Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS AIR POLLUTANT MAJOR

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/30/2015

Next Scheduled EDR Contact: 04/18/2016
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/30/2015

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/09/2015
Date Data Arrived at EDR: 06/26/2015

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Last EDR Contact: 03/07/2016
Next Scheduled EDR Contact: 06/20/2016
Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 09/17/2015
Date Data Arrived at EDR: 12/04/2015

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

BURROUGHS MIDDLE SCHOOL
600 S. MCCADDEN PLACE
LOS ANGELES, CA 90005

TARGET PROPERTY COORDINATES

Latitude (North):	34.063542 - 34° 3' 48.75''
Longitude (West):	118.336254 - 118° 20' 10.51''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	376684.8
UTM Y (Meters):	3769812.2
Elevation:	213 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

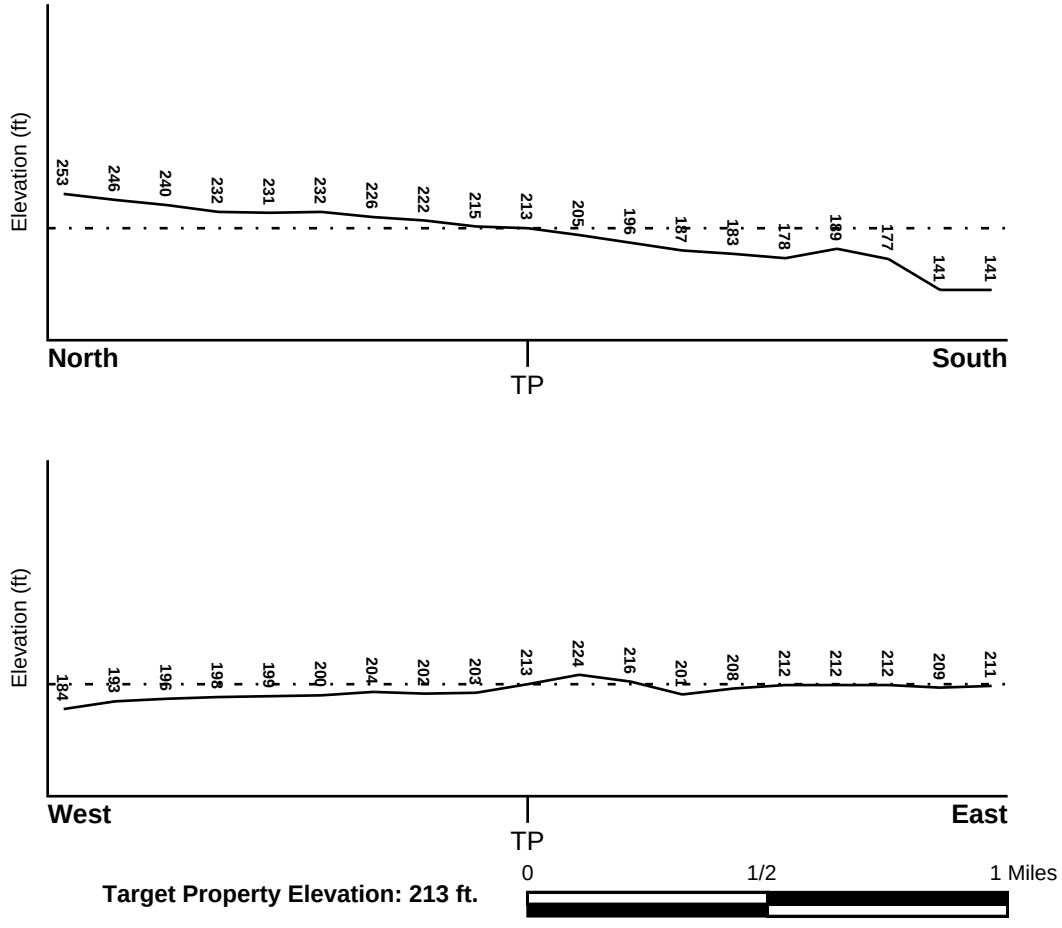
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by WorleyParsons were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by WorleyParsons were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of WorleyParsons on Mar 14, 2016.

TARGET PROPERTY

600 S. McCadden Place
Los Angeles, CA 90005

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

PROPERTY INFORMATION

Deed 1:

According to the Los Angeles County Assessor, the current owner of the subject property is Los Angeles Unified School District. Records were searched at the Los Angeles County Recorder's Office back to 1980. No conveyance was found of record for the subject property. Based on our research, it appears that Los Angeles Unified School District acquired title to the property prior to 1980.

Legal Description: All that certain piece or parcel of land being a portion of Lots 14 and 15 of Tract 215, filed in Map Book 14, at Pages 42-43, situate and lying in the County of Los Angeles, State of California.

Legal Current Owner: Los Angeles Unified School District

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Subject: File Request - 600 S. McCadden Place, Los Angeles 90005; APN 5507-017-900

Hi Kim,

I would like to review information your department may have regarding the following location:

a) 600 South McCadden Place, Los Angeles, 90005; APN 5507-017-900

This information will be used for a Phase I Environmental Site Assessment of the above-listed property for the Los Angeles Unified School District for the Burroughs Middle School.

Please contact me by phone at 310-736-0964, if you have any questions regarding this request or to confirm receipt of this letter. Responses via email (Michael.Huma@Advisian.com) is preferred. However, if faxes are necessary, please fax to: 1-888-753-9007

Regards,

Michael Huma

Dear Mr. Huma:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the site/facility referenced above.

We would also like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. Envirostor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view Envirostor.

If you have any questions or would like further information regarding your request, please contact me at (818) 717-6521.

Sincerely,

Vivien Tutaan/aa
Regional Records Coordinator

APPENDIX 5

INTERVIEW DOCUMENTATION

Phase I ESA Key Site Contact Questionnaire

1. Name and title of interview subject.

Mr. Martin Nevarez, Plant Manager, John Burroughs Middle School.

Mr. Andrew Fowler, LAUSD OEHS, Project Manager.

2. How long have they been associated (worked at) the Site?

7 years (i.e. since 2009).

3. What is the Site currently used for and for how long has it been in its current use?

The Site is currently used as middle school and to Mr. Nevarez's best knowledge; the Site has always been used as a school since 1924 (92 years).

4. Are any hazardous materials and/or petroleum products used at the Site? If so, what are they used for and where are they stored?

Common janitorial supplies are used to clean the various buildings on-Site. Mr. Nevarez indicated that gasoline-powered mowers and leaf blowers are used to maintain the landscaping at the Site; gasoline is stored in one 55-gallon steel drum in the flammable storage building located southeast of Building No. 9 (Shop Building). Evidence of spills and stains was observed at this location.

5. Are you aware of any releases of hazardous materials or petroleum products at the Site?

Neither Mr. Nevarez nor Mr. Fowler was aware of any releases at the Site. However, evidence of spills and stains was observed in the flammable storage building located southeast of Building No. 9 (Shop Building) where the 55-gallon steel drum containing gasoline is located.

6. Are hazardous wastes generated at the Site? If so, where are they stored? How often and by who are they disposed?

According to Mr. Nevarez, no hazardous waste is stored at the Site with the exception of gasoline stored in one 55-gallon steel drum in the flammable storage building located southeast of Building No. 9 (Shop Building).

7. Before its current use, do you know what the Site was used for?

Mr. Fowler indicated that the Site was vacant undeveloped land prior to it be used as a school.

8. Have you ever noticed pools of unidentified liquids or staining on the ground at the Site?

Evidence of spills and stains was observed in the flammable storage building located southeast of Building No. 9 (Shop Building) near the 55-gallon steel drum containing gasoline.

9. Are you aware of the presence of any wells at the Site?

Mr. Nevarez and Mr. Fowler reported no knowledge of any wells at the Site.

10. Are you aware of the existence of the following documents related to the Site?

a. Any previously conducted environmental site assessment or audit reports.

None per Mr. Nevarez and Mr. Fowler.

b. Any environmental permits (solid waste disposal, hazardous waste disposal, wastewater treatment/disposal, NPDES).

None per Mr. Nevarez and Mr. Fowler.

c. Any registrations or plans for USTs, ASTs, wastewater clarifiers/treatment systems or septic systems.

A Roof and Plot Plan, dated January 22, 1923, was obtained from Mr. Fowler which indicates that a heating oil tank was located on-Site, east of the center portion of Building No. 1 (the Main/Auditorium Building).

d. Any spill control and countermeasure plans.

Mr. Nevarez indicated that spill control and countermeasure plans are stored in the Plant Manager's office and comprise of absorbent pads and solidifiers/powders for small gasoline spills.

e. Any geologic, geotechnical or hydrogeologic reports.

None per Mr. Nevarez and Mr. Fowler.

f. Any notices or correspondence from any government agencies regarding past or current violations of environmental regulations.

None per Mr. Nevarez and Mr. Fowler.

g. Any environmental liens against the Site.

None per Mr. Nevarez and Mr. Fowler.

h. Any hazardous waste generator reports.

None per Mr. Nevarez and Mr. Fowler.

i. Any risk assessment reports.

None per Mr. Nevarez and Mr. Fowler.

j. Any deed or land use restrictions or limitations for the Site related to environmental conditions.

None per Mr. Nevarez and Mr. Fowler.

k. Any pending, current or past litigation or administrative action related to hazardous materials or petroleum products at the Site.

None per Mr. Nevarez and Mr. Fowler.

8. Are you aware of any current or previous environmental issues/problems on the neighboring properties?

None per Mr. Nevarez and Mr. Fowler.

APPENDIX 6

OEHS PRELIMINARY ENVIRONMENTAL SCREENING OF CANDIDATE SCHOOL SITES CHECKLIST

Preliminary Environmental Screening of Proposed Project at Existing School Site

Project: LAUSD John Burroughs Middle School Phase I ESA

Selection Criteria	Yes	No	Comments
Powerlines/Electromagnetic Fields [CCR, Title 5, 14010(c)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from 50-133 kV powerlines/electromagnetic fields within 100 feet of the site?		X	
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from 220-230 kV powerlines/electromagnetic fields within 150 feet of the site?		X	
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from 500-550 kV powerlines/electromagnetic fields within 350 feet of the site?		X	
Railroads [CCR, Title 5, 14010(d)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from railroads within 1,500 feet of the site?		X	
Traffic Noise [CCR, Title 5, 14010(e)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from adjacent roads or freeways that will adversely affect the educational program?		X	
Faults [CCR, Title 5, 14010(f)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from an active earthquake fault or fault trace which may be onsite?	X		
Flood or Inundation Area [CCR, Title 5, 14010(g)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from flooding or dam inundation?		X	
Pipelines and Above Ground Tanks [CCR, Title 5, 14010(h)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from nearby above-ground water or fuel storage tanks?		X	
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from above-ground or underground pipelines located within 1,500 feet of the site?		X	
Liquefaction and Landslides [CCR, Title 5, 14010(i)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from liquefaction or landslides?		X	
Traffic and Pedestrian Safety [CCR, Title 5, 14010(l)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from an adjacent major arterial street?	X		

Preliminary Environmental Screening of Proposed Project at Existing School Site

Project: LAUSD John Burroughs Middle School Phase I ESA

Selection Criteria	Yes	No	Comments
Compatible Zoning [CCR, Title 5, 14010(m)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from the zoning surrounding the site?		X	
Light, Wind, Air Pollution [CCR, Title 5, 14010(q)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from light, wind or air pollution?		X	
Easements [CCR, Title 5, 14010(r)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from easements on or adjacent to the site which may restrict access or building placement?		X	
Border Zone Property [CCR, Title 5, 14010(t)]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from a significant disposal of hazardous waste within 2,000 ft. of the site?		X	
Cellular Phone Towers [LAUSD Board Resolution]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from a cellular phone tower on or adjacent to the site?		X	
Air Pollution [LAUSD Board Resolution]			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from a major transportation corridor (freeway, major rail line) within 500 feet?		X	
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from a major stationary source of emissions within 500 feet?		X	
Is the school on the Priority List of Schools Most at Risk from Air Pollution?		X	
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from a high-risk facility previously identified by OEHS?		X	
Methane Zone			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from a known methane zone or oil field?	X		
Oil Wells			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from an onsite oil well?		X	
Airports			
Will the project create any new significant safety hazards or exacerbate any existing safety hazards to students from an airport within two nautical miles of the site?		X

EXECUTIVE SUMMARY

This *Preliminary Environmental Assessment Equivalent (PEA-E) Document* summarizes historical site land use, and outlines the approach utilized and data collected as part of the recently concluded assessment conducted for the Burroughs Middle School Comprehensive Modernization Project (the 'Site', Figures 1, 2 and 3). The Site is part of the Burroughs Middle School property (hereinafter also referred to as 'the School property'), located at 600 South McCadden Place, Los Angeles, California, 90005.

The School opened as "John Burroughs Junior High School" in 1924. Since 1924, various construction activities at the Site added and removed various structures, added parking lots and paved areas. From at least 1894 to 1921 the land was undeveloped with the exception of a small building located on the southern portion of the Site adjacent to Wilshire Boulevard (WorleyParsons, 2016).

The majority of the Site is paved and currently developed with three two-story administrative/classroom buildings, 23 single-story multi-purpose buildings that contain such things as classrooms, restrooms, gymnasiums, lounges and storage rooms (Figure 2). Two paved parking areas are located in the northeast corner and the southwest corner of the Site. Two tennis courts are located in the center of the Site. A paved and dirt playground area is located in the southern portion of the Site. The School property is bounded to the north by residential properties across West 6th Street, to the east by residential properties and a commercial building, to the south by residential properties, Wilshire Private School, and commercial buildings across Wilshire Boulevard, and to the west by residential properties across South McCadden Place.

The primary objectives of this PEA-E were to assess soil for potential environmental concerns identified in a Phase I Environmental Site Assessment (ESA) (WorleyParsons, 2016); and to evaluate overall Site health risk based on soil analytical screening results for chemicals of potential concern (COPCs), including lead, arsenic, organochlorine pesticides (OCPs), polychlorinated biphenyls (PCBs), total petroleum hydrocarbons (TPH), polyaromatic hydrocarbons (PAH's), and CA Title 22 Metals (CAM-17). Additionally, this PEA-E included a survey to screen for methane in soil gas.

Between December 28, 2016 and July 17, 2017, a total of one hundred and ninety (190) soil borings were advanced using hand auger or direct push drilling methods for the purpose of collecting soil samples in the vicinity of existing and former buildings, a former incinerator and a former aboveground storage tank (AST). A total of six hundred and thirty-two (632) soil samples were collected and select samples were analyzed for

DRAFT FINAL DOCUMENT

COPCs. The initial round of soil sampling conducted between December 28, 2016 and January 3, 2017, identified lead or arsenic impacts in soil in eighteen (18) borings. Subsequent sampling events conducted April 10-12, 2017 and July 17, 2017 helped to delineate the vertical and lateral extent of lead or arsenic contamination in these eighteen (18) areas with step-out borings (Figure 3). Borings installed in April and July 2017 are referred to as step-outs or step-out borings throughout this report.

In one hundred and eighty-one (181) of the one hundred and ninety (190) soil borings, the target maximum total depth was 2.5 feet below ground surface (bgs), with soil samples typically collected from 0.5, 1.5 and 2.5 feet bgs, to the extent practicable. Seven (7) of the 190 borings were advanced to a target maximum total depth of 4 feet to delineate the vertical extent of arsenic impacts in soil in select areas, with soil samples typically collected at 0.5, 1.5, 2.5, 3 and 4 feet bgs (EB9-6 step-out samples and EB15-1 step-out sample). For one boring installed in the vicinity of a former incinerator (EB9-7), soil samples were collected from target depths of 0.5, 1.5, and 2.5 feet bgs. One (1) boring installed in the vicinity of a former fuel oil AST (EB1-1) was advanced to a target maximum total depth of 10 feet bgs, with soil samples collected from 1, 5 and 10 feet bgs. Select soil samples were analyzed for COPCs. Boring locations are shown on Figures 3 through 7, and analytical soil results are summarized in Tables 1 through 3.

With the exception of arsenic and lead in select borings, the soil matrix analytical results (Tables 1 through 3) indicate that remaining COPCs at the Site were either below detection or below regulatory screening levels. Evaluation of the analytical results presented in this report show the data to be of acceptable quality.

Table 1 identifies boring locations where shallow soil sample results indicate concentrations of arsenic above the DTSC-adopted background concentration of 12 milligrams per kilogram (mg/kg) (DTSC, 2008) and/or lead above the DTSC-modified screening level of 80 mg/kg. No arsenic results exceeded state or federal hazardous waste criteria; therefore, for waste disposal considerations the levels of arsenic in shallow soil are representative of non-hazardous material under California waste disposal regulations, per the California Code of Regulations, Title 22, Chapter 11, Article 3. Lead results in select samples exceeded the state hazardous waste criteria of 1,000 mg/kg Total Threshold Limit Concentration (TTLC) lead or 5 mg/L Soluble Threshold Limit Concentration (STLC)-lead. Therefore, for waste disposal considerations select areas were identified with lead impacts in soil representative of hazardous material under California waste disposal regulations, per the California Code of Regulations, Title 22, Chapter 11, Article 3 (i.e., California-restricted non-Resource

DRAFT FINAL DOCUMENT

Conservation and Recovery Act (non-RCRA) hazardous waste was identified). No areas of Federal RCRA hazardous waste were identified based on the lead and arsenic results (Table 1). Based upon the findings of the PEA-E and in consultation with the OEHS, the estimated volume of arsenic and lead-impacted shallow soil along with the anticipated waste classification is summarized below:

- Approximately 54 cubic yards (CY) of arsenic and lead-impacted soil with non-hazardous waste classification (Areas A, E, and G shown on Figures 4 and 5)
- Approximately 106 CY of arsenic and lead-impacted soil with California-restricted non-RCRA hazardous waste classification due to elevated lead levels (Areas B, C, D, F, H, I, J, K, L and M shown on Figures 4 through 7)

To screen for methane in soil gas, thirty (30) additional soil borings were advanced between December 23 and 28, 2016 to a maximum total depth of 15.5 feet bgs. Dual methane probes were installed at approximately 5 and 15 feet bgs at each location. Methane sampling events were conducted on January 3 and 16, 2017. Soil samples were not typically collected from methane probe locations; however, in consultation with OEHS, two supplemental soil samples were collected from one location (M-3 at 10 and 12.5 feet bgs) where soil staining (potentially tar sand) was observed. The M-3 soil samples were analyzed for TPH and volatile organic compounds (VOCs), and results from the limited soil sampling at the M-3 location are presented in Table 3. TPH and VOCs in the M-3 samples were either below detection or below regulatory screening levels. Appendix F presents a methane screening report. It is Leighton's understanding that methane issues will be addressed by the District per Los Angeles Department of Building and Safety requirements and regulatory agency requirements, where applicable.

Based on the maximum methane concentrations measured above 12,500 ppm, the Site is a Level V design category per Los Angeles Department of Building and Safety (LADBS) methane regulations (>12,500 ppm at all pressures) (Appendix F).

Based upon the findings presented in this PEA-E study, elevated levels of COPCs were identified at the Site, including arsenic and lead in soil in select areas (Table 1). On behalf of the District, Leighton recommends preparation of a Removal Action Workplan (RAW) to address areas of elevated arsenic and lead in soil at the Site.

DRAFT FINAL DOCUMENT

1.0 INTRODUCTION

This *Preliminary Environmental Assessment Equivalent (PEA-E) Document (hereinafter also referred to as 'the report')* summarizes historical site land use, and outlines the approach utilized and data collected as part of the recently concluded assessment conducted at the Burroughs Middle School Comprehensive Modernization Project (the 'Site', Figures 1, 2 and 3).

This report was prepared by Leighton Consulting Inc. (Leighton) on behalf of the District in general conformance with various existing guidance documents related to site assessment, characterization and investigation published by the California Environmental Protection Agency (Cal/EPA) – Department of Toxic Substances Control (DTSC, 2015). Pertinent references related to the Site are listed in Appendix A.

1.1 Site Description

The School property is identified by the Los Angeles County Assessor's Office with Assessor's ID Number (AIN) 5507-017-900 and occupies approximately 10.23 acres. The property is owned and operated by the Los Angeles Unified School District (LAUSD) (hereinafter also referred to as 'the District' or LAUSD). The School property is bounded to the north by residential properties across West 6th Street, to the east by residential properties and a commercial building, to the south by residential properties, Wilshire Private School, and commercial buildings across Wilshire Boulevard, and to the west by residential properties across South McCadden Place.

The Site is part of the Burroughs Middle School property (hereinafter also referred to as 'the School property'), which is located at 600 South McCadden Place, Los Angeles, California, 90005. The majority of the Site is paved and currently developed with three two-story administrative/classroom buildings, 23 single-story multi-purpose buildings that contain such things as classrooms, restrooms, gymnasiums, lounges and storage rooms. Two paved parking areas are located in the northeast corner and the southwest corner of the Site. Two tennis courts are located in the center of the Site. A paved and dirt playground area is located in the southern portion of the Site.

DRAFT FINAL DOCUMENT

1.2 Background

The school opened as "John Burroughs Junior High School" in 1924. Since 1924, various construction activities at the Site added and removed various structures, added parking lots and paved areas. From at least 1894 to 1921 the land was undeveloped with the exception of a small building located on the southern portion of the Site adjacent to Wilshire Boulevard (WorleyParsons, 2016).

WorleyParsons completed a Phase I Environmental Site Assessment (ESA) for the School Property in May 2016. Findings from the Phase I ESA are discussed in Section 1.5, below.

The current Site contact related to the environmental matters is listed below:

Mr. Dane Robinson
Los Angeles Unified School District
Office of Environmental Health and Safety
333 South Beaudry Avenue, 21st Floor
Los Angeles, California 90017

1.3 Regional Geology and Hydrogeology

Geologic Setting: Locally, the Site is located in the Hollywood Basin within the central block of the Los Angeles Basin, a structural trough, characterized as a northwest-trending alluviated lowland plain approximately 50 miles long and 20 miles wide. The Santa Monica Mountains, Beverly Hills and Elysian Hills that generally expose Late Cretaceous to Late Pleistocene-age sedimentary and igneous rocks bound the Hollywood Basin along the north, northeast and east (Yerkes, 1965).

The sediments deposited in the Hollywood Basin have subsequently been faulted and folded during uplift of the Santa Monica Mountains and contraction of the basin (Tsutsumi et al., 2001; Catchings et al., 2001). Uplift of the Santa Monica Mountains is occurring along a zone of faults that comprise the Santa Monica Fault System, and include the Malibu Coast, Santa Monica and the Hollywood faults (Tsutsumi et al., 2001; Catchings et al., 2001; Dolan, et al., 2000). Deformation caused by the Hollywood Fault of the near-surface sediments has resulted in the formation of the Hollywood Basin. The Hollywood Basin is situated between the Hollywood fault and the Santa Monica Mountains on its north, and a subsurface fold to the south, known as the Wilshire Arch, located

DRAFT FINAL DOCUMENT

near Wilshire Boulevard (Dolan et al., 1997 and 2000; Hildenbrand et al., 2001; Hummon et al., 1994; California Department of Water Resources, 1988).

The Site, southeast of the Salt Lake Oilfield, is underlain by surficial sediments consisting generally of clay, sand and gravel including gravel of minor stream channels (Dibblee, 1991). Older surficial sediments underlying the site can be expected to consist generally of unconsolidated to weakly consolidated, dissected alluvial fan sediments consisting chiefly of clay, silt, sand and gravels overlying the Lakewood and San Pedro Formations. At depth, petroliferous sands (tar sand) present within the San Pedro Formation can be expected.

Groundwater: The Site lies within the northeastern part of the Coastal Plain at an approximate elevation of 209 feet above mean sea level (amsl) (USGS, 1972) and located within the Hollywood sub-basin. This groundwater basin is bound on the north by the Santa Monica Mountains and the Hollywood fault, on the east by the Elysian Hills and on the west by the Newport-Inglewood fault zone. Southerly, the basin is bound by anticlinal structure termed the La Brea High were the San Pedro formation was eroded prior to deposition of the Lakewood Formation. This anticlinal structure brings less permeable bedrock close to the surface forcing groundwater to shallow depths primarily within the Pleistocene sands and gravels. Based on the approximate site elevation (El. 209 feet) and depth to groundwater recorded at 5020 to 5044 Wilshire Boulevard (1,000 feet southwest of the site) groundwater is likely to occur at approximate elevations (El.) 189 feet to El. 186 feet (Western Environmental Engineers Company, 2006). These elevations suggest groundwater may be encountered beneath the Site at approximately 20 to 23 feet below grade.

1.4 Environmental Setting

A Phase I ESA was completed for the School property on May 18, 2016 by WorleyParsons (WorleyParson, 2016). The purpose of the Phase I ESA is to identify recognized environmental conditions (RECs) in order to assist in the evaluation of historical land use, assess potential environmental impacts on- and off-site, and determine if any potential environmental impacts may pose a threat to on-site occupants, off-site individuals and the environment. Information pertaining to the Site as determined by the Phase I ESA is summarized below.

DRAFT FINAL DOCUMENT

1.4.1 School Property

The Phase I ESA includes a review of historical aerial photographs, topographic maps and Sanborn® maps for the School property. According to the Phase I ESA, historical use of the School property from at least 1928 to 1940 included an arboretum with a single-family dwelling located in the center portion of the property. The property was purchased by LAUSD in 1949, and has operated as a school since approximately 1951. Currently, the majority of the School property is paved and is developed with various school buildings, intermodal containers used for storage, playground areas and an animal sanctuary. The findings of the Phase I ESA are discussed in Section 1.5, below.

1.4.2 Site

WorleyParsons identified RECs for the Site (WorleyParsons, 2016). Identified RECs include the potential presence of lead based paint (LBP) residue, organochlorine pesticide (OCP), and arsenic in soils at the Site; asbestos containing material (ACM) in the Site building materials, the historical presence of a heating oil aboveground storage tank (AST) on-Site, the historical presence of an incinerator on-Site, and the former presence of two nearby off-site gasoline service stations.

Based on the Phase I ESA's investigation of historical aerial images, topographic maps, site reconnaissance, and fire insurance maps, existing and former building footprints were identified within the proposed development area at the Site (WorleyParsons, 2016). Existing and former building footprints are shown on Figure 2.

The District plans to redevelop the Site as part of the Burroughs Middle School Comprehensive Modernization Project. Leighton was contracted by the District to complete a PEA-E study to address potential soil contamination identified in the Phase I ESA and screen for methane in soil gas.

1.5 Discussion of Phase I ESA Items

The Phase I ESA found no evidence of the storage or release of hazardous materials during the on-site inspection at the School property with the exception

DRAFT FINAL DOCUMENT

of the storage of small quantities of janitorial supplies and a 55-gallon steel drum containing gasoline, stored in a flammable materials storage building located southeast of Building No. 9 (Shop Building). Staining on the concrete floor adjacent to this drum was observed during the reconnaissance inspection. During review of regulatory databases, the John Burroughs Middle School is identified as a large quantity hazardous waste generator; as a result of past school renovation activities, which included the abatement of asbestos and polychlorinated biphenyls (PCB)-containing equipment. According to Mr. Martin Nevarez, the Site Plant Manager, these wastes are not and have not been disposed at the Site. Based on the site reconnaissance and records reviewed as part of the Phase I ESA, WorleyParsons identified the following RECs associated with the Site:

- Potential presence of LBP residue in shallow soils around the drip lines of the existing and former buildings at the Site.
- Potential presence of OCP in shallow soils around the foundations of the existing and former buildings at the Site.
- Potential presence of arsenic in shallow soils under pavement at the Site.
- Potential presence of ACM in Site building materials.
- Potential presence of hydrocarbons in groundwater due to the historical presence of two gasoline service stations approximately 60 and 250 feet west of the Site.
- Potential presence of petroleum products in soil and groundwater due to the historical presence of an heating oil AST located adjacent to Building No. 1 (Main/Auditorium Building).
- Potential presence of burn ash in soils due to the historical presence of an incinerator located adjacent to Building No. 9 (Shop Building).

Based on the age of the existing Site buildings, it is possible that LBP has been applied to the exterior finishes of the buildings. As such, it is possible that LBP residue is present in soils around the perimeters of the existing and former buildings (WorleyParsons, 2016). DTSC guidance indicates that LBP residue from paint or surface coatings may be present in soil around school structures

DRAFT FINAL DOCUMENT

that are adjacent or near unpaved areas where runoff could occur and were constructed prior to January 1993 (DTSC, 2006).

It is possible that OCPs in the form of termiticides have been applied around the foundations of these Site buildings or in the areas (WorleyParsons, 2016). OCPs were commonly used as insecticides for termite control, around structures between 1948 and 1989 (DTSC, 2006).

There is the potential presence of arsenic underneath pavement that may have been applied as an herbicide (WorleyParsons, 2016).

Based on the age of the existing Site buildings, it is possible that ACM are present in building materials (WorleyParsons, 2016).

Two “oil and gas” service stations were located west of the Site (approximately 60 feet west of the Site and cross/upgradient with respect the reported groundwater flow direction), at the northwest intersection of South McCadden Place and Wilshire Boulevard and at the northeast corner of South Highland Avenue and Wilshire Boulevard, from at least 1938 to at least 1964. Based on their location relative to the Site, it is possible that groundwater beneath the Site has been impacted by releases of petroleum hydrocarbons at these facilities (WorleyParsons, 2016).

A heating oil AST was located on the Site adjacent to the east of Building No. 1 (Main/Auditorium Building). Based on this, it is possible that leaks or spills from this tank have impacted soil and groundwater at the Site (WorleyParsons, 2016).

An incinerator, presumably for solid waste, was located on the Site near the southwest corner of Building No. 9 (Shop Building). Based on this, it is possible that adjacent soils have been impacted by burn ash containing combustion by-products such as polycyclic aromatic hydrocarbons (PAHs), furans, and heavy metals (WorleyParsons, 2016).

A hazardous material property condition survey was recommended in the Phase I ESA to identify and quantify hazardous construction-related materials (ACM, LBP, mold, PCBs, mercury, tritium, radium and universal wastes). The hazardous material survey is not part of Leighton’s scope for this PEA-E study.

Leighton was contracted by the District to complete a PEA-E study to address soil concerns identified in the Phase I ESA, specifically to collect soil samples

DRAFT FINAL DOCUMENT

near former and existing buildings at the Site and analyze select samples for lead, OCPs, arsenic, PCBs, petroleum hydrocarbons, PAH's, and CA Title 22 metals (CAM-17). Where elevated levels of chemicals of potential concern (COPCs) are identified, a human health risk screening assessment is included to determine if the levels may pose a risk to future Site occupants.

1.6 Other Environmental Concerns

PCBs were used widely in caulking and elastic sealant materials, particularly from 1950 through the 1970s until PCBs were banned in 1979. DTSC guidance indicates that PCBs may exist in soil near exterior caulking present in buildings meeting the age criteria and adjacent to unpaved areas (DTSC, 2006). PCBs in shallow soil are commonly evaluated at the Phase I ESA Addendum/PEA-E stage of assessment at school sites that meet the age criteria. Although not identified as a COPC in soil by WorleyParsons, screening for PCBs was included in the PEA-E for select samples, as defined in the PEA-E Scope of Services (OEHS, 2016).

Information provided by the City of Los Angeles NavigateLA Web site, the Los Angeles Department of Building and Safety (LADBS), and the City's Public Works Departments, indicates that the Site lies within a City of Los Angeles designated methane zone. The Salt Lake Oil Field lies approximately 1,500 feet north of the Site and 2,000 feet west of the Site. One plugged oil and gas production well is also located approximately 1,300 feet west/southwest of the Site (API 03720045). Based on this, the Project may create a new or exacerbate an existing significant safety hazard to students from a known methane zone. Screening of soil gas for methane was included in the PEA-E, per the PEA-E Scope of Services (OEHS, 2016).

DRAFT FINAL DOCUMENT

2.0 SAMPLING ACTIVITIES

The PEA-E field sampling activities presented herein were conducted between December 23, 2016 and July 17, 2017 and included soil sampling and a survey to screen for methane in soil gas. Soil sampling was designed to assess lead, arsenic, OCPs, PCBs, TPH, PAHs, and CA Title 22 Metals, which were the COPCs identified in soil at the Site. The soil sampling consisted of the collection of select soil samples at specific depths to screen soil for COPCs. Appendix B contains boring logs and boring locations are shown on Figures 3 through 7. Appendix C contains a photographic log showing representative soil boring locations from the sampling event. Section 2.8 includes discussion of the methane survey, including methane sampling events conducted on January 3 and 16, 2017.

Between December 28, 2016 and July 17, 2017, a total of one hundred and ninety (190) soil borings were advanced using hand auger or direct push drilling methods for the purpose of collecting soil samples in the vicinity of existing and former buildings, a former incinerator and a former AST. The initial round of soil sampling conducted between December 28, 2017 and January 3, 2017, identified lead or arsenic impacts in soil in eighteen (18) borings. Subsequent sampling events conducted April 10-12, 2017 and July 17, 2017 helped to further delineate the vertical and lateral extent of lead or arsenic contamination in these eighteen (18) areas (Figures 3 through 7). Borings installed in April and July 2017 are referred to as step-outs or step-out borings throughout this report.

In one hundred and eighty-one (181) of the one hundred and ninety (190) soil borings, the target maximum total depth was 2.5 feet below ground surface (bgs), with soil samples typically collected from 0.5, 1.5 and 2.5 feet bgs, as practicable. Seven (7) of the 190 borings were advanced to a target maximum total depth of 4 feet to delineate the vertical extent of arsenic impacts in soil in select areas, with soil samples typically collected at 0.5, 1.5, 2.5, 3 and 4 feet bgs (EB9-6 step-out samples and EB15-1 step-out sample). For one (1) boring installed in the vicinity of a former incinerator (EB9-7), soil samples were collected from target depths of 0.5, 1.5, and 2.5 feet bgs. One (1) boring installed in the vicinity of a former fuel oil AST (EB1-1) was advanced to a target maximum total depth of 10 feet bgs, with soil samples collected from 1, 5 and 10 feet bgs. Select soil samples were analyzed for COPCs. Boring locations are shown on Figures 3 through 7, and analytical soil results are summarized in Tables 1 through 3.

Sampling activities consisted of the following components discussed below.

DRAFT FINAL DOCUMENT

2.1 Objectives

The primary objectives of this PEA-E were:

- To assess soil for potential environmental concerns identified in the Phase I ESA for the Site; and
- To evaluate the overall Site health risk based on soil analytical screening results for COPCs, including lead, arsenic, OCPs, PCBs, TPH, PAHs, and CA Title 22 Metals.
- To screen soil gas beneath the Site for the presence of oil field gases and determine the design level of mitigation required.

2.2 Utility Clearance

Prior to collecting the soil samples, Underground Service Alert (USA) was notified more than 48-hours prior to initiation of field sampling activities for marking subsurface utilities in and around the Site. The Site boring locations were clearly marked with white water-base chalk paint on December 20, 2016, April 1, 2017 and June 26, 2017 prior to USA notification. Also on December 27, 2016, April 1, 2017, and June 26, 2017 Spectrum Geophysics completed a geophysical survey to identify potential underground utilities or obstructions in conflict with the soil boring locations. Leighton reviewed an ALTA survey map (Surveying and Drafting Services, Inc., 2016) provided by the District indicating the anticipated locations of known sub-surface utilities at the School property prior to field activities in an effort to avoid encountering potential subsurface utilities during advancement of borings sampling. Based on the geophysical survey and ALTA survey, select proposed boring locations were adjusted in the field where necessary to minimize risk to damaging underground utilities.

2.3 Health & Safety Plan

A Site-specific health and safety plan (HASP) was prepared for the field activities. The HASP addressed issues regarding chemical exposure, personal protective equipment (PPE), physical and biological hazards that might be expected at the Site, an emergency response plan, and route to the nearest hospital. Site personnel engaged in field activities were required to read and sign

DRAFT FINAL DOCUMENT

the HASP. Subcontractor(s) were required to prepare and follow their own HASP during field activities, considering the Site-specific conditions.

2.4 Field Procedures

Collection of environmental samples of high integrity is important to the quality of chemical data to be generated. To this end, strict field procedures have been developed. General descriptions of field methods that were employed at various locations during various phases of the field investigation are described below.

2.4.1 Sample Collection and Analysis

Soil borings were advanced by Millennium Environmental, Inc. (Millennium), a State of California licensed driller, using hand-auger tools or direct-push drilling methods (Appendix B). Additionally, J&H Drilling (J&H), a State of California licensed driller, advanced soil borings using hand-auger tools or direct-push drilling methods and installed methane probes on December 28, 2016. The addition of J&H to complete drilling on December 28, 2016 was necessary due to difficult drilling conditions encountered and to complete sampling within the winter break. Asphalt or concrete pavement was cored by the respective driller prior to advancing the soil borings. Each boring was advanced to the maximum target depth or refusal. When refusal was encountered up to three additional attempts were made to advance a soil boring to the target depth in the vicinity of the original attempted boring location. Lithologic information and soil descriptions from the soil borings were recorded by Leighton's on-Site staff and reviewed by a State Certified Professional Geologist. Boring Logs are provided in Appendix B.

Specific sampling approaches are outlined below and sample analyses with corresponding sample depths are shown in Tables 1 through 3:

- Between December 28, 2016 and July 17, 2017, a total of one hundred and ninety (190) soil borings were advanced using hand auger or direct push drilling methods for the purpose of collecting soil samples in the vicinity of existing and former buildings, a former incinerator and a former AST. The initial round of soil sampling conducted between December 28, 2017 and January 3, 2017, identified lead or arsenic impacts in soil in eighteen (18) borings. Subsequent sampling events

DRAFT FINAL DOCUMENT

conducted April 10-12, 2017 and July 17, 2017 helped to further delineate the vertical and lateral extent of lead or arsenic contamination in these areas.

- Discrete soil samples were obtained from target depths from each boring and analyzed for the relevant COPCs, as summarized in Tables 1 through 3. Depths were measured from the top of the asphaltic concrete, if present. Gravel base located below the AC was not included in the sample, if present. Soil samples were collected in laboratory supplied 8-ounce glass jars or driller-provided acetate sleeves.

- For one hundred and eighty-one (181) of the soil borings, soil samples were collected from target depths of 0.5, 1.5, and 2.5 feet bgs, to the extent practicable. The upper 0.5 feet and 1.5 feet bgs samples were analyzed for lead, OCPs, arsenic and/or PCBs. The 2.5 feet bgs samples near former buildings were also analyzed for lead, OCPs and arsenic. Approximately 10% of the samples collected (excluding step-outs) were analyzed for PCBs based on field observations and discussions with District personnel. The 2.5 feet bgs samples near existing buildings were placed on hold, which were intended to allow analysis in a tiered fashion for vertical delineation of soil contamination, such that the deeper 2.5 feet bgs samples would be analyzed if shallow sample results revealed significant concentrations of lead, arsenic or other OCPs. Select 2.5 feet bgs samples near existing buildings were analyzed based on the shallower results and step-out samples were analyzed for the COPC that was potentially elevated in the vicinity of the original nearby boring (lead or arsenic).

- Seven (7) step-out borings were advanced to a target maximum total depth of 4 feet to delineate the vertical extent of arsenic impacts in soil in select areas, with soil samples typically collected at 0.5, 1.5, 2.5, 3 and 4 feet bgs (EB9-6 step-out samples and EB15-1 step-out sample). These samples were analyzed for arsenic.

- For one (1) boring installed in the vicinity of a former incinerator (EB9-7), soil samples were collected from target depths of 0.5, 1.5, and 2.5 feet bgs. Boring EB9-7 samples were analyzed for PAHs, PCBs, and Title 22 metals.

DRAFT FINAL DOCUMENT

- One (1) boring installed in the vicinity of a former fuel oil AST (EB1-1) was advanced to a target maximum total depth of 10 feet bgs, with soil samples collected from 1, 5 and 10 feet bgs. The samples from EB1-1 were analyzed for TPH.

- Boring locations are shown on Figures 3 through 7, and analytical soil results are summarized in Tables 1 through 3.

- Field duplicate samples were collected during the PEA-E sampling activities at an approximate ratio of 1 duplicate sample for every 10 original samples. The duplicate sample was collected immediately after the original sample. Due to the heterogeneity of the soil matrix the results for duplicate samples may vary from the results of the original sample. The duplicate samples were analyzed for the same parameters as the original samples collected from the same boring and similar interval.

- An equipment rinsate blank was collected from the reusable sampling equipment (hand auger) each field day, typically. The equipment blank was collected by pouring distilled water over the cleaned and rinsed hand auger bucket and collecting the poured water in laboratory supplied sample container(s). The equipment blank sample was analyzed for the same parameters as the soil matrix sample(s) collected during the investigation.

Select samples were analyzed for the following compounds:

- Arsenic and/or Lead by EPA Method 6010B,
- OCPs by EPA Method 8081A,
- PCBs by EPA Method 8082,
- TPH-carbon chain (TPH-cc, C4-C40) by EPA 8015M,
- Title 22 Metals by EPA 6000/7000,
- PAHs by 8270SIM,
- Soluble Threshold Limit Concentration (STLC) and Toxicity Characteristic Leaching Procedure (TCLP) Lead by EPA Method 6010B (where the Total Threshold Limit Concentration (TTLC) Lead result was greater than 50 mg/kg), and/or

DRAFT FINAL DOCUMENT

- STLC and TCLP Arsenic by EPA Method 6010B (where the TTLC Arsenic result was greater than 50 mg/kg).

2.4.2 Sample Handling and Storage

In the field, each sample container was marked with their unique sampling location number, date and time of sample collection. Each of the sample containers were wiped with clean paper towels, sealed in a plastic bag, and securely packed in a cooler on ice, in preparation for delivery to the laboratory.

2.4.3 Sample Custody

An entry was made on a chain-of-custody form supplied by the laboratory for each sample that was submitted to the laboratory for analysis. The information recorded included the sampling date and time, sample identification number, matrix type, requested analyses and methods, preservatives, and the sampler's name. Sampling team members maintained custody of the samples until they were relinquished to laboratory personnel or professional courier service. The cooler was appropriately sealed before it was relinquished to laboratory personnel. The chain-of-custody form accompanied the samples from the time of collection until received by the laboratory. Each party in possession of the samples signed the chain-of-custody form signifying receipt.

Collected soil samples were transported using standard chain-of-custody protocol to Advanced Technology Laboratories (ATL) of Signal Hill, California, an analytical testing laboratory accredited by the California Department of Public Health (CDPH). Upon receipt, the laboratory inspected the condition of the sample containers and reported the information on chain-of-custody or similar form.

A copy of the original completed chain-of-custody form was provided by the laboratory along with the report of results. Appendix D contains copies of the laboratory analytical reports.

2.4.4 Equipment Decontamination

Any equipment that came into contact with potentially contaminated materials was decontaminated consistently to assure the quality of

DRAFT FINAL DOCUMENT

samples collected. Disposable equipment intended for one time use was not decontaminated, but was packaged for appropriate disposal. Decontamination occurred prior to and after each use of a reusable piece of equipment. The sampling devices used (e.g., hand auger, drilling equipment) were decontaminated using the following procedures:

- Non-phosphate detergent and tap water scrub, using a brush if necessary;
- Tap water rinse; and
- Final deionized/distilled water rinse.

2.5 Laboratory Quality Control

The laboratory data package provided includes quality control sample results for blanks, matrix spike/matrix spike duplicates, surrogate recoveries, and laboratory control samples/laboratory control sample duplicates, as specified by the method. The laboratory also provided narrative stating whether or not quality control guidelines were met and listed discrepancies and laboratory data qualifiers. The laboratory reports containing the quality control results are included in Appendix D.

2.6 Abandonment of Soil Borings

Upon completion of sampling, all soil borings were backfilled with native soil (soil cuttings) and tamped per the request of the District personnel. Boring locations were resurfaced with concrete dyed black to match existing asphalt hardscape, as applicable.

2.7 Investigation Derived Waste Management

In the process of collecting environmental samples during the PEA-E activities, different types of potentially contaminated Investigation Derived Waste (IDW) were generated that included used PPE, disposable sampling equipment, excess soil cuttings, and decontamination fluids.

Listed below are the procedures that were followed for handling the IDW:

DRAFT FINAL DOCUMENT

- Used PPE and disposable equipment were double bagged and placed in a municipal refuse dumpster. These wastes are not considered hazardous and could be sent to a municipal landfill.

- Remaining soil cuttings (not used as backfill) and decontamination wastewater were placed in US Department of Transportation (DOT)-approved 55-gallon drums. The drums were labeled and sealed, pending receipt of analytical results, waste profiling and off-Site disposal.

Four 55-gallon drums containing IDW were generated during the PEA-E. Grab samples were collected directly from the 55-gallon drums containing IDW on December 29, 2016 (Sample ID "DRUM1"), January 3, 2017 (Sample ID "DRUM-LIQUID"), April 13, 2017 (Sample ID "DRUM-1"), and July 17, 2017 (Sample IDs: "IDW-S" and "IDW-L"). IDW sampled on April 13, 2017 and July 17, 2017 were combined into one drum, and the July 17, 2017 samples were used for profiling purposes for that drum. Laboratory reports are provided in Appendix D. IDW samples were analyzed for the following compounds:

- California Code of Regulations (CCR) Title 22 Code of Administrative Manual (CAM) 17 metals (CAM 17 metals) by EPA Method 6010B/7471A,

- OCPs by EPA Method 8081A, and

- Gasoline Range Organics (GRO), Diesel Range Organics (DRO) and Oil Range Organics (ORO) by EPA Method 8015B.

Additionally, the July 17, 2017 "IDW-S" sample was also analyzed for lead using the Waste Extraction Test for STLC and TCLP by EPA Method 6010B, because the TTLC lead result in this sample was greater than 50 mg/kg. With the result below the STLC and TCLP regulatory limits of 5 mg/L, the material is considered non-hazardous under California waste disposal regulations, per the California Code of Regulations, Title 22, Chapter 11, Article 3.

The IDW sample results indicate that the IDW is classified as nonhazardous waste. Two drums containing soil cuttings and one drum containing sample equipment decontamination water were removed from the Site on January 6, 2017 by Belshire Environmental Services Inc. (Belshire). One drum containing soil cuttings and decontamination water was removed from the Site on September 8, 2017 by Belshire. The three drums containing soil cuttings were transported to US Ecology in Beatty, Nevada for disposal. The one drum

DRAFT FINAL DOCUMENT

containing water only was transported to Demenno Kerdoon in Compton, California for disposal. Appendix E provides waste disposal documentation.

2.8 Methane Screening in Soil Gas

To screen for methane in soil gas, thirty (30) soil borings were advanced between December 23 and 28, 2016 to a maximum total depth of 15.5 feet bgs. Dual methane probes were installed at approximately 5 and 15 feet bgs at each location. Appendix F summarizes results of methane in soil gas screening, including sampling events on January 3 and 16, 2017. It is Leighton's understanding that methane issues will be addressed by the District per Los Angeles Department of Building and Safety requirements and regulatory agency requirements, where applicable.

Soil samples were not typically collected from methane probe locations; however, in consultation with OEHS, two supplemental soil samples were collected from one location (M-3 at 10 and 12.5 feet bgs) where soil staining (potentially tar sand) was observed. The M-3 soil samples were analyzed for TPH and volatile organic compounds (VOCs), and results from the limited soil sampling at the M-3 location are presented in Table 3. TPH and VOCs in the M-3 samples were either below detection or below regulatory screening levels. TPH and VOCs were not identified at levels of concern at M-3 and VOCs were not identified as a COPC for the Site.

Upon reaching the total target depth, soil vapor probes were installed per the DTSC *Advisory Active Soil Gas Investigations* dated July 2015. Soil vapor probes were installed at approximately 5 and 15 feet bgs in each location for a total of 60 soil vapor probes. Details of soil vapor probe installation include:

- Dual-nested soil gas probes were installed at approximate target depths of 5 and 15 feet bgs in each boring.
- A small-diameter, inert Nylaflow tube with an attached sampling filter was inserted into each probe upon reaching desired depths. Displaced annular space was back-filled above and below each installed sampling probe for a total of approximately one vertical foot of sand filter-pack. Hydrated granular bentonite was placed from the top of the sand filter pack up to existing grade or 6-inches below the next probe depth. Sand filter-pack and bentonite placement were repeated as necessary until all probes were installed. The

DRAFT FINAL DOCUMENT

probes were sealed with bentonite for a minimum of 48 hours prior to sample collection.

- Two rounds of sampling for methane and hydrogen sulfide in soil gas were conducted at each probe in accordance with the *Advisory Active Soil Gas Investigations* (July 2015):
  - Sampling took place after the appropriate equilibration time
  - Prior to sampling, tubing or probe pressure was recorded in the field logs and each probe was purged a minimum of three tubing volumes prior to collecting soil gas samples.
  - Samples were then extracted at a rate of approximately 200 milliliters per minute using a Xitech 1-Liter bag sampler and transferred into Tedlar bags.
  - Field monitoring of samples collected in the Tedlar bags was conducted for oil field gases utilizing a pre-calibrated Landtec GEM-2000 Plus, Jerome 631-X H2S Analyzer, and a Photovac MicroFID.
- Approximately 10% of soil gas samples were placed in new 1-L Tedlar bags, protected from ultra-violet light in a black protective bag, and transported using chain-of-custody protocol to Enthalpy Analytical (Enthalpy) a California Department of Public Health, Environmental Laboratory Accreditation Program-certified laboratory for analysis for methane and hydrogen sulfide, as follows:
  - Methane by EPA 8015 analyzed within 24 hours of collection, and
  - Hydrogen Sulfide by ASTM D5504M analyzed within 24 hours of collection.
- Upon completion of soil gas sampling and with OEHS approval, soil gas sampling points will be decommissioned in accordance with the *Advisory Active Soil Gas Investigations* (July 2015).

DRAFT FINAL DOCUMENT

3.0 RESULTS

The following sections provide discussion of PEA-E results.

3.1 Soil Type and Groundwater

The limited subsurface investigation conducted at the Site included a total of one hundred and ninety (190) soil borings to facilitate soil sampling and thirty (30) soil borings to facilitate methane probe installation (Appendix B).

A majority of soil borings were completed in paved areas consisting of 3-4 inches of asphaltic concrete with the exception of borings completed on the athletic field and the locations adjacent to the southern margin of the Site. Soil logging within shallow boreholes, up to 2.5 feet bgs, generally consisted of fine-grained soils of predominantly silt and clay with varying amounts of fine to medium-grained sand as a secondary component. Deeper borings, or methane probe locations, completed to approximately 15.5 feet bgs encountered similar native fine-grained soils dominated by silt and clay. Artificial fill materials were identified in several deeper boring locations (M-3, M-8, M-9) primarily based on the coarse nature of the soil and presence of construction debris, brick or asphalt, observed between 0.5 and 11.5 feet in specific locations.

Varying levels of naturally occurring bitumen or tar were noted in soil from 10 methane probe locations including M-1, M-2, M-12, M-13, M-14, M-23, M-24, M-25, M-26, and M-30. These locations were generally located in the southern half of the Site and/or near the eastern Site boundary. Observations ranged from gray to black soil coloration with a distinct tar-like odor to soil saturated with black, viscous bitumen. Soils that exhibited these characteristics were noted as “bituminous” in the methane probe construction log. Natural deposits of bitumen are not uncommon for this area as seen in the nearby La Brea Tar Pits, which is located approximately one mile west of the Site. Soils exhibiting the presence of bitumen were generally encountered at depths greater than 5 feet below grade.

Groundwater was not encountered in the borings completed during this investigation with the exception of boring location M-30. The M-30 boring was advanced to 15.5 feet bgs and soil was noted as “moist” during drilling from 9 feet to total depth. Upon reaching total depth, the drill rod was removed from the borehole and water was observed pooling in the bottom of the borehole up to approximately 12 feet bgs. Methane probes were set at 5 feet bgs and 9.5 feet

DRAFT FINAL DOCUMENT

bgs at location M-30. This occurrence is likely an isolated zone of perched groundwater related to irrigation water infiltration taking place on the athletic field. Groundwater was not observed in any of the remaining borings installed between December 23, 2016 and July 17, 2017.

3.2 Soil Analytical Results

Between December 28, 2016 and July 17, 2017, a total of one hundred and ninety (190) soil borings were advanced using hand auger or direct push drilling methods for the purpose of collecting soil samples in the vicinity of existing and former buildings, a former incinerator and a former AST (Figures 3 through 7). Tables 1 through 3 summarize data collected during the PEA-E from these soil borings at various depths, as follows:

The soil matrix analytical results indicate the following for screening for Arsenic, Lead, OCPs and/or PCBs at one hundred and eighty-eight (188) total soil borings in the vicinity of existing and former buildings (Table 1):

- One hundred and eighty-one (181) soil borings, were advanced to a target maximum total depth of 2.5 feet below ground surface (bgs), with soil samples typically collected from 0.5, 1.5 and 2.5 feet bgs, to the extent practicable. Seven (7) step-out borings were advanced to a target maximum total depth of 4 feet to delineate the vertical extent of arsenic impacts in soil in select areas, with soil samples typically collected at 0.5, 1.5, 2.5, 3 and 4 feet bgs (EB9-6 step-out samples and EB15-1 step-out sample).

- An initial round of soil sampling conducted between December 28, 2017 and January 3, 2017, identified lead or arsenic impacts in soil in eighteen (18) borings. Subsequent sampling events conducted April 10-12, 2017 and July 17, 2017 helped to delineate the extent of lead or arsenic contamination in these areas (Figures 3 through 7). Borings installed in April and July 2017 are referred to as step-outs or step-out borings throughout this report.

- During the PEA-E, three hundred and fifty one (351) original and step-out samples were analyzed for arsenic in soil with the following results (Table 1).

  – Arsenic was reported above the practical quantitation limit (PQL) in three hundred and twenty-six (326) samples at concentrations ranging between 1.0 mg/kg (EB6-3 at 1.5 feet bgs and EB9-6-E10 at 2.5 feet bgs) and a maximum of 82 mg/kg (EB15-1-S5 step-out at 0.5 feet bgs).

DRAFT FINAL DOCUMENT

  - The DTSC-adopted background arsenic concentration is 12 mg/kg (DTSC, 2008), and thirty-four (34) of the soil samples analyzed showed concentrations above 12 mg/kg (Table 1).

  - Additionally, nine (9) samples were also analyzed for arsenic using the Waste Extraction Test (WET) for STLC and/or TCLP by EPA Method 6010B, because the TTLC arsenic result in these samples was greater than 50 mg/kg. Each resulting arsenic concentration was below the STLC and TCLP regulatory limits of 5 milligrams per liter (mg/L). Additionally, no arsenic results exceeded the state hazardous waste criteria of 500 mg/kg TTLC-arsenic. Based on these TTLC, STLC and TCLP results, the levels of arsenic in soil are representative of non-hazardous material under California waste disposal regulations, per the California Code of Regulations, Title 22, Chapter 11, Article 3.

  - See Section 4.0 for further discussion of arsenic concentrations.

- During the PEA-E, five hundred and twenty-one (521) original and step-out samples were analyzed for lead in soil with the following results (Table 1).

  - Lead was reported above the PQL in all five hundred and twenty-one (521) samples at concentrations ranging between 1.3 mg/kg (FB16-1-E5 step-out at 0.5 feet bgs) and a maximum of 2,700 mg/kg (EB9-1-S5 step-out at 1.5 feet bgs).

  - The EPA Region 9 Regional Screening Level (RSL) for lead is 400 mg/kg (RSL for soil considering residential land use) (EPA, 2017), and three (3) of the soil samples analyzed showed concentrations above 400 mg/kg (Table 1).

  - The DTSC-modified screening level is 80 mg/kg (screening level for use in human health risk assessments) (DTSC, 2017), and fifty-three (53) of the soil samples analyzed showed concentrations above 80 mg/kg (Table 1).

  - Additionally, ninety-nine (99) samples were analyzed for lead using the WET-STLC and/or TCLP by EPA Method 6010B, because the TTLC-lead result in these samples was greater than 50 mg/kg. Each resulting lead concentration is shown on Table 1. One (1) lead result (EB9-1-S5 step-out at 1.5 feet bgs) exceeded the state hazardous waste criteria of 1,000 mg/kg TTLC-lead, and thirty-eight (38) STLC-lead results exceeded the

DRAFT FINAL DOCUMENT

STLC-lead limit of 5 mg/L. STLC-lead results were between 0.24 mg/L (FB9-1-N5 at 1.5 feet bgs) and 51 mg/L (EB9-1-E5 step-out at 0.5 feet bgs). TCLP-lead ranged between <0.014 mg/L (multiple samples) and 3.8 mg/L (FB14-4 at 1.5 feet bgs), so all TCLP-lead concentrations were below the TCLP regulatory limit of 5 mg/L.

  - Because lead results in select samples exceeded the state hazardous waste criteria of 1,000 mg/kg TTLC-lead or 5 mg/L STLC-lead, areas were identified with soil representative of hazardous material under California waste disposal regulations, per the California Code of Regulations, Title 22, Chapter 11, Article 3 (California-restricted non-RCRA hazardous waste was identified).

  - Federal RCRA hazardous waste was not identified based on the TCLP-lead results, which were all below 5 mg/L.

  - See Section 4.0 for further discussion of lead concentrations.

- As presented on Table 1, low concentrations of OCPs were detected above the laboratory PQL in forty-seven (47) out of two hundred and eighty (280) samples analyzed for OCPs between December 28, 2016 and January 3, 2017. OCP compounds with detections above the PQL included 4,4-DDD, 4,4-DDE, 4,4-DDT, alpha-Chlordane, Chlordane, gamma-Chlordane, and Methoxychlor in the following ranges:

  - 4,4-DDD from 2.1 micrograms per kilogram (µg/kg) (FB9-3 at 0.5 feet bgs) to 21 µg/kg (FB14-4 at 0.5 feet bgs),

  - 4,4-DDE from 2.2 µg/kg (FB15-2 at 0.5 feet bgs, and FB15-4 at 0.5 feet bgs) to 600 µg/kg (EB5-3 at 0.5 feet bgs),

  - 4,4-DDT from 2.1 µg/kg (FB4-3 at 0.5 feet bgs) to 25 µg/kg (FB14-4 at 0.5 feet bgs),

  - alpha-Chlordane from 1.1 µg/kg (FB1-3 at 1.5 feet bgs [duplicate], and EB20-3 at 0.5 feet bgs) to 38 µg/kg (FB15-3 at 2.5 feet bgs),

  - Chlordane (total) from 8.9 µg/kg (FB1-3 at 1.5 feet bgs [duplicate]) to 280 µg/kg (EB15-3 at 2.5 feet bgs),

DRAFT FINAL DOCUMENT

  - gamma-Chlordane from 1.0 µg/kg (EB20-2 at 1.5 feet bgs) to 29 µg/kg (FB15-3 at 2.5 feet bgs), and

  - Methoxychlor from 48 µg/kg (EB5-4 at 0.5 feet bgs) to 180 µg/kg (EB5-3 at 1.5 feet bgs).

  - The above reported concentrations for OCP compounds were below published regulatory screening levels in all borings sampled for OCPs between December 28, 2016 and January 3, 2017 (Table 1). Based on these initial results, no step-out samples were analyzed for OCPs in subsequent soil sampling events in April and July 2017.

- PCB concentrations were below the laboratory PQL in the subset of soil samples chosen for PCB analysis (38 samples collected from a depth of 0.5 or 1.5 feet bgs) (Table 1).

The soil matrix analytical results indicate the following for screening for PCBs, PAHs, and Title 22 metals in soil in the vicinity of a former incinerator (Tables 1 and 2):

- For one (1) soil boring (EB9-7), and one (1) step-out soil boring located 6 feet to the west (EB9-7-W6), soil samples were collected from target depths of 0.5, 1.5, and 2.5 feet bgs. Borings EB9-7 and EB9-7-W6 lie in the vicinity of a former on-site incinerator. The EB9-7 samples were analyzed for PAHs, PCBs, and Title 22 metals at each depth. The EB9-7-W6 step-out samples were analyzed for copper and lead at each depth. Additional step-out borings were attempted in the compass directions around the EB-9-7 boring. An aboveground structure prevented step-outs to the north, and utilities prevented step-outs to the east, south and further west.

- PCB concentrations were below the laboratory PQL in each of the EB9-7 samples (0.5, 1.5 and 2.5 feet bgs samples) (Table 1).

- PAHs concentrations were below the laboratory PQL in each of the EB9-7 samples (0.5, 1.5 and 2.5 feet bgs samples) (Table 2).

- Metals with detections above the PQL included arsenic, barium, chromium, cobalt, copper, lead, mercury, nickel, vanadium and zinc in the following ranges:

DRAFT FINAL DOCUMENT

  - Arsenic from 1.5 mg/kg (EB9-7 at 2.5 feet bgs) to 2.3 mg/kg (EB9-7 at 0.5 feet bgs),
  - Barium from 88 mg/kg (EB9-7 at 2.5 feet bgs) to 180 mg/kg (EB9-7 at 1.5 feet bgs),
  - Chromium from 14 mg/kg (EB9-7 at 0.5 feet bgs) to 20 mg/kg (EB9-7 at 2.5 feet bgs),
  - Cobalt from 8.0 mg/kg (EB9-7 at 0.5 feet bgs) to 9.0 mg/kg (EB9-7 at 2.5 feet bgs),
  - Copper from 25 mg/kg (EB9-7 at 2.5 feet bgs) to 2,800 mg/kg (EB9-7 at 0.5 feet bgs),
  - Lead from 11 mg/kg (EB9-7 at 2.5 feet bgs) to 250 mg/kg (EB9-7 at 0.5 feet bgs),
  - Mercury at 0.12 mg/kg (EB9-7 at 1.5 feet bgs) and below the PQL in remaining samples analyzed at EB9-7,
  - Nickel from 13 mg/kg (EB9-7 at 0.5 feet bgs) to 18 mg/kg (EB9-7 at 2.5 feet bgs),
  - Vanadium from 26 mg/kg (EB9-7 at 0.5 feet bgs) to 31 mg/kg (EB9-7 at 1.5 feet bgs and 2.5 feet bgs), and
  - Zinc from 38 mg/kg (EB9-7 at 2.5 feet bgs) to 170 mg/kg (EB9-7 at 1.5 feet bgs).

- With the exception of copper, lead and arsenic, Title 22 metals results were below published regulatory screening levels in each sample in the vicinity of the former incinerator (Table 2).
- None of the EB9-7 sample results for arsenic exceeded the DTSC-adopted background arsenic concentration of 12 mg/kg (DTSC, 2008), and arsenic was not analyzed in the step out samples from EB9-7-W6 (Table 1 and Table 2). Arsenic was not elevated above 12 mg/kg in the vicinity of the former incinerator. Arsenic results from the EB9-7 and EB9-7-W6 borings were included in the data set for arsenic in soil surrounding existing and former buildings at the Site (Table 1), as discussed in Section 4.0.

DRAFT FINAL DOCUMENT

- For lead results, none of the EB9-7 or EB9-7-W6 step-out samples exceeded the EPA Region 9 RSL of 400 mg/kg lead. Two (2) of the soil samples analyzed showed concentrations above 80 mg/kg (250 mg/kg and 130 mg/kg lead were reported for EB9-7 soil samples at 0.5 and 1.5 feet bgs, respectively). Lead results from the EB9-7 and EB9-7-W6 borings were included in the data set for lead in soil surrounding existing and former buildings at the Site (Table 1), as discussed in Section 4.0.

- For potential waste characterization purposes, EB9-7 soil samples at 0.5 and 1.5 feet bgs were analyzed for lead using the WET-STLC and TCLP by EPA Method 6010B. Each resulting lead concentration is shown on Table 1. Both STLC-lead results exceeded the STLC-lead limit of 5 mg/L. All TTLC-lead results were below the state hazardous waste criteria of 1,000 mg/kg TTLC-lead. Because lead results in select samples exceeded the 5 mg/L STLC-lead limit, areas were identified with soil representative of hazardous material under California waste disposal regulations, per the California Code of Regulations, Title 22, Chapter 11, Article 3 (California-restricted non-RCRA hazardous waste was identified). Federal RCRA hazardous waste was not identified based on the TCLP-lead results, which were all below 5 mg/L.

- For copper results, none of the EB9-7 or EB9-7-W6 step-out samples exceeded the EPA Region 9 RSL of 3,100 mg/kg copper. For waste characterization purposes, one 2,800 mg/kg TTLC-copper result at EB9-7 at 0.5 feet bgs exceeded the state hazardous waste criteria of 2,500 mg/kg TTLC-copper. Because copper results in the 0.5 feet bgs sample exceeded the state TTLC limit, areas were identified California-restricted non-RCRA hazardous waste was identified. There is no federal TCLP limit for copper. Elevated copper was not identified in other deeper samples at EB9-7 or in step-out samples at EB9-7-W6. The elevated copper result in the one sample from EB9-7 at 0.5 feet bgs was co-located with elevated lead results that also indicated California-restricted non-RCRA hazardous waste identified based on lead results.

The soil matrix analytical results indicate the following for screening for TPH in Soil in the Vicinity of a Former AST (Table 3):

- One (1) boring installed in the vicinity of a former fuel oil AST (EB1-1) was advanced to a target maximum total depth of 10 feet bgs, with soil samples

DRAFT FINAL DOCUMENT

collected from 1, 5 and 10 feet bgs. The samples from EB1-1 were analyzed for TPH.

- As shown on Table 3, TPH results were below published regulatory screening levels in each sample in the vicinity of the former fuel AST.

The soil matrix analytical results indicate the following for Supplemental Soil Samples from methane probe location M-3 where stained soil was screened for TPH and VOCs (potentially naturally-occurring tar sand) (Table 3):

- To screen for methane in soil gas, thirty (30) additional soil borings were advanced between December 23 and 28, 2016 to a maximum total depth of 15.5 feet bgs. Soil samples were not typically collected from methane probe locations; however, in consultation with OEHS, two supplemental soil samples were collected from one location (M-3 at 10 and 12.5 feet bgs) where soil staining (potentially tar sand) was observed.

- The M-3 soil samples were analyzed for TPH and VOCs, and results from the limited soil sampling at the M-3 location are presented in Table 3. As shown on Table 3, TPH results were below published regulatory screening levels in the M-3 samples at 10 and 12.5 feet bgs. VOCs in the M-3 samples were below the laboratory PQL.

Duplicate samples collected during the PEA-E are included in Tables 1 to 2 in the row beneath the relevant original sample. Duplicate samples show similar results to the original samples considering the observed heterogeneity of the soil matrix. Equipment blank sample results indicated levels of COPCs below the laboratory PQLs. Field procedures (sampling and decontamination) were conducted in compliance with the above procedures. Laboratory procedures were in compliance with the method requirements, including acceptable reporting limits, laboratory selection, and laboratory reporting of quality control information. Samples from borings and quality control samples were analyzed as planned, therefore an acceptable level of completeness was achieved. Borings that could not be installed due to refusal, proximity to utilities, or surface obstructions/structures were not considered in the assessment of completeness. Acceptable sensitivity was achieved by selecting analytical methods with reporting limits suitable for comparison with action levels. Overall, the dataset is considered to be of acceptable quality. As such, the data set is considered acceptable for use in assessing human health risk at the Site.

DRAFT FINAL DOCUMENT

3.3 Methane Screening Results

Probes were installed between December 23 and 28, 2016 using hand augering and direct-push drilling methods. Probe locations are shown in Figure 1 in Appendix F. Monitoring for methane and hydrogen sulfide was conducted on January 3 and 16, 2017. The probes were monitored using a magnahelic gauge for initial subsurface pressure, and a GEM2000 Plus for methane, fixed gases, and hydrogen sulfide. A Jerome 631-X H2S Analyzer was also used to monitor for hydrogen sulfide, and a Photovac MicroFID was used to monitor for methane. Table 1 in Appendix F summarizes field readings collected at thirty (30) methane probe locations throughout the Site.

During the initial round of monitoring, the GEM2000 Plus measured methane between 0.0% and 48.8% (M-17 probe set at 5 feet bgs), and hydrogen sulfide between 0.0 ppm and 1.0 ppm (M-1 and M-20 at 15 feet bgs). Methane was measured between 0.0 ppm and 3,800 ppm (M-14 at 15 feet bgs) using the MicroFID, and hydrogen sulfide was measured between 0.00 ppm and 0.78 ppm (M-14 at 15 feet bgs) using the Jerome 631-X H2S Analyzer. At some locations, the MicroFID experienced flame out conditions and the Jerome 631-X H2S Analyzer did not display a reading ("MF") preventing collection of measurements with these instruments. No flow was observed in some probes, as summarized in Table 1 in Appendix F.

During the second round of monitoring on January 16, 2017, the GEM 2000 Plus measured methane between 0.0% and 57.8% (M-17 probe set at 5 feet bgs), and hydrogen sulfide between 0.0 ppm and 1.0 ppm (M-24 at 15 feet bgs). Methane was measured between 0.0 ppm and 2,427 ppm (M-13 at 5 feet bgs) using the MicroFID, and hydrogen sulfide was measured between 0.00 ppm and 0.02 ppm (multiple probe locations) using the Jerome 631-X H2S Analyzer. At some locations, the MicroFID did not display a reading ("MF") preventing collection of measurements with these instruments.

In addition, fixed gases in the field measurements included carbon dioxide and oxygen, using the GEM2000 Plus. On January 3, 2017, carbon dioxide was measured between 0.0% (multiple probes) and 19.2% (M-6 at 5 feet bgs), and oxygen was measured between 1.6% (M-6 at 5 feet bgs) and 21.1% (M-14 at 5 feet bgs). On January 16, 2017, carbon dioxide was measured between 0.0%

DRAFT FINAL DOCUMENT

(multiple probes) and 17.0% (M-15 at 15 feet bgs) and oxygen was measured between 0.6% (M-17 at 5 feet bgs) and 21.1% (M-4 at 15 feet bgs).

Background outdoor air concentrations of methane and hydrogen sulfide were:

Date Sampled	% Methane (GEM2000 Plus)	Methane (ppm) (MicroFID)	Hydrogen Sulfide (ppm) (Jerome 631-X)
January 3, 2017	0.0	0.0	0.00
January 16, 2017	0.0	0.0	0.00

A summary of the monitoring results for soil vapor samples is presented in Table 1 in Appendix F. During each event, seven (7) soil vapor samples were collected for laboratory analysis of methane by EPA method 8015 and hydrogen sulfide by ASTM method D5504M. The January 3, 2017 samples were collected from probes M-1 at 15 feet bgs, M-7 at 5 feet bgs, M-8 at 5 feet bgs, M-14 at 15 feet bgs, M-15 at 15 feet bgs, and M-17 at 5 feet bgs (original and duplicate sample). The January 16, 2017 samples were collected from probes M-7 at 5 feet bgs, M-13 at 5 feet bgs, M-14 at 15 feet bgs, M-15 at 15 feet bgs, M-17 at 5 feet bgs (original and duplicate sample) and M-24 at 15 feet bgs. Soil vapor samples were delivered under chain of custody documentation to Enthalpy Analytical, Inc. (Enthalpy) in Orange, California for analysis. Enthalpy is a California Department of Public Health, Environmental Laboratory Accreditation Program-certified laboratory. Laboratory results for methane and hydrogen sulfide in soil gas are presented in Table 2 in Appendix F. Copies of the laboratory reports are included in Appendix F.

During the initial round of sampling on January 3, 2017, the laboratory reported methane between 124 ppm (M-7 at 5 feet bgs) and 577,000 ppm (M-17 duplicate sample at 5 feet bgs), and hydrogen sulfide between 0.008 ppm (M-8 at 5 feet bgs) and 3.5 ppm (M-1 at 15 feet bgs). During the second round of sampling on January 16, 2017, the laboratory reported methane between 84,200 ppm (M-15 at 15 feet bgs) and 388,000 ppm (M-17 duplicate sample at 5 feet bgs), and hydrogen sulfide between 0.021 ppm (M-13 at 5 feet bgs) and 5.4 ppm (M-24 at 15 feet bgs).

Methane field readings were generally similar to laboratory results for methane and hydrogen sulfide. Where variability was observed between field and

DRAFT FINAL DOCUMENT

laboratory results, the field result was qualified in Table 1 in Appendix F with a J1 or J2 qualifier. The qualifier indicates that the result is an estimate based on variability between the field and laboratory results for methane, with the field result being lower (J1) or higher (J2) than the laboratory result. As qualified, the data is usable for its intended purpose of screening the Site for methane in soil gas beneath the Site.

The maximum positive pressure measured in the probes prior to monitoring was a maximum of 1.0 inches of water column (multiple probes, Table 1 in Appendix F). Based on the maximum methane concentrations measured above 12,500 ppm, the Site is a Level V design category per LADBS methane regulations (>12,500 ppm at all pressures). Hydrogen sulfide was detected at a maximum of 5.4 ppm.

DRAFT FINAL DOCUMENT

4.0 HUMAN HEALTH SCREENING EVALUATION

Areas surrounding existing and former buildings are typically paved at the Site. There is no direct pathway between the current Site occupants and shallow soil in paved areas. It is Leighton's understanding that one of the intentions of sampling was to assess shallow soil for COPCs identified in the Phase 1 ESA (WorleyParsons, 2016). Data from this PEA-E will help to evaluate reuse and disposal options for soil that may be disturbed during redevelopment activities.

Elevated levels of arsenic and lead were identified at the Site based upon the initial soil sampling activities conducted between December 28, 2017 and January 3, 3017, during which select samples were analyzed for arsenic, lead, OCPs, PCBs, TPH, PAHs, Title 22 metals, and/or VOCs (Tables 1 through 3), as described in Section 3, above. Results for remaining Title 22 Metals, OCPs, PCBs, TPH, PAHs, and VOCs were below their respective screening levels (Human Health Risk Assessment Note #3, and RSLs).

Arsenic in Soil: A 12 mg/kg concentration of arsenic in soil represents an upper-bound value for background ambient levels of arsenic found in southern California and is actually a 95% upper confidence limit (UCL)(DTSC, 2008). The 12 mg/kg concentration was used as the screening level for arsenic at the Site.

Arsenic was reported above the PQL in three hundred and twenty-six (326) samples at concentrations ranging between 1.0 mg/kg (EB6-3 at 1.5 feet bgs and EB9-6-E10 at 2.5 feet bgs) and a maximum of 82 mg/kg (EB15-1-S5 step-out at 0.5 feet bgs) (Table 1). Due to the presence of sample results above 12 mg/kg in thirty-four (34) of the samples, a 95% upper confidence limit (UCL) analysis was completed. The analysis used the three hundred and twenty-six (326) detections above the PQL to determine if arsenic in soil exceeded the screening level, and would potentially present a human health risk to current or future occupants of the Site. The 95% UCL Analysis Report is included as Appendix G. The result was 9.842 mg/kg for arsenic. The median arsenic result is 2.4 mg/kg. The arsenic data set is consistent with the southern California arsenic data set and the central tendencies are also similar.

Shallow soil where elevated arsenic results were reported will be targeted for removal, so that arsenic remaining at the Site is below background arsenic levels for southern California per DTSC guidelines (12 mg/kg arsenic) (DTSC, 2008).

DRAFT FINAL DOCUMENT

Lead in Soil: The 80 mg/kg concentration is the DTSC screening level for lead in soil (Human Health Risk Assessment Note #3, soil lead discussion, available at http://www.dtsc.ca.gov/ AssessingRisk/ LeadSpread8.cfm).

Due to the presence of sample results above 80 mg/kg in fifty-three (53) of the samples, a 95% UCL analysis was completed. The analysis used the five hundred and twenty-one (521) detections above the PQL to determine if lead in soil exceeded the screening level, and would potentially present a human health risk to current or future occupants of the Site. The 95% UCL Analysis Report is included as Appendix G. The result was 61.28 mg/kg for lead. The median lead result is 11 mg/kg. The lead data set indicates that the 95% UCL is below the screening level of 80 mg/kg.

Shallow soil where elevated lead results were reported will be targeted for removal, so that lead remaining at the Site is below the DTSC-modified screening level (80 mg/kg lead) (DTSC, 2017).

Other COPCs in Soil (remaining Title 22 Metals, OCPs, PCBs, TPH, PAHs, and VOCs):

With the exception of limited areas with elevated arsenic and lead in soil, the PEA-E sampling results presented in this report, demonstrate that soil analytical results for remaining Title 22 Metals, OCPs, PCBs, TPH, PAHs, and VOCs were either below the laboratory PQL or below regulatory screening levels.

Arsenic and lead have been identified as chemicals of concern in soil. Based on District preference to remove isolated areas with elevated arsenic and lead, further action appears warranted at the Site.

Methane in Soil Gas: Methane gas is a non-poisonous, non-toxic, non-carcinogenic, and simple asphyxiant. Methane is considered for its explosive concerns and not health concerns. Accumulation of methane gas is combustible and potentially explosive at concentrations above the lower explosive limit of 50,000 ppmv (equivalent to 5% v/v methane in air, and 100% of the LEL) in the presence of oxygen and an ignition source. Methane is discussed further in Appendix F.

DRAFT FINAL DOCUMENT

5.0 COMMUNITY PROFILE

5.1 Community Demographics

A brief summary of the community demographics for the zip code 90005 in Los Angeles County according to the 2010 US Census (factfinder.census.gov) is as follows:

- Total population: 37,681
- Male: 13,635 (51.2%)
- Female: 14,292 (48.8%)
- Median Age: 33.9
- Population 18 years and over: 79.7%
- Total Housing units: 16,345
- Average Household Size: 2.5
- Population by race: White: 10,953 (29.1%)
  Black or African American: 2,007 (5.3%)
  American Indian and Alaska Native: 317 (0.8%)
  Asian: 12,740 (33.8%)
  Native Hawaiian and Pacific Islander: 40 (0.1%)
  Other: 9,940 (26.4%)
  Two or More Races: 1,684 (4.5%)

5.2 Local Participation and Involvement

At the time of this investigation, Leighton is not aware of any current or past media coverage with relation to the School property or the Site. A fact sheet, in the form of a flyer, was produced in English, Spanish, and Korean (double-sided flyer) to provide members of the community with details regarding the PEA-E investigation including who would perform the work, project schedule, when and where the results of the investigation would be posted, and who to contact regarding additional information. This work notice flyer was handed out to School staff, mailed to parents of students, hand-delivered to line-of-site neighbors of the School, and posted along the boundary fence of the School property.

DRAFT FINAL DOCUMENT

No specific environmental concerns or issues have been brought to the District's attention regarding the onsite activities at this time. In terms of project visibility, the onsite work took place during School shut downs (i.e., winter break and summer break) to minimize any interference with school activities. Line-of-site neighbors, School staff, and parents were given copies of the work notice flyer. With the exception of offsite former gas station sites identified by WorleyParsons in the Phase 1 ESA (WorleyParsons, 2016), Leighton is unaware of environmental concerns or issues with relation to neighboring sites at this time.

DRAFT FINAL DOCUMENT

6.0 OPINION OF ENVIRONMENTAL PROFESSIONAL

Based on the PEA-E sampling results (Table 1), elevated levels of lead and arsenic were reported for soil in limited areas at the Site (Figures 4 through 7). The RAW should include hot spot removal such that the post-removal data sets for lead and arsenic provide 95% UCL analysis results that are below DTSC screening levels of 80 mg/kg lead and 12 mg/kg arsenic, respectively (DTSC, 2017 and 2008). The extent of excavations shown on Figures 4 through 7 are estimates. Based on the post-removal data sets and their 95% UCL analysis results, the final extent of soil removal may vary from that shown on Figures 4 through 7, in consultation with OEHS and DTSC, as appropriate.

One elevated result of 2,800 mg/kg for copper at boring EB9-7 at 0.5 feet bgs was co-located with elevated lead impacts in soil in the vicinity of a former incinerator. This copper result was below the RSL for residential soil considering health risk screening (3,100 mg/kg). Copper will not drive removal action based on health risk because the maximum level of 2,800 mg/kg is below the relevant RSL and no DTSC-modified screening level exists for copper. Copper in the vicinity of boring EB9-7 will be addressed with the removal of lead-impacted soil. Should soil generated from the vicinity of boring EB9-7 require disposal, copper and lead will both support classification of the soil as California-restricted non-RCRA hazardous waste.

Further action appears warranted to address lead and arsenic in soil at select areas of the Site. Limitations that apply to this PEA-E study are shown in Section 8.0.

It is our opinion that the objectives of the methane screening survey were met, and no additional assessment is necessary to assess the objectives of the methane survey. Soil vapor probes were installed per the DTSC Advisory Active Soil Gas Investigations dated July 2015, as required by the RFP (OEHS, 2016). Maximum methane concentrations observed in the soil vapor probes in January 2017 trigger Design Level V, which is the highest level of mitigation LADBS specifies. Additional sampling per LADBS testing depths (5, 10 and 20 feet) does not appear warranted because LADBS would be unlikely to accept a design level less stringent that Design Level V.

DRAFT FINAL DOCUMENT

7.0 CONCLUSIONS AND RECOMMENDATIONS

The Site is part of the Burroughs Middle School property, located at 600 South McCadden Place, Los Angeles, California, 90005 (Figure 1 and Figure 2). The primary objectives of this PEA-E were to assess soil for potential environmental concerns identified in a Phase I ESA (WorleyParsons, 2016); and to evaluate overall Site health risk based on soil analytical screening results for COPCs, including lead, arsenic, OCPs, PCBs, TPH, PAH's, and CAM-17. Additionally, this PEA-E included a survey to screen for methane in soil gas.

Based upon the findings presented in this PEA-E study, elevated levels of COPCs were identified at the Site in soil, including arsenic and lead in soil in select areas (Table 1). With the exception of arsenic and lead in select borings, the soil matrix analytical results (Tables 1 through 3) indicate that remaining COPCs at the Site were either below detection or below regulatory screening levels. On behalf of the District, Leighton recommends preparation of a Removal Action Workplan (RAW) to address areas of elevated arsenic and lead in soil at the Site per DTSC guidelines (DTSC, 2017 and 2008).

The purpose of conducting the methane screening survey was to evaluate the Site for the presence of oil field gases and determine the design level of mitigation required. The Site lies within the City of Los Angeles methane zone. The Salt Lake Oil Field lies approximately 1,500 feet north of the Site and 2,000 feet west of the Site. One plugged oil and gas production well is also located approximately 1,300 feet west/southwest of the Site. Maximum field measurements and the maximum laboratory reported concentrations from sampling events on January 3 and 16, 2017 exceeded 12,500 ppm methane. The maximum positive pressure measured in the probes prior to monitoring was a maximum of 1.0 inches of water column. Hydrogen sulfide was detected at a maximum of 5.4 ppm at the Site. Based on the field measurements and the laboratory results the Site is categorized as Design Level V at all pressures per the LADBS criteria. It is our opinion that the objectives of the methane screening survey were met, and no additional assessment is necessary to assess the objectives of the methane survey.

DRAFT FINAL DOCUMENT

8.0 LIMITATIONS

The services described in this report were performed consistent with generally accepted professional consulting principles and practices. No other warranty, express or implied, is made. Opinions, conclusions, and recommendations contained in this report apply to conditions existing when the services were performed and are intended only for the client, purposes, locations, time frames, and project parameters indicated. Where subsurface exploratory work, monitoring, and/or testing was performed, our professional opinions and conclusions are based in part on interpretation of data from discrete sampling or measurement locations that may not represent actual conditions at un-sampled or un-measured locations. We are not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of the services. We assume no responsibility for conditions we were not authorized to evaluate, or conditions not generally recognized as predictable when the services were performed. We do not warranty the accuracy of information supplied by others, or the use of segregated portions of this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Leighton should be contacted if the reader requires any additional information, or has questions regarding content, interpretations presented, or completeness of this document.

Leighton's professional opinions and recommendations regarding environmental conditions, as presented in this report, are based on limited subsurface assessment and chemical analyses data. Further assessment of potential adverse environmental impacts from past on-Site and/or nearby use of hazardous materials may be accomplished by a more comprehensive assessment. The samples collected and used for testing, and the observations made, are believed to be representative of the area(s) evaluated; however, conditions can vary significantly between and beyond the sampling locations. Variations in soil and soil gas conditions likely exist beyond the points explored in this assessment and related excavation.

NA = not analyzed for arsenic and/or lead TTLC
STLC = Soluble threshold limit concentration
TCLP = Toxicity characteristic leaching procedure
TTLC = Total threshold limit concentration
RCRA = Resource Conservation and Recovery Act
* Replicate/duplicate soil sample
Approximate Volume of Soil Impacted with Arsenic or Lead for Removal**:
Area D (to 2.5 feet bgs) = ~22 CY (CA-Haz Non-RCRA)
Area E (to 4.5 feet bgs) = ~31 CY (Non-Hazardous)
Area F (to 2.5 feet bgs) = ~20 CY (CA-Haz Non-RCRA)
Area G(to 3.5 feet bgs) = ~18 CY (Non-Hazardous)
Area H** (to 2.5 feet bgs) = ~18 CY (CA-Haz Non-RCRA)
Area I (to 2.5 feet bgs) = ~14 CY (CA-Haz Non-RCRA)
Area J (to 2.5 feet bgs) = ~3 CY (CA-Haz Non-RCRA)
**Survey monument to protect in Area H west of Building 13. Removal to within 1 foot of surface structures and to within 2 feet of identified utilities was assumed.

**Removal to within 1 foot of surface structures and to within 2 feet of identified utilities was assumed.

LEGEND

EB1-1 — Sample: Where Lead-TTLC (mg/kg) or Arsenic-TTLC (mg/kg) results are greater than >80 mg/kg lead and >12 mg/kg arsenic the ID is red

Non-Hazardous Waste - Soil Sample Location where no results exceeded hazardous waste criteria

California-Restricted (Non-RCRA) Hazardous Waste - Soil Sample Location where Lead STLC exceeded 5.0 mg/L, arsenic STLC exceeded 5 mg/L and/or Lead TTLC exceeded 1,000 mg/kg
[No sample results exceeded Federal RCRA Hazardous Waste criteria]

Approximate extent of lead or arsenic impacted soil based on TTLC Lead >80 mg/kg, TTLC Arsenic >12 mg/kg, or CA Hazardous Levels

Regulatory Screening Levels:																							
DTSC HERO HHRA Note 3 (August 2017)[1]					NA	NA	NA	NA	440	NA	NA	NA	NA	NA	Varies	0.11	80 [2]	NA	NA	NA	NA	NA	Varies
RSLs (June 2017)[3]					2,300	2,000	1,900	NA	1,700	34	19,000	NA	70	320,000	Varies	0.68	400	NA	NA	NA	NA	240	Varies
Southern California Regional Background Level (DTSC, 2008)[4]					NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	12	NA	NA	NA	NA	NA	NA	NA
Federal and State Hazardous Waste Criteria					1,000	1,000	1,000	NA	2,500	8,000	200	NA	4,700	100,000	Varies	500	1,000	5 mg/L	5 mg/L	5 mg/L	5 mg/L	50,000	50,000

Notes:

Yellow high-lighted values exceeded one or more screening level.

Purple high-lighted values exceeded non-RCRA (CA-restricted) hazardous waste criteria.

1. DTSC, HERO HHRA Note Number 3 (August 2017). Criteria selected: Residential soil, cancer endpoint (carcinogens), non-cancer endpoint (all others)

2. DTSC recommends that a 95% upper confidence limit on the arithmetic mean calculated to be 80 mg/kg or less is protective of human health.

3. RSLs, Regional Screening Levels for Region 9, Updated June 2017, Criteria selected: Residential soil, Total Hazard Quotient = 1.0, Target risk of 1.0E-6

4. DTSC, Determination of a Southern California Regional Background Arsenic Concentration in Soil, March 2008. Background arsenic was selected as the screening level for arsenic.

5. Where TTLC lead and/or arsenic was greater than 50 mg/kg, the sample was analyzed using the Waste Extraction Test for STLC by EPA Method 6010B. Where the result is below the STLC regulatory limit of 5 mg/L arsenic or 5 mg/L lead, the material is non-hazardous under California waste disposal regulations, as per the California Code of Regulations, Title 22, Chapter 11, Article 3.

Acronyms/Abbreviations:

bgs	Below ground surface
D1	Laboratory data qualifier indicating that the sample required dilution due to possible matrix interference.
D5	Sample diluted due to failing internal standard in the original run.
D6	Sample required dilution due to high concentration of target analyte.
DTSC	California Department of Toxic Substances Control
EPA	United States Environmental Protection Agency
HERO	Office of Human and Ecological Risk
HHRA	Human Health Risk Assessment
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
mg/kg	milligrams per kilogram
mg/L	milligrams per liter
NA	Not applicable or not available.
ND	Not detected above the laboratory reporting limit.
OCPs	Organochlorine Pesticides
PCBs	Polychlorinated biphenyls
RSLs	Regional Screening Levels (see Note 3, above)
STLC	Soluble Threshold Limit Concentration
TCLP	Total Threshold Limit Concentration
TTLC	Toxicity characteristic leaching procedure
ug/kg	micrograms per kilogram
4,4-DDD	Dichlorodiphenyldichloroethane
4,4-DDE	Dichlorodiphenyldichloroethylene
4,4-DDT	Dichlorodiphenyltrichloroethane
< 1.0	Analyte not detected above the referenced detection limit.
-	Not analyzed.
*	Includes testing for overlapping former buildings.
**	See additional soil analyses for these samples in Table 2 and/or Table 3.

TABLE 2
Summary of Laboratory Results in Soil for Polycyclic Aromatic Hydrocarbons (PAHs), and Title 22 Metals at Boring EB9-7
Burroughs Middle School

Location	Boring ID	Sample ID	Sample Depth (feet bgs)	Sample Date	Title 22 Metals by EPA Method 6010B/7471A (mg/kg)													Polycyclic Aromatic Hydrocarbons (PAHs) by EPA Method 8270C SIM (ug/kg)

Southern California Regional Background Level (DTSC, 2008)[4]					NA	12	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
Federal and State Hazardous Waste Criteria					500	500	10,000	75	2,500	8,000	2,500	1,000	20	2,000	500	2,400	5,000	Varies	NA	NA	NA	NA	NA	NA	NA	NA	Varies

Notes:
Yellow high-lighted values exceeded one or more screening level.
Purple high-lighted values exceeded non-RCRA (CA-restricted) hazardous waste criteria.
1. DTSC, HERO HHRA Note Number 3 (August 2017). Criteria selected: Residential soil, cancer endpoint (carcinogens), non-cancer endpoint (all others)
2. DTSC recommends that a 95% upper confidence limit on the arithmetic mean calculated to be 80 mg/kg or less is protective of human health
3. RSLs, Regional Screening Levels for Region 9, Updated June 2017, Criteria selected: Residential soil, Total Hazard Quotient = 1.0, Target risk of 1.0E-6
4. DTSC, Determination of a Southern California Regional Background Arsenic Concentration in Soil, March 2008. Background arsenic was selected as the screening level for arsenic.
5. See Table 1 for results using the Waste Extraction Test for STLC by EPA Method 6010B and TCLP results for lead.
6. Laboratory results for lead in sample EB9-7-0.5 exceed non-RCRA hazardous (CA-restricted) waste disposal regulations based on the lead results (See Table 1), as per the California Code of Regulations, Title 22, Chapter 11, Article 3. Further analysis of the sample for copper by the extraction test for STLC would not alter the classification and was not performed.

Acronyms/Abbreviations:

bgs	Below ground surface
D1	Laboratory data qualifier indicating that the sample required dilution due to possible matrix interference.
DTSC	California Department of Toxic Substances Control
EPA	United States Environmental Protection Agency
HERO	Office of Human and Ecological Risk
HHRA	Human Health Risk Assessment
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
mg/kg	milligrams per kilogram
mg/L	milligrams per liter
NA	Not applicable or not available.
ND	Not detected above the laboratory reporting limit.
PAHs	Polycyclic Aromatic Hydrocarbons
RSLs	Regional Screening Levels (see Note 3, above)
STLC	Soluble Threshold Limit Concentration
TTLC	Total Threshold Limit Concentration
ug/kg	micrograms per kilogram
< 1.0	Analyte not detected above the referenced detection limit.
-	Not analyzed.

Re: ATL Work Order Number : 1604882
Client Reference : Burroughs MS-LAUSD, 603378.006

Enclosed are the results for sample(s) received on December 23, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

Certificate of Analysis

Leighton Consulting, Inc.		Project Number :	Burroughs MS-LAUSD, 603378.006
17781 Cowan Street		Report To :	Julie Harriman
Irvine , CA 92614		Reported :	01/05/2017

SUMMARY OF SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
M-3-10.0	1604882-02	Soil	12/23/16 13:25	12/23/16 16:50
M-3-12.5	1604882-03	Soil	12/23/16 13:30	12/23/16 16:50

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

S4	Surrogate was diluted out.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

TAT

TERMS

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples Submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.
3. The following turnaround time conditions apply:
   - TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   - TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   - TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   - TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   - TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   - TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for fi ve (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-fi ve (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reforma? ed report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

Re: ATL Work Order Number : 1604898
Client Reference : LAUSD-Burroughs MS, 603378.006

Enclosed are the results for sample(s) received on December 28, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Certificate of Analysis

Leighton Consulting, Inc.	Project Number : LAUSD-Burroughs MS, 603378.006
17781 Cowan Street	Report To : Julie Harriman
Irvine , CA 92614	Reported : 01/09/2017

Notes and Definitions

S4	Surrogate was diluted out.
S2	Surrogate recovery was below laboratory acceptance limit. Reextraction and/or reanalysisconfirms low recovery caused by matrix effects.
S12	Surrogate recovery outside in-house established limit but within method default criteria.
S1	Surrogate recovery was above laboratory acceptance limit. No target analyte was detected in the sample.
R3	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
R	RPD value outside acceptance criteria. Calculation is based on raw values.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
L4	Laboratory Control Sample outside of control limit but within Marginal Exceedance (ME) limit.
L2	Laboratory control sample outside of acceptance limits. Reextraction and/or reanalysis is not possible due to limited amount of sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

REMARKS

TERMS

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples Submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.
3. The following turnaround time conditions apply:
   - TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   - TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   - TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   - TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   - TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   - TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for fi ve (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-fi ve (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reforma? ed report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

SAMPLE RECEIPT

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples Submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.
3. The following turnaround time conditions apply:
   - TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   - TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   - TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   - TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   - TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   - TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for fi ve (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-fi ve (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reforma? ed report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

Importance: High

Carmen,

We compared the information to our boring logs and have the following solution:

- The jar labeled "EB15-1-0.5 @1353" corresponds to the sample on the COC labeled as "EB15-1-2.5" and the time on the jar is correct. See attached corrected sheet.
- The jar labeled "EB15-2-0.5@1350" is correct. See attached corrected time on the COC.

Thank you,
Julie

Hi Julie,

For the samples received 12/28, we do not have a sample labeled EB15-1-2.5 @1350, but we have an extra sample labeled EB15-1-0.5 @1353.

Also, for sample EB15-2-0.5 @1353, the time indicated on the jar is 1350.

Please advise. Attached is a copy of the CoC received.

Thank you,

Carmen Aguila

Carmen,

The following samples submitted on 12/28/2016 should be placed on hold:

- EB11-1-2.5
- EB11-2-2.5
- EB12-1-2.5
- EB12-2-2.5
- EB9-1-2.5
- EB9-5-2.5
- EB13-1-2.5
- EB13-2-2.5
- EB15-1-2.5
- EB15-2-2.5

The following samples submitted on 12/28/2016 should be analyzed for Title 22 metals, PAHs by 8270SIM and PCBs and not for what is shown on the COC:

- EB9-7-0.5
- EB9-7-1.5
- EB9-7-2.5

The following sample submitted on 12/28/2016 should be analyzed for lead in addition to what is shown on the COC:

- FB5-1-2.5
- FB5-2-2.5

The following sample submitted on 12/28/2016 should be analyzed for arsenic and OCPs in addition to what is shown on the COC:

- EB15-2-0.5

The following samples **submitted on 12/29/2016** were incorrectly identified as EB15 samples in the field and we would like the samples corrected to be logged and reported as EB5 samples as follows:

- EB15-1-0.5 should be EB5-1-0.5
- EB15-1-1.5 should be EB5-1-1.5
- EB15-1-2.5 should be EB5-1-2.5
- EB15-2-0.5 should be EB5-2-0.5
- EB15-2-1.5 should be EB5-2-1.5
- EB15-2-2.5 should be EB5-2-2.5
- EB15-3-0.5 should be EB5-3-0.5
- EB15-3-1.5 should be EB5-3-1.5
- EB15-3-2.5 should be EB5-3-2.5
- EB15-4-0.5 should be EB5-4-0.5
- EB15-4-1.5 should be EB5-4-1.5
- EB15-4-2.5 should be EB5-4-2.5
- EB15-5-0.5 should be EB5-5-0.5
- EB15-5-1.5 should be EB5-5-1.5
- EB15-5-2.5 should be EB5-5-2.5
- EB15-6-0.5 should be EB5-6-0.5
- EB15-6-1.5 should be EB5-6-1.5
- EB15-6-2.5 should be EB5-6-2.5

I think we could do OCPs, arsenic and lead at a minimum. If there is enough, TPHcc would be good to get too.

Hi Julie,

For the EQB122816 sample, we only received 1-1 L amber container, this can be use for only one of the following test: TPHcc or OCPs/PCBs or PAHs by 8270SIM. Each test need 1-1 L container. Please let us know which one we need to run.

Thank you,
Carmen

Carmen,

The following sample submitted on 12/28/2016 should be analyzed for TPHcc, Title 22 metals, OCPs, PAHs by 8270SIM and PCBs and not for what is shown on the COC:

- EQB122816

The following sample submitted on 12/29/2016 should be analyzed for lead, arsenic, OCPs, and PCBs and not for what is shown on the COC:

- EQB-12-29-16

The following sample submitted on 12/29/2016 does not need to be analyzed for PCBs, but is otherwise correct on the COC:

- DRUM1

Thank you,

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Rachelle:

Please run soil samples that exceeded 50 mg/kg TTLC-lead for STLC-lead.
Please run soil samples that exceeded 100 mg/kg TTLC-lead for TCLP-lead.

There are approximately 34 samples affected. Do you need me to list all the samples?

Thank you,

Re: ATL Work Order Number : 1604921
Client Reference : Burroughs MS, 603378.006

Enclosed are the results for sample(s) received on December 29, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

EB5-3-0.5	1604921-37	Soil	12/29/16 12:05	12/29/16 16:20
EB5-4-0.5	1604921-39	Soil	12/29/16 12:00	12/29/16 16:20
EB5-6-1.5	1604921-43	Soil	12/29/16 12:04	12/29/16 16:20

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Rachelle:

Please run the following samples for arsenic by EPA 6010 on standard TAT:

- EB9-6-2.5
- EB12-1-2.5
- EB15-1-2.5

Thank you,
Julie

Rachelle:

Please run soil samples that exceeded 50 mg/kg TTLC-lead for STLC-lead.
Please run soil samples that exceeded 100 mg/kg TTLC-lead for TCLP-lead.

There are approximately 34 samples affected. Do you need me to list all the samples?

Thank you,

Julie C. Harriman, P.E.

Enclosed are the results for sample(s) received on December, 29 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

S4	Surrogate was diluted out.
S12	Surrogate recovery outside in-house established limit but within method default criteria.
S1	Surrogate recovery was above laboratory acceptance limit. No target analyte was detected in the sample.
R3	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
R2	RPD value outside acceptance criteria due to possible matrix interference.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
L3	Laboratory control sample outside in-house established limits but within method criteria.
L2	Laboratory control sample outside of acceptance limits. Reextraction and/or reanalysis is not possible due to limited amount of sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

TERMS

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples Submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.
3. The following turnaround time conditions apply:
   - TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   - TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   - TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   - TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   - TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   - TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for fi ve (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-fi ve (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reforma? ed report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

3. The following turnaround time conditions apply:
   - TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   - TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   - TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   - TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   - TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   - TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for fi ve (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-fi ve (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reforma? ed report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

Subject: RE: Burroughs MS-LAUSD, 603378.006

Importance: High

Carmen,

The following samples submitted on 12/28/2016 should be placed on hold:

- EB11-1-2.5
- EB11-2-2.5
- EB12-1-2.5
- EB12-2-2.5
- EB9-1-2.5
- EB9-5-2.5
- EB13-1-2.5
- EB13-2-2.5
- EB15-1-2.5
- EB15-2-2.5

The following samples submitted on 12/28/2016 should be analyzed for Title 22 metals, PAHs by 8270SIM and PCBs and not for what is shown on the COC:

- EB9-7-0.5
- EB9-7-1.5
- EB9-7-2.5

The following sample submitted on 12/28/2016 should be analyzed for lead in addition to what is shown on the COC:

- FB5-1-2.5
- FB5-2-2.5

The following sample submitted on 12/28/2016 should be analyzed for arsenic and OCPs in addition to what is shown on the COC:

- EB15-2-0.5

The following samples **submitted on 12/29/2016** were incorrectly identified as EB15 samples in the field and we would like the samples corrected to be logged and reported as EB5 samples as follows:

- EB15-1-0.5 should be EB5-1-0.5
- EB15-1-1.5 should be EB5-1-1.5
- EB15-1-2.5 should be EB5-1-2.5
- EB15-2-0.5 should be EB5-2-0.5
- EB15-2-1.5 should be EB5-2-1.5
- EB15-2-2.5 should be EB5-2-2.5
- EB15-3-0.5 should be EB5-3-0.5
- EB15-3-1.5 should be EB5-3-1.5
- EB15-3-2.5 should be EB5-3-2.5

Importance: High

Carmen,

The following sample submitted on 12/28/2016 should be analyzed for TPHcc, Title 22 metals, OCPs, PAHs by 8270SIM and PCBs and not for what is shown on the COC:

- EQB122816

The following sample submitted on 12/29/2016 should be analyzed for lead, arsenic, OCPs, and PCBs and not for what is shown on the COC:

- EQB-12-29-16

The following sample submitted on 12/29/2016 does not need to be analyzed for PCBs, but is otherwise correct on the COC:

- DRUM1

Thank you,

Julie C. Harriman, P.E.

Importance: High

Rachelle,

I need to rush the below "DRUM1" sample submitted on 12/29/2016 and get the results tomorrow. Is that possible? We do not need PCBs for this sample, but it is otherwise correct on the COC.

Thank you,
Julie

Hi Julie,

Just following up if you have the carbon chain you need for this project. Thanks.

Rachelle

Enclosed are the results for sample(s) received on December, 29 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

SUMMARY OF SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
DRUM1	1604921-87	Soil	12/29/16 15:20	12/29/16 16:20

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Certificate of Analysis

Leighton Consulting, Inc.	Project Number : Burroughs MS, 603378.006
17781 Cowan Street	Report To : Julie Harriman
Irvine , CA 92614	Reported : 01/05/2017

Notes and Definitions

S4	Surrogate was diluted out.
R3	RPD value outside acceptance criteria. Calculation is based on raw values. The analytical batch was validated by the Laboratory Control Sample (LCS).
R2	RPD value outside acceptance criteria due to possible matrix interference.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

TERMS

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples Submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.
3. The following turnaround time conditions apply:
   - TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   - TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   - TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   - TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   - TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   - TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for fi ve (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-fi ve (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reforma? ed report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

TERMS

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples Submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.
3. The following turnaround time conditions apply:
   - TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   - TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   - TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   - TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   - TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   - TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for fi ve (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-fi ve (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reforma? ed report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

TERMS & CONDITIONS

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples Submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.
3. The following turnaround time conditions apply:
   - TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   - TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   - TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   - TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   - TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   - TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for fi ve (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-fi ve (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reforma? ed report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

Importance: High

Carmen,

The following samples submitted on 12/28/2016 should be placed on hold:

- EB11-1-2.5
- EB11-2-2.5
- EB12-1-2.5
- EB12-2-2.5
- EB9-1-2.5
- EB9-5-2.5
- EB13-1-2.5
- EB13-2-2.5
- EB15-1-2.5
- EB15-2-2.5

The following samples submitted on 12/28/2016 should be analyzed for Title 22 metals, PAHs by 8270SIM and PCBs and not for what is shown on the COC:

- EB9-7-0.5
- EB9-7-1.5
- EB9-7-2.5

The following sample submitted on 12/28/2016 should be analyzed for lead in addition to what is shown on the COC:

- FB5-1-2.5
- FB5-2-2.5

The following sample submitted on 12/28/2016 should be analyzed for arsenic and OCPs in addition to what is shown on the COC:

- EB15-2-0.5

The following samples **submitted on 12/29/2016** were incorrectly identified as EB15 samples in the field and we would like the samples corrected to be logged and reported as EB5 samples as follows:

- EB15-1-0.5 should be EB5-1-0.5
- EB15-1-1.5 should be EB5-1-1.5
- EB15-1-2.5 should be EB5-1-2.5
- EB15-2-0.5 should be EB5-2-0.5
- EB15-2-1.5 should be EB5-2-1.5
- EB15-2-2.5 should be EB5-2-2.5
- EB15-3-0.5 should be EB5-3-0.5
- EB15-3-1.5 should be EB5-3-1.5
- EB15-3-2.5 should be EB5-3-2.5
- EB15-4-0.5 should be EB5-4-0.5
- EB15-4-1.5 should be EB5-4-1.5
- EB15-4-2.5 should be EB5-4-2.5

- EB15-5-0.5 should be EB5-5-0.5
- EB15-5-1.5 should be EB5-5-1.5
- EB15-5-2.5 should be EB5-5-2.5
- EB15-6-0.5 should be EB5-6-0.5
- EB15-6-1.5 should be EB5-6-1.5
- EB15-6-2.5 should be EB5-6-2.5

Thank you,

Importance: High

Carmen,

The following sample submitted on 12/28/2016 should be analyzed for TPHcc, Title 22 metals, OCPs, PAHs by 8270SIM and PCBs and not for what is shown on the COC:

- EQB122816

The following sample submitted on 12/29/2016 should be analyzed for lead, arsenic, OCPs, and PCBs and not for what is shown on the COC:

- EQB-12-29-16

The following sample submitted on 12/29/2016 does not need to be analyzed for PCBs, but is otherwise correct on the COC:

- DRUM1

Thank you,

Rachelle,

I need to rush the below "DRUM1" sample submitted on 12/29/2016 and get the results tomorrow. Is that possible? We do not need PCBs for this sample, but it is otherwise correct on the COC.

Thank you,
Julie

Enclosed are the results for sample(s) received on December 29, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Eddie Rodriguez
Laboratory Director

Certificate of Analysis

Leighton Consulting, Inc.	Project Number : Burroughs MS, 603378.006
17781 Cowan Street	Report To : Julie Harriman
Irvine , CA 92614	Reported : 01/11/2017

Notes and Definitions

S12	Surrogate recovery outside in-house established limit but within method default criteria.
S1	Surrogate recovery was above laboratory acceptance limit. No target analyte was detected in the sample.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D5	Sample diluted due to failing internal standard in the original run.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

TERMS

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples Submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.
3. The following turnaround time conditions apply:
   - TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   - TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   - TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   - TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   - TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   - TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for five (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-five (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reformated report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

   - Liquid & solid samples: Complimentary storage for forty-fi ve (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reforma? ed report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

Re: ATL Work Order Number : 1604923
Client Reference : Burroughs MS, 603378.006

Enclosed are the results for sample(s) received on December 29, 2016 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Eddie Rodriguez
Laboratory Director

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Rachelle:

Please run soil samples that exceeded 50 mg/kg TTLC-lead for STLC-lead.
Please run soil samples that exceeded 100 mg/kg TTLC-lead for TCLP-lead.

There are approximately 34 samples affected. Do you need me to list all the samples?

Thank you,

Irvine , CA 92614	Reported : 01/11/2017

Notes and Definitions

ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

RE: ATL Work Order Number : 1700026
Client Reference : Burroughs MS, 603378.006

Enclosed are the results for sample(s) received on January, 3 2017 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

SUMMARY OF SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
DRUM-LIQUID	1700026-03	Water	1/03/17 16:10	1/03/17 18:35

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.

Certificate of Analysis

Leighton Consulting, Inc.	Project Number : Burroughs MS, 603378.006
17781 Cowan Street	Report To : Julie Harriman
Irvine , CA 92614	Reported : 01/05/2017

Notes and Definitions

S2	Surrogate recovery was below laboratory acceptance limit. Reextraction and/or reanalysisconfirms low recovery caused by matrix effects.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
L2	Laboratory control sample outside of acceptance limits. Reextraction and/or reanalysis is not possible due to limited amount of sample.
J	Analyte detected below the Practical Quantitation Limit but above or equal to the Method Detection Limit. Result is an estimated concentration.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)
TX1	TX-NELAP (TCEQ)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Container — Type: 1=Tube; 2=VOA; 3=Liter; 4=Pint; 5=Jar; 6=Tedlar; 7=Canister — Material: 1=Glass; 2=Plastic; 3=Metal
Preservative: 1=HCl; 2=HNO3; 3=H2SO4; 4=4C; 5=Zn (Ac)2; 6=NaOH; 7=NA2S2O3

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples Submitted AFTER 3:00 PM, are considered received the following Business day at 8:00 AM.
3. The following turnaround time conditions apply:
   TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work - ask for quote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for five (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-five (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20/ sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reformatted report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction on procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.

As the authorized agent of the company above, I hereby purchase laboratory services from ATL as shown above and hereby guarantee payment as quoted.

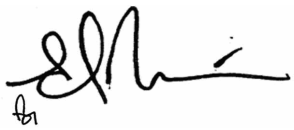
Re: ATL Work Order Number : 1700027
Client Reference : Burroughs MS, 603378.006

Enclosed are the results for sample(s) received on January 03, 2017 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,



Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

Results were J-flagged. "J" is used to flag those results that are between the PQL (Practical Quantitation Limit) and the calculated MDL (Method Detection Limit). Results that are "J" flagged are estimated values since it becomes difficult to accurately quantitate the analyte near the MDL.
