Description of Events: Tank Vehicle was turning left onto northbound I-15 from eastbound Friars road. The driver turned too sharply and/or too fast which lead to a loss of control and the vehicle fell on it's right side. The tank fell onto a signpost that created a 3 inch punture to the right side of the cargo tank wall. Response crew recovered approx 2500 gallons of gasoline into recovery pump truck. The cargo tank leaked gasoline contents for approx 4 hours before the tank contents were fully removed. Sand dikes were contructed to contain the released gasoline. After the tank was set upright with crane trucks pooled product was immediately recovered and within 10 days contaminated soils were removed from the shoulder area and disposed. Approx 100 gallons reached the storm drains which were completely cleaned the next day. All recovery and remediation efforts were supervised by appropriate regulatory agency personel.

Recommend Actions Taken: The accident investigation shown that there were no contributing factors to the accident other that poor driver judgment. Cargo was loaded properly there were no mechanical defects on the 6 month old vehicle and the driver was not impaired or distracted. It is estimated that the driver had completed the turn several hundred times in the past without incident. The driver has been terminated and efforts to increase driver awareness and elininate driver complacency have been implemented. These measures include: increased training visual reminders verbal reminders and Safe Driving Incentives .

Description of Events: 15 gallon drum was loaded and isolated toward the rear of the trailer and tied by the plastic handle (with rope) to the side of the trailer. In transit the drum bounced around in the trailer finally coming to a rest at a 45 degree angle. The area where the plastic handle is connected to the drum ripped open but the handle stayed connected. Approximately two gallons spilled out of the hole. Product was not braced other than being tied to the wall with rope.

Description of Events: DAMAGED PAIL PART OF A TRAILER LOAD SHIPMENT. THE TRAILER WAS INSPECTED FOR CONDITION OF THE LOAD FROM SAN JOSE TO SAN DIEGO. UNLOADER DAVE BARTKEWITZ NOTICED LIQUID ON THE TRAILER FLOOR. UPON FURTHER INSPECTION HE FOUND THE ORGIN OF THE SPILLAGE. NO LABELS VISIBLE (PRESENT) TO INDICATE WHAT HAZARDOUS MATERIAL IT MIGHT BE. THE DRUM WAS STRUCK WRAPPED WITH OTHER PAILS ON A PALLET. THE PALLET WAS BROKEN DOWN TO FURTHER EXAMINE THE LEAKER. AT THIS POINT DAVE NOTICED THE POISON LABEL ON THE TOP OF THE DRUM. UPON NOTICING THAT THE PRODUCT WAS POISONOUS ALL THE PRODUCT WAS PUT BACK IN THE TRAILER AND THE TRAILER DOOR WAS QUICKLY CLOSED DOWN. THE PALLET WAS LOADED SIDE WAYS ON THE LEFT TAIL LEAVING APPROXIMATELY 3 FEET OPEN SPACE BETWEEN PALLET AND TRAILER DOOR. NO BRACING USED. THE PAIL IN QUESTION WAS A QUATER WAS OFF ITS PALLET. UNKNOWN IF PUNCTURE OCCURRED FROM LOADING PALLET OR FROM A PROTRUDING NAIL BECAUSE PF CONTENTS FURTHER EXAMINATION WAS NOT POSSIBLE.

Description of Events: VALVE WAS LEFT OPEN WHEN LEAVING THE ORIGINATION ADDRESS UPON STOPPING AT A TRAFFIC SIGNAL THE DRIVER NOTICED THAT PRODUCT WAS LEAKING FROM THE REAR AREA OF THE VEHICLE. UPON SEEING THIS THE DRIVER IMMEDIATELY WENT TO THE REAR AREA TO FIND THE PROBLEM. THE RELIEF VALVE ON THE VEHICLE HAD BEEN LEFT OPEN. AT THE TIME OF START UP AT THE TRAFFIC SIGNAL THE PRODUCT SHIFTED AND EXITED THE TANK THROUGH THE RELIEF VALVE. THE DISPATCH OFFICE WAS IMMEDIATELY NOTIFIED AND CLEAN UP OF THE INCIDENT STARTED AS SOON AS THE RESPONDING AGENCY GAVE AUTHORIZATION TO DO SO. THE DRIVER IMMEDIATELY GOT OUT OF THE TRUCK AND PUT ABSORBENT ON THE SPILL AND OUR REPONSE TEAM WAS SENT OUT TO DO THE REMAINDER OF THE CLEAN-UP. IN ORDER TO PREVENT THIS INCIDENT AGAIN IN THE FUTURE THE TRUCK VALVE WAS INSTALLED WITH A 2 1/2 CAMLOCK FITTING. AND THE DRIVER WAS DISCIPLINED AND TRAINED IN HOW NOT TO HAVE THIS HAPPEN AGAIN.

Description of Events:

DRIVER WAS EXITING REAR GATE OF KINDER MORGAN FACILITY SAN DIEGO AFTER LOADING FOR TOSCO CUSTOMER. ROOT CAUSE: DRIVER ERROR IN JUDGMENT WHILE MAKING A LEFT HAND TURN ON A ROAD WITH A HIGH CROWN RESULTING IN TRAILER ROLLOVER. TRAILER WITH 4000 GALLONS REMAINED UPRIGHT. DRIVER CONTACTED COLTON DISPATCHER VIA RADIO IMMEDIATELY AFTER ROLLOVER OF TRAILER. COLTON DISPATCHER CONTACTED SAN DIEGO POLICE AND FIRE DEPARTMENT(911) AND ALSO INFORMED THE TERMINAL MANAGER AT HOME. COLTON TERMINAL MANAGER CONTACTED SAN DIEGO MANAGER/COMPANY SAFETY SUPERVISOR AND DISPATCHED TO ACCIDENT SITE. ARRIVED AT SITE 2130 HOURS. HAZMAT TEAM FOSS ENVIRONMENTAL AND TOW TRUCKS(3 AT SITE FOR CLEANUP. CARGO TANK ACCESS WAS DRILLED AT EACH COMPARTMENT(3) AND REMOVED PRODUCT WITH VACUUM TRUCK WHICH WAS THAN TRANSFERRED TO A VAN DYK TRUCK AT VAN DYK YARD LOCATED NEAR BY. WHILE TRAILER WAS ON IT'S SIDE THERE WAS ONLY SLIGHT SEEPAGE FROM DOME LIDS. NOT ENOUGH TO LIE REPORTABLE ACCORDING TO HAZMAT TEAM LEADER NICK VENT. STATEWIDE TOW TRUCK DRIVER JERRY UP RIGHTED TRAILER AND PRODUCT WHICH HAD NOT BEEN COMPLETELY REMOVED FROM TRAILER SPILLED OUT OF DRILLED HOLES WHICH HAD ONLY BEEN DUST TAPED AND NOT PROPERLY PLUGGED BY FOSS ENVIRONMENTAL/FIRE DEPARTMENT. PRODUCT ALSO LEAKED OUT OF THE AREA BETWEEN THE DOUBLE BULKHEAD WHICH HAS A WEEP HOLE WHICH ALSO WAS NOT PLUGGED BEFORE UP RIGHTING TRAILER. APPROXIMATELY 1500 POUNDS HAZARDOUS SOLID WASTE REMOVED ON STATE MANIFEST NO. 20203581 TO D/K ENVIRONMENTAL 3650 E. 26TH STREET LOS ANGELES CA 90023 AND APPROXIMATELY 275 RQ WASTE FLAMMABLE LIQUID WATER AND GASOLINE REMOVED ON STATE MANIFEST 20203586 TO DEMENNOKERDOON 2000 N ALAMEDA COMPTON CA. 90222. MANIFEST ATTACHED. APPROXIMATELY 4800 GALLONS GASOLINE REMOVED FROM ROLLED TRAILER VIA VACUUM TRUCK WAS DELIVERED TO TOSCO LOS ANGELES TERMINAL VIA VAN DYK TRUCK AND RETURNED TO TRANSMIX STORAGE TANK AS A RESULT OF BEING CONTAMINATED BY THE VACUUM TRUCK. VACUUM TRUCK NOT PROPERLY CLEANED PRIOR TO REMOVING PRODUCT FROM ROLLED TRAILER. THE 4000 GALLONS ON THE TRUCK WHICH DID NOT ROLL OVER WAS DELIVERED TO DESIGNATED DELIVERY SITE. ROLLED TRAILER WAS TOWED TO THE COLTON TERMINAL LOCATION AND THAN TO BEALL TRAILERS LOCATED AT 225 W SLOVER AVE BLOOMINGTON CA 92316 FOR REPAIRS.

Description of Events: THE PAIL WAS ON A PALLET BEING MOVED FROM THE BREAKOUT TRAILER TO THE LOADING TRAILER. WHEN THE PALLET WAS IN THE LOADING TRAILER THE VIBRATION CAUSED THE PAIL TO SLIP OFF OF THE PALLET. THE PAIL AS IT SLIPPED OFF OF THE PALLET CAUGHT A PROTRUDING NAIL HEAD WHICH PUNCTURED THE PAIL. 3 OUNCES OF LIQUID LEAKED PAIL WAS TURNED UPSIDE DOWN. THE PAIL WAS SET UPSIDE DOWN IN A RECOVERY DRUM.

Description of Events: While off loading a pallet turned sideways in front of the hazardous order. The forklift blades extended past the sideways pallet and punctured the two damaged pails. As product was spilling from the pails absorbent was placed around it to soak it up. The the pallet was broken down to turn both pails over to prevent further leakage. Absorbent pails and liquid product were all placed in a salvage drum and are awaiting disposition.

Remarks: SWAT report is a copy of site investigation for the adjacent West Miramar Landfill, and has been reviewed together with that SWAT
report. See report remarks for West Miramar Landfill. Low concentrations of volatile compounds were identified in ground water
samples. A determination of extent of leakage could not be made due to insufficient analytical data.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Feb 6, 2018

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Feb 6, 2018

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Feb 6, 2018

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Dec 11, 2017

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Dec 11, 2017

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 24, 2018

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Jan 24, 2018

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 24, 2018

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jan 24, 2018

RCRA Conditionally Exempt Small Quantity Generators List: RCRA CESQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt Small Quantity Generators (CESQG) generate 100 kilograms or less per month of hazardous waste or one kilogram or less per month of acutely hazardous waste.

Government Publication Date: Jan 24, 2018

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jan 24, 2018

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 20, 2016

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Jan 20, 2016

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 8, 2017

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 20, 2018

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Dec 11, 2017

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Sep 22, 2017

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.
Government Publication Date: Dec 21, 2017

Delisted EnviroStor Database: DELISTED ENVS
Sites removed from the list of facilities made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).
Government Publication Date: Sep 22, 2017

Solid Waste Information System (SWIS): SWF/LF
The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.
Government Publication Date: Jan 31, 2018

EnviroStor Hazardous Waste Facilities: HWP
A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.
Government Publication Date: Jan 30, 2018

Land Disposal Sites: LDS
Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.
Government Publication Date: Dec 04, 2017

Leaking Underground Fuel Tank Reports: LUST
List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.
Government Publication Date: Dec 27, 2017

Delisted Leaking Storage Tanks: DELISTED LST
List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.
Government Publication Date: Jan 31, 2018

Permitted Underground Storage Tank (UST) in GeoTracker: UST
List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).
Government Publication Date: Mar 11, 2018

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE
List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.
Government Publication Date: Jan 31, 2018

Historical Hazardous Substance Storage Information Database: HHSS
The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.
Government Publication Date: Aug 27, 2015

Aboveground Storage Tanks: AST
A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Mar 11, 2018

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Jan 4, 2018

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Jan 4, 2018

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Sep 12, 2017

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Feb 18, 2018

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Jan 11, 2018

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Sep 7, 2017

GeoTracker Cleanup Sites Data: CLEANUP SITES

A list of cleanup sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Dec 27, 2017

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Jan 4, 2018

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Jan 4, 2018

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Apr 13, 2017

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Apr 13, 2017

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Aug 3, 2017

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Aug 3, 2017

County

Delisted County Records: DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Feb 13, 2018

San Diego County Site Assessment and Mitigation Investigation Sites: SANDIEGO SAM

List of sites which have undergone a Site Assessment and Mitigation investigation. This list is made available by the County of San Diego Department of Environmental Health.

Government Publication Date: Feb 15, 2018

San Diego County Solid Waste Facility List: SANDIEGO SWF

A list of open and closed Solid Waste Facilities in the County of San Diego. The list is made available by San Diego County Department of Environmental Health.

Government Publication Date: Jan 9, 2018

San Diego County UST List: SANDIEGO UST

A list of registered Underground Storage Tanks in the County of San Diego. The list is made available by the San Diego County Hazardous Materials Division.

Government Publication Date: Jan 15, 2018

San Diego County Local Oversight Program List: SAN DIEGO LOP

A list of Underground Storage Tank (UST) release sites in the County of San Diego. This list is made available by San Diego County Department of Environmental Health.

Government Publication Date: Jan 11, 2018

Additional Environmental Record Sources

Federal

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Dec 31, 2016

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 11, 2017

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Dec 21, 2017

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA of the Act) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified ongressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Jun 30, 2017

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Oct 10, 2017

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Nov 18, 2016

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Sep 14, 2016

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Sep 14, 2016

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Nov 22, 2016

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Sep 13, 2016

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Jul 31, 2017

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Feb 6, 2018

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Jan 9, 2018

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 1, 2018

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 30, 2017

State

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Nov 24, 2017

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Jun 30, 2017

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Sep 20, 2017

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Aug 21, 2017

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Feb 1, 2018

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

Drycleaner Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Jan 18, 2018

Delisted Drycleaners: DELISTED DRYC

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Jan 18, 2018

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Oct 3, 2017

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2015

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental databases were selected to be included in the search.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Appendix C

Regulatory Documentation

The City of SAN DIEGO

Environmental Services Department
Disposal and Environmental Protection Division

October 25, 2017

Mr. John Odermatt, M.Sc., PG, Senior Engineering Geologist
California Regional Water Quality Control Board
San Diego Region
2375 Northside Drive, Suite 100
San Diego, CA 92108

Subject: Semiannual Water Quality Monitoring Report for the South Miramar Landfill, Board Order 94-28, (April 2017 through September 2017)

Dear Mr. Odermatt:

Enclosed is the semiannual water quality monitoring report for the inactive South Miramar Landfill as part of the Monitoring and Reporting Program required by the Regional Water Quality Control Board Order 94-28. This water monitoring report, prepared by Geosyntec Consultants, documents the results of the April 2017 through September 2017 semiannual groundwater monitoring and reporting activities.

Included in this summary are the analytical results of tests conducted on samples collected from all nine groundwater monitoring wells and one of three surface water monitoring stations. The groundwater flow rate and direction have remained consistent with past results and water quality analytical results are generally similar to previous monitoring events.

Concentrations of Constituents of Concern in groundwater and surface water samples collected during the July 2017 sampling event were consistent with historical concentrations with the exception of anomalous low-level detection of styrene in the surface water sample (SMSWS-2). Concentrations of general chemistry parameters were below their respective Water Quality Objectives with the following exceptions:

- Total Dissolved Solids in the groundwater samples collected from monitor wells SMMW-3R, SMMW-4, SMAMW-1, SMMW-6SR, SMMW-7S and SMMW-9S; and the surface water sample collected from SMSWS-2.

- Turbidity detected in groundwater samples collected from monitor wells SMMW-6DR, SMMW-7D, SMMW-6SR, and SMMW-9D.

During the current monitoring period Volatile Organic Compounds (VOCs) were detected above their respective Method Detection Limits in groundwater samples collected from SMAMW-1,

9601 Ridgehaven Court, Suite 310, MS-1103A
San Diego, CA 92123

T (858) 492-5010
www.sandiego.gov

SMMW-6SR, SMMW-7S, SMMW-9S, and SMMW-7D, however the groundwater beneath the site does not have beneficial use designations. Concentrations of VOCs in SMMW-7S has been documented as an ongoing issue and has been addressed separately. The concentrations of constituents are within historical ranges, and do not indicate a new or expanding release from the landfill.

Local Enforcement Agency (LEA) inspection reports of the site are included in Appendix A of the monitoring report. Also included in Appendix A is the response from the City to the Regional Water Quality Control Board (RWQCB) inspection during the previous monitoring period. During this semi-annual monitoring period, violations were noted by the LEA for methane in gas probe MW3SM-M, and drainage and erosion control issues. Actions to correct violations in the gas probe are continuing, and include adjusting the gas collection system within the NAS Convoy parcel south of SR 52, and investigating the possibility of hooking up their gas collection system to the City's collection and flaring system north of SR 52. Ongoing work to correct noted deficiencies (LEA and RWQCB) is included in the City's site inspection reports.

"I certify under the penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

If you have any questions regarding this submission, please contact John Mauk at jmauk@sandiego.gov or (858) 573-1205.

Sincerely,

Mario X. Sierra
Director

CF/jsm

APRIL 2017 – SEPTEMBER 2017
SEMI-ANNUAL MONITORING REPORT
WATER QUALITY MONITORING PROGRAM
SOUTH MIRAMAR LANDFILL
SAN DIEGO, CALIFORNIA

I certify that this document and attachments presented in this report are accurate and complete. This report was prepared by the staff of Geosyntec Consultants under my supervision to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who are directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. No attempt has been made to verify the accuracy of the Site Inspection Reports provided by the City of San Diego (City) and Local Enforcement Agency (LEA).

1. INTRODUCTION

1.1 Terms of Reference

This report documents the results of the April – September 2017 semi-annual groundwater monitoring and reporting activities for the Detection Monitoring Program (DMP) at the South Miramar Landfill (Figure 1). This document was prepared by Geosyntec Consultants (Geosyntec) for the City of San Diego, Environmental Services Department (ESD) to comply with the Waste Discharge Requirements (WDRs) established by the California Regional Water Quality Control Board (RWQCB), San Diego Region, in Order No. 94-28, and Technical Change Order No. 1 to Order No. 94-28. This report was prepared by Anayeli Picasso, GIT, and reviewed by Mr. Daniel Pelikan, PG, and Mr. Veryl Wittig, PG, CHG, of Geosyntec, in accordance with Geosyntec's internal review policy.

Table 1 included in this report provides a summary list of the components for the Semi-Annual Report required by the corresponding sections from Monitoring and Reporting Program (MRP) 94-28.

1.2 Site Inspections and Maintenance

Appendix A presents the results of quarterly landfill inspections conducted by City personnel and the Local Enforcement Agency during the semi-annual monitoring event. In accordance with California Code of Regulations (CCR) Title 27, run-on/run-off control facilities have been designed to accommodate a 100-year, 24-hour storm event. The site is unlined, and stormwater is diverted around the site, and into San Clemente Canyon during larger storm events.

1.2.1 Storm Water Pollution Prevention Plan (SWPPP)

A Notice of Termination (NOT) for coverage under California's General Permit for Stormwater Discharges Associated with Industrial Activities, Order No. 97-03-DWQ was submitted for South Miramar Landfill on March 4, 2015. Upon further communications with the SD RWQCB, the City filed a Notice of Intent (NOI) in August 2016 to enroll for coverage under the 2014 California Industrial NPDES General Permit, Order No. 2014-0057-DWQ (NPDES No. CAS000001) (General Permit) and was assigned WDID No. 9 37I026777. Coverage under the General Permit will be maintained until the South Miramar Landfill is enrolled under the SD RWQCB's General Order No. R9-2012-0001 (and associated Monitoring and Reporting Program [MRP] No. R9-2012-0002) for the Maintenance and Monitoring of Closed, Abandoned, for Inactive Non-hazardous Solid Waste Management Units within the San Diego Region.

2. MONITORING RESULTS

Water monitoring and sampling were performed by BBC Environmental, Inc., a subcontractor to Geosyntec, in general accordance with current County of San Diego, Department of Environmental Health (DEH) Site Assessment and Mitigation (SAM) Manual, and United States Environmental Protection Agency (USEPA) guidance as detailed on the field sample collection logs (Appendix B).

Analyses were performed at TestAmerica Laboratories, Inc., located in Irvine, California. Analytical results were compared to Penasquitos Hydrologic Unit, Miramar Hydrologic Area, Water Quality Objectives (WQOs). Analytical results from the current monitoring period and previous semi-annual monitoring events are provided in Appendix C.

2.1 Monitoring Parameters

Groundwater and surface water samples collected during the current monitoring period were analyzed in accordance with Section B.6a.1 of the WDR. Each groundwater and surface water sample collected during the current monitoring period was analyzed as follows:

Parameter	Test Method
GENERAL CHEMISTRY	
pH	Field Method
Nitrate as Nitrogen	EPA 300.0
Total Dissolved Solids	SM 2540 C
ORGANIC COMPOUNDS	
Volatile Organic Compounds (VOCs)	8260B

2.2 Groundwater Elevations and Flow Direction

The depth to groundwater in each well was measured 10 July 2017. Groundwater elevations for the third quarter 2017 event are presented in Table 2.

During the current semi-annual monitoring period, deep groundwater elevations beneath the site ranged from 173.09 feet above Mean Sea Level (ft MSL) (SMMW6DR) to 190.55 ft MSL (SMMW-3R). Consistent with previous results, the direction of deep groundwater flow is generally to the southeast in the western portion of the site, and to the south/southwest in the eastern portion of the site at a hydraulic gradient ranging from 0.001 to 0.010 foot per foot (ft/ft) (Figure 2).

During the current semi-annual monitoring period, perched groundwater elevations beneath the site ranged from 292.43 ft MSL (SMAMW-1) to 364.80 ft MSL (SMMW-7S). The direction of shallow perched groundwater flow is generally to the north at a hydraulic gradient of 0.027 ft/ft (Figure 3).

During the semi-annual monitoring period, groundwater elevations exhibited minor fluctuations, but were consistent with long term trends (Figure 5).

2.3 Data Validation

The analytical data packages were received from TestAmerica, Inc., and reviewed for basic analytical quality assurance/quality control (QA/QC) adherence based on quality control (QC) guidance in the USEPA Contract Laboratory Program National Functional Guidelines [USEPA, 2014a and 2014b], as well as pertinent methods referenced in the data packages, and professional judgment. Data packages were reviewed for chain of custody discrepancies; adherence to sample holding times; evaluation of matrix spike/matrix spike duplicates (MS/MSD) and laboratory control samples/laboratory control sample duplicates (LCS/LCSD); and assessment of trip and method blanks. The data as qualified are considered usable and acceptable for meeting project objectives. Validated concentrations are reported in the Summary of Groundwater Analytical Results, Tables 3 & 4, and Summary of Surface Water Analytical Results, Table 5.

2.4 Deep Groundwater Analytical Results

Analytical results for the July 2017 sampling event for compliance groundwater monitor wells SMMW-3R, SMMW-4, SMMW6DR, SMMW-7D, and SMMW-9D, including data for the trip blanks (QCTB), are summarized in Table 3. Wells SMMW-1, SMMW-5 and SMMW-8 are used for elevation purposes only (no samples are collected). Compliance groundwater sample collection logs are included in Appendix B. Analytical certificates for samples collected during the current monitoring period are included in Appendix C.

General chemistry parameters in compliance groundwater samples collected from site monitor wells during the July 2017 sampling event were detected at concentrations below their respective WQOs, which are included in Table 3, with the following exceptions:

- Total Dissolved Solids (TDS) in the groundwater samples collected from monitor wells SMMW-3R (1,300 mg/L) and SMMW-4 (990 mg/L); and

- Turbidity detected in groundwater samples collected from monitor wells SMMW6DR (116.8 NTU), SMMW-7D (29.8 NTU), and SMMW-9D (10.3 NTU).

In compliance monitor well SMMW-7D, 1,1–dichloroethene (6.3 µg/L) and tetrachloroethene (0.84 µg/L) were detected above their respective Method Detection Limit (MDL).

Although VOCs were detected above their respective MDLs during the current monitoring period, groundwater beneath the site does not have beneficial use designations.

2.5 Perched Groundwater Analytical Results

Analytical results for the July 2017 sampling event for perched groundwater monitor wells SMMW6SR, SMMW-7S, SMMW-9S, and SMAMW-1, including data for the trip blanks (QCTB), are summarized in Table 4. Perched groundwater sample collection logs are included in Appendix B. Analytical certificates for samples collected during the current monitoring period are included in Appendix C.

General chemistry parameters in perched groundwater samples collected from site monitor wells during the July 2017 sampling event were detected at concentrations below their respective WQOs, which are included in Table 4, with the following exceptions:

- Total Dissolved Solids (TDS) in the groundwater samples collected from perched monitor wells SMAMW-1 (11,000 mg/L), SMMW6SR (3,600 mg/L), SMMW-7S (11,000 mg/L) and SMMW-9S (19,000 mg/L); and

- Turbidity detected in groundwater samples collected from perched monitor well SMMW6SR (73.3 NTU).

The following VOCs were detected above their respective MDLs in samples collected from one or more perched monitor wells:

- 1,1-Dichloroethane
- 1,1-Dichloroethene
- 1,2-Dichloroethane
- 1,4-Dichlorobenzene
- Acetone
- Carbon Tetrachloride
- Chlorobenzene
- Chloroform
- cis-1,2-Dichloroethene
- Diethyl ether
- Dichlorodifluoromethane
- Tetrachloroethene (PCE)
- trans-1,2-Dichloroethene
- Trichloroethene (TCE)

- Vinyl Chloride

Although VOCs were detected above their respective MDLs during the current monitoring period, groundwater beneath the site does not have beneficial use designations.

2.6 Surface Water Analytical Results

Analytical results for the July 2017 sampling event for surface water sampling location SMSWS-2, including data for the trip blank (QCTB), are summarized in Table 5. Surface water sample locations SMSWS-1 and SMSWS-3 were dry. Surface water sample collection logs are included in Appendix B. Analytical certificates for samples collected during the current monitoring period are included in Appendix C.

General chemistry parameters in the surface water sample collected during the July 2017 sampling event were detected at concentrations below their respective WQOs with the following exceptions:

- Total Dissolved Solids (TDS) in the surface water sample collected from SMSWS-2 (1,300 mg/L).

During the current monitoring period, styrene (0.38 µg/L) was detected above the MDL in the sample collected from SMSWS-2.

2.7 GeoTracker

The groundwater monitoring data[1], laboratory data[2], and a copy of the final report for this monitoring period for the South Miramar Landfill site were electronically submitted to and confirmed by the State Water Resource Control Board's internet-accessible database system, GeoTracker. This information was submitted to the GeoTracker database in accordance with Chapter 30, Division 3, Titles 23 & 27 of the CCR Regulations on the date that this report was finalized.

[1] Confirmation number for upload of groundwater monitoring (elevation) data into GeoTracker is 7541999518 submitted on 8/28/2017.
[2] Confirmation numbers for upload of analytical data into GeoTracker are 9450952351 submitted on 8/28/2017.

3. SEMI-ANNUAL DATA ASSESSMENT

3.1 Correspondence

The City received a letter dated 16 March 2017 from the RWQCB. This letter provides comments regarding areas of concern for the South Miramar Landfill including observed ponding and drainage features covered with debris and sediment. The City responded to the RWQCB with a letter dated 18 May 2017 detailing the actions being taken by the City to correct the areas of concern (Attachment A). Previous communication with the RWQCB pertaining to concentrations of VOCs in upgradient perched monitor well SMMW-7S has been documented as an ongoing issue and has been addressed separately.

3.2 Comprehensive Compliance Record Discussion

With the exception of anomalous low-level detection of styrene in SMSWS-2, concentrations of COCs in groundwater and surface water samples collected during the July 2017 sampling event were consistent with historical concentrations. Concentrations of general chemistry parameters were below their respective WQOs with the following exceptions:

- TDS in the groundwater samples collected from monitor wells SMMW-3R, SMMW-4, SMAMW-1, SMMW6SR, SMMW-7S and SMMW-9S; and the surface water sample collected from SMSWS-2.

- Turbidity detected in groundwater samples collected from monitor wells SMMW6DR, SMMW-7D, SMMW-9D, and SMMW6SR.

- During the current monitoring period VOCs were detected above their respective MDLs in groundwater samples collected from SMAMW-1, SMMW6SR, SMMW-7S, SMMW-9S, and SMMW-7D, however the groundwater beneath the site does not have beneficial use designations.

The concentrations of the constituents listed above are within historical ranges, and do not indicate a new or expanding release from the landfill.

Executive Summary

On behalf of General Dynamics Properties, Incorporated (GD), Brown and Caldwell has prepared this human health risk assessment (HHRA) update in response to the County of San Diego, Department of Environmental Health's (DEH's) letter dated May 4, 2016. The work in this report was required by the DEH as part of the Voluntary Assistance Program's Case No. H00472-001. This report presents the results of additional data collection and evaluation by Brown and Caldwell to evaluate the potential for indoor air exposure to residents at the Avion @ Spectrum (Avion) complex located at 9001 Spectrum Center Boulevard in San Diego, California. This HHRA update focuses specifically on the potential for soil vapor intrusion exposure and risks from chemicals associated with the General Dynamics Kearny Mesa Plant (KMP) formerly at this location (Figure 1). A separate HHRA has been prepared for the ResMed Corporation commercial building. Commercial risks are not considered in this report.

The results of the HHRA are presented in the following sections of this report and summarized below in the remainder of this Executive Summary:

- **Section 1 Introduction, Section 2 Background, and to Section 3 Physical Setting:** describes the purpose of this assessment, the background and investigation/assessment history of the project, and setting for the Study Area (the combined areas of Avion and Dog park contained within the KMP).
- **Section 4 Field Activities and Section 5 Investigation Results:** summarizes the methods used to collect the soil and soil vapor samples and presents the results of laboratory analyses.
- **Section 6 HHRA Update:** presents the results of a vapor intrusion model that evaluates the potential for vapor migration to indoor air and estimates the likelihood that any volatile organic compound (VOC) vapors pose a concern to human health.

In September and October 2016, two rounds of soil vapor investigation were performed under walkways at the Avion complex and in the adjacent Dog Park (the Study Area). Sampling included collection of soil vapor samples for VOC analysis and soil samples for analysis of selected soil properties (moisture content and porosity) to support vapor intrusion modeling. Of the eight locations within the Study Area, only four locations in the first sampling event and three in the second sampling event had available vapor to sample due to high vacuum and/or no flow.

Risks were modeled separately for each sample location using the California Department of Toxic Substances Control (2014) Human and Ecological Risk Assessment Office soil vapor intrusion model. This model calculates vapor migration from the subsurface into indoor air using conservative assumptions and estimates exposure and excess lifetime carcinogenic risk (ELCR) and noncarcinogenic hazard using California Environmental Protection Agency (CalEPA) and United States Environmental Protection Agency (USEPA) inhalation toxicity factors. Risks were estimated separately for each sample location using the chemical, porosity, and moisture data collected from that location. Where vapor was sampled in both events, or a duplicate sample was collected, the higher of the two observed concentrations was used for each chemical. For model inputs where location-specific data were unavailable, conservative model defaults were used.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

Maximum risks were observed using the data from SV115 located at Dog Park: 1E-06 (one in a million) ELCR and 0.2 hazard index. Estimated risks from soil vapor borings in the Avion complex were lower. No factor was included for the positive pressure vapor barrier that underlies the Avion complex, which likely minimizes or eliminates the vapor intrusion pathway. Despite the conservative assumptions, the risks do not exceed risk levels that are considered insignificant by USEPA and CalEPA.

This HHRA indicates that soil vapor intrusion does not present a human health concern for residents of Avion.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

Section 1

Introduction

On behalf of General Dynamics Properties, Incorporated (GD), Brown and Caldwell has prepared this human health risk assessment (HHRA) update for the former General Dynamics Kearny Mesa Plant (KMP; Figure 1) in response to the County of San Diego, Department of Environmental Health's (DEH's) letter dated May 4, 2016. The work in this report was required by the DEH as part of the Voluntary Assistance Program's Case No. H00472-001.

The DEH's letter stated that due to the increasing groundwater levels in the groundwater monitoring wells at the KMP, the previously completed *Soil Gas Survey and HHRA Report* (Brown and Caldwell 2008) required updating by resampling existing soil vapor probes (at Dog Park) and installing additional sub slab/vapor probes in the area of northeastern building of the Avion @ Spectrum (Avion) apartment complex. Figure 2 shows the referenced area of Avion and the Dog Park immediately east of Avion in San Diego, California. For the purposes of this report, the KMP, including the former "Trich" (short for trichloroethylene/trichloroethane; pronounced "trike") Farm, is referred to as the Site. The combined areas of Avion and Dog Park, contained within the KMP, are referred to as the Study Area.

Prior to performing the sampling activities and at the request of the DEH, Brown and Caldwell prepared the *Addendum Number 18 to Work Plan for Soil and Groundwater Impact Assessment of Hazardous Substance Release* (Work Plan; Brown and Caldwell 2016) on GD's behalf. The Work Plan presented the assessment activities and sampling locations to meet the requirements provided in DEH's May 4, 2016 letter. The Work Plan was approved by the DEH on July 27, 2016.

This HHRA update for Avion is a companion document to the *Data Report* (Brown and Caldwell 2016b), which details the soil vapor installation activities performed as part of the DEH-approved Work Plan. The Data Report was submitted to the DEH on December 1, 2016. The Data Report presents the soil and soil vapor sampling results used in this HHRA update, specifically the results for soil vapor probes SV108 through SV111 and SV114 through SV117 that were installed at the Study Area under Permit Nos. LMWP-002462 and LMWP-002474, respectively, in support of this HHRA update. Figure 2 shows the locations of these soil vapor probes at the Avion property (8811 Spectrum Center Boulevard, San Diego, California) and the adjacent Dog Park. As requested in the DEH May 4, 2016, letter, the prior HHRA (Brown and Caldwell 2008) has also been updated for the ResMed Corporation (ResMed) building. A separate non-residential HHRA update report has been prepared specifically for the ResMed commercial building located at 9001 Spectrum Center Boulevard.

The primary objective of this HHRA update for Avion is to verify that conditions detected at the Avion property, and the estimated risks using updated regulatory guidance, are consistent with the conclusion made in the 2008 HHRA (i.e., the estimated residential risks from vapor intrusion are in the range considered insignificant by the California Environmental Protection Agency [CalEPA] Department of Toxic Substances Control [DTSC], and the United States Environmental Protection Agency [USEPA]).

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

Section 2

Background

The following sections present a summary of the Site background information, including a description of former industrial Site activities and environmental assessments, and a summary of previous HHRA work completed for the Site (Figure 1).

2.1 Project Background

From 1959 to 1995, GD operated the KMP, a 242-acre aerospace manufacturing facility located in central San Diego, California (Figure 1). In 1986, a solvent leak was discovered during replacement of underground storage tanks (USTs) and associated piping in what is now referred to as the former Trich Farm (Figure 2). The USTs were used for storage and recycling of trichloroethene (TCE), 1,1,1-trichloroethane (TCA), and other chlorinated solvents at the former Trich Farm. These chemicals were stored on the east side of what was then Building 5 of the KMP. The USTs had been in regular use since the 1960s and TCE was used at the Trich Farm until about 1974 when it was replaced by TCA, which was used until shutdown of the Trich Farm in the early 1990s. In mid-1986, the USTs associated with the former Trich Farm were removed and replaced with aboveground storage tanks. During removal, no leaks were observed in the USTs but were found in the associated piping areas.

Site assessment began at the Trich Farm in 1986 near the identified solvent pipe leak (approximately 200 feet to the east of the current Avion property); however, more extensive assessment and remediation was not undertaken until the early 1990s because the 1986 study indicated the bulk of the impacted soil was inaccessible (located beneath Building 5). In early 1997, after Building 5 and the rest of the KMP were demolished, GD received approval from the DEH to conduct a phased soil and groundwater assessment. LNR Kearny Mesa, Inc. (LNR) purchased the entire KMP property in 1998 with plans to redevelop the area. As part of that redevelopment, LNR sold most individual parcels to other parties, including those now occupied by Dog Park and the Avion apartment complex.

Activities conducted at the Trich Farm since the start of investigations in the early 1990s have included the sampling of numerous soil borings, groundwater wells, and soil vapor probes at and in the vicinity of the Site. The two current ongoing activities being conducted at the KMP are annual groundwater monitoring of 16 groundwater monitoring wells and quarterly dense non-aqueous phase liquid (DNAPL) monitoring and extraction from two groundwater monitoring wells located within the original solvent release source area. Routine groundwater monitoring events have been conducted since 1998 at wells within the KMP associated with the Trich Farm. The most recent event was conducted in November 2016.

2.2 Previous Soil Vapor Investigations and HHRAs

Three soil vapor and risk screening investigations have been conducted at the KMP prior to this investigation. The following summarizes the previous soil vapor investigations and HHRAs.

2.2.1 1998 through 2000 Investigations

A 1998/1999 investigation was conducted by Ogden Environmental and Energy Services Co. (Ogden 1999) for LNR, and a follow-up investigation was conducted by Brown and Caldwell in 1999/2000

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

(Brown and Caldwell 2000) for GD. Ogden collected 74 soil vapor samples ranging in depth from 5 feet below ground surface (bgs) to 10.5 feet bgs from 32 sampling locations (SV-1 though SV-32), while Brown and Caldwell installed 43 dedicated sampling probes (SV-33 through SV-75) and collected 100 soil vapor samples. The Ogden investigation also involved collection and analysis of 15 soil samples for Site-specific physical parameters in support of the human health risk modeling. The physical parameters analyzed by Ogden included soil moisture, dry density, grain size distribution, specific gravity, total porosity, and total organic carbon. As part of previous human health risk calculations for GD, Brown and Caldwell also used soil physical data collected by Ogden.

The soil vapor investigations conducted in the vicinity of the former Trich Farm showed detectable concentrations of volatile organic compounds (VOCs) in soil vapor. The VOCs most frequently reported in the Ogden and Brown and Caldwell data sets were the chlorinated VOCs (cVOCs) TCA, 1,1-dichloroethene (1,1-DCE), TCE, and various chlorofluorocarbons. It was observed from data obtained during the two investigations that concentrations of VOCs in soil vapor generally decreased laterally away from the former Trich Farm source area (Appendix A).

These investigations included evaluations of human health risks under future commercial/industrial use scenarios. In addition, the Ogden investigation included evaluation of human health risks under future residential use scenarios on the west side of Paramount Drive in the area of Dog Park. The indoor air model presented in the 2000 Site Assessment and Mitigation Manual (DEH 2000) was used by both Ogden and Brown and Caldwell to assesses the potential for migration of VOC vapors through the subsurface and up through a future concrete building slab. As noted, Ogden used both commercial/industrial and residential exposure scenarios to perform risk calculations while Brown and Caldwell used only commercial/industrial risk screening assumptions for their calculations. Using residential screening exposure values, Ogden found the non-cancer risk estimate from soil vapor beneath the east-central portion of the former Building 5 (east of Avion) to be at a level considered insignificant by USEPA and CalEPA (hazard index [HI] less than 1.0). An individual excess lifetime cancer risk (ELCR) greater than one in a million (1E-06 or 1 x 10-6) was estimated by Ogden for a residential exposure scenario at 11 of the 32 soil vapor probe locations tested (Ogden 1999).

Based on Ogden's soil vapor survey and indoor air risk assessment, LNR incorporated institutional controls into their proposed development plan for the subject area as specified in the 1999 Case Closure Summary (DEH 1999). These controls included limiting the use of the former Trich Farm area to a roadway (Paramount Drive), adding a 25-foot setback on either side of the roadway, and precluding residential structures in the area where the calculated ELCR exceeded 1E-06, with an additional setback near those areas for residential use. In addition, the DEH stipulated that the northeast corner of the proposed residential subdivision was to remain as open space and that no large continuous monolithic concrete or asphalt structures be constructed over the entire area identified as posing an unacceptable risk. These areas were required to be maintained with permeable surfaces to allow for venting of soil vapor. This requirement led to the development of the fully landscaped and irrigated park area now known as Dog Park. Dog Park was designated specifically in the DEH Case Closure Summary prepared in support of a no further action determination issued to LNR (DEH 1999).

2.2.2 2008 Investigation

In 2008, Brown and Caldwell completed a soil vapor investigation and HHRA in the Dog Park, which was previously studied in the late 1990s on behalf of LNR. The DEH requested the soil vapor survey and HHRA work (DEH 2007) because of changing Site conditions, including rising water levels, increases in VOC concentrations in some wells, and changes in zoning allowing for residential use. The scope was outlined in *Addendum No. 16 to the Work Plan for Soil and Groundwater Impact Assessment of Hazardous Substance Release, Former General Dynamics Kearny Mesa Plant Trich*

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

Farm, San Diego, California (Brown and Caldwell 2007). The purpose of the investigation was to evaluate the current shallow subsurface distribution of VOCs in soil vapor near the boundaries of Dog Park, assess the potential for subsurface vapor intrusion from the subsurface to indoor air at residential units adjacent to Dog Park, and evaluate if further mitigation or monitoring of soil vapor conditions west of Paramount Drive was warranted.

Between February and July 2008, Brown and Caldwell collected 34 soil vapor samples from the 5- to 6-foot and 11- to 12.5-foot depth intervals at six locations at the western edge of Dog Park. The soil vapor data were used to complete an HHRA that evaluated the potential for risk due to potential soil vapor intrusion. The risk assessment methods followed the standard guidance established by USEPA and CalEPA in effect at the time of the HHRA. The exposure estimates were based on the concentrations of VOCs in soil vapor samples collected at the 5-foot depth because these were considered by USEPA and CalEPA risk managers to be the most representative of the VOC concentrations in soil vapor that might migrate into a building. To estimate indoor air concentrations, Brown and Caldwell used the USEPA's version of a computer-based Johnson and Ettinger vapor intrusion model (JEM) modified to reflect CalEPA guidelines. These concentrations were used to estimate inhalation intakes, and then risks were calculated using toxicity factors that estimate ELCR and HI based on intake.

The HHRA (Brown and Caldwell 2008) evaluated both potential residents and commercial/industrial workers in a hypothetical building overlying Dog Park. The ELCR for a resident who spends 6 years as a child and 24 years as an adult in an apartment was estimated based on JEM to be 1E-06 (1×10^{-6}) and the HI to be 1E-02 (0.01). The ELCR and HI estimated by Brown and Caldwell for a future industrial worker at Dog Park were 7E-08 (7×10^{-8}) and 5E-04 (0.0005), respectively. These levels for both cancer risk and HI are considered insignificant by both CalEPA and USEPA.

I05978_HHRA_Avion_Dec_2016.docx

Section 3

Physical Setting

This section summarizes the physical setting of the Site, focusing on the Study Area as defined in Section 1. A detailed description of the conceptual site model including Site topography, geology, hydrogeology, and nature and extent of VOC impacts was presented in the *Updated Site Assessment and Hydrogeologic Conceptual Site Model Report* (HCSM; Brown and Caldwell 2014). The following presents a summary of the physical setting components of the conceptual site model presented in the HCSM.

3.1 Site and Surrounding Area Description

The data used in this HHRA update were collected during the most recent soil vapor investigation (September to October 2016) conducted at the Study Area. Dog Park lies between the Avion apartment complex and Paramount Drive to the east (Figure 2). Dog Park, which is landscaped and used by pedestrians, has no inhabited structures. Due to drought, watering has been reduced at Dog Park in the past several years. Land use in the surrounding area includes residential units to the north, south, and west and commercial units to the east. Commercial and residential land use dominates the surrounding area. No schools, day care centers, or hospitals are located within one quarter of a mile.

Avion is operated as a residential rental property. The Avion apartment building located immediately adjacent to the west side of Dog Park (Building 4) was constructed in 2002 and 2003 as a U-shaped three-story building with an occupied ground footprint of approximately 12,000 square feet. This building is occupied by multiple adjoining residential units. Based on available design details for the building obtained from the City of San Diego Development Services Department, it is constructed as a slab-on-grade structure with an elastomeric membrane moisture barrier between the concrete slab and the underlying soil. The Avion building is surrounded by grass landscaped areas to the north and east and concrete or asphalt covered surfaces to the south and west. In 2010, all 24 ground floor units of this building, and Building 6 (immediately south of Dog Park), had positive pressure systems installed (the system specifications are included in Appendix B).

Based on historic utility evaluations, the subsurface utilities appear to be located along Paramount Drive and Spectrum Center Boulevard right-of-ways. Only drain and shallow irrigation lines are present in the Dog Park area between the former Trich Farm area and the residential areas to the west or south on the other side of the Dog Park. The shallow drain lines extend from low areas in Dog Park to within approximately 5 feet of the Avion apartment building.

3.2 Geology and Hydrogeology

Geology in the area is composed of inter-bedded sedimentary units composed of silts, sands, and cobble-conglomerates overlain by varying amounts of fill material. The formations beneath the area generally have low permeability and hydraulic conductivity values due to their generally fine grained, partially cemented nature. Hydraulic conductivity values between 10^{-5} and 10^{-7} centimeters per second have been measured at the Site during previous investigations.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

During this investigation, the soil vapor probes were installed beneath concrete walkways in the Avion complex and beneath grass in Dog Park. The material encountered in the top 5 feet (the sample depth) was composed primarily of silty sand with gravel and cobbles underlain by clayey sand. Boring logs for the soil vapor samples appear in Appendix C. Additional descriptions of the lithology appear in the Data Report (Brown and Caldwell 2016b).

There are no natural surface water bodies within or near the Site or surrounding areas. The nearest surface water drainages are the intermittent creeks in Murphy Canyon, located approximately 1 mile east of the Site, and San Clemente Canyon, located approximately 2 miles north of the Site. Site hydrogeology is complex with three water-bearing zones recognized between the surface and approximately 200 feet bgs. Zone A, the shallowest water-bearing zone, has previously been understood as a discontinuous and unconfined unit; however, recent groundwater monitoring events have indicated increased groundwater levels similar to those observed in Zone B, indicating a diminished separation between these zones due to the rising groundwater levels. Zone B is the locally continuous water-bearing zone above the Ardath Shale and Zone C is the deepest water-bearing zone.

Groundwater was not encountered during the soil vapor investigation, but was observed at approximately 22 feet bgs in the monitoring well MW-18B that was installed in the Avion property during the same sampling event (Figure 2). Groundwater elevations at the Site area have been increasing since initials observations began in 1998.

3.3 Historical Summary of the Nature and Extent of VOC Impacts

VOCs at the Site are present in groundwater, soil, soil vapor, and as DNAPL in the Trich Farm source area approximately 200 feet to the east of Avion. DNAPL is the phase-separated form of the solvent released from the former Trich Farm. A brief overview of the occurrence of VOCs is discussed below.

VOCs have been reported in soil from the near surface to approximately 90 feet bgs primarily in the source area, which is now beneath the Paramount Drive right-of-way, but extend to the west into Dog Park and also to the east beneath the commercial property. The predominant VOCs detected in soil are TCE and TCA, which were the primary chemicals released from the Trich Farm during its operation, as well as several degradation products.

Groundwater containing dissolved-phase VOCs has been monitored at the Site since 1998. DNAPL has been observed in monitoring wells east of Paramount Drive and DNAPL recovery has been performed at the Site since 1999 in several monitoring wells east of Paramount Drive. Groundwater contains similar VOCs as soil. For general reference, the extent of groundwater TCE impacts in Zone B appears in Figure 3.

Chlorinated VOC concentrations in monitoring well MW-2, located in Dog Park, have been generally stable or decreasing in recent years, and TCE has decreased approximately 67 percent since 2005. Concentrations of TCE and 1,1-DCE in monitoring well MW-3 located southeast of Dog Park have had an overall decreasing trend since January 2011 and have declined approximately 86 and 95 percent, respectively, since that peak. VOC concentrations in other wells monitored at the Site are within historical ranges and remain stable. Quarterly DNAPL monitoring is conducted at monitoring wells MW-9 and MW-12 near the former Trich Farm; however, DNAPL has not been observed in monitoring well MW-9 since April 2011 and has not been observed in monitoring well MW-12 since April 2013.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

As discussed in Section 2.2, previous soil vapor investigations have been conducted at the former Trich Farm near Dog Park. Based on these previous investigations, the distribution of VOCs is generally centered around the former Trich Farm source area. The 2008 soil vapor results for TCE and degradation product vinyl chloride (VC) are shown in the blue shaded boxes on Figure 4 for comparison to the soil vapor results obtained in 2016 (shaded in yellow).

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

Section 4

Field Activities

As part of this HHRA update, soil vapor samples were obtained during two separate sampling events (September and October 2016) at borings SV108 through SV111 and SV114 through SV117. To obtain the soil vapor data for this update, the following was performed:

- Negotiation of access agreement with Avion;
- Acquisition of appropriate permit to install vapor probes;
- Completion of utility clearance;
- Installation of eight soil vapor borings (SV108 through SV111 and SV114 through SV117) to 5 feet bgs (Figure 2) in the Study Area via limited-access direct-push rig (or hand-augering due to utility concerns at SV109 and SV111);
- Collection of three undisturbed soil samples from each soil vapor probe location at depths of approximately 1, 3, and 5 feet bgs (except at SV111, which only had samples collected at 1 and 3 feet bgs due to a cobble present at approximately 5 feet bgs);
- Analysis of the soil samples for moisture content and porosity (total, air-filled, and water-filled);
- Installation and sampling of soil vapor probes using 400-milliliter summa canisters; and
- Analysis of the soil vapor samples for VOCs by USEPA Method TO-15.

Soil vapor samples could not be collected from all locations in one or both events due to high vacuum or no flow. The lack of samples reflects the general absence of vapor under the Study Area due to soil and soil vapor conditions at the vapor probes. These conditions limit the potential for vapor movement to the vapor probe and reduce the likelihood of a complete vapor intrusion pathway, as discussed further in Section 6. A summary of samples collected is below.

Soil Vapor Samples			
Location	September 2016	October 2016	Reason Not Sampled
SV108	Yes		No vapor (high vacuum/no flow)
SV019	Yes	Yes	
SV110			No vapor (high vacuum/no flow)
SV111	Yes	Yes	
SV114			No vapor (high vacuum/no flow)
SV115	Yes		No vapor (high vacuum/no flow)
SV116			No vapor (high vacuum/no flow)
SV117			Water in probe

Details regarding the sampling procedures and field observations are provided in the Data Report (Brown and Caldwell 2016b).

Use of contents on this sheet is subject to the limitations specified at the end of this document.

Section 5

Investigation Results

Detailed results of the 2016 sampling performed in accordance with the Work Plan (Brown and Caldwell 2016a), are presented in the Data Report (Brown and Caldwell 2016b). A summary of the general investigation results and observations is provided below. The laboratory analytical reports and data validation reports are provided in Appendix D.

5.1 Soil

Results of soil physical properties in soil collected from the soil vapor probe borings are presented in Table 1. As described in the Data Report (Brown and Caldwell 2016b), comparison of the 2008 to 2016 data indicates that moisture content in samples collected from Dog Park has decreased since 2008. This is consistent with the reduction in irrigation by the Owners' Association as mentioned in Section 3.1. However, the soil moisture and porosity results at Avion indicated generally high values of pore water saturation at 5 feet bgs. The moisture content and air-filled porosity results at Avion in 2016 are similar to the high values of pore water saturation results from samples collected at Dog Park in 2008.

5.2 Soil Vapor

The results of the laboratory VOC analysis of soil vapor samples collected from Avion and Dog Park during the 2016 investigation are summarized in Table 2. The concentrations of TCE and VC are shown on Figure 5. The laboratory analytical reports are provided in in Appendix D.

Soil vapor samples collected during this investigation contained detectable concentrations of 20 of the 49 target VOCs for this project (see Appendix D for the list of compounds analyzed). Many of these were sporadically detected in groundwater. Detected cVOCs associated with the chemicals used at the former Trich Farm (and daughter products) included TCE, TCA, 1,1-DCE, and VC. Other VOCs detected included various chlorofluorocarbons such as Freon 113 and aromatic hydrocarbons such as benzene and ethyl benzene. Benzene and ethylbenzene are common fuel constituents and ubiquitous in the atmosphere (Agency for Toxic Substances and Disease Registry 2007, 2010).

I05978_HHRA_Avion_Dec_2016.docx

Section 6

Human Health Risk Assessment Update

As discussed above, DEH requested that the previously completed *Soil Gas Survey and HHRA Report* (Brown and Caldwell 2008) be updated by collecting additional soil vapor data at Avion and the Dog Park and re-evaluating human health risks due to potential vapor intrusion. This HHRA update estimates the risks associated with potential migration of VOCs into indoor air (soil vapor intrusion) into the Avion apartment complex. Soil vapor samples collected beneath two breezeways in the Avion complex nearest to the former Trich Farm and the Dog Park are considered representative of vapors that could potentially migrate into residences. This HHRA follows the standard protocols and guidance established by the DTSC (2011) and the USEPA (1989 *et seq*).

USEPA and DTSC have made default policy decisions about the possible health effects of chemicals used by the industry. The intent of these policy decisions is to assure that the actual risk, if any exists, will not be underestimated (USEPA 1989).

HHRA is a formal process with five steps as follows:

1. **Data Evaluation**—discusses the soil vapor data and VOCs that were used in the HHRA.
2. **Exposure Assessment**—estimates the potential concentrations of VOCs in indoor air and the amount of VOCs that a resident might take in (daily intake).
3. **Toxicity Assessment**—presents the toxicity factors used to estimate the potential health effects associated with the dose estimated for each VOC.
4. **Risk Characterization**—shows how the information in the Exposure and Toxicity Assessments is combined to estimate the likelihood of adverse health effects for VOCs considered potential carcinogens (cancer risk) and for VOCs with only noncancer health effects (hazard quotients).
5. **Uncertainty Analysis**—discusses the level of confidence that can be placed in the results of the HHRA.

For this HHRA, the DTSC (2014) Human and Ecological Risk Assessment Office (HERO) soil vapor intrusion model was used to complete Steps 2 through 4. The inputs for the modeling are presented in Table 3 and the results of the HHRA are summarized in Tables 4 and 5. Additional supporting information for the modeling is provided in Appendix E.

6.1 Data Evaluation

The data used in this HHRA update are the laboratory analyses of soil and soil vapor samples collected in 2016, discussed in earlier sections of this report. Data were independently validated by Laboratory Data Consultants, Inc., of Carlsbad, California. The validation reports are provided in Appendix D. The data were considered usable for this HHRA update.

Each of the 20 VOCs that were reported in a least one sample was included in this HHRA update, with the exception of 4-ethyltoluene, which has no inhalation toxicity factors and could not be assessed. The list of these detected VOCs is shown in Table 2.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

6.2 Exposure and Risk Assessment

The HERO soil vapor intrusion model is a version of JEM (USEPA 1991), which predicts indoor air concentrations resulting from subsurface vapor migration into indoor air. The model produces an attenuation factor "alpha" that represents the ratio of the indoor air concentration to the subsurface soil vapor concentration. Indoor air concentrations are estimated from the VOC concentrations in soil vapor and the attenuation factor. The USEPA programmed JEM into Microsoft® Excel and added a human health risk component that calculates the risk associated with inhalation of a specific contaminant at the estimated indoor air concentration (USEPA Vapor Intrusion Model; 2004). The USEPA model has been modified by the DTSC HERO to include CalEPA toxicity criteria values for the risk calculation component. DTSC has also added an exposure time variable in accordance with updated USEPA inhalation toxicity guidance (USEPA 2009) to account for exposures that are less than full time (DTSC 2014). This variable does not affect residential risk estimates, which are based on an assumption of full-time exposure. In October 2016, DTSC slightly modified the tetrachloroethene (PCE) inhalation unit risk, which is not reflected in the published model. Since PCE was not detected in soil vapor at this Study Area, no modification has been made here.

6.2.1 Soil Vapor Intrusion Model Inputs

The HERO soil vapor intrusion model is a screening version of JEM and has limited input fields. The inputs for the modeling are presented in Table 3. Additional details appear in the modeling input and output files in Appendix E. Additional discussion on key input parameters appears below.

Soil Vapor Concentration

Soil vapor concentration (in micro grams per cubic meter) was entered as reported by the laboratory. As noted in Section 4, vapor could only be obtained in four of the eight probes during the September sampling event and in three of the eight probes in the October sampling event. For the locations that had data from both events, SV109 and SV111, the higher of the soil vapor concentration from each location was used. These values appear in the "detects" summary presented in Table 2. Nondetects ("U" values) were not considered in this HHRA update. Estimated "J"-qualified results that were below the quantitation limit were used as reported.

Soil Type

The model has a selection of 12 soil types. Sandy loam was identified as the most representative soil type for this Site based on the lithology observed in the soil samples collected from the soil vapor probe borings (see Appendix C for the boring logs). This is the same soil type that was identified and used in the 2008 HHRA. The model can assign bulk density and porosity based on the soil type if Site-specific data are not available.

Porosity

As discussed in Section 4, porosity was measured in the soil collected at approximately 1, 3, and 5 feet bgs. Total, water-filled and air-filled porosity are inputs in the model. For each boring, the results were averaged to represent the characteristic of the soil column through which vapor would need to migrate from the sampled depth (approximately 5 feet bgs) to the bottom of the building foundation. The porosity values are presented in Table 1.

A model was run for each location using the detected VOC concentrations as discussed above. The modeling files appear in Appendix E.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

6.3 Risk Results

The HHRA update process, which is incorporated into the model, combines estimates of indoor air concentrations with inhalation toxicity values to calculate potential ELCR and noncancer HI. The cancer and noncancer results are summarized in Table 4 and 5, respectively.

6.3.1 Risk Assessment Results

Excess Lifetime Cancer Risk

Cancer risk is termed "the probability of increased individual excess cancer." This means the risk over and above the natural risk of cancer in the general public. The cancer risks from detected chemicals and exposure pathways are then added to estimate overall ELCR. CalEPA considers cancer risks at or below one in a million (1E-06, or $1x10^{-6}$) to be insignificant.

The cancer risks calculated for this Study Area do not exceed risk levels that are considered insignificant by USEPA and CalEPA. The highest ELCR, 1E-06, was estimated from the soil vapor measured at SV115 in Dog Park just east of the Avion apartment complex. Approximately a quarter of the total ELCR is related to benzene, which is not a Site contaminant and, as previously indicated, is ubiquitous. The total ELCR without benzene is 8E-07. Lower risks were estimated from soil vapor under the Avion walkways (3E-07 at SV108 and 1E-07 at SV109). The higher water-filled soil porosity in the Avion samples accounts in part for the lower modeled risks. Note that no building overlies the highest-risk location. The highest risk location (SV115) is located in Dog Park where watering has been reduced, likely resulting in lower soil moisture in Dog Park relative to Avion (see Table 1). The only compounds detected at SV111 were two freons, which are not classified as carcinogens, so there are no carcinogenic risks associated with that location.

Noncancer Risk

Noncancer risk for an individual chemical is expressed as the hazard quotient. The sum of chemical-specific hazard quotients is called the HI. It is only appropriate to add hazard quotients values for different chemicals if they have the same health effect. Adding hazard quotients values into a single cumulative HI across chemicals is a preliminary estimate of the highest possible noncancer risk. A HI value of 1 indicates that lifetime exposure has limited potential for causing an adverse effect in sensitive populations, and values of less than 1 can generally be considered acceptable. Values greater than 1 are usually given closer attention. If the HI is greater than 1, the contribution of individual VOCs and the potential for additive effects is considered.

Noncarcinogenic HIs in the four locations in Dog Park and Avion ranged from 0.005 to 0.2 (at SV115). These were all below the HI risk limit of 1, even assuming full additivity (not accounting for target organs).

These results indicate no human health risks above levels of concern associated with vapor intrusion into the Avion apartments.

6.4 Uncertainty Analysis

Varying degrees of uncertainty exist in each step of the HHRA process. The key uncertainties that may affect the HHRA update are described below.

6.4.1 Data

The data were determined to be of acceptable quality. In terms of representativeness, the results are considered adequate to support the HHRA update. Soil vapor samples were collected beneath walkways within the Avion complex as well as immediately to the east in Dog Park. There is some

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

degree of uncertainty because no data were collected under the occupied residences. However, the impermeable surface is continuous between the walkways and the units and concentrations are, therefore, not expected to differ significantly under the occupied areas. In addition, the contamination originates to the east and the VOC concentrations in groundwater tend to decrease in the direction towards the apartment building. Thus, the highest risks, derived from sample SV115 to the east of the complex, are likely to overestimate risks within the occupied apartments.

The concentrations are consistent with the data collected in 1999 and 2008 (see Figure 4), indicating the soil vapor VOC concentrations are not increasing over time and that the results are representative.

6.4.2 Soil Vapor Intrusion Model

The attenuation factor that predicts indoor air concentrations based on soil vapor concentrations is based on a number of assumptions. Observations of soil type and measured porosity provide a fairly high degree of confidence in the calculation of permeability. However, the actual migration from the subsurface through the foundation and into indoor air, as well as the mixing and dilution within the breathing zone, are based on model defaults. For example, the vapor model assumes that vapors enter through a crack in the floor around the perimeter of the residence where the outside wall meets the foundation on all four outside walls. However, the apartment units have a maximum of only two full outside walls (Brown and Caldwell 2008). The assumption of only a 0.5 per hour air exchange rate is also low and probably underestimates actual ventilation rates.

The calculated risks are based on the maximum concentrations observed. However, as detailed in Section 4, only a fraction of the probes exhibited soil vapor, probably due to the high moisture. In some locations, therefore, the presence of a vapor intrusion pathway is unconfirmed, and in other locations it is inconsistent. Calculating long-term risks assuming continuous exposure to the limited vapor that was actually observed likely over-predicts exposures and associated risks.

6.4.3 Risk Characterization

A high degree of uncertainty in any risk assessment is associated with the toxicity factors because, for the VOCs used in this HHRA, data from animals exposed to high doses of chemicals were used to extrapolate the health effects in people exposed to doses that are orders of magnitude lower. The toxicity factors are conservatively derived with upper-bound risk estimates and safety factors. Toxicity factors are derived to over-estimate the potential for health effects.

One consideration that has not been factored into this HHRA update is that in 2010 the buildings immediately east (Building 4) and south (Building 6) of Dog Park had positive pressure systems installed. Because the extent to which the system prevents migration of vapors from the subsurface into indoor air cannot be quantified, no reduction in the risk estimates was assumed. However, it is likely that the system greatly eliminates or even prevents vapor intrusion. The true risk to occupants due to vapor intrusion from Site-related VOCs may be zero.

6.5 Risk Conclusions

The risks in this HHRA update were estimated using highly conservative assumptions that likely overestimate both exposure and risk. Nonetheless, the estimates do not exceed risk levels (one in a million [1E-06] excess lifetime cancer risk) that are considered insignificant by USEPA and CalEPA. This HHRA update indicates that soil vapor intrusion does not present a human health concern for residents of the Avion apartments.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05978_HHRA_Avion_Dec_2016.docx

Section 7

Conclusions

Human health risks due to potential vapor intrusion into the Avion apartments were estimated using measured soil and soil vapor data and the DTSC vapor intrusion screening model. Even using conservative assumptions that are likely to overestimate actual exposure and risks, the cancer and noncancer risks are at a level considered insignificant by USEPA and CalEPA. This finding is consistent with the conclusions of the prior 2008 HHRA that indicated no health concern for long-term residents of the Avion complex. No further evaluation of risk is recommended.

Section 8

Limitations

This report has been prepared for the exclusive use of GD in accordance with the standards of the environmental consulting industry at the time the services were performed and in accordance with the contract between GD and Brown and Caldwell dated August 1, 2016. This work has been performed for the sole purpose of assisting in the evaluation of environmental conditions associated with the Site, particularly the former Trich Farm and, as such, is governed by the specific scope of work authorized by GD. GD and Brown and Caldwell acknowledge that this report is prepared for the benefit and specific reliance of GD. The findings in this report are based upon observations of current site conditions. The conclusions presented are not necessarily indicative of future conditions or of future operating practices on this property.

Use of contents on this sheet is subject to the limitations specified at the end of this document.

Notes and Abbreviations:

Concentrations in µg/m^3

All samples collected 5 ft bgs

D - Field duplicate sample

ID - Identification

J - Estimated value

U - Less than reporting limit shown

Table 3. Inputs for Soil Vapor Intrusion Modeling			
Variable	Units	Value(s)	Comments
Soil Vapor Concentration	$\mu g/m^3$	●As reported ●Higher of September and October results at each location for SV109 and SV111 ●Higher concentration from duplicate pairs at SV111 and S115	Only half the probes had soil vapor that could be sampled; therefore, risk calculations were only performed for locations where samples were collected
Depth below grade to bottom of enclosed floor space (L_F)	cm	15	Model default for slab on grade construction
Soil gas sampling depth below grade	cm	152	Five feet
Average soil temperature	^oC	24	DTSC default
Vadose zone SCS soil type	unitless	SL	Sandy loam; based on observed lithology in vapor probe soil borings
Vadose zone soil dry bulk density (ρ_b^A)	g/cm^3	1.62	Model default for sandy loam
Total porosity	unitless	Sample specific; average of measurements at all 3 depths (1' and 3' only for SV111 due to cobble at 5' bgs)	Soil vapor measured at 5 feet bgs will have to migrate upward through the whole 5 feet of soil column prior to entering the building; therefore the soil properties at 1 feet, 3 feet and 5 feet are all relevant
Water-filled porosity	unitless		
Air-filled porosity	unitless		
Averaging time for carcinogens (AT_c)	years	70	DTSC defaults for residential exposure
Averaging time for noncarcinogens (AT_{nc})	years	26	
Exposure duration	years	26	
Exposure frequency	days/year	350	
Exposure time	hours/day	24	
Air exchange rate	$hour^{-1}$	0.5	

Notes and Abbreviations:

$\mu g/m^3$	*micrograms per cubic meter*
^oC	*degrees Celsius*
bgs	*below ground surface*
cm	*centimeter*
DTSC	*California Department of Toxic Substances Control*
g/cm^3	*grams per cubic centimeter*

Table 4. Summary of Carcinogenic Residential Risks					
Chemical	CAS Number	SV108	SV109	SV111	SV115
1,1,1-Trichloroethane	71556				NA
Benzene	71432	2.5E-08	3.1E-08		2.4E-07
Carbon disulfide	75150	NA	NA		NA

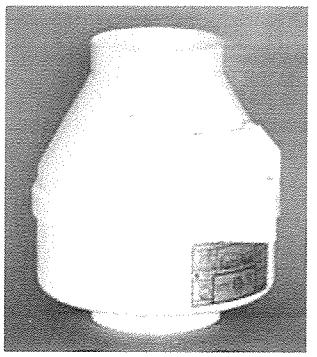
RADON FAN SPECIFICATIONS

RADONAWAY (SPRUCE) RV100

Designed specially for radon mitigation, RV Series Fans provide superb performance, use little electric power, run ultra quiet and are attractive. An ideal choice for most radon mitigation systems. Model selection is dependant on building characteristics and should be made by a radon professional.



*Typical monthly electric cost $1.00 - $2.00 depending on model, electric rates & operating conditions.

Models	Watts*	Maximum Pressure	Typical CFM vs Static Pressure WC"				
			0.0"	0.5"	1.0"	1.5"	2.0"
RV100	40	2.0" WC	100	80	55	35	-

1.0"

- 5 - Year Warranty.
- Mounts on duct
- 4" diameter ducts.
- Rugged .125" Noryl plastic housing.
- Electrical box for hard wire or plug in.
- ETL Safety Agency Listed - tested to UL Standard 507 for indoor or outdoor use. Meets all electrical code requirements.

Size: 9.5H" x 8.5" Dia. **Weight**: 6 lbs. **Continuous Duty / Thermally protected**

Class B Insulation **3000 RPM** **Rated for Indoor or Outdoor use**

For Mechanical Ventilation Systems a timer is recommended to cycle the fan on and off.

National
AIR & ENERGY

June 1, 2010

Mr Todd Coomes
Davis Companies, Inc.
1091 Seventh Street
Calimesa, CA 92320

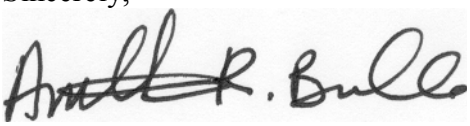
Thank you for the opportunity for allowing us to assist you with the installation of the apartment unit pressurization system prototype at the Avion@ Spectrum complex. This prototype system was installed in unit number 2116 to determine if by drawing air from the outside and introducing it into the forced air HVAC system controlling the apartment unit's environment would make the air pressure inside the unit to be greater than the atmospheric air pressure outside the unit. The purpose for this exercise was to create a positive air pressure inside the unit to prevent soil gas vapors infiltrating into the unit through minute openings in the concrete slab.

Our scope of work was as follows:

1. Install one new Fantech, Model FR -150, inline fan into a flexible duct system which is connected from the outside wall of the apartment unit to the supply air side of the apartment's fan-coil unit.
2. Provide an exterior wall grille and connect it to the new duct system and the exterior facade of the wall.
3. Connect the inline fan unit to the electrical power source of the fan-coil unit for a 24/7 operation.
4. Start and test the new inline fan for proper operation.
5. Test the air pressure inside the apartment unit relative to the atmospheric air pressure outside using a magnahelic gauge.

The magnahelic gauge has two ports, a low side and a high side. A hose was attached to the high side port and placed in the apartment unit between the base of the door and its jamb with the crack being sealed to prevent air escaping from the unit and the low side left open to the ambient atmospheric air pressure outside the unit. The pressure difference was measured at .005" WC with the pressure inside the apartment unit being greater than that of the outside.
Please contact us if you have any questions or if we can assist you in any way.

Sincerely,



Anthony R. Brunelle, Engineer
National Air & Energy

Date: 03/04/2010

Billed To: Avion
8811 Spectrum Center Blvd.
San Diego CA 92123

Project:
8811 Spectrum Center Blvd.
San Diego CA 92123

This quote is valid until:30 days from quote date **Order#:**

Description	Quantity	Price	Ext Price
Install interior fan system in 24 units	24.00	$1,937.00	$46,488.00

Walk each unit and determine system layout.
Remove drywall in affected areas
Install Radonway RV100 Fan per property scope in the ceiling cavity per fan specification
Install 4" duct work using coated hangers
Penetrate exterior wall with duct and install fire damper
Connect duct to air handler
Add a dedicated circuit from panel to fan location and make electrical connections. Install GFCI protected breaker.
Repair drywall to include tape, mud and texture.
Prime and paint by others.
Install access panel @ fan location

Total per system (unit) - $1,937.00

Notes:

Does not include permits
Does not include hidden conditions
Prior to construction, we need to open one ceiling to determine that there is adequate room to install the system

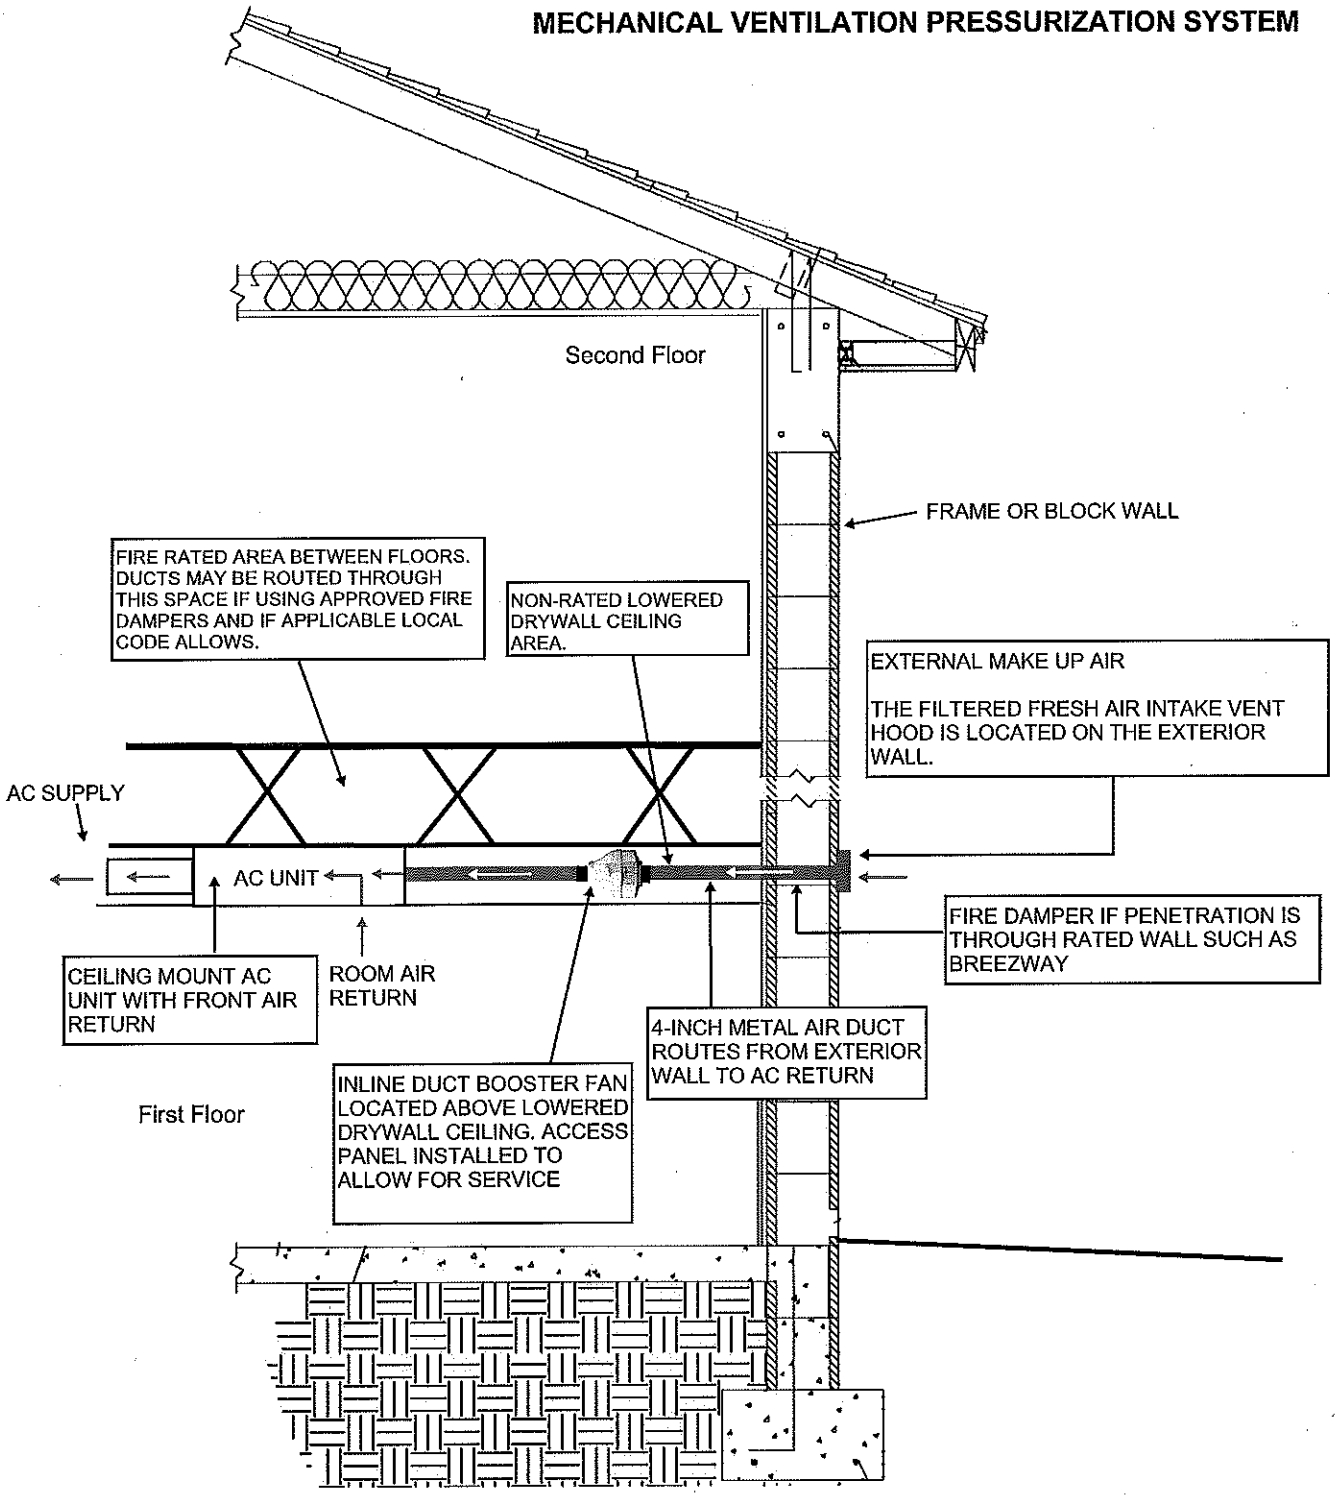
Description	Quantity	Price	Ext Price
Price is per unit based on a minimum of two systems per approval, for one off installation add $250. DC has not received or reviewed any prior testing results and makes no warranties that the system will eliminate or prevent any current or future Radon occurrences. Fax: (858)277-9192			

MECHANICAL VENTILATION PRESSURIZATION SYSTEM



The overall methodology utilized by this system involves the use of an external make up air source that shall add ventilation to the living space to create positive pressure in the living space. The fan can be operated by a relay that allows the system to operate when the AC motor operates or it may operate independently using a timer device. The make-up air is discharged at the AC return to allow conditioning of the make-up air.

SUBJECT: Former General Dynamics Trich Farm, Data Validation

Dear Ms. Kaminski,

Enclosed is the final validation report for the fraction listed below. This SDG was received on September 29, 2016. Attachment 1 is a summary of the samples that were reviewed for analysis.

LDC project #37153:

SDG #	Fraction
16-09-1218	Volatiles

The data validation was performed under Level III & IV validation guidelines. The analyses were validated using the following documents and variances, as applicable to each method:

- USEPA, Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Pei Geng
Project Manager/Senior Chemist

**Indicates sample underwent Level IV validation

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines (CLPNFG) for Superfund Organic Methods Data Review (June 2008). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) SW 846 Method 8260B

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results. Samples appended with a double asterisk on the cover page were subjected to Level IV data validation, which is comprised of the QC summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

A bromofluorobenzene (BFB) tune was performed at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

For compounds where average relative response factors (RRFs) were utilized, the percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs) with the following exceptions:

Date	Compound	%RSD	Associated Samples	Flag	A or P
09/09/16	Bromoform Chloromethane	22 21	All samples in SDG 16-09-1218	UJ (all non-detects) UJ (all non-detects)	A

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

Average relative response factors (RRF) for all compounds were within validation criteria.

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
09/09/16	Dichlorodifluoromethane	24	All samples in SDG 16-09-1218	UJ (all non-detects)	A

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds.

All of the continuing calibration relative response factors (RRF) were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample 201601TB03 was identified as a trip blank. No contaminants were found.

Sample 20160198-4 was identified as an equipment blank. No contaminants were found.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

All internal standard areas and retention times were within QC limits.

XII. Compound Quantitation

All compound quantitations met validation criteria for samples which underwent Level IV validation.

All compounds reported below the reporting limit (RL) were qualified as follows:

Sample	Compound	Flag	A or P
All samples in SDG 16-09-1218	All results reported below the RL.	J (all detects)	A

Raw data were not reviewed for Level III validation.

XIII. Target Compound Identifications

All target compound identifications met validation criteria for samples which underwent Level IV validation. Raw data were not reviewed for Level III validation.

XIV. System Performance

The system performance was acceptable for samples which underwent Level IV validation. Raw data were not reviewed for Level III validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to initial calibration %RSD, ICV %D, and results below the RL, data were qualified as estimated in three samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Method: Volatiles (EPA SW 846 Method 8260B)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
Were all technical holding times met?	✓			
Was cooler temperature criteria met?	✓			
II. GC/MS instrument performance check				
Were the BFB performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
IIIa. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If yes, did the initial calibration meet the curve fit acceptance criteria of ≥ 0.990?	✓			
Were all percent relative standard deviations (%RSD) ≤ 30%/15% and relative response factors (RRF) ≥ 0.05?		✓		
IIIb. Initial Calibration Verification				
Was an initial calibration verification standard analyzed after each initial calibration for each instrument?	✓			
Were all percent differences (%D) ≤ 20% or percent recoveries (%R) 80-120%?		✓		
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) ≤ 20% and relative response factors (RRF) ≥ 0.05?	✓			
V. Laboratory Blanks				
Was a laboratory blank associated with every sample in this SDG?	✓			
Was a laboratory blank analyzed at least once every 12 hours for each matrix and concentration?	✓			
Was there contamination in the laboratory blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Field blanks				
Were field blanks were identified in this SDG?	✓			
Were target compounds detected in the field blanks?		✓		
VII. Surrogate spikes				
Were all surrogate percent recovery (%R) within QC limits?	✓			
If the percent recovery (%R) for one or more surrogates was out of QC limits, was a reanalysis performed to confirm samples with %R outside of criteria?			✓

Validation Area	Yes	No	NA	Findings/Comments
VIII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.		✓		
Was a MS/MSD analyzed every 20 samples of each matrix?			✓	
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?			✓	
IX. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per analytical batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
X. Field duplicates				
Were field duplicate pairs identified in this SDG?		✓		
Were target compounds detected in the field duplicates?			✓	
XI. Internal standards				
Were internal standard area counts within -50% to +100% of the associated calibration standard?	✓			
Were retention times within + 30 seconds of the associated calibration standard?	✓			
XII. Compound quantitation				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound,
C_x = Concentration of compound,
S = Standard deviation of the RRFs
X = Mean of the RRFs

A_{is} = Area of associated internal standard
C_{is} = Concentration of internal standard

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (10 std)	Recalculated RRF (10 std)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported %RSD	Recalculated %RSD

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

Y N N/A Were all reported results recalculated and verified for all level IV samples?

Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(DF)}{(A_{is})(RRF)(V_o)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

RRF = Relative response factor of the calibration standard.

V_o = Volume or weight of sample pruged in milliliters (ml) or grams (g).

Df = Dilution factor.

%S = Percent solids, applicable to soils and solid matrices only.

Example:

Sample I.D. #11, NO:
LCS - H

Conc. = $\frac{(17420)(10.0)(1)}{(27241)(0.7119)(\quad)(\quad)}$

= 8.988 µg/L

#	Sample ID	Compound	Reported Concentration (µg/L)	Calculated Concentration ( )	Qualification
	LCS	H	8.988

SUBJECT: Former General Dynamics Trich Farm, WP18, Data Validation

Dear Ms. Kaminski,

Enclosed are the final validation reports for the fraction listed below. These SDGs were received on September 26, 2016. Attachment 1 is a summary of the samples that were reviewed for analysis.

LDC project #37163:

SDG #	**Fraction**
16-09-0215, 16-09-0579	Volatiles

The data validation was performed under Level III & IV validation guidelines. The analyses were validated using the following documents and variances, as applicable to each method:

- USEPA, Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Pei Geng
Project Manager/Senior Chemist

**Indicates sample underwent Level IV validation

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines (CLPNFG) for Superfund Organic Methods Data Review (June 2008). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) SW 846 Method 8260B

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results. Samples appended with a double asterisk on the cover page were subjected to Level IV data validation, which is comprised of the QC summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

A bromofluorobenzene (BFB) tune was performed at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

For compounds where average relative response factors (RRFs) were utilized, the percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs) with the following exceptions:

Date	Compound	%RSD	Associated Samples	Flag	A or P
08/23/16	Bromoform	18	All samples in SDG 16-09-0215	UJ (all non-detects)	A

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

Average relative response factors (RRF) for all compounds were within validation criteria.

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 20.0% for all compounds.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
09/06/16	Carbon disulfide Chloromethane Dichlorodifluoromethane trans-1,2-Dichloroethene Trichlorofluoromethane	38 24 24 24 21	All samples in SDG 16-09-0215	J (all detects) UJ (all non-detects)	A

All of the continuing calibration relative response factors (RRF) were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample 201601TB01 was identified as a trip blank. No contaminants were found.

Sample 20160198-1 and 20160198-2 was identified as an equipment blank. No contaminants were found with the following exceptions:

Blank ID	Collection Date	Compound	Concentration	Associated Samples
20160198-2	09/02/16	Carbon disulfide	1.8 ug/L	MW18B-100-GW MW18B-120-GW**

Sample concentrations were compared to concentrations detected in the field blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated field blanks.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

X. Field Duplicates

Samples MW18B-60-GW** and 20160199-A were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ug/L)		RPD (Limits)	Flag	A or P
	MW18B-60-GW**	20160199-A			
Acetone	47	45	4 (≤30)	-	-
1,1-Dichloroethene	1.1	1.3	17 (≤30)	-	-
Trichloroethene	1100	1100	0 (≤30)	-	-
2-Butanone	20U	8.4	82 (≤30)	J (all detects) UJ (all non-detects)	A
Toluene	2.0U	0.57	111 (≤30)	J (all detects) UJ (all non-detects)	A
Trichlorofluoromethane	2.0U	0.46	125 (≤30)	J (all detects) UJ (all non-detects)	A

XI. Internal Standards

All internal standard areas and retention times were within QC limits.

XII. Compound Quantitation

All compound quantitations met validation criteria for samples which underwent Level IV validation.

All compounds reported below the reporting limit (RL) were qualified as follows:

Sample	Compound	Flag	A or P
All samples in SDG 16-09-0215	All results reported below the RL.	J (all detects)	A

Raw data were not reviewed for Level III validation.

XIII. Target Compound Identifications

All target compound identifications met validation criteria for samples which underwent Level IV validation. Raw data were not reviewed for Level III validation.

XIV. System Performance

The system performance was acceptable for samples which underwent Level IV validation. Raw data were not reviewed for Level III validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to initial calibration %RSD, continuing calibration %D, field duplicates RPD, and results below the RL, data were qualified as estimated in nine samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Method: Volatiles (EPA SW 846 Method 8260B)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
Were all technical holding times met?	✓			
Was cooler temperature criteria met?	✓			
II. GC/MS Instrument performance check				
Were the BFB performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
IIIa. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If yes, did the initial calibration meet the curve fit acceptance criteria of ≥ 0.990?	✓			
Were all percent relative standard deviations (%RSD) ≤ 30%/15% and relative response factors (RRF) ≥ 0.05?		✓		
IIIb. Initial Calibration Verification				
Was an initial calibration verification standard analyzed after each initial calibration for each instrument?	✓			
Were all percent differences (%D) ≤ 20% or percent recoveries (%R) 80-120%?	✓			
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) ≤ 20% and relative response factors (RRF) ≥ 0.05?		✓		
V. Laboratory Blanks				
Was a laboratory blank associated with every sample in this SDG?	✓			
Was a laboratory blank analyzed at least once every 12 hours for each matrix and concentration?	✓			
Was there contamination in the laboratory blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Field blanks				
Were field blanks were identified in this SDG?	✓			
Were target compounds detected in the field blanks?	✓			
VII. Surrogate spikes				
Were all surrogate percent recovery (%R) within QC limits?	✓			
If the percent recovery (%R) for one or more surrogates was out of QC limits, was a reanalysis performed to confirm samples with %R outside of criteria?			✓

VALIDATION FINDINGS WORKSHEET
Matrix Spike/Matrix Spike Duplicates Results Verification

Reviewer: 9
2nd Reviewer: 2

METHOD: GC/MS VOA (EPA SW 846 Method 8260B)

The percent recoveries (%R) and Relative Percent Difference (RPD) of the matrix spike and matrix spike duplicate were recalculated for the compounds identified below using the following calculation:

% Recovery = 100 * (SSC - SC)/SA Where: SSC = Spiked sample concentration; SA = Spike added; SC = Sample concentration

RPD = I MSC - MSC I * 2/(MSC + MSDC) MSC = Matrix spike concentration; MSDC = Matrix spike duplicate concentration

MS/MSD sample: 10/11

Compound	Spike Added (µg/L)		Sample Concentration (µg/L)	Spiked Sample Concentration (µg/L)		Matrix Spike Percent Recovery		Matrix Spike Duplicate Percent Recovery		MS/MSD RPD	
	MS	MSD	------	MS	MSD	Reported	Recalc	Reported	Recalc	Reported	Recalculated

METHOD: GC/MS VOA (EPA SW 846 Method 8260B)

The percent recoveries (%R) and Relative Percent Difference (RPD) of the laboratoy control sample and laboratory control sample duplicate (if applicable) were recalculated for the compounds identified below using the following calculation:

% Recovery = 100 * SSC/SA Where: SSC = Spiked sample concentration; SA = Spike added

RPD = I LCSC - LCSDC I * 2/(LCSC + LCSDC) LCSC = Laboraotry control sample concentration LCSDC = Laboratory control sample duplicate concentration

LCS ID: 160906L00T

Compound	Spike Added (ug/L)		Spiked Sample Concentration (ug/L)		LCS Percent Recovery		LCSD Percent Recovery		LCS/LCSD RPD	
	LCS	LCSD	LCS	LCSD	Reported	Recalc.	Reported	Recalc.	Reported	Recalculated
1,1-Dichloroethene	10.00	NA	8.865	NA	89	89

Y N N/A Were all reported results recalculated and verified for all level IV samples?

Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(DF)}{(A_{is})(RRF)(V_o)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

RRF = Relative response factor of the calibration standard.

V_o = Volume or weight of sample pruged in milliliters (ml) or grams (g).

Df = Dilution factor.

%S = Percent solids, applicable to soils and solid matrices only.

Example:

Sample I.D. 4, H:

Conc. = $\frac{(4152)(10.0)(4)}{(231668)(0.6253)(\quad)(\quad)}$

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines (CLPNFG) for Superfund Organic Methods Data Review (June 2008). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) SW 846 Method 8260B Modified

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

A bromofluorobenzene (BFB) tune was performed at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

For compounds where average relative response factors (RRFs) were utilized, percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs) with the following exceptions:

Date	Compound	%RSD	Associated Samples	Flag	A or P
09/09/16	Bromoform Chloromethane	22 21	All samples in SDG 16-09-0579	UJ (all non-detects) UJ (all non-detects)	A

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination (r^2) were greater than or equal to 0.990.

Average relative response factors (RRF) for all compounds were within validation criteria.

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
09/09/16	Dichlorodifluoromethane	24	All samples in SDG 16-09-0579	UJ (all non-detects)	A

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 20.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
09/14/16	Bromomethane	33	All samples in SDG 16-09-0579	UJ (all non-detects)	A

All of the continuing calibration relative response factors (RRF) were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample 201601TB02 was identified as a trip blank. No contaminants were found.

Sample 20160198-3 was identified as an equipment blank. No contaminants were found.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

All internal standard areas and retention times were within QC limits.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) were qualified as follows:

Sample	Compound	Flag	A or P
All samples in SDG 16-09-0579	All results reported below the RL.	J (all detects)	A

Raw data were not reviewed for Level III validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level III validation.

XIV. System Performance

Raw data were not reviewed for Level III validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to initial calibration RSD, ICV %D, continuing calibration %D, and results below the RL, data were qualified as estimated in five samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

SUBJECT: Former General Dynamics Trich Farm, Data Validation

Dear Ms. Kaminski,

Enclosed is the final validation report for the fraction listed below. This SDG was received on October 5, 2016. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC project #37201:

SDG #	Fraction
BC091416-13	Volatiles

The data validation was performed under Level III & IV validation guidelines. The analyses were validated using the following documents and variances, as applicable to each method:

- USEPA, Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Pei Geng
Project Manager/Senior Chemist

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines (CLPNFG) for Superfund Organic Methods Data Review (June 2008). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) SW 846 Method 8260B Modified

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

A bromofluorobenzene (BFB) tune was performed at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all compounds were within validation criteria.

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
09/13/16	Dichlorodifluoromethane 2-Butanone	33.3 50.0	All samples in SDG BC091416-13	UJ (all non-detects) UJ (all non-detects)	A

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 30.0% for all compounds.

All of the continuing calibration relative response factors (RRF) were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	%R (Limits)	Flag	A or P
EI61605-BS1 (All samples in SDG BC091416-13)	Dichlorodifluoromethane	63.7 (70-130)	UJ (all non-detects)	P

X. Field Duplicates

No field duplicates were identified in this SDG.

XI. Internal Standards

All internal standard areas and retention times were within QC limits.

XII. Compound Quantitation

All compounds reported below the reporting limit (RL) were qualified as follows:

Sample	Compound	Flag	A or P
All samples in SDG BC091416-13	All results reported below the RL.	J (all detects)	A

Raw data were not reviewed for Level III validation.

XIII. Target Compound Identifications

Raw data were not reviewed for Level III validation.

XIV. System Performance

Raw data were not reviewed for Level III validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to ICV %D, LCS %R, and results below the RL, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

SV115D	E609050-06	Air	09/14/16

**Indicates sample underwent Level IV validation

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines (CLPNFG) for Superfund Organic Methods Data Review (June 2008). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) Method TO-15

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results. Samples appended with a double asterisk on the cover page were subjected to Level IV data validation, which is comprised of the QC summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound for analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

The canisters were properly pressurized and handled.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

A bromofluorobenzene (BFB) tune was performed at 24 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
09/13/16	1,2,4-Trichlorobenzene Hexachlorobutadiene	39.1 46.2	All samples in SDG BC091416-13	UJ (all non-detects) UJ (all non-detects)	A

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 30.0% for all compounds.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Surrogates

Although surrogates were not required by the method, surrogate analysis was performed by the laboratory. Surrogate recoveries (%R) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

X. Field Duplicates

Samples SV115 and SV115D were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ug/m^3)		RPD (Limits)	Flag	A or P
	SV115	SV115D			
Vinyl chloride	8.5	6.8	22 (≤30)	-	-
Trichlorofluoromethane	420	280	40 (≤30)	J (all detects)	A
1,1-Dichloroethene	840	550	42 (≤30)	J (all detects)	A
1,1,2-Trichlorotrifluoroethane	3600	2400	40 (≤30)	J (all detects)	A
Carbon disulfide	21	25	17 (≤30)	-	-
1,1-Dichloroethane	44	41	7 (≤30)	-	-
cis-1,2-Dichloroethene	8.4	27	105 (≤30)	J (all detects)	A
Benzene	49	48	2 (≤30)	-	-
Trichloroethene	1200	1200	0 (≤30)	-	-
Toluene	82	83	1 (≤30)	-	-
Ethylbenzene	42	50	17 (≤30)	-	-
m,p-Xylenes	120	140	15 (≤30)	-	-
o-Xylene	72	86	18 (≤30)	-	-
1,2,4-Trimethylbenzene	21	29	32 (≤30)	J (all detects)	A

Compound	Concentration (ug/m³)		RPD (Limits)	Flag	A or P
	SV115	SV115D			
1,1,1-Trichloroethane	11U	36	106 (≤30)	J (all detects) UJ (all non-detects)	A
1,3,5-Trimethylbenzene	10U	12	18 (≤30)	-	-

XI. Internal Standards

All internal standard areas and retention times were within QC limits.

XII. Compound Quantitation

All compound quantitations met validation criteria for samples which underwent Level IV validation.

All compounds reported below the reporting limit (RL) were qualified as follows:

Sample	Compound	Flag	A or P
All samples in SDG BC091416-13	All results reported below the RL.	J (all detects)	A

Raw data were not reviewed for Level III validation.

XIII. Target Compound Identifications

All target compound identifications met validation criteria for samples which underwent Level IV validation. Raw data were not reviewed for Level III validation.

XIV. System Performance

The system performance was acceptable for samples which underwent Level IV validation. Raw data were not reviewed for Level III validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to ICV %D, field duplicate RPD, and results below the RL, data were qualified as estimated in five samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

VALIDATION FINDINGS CHECKLIST

Reviewer: 9
2nd Reviewer: K

Method: Volatiles (EPA Method TO-15)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
Were all technical holding times met?	✓			
Was canister pressure criteria met?	✓			
II. GC/MS Instrument performance check				
Were the BFB performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 24 hour clock criteria?	✓			
IIIa. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) ≤ 30%?	✓			
IIIb. Initial calibration verification				
Was an initial calibration verification standard analyzed after every ICAL for each instrument?	✓			
Were all percent differences (%D) ≤ 30% or percent recoveries (%R) 70-130%?		✓		
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 24 hours for each instrument?	✓			
Were all percent differences (%D) < 30% or percent recoveries (%R) 70-130%?	✓			
V. Laboratory Blanks/Canister Blanks				
Was a laboratory blank associated with every sample in this SDG?	✓			
Was a laboratory blank analyzed at least once every 24 hours for each matrix and concentration?	✓			
Was there contamination in the laboratory blanks? If yes, please see the Blanks validation completeness worksheet.	✓	✓		
Was a canister blank analyzed for every canister?	✓			
Was there contamination in the canister blanks? If yes, please see the Canister Blanks validation completeness worksheet.		✓		
VI. Field Blanks				
Were field blanks identified in this SDG?		✓		
Were target compounds detected in the field blanks?			✓	
VII. Surrogate spikes (Optional)				
Were all surrogate percent recoveries (%R) within QC limits?	✓			
If the percent recovery (%R) for one or more surrogates was out of QC limits, was a reanalysis performed to confirm samples with %R outside of criteria?			✓	
VIII. Laboratory Duplicate				
Was a laboratory duplicate analyzed for this SDG?	✓	✓		
Were the relative percent differences (RPD) within the QC limits?	✓		✓	

LDC #: 37R0448

VALIDATION FINDINGS CHECKLIST

Reviewer: Q
2nd Reviewer: AC

Validation Area	Yes	No	NA	Findings/Comments
IX. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per analytical batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
X. Field duplicates				
Were field duplicate pairs identified in this SDG?	✓	✓		
Were target compounds detected in the field duplicates?	✓			
XI. Internal standards				
Were internal standard area counts within ± 40% from the associated calibration standard?	✓			
Were retention times within ± 20.0 seconds from the associated calibration standard?	✓			
XII. Compound quantitation				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and RLs adjusted to reflect all sample dilutions applicable to level IV validation?	✓			
XIII. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓

METHOD: GC/MS VOA (EPA Method TO-15)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound,
C_x = Concentration of compound,
S = Standard deviation of the RRFs
X = Mean of the RRFs

A_{is} = Area of associated internal standard
C_{is} = Concentration of internal standard

METHOD: GC/MS VOA (EPA TO-15)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

#	Standard ID	Calibration Date	Compound (Reference internal Standard)	Average RRF (initial)	Reported RRF (CC) *	Recalculated RRF (CC)	Reported %D	Recalculated %D
1	~~ICAL~~ CCV-20C	9/20/16	~~Methylene chloride~~ (1st internal standard)	0.608	~~0.654~~ 0.631	0.631	7.1	3.7
			~~Trichlorethene~~ (2nd internal standard)	1.168	1.111	1.136	4.9	2.7
			~~Toluene~~ (3rd internal standard)	6.503	6.175	6.953	4.2	6.9

SUBJECT: Former General Dynamics Trich Farm, Data Validation

Dear Ms. Kaminski,

Enclosed is the final validation report for the fraction listed below. This SDG was received on October 19, 2016. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC project #37297:

SDG #	Fraction
BC100616-10	Volatiles

The data validation was performed under Level III & IV validation guidelines. The analyses were validated using the following documents and variances, as applicable to each method:

- USEPA, Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Pei Geng
Project Manager/Senior Chemist

**Indicates sample underwent Level IV validation

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines (CLPNFG) for Superfund Organic Methods Data Review (June 2008). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) Method TO-15/8260SV

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results. Samples appended with a double asterisk on the cover page were subjected to Level IV data validation, which is comprised of the QC summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound for analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

The canisters were properly pressurized and handled.

All technical holding time requirements were met.

II. GC/MS Instrument Performance Check

A bromofluorobenzene (BFB) tune was performed at 24 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration and Initial Calibration Verification

An initial calibration was performed as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%RSD	Associated Samples	Flag	A or P
09/18/16	Hexachlorobutadiene	31.27	02SV112-005** 02SV109-005 02SV999-000A2	UJ (all non-detects)	P

The percent differences (%D) of the initial calibration verification (ICV) standard were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
09/18/16	Dichlorodifluoromethane Chloromethane m,p-Xylenes 1,2,4-Trichlorobenzene	31.7 34.3 60.0 32.2	02SV112-005** 02SV109-005 02SV999-000A2	J (all detects) UJ (all non-detects)	P

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The percent differences (%D) were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
10/06/16	Chloromethane m,p-Xylenes	39.9 50.9	02SV112-005** 02SV109-005 02SV999-000A2	J (all detects) UJ (all non-detects)	P

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

VI. Field Blanks

Sample 02SV999-000A2 was identified as an ambient blank. No contaminants were found with the following exceptions:

Blank ID	Collection Date	Compound	Concentration	Associated Samples
02SV999-000A2	10/05/16	Chloromethane	2.3 ug/m^3	02SV112-005** 02SV111-005 02SV111-005D 02SV109-005

Sample concentrations were compared to concentrations detected in the field blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated field blanks.

VII. Surrogates

Although surrogates were not required by the method, surrogate analysis was performed by the laboratory. Surrogate recoveries (%R) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
EJ61110-BSI (02SV111-005 02SV111-005D)	Dichlorodifluoromethane	68.4 (70-130)	-	UJ (all non-detects)	P

Relative percent differences (RPD) were within QC limits.

X. Field Duplicates

Samples 02SV111-005 and 02SV111-005D were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ug/m^3)		RPD (Limits)	Flag	A or P
	02SV111-005	02SV111-005D			
Trichlorofluoromethane	600	600	0 (≤30)	-	-
1,1,2-Trichloro-1,2,2-trifluoroethane	20000	22000	10 (≤30)	-	-

XI. Internal Standards

All internal standard areas and retention times were within QC limits.

XII. Compound Quantitation

All compound quantitations met validation criteria for samples which underwent Level IV validation.

All compounds reported below the reporting limit (RL) were qualified as follows:

Sample	Compound	Flag	A or P
All samples in SDG BC100616-10	All results reported below the RL.	J (all detects)	A

Raw data were not reviewed for Level III validation.

XIII. Target Compound Identifications

All target compound identifications met validation criteria for samples which underwent Level IV validation. Raw data were not reviewed for Level III validation.

XIV. System Performance

The system performance was acceptable for samples which underwent Level IV validation. Raw data were not reviewed for Level III validation.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to ICAL %RSD, ICV %D, continuing calibration %D, LCS %R, and results below the RL, data were qualified as estimated in five samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

METHOD: GC/MS VOA (EPA Method TO-15)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$ — A_x = Area of Compound — A_{is} = Area of associated internal standard

average RRF = sum of the RRFs/number of standards — C_x = Concentration of compound, — C_{is} = Concentration of internal standard

%RSD = 100 * (S/X) — S= Standard deviation of the RRFs, — X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (IS)	Reported RRF (RRF 10 std)	Recalculated RRF (RRF 10 std)	Reported Average RRF (Initial)	Recalculated Average RRF (Initial)	Reported %RSD	Recalculated %RSD

METHOD: GC/MS VOA (EPA Method TO-15)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
RRF = (Ax)(Cis)/(Ais)(Cx)

Where:
ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
Ax = Area of compound,
Cx = Concentration of compound,
Ais = Area of associated internal standard
Cis = Concentration of internal standard

#	Standard ID	Calibration Date	Compound (IS)	Average RRF (Initial)	Reported RRF (CC)	Recalculated RRF (CC)	Reported % D	Recalculated %D

METHOD: GC/MS VOA (EPA Method TO-15)

Y N N/A Were all reported results recalculated and verified for all level IV samples?

Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(DF)}{(A_{is})(RRF)(V_o)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

RRF = Relative response factor of the calibration standard.

V_o = Volume or weight of sample pruged in milliliters (ml) or grams (g).

Df = Dilution factor.

%S = Percent solids, applicable to soils and solid matrices only.

Example:

Sample I.D. 1, Benzene

Conc. = $\frac{(169230)(50)(\quad)}{(3895191)(4.228)(\quad)}$

= 5.138 ppbv

$ug/m^3 = \frac{(5.14)(78)}{(24)} = 16.698$

$\approx$ 17 ug/m3

Physical Properties Data
Trich Farm 18; 149429

Dear Ms. Russell:

Please find enclosed report for Physical Properties analyses conducted upon samples received from your Trich Farm 18; 149429 project. All analyses were performed by applicable ASTM, EPA, or API methodologies. The samples are currently in storage and will be retained for thirty days past completion of testing at no charge. Please note that the samples will be disposed of at that time. You may contact me regarding storage, disposal, or return of the samples.

PTS Laboratories appreciates the opportunity to be of service. If you have any questions or require additional information, please give me a call at (562) 347-2502.

Sincerely,
PTS Laboratories, Inc.

Mobile Geochemistry Inc.

23 September 2016

Ms. Eileen Russell
Brown and Caldwell - San Diego
9665 Chesapeake Drive Suite 201
San Diego, CA 92123

H&P Project: BC091416-13
Client Project: Work Plan 18-149429 / San Diego

Dear Ms. Eileen Russell:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 14-Sep-16 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP, the National Environmental Laboratory Accreditation Conference (NELAC) and the Department of Defense Accreditation Programs.

ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
SV112	E609050-01	Vapor	14-Sep-16	14-Sep-16
SV109	E609050-02	Vapor	14-Sep-16	14-Sep-16
SV111	E609050-03	Vapor	14-Sep-16	14-Sep-16
SV108	E609050-04	Vapor	14-Sep-16	14-Sep-16
SV115	E609050-05	Vapor	14-Sep-16	14-Sep-16
SV115D	E609050-06	Vapor	14-Sep-16	14-Sep-16

Due to the presence of an elevated 1,1,2-Trichlorotrifluoroethane concentration, sample SV111 was analyzed by H&P 8260SV rather than EPA Method TO-15.

The following EPA Method TO-15 results are not reported by H&P 8260SV:
Dichlorotetrafluoroethane
4-Ethyltoluene

Notes and Definitions

QL-1L	The LCS and/or LCSD recoveries fell below the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased low.
LCC	Leak Check Compound
ND	Analyte NOT DETECTED at or above the reporting limit
MDL	Method Detection Limit
%REC	Percent Recovery
RPD	Relative Percent Difference

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP and the ISO 17025 programs, certification number L15-279-R1

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

Site Notes such as weather, visitors, scope deviations, health & safety issues, etc. (When making sample specific notes, reference the line number above):

(1) SV113: No flow, high vac, no sample
(2) SV110: No flow, high vac, no sample
(3) SV108: Very low flow, high vac. Per client, took out 1 PV & sampled
(4) SV117: H_2O in probe - in landscaped area. Also probe tag said 5'
(5) SV116 - No flow, high vac, no sample
(6) SV115 - Very low flow, high vac; able to purge 3PV by purging to 100", then shutting off pump & letting vac dissipate & repeat
(7) SV114 - No flow, high vac, no sample

→ SV108: Per client, probe specs were 3.5" D

Acq On : 20 Sep 2016 5:42 pm
Operator : CSP
Sample : EI62109-BS1
Misc :
ALS Vial : 8 Sample Multiplier: 1

Quant Time: Sep 21 11:35:59 2016
Quant Method : C:\msdchem\1\METHODS\091316PPBV.M
Quant Title : EPA TO-15 Analysis GC/MS #9
QLast Update : Tue Sep 13 15:08:40 2016
Response via : Initial Calibration

#2
1,1,1-Trifluoroethane
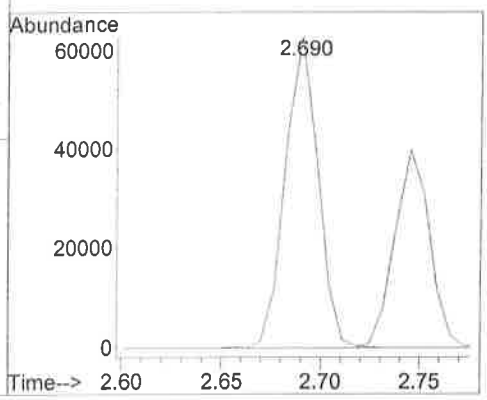
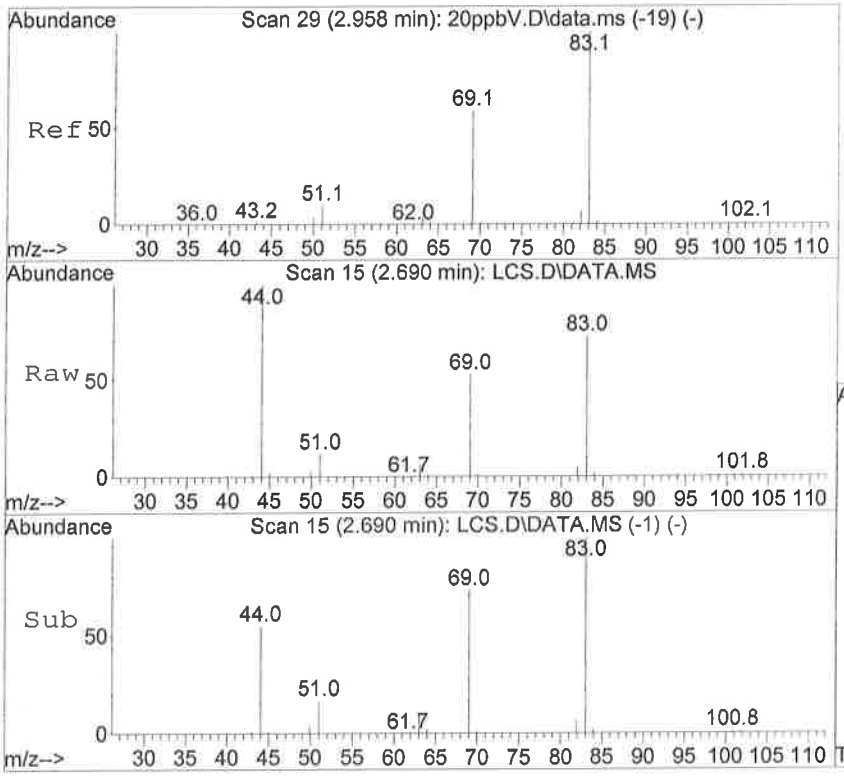
Concen: 10.44 ppbV
RT: 2.690 min Scan# 15
Delta R.T. 0.034 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 69 Resp: 71518

Ion	Ratio	Lower	Upper
69	100		
65	0.0	28.4	42.6#

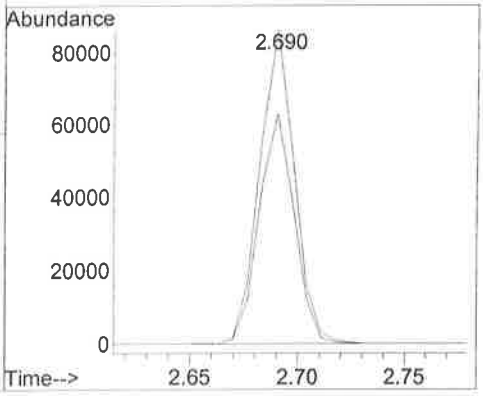


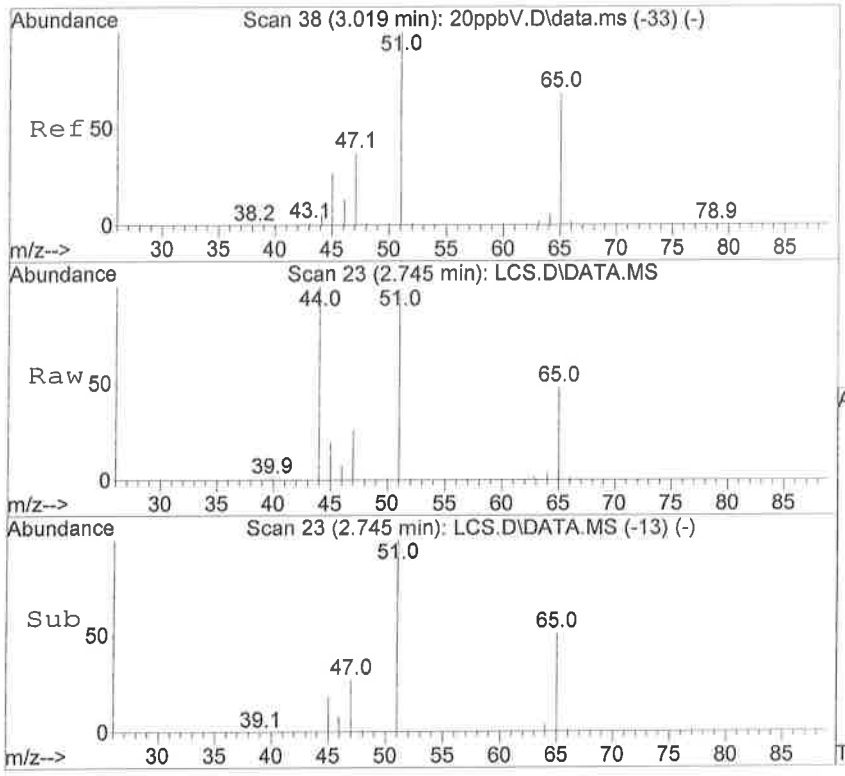


#3
1,1,1,2-Tetrafluoroethane
Concen: 17.47 ppbV
RT: 2.690 min Scan# 15
Delta R.T. 0.007 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 83 Resp: 96315

Ion	Ratio	Lower	Upper
83	100		
69	74.3	58.1	87.1

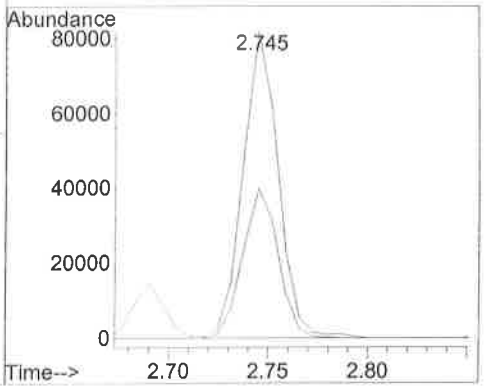


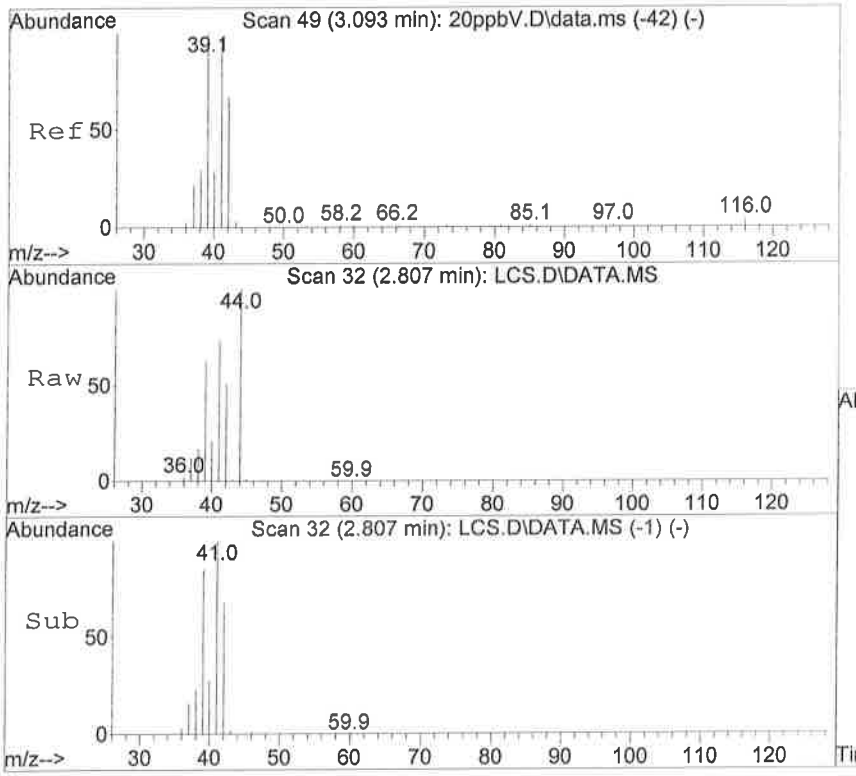


#4
1,1-Difluoroethane
Concen: 16.89 ppbV
RT: 2.745 min Scan# 23
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 51 Resp: 100263

Ion	Ratio	Lower	Upper
51	100		
65	49.0	43.7	65.5

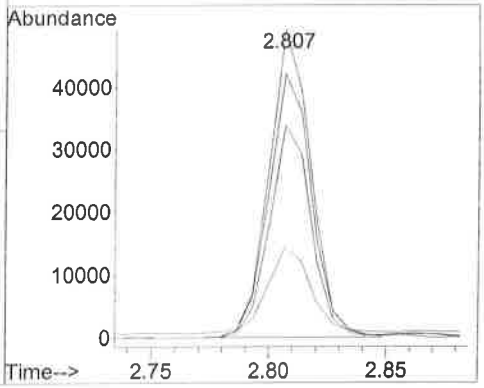


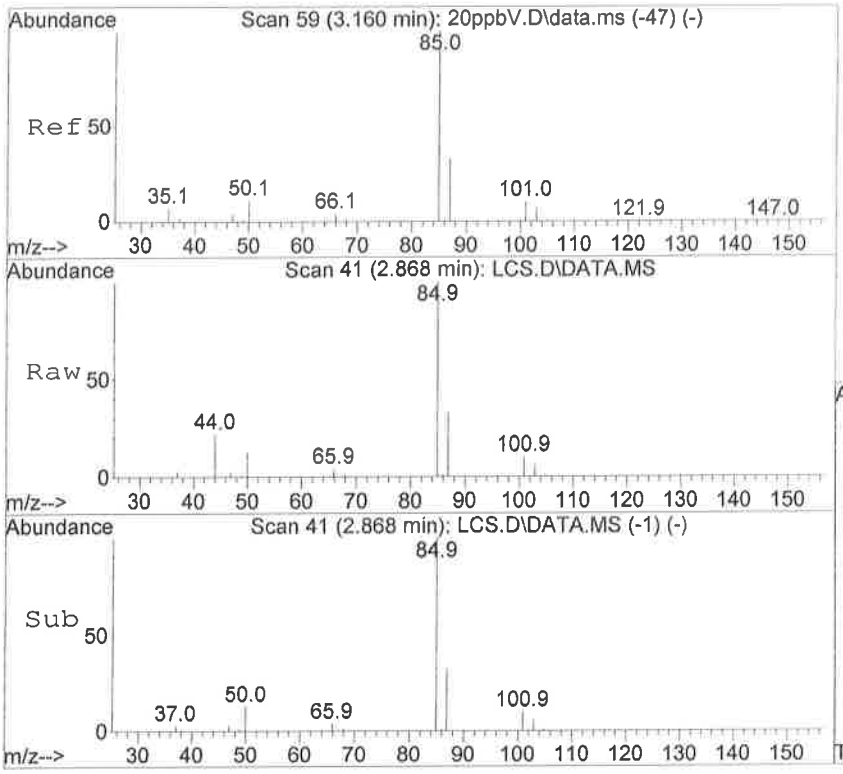


#5
Propene
Concen: 15.18 ppbV
RT: 2.807 min Scan# 32
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 41 Resp: 60555

Ion	Ratio	Lower	Upper
41	100		
42	69.0	45.2	87.8
40	30.2	19.0	36.8
39	89.1	54.3	105.5

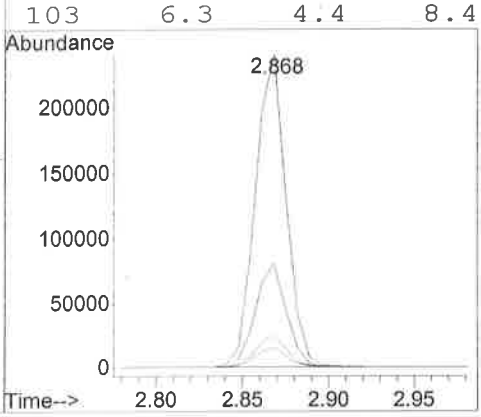


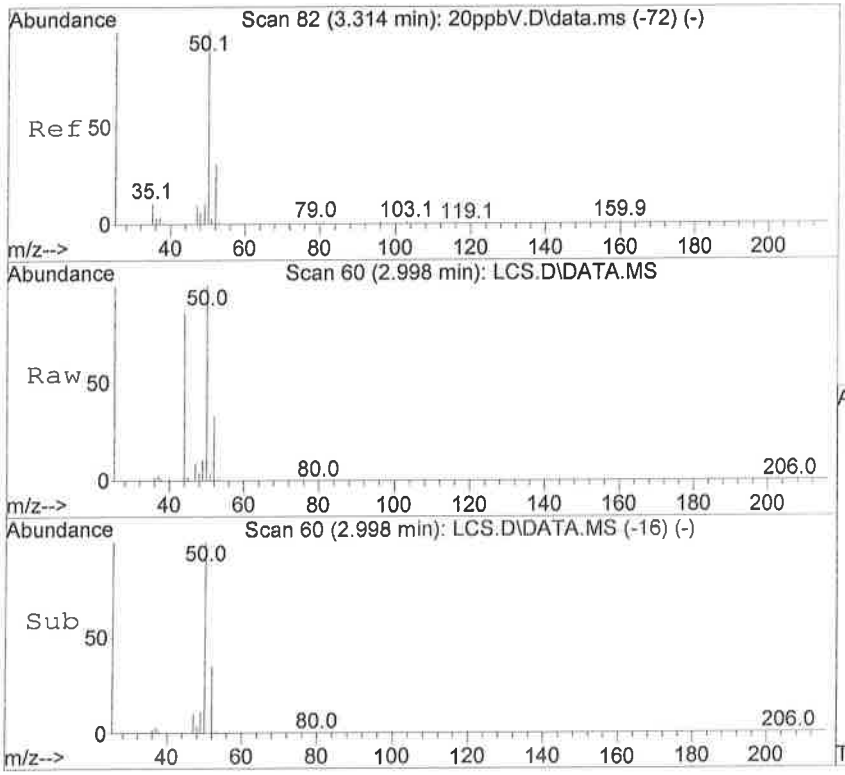


#6
Dichlorodifluoromethane
Concen: 18.66 ppbV
RT: 2.868 min Scan# 41
Delta R.T. 0.007 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 85 Resp: 298633

Ion	Ratio	Lower	Upper
85	100		
87	33.5	21.9	42.5
101	10.0	6.6	12.8
103	6.3	4.4	8.4

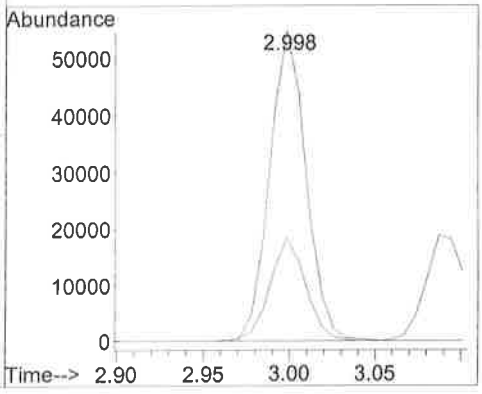


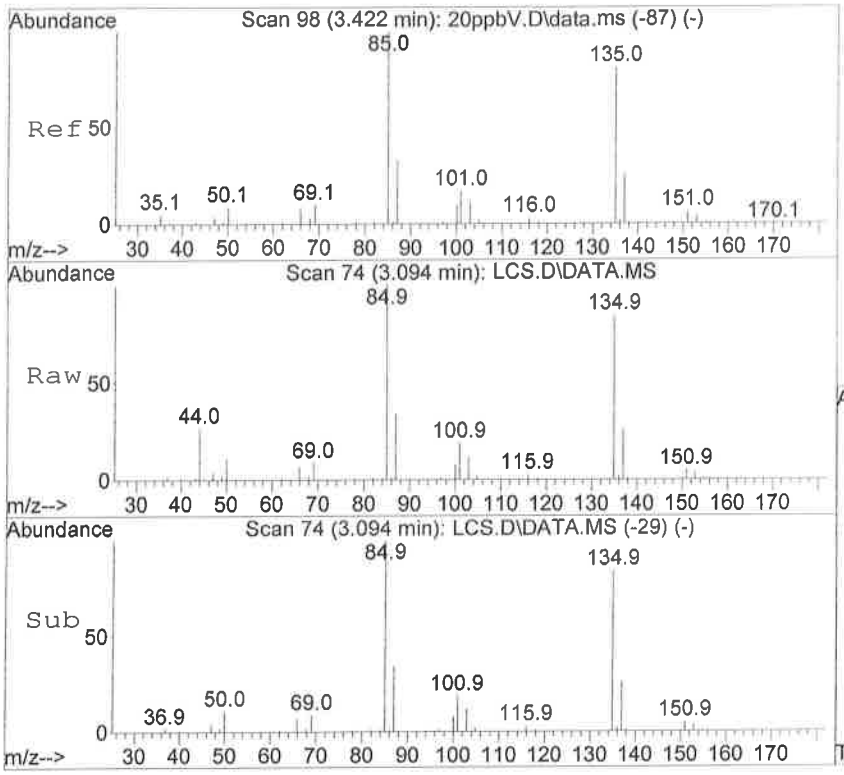


#7
Chloromethane
Concen: 17.83 ppbV
RT: 2.998 min Scan# 60
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 50 Resp: 80795

Ion	Ratio	Lower	Upper
50	100		
52	32.7	23.0	44.6

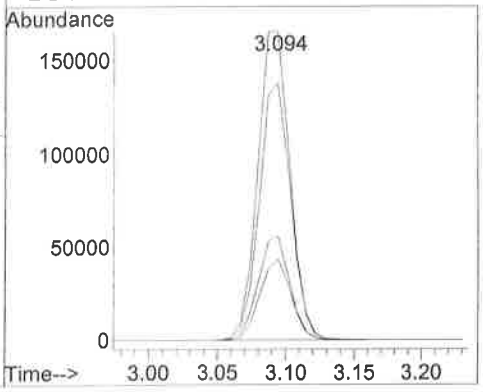


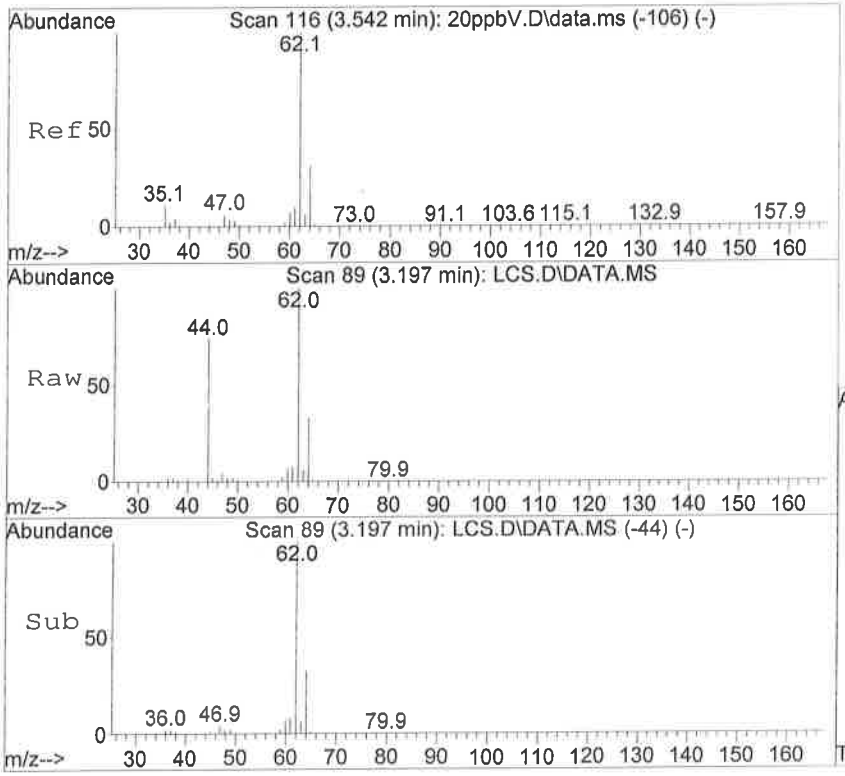


#8
Dichlorotetrafluoroethane
Concen: 18.26 ppbV
RT: 3.094 min Scan# 74
Delta R.T. 0.007 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 85 Resp: 271693

Ion	Ratio	Lower	Upper
85	100		
87	33.0	22.1	42.9
135	82.1	55.1	107.1
137	25.6	17.8	34.6

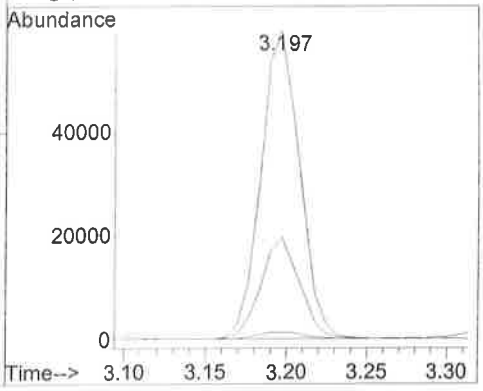


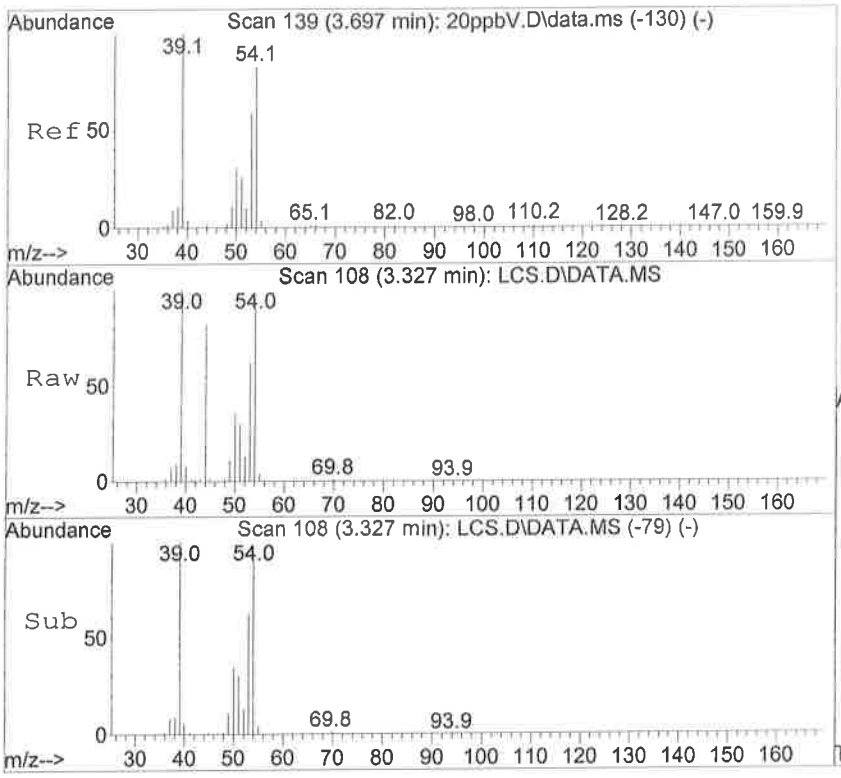


#9
Vinyl Chloride
Concen: 18.00 ppbV
RT: 3.197 min Scan# 89
Delta R.T. 0.007 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 62 Resp: 98219

Ion	Ratio	Lower	Upper
62	100		
64	32.7	22.0	42.8
35	0.0	0.0	0.0
37	2.3	1.4	2.8

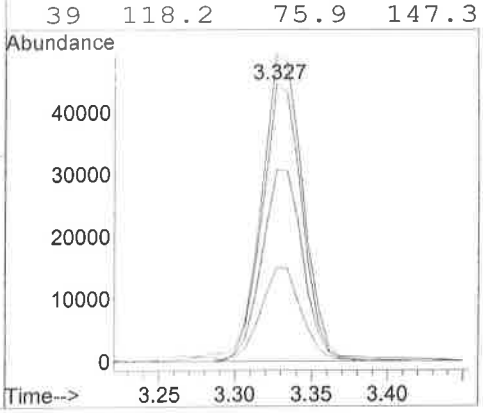


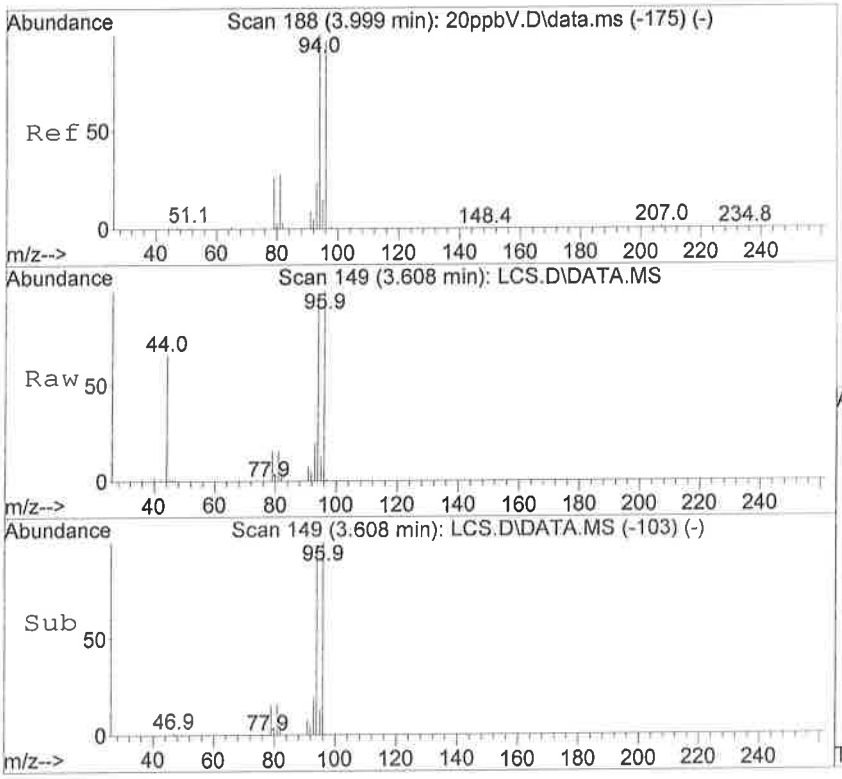


#10
1,3-Butadiene
Concen: 17.30 ppbV
RT: 3.327 min Scan# 108
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 54 Resp: 80273

Ion	Ratio	Lower	Upper
54	100		
53	70.7	46.0	89.4
51	34.3	20.5	39.7
39	118.2	75.9	147.3

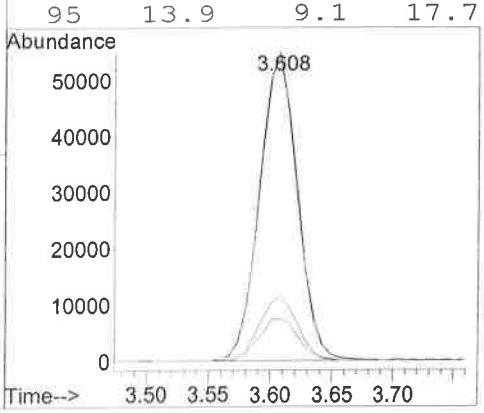


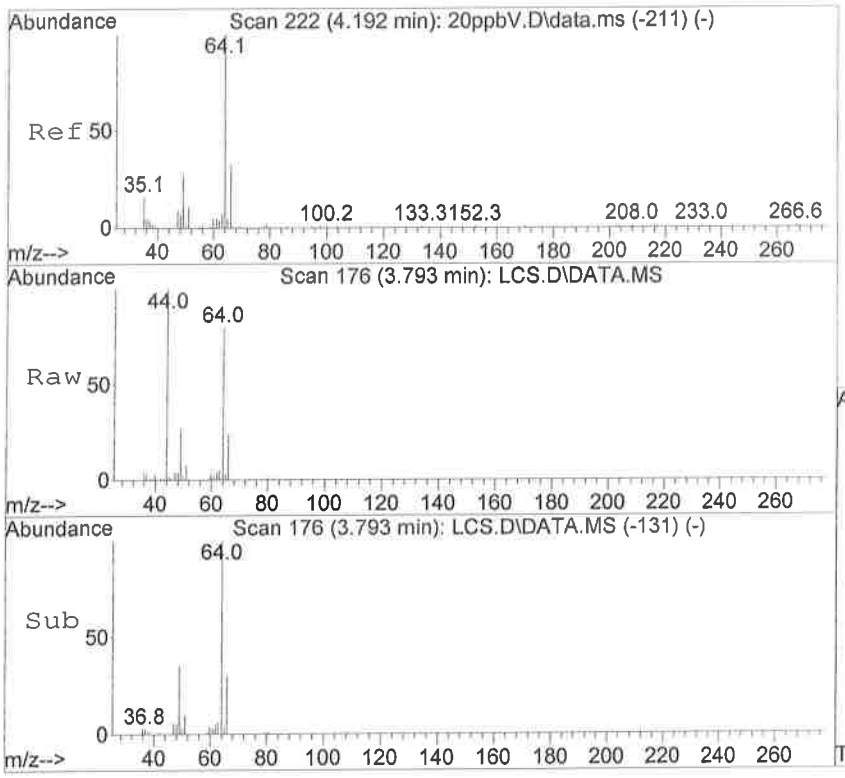


#11
Bromomethane
Concen: 16.96 ppbV
RT: 3.608 min Scan# 149
Delta R.T. 0.014 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 94 Resp: 116836

Ion	Ratio	Lower	Upper
94	100		
96	98.2	63.1	122.5
93	20.6	13.9	26.9
95	13.9	9.1	17.7

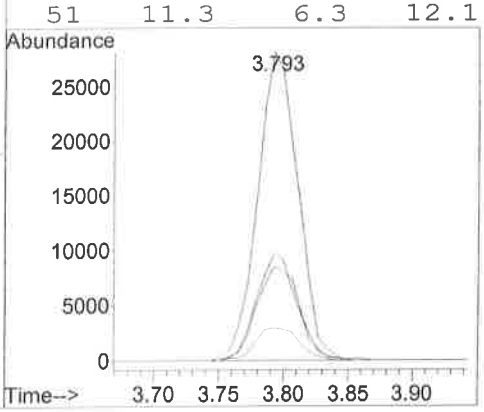


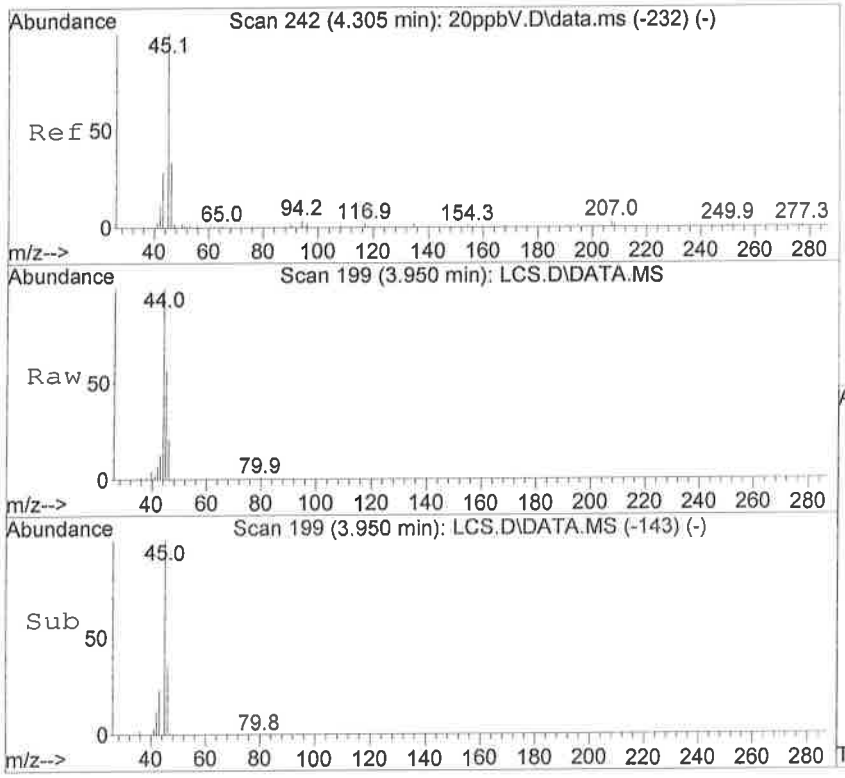


#12
Chloroethane
Concen: 17.22 ppbV
RT: 3.793 min Scan# 176
Delta R.T. 0.007 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 64 Resp: 60703

Ion	Ratio	Lower	Upper
64	100		
66	32.0	22.5	43.7
49	34.2	20.2	39.2
51	11.3	6.3	12.1

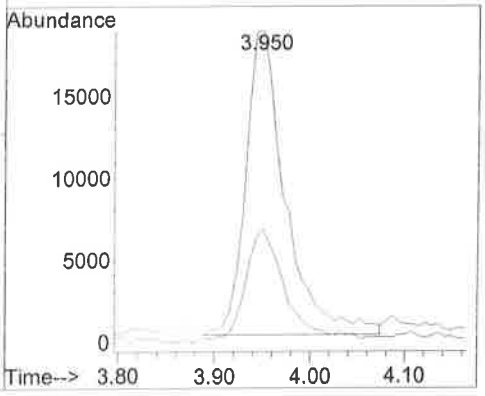


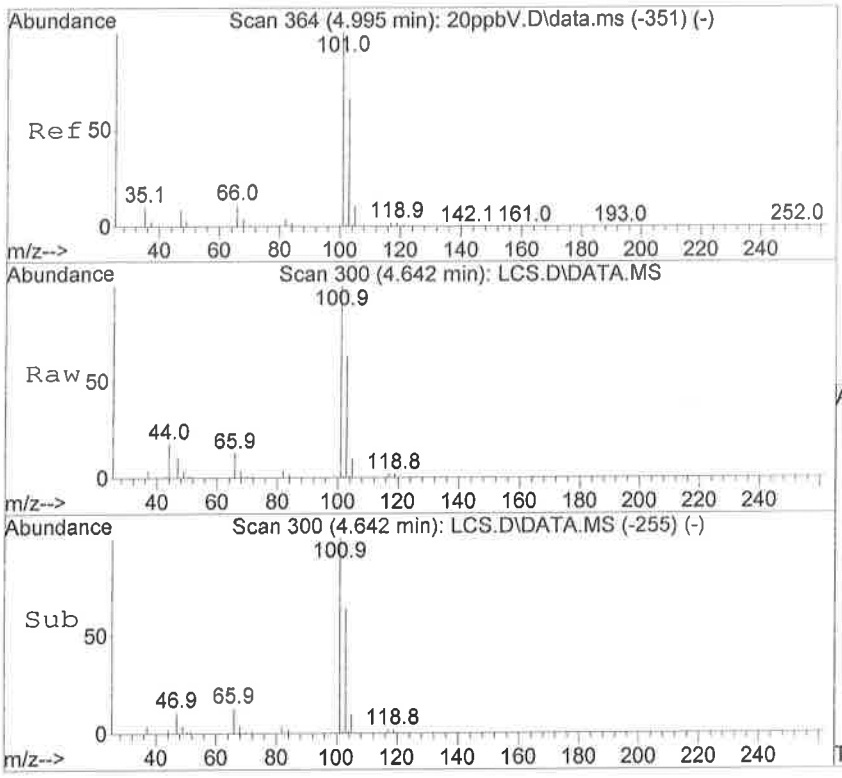


#13
Ethanol
Concen: 13.00 ppbV
RT: 3.950 min Scan# 199
Delta R.T. -0.014 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 45 Resp: 53300

Ion	Ratio	Lower	Upper
45	100		
46	36.5	29.3	43.9

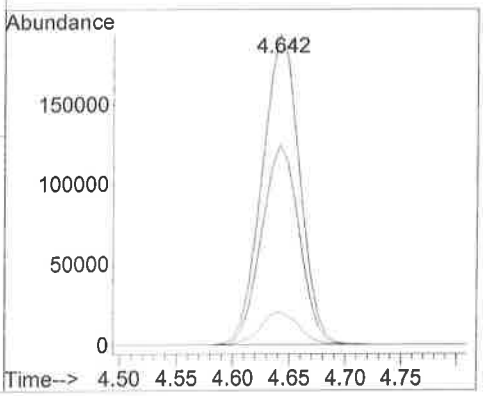


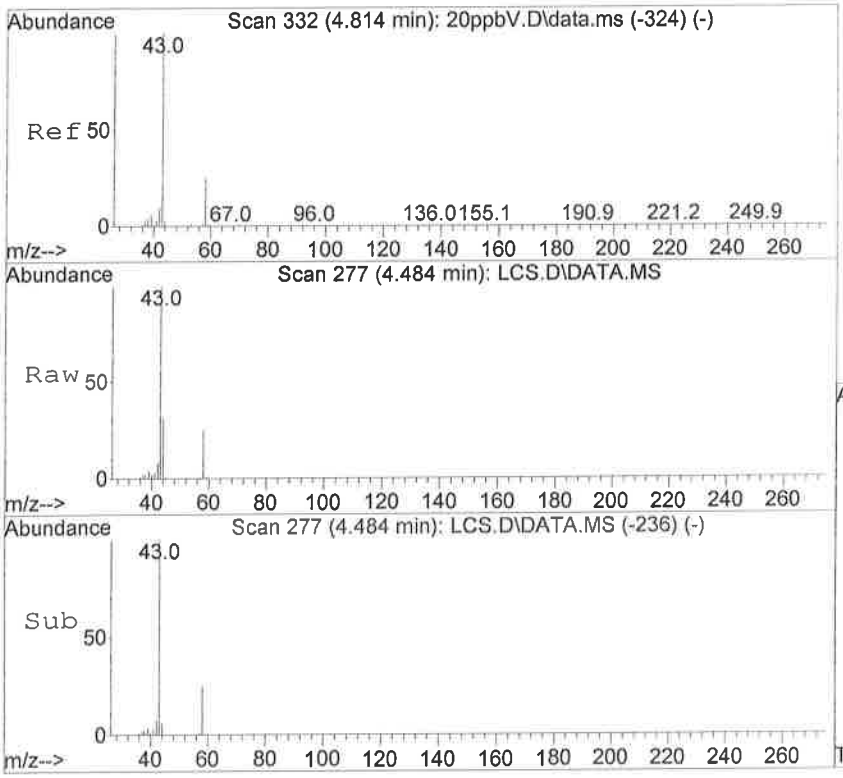


#14
Trichlorofluoromethane
Concen: 17.35 ppbV
RT: 4.642 min Scan# 300
Delta R.T. 0.007 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion:101 Resp: 443830

Ion	Ratio	Lower	Upper
101	100		
103	64.7	44.1	85.7
105	10.5	7.2	14.0

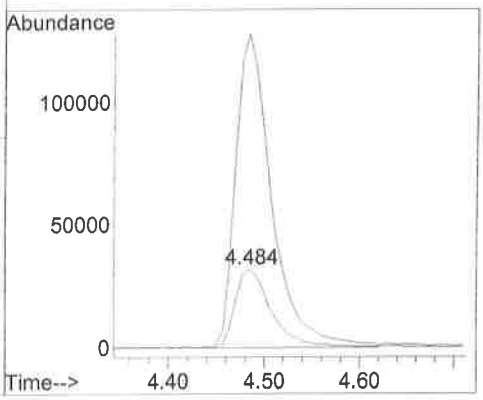


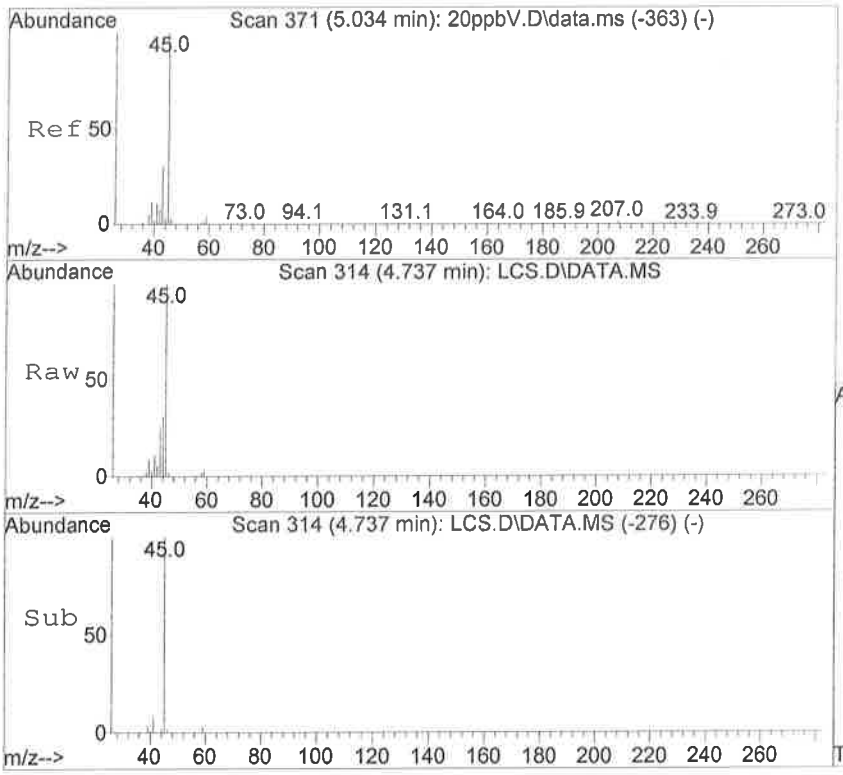


#15
Acetone
Concen: 19.50 ppbV
RT: 4.484 min Scan# 277
Delta R.T. -0.021 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 58 Resp: 83464

Ion	Ratio	Lower	Upper
58	100		
43	406.1	222.0	431.0

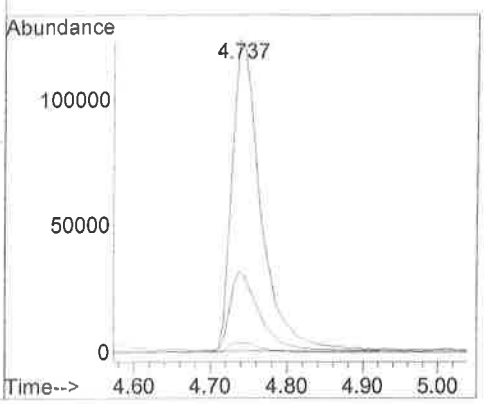


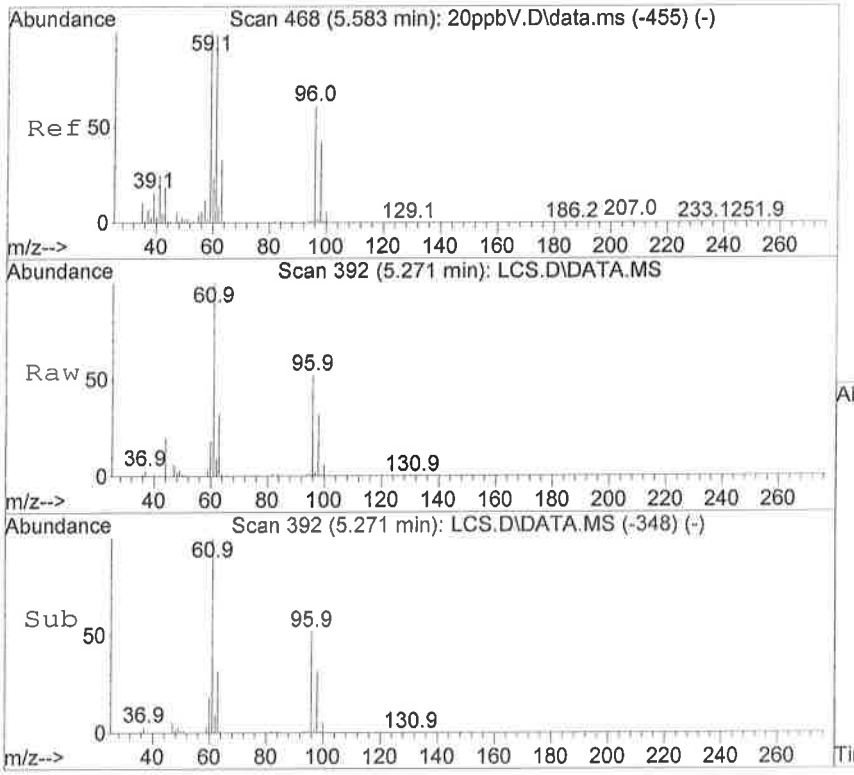


#16
Isopropyl Alcohol
Concen: 12.98 ppbV
RT: 4.737 min Scan# 314
Delta R.T. -0.041 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 45 Resp: 326477

Ion	Ratio	Lower	Upper
45	100		
43	25.7	16.3	31.5
59	3.3	2.6	5.0

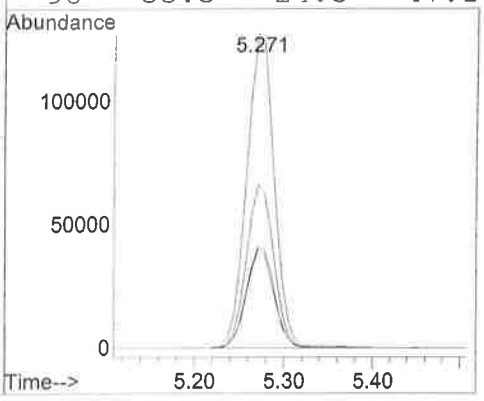


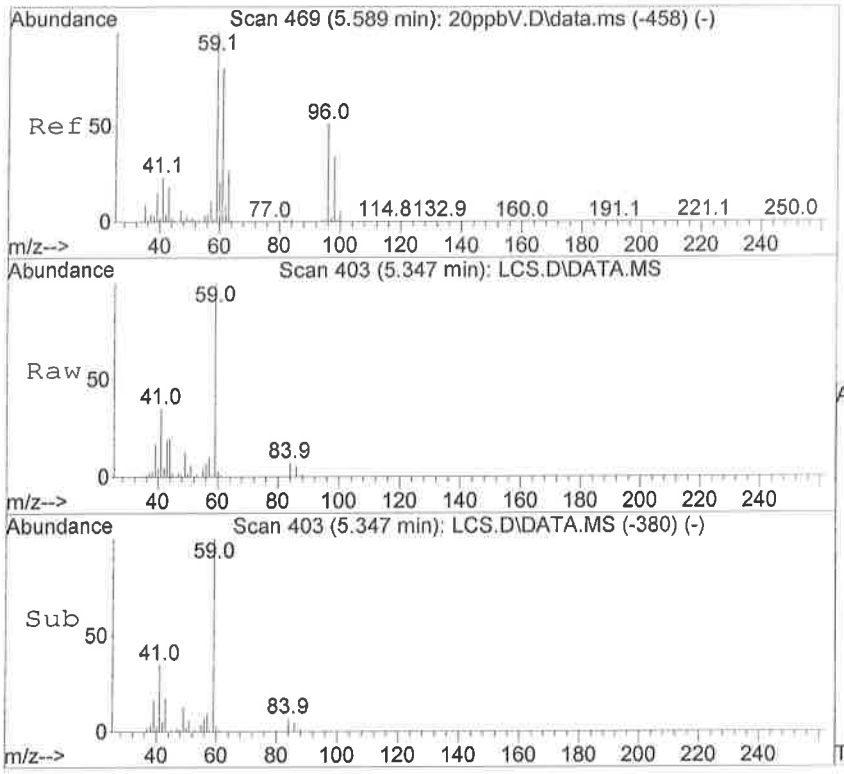


#17
1,1-Dichloroethene
Concen: 18.26 ppbV
RT: 5.271 min Scan# 392
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 61 Resp: 292770

Ion	Ratio	Lower	Upper
61	100		
63	28.8	21.7	42.1
96	52.1	37.9	73.7
98	33.3	24.3	47.1

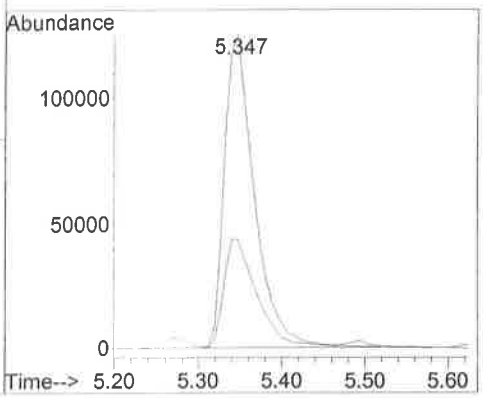


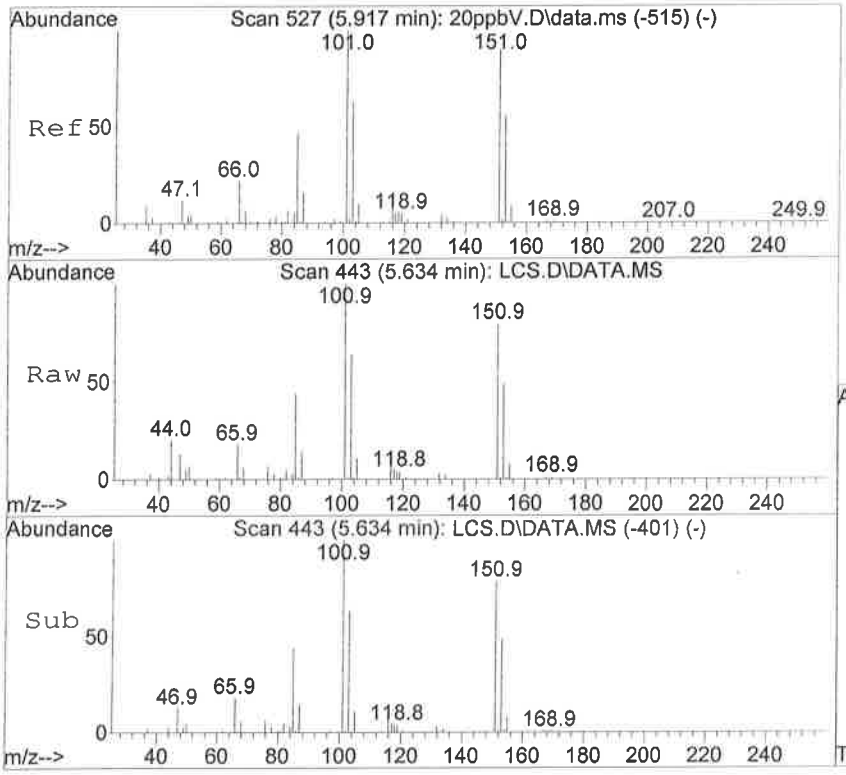


#18
tert-Butyl Alcohol
Concen: 14.40 ppbV
RT: 5.347 min Scan# 403
Delta R.T. -0.041 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 59 Resp: 256385

Ion	Ratio	Lower	Upper
59	100		
41	40.2	20.2	30.2#

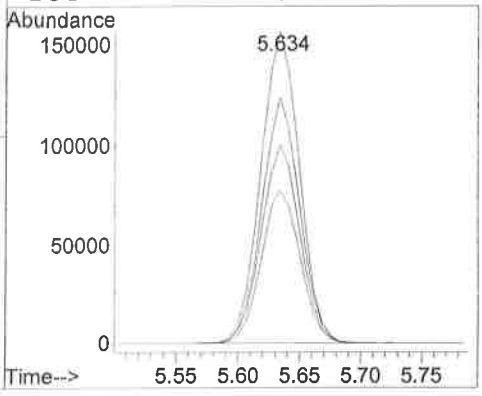


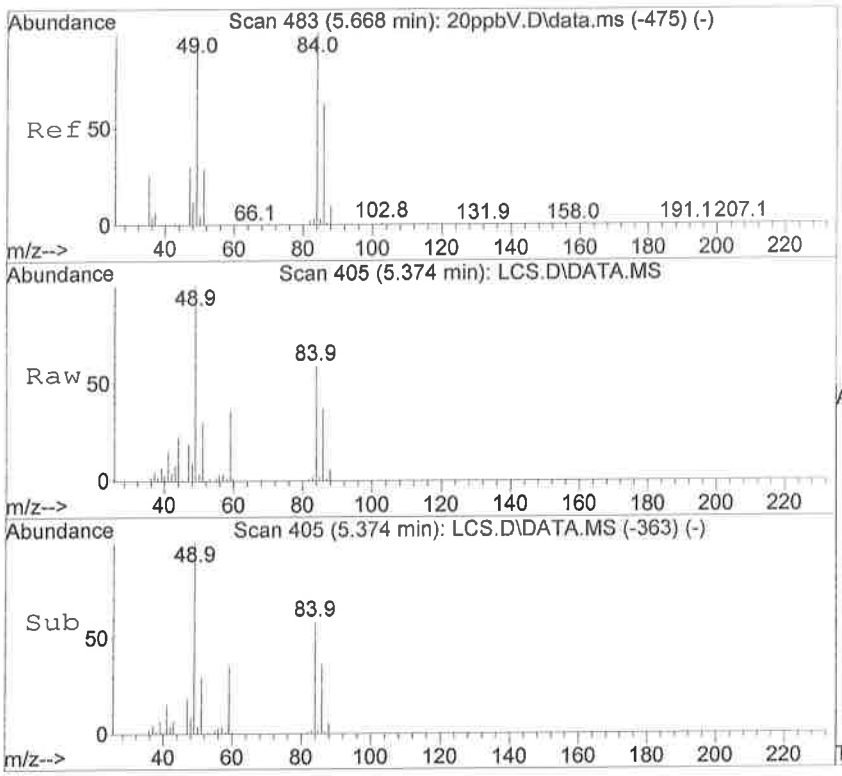


#19
1,1,2-Trichlorotrifluoroethane
Concen: 18.34 ppbV
RT: 5.634 min Scan# 443
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion:101 Resp: 343959

Ion	Ratio	Lower	Upper
101	100		
103	63.9	43.6	84.6
151	77.8	54.1	104.9
153	49.9	35.2	68.2

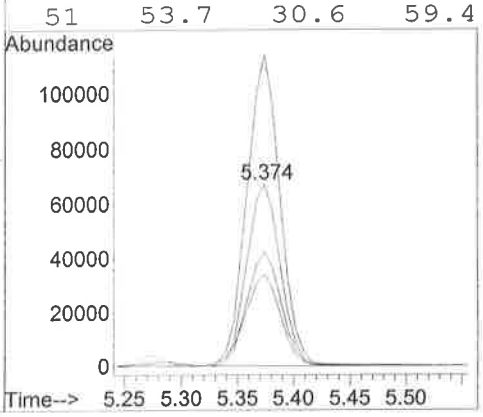


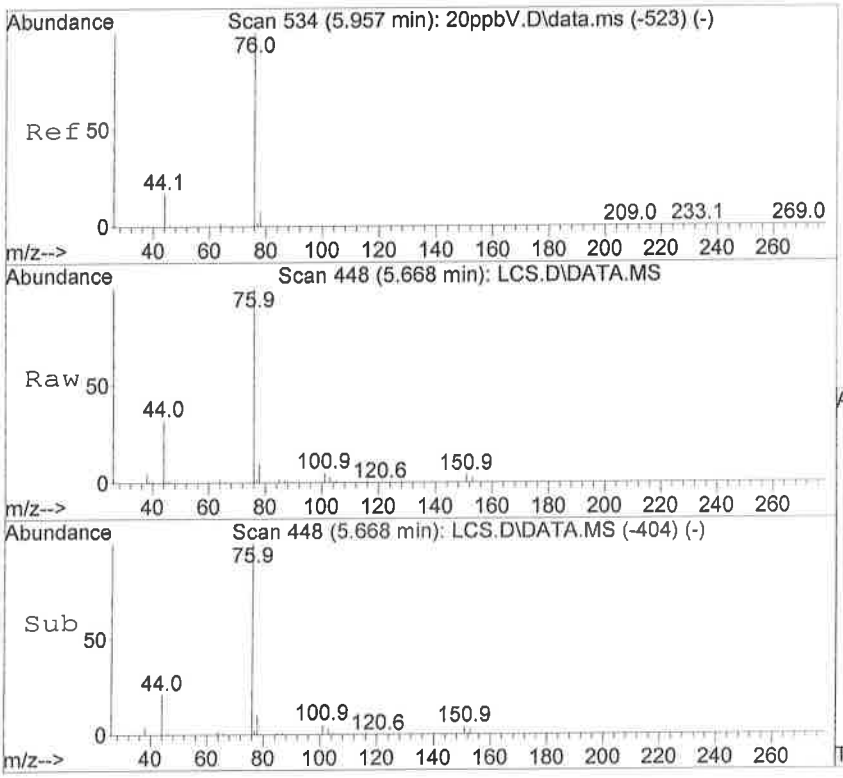


#20
Methylene Chloride
Concen: 17.34 ppbV
RT: 5.374 min Scan# 405
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 84 Resp: 123538

Ion	Ratio	Lower	Upper
84	100		
86	65.9	43.4	84.2
49	164.6	99.6	193.4
51	53.7	30.6	59.4

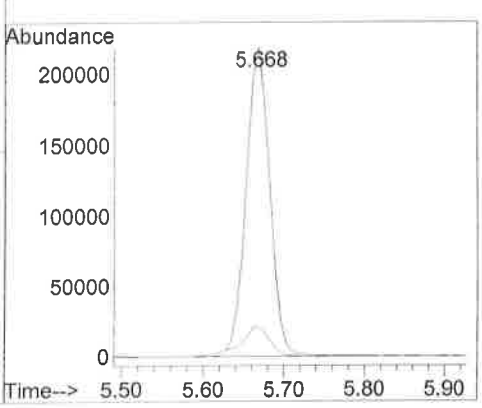


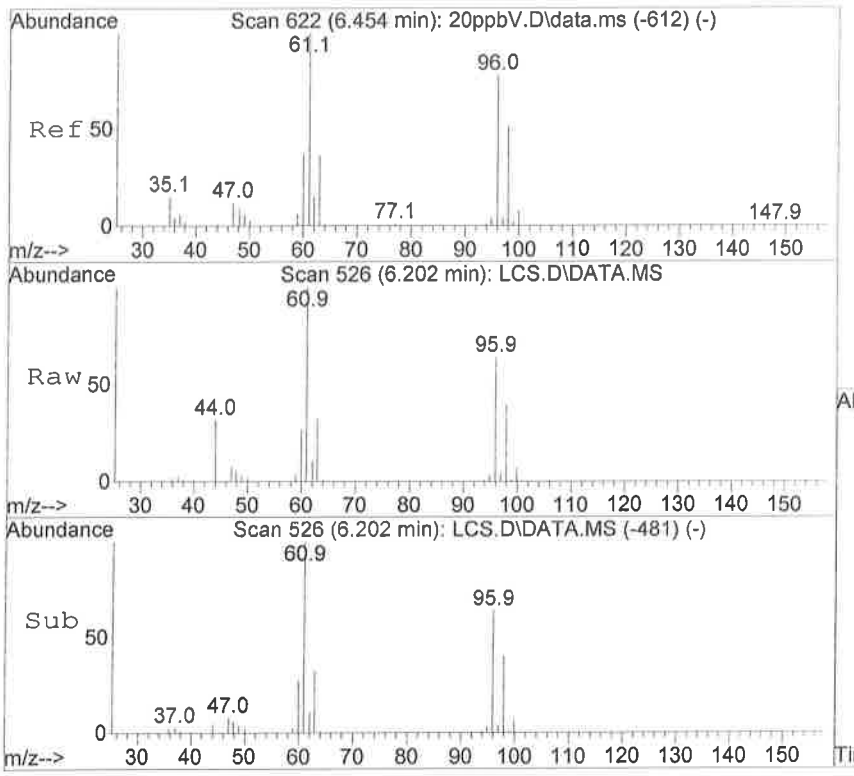


#21
Carbon Disulfide
Concen: 16.64 ppbV
RT: 5.668 min Scan# 448
Delta R.T. 0.007 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 76 Resp: 451460

Ion	Ratio	Lower	Upper
76	100		
78	11.8	7.7	14.9

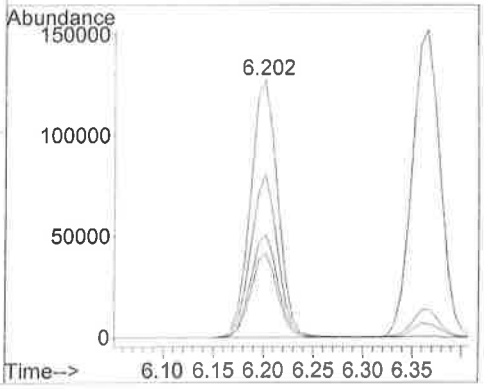


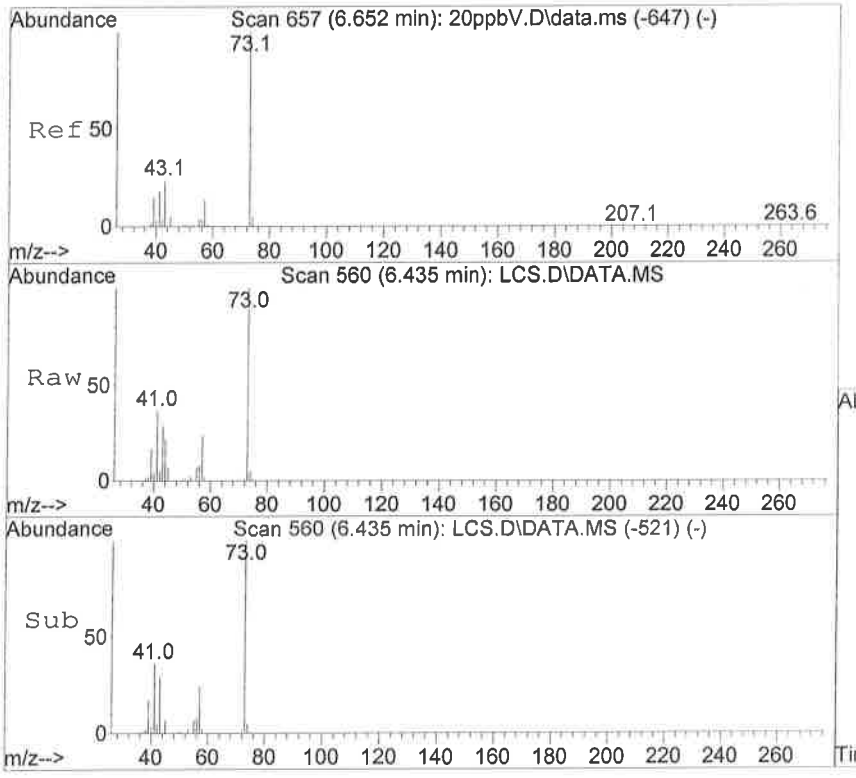


#22
trans-1,2-Dichloroethene
Concen: 16.54 ppbV
RT: 6.202 min Scan# 526
Delta R.T. 0.007 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 61 Resp: 244722

Ion	Ratio	Lower	Upper
61	100		
63	31.8	21.5	41.7
96	61.5	43.5	84.3
98	39.3	27.5	53.5

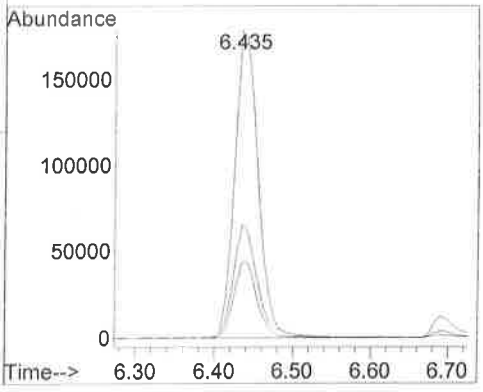


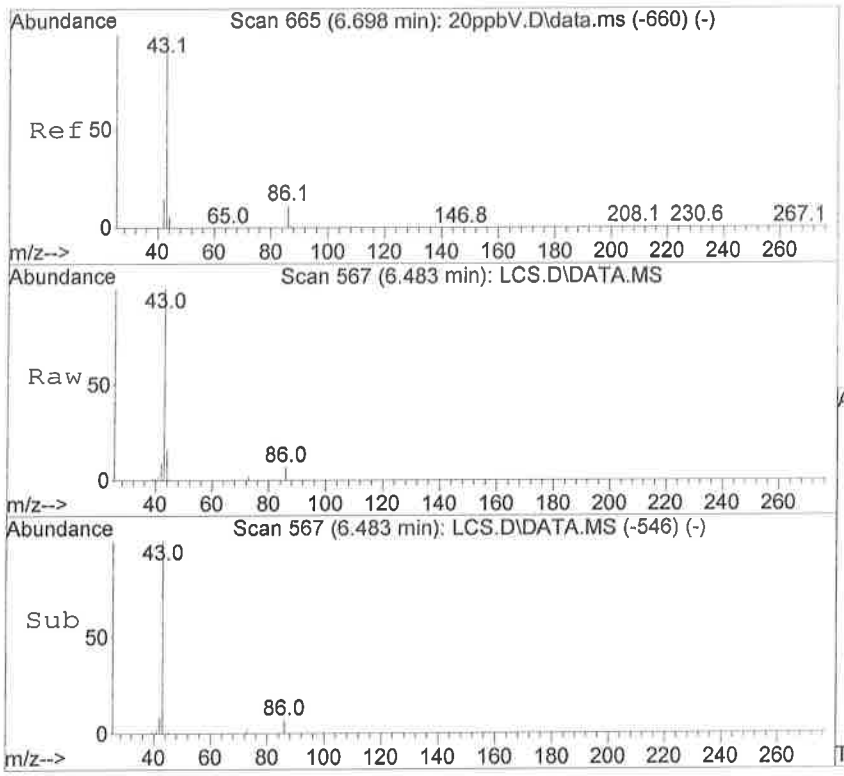


#23
Methyl tert-Butyl Ether (MTBE)
Concen: 15.98 ppbV
RT: 6.435 min Scan# 560
Delta R.T. -0.034 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 73 Resp: 370495

Ion	Ratio	Lower	Upper
73	100		
57	24.7	15.4	29.8
41	38.6	18.3	35.5#

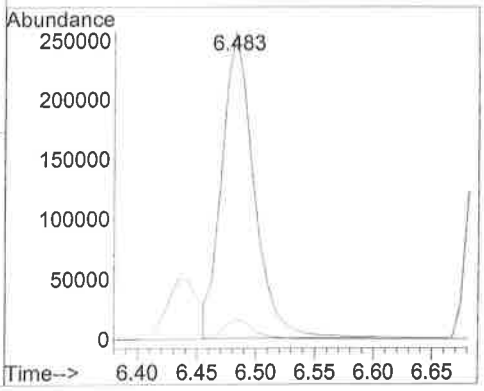


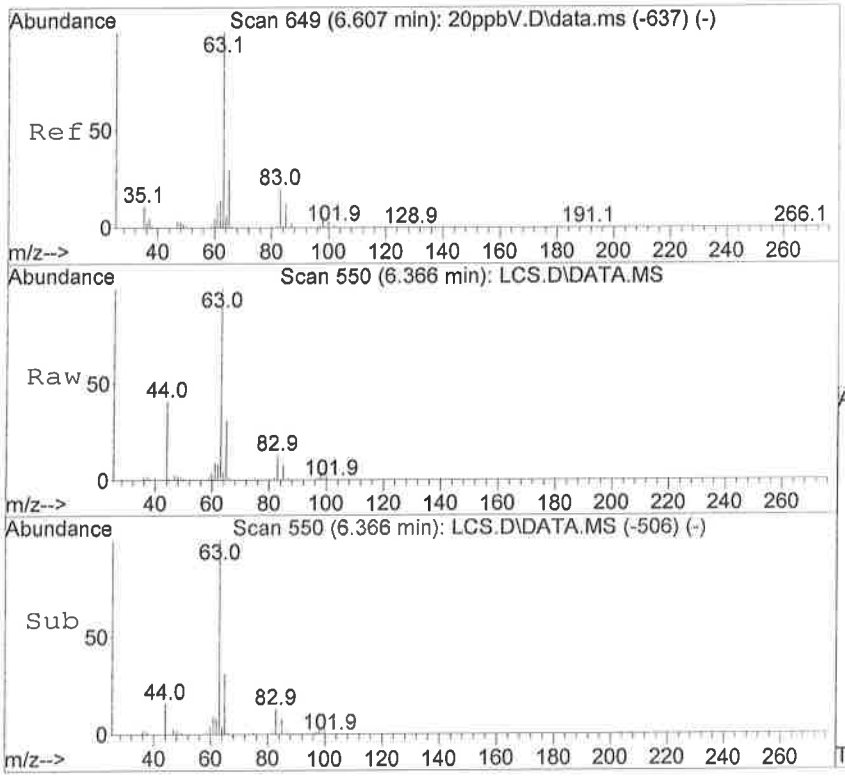


#24
Vinyl Acetate
Concen: 13.35 ppbV
RT: 6.483 min Scan# 567
Delta R.T. -0.007 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 43 Resp: 484620

Ion	Ratio	Lower	Upper
43	100		
86	6.2	5.0	9.8

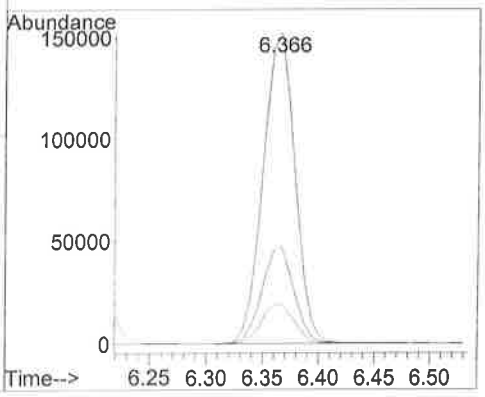


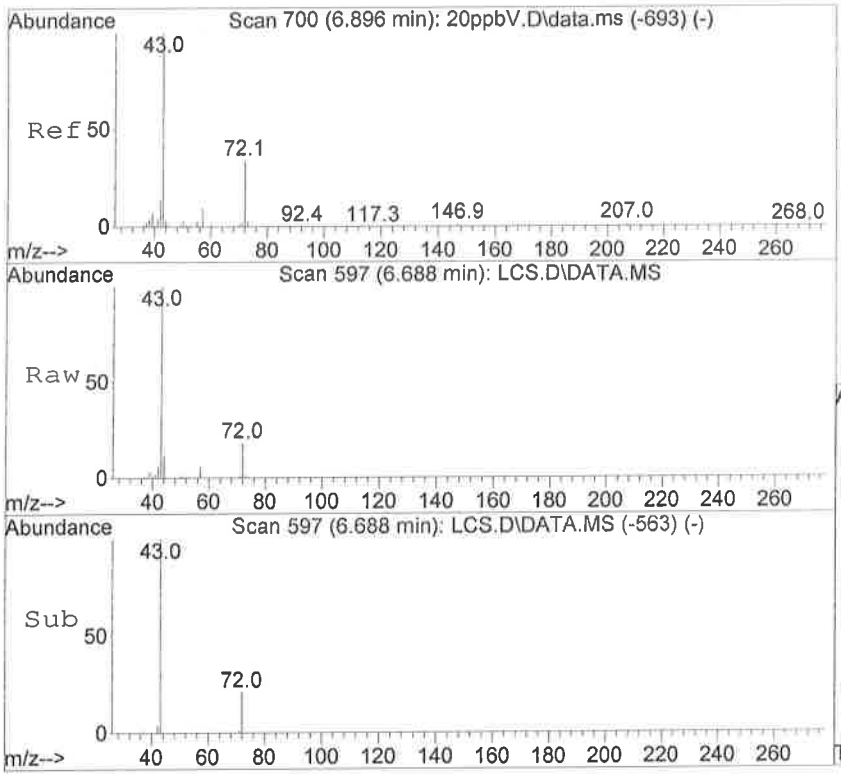


#25
1,1-Dichloroethane
Concen: 17.23 ppbV
RT: 6.366 min Scan# 550
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 63 Resp: 301157

Ion	Ratio	Lower	Upper
63	100		
65	30.9	21.6	42.0
83	12.9	8.8	17.0

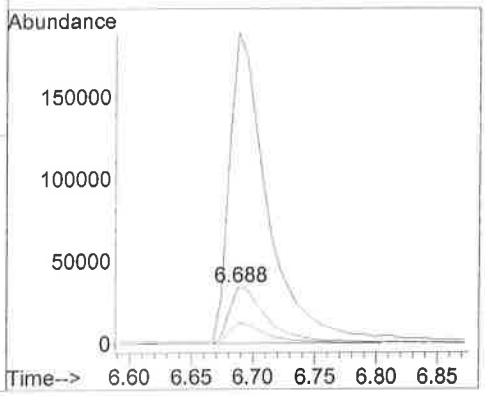


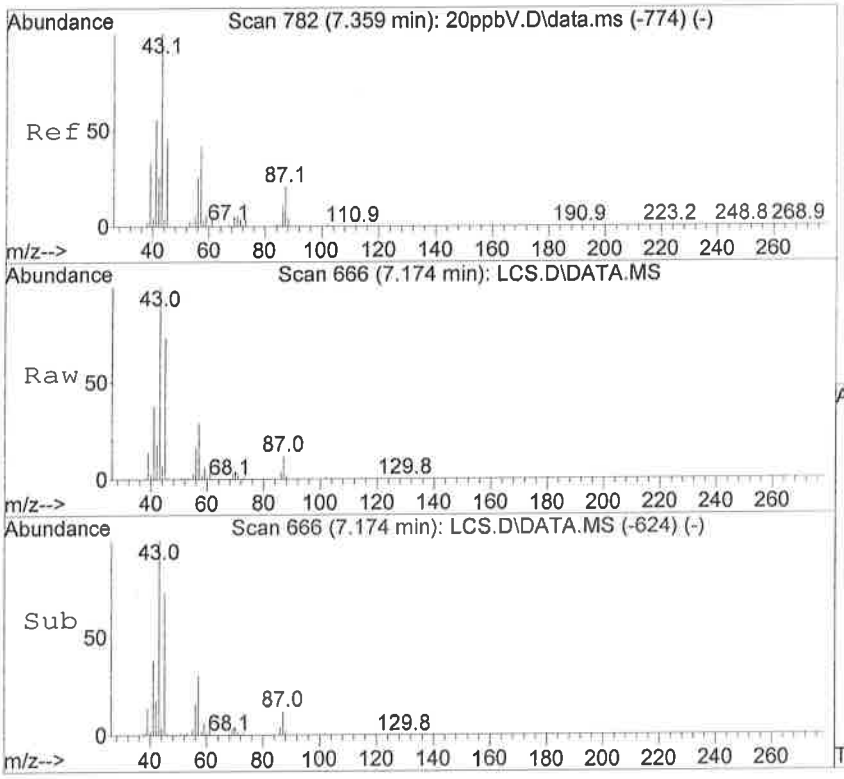


#26
2-Butanone
Concen: 15.40 ppbV
RT: 6.688 min Scan# 597
Delta R.T. -0.069 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 72 Resp: 73632

Ion	Ratio	Lower	Upper
72	100		
43	563.1	313.7	608.9
57	35.8	20.8	40.4

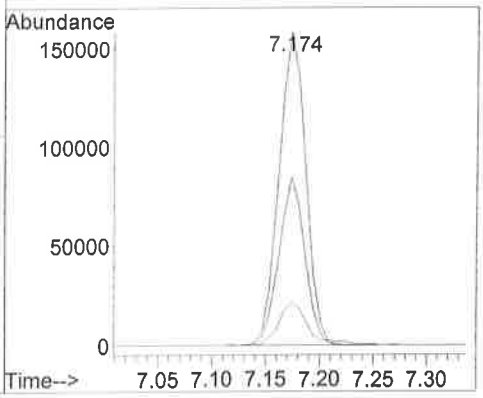


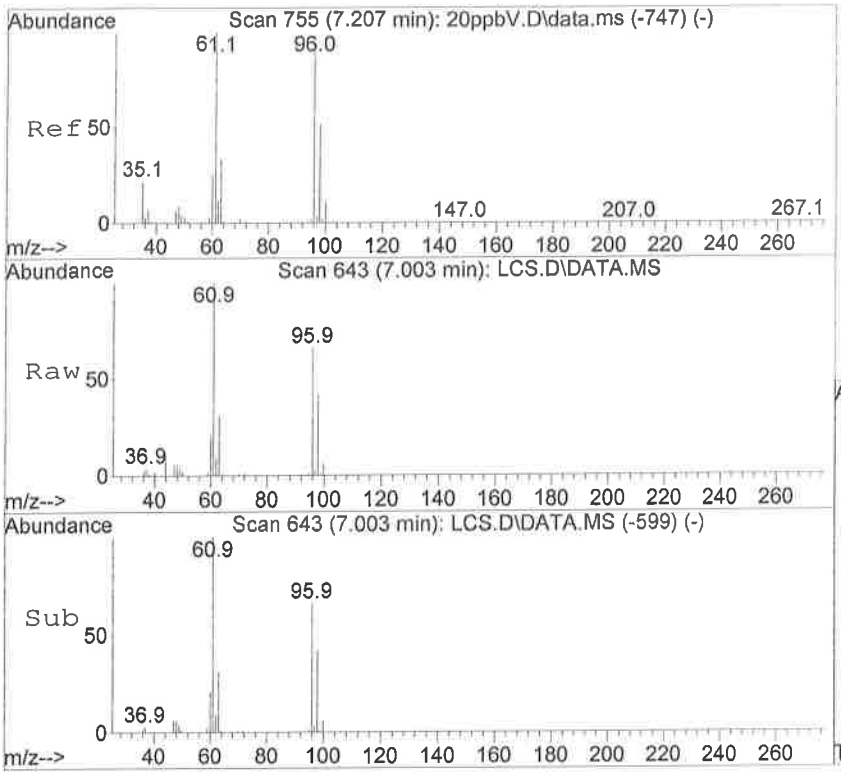


#27
n-Hexane
Concen: 17.48 ppbV
RT: 7.174 min Scan# 666
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 57 Resp: 295566

Ion	Ratio	Lower	Upper
57	100		
56	47.4	35.7	69.3
86	13.5	10.8	21.0

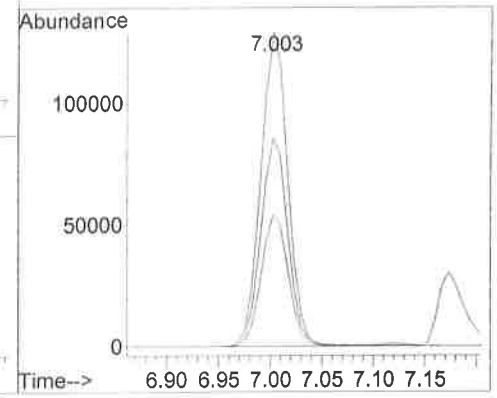


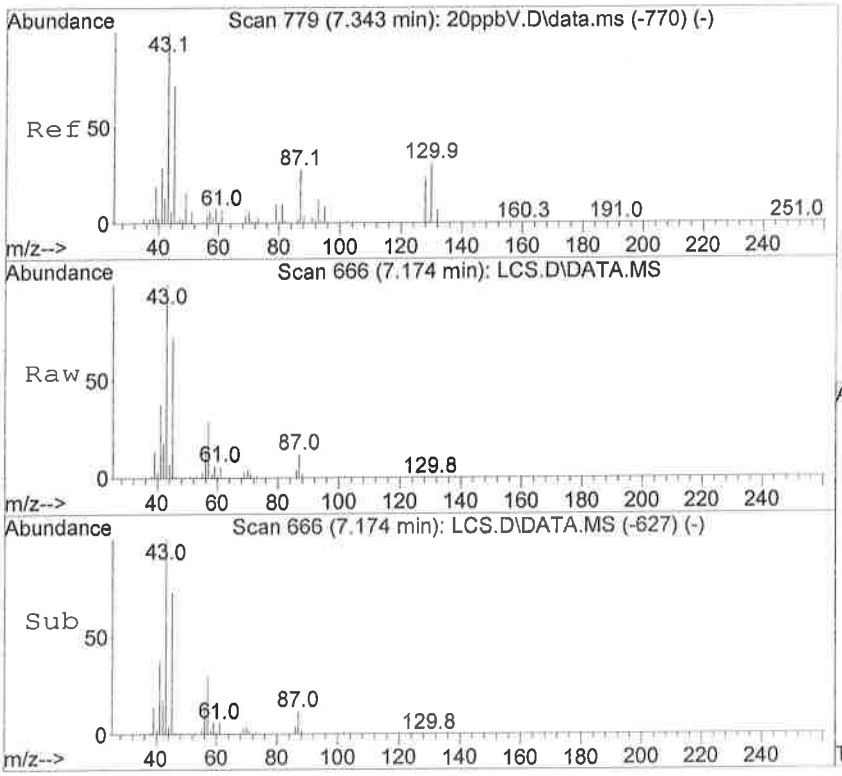


#28
cis-1,2-Dichloroethene
Concen: 17.64 ppbV
RT: 7.003 min Scan# 643
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 61 Resp: 254593

Ion	Ratio	Lower	Upper
61	100		
96	61.1	47.7	92.7
98	38.8	31.2	60.6

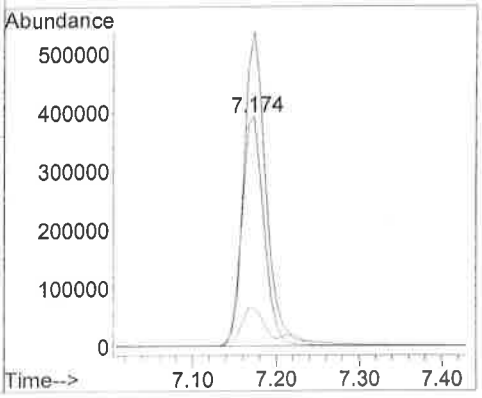


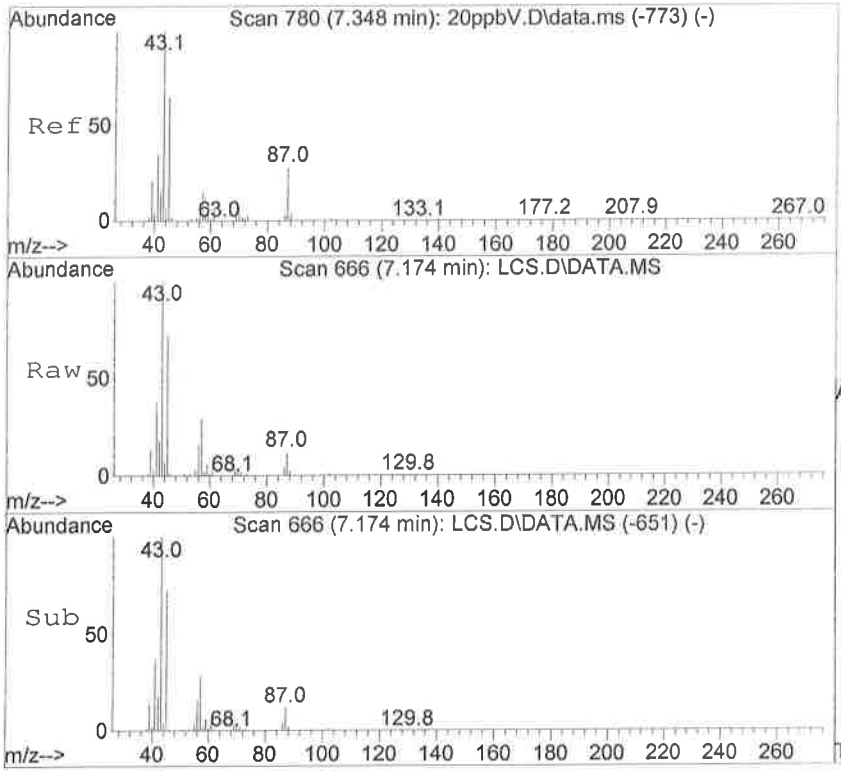


#29
Di-isopropyl Ether
Concen: 16.73 ppbV
RT: 7.174 min Scan# 666
Delta R.T. -0.021 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 45 Resp: 726566

Ion	Ratio	Lower	Upper
45	100		
43	138.9	100.1	150.1
87	17.5	16.5	24.7

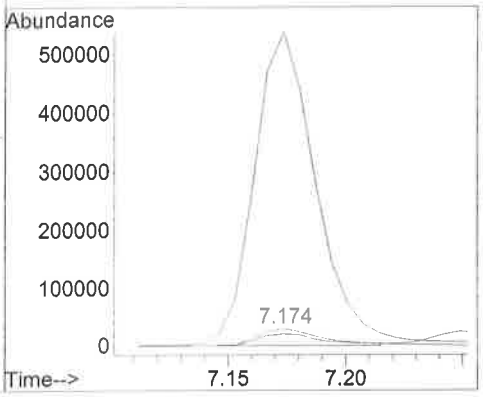


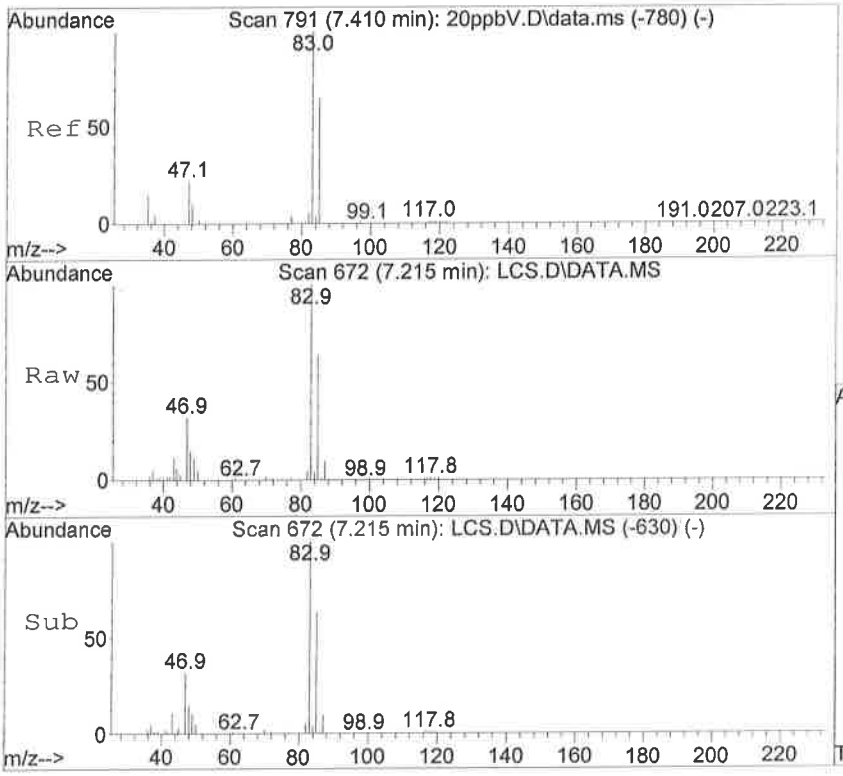


#30
Ethyl Acetate
Concen: 18.60 ppbV
RT: 7.174 min Scan# 666
Delta R.T. -0.034 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 61 Resp: 53917

Ion	Ratio	Lower	Upper
61	100		
43	1864.4	1165.2	2261.8
70	83.6	60.5	117.5

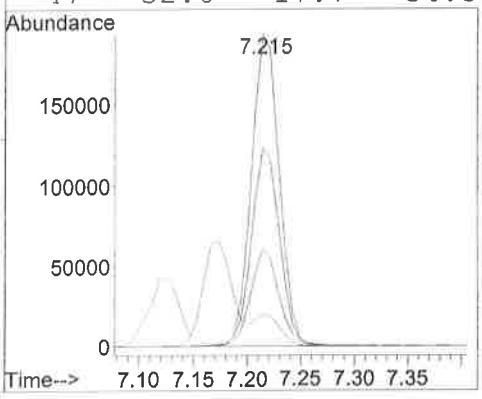


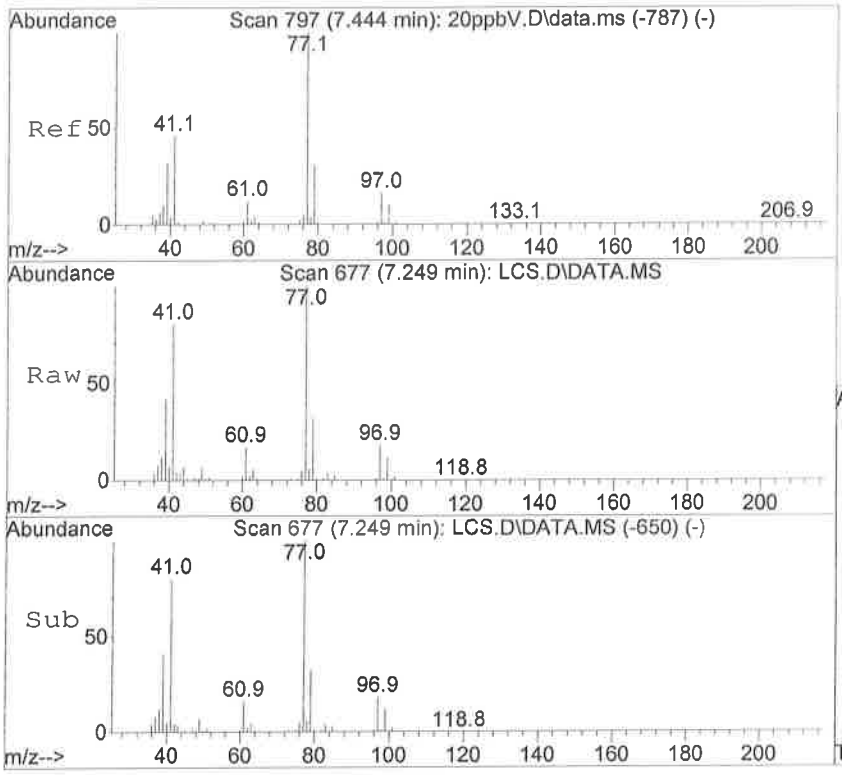


#31
Chloroform
Concen: 17.82 ppbV
RT: 7.215 min Scan# 672
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 83 Resp: 352995

Ion	Ratio	Lower	Upper
83	100		
85	64.2	44.4	86.2
87	9.4	7.1	13.9
47	32.0	17.7	34.5

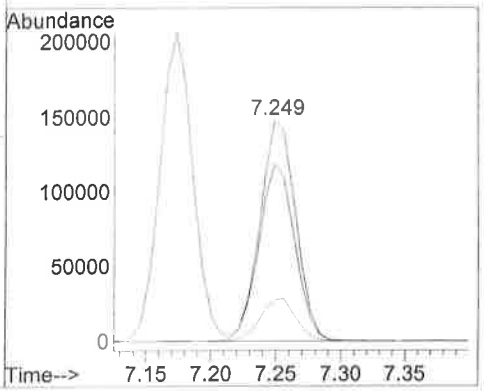


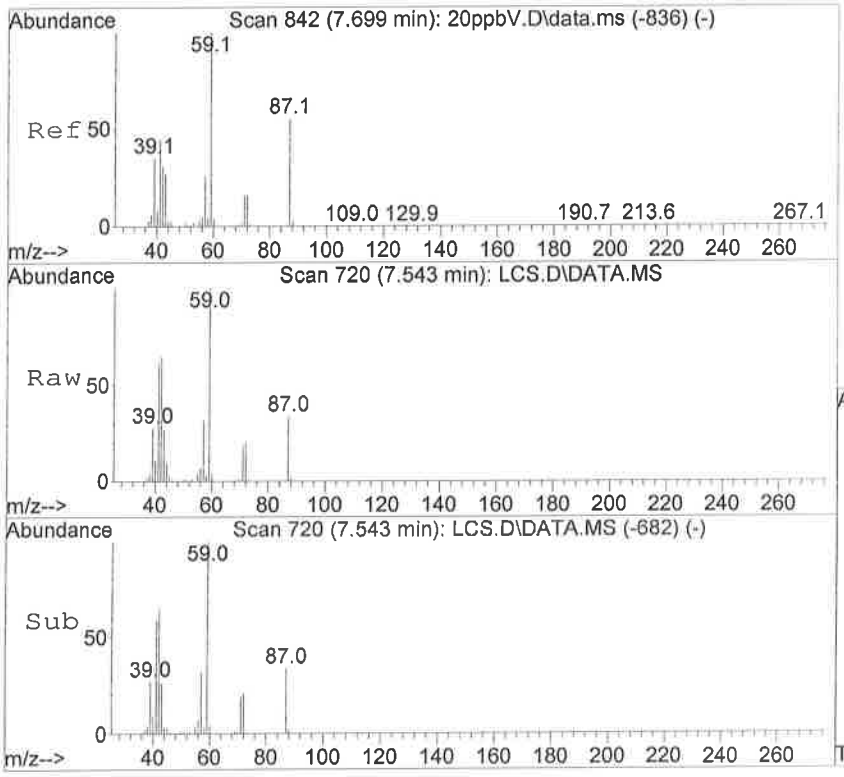


#32
2,2-Dichloropropane
Concen: 16.94 ppbV
RT: 7.249 min Scan# 677
Delta R.T. -0.000 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 77 Resp: 281252

Ion	Ratio	Lower	Upper
77	100		
41	81.3	50.9	76.3#
97	18.9	15.2	22.8

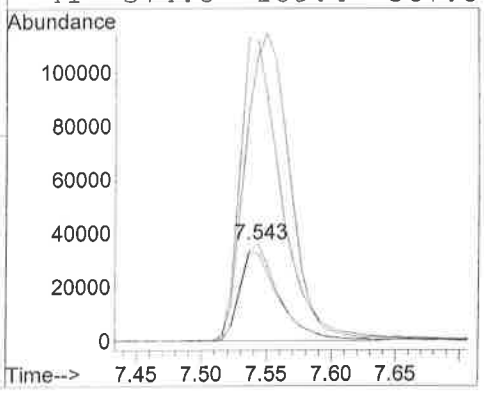


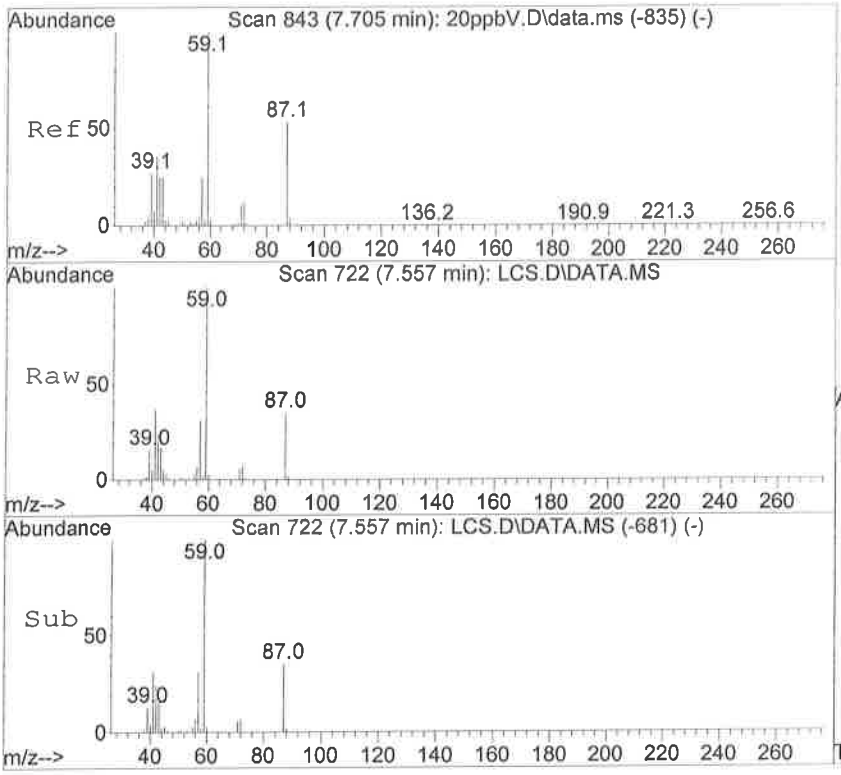


#33
Tetrahydrofuran
Concen: 16.65 ppbV
RT: 7.543 min Scan# 720
Delta R.T. -0.041 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 72 Resp: 73759

Ion	Ratio	Lower	Upper
72	100		
71	95.9	62.6	121.4
42	341.5	195.7	379.9
41	374.8	189.4	367.8#

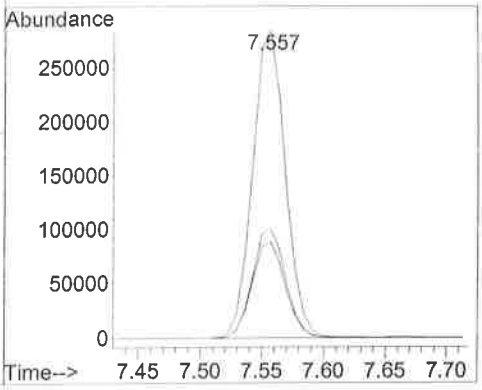


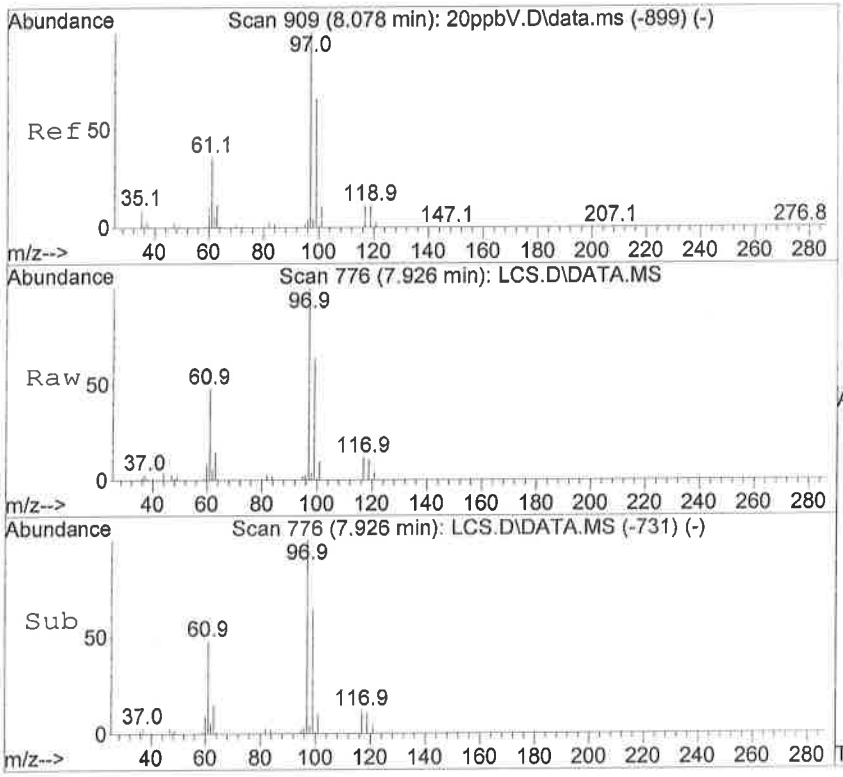


#34
Ethyl-tert-Butyl Ether
Concen: 17.70 ppbV
RT: 7.557 min Scan# 722
Delta R.T. -0.021 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 59 Resp: 523891

Ion	Ratio	Lower	Upper
59	100		
57	31.7	25.2	37.8
87	35.6	30.3	45.5





#36
1,1,1-Trichloroethane
Concen: 17.73 ppbV
RT: 7.926 min Scan# 776
Delta R.T. 0.007 min
Lab File: LCS.D
Acq: 20 Sep 2016 5:42 pm

Tgt Ion: 97 Resp: 364710

Ion	Ratio	Lower	Upper
97	100

Quant Title : EPA TO-15 Analysis GC/MS #9
QLast Update : Tue Sep 13 15:08:40 2016
Response via : Initial Calibration

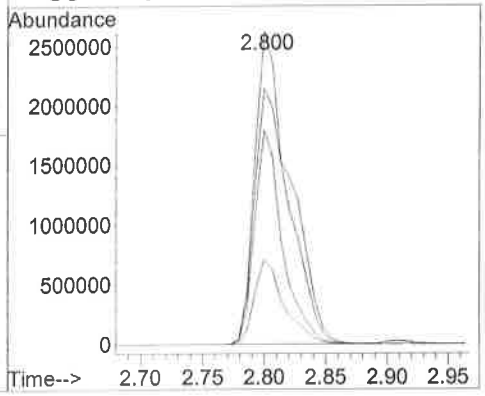
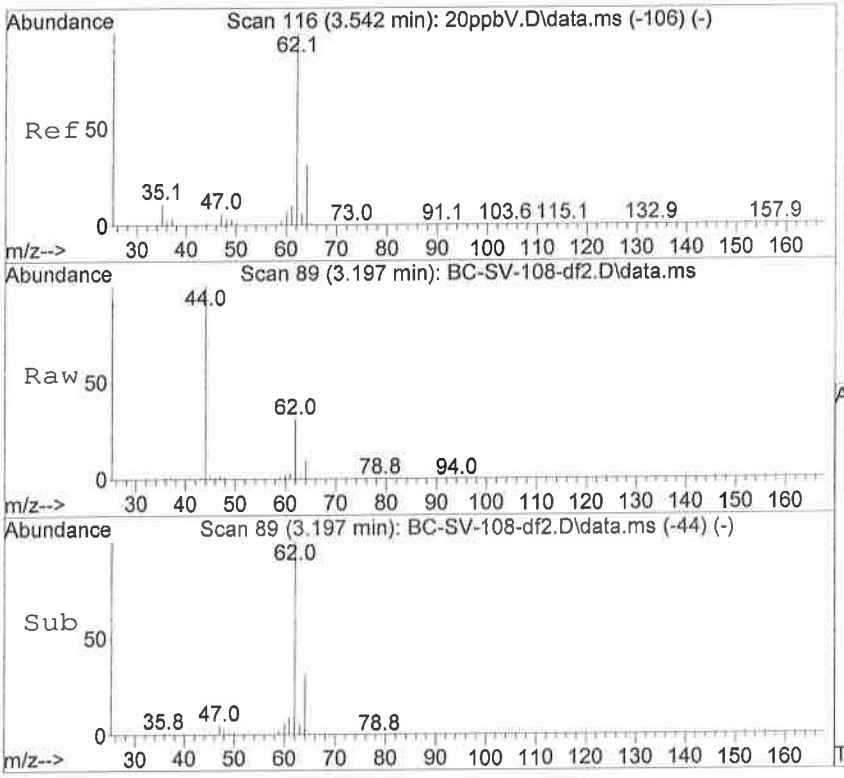
#5
Propene
Concen: 983.14 ppbV
RT: 2.800 min Scan# 31
Delta R.T. -0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 41 Resp: 4790789

Ion	Ratio	Lower	Upper
41	100		
42	59.0	45.2	87.8
40	24.7	19.0	36.8
39	98.0	54.3	105.5

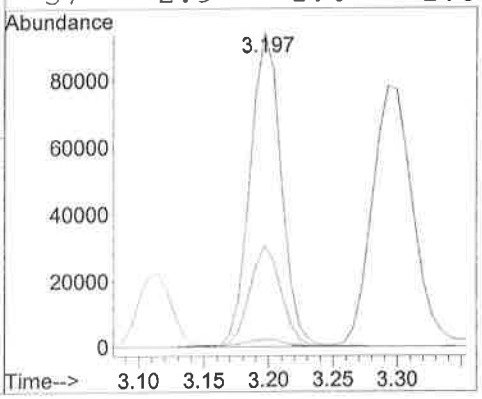


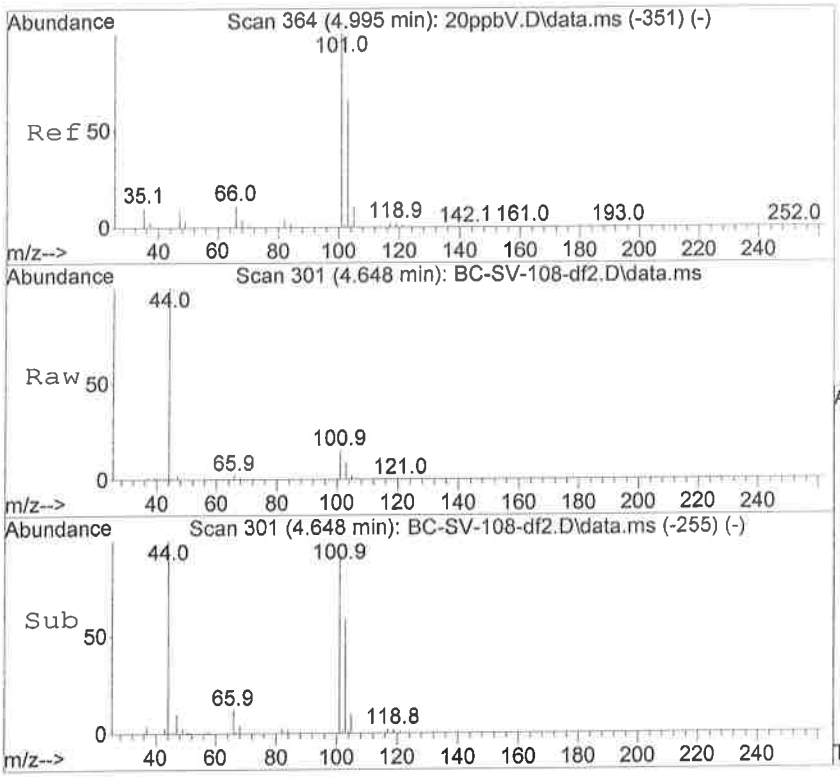


#9
Vinyl Chloride
Concen: 23.89 ppbV
RT: 3.197 min Scan# 89
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 62 Resp: 159232

Ion	Ratio	Lower	Upper
62	100		
64	32.9	22.0	42.8
35	0.0	0.0	0.0
37	2.9	1.4	2.8#

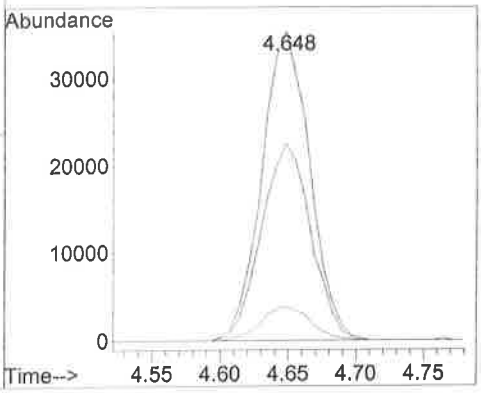


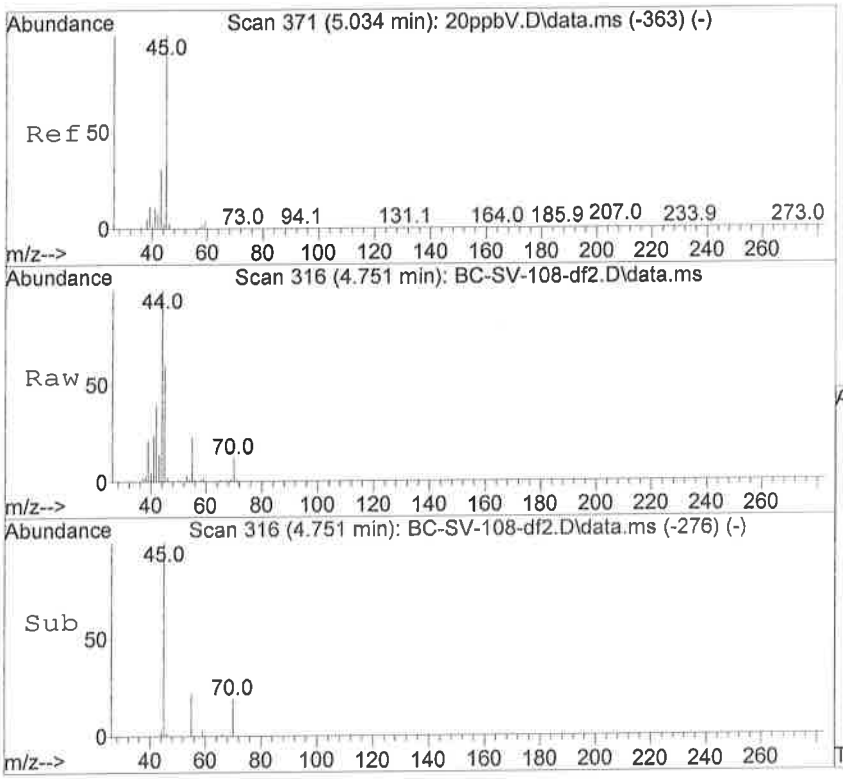


#14
Trichlorofluoromethane
Concen: 2.77 ppbV
RT: 4.648 min Scan# 301
Delta R.T. 0.014 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion:101 Resp: 86441

Ion	Ratio	Lower	Upper
101	100		
103	65.9	44.1	85.7
105	11.2	7.2	14.0

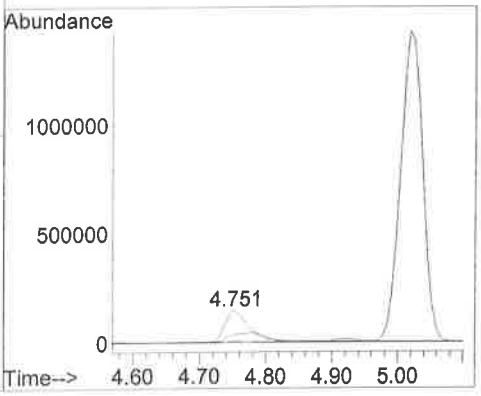


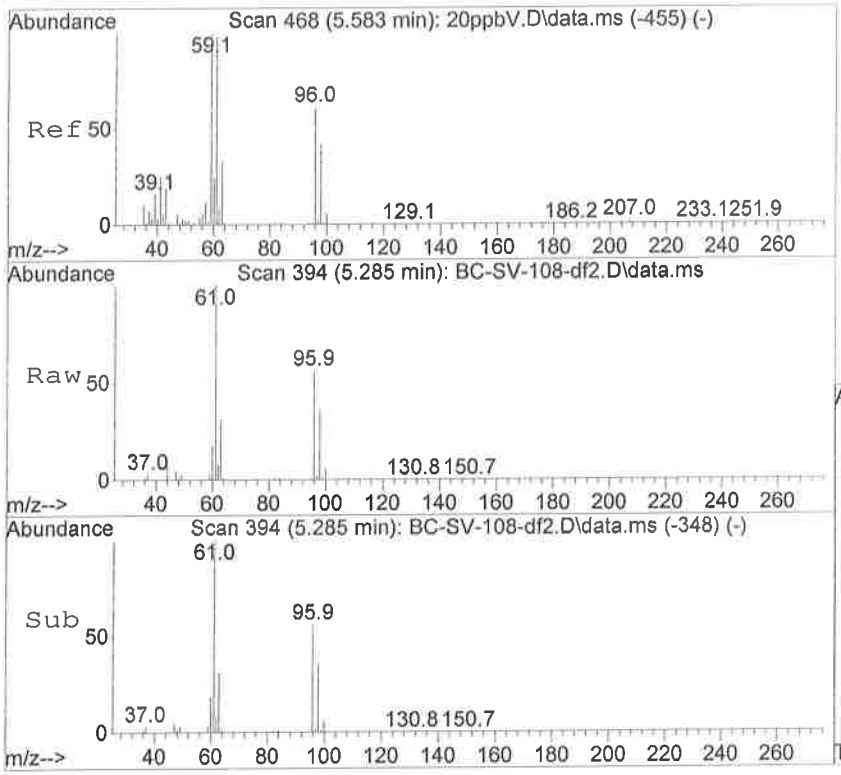


#16
Isopropyl Alcohol
Concen: 12.06 ppbV
RT: 4.751 min Scan# 316
Delta R.T. -0.027 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 45 Resp: 370474

Ion	Ratio	Lower	Upper
45	100		
43	43.2	16.3	31.5#
59	3.4	2.6	5.0

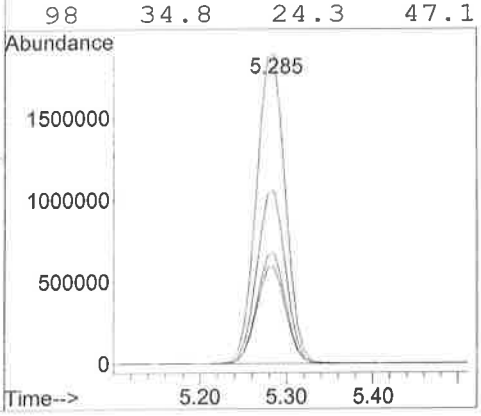


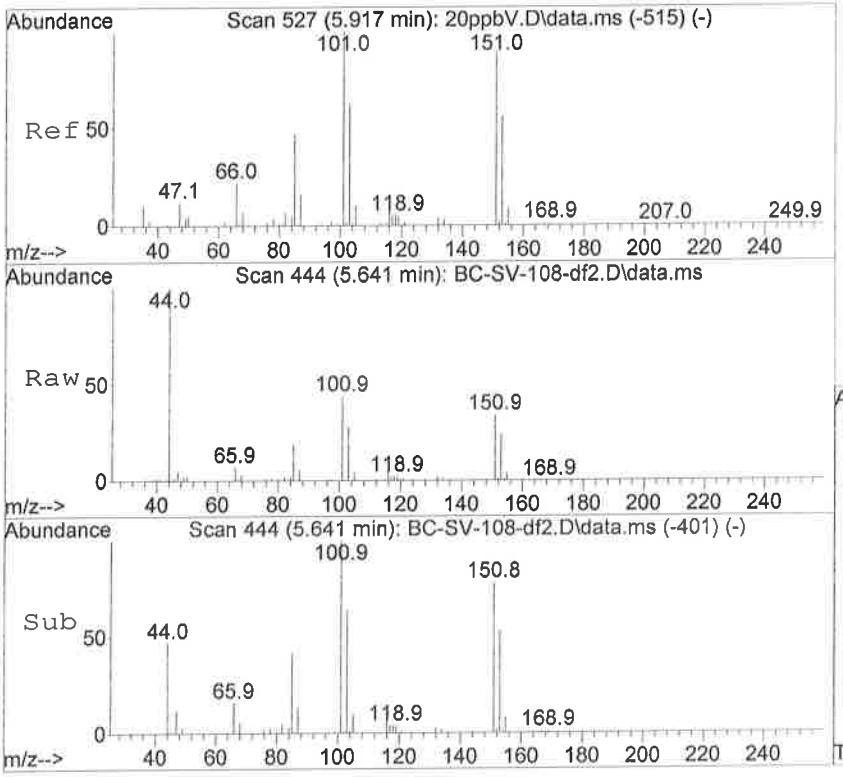


#17
1,1-Dichloroethene
Concen: 241.05 ppbV
RT: 5.285 min Scan# 394
Delta R.T. 0.014 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 61 Resp: 4719554

Ion	Ratio	Lower	Upper
61	100		
63	31.8	21.7	42.1
96	54.5	37.9	73.7
98	34.8	24.3	47.1

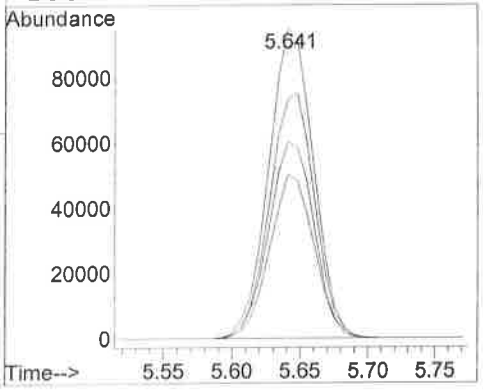


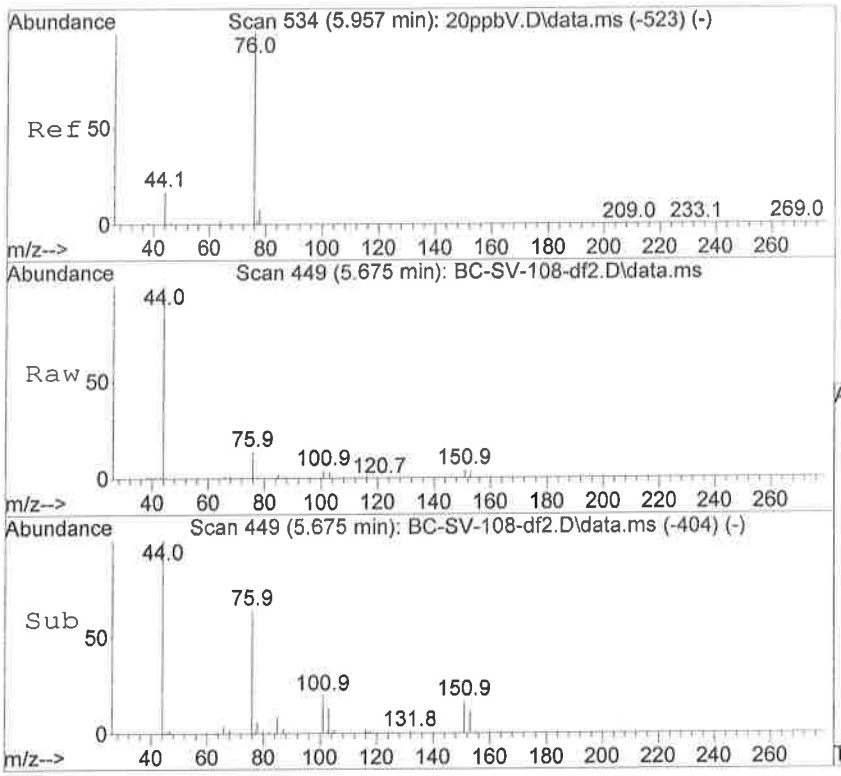


#19
1,1,2-Trichlorotrifluoroethane
Concen: 9.50 ppbV
RT: 5.641 min Scan# 444
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion:101 Resp: 217728

Ion	Ratio	Lower	Upper
101	100		
103	64.3	43.6	84.6
151	79.8	54.1	104.9
153	52.1	35.2	68.2

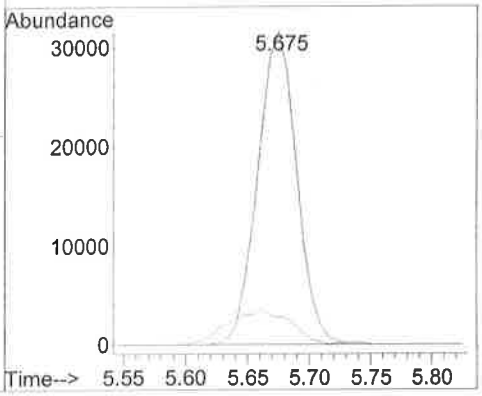


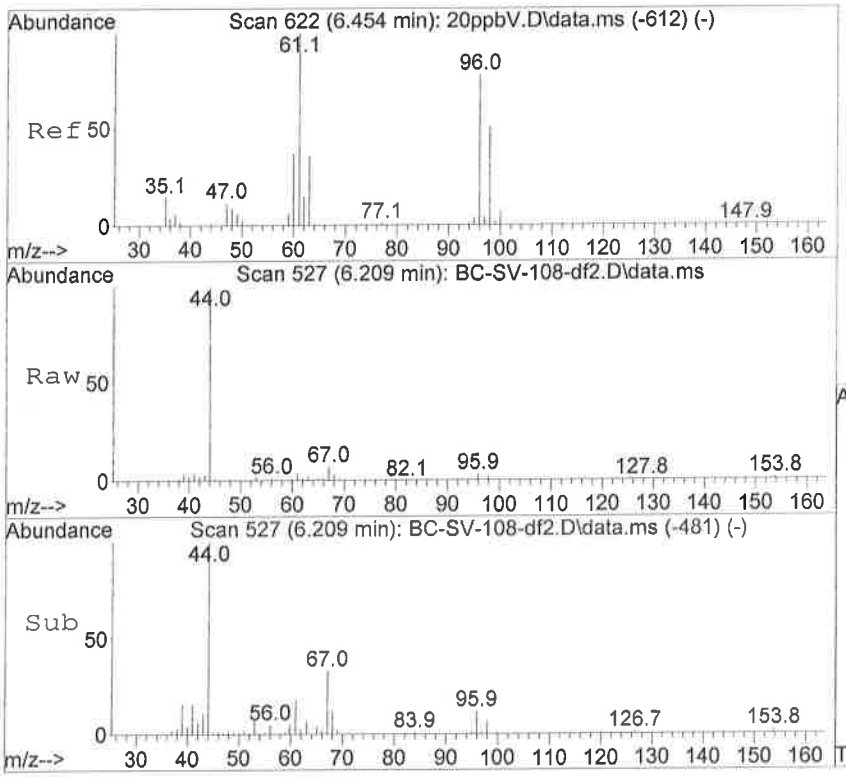


#21
Carbon Disulfide
Concen: 2.09 ppbV
RT: 5.675 min Scan# 449
Delta R.T. 0.014 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 76 Resp: 69344

Ion	Ratio	Lower	Upper
76	100		
78	18.0	7.7	14.9#

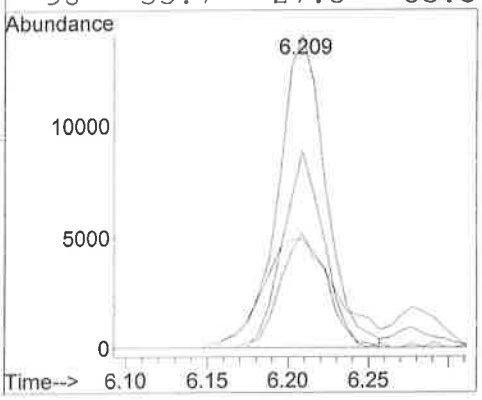


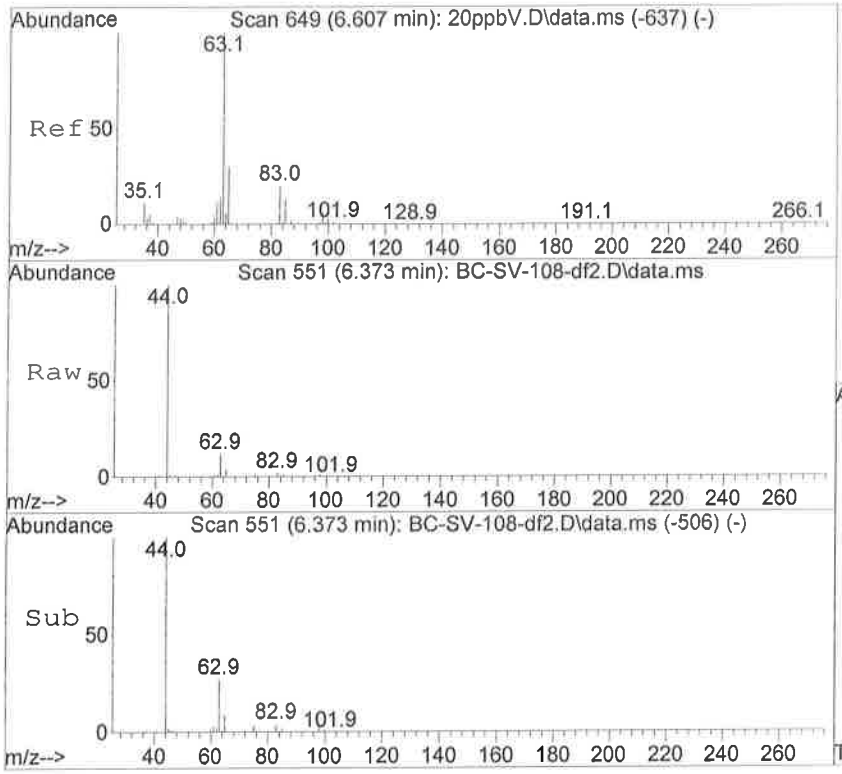


#22
trans-1,2-Dichloroethene
Concen: 1.60 ppbV
RT: 6.209 min Scan# 527
Delta R.T. 0.014 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 61 Resp: 28872

Ion	Ratio	Lower	Upper
61	100		
63	54.3	21.5	41.7#
96	53.8	43.5	84.3
98	35.7	27.5	53.5

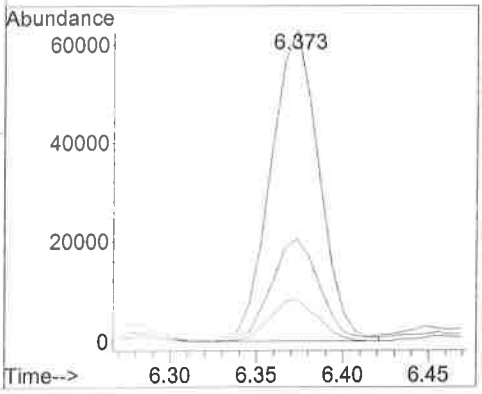


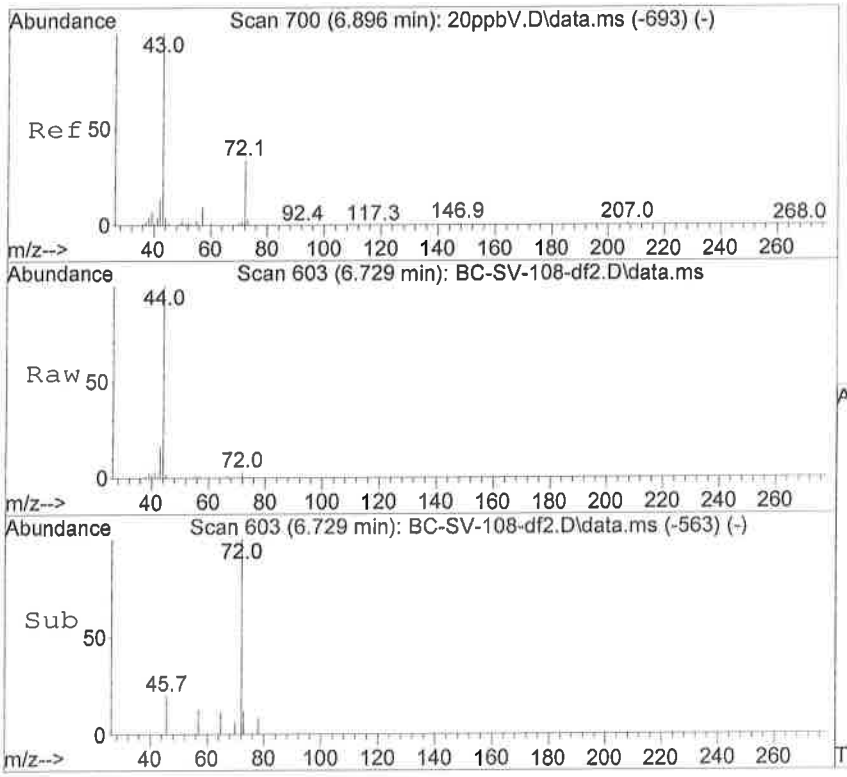


#25
1,1-Dichloroethane
Concen: 5.68 ppbV
RT: 6.373 min Scan# 551
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 63 Resp: 121269

Ion	Ratio	Lower	Upper
63	100		
65	32.8	21.6	42.0
83	13.0	8.8	17.0

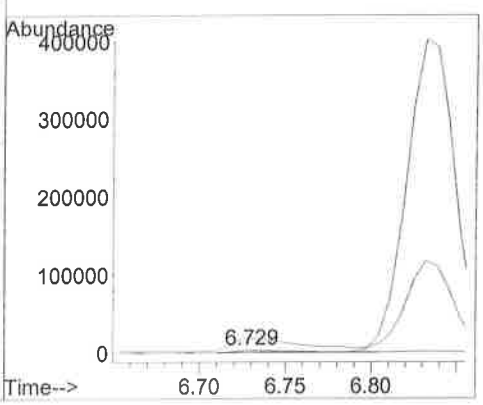


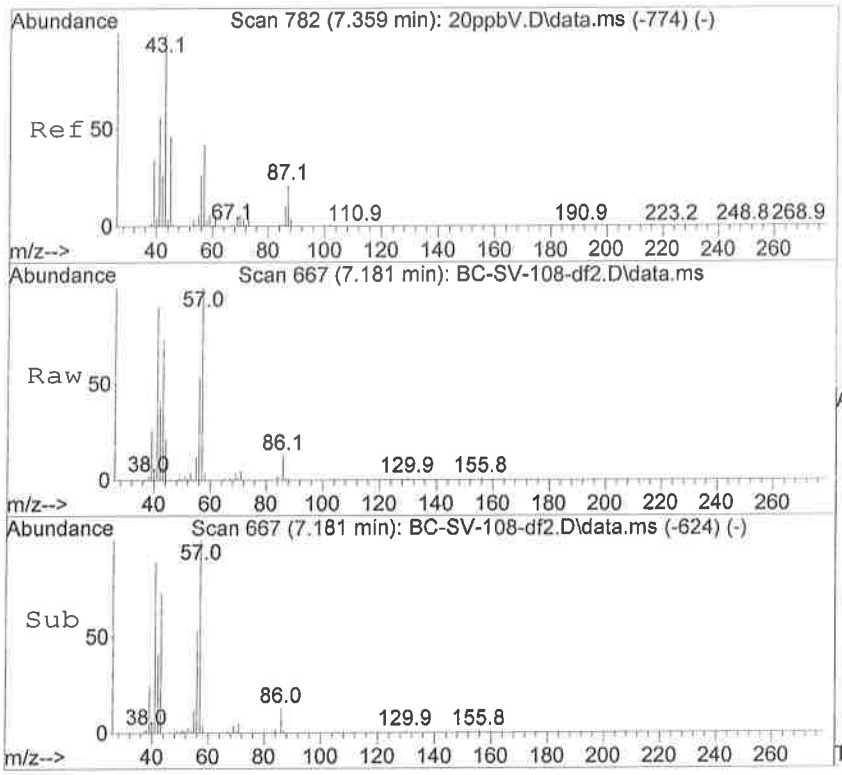


#26
2-Butanone
Concen: 1.42 ppbV
RT: 6.729 min Scan# 603
Delta R.T. -0.027 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 72 Resp: 8267

Ion	Ratio	Lower	Upper
72	100		
43	564.2	313.7	608.9
57	33.4	20.8	40.4

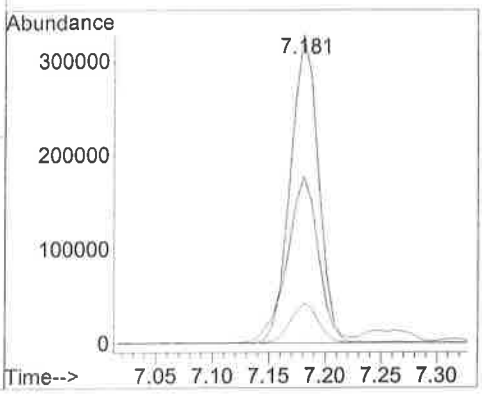


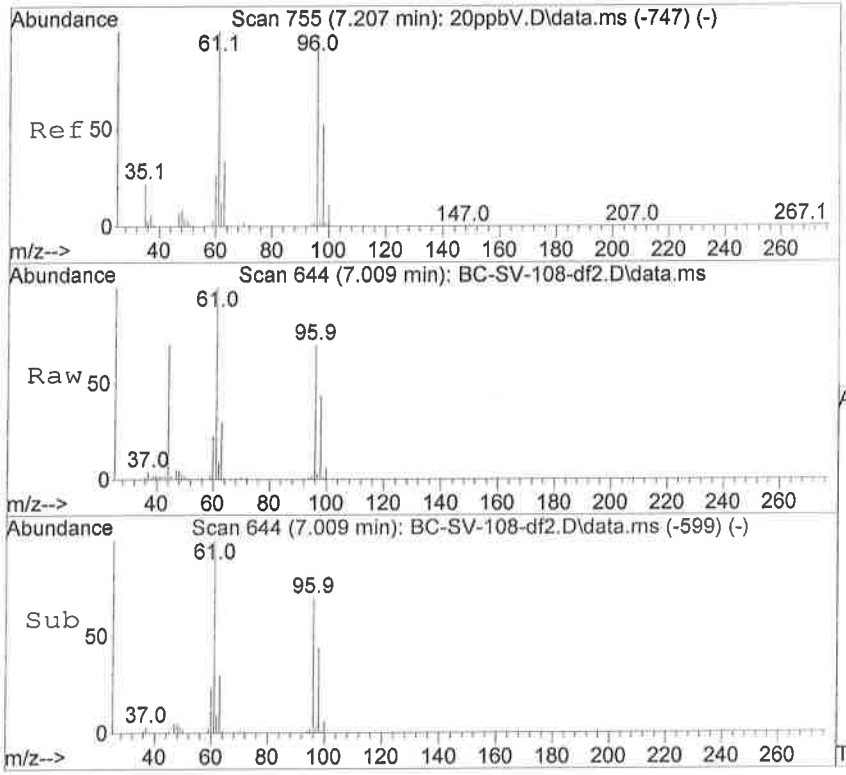


#27
n-Hexane
Concen: 30.05 ppbV
RT: 7.181 min Scan# 667
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 57 Resp: 620692

Ion	Ratio	Lower	Upper
57	100		
56	55.5	35.7	69.3
86	11.7	10.8	21.0

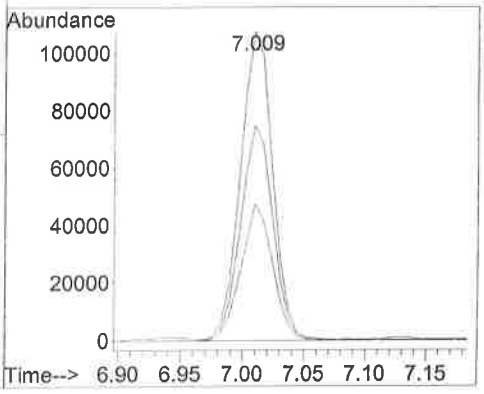


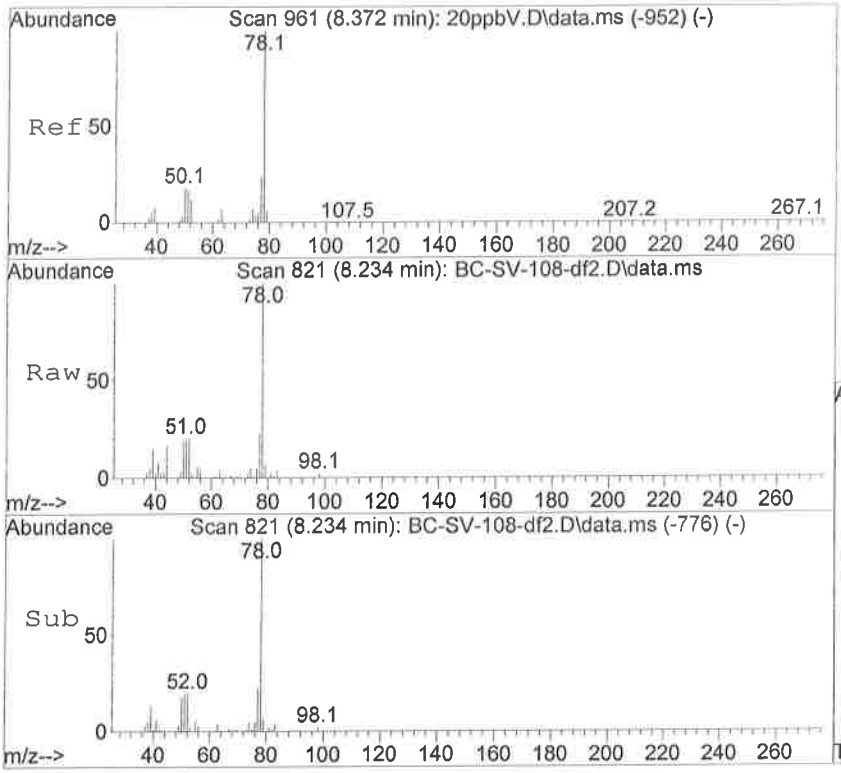


#28
cis-1,2-Dichloroethene
Concen: 12.28 ppbV
RT: 7.009 min Scan# 644
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 61 Resp: 216440

Ion	Ratio	Lower	Upper
61	100		
96	63.0	47.7	92.7
98	39.0	31.2	60.6

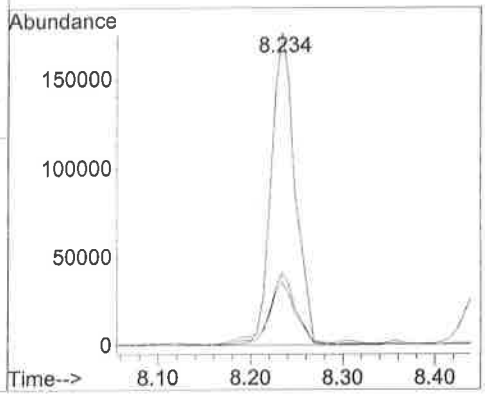


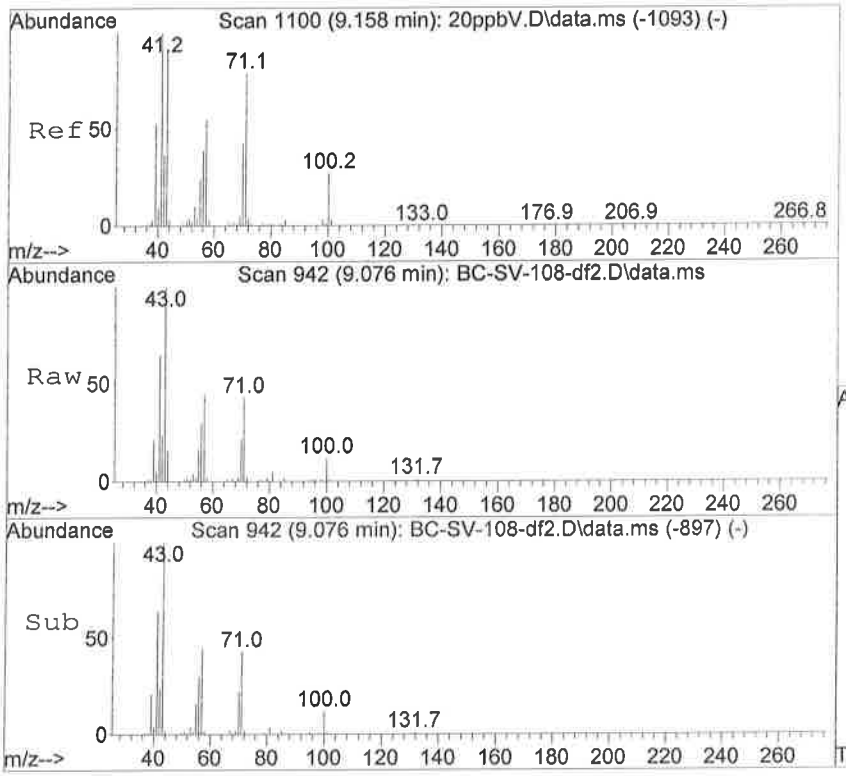


#39
Benzene
Concen: 7.84 ppbV
RT: 8.234 min Scan# 821
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 78 Resp: 302647

Ion	Ratio	Lower	Upper
78	100		
77	26.1	16.0	31.2
51	25.0	12.2	23.8#

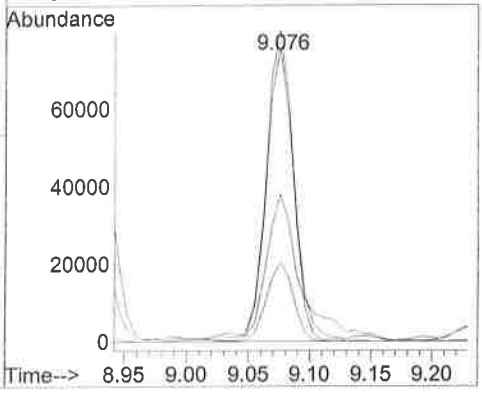


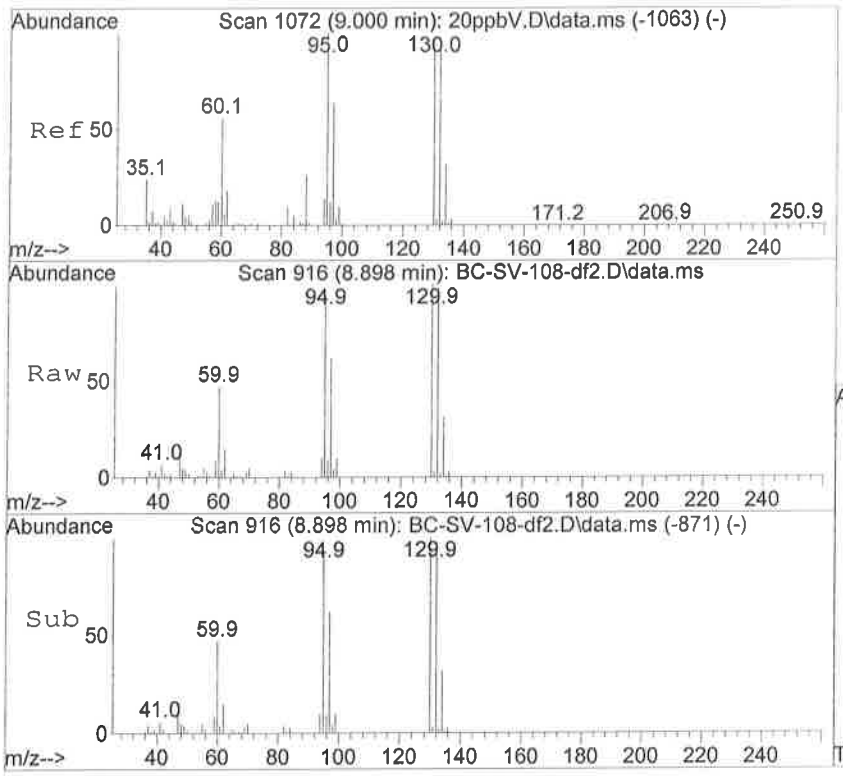


#45
n-Heptane
Concen: 11.09 ppbV
RT: 9.076 min Scan# 942
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 71 Resp: 115606

Ion	Ratio	Lower	Upper
71	100		
100	26.7	18.0	35.0
70	66.4	32.4	62.8#
57	108.5	64.6	125.4

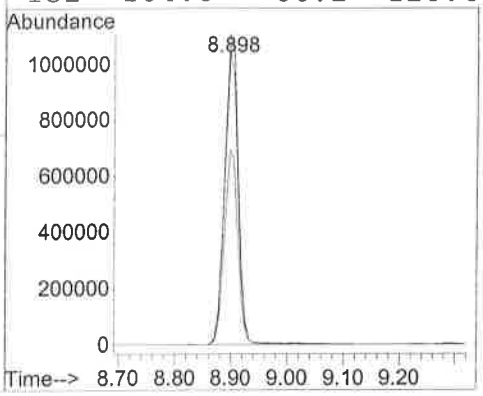


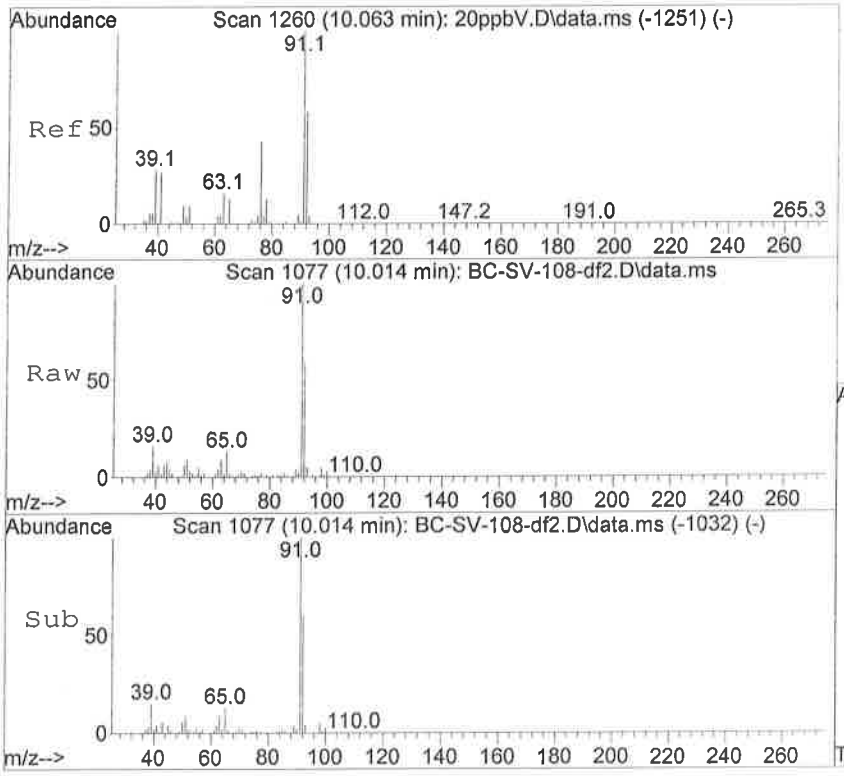


#46
Trichloroethene
Concen: 129.97 ppbV
RT: 8.898 min Scan# 916
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 95 Resp: 1746320

Ion	Ratio	Lower	Upper
95	100		
97	66.8	43.9	85.1
130	106.8	69.0	134.0
132	104.8	66.2	128.6

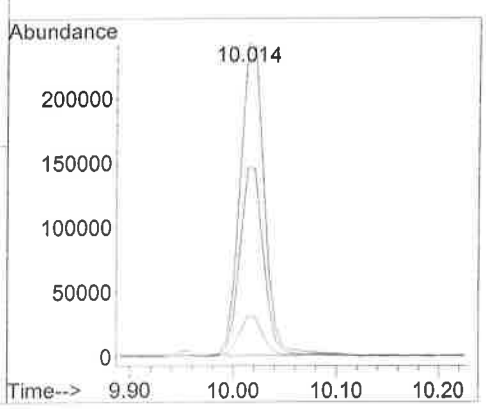


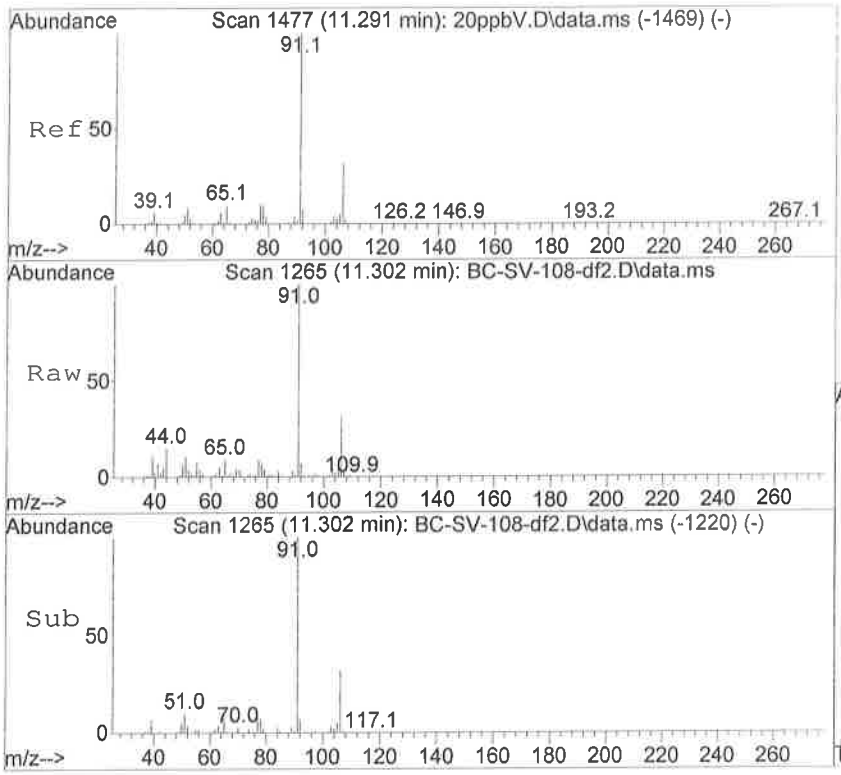


#55
Toluene
Concen: 9.06 ppbV
RT: 10.014 min Scan# 1077
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 91 Resp: 401088

Ion	Ratio	Lower	Upper
91	100		
92	59.8	40.4	78.4
65	12.4	9.3	18.1

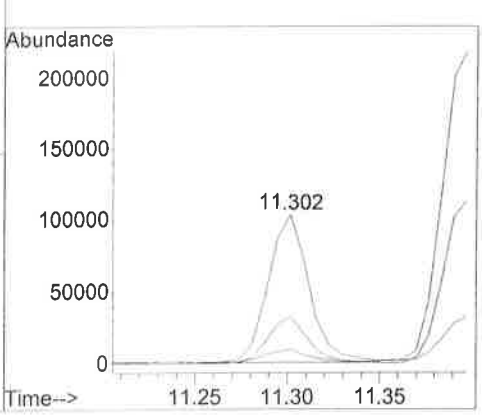


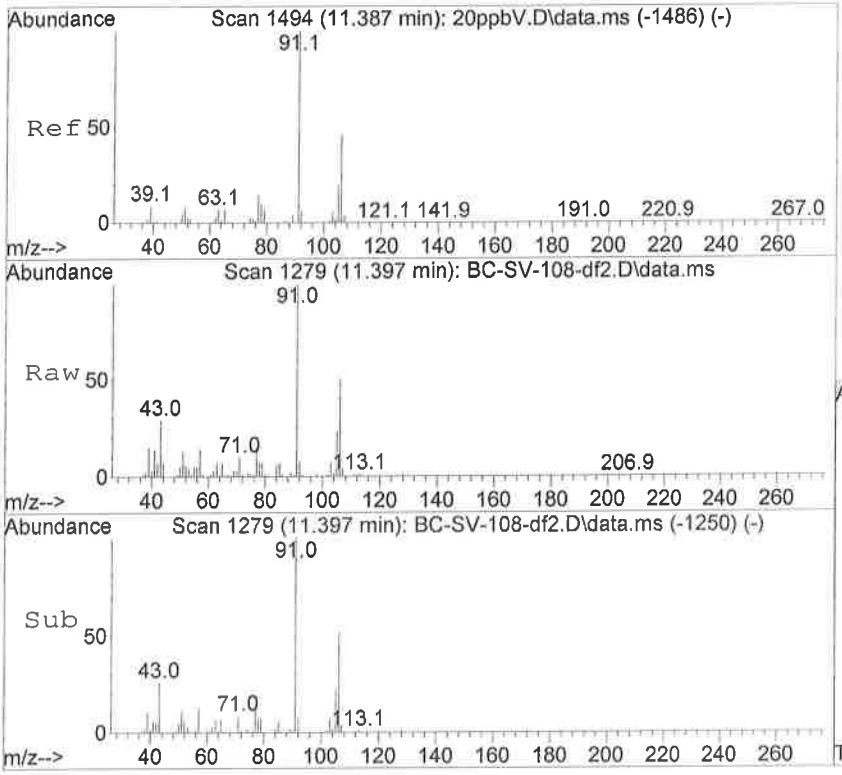


#65
Ethylbenzene
Concen: 3.16 ppbV
RT: 11.302 min Scan# 1265
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 91 Resp: 157555

Ion	Ratio	Lower	Upper
91	100		
106	31.4	21.4	41.4
77	9.7	6.2	12.0

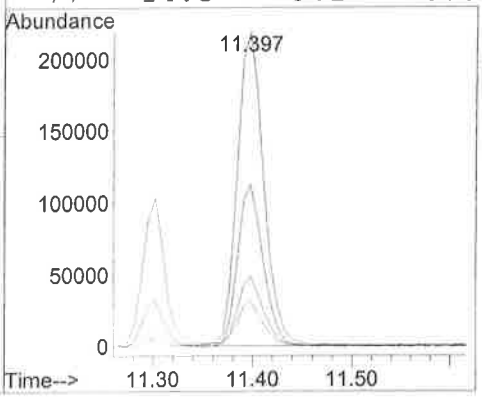


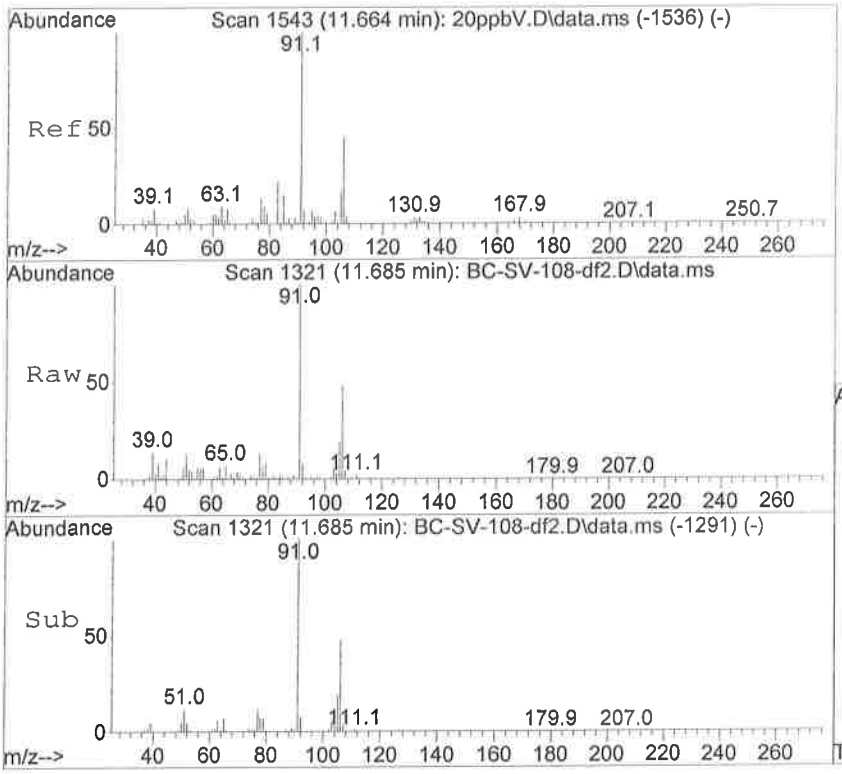


#66
m,p-Xylene
Concen: 8.70 ppbV
RT: 11.397 min Scan# 1279
Delta R.T. -0.000 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 91 Resp: 409181

Ion	Ratio	Lower	Upper
91	100		
106	50.0	33.9	65.9
105	22.0	14.7	28.5
77	14.3	9.2	18.0

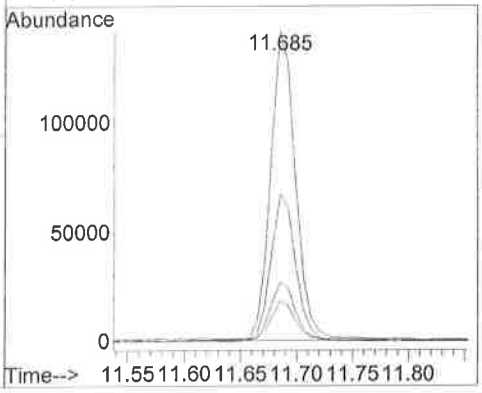


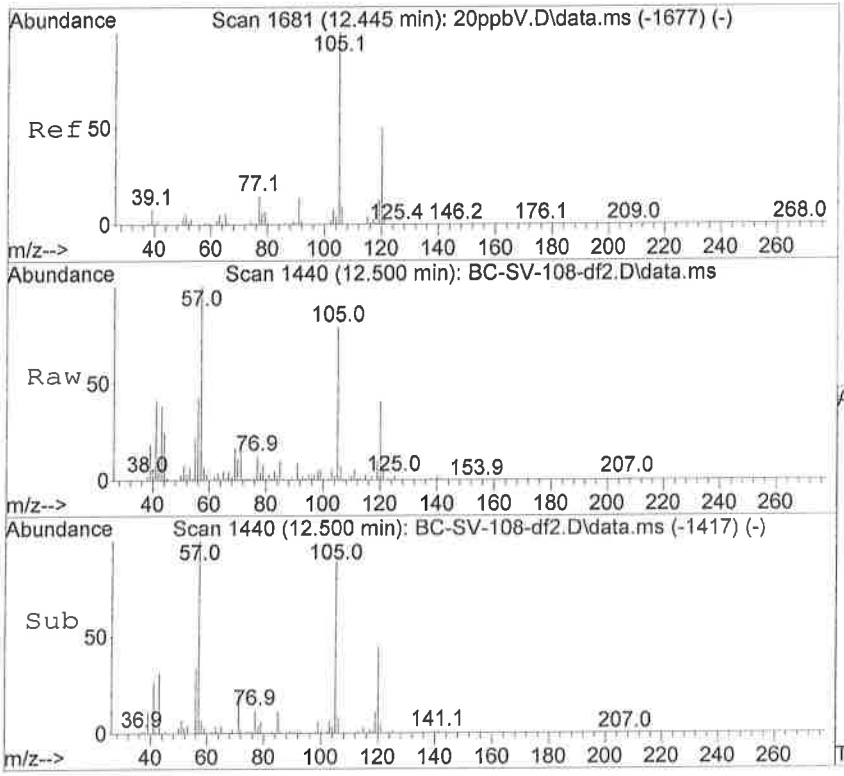


#68
o-Xylene
Concen: 5.43 ppbV
RT: 11.685 min Scan# 1321
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion: 91 Resp: 219297

Ion	Ratio	Lower	Upper
91	100		
106	47.6	32.1	62.3
105	19.7	12.6	24.4
77	12.4	8.9	17.3





#79
1,3,5-Trimethylbenzene
Concen: 1.19 ppbV
RT: 12.500 min Scan# 1440
Delta R.T. 0.007 min
Lab File: BC-SV-108-df2.D
Acq: 21 Sep 2016 12:16 pm

Tgt Ion:105 Resp: 61144

Ion	Ratio	Lower	Upper

H&P Project: BC100616-10 Rev
Client Project: Work Plan 18-149429 / San Diego

Dear Ms. Eileen Russell:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 05-Oct-16 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP, the National Environmental Laboratory Accreditation Conference (NELAC) and the Department of Defense Accreditation Programs.

Notes and Definitions

QL-1L	The LCS and/or LCSD recoveries fell below the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased low.
LCC	Leak Check Compound
ND	Analyte NOT DETECTED at or above the reporting limit
MDL	Method Detection Limit
%REC	Percent Recovery
RPD	Relative Percent Difference

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP and the ISO 17025 programs, certification number L15-279-R1

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

DTSC Vapor Intrusion Screening Model - Soil Gas

Introduction

This vapor intrusion model should be used in conjunction with the 2011 Department of Toxic Substances Control (DTSC) document: "Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion into Indoor Air", also called the Vapor Intrusion Guidance (VIG).

The Johnson and Ettinger (J&E) model (1991) predicts indoor air concentrations resulting from subsurface vapor migration into indoor air. The model produces an attenuation factor "alpha" that represents the ratio of the indoor air concentration to the subsurface concentration. Indoor air concentrations can be estimated from subsurface data (contaminant concentration in soil gas or groundwater) and the attenuation factor. The USEPA programmed the J&E model into Microsoft EXCEL ™ and added a human health risk component that calculates the risk associated with inhalation of a specific contaminant at the estimated indoor air concentration (USEPA Vapor Intrusion Model; 2004a). The USEPA "User's Guide for Evaluating Subsurface Vapor Intrusion into Buildings" (2004b) should be reviewed for documentation and instructions for using the vapor intrusion model provided in the spreadsheets. The USEPA screening level model can be used an additional line of evidence for evaluating vapor intrusion at a site. The model has been modified by the DTSC Human and Ecological Risk Office (HERO) to include Cal/EPA toxicity criteria values for the risk calculation component.

After preliminary evaluation of a site for potential vapor intrusion by use of default vapor attenuation factors (DTSC VIG, Step 5), a site-specific screening evaluation may be conducted using physical parameter data collected for the site and the DTSC version of the USEPA Vapor Intrusion Model (DTSC VIG, Steps 6 and 7). Table 3 of the DTSC VIG lists the input parameters for Site-Specific Screening Evaluations and provides default values for several parameters.

Users of the spreadsheet should be familiar with the assumptions and limitations of the model and recognize when the model is not appropriate for evaluating a site. For example, the model cannot evaluate preferential migration pathways and fractured bedrock conditions, which have the potential to significantly increase the rate of vapor intrusion beyond what the model would predict. Input parameters for a given site must be appropriately conservative and match site-specific conditions. The user should understand the sensitivity of the model to various input parameters and the DTSC recommends that all vapor intrusion evaluations include a sensitivity analysis. (See DTSC 2011 and USEPA 2004b).

December 2014 Revisions

The residential exposure duration (ED) and the averaging time for noncarcinogens (AT_{NC}) have been changed to 26 years as recommended by DTSC Human and Ecological Risk Office (DTSC 2014a) and consistent with the USEPA Exposure Factors Update (USEPA 2014a). **(DATENTER F47, G47; VLOOKUP C19, D19)**

March 2014 Revisions (last update - December 2011)

The DTSC version of the USEPA vapor intrusion spreadsheet model has been revised to (1) reflect recommendations in the Final DTSC Vapor Intrusion Guidance (2011), (2) provide additional receptor exposure scenarios, and (3) update toxicity criteria values from Cal/EPA Office of Environmental Health Hazard Assessment (OEHHA) and USEPA as currently recommended by the DTSC Human and Ecological Risk Office. Other revisions include changes in default soil properties and values for chemical physical properties, addition of references and comments for specific toxicity criteria, and messages and flags to refer the user to additional information.

Soil Properties (DATENTER H24, F36:H36)

The default values for soil properties for screening evaluations have been revised to those for sand (SCS soil type "S"; previous values were from USEPA Soil Screening Guidance, 1996), and are consistent with the values used to derive the California Human Health Screening Levels (OEHHA, 2005). Site-specific values may be used for site-specific vapor intrusion evaluations (see Appendices D

Additional Receptors (DATENTER Row 47)

A pull-down menu has been provided to allow for evaluation of a commercial/industrial receptor or a user-defined receptor, in addition to the residential receptor.

Receptor Exposure Parameters (DATENTER Row 47)

DTSC Vapor Intrusion Screening Model - Soil Gas

The auto-fill feature (using the "Lookup Receptor Parameters" button) will provide default exposure assumptions and air exchange rate for the residential and commercial scenarios. The user can also enter site-specific expsoure parameters if the "user-defined" scenario is selected.

Exposure Time (DATENTER I47)

Exposure Time was added as a parameter for receptor inhalation exposures. This revision is consistent with USEPA (2009) methodology to use the type of human health toxicity values which are currently derived by the USEPA Integrated Risk Information System (IRIS) as concentrations (Reference Concentrations, [or Cal/EPA OEHHA References Exposure Levels] for non-cancer effects and Inhalation Unit Risk values for cancer endpoints) rather than the earlier and now superseded intake-based approach. This revision is also needed for evaluation of receptor daily exposures that are less

DTSC Vapor Intrusion Screening Model - Soil Gas

Air Exchange Rate (DATENTER J47)

The Air Exchange Rate was added as an input parameter specific to a receptor scenario—residential (default = 0.5 changes per hour), commercial (default = 1.0 changes per hour), or user-defined. A user-defined site-specific air exchange rate may be higher or lower than the default. However, the exchange rate must be within a reasonable range and the basis for the value must be technically supported. The building dimensions remain fixed for the screening scenarios (INTERCALCS I10).

Default Attenuation Factor (alpha) for Subslab Soil Gas Data (DATENTER E24, F24, J36, J37; INTERCALCS A10, H31; message at RESULTS B19 and DATENTER K9)

For soil gas, the "source - building separation", L_T, is calculated by the model as the difference between the depth below grade to the bottom of the enclosed space (L_F, E24), and the soil gas sampling depth below grade, L_S (F24) (ideally, the depth to the source): $L_T = L_S - L_F$

If L_T, is less than 40 cm (OEHHA 2005; engineered fill scenario), the model defaults to the empirically derived subslab attenuation factor of 0.05 (DTSC VIG Table 2 and Appendix B):

If L_T < 40 cm, alpha = 0.05

Minimum Attenuation Factor (DATENTER L7; INTERCALCS H31; message at INTERCALCS H32, RESULTS B19 and DATENTER K9)

In certain site-specific situations, the model can yield very low attenuation factors, lower than reasonable values. DTSC does not anticipate that many sites will have attenuation factors less than 0.00006 (6E-05) for soil gas, as indicated by the empirical data in USEPA's database (5th percentile of attenuation factors remaining after source strength screen of 500X for exterior soil gas; USEPA, 2012). A warning message will appear on the INTERCALCS, RESULTS and DATENTER worksheets if the calculated attenuation factor is less than 0.00006. Use of attenuation factors less than 0.00006 should be fully explained and justified with site-specific information and a weight-of-evidence approach.

Results Summary (DATENTER J4:N7)

The receptor scenario, soil gas concentration (source vapor concentration, C_{source}), attenuation factor (alpha), indoor air concentration ($C_{building}$), cancer risk and hazard quotient are now shown on the DATENTER worksheet for easy reference and printing. For the soil gas model, C_{source} is the measured soil gas concentration input into the model. For the groundwater model, C_{source} is calculated from the groundwater concentration input into the model.

Chemical Properties (VLOOKUP, Chemical Properties Lookup Table)

The Chemical Properties Lookup Table columns C through H represent the current DTSC/HERO recommendations. These values reflect the chemical properties listed in the USEPA November 2013 Regional Screening Level Tables (USEPA 2013a) and USEPA online Vapor Intrusion Screening Level Calculator (2014b), except for the chemicals listed below:

75296	**2-Chloropropane** - Not listed in the RSL table; original spreadsheet values are retained.
108872	**Methylcyclohexane** - Not listed in the RSL table; original spreadsheet values are retained.
541731	**1,3-Dichlorobenzene** - Not listed in the RSL table; average values for 1,2- and 1,4-isomers from the RSL table are used as surrogate.

Toxicity Criteria (VLOOKUP, Chemical Properties Lookup Table)

The toxicity criteria listed in the Chemical Properties Lookup Table columns M (Inhalation Unit Risk, IUR) and N (Reference Concentration, RfC), represent current DTSC/HERO recommendations. These values are used by the model for calculating risk and hazard. The toxicity criteria listed in columns S (IUR) and T (RfC) are from the USEPA November 2013 Regional Screening Level Tables. For screening evaluations, DTSC/HERO applies route-extrapolation of oral toxicity values when inhalation criteria are not available. The RSL table excludes inhalation critiera derived by route-extrapolation from oral toxicity values. Many of the RfCs previously based on route-extrapolation have been replaced by USEPA provisional RfC or screening RfCs. Toxicity criteria from the original USEPA version of the model are shown as "Archive" values in columns W and X. Chemicals for which toxicity criteria values in columns M and N have been revised are listed below. See cell notes in VLOOKUP for further information.

OEHHA = Cal/EPA Office of Environmental Health Hazard Assessment
IRIS = USEPA Integrated Risk Information System
RSL = USEPA Regional Screening Level (Tables and Chemical-Specific values)
PPRTV = USEPA Provisional Peer-Reviewed Toxicity Value (PPRTV also refers to the USEPA document)
IUR = Inhalation Unit Risk

DTSC Vapor Intrusion Screening Model - Soil Gas

REL = Reference Exposure Level (Cal/EPA OEHHA inhalation reference concentration)
RfC = Reference Concentration
RfDi = Inhalation Reference Dose
RfDo = Oral Reference Dose
ATSDR = Agency for Toxic Substances and Disease Registry
MRL = ATSDR Minimal Risk Level

DTSC Vapor Intrusion Screening Model - Soil Gas

67663 **Chloroform** - IUR was revised to USEPA IRIS value. RfC was revised to ATSDR value as recommended in November 2013 RSL table.

67721 **Hexachloroethane** - RfC updated to 2011 USEPA RfC.

71432 **Benzene** - RfC from USEPA 2003 IRIS replaced with OEHHA 2014 REL

71556 **1,1,1-Trichloroethane** - RfC replaced with OEHHA REL.

74873 **Methyl Chloride** (Chloromethane) - IUR value withdrawn; USEPA 2012 PPRTV determined data are inadequate for assessment of carcinogenic potential.

74908 **Hydrogen Cyanide** - RfC updated to 2010 IRIS RfC.

74953 **Methylene Bromide** (Dibromomethane) - RfC derived from RfDo replaced with USEPA 2009 PPRTV Appendix A screening chronic RfC.

75003 **Chloroethane** - IUR value withdrawn by USEPA. 2007 PPRTV characterized chloroethane as likely to be carcinogenic to humans; however, data are inadequate for calculation of inhalation unit risk. Listed in 1990 as Cal/EPA Prop. 65 carcinogen.

75718 **Dichlorodifluoromethane** - RfC updated with 2010 PPRTV Appendix A screening chronic RfC.

79005 **1,1,2-Trichloroethane** - RfC derived from RfDo replaced with 2011 PPRTV Appendix A screening chronic RfC.

79345 **1,1,2,2-Tetrachloroethane** - RfC derived from PPRTV RfDo was updated using route-to-route extrapolation of 2010 IRIS RfDo.

88722 **o-Nitrotoluene** - Added IUR derived from route extrapolation of USEPA 2008 PPRTV oral cancer slope factor. USEPA classified as likely to be carcinogenic to humans. Listed in 1998 as Cal/EPA Prop. 65 carcinogen.

92524 **Biphenyl** - RfC derived from RfDo replaced with USEPA 2011 PPRTV Appendix A screening chronic RfC. Suggestive evidence of carcinogenicity.

96333 **Methyl Acrylate** - RfC derived from RfDo replaced with 2012 PPRTV RfC recommended in the November 2013 RSL Table.

97632 **Ethylmethylacrylate** - RfC derived from RfDo replaced with 2010 PPRTV RfC recommended in the November 2013 RSL Table.

98066 ***tert*-Butylbenzene** - RfC derived from RfDo replaced with IRIS RfC for isopropylbenzene (cumene), surrogate recommended by 2012 PPRTV for tert-butylbenzene.

98953 **Nitrobenzene** - IUR added and RfC updated with the 2009 IRIS assessment. Likely to be carcinogenic to humans (combined route).

103651 **n-Propylbenzene** - RfC derived from RfDo replaced with IRIS RfC for ethyl benzene, surrogate recommended in 2009 PPRTV Appendix A and used in November 2013 RSL table.

104518 **n-Butylbenzene** - RfC derived from provisional RfDo updated using route-to-route extrapolation of 2010 IRIS RfDo.

106934 **1,2-Dibromoethane** - IUR from OEHHA replaced with more conservative IRIS IUR.

107062 **1,2-Dichloroethane** - IUR from OEHHA replaced with IRIS IUR. RfC (OEHHA 2000 REL) updated with USEPA 2010 PPRTV RfC.

108678 **1,3,5-Trimethylbenzene** - RfC derived as 2003 PPRTV was withdrawn by USEPA; replaced with RfC HERO derived by route extrapolation of 2009 PPRTV screening chronic RfDo.

108872 **Methylcyclohexane** - RfC from HEAST replaced with IRIS 2005 RfC for surrogate hexane.

108907 **Chlorobenzene** - RfC from OEHHA (REL) replaced with USEPA 2006 PPRTV RfC.

120821 **1,2,4-Trichlorobenzene** - RfC from 2002 PPRTV updated with USEPA 2009 PPRTV RfC.

126987 **Methacrylonitrile** - RfC from HEAST updated with USEPA 2013 PPRTV RfC.

126998 **2-Chloro-1,3-butadiene** (Chloroprene) - IUR added and RfC from HEAST updated with IRIS RfC. USEPA 2010 IRIS assessment characterized chloroprene as likely to be carcinogenic to humans. Listed in 2000 as Cal/EPA Prop. 65 carcinogen.

132649 **Dibenzofuran** - RfC derived from provisional RfDo replaced with RfC derived from route-extrapolation of USEPA 2007 PPRTV screening chronic RfDo.

135988 ***sec*-Butylbenzene** - RfC replaced with IRIS RfC for isopropylbenzene, surrogate recommended by 2012 PPRTV for sec-butylbenzene.

141786 **Ethylacetate** - RfC derived from 1988 IRIS RfDo replaced by USEPA 2013 PPRTV RfC.

156592 ***cis*-1,2-Dichloroethylene** - RfC derived from HEAST RfDo replaced with RfC derived from extrapolation of the 2010 IRIS RfDo.

319846 **alpha-HCH** (Hexachlorohexane; alpha-BHC) - IUR from OEHHA replaced with more conservative USEPA IRIS IUR.

DTSC Vapor Intrusion Screening Model - Soil Gas

DTSC Vapor Intrusion Screening Model - Soil Gas

Additional Chemicals (VLOOKUP, Chemical Properties Lookup Table)

Chemicals have been added to the list for vapor intrusion evaluation as a result of toxicity criteria being derived or revised, more frequent detection at sites, and/or as needed for specific sites. See cell notes in VLOOKUP for chemical-specific information.

109-99-9 **Tetrahydrofuran**
96-12-8 **1,2-Dibromo-3-chloropropane**
142-28-9 **1,3-Dichloropropane**
123-91-1 **1,4-Dioxane**
108-60-1 **bis(2-Chloroisopropyl)ether**
542-88-1 **bis(Chloromethyl)ether**
108-20-3 **Diisopropyl ether (DIPE)**
106-89-8 **Epichlorohydrin**
924-16-3 **N-Nitroso-di-n-butylamine**
109-66-0 **Pentane, n-**
110-82-7 **Cyclohexane**

Chemical-Specific Information - Message (DATENTER I13)

For certain chemicals, a message will appear beneath the chemical name referring the user to the VLOOKUP Chemical Properties Lookup Table for comments on chemical properties and/or toxicity criteria. The comments provide chemical-specific information important for interpretation and/or application of the results in risk characterization and risk management. Included are possible or likely carcinogens for which inhalation unit risks have not been developed for quantifying potential risks.

Trichloroethylene (Trichloroethene, TCE; VLOOKUP, Chemical Properties Lookup Table M70, N70; message at DATENTER I13)

To protect women in the first trimester of pregnancy as one of the most sensitive populations, due to potential developmental toxicity from exposure to TCE, USEPA Region 9 developed health-protective interim response action levels and guidelines to address short-term inhalation exposures to TCE in indoor air from subsurface vapor intrusion (USEPA 2013b). HERO concurs with use of the USEPA Region 9's "Prompt Response Action Levels" of 2 µg/m^3 and 9 µg/m^3 for exposure to TCE under residential and commercial/industrial 8-hour workday scenarios, respectively (DTSC 2014b).

In the event the model-predicted indoor air concentration of TCE for a site approaches or exceeds these interim action levels, the DTSC Project Manager and Toxicologist should be contacted for a site-specific evaluation.

(Note that these prompt response action levels are close to the long-term exposure, cancer risk-based indoor air concentrations for 1E-6 risk, 0.4 µg/m^3 for residential exposures and 3 µg/m^3 for 8-hour/day commercial/industrial exposures.)

NEW => Receptor Lookup Table (added by HERO)

Receptor Type	AT_C (yrs)	AT_{NC} (yrs)	ED (yrs)	EF (days/yr)	ET (hrs/day)	ACH (1/hour)
Residential	70	26	26	350	24	0.5
Commercial	70	25	25	250	8	1
User-Defined						

Notes on Toxicity Criteria (see cell comments for individual chemical toxicity values)
1. Chemical name (blue) = Carcinogens with IUR
2. Values are from USEPA IRIS database except as indicated.
3. **Bold** = Cal/EPA Office of Environmental Health Hazard Assessment (OEHHA) toxicity value
4. IUR or RfC (red) = revised values (March 2014 update of December 2011 values)
5. X denotes route extrapolation from oral toxicity criteria.
(Values posted by USEPA or OEHHA as inhalation criteria, including cancer slope factors, are not denoted except as in original USEPA 2002 Draft VI guidance.)

Chemical Properties Lookup Table (K_{oc}, D_a, D_w, S, H', H values updated per USEPA November 2013 RSL Table)

NEW => 11 Additional Chemicals
(CAS No. in red)

CAS No.	Chemical	Organic carbon partition coefficient, K_{oc} (cm^3/g)	Diffusivity in air, D_a (cm^2/s)	Diffusivity in water, D_w (cm^2/s)	Pure component water solubility, S (mg/L)	Henry's law constant H' (unitless)	Henry's law constant at reference temperature, H (atm-m^3/mol)	Henry's law constant reference temperature, T_R (°C)	Normal boiling point, T_B (°K)	Critical temperature, T_C (°K)	Enthalpy of vaporization at the normal boiling point, $DH_{v,b}$ (cal/mol)
56235	Carbon tetrachloride	4.39E+01	5.71E-02	9.79E-06	7.93E+02	1.13E+00	2.76E-02	25	349.9	556.6	7,127

Executive Summary

On behalf of General Dynamics Properties, Incorporated (GD), Brown and Caldwell has prepared this human health risk assessment (HHRA) in response to the County of San Diego, Department of Environmental Health's (DEH's) letter dated May 4, 2016. The work in this report was required by DEH as part of the Voluntary Assistance Program's Case No. H00472-001. This report presents the results of data collection and evaluation by Brown and Caldwell to evaluate the potential for indoor air exposure to occupants of the ResMed Corporation (ResMed) building located at 9001 Spectrum Center Boulevard in San Diego, California. This HHRA update focuses specifically on the potential for soil vapor intrusion exposure and risks from chemicals associated with the General Dynamics Kearny Mesa Plant (KMP) formerly at this location (Figure 1). A separate HHRA has been prepared for the nearby residential area. Residential risks are not considered in this report since the ResMed building and property is used for commercial/industrial activities and not as residential.

The results of the HHRA are presented in the following sections of this report and summarized below in the remainder of this Executive Summary:

- **Section 1 Introduction, Section 2 Background, and Section 3 Physical Setting** — describes the purpose of this assessment, the background and investigation/assessment history of the project, and setting for the Study Area (the ResMed property within the KMP).
- **Section 4 Field Activities and Section 5 Investigation Results** — summarizes the methods used to collect the soil and soil vapor samples and presents the results of laboratory analyses.
- **Section 6 HHRA Update** — presents the results of a vapor intrusion model that evaluates the potential for vapor migration to indoor air and estimates the likelihood that any volatile organic compound (VOC) vapors pose a concern to human health.

In September and October 2016, two rounds of soil vapor investigation were performed adjacent to the ResMed building. Sampling included collection of soil vapor samples for VOCs analysis and soil samples for analysis of selected soil properties (moisture content and porosity) to support vapor intrusion modeling. Vapor was only obtained from one of the two locations (SV112) due to high vacuum and/or no flow in the second location.

Risks were modeled for location SV112 using the California Department of Toxic Substances Control (DTSC 2014) Human and Ecological Risk Assessment Office (HERO) soil vapor intrusion model. This model calculates vapor migration from the subsurface into indoor air using conservative assumptions and estimates exposure and Excess Lifetime Carcinogenic Risk (ELCR) and noncarcinogenic hazard using California EPA (CalEPA) and United States Environmental Protection Agency (USEPA) inhalation toxicity factors. Risks were estimated using the chemical concentrations (the higher from the two sampling events), chemical porosity, and moisture data collected from SV112. For model inputs where location-specific data were unavailable, conservative model defaults were used.

No factor was included for the positive pressure vapor barrier that underlies the ResMed building, which likely minimizes or eliminates the vapor intrusion pathway. Despite the conservative assumptions, the ELCR and noncarcinogenic Hazard Index were well below risk levels that are considered insignificant by USEPA and CalEPA.

This HHRA indicates that soil vapor intrusion does not present a human health concern for occupants of the ResMed building.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

Section 1

Introduction

On behalf of General Dynamics Properties, Incorporated (GD), Brown and Caldwell has prepared this human health risk assessment (HHRA) for the former General Dynamics Kearny Mesa Plant (KMP; Figure 1) in response to the County of San Diego, Department of Environmental Health's (DEH's) letter dated May 4, 2016. The work in this report was required by DEH as part of the Voluntary Assistance Program's Case No. H00472-001.

DEH's May 4, 2016 letter requested additional investigation and an evaluation of risks to the occupants of the ResMed Corporation (ResMed) via potential soil vapor intrusion. The ResMed building is located at 9001 Spectrum Center Boulevard, San Diego, California (Figure 2). For the purposes of this report, the KMP, including the former "Trich" (short for trichloroethylene/ trichloroethane, pronounced "trike") Farm, is referred to as the Site. The ResMed property within the KMP is referred to as the Study Area.

Prior to performing the sampling activities, and at the request of the DEH, Brown and Caldwell prepared the *Addendum Number 18 to Work Plan for Soil and Groundwater Impact Assessment of Hazardous Substance Release* (Work Plan; Brown and Caldwell 2016) on GD's behalf. The Work Plan presented the assessment activities and sampling locations to meet the requirements provided in DEH's May 4, 2016 letter. The Work Plan was approved by the DEH on July 27, 2016.

This HHRA is a companion document to the *Data Report* (Brown and Caldwell 2016b), which details the soil vapor probe installation activities for SV112 and SV113 performed as part of the DEH-approved Work Plan under Permit No. LMWP-002474 for this Study Area (the combined areas of Avion and Dog Park contained within the KMP). The Data Report, which was submitted to DEH on December 1, 2016, presents the soil and soil vapor sampling results used in this HHRA update. Figure 2 shows the locations of these soil vapor probes. As requested in the DEH May 4, 2016 letter, a separate HHRA update report has been prepared for nearby residential areas. Residential risks are not considered in this report since the ResMed building and property is used for commercial/industrial activities and not as residential.

The primary objective of this HHRA is to verify that the estimated industrial risks from vapor intrusion at ResMed are in the range considered insignificant by the California Environmental Protection Agency (CalEPA), Department of Toxic Substances Control (DTSC), and United States Environmental Protection Agency (USEPA).

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

Section 2

Background

The following sections present a summary of the Site background information, including a description of former industrial Site activities and environmental assessments.

2.1 Project Background

From 1959 to 1995, GD operated the KMP, a 242-acre aerospace manufacturing facility located in central San Diego, California (Figure 1). In 1986, a solvent leak was discovered during replacement of underground storage tanks (USTs) and associated piping in what is now referred to as the former Trich Farm (Figure 2). The USTs were used for storage and recycling of trichloroethene (TCE), 1,1,1-trichloroethane (TCA), and other chlorinated solvents at the former Trich Farm. These chemicals were stored on the east side of what was then Building 5 of the KMP. The USTs had been in regular use since the 1960s and TCE was used at the Trich Farm until about 1974 when it was replaced by TCA, which was used until shutdown of the Trich Farm in the early 1990s. In mid-1986, the USTs associated with the former Trich Farm were removed and replaced with aboveground storage tanks. During removal, no leaks were observed in the USTs, but leaks were found in the associated piping areas.

Site assessment began at the Trich Farm in 1986 near the identified solvent pipe leak, but more extensive assessment and remediation was not undertaken until the early 1990s because the 1986 study indicated the bulk of the impacted soil was inaccessible (located beneath Building 5). In early 1997, after Building 5 and the rest of the KMP were demolished, GD received approval from the DEH to conduct a phased soil and groundwater assessment. LNR Kearny Mesa, Inc. (LNR) purchased the entire KMP property in 1998 with plans to redevelop the area. As part of that redevelopment, LNR sold most individual parcels to other parties, including those now occupied by Dog Park and the Avion apartment complex located to the west across Paramount Drive.

Activities conducted at the Trich Farm since the start of investigations in the early 1990s have included the sampling of numerous soil borings, groundwater wells, and soil vapor probes at and in the vicinity of the Site. The two current ongoing activities being conducted at the KMP are annual groundwater monitoring of 16 groundwater monitoring wells and quarterly dense non-aqueous phase liquid (DNAPL) monitoring and extraction from two groundwater monitoring wells located within the original solvent release source area. Routine groundwater monitoring events have been conducted since 1998 at wells within the KMP associated with the Trich Farm. The most recent event was conducted in November 2016.

2.2 Previous Soil Vapor Investigations and HHRAs

Three soil vapor and risk screening investigations have been conducted at the KMP prior to this investigation. The following summarizes the previous soil vapor investigations and HHRAs.

2.2.1 1998 through 2000 Investigations

A 1998/1999 investigation was conducted by Ogden Environmental and Energy Services Co. (Ogden 1999) for LNR, and a follow-up investigation was conducted by Brown and Caldwell in 1999/2000 (Brown and Caldwell 2000) for GD. Ogden collected 74 soil vapor samples ranging in depth from 5

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

feet below ground surface (bgs) to 10.5 feet bgs from 32 sampling locations (SV-1 though SV-32), while Brown and Caldwell installed 43 dedicated sampling probes (SV-33 through SV-75) and collected 100 soil vapor samples. The Ogden investigation also involved collection and analysis of 15 soil samples for site-specific physical parameters in support of the human health risk modeling. The physical parameters analyzed by Ogden included soil moisture, dry density, grain size distribution, specific gravity, total porosity, and total organic carbon. As part of previous human health risk calculations for GD, Brown and Caldwell also used soil physical data collected by Ogden.

The soil vapor investigations conducted in the vicinity of the former Trich Farm showed detectable concentrations of volatile organic compounds (VOCs) in soil vapor. The VOCs most frequently reported in the Ogden and Brown and Caldwell data sets were the chlorinated VOCs (cVOCs) TCA, 1,1-dichloroethene (1,1-DCE), TCE, and various chlorofluorocarbons. It was observed from data obtained during the two investigations that concentrations of VOCs in soil vapor generally decreased laterally away from the former Trich Farm source area.

These investigations included evaluations of human health risks under future commercial/industrial use scenarios. In addition, the Ogden investigation included evaluation of human health risks under future residential use scenarios on the west side of Paramount Drive in the area of Dog Park. The indoor air model presented in the 2000 Site Assessment and Mitigation Manual (DEH 2000) was used by both Ogden and Brown and Caldwell to assesses the potential for migration of VOC vapors through the subsurface and up through a future concrete building slab. As noted, Ogden used both commercial/industrial and residential exposure scenarios to perform risk calculations while Brown and Caldwell used only commercial/industrial risk screening assumptions for their calculations. Using residential screening exposure values, Ogden found the non-cancer risk estimate from soil vapor beneath the east-central portion of the former Building 5 was at a level considered insignificant by USEPA and CalEPA (hazard index [HI] less than 1.0). An individual ELCR greater than one in a million (1E-06 or 1 x 10^{-6}) was estimated by Ogden for a residential exposure scenario at 11 of the 32 soil vapor probe locations tested (Ogden 1999).

Based on Ogden's soil vapor survey and indoor air risk assessment, LNR incorporated institutional controls into their proposed development plan for the subject area as specified in the 1999 Case Closure Summary (DEH 1999). These controls included limiting the use of the former Trich Farm area to a roadway (Paramount Drive), adding a 25-foot setback on either side of the roadway, and precluding residential structures in the area where the calculated ELCR exceeded 1E-06, with an additional setback near those areas for residential use. In addition, the DEH stipulated that the northeast corner of the proposed residential subdivision was to remain as open space and that no large continuous monolithic concrete or asphalt structures be constructed over the entire area identified as posing an unacceptable risk. These areas were required to be maintained with permeable surfaces to allow for venting of soil vapor. This requirement led to the development of the fully landscaped and irrigated park area now known as Dog Park. Dog Park was designated specifically in the DEH Case Closure Summary prepared in support of a no further action determination issued to LNR (DEH 1999).

2.2.2 2008 Investigation

In 2008, Brown and Caldwell completed a soil vapor investigation and HHRA in the Dog Park, which was previously studied in the late 1990s on behalf of LNR. DEH requested the soil vapor survey and HHRA work (DEH 2007) because of changing Site conditions, including rising water levels, increases in VOC concentrations in some wells, and changes in zoning allowing for residential use. The scope was outlined in *Addendum No. 16 to the Work Plan for Soil and Groundwater Impact Assessment of Hazardous Substance Release, Former General Dynamics Kearny Mesa Plant Trich Farm, San Diego, California* (Brown and Caldwell 2007). The purpose of the investigation was to evaluate the

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

current shallow subsurface distribution of VOCs in soil vapor near the boundaries of Dog Park and assess the potential for subsurface vapor intrusion from the subsurface to indoor air at residential units adjacent to Dog Park and evaluate if further mitigation or monitoring of soil vapor conditions west of Paramount Drive was warranted.

Between February and July 2008, Brown and Caldwell collected 34 soil vapor samples from the 5-to-6-foot and 11-to-12.5-foot depth intervals at six locations at the western edge of Dog Park. The soil vapor data were used to complete an HHRA that evaluated the potential for risk due to potential soil vapor intrusion. The risk assessment methods followed the standard guidance established by USEPA and CalEPA in effect at the time of the HHRA. The exposure estimates were based on the concentrations of VOCs in soil vapor samples collected at the 5-foot depth because these were considered by USEPA and CalEPA risk managers to be the most representative of the VOC concentrations in soil vapor that might migrate into a building. To estimate indoor air concentrations, Brown and Caldwell used the USEPA's version of a computer-based Johnson and Ettinger vapor intrusion model (JEM) modified to reflect CalEPA guidelines. These concentrations were used to estimate inhalation intakes, and then risks were calculated using toxicity factors that estimate ELCR and HI based on intake.

The HHRA evaluated both potential residents and commercial/industrial workers in a hypothetical building overlying Dog Park. The ELCR for a resident who spends 6 years as a child and 24 years as an adult in an apartment was estimated based on JEM to be 1E-06 (1×10^{-6}) and the HI to be 1E-02 (0.01). The ELCR and HI estimated by Brown and Caldwell for a future industrial worker at Dog Park were 7E-08 (7×10^{-8}) and 5E-04 (0.0005), respectively. These levels for both cancer risk and HI are considered insignificant by both CalEPA and USEPA.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

Section 3

Physical Setting

This section summarizes the physical setting of the Site. A detailed description of the conceptual site model including Site topography, geology, hydrogeology, and nature and extent of VOC impacts was presented in the *Updated Site Assessment and Hydrogeologic Conceptual Site Model Report* (HCSM; Brown and Caldwell 2014). The following presents a summary of the physical setting components of the conceptual site model presented in the HCSM.

3.1 Site and Surrounding Area Description

The data used in this HHRA were collected during the most recent soil vapor investigation (September to October 2016) conducted at the ResMed building. Land use in the surrounding area includes residential units to the west and commercial units to the east. Commercial and residential land use dominates the surrounding area. No schools, day care centers, or hospitals are located within one quarter mile.

ResMed is a manufacturer of medical devices and software. The building, constructed in 2008, is used for administrative purposes. It consists of a slab on grade structure with a vapor barrier as part of the installed foundation. Offices in a small portion of the northwestern corner of the ResMed building overlie an area where the TCE soil vapor contours indicated TCE vapors could be present. These contours were previously developed and presented in the 2008 HHRA using the 1999 Ogden and 2000 Brown and Caldwell soil gas investigation data. For this reason, the DEH requested this soil vapor probe installation and sampling discussed in this report.

3.2 Geology and Hydrogeology

Geology in the area is composed of inter-bedded sedimentary units composed of silts, sands, and cobble-conglomerates overlain by varying amounts of fill material. The formations beneath the area generally have low permeability and hydraulic conductivity values due to their generally fine grained, partially cemented nature. Hydraulic conductivity values between 10^{-5} and 10^{-7} centimeters per second have been measured at the Site during previous investigations.

During this investigation, the soil vapor probes were installed in the soil walkway adjacent to the northwest corner of the ResMed building (Figure 2). The material encountered in the top 5 feet (the sample depth) was composed primarily of silty sand with gravel and cobbles underlain by clayey sand. Boring logs for the soil vapor samples appear in Appendix A. Additional descriptions of the lithology appear in the Data Report (Brown and Caldwell 2016b).

There are no natural surface water bodies within or near the Site or surrounding areas. The nearest surface water drainages are the intermittent creeks in Murphy Canyon, located approximately 1 mile east of the Site and San Clemente Canyon, located approximately 2 miles north of the Site. Site hydrogeology is complex with three water-bearing zones recognized between the surface and approximately 200 feet bgs. Zone A, the shallowest water-bearing zone, has previously been understood as a discontinuous and unconfined unit; however, recent groundwater monitoring events have indicated increased groundwater levels similar to those observed in Zone B, indicating a diminished separation between these zones due to the rising groundwater levels. Zone B is the

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

locally continuous water-bearing zone above the Ardath Shale, and Zone C is the deepest water-bearing zone.

Groundwater was not encountered during the soil vapor investigation, but has been observed at approximately 25 feet bgs in the monitoring wells (including MW-10 and MW-11) immediately to the west of the ResMed building. Groundwater elevations in the Site area have been increasing since initial observations began in 1998.

3.3 Historical Summary of the Nature and Extent of VOC Impacts

VOCs at the Site are present in groundwater, soil, soil vapor, and as DNAPL in the Trich Farm source area. DNAPL is the phase-separated form of the solvent released from the former Trich Farm. A brief overview of the occurrence of VOCs is discussed below.

VOCs have been reported in soil from the near surface to approximately 90 feet bgs primarily in the source area, which is now beneath the Paramount Drive right-of-way, but extend to the west into Dog Park and also to the east beneath the commercial property. The predominant VOCs detected in soil are TCE and TCA, which were the primary chemicals released from the Trich Farm during its operation, as well as several degradation products.

Groundwater containing dissolved-phase VOCs has been monitored at the Site since 1998. DNAPL has been observed in monitoring wells east of Paramount Drive and DNAPL recovery has been performed at the Site since 1999 in several monitoring wells east of Paramount Drive. Groundwater contains similar VOCs as soil. For general reference, the extent of groundwater TCE impacts in Zone B appears in Figure 3.

Concentrations of TCE and 1,1-DCE in MW-11 located northwest of the ResMed building have had an overall decreasing trend since November 2006, and have declined approximately 28 and 40 percent, respectively, since that peak. Concentrations of TCE and 1,1-DCE in MW-3, located southwest of the ResMed building, have had an overall decreasing trend since January 2011 and have declined approximately 86 and 95 percent, respectively, since that peak. VOC concentrations in other wells monitored at the Site are within historical ranges and remain stable. Quarterly DNAPL monitoring is conducted at monitoring wells MW-9 and MW-12 near the former Trich Farm, but DNAPL has not been observed in MW-9 since April 2011 and has not been observed in MW-12 since April 2013.

As discussed in Section 2.2, previous soil vapor investigations have been conducted at the former Trich Farm. Figure 4 shows the isoconcentration contours for the average total soil vapor concentrations presented in Brown and Caldwell's *Soil Vapor Survey and Human Health Risk Assessment* (2008). Based on these previous investigations, the distribution of VOCs in soil vapor is generally centered around the former Trich Farm source area that was located approximately 50 feet west of the ResMed building.

I05979_HHRA_ResMed_Dec_2016.docx

Section 4

Field Activities

As part of this HHRA update, soil vapor samples were obtained during two separate sampling events (September and October 2016) at borings SV112 and SV113. To obtain the soil vapor data for this update, the following was performed:

- Negotiation of access agreement with ResMed;
- Acquisition of appropriate permit to install vapor probes;
- Completion of utility clearance;
- Installation of two soil vapor borings (SV112 and SV113) to 5 feet bgs (Figure 2) immediately adjacent to the ResMed building foundation via limited-access direct-push rig;
- Collection of three undisturbed soil samples from each soil vapor probe location at depths of approximately 1, 3, and 5 feet bgs;
- Analysis of the soil samples for moisture content and porosity (total, air-filled, and water-filled);
- Installation and sampling of soil vapor probes using 400-milliliter summa canisters; and
- Analysis of the soil vapor samples, where obtained, for VOCs by USEPA Method TO-15.

Soil vapor samples could not be collected from SV113 due to high vacuum or no flow. The lack of a sample reflects the general absence of vapor under the Site due to soil and soil vapor conditions at the vapor probes. These conditions limit the potential for vapor movement to the vapor probe and reduce the likelihood of a complete vapor intrusion pathway, as discussed further in Section 6. Details regarding the sampling procedures and field observations are provided in the Data Report (Brown and Caldwell 2016b).

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

Section 5

Investigation Results

Detailed results of the 2016 sampling performed in accordance with the Work Plan (Brown and Caldwell 2016a) are presented in the Data Report (Brown and Caldwell 2016b). A summary of the general investigation results and observations is summarized below. The laboratory analytical reports and data validation reports are provided in Appendix B.

5.1 Soil

Results of soil physical properties in soil collected from the soil vapor probe borings are presented in Table 1. As described in the Data Report (Brown and Caldwell 2016b), average moisture content was 13.7 percent in SV112 and 9.6 percent in SV113 (where no vapor was obtained).

5.2 Soil Vapor

The results of the laboratory VOC analysis of soil vapor samples collected during the 2016 investigation are summarized in Table 2. The concentrations of TCE and vinyl chloride (VC) are shown on Figure 4.

Soil vapor samples collected during this investigation contained detectable concentrations of 18 of the 49 target VOCs for this project (see Appendix B for the list of compounds analyzed). Many of these have been sporadically detected in groundwater. Detected cVOCs associated with the chemicals used at the former Trich Farm (and daughter products) included tetrachloroethene (PCE), cis-1,2-dichloroethene, and VC. The values of the cVOCs during the 2016 sampling were lower than the isoconcentrations previously presented in Brown and Caldwell's *Soil Vapor Survey and Human Health Risk Assessment* (2008). This is consistent with the trend noted in the 2008 report; i.e., VOC concentrations in soil vapor decrease away from the Former Trich Farm area (west of the ResMed building). Figure 4 shows the TCE isoconcentrations presented in the 2008 report as well as the data from 2016. Other VOCs detected included various chlorofluorocarbons such as Freon 11 and aromatic hydrocarbons such as benzene and ethylbenzene. Benzene and ethylbenzene are common fuel constituents and ubiquitous in the atmosphere (Agency for Toxic Substances and Disease Registry 2007, 2010).

Section 6

Human Health Risk Assessment

As discussed above, DEH requested that an investigation and HHRA be performed to assess soil vapor intrusion risks to occupants of the ResMed building. This HHRA update estimates the risks associated with potential migration of VOCs into indoor air (soil vapor intrusion) in the northwestern corner of the ResMed building. Soil vapor collected just outside the corner of the building is considered representative of vapors that could potentially migrate into the building. This HHRA follows the standard protocols and guidance established by the DTSC (2011) and the USEPA (1989 *et seq*).

USEPA and DTSC have made default policy decisions about the possible health effects of chemicals used by the industry. The intent of these policy decisions is to assure that the actual risk, if any exists, will not be underestimated (USEPA 1989).

HHRA is a formal process with five steps as follows:

1. **Data Evaluation** — discusses the soil vapor data and VOCs that were used in the HHRA.
2. **Exposure Assessment** — estimates the potential concentrations of VOCs in indoor air and the amount of VOCs that a building occupant might take in (daily intake).
3. **Toxicity Assessment** — presents the toxicity factors used to estimate the potential health effects associated with the dose estimated for each VOC.
4. **Risk Characterization** — shows how the information in the Exposure and Toxicity Assessments is combined to estimate the likelihood of adverse health effects for VOCs considered potential carcinogens (cancer risk) and for VOCs with only noncancer health effects (hazard quotients).
5. **Uncertainty Analysis** — discusses the level of confidence that can be placed in the results of the HHRA.

For this HHRA, the DTSC (2014) HERO soil vapor intrusion model was used to complete Steps 2 through 4. The inputs for the modeling are presented in Table 3, and the results of the HHRA are summarized in Table 4. Additional supporting information for the modeling is provided in Appendix C.

6.1 Data Evaluation

The data used in this HHRA are the laboratory analyses of soil and soil vapor samples collected in 2016, discussed in earlier sections of this report. Data were independently validated by Laboratory Data Consultants, Inc., of Carlsbad, California. The validation reports are provided in Appendix B. The data were considered usable for this HHRA update.

Each of the 18 VOCs that were reported in a least one sample was included in this HHRA update, with the exception of 4-ethyltoluene, which has no inhalation toxicity factors and could not be assessed. The list of these detected VOCs is shown in Table 2.

6.2 Exposure and Risk Assessment

The HERO soil vapor intrusion model is a version of the JEM (USEPA 1991), which predicts indoor air concentrations resulting from subsurface vapor migration into indoor air. The model produces an attenuation factor "alpha" that represents the ratio of the indoor air concentration to the subsurface soil vapor concentration. Indoor air concentrations are estimated from the VOC concentrations in

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

soil vapor and the attenuation factor. The USEPA programmed the JEM into Microsoft EXCEL™ and added a human health risk component that calculates the risk associated with inhalation of a specific contaminant at the estimated indoor air concentration (USEPA Vapor Intrusion Model; 2004). The USEPA model has been modified by the DTSC HERO to include CalEPA toxicity criteria values for the risk calculation component. DTSC has also added an exposure time variable in accordance with updated USEPA inhalation toxicity guidance (USEPA 2009) to account for exposures that are less than full time (DTSC 2014). In October 2016, DTSC slightly modified the PCE inhalation unit risk, which is not reflected in the published model. To account for this DTSC slight modification, Brown and Caldwell adjusted the model to reflect the updated PCE toxicity factor.

6.2.1 Soil Vapor Intrusion Model Inputs

The HERO soil vapor intrusion model is a screening version of JEM and has limited input fields. The inputs for the modeling are presented in Table 3. Additional details appear in the modeling input and output files in Appendix C. Additional discussion on key input parameters appears below.

Soil Vapor Concentration

Soil vapor concentration (in micro grams per cubic meter) was entered as reported by the laboratory. As noted in Section 4, vapor could only be obtained from one of the two probes, SV112 (in both the September and October sampling events). The higher soil vapor concentration from each sampling event was used for each VOC. These values appear in the "detects" summary presented in Table 2. Nondetects ("U" values) were not considered in this HHRA. Estimated "J"-qualified results that were below the quantitation limit were used as reported.

Soil Type

The model has a selection of 12 soil types. Sandy loam was identified as the most representative soil type for this Site based on the lithology observed in the soil samples collected from the soil vapor probe borings (see Appendix A for the boring logs). The model can assign bulk density and porosity based on the soil type if site-specific data are not available.

Porosity

As discussed in Section 4, porosity was measured in the soil collected at approximately 1, 3 and 5 feet bgs. Total, water-filled and air-filled porosity are inputs in the model. For the modeled boring (SV112), the results were averaged to represent the characteristic of the soil column through which vapor would need to migrate from the sampled depth (approximately 5 feet bgs) to the bottom of the building foundation. The porosity values are presented in Table 1.

The modeling files appear in Appendix C.

6.3 Risk Results

The HHRA process, which is incorporated into the model, combines estimates of indoor air concentrations with inhalation toxicity values to calculate potential ELCR and noncancer hazard. The cancer and noncancer results are summarized in Table 4.

6.3.1 Risk Assessment Results

Excess Lifetime Cancer Risk

Cancer risk is termed "the probability of increased individual excess cancer." This means the risk over and above the natural risk of cancer in the general public. The cancer risks from detected chemicals and exposure pathways are then added to estimate overall ELCR. CalEPA considers cancer risks at or below one in a million (1 E-06, or 1 x 10^{-6}) to be insignificant.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

The cancer risks from the data at SV112 were estimated at 7E-09, or seven in a billion, well below the risk limit. Approximately 60 percent of the total ELCR is related to benzene, which is not a Site contaminant, and, as previously indicated, is ubiquitous. The total ELCR without benzene (not considered a Site contaminant of concern) is 3E-09.

Noncancer Risk

Noncancer risk for an individual chemical is expressed as the hazard quotient. The sum of chemical-specific hazard quotients is called the HI. It is only appropriate to add hazard quotients values for different chemicals if they have the same health effect. Adding hazard quotients values into a single cumulative HI across chemicals is a preliminary estimate of the highest possible noncancer risk. A HI value of 1 indicates that lifetime exposure has limited potential for causing an adverse effect in sensitive populations, and values of less than 1 can generally be considered acceptable. Values greater than 1 are usually given closer attention. If the HI is greater than 1, the contribution of individual VOCs and the potential for additive effects is considered.

The estimated noncarcinogenic HI was 2E-04. This HI is approximately 4,000 times below the risk limit of 1, even assuming full additivity (not accounting for target organs). Furthermore, that HI value includes about one third that is attributable to benzene compounds, not considered Site constituents of concern.

These results indicate no human health risks above levels of concern associated with vapor intrusion into the ResMed building.

6.4 Uncertainty Analysis

Varying degrees of uncertainty exist in each step of the HHRA process. The key uncertainties that may affect the HHRA update are described below.

6.4.1 Data

The data were determined to be of acceptable quality. In terms of representativeness, the results are considered adequate to support the HHRA update. The soil vapor was collected in the soil walkway area immediately adjacent to the northeastern corner of the building. The maximum VOC concentrations in groundwater are located to the west of the building (see Figure 3); therefore, concentrations in the subsurface soil vapor under the building may be lower than those in the SV112 location. If that is the case, soil vapor measured in SV112 may overestimate risk to building occupants.

6.4.2 Soil Vapor Intrusion Model

The attenuation factor that predicts indoor air concentrations based on soil vapor concentrations is based on a number of assumptions. Observations of soil type and measured porosity provide a fairly high degree of confidence in the calculation of permeability. However, the actual migration from the subsurface through the foundation and into indoor air, as well as the mixing and dilution within the breathing zone, are based on model defaults. For example, the vapor model assumes that vapors enter through a crack in the floor around the perimeter of the building where the outside wall meets the foundation on all outside walls. However, the ResMed building is large and there are unlikely to be subareas that have more than two outside walls. The assumption of only a 0.5 per hour air exchange rate is also low and probably underestimates actual ventilation rates.

The calculated risks are based on the maximum concentrations observed. As detailed in Section 4, soil vapor samples could only be obtained from one of the two probes adjacent to the ResMed building. However, the detected VOC concentrations from the two sampling events from SV112 were

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

relatively similar. Therefore, using the maximum concentrations observed, and calculating long-term risks assuming continuous exposure to the limited vapor that was actually observed, likely over-predicts exposures and associated risks.

6.4.3 Risk Characterization

A high degree of uncertainty in any risk assessment is associated with the toxicity factors because, for the VOCs used in this HHRA, data from animals exposed to high doses of chemicals were used to extrapolate the health effects in people exposed to doses that are orders of magnitude lower. The toxicity factors are conservatively derived with upper-bound risk estimates and safety factors. Toxicity factors are derived to over-estimate the potential for health effects.

An additional human health protection consideration for this HHRA is that the ResMed building was constructed with a vapor barrier as part of the building foundation. Because the extent to which the system prevents migration of vapors from the subsurface into indoor air cannot be quantified, no reduction in the risk estimates was assumed. However, it is likely that the barrier greatly eliminates or even prevents vapor intrusion. As a result, the actual risk to occupants due to vapor intrusion from Site-related VOCs may be non-existent.

6.5 Risk Conclusions

The risks in this HHRA update were estimated using highly conservative assumptions that likely overestimate both exposure and risk. Nonetheless, the estimates are well below risk levels that are considered insignificant by USEPA and CalEPA. This HHRA indicates that soil vapor intrusion does not present a human health concern for occupants of the ResMed building.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
I05979_HHRA_ResMed_Dec_2016.docx

Section 7

Conclusions

Human health risks due to potential vapor intrusion into the ResMed building were estimated using measured soil and soil vapor data and the DTSC vapor intrusion screening model. Even using conservative assumptions that are likely to overestimate actual exposure and risks, the cancer and noncancer risks are well below levels considered insignificant by USEPA and CalEPA. No further evaluation of risk is recommended.

Limitations

This report has been prepared for the exclusive use of GD in accordance with the standards of the environmental consulting industry at the time the services were performed and in accordance with the contract between GD and Brown and Caldwell dated August 1, 2016. This work has been performed for the sole purpose of assisting in the evaluation of environmental conditions associated with the Site, particularly the former Trich Farm and, as such, is governed by the specific scope of work authorized by GD. GD and Brown and Caldwell acknowledge that this report is prepared for the benefit and specific reliance of GD. The findings in this report are based upon observations of current site conditions. The conclusions presented are not necessarily indicative of future conditions or of future operating practices on this property.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
