

During the Late Holocene (1,650 cal B.C. to cal A.D. 1769), many aspects of Millingstone culture persisted, but a number of socioeconomic changes occurred (Erlandson, 1994; Wallace, 1955; Warren, 1968). The native populations of southern California were becoming less mobile and populations began to gather in small sedentary villages with satellite resource-gathering camps. Increasing population size necessitated the intensified use of existing terrestrial and marine resources (Erlandson, 1994). Evidence indicates that the overexploitation of larger, high-ranked food resources may have led to a shift in subsistence, towards a focus on acquiring greater amounts of smaller resources, such as shellfish and small-seeded plants (Byrd and Raab, 2007). Between about A.D. 800 and A.D. 1350, there was an episode of sustained drought, known as the Medieval Climatic Anomaly (MCA) (Jones et al., 1999). While this climatic event did not appear to reduce the human population, it did lead to a change in subsistence strategies in order to deal with the substantial stress on resources. The Late Holocene marks a period in which specialization in labor emerged, trading networks became an increasingly important means by which both utilitarian and non-utilitarian materials were acquired, and travel routes were extended. Trade during this period reached its zenith as asphaltum (tar), seashells, and steatite were traded from Catalina Island (*Pimu* or *Pimugna)* and coastal southern California to the Great Basin. The bow and arrow was introduced sometime after cal A.D. 500, largely replacing the dart and atlatl (Byrd and Raab, 2007). Major technological changes appeared as well, particularly with the advent of the bow and arrow sometime after cal A.D. 500, which largely replaced the use of the dart and atlatl (Byrd and Raab, 2007).

2.4 Ethnographic Setting

2.4.1 Gabrielino

The Project site is located in a region traditionally occupied by the Takic-speaking Gabrielino Indians. The term “Gabrielino” is a general term that refers to those Native Americans who were administered by the Spanish at the Mission San Gabriel Arcángel. Prior to European colonization, the Gabrielino occupied a diverse area that included: the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers; the Los Angeles basin; and the islands of San Clemente, San Nicolas, and Santa Catalina (Kroeber, 1925). Their neighbors included the Chumash to the north, the Juañeno to the south, and the Serrano and Cahuilla to the east. The Gabrielino are reported to have been second only to the Chumash in terms of population size and regional influence (Bean and Smith, 1978). The Gabrielino language is part of the Takic branch of the Uto-Aztecan language family.

The Gabrielino Indians were hunter-gatherers and lived in permanent communities located near stable water and food supplies. Community populations generally ranged from 50 to 100 inhabitants, although larger settlements may have existed. The Gabrielino are estimated to have had a population numbering around 5,000 in the pre-contact period (Kroeber, 1925).

Villages are reported to have been the most abundant in the San Fernando Valley, the Glendale Narrows area north of downtown, and around the Los Angeles River's coastal outlets (Gumprecht 2001). The nearest villages to the Project site were *Kuruvungna* and *Yangna*, located approximately 7 miles southwest and 6 miles east of the Project site, respectively (McCawley, 1996).

The Project site is also located approximately one mile east of the La Brea Tar Pits, which were visited by the Gabrielino in prehistoric and historic times for the purpose of extracting tar, a prized resource for making weapons, vessels and jewelry, and waterproofing for canoes and roofing (Selden and Nudds, 2004). The alignment of present-day Wilshire Boulevard, which is located immediately south of the Project site, was constructed on a trail established by the Gabrielino which connected the village of *Yangna* to the tar pits (Roderick and Lynxwiler, 2005).

Subsistence consisted of hunting, fishing, and gathering. Small terrestrial game were hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows. Fish were taken by hook and line, nets, traps, spears, and poison (Bean and Smith, 1978). The primary plant resources were the acorn, gathered in the fall and processed in mortars and pestles, and various seeds that were harvested in late spring and summer and ground with manos and metates. The seeds included chia and other sages, various grasses, and islay or holly-leafed cherry.

Gabrielino society was characterized by patrilineal, non-localized clans, each clan consisting of several lineages. The Gabrielino inhabited large circular, domed houses constructed of willow poles thatched with tule (Bean and Smith, 1978). These houses could sometimes hold up to 50 people. Other village structures of varying sizes served as sweathouses, ceremonial enclosures, and granaries.

At the time of Spanish contact, many Gabrielino practiced a religion that was centered around the mythological figure *Chinigchinich* (Bean and Smith, 1978). This religion may have been relatively new when the Spanish arrived, and was spreading at that time to other neighboring Takic groups. The Gabrielino practiced both cremation and inhumation of their dead. A wide variety of grave offerings, such as stone tools, baskets, shell beads, projectile points, bone and shell ornaments, and otter skins, were interred with the deceased.

Coming ashore on Santa Catalina Island in October of 1542, Juan Rodriguez Cabrillo was the first European to make contact with the Gabrielino-Tongva; the 1769 expedition of Portolá also passed through Gabrielino territory (Bean and Smith, 1978). Native Americans suffered severe depopulation and their traditional culture was radically altered after Spanish contact. Nonetheless, Gabrielino descendants still reside in the greater Los Angeles and Orange County areas and maintain an active interest in their heritage.

2.4.2 CA-LAN-159 ("La Brea Woman")

In 1914, the remains of "La Brea Woman" (or CA-LAN-159) were discovered at Pit 10 of the La Brea Tar Pits approximately six to nine feet below the ground surface (Heizer, 1949). Speculations have been made that La Brea Woman was between 25 to 30 years old at death,

although her age has not been scientifically confirmed (Kennedy, 1989). There have also been many attempts at dating La Brea Woman's skeleton. In 1971, bone collagen extracted from La Brea Woman's remains yielded a date of 9,000 Radiocarbon Years Before Present ("RYBP"); however; Erlandson (1994) suggests that these dates be regarded with caution given the problems with dating bone collagen and decontaminating samples from tar seeps. Several bones of Pleistocene fauna that exhibit possible butchering marks that were found associated with the remains should also be regarded with caution. A mano, shell beads, and extinct fauna are also known to have been discovered in association with the human remains. The shell beads were studied by Chester King in 1988 and he believes that they are similar to the ones found in Level 1 at the Malaga Cove site in the Santa Monica Bay, which suggests that an early Holocene age (i.e., 12,000 to 8,000 years before present) for the remains is valid. Michael Moratto has also hypothesized that the extinct fauna discovered with La Brea Woman's remains (with different radio carbon dates of 12,650 RYBP and 15,200 RYBP) raise the possibility of a late Pleistocene human presence in the Los Angeles area (Erlandson, 1994). The remains of a domestic dog were also identified and analyzed more than seventy years after they were recovered from Pit 10 and are likely associated with La Brea Woman (Reynolds, 1985). Lastly, a wooden foreshaft (perhaps for an atlatl), dart shafts and a cogstone were recovered from Pits 61 and 67 of the tar pits (Heizer, 1949).

2.5 Historic Setting

2.5.1 Spanish Period (A.D. 1769-1821)

Although Spanish explorers made brief visits to the region in 1542 and 1602, sustained European exploration of southern California began in 1769, when Gaspar de Portolá and a small Spanish contingent began their exploratory journey along the California coast from San Diego to Monterey. This was followed in 1776 by the expedition of Father Francisco Garcés (Johnson and Earle, 1990). In the late 18th century, the Spanish began establishing missions in California and forcibly relocating and converting native peoples. In 1771, Father Junipero Serra founded the Mission San Gabriel Arcángel, located approximately 13 miles northeast of the Project site (California Missions Resource Center, 2003). Disease and hard labor took a toll on the native population in California; by 1900, the Native Californian population had declined by as much as 90 percent (Cook, 1978). In addition, native economies were disrupted, trade routes were interrupted, and native ways of life were significantly altered.

In an effort to promote Spanish settlement of Alta California, Spain granted several large land concessions from 1784 to 1821. At this time, unless certain requirements were met, Spain retained title to the land (State Lands Commission, 1982).

2.5.2 Mexican Period (A.D. 1821-1848)

The Mexican Period began when Mexico won its independence from Spain in 1821. Mexico continued to promote settlement of California with the issuance of land grants. In 1833, Mexico began the process of secularizing the missions, reclaiming the majority of mission lands and redistributing them as land grants. According to the terms of the Secularization Law of 1833 and

Regulations of 1834, at least a portion of the lands would be returned to the Native populations, but this did not always occur (Milliken et al., 2009).

Many ranchos continued to be used for cattle grazing by settlers during the Mexican Period. Hides and tallow from cattle became a major export for Californios, many of whom became wealthy and prominent members of society. The Californios led generally easy lives, leaving the hard work to vaqueros and Indian laborers (Pitt, 1994; Starr, 2007).

2.5.3 American Period (1846–present)

In 1846, the Mexican-American War broke out. Mexican forces were eventually defeated in 1847 and Mexico ceded California to the United States as part of the Treaty of Guadalupe Hildalgo in 1848. California officially became one of the United States in 1850. While the treaty recognized the right of Mexican citizens to retain ownership of land granted to them by Spanish or Mexican authorities, the claimant was required to prove their right to the land before a patent was given. The process was lengthy, and generally resulted in the claimant losing at least a portion of their land to attorney's fees and other costs associated with proving ownership (Starr, 2007).

When the discovery of gold in northern California was announced in 1848, a huge influx of people from other parts of North America flooded into California. The increased population provided an additional outlet for the Californios' cattle. As demand increased, the price of beef skyrocketed and Californios reaped the benefits. However, a devastating flood in 1861, followed by droughts in 1862 and 1864, led to a rapid decline of the cattle industry; over 70 percent of cattle perished during these droughts (McWilliams, 1946; Dinkelspiel, 2008). This event, coupled with the burden of proving ownership of their lands, caused many Californios to lose their lands during this period (McWilliams, 1946). Former ranchos were subsequently subdivided and sold for agriculture and residential settlement.

The first transcontinental railroad was completed in 1869, connecting San Francisco with the eastern United States. Newcomers poured into northern California. Southern California experienced a trickle-down effect, as many of these newcomers made their way south. The Southern Pacific Railroad extended this line from San Francisco to Los Angeles in 1876. The second transcontinental line, the Santa Fe, was completed in 1886 and caused a fare war, driving fares to an unprecedented low. Settlers flooded into the region and the demand for real estate skyrocketed. As real estate prices soared, land that had been farmed for decades outlived its agricultural value and was sold to become residential communities. The subdivision of the large ranchos took place during this time (Meyer, 1981; McWilliams, 1946). During the first three decades of the 20th century, more than 2 million people moved to Los Angeles County, transforming it from a largely agricultural region into a major metropolitan area.

3. Regulatory Framework

3.1 State

3.1.1 California Environmental Quality Act

CEQA is the principal statute governing environmental review of projects occurring in the State and is codified at *Public Resources Code (PRC) Section 21000 et seq.* CEQA requires lead agencies to determine if a proposed project would have a significant effect on the environment, including significant effects on historical or unique archaeological resources. Under CEQA (Section 21084.1), a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.

The *CEQA Guidelines* (Title 14 California Code of Regulations [CCR] Section 15064.5) recognize that historical resources include: (1) a resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (California Register); (2) a resource included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g); and (3) any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California by the lead agency, provided the lead agency's determination is supported by substantial evidence in light of the whole record. The fact that a resource does not meet the three criteria outlined above does not preclude the lead agency from determining that the resource may be an historical resource as defined in PRC Sections 5020.1(j) or 5024.1.

If a lead agency determines that an archaeological site is a historical resource, the provisions of Section 21084.1 of CEQA and Section 15064.5 of the *CEQA Guidelines* apply. If an archaeological site does not meet the criteria for a historical resource contained in the *CEQA Guidelines*, then the site may be treated in accordance with the provisions of Section 21083, which is as a unique archaeological resource. As defined in Section 21083.2 of CEQA a "unique" archaeological resource is an archaeological artifact, object, or site, about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information;
- Has a special and particular quality such as being the oldest of its type or the best available example of its type; or,
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

If an archaeological site meets the criteria for a unique archaeological resource as defined in Section 21083.2, then the site is to be treated in accordance with the provisions of Section 21083.2, which state that if the lead agency determines that a project would have a significant

effect on unique archaeological resources, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place (Section 21083.1(a)). If preservation in place is not feasible, mitigation measures shall be required. The *CEQA Guidelines* note that if an archaeological resource is neither a unique archaeological nor a historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment (*CEQA Guidelines* Section 15064.5(c)(4)).

A significant effect under CEQA would occur if a project results in a substantial adverse change in the significance of a historical resource as defined in *CEQA Guidelines* Section 15064.5(a). Substantial adverse change is defined as "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired" (*CEQA Guidelines* Section 15064.5(b)(1)). According to *CEQA Guidelines* Section 15064.5(b)(2), the significance of a historical resource is materially impaired when a project demolishes or materially alters in an adverse manner those physical characteristics that:

A. Convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

B. Account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in a historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

C. Convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a Lead Agency for purposes of CEQA.

Paleontological Resources

The CEQA Guidelines (Title 14, Chapter 3 of the California Code of Regulations, Section 15000 et seq.), define the procedures, types of activities, individuals, and public agencies required to comply with CEQA. As part of CEQA's Initial Study process, one of the questions that must be answered by the lead agency relates to paleontological resources: "Will the proposed project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?" (CEQA Guidelines Section 15023, Appendix G, Section XIV, Part a).

The loss of any identifiable fossil that could yield information important to prehistory, or that embodies the distinctive characteristics of a type of organism, environment, period of time, or geographic region, would be a significant environmental impact. Direct impacts to paleontological resources primarily concern the potential destruction of nonrenewable paleontological resources and the loss of information associated with these resources. This includes the unauthorized collection of fossil remains. If potentially fossiliferous bedrock or surficial sediments are disturbed, the disturbance could result in the destruction of paleontological resources and subsequent loss of information (significant impact). At the project-specific level, direct impacts can be mitigated to a less than significant level through the implementation of paleontological mitigation.

The CEQA threshold of significance for a significant impact to paleontological resources is reached when a project is determined to "directly or indirectly destroy a significant paleontological resource or unique geologic feature." In general, for projects that are underlain by paleontologically sensitive geologic units, the greater the amount of ground disturbance, the higher the potential for significant impacts to paleontological resources. For projects that are directly underlain by geologic units with no paleontological sensitivity, there is no potential for impacts on paleontological resources unless sensitive geologic units which underlie the non-sensitive unit are also affected.

3.1.2 California Register of Historical Resources

The California Register is "an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the State and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Section 5024.1[a]). The criteria for eligibility for the California Register are based upon National Register criteria (PRC Section 5024.1[b]). Certain resources are determined by the statute to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the National Register.

To be eligible for the California Register, a prehistoric or historic-period property must be significant at the local, state, and/or federal level under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

A resource eligible for the California Register must meet one of the criteria of significance described above, and retain enough of its historic character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. It is possible that a historic resource may not retain sufficient integrity to meet the criteria for listing in the National Register, but it may still be eligible for listing in the California Register.

Additionally, the California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally determined eligible for the National Register;
- California Registered Historical Landmarks from No. 770 onward; and,
- Those California Points of Historical Interest that have been evaluated by the OHP and have been recommended to the State Historical Commission for inclusion on the California Register.

Other resources that may be nominated to the California Register include:

- Historical resources with a significance rating of Category 3 through 5 (those properties identified as eligible for listing in the National Register, the California Register, and/or a local jurisdiction register);
- Individual historical resources;
- Historical resources contributing to historic districts; and,
- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an historic preservation overlay zone.

3.1.3 Assembly Bill 52 and Related Public Resources Code Sections

Assembly Bill (AB) 52 was approved by California State Governor Edmund Gerry "Jerry" Brown, Jr. on September 25, 2014. The act amended California PRC Section 5097.94, and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. AB 52 applies specifically to projects for which a Notice of Preparation (NOP) or a Notice of Intent to Adopt a Negative Declaration or Mitigated Negative Declaration (MND) will be filed on or after July 1, 2015. The primary intent of AB 52 was to include California Native American Tribes early in the environmental review process and to establish a new category of resources related to Native Americans that require consideration under CEQA, known as tribal cultural resources. PRC Section 21074(a)(1) and (2) defines tribal cultural resources as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe" that are either included or determined to be eligible for inclusion in the California Register or included in a local register of historical resources, or a resource that is determined to be a tribal cultural resource by a lead agency, in its discretion and supported by substantial evidence. On July 30, 2016, the California Natural Resources Agency adopted the final text for tribal cultural resources update to Appendix G of the CEQA Guidelines, which was approved by the Office of Administrative Law on September 27, 2016.

PRC Section 21080.3.1 requires that within 14 days of a lead agency determining that an application for a project is complete, or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact, or a tribal representative, of California Native American Tribes that are traditionally and culturally affiliated with the geographic area of the project (as defined in PRC Section 21073) and who have requested in writing to be informed by the lead agency (PRC Section 21080.3.1(b)). Tribes interested in consultation must respond in writing within 30 days from receipt of the lead agency's formal notification and the lead agency must begin consultation within 30 days of receiving the tribe's request for consultation (PRC Sections 21080.3.1(d) and 21080.3.1(e)).

PRC Section 21080.3.2(a) identifies the following as potential consultation discussion topics: the type of environmental review necessary; the significance of tribal cultural resources; the significance of the project's impacts on the tribal cultural resources; project alternatives or appropriate measures for preservation; and mitigation measures. Consultation is considered concluded when either: (1) the parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or (2) a party, acting in good faith and

after reasonable effort, concludes that mutual agreement cannot be reached (PRC Section 21080.3.2(b)).

If a California Native American tribe has requested consultation pursuant to Section 21080.3.1 and has failed to provide comments to the lead agency, or otherwise failed to engage in the consultation process, or if the lead agency has complied with Section 21080.3.1(d) and the California Native American tribe has failed to request consultation within 30 days, the lead agency may certify an EIR or adopt an MND (PRC Section 21082.3(d)(2) and (3)).

PRC Section 21082.3(c)(1) states that any information, including, but not limited to, the location, description, and use of the tribal cultural resources, that is submitted by a California Native American tribe to the lead (or public) agency during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public without the prior consent of the tribe that provided the information. If the lead agency publishes any information submitted by a California Native American tribe during the consultation or environmental review process, that information shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public.

3.3.4 California Health and Safety Code Section 7050.5

California Health and Safety Code Section 7050.5 requires that in the event human remains are discovered, the County Coroner be contacted to determine the nature of the remains. In the event the remains are determined to be Native American in origin, the Coroner is required to contact the California Native American Heritage Commission (NAHC) within 24 hours to relinquish jurisdiction.

3.3.5 California Public Resources Code Section 5097.98

California PRC Section 5097.98, as amended by Assembly Bill 2641, provides procedures in the event human remains of Native American origin are discovered during project implementation. PRC Section 5097.98 requires that no further disturbances occur in the immediate vicinity of the discovery, that the discovery is adequately protected according to generally accepted cultural and archaeological standards, and that further activities take into account the possibility of multiple burials. PRC Section 5097.98 further requires the NAHC, upon notification by a County Coroner, designate and notify a Most Likely Descendant (MLD) regarding the discovery of Native American human remains. Once the MLD has been granted access to the site by the landowner and inspected the discovery, the MLD then has 48 hours to provide recommendations to the landowner for the treatment of the human remains and any associated grave goods.

In the event that no descendant is identified, or the descendant fails to make a recommendation for disposition, or if the land owner rejects the recommendation of the descendant, the landowner may, with appropriate dignity, reinter the remains and burial items on the property in a location that will not be subject to further disturbance.

3.3.6 Public Resources Code Section 5097.5 and Section 30244

Other state requirements for paleontological resource management are included in PRC Section 5097.5 and Section 30244. These statutes prohibit the removal of any paleontological site or feature from public lands without permission of the jurisdictional agency, define the removal of paleontological sites or features as a misdemeanor, and require reasonable mitigation of adverse impacts to paleontological resources from developments on public (state, county, city, district) lands.

3.2 Local

3.2.1 City of Los Angeles General Plan

The City of Los Angeles General Plan (adopted 2001) states as its objective, to "protect the city's archaeological and paleontological resources for historical, cultural, research, and/or educational purposes" by continuing "to identify and protect significant archaeological and paleontological resources known to exist or that are identified during land development, demolition, or property modification activities."

In addition, the City will:

> *continue to protect historic and cultural sites and/or resources potentially affected by proposed land development, demolition, or property modification activities…The city's environmental guidelines require the applicant to secure services of a bona fide archaeologist to monitor excavations or other subsurface activities associated with a development project in which all or a portion is deemed to be of archaeological significance. Discovery of archaeological materials may temporarily halt the project until the site has been assessed, potential impacts evaluated and, if deemed appropriate, the resources protected, documented and/or removed (*City of Los Angeles, 2001*).*

The General Plan also contains the following statement regarding paleontological resources:

> *Pursuant to CEQA, if a land development project is within a potentially significant paleontological area, the developer is required to contact a bona fide paleontologist to arrange for assessment of the potential impact and mitigation of potential disruption of or damage to the site. If significant paleontological resources are uncovered during project execution, authorities are to be notified and the designated paleontologist may order excavations stopped, within reasonable time limits, to enable assessment, removal or protection of the resources. For Los Angeles city and county, the Los Angeles County Museum of Natural History, including the George C. Page Museum, provides advice concerning paleontological resources.*

In addition, the Los Angeles Municipal Code (LAMC) Section 91.106.4.5 states that the Building Department "shall not issue a permit to demolish, alter or remove a building or structure of historical, archaeological or architectural consequence if such building or structure has been officially designated" by a federal, state, or local authority.

3.2.2 LAUSD

The SUP Program EIR was certified by LAUSD on November 10, 2015.[3] The overall purpose of the EIR was to inform LAUSD (lead agency), responsible agencies, decision makers, and the general public of the potential environmental effects from implementation of the SUP, and to streamline future CEQA compliance. The SUP Program EIR included Standard Conditions to provide sufficient performance standards for future projects to reduce environmental impacts. The following Standard Conditions are applicable to archaeological and paleontological resources.

TABLE 1
SUP PROGRAM EIR – APPLICABLE CULTURAL RESOURCES STANDARD CONDITIONS

Reference	Topic	Trigger for Compliance	Implementation Phase	Standard Conditions
SC-CUL-7	Archaeological Resource	Project area is deemed highly sensitive for archaeological resources.	Prior to and during grading, excavation, or other ground disturbing activities	LAUSD shall retain a qualified archaeologist to be available on-call. The qualified archaeologist shall meet the Secretary of the Interior's Professional Qualifications Standards (48 Federal Register 44738–39).
SC-CUL-8	Historic and Archaeological Resource	Historical or unique archaeological resources are discovered during construction activities.	During grading, excavation, or other ground disturbing activities	The contractor shall halt construction activities in the immediate area and notify the LAUSD. LAUSD shall retain a qualified archeologist to make an immediate evaluation of significance and appropriate treatment of the resource. To complete this assessment, the qualified archeologist will be afforded the necessary time to recover, analyze, and curate the find. The qualified archeologist shall recommend the extent of archeological monitoring necessary to ensure the protection of any other resources that may be in the area. Construction activities may continue on other parts of the building site while evaluation and treatment of historical or unique archaeological resources takes place.
SC-CUL-9	Archaeological Resource Monitoring Program	Phase I Archaeological Site Investigation shows a strong possibility that unique resources, and/or unique architectural resources have been identified on a site.	Prior to the start of construction	LAUSD shall implement an archaeological monitoring program for construction activities at a site prepared by a qualified archaeologist under the following conditions: (1) when a Phase I Site Investigation shows a strong possibility that unique archeological resources are buried on the site; and/or (2) when unique architectural resources have been identified on a site, but LAUSD does not implement a Phase III Data Recovery/Mitigation Program because the resources can be recovered through the archaeological monitoring program.
SC-CUL-10	Archaeological Resource	Evidence of prehistoric or historic cultural resources is uncovered.	During grading, excavation, or other ground disturbing activities	All work shall stop within a 30-foot radius of the discovery. Work shall not continue until the discovery has been evaluated by a qualified archaeologist. The qualified archaeologist shall assess the find(s) and, if it is determined to be of value, shall draft a monitoring program and oversee the remainder of the grading program. Should evidence of prehistoric or historic cultural resources be found the archaeologist shall monitor all ground-disturbing activities related to the proposed project. Any significant archaeological resources found shall be preserved as determined

[3] LAUSD. 2015. School Upgrade Program Final Environmental Impact Report, http://achieve.lausd.net/ceqa. Adopted by the Board of Education on November 10, 2015.

Reference	Topic	Trigger for Compliance	Implementation Phase	Standard Conditions
				necessary by the archaeologist and offered to a local museum or repository willing to accept the resource. Any resulting reports shall also be forwarded to the South Central Coastal Information Center at the California State University, Fullerton.
SC-CUL-11	Archaeological Resource	Project construction requires archaeological monitoring	Prior to the start grading, excavation, or other ground disturbing activities	Cultural resources sensitivity training shall be conducted by a qualified archaeologist for all construction workers involved in moving soil or working near soil disturbance. This training shall review the types of archaeological resources that might be found, along with laws for the protection of resources.
SC-CUL-12	Archaeological Resource	Unique archaeological resources are discovered and LAUSD determines not to avoid them by abandoning the site or redesigning the project	During grading, excavation, or other ground disturbing activities	LAUSD shall determine whether it is feasible to prepare and implement a Phase III Data Recovery/Mitigation Program. A Phase III Data Recovery/Mitigation Program would be designed by a Qualified Archaeologist to recover a statistically valid sample of the archaeological remains and to document the site to a level where the impacts can be determined to be less than significant. All documentation shall be prepared in the standard format of the ARMR Guidelines, as prepared by the OHP. Once a Phase III Data Recovery/Mitigation Program is completed, an archaeological monitor shall be present on site to oversee the grading, demolition activities, and/or initial construction activities to ensure that construction proceeds in accordance with the adopted Phase III Data Recovery/Mitigation Program. The extent of the Phase III Data Recovery/Mitigation Program and the extent and duration of the archaeological monitoring program depend on site-specific factors.
SC-CUL-13	Native American Resource	Evidence of Native American Resources is Uncovered	During grading, excavation, or other ground-disturbing activities (Construction)	All work shall stop within a 30-foot radius of the discovery. Work shall not continue until the discovery has been evaluated by a qualified archaeologist and the local Native American representative has been contacted and consulted to assist in the accurate recordation and recovery of the resources.
SC-CUL-14	Paleontological Resource	Cultural Resources Assessment identifies the project area as sensitive for paleontological resources.	During grading, excavation, or other ground disturbing activities	LAUSD shall have paleontological monitor on-call during construction activities. This monitor shall provide the construction crew(s) with a brief summary of the sensitivity, the rationale behind the need for protection of these resources, and information on the initial identification of paleontological resources. If paleontological resources are uncovered during construction, the on-call paleontologist shall be notified and afforded the necessary time and funds to recover, analyze, and curate the find(s). Subsequently, the monitor shall remain on site for the duration of the ground disturbances to ensure the protection of any other resources that may be in the area.
SC-CUL-15	Paleontological Resource	Project area is deemed highly sensitive for paleontological resources.	During grading, excavation, or other ground disturbing activities	The paleontological monitor shall be on site for all ground altering activities and shall advise LAUSD as to necessary means of protecting potentially significant paleontological resources, including, but not limited to, possible cessation of construction activities in the immediate area of a find. If resources are identified during the monitoring program, the paleontologist shall be

Reference	Topic	Trigger for Compliance	Implementation Phase	Standard Conditions
				afforded the necessary time and funds to recover, analyze, and curate the find(s). Subsequently, the monitor shall remain on site for the duration of the ground disturbances to insure the protection of any other resources that may be in the area.

3.2.3 Society for Vertebrate Paleontology Guidelines

The Society for Vertebrate Paleontology (SVP) has established standard guidelines for acceptable professional practices in the conduct of paleontological resource assessments and surveys, monitoring and mitigation, data and fossil recovery, sampling procedures, and specimen preparation, identification, analysis, and curation. Most practicing professional paleontologists in the nation adhere closely to the SVP's assessment, mitigation, and monitoring requirements as specifically provided in its standard guidelines. Most California State regulatory agencies accept the SVP standard guidelines as a measure of professional practice.

As defined by the SVP (2010: 11), significant nonrenewable paleontological resources are:

> fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years).

As defined by the SVP (1995:26), significant fossiliferous deposits are:

> a rock unit or formation which contains significant nonrenewable paleontologic resources, here defined as comprising one or more identifiable vertebrate fossils, large or small, and any associated invertebrate and plant fossils, traces, and other data that provide taphonomic, taxonomic, phylogenetic, ecologic, and stratigraphic information (ichnites and trace fossils generated by vertebrate animals, e.g., trackways, or nests and middens which provide datable material and climatic information).

Based on the significance definitions of the SVP (1995, 2010), all identifiable vertebrate fossils are considered to have significant scientific value. This position is adhered to because vertebrate fossils are relatively uncommon, and only rarely will a fossil locality yield a statistically significant number of specimens of the same genus. Therefore, every vertebrate fossil found has the potential to provide significant new information on the taxon it represents, its paleoenvironment, and/or its distribution. Furthermore, all geologic units in which vertebrate fossils have previously been found are considered to have high sensitivity. Identifiable plant and invertebrate fossils are considered significant if found in association with vertebrate fossils or if defined as significant by project paleontologists, specialists, or local government agencies.

A geologic unit known to contain significant fossils is considered "sensitive" to adverse impacts if there is a high probability that earth-moving or ground-disturbing activities in that rock unit will either directly or indirectly disturb or destroy fossil remains. The limits of the entire rock formation, both areal and stratigraphic, therefore define the scope of the paleontological potential in each case (SVP, 1995).

Fossils are contained within surficial sediments or bedrock, and are therefore not observable or detectable unless exposed by erosion or human activity. In summary, paleontologists cannot know either the quality or quantity of fossils prior to natural erosion or human-caused exposure. As a result, even in the absence of surface fossils, it is necessary to assess the sensitivity of rock units based on their known potential to produce significant fossils elsewhere within the same geologic unit (both within and outside of the study area), a similar geologic unit, or based on whether the unit in question was deposited in a type of environment that is known to be favorable for fossil preservation. Monitoring by experienced paleontologists greatly increases the probability that fossils will be discovered during ground-disturbing activities and that, if these remains are significant, successful mitigation and salvage efforts may be undertaken in order to prevent adverse impacts to these resources.

Paleontological Sensitivity

Paleontological sensitivity is defined as the potential for a geologic unit to produce scientifically significant fossils. This is determined by rock type, past history of the geologic unit in producing significant fossils, and fossil localities recorded from that unit. Paleontological sensitivity is derived from the known fossil data collected from the entire geologic unit, not just from a specific survey. In its "Standard Guidelines for the Assessment and Mitigation of Adverse Impacts to Paleontologic Resources," the SVP (2010: 1-2) defines four categories of paleontological sensitivity (potential) for rock units: high, low, undetermined, and no potential:

> **High Potential**. Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources. Rocks units classified as having high potential for producing paleontological resources include, but are not limited to, sedimentary formations and some volcaniclastic formations (e. g., ashes or tephras), and some low-grade metamorphic rocks which contain significant paleontological resources anywhere within their geographical extent, and sedimentary rock units temporally or lithologically suitable for the preservation of fossils (e. g., middle Holocene and older, fine-grained fluvial sandstones, argillaceous and carbonate-rich paleosols, cross-bedded point bar sandstones, fine-grained marine sandstones, etc.). Rock units which contain potentially datable organic remains older than late Holocene, including deposits associated with animal nests or middens, and rock units which may contain new vertebrate deposits, traces, or trackways are also classified as having high potential.
>
> **Low Potential**. Reports in the paleontological literature or field surveys by a qualified professional paleontologist may allow determination that some rock units have low potential for yielding significant fossils. Such rock units will be poorly represented by fossil specimens in institutional collections, or based on general scientific consensus only

preserve fossils in rare circumstances and the presence of fossils is the exception not the rule, e.g. basalt flows or Recent colluvium. Rock units with low potential typically will not require impact mitigation measures to protect fossils.

Undetermined Potential. Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study is necessary to determine if these rock units have high or low potential to contain significant paleontological resources. A field survey by a qualified professional paleontologist to specifically determine the paleontological resource potential of these rock units is required before a paleontological resource impact mitigation program can be developed. In cases where no subsurface data are available, paleontological potential can sometimes be determined by strategically located excavations into subsurface stratigraphy.

No Potential. Some rock units have no potential to contain significant paleontological resources, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites). Rock units with no potential require no protection nor impact mitigation measures relative to paleontological resources.

For geologic units with high potential, full-time monitoring is generally recommended during any project-related ground disturbance (SVP, 2010). For geologic units with low potential, full-time monitoring will not generally be required. For geologic units with undetermined potential, field surveys by a qualified vertebrate paleontologist should be conducted to specifically determine the paleontologic potential of the rock units present within the Project site.

4. Archival Research

4.1 SCCIC Records Search

A records search for the proposed Project was conducted on December 6, 2017 at the California Historic Resources Inventory System (CHRIS) South Central Coastal Information Center (SCCIC) housed at California State University, Fullerton (**Appendix B**). The records search included a review of all recorded archaeological sites within a ½-mile radius of the proposed project, as well as a review of cultural resource reports on file. In addition, the California Points of Historical Interest (PHI), the California Historical Landmarks (CHL), the California Register of Historic Resources (California Register), the National Register, and the California State Historic Resources Inventory (HRI) listings were reviewed for properties within or adjacent to the proposed Project site.

4.1.1 Previous Cultural Resources Investigations

The records search indicates that 22 cultural resources studies have been conducted within a ½-mile of the proposed Project (**Table 2**). Less than 25 percent of the ½-mile records search area has been included in previous studies. Of the 22 studies, one covered a portion of the proposed Project site. However, this study (LA-08020) consisted of conducting archival research and a

historical resources survey for the Los Angeles Rail Rapid Transit Project and did not address archaeological resources. No archaeological surveys have covered the proposed project.[4]

[4] It should be noted that three studies (LA-07562, -07565, and -07566) are plotted on SCCIC maps as occurring within the proposed Project site. However, a review of these studies, which pertain to cultural resource investigations for the Los Angeles Rail Rapid Transit Project ("Metro Rail") and the Dseis Core Study Alignments Project (also related to the "Metro Rail") shows that they are incorrectly mapped at the SCCIC and do not occur with the proposed Project site.

4.1.2 Previously Recorded Cultural Resources

The records search results indicate that no archaeological resources have been previously recorded within the ½-mile radius, or within the Project site.

4.2 LACM Paleontological Records Search

A paleontological records search was conducted by the Natural History Museum of Los Angeles County (LACM) on December 11, 2017 (**Appendix C**). The results indicate that no fossil localities are known within the Project site. However, there are fossil localities within 0.10 miles from the same sedimentary deposits that occur within the Project site.

According to the LACM, surface deposits on the southeastern portion of the Project site are made up of younger Quaternary Alluvium, which are derived from a drainage that is located in that portion of the Project site. Surface deposits in the rest of the Project site consist of older Quaternary Alluvium, derived as alluvial fan deposits from the Hollywood Hills located to the north. The LACM has also stated that at "relatively shallow depth in this area significant fossil vertebrate remains are found in these deposits" (McLeod, 2017).

The closest vertebrate fossil locality from older Quaternary Alluvium deposits is LACM 1198, located approximately 0.10 miles south of the Project site (near the intersection of 8th Street and Tremaine Avenue), which produced a fossil specimen of mastodon (*Mammut*) at a depth of 17 feet below ground surface. LACM 5599, located approximately 0.35 miles southwest of the Project site (near the intersection of Longwood Avenue and Olympic Boulevard), yielded a fossil camel (*Camelops*) at a depth of 12 feet below ground surface. LACM 1814, located approximately 0.62 miles southwest of the Project site (near the intersection of La Brea Avenue and Sycamore Avenue) produced a specimen of fossil bovid (*Preptoceras sinclairi*) at a depth of 2 feet below ground surface. Additionally, LACM 1814 consists of asphaltic sands, like those of the La Brea Tar Pits to the west of the Project site in Hancock Park.

The LACM has reported that excavations of older Quaternary Alluvium deposits throughout the Project site could yield vertebrate fossil remains and that any substantial excavations should be closely monitored (McLeod, 2017).

5. Additional Research

5.1 Historic Map Review

Historic maps were examined to provide historical information about the proposed Project site and vicinity, and to contribute to an assessment of the proposed project's archaeological sensitivity. Available historic topographic maps include: 1894 Los Angeles 15-minute topographic quadrangle; 1896, 1898, 1900, and 1902 Santa Monica 15-minute quadrangles; 1921 Santa Monica 15-minute topographic quadrangle; 1924, 1926, 1953, 1966, 1972, 1981, and 1991 Hollywood 7.5-minute topographic quadrangles (Worley Parsons, 2016). Sanborn Fire Insurance maps were available for the years 1926, 1950, and 1969 (Worley Parsons, 2016).

The review of topographic maps indicates that from 1894 through 1902, a small building was located on the southern portion of the Project site and that an unnamed tributary of Ballona Creek followed a northeast to southwest direction across the western portion of the Project site. By 1921, the Project site appears to have been undeveloped. By 1924 and 1926, a school is depicted within the northwest portion of the Project site and residential development appears in the immediate vicinity. From 1953 through 1991, the Project site was occupied by the John Burroughs Junior High School, with several different structures.

Review of the 1926 Sanborn map also indicates that the northern portion of the Project site was developed as the John Burroughs Junior High School, which consisted of six different buildings including a large building with an auditorium, classrooms with restrooms, a gymnasium, a dressing room, and an auto repair and wood working shop. Review of the 1950 Sanborn map indicates that additional buildings had been added to the school by that date, including a music room, a greenhouse building, a girl's gymnasium, and two small structures (one north of a lunch shelter and the other east of the auto repair and wood working shop). Review of the 1969 Sanborn map indicates that by this time, several buildings (including a greenhouse building, music room, lathe building, and the two small structures) had been removed. Two new classroom buildings, a new music room building, and three small storage sheds had been added.

5.2 Paleontological Resources Literature Review

A desktop review was conducted to assess the potential of the geologic units in the Project site to preserve fossil resources. The surficial geology of the Project site has been mapped by Dibblee and Ehrenspeck (1991) at a scale of 1:24,000. The Project site consists of younger Quaternary Alluvium (Qa) in the southeastern area and older Quaternary Alluvium (Qae) across the remainder of the site (**Figure 3**). These units are discussed in detail below.

> **Younger Quaternary Alluvium (Qa)**. These sediments date to the Holocene (up to 10,000 years old) and consist of alluvial clay, sand, and gravel deposited by minor stream flow (Dibblee and Ehrenspeck, 1991). While these sediments are too young in the

surficial and upper layers to preserve fossil resources (under 5,000 years old, per the SVP, 2010), they increase in age with depth and therefore may preserve fossils in deeper layers. Therefore, this unit has **low-to-high paleontological sensitivity**, depending on depth. While the exact depth at which this transition occurs is not known in the Project site, elsewhere in the Los Angeles Basin fossils have been found in layers of younger Quaternary Alluvium at depths of 10-15 feet below ground surface (Jefferson, 1991 a, b).

Older Quaternary Alluvium. These sediments date to the Pleistocene (over 10,000 years old) and are similar in lithology to the younger Quaternary Alluvium described above (Dibblee and Ehrenspeck, 1991). These Pleistocene sediments have a rich fossil history in southern California (Jefferson, 1991a and b; Miller, 1971; Scott, 2010). The most common Pleistocene terrestrial mammal fossils include the bones of mammoth, bison, deer, and small mammals, but other taxa, including horse, lion, cheetah, wolf, camel, antelope, peccary, mastodon, capybara, and giant ground sloth, have been reported (Jefferson, 1991 a and b; Graham and Lundelius, 1994). In addition to illuminating the striking differences between Southern California in the Pleistocene versus today, this abundant fossil record has been vital in studies of extinction (e.g. Sandom et al., 2014; Scott, 2010), ecology (e.g. Connin et al., 1998), and climate change (e.g. Roy et al., 1996). Due to the rich fossil history of these sediments throughout the Los Angeles Basin and Southern California, they have **high paleontological sensitivity.**

It should be noted that while the geotechnical study discussed below did not identify asphaltic sands in the subsurface of the Project site, the proximity of the Project site to the La Brea Tar Pits (one mile to the west) and fossil locality LACM 1814 (0.62 miles to the southwest), indicates that asphaltic sands may be encountered during construction. As discussed above, these deposits have preserved millions of fossils at the La Brea Tar Pits, and have **high paleontological sensitivity**.

5.3 Geotechnical Investigation Review

A report prepared by Amec Foster Wheeler (2015) detailing the results of a geotechnical investigation for the proposed Project was reviewed. Two geotechnical borings were drilled to depths of 50 feet below the existing ground surface to evaluate the underlying soil conditions of the Project site.

Review of the boring logs and Plot Plan indicates that Boring 1 was drilled in the center portion of the Project site and that fill soils (consisting of sandy silt and sandy clay with some brick fragments[5]) were encountered down to 11 feet in thickness. The boring logs and Plot Plan indicate that Boring 2 was drilled in the northeastern portion of the Project site and that fill soils (made up of sandy lean clay) were encountered down to 3 feet in thickness. Amec Foster Wheeler (2015) has also indicated that previous investigations conducted by them throughout different portions of the Project site encountered fill soils with significant amount of debris. Previous borings near Boring 1 also encountered petroleum-soaked fill soils. The fill soils are underlain by Holocene to Pleistocene-age alluvial deposits, which generally consist of "interbedded and interfingered sand, silt, and clay" (Amec Foster Wheeler, 2015).

5 Brick fragments are debris which may indicate the presence of subsurface historic-period archaeological deposits.

6. Sacred Lands File Search

The NAHC maintains a confidential Sacred Lands File (SLF) which contains sites of traditional, cultural, or religious value to the Native American community. The NAHC was contacted on November 27, 2017 to request a search of the SLF. The NAHC responded to the request in a letter dated November 29, 2017 (**Appendix D**). The SLF yielded negative results; however, the NAHC noted that the negative results of the SLF search does not preclude the existence of Native American resources within the Project site (Quinn, 2017).

7. Conclusion and Recommendations

7.1 Archaeological Resources

No archaeological resources were identified within the Project site as a result of this study. However, this does not preclude the possibility that subsurface archaeological deposits underlie the project.

Archival research indicates that the southern portion of the Project site was developed with a small building as early as 1894. At around this same time, an unnamed tributary/drainage from Ballona Creek is depicted in topographic maps within the western portion of the Project site. Review of the geotechnical report prepared for the proposed Project indicates that fill soils with significant amount of debris (including brick fragments) were encountered in the Project site. Given this, the Project site has the potential to contain historic-period archaeological resources, both those associated with former uses of the property and within the imported fill soils, as indicated by the brick fragment remnants exposed during the geotechnical investigation for the project. Moreover, the Project site is located in the immediate vicinity of a historical-period thoroughfare, Wilshire Boulevard, and the La Brea Tar Pits (used during prehistoric and ethnographic time periods), located approximately one mile west of the project site. Specifically, the route of Wilshire Boulevard, located immediately south of the Project site, is known to have been used during prehistoric times by the Gabrielino as a route to the La Brea Tar Pits, an important source of resources. Lastly, the former drainage (composed of Quaternary Alluvium deposits) that once crossed the Project site may have attracted prehistoric and historic period inhabitants to the area. The alluvial deposits associated with the drainage have the potential to contain buried and preserved archaeological sites.

Given these findings, the Project site has the potential to contain buried historic-period and prehistoric archaeological resources under the current foundations of the school buildings and surface parking lots. Since the proposed Project includes ground disturbance, implementation could result in a significant impact to archaeological resources that qualify as historical resources or unique archaeological resources under CEQA. As such, LAUSD's Standard Conditions of Approval (SCs), SC-CUL-7 through SC-CUL-13 would be incorporated to ensure that impacts are less than significant:

> **SC-CUL-7:** LAUSD shall retain a qualified archaeologist to be available on-call. The qualified archaeologist shall meet the Secretary of the Interior's Professional Qualifications Standards (48 Federal Register 44738–39).

SC-CUL-8: If historical or unique archaeological resources are discovered during construction activities, the contractor shall halt construction activities in the immediate area and notify the LAUSD. LAUSD shall retain a qualified archeologist to make an immediate evaluation of significance and appropriate treatment of the resource. To complete this assessment, the qualified archeologist will be afforded the necessary time to recover, analyze, and curate the find. The qualified archeologist shall recommend the extent of archeological monitoring necessary to ensure the protection of any other resources that may be in the area. Construction activities may continue on other parts of the building site while evaluation and treatment of historical or unique archaeological resources takes place.

SC-CUL-9: LAUSD shall implement an archaeological monitoring program for construction activities at a site prepared by a qualified archaeologist under the following conditions: (1) when a Phase I Site Investigation shows a strong possibility that unique archeological resources are buried on the site; and/or (2) when unique architectural resources have been identified on a site, but LAUSD does not implement a Phase III Data Recovery/Mitigation Program because the resources can be recovered through the archaeological monitoring program.

The Project site has a strong possibility of containing subsurface archaeological materials that could qualify as historical resources or unique archaeological resources, and these resources could be impacted by construction. Given this, per condition (1) of SC-CUL-9, an archaeological monitoring program shall be implemented during Project-related ground disturbing activity.

SC-CUL-10: If evidence of prehistoric or historic cultural resources is uncovered, all work shall stop within a 30-foot radius of the discovery. Work shall not continue until the discovery has been evaluated by a qualified archaeologist. The qualified archaeologist shall assess the find(s) and, if it is determined to be of value, shall draft a monitoring program and oversee the remainder of the grading program. Should evidence of prehistoric or historic cultural resources be found the archaeologist shall monitor all ground-disturbing activities related to the proposed project. Any significant archaeological resources found shall be preserved as determined necessary by the archaeologist and offered to a local museum or repository willing to accept the resource. Any resulting reports shall also be forwarded to the South Central Coastal Information Center at the California State University, Fullerton.

SC-CUL-11: Cultural resources sensitivity training shall be conducted by a qualified archaeologist for all construction workers involved in moving soil or working near soil disturbance. This training shall review the types of archaeological resources that might be found, along with laws for the protection of resources.

SC-CUL-12: If archeological resources qualifying as unique archaeological resources are discovered and LAUSD determines not to avoid them by abandoning the site or redesigning the project, LAUSD will determine whether it is feasible to prepare and implement a Phase III Data Recovery/Mitigation Program. A Phase III Data Recovery/Mitigation Program would be designed by the Qualified Archaeologist to recover a statistically valid sample of the archaeological remains and to document the site to a level where the impacts can be determined to be less than significant. All documentation will be prepared in the standard format of the ARMR Guidelines, as prepared by the OHP. Once a Phase III Data Recovery/Mitigation Program is completed,

an archaeological monitor will be present on site to oversee the grading, demolition activities, and/or initial construction activities to ensure that construction proceeds in accordance with the adopted Phase III Data Recovery/Mitigation Program. The extent of the Phase III Data Recovery/Mitigation Program and the extent and duration of the archaeological monitoring program depend on site-specific factors.

SC-CUL-13: If evidence of Native American resources is uncovered during construction, then all work shall stop within a 30-foot radius of the discovery. Work shall not continue until the discovery has been evaluated by a qualified archaeologist and the local Native American representative has been contacted and consulted to assist in the accurate recordation and recovery of the resources.

7.2 Paleontological Resources

No paleontological resources have been identified within the Project site. However, background research conducted for the Project indicates that the proposed Project is underlain by Holocene-aged younger Quaternary Alluvium in the southeastern area and Pleistocene-aged older Quaternary Alluvium across the remainder of the site. Younger Quaternary Alluvium has low-to-high paleontological sensitivity, increasing with depth, and is underlain by older Quaternary alluvium. Excavations in the upper levels of these sediments are unlikely to encounter fossil resources, while deeper excavations (estimated at 10 feet or greater in depth) risk disturbing fossil resources. Older Quaternary Alluvium has high paleontological sensitivity. Excavations into this unit at any depth risks disturbing fossil resources. Additionally, the records search from the LACM indicates that one of the nearby fossil localities (LACM 1814, approximately 0.62 miles southwest of the Project site) was preserved in asphaltic sands, which have high paleontological sensitivity and have produced millions of fossils from the La Brea Tar Pits, one mile west of the Project site. Ground-disturbing activities for the proposed Project could result in a significant impact to unique paleontological resources under CEQA. As such, SC-CUL-14 and the associated mitigation measures CUL-1 through -4 would be incorporated to ensure that impacts remain less than significant:

SC-CUL-14: LAUSD shall have a paleontological monitor on-call during construction activities. This monitor shall provide the construction crew(s) with a brief summary of the sensitivity, the rationale behind the need for protection of these resources, and information on the initial identification of paleontological resources. If paleontological resources are uncovered during construction, the on-call paleontologist shall be notified and afforded the necessary time and funds to recover, analyze, and curate the find(s). Subsequently, the monitor shall remain on site for the duration of the ground disturbances to ensure the protection of any other resources that may be in the area.

CUL-1: The Qualified Paleontologist shall conduct initial construction worker paleontological resources sensitivity training prior to the start of ground disturbing activities (including vegetation removal, pavement removal, etc.). In the event construction crews are phased, additional trainings shall be conducted for new construction personnel. Subsequent training session may be provided by a paleontological monitor or in a video format. The training session shall focus on the recognition of the types of paleontological resources that could be encountered within the Project site and the procedures to be followed if they are found. Documentation shall be retained demonstrating that all construction personnel attended the training.

CUL-2: Paleontological monitoring of previously undisturbed sediment shall be conducted by a qualified paleontological monitor (SVP, 2010) under the supervision of the Qualified Paleontologist as follows:

- In areas mapped as younger Quaternary Alluvium (Qa), full-time paleontological monitoring shall commence once excavations have exceeded 10 feet in depth. Monitoring is not necessary in shallow excavations (<10 feet) or in artificial fill.

- In areas mapped as older Quaternary Alluvium (Qae), full-time paleontological monitoring shall be conducted for all ground-disturbing activities, regardless of depth. Monitoring is not necessary in artificial fill.

Monitors shall have the authority to temporarily halt or divert work away from exposed fossils in order to recover the fossil specimens. Any significant fossils collected during project-related excavations shall be prepared to the point of identification and curated into an accredited repository with retrievable storage. Monitors shall prepare daily logs detailing the types of activities and soils observed, and any discoveries. The Qualified Paleontologist shall prepare a final monitoring and mitigation report to document the results of the monitoring effort.

CUL-3: If construction or other Project personnel discover any potential fossils during construction, regardless of the depth of work or location, work at the discovery location shall cease in a 50-foot radius of the discovery until the Qualified Paleontologist has assessed the discovery and made recommendations as to the appropriate treatment. If the find is deemed significant, it should be salvaged following the standards of the SVP (SVP, 2010) and curated with a certified repository.

CUL-4: Should fossils be encountered in asphaltic sands during the course of excavations, the Qualified Paleontologist will contact the paleontological staff of the La Brea Tar Pits & Museum for coordination of excavation and salvage procedures. Any fossil material from asphaltic sands shall be collected and deposited at the La Brea Tar Pits & Museum, with preparation and curation fees to be assessed on a case-by-case basis.

Monica has successfully completed dozens of cultural resources projects throughout California and the greater southwest, where she assists clients in navigating cultural resources compliance issues in the context of CEQA, NEPA, and Section 106. Monica has extensive experience with archaeological resources, historic buildings and infrastructure, landscapes, and Tribal resources, including Traditional Cultural Properties. Monica manages a staff of cultural resources specialists throughout the region who conduct Phase 1 archaeological/paleontological and historic architectural surveys, construction monitoring, Native American consultation, archaeological testing and treatment, historic resource significance evaluations, and large-scale data recovery programs. She maintains excellent relationships with agency staff and Tribal representatives. Additionally, Monica manages a general compliance monitoring team who support clients and agencies in ensuring the daily in-field compliance of overall project mitigation measures.

Relevant Experience

Topock Compressor Station Remediation CEQA Services. Mohave County, AZ and San Bernardino County, CA. *Cultural Resources Project Director*. Monica is overseeing the preparation of cultural resources EIR sections and is providing project support to the California Department of Toxic Substances Control (DTSC), including facilitating Native American involvement. DTSC provides oversight of the site investigation and cleanup activities for the Pacific Gas and Electric Company (PG&E) Topock Gas Compressor Station, located in San Bernardino County, 15 miles southeast of Needles, California. Groundwater samples taken under and near the Station were found to be contaminated with hexavalent chromium and other chemicals as result of past disposal activities. Soils contamination is also present at the site, requiring investigation and cleanup. These activities are highly scrutinized by the regional Native American Tribes because the area has important cultural and religious significance. ESA is currently preparing an EIR for soil investigations and will be conducting CEQA evaluations that tier off of the Program EIR for the Groundwater Remedy. Additional project-specific EIRs may be required for the final remedy, which is currently undergoing engineering design. ESA will provide these services as well as lead the Native American and public participation efforts.

Los Angeles Department of Water and Power, Path 46 Clearance Surveys, San Bernardino, CA. *Field Director.* ESA has been tasked by Los Angeles Department of Water and Power (LADWP) to conduct required surveys for the Path 46 Transmission Line Clearances Project. The project's objective is to restore required code clearances to the transmission conductors, which will be accomplished by grading the ground surface underneath the transmission lines to achieve required height consistency. The work is being conducted in compliance with BLM guidelines and federal laws and statutes. Biological, archaeological, and paleontological resource surveys are currently being conducted for the 77

proposed grading areas, staging areas, and roads. Reports will be written documenting the results of the surveys and providing recommendations on the areas for access, staging areas, and soil distribution that would have the least amount of impacts on natural resources. Monica is providing support to LADWP in their coordination with the BLM, including providing oversight of map preparation, field surveys, and preparation of pre-field research designs and post-field technical reports.

Santa Clarita Valley Sanitation District, Facilities Plan Update EIR, Los Angeles County, CA. *Cultural Resources Senior Reviewer.* Monica is currently serving as senior reviewer for the Phase I cultural resources study for the project. The study identified 23 cultural resources within or adjacent to the project, including the historical San Fernando Road. The resources were documented and evaluated for their eligibility to the California Register in a technical report and the results were incorporated into the EIR. The project includes installation of an approximately 35-mile recycled water pipeline from the Santa Clarita Valley to east Los Angeles.

Ballona Wetlands Restoration EIS/EIR, Los Angeles County, CA. *Cultural Resources Project Director.* As part of the development of the restoration plan for the Ballona Wetlands, the ESA project team characterized existing conditions that included water and sediment sampling and analysis. The water and sediment quality sampling was performed to develop and evaluate potential restoration alternatives, and to develop a conceptual plan. The ESA project team compiled existing data on and conducted additional sampling for water and sediment to assess potential effects on the proposed wetland restoration habitat from the use of urban runoff and tidal in-flow from Ballona Creek. These data were used to complete a baseline report and restoration alternatives assessment. Monica is assisting the CSCC in fulfilling Army Corps of Engineers requirements under Section 106 of the National Historic Preservation Act. In addition, she is coordinating with Tribal members and is overseeing a team of resource specialists who are compiling cultural resources technical in preparation of the EIR's Cultural Resources section.

Bureau of Land Management, Soda Mountain Solar Project, San Bernardino County, CA. *Cultural Resources Director*. ESA prepared a joint EIS/EIR for a 358-megawatt (MW) photovoltaic (PV) solar power plant and related infrastructure on approximately 4,397 acres of public land administered by the BLM near the town of Baker and the Mojave National Preserve. The project includes a substation, switchyard, operations and maintenance buildings, and interconnection to a Los Angeles Department of Water and Power 500 kV transmission line. If BLM approves the requested ROW grant, it will be necessary for the BLM to amend the California Desert Conservation Area Plan to identify the ROW area as appropriate for the proposed solar energy development use. ESA also provided support to BLM related to cultural resources and Section 106 of the NHPA. Monica provided technical and compliance oversight for third-party review of cultural resources studies and for the cultural resources section of the joint EIS/EIR.

Los Angeles Department of Water and Power Moapa Road Repair Cultural and Biological Resources Assessment, Clark County, NV. *Project Director.* The Los Angeles Department of Water and Power (LADWP) is seeking to conduct roadway

repairs following flash flooding to several locations of LADWP transmission line access roads on Bureau of Land Management (BLM) lands. ESA conducted cultural and biological resources assessments to identify sensitive resources within the project area. Monica provided general oversight of the project and led the coordination with the BLM Las Vegas Field Office.

Santa Susana Field Laboratory, Ventura County, CA. *Cultural Resources Project Director.* The Santa Susana Field Laboratory is a former rocket engine test, nuclear, and liquid metals research facility located on a 2,849- acre portion of the Simi Hills in Simi Valley, California. The uses of hazardous substances such as trichloroethylene and other solvents, heavy metals, and radioactive material at the field laboratory have resulted in soil and/or groundwater contamination. The field laboratory is currently the focus of a comprehensive environmental investigation and cleanup program conducted by Boeing, the U.S. Department of Energy (DOE), and the National Aeronautics and Space Administration (NASA) and overseen by the Department of Toxic Substances Control (DTSC). ESA is preparing a Program EIR that will evaluate soil and groundwater remediation activities. Because there are multiple responsible parties with separate cleanup actions, the Program EIR will provide a framework for tiered environmental documents to be prepared to address the development and refinement of remediation approaches and actions. Monica is overseeing a team of specialists who are conducting a geoarcheological and archaeological district studies for use in addressing impacts to archaeological resources in the EIR. Monica provides strategic guidance to DTSC on cultural resources-related issues, including Tribal outreach, approach to the Traditional Cultural Property, resource evaluations, and treatment of cultural resources on a project and program level.

Los Angeles Department of Water and Power Lone Pine Landfill Paleontological Resources Recovery, Inyo County, CA. *Cultural Resources Project Director.* At the request of LADWP, ESA responded to a discovery of large mammal bone at the Lone Pine Landfill in an area where borrow materials were being excavated. ESA conducted geologic map research and recovered what was identified as a mammoth tusk. The tusk was stabilized, prepared for curation, and transported to a storage facility. Monica provided senior oversight of the paleontological resources recovery team and conducted paleontological resources sensitivity training and guidance to landfill staff in the event additional material are encountered.

Desert Sunlight Solar Farm, Riverside County, CA. *Third-Party Compliance Monitoring Manager.* Monica provided oversight to compliance monitors who conducted daily monitoring of site activities, assisted contractors in avoiding non-compliance issues, and prepared weekly reports, and she coordinated with First Solar and the BLM on compliance issues. ESA also assists with evaluation and approvals of project Variance Requests.

Society for California Archaeology

Dr. Michael Bever has over 20 years of experience in archaeology and cultural resources management. He has worked throughout the western United States, with a focus in California. He has experience and specialized training in project management, business development, and cultural resources practice oversight, and has directed projects involving a wide breadth of resource types in compliance with federal and state laws and regulations. Dr. Bever's experience includes all manner of cultural resources studies and documentation for projects both large and small, and he has presented various cultural resources management training courses in both professional and academic settings.

In addition to work in cultural resources management, Dr. Bever has held tenure-track professorships at the University of Texas at Austin and the University of Nevada, Reno. A published expert in the earliest prehistory of North America, he is well-versed in archaeological research design and all aspects of archaeological field and laboratory research.

Relevant Experience

SDUSD On-call Consulting Services for Multiple Capital Improvement Projects, San Diego, CA. *Cultural Resources Manager.* ESA holds a current on-call contract with the San Diego Unified School District (SDUSD) for CEQA and environmental services related to capital improvement projects at their various facility locations. SDUSD is using bond funds to repair, renovate and revitalize District schools. These projects include safety and security upgrades, Americans with Disabilities Act upgrades, new/renovated facilities athletic facilities improvements, and whole site modernizations. Dr. Bever leads the cultural resources group in preparing archaeological, paleontological and historical (built) resources studies in support of these projects.

SDUSD Joint Occupancy Project at Scripps Ranch, San Diego Unified School District, San Diego, CA. *Cultural Resources Manager.* ESA is preparing a highly controversial EIR for the San Diego Unified School District (District). The District proposes demolition of existing structures on the approximately 6.7-acre project site, and the construction of a mixed-use development, including residential units and a Student Makerspace and Community Center building. Dr. Bever directed a Phase I cultural resources inventory and preparation of the cultural resources section of an EIR. No resources were identified, given that the project occurs atop a massive deposit of artificial fill.

Los Angeles County Sanitation District, Joint Water Pollution Control Plant Biogas Conditioning System Project, Carson, CA. *Cultural Resources Manager.* ESA prepared the Mitigated Negative Declaration (MND) for the Joint Water Pollution Control Plant (JWPCP) Biogas Conditioning System project. The MND

Project Management and Advanced Project Management, Project Management Institute

Best Practices in Historic Preservation, City of San Diego and California Office of Historic Preservation

Paleontological Monitor Training, San Jose State University

Numerous CEQA, NEPA and Section 106 training programs

Effective Presentation Skills: The Shortlist Interview Toolbox, The Professional Voice

evaluated the installation of a biogas conditioning system and associated pipelines (biogas supply pipeline, tail gas return pipeline, drain water pipeline) within the JWPCP and across a public roadway. Dr. Bever directed the cultural resources studies for this fast-paced MND preparation, which involved a Phase 1 archaeological study with a site survey, and participation in Native American consultation with the District.

Los Cerritos Wetlands and Oil Production Project EIR, Long Beach, CA. *Cultural Resources Specialist***.** ESA is has prepared an EIR for the Los Cerritos Wetlands and Oil Production project in the City of Long Beach. The project includes a comprehensive wetlands restoration that will restore a privately owned oil field in the City of Long Beach through the creation of a wetlands mitigation bank. The project will occur on four properties and will relocate and modernize existing oil production facilities. In addition, the project will include the construction of facilities to support oil production and will include a visitor's center and pedestrian paths on the newly restored wetlands. Dr. Bever conducted peer review of archaeological, historical, and paleontological resources technical reports, provided assistance with AB 52 consultation, and prepared the cultural resources section of the EIR.

Cultural Resources Mitigation Compliance for High School No. 12, Grossmont Union High School District, Alpine, CA. *Project Director*. Dr. Bever oversaw and directed various studies for a new high school that will be constructed in the City of Alpine. The project involved coordination with multiple specialists, including prehistoric and historical archaeologists, and architectural historians, to develop plans to evaluate and treat multiple cultural resources. To date, the project has involved test excavation and evaluation of several prehistoric archaeological sites, evaluation of six standing structures, data recovery excavation, HAER documentation, and monitoring. Documents prepared include testing and evaluation reports, a historic properties treatment plan, an MOA, and a draft data recovery report. Future work will include extensive monitoring of grading for construction of the school. Because of the sensitive nature of the prehistoric cultural resources, coordination with local Native American groups, both in project planning and in field monitoring, as well as with the District and USACE has been essential.

On-Call Cultural Resources Services, Southern California Edison, Various Locations, CA. *Project Director*. Dr. Bever directed multiple small and large projects involving cultural resources inventory for installation, maintenance, replacement and demolition of transmission lines and associated facilities. Tasks included records searches, Native American and federal agency coordination, survey, evaluation, and report preparation. Documents were prepared for SCE under both CEQA and Section 106 of the NHPA.

On-Call Cultural Resources Services, Southern California Gas Company, Various Locations, CA. *Project Director*. Dr. Bever served as director for cultural resources services for the Southern California Gas Company, including records searches, feasibility studies, field survey, excavation, and construction monitoring. Recent projects include archaeological testing and monitoring of an historic period site near the historic San Gabriel Mission in San Gabriel, California, as part of a gas pipeline replacement project. Also provided in-house cultural resources adjunct staff support.

Los Angeles to Anaheim High Speed Train, California High-Speed Rail Authority/Federal Railroad Authority, Los Angeles and Orange Counties, CA. *Archaeological Resources Manager*. Dr. Bever prepared technical report and EIS documents summarizing survey, archival research and sensitivity studies for prehistoric and historical archaeological resources associated with a thirty mile proposed rail line through the Los Angeles Basin. Documents were prepared for California High-Speed Rail Authority and FRA.

Cogswell Reservoir Sediment Removal Project, Los Angeles National Forest, Los Angeles County, CA. *Cultural Resources Manager.* ESA retained by the County of Los Angeles Department of Public Works, Water Resources Division to prepare a Cultural Resources Assessment in support of the Cogswell Reservoir Sediment Removal Project. The purpose of the project is to remove debris and sediment from Cogswell Reservoir associated with the August 26, 2009 Station Fire in the Angeles National Forest. Dr. Bever managed the cultural resources study, which involved coordination with the United States Forest Service, preparation of a work plan and Archaeological Resources Protection Act permit, field survey, and preparation of a Cultural Resources Assessment Report meeting both CEQA and Section 106 of the National Historic Preservation Act requirements.

Ballona Wetlands Restoration Project, California State Coastal Conservancy, Los Angeles, CA. *Cultural Resources Manager*. The historical Ballona Wetlands, which is now reduced to 577 acres (and only 12 percent of that is tidally influenced), once occupied a 2,000-acre expanse of critical coastal habitat and included some of the most diverse wetland habitat types in the Los Angeles Basin due to the presence of both freshwater and saltwater environments. The Ballona Wetlands Restoration EIR/EIS evaluates four alternatives that include the following key elements: ecosystem restoration, flood and stormwater management (by allowing a naturalized, rather than concrete-lined, Ballona Creek), public access improvements, infrastructure and utility modifications (including abandonment and relocation of Southern California Gas Company monitoring wells and pipelines), a full-scale implementation and restoration program, a state-of-the-art monitoring and adaptive management program, and ongoing operations and maintenance activities. Over more than seven years, Dr. Bever has directed or overseen aspects of the cultural resources studies for the Ballona Wetlands Restoration Project. The cultural resources component of the project has involved field survey and excavation, archival research, geoarchaeological assessment, SHPO and USACE outreach, and reporting to document cultural resources in the area. The area is considered exceptionally sensitive to local Native American groups and extensive consultation and coordination with local tribes and the California Department of Parks and Recreation has been essential. Documents, including cultural resources technical studies and an EIR/EIS, were prepared for the California Coastal Conservancy and the USACE.

Alyssa Bell, PhD

Paleontologist

EDUCATION

Ph.D., Vertebrate Paleontology; University of Southern California

M.S., Environmental Microbiology; University of Tennessee

B.A. with honors, Ecology and Systematics; William Jewell College & Homerton College, Cambridge University

10 YEARS EXPERIENCE

Dr. Alyssa Bell has supervised and peformed field work, authored project reports, and provided scientific and compliance direction and quality control for paleontological projects throughout Southern California. Dr. Bell has accumulated a wealth of field experience, working with crews from a variety of institutions on field sites in California, Arizona, New Mexico, South Dakota, and Utah, and has led her own expeditions in Montana. She has performed all manner of investigations from surveys and assessments to monitoring and fossil idenfitication over the last 15 years as a part of her academic pursuits and professional consultation, with the last three years being exclusively professional endeavors.

In addition to consulting, Dr. Bell serves as a postdoctoral fellow at the Dinosaur Institute of the Natural History Museum of Los Angeles County (LACM). There she is involved in pursuing her own research into fossil birds as well as working with the Institute's field projects and museum-wide education and outreach initiatives. She has also published peer-reviewed articles and book chapters and given numerous presentations at scientific conferences on both her paleontological and microbiological research.

Relevant Experience

ICHA Area 10 (PA 10-2 & 10-4) Archaeological and Paleontological Monitoring, Irvine, CA. *Principal Investigator & Project Paleontologist.* Dr. Bell managed the curatorial process for fossils collected during monitoring of pre-construction activities at the University of California, Irvine, and authored the final report.

Suncrest Reactive Power Support Project, San Diego County, CA. *Principal Investigator.* Dr. Bell authored the paleontological assessment for the Proponent's Environmental Assessment (PEA) in support for a dynamic reactive power support facility and associated 230-kilovolt (kV) transmission line near Alpine, California. The application for Certificate of Public Convenience and Necessary was filed in summer 2015 and the PEA was deemed complete in December 2015.

Washington National Archaeological and Paleontological Monitoring (Access Culver City), Culver City, CA. *Principal Investigator & Project Paleontologist.* Dr. Bell managed the curatorial process for fossils collected during monitoring of pre-construction activities at the Washington national site in Culver City, CA and authored the final report.

OTO Hotels Santa Monica Archaeological and Paleontological Service, Santa Monica, CA. *Principal Investigator.* Dr. Bell supervised paleontological monitoring and mitigation services during construction excavations and grading. Services included implementation of a paleontological mitigation monitoring program and reporting.

Sacred Heart Specific Plan Environmental Impact Report (EIR), La Canada Flintridge, CA. *Principal Investigator.* Dr. Bell prepared paleontological studies and

developed monitoring & mitigation recommendations for the Sacred Heart development project.

Sixth & Bixel Paleontological Monitoring Services Project, Los Angeles, CA. *Principal Investigator & Project Paleontologist.* Dr. Bell supervised paleontological monitoring of preconstruction activities in support of a development project encompassing two parcels in downtown Los Angeles. During these activities, monitors identified and recovered numerous significant vertebrate fossils. Dr. Bell supervised the excavation of fossilized whale remains discovered on-site, and oversaw the collection and curation of all fossil specimens.

Natural and Cultural Support for the Gordon Mull Subdivision EIR, Glendora, CA. *Principal Investigator.* Dr. Bell collected the necessary data to prepare the technical sections and mitigation recommendations to support an EIR prepared by another firm to address the Gordon Mull Subdivision in the city of Glendora. The project is proposes to redevelop a 71-acre, 19-lot located in the San Gabriel Foothills.

Lake Elsinore Lakeshore Town Center Permitting, Riverside County, CA. *Principal Investigator.* Dr. Bell provided paleontological studies and developed monitoring and mitigation recommendations for the Lake Elsinore Town Center project in Riverside County.

San Pedro Plaza Park - Phase III Archaeological Monitor, Los Angeles, CA. *Principal Investigator.* Dr. Bell identified fossils during the mitigation measurement-required archaeological monitoring of earthmoving activities in San Pedro Park Plaza. She is also responsible for curation of the fossil material and authorship of the paleontological section of the final report.

City of Hope Specific Plan and EIR, Duarte, CA. *Principal Investigator.* Dr. Bell provided paleontological resource studies for the City of Hope Specific Plan Project.

Blythe Solar Power Project, Units 1 & 2, Riverside County, CA. *Project Paleontologist.* Dr. Bell supervised paleontological monitoring of preconstruction activities for a solar photo-voltaic cell power-generating facility outside the city of Blythe. As a part of her role, she provided oversight and management of paleontological monitors and development of the final monitoring report.

Industrial Project Environmental Impact Report, Colton, CA. *Principal Investigator.* Dr. Bell provided a paleontological resources study for a six-acre industrial project site at the southwest corner of Agua Mansa Road and Rancho Avenue in the city of Colton.

Mojave Solar Project Paleontological Reporting, San Bernardino County, CA. *Principal Investigator.* Dr. Bell managed curation of fossil materials and authored the final report of paleontological monitoring services provided for construction activities in support of a solar field development project in San Bernardino County.

El Camino Real Bridge Replacement Environmental Services, Atascadero, CA. *Principal Investigator.* Dr. Bell provided environmental services, including preparation of all California Environmental Quality Act (CEQA)/National Environmental Policy Act (NEPA) documentation, technical studies, and permitting, for the replacement of the El Camino Real Bridge over Santa Margarita Creek in Atascadero.

Recycled Water Transmission Water Main Paleo Monitoring, Fresno, CA. *Principal Investigator.* Dr. Bell developed a monitoring and mitigation plan for the city of Fresno recycled water main construction project.

Shafter Wasco Irrigation District Natural and Cultural Resource Evaluations and Air Quality, Kern County CA. *Principal Investigator.* Dr. Bell provided paleontological studies and developed recommendations for the monitoring and mitigation of paleontological resources for the project.

Valentine EIR, Kern County, CA. *Principal Investigator.* Dr. Bell provided paleontological resources support for a 2,000-acre solar PV project in the Mojave Desert. Deliverables included comprehensive technical reports, GIS impact analysis, strategic and permitting support, and a paleontological field survey in the preparation of an EIR and other permitting requirements.

Valentine Solar EIR 115MW Supplemental Reports, Kern County, CA. *Principal Investigator.* Dr. Bell provided paleontological studies in support of changes to the previously established Valentine Solar project.

Valentine Solar Biological and Paleontological Study Updates, Rosamond, Kern County, CA. *Principal Investigator & Project Paleontologist.* Dr. Bell provided paleontological studies, carried out a paleontological survey, and developed monitoring and mitigation guidelines for the Valentine Solar project.

Field Research

2006-Present. The Dinosaur Institute, LACM. Coordinator and Team Leader on expeditions in Montana (Niobrara and Pierre Shale Formations) and Arizona (Chinle Formation). Field assistant on expeditions to Montana (Hell Creek Formation), Utah (Morrison Formation), Arizona (Chinle Formation), New Mexico (Kirtland Formation), and California (Aztec Sandstone). During this period approximately four-six weeks are spent in the field in various locations every year.

2015. Principal Investigator, Field Manager. SWCA Environmental Consultants. Supervision of all paleontological field work, including excavation of a partial whale fossil from a downtown Los Angeles construction site and numerous monitoring projects.

2014. University of Southern California. Field Assistant on an expedition to South Africa (Pre-Cambrian).

2005. Cambridge University. Field Assistant on an expedition in Badlands National Park, South Dakota (White River Group).

2002-2004. Montana State University Northern. Field Assistant on excavations in Montana (Judith River Formation).

Fatima Clark

Archaeologist

EDUCATION

B.A., Anthropology, California State University, Fullerton

8 YEARS EXPERIENCE

PROFESSIONAL AFFILIATIONS

Society for California Archaeology

SPECIALIZED TRAINING

Workshop: The Art and Science of Flintknapping, California Desert Studies Center, 2013

Successful CEQA, Compliance-Southern California Edison, Environmental Training, 2011

Cultural Resources Protection under CEQA and Other Legislative Mandates, UCLA Extension, 2010

PROFESSIONAL AFFILIATIONS

Society for California Archaeology

Fatima Clark has eight years of hands-on archaeological experience and is practiced in project management and client and agency coordination. Her field experience is complimented by the course study and participation in numerous archaeological excavations in California, Arizona, and Peru. Fatima has written California Environmental Quality Act (CEQA)-level technical reports, Environmental Impact Report (EIR) sections, Initial Study sections, archaeological peer reviews, archaeological monitoring reports, and reports pursuant to Caltrans requirements. She is also experienced in performing archaeological testing, site recordation, laboratory analysis, pedestrian surveys, records searches through several California Historical Resources Information Systems-Information Centers, and monitoring for a wide variety of projects, including mixed-use, residential, and energy, water, and road infrastructure projects. In addition to her archaeology background, Fatima has been cross-trained in conducting paleontological surveys and monitoring and has co-authored and managed associated reports.

Representative Experience

Real Estate Development. Fatima has provided a full range of archaeological services to numerous projects throughout Southern California. Her role in these projects have consisted of conducting coordination management between construction personnel managers and archaeological monitors, writing Phase I and monitoring reports, conducting pedestrian surveys, monitoring, and performing records searches and laboratory work of recovered artifacts during monitoring and Phase II archaeological testing. Recent project experience includes the Uptown Newport Village Project in Newport Beach, the Shriners Hospital for Children in Pasadena, the San Juan Medical Office Building in San Juan Capistrano, the Isla Verde Residential Project in Moreno Valley, the Frontier Chino Project, and the 220-acre Aidlin Property Residential Project in the Stevenson Ranch community of unincorporated Los Angeles County.

Infrastructure. Fatima has served a number of clients and lead agencies in the provision of a variety of archaeological services, including municipalities, water agencies, Caltrans, large engineering firms, and energy providers. She served as an in-house consultant to Southern California Edison (SCE) for nearly six years, during which time she worked on a wide variety of environmental compliance projects. Fatima also served as the Project Manager for the I-10 Freeway/Pepper Avenue Interchange Project in Colton, and is currently the La Costa Chevron Drainage Improvements Project in Encinitas. Other projects include the Badlands Landfill stockpile project for Riverside County, the Palos Verdes pipeline project and Crenshaw Reservoir project for the California Water Service Company, and the San Clemente Recycled Water project.

Paleontology. Fatima's experience in paleontological resources has included projects throughout Southern California. Because of her cross-training, she is often called to perform monitoring and surveys on a variety of project types. Her monitoring projects are diverse in nature and include everything from residential to petroleum-related projects. Fatima's paleontology projects include the 7.5 acre Highgrove community library site in Riverside County and the proposed San Clemente Recycled Water Project study areas associated with the installation, transmission, distribution of pipelines, and expansion of facilities at water treatment plants.

Construction Monitoring. Fatima's monitoring projects are diverse in nature and encompass everything from residential to petroleum-related projects. Her archaeological monitoring includes a number of projects for the City of San Juan Capistrano, Burbank Water & Power, as well as work at the Orange County Great Park (on the former El Toro MCAS), with the city of Mission Viejo, for the Cascade Solar Project, the Willow Heights project in Diamond Bar, and various Lennar Homes and John Laing Homes Housing development projects.

Her paleontological monitoring projects include monitoring and fossil salvage at a proposed school site off of Mulholland that dated back to the Miocene era. She also performed construction monitoring for paleontological resources during the grading of three large basins for the installation of storm drains at the Lytle Creek North Water Quality Basin Relocation project site. Additional experience includes monitoring at the Brio Residential Development in La Habra, monitoring for resources in contaminated soils at the Orange County Great Park (Heritage Fields) project site (formerly the El Toro Marine Corps Air Station), and at the Arroyo Grande Oil Field Project in San Luis Obispo, where she also performed sediment sampling.

RECORD SEARCH COMPLETION SHEET

ESA

- ☐ Pull all site records and photocopy. Check quad names on the DPR form and compare the plotted locations on your map to the DPR location maps to make sure you copied the right form! No sites w/in ½ mile
- ☐ Request printed copied of bibliography and CD with spreadsheet of studies. Check the printed list against the studies you've listed on page 1 of this form. Check the quad names for each listing to identify any discrepancies and ensure you've written down the correct number.
- ☒ Copy reports that overlap the project area and that document resources in or near the project area.

- ☒ Pull historic topo maps and photocopy
- ☒ Check and copy National Register of Historic Places and Copied Archsite DOE
- ☒ Check and copy Mapped LA City Historic Cultural Monuments
- ☐ Check and copy HRI Listings – we have City of LA - HRI at office
- ☒ Check and copy Mapped Points of Historical Interest

Tips:

- Write legibly! Someone else may have to interpret your handwriting.
- Use separate maps for resources and studies. Write "Resources" or "Studies" on the map.
- Use an ink color that contrast the base map when mapping resources. If the base map is red, use a blue pen. If the base map is gray, use a red pen.
- Write the site number in the margin as well as next to the poly. It can be difficult to read the small numbers next to the poly.
- Use a wide variety of colored highlighters when mapping studies.
- Write the report number in the margin and highlight it with the same color.
- Use multiple sheets if you have a large number of studies to plot.
- Make notes of any discrepancies or oddities, or anything that requires further clarification. Ask IC staff for help if something doesn't make sense to you.
- If in doubt, need clarification, or have questions, please call the ESA contact on page 1 of this form before you leave the IC.
- Make sure that you double check everything before you leave the info center. This is our one chance to get it right!

re: Paleontological Records Check for the proposed Burroughs Middle School Comprehensive Modernization Project, in the City of Los Angeles, Los Angeles County, project area

Dear Fatima:

I have conducted a thorough search of our Vertebrate Paleontology records for the proposed Burroughs Middle School Comprehensive Modernization Project, in the City of Los Angeles, Los Angeles County, project area as outlined on the portion of the Hollywood USGS topographic quadrangle map that you sent to me via e-mail on 27 November 2017. We have no vertebrate fossil localities that lie directly within the proposed project area, but we do have localities nearby from the same sedimentary deposits that occur within the proposed project area.

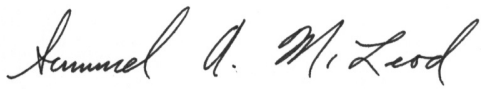
Surface deposits for most of the southeastern portion of the proposed project area consist of younger Quaternary Alluvium, derived from the slight drainage there. Surface deposits in the rest of the proposed project area consist of older Quaternary Alluvium, derived as alluvial fan deposits from the Hollywood Hills to the north. At relatively shallow depth in this area significant fossil vertebrate remains are found in these deposits. Our closest vertebrate fossil locality is LACM 1198, due south of the proposed project area near the intersection of 8th Street and Tremaine Avenue, that produced fossil mastodon, *Mammut*, at a depth of 17 feet. Just west of south of the western border of the proposed project area, near the intersection of Longwood Avenue and Olympic Boulevard, our locality LACM 5599 produced fossil camel, *Camelops*, at a depth of 12 feet. A little further to the west, along Sycamore Avenue just north of La Brea Avenue, our locality LACM 1814 produced a specimen of fossil bovid, *Preptoceras sinclairi*, at

a depth of only 2 feet. This latter locality was associated with asphalt impregnated sands such as surround the famous and extremely fossiliferous Rancho La Brea asphalt deposits just west of the proposed project area in Hancock Park, where we have a great number of vertebrate fossil localities.

Even relatively shallow excavations in the Quaternary Alluvium exposed throughout the proposed project area may well encounter significant vertebrate fossil remains. Any substantial excavations in the proposed project area, therefore, should be monitored closely to quickly and professionally recover any fossil remains discovered while not impeding development. Also, sediment samples should be collected and processed to determine the small fossil potential in the proposed project area. Any fossils collected should be placed in an accredited scientific institution for the benefit of current and future generations.

This records search covers only the vertebrate paleontology records of the Natural History Museum of Los Angeles County. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Sincerely,



Samuel A. McLeod, Ph.D.
Vertebrate Paleontology

RE: Burroughs Middle School Comprehensive Modernization Project, Los Angeles County

Dear Ms. Clark:

A records search of the Native American Heritage Commission (NAHC) *Sacred Lands File* was completed for the area of potential project effect (APE) referenced above with negative results. Please note that the absence of specific site information in the *Sacred Lands File* does not indicate the absence of Native American cultural resources in any APE.

Attached is a list of tribes culturally affiliated to the project area. I suggest you contact all of the listed Tribes. If they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. By contacting all those on the list, your organization will be better able to respond to claims of failure to consult. If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact via email: steven.quinn@nahc.ca.gov.

Sincerely,

Steven Quinn

EXECUTIVE SUMMARY

This report presents the results of a historic resources survey conducted for the Los Angeles Unified School District (LAUSD) by Sapphos Environmental, Inc. between October 2013 and February 2014. Debi Howell-Ardila, senior architectural historian, served as project manager, survey team lead, and principal author of the LAUSD Historic Resources Survey Report. Marilyn Novell, historic resources coordinator, contributed to fieldwork, research, data management, and documenting survey results on Department of Parks and Recreation forms. Carole Zellie, historic resources manager, provided oversight and input. All staff meet and/or exceed the Secretary of the Interior's Professional Qualifications Standards for architectural history. Gwenn Godek of the LAUSD Office of Environmental Health and Safety served as project administrator and manager.

This survey represents a first step in a district-wide historic resources survey of as-yet unevaluated LAUSD campuses and properties. The information compiled in this report, including the *LAUSD Historic Context Statement, 1870 to 1969*, is intended to provide the district with a basis for proactively identifying, documenting, and maintaining its historically significant school buildings and campuses in advance of district-wide redevelopment efforts.

Included in this survey were a total of 55 LAUSD campuses, which span the extent of the district (Figure 3, *Los Angeles Unified School District boundary*). At the time of the survey, all campuses were 45 years of age or older, with dates of construction ranging from the late 1940s through early 1970s; a majority had not been previously surveyed or evaluated. The survey sample included elementary, middle, and senior high schools, as well as several specialty facilities or campuses.

Of the 55 campuses surveyed, 14 campuses appear to be eligible for the National Register of Historic Places (NRHP) and/or the California Register of Historical Resources (CRHR). Eligible campuses are described in detail in Section 4, Survey Results, and documented on Department of Parks and Recreation (DPR) Primary and Building, Structure, and Object forms, which are included in Appendix A.

I. INTRODUCTION

With nearly 800 campuses and a geographic span of over 700 square miles, LAUSD is the second largest public school system in the United States. The district includes all of incorporated Los Angeles, as well as unincorporated areas throughout Los Angeles County. LAUSD's northern portion spans the San Fernando Valley, including Granada Hills, Chatsworth, Reseda, Woodland Hills, Van Nuys, Sylmar, San Fernando, Pacoima, and Sunland. Along the west, LAUSD includes western Los Angeles, Pacific Palisades, Venice, and Westchester. Along the east, LAUSD borders Glendale, Monterey Park, Montebello, Commerce, Downey, and Long Beach. Within LAUSD, extending south from Los Angeles, are the communities of Vernon, Huntington Park, Maywood, Bell, South Gate, Gardena, and Carson. LAUSD's southernmost portion includes San Pedro, Lomita, and Rancho Palos Verdes.

Since its founding in 1872, LAUSD has commissioned, designed, and acquired a remarkable collection of buildings, campuses, and facilities. These properties reflect more than a century of social, architectural, and technological advances, as well as ongoing educational and curricular reform. Extant properties range from a wood-framed schoolhouse of the late nineteenth century to superblock campuses displaying Mid-Century Modern architectural styles.

In the early 2000s, in conjunction with the Getty Conservation Institute, LAUSD launched the district's first comprehensive Historic Resources Survey. This work resulted in findings of federal and/or state eligibility for 123 schools (local eligibility criteria were not included in these surveys; public schools are statutorily exempt in the California State Government Code from local landmark designation).[1] With a project scope focused primarily on the pre–World War II era, however, many postwar campuses were either not surveyed or not subject to context-driven evaluations. Since the 2001–2004 surveys, approximately 175 additional campuses have passed the 45-year mark, signaling the need for future evaluation. Another approximately 125 campuses constructed between 1945 and 1955 have been evaluated only at the reconnaissance level, and only from the public right-of-way.[2]

Project Description and Purpose

In advance of campus-wide redevelopment, LAUSD contracted with Sapphos Environmental, Inc. to provide historic resource consulting services to inform master planning efforts and environmental review pursuant to the California Environmental Quality Act (CEQA). The scope of work is three-fold:

1. Preparation of a comprehensive LAUSD Historic Context Statement;
2. Historic resource surveys of 55 campuses; and
3. Updating the LAUSD Historic Resources Inventory database.

The 55 campuses surveyed included school plants that have not yet been subject to historic resource evaluations due to age (i.e., schools built primarily between 1955 and 1969) and schools that were previously identified as warranting re-evaluation once they reached 45 years of age. These included: (1) 10 high schools; (2) 22 schools identified in the 2002 "Phase 2" Getty survey as warranting re-evaluation; and (3) 23 elementary and junior high schools.

Historic Resources and CEQA

In addition to helping inform master planning efforts for LAUSD, this Historic Resources Survey and report are designed to facilitate compliance with CEQA, which requires lead agencies to consider the potential effects of proposed projects on historic resources as defined by CEQA. CEQA identifies a historic resource as a property that is listed in—or is eligible for listing in—the NRHP, CRHR, or local registers. NRHP-listed properties are automatically included in the CRHR. The criteria for both are similar and described below, with the NRHP letter (A, B, C, and D) followed by the corresponding CRHR number (1, 2, 3, and 4). In keeping with the 2001–2004 LAUSD Historic Resources Surveys, local criteria were not included.[3]

Resources that may be eligible for listing include buildings, sites, structures, objects, and historic districts. To qualify as a historic resource under CEQA, a resource must be significant at the local, state, or national level under one or more of the following criteria:

A/1: For an association with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States (NRHP Criterion A; CRHR Criterion 1);

B/2: For an association with the lives of persons important to local, California, or national history (NRHP Criterion B; CRHR Criterion 2);

C/3: As an embodiment of the distinctive characteristics of a type, period, region, or method of construction, representative of the work of a master or high artistic values (NRHP Criterion C; CRHR Criterion 3); or

D/4: Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation (NRHP Criterion D; CRHR Criterion 4).

There is no specific age threshold for CRHR eligibility; rather, the regulations specify that enough time must have passed for a property to be evaluated within its historic context.

Resources eligible for listing in the CRHR must retain enough of their historic character or appearance to be recognizable as historic resources and to convey the reasons for their significance. It is possible that resources that may not retain sufficient integrity for listing in the NRHP may still be eligible for the CRHR. The evaluation of integrity is based on how a property's physical features and attributes tell the story of its historic significance. The NRHP has defined the following seven aspects of historic integrity: Location, Design, Setting, Materials, Workmanship, Feeling, and Association.[4]

Previous Historic Resources Surveys and Studies

The consultants reviewed past LAUSD property surveys, including the following three historic resource surveys, as well as one in-progress project:

(1) **Historic resource surveys following the 1994 Northridge Earthquake**
Conducted for the Federal Emergency Management Agency (FEMA) and carried out in support of compliance under Section 106 of the National Historic Preservation Act, these surveys identified approximately 39 out of 71 campuses surveyed as historic (i.e., eligible for listing in the NRHP or for designation under a local ordinance);

(2) **"Phase 1" Getty survey**
This 2001–2002 historic resource survey was funded through a Planning Grant from Preserve LA, a program of the J. Paul Getty Trust. The survey included approximately 190 campuses, with results incorporating and expanding on the 1994 FEMA survey; a database of 410 schools aged 45 years or older was prepared as part of the project;

(3) **"Phase 2" Getty survey**
This 2002–2004 expansion of Phase 1 considered approximately 220 campuses;

(4) **SurveyLA**
A multi-year, citywide historic resource survey, partially funded by the J. Paul Getty Trust and covering all of Los Angeles; led by the City of Los Angeles Office of Historic Resources, the project is in its final phase as of spring 2014. Numerous LAUSD properties appear to be eligible for federal, state, or local listing and are therefore presumed historic resources for the purposes of CEQA. Final results from SurveyLA will be incorporated into the California State Historic Resources Inventory.

Included in the compiled LAUSD Historic Resources Inventory prepared for this report are eligibility findings from the 2001–2004 Phase 1 and Phase 2 Getty surveys (i.e., all campuses found eligible for either the NRHP and/or the CRHR). Eligibility findings for LAUSD schools made through SurveyLA, which is in progress as of June 2014, are available through the City of Los Angeles Office of Historic Resources.[5]

II. SURVEY METHODS AND PROCEDURES

The survey process used by Sapphos Environmental, Inc. staff was based on recognized professional standards, including those recommended by the National Park Service and the California Office of Historic Preservation guided by California Historic Resources Status Codes. Proceeding in stages, the survey method was as follows:

1. Pre-field research on each campus;
2. Fieldwork, including on-campus site inspections;
3. Compilation of results, with data entered into a property list including Assessor's Parcel Number; address; principal dates of construction; architect, designer, and/or contractor, if known; and past and present evaluation results;
4. Analysis, with compiled data and results of site inspections studied and compared with applicable criteria as well as the findings of the LAUSD Historic Context Statement;
5. Evaluation/Designation, wherein each campus was found either eligible or not eligible and assigned a California Historic Resources Status Code indicating evaluation findings.

Before beginning survey work, Sapphos Environmental, Inc. completed a comprehensive Historic Context Statement to guide evaluations. The complete LAUSD Historic Context Statement is included in this report as Appendix B. Framed in accordance with the NRHP Multiple Property Documentation (MPD) approach, the LAUSD Historic Context Statement identifies themes of significance, property types, eligibility standards, and integrity thresholds for LAUSD school properties from the late nineteenth century through 1969. By using the MPD approach, properties sharing a given theme of significance are assessed consistently, in comparison with resources that share similar physical characteristics and historical associations. In this way, the Historic Context Statement was designed to provide a consistent framework for evaluations both for the current scope of work and future LAUSD historic resource surveys.

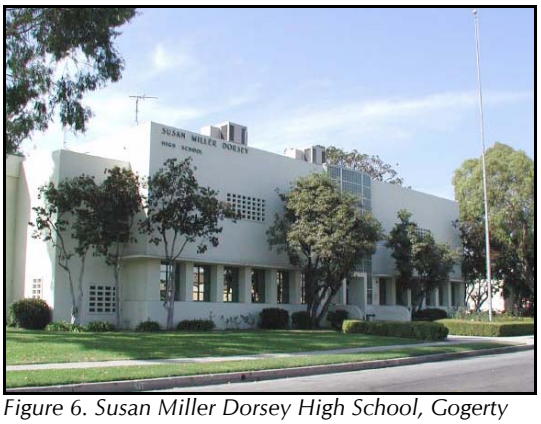

Figure 6. Susan Miller Dorsey High School, Gogerty and Noerenberg, Los Angeles (1937). Source: LAUSD.

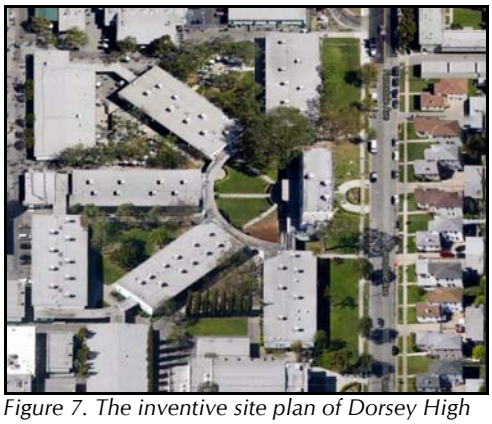

Figure 7. The inventive site plan of Dorsey High School. Source: Google Maps, 2013.

Survey results were incorporated into the LAUSD Historic Resource Inventory database; the inventory compiles 2013/2014 survey results with eligibility findings from the 2001–2004 Phase 1 and Phase 2 Getty surveys. The LAUSD Historic Resources Inventory prepared for this report is ArcGIS-compatible and designed for future use as an ArcGIS layer.

Campus-specific research incorporated a wide variety of sources, online databases and archives, as well as available print sources. Sapphos Environmental, Inc. staff investigated the origins and history of each school. This included research on architects, designers, or contractors involved in the school's design and construction; significant teachers, students, administrators, or other individuals who might have had an association with the school over time; and how the school reflected or fit within patterns of development, such as suburbanization, or significant events.

Staff members also reviewed and compiled data collected as part of LAUSD's Pre-Planning Surveys; relevant information was obtained from the Pre-Planning Surveys for all 55 campuses, including dates of construction, site maps, and plans.[6]

For site inspections, survey teams documented the principal buildings, structures, general character-defining features, and alterations. DPR Primary and Building, Structure, and Object forms were prepared for all campuses appearing to have either individual buildings or districts eligible for federal or state landmark designation. For potential historic districts, the identification of contributors and non-contributors was outside the scope of the current project, but is a suggested next step, as projects are proposed for school campuses including buildings, structures, related features, or historic districts appearing eligible for federal or state landmark designation and therefore qualifying as historic resources under CEQA.

Definitions of California Historic Resources Status Codes

The following are the California Historic Resources Status Codes assigned in the course of this survey and incorporated into the Historic Resources Inventory; codes also include eligibility findings from the 2001–2004 Phase 1 and Phase 2 Getty surveys:

1S/1D: Properties listed in the NRHP or CRHR either as individual resources (1S) or contributors to historic districts (1D).

2S/2D: Officially determined eligible for NRHP (and therefore also for the CRHR) as a single property or as a district contributor. As official evaluations, these codes were not modified during either the Phase 1 or Phase 2 studies.

3S: Appears individually eligible for the NRHP as a result of survey evaluation. These properties should also be understood as eligible for the CRHR.

3D: Appears eligible as a historic district for the NRHP as a result of survey evaluation. These properties should also be understood as eligible for the CRHR.

3CS: Appears individually eligible for the CRHR as a result of a survey evaluation.

3CD: Appears eligible for the CRHR as a potential historic district as a result of survey evaluation.

6Y: Officially determined ineligible for the NRHP.

6Z: Does not appear eligible for the NRHP or the CRHR, in the opinion of the surveyor.

Given that all codes from 1 to 5 denote properties eligible for either federal, state, or local listing, all codes from 1 to 5 correspond to properties considered to be historic resources for the purposes of CEQA.

III. SUMMARY OF THE LAUSD HISTORIC CONTEXT STATEMENT

The complete *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*, follows this report as Appendix B. Prepared in accordance with the National Register Multiple Property Documentation approach, the study provided the survey team with a consistent, context-driven framework for evaluations of LAUSD campuses and buildings.[7]

To summarize, research conducted for the *Los Angeles Unified School District Historic Context* revealed four distinct periods and corresponding themes of significance:

(1) Founding Years, 1870s through 1909;
(2) Progressive Education Movement: Standardization and Expansion, 1910 to 1933;
(3) Era of Reform: Great Depression, Earthquake, and Early Experiments in the Modern, Functionalist School Plant, 1933 to 1944; and
(4) Educating the Baby Boom: Postwar Expansion and the Modern, Functionalist School Plant, 1945 to 1969.

Themes of significance associated with each era were developed, along with eligibility standards, character-defining features, and integrity thresholds. Additional sections describe the typical architectural styles of LAUSD schools, along with character-defining features for each, as well as a list of some of the leading architects and designers participating in the design of extant LAUSD schools and campuses. Given this survey's focus on unevaluated properties, constructed between the late 1940s and 1969, evaluations primarily drew upon the final era, from 1945 to 1969. The following section presents the applicable themes of significance, architectural style descriptions, and architects/designers corresponding to the era of 1945 to 1969.

Figure 9. Baldwin Hills Elementary School, Robert Alexander, architect, Los Angeles (1949–1951). Source: Getty Research Institute, Shulman Archives.

Figure 10. Early finger-plan school, Baldwin Hills Elementary School. Source: Google Maps, 2013.

CONTEXT: PUBLIC AND PRIVATE INSTITUTIONAL DEVELOPMENT | EDUCATION

THEME: LAUSD | EDUCATING THE BABY BOOM: THE POSTWAR MODERN FUNCTIONALIST SCHOOL PLANT, 1945–1969

By the 1950s, many of the design ideas considered experimental in the 1930s had matured and become the national standard for schools. Stylistically, schools might include some historicist detailing reflecting popular styles (such as Colonial Revival). However, overall, a unified campus design, building types and plans that accommodated a high degree of indoor-outdoor integration, ample outdoor spaces, and sheltered corridors marked the typology as the mature version of the functionalist school plant. The priority remained the creation of a domestic scale for schools. Campuses displayed a one-story massing for elementary schools, and up to two stories for middle and high schools. Site plans, which often featured a decentralized, pavilion–like layout, lacked the formality and monumentality that characterized earlier eras of school design.

School types expressive of these ideals include the finger-plan (1940s through 1950s) and cluster-plan (1950s), and variations on their basic themes. Combinations of these basic forms, which flexed according to available lot size and school enrollment, are also evident.

For LAUSD, the postwar years brought another round of reform as well as unprecedented expansion. Given the postwar classroom shortage, many campuses were constructed quickly, from standardized plans used district-wide, in designs that convey some of these ideas. The most intact and well-designed campuses among these, though, uniquely represent this era of reform and the midcentury modern school.

Property Type:	Institutional/Educational
Property Subtypes:	Elementary Schools, Junior High Schools, and High Schools
Period of Significance:	1945 to 1969
Area of Significance:	Education
Geographic Location:	Citywide; with concentrations in the San Fernando Valley and West Los Angeles
Area of Significance:	A/1

Eligibility Standards

- Clearly embodies the characteristics of a postwar modern functionalist school campus
- Displays a unified, functional site design, with buildings extending across the site and oriented in relation to outdoor spaces (courtyards, patios, outdoor play areas)
- One-story massing for elementary schools; up to two-stories for junior/high schools
- Classrooms, in detailing and plans, clearly express their function, with axial, finger-like wings, plentiful fenestration, and connections to the outdoors
- Retains most of the associative and character-defining features from the period of significance

Character-Defining Features | Buildings/Structures

- Building plans and site design clearly express their function; classroom wings often exhibit one-story "finger-like" wings, arranged on an axis
- Easily identifiable indoor-outdoor spaces, connections to classrooms through the incorporation of patios, courtyards, and outdoor canopied corridors
- One-story massing, particularly for elementary schools; up to two to three stories for junior and high schools
- Building types and plans expressive of postwar ideals in school design; these can include (1) finger-plan schools (usually in 1940s through 1950s); (2) cluster-plan schools (beginning in 1950s); and (3) variations and combinations of these typologies clearly expressive of the ideals for informality, indoor-outdoor connections, and zoned planning for the site
- Varying elevations might display differentiated window sizes and configurations, in order to tailor interior light to sun patterns and create cross-lit classrooms

Character-Defining Features | Campus/District

- Unified campus design includes most or all of the following attributes: lack of formality and monumentality; low massing (usually one story for classrooms and up to two stories for auditoriums/multipurpose rooms); strong geometric ordering of buildings and outdoor spaces; decentralized, pavilion-like layout; rational, function-

driven site design; buildings extend across the site; buildings are oriented to outdoor spaces (courtyards, patios, outdoor areas), purposeful indoor-outdoor integration

- Automobile traffic/drop-off areas separated from campus; linked to interior via extended canopied corridors
- Buildings often turn inward, toward green spaces, courtyards, and lawns
- Outdoor corridors, sheltered beneath simple canopies, forming links between the buildings of the campus
- Classrooms often consist of a series of axial, modular units
- An informal, domestic scale for the buildings and campus might be especially evident in elementary schools
- Swaths of patios, terraces, and plantings adjacent to and alternating with buildings
- Generous expanses of windows, including steel- and wood-framed multi-light windows, in awning and hopper casements, clerestories, and fixed panes
- Flat roof or broken-plane roof often used for lighting and acoustical issues
- Modular design, with a rhythmic, asymmetrical but balanced composition
- Usually displays a modern design idiom, usually either regional modernist (with use of native materials such as stone, brick, and wood siding and/or framing), International Style modernist, or, by the early 1960s, Late Modern (more expressive and sculptural)
- Some examples might include some degree of historicist detailing or styles popular in the postwar period (such as American Colonial Revival); these are less common than modernist examples
- May have been designed by a prominent architect of the period
- Often associated with post–World War II suburbanization and growth near major employment centers beyond the city periphery (such as the San Fernando Valley and southwest Los Angeles)
- Often built in residential neighborhoods on large expanses of land, with large areas devoted to landscape design and playing fields (in particular for high school campuses)

Integrity Considerations

- Retains most of the essential physical features from the period of significance
- School expansion and new construction over the years, in particular in the postwar period, might have resulted in the addition of in-fill buildings and structures in areas that were originally designed open spaces. Such new additions should not interfere with or serve as a visual impairment to the designed connections between buildings, in particular classroom wings, and adjacent outdoor patios and spaces.

- Many postwar schools were designed to be easily expandable as enrollment increased; the original site design and building types and plans should be readily discernible. If additional wings were added or the campus extended, the additions should be compatible with and visually subordinate to the original.
- Some materials may have been removed or altered
- Modern lighting and fencing of site acceptable
- Should retain integrity of Setting, Materials, Design, Workmanship, Feeling, and Association from its period of significance
- Addition of portable or permanent buildings after the period of significance acceptable as long as original campus design is intact

Comments: This theme would most often apply to a campus evaluated as a historic district. Individual buildings and/or campuses exhibiting distinctive design features might also qualify under Criteria C/3, as the embodiment of the distinctive characteristics of a type/period or method of construction, as an example of the work of a master architect, or for high artistic values.

CONTEXT: PUBLIC AND PRIVATE INSTITUTIONAL DEVELOPMENT | EDUCATION

THEME: LAUSD AND THE CIVIL RIGHTS MOVEMENT, 1954–1980

This theme of significance begins with the filing of the landmark U.S. Supreme Court case *Brown v. The Board of Education Topeka, Kansas*. Although *Brown v. Board of Education* addressed state laws that did not exist in California—namely, laws allowing for racially segregated public schools—this case and the Civil Rights Movement helped generate and focus attention on related issues in Los Angeles. Issues touched on racial division and cultural identity, equal access, and how to create more balance and diversity in public schools. Signaling the end of this period of significance is the U.S. Supreme Court decision effectively ending mandatory school busing as a solution to racial imbalance in California's public schools. Although this issue continued to form part of the social context for LAUSD, this period captures an era of intense debate and activism on the part of community members, parents, politicians and jurists, as well as teachers and administrators.

A school eligible under this theme might be the site of significant integration initiatives, challenges, or community activities related to the Civil Rights Movement and school integration. This might include initiatives for equal access to schools and/or to employment opportunities in LAUSD schools.

In addition, a school might qualify under this theme for a long-term association with a figure who was significant in the Civil Rights Movement and school integration.

Property Type:	Institutional/Educational
Property Subtypes:	Elementary Schools, Junior High Schools, and High Schools
Period of Significance:	1954 to 1980
Area of Significance:	Education/Ethnic Heritage
Geographic Location:	Citywide
Area of Significance:	A/1 and/or B/2

Eligibility Standards

- Was constructed during the theme of significance
- Was the site of significant integration initiatives, challenges, or activities related to the Civil Rights Movement and school integration
- Directly reflects the movement for equal access to schools, through integration activities, events, or protests, and/or equal access to employment opportunities in LAUSD schools
- Has a well-established, long-term association with a figure who was significant in the Civil Rights Movement and school integration (eligibility under B/2)

Character-Defining Features

- Retains most of the associative and character-defining features from the period of significance

Integrity Considerations

- Retains integrity of Location, Design, Setting, Feeling, Association
- Some materials may have been removed or altered
- If there are multiple buildings on campus constructed during the period of significance, these should be evaluated as a potential historic district

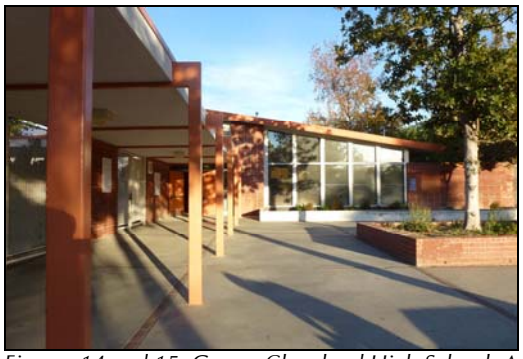
ARCHITECTURAL STYLES

MID-CENTURY MODERNISM / REGIONAL MODERNISM (POST-1945)

Mid-Century Modernism, or Regional Modernism, represents a middle ground between the formal, machine-age aesthetic of the International Style and a regional idiom reflecting local precedent and identity. In the postwar period through the 1960s, as practiced in Southern California, Mid-Century Modernism took its cues from the region's first-generation modernist architects such as Richard Neutra, Rudolph Schindler, Gregory Ain, Frank Lloyd Wright, and Harwell Hamilton Harris. In the postwar period, second-generation practitioners such as Raphael Soriano, Whitney Smith, and A. Quincy Jones, among many others, established Los Angeles as a center for innovative architectural design and culture.

Mid-Century Modernism is characterized by an honest expression of structure and function, with little applied ornament. Aesthetic effect is achieved through an asymmetrical but balanced, rhythmic design composition, often expressed in modular post-and-beam construction. Whether wood or steel, post-and-beam construction allowed for open floor plans, ease of expansion, and generous expanses of glazing to heighten indoor-outdoor integration. Infill panels of wood or glass are common, with glazing often extending to the gable. Buildings are generally one to two-stories, with an emphasis on simple, geometric forms. Capped with low-pitched gabled or flat roofs, a Mid-Century Modern building often displays wide eaves and cantilevered canopies, supported on spider-leg or post supports. Sheathing materials vary, with wood, stucco, brick and stone, or steel-framing and glass. Windows are generally flush-mounted, with metal frames.



Figures 14 and 15. Grover Cleveland High School, Administration Building (left) and typical classroom wing (right), Matcham & Granger and Associates (1959), Reseda. Source: Sapphos Environmental, Inc., 2013.

This style was seen in postwar institutional and commercial buildings, as well as residences, from 1945 until circa 1975.

Typical Character-Defining Features

- Horizontal design composition and massing; generally one to two stories; simple, geometric volumes; flat or shed roof, often with wide, cantilevered overhangs
- Exterior materials include stucco, brick, or concrete; modular design and planning
- Simply treated, natural materials and excellent craftsmanship
- Direct expression of structural systems, often in wood or steel post-and-beam
- Lack of historicizing ornament
- Generous expanses of fenestration, including bands of grouped multi-light windows
- Extensive use of sheltered exterior corridors, with flat or slightly sloped roofs supported by posts, piers, or pipe columns

Mid-Century Modernism | Expressionistic/Organic Subtype

- A more dynamic Mid-Century Modernism: combines sculptural forms with basic geometric volumes; curved, sweeping wall surfaces; dynamic, expressionistic roof forms, including butterfly, folded plate or barrel vault roof forms

ARCHITECTS AND BUILDERS OF LAUSD PROPERTIES

Since the early years of LAUSD, the school buildings and campuses of LAUSD have been designed by some of the region's most prominent master architects as well as the district's own architectural department. The following architects and firms were responsible for numerous designs of extant buildings throughout the district, since the early twentieth century:

- Thornton Abell
- Ain, Johnson & Day (Gregory Ain, Joseph Johnson, and Alfred Day)
- Robert Evans Alexander
- Allison & Allison (David Clark Allison and James Edward Allison)
- John C. Austin
- Austin and Ashley (John C. Austin and Frederic Ashley)
- Austin, Field & Fry (John C. Austin, Robert Field, Jr., Charles Eugene Fry)
- Edwin Bergstrom
- Daniel, Mann, Johnson & Mendenhall, DMJM (Phillip Daniel, Arthur Mann, Kenneth Johnson, Irvan Mendenhall)
- Stiles O. Clements
- Roland Coate
- Edelman and Zimmerman
- Sidney Eisenshtat
- Henry L. Gogerty
- Heitschmidt & Thompson (Earl Heitschmidt and Whiting Thompson)
- Frank Hudson
- Hudson & Munsell
- Stewart S. Granger
- Myron Hunt
- Hunt & Chambers
- Hunt & Burns
- Gordon B. Kaufmann
- George Lindsey
- Marsh, Smith, & Powell (Norman Marsh, David Smith, and Herbert James Powell)
- A. C. Martin
- Matcham & Granger (Charles O. Matcham Sr. and Stewart S. Granger)
- Alfred S. Nibecker
- Richard Neutra
- C.E. Noerenberg and Johnson
- Parkinson and Parkinson
- Charles Plummer
- Alfred Rosenheim
- Sumner Spaulding
- Spaulding & Rex (Sumner Spaulding and John Rex)
- William Stockwell
- Whiting Thompson
- Walker and Eisen
- Adrian Wilson & Associates

IV. SURVEY RESULTS

As a result of the LAUSD Historic Resources Survey, 2013/2014, the following 14 of 55 LAUSD campuses were found to include properties that appear eligible for either the NRHP and/or the CRHR. These campuses therefore include one or more buildings, structures, and/or related features that are presumed historic resources for purposes of CEQA:

1. 156th Street Elementary School — Eligible for CRHR (3CD)
2. Castle Heights Elementary School — Eligible for CRHR (3CD)
3. Chatsworth Senior High School — Eligible for NRHP (3D)
4. Cleveland Senior High School — Eligible for NRHP (3D)
5. Colfax Avenue Elementary School — Eligible for CRHR (3CD)
6. Dodson Middle School — Eligible for CRHR (3CD)
7. Fernangeles Elementary School — Eligible for CRHR (3CD)
8. Leapwood Avenue Elementary School — Eligible for NRHP (3D)
9. Narbonne Senior High School — Eligible for CRHR (3CD)
10. Pacoima Middle School — Eligible for CRHR (3CD)
11. Palisades Senior High School — Eligible for NRHP (3D)
12. Parmelee Avenue Elementary School — Eligible for CRHR (3CD)
13. Topanga Charter Elementary School — Eligible for NRHP (3D)
14. Webster Middle School — Eligible for CRHR (3CD)

Properties found eligible for the National Register under Criteria A/1, as representing the ideals and design principals of LAUSD from the era, were highly exceptional examples of the school type, though minor alterations might have been noted. Properties found eligible for the California Register only under the same criteria were generally outstanding examples of the applicable school type but exhibited a higher number of alterations.

The following sections present: (1) an overall district map, as well as detailed area maps, showing survey results, and (2) a pictorial overview of all eligible and non-eligible campuses, including school name, address, dates of construction, architect/designer (if known), and evaluation findings. Section 5 provides a tabulated version of the updated LAUSD Historic Resources Inventory.

Mapped Results: District Overview and Area Maps

Below is a composite map of the study area showing all LAUSD campuses, with eligibility indicated for campuses evaluated in the Historic Resources Survey, 2013/2014. The subsequent pages present enlarged versions of each subdivision of the composite map.

ELIGIBLE CAMPUSES: OVERVIEW

School Name: 156th Street Elementary School
Address: 2100 West 156th Street, Gardena
Date(s) of Construction: 1953
Architect/Designer: Unknown
Eligibility Criteria: CRHR 1
CHR Status Code: 3CD

Notes: Campus core appears eligible as a historic district under CRHR Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent and intact example of the standardized finger-plan school used throughout LAUSD in the postwar period. Exemplifies LAUSD design principles of the era. CRHR eligible only (due to alterations).

School Name: Castle Heights Elementary School
Address: 9755 Cattaraugus Avenue, Los Angeles
Date(s) of Construction: 1951
Architect/Designer: Unknown
Eligibility Criteria: CRHR 1
CHR Status Code: 3CD

Notes: Campus core appears eligible as a historic district under CRHR Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Castle Heights Elementary School is an excellent example of a postwar indoor-outdoor LAUSD campus. Exemplifies LAUSD design principles of the postwar era.

School Name: Chatsworth Senior High School
Address: 10027 Lurline Avenue, Chatsworth
Date(s) of Construction: 1963
Architect/Designer: Unknown
Eligibility Criteria: NRHP 1, 3; CRHR A, C
CHR Status Code: 3D

Notes: The campus core appears eligible as a historic district under Criteria A/1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent, intact example of postwar LAUSD school; exemplifies LAUSD design ideals and principles of the era. Also eligible as a historic district under Criteria C/3, as an excellent example of Mid-Century Modern design applied to institutional architecture. Some alterations, but intact and exceptional example that is eligible for the NRHP and CRHR.

School Name: Cleveland Senior High School
Address: 8140 Vanalden Avenue, Reseda
Date(s) of Construction: 1959–1960
Architect/Designer: Matcham and Granger & Associates
Eligibility Criteria: NRHP 1, 3; CRHR, A, C
CHR Status Code: 3D

Notes: The campus core appears eligible as a historic district under the NRHP and CRHR Criteria A/1, in the context of institutional architecture/educational facilities in Los Angeles. As an intact, indoor-outdoor finger- and cluster-plan school, Cleveland Senior High School exemplifies LAUSD design ideals and principles of the era. Also eligible as a historic district under Criteria 3, as an excellent example of Mid-Century Modern style applied to institutional architecture. Some alterations, but intact and exceptional example that is eligible for the NRHP and CRHR.

School Name: Colfax Avenue Elementary School
Address: 11724 Addison St., North Hollywood
Date(s) of Construction: 1950–1955
Architect/Designer: Unknown
Eligibility Criteria: CRHR 1
CHR Status Code: 3CD

Notes: Appears eligible as a historic district under CRHR Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Colfax Avenue Elementary School is an excellent, intact example of an indoor-outdoor, postwar finger-plan school. Exemplifies LAUSD design ideals and principles of the era. Some replaced/filled-in windows and non-original hardscaping; CRHR eligible as historic district.

School Name: Dodson Middle School
Address: 28014 South Montereina Drive, Rancho Palos Verdes
Date(s) of Construction: 1960
Architect/Designer: Unknown
Eligibility Criteria: CRHR 1
CHR Status Code: 3CD

Notes: Campus core appears eligible as a historic district under CRHR Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent and intact example of an indoor-outdoor, postwar finger-plan school. Exemplifies LAUSD design principles of the era. CRHR eligible only (due to alterations).

School Name: Fernangeles Elementary School
Address: 12001 Art Street, Sun Valley
Date(s) of Construction: 1954
Architect/Designer: Unknown
Eligibility Criteria: CRHR 1
CHR Status Code: 3CD

Notes: Campus core appears eligible as a historic district under CRHR Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Administration building and assembly room form a distinctive entrance to the school and architectural anchor for adjacent neighborhood. From the interior, these buildings frame a courtyard and outdoor dining area. Site design includes expansive central lawn with mature (original) trees. Due to alterations, CRHR eligible only.

School Name: Leapwood Avenue Elementary School
Address: 19302 Leapwood Avenue, Carson
Date(s) of Construction: 1962
Architect/Designer: Unknown
Eligibility Criteria: NRHP A; CRHR 1
CHR Status Code: 3D

Notes: Campus core appears eligible as a historic district under CRHR Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Outstanding example of a one- and two-story school with a finger- and cluster-plan campus design.

School Name: Narbonne Senior High School
Address: 24300 South Western Avenue, Harbor City
Date(s) of Construction: 1955–1960
Architect/Designer: Daniel, Mann, Johnson & Mendenhall
Eligibility Criteria: CRHR 1
CHR Status Code: 3CD

Notes: Campus core appears eligible as a historic district under CRHR Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent, innovative example of postwar LAUSD school; exemplifies LAUSD design ideals and principles of the era. Some replaced / filled-in windows and non-original seismic supports. CRHR eligible only (due to alterations).

School Name: Pacoima II Middle School
Address: 9919; 9921 Laurel Canyon Boulevard, Pacoima
Date(s) of Construction: 1953 - 1957
Architect/Designer: Unknown
Eligibility Criteria: CRHR 1
CHR Status Code: 3CD

Notes: Campus core appears eligible as a historic district under CRHR Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent, intact example of postwar LAUSD school; exemplifies LAUSD design ideals and principles of the era. A number of alterations, including many filled-in / covered over clerestory windows, which has compromised the integrity of some classroom wings. CRHR eligible only (due to alterations). Site of a 1957 mid-air collision of two aircrafts.

School Name: Palisades Senior High School
Address: 15777 Bowdoin Street, Pacific Palisades
Date(s) of Construction: 1961
Architect/Designer: Adrian Wilson and Associates
Eligibility Criteria: NRHP 1, 3; CRHR, A, C
CHR Status Code: 3D

Notes: Campus core appears eligible as a historic district under Criteria A/1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent, intact example of postwar LAUSD school; exemplifies LAUSD design ideals and principles of the era. Also eligible as a historic district under Criteria C/3, as an excellent example of Mid-Century Modern design (expressionist subtype) applied to institutional architecture in Los Angeles. Few visible alterations; eligible for NRHP and CRHR as historic district.

School Name: Parmelee Avenue Elementary School
Address: 1338 E. 76th Place, Los Angeles
Date(s) of Construction: 1962, 1964, 1965
Architect/Designer: Unknown
Eligibility Criteria: CRHR 1
CHR Status Code: 3CD

Notes: Campus core appears eligible as a historic district under CRHR Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Outstanding example of a one- and two-story school with a cluster-plan campus design and ample indoor-outdoor integration. CRHR eligible only (due to alterations).

School Name: Topanga Elementary School
Address: 22075 Topanga School Road, Topanga
Date(s) of Construction: 1953, 1955
Architect/Designer: Unknown
Eligibility Criteria: NRHP 1, 3; CRHR, A, C
CHR Status Code: 3D

Notes: Campus core appears eligible as a historic district under Criteria A/1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent, intact example of postwar LAUSD school; exemplifies LAUSD design ideals and principles of the era. Also eligible as a historic district under Criteria C/3 as an excellent example of the Mid-Century Modern style applied to institutional architecture.

School Name: Webster Middle School
Address: 11330 Graham Place, Los Angeles
Date(s) of Construction: 1954–1958
Architect/Designer: Building Dept., Los Angeles Board of Education
Eligibility Criteria: CRHR 1
CHR Status Code: 3CD

Notes: Campus core appears eligible as a historic district under CRHR Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Outstanding example of a postwar, indoor-outdoor school employing an innovative site plan. CRHR eligible only (due to alterations).

INELIGIBLE CAMPUSES: OVERVIEW

School Name: 122nd Street Elementary School
Address: 405 East 122nd Street, Los Angeles
Date(s) of Construction: 1963
Architect/Designer: Unknown

Notes: Not eligible. In terms of the context of institutional architecture/educational facilities in Los Angeles, this campus is a typical but not outstanding example of a postwar LAUSD campus. Additionally, under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criterion 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: 153rd Street Elementary School
Address: 1605 W 153rd Street, Gardena
Date(s) of Construction: 1957–1958
Architect/Designer: Ain, Johnson & Day

Notes: Not eligible. This campus has many of the character-defining features of a postwar finger-plan school but not all the eligibility standards required under Criteria A/1 as an exemplification of LAUSD design ideals for postwar schools. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, this campus was designed by master architects Ain, Johnson & Day; however, the school plan and design overall do not stand out as an outstanding exemplar of the firm's work.

School Name: 186th Street Elementary School
Address: 1581 West 186th Street, Gardena
Date(s) of Construction: 1955–1962
Architect/Designer: John Kewell & Associates

Notes: Not eligible. Not typical of LAUSD design principles of the era; site design does not exhibit an exceptionally unified plan. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect. Displays some characteristics of Mid-Century Modern design, but the design does not rise to the level required for eligibility for either the NRHP or CRHR.

School Name: 232nd Place Elementary School
Address: 23240 Archibald Avenue, Carson
Date(s) of Construction: 1957–1968
Architect/Designer: A. Quincy Jones and Frederick E. Emmons & Associates; landscape architect Curtis Dixon Anderson

Notes: Not eligible. Campus and its classroom wings and buildings represent typical but not outstanding examples of a postwar finger-plan school. Lack of indoor-outdoor integration in campus plan; arcades are replaced with tunnel-like corridors. Represents the work of master architects A. Quincy Jones and Frederick E. Emmons & Associates, but is not an exceptional example of their many buildings throughout Southern California. The campus is not eligible under other applicable criteria.

School Name: Ambler Avenue Elementary School
Address: 319 East Sherman Drive, Carson
Date(s) of Construction: 1966
Architect/Designer: Unknown

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, the school does not qualify as an outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Amestoy Elementary School
Address: 1048 West 149th Street, Gardena
Date(s) of Construction: 1949–1957
Architect/Designer: Unknown

Notes: Not eligible. Not typical of LAUSD design principles of the era; site design does not exhibit an exceptionally unified plan. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Annalee Avenue Elementary School
Address: 19410 South Annalee Avenue, Los Angeles
Date(s) of Construction: 1966–1967
Architect/Designer: Unknown

Notes: Not eligible. The school campus and buildings represent a typical but not exemplary embodiment of LAUSD design principles of the era. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Avalon Gardens Elementary School
Address: 13940 South San Pedro Street, Los Angeles
Date(s) of Construction: 1948–1955
Architect/Designer: Unknown

Notes: Not eligible. This campus has many of the character-defining features of a postwar finger-plan school, but the range of construction dates, from 1948 to 1955, produced a campus plan that is not sufficiently unified to qualify under Criteria A/1 as an exemplification of LAUSD design ideals for postwar schools (under the context of institutional architecture/educational facilities in Los Angeles). In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Banneker Special Education Center
Address: 14024 South San Pedro Street, Los Angeles
Date(s) of Construction: 1972–1978
Architect/Designer: Unknown

Notes: Not eligible. In terms of the context of institutional architecture/educational facilities in Los Angeles, the campus is not representative of LAUSD design principles of the era. Additionally, under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Bonita Street Elementary School
Address: 21929 Bonita Street, Carson
Date(s) of Construction: 1958
Architect/Designer: Unknown

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Broadacres Elementary School
Address: 19424 South Broadacres Avenue, Carson
Date(s) of Construction: 1967
Architect/Designer: Unknown

Notes: Not eligible. In terms of the context of institutional architecture/educational facilities, the campus does not represent an outstanding example of LAUSD design principles of the era. Additionally, under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Brooklyn Avenue Elementary School
Address: 4620 Cesar Chavez Avenue, Los Angeles
Date(s) of Construction: 1960–1975
Architect/Designer: Unknown

Notes: Not eligible. In terms of the context of institutional architecture/educational facilities in Los Angeles, the campus is not representative of LAUSD design principles of the era. Additionally, under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Carnegie Middle School
Address: 21820 Bonita Street, Carson
Date(s) of Construction: 1965
Architect/Designer: Unknown

Notes: Not eligible. The campus overall is not typical of LAUSD design principles of the era. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Caroldale Learning Community
Address: 22424 Caroldale Avenue, Carson
Date(s) of Construction: 1960–1969
Architect/Designer: Unknown

Notes: Not eligible. The campus overall is not typical of LAUSD design principles of the era. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Carson Senior High School
Address: 22328 South Main Street, Carson
Date(s) of Construction: 1962–1969
Architect/Designer: Austin, Field, and Fry

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Century Park Elementary School
Address: 10935 South Spinning Avenue, Inglewood
Date(s) of Construction: 1948–1959
Architect/Designer: Unknown

Notes: Not eligible. Not typical of LAUSD design principles of the era; all of the original classrooms in addition to the auditorium are located in a single building; classrooms on double-loaded interior corridor. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Chandler Elementary School
Address: 14030 Weddington Street, Van Nuys
Date(s) of Construction: 1949–1956
Architect/Designer: Unknown

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Cimarron Elementary School
Address: 11559 Cimarron Avenue, Los Angeles
Date(s) of Construction: 1953–1957
Architect/Designer: Unknown

Notes: Not eligible. The school campus and buildings represent a typical but not exemplary embodiment of LAUSD design principles of the era. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Cowan Avenue Elementary School
Address: 7615 Cowan Avenue, Los Angeles
Date(s) of Construction: 1953–1958
Architect/Designer: Unknown

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Crenshaw Senior High School
Address: 5010 11th Avenue, Los Angeles
Date(s) of Construction: 1968
Architect/Designer: Unknown

Notes: Not eligible. Not typical of LAUSD design principles of the era. In terms of eligibility under Criteria A/1, research showed that construction of Crenshaw High School reflected post-Watts Riots investment in South Los Angeles schools. Research conducted within the parameters of the current scope, however, did not identify a broader, contextual pattern to justify eligibility under Criteria A/1 on this basis. In addition, research did not show that this campus was the site of a significant event. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Curtiss Middle School
Address: 1254 East Helmick Street, Carson, Los Angeles
Date(s) of Construction: 1969
Architect/Designer: Unknown

Notes: Not eligible. The school campus and buildings represent a typical but not exemplary embodiment of LAUSD design principles of the era. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or work of a master architect.

School Name: Dixie Canyon Avenue Elementary School
Address: 4220 Dixie Canyon Avenue, Sherman Oaks
Date(s) of Construction: 1949–1961
Architect/Designer: Unknown

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Encino Elementary School
Address: 16941 Addison Street, Encino, Los Angeles
Date(s) of Construction: 1949–1961
Architect/Designer: Unknown

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Francis Polytechnic Senior High School
Address: 12431 Roscoe Boulevard, Sun Valley
Date(s) of Construction: 1957
Architect/Designer: Austin, Field, and Fry

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Fullbright Avenue Elementary School
Address: 6940 Fullbright Avenue, Canoga Park
Date(s) of Construction: 1954
Architect/Designer: Unknown

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Grant Senior High School
Address: 13000 Oxnard Street, Valley Glen
Date(s) of Construction: 1958–1964
Architect/Designer: J. E. Stanton and William F. Stockwell

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design. Designed by prominent architectural firm, Stanton & Stockwell (J.E. Stanton & William F. Stockwell), but the school is not the most representative or intact example of the firm's work.

School Name: Haskell Avenue Elementary School
Address: 15850 Tulsa Street, Granada Hills
Date(s) of Construction: 1953–1965
Architect/Designer: Unknown

Notes: Not eligible. In terms of the context of institutional architecture/educational facilities in Los Angeles, this campus exhibits most of the character-defining features of the indoor-outdoor, finger-plan school constructed throughout LAUSD in the postwar period. However, due to alterations (primarily in-filled windows, altered window and door openings), the campus does not retain sufficient integrity to convey its period of significance.

School Name: Hawaiian Avenue Elementary School
Address: 540 Hawaiian Avenue, Wilmington
Date(s) of Construction: 1948–1966
Architect/Designer: Unknown

Notes: Not eligible. The campus overall is not typical of LAUSD design principles of the era. The 1948 Administration Building is noteworthy, but due to alterations (replaced windows), it does not retain integrity. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation.

In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Marianna Elementary School
Address: 4215 East Gleason Street, Los Angeles
Date(s) of Construction: 1958–1964
Architect/Designer: Unknown

Notes: Not eligible. In terms of the context of institutional architecture/educational facilities in Los Angeles, this campus is a typical but not outstanding example of a postwar LAUSD campus. Additionally, under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Monroe Senior High School
Address: 9229 North Haskell Avenue, North Hills
Date(s) of Construction: 1957
Architect/Designer: Heitschmidt and Thompson

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Park Avenue Elementary School
Address: 8020 Park Avenue, Cudahy
Date(s) of Construction: 1968
Architect/Designer: Unknown

Notes: Not eligible. In terms of the context of institutional architecture/educational facilities in Los Angeles, the campus is a common but not outstanding example of LAUSD design principles of the era. Additionally, under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Purche Elementary School
Address: 13210 Purche Avenue, Gardena
Date(s) of Construction: 1957
Architect/Designer: Unknown

Notes: Not eligible. The school campus and buildings represent a typical but not exemplary embodiment of LAUSD design principles of the era. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Sellery Special Education Center
Address: 15804 South Budlong Avenue, Gardena
Date(s) of Construction: 1961–1963
Architect/Designer: Unknown

Notes: This school was custom-built to serve a special needs population of children with severe handicaps. As such, the plan and building types vary from typical LAUSD plan typologies. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect. The school displays many character-defining features of the Mid-Century Modern architectural style. However, the school is not an outstanding or distinctive example of the Mid-Century Modern architectural style and does not qualify under Criteria C/3.

School Name: Sherman Oaks Elementary School
Address: 14755 Greenleaf Street, Sherman Oaks
Date(s) of Construction: 1948–1976
Architect/Designer: Unknown

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Stagg Street Elementary School
Address: 7839 Amestoy Avenue, Van Nuys
Date(s) of Construction: 1954–1958
Architect/Designer: Unknown

Notes: Not eligible. In terms of the context of institutional architecture/educational facilities in Los Angeles, this campus exhibits most of the character-defining features of the indoor-outdoor, finger-plan school constructed throughout LAUSD in the postwar period. However, due to alterations (primarily in-filled windows, altered window and door openings), the campus does not retain sufficient integrity to convey its period of significance.

School Name: Towne Avenue Elementary School
Address: 18924 Towne Avenue, Carson
Date(s) of Construction: 1958
Architect/Designer: Unknown

Notes: Not eligible. In terms of the context of institutional architecture/educational facilities in Los Angeles, this campus is a typical but not outstanding example of a postwar LAUSD campus. Additionally, under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Van Deene Elementary School
Address: 826 West Javelin Street, Torrance
Date(s) of Construction: 1960–1965
Architect/Designer: Unknown

Notes: Not eligible; very typical but not outstanding example of LAUSD design ideals of the era. Appears to be drawn from one of the standardized plans for schools during this period. Not the site of significant event or representative of a significant pattern of development. Not an outstanding example of architectural design or the work of a master architect.

School Name: Vintage Street Elementary School (Vintage Street Fundamental Magnet School)
Address: 15848 Stare Street, North Hills
Date(s) of Construction: 1953
Architect/Designer: Unknown

Notes: Not eligible. In terms of the context of institutional architecture/educational facilities in Los Angeles, this campus exhibits most of the character-defining features of the indoor-outdoor, finger-plan school constructed throughout LAUSD in the postwar period. However, due to alterations (primarily in-filled windows, altered window and door openings, and changes to the design configuration of the entrance and auditorium), the campus does not retain sufficient integrity to convey its period of significance.

School Name: White Middle School
Address: 22102 South Figueroa Street, Carson
Date(s) of Construction: 1956
Architect/Designer: Unknown

Notes: Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Wilmington II Middle School
Address: 1700 Gulf Avenue, Wilmington
Date(s) of Construction: 1951–1962
Architect/Designer: Unknown

Notes: Not eligible. The campus overall is not typical of LAUSD design principles of the era. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

School Name: Wilson Senior High School
Address: 4500 Multnomah Street, Los Angeles
Date(s) of Construction: 1970
Architect/Designer: Unknown

Notes: Not eligible. The campus overall is not typical of LAUSD design principles of the era. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.

V. UPDATED LAUSD HISTORIC RESOURCES INVENTORY

This section presents a tabulated version of the updated LAUSD Historic Resources Inventory. The inventory compiles results from the LAUSD Historic Resources Survey, 2013/2014, with eligibility findings from the 2001–2004 Phase 1 and Phase 2 Getty Historic Resources Surveys. The compiled results are presented in an Excel spreadsheet format and an Access Database format compatible with ArcGIS.

4063-012-900	13673	**156th Street Elementary School**	ES	2100	W	156th	St	Gardena	90249	1953		1953		6Z/7N	Campus core appears eligible as a historic district under California Register Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent and intact example of the standardized indoor-outdoor, postwar finger-plan school used throughout LAUSD in the postwar period. Exemplifies LAUSD design principles of the era. California Register eligible only (due to alterations).	Yes	3CD
4308-019-900	13680	**Castle Heights Elementary School**	ES	9755		Cattaraugus	Ave	Los Angeles	90034	1951	1961	1951		6Z/7N	Campus core appears eligible as a historic district under California Register Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Castle Heights Elementary School is an excellent example of a postwar, indoor-outdoor LAUSD campus. Exemplifies LAUSD design principles of the postwar era.	Yes	3CD
2355-013-900	13681	**Colfax Avenue Elementary School**	ES	11724		Addison	St	North Hollywood	91607	1950	1955	1951		6Z/7N	Campus core appears eligible as a historic district under California Register Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Colfax Avenue Elementary School is an excellent, intact example of an indoor-outdoor, postwar finger-plan school. Exemplifies LAUSD design ideals and principles of the era. Some replaced/filled-in windows and non-original hardscaping; CRHR eligible as historic district.	Yes	3CD
2631-019-904	13594	**Fernangeles Elementary School**	ES	12001		Art	St	Sun Valley	91352	1948	1954	1946		6Z/7N	Campus core appears eligible as a historic district under California Register Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Administration building and assembly room form a distinctive, 1950s-flavored entrance to the school and anchor for the residential community around it. From the interior, these two buildings frame a courtyard and outdoor dining area. Site design features buildings and facilities oriented around an expansive lawn with mature (original) trees. Due to alterations on many of the classrooms, however, including clerestories that have been covered and sheathed in stucco, contributing buildings appear eligible for the California Register only.	Yes	3CD
2505-025-900	13707	**Olive Vista Middle School**	MS	14600		Tyler	St	Sylmar	91342	1958	1968	1958		6Z/7N	Campus core appears eligible as a historic district under Criteria C/3, as an excellent example of Mid-Century Modern design applied to institutional architecture. The elements of the campus that are considered contributors are the complex of buildings and structures at the entrance of the campus on Tyler Street, consisting of the Administration Building, the Library, the Health and Counseling Building, and the entrance portal that unifies the northwest side of the campus and forms a distinctive 1950s Mid-Century Modern entrance. Because the other structures on	Yes	3CD

CHR Status Code
															campus and the site plan are not outstanding examples of LAUSD design principles or architecture, California Register eligible only.		
2622-001-900	13750	**Pacoima II Middle School**	MS	9919; 9921		Laurel Canyon	Blvd	Pacoima	91331	1953	1957	1954	Pacoima Junior High School	6Z/7N	Campus core appears eligible as a historic district under California Register Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent, intact example of postwar LAUSD school; exemplifies LAUSD design ideals and principles of the era. A number of alterations, including many filled-in/stucco'd over clerestories, may compromise the integrity of some classroom wings. California Register eligible only (due to alterations).Site of infamous 1957 mid-air collision of two aircraft.	Yes	3CD
4258-016-900	13741	**Webster, Daniel Middle School**	MS	11330		Graham	Pl	Los Angeles	90064	1954	1958	1954	Richland JHS 1954	6Z/7N	Campus core appears eligible as a historic district under California Register Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent example of postwar LAUSD middle school campus; exemplifies LAUSD design ideals and principles of the era. Inventive site plan, with classroom wings radiating outward from a central circular core, and extensive network of arcades creates classroom spaces well integrated with designed outdoor spaces throughout the campus. Some alterations (to Auditorium and to some classroom wings, mostly consisting of in-filled windows). Eligible for CRHR as a district.	Yes	3CD
7552-017-900	13846	**Dodson Middle School (Rudecinda Sepulveda Dodson Middle School)**	MS	28014	S	Montereina	Dr	Rancho Palos Verdes	90275	1960		1960		N/A	Campus core appears eligible as a historic district under California Register Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent and intact example of an indoor-outdoor, postwar finger-plan school. Exemplifies LAUSD design principles of the era. California Register eligible only (due to alterations).	Yes	3CD
7439-015-900	13407	**Narbonne Senior High School**	SH	24300	S	Western	Ave	Harbor City	90710	1956		1938		N/A	Campus core appears eligible as a historic district under California Register Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent, intact example of postwar LAUSD school; exemplifies LAUSD design ideals and principles of the era. Highly inventive site plan, in the form of a spiral, allows for maximum indoor-outdoor integrated classrooms on compact, urban site. Some replaced/filled-in windows and seismic supports visible on building exteriors. California Register eligible only (due to alterations).	Yes	3CD

6024-022-900	13815	**Parmelee Elementary School**	ES	1338	E	76th	Pl	Los Angeles	90001	1962	1965	1962		N/A	Campus core appears eligible as a historic district under California Register Criterion 1, in the context of institutional architecture/educational facilities in Los Angeles. Outstanding example of a one- and two-story school with a cluster-plan campus design and ample indoor-outdoor integration. California Register eligible only (due to alterations).	Yes	3CD
2741-002-900	13870	**Chatsworth Senior High School**	SH	10027		Lurline	Ave	Chatsworth	91311	1963		1963		N/A	Campus core appears eligible as a historic district under Criteria A/1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent, intact example of postwar LAUSD school; exemplifies LAUSD design ideals and principles of the era. Inventive site plan, with classrooms radiating outward from a central landscaped quad. Also eligible as a historic district under Criteria C/3, as an excellent example of Mid-Century Modern design applied to institutional architecture. Some alterations, but intact and exceptional example that is eligible for both National Register and California Register.	Yes	3D
2104-004-905	13753	**Cleveland, Grover Senior High School**	SH	8140		Vanalden	Ave	Reseda	91335	1959	1960	1950		N/A	Campus core appears eligible as a historic district under National Register and California Register Criteria A/1, in the context of institutional architecture/educational facilities in Los Angeles. As an intact, indoor-outdoor finger-plan school, Cleveland Senior High School exemplifies LAUSD design ideals and principles of the era. Also eligible as a historic district under Criteria A/3, as an excellent example of Mid-Century Modern style applied to institutional architecture. Some replaced/filled-in windows and non-original hardscaping.	Yes	3D
7321-018-900	13817	**Leapwood Elementary School**	ES	19302		Leapwood	Ave	Carson	90746	1962		1963		N/A	Campus core appears eligible as a historic district under National Register and California Register Criteria A/1, in the context of institutional architecture/educational facilities in Los Angeles. Outstanding example of a one- and two-story school with a cluster-plan campus design and ample indoor-outdoor integration. Few visible alterations.	Yes	3D
4413-021-905	13742	**Palisades Charter Senior High School**	SH	15777		Bowdoin	St	Pacific Palisades	90272	1961		1958		N/A	Campus core appears eligible as a historic district under Criteria A/1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent, intact example of postwar LAUSD school; exemplifies LAUSD design ideals and principles of the era. Also eligible as a historic district under Criteria C/3, as an excellent example of Mid-Century Modern design (expressionist subtype) applied to institutional architecture in Los Angeles. Few visible alterations; eligible for National Register and California Register as historic district.	Yes	3D
4445-	13816	**Topanga Charter**	ES	22075		Topanga	Rd	Topanga	90290	1953	1955	1940		N/A	Campus core appears eligible as a historic district	Yes	3D

005-902		**Elementary School**				School									under Criteria A/1, in the context of institutional architecture/educational facilities in Los Angeles. Excellent, intact example of postwar LAUSD school; exemplifies LAUSD design ideals and principles of the era. Also eligible as a historic district under Criteria C/3 as an excellent example of the Mid-Century Modern style applied to institutional architecture.		
6103-017-900	13812	**153rd Street Elementary School**	ES	1605	W	153rd	St	Gardena	90247	1957	1958	1956		6Z/7N	Not eligible. This campus has many of the character-defining features of a postwar finger-plan school but not all the eligibility standards required under Criteria A/1 as an exemplification of LAUSD design ideals for postwar schools. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, this campus was designed by master architects Ain, Johnson & Day; however, the school plan and design overall do not stand out as an outstanding exemplar of the firm's work.	No	6Z
6108-003-900	13303	**186th Street Elementary School**	ES	1581	W	186th	St	Gardena	90248	1955	1962	1907	McKinley Home 1907; 182nd St 1924; 184th St 1925	6Z/7N	Not eligible. Not typical of LAUSD design principles of the era; site design does not exhibit an exceptionally unified plan. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect. Displays some characteristics of Mid-Century Modern design, but the design does not rise to the level required for eligibility for either the National Register or California Register.	No	6Z
6114-030-902	13426	**Amestoy Elementary School**	ES	1048	W	149th	St	Gardena	90247	1949	1957	1915	Amestoy Avenue 1915	6Z/7N	Not eligible. Not typical of LAUSD design principles of the era; site design does not exhibit an exceptionally unified plan. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural	No	6Z

															design or the work of a master architect.		
6131-013-900	13618	**Avalon Gardens Elementary School**	ES	13940	S	San Pedro	St	Los Angeles	90061	1948	1955	1952		6Z/7N	Not eligible. This campus has many of the character-defining features of a postwar finger-plan school, but the range of construction dates, from 1948 to 1955, produced a campus plan that is not sufficiently unified to qualify under Criteria A/1 as an exemplification of LAUSD design ideals for postwar schools (under the context of institutional architecture/educational facilities in Los Angeles). In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.	No	6Z
4029-021-900	13675	**Century Park Elementary School**	ES	10935	S	Spinning	Ave	Inglewood	90303	1948	1959	1947		6Z/7N	Not eligible. Not typical of LAUSD design principles of the era; all of the original classrooms in addition to the auditorium are located in a single building; classrooms on double-loaded interior corridor. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.	No	6Z
2247-020-900	13619	**Chandler Elementary School**	ES	14030		Weddington	St	Van Nuys	91401	1949	1956	1949		6Z/7N	Not eligible. Campus plan and buildings have many of the typical character-defining features of postwar LAUSD schools. However, taken as a whole, the campus is a common but not outstanding exemplification of postwar LAUSD design ideas. In terms of eligibility under Criteria A/1, research did not show that this campus was the site of a significant event or representative of a significant pattern of development. In terms of eligibility under Criteria B/2, research did not show that the campus was associated with a person of significance in the community, state, or nation. In terms of eligibility under Criteria 3, the campus and its buildings are not an outstanding or distinctive example of architectural design or the work of a master architect.	No	6Z

VI. CONCLUSION | RECOMMENDATIONS

The LAUSD Historic Resources Survey, 2013/2014, recommended a total of 14 of 55 campuses as eligible for either the NRHP and/or CRHR. Consequently, these campuses include buildings, structures, and features that are presumed historic resources under CEQA. The survey pool included a variety of LAUSD property types, including elementary, middle, and senior high schools, as well as special education centers. This variety was also reflected in the selection of campuses that appear to be eligible.

The following recommendations may further and expand the survey results in this report:

1. **Update and expand the *LAUSD Historic Resources Survey***
   LAUSD should update its comprehensive Historic Resources Survey in order to consider all as-yet unevaluated LAUSD assets. The survey could be initially broadened to include all post–1945 school buildings and campuses that have not yet been subject to context-driven evaluation. According to the *Los Angeles Unified School District History of Schools, 1855 to 1972*, there are roughly 175 campuses constructed between 1955 and 1969, as well as approximately 125 campuses constructed between 1945 and 1954.[8]

   The current survey examined 55 campuses, with approximately 245 remaining unevaluated.

   A comprehensive survey update would provide a cost-effective method for guiding district-wide redevelopment plans and CEQA compliance. It would also assist LAUSD in continuing stewardship of its many historically significant school buildings and campuses.

2. **Intensive-Level, District Recordation for Eligible Campuses**
   Proposed modernization or redevelopment projects may include the LAUSD campuses found eligible as historic districts in this survey or included in the LAUSD Historic Resources Inventory database. It is recommended that, prior to or concurrent with project planning, LAUSD commission an intensive-level survey by a qualified architectural historian to document all eligible and non-eligible buildings and structures (contributors and non-contributors) to the historic district. The qualified architectural historian should ideally meet and exceed the Secretary of the Interior's Professional Qualifications Standards for Architectural History and possess a minimum of 5 years of full-time experience conducting historic resource evaluations. It is further recommended that contributors and non-contributors be documented in ArcGIS maps for ease of use by LAUSD Facilities Services Division staff.

3. **Expand the *LAUSD Historic Context Statement* and *Historic Resources Survey* to include the period to 1980**
   Pursuant to Measure Q, district-wide modernization and redevelopment will unfold gradually, over many years. Broadening the LAUSD Historic Context Statement and survey to consider all schools constructed in the past 35 years (rather than 45 years) would allow the district to take proactive steps to identify historically significant campuses (and therefore historic resources under CEQA) prior to redevelopment planning and work. This would also bring the LAUSD comprehensive Historic Resources Survey up to date with the City of Los Angeles Office of Historic Resources citywide survey, SurveyLA.

4. **Conduct archival research to expand property eligibility under additional criteria**
   In the current scope, campus-specific work included research on events, patterns of development, and significant people associated with the schools included in the accompanying survey. However, scope limitations precluded extensive research on LAUSD's history that might result in eligibility under Criteria A/1 (such as LAUSD and the Civil Rights Movement) and Criteria B/2 (for an association with significant figures in the history of public schools in Los Angeles). These and other areas should receive further study. (The context of the Civil Rights Movement and Los Angeles schools was addressed, however, in the NRHP MPD form for African-Americans in Los Angeles.[9])

ENDNOTES

1 California State Government Code, Section 53094 permits 'the governing board of a school district, by vote of two-thirds of its members . . . [to] render a city or county zoning ordinance inapplicable to a proposed use of property by such school district . . .' The legislative history of section 53094 indicates that 'the Legislature deliberately accorded different treatment to school districts than to other local agencies because it was well aware that school construction was subject to almost complete control by the state. . . . The Legislature accordingly provided in section 53094 that school districts, as opposed to other local agencies, should retain the right to exempt themselves from local zoning ordinances.'" (*Santa Clara, supra*, 22 Cal.App.3d at p. 158 fn. 3.) Court of Appeal, State of California, Second Appellate District, Division 7, Los Angeles Unified School District, Petitioner and Appellant, versus City of Maywood, et al., Respondents and Defendants. Nos. B238629, B238630, Los Angeles Superior Court. Filed 13 February 2013.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located in a residential neighborhood in the city of Gardena, the 156th Street Elementary School occupies a 4.9-acre site bounded by West 156th Street to the north, an alleyway to the south, an LAUSD facility to the east, and Van Ness Avenue to the west. Built in 1953 in a standardized school plan, the campus consists of a series of stucco-clad, one-story rectilinear buildings, with a central courtyard. The campus layout is characterized by finger-like classroom wings, arranged in a grid. Linking the classroom wings of the campus is a network of sheltered corridors, capped with flat roofs, with wood planks and cross beams and simple pipe supports. Campus buildings and structures display a similar massing, detailing, and Mid-Century Modern–influenced architectural style. *(See Continuation Sheet)*

BUILDING, STRUCTURE, AND OBJECT RECORD

***NHRP Status Code** 3CD

 ***Resource Name or #:** 156th Street Elementary School

B1. Historic Name: 156th Street Elementary School
B2. Common Name: Same
B3. Original Use: Institutional (Educational Facility)
B4. Present Use: Institutional (Educational Facility)
***B5. Architectural Style:** Mid-Century Modern–influenced
***B6. Construction History:** (Construction date, alterations, and date of alterations):

According to records on file with the Los Angeles Unified School District, the campus core was constructed in 1953. A $338,990 contract was awarded for the construction of a semi-permanent frame and stucco building to accommodate 520 students at the school, with the Hudson Construction Company serving as contractor ("Contract for Gardena School Let" 1953). All of the campus's permanent buildings, structures, and facilities date from 1953. The grounds also contain four portable/temporary buildings dating from 1997 located south of the campus core.

A number of alterations and repairs have taken place over the years, including seismic and systems upgrades, the removal of windows to accommodate the installation of air-conditioning units, the retrofitting of electrical systems, the removal and replacement of gutters and downspouts (*LAUSD Pre-Planning Survey, 156th Street Elementary School*, provides a list of repairs and improvements performed since the late 1990s). Alterations to the original buildings on campus include the replacement of some original windows and hardscaping.

Applicable Criteria: CRHR: 1
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of the 156th Street Elementary School appears eligible for the California Register of Historical Resources as a district under Criterion 1 as an excellent, intact example of a postwar finger-plan school in the Los Angeles Unified School District. The campus plan and buildings exemplify LAUSD design principles and ideals from the postwar period (as described in the *Los Angeles Unified School District Historic Context Statement, 1870 to 1969* [Sapphos Environmental, Inc. 2014]). While drawing on standardized plans used districtwide, the campus represents a relatively early example of LAUSD's postwar finger-plan school. Character-defining features include a unified site plan with mature landscaping, a network of arcades, Mid-Century Modern-influenced design, one-story massing, and incorporation of generous expanses of windows oriented to the outdoors. Due to alterations, such as the replacement of some windows, the campus is eligible for the California Register only.

***P3a. Description (continued):**

Buildings are capped with low-pitched shed roofs, terminating in thin, unadorned fascia and shallow eaves. Fenestration generally consists of multi-light, wood-frame windows in a variety of configurations. At the western elevations, classrooms display bands of awning clerestories. Eastern elevations display grouped, four-over-four, double-hung wood sashes. A network of sheltered arcades provides shade and circulation corridors between classroom wings and facilities. Windows occupy approximately 70 percent of the wall height on the eastern elevations and mark the location of the interior classrooms. Classroom entrances consist of wood doors topped with four-light transoms.

Located on the western portion of the campus, the assembly building/cafeteria is rectangular in plan and symmetrical in design composition. It consists of a two-story main block, capped with a flat roof and clad in stucco. The assembly building is accessed via a projecting one-story entrance wing, located on the north elevation. The entrance displays paired wood doors, flanked with thin, attached brick piers, and sheltered beneath a flat cantilevered roof. This roofline forms a continuous horizontal course across the façade and around side elevations. Projecting from the second story on the façade is a perpendicular stucco blade wall, which extends above the height of the building. The entrance is flanked by stack-laid brick piers and planters and two symmetrical bands of multi-light wood-framed windows. The brick motif is continued in the entrance steps and a wall extending from the Assembly Building to the campus entrance. Transoms over the entrance door and some of the windows on the main elevation appear to have been filled in. On the east elevation of the building is an open-air lunch pavilion.

The buildings and structures comprising the campus core are in good repair and enhanced with mature landscaping. Alterations include the removal of a number of windows on the east elevations of classroom buildings to accommodate air-conditioning units and the asphalt paving of open spaces between classroom buildings.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located on a 5.1-acre site in west Los Angeles, Castle Heights Elementary School is bounded by Beverlywood Street on the north, Cattaraugus Avenue on the south, Castle Heights Avenue on the east, and Beverwil Drive on the west. The campus core was constructed in 1951 in a predominantly residential neighborhood. Displaying a Mid-Century Modern architectural style, the original campus consists of four principal buildings: a one-story administration building/classroom, a two-story auditorium/cafeteria, separate kindergarten, and a one-story classroom wing. Following the curve of Castle Heights Avenue on the east is a curved classroom building, constructed in 1961.

Sketch Map, with north arrow required

(This space reserved for official comments.)

***P3a. Description (continued):**

The principal entrance is set back from the street and fronted by a lawn with mature trees and landscaping. Through the entrance breezeway, the campus opens to an expansive central courtyard containing a small lawn and a number of mature trees in brick planters. The courtyard is flanked by classrooms on the east and west, the cafeteria/auditorium on the south, and recreational areas on the north.

Rectangular in plan and sheathed in smooth stucco, the auditorium/cafeteria is two stories in height and capped with a flat roof and no eaves. The principal entrance is located on the south elevation; it consists of recessed double doors elevated on two concrete steps. The entrance's original side lights appear to have been filled in. Attached brick piers and a planter accent the primary elevation of the auditorium. Fenestration generally consists of multi-light wood-framed windows in a variety of configurations, including hopper casements and fixed panes. On the north elevation, a breezeway with an open skylight provides a transitional space between the auditorium, the cafeteria, and classrooms.

Classroom wings are one story in height and rectangular in plan, capped with flat roofs and no eaves. Exterior walls are clad in smooth stucco, with minimal adornment. Classrooms display groupings of six four-over-four, wood-framed double-hung sashes with simple wood surrounds. Doors are integrated into the window grouping and include fixed-pane transoms. Attached brick piers accent the exterior of the buildings, echoing the ornamental theme displayed at the entrance to the campus.

A later addition to the campus is the curved classroom along Castle Heights Avenue. The stucco-clad building forms a continuous, curved line along Castle Heights Avenue, where it is setback from the sidewalk and lined by a series of concrete planters. Stack-bond brick planters and wall cladding at the north and south ends of the building reiterate the decorative elements throughout the campus. One classroom deep, the building displays a curved recessed corridor with pole supports that open onto a landscaped courtyard. Two single-light, double-hung sashes grouped with a unadorned door and a small filled-in transom mark each classroom.

Buildings and structures comprising the campus core are in good repair. Alterations include the removal and infilling of some original windows, including on the auditorium and 1961 classroom, the replacement of windows with air-conditioning units, and placement of storage sheds in the main courtyard outside of classrooms. The campus otherwise retains sufficient integrity to convey its period of significance.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located on a 37.5-acre site in northwestern San Fernando Valley, Chatsworth Senior High School is bounded by Lemarsh Street on the north, Lurline Avenue on the east, Vintage Street on the south, and De Soto Avenue on the west. The campus core displays the textbook features of the postwar indoor-outdoor school plant, with low (generally one story) classroom wings extending across a large site, and ample outdoor courtyards and landscaping, connected by an extensive system of arcades. Constructed in 1963 in a Mid-Century Modern architectural style, the focal point of the campus is an oval-shaped central lawn, with eight one-story classroom wings radiating outward from the lawn. The central lawn is bisected by a concrete walkway and accented with mature trees and landscaping. An outdoor auditorium, with concrete steps and stage, are located in the lawn's northwestern portion. Anchoring both sides of the lawn are the Administration Building in the southeast portion of the campus and the cafeteria, outdoor dining area, and multipurpose room in the northwest portion. Throughout the core of the campus, landscaped courtyards with walkways, benches, and landscaping line each classroom wing.

The Administration Building consists of a one-story building, rectangular in plan and capped with a low-pitched, front-gabled roof. The building is sheathed in stucco and brick. Windows display a variety of configurations, including fixed lights, transoms, multi-light double-hung sashes, and awning casements. *(See Continuation Sheet)*

B3. Original Use: Institutional (Educational Facility) B4. Present Use: Institutional (Educational Facility)
*B5. **Architectural Style:** Mid-Century Modern
*B6. **Construction History:** (Construction date, alterations, and date of alterations):

According to records on file with the Los Angeles Unified School District, construction was completed on Chatsworth Senior High School in 1963. A majority of the campus's extant buildings, structures, and facilities date from this period. The grounds also include several portable/temporary buildings from the 1940s and 1950s. After construction of the campus (especially during the 1980s and 2000s), additional modular, portable buildings and structures were added, primarily in the campus's southwestern portion. A number of alterations and repairs have taken place over the years, including seismic and systems upgrades, the installation of air-conditioner units, and safety improvements (see *LAUSD Pre-Planning Survey, Chatsworth Senior High School* for list of repairs and improvements carried out since the 1990s). Alterations to original buildings on campus include the infilling of original window openings with air-conditioners or other materials (such as wood paneling); such changes are visible on several classroom wings. The Multipurpose Room and Gymnasium also appear to have had window openings/doors altered or filled in.

Applicable Criteria: NRHP: A and C; CRHR: 1 and 3.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of Chatsworth Senior High School appears eligible as a district under Criteria A/1 as an excellent, intact example of an indoor-outdoor postwar school in the Los Angeles Unified School District. The campus plan and buildings exemplify LAUSD design principles and ideals from the postwar period (as described in the Los Angeles Unified School District Historic Context Statement, 1870 to 1969). The construction of Chatsworth Senior High School in 1963 also reflects the continuing postwar suburban expansion of the San Fernando Valley. The campus is also eligible under Criteria C/3 as an excellent example of the Mid-Century Modern style applied to institutional architecture.

With plans launched in 1961, Chatsworth Senior High School was designed to accommodate overflow student populations from Canoga Park, Cleveland, and Granada Hills high schools. The school was originally designed to accommodate up to 2,500 students. Although the campus shows some signs of alteration, such as the removal of original hardscaping, windows, and doors, the campus core retains integrity of location, design, setting, workmanship, feeling, and association.

***P3a. Description (continued):**

Swaths of wide horizontal louvers provide shade along the façade the Administration Building. The campus also displays a generous setback, with the Administration Building fronted by an expansive lawn and several mature trees.

The eight wings of the campus core, which include the main classroom wings and campus library, are largely identical in plan, configuration, and architectural detailing. Classrooms consist of rectangular, one-story buildings capped with low-pitched, front-gabled roofs. Roof lines terminate in thin gable bargeboards. At the ends of the roof gables, eaves extend and turn downward at a 90-degree angle, providing additional shading for the interior. These wings have double-loaded corridors with classrooms along each side. Generous bands of fixed and casement windows line the classroom wings; in a typical fenestration pattern for postwar LAUSD schools, windows occupy approximately 60 percent of the exterior wall height. Sheathing materials used on classroom wings vary; facing the central lawn, primary and secondary elevation walls are sheathed in smooth stucco, with some scoring detailing. The elevation facing the exterior of the campus displays patterned Roman brick sheathing and a cantilevered shelter over the entrance.

The entrances on both sides of the classroom wings feature similar architectural detailing. Flanking the entrances are thin, square piers, sheathed in off-white brick. Entrances consist of sets of metal doors with fixed and side lights, capped with clerestory windows. On all classroom wings, decorative tile work and horizontal vents accent the apexes of the roof gables. On the interior of the campus, the cantilevered roofs over entrances extend to form covered canopies. The concrete-clad canopies are capped with flat roofs and rest on thin, spider-leg supports.

Beyond the campus core, the school includes a music room, gymnasium, playing fields, and a shop building, as well as other ancillary buildings and structures. Alterations include the replacement of some original hardscaping and windows, and the infilling of original window openings with air-conditioner units. The core of the campus is otherwise intact. The original entrance of the gymnasium also appears to have been altered, with original windows and doors filled in on the eastern portion of the façade.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located in northwest Reseda in the San Fernando Valley, Grover Cleveland Senior High School occupies a 33-acre site bounded by Roscoe Boulevard on the north, the Los Angeles River on the east, Wilbur Avenue on the southeast, Strathern Street on the south, and Vanalden Avenue on the west.

Constructed in 1959/1960 in the Mid-Century Modern style, the campus core displays the textbook features of the postwar indoor-outdoor school plant, with low (generally one story) classroom wings extending across a large site, and with outdoor courtyards and plantings, connected by an extensive network of arcades. The site plan combines the features of a finger-plan and a cluster-plan school, with axial, double-loaded classroom wings grouped around shared courtyard spaces and a large central lawn. The central lawn provides gathering spaces for students and doubles as an outdoor auditorium, with a raised concrete platform along the eastern portion of the lawn. A low wall, characterized by alternating panels of brick cladding and decorative grillwork, fronts the central lawn. The principal entrance to the school is located in the Administration Building, which is located along the northeastern portion of the lot. Classrooms extend outward from the main entrance, in a symmetrical plan linked by arcades. Courtyards and outdoor spaces throughout the campus exhibit mature trees and plantings, built-in concrete benches, planters and hardscaping. *(See Continuation Sheet)*

 *Resource Name or #: Cleveland Senior High School

B1. Historic Name: Grover Cleveland Senior High School
B2. Common Name: Same
B3. Original Use: Institutional (Educational Facility) B4. Present Use: Institutional (Educational Facility)
*B5. **Architectural Style:** Mid-Century Modern
*B6. **Construction History:** (Construction date, alterations, and date of alterations):

Grover Cleveland Senior High School was constructed in 1959–1960 at an estimated cost of $5 million (*Los Angeles Times*, 22 September 1957). A majority of the campus's extant buildings, structures, and facilities date from this period. The grounds also include a number of portable/temporary buildings, most of which were added during the mid-1980s and early 2000s. A number of alterations and repairs have taken place over the years, including seismic and systems upgrades, the installation of air-conditioning units, and safety improvements (see *LAUSD Pre-Planning Survey, Cleveland Senior High School* for list of repairs and improvements carried out since the 1990s). Alterations to original buildings on campus include the infilling of some original window openings with air-conditioner units; such changes are visible on several of the classroom wings.

*B7. **Moved?** ■No ☐Yes ☐Unknown **Date:**_____ **Original Location:**_____

Applicable Criteria: NRHP: A and C; CRHR: 1 and 3.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of Cleveland Senior High School appears eligible as a district under Criteria A/1 as an excellent, intact example of an indoor-outdoor postwar school in the Los Angeles Unified School District. The campus plan and buildings exemplify LAUSD design principles and ideals from the postwar period, specifically as an example of a finger-plan and cluster-plan school (as described in the *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*). The construction of Cleveland Senior High School in 1959 also reflects the continuing postwar suburban expansion of the San Fernando Valley. The campus is also eligible under Criteria C/3 as an excellent example of the Mid-Century Modern style applied to institutional architecture.

With plans launched in 1957, Cleveland Senior High School was designed to accommodate 3,000 students in the rapidly expanding San Fernando Valley. Although the campus shows some signs of alteration, such as the removal of original hardscaping and windows, the campus core retains integrity of location, design, setting, workmanship, feeling, and association.

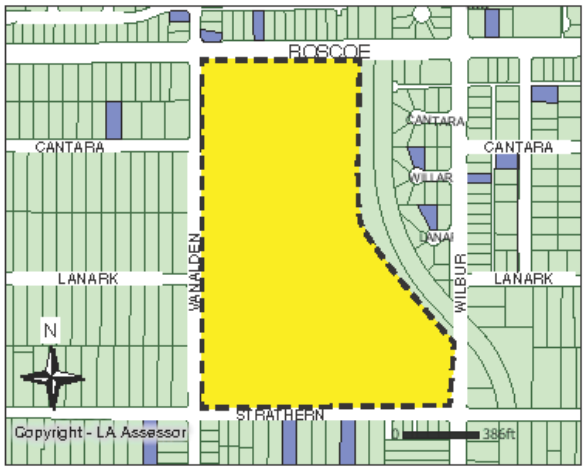
Sketch Map, with north arrow required



***Recorded by** Debi Howell-Ardila and Marilyn Novell ***Date:** 29 January 2014 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The defining feature of the campus is the Administration Building, which is located along the northeastern portion of the lot. The one-story building is rectangular in plan and capped with a very low-pitched, front-gabled roof. Projecting from the north half of the building, a brick-clad wall separates the entrance from an adjacent parking lot. On the primary (east) elevation, wood-framed, full-height windows face the drop-off area for students and look out onto extensive landscaping, brick planters, and mature trees. Decorative detailing is primarily reserved for the entrance, which is centered beneath the gable and displays Roman-patterned brick and a flat-roofed cantilevered shelter. Horizontal vents mark the gable apex. A recessed courtyard with landscaping is located on the south elevation.

The main entrance is centered on the building and consists of paired metal doors, sheltered by a flat-roof arcade that provides a transition from the exterior to the interior of the school. A wall composed of alternating panels of brick and decorative grillwork separates the entrance arcade from an adjacent parking lot. As on the campus interior, the arcade is characterized by a stucco-clad shelter supported on steel, spider-leg supports (along the central lawn, the arcade is supported on thick, brick-clad piers). The structure is frankly expressed, with exposed steel supports exposed beneath the arcades. In a configuration that also characterizes classroom wings throughout the campus, the gable of the Administration Building displays shallow eaves trimmed with thin bargeboards. Along the side of the building, the roof line ends in medium cantilevered eaves sheathed in stucco. (This roof configuration and detailing are echoed in the classroom wings throughout campus.)

Typical classroom wings follow this pattern, with one-story rectangular buildings, capped with low-pitched front-gabled roofs. Along the length of the classrooms, windows are recessed and generally consist of two-over-two, double-hung wood sashes, grouped in rows that mark the location of the classrooms inside. These window groupings mark the classrooms on the interior and occupy approximately 60 percent of the exterior wall height. A variety of fenestration types and patterns are seen throughout campus, including a number of fixed pane, clerestories, and casements. Sheathing materials include stucco, with some decorative scoring, and patterned Roman brick. *(See Continuation Sheet, p. 4)*

***P3a. Description (continued):**

Beyond the campus core, the school includes a library (on the northwestern side of campus), cafeteria and sheltered outdoor dining area, gymnasium and recreational fields (in the southern portion of the lot), as well as a number of facilities and portable buildings/structures, installed primarily in the 1980s. All buildings on campus are one story with the exception of one classroom building, the cafeteria, and gymnasium. Overall, the campus core is in good repair and enhanced by extensive original (and new) landscaping. Visible alterations include some replaced hardscaping and concrete benches in the courtyards, the addition of security grills and air-conditioning units in some of the original window openings.

e. Other Locational Data: APN: # 2355-013-900

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located on an 8-acre site in the Valley Village area of the San Fernando Valley, Colfax Avenue Elementary School is bounded by Colfax Avenue on the east, Huston Street on the south, Morella Avenue on the west, and Addison Street on the north. The campus exhibits the textbook features of a postwar, finger-plan school, with axial, one-story classroom wings, one room deep, extending across the site. Indoor-outdoor integration is created through the generous use of windows, which occupy approximately 80 percent of the wall height along eastern elevations, as well as through the incorporation of courtyards adjacent to classroom wings, outdoor gathering and recreational areas, and mature landscaping and trees.

The core of the campus consists of five rectilinear classroom wings, linked on both sides by continuous arcades. The arcades, which form circulation corridors throughout the main campus, display flat-roofed shelters, terminating in broad, unadorned wood fascia. Wood rafters and planks, visible from beneath the sheltered corridors, form the roof structure. Simple metal poles serve as supports for corridors throughout campus. Classroom wings display the differentiated fenestration patterns and roof eave treatment typical of postwar schools from this era (though ordinarily the orientation of the building would have been north-south, with fewer windows on the sunny, south side, and broad expanses of windows on the north side). In this case, the orientation of classroom wings is east-west, with fewer windows/clerestories on the west, and generous expanses of windows on the east. *(See Continuation Sheet)*

B1. Historic Name: Colfax Avenue Elementary School
B2. Common Name: Same
B3. Original Use: Institutional (Educational Facility) B4. Present Use: Institutional (Educational Facility)
*B5. **Architectural Style:** Mid-Century Modern–influenced
*B6. **Construction History:** (Construction date, alterations, and date of alterations):

According to records on file with the Los Angeles Unified School District, construction on the core of the campus was completed in 1950/1951. In 1955, a two-story auditorium was added in the northeastern corner of the parcel, at Colfax Avenue and Addison Street. The eastern portion of the campus grounds also includes several portable/temporary buildings from the late 1980s and early 1990s. A number of alterations and repairs have taken place over the years, including seismic and systems upgrades, the installation of air-conditioner units, replacement of original hardscaping, new fencing, and various safety improvements (see *LAUSD Pre-Planning Survey, Colfax Avenue Elementary School* for list of repairs and improvements carried out since the 1990s). In addition, alterations to original classroom wings include the infilling of some clerestory casements and entry glazing, as well as replacement of original windows with air-conditioner units; such changes are visible on several of the classroom wings.

*B7. **Moved?** ■No ☐Yes ☐Unknown **Date:**_____ **Original Location:**_____
*B8. **Related Features:** Landscaping/mature trees, hardscaping, benches
B9a. Architect: Unknown b. Builder: Unknown
*B10. **Significance:** **Theme**, Institutional (Educational Facility),
"Educating the Baby Boom: Postwar Expansion and the Functional, Modern School Plant, 1945-1969" **Area** Los Angeles
Period of Significance: 1950-1955 (District) **Property Type:** Institutional (Educational Facility)
Applicable Criteria: CRHR: 1.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of Colfax Avenue Elementary School appears eligible for the California Register of Historical Resources under Criterion 1 as an excellent, intact example of a modern, indoor-outdoor postwar elementary school in Los Angeles. The campus plan and buildings exemplify LAUSD design principles and ideals from the postwar period (as described in *the Los Angeles Unified School District Historic Context Statement, 1870 to 1969*). The construction of Colfax Avenue Elementary School in 1950/1951 also reflects the rapid postwar suburban expansion of the San Fernando Valley.

The campus exhibits some alterations, such as the removal of original hardscaping and windows and the infilling of original clerestory hopper casement windows, which spanned the length of classroom wings on the west elevations. While many of the casements appear to have been painted over or filled in with wood, the original size and configuration of the windows is still visible. Overall, the campus core (which includes the site plan, the relationship of buildings to outdoor spaces, and original plantings) retains integrity of location, design, setting, workmanship, feeling, and association. However, due to alterations, the campus is not eligible for the National Register and is eligible for the California Register only.

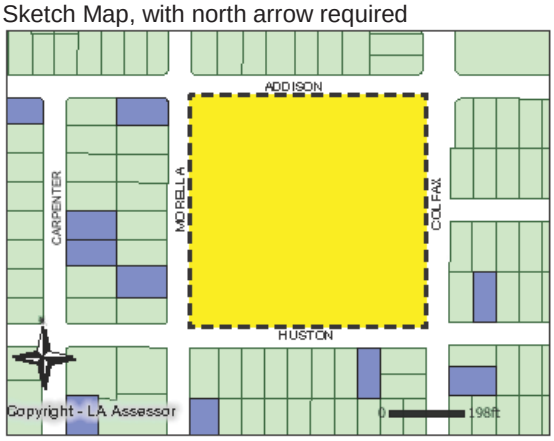
(This space reserved for official comments.)

Sketch Map, with north arrow required



Recorded by Debi Howell-Ardila **Date:** 23 January 2014 ☒ Continuation ☐ Update

***P3a. Description (continued):**

Along the west elevations, classroom windows are sheltered beneath wide cantilevered eaves, with wood beams and planks and broad, unadorned fascia boards. A slightly sloping shed roof caps the classroom buildings, with the slightly higher side located on the east. Clerestory windows appear to have originally spanned the west elevations of the classrooms (they are now filled in). On the east elevation, roof eaves are slightly shallower, also displaying wood beams and fascia boards. The main entrances to classrooms are located on the east elevation and generally consist of original metal doors with single-pane fixed windows. On the east elevations, classrooms are lined with generous expanses of wood-framed windows (which span roughly 80 percent of the wall height, from roof line nearly to the ground). Also on the east elevations of the classrooms are two square built-in mechanical service rooms, which appear to house air-conditioning units. These mechanical service rooms are flush with the roofline and accessed via paired metal doors.

The Administration Building, which serves as the main entrance to the campus, is located on the northeastern portion of the lot, on Addison Street. One story in height, the building is roughly rectangular in shape, with a street-level façade displaying recessed wings and features. The building is capped with a very low-pitched side-gable roof, terminating in shallow eaves with exposed wood beams. Broad, unadorned wood fascia boards terminate the roof line. A projecting, cantilevered shelter marks the entrance to the Administration Building. The entrance shelter has a flat roof with wide eaves and wood fascia boards, which display the school name. The roof line is trimmed with an open wood grid, marking a transitional space from the outside to the inside. The design composition of the façade is simple. The wall plane varies, with portions of the façade featuring wide expanses of wood-framed windows, set flush with the roof eaves, and recessed sheltered with sets of double-hung wood-framed windows, accented with brick planters along the ground. The façade includes a simple ornamental detail of a diamond-patterned metal screen and an angled wood grid serving as a roof support.

The campus exhibits many of the characteristics typical of Mid-Century Modernism. The Administration Building and classroom wings display a horizontal design composition, with very low-pitched or flat roofs and wide, cantilevered overhangs. There is an overall lack of applied ornament; campus buildings consist of simple, geometric volumes, with modular site planning. All classrooms are lined with windows, which appear to be wood-framed, multi-light double-hung sashes. *(See Continuation Sheet, p. 4)*

Colfax Avenue Elementary School, Administration Building, view from inside campus. Southwest perspective. Source: Sapphos Environmental, Inc., 21 January 2014.

Recorded by Debi Howell-Ardila **Date:** 23 January 2014 ☒ Continuation ☐ Update

***P3a. Description (continued):**

Extending southward from the classroom wings and library are an outdoor dining area, capped with a flat roof supported on metal poles, a playground and recreational fields, and other facilities extending through the south portion of the campus. Mature trees appearing to date to the original construction era (early 1950s) are located throughout the campus, in particular in the northern portion. In the northeastern corner of the campus is the two-story auditorium building, constructed in 1955.

Alterations include the infilling of clerestory lights along the west elevations of classrooms, the apparent addition of mechanical sheds along the east elevations, the replacement of original hardscaping , as well as the addition of security gates at the entrance and bars on some of the windows. In addition, since the school's construction, a number of portable structures have been added, primarily in the southeastern portion of campus. The campus is otherwise in good repair, intact, and enhanced through landscaping and mature trees (including a number of old eucalyptus along Addison Street).

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located in Rancho Palos Verdes, south of Los Angeles, Rudecinda Sepulveda Dodson Middle School occupies a 20.7-acre site in a residential neighborhood. The campus is generally bounded by Avenue Aprenda on the north, Avenida Estudiante on the south, Avenida Cuaderno on the east, and South Montereina Drive on the west and south. The school was constructed in 1960, with a number of small relocatable/temporary classroom buildings dating from 1935 through 2002, located on the periphery of campus along the west and north. The site plan displays the features of a postwar finger-plan school, designed in the Mid-Century Modern style. At the core of the campus, the focal point is an outdoor assembly area, courtyard, and lawn, which are framed by a two-story Multipurpose Building and one-story Administration Building. Extending from this student quad is a series of axial, finger-like classroom wings, linked by a sheltered arcade. Sheathed in smooth stucco, classrooms are one-story in height, one room deep, and capped with slightly sloped shed roofs with no overhanging eaves. Along the south elevation of classroom wings, a covered arcade, with a wide, wood plank-and-beam roof and simple pipe supports, provides a sheltered circulation corridor. *(See Continuation Sheet)*

BUILDING, STRUCTURE, AND OBJECT RECORD

***NHRP Status Code** 3CD

 ***Resource Name or #:** Dodson Middle School

B1. Historic Name: Rudecinda Sepulveda Dodson Middle School
B2. Common Name: Dodson Middle School
B3. Original Use: Institutional (Educational Facility) B4. Present Use: Institutional (Educational Facility)
***B5. Architectural Style:** Mid-Century Modern
***B6. Construction History:** (Construction date, alterations, and date of alterations):

According to records on file with the Los Angeles Unified School District, the core of the Dodson Middle School campus was constructed in 1960. Nine small portable/temporary buildings at the east and north sides of campus date from 1935 to 2002. A number of alterations and repairs have taken place over the years, including systems upgrades (the *LAUSD Pre-Planning Survey, Dodson Middle School* lists repairs and improvements performed at the school since the 1990s). Visible alterations include the removal of clerestory lights on some classroom wings and in-filling of windows with air conditioning units; expanses of locker storage added to the side elevations of some classroom wings also appear to be nonoriginal.

***B7. Moved?** ■**No** ☐**Yes** ☐**Unknown** **Date:**_____ **Original Location:**_____

Period of Significance: 1960 (District) **Property Type:** Institutional (Educational Facility)
Applicable Criteria: CRHR: 1.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of Dodson Middle School appears eligible as a historic district for the California Register of Historical Resources under Criterion 1 as an excellent, intact example of a postwar finger-plan high school. The campus plan and buildings exemplify LAUSD design principles and ideals from the postwar period (as described in the *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*).

The core of the campus is an outstanding example of a postwar, Mid-Century Modern school exhibiting a finger-plan campus design. Due to alterations, the campus is not eligible for listing on the National Register. Overall, the campus core retains historic integrity and continues to convey the reasons for its significance.

***P3a. Description (continued):**

Lined with mature trees and plantings, the campus entrance is accessed via an open courtyard paved with patterned red brick. To the east is a one-story, stucco-clad administration building and to the west a one-and-a-half-story library, also clad in stucco. Screening the windows on the library's east side is a prominent band of wide, vertical metal louvers set in a rectangular frame. The administration building is capped with a shed roof and no eaves, with the roof edge trimmed with metal. Connecting the two buildings is an entrance portal capped with a flat roof and shallow overhanging eaves. The portal consists of alternating panels of metal screen gates, trimmed with decorative geometric patterning, and rusticated, faux stone.

The brick pavers continue into an entrance courtyard, where a lawn and elevated concrete stage with semicircular steps form a central gathering area. Clad in stucco, the classroom wings are one-story in height and one room deep, capped with slightly sloped shed roofs. South elevations of the classrooms are lined with sheltered arcades consisting of wood plank and beam ceilings, supported on steel pipe supports. Along most north elevations, the roof terminates in no eaves. Sheltering each window grouping on the north elevations are flat, cantilevered eaves. Windows along the north elevations consist primarily of expansive two-light double-hung sash windows. Windows occupy approximately 60 percent to 70 percent of the wall height, providing natural light and views of courtyards with lawns, foundation plantings, and mature trees.

The buildings and structures comprising the campus core are in good repair, and enhanced with mature landscaping and trees. Alterations include the replacement of some original windows as well as apparent removal of original materials/openings along some classroom exteriors to accommodate the addition of nonoriginal lockers. The campus core is otherwise intact.

e. Other Locational Data: APN: # 2631-019-904

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located on a 6.7-acre site in San Fernando Valley immediately north of the Interstate 5 freeway, Fernangeles Elementary School is bounded by Wicks Street on the northwest, Oneida Avenue on the southwest, a residential neighborhood on the northeast, and Art Street on the southeast. The campus core displays many typical features of a cluster- and finger-plan campus, with classrooms grouped around a central courtyard and axial classroom wings. The focal point of the campus from the exterior is the Administration Building and Assembly Building, which create a distinctive, Mid-Century Modern-style entrance to the school at the southwestern portion of the property. The two buildings form an interior courtyard, which is ringed by a grid-like trellis near the entrance and covered arcade, consisting of a wood-plank roof and wood cross beams, resting on simple pole supports. While the campus classrooms display extensive alterations (mostly in the form of the removal and in-filling of original clerestory windows), the two buildings at the campus entrance remain relatively intact and are highly representative of LAUSD's standardized postwar school, both in terms of style and building plan/features. *(See Continuation Sheet)*

B1. Historic Name: Fernangeles Elementary School
B2. Common Name: Same
B3. Original Use: Institutional (Educational Facility) B4. Present Use: Institutional (Educational Facility)
***B5. Architectural Style:** Mid-Century Modern
***B6. Construction History:** (Construction date, alterations, and date of alterations):

According to records on file with the Los Angeles Unified School District, construction was completed on most of the extant campus of Fernangeles Elementary School in 1954. To accommodate expanding enrollment, over 20 portable buildings have been added to the campus since its construction, with a majority of these located in the northern and eastern portions of the property. As of 2014, portable buildings represent 67 percent of the classroom space on campus, with most added in the 1990s. A number of alterations and repairs have taken place over the years, including systems upgrades and the installation of air-conditioner units (see *LAUSD Pre-Planning Survey, Fernangeles Elementary School* for list of repairs and improvements carried out since the 1990s). The most visible alterations on the exterior include the removal of original windows and in-filling and covering of original window openings with stucco; this includes bands of original clerestory windows lining the west elevations of classroom wings. In other areas, original windows have been replaced with air-conditioning units. The Administration Building and Multipurpose Room also appear to have some in-filled windows.

***B7. Moved?** ■**No** ☐**Yes** ☐**Unknown** **Date:**_____ **Original Location:**_____
***B8. Related Features:** Landscaping/mature trees, hardscaping, benches

"Educating the Baby Boom: Postwar Expansion and the Functional, Modern School Plant, 1945-1969" **Area** Los Angeles
Period of Significance: 1954 (District) **Property Type:** Institutional (Educational Facility)
Applicable Criteria: CRHR: 1.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The grouping of the Fernangeles Elementary School Administration Building, Assembly Building, interior courtyard and landscaping features appears eligible for the California Register of Historical Resources as a district under Criterion 1 in the context of institutional architecture/educational facilities in the Los Angeles Unified School District. The Adminstration Building and Assembly Building form a distinctive, Mid-Century Modern–style entrance to the school and represent a recognizable anchor for the neighboring residential community. The finding of eligibility applies to the identified buildings and features, which, while exhibiting some alterations, continue to convey the reasons for their significance. Subsequent survey of contributing and noncontributing features will be necessary to make a detailed determination regarding all contributors and noncontributors to the historic district within the campus grounds.

Recorded by Debi Howell-Ardila and Marilyn Novell **Date:** 15 January 2014 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The Assembly Building and Administration Building are connected by a brick wall and gate capped by a flat-roofed arcade. This gate serves as the entrance to campus; on the interior, it passes beneath a wood-grid trellis and opens onto a courtyard ringed with covered arcades. The approach to the main entrance also displays a series of tiered brick planters with landscaping. Matching stack-bond brick sheathes the south elevation of the Administration Building. Set at a right angle with the Assembly Building, the Administration Building is rectangular in plan, one story in height, and capped with a flat roof and tapered, shallow eaves. Fenestration consists of various configurations and types, and the building is clad in stucco. In a feature typical for Southern Californian Mid-Century Modern architecture, the roof line extends on the northern portion of the Administration Building in a wood-grid trellis, which encloses a tree.

The Assembly Building is roughly two stories in height, rectangular in plan, and clad in smooth stucco. The main portion of the building is capped with a flat roof with no overhanging eaves. Located on the southwest elevation, the main entrance to the Assembly Building consists of a pair of doors elevated on brick steps. The entrance is flanked by thin, stack-bond brick piers, which project from the wall, and two identical bands of recessed multilight windows.

Alterations include the apparent removal and filling-in of windows in variation locations. It also appears that windows have been covered at the upper level of the southwest elevation of the Assembly Building. The buildings are otherwise relatively intact and in fair repair overall.

***a. County** Los Angeles County
***b. USGS 7.5' Quad** Torrance, CA **Date** 1981 **T** 4S **R** 13W; Unsectioned Area S.B.**B.M.**
c. Address 19302 Leapwood Avenue City Carson Zip 90746
e. Other Locational Data: APN: # 7321-018-900

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Leapwood Avenue Elementary School is located in a residential neighborhood in the city of Carson, south of Los Angeles. The campus occupies a 7.1-acre site bounded by Brenner Drive to the north, Eddington Drive to the east, East Elsmere Drive to the south, and Leapwood Avenue to the west. Constructed in 1962, the campus core consists of a series of two-story classrooms, assembly building, administration building, and two kindergarten buildings, all oriented around a central lawn and open-air lunch pavilion. A network of sheltered corridors and exterior stairways links the buildings throughout the campus core. Three temporary buildings are located at the eastern portion of the campus.

The campus entrance is set back from Leapwood Avenue by a lawn lined with landscaping and a row of mature trees. Defining the principal entrance are the assembly building to the south and the administration building to the north. Linking the two buildings is a sheltered entrance courtyard, capped with a low-pitched roof with a large, square skylight perforating the center. A concrete planter with landscaping is positioned beneath the skylight. The roof of the entry courtyard mirrors treatment of the arcades on the interior of the campus, with the low-pitched, side-gabled roofs and concrete-block piers. *(See Continuation Sheet)*

BUILDING, STRUCTURE, AND OBJECT RECORD

***NHRP Status Code** 3D

 ***Resource Name or #:** Leapwood Avenue Elementary School

B1. Historic Name: Leapwood Avenue Elementary School
B2. Common Name: Same
B3. Original Use: Institutional (Educational Facility) B4. Present Use: Institutional (Educational Facility)
***B5. Architectural Style:** Mid-Century Modern–influenced
***B6. Construction History:** (Construction date, alterations, and date of alterations):

According to records on file with the Los Angeles Unified School District, construction of Leapwood Avenue Elementary School was completed in 1962. The total cost was just over $834,000, which was financed with school bond funds (*Los Angeles Times*, 1961). Three portable/temporary buildings were added at the eastern perimeter of campus in the 1990s. A number of alterations have taken place over the years, including systems upgrades, the removal of windows to accommodate the installation of air-conditioning units, replacement of gutters and downspouts, new fencing, and various other improvements, including the addition of an access ramp at the campus entrance (the *LAUSD Pre-Planning Survey, Leapwood Avenue Elementary School* lists repairs and improvements performed since the 1990s). In addition, security grilles have been added to windows throughout the campus, and storage units have been placed outside some of the classrooms.

***B7. Moved?** ■**No** ☐**Yes** ☐**Unknown** **Date:**_____ **Original Location:**_____

Period of Significance: 1962 (District) **Property Type:** Institutional (Educational Facility)
Applicable Criteria: NRHP: A; CRHR: 1.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The core of the campus of Leapwood Avenue Elementary School appears eligible for the National Register of Historic Places and California Register of Historical Resources under Criteria A/1 as an excellent, intact example of a postwar finger- and cluster-plan school campus in the Los Angeles Unified School District. The campus plan and buildings exemplify LAUSD design principles and ideals (as described in the Los Angeles Unified School District Historic Context Statement, 1870 to 1969). The campus combines one- and two-story massing with a finger- and cluster-plan site design. Overall, the campus core (which includes the site plan, the relationship of buildings to outdoor spaces, and original plantings) retains sufficient integrity to convey its period of significance.

***P3a. Description (continued):**

Most buildings on campus are clad in stucco and capped with low-pitched, gabled roofs with wide overhanging eaves. The two-story classroom building displays a folded-plate overhang, which shelters the corridor below. The floor of the upper corridor is supported on concrete-clad beams. A railing made of metal mesh panels, with decorative geometric detailing, encloses the second-story corridor and walkway. The corridors of the classroom building are free of vertical roof supports, exhibiting a clean, open look. Arcades capped with flat roofs, supported on steel-pipe supports, provide circulation corridors throughout the campus core.

Throughout campus, fenestration consists of a variety of treatments and configurations. Classrooms are lined with grouped, steel-frame windows, with clerestories lining the top and opaque panels along the bottom. At each side of the window bays are classroom entrances. (These are topped with panels that appear to have originally been transom lights.) Connected to the main classroom building via sheltered corridors is a freestanding restroom facility, adjacent to the campus's central courtyard. The facility is capped with a low-pitched, gabled roof with shallow overhanging eaves. Covered corridors line the facility along three sides. On the north elevation, fenestration consists of a band of multi-light, awning-style casements, with a thin rectangular light fixed pane below. A vent pierces the gable. Located south of central courtyard is a freestanding lunch pavilion. Octagonal in form, the roof is supported by a central concrete block pylon, with thin concrete block piers supporting each point of the roof eaves.

In terms of design, the campus exhibits characteristics typical of 1960's Mid-Century Modernism. Although the main classroom building is two stories, its broad overhanging eaves, ample fenestration, and flat roof give the building a strong horizontality. The campus buildings exhibit simple orthogonal massing with minimal ornament and a strong site plan that clusters a variety of building types around a unifying courtyard. With generous use of windows and exterior corridors and access to courtyards and mature landscaped areas, the campus exhibits a high degree of indoor-outdoor integration. The buildings and structures comprising the campus core are in good repair, with minimal alterations.

e. Other Locational Data: APN: # 7439-015-900

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located on a 37.5-acre site in a residential neighborhood in the Harbor City area, Narbonne Senior High School is bounded by 242nd Street on the north, 247th Street on the south, President Avenue on the east, and South Western Avenue on the west. The spiral-shaped site plan exhibits an innovative adaptation of the finger-plan school, with classroom wings radiating outward, in a spoke-like arrangement. At the center of spiral plan is a curved arcade, capped with a flat-roof with a coffered concrete ceiling and oversized steel-pole supports. This arcade system provides circulation corridors throughout the campus core. Located in the center of the circular arcade is a circular central open lawn, with a raised concrete stage and outdoor seating area. Classroom wings are generally rectangular in plan, one story in height, and primarily double-loaded, with two rows of classrooms on each side and a central hallway. The design of the classroom wings emphasizes the horizontal axis through the use of flat roofs ending in wide cantilevered roof eaves. Generous expanses of steel-frame, multi-light windows face onto landscaped courtyards between the buildings. *(See Continuation Sheet)*

BUILDING, STRUCTURE, AND OBJECT RECORD

***NHRP Status Code** 3CD

B1. Historic Name: Nathaniel A. Narbonne Senior High School
B2. Common Name: Same
B3. Original Use: Institutional (Educational Facility) B4. Present Use: Institutional (Educational Facility)
***B5. Architectural Style:** Mid-Century Modern-influenced
***B6. Construction History:** (Construction date, alterations, and date of alterations):

According to records on file with the Los Angeles Unified School District, the core of the Narbonne Senior High School campus was constructed in phases between 1955 and 1960. (Contemporaneous accounts in the *Los Angeles Times* also track the development history of the site; see "Unique School Design Planned for Lomita Site," *Los Angeles Times*, 1954; "Work Started on Large New School Portion," *Los Angeles Times*, 1955). In addition, numerous small portable/relocatable buildings dating from 1950 to 2002 are located throughout the campus. A number of alterations and repairs have taken place over the years, including systems and seismic upgrades (including the apparent incorporation of concrete support beams beneath cantilevered roof eaves on some of the classroom wings) and the removal of windows to accommodate the installation of air-conditioning units (see *LAUSD Pre-Planning Survey, Narbonne High School,* for a list of repairs and improvements performed since the 1990s). Other visible alterations include the filling-in of numerous transom windows over classroom entrances.

***B7. Moved?** ■**No** ☐**Yes** ☐**Unknown** **Date:**_____ **Original Location:**_____

"Educating the Baby Boom: Postwar Expansion and the Functional, Modern School Plant, 1945-1969" **Area** Los Angeles
Period of Significance: 1955-1960 (District) **Property Type:** Institutional (Educational Facility)
Applicable Criteria: CRHR: 1.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of Narbonne Senior High School appears eligible for the California Register of Historical Resources under Criterion 1 as an excellent, intact example of an innovative finger-plan school campus. The spiral campus plan represents a creative interpretation of LAUSD design principles and ideals from the postwar period (as described in the Los Angeles Unified School District Historic Context Statement, 1870 to 1969). Designed and engineered by architects Daniel, Mann, Johnson & Mendenhall, classroom wings and buildings extend outward in a spoke-like pattern from a central hub, a concept that the designers intended would reduce cross-campus travel distances and maximize available lot acreage. The plan was said to be a variation on the older finger plan, which included a long central corridor; in the spiral plan, the corridor is curved around a central open court ("Work Started on Large New School Portion," *Los Angeles Times*, 1955). Overall, the campus core retains sufficient integrity to convey the reasons for its significance. Due to alterations, the historic district does not appear eligible for listing on the National Register.

e. Other Locational Data: APN: # 7552-017-900

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located in San Fernando Valley in the community of Pacoima, the Pacoima Middle School occupies a 23.7-acre site bounded by Laurel Canyon Boulevard on the northeast, Kagel Canyon Street on the southeast, Cranford Avenue on the southwest, and Terra Bella Street on the northwest. Interstate 5 (Golden State Freeway) runs immediately adjacent to Cranford Avenue. The spoke-like site plan and general design and configuration of the classrooms display the typical features of LAUSD's standardized finger-plan school from the postwar era. Classroom buildings extend outward from the main entrance and courtyard, which include the Administration Building and Library at the eastern corner of the campus. Designed in a Mid-Century Modern-influenced style, classroom wings are one-story, single-loaded, stucco-clad rectangular buildings capped with slightly sloping shed rooms. Classroom entrances open off flat-roofed arcades, and a wall of windows defines each classroom on the opposite side. Covered arcades with steel pipe supports and flat roofs provide circulation throughout the campus. A central quad and the open areas between the classroom buildings are planted with lawns and mature trees. Typical of the postwar LAUSD high school campus, a two-story gymnasium is sited outside the campus core, near recreation areas. The auditorium and the cafeteria are also set apart from the classroom buildings on the edge of campus. Alterations include a number of removed and/or in-filled or stuccoed windows, including bands of clerestory lights. In fair repair, the campus core retains sufficient integrity to convey its period of significance.

B9a. Architect: Unknown b. Builder: Unknown
***B10. Significance:** **Theme**, Institutional (Educational Facility),
"Educating the Baby Boom: Postwar Expansion and the Functional, Modern School Plant, 1945-1969" **Area** Los Angeles
Period of Significance: 1955 (District) **Property Type:** Institutional (Educational Facility)
Applicable Criteria: CRHR: 1.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of Pacoima Middle School appears eligible as a historic district for the California Register of Historical Resources under Criterion 1 as an outstanding example of the standardized indoor-outdoor postwar school. Considered in the context of institutional architecture/educational facilities in Los Angeles, the campus plan and buildings exemplify LAUSD design principles and ideals from the period (as described in the *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*). A number of alterations, including many filled-in or stuccoed clerestories, appear to have compromised the integrity of some classroom wings. Because of these alterations, the campus is not eligible for listing on the National Register. Overall, the campus core (which includes the site plan, the relationship of buildings to outdoor spaces, and original plantings) retains sufficient integrity to convey the reasons for its significance. Of historic note was Pacoima Middle School's role as the site of a 1957 plane crash in which seven students were killed and 74 other people injured when a transport plane collided with a jet over the school yard ("7 Killed, 74 Hurt in School Air Crash" 1957).

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located on a 30.8-acre hillside site in Pacific Palisades, Palisades Charter Senior High School is bounded by Sunset Boulevard (north), Temescal Canyon Road (east), El Medio Avenue (west), and Bowdoin Street, which transects the campus. The two halves of campus are linked with pedestrian tunnels running beneath Bowdoin Street. Constructed in 1961 in an expressionist, Mid-Century Modern style, Palisades Charter Senior High School displays the textbook characteristics of a postwar indoor-outdoor high school campus. The heart of the campus consists of an expansive central lawn and gathering area, around which classrooms, an outdoor dining area, and other facilities are oriented. The central lawn includes mature trees, landscaping, benches, and an elevated stage. Classroom wings are generally two stories in height, rectangular in plan, and unified beneath a continuous folded-plate roof. Wall expanses are clad in patterned brick, with exposed stucco piers providing decorative accents. Broad, sheltered walkways fronted by simple metal grills and diagonal structural supports line upper stories of classrooms. Providing circulation corridors throughout campus is a network of sheltered arcades, which consist of steel I-beam roofs resting on simple, steel posts. To the east of the central lawn is an outdoor dining area, sheltered beneath a stylized zig-zag roof resting on simple pipe supports. South of Bowdoin Street, recreational facilities include a track, football stadium, and various recreational facilities and ancillary structures. *(See Continuation Sheet)*

BUILDING, STRUCTURE, AND OBJECT RECORD

*NHRP Status Code 3D

 *Resource Name or #: Palisades Charter Senior High School

B1. Historic Name: Palisades Charter Senior High School
B2. Common Name: Pacific Palisades Senior High School
B3. Original Use: Institutional (Educational Facility) B4. Present Use: Institutional (Educational Facility)
*B5. **Architectural Style:** Mid-Century Modern/Expressionistic
*B6. **Construction History:** (Construction date, alterations, and date of alterations):

According to records on file with the Los Angeles Unified School District, construction was completed on Palisades Charter Senior High School in 1961. A majority of the campus's extant buildings, structures, and facilities date from this period. The grounds also include several portable/temporary buildings, most of which were installed in the 1990s (and located primarily in the northern portion of campus and near the football stadium). A number of minor alterations have taken place over the years, including seismic and systems upgrades, safety and security improvements (see *LAUSD Pre-Planning Survey, Palisades Charter Senior High School* for list of repairs and improvements carried out since the 1990s). Alterations to original buildings on campus include the addition of X-shaped cross-bracing on outdoor walkways, the addition of security grills on some windows, and the in-filling/replacement of some original windows. The campus is otherwise highly intact and in good repair.

*B7. **Moved?** ■No ☐Yes ☐Unknown **Date:**_____ **Original Location:**_____
*B8. **Related Features:** Landscaping/mature trees, hardscaping, benches

Period of Significance: 1961 (District) **Property Type:** Institutional (Educational Facility)
Applicable Criteria: NRHP: A and C; CRHR: 1 and 3.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of Palisades Charter Senior High School appears eligible for the National Register of Historic Places (NRHP) and the California Register of Historical Resources (CRHR) as a district under Criteria A/1 as an excellent, intact example of a postwar indoor-outdoor educational facility in Los Angeles. The campus plan and buildings exemplify the design principles and ideals of the Los Angeles Unified School District from the postwar period (as described in the *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*). The campus core also appears eligible for the NRHP and CRHR as a district under Criteria C/3 as an excellent example of the Mid-Century Modern style (Expressionist subtype) applied to institutional architecture.

***P3a. Description (continued):**

The principal entrance to campus is located on Bowdoin Street, with the main entry flanked by the Administration Building on the west and the Assembly Room/Cafeteria on the east. Arcades extend to the sidewalk and lead into the main campus. Architectural details on these signature buildings are reflected throughout the campus. Features include exterior walls clad in brick and stucco, sheltered beneath cantilevered overhanging eaves. Marking the centered entrance bays are a set of floor-to-ceiling stucco-clad piers. Formed by gaps in the brick cladding, these full-height piers provide visual interest on the exterior walls, which consist of broad expanses of brick sheathing. Continuous bands of metal sunshades line the southern elevation of the Administration Building. A variety of fenestration patterns are seen throughout campus, including steel-framed casements, fixed panes, clerestories, and transoms. Exterior walls of classrooms have built-in lockers. Throughout the core of the campus, landscaped courtyards with walkways, benches, and greenery provide outdoor spaces for gathering.

School facilities include a shop building, outdoor pool, parking areas, portable buildings and structures, added primarily in the 1990s, as well as other ancillary buildings and structures. Alterations include various safety and systems upgrades, the installation of security grills on some windows, and the in-filling of some windows. The core of the campus is otherwise highly intact and in good repair.

***B10. Significance (continued):**

With its "ultra-modern" design and $6-million cost, Palisades Senior High School was said to be the "most expensive and most architecturally distinctive plant in the Los Angeles city schools system" when it was built in 1961 ("Palisades High School Readied for Occupancy," *Los Angeles Times*, 1961). Due to its location—in a constricted valley, nestled in the hillsides of Pacific Palisades—the campus required $1-million of earth-moving activities to prepare the site. Los Angeles firm Adrian Wilson and Associates, responsible for design and engineering specifications, envisioned the school as a series of classroom wings focused on a central quadrangle, in a compact but open campus plan accommodating up to 3,000 students ("Record Earth-Moving Job at School Site Told" 1961). The campus core exhibits few signs of alteration and retains a high degree of integrity of location, design, setting, materials, workmanship, feeling, and association.

e. Other Locational Data: APN: # 6024-022-900

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Parmelee Elementary School is located in a residential area of the Florence-Graham neighborhood in the City of Los Angeles. The campus occupies a 6.3-acre site bounded by East 76th Place to the north, East 77th Place to the south, Parmelee Avenue to the east, and Hooper Avenue to the west. The school consists of three two-story classroom buildings and three two-story utility buildings, in addition to a one-story administration building and two kindergarten buildings, all constructed in 1962. An Assembly Building and associated lunch pavilion were added in 1964, and nine temporary/portable buildings were added between 1960 and 2005 to the east and south of the campus core. All permanent buildings on the campus core are linked by sheltered corridors and wide overhanging eaves.

Parmlee Elementary School exhibits the typical features of a finger- and cluster-plan school. With generous use of windows and exterior corridors and access to courtyards and mature landscaped areas, the campus displays the indoor-outdoor connection typical of this school typology. The use of exposed cast-concrete structural elements and sculptural forms is associated with the style as it transitioned to the 1960s. *(See Continuation Sheet)*

B3. Original Use: Institutional (Educational Facility) B4. Present Use: Institutional (Educational Facility)
*B5. **Architectural Style:** Mid-Century Modern
*B6. **Construction History:** (Construction date, alterations, and date of alterations):

According to records on file with the Los Angeles Unified School District, the core of the Parmelee Elementary School campus was completed in 1962, with the assembly building added in 1964 and the lunch pavilion in 1965. Construction of the school cost more than $1.2 million ("Pupils to Get Preview of New Parmelee School," *Los Angeles Times*, 1962). In 1965, an arson fire destroyed four classrooms ("School Hit by Two-Alarm Fire," *Los Angeles Times*, 1965). Three portable/temporary buildings were added at the eastern perimeter of the campus in the 1990s. A number of alterations and repairs have taken place over the years, including seismic and systems upgrades, the removal of windows to accommodate the installation of air-conditioning units, and various safety improvements (see *LAUSD Pre-Planning Survey, Parmelee Elementary School,* for a list of repairs and improvements performed since the 1990s). In addition, security grilles have been added to windows throughout the campus.

*B7. **Moved?** ■No ☐Yes ☐Unknown **Date:**_____ **Original Location:**_____

Applicable Criteria: CRHR: 1.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of Parmelee Elementary School appears eligible for the California Register of Historical Resources under Criterion 1 as an excellent, intact example of a postwar finger- and cluster-plan elementary school. The campus plan and buildings exemplify LAUSD design principles and ideals from the postwar period (as described in the *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*). The campus core also appears eligible under Criterion 3 as an outstanding, intact example of the Mid-Century Modern style applied to institutional architecture. Due to alterations, the campus is not eligible for listing on the National Register and is eligible for the California Register only. Overall, the campus core (which includes the site plan, the relationship of buildings to outdoor spaces, and original plantings) retains integrity of location, design, setting, workmanship, feeling, and association.

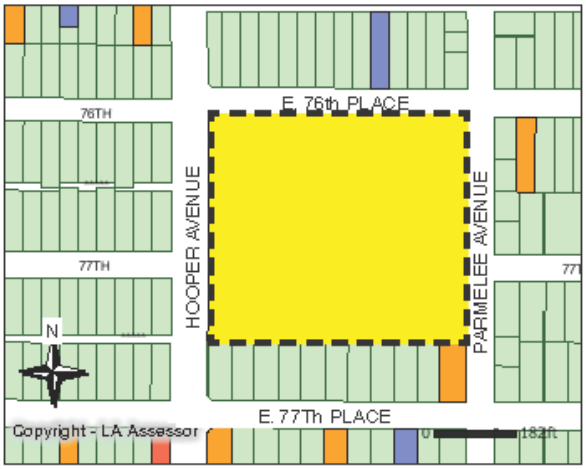
Sketch Map with north arrow required



(This space reserved for official comments.)

***P3a. Description (continued):**

The two-story auditorium and a small two-story classroom/utility building linking two of the classroom wings are clad in red brick over a convex barrel surface. The north and south elevations of the auditorium and the west elevation of the utility building display a curved façade that contrasts with rectilinear overhanging roofs and heavy cast-concrete beams. In plan, orthogonal one-story wings to the south and west of the curvilinear auditorium and a projecting one-story entrance at the east elevation present a complex arrangement of forms. At the main elevation, recessed entry doors are placed asymmetrically beneath a broad overhanging eaves supported by a brick pier.

The roof of the major east-west arcade is constructed of corrugated metal and suspended from the cross-beam of a single row of heavy cast-concrete pilons. Exposed vertical cast-concrete structural elements and exterior stairways contribute to a sturdy-appearing architecture throughout the campus. Inlaid blond brickwork on the north elevation of the auditorium and the west elevation of the administration building and a terra cotta screen on the curved façade of Building 6 contribute Mid-Century-Modern details to the campus. Cladding of the buildings throughout the campus varies between red brick and stucco, with structural concrete marking the locations of the classrooms and the corners of the classroom wings. Three two-story classroom buildings have back-to-back classrooms opening onto exterior corridors with views of courtyards. At the upper level, a metal handrail and mesh balustrade is supported by slender inward-curving metal stanchions. The floor of the upper-level corridor shelters the corridor below.

The lunch pavilion has a tripartite roof; the central section is in the form of a folded “butterfly” roof with the ends rising in a V shape above the two lower roofs at either side to allow circulation of air. The roofs are supported by steel poles. Otherwise, roofs throughout the campus are flat with wide fascia. Windows in the classroom wings are arranged in groups of four three-part fixed panes flanked by a plain metal door with a fixed transom on each side. The upper tier of windows and the transoms appear to be filled in on the administration building.

The campus design exhibits many of the characteristics typical of Mid-Century Modernism in the Expressionistic subtype as applied in the 1960s. Although the classroom buildings are two stories in height, their broad overhanging eaves and flat roof retain a simple, horizontal effect. The campus buildings have simple orthogonal massing with minimal ornament, and the site has a strong site plan that clusters a variety of building types around a unifying courtyard.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Topanga Charter Elementary School is located in the Santa Monica Mountains on the western edge of Los Angeles County on a 12.2-acre site in heavily wooded, rugged terrain. The campus is on a cul-de-sac at the end of Topanga School Road, a semi-private road off Topanga Canyon Boulevard. The acreage downslope from the campus core is geologically unstable, and approximately half of the site remains undeveloped.

Despite its unique mountainous setting and dense vegetation, the campus displays many of the classic features of the postwar indoor-outdoor school, with low, single-loaded classroom wings connected by a system of arcades and exterior corridors. Immersed in this natural setting, the buildings are placed on various levels on terraced hillsides to accommodate the steep topography, with one classroom placed downslope from the Administration Building and the Assembly Building at a higher level shared with the main playground and temporary buildings. Each classroom has access to the outdoors and abundant air and natural light. Constructed in 1953 and 1955, the steel-reinforced red brick buildings display clean, simple lines with steep shed roofs and extensive windows typical of the Mid-Century Modern architectural style of the period. *(See Continuation Sheet)*

BUILDING, STRUCTURE, AND OBJECT RECORD

***NHRP Status Code** 3D

 ***Resource Name or #:** Topanga Charter Elementary School

B1. Historic Name: Topanga Charter Elementary School
B2. Common Name: Topanga Elementary School
B3. Original Use: Institutional (Educational Facility) B4. Present Use: Institutional (Educational Facility)
***B5. Architectural Style:** Mid-Century Modern
***B6. Construction History:** (Construction date, alterations, and date of alterations):

According to records on file with the Los Angeles Unified School District, construction was completed on Topanga Elementary School in 1953 and 1955. With the exception of a lunch shelter built in 1940, all of the campus's buildings, structures, and facilities date from this period. The grounds also include four portable/temporary buildings from the 1990s. A number of alterations and repairs have taken place over the years, including seismic and systems upgrades, the installation of systems on roofs, and safety improvements (see *LAUSD Pre-Planning Survey, Topanga Charter Elementary School,* for a list of repairs and improvements carried out since the 1990s). However, permanent alterations are minimal, apparently limited to the painting over and filling in of clerestory windows on the Assembly Building.

***B7. Moved?** ■**No** ☐**Yes** ☐**Unknown** **Date:**_____ **Original Location:**_____
***B8. Related Features:** None
B9a. Architect: Unknown b. Builder: Unknown
***B10. Significance:** **Theme**, Institutional (Educational Facility),
"Educating the Baby Boom: Postwar Expansion and the Functional, Modern School Plant, 1945-1969" **Area** Los Angeles
Period of Significance: 1953-1955 (District) **Property Type:** Institutional (Educational Facility)
Applicable Criteria: NRHP: A and C; CRHR: 1 and 3.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of Topanga Charter Elementary School appears eligible as a district under Criterion A/1 as an excellent, intact example of a modern, indoor-outdoor postwar school in the Los Angeles Unified School District. The campus plan and buildings exemplify LAUSD design principles and ideals from the postwar period (as described in the *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*). The campus core also appears eligible under Criterion C/3 as an excellent example of the Mid-Century Modern style applied to institutional architecture.

The campus shows minimal signs of alteration, and the campus core retains integrity of location, design, setting, workmanship, feeling, and association.

***P3a. Description (continued):**

Topanga Charter Charter Elementary School (formerly called Topanga Charter Elementary School) was featured in a *Los Angeles Times* photo feature focusing on the open-air architecture of new L.A. schools. In 1961, the financially strapped Topanga Charter Elementary School District, consisting of a single school, voted for annexation to Los Angeles ("More and Better Schools Rising in Southland for New Generations" 1954; "Plans Studied to Add Junior College Districts" 1961; "Topanga Charter School to Be Joined to L.A. Group" 1961).

The two main classroom buildings and the Administration Building were constructed in 1953, with a classroom/sanitary building and an assembly building added in 1955. Steep shed roofs slope down from the back of the building, with a wide overhanging eave sheltering the corridor below. The ceilings of the corridors are composed of diagonal wood planks with doubled cross-beams. The cross-beams are bolted to an additional single beam at an angle of approximately 30 degrees that serves as support for a series of horizontal aluminum louvers that run the length of the corridor.

Built of reinforced masonry with no interior wall cladding, all of the campus buildings display the exposed red brick of the exterior inside the classrooms, further contributing to a melding of indoors and outdoors. On the southeast elevations of the two main classroom buildings and the south elevation of a third classroom building are banks of windows filling approximately 70 percent of the height of the wall. The arrangement of each bank of windows consists of alternately fixed and awning-style steel-framed windows set in vertical wood mullions. Grouped with the banks of windows defining each classroom is a single, unadorned wood door to one side with an outward-opening wood-veneer hopper transom. On the back of each classroom is a bank of seven clerestory windows, each composed of a band of awning-type windows with a fixed window below, providing the classrooms with cross-ventilation and additional natural light.

The shed roof of the Administration Building slopes from a low point at the back up toward the front, where it faces the central courtyard. The roof has a wide, flat wood fascia with no overhanging eaves. At the courtyard side of the building, a flat-roofed corridor supported by plain steel posts sits just above the northwest-facing windows. A series of unadorned wide doors with fixed transoms open onto the corridor, with banks of windows in various groupings. Each set of windows consists of a large awning-type window with a fixed light above and below.

A paved trail leads up a wooded pathway to the upper level of the campus, where the Assembly Building and Lunch Shelter, as well as four temporary buildings and the main playground, are located. The Assembly Building is a double-height block with a side-gabled roof and clerestory windows, and a lower one-story, side-gabled wing that houses offices and auxiliary rooms extends along the south and east elevations. A wide overhanging eave at the set-back entrance on the southeast corner of the lower section is supported by three red-brick piers.

e. Other Locational Data: APN: # 4258-016-900

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

Located on a 24-acre site in west Los Angeles, Daniel Webster Middle School is bounded on the north by Graham Place and, further north, Interstate 10, Sawtelle Boulevard and Interstate 405 (on the east), National Boulevard (on the south), and Butler Avenue (on the west). Constructed in 1954, the campus is located in a residential neighborhood of primarily single-family homes. The site plan is largely symmetrical, with a swath of landscaping, courtyards, and an open lawn forming an axis through the center. Classroom buildings, facilities, and circulation corridors form a ring around this central open space in the campus core. With a Mid-Century Modern–influenced style, the campus is generally low in scale and massing, with a decentralized, outdoor-oriented plan. The core of the campus consists of a series of finger-like classroom wings, radiating outward from a U-shaped, central lawn. An extensive network of sheltered arcades, made of wood plank roofs and beams, resting on simple steel pipe supports and railings, ring the central lawn and provide circulation corridors throughout campus. The central lawn and a landscaped courtyard at the entrance display an abundance of plantings and mature trees. At the southern portion of the central lawn is an elevated concrete stage. *(See Continuation Sheet)*

Applicable Criteria: CRHR: 1.
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity)

The campus core of Webster Middle School appears eligible for the California Register of Historical Resources (CRHR) as a district under Criterion 1 as an excellent, intact example of a postwar indoor-outdoor educational facility in Los Angeles. The campus plan and buildings exemplify the design principles and ideals of the Los Angeles Unified School District from the postwar period (as described in the Los Angeles Unified School District Historic Context Statement, 1870 to 1969). Following a major bond initiative in 1952, plans for the school were announced with fanfare. With a sketch of the school's design, the *Los Angeles Times* thus described plans for the school: "One of the biggest school projects slated for Los Angeles in recent years is the starter of the $130,000,000 school building expansion program… It's the Richland Junior High School to be built on a 27-acre site at the west side of Sawtelle Bouelvard. The new school group of structures, designed to accommodate 1600 students, is estimated to cost $2,445,000" ("Big School Project Launches Program: Will Mark Start of $130,000,000 Expansion Plan," *Los Angeles Times*, 1952). The campus core exhibits some signs of alteration but retains a high degree of integrity of location, design, setting, workmanship, feeling, and association.

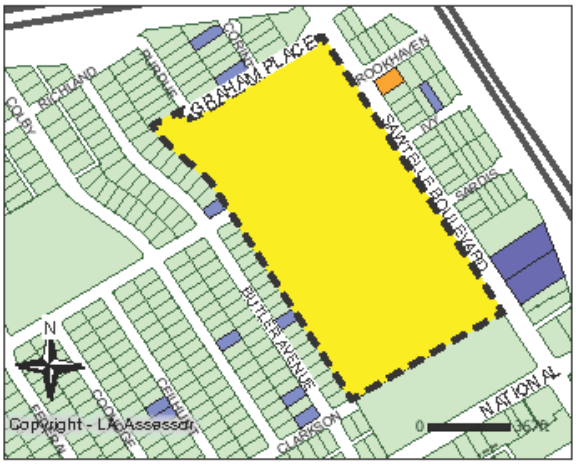
***Date of Evaluation:** 4 February 2014

Sketch Map with north arrow required



(This space reserved for official comments.)

Recorded by Marilyn Novell **Date:** 4 February 2014 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The signature buildings for the campus are located along the north, on Graham Place: these consist of the Auditorium (a two-story, brick and stucco-clad building in the northeast corner of campus), the Health and Counseling Building (a one-story, brick and stucco-clad building, set back from the street), an entrance gate, arcades, and landscaped courtyard, and a Library (one- and one-half stories, sheathed in brick and stucco). A low wall, consisting of alternating panels of brick and decorative metal framing and grillwork, separate the campus from the public right-of-way. This wall is flanked by two gates made of large brick-clad piers, capped with a flat roof and flared cornice (the entrance on the eastern side has been closed off with a security gate).

The Health and Counseling Building and Library have little applied ornament; the focal point of the design is the use of continuous bands of windows, mostly grouped rectangular lights, with both fixed and casement windows.

Classroom buildings are generally one-story high, one-room deep, and rectangular in plan. Most classrooms are capped with a low-pitched shed roof, with thin, unadorned eaves. Along the north elevations, classrooms have continuous bands of windows, which occupy approximately 70 percent of the wall height. The north elevation windows primarily consist of four-over-four wood-framed double-hung sashes. Along south elevations, indirect light is provided through the use of clerestory lights, some of which appear to be operable casement windows. Projecting from the south elevations of classrooms are wide, one-story arcades, with flat roofs, wood plank and beam structure, and simple steel pipe supports.

Throughout the core of the campus, landscaped courtyards with walkways, benches, and landscaping provide outdoor spaces for gathering. Beyond the campus core, school facilities also include a gymnasium and recreational fields, portable buildings and structures, added primarily in the 1990s, as well as other ancillary buildings and structures. Alterations include various safety and systems upgrades, the installation of security grills on some windows, and the infilling of numerous windows. The core of the campus is otherwise intact and in good repair.

I. INTRODUCTION

Behind every building type and feature comprising our built environment—whether commercial or residential buildings, urban plans, or parks—is a long history of practitioners who tried to harness the best ideas and technologies of their day to create quality environments for living and working. In California and throughout the United States, few other areas have generated as much debate and study, however, as environments for learning.

Whether in 1900 or 1960, reform-minded architects and designers, school boards, and educators used similar language to present their ideas for the most "modern" classroom and campus. Through this time, ideas evolved, of course. But the debate has always been shaped by the latest ideas about teaching methods and curricula, childhood development, and optimal environmental conditions for comfort, safety, and efficiency. Fueled by a national network of education-related organizations and publications, this has been a shared, ongoing project throughout the United States since the Progressive Era.

Spanning the early 1870s to 1969, this Historic Context Statement explores over a century of development of the Los Angeles Unified School District (LAUSD), examined in the context of school design in the United States. Since the Progressive Education Movement gained momentum in the early twentieth century, national standardization has been at the heart of school reform, in terms of both classroom curriculum and design. Therefore, the local story is best understood against the backdrop of the national context. This study explores the ways in which LAUSD's schools and campuses reflect a century of national practice, reform, and regional variation.

Project Summary and Scope

With nearly 800 campuses and a geographic span of over 700 square miles, LAUSD is the second largest public school system in the United States. The district's northern portion spans the San Fernando Valley, including Granada Hills, Chatsworth, Reseda, Woodland Hills, Van Nuys, Sylmar, San Fernando, Pacoima, and Sunland. Along the west, the district includes western Los Angeles, Pacific Palisades, Venice, and Westchester. Along the east, LAUSD borders Glendale, Monterey Park, Montebello, Commerce, Downey, and Long Beach. Within the district, extending south from Los Angeles, are the communities of Vernon, Huntington Park, Maywood, Bell, South Gate, Gardena, and Carson. LAUSD's southernmost portion includes San Pedro, Lomita, and Rancho Palos Verdes.

Since its founding in 1872, the district has commissioned, designed, and acquired a remarkable collection of buildings, campuses, and facilities. These properties reflect over a century of social, architectural, and technological advances, as well as ongoing educational and curricular reform. Extant properties range from the wood-framed schoolhouse of the late nineteenth century to superblock campuses displaying Mid-Century Modern architectural styles.

In July 2013, in anticipation of district-wide modernization efforts, LAUSD contracted Sapphos Environmental, Inc. to provide historic resource consulting services to inform master planning efforts and environmental review under the California Environmental Quality Act (CEQA). The scope of work includes updating the LAUSD Historic Context Statement, conducting historic resource surveys of 55 unevaluated campuses, and preparing design and procedural guidelines to help guide facilities management and planning efforts.

Purpose of Historic Context Statements

The *LAUSD Historic Context Statement* follows the National Register of Historic Places (NRHP) Multiple Property Documentation (MPD) format, which provides a consistent framework for evaluating properties sharing similar periods, geographic distribution, and historic themes.[1] The MPD approach defines themes of significance, eligibility standards, and related property types. Properties sharing a theme of significance are then assessed consistently, in comparison with resources that share similar physical characteristics and historical associations.

According to federal, state, and local law, landmark eligibility is not just tied to architectural style but also to significant people, events and patterns of development. Historic context statements facilitate the consistent consideration of these criteria. Three principal components go into context statements: historic themes, geographic areas, and chronological periods. Contexts offer more than a chronological history; they identify the patterns and events that drove development of an area—or, in this case, a building type, educational facilities—and caused the building type to acquire the form and appearance for which it became known.

Because of the high degree of national standardization of school curricula and facilities design, in particular during the postwar period, the *LAUSD Historic Context Statement* provides a framework for evaluating school plants not only in Los Angeles but also in other school districts throughout California and beyond.

Historic Resources and CEQA

The *LAUSD Historic Context Statement* is also designed to facilitate compliance with CEQA, which requires lead agencies to consider the impacts of proposed projects on historic resources. CEQA identifies a historic resource as a property that is listed on—or eligible for listing on—the NRHP, California Register of Historical Resources (CRHR), or local registers.

NRHP-listed properties are automatically included on the CRHR. The criteria for both are similar and described below, with the NRHP letter (A, B, C, and D) followed by the corresponding CRHR number (1, 2, 3, and 4). In keeping with the 2001–2004 Phase 1 and 2 LAUSD historic resources survey, this survey does not include local criteria.[2]

Resources that may be eligible for listing include buildings, sites, structures, objects, and historic districts. To qualify as a historic resource under CEQA, a resource must be significant at the local, state, or national level under one or more of the following criteria:

A/1: For an association with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States (NRHP Criterion A; CRHR Criterion 1);

B/2: For an association with the lives of persons important to local, California, or national history (NRHP Criterion B; CRHR Criterion 2);

C/3: As an embodiment of the distinctive characteristics of a type, period, region, or method of construction, representative of the work of a master or high artistic values (NRHP Criterion C; CRHR Criterion 3); or

D/4: Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation (NRHP Criterion D; CRHR Criterion 4).

Resources eligible for listing in the California Register must retain enough of their historic character or appearance to be "recognizable as historic resources and to convey the reasons for their significance."[3] Some resources that do not retain sufficient integrity for listing in the National Register may still be eligible for the California Register. There is no specific age threshold for California Register eligibility; rather, the regulations specify that enough time must have passed for a property to be evaluated within its historic context.

Focus and Parameters of the LAUSD Historic Context Statement

This Historic Context Statement creates a framework for evaluating Los Angeles's public schools at a critical juncture, as LAUSD begins planning for campus-wide modernization and redevelopment. Emphasized in this study, therefore, was the question of potential eligibility of schools under Criteria A/1, as outstanding examples of LAUSD design ideals and principles. The history and context of Los Angeles public school design and educational architecture are the particular focus of this study. Because the postwar era largely fell outside the scope of the 2002 LAUSD historic context statement, the postwar era is examined in detail.

This study represents not a comprehensive history but rather a first step in better understanding the evolution of school design in the district. Project limitations precluded extensive research on additional aspects of LAUSD's history that might result in eligibility

under Criteria A/1 and Criteria B/2. Campus-specific research was conducted on all pertinent topics for each of the schools surveyed. Subsequent research that establishes additional themes for the district overall would be an excellent area for future study. For example, this study offers a short section on LAUSD and the Civil Rights Movement; in addition, this topic was addressed in the National Register of Historic Places Multiple Property Documentation form for African-Americans in Los Angeles.[4] Given how broad and rich the topic is, however, ample opportunities remain for further research.

In terms of evaluations under Criteria C/3, this study also includes a section on the typical architectural styles of LAUSD schools. This material draws on and expands the 2002 LAUSD Historic Context Statement as well as the guidelines prepared by the City of Los Angeles Office of Historic Resources for historic resource survey work.

Inclusion in this context does not indicate eligibility for listing. Rather, the range of LAUSD campuses, past and present, illustrated or described here serves to define the context, themes of significance, and features of properties that might be found significant upon further study.

Project Team

Debi Howell-Ardila, senior architectural historian with Sapphos Environmental, Inc., served as project manager, principal investigator, and author of the LAUSD Historic Context Statement. Carole Zellie, historic resources manager, provided guidance and input. Marilyn Novell, historic resources coordinator, provided valuable research assistance, and Matthew Adams, senior technical editor, provided editorial expertise. Gwenn Godek of the LAUSD Office of Environmental Health and Safety served as project administrator and manager. The study also benefited from the feedback of LAUSD Facilities Services Divisions staff Mitra Nehorai; Janet Hansen, deputy manager of the City of Los Angeles Office of Historic Resources; and Linda Dishman, executive director, and Adrian Scott Fine, director of advocacy, of the Los Angeles Conservancy.

Report Preparation and Methodology

A wide range of repositories and archives were consulted in the course of this study. Among them were the combined collections of the University of Southern California (USC) libraries; the Los Angeles Public Library, including the Photo Collection, California Index, and Sanborn Fire Insurance Maps; the Getty Research Institute; and the historic *Los Angeles Times* and other digital newspaper collections. The photographic collections of the Getty Research Institute and the USC Digital Archive were also used. A variety of primary source materials were provided by LAUSD.

Research also explored an array of online and print sources. These included historic photographs and aerial images, reports, studies, and treatises on school architecture (ca. 1900 to 1950). Other sources included books, trade publication and newspaper articles, and architectural plans. Scholarly articles as well as specialized studies and chronologies of LAUSD were also consulted.

Also informing this study was a review of past LAUSD historic resource contexts and surveys, including the multiphase survey conducted by Leslie Heumann and Associates and Science Applications International Corporation between 2001 and 2004. In addition, Sapphos Environmental, Inc. reviewed the findings of historic resource surveys conducted through SurveyLA, a citywide, multiyear initiative of the City of Los Angeles Office of Historic Resources. To complement the work of SurveyLA, this Historic Context Statement reflects and draws upon the basic structure of context, themes, and property types used in SurveyLA for institutional architecture in Los Angeles. With a focus on the patterns and trends that shaped LAUSD's history and schools, as well as on-site access to district campuses, this context provides a supplemental framework to help inform and guide evaluations.

In accordance with LAUSD and the City of Los Angeles Office of Historic Resources, once complete, the LAUSD Historic Context Statement and Historic Resources Inventory database will be provided to the Office of Historic Resources. The Historic Resources Inventory being developed by Sapphos Environmental, Inc. is Arc-GIS compatible and can easily be utilized as an Arc-GIS layer in future historic resource surveys carried out for the City of Los Angeles.

Study Contents

This report consists of six sections: Section I, Introduction; Section II, Summary of Themes of Significance; Section III, Historic Context and Background; Section IV, Architectural Character; Section V, Themes of Significance; Section VI, Conclusion and Recommendations; and Section VII, Selected Bibliography. Four distinct eras for LAUSD were identified: Founding Years, 1870s to 1909; Progressive Education Movement: Standardization and Expansion, 1910 to 1933; Era of Reform: Great Depression, Earthquake, and Early Experiments in the Modern, Functional School Plant, 1933 to 1945; and Educating the Baby Boom: Postwar Expansion and the Functional, Modern School Plant, 1946 to 1969.

II. SUMMARY OF THEMES OF SIGNIFICANCE

Themes of significance were prepared for extant school property types. No known examples exist of some important types, notably the monumental, early-twentieth-century big-block school that was once a LAUSD standard. This school type was usually constructed of unreinforced, fire-resistant masonry. However, the material's earthquake vulnerability meant that most of these schools were either destroyed or damaged beyond repair in the 1933 Long Beach earthquake, or were subsequently replaced to comply with new building codes.

In order to facilitate cross-agency coordination, this section draws on relevant material developed by the City of Los Angeles Office of Historic Resources for historic resource evaluations. Information used in SurveyLA to evaluate institutional properties was consulted and adapted where appropriate.

CONTEXT: PUBLIC AND PRIVATE INSTITUTIONAL DEVELOPMENT | EDUCATION

THEME: LAUSD | FOUNDING YEARS, 1875–1894

This theme is embodied in Los Angeles's remaining one- and two-story wood-frame schoolhouses that generally display Late Victorian or vernacular styles. Only three nineteenth-century schoolhouses are known to remain from LAUSD's founding years. Schools constructed during this period display traditional modes of school design, before the Progressive Education Movement and widespread reform changed national construction standards and before increased urbanization necessitated larger-capacity school plants.

THEME: LAUSD | PRE–1933 LONG BEACH EARTHQUAKE SCHOOL PLANTS, 1910–1933

This theme reflects an important period for Los Angeles schools. First, it occurred after the Progressive Education Movement had triggered widespread reform of school design throughout the United States. This resulted in a more differentiated, expansive school plant, with specialized facilities and program-specific buildings and classrooms; this ended the era of the monumental, big-block school. Second, this period occurred before a statewide overhaul of school building codes and practices after the 1933 Long Beach earthquake.

This period also began as the 1920s ushered in a school building boom and period-revival golden age in Southern Californian architecture. The importance placed on public education was expressed through beautifully designed school buildings, often created by the region's leading architects. Campus design became more unified, with elaborate approaches and entrances. The advent of more grand entrances, as well as the incorporation of separate auditoriums, sited for ease of public access, reflected a growing sense that public education was a community affair.

Figure 9. 10th Street Elementary School, Los Angeles (1922). Source: LAUSD.

Replacing the big-block school, with internal corridors, was a generally lower-massed, spread-out campus. In some examples, designers replaced hallways with covered outdoor walkways. Building plans also evolved, as the traditional rectangular plan took on adjacent wings, in H-shaped, T-shaped, or U-shaped buildings that facilitated the creation of sheltered outdoor spaces and patios. Lower massing was particularly common for elementary schools.

Because most pre-1933 schools were substantially remodeled following the Long Beach earthquake, intact examples from this era are relatively rare. It is common to find 1920s-era schools that were remodeled following the earthquake; such schools might exhibit the building plans and configurations typical of the 1920s but with 1930s PWA Moderne and Streamline Moderne detailing.

Source: U.S. Dept. of Agriculture, historicaerials.com (left) and LAUSD Reseda Elementary School Pre-Planning Survey (right).

THEME: LAUSD | POST–1933 LONG BEACH EARTHQUAKE SCHOOLS, 1933–1945

Following the 1933 Long Beach earthquake, state and city legislation regarding school building codes and practices shifted the character of LAUSD schools and campuses. Requirements of the Field Act (1934), such as maintaining one-story massing for elementary schools and no more than two stories for junior and high schools, mirrored reforms already under way. Classroom wings continued to be designed for connections to the outdoors, with L-, H-, U-, and T-shaped buildings accommodating sheltered courtyard and patio spaces. Continuing another trend under way in the 1920s, campuses displayed an increasingly unified site design, with sheltered corridors linking campus buildings.

The advances of the Progressive Education Movement also continued to shift school plant design. Campuses were increasingly differentiated, with administration buildings, auditoriums and gymnasiums, separate classroom, shop, and specialty wings, and cafeterias. Adequate indirect lighting and ventilation were provided through the use of generous bands of windows, including multilight sashes, casements, and clerestories. Stylistically, these buildings were less ornamental than their 1920s period-revival counterparts. An emphasis was placed on traditional Southern Californian styles, such as the Spanish Colonial and Mission Revival. Other styles included Streamline Moderne, Art Deco, and Late Moderne. Much post-earthquake reconstruction was funded through the Public Works Administration (PWA), and many schools exhibit a range of PWA Moderne styles.

Figure 12. Reseda Elementary School, 1936. The spare Mission Revival style was in keeping with the post-Field Act requirement for one-story massing and the post–Long Beach Earthquake trend to design in the "traditional Southern Californian" mode. Source: LAUSD.

THEME: LAUSD | EARLY EXPERIMENTS IN THE MODERN, FUNCTIONALIST SCHOOL, 1933–1945

Although this category shares general characteristics with the preceding theme (Post–1933 Long Beach Earthquake Schools), it is distinguished by an experimental approach to school design that emerged during the Great Depression. Such schools reflect the most avant-garde ideas of the era and the beginning of modern, functionalist school design. Stylistically, the proto-modernist school need not be purely "modern" in the sense of lacking any ornamental detailing. The significant changes reflected a philosophy that went a step further than did the schools of the 1920s in designing for function and integrating school buildings with exterior spaces. During the postwar construction boom, many of the same ideas that characterized these experimental schools became the norm throughout Los Angeles and the United States.

The notable differences between the two themes (or periods) relate to scale, site plan, and functional, child-centered design. The proto-modernist school has an explicitly domestic scale, with low ceilings and a lack of monumental design or massing. These schools generally exhibit a decentralized, nonhierarchical campus, with a strong geometric patterning applied to the site plan. Classroom wings generally consist of one-room-deep rectilinear buildings, lined with adjacent patios and landscaping. Building plans clearly express their function, with (usually) one-story massing, generous expanses of glazing, window sizes and configurations tailored to sun patterns and doors opening directly onto patio areas and courtyards. The preferred typology was the early version of the "finger-plan" school, with rectilinear classroom wings extending from a central axis.

THEME: LAUSD | EDUCATING THE BABY BOOM: THE POSTWAR MODERN FUNCTIONALIST SCHOOL PLANT, 1945–1969

By the 1950s, many of the design ideas considered experimental in the 1930s had matured and become the national standard for schools. Stylistically, schools might include some historicist detailing reflecting popular styles (such as Colonial Revival). But, overall, a unified campus design, building types and plans that accommodated a high degree of indoor-outdoor integration, ample outdoor spaces, and sheltered corridors marked the typology as the mature version of the functionalist school plant. The priority remained the creation of a domestic scale for schools. Campuses displayed a one-story massing for elementary schools, and up to two stories for middle and high schools. Site plans, which often featured a decentralized, pavilion-like layout, lacked the formality and monumentality that characterized earlier eras of school design.

School types expressive of these ideals include the finger-plan (1940s–1950s) and cluster-plan (1950s), and variations on their basic themes. Combinations of these basic forms, which flexed according to available lot size and school enrollment, are also evident.

For LAUSD, the postwar years brought another round of reform as well as unprecedented expansion. Given the postwar classroom shortage, many campuses were constructed quickly, from standardized plans used district-wide, in designs that convey some of these ideas. The most intact and well-designed campuses among these, though, uniquely represent this era of reform and the midcentury modern school.

THEME: LAUSD AND THE CIVIL RIGHTS MOVEMENT, 1954–1980

This theme of significance begins with the filing of the landmark U.S. Supreme Court case *Brown v. The Board of Education, Topeka, Kansas*. Although *Brown v. Board of Education* addressed state laws that did not exist in California—namely, laws allowing for racially segregated public schools—this case and the Civil Rights Movement helped generate and focus attention on related issues in Los Angeles. Issues touched on racial division and cultural identity, equal access, and how to create more balance and diversity in public schools. Signaling the end of this period of significance is the U.S. Supreme Court decision effectively ending mandatory school busing as a solution to racial imbalance in California's public schools. Although this issue continued to form part of the social context for LAUSD, this period captures an era of intense debate and activism on the part of community members, parents, politicians and jurists, as well as teachers and administrators.

A school eligible under this theme might be the site of significant integration initiatives, challenges, or community activities related to the Civil Rights Movement and school integration. This might include initiatives for equal access to schools and/or to employment opportunities in LAUSD schools.

In addition, a school might qualify under this theme for a long-term association with a figure who was significant in the Civil Rights Movement and school integration.

III. HISTORIC CONTEXT AND BACKGROUND

This section provides a broad overview of the trends and patterns of development that shaped the facilities of the Los Angeles Unified School District since its founding in the 1870s. The following eras are covered:

A. Founding Years, 1870s through 1909

B. Progressive Education Movement: Standardization and Expansion, 1910 to 1933

C. Era of Reform: Great Depression, Earthquake, and Early Experiments in the Modern, Functionalist School Plant, 1933 to 1945

D. Educating the Baby Boom: Postwar Expansion and the Modern, Functionalist School Plant, 1945 through 1969

Each era is broken down into three sections: (1) National Context and Developments, exploring the trends in educational methods and curricula, as well as background information on school plant design; (2) Effects on School Buildings and Campuses, exploring how these trends resulted in changes to school plant facilities; and (3) Los Angeles City School Districts: Developments and Context, presenting Los Angeles–specific events that resulted in changes to educational policy and school plant design in Los Angeles and the region as a whole.

Sections also include a variety of historic and current photographs, with national and local examples illustrating the trends, patterns of development, and significant themes in the evolution of school plant design. Until 1961, what became the LAUSD comprised two separate entities: the Los Angeles City School District, covering primary education; and the Los Angeles City High School District. Throughout the Historic Context Statement, references to the district therefore reflect the administrative structure at the time (as the Los Angeles City school districts).

A. FOUNDING YEARS: 1870s THROUGH 1909[5]

Only three schools are known to remain from this early era in the history of the Los Angeles Unified School District: the Old Vernon Avenue School (1876; 450 N. Grand Avenue); the Old Farmdale School (1889; 2839 N. Eastern Avenue, in El Sereno); and, in present-day Santa Monica, the Old Canyon School (1894), now serving as the library for an elementary school. The Old Farmdale School, a Queen Anne Revival–style building attributed to architects Bradbeer and Ferris, was restored and rededicated as a museum in 1976.

Few resources remain, but the late-nineteenth- and early-twentieth-century context helps set the stage for the eras that followed. During the period considered in this context, school architects and educators shared a sense of urgency in describing the importance of the safe, well-designed school. Whether in 1906 or 1966, they used remarkably similar language to describe their era's contributions to designing the ideal "modern American school."

Describing the district's founding years helps illustrate the evolution of school plant design and the challenges faced by successive generations of architects and educators. Well into the postwar period, late-nineteenth-century educational philosophies and facilities remained a point of comparison, an example of what to avoid. In 1965, writing about modern Californian school design, State Department of Education official Charles D. Gibson declared that "big block schools with internal corridors and windowless classrooms are becoming a rarity, with most schools returning to the campus plan concept, using landscaped courts and natural materials to create informal environments."[6]

In fact, by 1965, the battle against the big-block school had long since been won. But the specter of the imposing, factory-like school plant remained the example against which new ideas were measured.

NATIONAL CONTEXT | DEVELOPMENTS

In the early years of American school design, the most typical building type for educational facilities had been the wood-framed, one-room schoolhouse—a basic typology that attempted "to be all things for all children," as well as all things for all teachers and educational methods.[7] Rapid urbanization throughout the United States called for a new approach. Large-scale schools, with classrooms accommodating several dozen pupils, were needed. With the increased demand, public schools started separating children into grades, with separate classrooms for each rather than a single large room housing all grades.

The new building typology tended to be rectangular in plan, with multistory massing, sanitation systems and facilities placed in a basement, and classrooms designed for large groups of students seated in rows. High ceilings accommodated tall windows, which provided the main source of interior illumination. In his study of the history of the American school, R. Thomas Hille observed that "a typical urban school from this era was organized in a single block of one or two floors, with standardized classrooms on each floor organized symmetrically around a central hallway. ... School furniture was already standardized and typically included individual desks organized in rows and bolted to the floor."[8]

This typology fit the curricula and methods of the time. Before the Progressive Education Movement gained momentum throughout the United States, beginning in the 1880s, primary and secondary schools continued to follow traditional methods emphasizing rote memorization and discipline, in an atmosphere that was regimented and authoritarian (rather than flexible and participatory).

In this respect, Los Angeles's early schools were similar to schools around the country. Los Angeles educators and administrators followed the philosophy of Johann Heinrich Pestalozzi (1746–1827), an influential Swiss pedagogue and reformer, and his "emphasis on the disciplinary values of the subjects taught."[9]

Figure 31. Old Farmdale School, opened in 1899. Source: LAUSD.

Figure 32. 79th Street School, South Central Los Angeles (now McKinley Avenue Elementary School), shown in 1925 aerial photo. Source: LAPL Photo Collection.

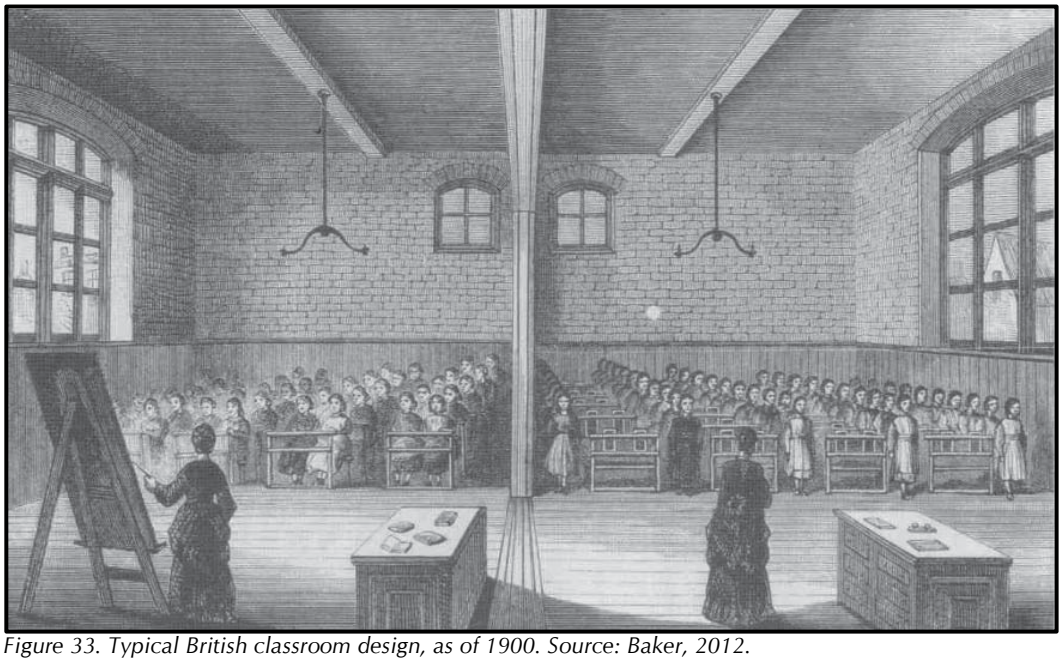

Figure 33. Typical British classroom design, as of 1900. Source: Baker, 2012.

Pestalozzi's thinking mirrored the trends of American education at the time, with an emphasis on memorization and recitation. In Los Angeles schools, "All pupils did the same lessons in the same way. There was no recognition of individual differences."[10] Early school officials emphasized the "disciplinary values of their subjects" and uniform teaching methods for all students and classes.[11]

At this time, the effects of the Progressive Era—the period of social activism and political reform associated with the 1890s through the 1920s—were becoming evident in the public schools. In Los Angeles, when promoting the activities and accomplishments of the schools, district officials began describing a general liberalization of teaching methods and curriculum. The new programs were based less on discipline—including, as one official proudly pointed out, a diminishing reliance on corporal punishment—and were more participatory and tailored to children's nature and needs.

In this way, as the nineteenth century came to a close, "the foundations were laid against regimented instruction," in Los Angeles as elsewhere; "the concept of the pupil as the passive recipient, the sponge soaking up information in preparation of adult life, was abandoned. The broader concept of education as an integral part of the life process, of learning by doing through creative participation, slowly replaced the old accepted theory."[12] In subsequent decades, these evolving philosophies would also shift ideas about school plant design.

EFFECTS ON SCHOOL BUILDINGS AND CAMPUSES

It took time for school plant design to catch up with evolving educational methods. As noted Connecticut school architect Warren Richards Briggs (1850–1933) argued in 1906, "no one will deny [that] the public system of education has been carried in our country during the last half century to a degree of perfection heretofore unknown to any country of the world." Yet, he wrote, "can it be said, however, with equal assurance that our school buildings have kept pace with our educational systems? Are they as complete in their design and construction as the educational system in its plan and equipment?"[13]

Among architects and educators it was widely recognized that reform and standardization were needed. During the late nineteenth century, especially in urban schools, systems for sanitation and safety "were less than ideal and varied considerably from location to location, with little in the way of regulatory oversight."[14] This area was the first to be widely studied and significantly changed during this time, as many resources were devoted to developing and improving health and safety standards and systems.[15]

In Briggs's 1906 book, *Modern American School Buildings*, the architect contributed one of many guides available for standardized schools. The scale of Briggs's schools remained imposing and monumental, with the entire school contained within a single, multistory building. But the new standardized schools offered the best building infrastructure available at the time, with improved heating, ventilation, and sanitation systems, as well as recommendations for the ideal size and configuration for windows, doors, emergency exits, and other features.

In the early twentieth century, the movement to standardize and improve schools gained momentum and took off in earnest. American school architecture "advanced from the low point of complete neglect to a high point of monumentalism. School buildings changed from small, shabby units to large, beautiful edifices, glorifying the people's devotion to education."[16] Education-related organizations and trade publications around the country helped forward the cause. Overall, urban school plants still tended to be imposing "big-block" institutions "designed to house as many students as possible."[17]

But the seed had been planted among a national network of educators and administrators that the classroom should be a comfortable, safe place. Advances in health and hygiene research translated into changes in school plant design. By the end of the nineteenth century, for example, a better understanding of ventilation and disease prevention, in particular for tuberculosis, affected approaches to fenestration and building siting and led to an increasing emphasis on cross-ventilation. Overall, the issue of how to design the most healthy and efficient school remained the topic of intense study and debate, as these ideas continued to evolve through the first quarter of the twentieth century.

LOS ANGELES CITY SCHOOL DISTRICTS | DEVELOPMENTS AND CONTEXT

As elsewhere, the earliest schools in Los Angeles were utilitarian and vernacular in style, constructed to serve newly established communities emerging throughout the region during this time. Early schools were generally wood framed and sheathed, with a simple communal room or two serving all of the school's needs. The late nineteenth century was the era that "introduced the bell tower as a signature element of a school building, perhaps modeling school buildings on early churches."[18] Three late-nineteenth-century school buildings survive in Los Angeles.

As school buildings turned from vernacular, domestic-scaled forms to more monumental statements of civic pride, the model became Beaux-Arts Academic Classicism: "The Classical Revival was especially favored, and impressive porticos of colossal columns

proclaimed the importance attached to education."[19] School buildings came to resemble grand civic buildings, with monumental scale, classical styling, symmetrical design composition, and a rational program. Spanning the nineteenth and twentieth centuries, this era brought improved technologies and industrial-strength materials, allowing buildings to rise to two or three stories in height. Most of these buildings were unreinforced masonry construction—more fireproof, but also more vulnerable to earthquakes—and many of these schools were destroyed or damaged beyond repair by the 1933 Long Beach earthquake.

Formation of the Los Angeles City School Districts

In 1872, little more than two decades after California's entry to the United States, the Los Angeles City School District was founded. The timing of the district's establishment was tied to state legislation requiring, among other things, that each city in California create a board of education. In 1879, amendments to the state constitution gave cities the authority to establish school curricula and methods, and Los Angeles educators set to the task of developing a program of study for their new district. Curricular improvements and reform in Los Angeles, as elsewhere, remained the topics of ongoing debate and refinement throughout the late nineteenth century and into the twentieth.

Figure 38. Central School (1873) at Temple and Broadway Streets in downtown Los Angeles, 1931 photo (demolished). Source: USC Digital Archive.

As the new district was launched, two schools were constructed in the early 1870s. One of these was the wood-framed Central School, located at Temple and Broadway Streets (then Fort Street) in downtown Los Angeles. Constructed in 1873 for $25,000, Central School became home to the county's first high school, which occupied four rooms of the two-story building.

In a 1936 series of articles exploring "landmarks almost forgotten in the march of progress," the *Los Angeles Times* recalled that when the school was constructed, it was "so big and grand that they came from miles around to see it, quite the finest school south of San Francisco. Its lines were classic, and it had a cupola with a clock in it. … The teachers like the wide corridors and generous windows and the transoms over the doors. The earthquake, which did so much damage to newer school buildings, didn't harm the [Central] school in the least."[20] In 1882, Los Angeles's first teaching college, the State Normal School, was constructed downtown near the present-day site of the Los Angeles Public Library.

Early Currents of Change

One shift during this period was a growing sense that public education and schools should be a community affair, with a mission to serve the needs of the population. One example of this is seen in a citywide poll launched in 1900 by the Los Angeles Board of Education. With an extended list of questions, the poll was distributed to all city residents in order to solicit input on district curricula and teaching methods. The stated goal of the board in creating the survey was to initiate "the freest and most open discussion of public school work by all interested."[21] All citizens of Los Angeles were asked to offer opinions on the subjects taught at all grade levels, with a particular amount of attention going toward the newly established kindergarten program, as well as the amount of homework assigned and classroom conditions. After surveys were distributed throughout the city, results were tallied and discussed at a public meeting, in what would ultimately become an ongoing effort to solicit community input.

Similarly, in this era, a range of special-needs schools were established, including facilities for the deaf, blind, physically disabled, or cognitively impaired; special facilities were also provided for children suffering from tuberculosis. In addition, vocational schools with more hands-on, skills-related curricula were established in these early years. The 1904 Polytechnic High School was one example of this initiative.

The Boom of the 1880s and Los Angeles City Schools

In the 1880s, as has been well documented, Los Angeles experienced a significant population boom. One factor fueling this expansion was a speculative land rush, fueled by the completion of the transcontinental railroad and price wars between competing railway lines. The "boom of the 1880s" brought prosperity and development throughout Southern

Figure 39. Los Angeles's first teaching college, State Normal School (1882), downtown Los Angeles, in a circa 1900 photo. In the 1920s, this site became the location for the Los Angeles Public Library. Source: LAPL Photo Collection.

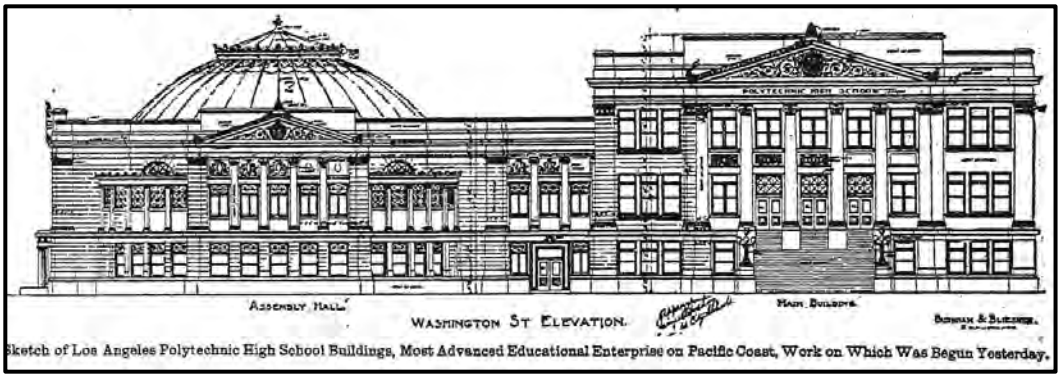

Figure 40. Elevation sketch of Los Angeles Polytechnic High School (1904), by Los Angeles architects Burnham & Bliesser. Source: Los Angeles Times, *July 9, 1904.*

California (though the boom had collapsed by 1890). Between 1880 and 1900, the population of Los Angeles expanded tenfold, growing from 10,000 to more than 100,000. In another decade, these numbers would triple, expanding to nearly 320,000 by 1910, greatly testing the capacity of the fledgling school district and board.

Although the district carried out an extensive building campaign during its first decade, keeping pace with population growth was a constant struggle. The city's schools quickly became overcrowded. As of 1874, the Los Angeles Board of Education recorded a total of six schools with nearly 900 students in the district. Within one decade, by 1884, the number of students within the district had nearly quadrupled, expanding to almost 3,500. By 1890, the Los Angeles Board of Education operated a total of 178 classrooms, which, in the spirit of the times, were classified not in terms of grade level but according to classroom capacity to house students.[22]

Figure 41. Neo-Classical Los Angeles Polytechnic High School (1904), Burnham & Bliesser (demolished). Source: LAPL Photo Collection.

Rapid population growth produced multiple problems for the fledgling Los Angeles Board of Education and school districts. Among them, according to the board's 1884 annual report, were a lack of scholastic uniformity among schools; significant gaps in the educational levels of pupils; crowded classrooms, which necessitated turning students away; and poor financial support. In addition, board president Frank A. Gibson "bemoaned" a governing structure by which state boards of education lacked the authority to issue bonds for school-building campaigns.[23] Within five years of the publication of this annual report, state policy changed. Cities were given the authority to issue bonds for municipal projects and improvements, including school construction. In

Figure 42. Grand, neo-classical high school beyond the city core: San Fernando Union High School (circa 1900), shown in a circa 1900 image (original location unknown). Source: USC Digital Archive.

1899, the City of Los Angeles sold bonds amounting to $200,000, generating proceeds for a turn-of-the-century building campaign for new schools.[24]

The funding provided through the bond measure temporarily helped ease overcrowding. However, the respite was short-lived. The board and district struggled to accommodate ever-expanding enrollment figures. Reflecting on the school year 1892–1893, the superintendent of the Los Angeles Board of Education wrote, "There seems to be no way to get entirely rid of these half-day schools in our rapidly and continuously growing city."[25] In the 1900s, this problem remained an issue, with rapidly increasing enrollment each year. Indeed, overcrowding continued to represent one of the most pressing challenges facing Los Angeles school districts throughout this era (and throughout the twentieth century).

Civic Pride and the Turn-of-the-Century School

On the city periphery, as undeveloped lands slowly gave way to residential and farming communities, utilitarian wood-framed schoolhouses continued to serve the needs of new communities. But in the city core, grand new schools reflected the city's economic and institutional success. In its first few decades, the district added many monumental large-scale schools. Designed by the city's nascent field of architects, the buildings were generally self-contained, multistory buildings exhibiting the palette of styles popular in the era, including late Victorian, Romanesque, Classical Revival, and Beaux-Arts styles. The district's educational facilities and slowly modernizing methods mirrored Los Angeles's transformation from an outpost of 10,000 in 1880 to a metropolis of nearly 320,000 by 1910.[26] Of the district's rapid growth, the *Los Angeles Times* noted in 1898 that

> while it is altogether unnecessary to draw comparisons, it may be said that there is no other city in the United States that can show a proportionately great increase in school population. To say that Los Angeles is proud of her school record and of the large and well-appointed buildings erected for the education of her children is but to repeat that which the parents of the children well know and appreciate. No expense has been spared in providing every modern acquirement.[27]

Figures 43. and 44. A rare remnant of the neo-classical era in school design: San Fernando Middle School, Auditorium, John C. Austin, architect (1916). Source: Heumann & Associates and SAIC for LAUSD.

On January 1, 1898, the *Los Angeles Times* took stock of a decade of expansion of the city's public schools, which by then included 57 facilities with nearly 400 classrooms, estimated in value at $1.25 million. The new, progressive tone was evident in the article. "Play is the business of childhood," the reporter wrote, so the new kindergarten facility is "the playschool for the little ones," with a day filled with varied arts and crafts activities. "By those simple methods, which afford an amusement rather than a task, the mind of the child is set in motion."[28]

The monumentality and beauty of the city's public schools were also celebrated as forwarding the cause of education. The fine buildings, along with updated classroom activities and subjects, would inspire the older pupil to attend school rather than "lie awake all night scheming how he might play hookey all next day." "How different it all is from days gone by," the reporter concluded wistfully.[29]

In this way, for Los Angeles, providing the most modern, up-to-date curricula and facilities became important symbols of the city's growth, economic success, and stature as an urban center worthy of comparison to San Francisco, its well-established rival to the north. With the 1908 groundbreaking for the Los Angeles Aqueduct, and the subsequent wave of land annexations to the city, the area covered by the Los Angeles City School Districts would expand even more in the 1910s and into the 1920s, bringing new challenges for the city's school districts.

B. PROGRESSIVE EDUCATION MOVEMENT: STANDARDIZATION AND EXPANSION, 1910 TO 1933

"One of the important functions of school architecture is to sell education to the public. This is accomplished by making attractive that side of education the public sees most."
—John J. Donovan, *School Architecture: Principles and Practices*, 1921

NATIONAL CONTEXT | DEVELOPMENTS

Throughout the early part of the twentieth century, Progressive Era reform inspired a broad restructuring of educational methods and curricula in the United States. Reform was guided by the theories of educators and philosophers such as John Dewey (1859–1952) of the Columbia University Teachers College. Dissatisfied with authoritarian teaching methods emphasizing passivity and rote learning—and factory-like schools—Dewey and others argued that a student's natural curiosity and real-life needs should shape the classroom environment and curriculum. Dewey and the Progressive Education Movement stressed "learning both abstract concepts and real skills through projects ... children should move freely through classrooms, use materials other than textbooks ... explore the physical world through hands-on projects."[30]

By the 1910s, the Progressive Education Movement had gained momentum. Educators and administrators interested in reform advocated for more hands-on, child-centered methods and curricula. Key to this movement was the notion that the classroom should flex to the needs of each student. Anthropologist William Henry Holmes (1846–1933) thus noted the change in 1912: "Within the past few years we have been coming to measure education by a new standard, the standard of individual achievement. This means that we have begun to differentiate the abilities of children ... not in terms of a general standard, but in terms of what each individual is able to do within the range of his own ability."[31] This new standard brought changes to classroom dynamics, school structures, and to schools themselves.

Figure 46. Los Angeles High School (1917), in 1925 photo. Although the school still occupies this site, at 4600 W. Olympic Boulevard in Central Los Angeles, this building is no longer extant; most of the existing campus core was constructed between 1964 and 1978. Source: LAPL Photo Collection.

Figure 47. Lincoln High School (1918), northeast Los Angeles, shown here in circa 1925 photo. After sustaining significant damage during the 1933 Long Beach Earthquake, the school was reconstructed beginning in 1936/1937. Source: LAPL Photo Collection.

The 1910s in Los Angeles also brought a number of developments that ultimately affected public schools. In addition to the 1913 opening of the Los Angeles Aqueduct, the film industry settled in the Los Angeles area during this time, and its economic strength drew new residents. Also in the early 1910s, the region's first collegiate school of architecture was taking shape at USC. By 1925, USC began conferring the region's only professional degree in architecture.[32] This helped establish the city's architectural profession and culture by training architects and attracting faculty throughout the country.

During this period, the role of the public school also changed, with a greater focus on serving community needs. An expansion of specialized programs and facilities served new groups, including working teenagers and adults. The school plant itself also took on a greater role as a community-gathering place, with auditoriums, outdoor spaces, and public rooms sited and designed to double as gathering areas. Artfully designed and landscaped approaches and entrances to schools represented an acknowledgment of this change and the need for positive relations with the community. Summing up the changes to educational philosophy in the early twentieth century, W. H. Crocker (1861–1937), editor of *The American Architect*, wrote,

> During the past quarter century, each succeeding year has witnessed the broadening development of public education. The relation of the school to the community has radically changed. Systems of education have been evolved as the result of the careful observation of those engaged in pedagogy, and these systems have become broadened and extended. ... With this evolution and extension of educational methods it was logical to assume that the modern schoolhouse would keep pace in its designing and planning.[33]

Figures 48. and 49. Civic pride and the monumental public school. On the left: Historic postcard of Union High School (1910), later Hollywood High, Hollywood. Source: LAPL Photo Collection. On the right: Union High School in a circa 1915 photo. Located at 1521 N. Highland Avenue, the building is extant but significantly altered; it is currently in use as the Hollywood High School Museum. Source: LAPL Photo Collection.

In fact, modern schoolhouse design was initially slower to keep up with the times. But by the early 1920s, the Progressive Education Movement had brought significant changes to two main realms: first, teaching methods and curricula became more hands-on and individualized, less rigid and authoritarian; and second, environments for learning were transformed to facilitate these new ideas. As architectural historian Amy Ogata wrote, "Historians of education are still divided on the real impact of progressivism on American education, but its effect on the *architectural* discourse was profound and enduring."[34]

EFFECT ON SCHOOL BUILDINGS AND CAMPUSES

Educational philosophies and methods—and eventually schools themselves—changed substantially during this period. For their communities, school plants remained important symbols of civic identity and pride. The buildings were increasingly functional, but the wish to create beautiful temples to learning, reflecting the community's aspirations for itself and its youth, remained strong: "There is nothing more impressive or hopeful in American democracy than the devotion of the people to education. … Unconsciously the spirit has been to represent truly this national devotion to education in the architecture of public schools."[35]

As architects and designers began experimenting with the new ideas of this period, school plants became "more flexible and adaptable, and more accommodating of the new methods of teaching."[36] The keys became functionality, adaptability, and programmatic differentiation of buildings and spaces, for interiors and for the site overall. The increasing emphasis on natural light and fresh air brought the incorporation of bays of windows, which would march across the building elevations and span each floor of classroom wings.

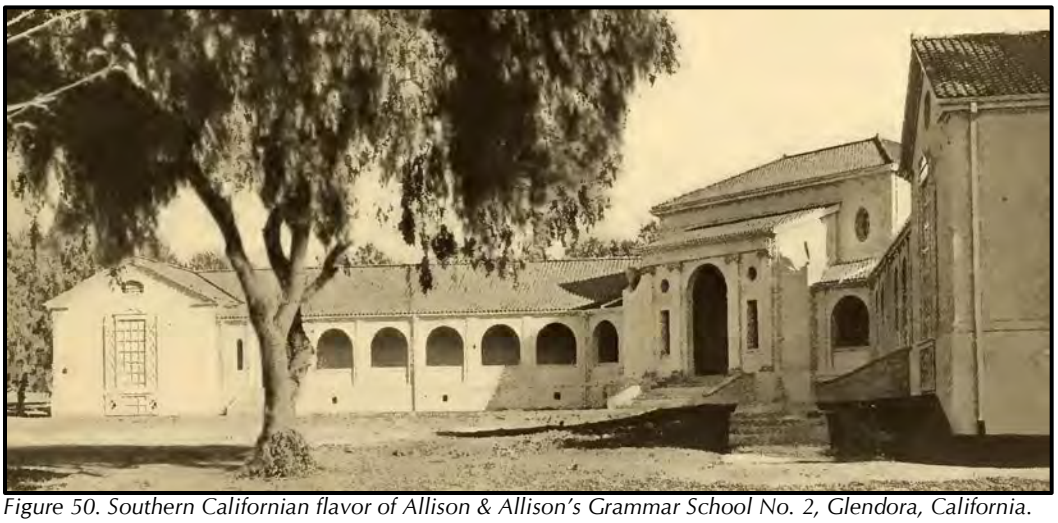

Figure 50. Southern Californian flavor of Allison & Allison's Grammar School No. 2, Glendora, California. Source: Donovan, 1921.

With a growing network of education-related organizations and publications, the push for modernization was a shared project for architects and educators around the United States. One of the era's most defining documents in this respect—one that became a standard office reference for architects—was John J. Donovan's 1921 *School Architecture: Principles and Practices*. Encyclopedic in scope, Donovan's volume offered a richly illustrated guide with the latest ideas in everything from construction to costs, campus planning and landscape development, to each feature of a modern school plant, whether vocational, elementary, junior, or high school. A wealth of drawings and floor plans illustrated the ideas described by Donovan and other school architects in the volume. In 1954, renowned school architect William Wayne Caudill referred to Donovan's book as "the 'bible'": "Any account of the architectural development of school buildings in the United States certainly would not be complete without a statement concerning the writings of Donovan."[37]

John J. Donovan's School Architecture: Principles and Practices

A native of Massachusetts and alumni of the Massachusetts Institute of Technology, John J. Donovan (1876–1949) moved to Oakland, California, in 1911 to supervise the construction of Oakland City Hall. Donovan resided and practiced in Oakland for the rest of his career, completing many high-profile commissions including libraries, schools, and infrastructure projects. Although he lived and practiced in Northern California, Donovan's book became a standard reference throughout the United States.

Shift away from Monumental Scale and Beaux-Arts Classicism

Donovan documented and proposed examples of how to plan for the new school. In terms of scale, the schools were less monumental, less imposing. For primary grades especially, Donovan wrote, "Vainglorious attempts to build monumentally are fatal to both child and adult, for instead of attracting the child's interest they are most likely to repel and make fearful." Rather, he continued, "the architecture of the elementary school should be symbolic of quiet simplicity, expressing in permanent materials much the same charm that the little child has for those who appreciate and love children."[38]

Stylistically as well, from the 1910s through the 1920s, there was a move away from Beaux-Arts Classicism and Classical Revival styles toward the period-eclectic styles commonly used in domestic architecture. The significant innovations and departures from earlier eras were in building plan, layout, and interior program. Using a range of national examples, Donovan's illustrations and narrative showed a new approach to school design that was focused on artful, functional site planning, and coordination of campus buildings.

During this time in Southern California, as in many other parts of the region, architecture was entering a golden age. Responding to the boom in construction, architects and designers were both meeting and fueling demand for the menu of period-eclectic styles popular at the time. In Southern California, architects drew on the heritage of the region, including the Arts and Crafts movement and Spanish Colonial past, to forge a unique architectural identity.

Importance of Indoor-Outdoor Integration

One of the most significant shifts during this era was the emphasis on outdoor spaces in schools. In 1910, in another guide for designing "modern" schoolhouses, architect Alfred D. Hamlin observed that "however perfect the heating and ventilating plant, and however faultless its operation, let it be clearly understood and always remembered that no artificial

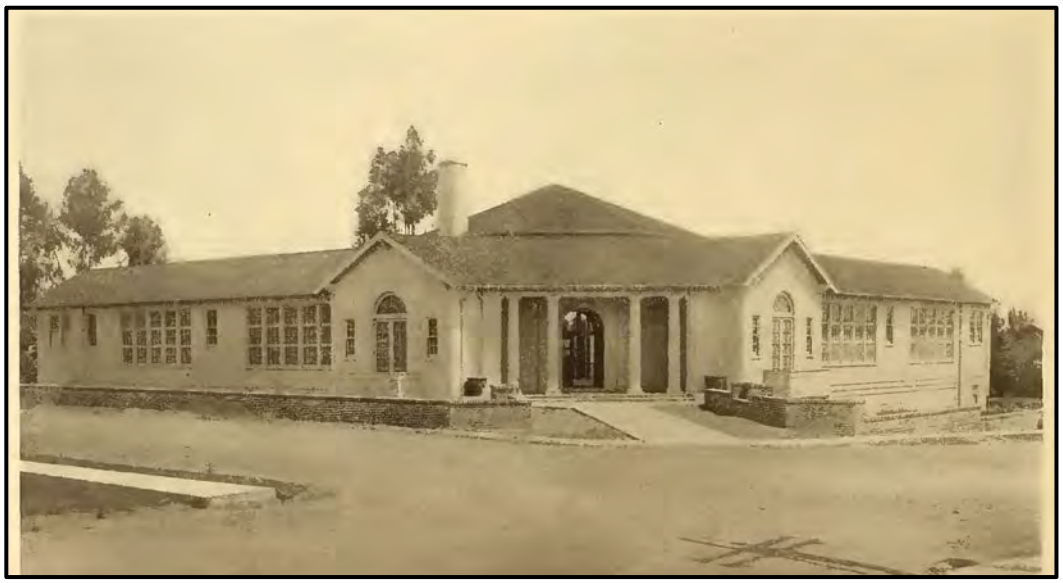

Figure 53. A lack of monumentality, low scale, and U-shaped plan characterize John J. Donovan's Stanford University Elementary School, Palo Alto, California. Source: Donovan, 1921.

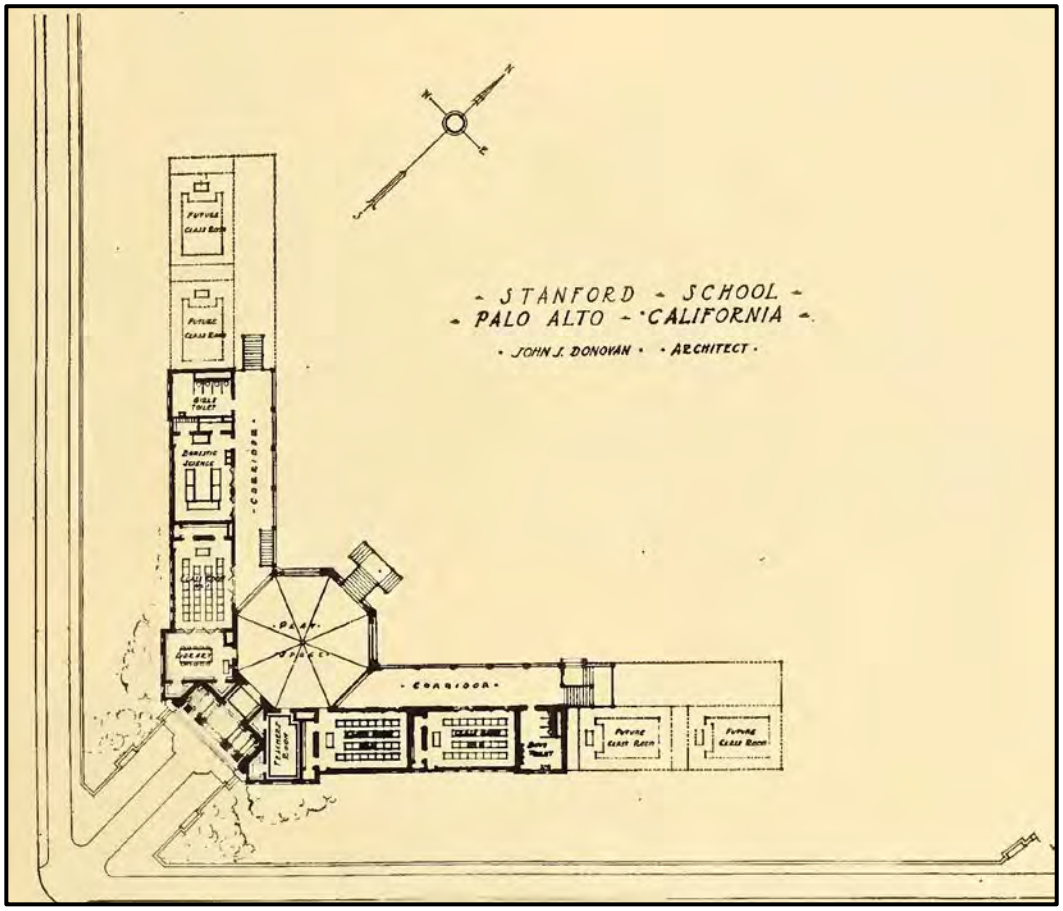

Figure 54. U-shaped campus plan, Stanford University Elementary School, Palo Alto, California. The plan allows for easy indoor-outdoor spaces as well as expansion as the school grows. The locations for four "future class rooms" are sketched in at each end of the plan. Source: Donovan, 1921.

heating and ventilation can ever take the place of fresh outdoor air and sunshine."[39] Rapid urbanization throughout the United States brought increased acknowledgment of the need for and benefits of outdoor activities. During this era, Hille wrote, "Connections to the out-of-doors were important for reasons of health and hygiene, providing access to natural light, fresh air, and exercise, and places for new kinds of learning activities."[40]

These ideas translated into clear changes in school design. Plans became "more open and interconnected, with more transparency and spatial complexity—both inside and out."[41] Schools capturing these ideas in particular abounded in Donovan's book. Simple changes to the traditional big-block school, such as adding adjacent or parallel wings, created numerous possibilities for outdoor spaces. The school branched out and turned in on itself, with building plans including elongated L shapes, T shapes, H shapes, or U shapes, all of which spread out the interior program and opened up possibilities for courtyard spaces and interconnections.

Many of the examples Donovan used to illustrate the latest ideas were drawn from Northern and Southern California. As Donovan said of these Californian schools, "Elevating the building and spreading its area over more ground brought forth many interesting developments in plan of single units and groups of units which of course led to delightful exterior compositions of the modified Romanesque, Spanish, Italian, English, and modern Renaissance. Thus it is that the school architecture of California has found a permanent spot in the sun."[42]

In this respect, California led the way. With its relatively mild climate—not to mention rapidly growing population, need for new schools, and room to grow—Southern California in particular was an early proving ground for the open-air campus and school. (For the region's residential architecture as well, outdoor living came to exemplify the good life and contemporary design in the "Californian" mode, a label that itself was becoming a marker for the latest ideas.)

This was an idea promoted by the Los Angeles school district officials as well. In 1911, M. C. Bettinger, assistant superintendent of the Los Angeles City School District, told the *Los Angeles Times* that in the city's schools "the custom of studying and even reciting out of doors is growing. The children take their books and go out under the trees, sit on the benches or the ground."[43] Bettinger said, "In my district I heartily encourage this custom." He evoked the language of reform when he declared that outdoor study provided a means of "getting away from the factory system of education. … This is especially desirable in the lower grades, when the children grow restless, and look longingly out toward the fields and the hills."[44]

Located in south Los Angeles, limited portions of the original campus are extant. Note series of window bays on each floor, letting in natural light and fresh air. Source: LAPL Photo Collection.

Site Planning and Layout

Unified site planning, the incorporation of landscape architecture, and a spread-out campus became increasingly important in this era. These qualities enhanced patterns of circulation, created more outdoor gathering spaces, and built connections between campus buildings based on use. Spreading out the plan, Donovan wrote, created "many opportunities for pleasing courts, and approaches, at the same time furnishing to the plan spaces for lawns, shrubs, trees."[45]

Because of the acreage requirements for an extended campus plan, though, such schools were often added on the city periphery. Donovan wrote, "The trend of the times is to locate secondary schools in sparsely settled sections of the cities where the buildings may be spread out and their height reduced. This is desirable, as it means better lighting, better natural ventilation, fewer fire hazards."[46] This was the case in Southern California as well, with many examples of open-air campuses located in what were, at the time, the expanding suburbs beyond the city core. This trend in campus planning also made school plant design, planning, and construction an interdisciplinary project, involving teams of architects, landscape designers, and school facilities personnel.

Buildings were designed with generous setbacks, taking into account adjacent traffic to ensure that classrooms were adequately buffered from street noise. More comprehensive site planning also allowed architects and school planners to think ahead to future expansion needs, in terms of both individual buildings that could be expanded and buildings and structures that might be added.

Figure 57. Garfield High School (1925), in 1929 photo. While the campus still occupies this site, very little of the original campus appears intact. Note semicircular driveway and approach to school, generous setback, use of landscaping, and unified campus plan. Expanses of window bays span each elevation. Source: LAPL Photo Collection.

Figure 58. Expansive site plan of Hyde Park Elementary School (1923), south Los Angeles, shown in 1927 aerial photo. The site is still occupied by a school (LAUSD's Young Empowered Scholars Academy), though little of the original campus appears extant. Source: LAPL Photo Collection.

The notion of campus planning was becoming more important as well, especially for upper grades. High schools were expected to be "about double the size" of junior highs, with the "character of the college campus": "The day has arrived when high schools are being planned as groups of buildings, not more than two or three stories high, with the different departments in separate buildings connected by open or inclosed arcades or wings."[47] This trend was best suited to expansive lots, though, rather than dense urban environments. For urban schools without much acreage to work with, multiple stories were often necessary, with classrooms organized in blocks with adjacent wings and double-loaded corridors. Although Donovan conceded that in the "larger cities, due to the cost of land, it may be necessary to have the high school under one roof," his book illustrated how variations in plans and programs still created opportunities for visual interest and outdoor spaces.

In addition to limited acreage, limited funding played a role in determining how far a campus could spread out across a site. Resources were not always available to design and construct an entire campus. In the Los Angeles city school districts in this period, buildings would be added as enrollment increased, usually starting with the administration building—usually the flagship building of the campus—and classroom wings, then eventually including additional classrooms, a cafeteria, and a gymnasium, depending on the grade level of the school. Purposeful site planning also allowed architects to factor into their designs the patterns of the sun and interior illumination, in order to make the best of natural light in the classroom.

According to Donovan, as of 1921, the finer points of building siting, orientation, and interior lighting had been "carefully documented and thoroughly understood by architects at the time."[48] Conventional wisdom held that window areas should equal approximately 40 to 50 percent of the total wall area of the room's longest side. Windows would extend up to 6 inches from the ceiling, to maximize light. In this way, the repetitive bays of windows, on

each floor with classroom space, became one of the trademark features of 1920s schools in particular. Views out the windows were also considered important, because students should have the chance to look out the window and "rest their eyes at times."[49] Ceilings also tended to be high, ranging typically from 12 to 15 feet, "a minimum standard that in many places was regulated by building codes."[50] High ceilings helped with ventilation and accommodated tall windows, which provided the main light source until the advent of fluorescent lighting in the 1930s.

LOS ANGELES CITY SCHOOL DISTRICTS | DEVELOPMENTS AND CONTEXT

Building Program

During this time in Southern California, the boom in construction and resources brought a golden age for period-revival architecture. Buildings reflected a wide palette of styles and stylistic hybrids; schools exhibited the ornamental programs of Romanesque, Italian Renaissance, Spanish Colonial, and Collegiate Gothic Revival styles. In terms of materials, schools during this period were generally, though not always, of masonry construction. Brick was a popular structural and decorative cladding material, as were hollow clay tile and concrete, the latter often manipulated to resemble stone or other materials.

While the 1920s boom provided opportunities to test new ideas, the era remained transitional, with some new construction showing the new lower massing and open site plans recommended by Donovan, and some schools still adopting a more monumental decorative program and higher massing. As elsewhere, the most common building plan types during this period were increasingly rectilinear with perpendicular wings in T, H, and U shapes, providing areas for courtyards and outdoor spaces. Ordinarily the interior would consist of classrooms lining a double-loaded corridor.

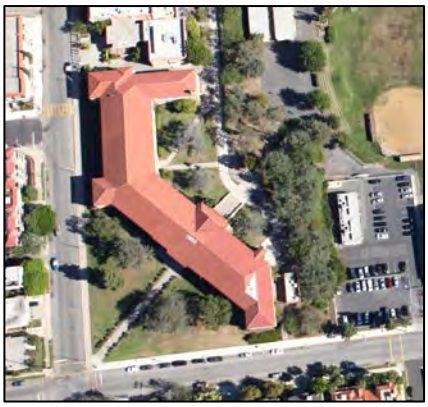
Construction generally unfolded in phases as school enrollment grew. Between the mid-1910s and 1930, elementary schools, for example, were typically constructed in three stages. The first stage usually brought an administrative office, the flagship building of the school, as well as a kindergarten and a nine-classroom wing. The second stage took place once enrollment reached 400, with the addition of more classrooms, facilities for home economics and manual education, and a cafeteria. When enrollment reached 900, the third stage took place, which usually brought a new auditorium, classrooms, or other service rooms as needed. Kindergartens tended to be self-contained and separate from other classes. Gymnasiums, shops, and specialized facilities for home economics, wood shop, and other coursework were also added for junior high and high schools.

During this era, newspapers of the day reflected much civic pride in—and promotion of—the city's new public schools. In 1914, when Los Angeles's public schools were singled out as "models for the rest of the state" (in comparison with San Francisco's schools, which were declared substandard), the bragging rights this conferred made news in the *Los Angeles Times*:

> A city is known by the schools it keeps and nobody can ignore the fact that Los Angeles owes no small measure of her astonishing growth, her rapidly increasingly wealth and commercial stranding, her desirable American population, to the acknowledged high efficiency of her public school system.[51]

Keeping up with ever-expanding enrollment figures remained a struggle, however. By the end of the 1910s, high enrollment and little funding for new facilities had again led to overcrowded classrooms and the need for half-day sessions. In April 1919, the Los Angeles Board of Education took temporary measures, building 30 bungalows to relieve the overcrowding, in advance of bond funding for a wider building campaign.



Figures 63 and 64. Spread-out plan and Renaissance Revival style of University High School (1924), west Los Angeles. Source: LAUSD University High School Pre-Planning Survey, 2011.

The 1920s brought dramatic expansion in school construction. By 1927, $60 million in bond issues had been sold for the construction of new schools, as well as additions to existing facilities. More than 200 permanent facilities were constructed in 6 years. As a reporter for the *Los Angeles Times* wrote in 1927,

> Los Angeles is in many respects such a super city that it is difficult to write about her without using superlatives. In speaking of her public schools, however, one may be pardoned—especially an outsider—for according them high praise, since they are the product of teachers and officers who are laboring unselfishly for the public good.[52]

Alfred S. Nibecker Jr. and the District Architecture and Building Department

Guiding the Los Angeles school districts through rapid expansion in 1920s, disaster and depression during the 1930s, and the great postwar boom through the mid-1950s was district architect and business manager Alfred S. Nibecker, Jr. In the 1920s, Nibecker began private practice in Los Angeles; he joined the Los Angeles City Board of Education as an architect in 1926, where he remained until his retirement in 1955. In his three-decade career with the school district, Nibecker oversaw the construction of, and contributed designs to, hundreds of school plant projects. Many commissions were completed by the district's in-house staff, but many others were handled by a range of the region's best architects and builders, with an increasing number of firms specializing in school design. In addition to his work with the Los Angeles City school districts, Nibecker was a fellow of the American Institute of Architects and served on the National Committee on School House Construction, the National Advisory Council on School Building Problems, run under the auspices of the U.S. Department of the Interior, Office of Education. In 1955, Nibecker was made an honorary member of the Structural Engineers Association of Southern California, the association's highest award.

Building Code Reform

New building codes attempted to keep pace with the construction boom and ensure safety. In 1914, with the focus still on fire hazards, Los Angeles voters approved a law requiring the replacement of wood-framed schools with masonry structures. Of course, the vulnerability

of masonry construction to earthquakes was not yet fully known. Therefore, most schools constructed in Los Angeles post-1914 utilized masonry construction, with brick construction used for a majority of the new schools.

In 1925, in response to the devastating Santa Barbara earthquake, the state adopted new building codes aimed at strengthening seismic safety. In 1927, the City of Los Angeles followed suit and revised its local building ordinance and added supplemental steps and requirements to ensure the structural stability of schools. Improvements included fire-resistant corridors, stairs, and exterior walls and reinforced concrete beams within floors and roofs. When the March 1933 Long Beach earthquake hit, schools built after 1927, under the new requirements, proved more resilient than those constructed before the laws took effect.

As before, the new schools of the district generated much civic pride, with newspapers of the day praising new campuses for their beauty and modern facilities. As *Los Angeles Times* reporter Neeta Marquis wrote in 1928, "Let us of Los Angeles who often grow depressed at times over the inadequacies of our city administration in other departments take heart of grace from the efficiency and stability of the factory which is turned out our citizens of tomorrow, our public schools."[53]

The Roaring '20s and Enrollment Expansion

The basic shift in philosophy coincided with the continuing, remarkable expansion of Los Angeles, not only in terms of population growth but also geographical range. In anticipation of the ample water supply promised by the Los Angeles Aqueduct, constructed between 1908 and 1913, Los Angeles experienced rapid population and land growth through annexation of neighboring cities. As of 1910, the population of the City of Los Angeles stood at 319,000, and the area served by the Los Angeles City School District spanned more than 85 square miles, with more than 46,500 students enrolled. Within just 6 years, by 1916, enrollment in the Los Angeles City School District had nearly doubled to more than 78,000 students, and the expanse of the district quadrupled, growing from 85 square miles

to approximately 400.[54] Some areas annexed by the Los Angeles City School District already had schools to serve their own needs; more often, though, new schools were required. Between 1911 and 1915, a total of 22 schools had been annexed to the district, with an additional 31 elementary and high school buildings under construction.[55]

During the boom of the 1920s, Los Angeles film and aeronautics industries remained strong draws for new settlers. In one decade, between 1920 and 1930, Los Angeles's population doubled, climbing to 1.2 million, making the city the fifth largest in the United States. At a high point during the 1920s, new residential subdivisions were being established at the rate of 40 per week in the City of Los Angeles. By 1930, Los Angeles spanned 441 square miles.[56] This represented a twelvefold expansion in 30 years.

Concurrently, Los Angeles's public school enrollment grew nineteenfold during the 1920s. The construction boom in schools helped accommodate the enrollment increase, but the need for new schools and classrooms remained a constant issue. By 1933, the Los Angeles City School District included a student population of 300,000, attending 384 schools—293 of them elementary schools; 22 junior high schools; 32 senior high schools; and continuation, trade, and junior college facilities rounding out the remainder.[57]

Curriculum Shifts

The Los Angeles City school districts followed the curriculum modernization and reform trends seen in the rest of the United States. By the early 1910s, the city's public schools had made a decisive move "away from the uniformity that was so much prized at the turn of the century. Diversification now marked the schools and the officials made that fact known."[58]

The heart of reform was designing curricula that flexed according to the students—their abilities, needs, psychological well-being, and their inherent curiosity and love of learning. For example, the new course of study in elementary schools was based on the idea that

Figure 69. Central Junior High School, as of circa 1925. Located in downtown Los Angeles on Hill Street, this school closed in 1946. Source: LAPL Photo Collection.

"individuals should progress in accordance with their individual capacities" and was organized in "large units with the activity approach emphasized throughout."[59]

In 1911, Los Angeles established a new intermediate level for schools, launching the third junior high school system in the United States, behind Columbus, Ohio, and Berkeley, California. Vocational schools and junior colleges (as an extension of the high school curriculum) were also greatly expanded in this period.

Social Responsiveness and a Broadened Mission for Public Schools

In Los Angeles and elsewhere, this era saw a broadened role for public schools as community centers. Public education became more inclusive and socially responsive to underserved populations. During the first quarter of the twentieth century, a range of special-needs schools were established, including special facilities for the deaf, blind, physically disabled, or cognitively impaired; special facilities were also provided for children suffering from tuberculosis. National trends and legislation prompted the establishment of evening high schools, for adults seeking to broaden or finish their education; part-time high schools, to help meet the new requirement for working children between the ages of 14 and 18 to attend school part time; and vocational schools. Cafeterias and nurseries became part of schools—the first for nourishment, and the second to ensure that older children tasked with caring for younger siblings could attend school while their parents worked. Schools also offered assimilation and language programs for the city's significant immigrant population.

The first evening high school opened in 1907 in Los Angeles at the Polytechnic High School. Offered initially as a means for working adults to obtain a high school education or diploma, night schools blossomed in popularity; and by the post–World War I period, they served as informal community centers, with offerings expanding to include a variety of course offerings.

Legislative Reform and Public Education

The two other major changes to Los Angeles's public schools were prompted by legislation at the state and federal level. Beginning in the early 1910s, legislation began emerging throughout the United States making part-time school compulsory for teenagers. The first such law was introduced in Wisconsin in 1911, with California following in 1919.

In 1913, a presidential commission was formed to assess the need for vocational training throughout the United States. One of the results of this commission was the 1917 Smith-Hughes Act, which, among other things, initiated new compulsory education requirements for school-aged children and provided federal funding for vocational schools and coursework, in particular in agriculture. In Los Angeles, specialized vocational training had been available as early as 1905, with Polytechnic High School. Throughout the early part of the twentieth century, technical schools offered specialized coursework, such as commercial courses at Polytechnic, industrial and household arts at the Manual Arts High Schools, and agriculture at Gardena High School.[60]

The state law that emerged from the Smith-Hughes Act required that all working children between the ages of 14 and 18 attend a minimum of 144 hours of class instruction per year.[61] In 1920, in response, Los Angeles public schools launched a program in part-time education, making use of "a large number of rented locations."[62] In 1926, Los Angeles's largest part-time high school—aptly named the Part-Time High School—became Metropolitan High School (located at 234 W. Venice Boulevard in Los Angeles, the campus became the Los Angeles Metropolitan Junior College in 1950).

Figure 70. Frank Wiggins Trade School, circa 1925. Located in downtown Los Angeles on Olive Street, this school closed in 1951. Source: USC Digital Archive.

The Frank Wiggins Trade School, the first of its kind in the district, was established in 1925 on Grand Avenue in downtown Los Angeles (though it was relocated in 1927 to South Olive Street). Named for the longtime secretary of the Los Angeles Chamber of Commerce, the Frank Wiggins Trade School provided a course of adult education in specific vocations and placement of students in the

occupations for which they had been trained. Among its other curricula, the school offered the first professional culinary training program in the nation, an offshoot of the home economics program. The trade school evolved into the Los Angeles Trade-Technical College, still operational today as part of the nine campus, 882-square-mile Los Angeles Community College District.

The establishment of the District's first junior college in 1929 was represented as the crowning accomplishment of the administration then in office. The school district purchased the Vermont Avenue campus of the former State Normal School when it relocated to Westwood and established the Los Angeles Junior College, which was an immediate success. The curriculum constituted the freshman and sophomore years of college and included semiprofessional courses for students interested in a 2-year education, as well as certificate work for those planning to qualify for subsequent admission to a university.

Together with trade schools, junior colleges filled an important social need by supplying focused adult education and career training during the Depression years, and enrollment steadily increased as the war approached.

C. ERA OF REFORM: GREAT DEPRESSION, EARTHQUAKE, AND EARLY EXPERIMENTS IN THE FUNCTIONALIST SCHOOL, 1933 TO 1945

"The old school was primarily designed to impress the adult and the new school primarily designed to impress and provide comfort to the pupil."
—William Wayne Caudill, *Better Design for Schools*, 1954

NATIONAL CONTEXT | DEVELOPMENTS

In the simple epigraph above, architect William Wayne Caudill (1914–1983) captured the evolving ideas about twentieth-century school design. Traditional schools had often been built as self-contained, monumental blocks, in Classical Revival and Beaux Arts–inspired styles designed to impart prestige. In the first quarter of the twentieth century, reformers started moving away from the multistory, block-style school in favor of a more flexible, program-differentiated school plant.

Figure 72. Indoor-outdoor classroom, Corona Avenue Elementary School, Richard Neutra, 1935. Extant in Bell, California, south of Los Angeles. Source: USC Digital Archive.

The reform movement was not concerned with bringing modernist style, per se, to school plant design. The real push was for a more "functional" school. If the function of a school was educating children—and if educational methods and curricula had improved and evolved—then school plant design had to evolve as well. Building plans, campuses, and interiors were increasingly designed to be more child-centered and flexible: "The broadening curriculum, the more active methods of learning, and emphasis upon doing and working with things rather than merely studying books—all have focused attention upon the importance of the physical environment."[63]

Continuing the trend begun in the 1920s, integration of classrooms with the outdoors became one key factor for school plant improvement. The early-twentieth-century recognition of the importance of children's playgrounds and an increasing emphasis on the benefits of outdoor living fueled this movement. Wrote Elizabeth Mock in 1943, "If we grant the importance of encouraging the child's awareness of nature along with his sense of freedom, we can then understand the present tendency towards ground-level classrooms, each with its own door to the outside and its adjacent outdoor class area."[64]

Numerous proposals were forwarded for including more indoor-outdoor connections for classrooms and campuses, whether through the use of patios, courtyards, or playing fields. So central was the concern for outdoor classrooms and recreation that, by the 1930s, the trend became known as the "open-air school" movement, with its emphasis on "air, light, outdoor learning, and easy circulation through the school buildings."[65] Site planning was also carried out with an eye toward environmental factors, such as sun patterns, interior cross-lighting, and ventilation. With its mild climate and room to grow, Southern California pioneered some of the nation's best and earliest examples of open-air schools in the 1930s.[66]

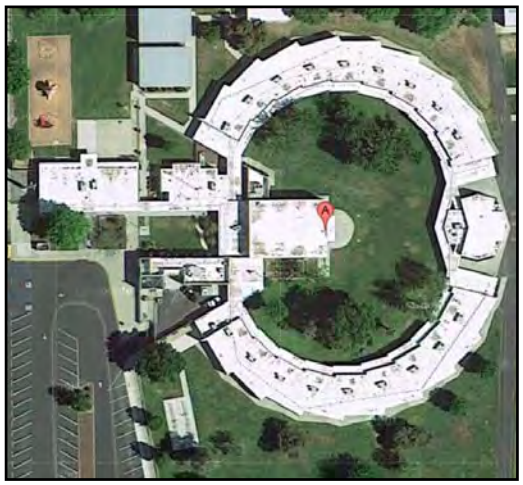

Figure 73. Richard J. Neutra School, Lemoore, California (Central Valley), 1960, based on Neutra's 1928 design. Source: Google Maps, 2013.

As in the 1920s, schools continued to play an increasingly important role as gathering places for the community. This was reflected in campus site planning, with auditoriums sited for public accessibility and separate entrances allowing for school-time access by the public that would not interrupt studies. Architects, designers, and school staff actively sought ways to adapt schools to this expanded function within the community, and innovations in this regard were amply noted in the education- and architecture-related trade magazines.

In the 1930s, an expanding field of research in the building sciences aided those tasked with designing comfortable classrooms for children. Controlling, designing for, and regulating the environmental conditions of classrooms became the topic of numerous studies, including in the science of proper lighting, ventilation, and safety systems (the field of acoustics came into play in the postwar period).

A new focus on defining and better understanding building typologies and their specific needs also grew out of this era, with the idea of creating better environments and lowering costs through standardization.[67]

Figure 75. Thomas Jefferson High School, Stiles O. Clements, 1936 image. Extant in south Los Angeles, on East 41st Street. Source: LAPL Photo Collection.

By the mid-1930s, the advent of the New Deal and the PWA (later the Works Progress Administration) sponsored a generation of new building. Throughout the United States, PWA funding helped buoy school construction during the Great Depression, with approximately 70 percent of all new school construction in the 1930s funded through the agency.[68] In Southern California, following the 1933 Long Beach earthquake and the urgent need for new facilities (described in detail below), PWA funding for school construction and reconstruction totaled over $13 million, a sum accounting for 62 percent of the spending overall.[69]

Throughout the United States, PWA buildings, including dozens of schools, became known for their distinctive Streamline Moderne styling. In Southern California, Streamline Moderne ideas were also applied to historic-eclectic styles that had been popular in the 1920s, creating new stylistic hybrids.

EFFECTS ON SCHOOL BUILDINGS AND CAMPUSES

The Functionalist, Modern Movement in School Design

By the 1930s, progressive educational reform had brought major changes: teaching methods and materials were becoming more hands-on, practical, and engaged; and the environments for learning were themselves transformed to facilitate the new ideas. As architectural historian Amy Ogata wrote, "Historians of education are still divided on the real impact of progressivism on American education, but its effect on the architectural discourse was profound and enduring."[70]

Compared with school buildings and campuses just a decade before, schools were increasingly nonmonumental in their scale, site plan, and design. One-story buildings were increasingly used for all grade levels, in particular for elementary schools. In a companion piece to the Museum of Modern Art exhibit *Modern Architecture for the Modern School*, Elizabeth Mock wrote in 1943 that "if the architect is guided primarily by his desire to create a building for children, the result will almost certainly be a one-story school, built as close to the ground as possible. This is the easiest way to open each room to the outside, and the easiest way to attain suitable scale."[71]

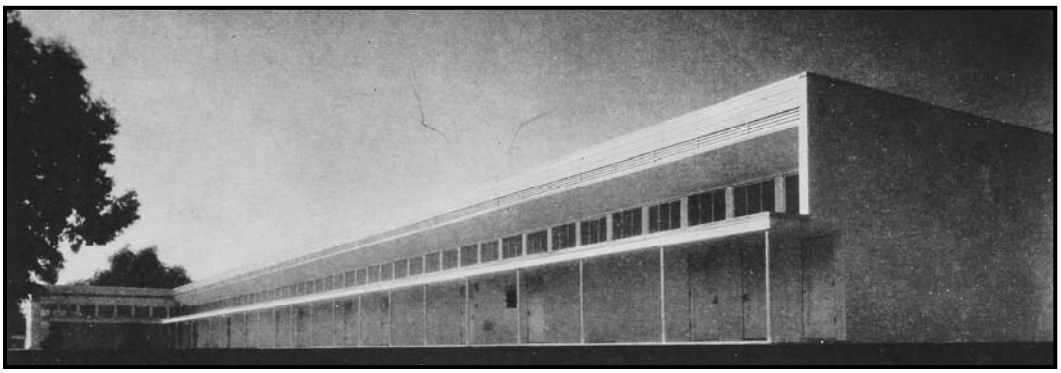

Figure 76. Richard Neutra's Corona Avenue Elementary School addition, 1934/1935. Extant in Bell, California, southeast of downtown Los Angeles. Source: Built in USA, 1944.

The emergence of modern architectural design provided a quantum leap forward for this new wave of reform. Modernism embraced honesty in structure and materials and a functional design driven not by a given style or ornamental program but by the building's purpose. By the postwar period, this debate had been settled, and modernism did become the preferred (though not exclusive) idiom for American school plants. But in the 1930s, this movement, which brought together ideas about educational reform, modern architecture, and research in building sciences, was just taking root.

William Edmond Lescaze

One architect who actively advocated for a more modern, functional approach to school design in the 1930s was William Edmond Lescaze (1896–1969). Between 1929 and 1932, Lescaze, along with partner George Howe (1886–1955), designed one of the era's most significant modern buildings in the United States, the Philadelphia Savings Fund Society building, considered to be the country's first example of a skyscraper in the International Style.[72] In the mid-1930s, Lescaze published articles in architectural magazines as well as specialized education-related trade journals to argue for more functionalist, modern schools:

> If buildings have an influence on us, should we not insist that our school buildings work well, and be good looking? Of course we should. But do they work well, and are they good looking? Alas, no! Most of the schools are massive, uninspiring, uninviting buildings. Pediments of limestone, a few columns and, when we can afford them, a tower or a cupola! Just as you may order lettuce salad with French dressing or mayonnaise, you may have a school building Gothic or Colonial!
>
> There can be no school planning worthy of the name unless the functions of the building are clearly understood, clearly expressed: and that understanding, expressing clearly the functions of a building, has been achieved by all good architecture in the past, and is what modern architecture is today attempting to achieve.[73]

Figure 77. Corona Avenue Elementary School, 1935. Source: LAPL Photo Collection.

Figure 78. Same outdoor classrooms, circa 1950. Source: Getty Research Institute, Shulman Archives.

The key to this, Lescaze argued, was moving beyond historic eclecticism:

> Modern functions cannot be fitted into old forms, nor can twentieth-century "uses" be combined with twelfth-century "beauties"! The buildings of the past are beautiful not because they are a "style." They are beautiful because the men responsible for them devoted all their skill, their taste, their understanding, to fulfilling the purposes, the functions, of these buildings. In other words, these buildings grew out of the life of their time, to meet the requirements of their time. And that is exactly what our buildings must do.[74]

Richard Neutra

As of 1936, Lescaze wrote, there was only one truly modern school building in the United States: Richard Neutra's 1934/1935 Corona Bell Elementary School in Los Angeles. Like Lescaze, Neutra (1892–1970) was European-born and educated and had come to the United States in the 1920s. Neutra had long been working on the problem of the modern school plant, with a philosophy steeped in Progressive-era notions of deinstitutionalizing the classroom. As Esther McCoy wrote, Neutra's ideas about school design

> grew out of the conviction that tensions begin to accumulate in a child when he is taken from the home and living room into a school and classroom, to be moored to the floor, and forced to look up at a teacher sitting above him on a platform. … Neutra saw great advantages in classrooms, especially for elementary grades, which resembled living rooms filled with group action—but a living room such as only a handful of architects had conceived at that time, one connected to a patio by a movable glass front.[75]

In 1928, Neutra had proposed a ring-plan school consisting of an outdoor, sheltered corridor providing circulation and access to finger-like classroom wings separated by landscaped patios and gardens. The elliptical plan was inventive and practical, as it made use of a compact lot and shortened distances between classrooms. (The plan was radical for 1928 but perfectly in the spirit of the times by 1960, when it was constructed as the Richard J. Neutra School by Neutra and his partner Robert Alexander in Lemoore, California.)

Figure 79. Emerson Junior High (now Middle) School, Richard Neutra, 1937, Los Angeles. This school is extant and located on Selby Avenue near Santa Monica Boulevard in west Los Angeles. Source: Julius Shulman Archives, J. Paul Getty Trust, Getty Research Institute.

Figure 81. Richard Neutra's Emerson Middle School (1937), extant, west Los Angeles. Source: LAPL Photo Collection.

In 1934, Neutra was given the opportunity to translate theory into practice. In the wake of the Long Beach earthquake, the architect was chosen to design an addition for the Corona Avenue Elementary School. His simple, L-shaped plan quickly became a prototype for Californian (and American) schools and "a classic in its field."[76]

The addition consists of a linear, one-story wing of single classrooms. On one side, covered passageways provide circulation corridors and, as Esther McCoy noted, evoke the arcades of Spanish Colonial architecture. On the west elevation, sliding glass walls provide direct access to outdoor play areas and classrooms. Landscaping creates divisions between classes, and 6-foot roof eaves provide shelter and transitional space. With this, Neutra perfectly melded outside and in and presaged the ways in which postwar architects would create seamless indoor-outdoor spaces.

The construction system of earthquake-friendly wood framing with generous expanses of single-pane windows adds to the sense of weightlessness and integration with the site. With a band of high clerestories on one side and full-length windows on the other, Neutra controlled classroom illumination and provided cross-ventilation. As McCoy wrote, the Corona School "banished the 'listening classroom,' which had its effect upon education methods, for the teacher became a part of the group as soon as students were no longer restricted to fixed seats."[77]

As the decade progressed, the ideas of architects like Lescaze and Neutra started to take hold. In 1937, Neutra designed a second pioneering example of a functionalist school plant, with the steel-framed Ralph Waldo Emerson Junior High School in Los Angeles. In this school, the architect continued the same themes of indoor-outdoor integration on a more constricted urban site. Emerson Junior High's "basic plan organization and massing are clearly expressive of function, with classrooms efficiently organized along double-loaded hallways in freely arranged wings. … The restrictions of the site are compensated by Neutra's inventive plan, making use of outdoor spaces, like a rooftop, for outdoor access."[78] As with the Corona Avenue project, Neutra created seamless connections between classrooms and patios with movable walls and landscaping.

Franklin & Kump and Finger-Plan Schools

Beyond Los Angeles in this era, other prototypes that became influential in the postwar period were under construction. One of the most important of these was Franklin & Kump and Associates' Acalanes Union High School in Lafayette, California, east of San Francisco. Franklin & Kump's rational "finger-plan" school perfectly captured the ideas of the day and became the most common school plan typology in the United States in the 1940s.

Constructed in 1939/1940, Acalanes Union High School was designed for a large rural site, with one-story wings extending outward in finger-like wings. Classrooms consist of open lofts with adjustable plywood partitions dividing the interiors. The pavilion-like site plan, low scale, and finger-like classrooms provide ample opportunities for outdoor access.

As with Neutra's early experiments, Acalanes Union High School moved interior hallways outside, with sheltered outdoor corridors throughout the campus. A recessed terrace off the dining room provided outdoor seating areas for lunch, and lockers were installed on exterior walls. The finger-like plan also allowed for cross-lighting and ventilation for each classroom. To the north, students enjoyed outdoor views through full-length windows. To the south, bands of high clerestory lights provided balanced illumination without glare.

Modular design and construction allowed for easy expansion of the school as enrollment increased. The campus included a variety of facilities, including gymnasium and playing fields, workshops, dining room, a network of classroom wings, and a parking area, all

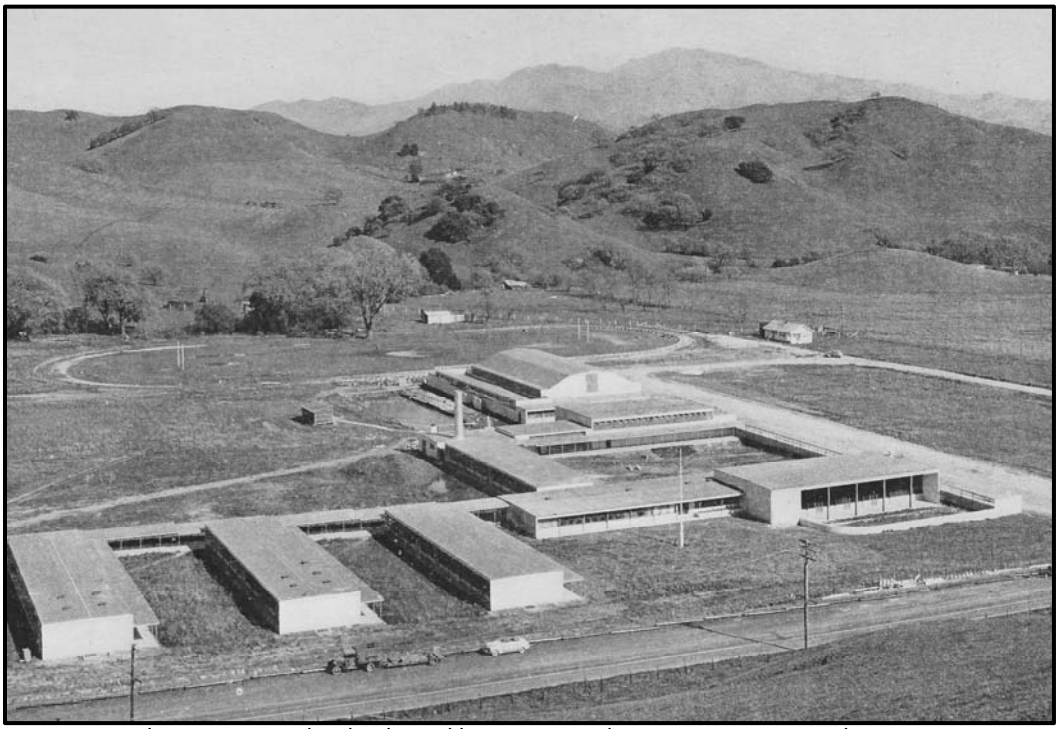

Figure 82. Acalanes Union High School, Franklin & Kump and Associates. Source: Built in USA, 1944.

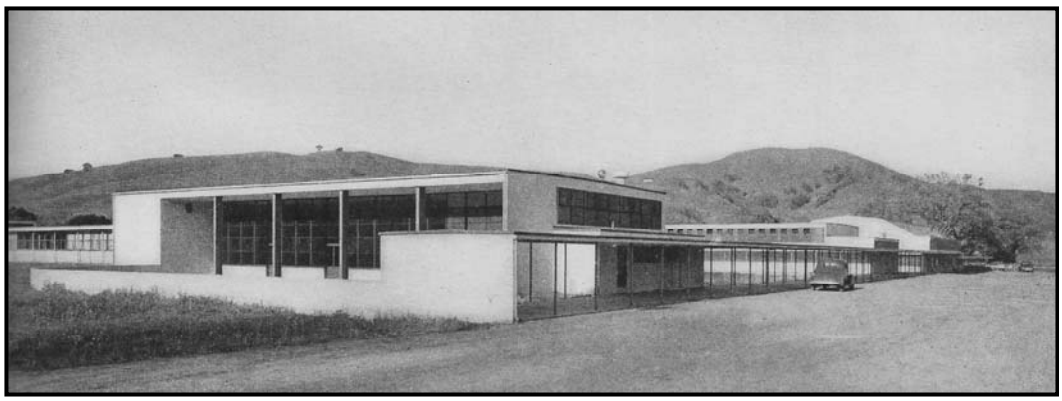

Figure 83. Franklin & Kump and Associates, Acalanes Union High School, Lafayette, California, 1939/1940. Source: Built in USA, 1944.

configured in a unified site plan. In keeping with 1930s planning trends, pedestrians and automobiles were separated through the use of a 500-foot-long canopied passageway, which connects the street and drop-off areas with the school entrance.

Although Franklin & Kump's school was published nationally on multiple occasions prior to 1945, it was in the postwar era that the school typology and plan took off. Pre-1945, Elizabeth Mock included the school in *Built in USA*, the Museum of Modern Art's 1944 exhibit and publication showcasing American regional modernism. Acalanes Union High School was one of only three other schools constructed between 1932 and 1944 included in the volume (Neutra's Corona Avenue project was among them).

Also included in the Museum of Modern Art's *Built in USA* was Eliel and Eero Saarinen's 1939/1940 Crow Island Elementary School in Winnetka, Illinois. Crow Island was another early experiment in how to interpret new ideas about education into function-driven, modern schools. The Saarinens, along with Perkins, Wheeler, and Will, proposed a domestic-scaled modular school, with an innovative pin-wheel plan, finger-like classrooms, plentiful opportunities for outdoor play, cross-lighting, and ventilation. This plan also was widely published and imitated in the postwar period.

Post–Long Beach Earthquake: The Era of the PWA Moderne | Streamline Moderne

Not all examples of the functional school plant were modernist in the sense of being antihistoricist. Most 1930s schools continued to display stylistic programs and ornamentation, though tastes had shifted to PWA Moderne, Streamline Moderne, Art Deco, and streamlined versions of historic-eclectic styles, such as the Spanish Colonial Revival. School plants embracing the new ideas might express their function clearly, with a differentiated, unified campus plan, but they might also display a specific style. These examples were widely praised and published as representative of the 1930's movement toward more functional school plants.

Several of the most significant Southern Californian firms to point the way forward in this regard on a national scale were James Edward and David Clark Allison; Sumner Spaulding and John Rex; Donald and John Parkinson; and Norman Marsh, David Smith and Herbert James Powell (later Marsh, Smith and Morgridge). During this era, these firms, among others, participated actively in school construction, designing more functional, child-centered, open-air schools that were also historicist to varying degrees.

In the postwar period, Spaulding & Rex, Marsh, Smith & Powell, and the successor firm to the Parkinsons' partnership continued to play an active role in school plant design, by then in stylistic idioms that forwarded the cause of modernism.

Marsh, Smith and Powell

During the 1930s and early 1940s, Marsh, Smith and Powell designed numerous school commissions that garnered national attention. Their work brought together the latest ideas in functional site plans and child-centered buildings and classrooms, with the all-important indoor-outdoor spaces and connections. The same issue of *Architectural Record* featuring Lescaze's 1936 call to American architects used a Marsh, Smith and Powell school, Roosevelt Elementary School in Santa Monica, to illustrate the new trends.

Figure 88. Post–Long Beach earthquake reconstruction at Manual Arts High School, Parkinson & Parkinson, circa 1935. Extant in mid-city Los Angeles, on South Vermont Avenue and West Martin Luther King Jr. Boulevard. Source: LAPL Photo Collection.

Figure 89. Manual Arts High School, Parkinson & Parkinson, circa 1935. Source: LAUSD.

The firm, consisting of Norman Foote Marsh, David D. Smith, and Herbert James Powell, was also featured in a 1938 issue of *Architect and Engineer* in order to illustrate the "progress" made in American school design during the decade: "The architects of California can well take pride in that which has been accomplished during the last twenty-five years. Their school buildings are beautiful—they are practical, they are utilitarian, and they are economical. To the credit of the architectural profession, the architecture of educational buildings has kept abreast with the progress of education."[79]

Los Angeles City School District's The Progressive Elementary School: A Handbook

Southern California's version of the open-air, functional school was also brought to a national audience in 1938's *The Progressive Elementary School: A Handbook for Principals, Teachers and Parents*. The guidebook was written by Robert Hill Lane, the assistant superintendent of schools in Los Angeles and vice president of the Progressive Education Association. Published by Houghton Mifflin Company and prepared in conjunction with the Los Angeles City School District and State Department of Education, Lane's handbook explored the region's array of modern, functional, open-air school plants.

The handbook drew on the wealth of post–Long Beach earthquake examples with numerous illustrations and plates. It also described the philosophical underpinnings of the movement: the desire to create more child-friendly, inviting schools and classrooms. The handbook was one of many primers and guides on modern schools, but *The Progressive Elementary School* brought Los Angeles school plant design to a national audience.

The trend continued away from the institutional, monumental school block and toward more approachable, flexible facilities and plants. A few years before the end of World War II, the movement had footholds throughout the United States, just in time to decisively shape the character of schools designed during the postwar building boom. As one commentator noted in 1942,

> Here and there throughout the country there appear signs of another basic change in school architecture. It is primarily a movement away from the monumentalism of the past four decades. People are not using their school buildings to sell their communities. The school building is being developed as a more intimate and better integrated element of the community, a place closely association with child and adult living.[80]

The era of reform in progressive educational methods and school plants had thus come of age by the end of the Great Depression and just prior to 1945. Many prototypes and proposals emerged throughout the 1930s, with many examples from Southern California. By the time the war ended and construction began in earnest, these pre-1945 examples suggested the direction and the future shape of the modern, functional American school plant.

LOS ANGELES CITY SCHOOL DISTRICTS | CONTEXT AND DEVELOPMENTS

Long Beach Earthquake and the Field Act

The March 1933 Long Beach earthquake was one of the decade's most significant events for the region's built environment. The 6.5-magnitude earthquake caused significant damage and losses; in Long Beach, more than two-thirds of the city's schools were in need of demolition and reconstruction.[81] In Los Angeles, 40 unreinforced masonry school buildings were destroyed.[82] In addition, after a survey of Los Angeles schools within 10 days of the earthquake, all damaged or "precariously placed" chimneys, parapets, fire walls, and ornamentation were removed. Fortunately, the earthquake took place when school was not in session.

The Long Beach earthquake posed a disaster for the district but also an opportunity for the region's architects. While change and reform in school plant design were already underway, the Long Beach earthquake and the mini–school construction boom it triggered provided ample opportunities to test new ideas about school architecture and campus planning in Southern California.

These changes also affected the state overall. One month following the earthquake, through the efforts of California Assembly member Charles Field, the State of California adopted the Field Act. Similar legislation had already been passed following the 1925 earthquake in the City of Santa Barbara. With this, the state had adopted building codes tailored to upgrading seismic stability. In 1927, the City of Los Angeles revised its own City Building Ordinance and adopted additional requirements for schoolhouse construction. All new construction after 1927 adopted the updated building codes, which included requirements for fire-resistant corridors, stairs, and exterior walls and for reinforced concrete beams within floors and roofs. By the time the 1933 earthquake struck, these post-1927 schools indeed proved more resilient.

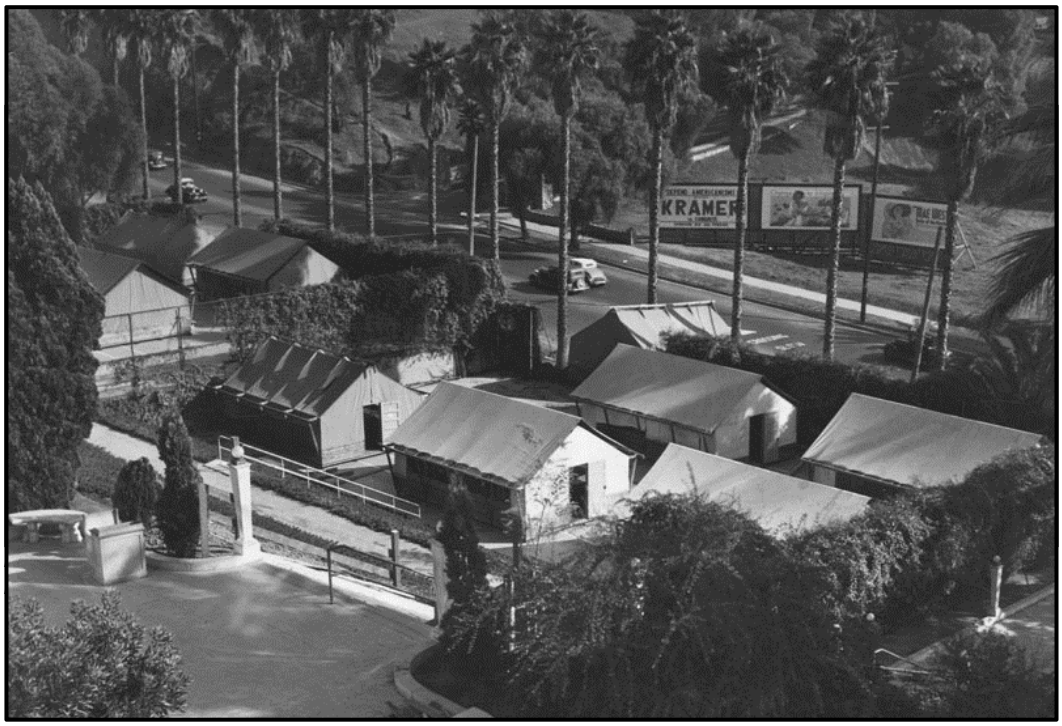

Figure 91. October 1934, Lincoln High Tent Village, awaiting reconstruction of classrooms. Source: LAPL Photo Collection.

Through the Field Act, the lessons learned in the Long Beach earthquake were used to further strengthen school building codes. The law directed the State Division of Architecture to design and enforce regulations to ensure earthquake-resistant buildings. State oversight and implementation of building codes/construction inspections were also established. Additionally, the City of Los Angeles Board of Education again revisited its own building codes. Post-1933 elementary school buildings were not to exceed one story in height, and high school buildings were limited to two stories (this would change over time, given the tremendous demand for classroom space in the postwar period and relative scarcity and expense of large lots). New buildings incorporated the latest construction techniques and prominently showcased the use of modern materials such as steel and reinforced concrete. On sites where soil load-bearing properties were found to be too low for steel and concrete, demolished schools were replaced with relatively earthquake-resistant wood-frame buildings. In cases where damaged buildings were rehabilitated, methods included installing reinforcing steel columns, beams, and diagonal bracing, exterior refacing with reinforced gunite and installation of reinforced concrete walls.

Some of the requirements of the Field Act were well aligned with the goals of progressive architects for more child-scaled, one-story schools. In a 1942 article on modern trends in school architecture, one commentator observed the overlapping influences: "Much emphasis has been given to the open plan in California. It is possible that this development has not grown so much from changing educational practice as it has from structural needs."[83] The author's insight had come from an *Architectural Record* article on a new

"open plan" school in El Monte, California. As *Architectural Record* pointed out, however, "'Two factors determined the choice of open plan, with departments housed in separate structures: the local soil-bearing value was very low; the buildings had to be designed to resist earthquake stresses.'"[84] In this way, the new requirements were compatible with the trend of the times toward one-story, open-plan buildings and campuses.

PWA Funding and the Post–Long Beach Earthquake Building Boom for Schools

Following the earthquake, the district planned for phased reconstruction. Available at the time were a total of $5.3 million in unsold bonds. The PWA purchased the bonds and granted additional matching funds for school reconstruction efforts. A total of $12.1 million was ultimately raised for the 1933 to 1935 reconstruction program. Approximately $250,000 funded the construction of temporary classroom housing, in order to minimize the interruption of the school year. An estimated 879 tents and 139 bungalows were initially erected to house the district's enrollment of 300,000 students.

As the school reconstruction program progressed, final steps included reinforcing or replacing 132 unreinforced masonry buildings, strengthening 275 buildings constructed since 1927, replacing 51 wood-frame buildings, and eliminating all temporary classroom housing. By 1937, over $34 million had been spent on post-earthquake school construction, repairs, retrofitting, and rehabilitation. The advent of World War II put substantial investments in schools on hold (after war's end, a $75 million bond issue kick-started these efforts).

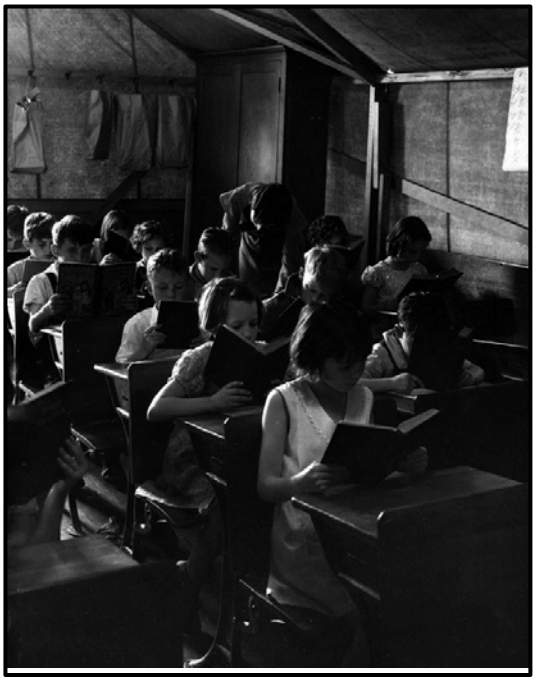

Figure 92. Children attending school in tents, one year following the Long Beach earthquake, March 1934. Source: LAPL Photo Collection.

As reconstruction began, Los Angeles City school districts intended to build new seismically sound buildings but also facilities with regionally inflected styles. As the *Los Angeles Times* reported in 1934, new and repaired buildings would be designed for "absolute safety with simplicity and beauty of architecture in harmony with the atmosphere and traditions of Southern California."[85] Many designs were executed by the district's architectural department, under the direction of Alfred Nibecker, but bids were also issued to outside architects, with the intention of awarding the work to a wide field of architects. In addition, new buildings were to be explicitly Southern Californian in design but "free of needless ornamentation."[86] This represented a move away from 1920s period-

Figure 93. Reseda Elementary School, 1936. The spare Mission Revival style was in keeping with the post-Long Beach earthquake trend to design in the "traditional Southern Californian" mode. This school is extant and located on Wyandotte Street, Reseda, San Fernando Valley. Source: LAUSD.

Figure 94. South Gate Middle School, 1941. A streamlined mix of Moderne, classical and modern elements. This school is extant and located on Firestone Boulevard, South Gate. Source: LAUSD.

revival styles but also a nod to earthquake safety, since applied ornament often failed and fell to the ground during earthquakes.

Early Experiments with the Finger-Plan School

Other school plants began exploring the new currents in modern, function-driven design. Henry L. Gogerty and C. E. Noerenberg's Susan Miller Dorsey High School is one such example. While the 1937 design drew inspiration from the PWA Moderne, the classrooms, patio spaces, and radial site plan, with classrooms extending outward like spokes of a wheel, were innovative for the time. With this site plan, the architects created an early form of condensed finger-plan school, which made use of a smaller site but provided the ample air, cross-lighting, and outdoor access possible with one-story finger-like classrooms. A circular outdoor corridor, sheltered beneath wide overhanging eaves with thin post supports, acted as the outdoor hallway for the campus, providing circulation to all classrooms and the main entrance. Adopting the language of functionalist reform, *Southwest Builder and Contractor* praised how the designs "architecturally and structurally express in functional form the outer envelope of a process of public education."[87]

Figure 95. Susan Miller Dorsey High School, 1937, Gogerty and Noerenberg, mid-city Los Angeles. Adopting the language of formalist reform, Southwest Builder and Contractor *praised how the design expressed "in functional form the outer envelope of a process of public education." Source: LAUSD.*

Great Depression and World War II: Curriculum Shifts

Just as the Long Beach earthquake struck in 1933, the Great Depression hit its nadir, and within the decade, the advent of World War II brought another round of readjustment. This period brought many changes to the operations and curricula of Los Angeles's public schools. Overall the decade was characterized by experimentation and liberalization of the curricula, in particular for secondary students. The general trend moved away from college preparatory studies and toward a more generalized program. Courses and new areas of emphasis came to reflect the realities of the era and the individual needs of students. A few examples include the expansion of social studies courses to consider contemporary issues and problems and a shift in the sciences toward more applied topics, aimed at the consumer rather than the future researcher.[88]

Through this era, the notion of the public school as an important gathering place for the community took a new turn. Schools became the focal point for a number of initiatives aimed at mitigating the social costs of the Great Depression, and later at supporting the troops during World War II.

By 1935, two federal programs had been launched that ultimately had a significant presence in Los Angeles public schools: the Emergency Education Program and the National Young Administration. Established in 1933, the Emergency Education Program provided federal

Figure 97. Lincoln High School War Bond Drive, 1945. Source: LAPL Photo Collection.

Figure 98. The women of Frank Wiggins Trade School, 1943. Source: LAPL Photo Collection.

funding to hire unemployed teachers to provide instruction to adults. With this, teachers were again gainfully employed and adults were able to further their training and education. By 1934, Los Angeles public schools provided approximately 200 such classes at 52 different campuses.[89]

In 1935, Congress authorized the National Youth Administration (NYA) program, aimed at providing jobs to teenagers and young adults in order to help them remain in school. The program was open to those aged 16 to 25, who earned no more than $6 a month. Through the NYA, Los Angeles public schools provided employment to thousands of students. After World War II began, this program continued but shifted its focus to defense-related classes.

Los Angeles Public Schools and World War II

World War II brought another round of adjustments to an educational system already reeling from the Great Depression. The focus on every front of American life for defense-related support brought major shifts. New classes for secondary students included defense-related training and specialized programs in aircraft recognition and aviation mechanics. At the city's vocational schools, applied skills were emphasized. The Frank Wiggins Trade School began teaching auto mechanics to female students, since the "war has taken away many a guy with the monkey wrench, and so today industrial schools are opening new courses for

women auto mechanics to fill the gap."[90] Coursework during the war and immediately after reflected the sociopolitical background of the time, with school districts offering programs in democratic systems of government, the functions of the United Nations, and, for a short time, "moral and spiritual values."[91] Geography courses took on a more international view, exposing students to a wider array of countries around the world.

The war also impacted activities in the city's elementary schools, where students were given opportunities to participate in a variety of war-related drives and programs. By 1942, Los Angeles City school districts had created nearly 30 different ways for students to support the war effort. The goal was organizing "every school so that each pupil and teacher had a part in supporting the war program" and inspiring "each child to be so patriotic that he would, of his own volition, carry on a program which would help the war effort."[92]

Figure 99. World War II in the Los Angeles public schools: materials drive, Crescent Heights Boulevard Elementary School, circa 1943. Source: LAPL Photo Collection.

Figure 100. Victory Garden at Manual Arts High School, 1942: "Students in a gardening class at Manual Arts High School learning about vegetables. The students and teachers during the spring term of 1942 had over 500 Victory Gardens to help in the war effort." Source: LAPL Photo Collection.

Two federal programs brought significant changes to the operations and curricula of Los Angeles public schools. The first program was the National Defense Training (NDT) program, which provided $15 million to American schools, $400,000 of which went to Los Angeles, for vocational and war-related training programs. Congress authorized the program in 1940 (before the U.S. entry into the war); by September 1940, the Los Angeles Board of Education had launched programs in 13 high schools and 10 evening high schools. Training programs included welding and shipbuilding, mechanics, and aircraft production and maintenance. The program continued to grow, and by 1942, Los Angeles City public schools housed the largest NDT program in the United States.[93] In August 1942, the NDT program because the War Production Training program.

In 1942, following the U.S. entry into the war, Congress established the Rural War Production Training program. A branch was established in Los Angeles, with classes targeted to working teenagers and adults attending evening high schools. Referred to as the Out-of-School Youth and Adults program, this initiative was more geared toward food production than industrial production (as with the NDT program). Canneries were established in schools throughout the district as a result of the program, which was renamed "Food Production War Training" in 1943. After the war, though federal funding of the project ended, the Los Angeles Board of Education continued the program, and community canning projects remained in place at a number of area high schools.

D. EDUCATING THE BABY BOOM: POSTWAR EXPANSION & THE FUNCTIONAL, MODERN SCHOOL, 1945 TO 1969

"Above all the school must be childlike.... It must be a place for living, a place for use, good hard use, for it is to be successively the home for a procession of thousands of children through the years. It must be warm, personal and intimate [so] that it shall be to each of these thousands 'My school.'"
—An American educator, writing to his architect, *Architectural Forum*, 1952[94]

NATIONAL CONTEXT | DEVELOPMENTS

With the end of World War II, the United States turned its attention to the long-awaited postwar—and post–Great Depression—expansion. The magnitude of the construction and population boom that followed, and its effect on the built environment, have been well documented. A wealth of literature has been devoted to the era's severe housing crisis, for example, and the array of initiatives launched to address it.

Less widely explored in the literature, but equally pressing at the time, was a dire classroom shortage. In 1949–1950, enrollment at U.S. elementary and secondary schools stood at 25.1 million. In one decade, this number expanded by nearly 50 percent to approximately 36 million; by 1971, it reached 46 million.[95] In 1955, in the midst of this boom, "editors at the *Architectural Forum* worried, 'every 15 minutes enough babies are born to fill another classroom and we are already 250,000 classrooms behind.' The rising population of young American children made school building, together with housing, the most widely discussed architectural challenge after World War II."[96]

Perhaps in no other state of the union was this growth felt more acutely than in California. The booming birth rate was accompanied by a wave of in-migration, as new settlers were drawn by established employment centers in, among other things, the aerospace industry, which had shifted operations to peacetime production. In Southern California, one region with a particularly strong pull in this regard was the San Fernando Valley. The postwar construction boom transformed miles of the San Fernando Valley's agricultural lands into new residential communities, and the population—and demands on schools—expanded accordingly.

School districts around the country struggled to keep up with unprecedented demand and overcrowded classrooms. Adding to the challenges facing school districts was the need not only for new schools, in particular in emerging suburban communities, but also the need to repair and maintain aging school plants, facilities, and equipment.

1930s Reform Comes of Age: The Modern, Child-Centered School

In this era, the functional, child-centered school plant that emerged in experimental form in the late 1930s became the norm. Newspapers, magazines, and trade journals in a variety of fields—including architecture, engineering, building trades, education, and school design—began forwarding proposals for the ideal modern school. Organizations devoted to the topic also helped standardize and disseminate these ideas; these included the American Institute of Architects Committee on School Buildings, the National Council on Schoolhouse Construction, the American Association of School Administrators, and the Council of Educational Facilities Planners. Journals and guidebooks proliferated with the latest ideas in school plant design, infrastructure and systems, and, above all, how to meet the demand in the most economical fashion possible. Within the architectural profession, a new subgroup of architects who specialized in school design also started to emerge.

Modernism—whether regionally inflected, wood post-and-beam or the machine-age International Style—became the idiom of choice for expressing the new ideas, for its relative economy, informality, accessibility, and, increasingly, "democratic" spirit:

> All the architecture shall be a setting for childlife. Everywhere children and what they can do shall be the adornment of the structure. The building itself shall be the place of joy in living. But I must warn you. It must be a place which permits the joy in the small things of life, and in democratic living. These two things we must safeguard in children's lives.[97]

While some school plants adopted the period styles popular at the time—including a postwar return to American Colonial Revival—the trend by not only modern architects but also educators was to move beyond historicist styles: "The building must not be too beautiful," wrote one commentator, "lest it be a place for children to keep and not one for them to use. Its materials must be those not easily marred, and permitting some abuse. The

Figure 105. Smith, Powell & Morgridge, Thomas Jefferson Elementary School, 1954. Source: J. Paul Getty Trust, Getty Research Institute, Julius Shulman Archives.

finish and settings must form harmonious background with honest child effort and creation."[98]

While regional variations existed, this was a national project. The extent to which school districts throughout the United States adopted similar approaches and strategies to the modern school plant was noteworthy. Since the early twentieth century and the days of the Progressive Education Movement, national standardization was a key element of reform. But the avenues available to architects, builders, and schools in this regard proliferated in the postwar era.

The National Council on Schoolhouse Construction, for example, addressed the topic in its annual guidebook, *Guide for Planning School Plants*. Written for school facilities managers, planners, and architects, the 1946 version illustrates the extent to which ideas considered experimental just a few years before had become best practices for the nation. The emphasis remained designing schools around their function—serving and educating children. With the psychological well-being of the student the prime consideration, numerous studies were devoted to optimal interior conditions and controls, such as studies in proper lighting, color schemes, and surface reflectivity to "increase morale and to decrease fatigue."[99]

Educational Facilities Laboratories (EFL)

The need for schools remained dire through the 1950s. In 1953, the American Institute of Architects established its Committee on School Buildings to address the issue. In 1956, the committee became the Educational Facilities Laboratories (EFL), a nonprofit funded by the Ford Foundation's Fund for the Advancement of Learning. The EFL "brought together educators, architects, manufacturers, and government officials" to "encourage new ideas about both curriculum and architecture."[100] The EFL conducted research, sponsored conferences, and held grant competitions.

With the rate of school construction continuing apace, EFL officials visited Southern California often. In 1962, the EFL sponsored a tour of one of the nations' early open-plan schools in West Covina, California. Attending the tour were Dr. James D. MacConnell, director of the school planning laboratory at Stanford University; Dr. Paul Salmon, superintendent, Covina Valley District; and Dr. Harold B. Gores, president of EFL in New York. In 1965, the EFL conferred an award on Covina High School as one of three outstanding Californian examples of "schools without walls" (the open-plan school, described in more detail below).[101]

In 1964, the EFL sponsored an airplane tour of the United States for 60 educators, including two from Orange County. The EFL flyover tour reflects two noteworthy points about this era in school design: (1) many innovations were best revealed from the air, by looking at the campus design and plan, building siting and configuration; and (2) ideas about how to create the best possible modern school were developed in tandem and shared among architects, builders, researchers, and school officials throughout the United States.[102] Between 1958 and 1976, the EFL invested over $25 million in the rethinking and designing modern American educational facilities.[103]

By the early 1960s, a shortage of teachers, as well as ever-evolving ideas about childhood development and education, prompted a renewed wave of reform. At its heart was an updated version of the Progressive Education Movement: the idea was that schools—both in terms of facility design and teaching methods—were not adequately harnessing a child's natural curiosity and creativity. There was a renewed sense that classrooms should nurture and capitalize on these qualities and adapt to the individual needs and pace of each student.

The national embrace of team teaching (an idea further promoted because of a shortage of qualified teachers) was one result of this movement. As the name implies, team teaching established a system whereby teachers shared pupils and class spaces, and classroom sizes varied throughout the day, depending on the wishes of the teachers. A few dozen students might gather to watch a movie, then break into smaller groups to work on projects. The classroom would be a dynamic rather than static place, with mixed grade levels, multimedia educational methods, and hands-on learning.

This push for more creative, flexible curricula and teaching methods flourished in Southern Californian schools. By 1968, reformed programs had been launched in 18 Southern Californian elementary schools, in conjunction with the League of Cooperating Schools. As in early eras, methods that appeared "traditional" were de-emphasized and a more experimental classroom environment was proposed. The coordinator of the program, Robert E. Keuscher, invoked many of the same ideas shaping curricular reform throughout the twentieth century, with a distinctively 1960's spin:

> Labels are disappearing, there are fewer graded classes. Schedules are more flexible. More and more, curriculum is not worked out in advance; the kids work it out as they go along, and it's more advanced and more scholarly. The teacher is more of a guide than an oracle. The emphasis is shifting from the group to the individual; there is more emphasis on query and discovery.[104]

Of the Southern Californian schools making this transition, Keuscher said, "We're helping these 18 become creative schools, but it's a slow, painful process. Our biggest problem is to make teachers and principals comfortable with change. … But it has been great to emancipate the creative teacher."

Throughout this era, the debate on how to shape a curriculum that best served children, and how to keep up with ever-expanding enrollment figures, continued to evolve. Yet the basic ideas seen in the early twentieth century remained at the heart of educational reform at midcentury. The evolving experiments in curricula and school plant types grew out of the same wish to eliminate institutionalism and to fashion a child-centered curriculum and school plant. The variety of building plans and campuses that grew out of midcentury reform reflected the postwar boom of construction and population, the robust network of publications and organizations disseminating the ideas nationally, and evolving philosophies about childhood development and education.

EFFECTS ON SCHOOL BUILDINGS AND CAMPUSES

The stylistic vocabulary of choice for American schools became modern—antihistoricist, decentralized, with function instead of style the driving concern. Of course, modernism did not take hold in earnest for residential design (to the dismay of many architects at the time). But for schools, by 1950, "the battle between 'contemporary' and 'traditional' was won. The public not only began to accept 'modern,' but also demanded it. … This new movement … brought together educators as well as architects, and together they are forwarding the cause of architecture for children."[105]

Although this era brought a major stylistic shift, from the architects' perspective, designing in a modern "style" was not the main concern. Progressive architects at midcentury often sounded a tone of idealism about the social value of their work. As architect William Wayne Caudill explained about school design, "There is no 'modern' style as such. Each new building ideally is the product of specific solutions to individual problems peculiar to that building's particular environs, site, function, budget, and designer. If two new schools are similar in appearance, they are … only because they were designed to perform similar specific functions in similar environments."[106]

This was especially true for architects trained and already practicing in the pre-1945 era. William Wayne Caudill was among them; the Texas architect graduated from MIT in 1939 and, by 1941, had already authored a pioneering study on modern school design, *Space for Teaching*. Throughout the 1940s and into the 1960s, Caudill and his firm specialized in functional, modern classrooms and campuses.

Figure 109. Balanced cross-lighting is achieved through full-length windows on the north elevation and clerestories on the south. Franklin & Kump, Acalanes Union High School. Source: Built in USA, 1944.

By 1969, Caudill had become an international authority on school design, and his firm, Caudill, Rowlett & Scott, had designed educational facilities in 28 states. Caudill's classic finger-plan schools in Blackwell, Oklahoma, designed in the late 1940s and early 1950s, epitomized the school planning ideals of the time. In 2009, all four schools--Huston, Northside, Parkside, and Washington Elementary—were listed on the National Register for their exemplification of postwar ideals of modern American school design.

Whether a postwar school exhibited a modern or mildly historicist design, they likely shared the same basic design principles. Postwar schools were designed to feel decentralized, nonhierarchical, approachable, informal, and child-centered (indeed, domestic-scaled for elementary schools, with lower ceilings making the class feel more like a living room). The preferred massing was one story, with an axial wing of classrooms usually one room deep, to provide cross-lighting, ventilation, and easy access to the outdoors.

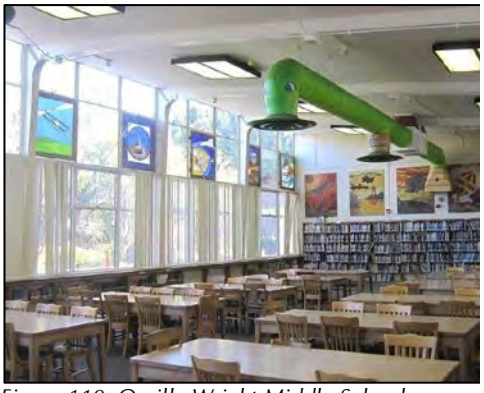

Figure 110. Orville Wright Middle School, library roof slopes upward on north elevation to allow for maximum indirect lighting. Source: LAUSD Orville Wright Middle School, Pre-Planning Survey, 2011.

Postwar schools continued to emphasize and experiment with the limits of indoor-outdoor integration. By the postwar period, one feature that was still experimental in the 1930s was now essential: canopied outdoor corridors. Supports remained simple posts or pilotis, either in steel or wood post-and-beam. It was a feature used in schools throughout the United States. Outdoor corridors lined classroom wings, providing sheltered circulation throughout the campus as well as outdoor gathering spaces.

During this period, size and orientation of windows took cues from the environment: a building with north-south exposure, for example, might feature large-panel, floor-to-ceiling glazing on the north elevation, with bands of clerestory casement windows on south elevations modulating or softening illumination. Experiments in roof configuration and design also tackled the issue not only of lighting but acoustics.

When necessary, massing might climb to two (or rarely, three) stories, if real estate was scarce and demand was high. But this allowance was more commonly made for junior and high schools. Roofs were flat, sloped, or occasionally gabled, with simple, exposed construction systems of steel or concrete framing with large-pane in-fill windows. Wide overhanging eaves with simple porch or piloti supports were common for connecting corridors. In terms of materials, the treatment and finishing were simple and unpretentious.

In the postwar period, architects economized through the use of new prefabricated materials, such as plywood, glass, and steel, as well as modular design and coordination, a 1930's movement that took off in the postwar era following the 1945 adoption of the 4-foot module as the American Standard Measurement.[107] Modular design and construction allowed for easy expansion as school enrollment grew and was a common construction technique in Southern Californian schools. (Two early all-steel-frame schools in Los Angeles were the 1937 Emerson Junior High, by Richard Neutra, and the 1959 Justice Street Elementary School in Canoga Park; stylistically unpretentious, the school was promoted as durable, safe, and easily expandable, a concern that remained pressing at the end of the 1950s.)

Modular site planning and design also lent itself particularly well to creating the indoor-outdoor connections now considered essential. As with the residential architecture of the era, school design relied on generous expanses of windows and outdoor access to patios or courtyards to provide students with recreational areas and outdoor classrooms. Throughout the United States, the importance of indoor-outdoor living for both residential and educational architecture remained a central concern. In this respect, California schools continued to garner national attention. In its 1949 series on postwar American schools, for example, *Architectural Forum* commented that "possibly because California's balmy climate ventilates educators' minds as well as their houses, California schools have been less tradition-bound than most. As one of the fastest growing states in the union, California has had plenty of chance to experiment in school design."[108]

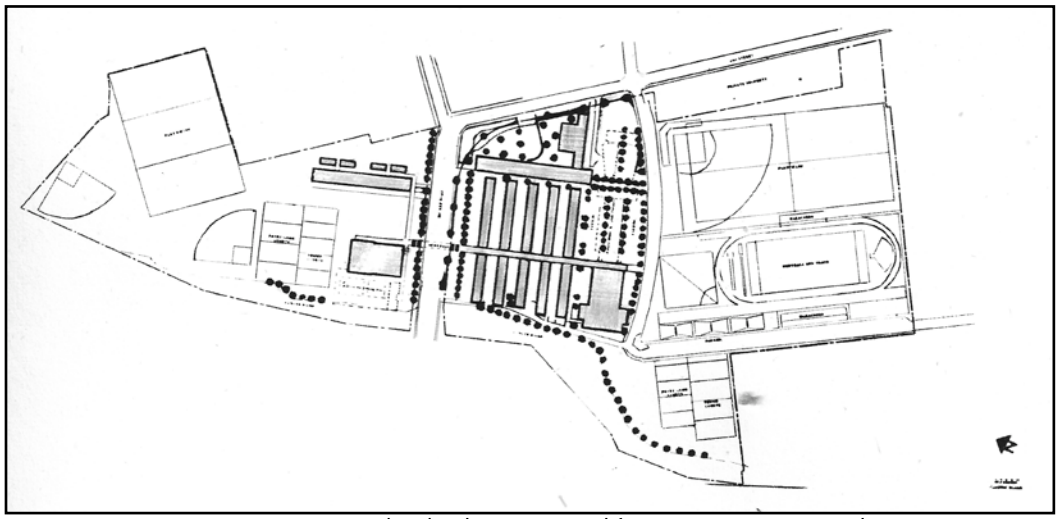

Figure 116. Ernst J. Kump, San Jose High School, San Jose, California, 1952. Source: Built in USA, 1952.

By the 1950s, school design had entered "a new age of innovation," as the decade brought "a proliferation of standardized plans and facades."[109] In California and elsewhere, three main plan types emerged during this period: the finger-plan school, the cluster-plan school, and the open-plan school. As the trends came and went, these plan typologies morphed, hybridized, and changed. But they shared basic design principles, and most reflected the tenets of midcentury modern design.

The 1940s and the Decade of the Finger-Plan School

The plan type that best captured the design principals of the immediate postwar years was the finger-plan school, which was launched in the late 1930s in Franklin & Kump's Acalanes Union High School and the Saarinen's Crow Island Elementary School. According to *Architectural Forum*, this plan type, dubbed the "western finger plan," became the most influential building typology for schools in the 1940s. The finger-plan school resembled

> a tree plan, based on a trunk corridor with side branches. It rests on radical standardization of classrooms; on absolute insistence that all classrooms share the best (north) orientation to sun and air; daylight for all of them from the open-corridor side as well as the main window side. This plan is not only flexible … but extensible indefinitely outward like a tree, by growing at branch-ends and by sprouting new branches.[110]

To illustrate the advantages of the plan in 1949, *Architectural Forum* chose the 1939/1940 Acalanes Union High School, which it described as

> the first large scale school which could serve as a complete demonstration of principles which amounted to a schoolhouse revolution—the revolution of the thirties. Since then, the Acalanes type of school, with its wide ranging, one-story classrooms arranged according to the "finger" plan, has swept the West Coast, is sweeping rapidly across the Midwest on its way to the East Coast.[111]

Figure 119. Exterior of a finger-plan school: G. Russell Wilkerson Elementary School, 1950, El Monte. Source: Getty Research Institute, Shulman Archives.

Acalanes had been published nationally, on multiple occasions, prior to 1945, but it was in the postwar period that the "schoolhouse revolution" it started took off in earnest. In the immediate postwar period, numerous examples could be found on the West Coast. Even though the plan type spread through the United States, the Californian roots and flavor of Acalanes Union High School were often highlighted.

In 1958, a self-described "primer" on how to build a good modern public school described Acalanes High School's divided "rows of classrooms with open-ended corridors of greenery, to achieve good ventilation, sound isolation, and a remarkable California-like architectural comfort."[112]

Built in USA included another California finger-plan school in its 1952 edition, San Jose High School, also by Ernest J. Kump. In San Jose High School, Kump proposed a slightly more condensed finger-plan, with concrete-frame construction, generous expanses of windows set flush to the wall plane, and a sheltered corridor with unadorned post supports providing circulation and outdoor spaces.

Figure 120. Huston Elementary School, Caudill, Rowlett & Scott, 1949, Blackwell, OK. Source: Getty Research Institute, Shulman Archives.

Figure 121. Huston Elementary School, Blackwell, OK. Source: Google Maps, 2013.

With many of the early experimental schools located in California, the issue arose of whether these prototypes would work in the rest of the country. In a 1943 article on modern American schools, Elizabeth Mock commented on this question: "Many people have the illusion that such schools are impractical. 'Fine for California,' they will say, 'but not for this climate. Too costly to build and heat."[113] However, Mock argued, modern materials and construction techniques were sound and economical enough to mitigate these problems. William Caudill appears to have agreed, as evidenced in his four classic finger-plan schools in Blackwell, Oklahoma (all now listed, as noted earlier, on the National Register of Historic Places).

As the popularity of the finger-plan school increased, its basic form changed to accommodate climate variations. Modifications on the plan included double-loaded hallways to provide the same level of indoor-outdoor connections, light, and ventilation, but with one less elevation exposed to the exterior. In the Midwest, the spread-out finger-plan became a compact trunk, with double-loaded corridors providing better insulation. Other plan innovations included a zigzag building plan, with an interior connecting walkway, in order to double-load corridors but also maximize window space for each classroom.

Two examples of more condensed finger-plan schools are seen in Richard Neutra's Kester Avenue Elementary School in Sherman Oaks and Robert Evans Alexander's Baldwin Hills Elementary School in Los Angeles, both from 1949 to 1951. Neutra designed the finger-plan of the Kester Avenue Elementary School around a compact central axis, with classroom wings alternating with landscaped patios. With its seamless connections between classrooms and outdoor play areas, the Kester Avenue facility displayed, in Esther

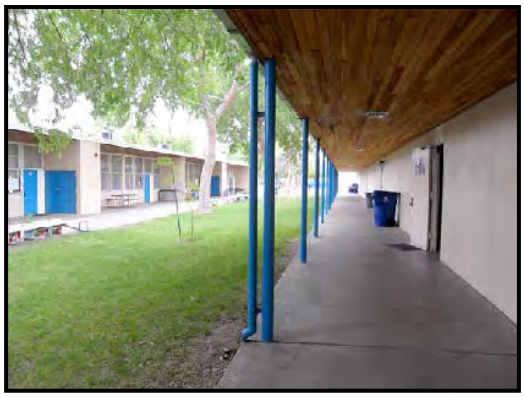

Figure 122. Kester Avenue Elementary School, Richard Neutra (1951), Sherman Oaks. Source: LAUSD Kester Avenue Elementary School Pre-Planning Survey, 2011.

McCoy's word, the "essentials of the open-air classroom ... restated in a more refined form."[114] Canopied passageways supported with light steel columns provided circulation and outdoor gathering areas.

Baldwin Hills Elementary School was constructed as part of the groundbreaking garden city of Baldwin Hills Village. Architect Robert Alexander arranged the school along a central corridor/axis, with parallel classroom wings extending from each side in lengths tailored to fit the site. Swaths of greenery divide the classroom wings, which are sheltered beneath wide overhanging eaves. The focal point of the entrance is a dramatic, cantilevered canopy, resting on a simple steel I-beam. The design otherwise is spare, unpretentious, and modern.

The 1950s and the Advent of the Cluster-Plan School

By the early 1950s, the popularity of the finger-plan school had begun to decline.[115] First, the design required large swaths of land to accommodate the extended site plan. Second, the plan increased cross-campus walk times and communication. In some scenarios, it also made more sense to build upward instead of outward. On hillside locations, where an expanded footprint meant doubling or tripling already expensive grading costs, the finger-plan school was not a viable option. In mass circulation and trade magazines of the day, though, the one-story scale was still preferred, in particular for elementary schools (the exception remained densely developed urban sites, where one could only expand upward).

The need for cost-effective school design and construction was an additional factor in the move away from the finger-plan. By the early 1950s, there were signs that the immediate postwar focus on carefully harnessing and controlling light—including orienting the building on a north-south axis to create the perfect blend of cross-lighting—was becoming too time-consuming. Not all sites would be large enough, and not all building programs well-funded enough, to justify having such an expenditure of design time devoted to fenestration alone. In 1952, *Architectural Record* observed that, in national school design,

> in more and more localities we can expect substantially less emphasis on daylighting. Natural light is so variable that it can seldom be relied on during the entire school day without considerable recourse to electric light. Control of daylight to prevent glare has been found costly and involved.[116]

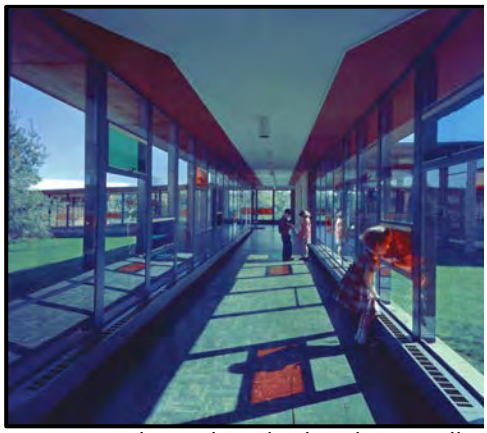

Figure 130. Cluster-plan school, Perkins & Will, Heathcote Elementary School, Scarsdale, New York, 1953. Source: Ogata, 2008.

With high demand and restricted funding for new schools a constant issue, the possibility of a more compact campus plan became the subject of study, a few early prototypes, then a new trend, the cluster-plan school, by the early

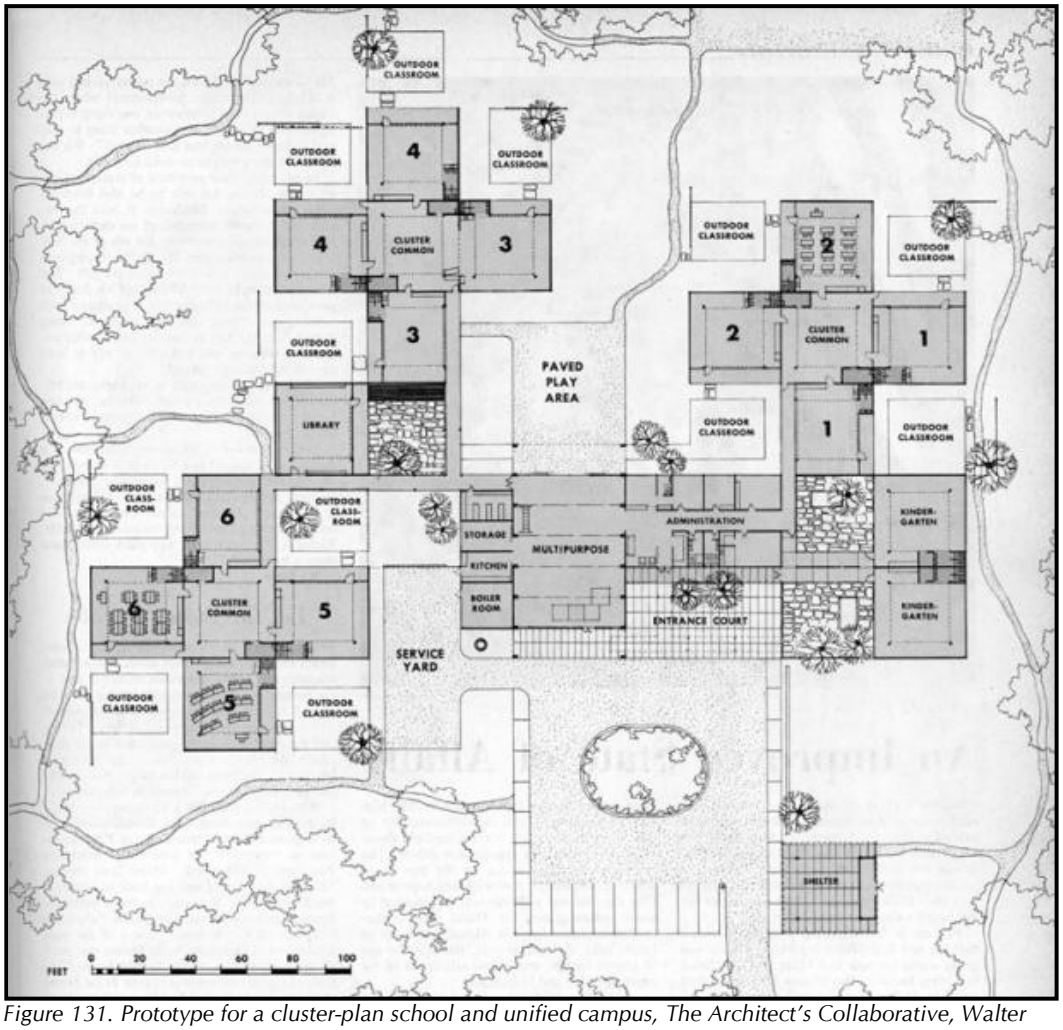

Figure 131. Prototype for a cluster-plan school and unified campus, The Architect's Collaborative, Walter Gropius, 1954. Source: Ogata, 2008.

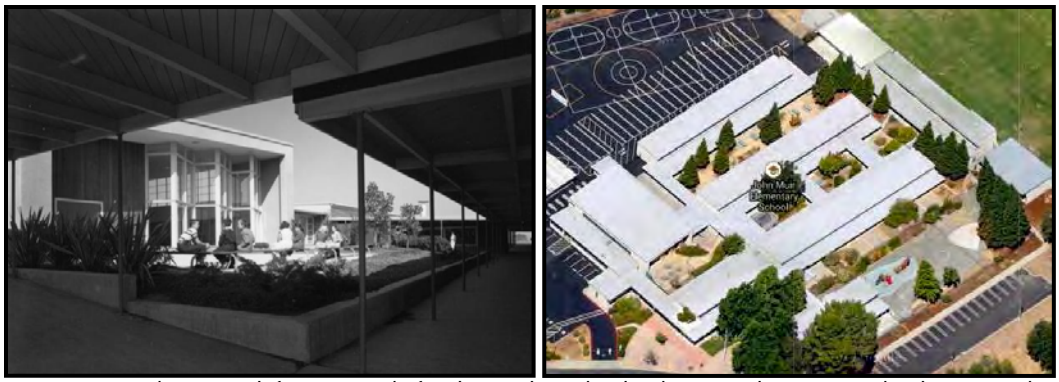
1950s. The cluster-plan school offered a logical solution to these issues. It retained the low massing and indoor-outdoor access and views for all classrooms. But rather than extending wings along an axis, the plan called for grouping them as modular, standalone units around a shared central courtyard. Classrooms still had generous expanses of windows, but now views took in the courtyard and other classrooms, which provided a more communal, neighborhood-like setting. As architectural historian Amy Ogata observed, the plan type provided "both economy and a meaningful spatial experience. In organization and details, the prominent cluster schools of the early and mid-1950s reflected a new sensitivity to the child's perception."[117]

As with the finger-plan, the new typology was interpreted and designed in many different variations, but the basic ideas remained the same.

Even in California, with space to grow, the cluster-plan became the preferred typology in the 1950s. Finger-plan schools were still built—usually the condensed or modified typologies



Figures 132 and 133. On left: Courtyard of a cluster-plan school: John Muir Elementary School (1951), John Lyon Reid, Martinez, California (northern California). Source: Ogata, 2008. On right, aerial of John Lyon Reid, John Muir Elementary School. Source: Google Maps, 2013.

already emerging by the late 1940s. But by the early 1960s, the cluster-plan school had "almost universally replaced the finger plan concept."[118] In a five-year study of the state's school plants, the California Department of Education praised the cluster-plan for more efficient land utilization and for encouraging "cooperation between teachers by allowing them to share multiuse classrooms, resources center, and teacher preparation areas, all adjacent to their classrooms. … Better acoustical control and lighting is evident, and technology is enabling these comfort factors to be coordinated with flexible interiors."[119]

The advantages of this plan were many: more child-friendly in its scale and setting, especially for younger children; more communal, with more shared spaces; and easier to supervise. With this plan, what had been the corner of the room on the interior became the front row on the courtyard.

One early example in California was John Lyon Reid's 1951 John Muir Elementary School in Martinez, California, northeast of San Francisco. In his design, Reid employed a typical pavilion-like plan, with long one-story classrooms separated by patios and landscaping, accessed via sheltered walkways with wide eaves. The classroom wings are clustered around cross-wings, creating a courtyard setting. As with the Saarinens' Crow Island school, Reid's L-shaped classrooms created enclosed outdoor areas for outdoor play and recreation. In a demonstration of the nonhierarchical, informal campus, Reid also eliminated the formal auditorium and designed instead an all-purpose room, "for meetings, lunches, and play, that looked onto a central courtyard through large sharply angled windows."[120]

Within the Los Angeles City School District, Sumner Spaulding and John Rex's Orville Wright Middle School (originally Westchester High School) was another early example of a finger-plan and cluster-plan hybrid, this time for a high school campus. The school incorporated the best of midcentury modern design, by one of the region's renowned firms, with the newest design principles for school plants. Completed in stages between 1948 and 1952, Orville Wright Middle School was constructed for a growing residential community near one of Los Angeles's centers for the aerospace industry.

Figure 134. Orville Wright Middle School (originally Westchester High School), Spaulding & Rex, 1948-1952. Source: Getty Research Institute, Julius Shulman Archive.

Figure 135. Orville Wright Middle School. Bands of clerestory windows provide balanced lighting for classrooms. Source: Flight, Westchester High School Yearbook, 1956, www.e-yearbook.com.

Figure 136. Westchester High School (now Orville Wright Middle School), Spaulding & Rex (1948-1952), west Los Angeles. Source: J. Getty Trust, Getty Research Institute, Shulman Archives.

In a spare, modernist design, Spaulding & Rex incorporated the same modular design, low massing, and easy indoor-outdoor connections typical of the era (and midcentury modernism in Southern California). Cross-lighting was provided through bands of clerestories and single-pane fixed and casement windows. A network of canopied corridors linked buildings and facilities throughout the campus. In a nod to the aerospace industry employing much of the adjacent community, the campus cafeteria featured a circular, space-age design.

The campus overall displays a decentralized but unified plan, zoned for automobile and pedestrian-only areas, with pavilion-like classrooms wings "clustered" around courtyards. In the "Curating the City" program for modern architecture, the Los Angeles Conservancy noted that Spaulding and Rex's Westchester High School took the basic tenets of the International Style and Southern Californian educational architecture and "turned them into a spectacular example of a Mid-Century Modern school. … This campus is a wonderfully intact and very vibrant testament to the power of good 'design for learning.'"[121]

Another LAUSD example of a hybrid finger- and cluster-plan school is the George K. Porter Middle High in Granada Hills. Built in 1959 and designed by Rowland H. Crawford, the campus displays a pavilion-like plan, with axial classroom wings connected by a central corridor. Swaths of landscaped patios divide the classrooms. Interrupting the axis, the focal point of the campus is a landscaped quad, with an expansive lawn ringed by trees creating a neighborhood, park-like setting.

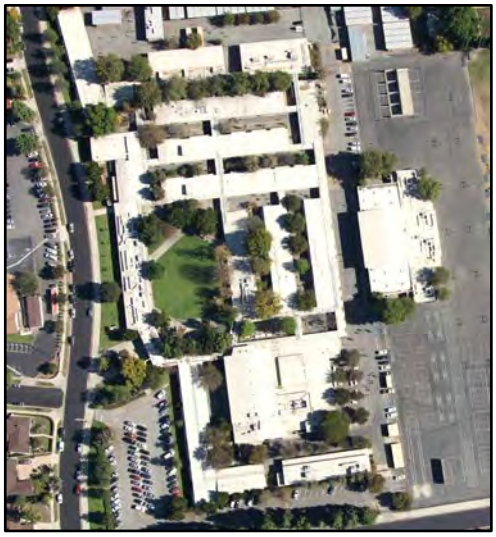


Figure 137. Combination cluster- and finger-plan, George K. Porter Middle School, Granada Hills, California, 1958. Source: LAUSD Porter Middle School Pre-Planning Survey, 2011.

Figure 138. 1953 aerial, Orville Wright Middle School. Source: USDA, www.historicaerials.com.

Figure 139. As of 2012, the campus plan of Spaulding & Rex's Orville Wright Middle School remains largely intact. Source: LAUSD Orville Wright Middle School Pre-Planning Survey, 2012.

Figure 140. George K. Porter Middle School (1958), Granada Hills, San Fernando Valley (extant). Source: Getty Research Institute, Julius Shulman Archives.

Typical of modern campus planning, and similar to Orville Wright Middle School, the site plan turns inward on itself. Automobile traffic and drop-off areas are located on the exterior, with extended canopied corridors providing access to the campus.

The George K. Porter Junior High also reflects how Los Angeles's still-expanding suburbs provided a testing ground for modern design and programming ideas school plants. The school is located in Granada Hills, also home of Joseph Eicher's celebrated midcentury modern tract of Balboa Highlands, now a Historic Preservation Overlay Zone in the City of Los Angeles. These buildings and so many others like them reflect how the suburbs continued to expand, especially throughout the San Fernando Valley, and how by the late 1950s midcentury modernism enjoyed wide acceptance among the public.

The 1960s and the Open-Plan School

Another wave of school plant reform in the early 1960s brought calls for more flexibility. To accommodate the new method of "team teaching," the focus became designing completely adaptable interiors, with movable walls and few built-ins, in a new typology known as the open-plan school.

In light of this new trend, the finger-plan of the 1940s—those "once-daring school plants with long corridors and classrooms located on one or both sides were now dismissed as hopelessly dull 'egg-crates.'"[122] Basic features like load-bearing interior walls came to be seen as too limiting. As the EFL wrote in a study, "'Old walls should not stifle new ideas. Identical boxes must not enforce the same program on all students and teachers; each is a unique individual. Fixed furnishings must not quash spontaneous inquiry.'"[123] The school capable of serving the needs of students, the EFL concluded, offered space to "accommodate groups of various sizes from 100 students down to one or two students studying by themselves" and "space allowing for the rapid shifting of group size or change in group's activity."[124]

Figure 141. Caudill, Rowlett, & Scott, Paul Klapper School, New York, 1966-1967. Source: Ogata, 2008.

EFL findings were well publicized and widely published, first finding audience in the nation's many education-related trade publications and into mass-market newspapers. Reporting on the findings of an EFL study, the *Los Angeles Times* wrote that "if you were to take the roof off most schools and look in, you would see a series of identical rooms, approximately 30x40 ft., strung along both sides of a corridor. This is the floor plan of an obsolete school."[125] This description, of course, fit the classic finger-plan school, and many cluster-plan schools, considered cutting-edge just one decade before.

Figure 142. Thurston School, Open Plan Model (1967), Flewelling & Mood. Source: Getty Research Institute, Julius Shulman Photography Archive.

What this meant in terms of school design was a less low-slung, spread-out campus; the buildings were more compact, with higher ceilings. The idea of cross-lighting and ventilation provided by the long rectangular classroom wing fell out of favor. They were no longer as essential, since, in the early 1960s, improved air-conditioning systems diminished the importance of cross-ventilation and less glazing was generally

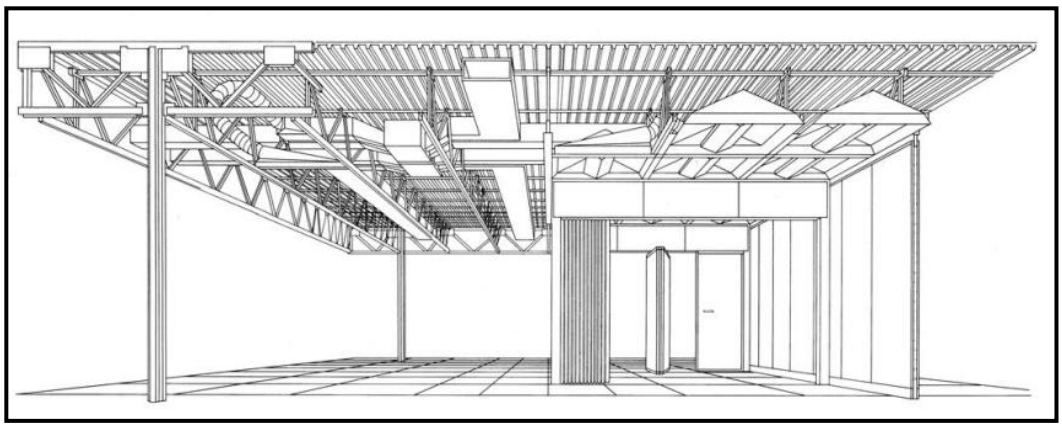

Figure 143. Standardized, demountable components for an open-school, School Construction Systems Development. Source: Ogata, 2008.

used. Since the open-plan school had to accommodate interior spaces separated by non-load-bearing walls, roof spans had to be long and high, with a steel structural system providing, essentially, a large high space into which the school's program could be designed. Massing increased, and corridors moved back inside.

Although the most obvious changes brought by the open-school plan were to school interiors, the shift was also discernible on the exterior. Some—but not all—open-plan schools adopted the circular form, with architect William Caudill arguing that the circular form best served team teaching, since the circular plan offered "continuous movement of children."[126]

Architects also experimented with hexagonal building shapes, either with self-enclosed campuses or smaller circular classrooms clustered around a common area or courtyards (in yet another variation bringing together two plan types). One of the "most adventurous examples" of the plan type, according to architectural historian Amy Ogata, was Caudill, Rowlett & Scott's Paul Klapper School in New York, constructed in 1966/1967.

School Construction Systems Development (SCSD)

In efforts to promote the open-plan school, the EFL awarded a substantial grant to develop "an economical, standardized building system" through its School Construction Systems Development (SCSD) program.[127] The program developed, standardized and manufactured modular components and structural systems for open-plan schools. The SCSD school components and infrastructure were standardized but aesthetically flexible, allowing for design and plan variations so that "architects were not limited in plan layout."[128] High roof spans of 60 to 70 feet provided the structural template into which the school's interior program could be designed.

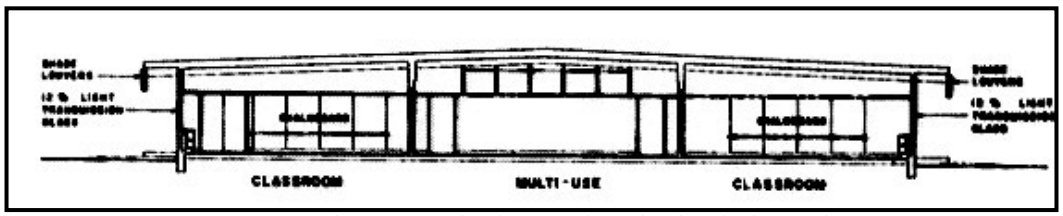

Figure 144. Section, Van Duzen Elementary School, open-plan school with cluster-plan configuration. Source: Gibson, 1965.

The SCSD system was promoted nationally. In 1962, the program "had the commitment of twelve California school districts to develop and build schools worth 25 million dollars."[129] Ultimately, 13 SCSD schools were constructed in California. The formation of the SCSD also grew out of the astronomical costs facing school districts and boards to keep up with demand; the goal was creating prototypes that offered economical, good design, reflecting the latest ideas in educational methods and school plant design. Modern school architects around the nation experimented with the new ideas.

Ultimately, in spite of high expectations, open-plan schools "faced problems of practicality and perception."[130] Problems related to acoustics plagued open schools, for example. The gap between theory and practice also became an issue, as the open-plan school did not in and of itself guarantee that teachers would adopt the creative, flexible team-teaching strategies that had prompted design reform in the first place. Much national debate and discussion about the open-plan school took place in the educational and architectural trade press. By the mid-1970s, the open-plan school had joined the finger-plan and cluster-core plan as experiments in school design that declining quickly in popularity.

As with the finger- and cluster-plans, there were many combinations of the main plan types. The Van Duzen Elementary School in Northern California, for example, represented one of first "cluster plan schools built in California with open planning."[131] Constructed in the early 1960s for a cooperative/team teaching program, the school consisted of three parallel classroom wings, open and flexible on the interior, but configured around an exterior courtyard, for the benefits of the clustered site plan.

Constructed in 1964, the Round Meadow Elementary School, in Hidden Hills, was another example of an open-plan school, this time in Southern California. Again, the cluster-plan idea played a role in the design: "This school is designed so that each building can work as a cluster-type 'little school.'"[132] At the center of each open-plan building was a multipurpose area, with a resource center and library. The buildings tended to be higher, with more wall space and fewer windows. The interior was made flexible through the use of folding walls, and a relative lack of windows was compensated for through a modern air-conditioning unit. As with the earlier postwar typologies, the open-plan type accommodated a variety of stylistic variations.

LOS ANGELES CITY SCHOOL DISTRICTS | CONTEXT & DEVELOPMENTS

The Building Program

In the postwar period, the order of the day for Los Angeles City school districts was keeping up with demand. Overseeing the first decade of postwar expansion was Alfred Nibecker, who had served as chief architect for the architectural department of the district since the 1920s. As before, Nibecker oversaw design and construction of schools, with a variety of commissions still shared between area architects, in particular those who had begun to specialize in school design, and the in-house team of the district. In 1955, Nibecker was made an honorary member of the Structural Engineers Association of Southern California, the association's highest award. That same year, he retired. Following his retirement, the board appointed Ernst Raymond C. Billerbeck as district architect.[133]

As school construction expanded in the suburbs, however, enrollment figures at several downtown schools were in sharp decline, resulting in the closing of a number of campuses in the postwar period (among them Central Junior High, founded in 1911 and closed in 1946; and Lafayette Junior High, founded in 1911 and closed in 1955). Between 1946 and 1953, the enrollment of Lafayette Junior High dropped by one-half, falling from nearly 1,400 in 1946 to 700 in 1953/1954, reflecting the population shift from the city to the suburbs.[134]

During this period, standardized construction techniques and components, with variations reflecting differences in site conditions and demand, allowed the district to expedite construction. Standardization meant that many campuses throughout the district, in particular schools constructed during the 1950s, display identical or similar elements and features. Common modular components (for elementary, middle, and senior high schools) included classroom wings that are one-room deep, one story in height, with a finger-link rectangular plan. These buildings are often capped with a slightly sloped shed roof. Along one side (intended for southern exposure), clerestories span the building below the roof line. Shade is provided through either wide (usually cantilevered) roof eaves, in steel or wood, or a wide, sheltered arcade. These arcades generally rise to the level of roof clerestories and are supported on simple pipe supports.

Image on the left shows the Administration Building and Auditorium; image on right shows the student lawn and landscaping, from the vantage point of sheltered outdoor dining area. Source: Sapphos Environmental, Inc., 2014.

Along the opposite side (meant for northern exposure), window glazing is generous, usually occupying 60 to 80 percent of the wall height in grouped, multi-light, operable windows. The grouping of windows marks the location of the classroom inside, and treatments vary, from wood-framed, multi-light double-hung sashes to steel-framed casements.

By the 1960s, it became more common to see double-loaded classroom wings (for senior high schools especially, but also for some elementary schools where demand was high and available acreage was scarce). By double-loading corridors but retaining the preferred one-story massing, schools accommodated more students while also providing a more domestic scaled, indoor-outdoor campus. Also in the early 1960s, for sites with less acreage, campuses incorporated more two-story buildings, with designs still drawing upon the postwar ideals for an informal, indoor-outdoor campus.

Many slight variations of another classic feature of postwar schools, sheltered corridors, appear on campuses throughout the district as well. Intended to move hallways outside, sheltered corridors might display wood plank and beam roof structures, resting on simple piers or steel pipe supports, capped with a flat or slightly sloped roof. Many examples form an elaborate network connecting all buildings and facilities of the campus.

Many LAUSD schools constructed during this period, from the late 1940s through the 1950s, also display standard campus components and site designs. Some basic elements include an auditorium, usually cited close to the public entrance to the campus, with a low, one-story entrance wing giving way to a two-story high interior. Stylistically, the auditorium generally reflects the character-defining features or influence of Mid-Century Modern design. Detailing is spare, and materials vary. For the auditorium, and usually for the equally public administration building, brick cladding and piers flank entrances and/or accenting building bases. Other typical materials include stucco, steel, and scored concrete.

Other common features for elementary, middle, and senior high schools included the incorporation of a centrally located, sheltered outdoor dining area and adjacent Cafeteria/Multipurpose Building, outdoor assembly area and landscaped lawn/quad and recreation fields along the periphery of campus (the latter two features are more common for middle and senior high schools). Elementary schools often incorporated a separate area for kindergarten classes. Usually located near the Administration building, the kindergarten areas have their own patios and recreation areas, adjacent to the classroom wing.

Postwar Expansion and Educating the Baby Boom

After the tumult of Great Depression and World War II, the Board of Education of Los Angeles, in spite of a turn toward architectural modernism, shifted away from the experiments of the 1930s and back toward a more traditional, college-focused curriculum. In September 1945, the Board of Education added its voice to a movement to carry out district-wide achievement testing for students and reevaluate the curriculum, partly in order to stop the "'drift toward laissez-faire, experimental, and lax methods.'"[135] The curriculum was revamped, with a renewed emphasis on the "3 Rs" and additional coursework in American history and geography.

The biggest challenge facing the district at the time was keeping up with demand. In Southern California, one of the areas with the most rapid growth was the San Fernando Valley. Between 1930 and 1950, population expansion in the valley was remarkable even for Southern California. With new settlers drawn by the area's emerging aerospace and entertainment industries, residential expansion had already been under way by the 1920s and 1930s. By the onset of the Great Depression, for example, the valley had become one of the United States' most important hubs for the aviation industry. Given this concentration of jobs, population doubled from approximately 51,000 in 1930 to 112,000 by 1940. With the advent of World War II and an infusion of federal funds for wartime spending, these figures skyrocketed by another 50 percent in 5 years, from 112,000 in 1940 to 176,000 by 1945. Between 1945 and 1950, a nearly fourfold increase was recorded, with figures climbing to 402,000. Given the magnitude of this expansion, a majority of post-1945 school construction for the district overall took place throughout the San Fernando Valley.

Photo on the right shows detail of courtyard spaces and landscaping lining all classrooms. Source: Sapphos Environmental, Inc., 2013.

This created another challenge for the Los Angeles City school district. Overcrowding led to the need to offer "half-day" sessions for children, where attendance happened in shifts of half-days. Bond issues in 1946, 1952, and 1955 addressed the pressing need for new school construction, and the resulting funds paid for the construction and expansion of numerous schools.[136] The 1946 bond issue provided $75 million, which helped generate 66 new schools, with a total of over 2,300 classrooms, over 480 cafeterias, gyms, auditoriums, and other ancillary buildings.[137] In addition, over $7.8 million went toward land for new schools, $3.2 million for maintenance and improvements to an aging stock of facilities, $4.5 million for grounds improvements, and $10.6 million for equipment. In spite of these investments, another $148 million was proposed for a 1952 bond issue.

In 1948, district-wide enrollment stood at 301,000 students; by 1949, this figure had increased by 15,000, with enrollment reaching over 316,000.[138] By the end of the 1950s baby boom, however, the student population of the Los Angeles City school district more than doubled, climbing from 316,000 to over 645,000. A further increase of 28,000 pupils was predicted for the school year 1960–1961.[139]

Although the district temporarily succeeded in decreasing the need for half-day sessions in 1948–1949, by 1952 the sheer numbers threaten to overwhelm its ability to keep up. Without a new building campaign, the number of students needing to attend half-day sessions was predicted to increase from 11,355 in 1952 to 100,000 by 1957.[140] By 1965, in the San Fernando Valley, demand was so great that school district officials began predicting that school plants would soon occupy high-rises, a trend that was not desired but seen as a possibility.

Funding was not the only challenge facing the district. There was a pressing need for new construction, but also a shortage of trained architects in the immediate postwar years (this tide started to turn in the 1950s). In 1949, the State of California issued a "renewed plea for draftsman and designers," as the state's ambitious postwar building program for institutional construction was falling behind schedule due to a personnel shortage.[141]

These years profoundly impacted the growth and organization of the school district. The geographic area served by the school district fluctuated over time, expanding during the 1920s and 1930s as it annexed adjacent school districts and served new areas. As of 1935, the school district enrolled 300,000 students housed in 384 schools, including 293 elementary schools, 22 junior high schools, 35 high schools, a trade school, and a junior college; and it served an area of over 1,095 square miles.

During the late 1930s and 1940s, the general trend in school district organization was toward decentralization; as communities grew and developed their own identities, they might split off and form stand-alone districts. For example, between 1936 and 1945, the Beverly Hills, Torrance, Culver City, and William S. Hart Union High School districts formed after leaving the Los Angeles City School District.

Even so, throughout the district, enrollment steadily increased. Rapid postwar residential development perpetuated the need for funds for additional classroom space, facilities, equipment, and other resources. To examine apportionment of state aid to school districts, in 1954 the state legislature created the State Commission on School Districts and directed it to examine unification and other means of reorganization of school districts in the state. The state's policy thereafter was the encouragement of unification for reasons of streamlining administrative functions and costs, enlarging tax bases and reducing dependence on state aid. Developing suburbs were, accordingly, encouraged to align themselves with the existing Los Angeles City School District, further contributing to its growth.

Formation of the Los Angeles Unified School District

Through the 1950s, the Los Angeles City School District remained organized as three separate entities: an Elementary School District, High School District, and Junior College District. In the late 1950s, calls for unifying Los Angeles's elementary and high school districts into one unified entity began gathering momentum. The movement for district consolidation was seen throughout the region and state in this era. As of 1959, the State of California spent upwards of $1.5 billion for public education, spread across 1,721 separate districts, "a maze related to the state's unending growth."[142]

Supported by the State Board of Education, the Los Angeles City School District and Board of Education, as well as California's governor at the time, Edmund Brown, district unification would "bring advantages in curriculum, staff and financing."[143] Proponents of the measure argued that unification would help bring costs under control by streamlining administrative procedures and eliminating duplication. In addition, a unified district would also provide a "continuity of education along a solid plane from the kindergarten to the senior year," as Los Angeles City School District superintendent Ellis Jarvis argued.[144]

These efforts culminated in three ballot measures, Propositions C, D, and E, included in the 1960 national primary elections. The propositions easily passed. As of July 1961, the LAUSD came into being as the second largest school system in the United States, and the Los Angeles Junior College District became an independent entity.

Changing Times: LAUSD in the 1950s and 1960s

In 1960, the *Los Angeles Times* education editor, Dick Turpin, observed that "growth, the word most nearly synonymous with California, has brought many problems to the state and education has had a major share of them."[145] At this juncture for LAUSD, enrollment in 1959–1960 stood at 645,000; by 1960–1961, enrollment figures were expected to climb by 28,000 pupils.[146] The school year 1960–1961 also brought the opening and staffing of 15 new schools.

The extended postwar boom of school construction and expansion had brought dozens of new schools to the district. Between 1946 and 1962, a total of $649.5 million in bond issues had funded the expansion. But population growth continued through the 1960s, exerting a constant pressure for new classrooms.

In 1962, the *Los Angeles Times* reported that California had become the most populous state in the nation and that this population boom was having a negative impact on the state's schools. As a result, LAUSD had increased half-day sessions for the first time since the 1950s, during the height of the baby boom. Half-day sessions had hit a high mark in 1957, with over 48,000 classes adopting the partial schedule; this number had steadily dropped in the intervening years. But by 1962, the numbers were again on the rise, with an estimated 20,000 half-day sessions needed in the fall of 1962. Other solutions, such as the temporary fix of busing students from overcrowded to less crowded schools, was one proposed but problematic solution in the early 1960s.

Even as the need to expand and upgrade continued, signs of voter fatigue for school bond measures were becoming evident. In 1962, a defeated bond measure of $128 million would have funded new schools and expansion in areas most impacted by enrollment increases and/or overcrowding, among them, the San Fernando Valley and central Los Angeles. By 1963, for example, enrollment in the San Fernando Valley accounted for one-third of the total for the district.[147] Even with the additional funds, keeping up with demand still would have proved onerous: "Had the measures passed," reported *Los Angeles Times* education editor Dick Turpin, "the city school system could barely have kept pace with the city's surging enrollment wave. Now additional half-day sessions are certain."[148]

Through the 1960s, however, the tide continued to turn against school bond measures. In 1969, for the fourth time in a row, Los Angeles voters rejected a tax increase to provide funding for "the already troubled Los Angeles city schools. A bond issue for the construction of new schools was also a victim of nonsupport."[149] This trend was statewide: joining Los Angeles voters in this rejection of school bond measures were Culver City, Ventura, and San Diego, among many others. Between 1966 and 1968, "52 percent of all propositions designed to provide more funds for California schools ... have been defeated."[150]

In an editorial in the *Los Angeles Times*, Warren L. Steinberg, a consultant with LAUSD's Center for Planned Change, commented on the trend:

> California businessmen and politicians—in addition to exploiting the beauties of the California scenery and climate—have long attributed much of the success in luring business to the state to an educational system that provides a large source of skilled manpower. Again, why do Californians reject support for one of the state's most precious assets—schools? Some will answer that it is a taxpayers' revolt, that school taxes are the only taxes on which the average citizen gets to vote and that there is no other way that the individual can show his wrath at the steadily climbing tax bite.

Steinberg captured the mood of the era, not just with respect to funding, in his concluding comments in the piece:

> Our children need to ponder basic educational problems: When will equal educational opportunity be a reality, what is the place of religion in the school, what should be taught in the schools, how much is good education worth, what is the role of home and school, how free should academic freedom be, what part should students have in determining the education they will receive? Unless schools turn out a better educational product and begin to teach students the history and place of education in our society, we can expect more propositions to fail their ABCs. [151]

As the decade ended, though, the "voter revolt" against school bond measures continued, and Los Angeles city schools were tasked with serving a substantial student population with ever-diminishing resources. In 1969, for the first time in its history, LAUSD's student enrollment dropped. The news made headlines in the *Los Angeles Times*: "'This is a new development for us,' said a surprised Asst. Supt. Frederick Fox. 'The trend (of growth) has been broken.'"[152]

Civil Rights and School Integration

As the 1960s ended with this novel news—of an enrollment decrease—school officials cited the dual causes of decreasing birth rates as well as the widespread move of many families to new suburban areas outside the district. An additional factor in this shift was increasing racial tension and growing pressure on the district to correct the racial imbalance that had become evident in many schools.

In the postwar period, addressing and correcting decades of de facto racial segregation represented a significant challenge for LAUSD.[153] By the 1960s, as the Civil Rights movement gained momentum, this long-brewing issue finally came to a head and formed an important part of the social context shaping the district during this time.

Throughout the early twentieth century, racial discrimination and segregation in housing had been reflected in the demographics of Southern Californian schools. A new wave of openly discriminatory housing practices in the 1930s helped maintain and worsen these divisions. In the mid- to late 1930s, surveyors for the Home Owners Loan Corporation (HOLC) studied the demographic breakdown of communities throughout the United States, including in Southern California. The HOLC provided long-term mortgage loans to, mostly, Anglo-American clients. In addition to discriminating against potential clients, the HOLC's "security maps" helped lenders discriminate against entire neighborhoods. In this climate, ethnic diversity was considered to be a security risk.

In order to document the presence of what they termed "subversive races," HOLC surveyors went block by block throughout Los Angeles, interviewing residents and creating neighborhood profiles describing, among other things, racial composition. Hundreds of data sheets, with detailed demographic information, were created for Los Angeles alone. Neighborhoods would be assigned a color denoting the level of risk, with an inordinate amount of weight being assigned on the basis of who lived there: green usually meant that a

neighborhood was entirely Anglo-American; yellow meant that a few ethnic minority members lived in the neighborhood; and red was reserved for neighborhoods with predominantly minority populations, usually African-American.

Figure 165. 1963 hunger strike by school integrationists: "A year-long study on the subject of de facto segregation was scheduled to be presented to the Board of Education." Source: LAPL, Shades of Los Angeles, #00041605.

This practice, which became known as "redlining," fueled discrimination and racially restrictive lending practices and intensified segregation in Los Angeles.[154] As restrictive housing and lending practices continued in the postwar period, racial segregation became particularly pronounced in newly constructed suburbs, in particular in the San Fernando Valley. The student populations of schools reflected this: "The Valley, regardless of the region—North, East, or West—was by far the most racially segregated region of the Los Angeles School District," according to a 1967 report released by the school district.[155] Among thousands of students at Birmingham, Canoga Park, Chatsworth, Cleveland, Granada Hills, Grant, Reseda, Taft, and Van Nuys high schools, there was a combined total of 19 African-American students.[156]

However, additional factors contributed to the marked racial imbalance in so many Los Angeles public schools. As architectural historian Teresa Grimes, et al., noted:

> According to Josh Sides, school segregation in Southern California was the product of racial geography, willful neglect, and racial gerrymandering. In this respect, the civil rights battle over education was very much tied to housing. If black families were restricted to living in certain areas with substandard schools, there was de facto school segregation.
>
> While the LAUSD officially mandated that students attend the school closest to them, white students in racially mixed neighborhoods were able to seek a waiver and attend a predominately white school. This practice, combined with segregated residential patterns, resulted in de facto segregation well into the 1950s. When the NAACP started investigating the schools system in 1953 and U.S. Supreme Court handed down the landmark Brown v. Board of Education case in 1954, schools became a central focus of the Los Angeles civil rights movement. Resistance from both the LAUSD and white parents in affected neighborhoods throughout the city led to a protracted battle over school desegregation well into the 1970s.[157]

Figure 166. The "East LA Blow Out," Lincoln High School, 16 September 1968. Students protested for "better schools for Mexican Americans. Sal Castro was a teacher there and spearheaded the movement." Source: LAPL, Herald-Examiner Collection, 00041327.

In the early 1960s, the NAACP and the American Civil Liberties Union (ACLU), along with a coalition of other organizations, launched a campaign of sit-ins, marches, and other nonviolent action, calling upon the Los Angeles Board of Education to adopt policies aimed at correcting racial segregation and broadening the curriculum. This coalition asserted the need for (1) the Los Angeles Board of Education to redraw its school boundaries, (2) black students in overcrowded schools to elect to attend predominantly white schools, and (3) black teachers to be hired throughout the district.[158] By the mid-1960s, a variety of groups joined forces, arguing for classes and subjects more reflective of the diverse histories and cultures of LAUSD students.

The issue also touched on school boundaries. In 1963, African-American leaders in Los Angeles staged protests, asking that "elementary and secondary school boundaries be redrawn around these 'Negro districts,' that that minority students be transferred from crowded schools to less crowded ones in a 15-mile radius, and that "barriers" to promotion of certified Negro personnel be eliminated."[159] With the Watts uprising in 1965, attitudes were intensified on all sides of the integration issue. Some citizens became more adamant that de facto segregation should remain in place, while other community members, activists, and students began arguing for and asserting the legal rights of all students to equal educational facilities and opportunities.

In 1968, Latin-American students in East Los Angeles staged a series of school strikes popularly known as the "East L.A. Blowout."[160] During the first week of March 1968, approximately 15,000 students walked out of classes at Woodrow Wilson, Garfield, Abraham Lincoln, Theodore Roosevelt, Belmont, Venice, and Jefferson high schools with demands for an "equal, qualitative, and culturally relevant education."[161]

Early Litigation

In 1954, in the landmark case *Brown v. Topeka Board of Education,* the U.S. Supreme Court declared that separate public schools for black and white children were "inherently unequal" and therefore violated the constitutional rights for equal protection for minority children.[162] Impacts of this decision were felt in Southern California. The Los Angeles Board of Education had cited "color-blindness" as its official policy, stating that racial segregation in housing patterns was beyond their control.[163] However, when the policies of the nearby Pasadena School Board (which mirrored those of Los Angeles) were challenged in a 1963 lawsuit brought by the National Association for the Advancement of Colored People (NAACP), the California Supreme Court ruled that school boards must attempt to eliminate racial segregation, regardless of its causes.[164]

In 1963 in Los Angeles, the ACLU filed *Crawford v. Los Angeles City Board of Education*, a class-action school desegregation lawsuit filed behalf of two African-American high school students, Mary Ellen Crawford and Inita Watkins.[165] The lawsuit highlighted two schools—both located in the southern portion of the district, only one mile apart—with pronounced racial imbalance: Jordan Senior High School in Watts, whose student population was 99 percent African-American, and South Gate Senior High School, which had 97 percent Anglo-American students.[166]

The case of *Crawford v. Los Angeles City Board of Education* became a watershed for Los Angeles schools. Filed in 1963, and effectively ending in the U.S. Supreme Court in 1982, the case "encapsulated and propelled the legal and political framework of an era."[167] As a result of the lawsuit, the California Supreme Court ordered LAUSD to formulate a plan to correct de facto racial imbalance in the schools. The most controversial solution proposed and implemented was busing students; programs were first established on a voluntary basis, then in a mandatory program that was hotly debated from the 1960s through the early 1980s, when a constitutional amendment passed by California's voters and affirmed by the U.S. Supreme Court ended the practice.

Crawford v. Los Angeles City Board of Education initially sought to halt the expenditure of public funds to renovate Jordan Senior High School until it was desegregated.[168] The suit was filed in 1963 but amended twice: in 1966, it was broadened to include Mexican-American students, and in 1968, the ACLU further amended the case to call for district-wide desegregation.[169] In 1970, as a result of lawsuit, a Los Angeles City Superior Court affirmed the presence of segregated schools in Los Angeles and ordered the district to take steps to correct racial imbalance. This prompted "a protracted fight over how to desegregate the increasingly diverse and increasingly racially segregated Los Angeles Unified School District."[170]

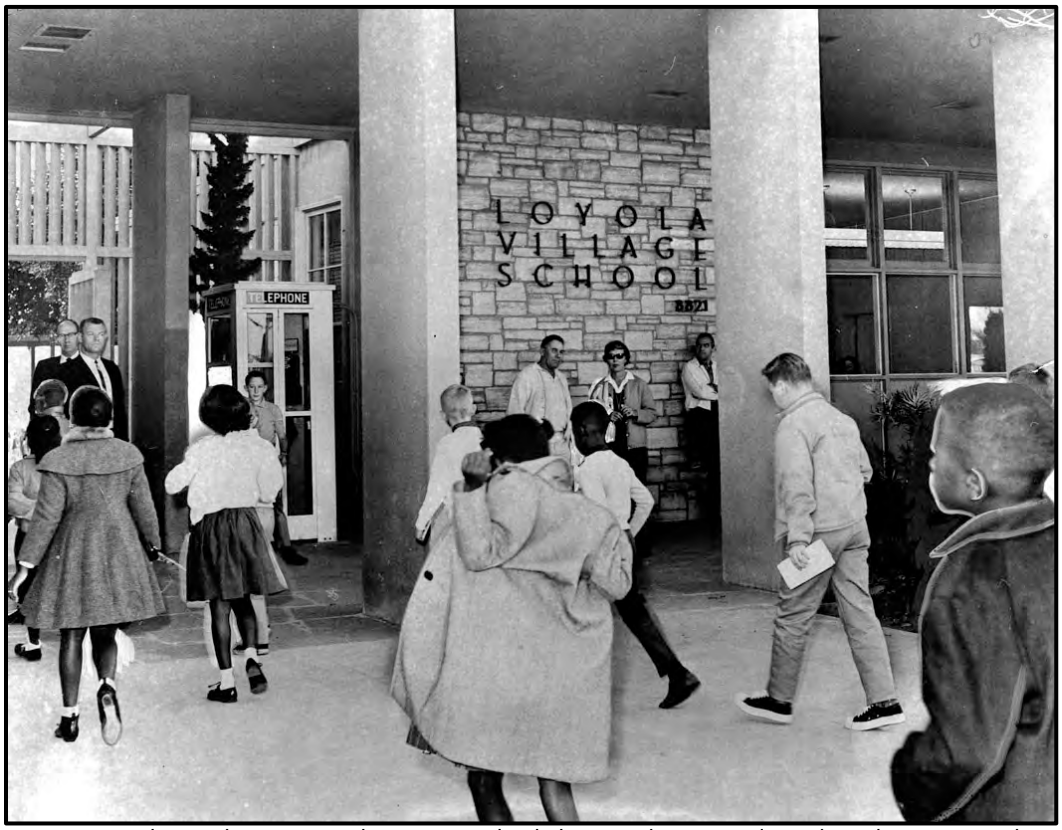

Figure 167. Voluntary busing as a solution to racial imbalance and overcrowding: This February 1964 photo shows children from Manchester Avenue School entering Loyola Village School. The caption read, "The transfer program is designed to cut half-day sessions at schools which are overcrowded by transporting pupils to schools with undersized classes." Source: LAPL, Herald-Examiner Collection, #LAPL00041639.

As mentioned, the most controversial solution involved busing students to correct racial imbalance as well as overcrowding. As early as the 1950s, and increasing in the 1960s, many communities and schools within LAUSD began exploring busing programs. In 1964, much attention was paid to a busing exchange program between relatively new schools in western Los Angeles (Loyola Village Elementary School and Osage Avenue School) and schools in older, more urbanized sections of Los Angeles (Manchester Avenue Elementary School and 66th Street School). In September 1967, a parents' group in Pacoima, in the San Fernando Valley, succeeded in establishing a busing program for 60 Pacoima students; the students would be taken by bus to the predominantly Anglo-American Encino Elementary School.[171]

During this period, in the late 1970s, two schools launched a voluntary, experimental program. Hobart Boulevard Elementary School, a multiracial school within the City of Los Angeles, partnered with Dixie Canyon Elementary School in the San Fernando Valley. In a program funded for a limited time by the Los Angeles School Board, approximately 70 second- and third-grade students from each school made the half-hour trip by bus to attend their partner school for a semester. The next semester, a new group of children would participate in the program. When the program was approved, the *Los Angeles Times* described it as "two schools, and one big step to integration": "The Anglo parents sat for more than two hours making a decision. Carefully, thoughtfully, they weighed the arguments. … But when the meeting was over, more than 100 parents of children in Dixie Canyon Elementary School in the San Fernando Valley agreed to participate in a voluntary two-way integration plan with Hobart Boulevard Elementary School, a multiracial inner-city school."[172] Writing in support of the program in the *Los Angeles Times*, Judith R. Birnberg, a Dixie Canyon Elementary School parent, stated that

> Socially, Hobart couldn't be more ideal: children attending the school have come from 42 different countries, and such a mix is already affecting my son. …Too many parents base their resistance to integration on the unknown. They assume minority schools are inferior, they assume the time traveling by bus will be a burden to their children; they assume children are haunted by the same fears clouding their own lives. But the time has come for parents to learn from their children.[173]

In 1977, in response to a California Supreme Court ruling calling for a "reasonable and feasible" integration plan, the Los Angeles Board of Education designed a program for mandatory busing. Under the plan, approximately 55,000 fourth- through eighth-grade students would be bused to school in 1978, with an estimated 112,000 students to follow in 1979.[174] The program was controversial and contested on a number of fronts. Just two years after the Los Angeles Board of Education proposed its plan, California's Proposition 1 sought to reverse it through a constitutional ban on mandatory busing. On the ballot in November 1979, Proposition 1 passed handily, with 70 percent of voters supporting the end of the practice.[175] On appeal in 1982, the US Supreme Court found Proposition 1 constitutional and upheld the ban on mandatory busing.

While this ruling solved one question, the issue of racial imbalance, cultural sensitivity in hiring practices and curricula, and encouraging diversity continued to shape the local- and state-level conversations about public schools through the 1960s, into the 1980s, and beyond. This issue continued to unfold in the courts on many fronts, as well as local and state governmental offices, school boards and classrooms, communities and families throughout Southern California. In this way, civil rights, ethnic identity, culture, and equal access shaped the sociopolitical context for school districts such as LAUSD in this period.

Summary: The Postwar Modern, Functional School Plant

In the postwar period, the functional modern school plant quickly became the norm throughout the United States and in Los Angeles. As school districts struggled to keep up with demand, architects had ample opportunities to test new ideas. The emphasis on the child-friendly school meant a continuing focus on improving and standardizing environmental controls, such as lighting, ventilation, heating and cooling systems, and interior design. While three main plan types emerged during this era—the finger-plan, cluster-plan, and open-plan school—there were many combinations and variations on the basic themes. Stylistically, as well, postwar schools might exhibit textbook features of the International Style, more regionally inflected modernism, or variations on the styles popular in the postwar period.

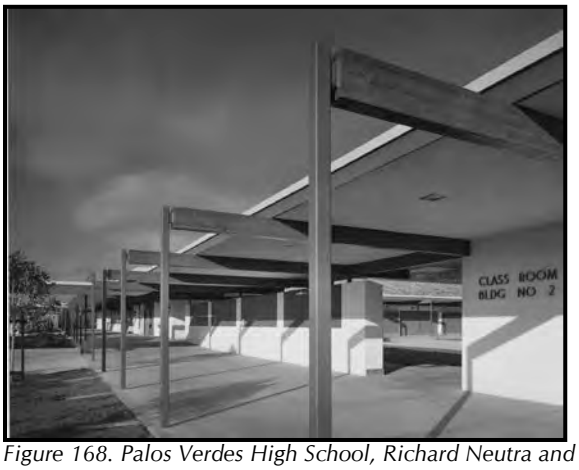

Figure 168. Palos Verdes High School, Richard Neutra and Robert Alexander (1961). Source: The J. Paul Getty Trust, Getty Research Institute, Julius Shulman Archives.

First and foremost, the postwar school was designed to be more informal, accessible, and child-friendly. A more accessible school generally signaled lower massing, though junior and high schools might still climb two or three stories, especially given the pressing need for more schools. In general, the preferred, more domestic scale was reflected in one-story massing and low ceilings, which made classrooms more intimate. Generous panels of glazing provided light and outdoor access, with larger windows on north elevations and often clerestory windows on southern sides, to balance cross-lighting. With the advent of air-conditioning, schools in the early 1960s tended to diminish generous expanses of glazing. The need for economical construction and finely tuned environmental features and controls accompanied a continued national call for standardization of school design.

Campus planning and site-specific design also became increasingly important, as new residential areas emerged from former agricultural lands, and school builders and planners had the acreage to plan an entire campus created for new residential communities. In this era, ideas about planning at the scale of the neighborhood included the generous use of outdoor spaces and landscaping and a zoned design that turned the campus inward and separated pedestrians and automobile traffic, for safety and accessibility. Although many variations were proposed, the modern campus plan called for "small separate units connected by arcades or passageways and attractively grouped. This type of arrangement is quite flexible and eliminates much of the institutional atmosphere of the large compact structures."[176]

SECTION IV ARCHITECTURAL CHARACTER

As described in Section III, early-twentieth-century reform brought a more functional approach to school design throughout the United States. Priorities shifted, and designing according to function rather than style became the starting point for architects and builders. In this way, Los Angeles's public schools generally display a scale and function that are unique to their purpose as educational facilities. Even so, as the focal point for the community's identity and commitment to education, public schools also showcased outstanding architectural design by the region's leading practitioners. Throughout the twentieth century, the public schools of Los Angeles have reflected both the increased emphasis on functionality as well as the significant stylistic trends of the day.

The following summary of the typical architectural styles reflected in LAUSD schools serves to introduce the topic and sketch the main character-defining features and eras for each style. This section draws upon and expands the architectural character section of the 2002 LAUSD Historic Context Statement and presentation prepared by Leslie Heumann & Associates and Science Applications International Corporation of Pasadena, California.[177] This updated version draws upon additional field observations, as well as recognized guides and studies.[178]

In order to ensure cross-agency compatibility, the authors of this section also considered and adapted, where appropriate, the standards used by the City of Los Angeles Office of Historic Resources and Department of Planning for historic resource surveys.

This section is not intended to be an exhaustive list of styles but rather an introduction and general framework for understanding the principal styles, as well as stylistic evolution, of LAUSD school plants. Descriptions of each style include the general period during which the style was used and its typical character-defining features.

The broad stylistic categories presented here were compiled with an understanding that architectural design is more dynamic than a fixed label might suggest. Styles and trends come together through a combination of architectural precedent, historical interpretation, creative license of designers, and the agency of clients. Therefore, architectural styles are best understood as cultural hybrids incorporating elements from a variety of sources. In this way, these descriptions offer a broad palette for identify stylistic influences and character.

LATE-NINETEENTH-CENTURY STYLES

Some of the earliest schoolhouses built in Los Angeles were one- and two-story, vernacular-type wood buildings, generally modeled at the scale of domestic and small civic buildings and easily enlarged or modified to accommodate growth or multiple uses. During this era of school construction, the bell tower, echoing church design, was introduced as a signature element. Three known examples of Los Angeles's early wood-framed schoolhouses have survived; in Los Angeles, this construction type was in use from the earliest years of the district through approximately 1910. The library building at Canyon Elementary School, for example, was built in 1894.

Typical Character-Defining Features:

- One- to two-story massing
- Wood-framed construction
- Horizontal wood or wood shingle siding
- Open cupola or bell tower
- Simple vernacular exteriors, or Queen Anne or Colonial Revival detailing
- Wood-framed, double-hung sash windows, often in groupings

EARLY TWENTIETH CENTURY: BEAUX-ARTS CLASSICISM & NEO-CLASSICAL REVIVAL

Early twentieth-century buildings brought a new architectural vocabulary to LAUSD school design. The monumental classical motifs of Beaux Arts Classicism, evident in courthouses and city halls accommodated a new scale of two and three stories. This scale was demanded by expanding enrollment and a need for increased capacity and rooms differentiated by grade level and curriculum.

Beaux Arts Classicism and Neo-Classical Revival styles were especially favored by designers following the lead of McKim, Mead and White and other prominent national firms. The impressive porticos, with classical orders and colossal columns, advertised the importance placed on public education. Primarily of masonry construction, most of these schools fell victim to the 1933 Long Beach Earthquake. The San Fernando Middle School Auditorium, constructed as part of a 6-year high school in 1916, is one of the few remaining examples of this era.

Figure 172. A rare remnant of the Neo-Classical era in school design: San Fernando Middle School, Auditorium, John C. Austin, architect (1916). Source: Heumann & Associates and SAIC for LAUSD.

Figure 173. Detail, San Fernando Middle School (1916). Source: Heumann & Associates and SAIC for LAUSD.

Typical Character-Defining Features:

- Monumental scale
- Formal, symmetrical design composition
- Smooth stone, masonry, or concrete exteriors (often scored to resemble masonry)
- Elaborated entrance, often featuring portico with columns
- Classical detailing, such as use of gables and entablature, columns, and pilasters
- Multilight grouped windows with wood surrounds

EARLY TWENTIETH CENTURY: INDIGENOUS REVIVAL STYLES AND THE ERA OF HISTORIC ECLECTICISM

As of 2013, a substantial number of LAUSD's remaining school buildings were constructed between the early 1920s and World War II. These schools reflect the eclectic menu of revival styles popular at the time for a range of building types. Period-revival styles seen in LAUSD schools include Italian Renaissance Revival, Collegiate Gothic Revival, and Tudor Revival. In addition, for Southern California's emerging architectural profession and academy, this era brought a new emphasis on the region's indigenous architectural traditions and a desire to infuse design with local character. Indigenous revival styles that rose in popularity during this period included, most notably for LAUSD public schools, the Spanish Colonial and Mission Revival. Designers expressed regional character and flavor by relating buildings to the outdoors, with one-story schools easily opened to exterior spaces, and by providing open loggias and arcades for circulation.

Where design was a priority, the stylistic program of the school is generally most clearly expressed in the campus's public buildings, such as the auditorium or administration building, and at primary entrances to buildings or classroom wings.

MISSION REVIVAL AND SPANISH COLONIAL REVIVAL

Beginning with efforts to restore California's missions in the late nineteenth century, Southern Californian architects began looking toward regional history for stylistic cues. The region's climate and Hispanic heritage figured prominently in these new directions. The Mission Revival vocabulary, most popular between 1890 and 1920, drew inspiration from Southwestern missions. Identifying features include curved parapets and red tiled, low-pitched roofs. Arches were used liberally, and wall surfaces commonly displayed smooth stucco. The Spanish Colonial Revival flourished between 1915 and 1940, reaching its apex during the 1920s and 1930s. This movement was catalyzed by architect Bertram Goodhue's 1915 designs for Panama-California Exposition in San Diego. The Spanish Colonial Revival style became one of the most popular idioms for a range of building types. Architects and builders embraced the style, which was employed for many LAUSD schools. The rise in popularity of the Spanish Colonial Revival style also coincided with the move toward more child-scaled schools, with lower massing and open, expansive campuses. With its emphasis on arcaded corridors and patios, the style fit this movement particularly well.

Spanish Colonial Revival buildings tend to be asymmetrical and sheathed with smooth stucco. Roofs generally consist of gabled, gabled and flat, and (less commonly) hipped roofs, clad in red clay tiles. Arched openings, whether for windows, doors, or gates, are a textbook feature. Secondary materials—including wood, wrought iron, and polychromatic tile—provide decorative accents. Windows are generally wood framed or metal, with molded wood surrounds or lintels.

Typical Character-Defining Features:

- Stucco-clad walls (usually smooth finish); occasionally might have brick or cast stone
- Asymmetrical design
- Use of towers, turrets, or cupolas
- Low-pitched gabled or hipped roof covered in red clay tiles or flat roof with parapet wall
- Shallow eaves or deeper eaves, lined with exposed carved wood brackets
- Arched openings for windows, doors, and use of arcades
- Secondary materials can include wrought iron, polychromatic tile, and cast stone
- Exterior patios and courtyards

RENAISSANCE REVIVAL STYLE

In the late nineteenth and early twentieth centuries, the Renaissance Revival style began as a fairly literal translation of sixteenth-century Italian *palazzi* into two- and three-story buildings. The style evolved into one of the most popular of the 1920s, in particular for midrise office buildings. McKim, Mead, and White designed some of the United States' most elegant expressions of the revival during its earlier years. During the 1920s, local architects such as Walker and Eisen and John and Donald Parkinson designed many of Los Angeles's best examples.

Renaissance Revival buildings in Southern California are generally sheathed in brick or stucco. Facades are symmetrical or highly regular and divided into bays by the fenestration pattern or by piers, which are often treated as columns with bases and capitals. Variations in surface finishes, fenestration, and level of detail visually distinguish each section, creating a horizontal emphasis that is reinforced by prominent belt courses. A cornice, set above a frieze and/or architrave, traditionally tops a Renaissance Revival building. Windows on top stories are often distinguished from lower stories by different surrounds and configuration.

Figure 180. El Sereno Middle School, originally Woodrow Wilson High School (1937). Source: Heumann & Associates and SAIC for LAUSD.

Typical Character-Defining Features:

- Rectangular massing
- Brick, stucco, and concrete, with trim of terra cotta or cast stone and bases of granite or masonry
- Horizontal emphasis; differentiated treatment of stories
- Symmetry and regularity
- Brick, stucco, or concrete exterior, often scored to resemble masonry
- Gabled and/or hipped roof, often sheathed in clay tiles
- Linear fenestration pattern
- Belt courses and cornices
- Classical detailing
- Cast stone or terra cotta architectural ornament

GOTHIC REVIVAL / COLLEGIATE GOTHIC

Popularized by writers and art critics such as John Ruskin (1819–1900), the English Gothic Revival movement looked back to and idealized the preindustrial Medieval era as a more pure and moral golden age, for society as well as for architecture. First popularized for religious buildings and for school buildings—the "Collegiate Gothic"—the style began appearing in the Los Angeles area in the late 1800s. Few buildings were constructed locally in this style, and even fewer remain.

Most extant Collegiate Gothic schools in Los Angeles were constructed during the height of the period-revival era. In the 1930s, in school design, the style fell out of favor as more up-to-date architectural idioms began emerging. The 1933 Long Beach earthquake, and then the 1934 Field Act, hastened the need for widespread school repairs and new construction, which accelerated the stylistic shift during this period.

Gothic Revival schools share the same emphasis on verticality that characterizes other applications of the style. The emphasis on the vertical is often expressed through the use of uninterrupted piers or attached ornament, which extend from the ground to the roof. The style also makes liberal use of mullions, towers, spires, and pinnacles. Windows are arranged in vertical channels of glass, sometimes topped with pointed arches. Brick and concrete were the materials of choice, often accented by cast stone.

Typical Character-Defining Features:

- Concrete or brick exterior
- Emphasis on the vertical axis
- Attenuated windows and openings
- Use of full-length columns or pilasters
- Steeply gabled roof
- Liberal use of cast stone or terra cotta ornament and sculptural detailing
- Stylized openings, with Tudor, pointed, or round arches
- Windows and doorways outlined with archivolts and topped with decorative crowns
- Windows with mullions

ART DECO

As architects and designers began exploring alternatives to historic revival styles, one of the earliest modern alternatives was Art Deco. The term grew out of the 1925 exposition in Paris showcasing the "nouveau," or new directions in design and decorative arts, at the *Le Musee des Arts Decoratifs*.

The idiom is highly decorative but rejects copying or adapting historical revival styles. Instead, ornamentation draws on geometric and foliate patterns and motifs, such as zigzags and chevrons, light, and color. Primarily in use between the 1920s and 1930s, the style was used most often in commercial, industrial, and institutional buildings.

Typical Character-Defining Features:

- Emphasis on verticality through building massing, applied exterior features, and ornament
- Use of stylized, geometric motifs and decorative features, such as zigzags and chevrons
- Generally features smooth stucco- or concrete-clad wall surfaces
- Often features towers or other elements projecting beyond the roofline
- Often features steel-frame casement and fixed windows

Figure 186. Streamline Moderne: Thomas Jefferson High School, Stiles O. Clements (1933). Source: LAUSD.

STREAMLINE MODERNE | MODERNE

The Streamline Moderne became a popular style during the Great Depression and World War II period. Its clean lines and minimalist ornament both celebrated the modern machine-age and signaled the period of austerity triggered by the Great Depression. Compared with its more ornamental predecessor, the Art Deco style, Streamline Moderne is more restrained in its ornamental program and emphasizes the horizontal rather than the vertical. This is achieved through incorporating bands of windows, decorative raised or grooved horizontal lines, flat canopies with banded fascia, and narrow coping at the roofline. Other characteristics include smooth wall surfaces, usually clad in stucco, glass block or porthole windows, and rounded corners. Reference to aerodynamic design is a signature of the style.

Compared with the Streamline Moderne, Moderne buildings also tend to be horizontal in emphasis but more clean-lined and rectilinear in their massing and detailing. Moderne designs are generally characterized by flat roofs, smooth stucco exteriors, and use of metal casement windows that often meet at the corners of the building.

Typical Character-Defining Features:

- Horizontal emphasis, massing, and accents, such as moldings and continuous sill courses
- Smooth stucco or concrete exterior finish
- Curvilinear/rounded wall surfaces, corners, and features
- Recessed windows with no surrounds
- Flat or nearly flat roof

PWA MODERNE

Created by the National Industrial Recovery Act, the Public Works Administration (PWA) was founded within a few months of the March 1933 Long Beach Earthquake. Following widespread damage to Los Angeles public schools in the wake of the earthquake, much school reconstruction work was funded by the PWA. Consequently, a substantial number of Los Angeles public schools either built or remodeled during this time exhibit some degree of PWA Moderne styling. Also referred to as "Stripped Classicism," the PWA Moderne often incorporates elements of a number of styles, including Classical Revival, Spanish Colonial Revival, Art Deco, and Streamline Moderne.

Compared with the Streamline Moderne, the PWA Moderne was more formal and symmetrical in its overall design, with less emphasis on curvilinear shapes and horizontality. This style is found throughout the United States, particularly for institutional buildings funded through the PWA. Although the PWA program was terminated in 1943, buildings continued to display these stylistic features.

Typical Character-Defining Features:

- Emphasis on the vertical axis
- Symmetrical, formal design composition and massing
- Smooth wall surfaces, generally exhibiting stucco, concrete, and/or polished stone (rarely includes brick exterior elements)
- Usually displays a flat roof
- Piers, often fluted or reeded, separating recessed window channels
- Incorporation of shallow relief panels and interior murals

Figures 191 and 192. Emerson Middle School, Richard Neutra, architect (1937-1940). Source: LAUSD Emerson Middle School Pre-Planning Survey.

EARLY MODERNISM | INTERNATIONAL STYLE (PRE-1945)

This style coincides with the emergence of modern architectural design and culture in Los Angeles, at a time when modernism was still in an experimental stage and carried out by a relatively small group of architects and designers. Although many of these same ideas informed postwar modern styles, this era was unique and experimental. The City of Los Angeles Office of Historic Resources describes this stylistic theme as follows:

> With precedents in Europe dating to the first decades of the twentieth century, Los Angeles was one of the first American centers of the International Style due in large part to the import of ideas by Viennese expatriates Rudolph Schindler and Richard Neutra. Although never catching on as a widely-accepted style for domestic architecture, the International Style was embraced and regionalized by a number of Los Angeles architects and designers who established a formidable local Modernist tradition.
>
> Rudolph Schindler came to Los Angeles from Austria in 1920 to oversee construction on the Barnsdall House (Hollyhock House) for the office of Frank Lloyd Wright. Fellow Austrian Richard Neutra came to Los Angeles at Schindler's urging in 1925. Schindler, Lloyd Wright and Neutra and the architects of the so-called "Second Generation" architects continued to design buildings in Los Angeles in the postwar years; however, by this time the work of these architects and their protégés took on an expression of a more regional modernism (see Mid-Century Modernism).[179]

Typical Character-Defining Features:

- Horizontal emphasis
- Use of simple, geometric volumes
- Smooth, unadorned wall surfaces, often sheathed in stucco or concrete
- Flat or nearly flat roof, often with cantilevered eaves
- Use of corner and casement windows, often with steel frames
- Windows generally set flush with the wall plane, with minimal trim or surrounds
- Continuous bands of windows emphasize the horizontal axis

Figures 193 and 194. On left, Fernangeles Elementary School (1954), Sun Valley. On right, Parmlee Avenue Elementary School (1962), southeastern Los Angeles. Source: Sapphos Environmental, Inc., 2014.

MID-CENTURY MODERNISM / REGIONAL MODERNISM (POST-1945)

Mid-Century Modernism, or Regional Modernism, represents a middle ground between the formal, machine-age aesthetic of the International Style and a regional idiom reflecting local precedent and identity. In the postwar period through the 1960s, as practiced in Southern California, Mid-Century Modernism took its cues from the region's first-generation modernist architects such as Richard Neutra, Rudolph Schindler, Gregory Ain, Frank Lloyd Wright, and Harwell Hamilton Harris. In the postwar period, second-generation practitioners such as Raphael Soriano, Whitney Smith, and A. Quincy Jones, among many others, established Los Angeles as a center for innovative architectural design and culture.

Mid-Century Modernism is characterized by an honest expression of structure and function, with little applied ornament. Aesthetic effect is achieved through an asymmetrical but balanced, rhythmic design composition, often expressed in modular post-and-beam construction. Whether wood or steel, post-and-beam construction allowed for open floor plans, ease of expansion, and generous expanses of glazing to heighten indoor-outdoor integration. Infill panels of wood or glass are common, with glazing often extending to the gable. Buildings are generally one to two-stories, with an emphasis on simple, geometric forms. Capped with low-pitched gabled or flat roofs, a Mid-Century Modern building often displays wide eaves and cantilevered canopies, supported on spider-leg or post supports. Sheathing materials vary, with wood, stucco, brick and stone, or steel-framing and glass. Windows are generally flush-mounted, with metal frames.

Figure 195. Pacoima Middle School, Administrative Building (1955), Wilmington. Source: LAUSD Pacoima Middle School Pre-Planning Survey, 2010.

Figures 196 and 197. Grover Cleveland High School, Administrative Building (left) and typical classroom wing (right), Matcham & Granger and Associates (1959), Reseda. Source: Sapphos Environmental, Inc., 2013.

This style was seen in postwar institutional and commercial buildings, as well as residences, from 1945 until circa 1975, when Title 24 restrictions on the use of glass curtailed the expansive glazing that characterizes the style.

Typical Character-Defining Features:

- Horizontal design composition and massing; generally one to two stories
- Simple, geometric volumes
- Flat or shed roof, often with wide, cantilevered overhangs
- Exterior materials include stucco, brick, or concrete
- Modular design and planning
- Aesthetic qualities derive from use of simply treated materials and excellent craftsmanship
- Direct expression of structural systems, often in wood or steel post-and-beam
- Lack of historicizing ornament
- Generous expanses of fenestration, including bands of grouped multi-light windows
- Extensive use of sheltered exterior corridors, with flat or slightly sloped roofs supported by posts, piers, or pipe columns

Figure 198. Orville Wright Middle School, Cafeteria, Spaulding & Rex (1951). Source: LAUSD Wright Middle School Pre-Planning Survey, 2012.

Figure 199. Palisades Charter High School, Wilson & Associates (1961). Source: LAUSD Palisades Charter High School Pre-Planning Survey, 2012.

Mid-Century Modernism | Expressionistic/Organic Subtype:

- Combines sculptural forms with basic geometric volumes
- Curved, sweeping wall surfaces
- Expressionistic roof forms, including butterfly, folded plate or barrel vault roof forms

ARCHITECTS

Since the early years of the district, the school buildings and campuses of LAUSD have been designed by some of the region's most prominent master architects region as well as the district's own architectural department. The following architects and firms were responsible for numerous designs of extant buildings throughout the district, since the early twentieth century:

- Thornton Abell
- Ain, Johnson & Day (Gregory Ain, Joseph Johnson, and Alfred Day)
- Robert Evans Alexander
- Allison & Allison (David Clark Allison and James Edward Allison)
- John C. Austin
- Austin and Ashley (John C. Austin and Frederic Ashley)
- Austin, Field & Fry (John C. Austin, Robert Field, Jr., Charles Eugene Fry)
- Edwin Bergstrom
- Daniel, Mann, Johnson & Mendenhall, DMJM (Phillip Daniel, Arthur Mann, Kenneth Johnson, Irvan Mendenhall)
- Stiles O. Clements
- Roland Coate
- Edelman and Zimmerman
- Sidney Eisenshtat
- Henry L. Gogerty
- Heitschmidt & Thompson (Earl Heitschmidt and Whiting Thompson)
- Frank Hudson
- Hudson & Munsell
- Stewart S. Granger
- Myron Hunt
- Hunt & Chambers
- Hunt & Burns
- Gordon B. Kaufmann
- George Lindsey
- Marsh, Smith, & Powell (Norman Marsh, David Smith, and Herbert James Powell)
- A. C. Martin
- Matcham & Granger (Charles O. Matcham Sr. and Stewart S. Granger)
- Alfred S. Nibecker
- Richard Neutra
- C.E. Noerenberg and Johnson
- Parkinson and Parkinson
- Charles Plummer
- Alfred Rosenheim
- Sumner Spaulding
- Spaulding & Rex (Sumner Spaulding and John Rex)
- William Stockwell
- Whiting Thompson
- Walker and Eisen
- Adrian Wilson & Associates

SECTION V THEMES OF SIGNIFICANCE

CONTEXT: PUBLIC AND PRIVATE INSTITUTIONAL DEVELOPMENT | EDUCATION
THEME: LAUSD | FOUNDING YEARS

Property Type:	Institutional/Educational
Property Subtypes:	Wood-Framed School House
Period of Significance:	1872 to 1894
Area of Significance:	Education
Geographic Location:	Citywide (rare)
Area of Significance:	A/1

Eligibility Standards:

- Is a rare example of an educational facility from the founding years of the Los Angeles City School District

Character-Defining Features:

- Retains most of the essential physical features from the period of significance
- Wood siding
- Bell tower; some Victorian-era ornamental detailing
- One-story massing
- Wood-framed, double-hung windows

Integrity Considerations:

- Should retain integrity of Design, Feeling, and Association from the period of significance
- Some materials may have been removed or altered
- Modern lighting and fencing of site acceptable alterations

CONTEXT: PUBLIC AND PRIVATE INSTITUTIONAL DEVELOPMENT | EDUCATION
THEME: LAUSD | PRE–1933 LONG BEACH EARTHQUAKE SCHOOL PLANTS, 1910–1933

Property Type:	Institutional/Educational
Property Subtypes:	Elementary, Junior High, and High School Buildings and Campuses
Period of Significance:	1910 to 1933
Area of Significance:	Education
Geographic Location:	Citywide
Area of Significance:	A/1

Eligibility Standards:

- Embodies LAUSD school planning and design ideals and principles of the era
- One of few remaining schools from the pre–1933 Long Beach earthquake era that was not substantially altered or remodeled
- Retains most of the associative and character-defining features from the period of significance

Character-Defining Features | Buildings/Structures:

- Articulated buildings plans, facilitating the creation of outdoor spaces (often T-shaped, E-shaped, U-shaped, and H-shaped plans)
- Generally low massing, usually one to two stories (with two to three stories more common for middle and senior high schools)
- Includes designed outdoor spaces, such as courtyards and patios, adjacent to classroom wings
- Exteriors usually lined with rows of grouped windows, including wood-framed multilight windows; expanses of windows often mark the location of classrooms
- Designed in popular period-revival styles of the era (including Spanish Colonial Revival, Renaissance Revival, Mediterranean Revival, and Collegiate Gothic)
- Often designed by prominent architects of the era

Character-Defining Features | Campus/District:

- Emphasis on a more spread-out site plan, with designed outdoor spaces
- More varied collection of buildings, differentiated by function and use (rather than a single building with all functions inside)
- Might include an elaborate administration building, usually the focal point of the campus, as well as classroom wings, auditoriums, gymnasiums, and outdoor recreation areas
- Middle or senior high schools might include a gymnasium designed in the style of the campus overall

Integrity Considerations:

- Most pre-1933 schools were substantially remodeled following the Long Beach earthquake
- Designed outdoor spaces, such as courtyards and patios, should be intact in use, if not with landscape design and hardscaping; development pressures over the years often resulted in these open spaces being in-filled with new construction; overall sense of relationship of building to designed outdoor spaces should be intact
- Should retain integrity of Materials, Design, Workmanship, Feeling, and Association from its period of significance
- Intact campus groupings from a single period of time are not common
- Some materials and features may have been removed or altered
- Modern lighting and fencing of site acceptable

Comments:
Schools from this period generally include additional buildings and structures added after the period of significance (in particular after World War II), which may be non-contributing.

Eligible properties under this theme may be a single building (generally the Administration Building, in combination with a classroom wings) or a grouping (campus) of buildings constructed during the period of significance.

Buildings and campuses exhibiting distinctive design features might also qualify under Criteria C/3, as the embodiment of the distinctive characteristics of a type, period, region, or method of construction, an excellent example of the work of a master architect, or for high artistic values.

Figure 225. Marshall Senior High School (1931). The school has expanded over the years but also retains many of its designed open spaces and courtyards. Source: LAUSD Marshall Senior High School Pre-Planning Survey, 2010.

CONTEXT: PUBLIC AND PRIVATE INSTITUTIONAL DEVELOPMENT | EDUCATION
THEME: LAUSD | POST–1933 LONG BEACH EARTHQUAKE SCHOOL PLANTS, 1933–1945

Property Type:	Institutional/Educational
Property Subtypes:	Elementary, Junior High, and High School Buildings and Campuses
Period of Significance:	1933 to 1945
Area of Significance:	Education
Geographic Location:	Citywide
Area of Significance:	A/1

Eligibility Standards:

- Exemplifies post–Long Beach earthquake school planning and design concepts of the period, including requirements under the 1934 Field Act
- One-story massing for elementary schools; up to two-stories for junior/high schools
- Retains most of the associative and character-defining features from the period of significance

Character-Defining Features | Buildings/Structures:

- One-story massing for elementary schools; up to two stories for middle and senior high schools
- Reinforced concrete, steel- or wood-frame construction
- Classroom wings designed for easy access and views to outdoors—with variations including L-, H-, T-shaped building plans
- Generous expanses of windows, including steel- and wood-framed multilight windows, awning and hopper casements, clerestories, and large-pane fixed windows; window groupings often mark the location of classrooms
- Stylistically more streamlined and less ornamental than 1920s period-revival styles
- Emphasis on "traditional Southern Californian" styles, such as Spanish Colonial and Mission Revival
- Styles can also include PWA Streamline Moderne, Art Deco, Late Moderne, and proto-modern styles
- May have been partially or fully funded through Works Progress Administration (WPA), 1935 to 1943
- WPA projects may include significant interior artwork such as murals, paintings and sculpture
- May have been designed by a prominent architect of the period

Character-Defining Features | Campus/District:

- Unified site plan consisting of buildings and structures designed and sited according to their use
- Use of designed outdoor and landscaped spaces, for outdoor study, recreation and dining
- Often displays connecting sheltered corridors throughout campus
- Emphasis on a more expansive site plan
- Varied collection of buildings, differentiated by function and use (rather than a single building with all functions inside)
- Might include an elaborate administration building, located near the campus entrance; administration buildings usually serve as the focal point of the campus
- Campus often composed of groupings of classroom wings, auditoriums, gymnasiums, cafeterias, and outdoor recreation and dining areas
- Middle or senior high schools might include a gymnasium designed in the style of the campus overall

Integrity Considerations:

- Should retain most of the essential physical features from the period of significance
- Some materials may have been removed or altered
- Modern lighting and fencing of site acceptable
- Schools from this period generally include buildings constructed after the period of significance, in particular post-World War II buildings, which may be non-contributing
- Eligible properties under this theme may be a single building, if it exemplifies the design ideals of the era, or a grouping (campus) of buildings constructed during the period of significance
- Intact campus groupings from the pre-1945 era are not common
- Many pre-1933 schools were substantially remodeled following the Long Beach earthquake—may retain a 1920s plan but with 1930s stylistic detailing.
- Pre-1933 schools rehabilitated post-1933 might exhibit added seismic supports of steel columns, beams, or diagonal bracing; original masonry might be covered by concrete/stucco sheathing
- Should retain integrity of Materials, Design, Workmanship, Feeling, and Association from its period of significance

Comments: Buildings exhibiting distinctive design features might also qualify under Criteria C/3, as the embodiment of the distinctive characteristics of a type/period or method of construction, as an example of the work of a master architect, or for high artistic values.

CONTEXT: PUBLIC AND PRIVATE INSTITUTIONAL DEVELOPMENT | EDUCATION
THEME: LAUSD | EARLY EXPERIMENTS IN THE MODERN, FUNCTIONALIST SCHOOL PLANT, 1933–1945

Property Type:	Institutional/Educational
Property Subtypes:	Elementary Schools, Junior High Schools, and High Schools
Period of Significance:	1933 to 1945
Area of Significance:	Education
Geographic Location:	Citywide; rare
Area of Significance:	A/1

Eligibility Standards:

- Clearly expresses the experimental ideas emerging during this period for the modern, functionalist school plant
- One-story massing for elementary schools; up to two-stories for junior/high schools
- Classrooms, in detailing and plans, clearly express their function, with axial, finger-like wings, plentiful fenestration, and connections to the outdoors
- Retains most of the associative and character-defining features from the period of significance

Character-Defining Features | Buildings/Structures:

- One-story massing for elementary schools; up to two stories for middle and senior high schools
- Usually reinforced concrete, steel- or wood-frame construction, clad in cement/stucco
- Classrooms are often single- or double-loaded finger-like wings, arranged along a central axis or semicircle
- Classrooms open directly onto patios/play areas through glass doors or movable walls
- Varying elevations might display differentiated window sizes and configurations, in order to tailor interior light to sun patterns and create cross-lit classrooms
- Windows are plentiful and include steel- and wood-framed multilight windows, in double-hung sashes, awning and hopper casements, clerestories, and fixed panes
- Displays an informal, nonmonumental scale and spare ornamental program
- Stylistically modern; might display influence of Late Moderne or PWA Streamline Moderne
- May have been partially or fully funded through WPA, 1935 to 1943; WPA projects may include significant interior artwork such as murals, paintings and sculpture
- May have been designed by a prominent architect of the period

Character-Defining Features | Campus/District:

- A unified, nonmonumental, nonhierarchical site plan
- Displays inventive site plan incorporating buildings, landscaped courtyards, and circulation corridors into a unified campus design
- Swaths of landscaped patios and terraces adjacent to classroom wings
- Designed outdoor spaces, including patios, courtyards
- Use of outdoor corridors, with simple canopy supports and posts or *pilotis*, form links between classrooms and other buildings

Integrity Considerations:

- School expansion and new construction over the years, in particular in the postwar period, might have resulted in the addition of in-fill buildings and structures in areas that were originally designed open spaces. Such new additions should not interfere with or serve as a visual impairment to the designed connections between buildings, in particular classroom wings, and adjacent outdoor patios and spaces.
- Some materials may have been removed or altered
- Modern lighting and fencing of site acceptable
- Should retain integrity of Materials, Design, Workmanship, Feeling, and Association from its period of significance

Comments: Buildings exhibiting distinctive design features might also qualify under Criteria C/3, as the embodiment of the distinctive characteristics of a type/period or method of construction, as an example of the work of a master architect, or for high artistic values.

CONTEXT: PUBLIC AND PRIVATE INSTITUTIONAL DEVELOPMENT | EDUCATION
THEME: LAUSD | EDUCATING THE BABY BOOM: THE POSTWAR MODERN, FUNCTIONALIST SCHOOL PLANT, 1945–1969

Property Type:	Institutional/Educational
Property Subtypes:	Elementary Schools, Junior High Schools, and High Schools
Period of Significance:	1945 to 1969
Area of Significance:	Education
Geographic Location:	Citywide; with concentrations in the San Fernando Valley and west Los Angeles
Area of Significance:	A/1

Eligibility Standards:

- Clearly embodies the characteristics of a postwar modern functionalist school campus
- Displays a unified, functional site design, with buildings extending across the site and oriented in relation to outdoor spaces (courtyards, patios, outdoor play areas)
- One-story massing for elementary schools; up to two-stories for junior/high schools
- Classrooms, in detailing and plans, clearly express their function, with axial, finger-like wings, plentiful fenestration, and connections to the outdoors
- Retains most of the associative and character-defining features from the period of significance

Character-Defining Features | Buildings/Structures:

- Building plans and site design clearly express their function; classroom wings often exhibit one-story "finger-like" wings, arranged on an axis
- Easily identifiable indoor-outdoor spaces, connections to classrooms through the incorporation of patios, courtyards, and outdoor canopied corridors
- One-story massing, particularly for elementary schools; up to two to three stories for junior and high schools
- Building types and plans expressive of postwar ideals in school design; these can include (1) finger-plan schools (usually in 1940s through 1950s); (2) cluster-plan schools (beginning in 1950s); and (3) variations and combinations of these typologies clearly expressive of the ideals for informality, indoor-outdoor connections, and zoned planning for the site
- Varying elevations might display differentiated window sizes and configurations, in order to tailor interior light to sun patterns and create cross-lit classrooms

Character-Defining Features | Campus/District:

- Unified campus design includes most or all of the following attributes: lack of formality and monumentality; low massing (usually one stories for classrooms and up to two stories for auditoriums/multipurpose rooms); strong geometric ordering of buildings and outdoor spaces; decentralized, pavilion-like layout; rational, function-driven site design; buildings extend across the site; buildings are oriented to outdoor spaces (courtyards, patios, outdoor areas), purposeful indoor-outdoor integration
- Automobile traffic/drop-off areas separated from campus; linked to interior via extended canopied corridors
- Buildings often turn inward, toward green spaces and courtyards, lawns
- Outdoor corridors, sheltered beneath simple canopies, forming links between the buildings of the campus
- Classrooms often consist of a series of axial, modular units
- An informal, domestic scale for the buildings and campus might be especially evident in elementary schools
- Swaths of patios, terraces, and plantings adjacent to and alternating with buildings
- Generous expanses of windows, including steel- and wood-framed multilight windows, in awning and hopper casements, clerestories, and fixed panes
- Flat roof or broken-plane roof often used for lighting and acoustical issues
- Modular design, with a rhythmic, asymmetrical but balanced composition
- Usually displays a modern design idiom, usually either regional modernist (with use of native materials such as stone, brick, and wood siding and/or framing), International Style modernist, or, by the early 1960s, Late Modern (more expressive and sculptural)
- Some examples might include some degree of historicist detailing or styles popular in the postwar period (such as American Colonial Revival); these are less common than modernist examples
- May have been designed by a prominent architect of the period
- Often associated with post–World War II suburbanization and growth near major employment centers beyond the city periphery (such as the San Fernando Valley and southwest Los Angeles)
- Often built in residential neighborhoods on large expanses of land, with swaths of land devoted to landscape design and playing fields (in particular for high school campuses)

Integrity Considerations:

- Retains most of the essential physical features from the period of significance
- School expansion and new construction over the years, in particular in the postwar period, might have resulted in the addition of in-fill buildings and structures in areas that were originally designed open spaces. Such new additions should not interfere with or serve as a visual impairment to the designed connections between buildings, in particular classroom wings, and adjacent outdoor patios and spaces.
- Many postwar schools were designed to be easily expandable as enrollment increased; the original site design and building types and plans should be readily discernible. If additional wings were added or the campus extended, the additions should be compatible with and visually subordinate to the original.
- Some materials may have been removed or altered
- Modern lighting and fencing of site acceptable
- Should retain integrity of Setting, Materials, Design, Workmanship, Feeling, and Association from its period of significance
- Addition of portable or permanent buildings after the period of significance acceptable as long as original campus design is intact

Comments: This theme would most often apply to a campus evaluated as a historic district. Individual buildings and/or campuses exhibiting distinctive design features might also qualify under Criteria C/3, as the embodiment of the distinctive characteristics of a type/period or method of construction, as an example of the work of a master architect, or for high artistic values.

CONTEXT: PUBLIC AND PRIVATE INSTITUTIONAL DEVELOPMENT | EDUCATION
THEME: LAUSD AND THE CIVIL RIGHTS MOVEMENT, 1954–1980

Property Type:	Institutional/Educational
Property Subtypes:	Elementary Schools, Junior High Schools, and High Schools
Period of Significance:	1954 to 1980
Area of Significance:	Education/Ethnic Heritage
Geographic Location:	Citywide
Area of Significance:	A/1 and/or B/2

Eligibility Standards:

- Was constructed during the theme of significance
- Was the site of significant integration initiatives, challenges, or activities related to the Civil Rights Movement and school integration
- Directly reflects the movement for equal access to schools and/or to employment opportunities in LAUSD schools
- Has a well-established, long-term association with a figure who was significant in the Civil Rights Movement and school integration (eligibility under B/2)

Character-Defining Features:

- Retains most of the associative and character-defining features from the period of significance

Integrity Considerations:

- Retains integrity of Location, Design, Setting, Feeling, Association
- Some materials may have been removed or altered
- If there are multiple buildings on campus constructed during the period of significance, these should be evaluated as a potential historic district

SECTION VI CONCLUSION | RECOMMENDATIONS

LAUSD is the second largest public school system in the United States and encompasses nearly 800 campuses distributed across more than 700 miles. Since its founding in 1872, the district has commissioned, designed, and acquired a remarkable collection of buildings, campuses, and facilities. These properties reflect more than a century of social, architectural, and technological advances, as well as ongoing educational and curricular reform. Extant properties range from a few late-nineteenth-century, wood-framed schoolhouses to mid-twentieth-century superblock campuses exemplary of modernist architectural design.

This Historic Context Statement represents a first step in creating a framework for context-driven evaluations of educational facilities in Los Angeles (and beyond). As LAUSD begins planning for campus-wide redevelopment and modernization under Measure Q, to be launched in 2014, this study provides a guide for conducting evaluations of LAUSD's many historically significant buildings and campuses.

Through research conducted for this study, four distinct periods emerged: (1) Founding Years, 1870s through 1909; (2) Progressive Education Movement: Standardization and Expansion, 1910 to 1933; (3) Era of Reform: Great Depression, Earthquake, and Early Experiments in the Modern, Functionalist School Plant, 1933 to 1944; and (4) Educating the Baby Boom: Postwar Expansion and the Modern, Functionalist School Plant, 1945 to 1969. Specific themes of significance associated with each era were prepared for this study, along with eligibility standards, character-defining features, and integrity thresholds for each.

Given the project need and parameters, this study focused on the potential eligibility of school buildings and campuses under Criteria A/1, as outstanding examples of LAUSD design ideals and principles, according to the era under consideration. Because the postwar era largely fell outside the scope of 2002 survey work, and postwar schools will be the focus of much of the modernization work for LAUSD in the coming years, the postwar era was explored in detail in the present study.

In addition, by identifying the character-defining features that lend campuses historic significance, this study also establishes a framework for the development of district-wide design guidelines. The guidelines are being prepared by Sapphos Environmental, Inc. to be included in environmental compliance documentation currently being prepared by LAUSD.

Recommendations | Areas for Further Research

Additional research on areas and topics beyond the current scope would further broaden the framework for evaluating significant events, people, and the architectural legacy of LAUSD. Recommendations related to the Historic Context Statement and historic resources survey are as follows:

1. **Expand the LAUSD Historic Context Statement and Historic Resources Survey to include the period to 1980**
   Pursuant to Measure Q, district-wide modernization and redevelopment will unfold gradually, over many years. Broadening the LAUSD Historic Context Statement and survey to consider all schools constructed in the past 35 years (rather than 45 years) would allow the district to take proactive steps to identify historically significant campuses (and therefore historic resources under CEQA) prior to redevelopment planning and work. This would also bring the LAUSD Comprehensive Historic Resources Survey up to date with the City of Los Angeles Office of Historic Resources citywide survey, SurveyLA.

2. **Conduct additional archival research to expand property eligibility under additional criteria**
   In the current scope, campus-specific work included research on events, patterns of development, and significant people associated with the schools included in the accompanying survey. However, project limitations precluded extensive research on LAUSD's history that might result in eligibility under Criteria A/1 (such as LAUSD and the Civil Rights Movement) and Criteria B/2 (for an association with significant figures in the history of public schools in Los Angeles). These areas represent excellent areas for further study. (The context of the Civil Rights Movement and Los Angeles schools was addressed, however, in the National Register of Historic Places Multiple Property Documentation form for African-Americans in Los Angeles.[180])

3. **Expand study of school plant property types and subtypes**
   As a general framework, this treated senior high, middle, and elementary schools, as well as other LAUSD educational facilities, with a broad brush, as a single property type. Noteworthy distinctions, generally in scale and massing, were noted throughout the context. Should subsequent survey work reveal significant distinctions among educational property types, these differences could be incorporated into an updated Historic Context Statement.

4. Update and expand the LAUSD Historic Resources Survey

Sapphos Environmental, Inc. also recommends that LAUSD take proactive steps to update its comprehensive historic resources survey, in order to consider all as-yet unevaluated LAUSD assets. With planning for district-wide modernization work under way, it will be critical that the LAUSD survey be comprehensively updated.

The survey could be initially broadened to include all post-1945 school buildings and campuses that have not yet been subject to context-driven evaluation. According to the *Los Angeles Unified School District History of Schools, 1855 to 1972*, this includes roughly 175 campuses constructed between 1955 and 1969, as well as approximately 125 campuses constructed between 1945 and 1954.[181] (The current scope with Sapphos Environmental, Inc. covers 55 campuses.)

A comprehensive survey update would help streamline and guide district-wide redevelopment plans and help LAUSD in its continuing stewardship of its many historically significant school buildings and campuses.

2. Local criteria were not included in this study. Under the provisions of California State Government Code, Section 53094, the properties of California school districts, including LAUSD, are statutorily exempt from most provisions of local ordinances, including landmark designation. California State Government Code, Section 53094 permits "the governing board of a school district, by vote of two-thirds of its members . . . [to] render a city or county zoning ordinance inapplicable to a proposed use of property by such school district . . . ." The legislative history of Section 53094 indicates that "the Legislature deliberately accorded different treatment to school districts than to other local agencies because it was well aware that school construction was subject to almost complete control by the state. . . . The Legislature accordingly provided in section 53094 that school districts, as opposed to other local agencies, should retain the right to exempt themselves from local zoning ordinances (*Santa Clara, supra*, 22 Cal.App.3d at p. 158 fn. 3.)," Court of Appeal, State of California, Second Appellate District, Division 7, *Los Angeles Unified School District, Petitioner and Appellant, v. City of Maywood, et al.*, Respondents and Defendants, Nos. B238629, B238630, Los Angeles Superior Court, filed 13 February 2013.

66. Throughout the United States, the Great Depression ushered in modern reform in many realms of architectural practice, pedagogy, and design. Two major examples in Southern California were in education and housing reform. In the early 1930s, Los Angeles's only collegiate school of architecture at USC shed its Beaux-Arts influenced curriculum and launched a modern curriculum. USC's design philosophy emphasized the same qualities advocated by school plant reformers: functional, modern design, thoughtful, integrated site planning, and indoor-outdoor integration as the key for the "good life." See Howell-Ardila, "Writing Our Own Program." In terms of housing reform, the Garden Apartment movement also emphasized these qualities as the key to providing better housing and living conditions for all. These movements shared practitioners and proponents, as well as the conviction that "modern" architecture was as much a social movement as it was an aesthetic one. For an outstanding history of the Garden Apartment movement in Los Angeles, see Architectural Resources Group, Inc., *Garden Apartments of Los Angeles Historic Context Statement*, prepared for the Los Angeles Conservancy (Los Angeles, CA, October 2012). Throughout the United States in the 1930s, these ideas occasioned a major shift in the national conversation about modern architecture.

115. If the finger-plan school remained the dominant trend for so long in spite of these shortcomings, it is in large part because the plan represented the perfect counterpoint to what reformers were still reacting against: the institutional "big block schools with internal corridors and windowless classrooms" (Gibson, *California School Buildings*, 1) These words came from the California Department of Education in 1965, long after the battle against the late-nineteenth-century big-block school had already been won. It is noteworthy that, even as late as 1965, the specter of the unfriendly, institutional school still provided the antithesis against which new ideas were measured.

EXECUTIVE SUMMARY

WorleyParsons performed a Phase I Environmental Site Assessment (ESA) of the John Burroughs Middle School, located at 600 South McCadden Place, Los Angeles, California (the Site). The Site consists of an approximately 10.53-acre middle school and is located within Los Angeles County assessor's parcel number (APN) 5507-017-900 with the Site's center located approximately at Latitude N34°03'48.70" and Longitude W118°20'10.53". The Site is bounded to the north by single-family dwellings across West 6th Street, to the east by single-family dwellings and a commercial building, to the south by multi-family dwellings, Wilshire Private School, and commercial buildings across Wilshire Boulevard, and to the west by single and multi-family dwellings across South McCadden Place.

ON-SITE FINDINGS

The Site was undeveloped land from at least 1894 to 1921 with the exception of a small building located on the southern portion of the Site adjacent to Wilshire Boulevard.. The first permit recorded on file for the Site was issued on June 21, 1910, for the construction of a two-story building. The next permit issued for the Site was dated April 23, 1923, for the construct on the first and second floors of a cafeteria building. The Site opened as "John Burroughs Junior High School" in 1924. Throughout the years, various construction activities at the Site added and removed various structures, added parking lots and paved areas.

The Site contains three two-story administrative/classroom buildings, 22 single-story multi-purpose buildings that contain such things as classrooms, restrooms, gymnasiums, lounges and storage rooms. Two paved parking areas are located in the northeast corner and the southwest corner of the Site. Two tennis courts are located in the center of the Site. A paved and dirt playground area is located in the southern portion of the Site.

Four dry-type electrical transformers were observed during the Site inspection; one located adjacent to the south of Building No. 9 (Shop Building), two located north and one located inside of Building No. 20 (Cafeteria/Classroom Building. A fenced area at a lower elevation (i.e. basement level) containing two compressed gas cylinders and an idle emergency generator are located adjacent to the southern portion of Building No. 1 (Main and Auditorium Building) and the entrance to a locked LADWP equipment room.

Gasoline is stored in a 55-gallon steel drum in a flammable materials' storage building located to the southeast of Building No. 9 (Shop Building). The gasoline is used to fuel landscaping equipment at the Site. Minor staining was observed on the concrete floor of the flammable materials' storage building. However, the floor was in good condition with no visible cracks or gaps that could act as conduits to the subsurface.

No other evidence of releases or spills of hazardous materials or petroleum products was identified at the Site during the reconnaissance inspection. Additionally, no evidence of underground storage tanks

(USTs), aboveground storage tanks (ASTs), pits, ponds, lagoons, or hazardous material/petroleum products use, storage or disposal was observed at the Site during the Site reconnaissance inspection.

Additionally, no evidence of dumping, landfilling, distressed vegetation, or other evidence suggesting the possible release of hazardous substances and/or petroleum products was observed during the Site reconnaissance inspection.

A Roof and Plot Plan, dated January 22, 1923, was provided by LAUSD, which indicates that an above ground heating oil tank was located on-Site, east of Building No. 1 (the Main/Auditorium Building). Additionally, a Plot Plan, dated May 1935, was provided by LAUSD, which indicates that an incinerator was located to the southwest of Building No. 9 (Shop Building).

OFF-SITE FINDINGS

From at least 1928 until 1938, the Site was surrounded by vacant undeveloped lots and single-family residential dwellings across 6th Street to the north, adjacent to the east of the Site, across Wilshire Boulevard to the south, and across South McCadden Place to the west. Between at least 1938 and 1964, two “oil and gas” service stations were located to the west of the Site. The first of these was located approximately 60 feet west of the Site at the northwest corner of McCadden Place and Wilshire Boulevard (cross/upgradient with respect the reported groundwater flow direction). The second was located approximately 250 west of the Site on the northeast corner of Highland Avenue and Wilshire Boulevard. Commercial buildings started appearing along Wilshire Boulevard as early 1938.

The Site is currently bordered to the north by single-family dwellings across West 6th Street, to the east by single-family dwellings and a multi-tenant commercial building, to the south by multi-family dwellings, the Wilshire Private School, and commercial buildings across Wilshire Boulevard, and to the west by single and multi-family dwellings across South McCadden Place. No evidence of hazardous material and/or petroleum product releases was observed on these properties during the reconnaissance inspection.

Federal, State, and local regulatory database lists were reviewed for cases including, but not limited to, USTs, ASTs, hazardous waste sites, hazardous waste generators, Brownfield sites, hazardous material/petroleum product release sites, abandoned sites, and sites with deed restrictions and/or institutional controls within the specified radii of standards established by the American Society of Testing and Materials (ASTM). The John Burroughs Middle School, was identified in the RCRA-LGQ, FINDS, HAZNET, and EMI databases for generation of various hazardous wastes, including asbestos, polychlorinated biphenyls (PCBs), organic and inorganic wastes generated during the renovation of Site buildings and Site operations.

OPINION OF ON-SITE FINDINGS

Based on the age of the existing Site buildings, it is possible that lead-based paint (LBP) has been applied to the exterior finishes of the buildings. As such, it is possible that LBP residue is present in

soils around the perimeters of the existing and former buildings. It is possible that organochlorinated pesticides (OCP) in the form of termiticides have been applied around the foundations of these Site buildings. There is the potential presence of arsenic underneath pavement that may have been applied as an herbicide. Based on the age of the existing Site buildings, it is possible that asbestos-containing materials (ACM) are present in building materials. Due to the former presence of a heating oil AST, it is possible that releases or spills of fuel oil have impacted soils in the former location of the tank adjacent to the east of Building No. 1 (Main/Auditorium Building). Due to the former presence of an incinerator, it is possible that burn ash is present in soils in the former location of the incinerator adjacent to the southwest corner of Building No. 9 (Shop Building).

It is possible that soil and groundwater in the vicinity of the former heating oil AST may be impacted by releases of spills associated with operation of the former tank. Additionally, it is possible that soils in the vicinity of the former incinerator may be impacted by burn ash containing combustion by-products such as polycyclic aromatic hydrocarbons (PAHs), furans and heavy metals.

It is WorleyParsons' opinion that the potential presence of LBP residue, OCPs, and arsenic in soil and ACM in the Site building materials constitute recognized environmental conditions (RECs). It is also WorleyParsons' opinion that the potential presence of petroleum hydrocarbons in soils and groundwater and burn ash in soils constitute RECs.

OPINION OF OFF-SITE FINDINGS

An environmental database report prepared by Environmental Data Resources, Inc. (EDR) was reviewed for local, state, and federal listings for properties within the Site vicinity. Regulatory database lists were reviewed for cases pertaining to leaking USTs and ASTs, hazardous waste sites, and abandoned sites within the specified radii of standards established by the ASTM. Based on the status of these facilities, their distance from the Site, and the reported groundwater flow direction, these sites are not considered RECs.

Two gasoline service stations were located west of the southern portion of the Site (approximately 60 feet and 250 feet west of the Site and cross/upgradient with respect the groundwater flow direction), at the northwest intersection of South McCadden Place and Wilshire Boulevard and the northeast corner of South Highland Avenue and Wilshire Boulevard, from at least 1938 to at least 1964. Based on their upgradient location relative to the reported groundwater flow direction and their proximity to the Site, is it WorleyParsons' opinion that these former service stations constitute RECs.

Based on the findings of this investigation, no other RECs, historic RECs (HRECs), controlled RECs (CRECs) or de minimus conditions have been identified at the Site.

EXISTING SCHOOL SITES CHECKLIST

A LAUSD Office of Environmental Health Services (OEHS) Existing School Sites checklist was completed as part of this Phase I ESA in accordance with California Department of Education (CDE)

requirements. Based on the findings of this investigation, no affirmative answers to the checklist were made with the exception of the following:

- The Site is located within a dam inundation area. However, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from flooding or dam inundation.
- The Site is located within the Hollywood Fault special study zone and is regulated under the Alquist-Priolo Earthquake Fault Zoning Act (Public Resources Code 2621, Division 2, Chapter 7.5). Based on this, the Project may create a new or exacerbate an existing significant safety hazard to students from an active earthquake fault or fault trace which may be onsite.
- According to the EDR report, a facility with a registered 2,200 gallon AST of unknown contents is located approximately 910 feet west (crossgradient with respect to the groundwater flow direction). However, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from this existing nearby AST.
- The Site is located within residential and commercial neighborhoods and is located adjacent to a major arterial street, Wilshire Boulevard. Based on this, the Project may create a new or exacerbate an existing significant safety hazard to students from the adjacent major arterial street.
- Information provided by the City of Los Angeles NavigateLA Web site, information provided by the LADBS, and the City's Public Works Departments, the Site lies within a City of Los Angeles designated methane zone. Based on this, the Project may create a new or exacerbate an existing significant safety hazard to students from a known methane zone.

CONCLUSIONS AND RECOMMENDATIONS

WorleyParsons has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and requirements set forth by the LAUSD and the CDE. Any exceptions to or deletions from this practice are described in Section 13 of this report. This assessment has revealed no evidence of RECs in connection with the Site with the exception of the following:

a) Potential presence of LBP residue in shallow soils around the drip lines of the existing and former buildings at the Site.

b) Potential presence of OCP in shallow soils around the foundations of the existing and former buildings at the Site.

c) Potential presence of arsenic in shallow soils under pavement at the Site.

d) Potential presence of ACM in Site building materials.

e) Potential presence of hydrocarbons in groundwater due to the historical presence of two gasoline service stations approximately 60 feet west of the Site.

f) Potential presence of petroleum products in soil and groundwater due to the historical presence of fuel oil AST located adjacent to Building No. 1 (Main/Auditorium Building).

g) Potential presence of burn ash in soils due to the historical presence of an incinerator located adjacent to Building No. 9 (Shop Building).

WorleyParsons recommends completion of a site investigation within the boundary of the planned development area that includes collection of soil samples for the evaluation of LBP, OCP, arsenic, petroleum hydrocarbons, PAH's, and metals, and if present, a human health risk assessment to determine if the levels pose a risk to future Site occupants. WorleyParsons also recommends completion of a hazardous Material Property Condition Survey to identify and quantify all hazardous materials present at the Site including asbestos, lead-based-paint, mold, PCBs, mercury, tritium, radium, and/or other hazardous materials, in order that work plans and specifications may be developed for the safe abatement by a licensed and qualified contractor(s) prior to removal/renovation of any Site buildings.

1. INTRODUCTION

This report presents the results of a Phase I Environmental Site Assessment (Phase I ESA) performed by WorleyParsons for the Los Angeles Unified School District (LAUSD) for the John Burroughs Middle School (hereinafter referred to as the "Site"). The Site consists of approximately 10.53-acres and is located at 600 South McCadden Place in Los Angeles, California (Figures 1 and 2). The Site is located within Los Angeles County assessor's parcel number (APN) 5507-017-900 with the Site's center located approximately at Latitude N34°03'48.70" and Longitude W118°20'10.53". The Site is bounded to the north by single-family dwellings across West 6th Street, to the east by single-family dwellings and a commercial building, to the south by multi-family dwellings, Wilshire Private School, and commercial buildings across Wilshire Boulevard, and to the west by single and multi-family dwellings across South McCadden Place. It is WorleyParsons' understanding that the LAUSD plans to modernize the existing administrative/auditorium, gymnasium and selected classroom, and demolish or remove the cafeteria/classroom building, the shop building and selected classroom buildings at the Site (hereinafter referred to as "the Project").

1.1 Objective and Purpose

The purpose of this Phase I ESA was to assist in the evaluation of Site-specific safety factors that may be caused or exacerbated by the Project and the potential impact of these safety factors on students at Site. The objective of the Phase I ESA is to identify recognized environmental conditions (RECs) in order to assist in the evaluation of historical land use at the Site, assess for potential environmental impacts on- and off-site, and determine the degree to which any potential environmental impacts may affect on-Site occupants, off-Site individuals, and the environment. The Phase I ESA was also intended to assist in determining whether further action is needed to characterize and/or mitigate environmental impacts identified during the Phase I ESA.

According to American Society for Testing and Materials (ASTM) Standard Practice E1527-13, the term REC means the presence or likely presence of hazardous substances and/or petroleum products on or near a property under conditions that indicate an existing release, a past release or the material threat of a release into structures on the property or into the ground, groundwater or surface water of the property. WorleyParsons understands that the purpose of this Phase I ESA is to perform due diligence with respect to RECs at the Site in accordance with good commercial and customary practice for conducting an environmental site assessment of a property.

1.2 Scope of Services

The Phase I ESA was performed in general accordance with the American Society for Testing and Materials (ASTM) Designation E 1527-13*, Standard Practice for Environmental Site Assessments:*

Phase I Environmental Site Assessment Process: Phase I Environmental Site Assessment Process and WorleyParsons proposal dated March 14, 2016.

The Phase I ESA scope of work included the following tasks:

a) Contacted the appropriate city, county, and regional agencies regarding records for the Site;

b) Reviewed selected government database lists;

c) Reviewed documents as provided by the LAUSD;

d) Performed a fire insurance map search and review;

e) Performed a city directory search and review;

f) Performed a building permits search and review;

g) Performed a property tax search and review;

h) Performed a search and review of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls;

i) Performed an aerial photograph search and review;

j) Performed a historical topographic map search and review;

k) Completed the OEHS Existing School Sites checklist; and

l) Prepared and submitted this Phase I ESA report to the client.

The scope of work for this Phase I ESA did not include collection of environmental samples such as air, soil and groundwater, building materials/finishes suspected of containing asbestos or lead-based paint, or equipment suspected of containing polychlorinated biphenyls (PCBs) or mercury. The scope of work did not include an assessment of the presence of sensitive or endangered species and/or wildlife habitats. This Phase I ESA also did not include an assessment of the environmental compliance status of the Site or a health-based risk assessment.

1.3 Significant Assumptions

WorleyParsons assumes that the purpose of this Phase I ESA is to provide all appropriate inquiry into the previous ownership and use of the Site consistent with good commercial and customary practice in an effort to minimize liability. WorleyParsons also assumes that the information provided by the LAUSD, regulatory database provider, regulatory agencies, and other 3rd parties is true and reliable.

2. SITE DESCRIPTION

The Site consists of an approximately 10.53-acre middle school. The Site is bounded to the north by single-family dwellings across West 6th Street, to the east by single-family dwellings and a commercial building, to the south by multi-family dwellings, Wilshire Private School, and commercial buildings across Wilshire Boulevard, and to the west by single and multi-family dwellings across South McCadden Place.

The location of the Site is shown on Figures 1 and 2 and is identified as APN 5507-017-900 by the Los Angeles County Assessor's office. The findings of a reconnaissance inspection of the Site are contained in Section 5.

2.1 Description of On-site Buildings, Structures, and Other Features

The table below provides a list and description of all 25 buildings located on-Site, as provided by the LAUSD.

Two paved parking areas are located on-Site, on in the northeast corner and the other in the southwest corner. Two tennis courts are located in the center of the Site. A paved and dirt playground area is

located in the southern portion of the Site. The location of the buildings described in the table above along with other features is presented in Figure 2.

2.2 Description of Current Site Use and Operations

The approximately 10.53-acres Site is currently in use as a middle school. Additional details regarding the Site are contained in Section 5 of this report.

2.3 Description of Past Site Use and Operations

Prior to John Burroughs Middle School (previously John Burroughs Junior High School) opening in 1924, the Site was undeveloped land. However, a records search at the Los Angeles Department of Building and Safety (LADBS) indicated that a permit was issued on June 21, 1910 for the construction of one two-story building. No other permits were identified for the Site prior to the construction of the school site in the early 1920s.

2.4 Description of Site Vicinity and Current Uses of Adjoining Properties

The immediate Site vicinity consists of residential, commercial, and institutional properties. The Site is bounded to the north by single-family dwellings across West 6th Street, to the east by single-family dwellings and a commercial building (Korea Business Plaza located at 4801 Wilshire Boulevard) on the northwest corner of Wilshire Boulevard and S. June Street, to the south by multi-family dwellings, a school (Wilshire Private School at 4900 Wilshire Boulevard) on the southwest corner of Wilshire Boulevard and S. Longwood Avenue, and commercial buildings (Lebanese American Foundation located at 4800 Wilshire Boulevard) and Farmers Insurance located at 4750 Wilshire Boulevard) across Wilshire Boulevard, and to the west by single and multi-family dwellings across South McCadden Place.

3. USER-PROVIDED INFORMATION

3.1 Title Records

No title records were provided by the LAUSD as part of this Phase I ESA.

3.2 Environmental Liens or Activity and Use Limitations

No information regarding environmental liens or activity and use limitations were provided by LAUSD as part of this Phase I ESA.

WorleyParsons ordered an environmental liens and Activity and Use Limitation (AULs) report for the Site from EDR. The findings of this report indicate that no environmental liens or AULs were found for the Site.

3.3 Specialized Knowledge

The Site is currently in use as a middle school. No other specialized knowledge regarding the Site was provided by the LAUSD as part of this Phase I ESA.

3.4 Commonly Known or Reasonably Ascertainable Information

The Site was undeveloped land prior to the construction of the existing school site and its opening to the public in 1924. No other additional commonly known or reasonably ascertainable information was provided by the LAUSD as part of this Phase I ESA.

3.5 Valuation Reduction for Environmental Issues

No estimated valuation reduction related to known environmental issues associated with the Site was provided by LAUSD as part of this Phase I ESA.

3.6 Owner, Manager, and Occupant Information

Based on information provided by the LAUSD and obtained during research of the Site, the Site is currently owned and operated by the LAUSD as part of the John Burroughs Middle School. Interviews regarding the current and historic use of the Site were conducted by Mr. Michael Huma, of WorleyParsons, on Wednesday, April 20, 2016, with Mr. Andrew Fowler, Project Manager for the LAUSD Office of Environmental Health Services (OEHS) and Mr. Martin Nevarez, the John Burroughs Middle School Plant Manager. The findings of these interviews are discussed in Section 5. During the Site reconnaissance, LAUSD provided a plot plan of the Site as well as a list and description of the

buildings on-Site and the quantity of various types of rooms, corridors, etc. present in the respective buildings (presented in the table in Section 2.1 above).

3.7 Reason for Performing Phase I ESA

The purpose of this Phase I ESA was to identify RECs in order to assist in the evaluation of historical land use at the Site, assess for potential environmental impacts on- and off-site, and determine the degree to which any potential environmental impacts may affect on-Site occupants, off-Site individuals, and the environment. The Phase I ESA was conducted to meet school modification construction and existing school expansion requirements set forth by the California Department of Education, as well as assist in determining whether further action is needed to characterize and/or mitigate environmental impacts identified during the Phase I ESA.

4. RECORDS REVIEW

4.1 Environmental Setting

4.1.1 Regional Physiographic Setting

The Site is located within the Central Block of the Los Angeles Basin approximately 3 miles south of the Santa Monica Mountains in the Peninsular Ranges Geomorphic Province of Southern California. The province is separated by northwest trending valleys, subparallel to faults branching from the San Andreas Fault, with granitic rock intruding the older metamorphic rocks. The Peninsular Ranges extend into lower California and are bound on the north by the Transverse Ranges and on the east by the Colorado Desert. The Los Angeles Basin and the island group (Santa Catalina, Santa Barbara, and the distinctly terraced San Clemente and San Nicolas islands), together with the surrounding continental shelf (cut by deep submarine fault troughs), are included in this province (California Department of Water Resources [DWR], 1961).

Topographic Setting

According to the United States Geological Survey (USGS) Topographic Map, Hollywood, California Quadrangle, the Site is approximately 213 feet above mean sea level (AMSL). The topography in the Site vicinity slopes toward the south-southwest (EDR, 2016b).

Nearest Surface Water Body

The nearest surface water bodies to the Site are MacArthur Park Lake, Echo Lake, and the Los Angeles River, approximately 3.2, 4.3 and 6.2 miles east of the Site, respectively.

4.1.2 Nearest Ecological Interest

Based on the information provided by the California Environmental Resources Evaluation System (CERES) database, the Information Center for the Environment Mapping Database (ICEMAPS), and the County of Los Angeles, Department of Regional Planning interactive GIS mapping application <http://planning.lacounty.gov/gis/interactive>, the closest area of significant ecological interest is MacArthur Park Lake, Echo Lake, and the State Water Resources Control Board Riverine Waterbody (Los Angeles River) area approximately 3.2, 4.3 and 6.2 miles east of the Site, respectively.

4.1.3 Geology

Regional Geology

The Site is located within the Central Block of the Los Angeles Basin, in the Peninsular Ranges Geomorphic Province near the border of the Transverse Ranges Geomorphic Province. The Site is located in an area of coalescing alluvial fan deposits shed from the nearby Santa Monica Mountains located approximately 3 miles north of the Site. The local topography in the Site vicinity is flat with a gentle slope towards the south.

The area is mapped as late to middle Pleistocene alluvial fan deposits composed of silt, sand, and gravel. Area topography generally slopes southward (Yerkes and Campbell, 2005; USGS, 1979).

The Site is located in an area of naturally occurring petroleum. The Site is not located within the boundaries of a defined oil field but several oil fields are present in the Site vicinity, including the Salt Lake Oil Field to the north and west, South Salt Lake Oil Field to the west-southwest, Beverly Hills Oil Field to the southwest, and Las Cienegas Oil Field to the South of the Site (California Department of Conservation, Division of Oil, Gas and Geothermal Resources, 2003). Crude oil is commonly encountered in the shallow subsurface soil and groundwater in this part of Los Angeles. The historic La Brea Tar Pits are located approximately 1 mile west of the Site. According to the Department of Public Works, Bureau of Engineering, the Site lies within a methane zone. Due to the naturally petroliferous area in which the Site is located, there is a potential for the presence of methane or hydrogen sulfide gas in the shallow subsurface at the Site and vicinity.

The nearest active faults to the Site include the Hollywood Fault, located approximately 3 miles north of the Site and the Santa Monica Fault, located approximately 4.5 miles west of the Site.

Local Geology

On November 29 and 30, 2005, Western Environmental Engineers Co. advanced three soil boreholes at 5020-5044 Wilshire Boulevard, approximately 550 feet west-southwest of the Site. The deepest boreholes were advanced to a total depth of 44 feet below ground surface (bgs). Soils identified in the borehole logs include silty clay from surface to 20 feet bgs and silty sand from 20 to 44 feet bgs. A confining layer was encountered at approximately 44 feet bgs. Groundwater was encountered at 27 feet bgs (Western Environmental Engineers Co., 2005). Groundwater wells at this location were gauged on September 11, 2013; depth to water ranged from 169.39 to 172.67 feet AMSL. The groundwater flow direction was reported towards the southeast at a hydraulic gradient of 0.04 feet/feet (Conestoga-Rovers and Associates, 2014).

4.1.4 Location of Nearest Oil and Gas Fields

Based on the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) Map 118, the Site is not located within an oil and gas field (DOGGR, 2003). The closest oil and gas field is the Salt Lake Oil Field, located approximately 0.28 mile to the north and 0.40 mile west of the Site (DOGGR, 2003).

4.1.5 Location of Nearest Exploratory and Production Oil and Gas Wells

Based on the DOGGR oil and gas well map 118, the closest current or historic plugged and abandoned oil and/or gas well to the Site is the plugged and abandoned oil wells Chevron U.S.A. Inc. “Highland Corehole” 1 and Chevron U.S.A. Inc. “Highland Corehole” 2, located approximately 0.24 miles west-southwest of the Site (DOGGR, 2003).

4.1.6 Potential for Methane and Hydrogen Sulfide

Methane and hydrogen sulfide are gases associated with the decay of organic matter. In the natural environment, these gases form in localities such as old marine rocks (including oil-bearing strata), peat bogs, marshes and swamps. Anthropogenic sources of these gases may include landfills, waste pools, and the refinement of petroleum products.

Based on the information provided by the City of Los Angeles NavigateLA Web site and information provided by the City of Los Angeles Building and Safety (LADBS) and the City’s Public Works Departments, the Site lies within a City of Los Angeles designated methane zone.

4.1.7 Nearest Special Study Zone (Alquist-Priolo Act)

Based on a review of the Special Studies Zone Maps provided by the California Department of Conservation Division of Mines and Geology (DMG), the Site is located within the Hollywood Fault special study zone and is regulated under the Alquist-Priolo Earthquake Fault Zoning Act (Public Resources Code 2621, Division 2, Chapter 7.5). The Hollywood Fault is located within the central portion of the Santa Monica-Hollywood-Raymond Fault system, which is collectively part of a greater than 200-km long west-trending system of oblique, reverse and left-lateral faults that separate the Transverse Ranges Geomorphic Province of California on the north from the Peninsular Ranges Geomorphic Province on the south (Dolan et al., 1997).

4.1.8 Potential for Liquefaction and Landslides

Liquefaction Potential

Based on Section 1, Liquefaction Evaluation Report, of the 1998 DMG Seismic Hazard Zone Report for the Hollywood 7.5-Minute Quadrangle, three Holocene soil inventory types were identified in the Hollywood Quadrangle as being susceptibility to liquefaction when saturated. These Holocene soil inventory types included active stream channels consisting of loose to dense sand, gravel, and silty sand, alluvial fans consisting of loose to moderately dense sand, gravel, and sandy silt, and floodplains, streams, alluvial fans consisting of loose to moderately dense sand, silt, and clay (DMG, 1998).

Liquefaction analyses of geotechnical data recorded in logs of boreholes drilled in the Hollywood Quadrangle show that young, saturated sandy soils are potentially liquefiable. Younger alluvium deposited in canyon bottoms and incised channels generally lack adequate geotechnical borehole information. The soil characteristics and groundwater conditions in these cases are assumed to be similar to those in deposits where subsurface information is available (DMG, 1998).

According to the California Geological Survey, Earthquake Zone of Required Investigation, Hollywood Quadrangle map released on November 6, 2014, the Site does not lie within a mapped liquefaction zone (California Department of Conservation, 2014).

Landslide Potential

Based on Section 2, Earthquake-Induced Landslide Evaluation Report, of the 1998 DMG report and on information provided by the California Geological Survey Earthquake Zones of Required Investigation Hollywood Quadrangle (2014), the Site is not located within an earthquake-induced landslide potential zone (DMG, 1998 and California Department of Conservation, 2014).

4.1.9 Potential for Flooding

The Site is not located within a 100 or 500-year flood zone as described by Federal Emergency Management Agency (FEMA). However, the area to the east of the Site along June Street is located within a 500-year flood zone (FEMA, 2008; EDR, 2016a). This area has a 0.2% annual chance of a flood, 1% annual chance of a flood with average depths of less than 1 foot or with drainage areas less than 1 square mile, and is an area protected by levees from the 1% annual chance flood.

4.1.10 Hydrogeology

Regional Hydrogeology

The Site is within the Coastal Plain of the Los Angeles Groundwater Basin, within the Hollywood Subbasin, which covers 16.4 square miles (California Department of Water Resources (DWR), 2004). The Hollywood Subbasin is bounded to the north by the Santa Monica Mountains and the Hollywood Fault, to the east by the Elysian Hills, to the west by the Inglewood fault zone, and south by the La Brea “High” (an anticline having impermeable rock close to the surface). Hollywood Subbasin groundwater has existing and designated beneficial uses for municipal and domestic supply, industrial service supply, industrial process supply, and agricultural supply (Regional Water Quality Control Board, Los Angeles Region [RWQCB], 1994). The only naturally occurring surface water bodies within one mile of the Site are ponds associated with the La Brea Tar Pits, located approximately 1 mile west of the Site.

Local Hydrogeology

Records of groundwater conditions in the general Site vicinity were reviewed at the Los Angeles Department of Public Works (LADPW), Hydrogeologic Records Division, to obtain groundwater depth near the Site. The nearest water well to the Site is Observation Well 2642M, located approximately 1.35 miles northwest of the Site. Groundwater in the well was measured at approximately 14.7 feet below top of casing or 195.5 feet AMSL, on September 23, 2015 (LADPW, 2016).

On September 11, 2013, depth to water at 5020-5044 Wilshire Boulevard, approximately 550 feet west-southwest of the Site, ranged from depth to water ranged from 169.39 to 172.67 feet AMSL. Groundwater flow direction was reported towards the southeast at a hydraulic gradient of 0.04 feet/feet (Conestoga-Rovers and Associates, 2014).

Nearest Groundwater Production Wells

There is one groundwater observation well, 2642M, located approximately 1.35 miles northwest of the Site and no groundwater production wells located within a 0.25 mile radius of the Site (EDR, 2016a and LACDPW, 2016).

4.2 Standard and Additional Environmental Record Sources

WorleyParsons contracted with EDR to research the available databases containing valuable environmental regulatory database information. EDR researched each database for sites located within the minimum standard search radius, as identified by ASTM 1527-13. Details of sites found in the databases are included in the EDR report (see Appendix 2). Please note that the distance and direction of sites listed within the EDR search radius, as related to the Site, are based on the EDR

report and Google Earth. Additionally, direction of gradient of each site listed in the radius report with respect to the Site is based on the expected shallow groundwater flow direction to the southeast.

EDR Radius Report Summary: Site

4.3 Historic Use Information

4.3.1 Regulatory Agency Information

Regional Water Quality Control Board, Los Angeles Region

WorleyParsons contacted the RWQCB, to determine whether files exist for the Site based on the existing or historic Site addresses. See Appendix 4 for copies of agency correspondence. No files were found for the Site address.

California Environmental Protection Agency, Department of Toxic Substances Control

WorleyParsons contacted the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC), in Chatsworth, California, to determine whether files exist for the Site. See Appendix 4 for agency correspondence. No files were found for the Site address.

Los Angeles County Fire Department, DHS Health Hazardous Materials Unit

WorleyParsons contacted the Los Angeles County Fire Department, Health Hazardous Materials Unit, which includes the Los Angeles County Public Health Investigation Unit (PHI), to determine whether files exist for the Site. See Appendix 4 for agency correspondence. No files were found for the Site address.

City of Los Angeles Fire Department, Fire Prevention – Underground Tank Unit

WorleyParsons contacted the City of Los Angeles Fire Department, Fire Prevention – Underground Tank Unit (LAFD-UST) to determine whether files exist for the Site. See Appendix 4 for agency correspondence. No files were found for the Site address.

City of Los Angeles Fire Department, Hazardous Materials Unit

WorleyParsons contacted the City of Los Angeles Fire Department, Hazardous Materials Unit (LAFD-Hazmat) to determine whether files exist for the Site. See Appendix 4 for a copy of agency correspondence. A response to WorleyParsons' request for file information for the Site was not received from the Hazardous Materials Unit; however, the lack of a response is not considered to constitute a significant data gap.

City of Los Angeles, Department of Building and Safety

WorleyParsons contacted the LADBS to determine whether files exist for the Site.

The LABDS reported that 26 building alteration permits were filed for the Site beginning on June 21, 1910 and ending October 24, 1960. The LABDS reported that 23 new building construction permits were filed for the Site beginning on April 5, 1927, and ending August 28, 1940. The LABDS reported that one building relocation permit was filed for the Site on September 23, 1929. The LABDS reported that three building addition permits were filed for the Site beginning on September 26, 1932 and ending November 10, 1936.

County of Los Angeles Department of Public Works, Industrial Waste Management Division

WorleyParsons contacted the County of Los Angeles Department of Public Works, Industrial Waste Management Division (LACPW-IWMD), to determine whether files exist for the Site. The online file review searches for files related to the UST program, Industrial Waste, and Stormwater certification program. See Appendix 4 for a copy of the online search. No files were found for the Site address.

Office of the State Fire Marshal, Pipeline Division

As part of this Phase I ESA, WorleyParsons requested records for the Site vicinity from the Pipeline Division of the State Fire Marshal's Office. The Office of the State Marshal indicated that there are no pipelines jurisdictional to the State Fire Marshal in the area of the Site. The Office of the State Marshal also recommends use of the National Pipeline Mapping System (NPMS) as a resource tool (State Fire Marshal's Office, 2016).

The NPMS is a dataset containing locations of and information about gas transmission and hazardous liquid pipelines and Liquefied Natural Gas (LNG) plants which are under the jurisdiction of the Pipeline and Hazardous Materials Safety Administration (PHMSA). The NPMS also contain voluntarily submitted breakout tank data. The data is used by PHMSA for emergency response, pipeline inspections, regulatory management and compliance, and analysis purposes. It is used by government officials, pipeline operators, and the general public for a variety of tasks including emergency response, smart growth planning, critical infrastructure protection, and environmental protection.

According to the NPMS database, no hazardous liquid pipelines are located within one mile of the Site (NPMS, 2016).

4.3.2 Fire Insurance Map Search and Review

WorleyParsons requested that EDR conduct a historical Sanborn Fire Insurance Maps search for the Site and immediate vicinity (EDR, 2016c). Maps of the Site and vicinity from 1926, 1950 and 1969 were identified and reviewed. A summary of WorleyParsons' review of these maps is included below. Copies of these maps are contained in Appendix 3.

1926

On-site

The Site is identified as John Burroughs Junior High School. The northern portion of the Site is occupied by 6 buildings consisting of a main building with an auditorium, a buildings containing classrooms and restrooms, a gymnasium building, a dressing room building, and an auto repair and wood working shop building.

Off-site

The Site is bordered to the north by single-family dwellings and vacant land across West 6th Street, to the east by single-family dwellings and vacant land, to the south by Wilshire Boulevard, and to the west by single-family dwellings and vacant land across South McCadden Place.

1950

On-site

The Site is identified as John Burroughs Junior High School. The northern portion of the Site is occupied by 13 buildings with following additional buildings being added since the 1926; a music room building, a greenhouse building, a girls' gymnasium, lathe building, one small structure located north of a lunch shelter and another small structure east of the auto repair and wood working shop building.

Off-site

The Site is bordered to the north by single-family dwellings across West 6th Street, to the east by single-family dwellings and vacant land, to the south by Wilshire Boulevard followed by single-family dwellings and vacant land, and to the west by single-family dwellings, vacant land, and two "gas & oil" service stations (located at the northwest corner of South McCadden Place and Wilshire Boulevard) across South McCadden Place.

1969

On-site

The Site is identified as John Burroughs Junior High School. The northern portion of the Site is occupied by 14 buildings. The music room building, greenhouse building, lathe building, and small structures located north of the lunch shelter and east of the auto repair and wood working shop building on the 1950 map are no longer present. New buildings at the Site include a new music room building, two new classroom buildings, and three, small storage sheds behind the auto repair and wood working shop building, including one identified as a solvent storage and another as a gardener's storage.

Off-site

The Site is bordered to the north by single-family dwellings across West 6th Street, to the east by single-family dwellings and vacant land, to the south by a private school, single-family dwellings and vacant land across Wilshire Boulevard, and to the west by single-family dwellings and vacant land across South McCadden Place.

4.3.3 City Directory Search and Review

WorleyParsons contracted with EDR to research available historical and current city directories based on the Site address. A copy of the complete EDR City Directory Abstract is included in Appendix 3. The following information on Site use and/or occupants was identified (EDR, 2016d).

600 South McCadden Place, Los Angeles, CA 90005

- 1929, 1933, 1937, 1942, 1958, 1962, 1967, 1971, 1976, 1981, 1986, 1990, 2006: Burroughs Junior High School.
- 2008 and 2013: Burroughs Middle School.

4.3.4 Historic Aerial Photograph Search and Review

WorleyParsons contracted with EDR to research available historic aerial photographs of the Site and vicinity. Copies of the aerial photographs are included in Appendix 3 and the Site is outlined. The information below was obtained from the aerial photographs (EDR, 2016e).

1928, Scale 1"= 500'

On-site

The Site is occupied by the John Burroughs Junior High School with approximately 10 structures present in the northern portion of the Site, including the auditorium building, gymnasium, class room buildings, auto repair and wood working shop building (shop building), lathe building and green house. The mid to southern portion of the Site is occupied by a dirt lot.

Off-site

Single-family dwellings and a relatively small amount of vacant land lots are visible to the north, east, south, and west.

1938, Scale 1" = 500'

On-site

The Site is occupied by the John Burroughs Junior High School with approximately 13 structures present in the northern portion of the Site. The girl's gymnasium and two additional classroom buildings are now present on the northern portion of the Site. Tennis and hand ball courts have been added in the central portion of the Site. The mid to southern portion of the Site is occupied by an empty grassy area.

Off-site

The surrounding properties appear similar to the previous map with the exception of a service station present at the northeast corner of Highland Avenue and Wilshire Boulevard (approximately 250 feet west of the southern portion of the Site). Commercial buildings are under construction to the east-southeast, west, and to the west-southwest of the Site.

1948, Scale 1"= 500'

On-site

The Site is occupied by the John Burroughs Junior High School with approximately 12 structures present in the northern portion of the Site. The music building is now present to the south of the shop building and a lunch shelter is present to the south of the girls' gymnasium. Three small class room buildings visible in the previous photograph are no longer present. The remainder of the Site appears similar to the previous photograph.

Off-site

The surrounding properties appear similar to the previous photograph. The two “oil & gas” service stations visible in the 1950 Sanborn Fire Insurance Map are visible to the west of the southern portion of the Site at the northwest corner of South McCadden Place and Wilshire Boulevard and at the northeast corner of Highland Avenue and Wilshire Boulevard.

1952, Scale 1”= 500’

On-site

The Site appears similar to the previous photograph.

Off-site

The surrounding properties appear similar to the previous photograph.

1964, Scale 1”= 500’

On-site

The Site is occupied by the John Burroughs Junior High School with approximately 13 structures present in the northern portion of the Site. New classroom buildings are present to the south of the auditorium and the shop building. A new music building is also present to the south of the shop building and a solvent storage shed and gardening tools storage shed (as identified on the 1969 Sanborn Map) are now visible to the east of the shop building. The old music building, lath building, green house and a small structure behind the shop building are no longer present. The remainder of the Site appears similar to the previous photograph.

Off-site

Additional commercial buildings have been constructed along Wilshire Boulevard to the south of the Site. A school is present to the south of the Site across Wilshire Boulevard.

1977, Scale 1”= 500’

On-site

The Site is occupied by the John Burroughs Middle School with approximately 21 structures present in the northern portion of the Site. The science/workshop building is present in the northeast corner of the Site. Six new storage buildings are present along the eastern boundary of the property, which includes

three to the east of the shop building, which have replaced the gardening tool and solvent storage sheds visible in the previous photograph. Four new classroom buildings are now present to the north of the boys' gymnasium and two apparent bus shelters are visible to the south of the handball courts. The girls' gymnasium and the classroom building south of the auditorium appear to have been demolished. Construction of the existing cafeteria/classroom building appears to be underway. Parking lots are now present in the northeastern and southwestern corners of the Site.

Off-site

The surrounding properties appear similar to the previous photograph with the exception of the two service stations observed in the previous photographs, which are no longer present. These service stations have been replaced by a commercial low-rise building and a parking lot.

1979, Scale 1"= 500'

On-site

In this photograph, the existing cafeteria/classroom building and girls' gymnasium are present on the Site. The remainder of the Site appears similar to the previous aerial photograph.

Off-site

The surrounding properties appear similar to the previous photograph.

1981, Scale 1"= 500'

On-site

In this photograph, the music building is no longer present and a track and field and other playground associated features are now visible on the southern portion of the Site. The remainder of the Site appears similar to the previous photograph.

Off-site

The surrounding properties appear similar to the previous photograph with the exception of additional commercial development to the southeast of the Site across Wilshire Boulevard.

1989, Scale 1"= 500'

On-site

In this photograph, eight additional classroom buildings have been constructed at the Site: four to the east of the girls' gymnasium and four to the north of the boys' gymnasium. One of the storage buildings located east of the girls' gymnasium in the previous photographs is no longer present. The track and field visible in the previous photograph is no longer present and has been replaced by an asphalt-paved parking lot.

Off-site

Numerous commercial buildings have been constructed along Wilshire Boulevard to the south of the Site. A commercial building has been constructed adjacent to the southeast corner of the Site on the northwest corner of Wilshire Boulevard and S. June Street. The remainder of the surrounding properties appear similar to the previous photograph.

1994, Scale 1"= 500'

On-site

In this photograph, one of the classroom buildings east of the girls' gymnasium is no longer present. The remainder of the Site appears similar to the previous photograph.

Off-site

The surrounding properties appear similar to the previous photograph.

2002, Scale 1"= 500'

On-site

In this photograph, a new classroom building has been constructed to the south of the tennis courts. The remainder of the Site appears similar to the previous photograph.

Off-site

The surrounding properties appear similar to the previous photograph.

2005, 2009, 2010 and 2012, Scale 1"= 500'

On-site

The Site appears similar to the previous photograph.

Off-site

The surrounding properties appear similar to the previous photograph.

4.3.5 Historic Topographic Map Search and Review

WorleyParsons contracted with EDR to research available historic topographic maps that include the Site and vicinity. Copies of the historic topographic maps from 1894 through 2012 are included in Appendix 3. The following is a summary of information obtained from the historic topographic maps (EDR, 2016b).

1894 Los Angeles Quadrangle, 15' Series

On this map, a small building is depicted at the southern end of the Site adjacent to Wilshire Boulevard. Two similar structures are adjacent to south of the Site across Wilshire Boulevard. No other obvious development is depicted on the Site or neighboring properties on this map.

1896, 1898, 1900 and 1902 Santa Monica Quadrangles, 15' Series

On these maps, the Site and vicinity appear substantially similar to the 1894 map.

1921 Santa Monica Quadrangle, 15' Series

On this map, the Site and adjacent properties consist of undeveloped land. Significant development has occurred in the Site vicinity. The La Brea Oil Field is now visible to the northwest of the Site.

1924 Hollywood Quadrangle, 7.5' Series

On this map, a school building is visible on the Site. The existing adjacent streets to the north, east and west of the Site are now visible. Residential development has occurred in the Site vicinity.

1926 Hollywood Quadrangle, 7.5' Series

On this map, the Site and adjacent properties are similar to the previous map. "Fossil Pits" (the La Brea Tar Pits) are now visible west of the Site.

1953 Hollywood Quadrangle, 7.5' Series

On this map, the Site is occupied by the John Burroughs Junior High School with seven structures depicted. The adjacent properties appear to be residential.

1966 Hollywood Quadrangle, 7.5' Series

On this map, the Site is occupied by the John Burroughs Junior High School with 13 structures depicted. The adjacent properties are similar to the previous map.

1972 Hollywood Quadrangle, 7.5' Series

On this map, the Site is occupied by the John Burroughs Junior High School with eight structures depicted. The adjacent properties are similar to the previous map.

1981 Hollywood Quadrangle, 7.5' Series

On this map, the Site is occupied by the John Burroughs Junior High School with 10 structures depicted. The adjacent properties are similar to the previous map.

1991 Hollywood Quadrangle, 7.5' Series

On this map, the Site is occupied by the John Burroughs Junior High School with 11 structures depicted. The adjacent properties are similar to the previous map.

2012 Hollywood Quadrangle, 7.5' Series

No structures or development is depicted on this map at the Site or adjacent properties.

4.3.6 Environmental Data Resources Building Permit Report

WorleyParsons contracted with EDR to research available building department records for indications of environmental conditions. A copy of the EDR Building Permit Report is included in Appendix 3. The following is a summary of information obtained from the EDR Building Permit Report (EDR, 2016g).

EDR searched numerous building department records including the City of Los Angeles, Department of Building and Safety, in Los Angeles, California, from 1988 to 2015. The EDR Building Permit Report identified two permits associated to the Site. One "No Plan Check Reconnect Two Boilers; Power is Existing" permit was issued on July 29, 2008, and another "No Plan Check Install Boiler" permit was issued on July 29, 2008. No other permits were identified in the EDR Building Permit Report.

4.3.7 Environmental Data Resources LienSearch™ Report

WorleyParsons contracted with EDR to search for available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls. A copy of the EDR LienSearch™ Report is included in Appendix 3. The following is a summary of information obtained from the EDR Building Permit Report (EDR, 2016h).

The legal description states "All that certain piece or parcel of land being a portion of Lots 14 and 15 of Tract 215, filed in Map Book 14, at Pages 42-43, situate and lying in the County of Los Angeles, State of California." According to the Los Angeles County Assessor, the current legal owner is the Los Angeles Unified School District. Records were searched at the Los Angeles County Recorder's Office back to 1980. No conveyance was found of record for the subject property.

No deeds were found for the Site. No environmental liens were found for the Site. No other Activity and Use Limitations (AULs) were found for the Site.

4.4 Historical Use of Adjoining Properties

Based on the information obtained for Section 4.3, Historic Use Information, the properties adjacent to the Site have consisted of single-family dwellings from at least 1928 until the present. Two "oil & gas" service stations were present to the west of the southern portion of the Site (cross/upgradient with respect to the reported groundwater flow direction), across from South McCadden Place, from at least 1938 to at least 1964.

5. SITE RECONNAISSANCE

On April 20, 2016, a reconnaissance inspection of the Site was conducted by Mr. Michael Huma of WorleyParsons. Mr. Huma was escorted by Mr. Martin Nevarez, Plant Manager of the John Burroughs Middle School and accompanied by Mr. Andrew Fowler, Project Manager/Consultant of the LAUSD OEHS. The purpose of the Site reconnaissance was to inspect the Site, its current operations and observe the neighboring properties for evidence of the use and/or the release of hazardous materials or petroleum products that may impact the Site in accordance with ASTM Standard Practice 1527-13 (ASTM, 2013).

5.1 Methodology and Limiting Conditions

The majority of the Site was visually inspected and observations of the adjacent properties were made from the Site's boundaries and/or public streets and sidewalks. WorleyParsons' personnel were not allowed to access classrooms or take photographs of the interior portions of the Site due to students being present at the Site. WorleyParsons' personnel were allowed to access the plant manager's office, pump station room and boiler room in the main/auditorium building; the elevator control room sprinkler room, and old transformer room in the cafeteria/classroom building; as well as the flammable materials storage building.

Photographs documenting Site conditions at the time of the reconnaissance inspection are included in Appendix 1.

5.2 General Site Setting

The Site consists of the approximately 10.53-acre John Burroughs Middle School with a 3.78-acre playground area, located at 600 South McCadden Place in Los Angeles, California.

The Site contains three two-story administrative/classroom buildings, 22 single-story multi-purpose buildings that contain such things as classrooms, restrooms, gymnasiums, lounges, stores, storage rooms, etc. Descriptions of the buildings located on-Site are presented in Section 2.1 above.

The Site is primarily surrounded by single family residential properties.

5.3 Exterior Observations

Site: The Site contains administrative buildings, an auditorium building, classroom buildings, gymnasium buildings, a cafeteria building, a shop building, and multi-purpose buildings. Descriptions of the buildings located on-Site are presented in Section 2.1. Basketball courts are located in the mid-southern portion of the Site. A playground area is located in the southern portion of the Site. Parking lots are located in the southwestern and northeastern portions of the Site. Solid waste is stored in nine waste bins and recyclable waste is stored in three waste bins all serviced by Republic Services. Four

electrical transformers were observed during the Site inspection; one located adjacent to the south of Building No. 9 (Shop Building), two located north of the Building No. 20 (Cafeteria/Classroom Building), and another located in the sprinkler room in Building No. 20 (Cafeteria/Classroom Building). A Los Angeles Department of Water and Power (LADWP) electrical equipment room is located in the southern portion of Building No. 1 (Main and Auditorium Building). This room was locked and inaccessible. A fenced area with a lower elevation (i.e. basement level) containing two compressed gas cylinders and an idle generator, is located adjacent to the southern portion of Building No. 1 (Main and Auditorium Building) and adjacent to the west of the LADWP equipment room.

No evidence of the use, storage or release of hazardous materials or petroleum products was observed in the exterior areas of the Site with the exception of the idle emergency generator located on the east side of Building No.1 (Main and Auditorium Building), which appears to have been gasoline fueled.

Surrounding Properties: The Site is surrounded by single family residential properties to the north across West 6th Street and to the east. The Site is bordered to the west by single-family dwellings and multi-family residential buildings across from South McCadden Place. The Site is bordered to the south by the Wilshire Private School and multi-family residential buildings across from Wilshire Boulevard. No evidence of the use, storage or release of hazardous materials or petroleum products was observed on the surrounding properties.

5.4 Interior Observations

The interiors of the classrooms were not inspected due to the presence of students during the Site reconnaissance visit. Non-hazardous materials are stored in the plant manager's office. These materials consisted of twelve 5-gallon containers of Super Polymer 85, five 5-gallon containers of Ultra-Hide Interior Wax, thirty 1-gallon containers of Exterior 100% Acrylic Flat Paint, four 5-gallon Floor Finish Wax, forty 1-gallon containers of Gloss Finish Interior/Exterior 100% Acrylic Enamel. Various other non-hazardous janitorial materials are present on-Site as well such as Windex. The boiler room, located in Building No. 1 (Main and Auditorium Building), contained four 1-gallon containers of Floor Stripper XS-100, liquid hand soap, and one 1-gallon containers of mistolin (all-purpose cleaner). The sprinkler shut off room contained numerous minor cleaning supplies such as soap and Windex, one 2-liter container of Quick Fill Compact 905, two 1-gallon containers of bleach, three 1-gallon cans of paint, and six 5-gallon containers SuperSport One Waterborne Finish. Numerous fluorescent tube lights were stored in boxes in a storage building located to the southeast of Building No. 9 (Shop Building), adjacent to the flammable materials storage building.

Gasoline, used for fueling landscaping equipment, is stored in a 55-gallon steel drum in the flammable materials' storage building located to the southeast of Building No. 9 (Shop Building). Minor staining was observed on the concrete floor of the flammable storage building. However, the floor was in relatively good condition with no visible cracks or gaps that could act as conduits to the subsurface.

6. INTERVIEWS

6.1 Interview with Site Owner's Representatives

On April 20, 2016, WorleyParsons interviewed Mr. Martin Nevarez, Plant Manager, of the John Burroughs Middle School and Mr. Andrew Fowler, the LAUSD OEHS Project Manager for the Site regarding the current and historic use of the Site. Mr. Nevarez has been associated with the Site since 2009. During this time, Mr. Nevarez and Mr. Fowler indicated that the Site has been used as a school and to the best of their knowledge has always been in use as a school since 1924. Mr. Nevarez reported, to the best of his knowledge, that no hazardous materials or associated wastes are stored at the Site, with the exception of a gasoline stored in a 55-gallon steel drum in the flammable storage building located southeast of Building No. 9 (Shop Building). Additionally, to the best of their knowledge, no releases of such materials have occurred at the Site.

A Roof and Plot Plan, dated January 22, 1923, was obtained from Mr. Fowler following the Site reconnaissance on April 20, 2016, which indicates that a heating oil tank was located on-Site, east of Building No. 1 (the Main/Auditorium Building). A copy of this plan in contained in Appendix 7.

A Part Plot Plan, dated May 1935, was obtained from Mr. Fowler following the Site reconnaissance on April 20, 2016, which indicates that an incinerator was located to the southwest of Building No. 9 (Shop Building) (Appendix 8).

Details regarding the interviews with Mr. Nevarez and Mr. Fowler are contained in Appendix 5.

7. ON-SITE ISSUES

The following conditions and practices were observed during the Site reconnaissance conducted on Wednesday, April 20, 2016.

7.1 Hazardous Material Handling (Including Inventory of All Chemicals Observed)

No hazardous material handling and no chemicals were observed on-Site during the Site reconnaissance with the exception of gasoline stored in a 55-gallon steel drum in the flammable materials storage building located southeast of Building No. 9 (Shop Building), paint, floor finish wax, enamels, and janitorial supplies noted in Section 5. The John Burroughs Middle School is registered as a large quantity hazardous waste generator for PCBs and asbestos abatement work previously conducted at the Site.

7.1.1 Current Hazardous Material Handling Practices

Hazardous material handling practices on-Site are comprised of the use of standard janitorial supplies for classroom and restroom cleaning as needed. One 55-gallon steel drum containing gasoline used to fuel Site landscaping equipment is stored in the flammable materials' storage building located southeast of Building No. 9 (Shop Building).

7.1.2 Past Hazardous Material Handling Practices

According to Mr. Nevarez, the Plant Manager for the John Burroughs Middle School, hazardous materials have not been stored or handled on the Site with the exception of standard janitorial supplies and one 55-gallon steel drum containing gasoline.

7.1.3 Current and Past On-site Underground Storage Tanks (USTs)

Based on the data obtained for the Site, no evidence was found regarding current and/or past USTs on-site.

7.1.4 Current and Past On-site Aboveground Storage Tanks (ASTs)

A Roof and Plot Plan, dated January 22, 1923, was obtained from Mr. Fowler following the Site reconnaissance on April 20, 2016, which indicates that a heating oil AST was located on-Site, east of the center portion of Building No. 1 (the Main/Auditorium Building). A copy of this plan is contained in Appendix 7.

7.2 Solid and Hazardous Waste Handling Practices

No solid and hazardous material handling practices were observed on-Site during the Site reconnaissance with the exception of solid waste stored in nine waste bins and recyclable waste stored in three waste bins located adjacent to the northwest of Building No. 20 (Cafeteria/Classroom Building).

7.2.1 Waste Handling and Storage

Solid waste is stored in nine waste bins and recyclable waste is stored in three waste bins all serviced by Republic Services. The waste bins are stored adjacent to the northwest of Building No. 20 (Cafeteria/Classroom Building).

7.2.2 On-site Disposal

No disposal of waste occurs on-Site. However, a Plot Plan, dated May 1935, provided by LAUSD, indicates that an incinerator, presumably for solid waste burning, was located near the southwest corner of Building No. 9 (Shop Building).

7.2.3 Visible Signs of Releases and Spills

Staining from apparent gasoline spills were observed near the 55-gallon steel drum containing gasoline that is stored in the flammable materials storage building located southeast of the Building No. 9 (Shop Building). According to Mr. Nevarez, no hazardous materials or petroleum product releases have occurred at the Site.

7.2.4 Potential Future Environmental Liabilities to District from Past Waste Disposal Practices

Based on the data obtained as part of this investigation, no evidence of potential future environmental liabilities to the LAUSD from past waste disposal practices was identified.

7.3 Subsurface Impacts to On- and/or Off-site Soil

No evidence of subsurface impacts to on- or off-Site soil was observed on-Site during the Site reconnaissance.

7.3.1 Use of Imported Fill Material

The use of fill material in the construction of the Site is likely, although positive proof of the use of fill or its source has not been identified from the data obtained as part of this Phase I ESA.

7.3.2 Previous Site Assessments

No previous assessment reports were identified for the Site.

7.4 Subsurface Impacts to On- and/or Off-site Groundwater

Based on the data obtained as part of this investigation, no information has been found to suggest subsurface impacts to on- and/or off-site soil or groundwater.

7.4.1 Source for Site Water Supply

Potable water is supplied to the Site by the LADWP.

7.4.2 Site Drainage and Stormwater Issues

No site drainage or stormwater issues were identified on-Site during the Site reconnaissance.

7.5 Site Permits

The LABDS reported that 26 building alteration permits were filed for the Site, beginning on June 21, 1910 and ending October 24, 1960.

The LABDS reported that 23 new building construction permits were filed for the Site, beginning on April 5, 1927 and ending August 28, 1940.

The LABDS reported that one building relocation permit was filed for the Site on September 23, 1929.

The LABDS reported that three building addition permits were filed for the Site, beginning on September 26, 1932 and ending November 10, 1936.

The EDR Building Permit Report identified two permits associated to the Site. One “No Plan Check Reconnect Two Boilers; Power is Existing” permit was issued on July 29, 2008, and another “No Plan Check Install Boiler” permit was issued on July 29, 2008. No other permits were identified in the EDR Building Permit Report (EDR, 2016g).

7.5.1 Site Permits on File with Environmental Regulatory Agencies

Current Permits

No current permits for the Site were found on file with environmental regulatory agencies.

Historical Permits

No historical permits for the Site were found on file with environmental regulatory agencies.

Noncompliance and Permit Violations

No information was found regarding non-compliance or permit violations for the Site.

7.5.2 Site Listings with Regulatory Agencies

Based on the data obtained, the Site address (600 South McCadden Place, John Burroughs Middle School) is listed in the following regulatory databases:

- **RCRA-LQG**. The Site is listed as a large quantity hazardous waste generator. According to the EDR report, no violations associated with the generation of this waste have been reported.
- **HAZNET and FINDS**. The Site is listed in the HAZNET and FINDS database for generation of 50.575 tons of inorganic waste, 0.18 tons of organic solids, 1.05 tons of PCBs, and 504.3532 tons of asbestos containing waste.
- **EMI**. The Site is listed in the EMI database. In 1990 it was determined that no emissions were being released from the Site.
- **ECHO**. The Site is listed in the ECHO database. No information was reported in the database. No violations were reported.

According to Mr. Nevarez, these materials are not stored on the Site. Additionally, based on the Site reconnaissance inspection, no evidence of the storage or release of such materials was observed at the Site.

7.6 Asbestos-containing Materials (ACM)

Based on the estimated age of the on-site buildings, there is a potential for asbestos-containing materials (ACM) to be present. However, sampling and analysis of suspect ACM was not included in the Phase I ESA scope of work.

7.6.1 Suspected ACM Sampling and Sampling Results

Sampling of suspect ACM was not included in the scope of work for this Phase I ESA.

7.7 Lead-based Paint (LBP)

Based on the estimated age of the on-site buildings, there is a potential for lead-based paint (LBP) to be present. However, sampling and analysis of suspect LBP was not included in the Phase I ESA scope of work.

7.7.1 Suspected LBP Sampling and Sampling Results

Sampling of suspect LBP was not included in the scope of work for this Phase I ESA.

7.8 Polychlorinated Biphenyl (PCB)-containing Equipment

Four electric transformers were observed during the Site inspection; one located adjacent to the south of Building No. 9 (Shop Building) in a fenced-in area, two located north of Building No. 20 (Cafeteria/Classroom Building) in an open area, and one located inside of Building No. 20 (Cafeteria/Classroom Building) in the sprinkler shutoff room. All four transformers are dry-type manufactured by General Electric.

7.9 Radon

The United States Environmental Protection Agency (USEPA) and the USGS have evaluated the radon potential in the United States and have included Los Angeles County in Zone 2, or moderate radon potential (from 2 to 4 picoCuries per liter). Current information on radon in California is available at <http://www.conservation.ca.gov/cgs/minerals/hazardous_minerals/radon/Documents/sr182map.pdf> and <http://www.epa.gov/radon/states/california.html>.

Radon gas testing was not included in the scope of work for this Phase I ESA. However, according to the Radon Potential Zone Map for Southern Los Angeles County, California, the Site is in an area for Low Potential for Indoor Radon Levels above 4.0 picoCuries per liter (California Department of Conservation, California Geological Survey, 2005).

7.10 Odors Noticed Indoors

No odors were noticed indoors during the Site reconnaissance inspection.

7.11 California Department of Education (CDE) Existing Schools Issues

An LAUSD OEHS Existing School Sites checklist was completed as part of this Phase I ESA in accordance with California Department of Education (CDE) requirements. A summary of the checklist is provided in the sections below. A copy of the checklist is contained in Appendix 6.

7.11.1 Proximity to Power Lines/Electromagnetic Fields

Pursuant to CCR, Title 5, Section 14010(c), the property line for a new school site shall be the following minimum distances from the edge of a high-voltage power line easement: 100 feet for 50–133 kV lines; 150 feet for 220–230 kV lines; and 350 feet for 500–550 kV lines. Based on the Site reconnaissance, no high-voltage power transmission lines were observed within the vicinity of the Site. Additionally, WorleyParsons contacted Southern California Edison (SCE) for information regarding the presence of easements for aboveground or underground power lines of 50 kilovolts or greater within 100 feet of the Site. According to SCE and the following website <http://www.gosolarcalifornia.ca.gov/utilities/>, the utility provider for the Site area is the LADWP. WorleyParsons contacted the Los Angeles Department of Water and Power by telephone and described the nature of the call, however, as of the date of this report no information has been received by WorleyParsons from the Los Angeles Department of Water and Power regarding high-voltage power transmission lines in the Site area. During the Site reconnaissance inspection, no 50–133 kV lines, 220–230 kV lines, or 500–550 kV lines were observed within 100, 150, or 350 feet of the Site, respectively.

7.11.2 Railroads

Based on aerial photographs and topographic maps, no railroad lines are located within 1,500 feet of the Site. Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from railroads within 1,500 feet of the Site.

7.11.3 Traffic Noise

The Site is located within a residential and commercial area. No major highways or freeways are located adjacent to the Site. Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from adjacent roads or freeways that will adversely affect the educational program.

7.11.4 Faults

Based on a review of the Special Studies Zone Maps provided by the California Department of Conservation Division of Mines and Geology (DMG), the Site is located within the Hollywood Fault special study zone and is regulated under the Alquist-Priolo Earthquake Fault Zoning Act (Public

Resources Code 2621, Division 2, Chapter 7.5). The Hollywood Fault is located within the central portion of the Santa Monica-Hollywood-Raymond Fault system, which is collectively part of a greater than 200-km long west-trending system of oblique, reverse and left-lateral faults that separate the Transverse Ranges Geomorphic Province of California from the Peninsular Ranges Geomorphic Province (Dolan et al., 1997).

Based on this, the Project may create a new or exacerbate an existing significant safety hazard to students from an active earthquake fault or fault trace which may be onsite.

7.11.5 Flood or Inundation Area

According to EDR, the Site is not located with either a 100-year or 500-year flood zone (EDR 2016a).

However, the area to the east of the Site along June Street is located within a 500-year flood zone (FEMA, 2008; EDR, 2016a). This area has a 0.2% annual chance of a flood, 1% annual chance of a flood with average depths of less than 1 foot or with drainage areas less than 1 square mile, and is an area protected by levees from the 1% annual chance flood

According to the County of Los Angeles, the Site is located within a dam inundation area (County of Los Angeles, 2014). However, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from flooding or dam inundation.

7.11.6 Pipelines and Aboveground Storage Tanks (ASTs)

During the Site reconnaissance inspection, no ASTs or associated pipelines were observed on-Site or the surrounding properties. According to the EDR report, one facility with a registered 2,200 gallon AST of unknown contents is located approximately 910 feet west of the Site. However, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from the presence of this nearby AST.

A Roof and Plot Plan, dated January 22, 1923, was obtained from Mr. Andrew Fowler, the Los Angeles Unified School District Office of Environmental Health Services Project Manager for the Site, following the Site reconnaissance on April 20, 2016. This plot plan indicates that a heating oil AST was located on-Site, east of the center portion of Building No. 1 (the Main/Auditorium Building). A copy of this plot plan is contained in Appendix 7. The location of the former AST is depicted on Figure 2.

7.11.7 Liquefaction and Landslides

Based on Section 1, Liquefaction Evaluation Report, of the 1998 DMG Seismic Hazard Zone Report for the Hollywood 7.5-Minute Quadrangle, three Holocene soil inventory types were identified in the Hollywood Quadrangle as being susceptibility to liquefaction when saturated. These Holocene soil inventory types included; active stream channels consisting of loose to dense sand, gravel, and silty

sand; alluvial fans consisting of loose to moderately dense sand, gravel, and sandy silt; and floodplains, streams, alluvial fans consisting of loose to moderately dense sand, silt, and clay (DMG, 1998).

Liquefaction analyses of geotechnical data recorded in logs of boreholes drilled in the Hollywood Quadrangle show that young, saturated sandy soils are potentially liquefiable. Younger alluvium deposited in canyon bottoms and incised channels generally lack adequate geotechnical borehole information. The soil characteristics and groundwater conditions in these cases are assumed to be similar to those in deposits where subsurface information is available (DMG, 1998).

According to the California Geological Survey, Earthquake Zone of Required Investigation Hollywood Quadrangle, map released on November 6, 2014, the Site does not lie within a mapped liquefaction zone (California Department of Conservation, 2014).

Based on Section 2, Earthquake-Induced Landslide Evaluation Report, of the 1998 DMG report and on information provided by the California Geological Survey Earthquake Zones of Required Investigation Hollywood Quadrangle (2014), the Site is not located within an earthquake-induced landslide potential zone (DMG, 1998 and California Department of Conservation, 2014).

Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from liquefaction or landslides.

7.11.8 Traffic and Pedestrian Safety

The Site is located within a residential and commercial neighborhood and is located adjacent to the north of a major arterial street, Wilshire Boulevard. Based on this, the Project may create a new or exacerbate an existing significant safety hazard to students from the adjacent major arterial street.

7.11.9 Compatible Zoning

The Project involves construction of new and the renovation of existing buildings at the Site and is not expected to affect existing zoning for the Site and vicinity. Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from the zoning surrounding the Site.

7.11.10 Light, Wind and Air Pollution

The Project involves construction of new and renovation of existing buildings as well as Site upgrades to vehicular circulation, landscape and hardscape, accessibility and exterior paint. Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from light, wind or air pollution.

7.11.11 Easements

No easements were reported at the Site. Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students, which may restrict access or building placement.

7.11.12 Border Zone Property

Pursuant to CCR, Title 5, Section 14010(t), a school site shall not be located on or within 2,000 feet from a significant disposal site for hazardous waste. If the school site is located with 2,000 feet then the school district shall contact the Department of Toxic Substance Control for a determination of whether the property should be considered a Hazardous Waste Property or Border Zone Property. Based on information obtained from an EDR research of available environmental databases in the vicinity of the Site, WorleyParsons obtained the following information related to hazardous substance release or disposal sites:

- ENVIROSTOR Database – DTSC: no Federal or State National Priority List sites found within the 2,000 feet of the Site.
- USEPA: no current or former hazardous or solid waste disposal properties found within 2,000 feet of the Site.
- SWF/LF – California Department of Resources Recovery and Recycling; no landfills were listed within 2,000 feet of the Site.
- WMUDS/SWAT database – State Water Resources Control Board (SWRCB): no sites were listed within 2,000 feet of the Site.

Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from a significant disposal site for hazardous waste within 2,000 ft. of the Site.

7.11.13 Cellular Phone Towers

According to www.CellReception.com, a database that maps towers registered with the Federal Communications Commission (FCC), no cellular phone towers are located within one mile of the Site.

7.11.14 Air Pollution

The closest major roadways to the Site are State Highways 2 and 10, located approximately 1.86 mile south and 2.38 miles northeast of the Site, respectively. No railroad lines are located within 500 feet of the Site. Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from a major transportation corridor.

The Site is located within a residential and commercial neighborhood. The Project involves construction of new and the renovation of existing buildings as well as Site upgrades to vehicular circulation, landscape and hardscape, accessibility and exterior paint. Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from a major stationary source of emissions within 500 feet of the Site.

7.11.15 Methane Zone

Based on the information provided by the City of Los Angeles NavigateLA Web site, information provided by the City of Los Angeles Building and Safety (LADBS), and the City's Public Works Departments, the Site lies within a City of Los Angeles designated methane zone. Per the California Department of Conservation, Division of Oil, Gas and Geothermal Resources, the Site is not located within a designated oil field. Based on this, the Project may create a new or exacerbate an existing significant safety hazard to students from a known methane zone.

7.11.16 Oil Wells

Based on the DOGGR oil and gas well map 118, there are no current or historic plugged and abandoned oil and/or gas well on the Site. The closest current or historic plugged and abandoned oil and/or gas well to the Site are the plugged and abandoned oil wells Chevron U.S.A. Inc. "Highland Corehole" 1 and "Highland Corehole" 2, located approximately 0.24 miles west-southwest of the Site (DOGGR, 2003). Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from an on-site oil well.

7.11.17 Airports

The closest airport to the Site is the Santa Monica Airport, located approximately 6.84 miles southwest of the Site. Based on this, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from an airport within two nautical miles of the Site.

7.12 Surrounding Land Uses

Based on documents reviewed, the land surrounding the Site consists of residential and commercial properties.

8. FINDINGS

8.1 General Findings

The Site consists of the approximately 10.53-acre John Burroughs Middle School located at 600 South McCadden Place in Los Angeles, California. The Site contains school buildings, storage buildings, two parking lots and a playground area. No evidence of the storage or release of hazardous materials were reported at the Site or observed during the Site reconnaissance inspection with the exception of small quantities of janitorial supplies and a 55-gallon steel drum containing gasoline, stored in a flammable materials storage building located southeast of Building No. 9 (Shop Building). Staining on the concrete floor adjacent to this drum was observed during the reconnaissance inspection. The John Burroughs Middle School is identified as a large quantity hazardous waste generator; as a results of past school renovation activities, which included the abatement of asbestos and PCB-containing equipment. According to Mr. Martin Nevarez, the Site Plant Manager, these wastes are not and have not been disposed at the Site.

Historically, according to topographic maps, the Site contained a small structure from at least 1894 to 1902. A records search at the LADBS indicated that a permit was issued on June 21, 1910 for the construction of a two-story building at the Site. According to the Los Angeles County Assessor, the current legal owner is the LAUSD. According to Mr. Andrew Fowler, Project Manager for the LAUSD, and Mr. Martin Nevarez, the John Burroughs Middle School Plant Manager, the school opened in 1924.

The Site is bounded to the north by single-family dwellings across West 6th Street, to the east by single-family dwellings and a commercial building, to the south by multi-family dwellings, Wilshire Private School, and multi-tenant commercial buildings across Wilshire Boulevard, and to the west by single-family dwellings and multi-family buildings across South McCadden Place.

8.2 SCHOOL SITE SELECTION CHECKLIST

An LAUSD OEHS Existing School Sites checklist was completed as part of this Phase I ESA in accordance with California Department of Education (CDE) requirements. Based on the findings of this investigation, no affirmative answers to the checklist were made with the exception of the following:

- The Site is located within a dam inundation area. However, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from flooding or dam inundation.
- The Site is located within the Hollywood Fault special study zone and is regulated under the Alquist-Priolo Earthquake Fault Zoning Act (Public Resources Code 2621, Division 2, Chapter 7.5). Based on this, the Project may create a new or exacerbate an existing significant safety hazard to students from an active earthquake fault or fault trace which may be onsite.

- According to the EDR report, one facility with a registered 2,200 gallon AST of unknown contents is located approximately 910 feet west of the Site. However, the Project is not expected to create a new or exacerbate an existing significant safety hazard to students from the presence of this existing AST.
- The Site is located within a residential and commercial neighborhood and is located adjacent north to a major arterial street, Wilshire Boulevard. Based on this, the Project may create a new or exacerbate an existing significant safety hazard to students from the adjacent major arterial street.
- Information provided by the City of Los Angeles NavigateLA Web site, information provided by the LADBS, and the City's Public Works Departments, the Site lies within a City of Los Angeles designated methane zone. Based on this, the Project may create a new or exacerbate an existing significant safety hazard to students from a known methane zone.

8.3 Known or Suspect Recognized Environmental Conditions

It is WorleyParsons' opinion that RECs exist at the Site. These RECs include the potential presence of LBP residue, OCP, and arsenic in soils at the Site; ACM in the Site building materials, the historical presence of a heating oil AST on-Site, the historical presence of an incinerator on-Site, and the former presence of two nearby off-site gasoline service stations.

Based on the age of the existing Site buildings, it is possible that lead-based paint (LBP) has been applied to the exterior finishes of the buildings. As such, it is possible that LBP residue is present in soils around the perimeters of the existing and former buildings. It is possible that organochlorinated pesticides (OCP) in the form of termiticides have been applied around the foundations of these Site buildings or in the areas. There is the potential presence of arsenic underneath pavement that may have been applied as an herbicide. Based on the age of the existing Site buildings, it is possible that asbestos-containing materials (ACM) are present in building materials.

Two "oil and gas" service stations were located west of the Site (approximately 60 feet west of the Site and cross/upgradient with respect the reported groundwater flow direction), at the northwest intersection of South McCadden Place and Wilshire Boulevard and at the northeast corner of South Highland Avenue and Wilshire Boulevard, from at least 1938 to at least 1964. Based on their location relative to the Site, it is possible that groundwater beneath the Site has been impacted by releases of petroleum hydrocarbons at these facilities.

A heating oil AST was located on the Site adjacent to the east of Building No. 1 (Main/Auditorium Building). Based on this, it is possible that leaks or spills from this tank have impacted soil and groundwater at the Site.

An incinerator, presumably for solid waste, was located on the Site near the southwest corner of Building No. 9 (Shop Building). Based on this, it is possible that adjacent soils have been impacted by

burn ash containing combustion by-products such as polycyclic aromatic hydrocarbons (PAHs), furans, and heavy metals.

9. CONCLUSIONS

WorleyParsons has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and requirements set forth by the LAUSD and the CDE. Any exceptions to or deletions from this practice are described in Section 13 of this report. This assessment has revealed no evidence of RECs in connection with the Site with the exception of the following:

a) Potential presence of LBP residue in shallow soils around the drip lines of the existing and former buildings at the Site.

b) Potential presence of OCP in shallow soils around the foundations of the existing and former buildings at the Site.

c) Potential presence of arsenic in shallow soils under pavement at the Site.

d) Potential presence of ACM in Site building materials.

e) Potential presence of hydrocarbons in groundwater due to the historical presence of two gasoline service stations approximately 60 and 250 feet west of the Site.

f) Potential presence of petroleum products in soil and groundwater due to the historical presence of an heating oil AST located adjacent to Building No. 1 (Main/Auditorium Building).

g) Potential presence of burn ash in soils due to the historical presence of an incinerator located adjacent to Building No. 9 (Shop Building).

10. RECOMMENDATIONS

WorleyParsons recommends completion of a site investigation within the boundary of the planned development area that includes collection of soil samples for the evaluation of LBP, OCP, arsenic, petroleum hydrocarbons, PAH's, and metals, and if present, a human health risk assessment to determine if the levels pose a risk to future Site occupants. WorleyParsons also recommends completion of a hazardous Material Property Condition Survey to identify and quantify all hazardous materials present at the Site including asbestos, lead-based-paint, mold, PCBs, mercury, tritium, radium, and/or other hazardous materials, in order that work plans and specifications may be developed for the safe abatement by a licensed and qualified contractor(s) prior to removal/renovation of any Site buildings.

12. ADDITIONAL SERVICES

No additional services outside the proposed scope of work in WorleyParsons' proposal, dated February 23, 2016 were conducted as part of this Phase I ESA.

13. DISCLAIMER

The information presented in this document was compiled and interpreted exclusively for the purposes stated in Section 1 of the document. WorleyParsons provided this report for the Los Angeles Unified School District solely for the purpose noted above.

WorleyParsons has exercised reasonable skill, care, and diligence to assess the information acquired during the preparation of this report, but makes no guarantees or warranties as to the accuracy or completeness of this information. The information contained in this report is based upon, and limited by, the circumstances and conditions acknowledged herein, and upon information available at the time of its preparation. The information provided by others is believed to be accurate but cannot be guaranteed.

WorleyParsons does not accept any responsibility for the use of this report for any purpose other than that stated in Section 1 and does not accept responsibility to any third party for the use in whole or in part of the contents of this report. Any alternative use, including that by a third party, or any reliance on, or decisions based on this document, is the responsibility of the alternative user or third party.

No part of this publication may be reproduced, stored in a retrieval system, or transmitted, in any form or by any means, electronic, mechanical, photocopying, recording, or otherwise, without the prior permission of WorleyParsons.

Any questions concerning the information or its interpretation should be directed to M. Huma or R. Beck.

13.1 Limitations and Exceptions

Site-specific activities performed by WorleyParsons and information collected regarding these activities is summarized in the following sections. The findings of this Phase I ESA are presented in Section 8. Conclusions drawn and recommendations made by WorleyParsons, based on the information collected as part of the Phase I ESA, are presented in Sections 9 and 10, respectively. This Phase I ESA was conducted in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained through the Phase I ESA described herein. Opinions presented herein apply to site conditions existing at the time of our study and cannot necessarily be taken to apply to site conditions or changes that we are not aware of or have not had the opportunity to evaluate. It must be recognized that conclusions drawn from these data are limited to the amount, type, distribution, and integrity of the information collected at the time of the investigation, as well as the methods utilized to collect and evaluate the data, and that a full and complete determination of environmental risks cannot be made. Although WorleyParsons has taken

steps to obtain true copies of information available from third parties, we make no representation or warranty with respect to the accuracy or completeness of this information.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
AVALON WILSHIRE	*5115 WILSHIRE BLVD*	*WSW 1/8 - 1/4 (0.231 mi.)*	*D25*	*51*

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/07/2015 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 12/14/2015 has revealed that there are 14 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 12/14/2015 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 11/07/2015 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 2 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there is 1 CUPA Listings site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

BARTEL H S	5020 WILSHIRE BLVD	WSW 0 - 1/8 (0.108 mi.)	C15	38

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location:	Regional Board
Potential Media Affected:	Soil, Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE)
Site History:	The property is located on the southeastern corner of Citrus Avenue and Wilshire Boulevard in Los Angeles. The property was previously used as a gas station (Phillips Petroleum Company) from 1934 to 1979. The subject property is currently comprised of a two-story commercial building , which houses several different businesses including the dry cleaning store (5028 -5044 Wilshire Boulevard), and two one-story buildings, consisting of a Starbucks Coffee store (5020 Wilshire Boulevard) and a flower shop (5032 Wilshire Boulevard). In addition, based on the records obtained from the City of Los Angeles Building & Safety Department, the adjacent property at 5000 Wilshire Boulevard (7-11 Store) was a gas station (Union Oil Company) from 1941 to 1961.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
