Site History:

The property originally was operated by the National Aeronautics and Space Administration (NASA) and was used as the government acceptance and test facility for Atlas rocket motor casings built by General Dynamics at their adjacent facility. Various hazardous waste and petroleum and diala oil was used and stored on-site. Numerous above- and below-ground tanks were used to store the material.

Violation Description:

Failure of line leak detector to detect a leak and/or failure of audible and visual alarm.

Violations

Violation Date: 4/15/2014 **Violation Program:** UST
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Notes:

Returned to compliance on 04/15/2014.

Violation Description:

Failure of the overfill prevention system to meet one of the following requirements:
1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Violations

Violation Date: 1/5/2015 ***Violation Program:*** HW
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Notes:

Returned to compliance on 01/27/2015.

Violation Description:

Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Returned to compliance on 06/22/2016.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date: 6/16/2016 **Violation Program:** APSA
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: HSC 6.67 25270.4.5 (a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5 (a)
Violation Notes:

Returned to compliance on 06/22/2016.

Violation Description:

Failure to complete a review and evaluation of the SPCC Plan at least once every five years, document the completion of the review, and sign a statement as to whether the SPCC Plan will be amended.

Violations

Violation Date: 7/25/2014 **Violation Program:** HW
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 02/01/2016.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 7/25/2014 **Violation Program:** HW
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Notes:

Returned to compliance on 02/01/2016.

Violation Description:

Haz Waste Generator Program - Operations/Maintenance - General

Violations

Violation Date: 7/25/2014 **Violation Program:** HW
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 22 CCR 15 66265.195(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.195(a)
Violation Notes:

Returned to compliance on 02/01/2016.

Violation Description:

Failure of the owner or operator to conduct inspections and maintain inspection records at the facility of the following tank equipment:
1) Overfill/spill control equipment (e.g., waste-feed cutoff systems, bypass systems, and drainage systems) to ensure that it is in good working order;
2) The aboveground portions of the tank system, if any, to detect corrosion or releases of waste;
3) Data gathered from monitoring equipment and leak-detection equipment, (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design;

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

4) The construction materials and the area immediately surrounding the externally accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation); and
5) For uncovered tanks, the level of waste in the tank, to ensure compliance with section 66265.194(b)(3).

Evaluations

Eval Date:	4/20/2016
Violations Found:	Yes

Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: San Diego County Department of Env Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Inspector: Burke Mike Inspection ID:5497178

Violations

Violation Date: 4/20/2016
Violation Program: HMRRP
Violation Division: San Diego County Department of Env Health
Violation Source: CERS
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Notes:

Returned to compliance on 04/27/2016.

Violation Description:

Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 4/20/2016
Violation Program: HMRRP
Violation Division: San Diego County Department of Env Health
Violation Source: CERS
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Returned to compliance on 05/09/2016.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Potential Media Of Concern:	Gasoline		

Potential Media Affected: Other Groundwater (uses other than drinking water)
How Discovered Description:
Stop Description: CLOSE AND REMOVE TANK
Cal Water Watershed Name: San Diego - Lower San Diego - Mission San Diego (907.11)
DWR Groundwater Subbasin Name:
Site History:

Four underground storage tanks were removed from the site prior to 1985. The site was redeveloped and is currently a Redi-Care facility. Site assessment has been performed since 1998. Soil and groundwater appears to have been adequately assessed. Remediation of free product was performed. Dissolved concentrations of hydrocarbons remain on the site, especially in the vicinity of the former tank pit. A soil vapor survey was performed and it was determined that there is no potential risk from vapors at the site. A CAP will be presented for public review in December of 2010.

Violations

Violation Date: 2/6/2015 ***Violation Program:*** HW
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 22 CCR 16 66266.130 - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.130
Violation Notes:

Returned to compliance on 02/12/2015.

Violation Description:

Failure to properly handle, manage, label, and recycle used oil and fuel filters.

Violations

Violation Date: 2/6/2015 ***Violation Program:*** HW
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 22 CCR 15 66265.195(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.195(a)
Violation Notes:

Returned to compliance on 02/12/2015.

Violation Description:

Failure of the owner or operator to conduct inspections and maintain inspection records at the facility of the following tank equipment:
1) Overfill/spill control equipment (e.g., waste-feed cutoff systems, bypass systems, and drainage systems) to ensure that it is in good working order;
2) The aboveground portions of the tank system, if any, to detect corrosion or releases of waste;
3) Data gathered from monitoring equipment and leak-detection equipment, (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design;
4) The construction materials and the area immediately surrounding the externally accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation); and
5) For uncovered tanks, the level of waste in the tank, to ensure compliance with section 66265.194(b)(3).

Description of Events: WHILE UNLOADING FREIGHT AT A CUSTOMER'S LOCATION ONE BOX OF RADIOACTIVE MATERIAL WAS DRAGGED OUT OF THE TRAILER ATTACHED TO THE BACK OF A SKID. THE BOX FELL TO THE GROUND WHEN UNLOADED AND WENT UNNOTICED. THE BOX WAS FOUND AFTER THE DRIVER EXITED THE PROPERTY AND PICKED UP BY YRC THE FOLLOWING MORNING. THE SHIPPER SENT A QUALIFIED REPRESENTATIVE TO TEST THE BOX AND DROP AREA AND ALL OTHER CONTACT POINTS FOR ANY RELEASE. THE AREAS WERE ALL CLEAN AND HAD NO TRACE OF A RELEASE. THE BOX WAS APPROVED BY THE SHIPPER TO CONTINUE TO DESTINATION. THERE WAS NO DAMAGE TO THE BOX.

Recommend Actions Taken: THE DRIVER MUST ENSURE ONLY CONSIGNEE'S FREIGHT IS UNLOADED AT DESIGNATED CONSIGNEE'S LOCATION.

Admin Agency: San Diego County Health Services Department
Notification Area: AA/CUPA,DFG-OSPR,DTSC,RWQCB,US EPA,USFWS,Co/E-Hlth
Location: 8135 Ronson Road
Description: * HISTORICAL * 5/3/2014 Caller advises a 55-gallom drum containing rags soaked in the above materials was producing smoke, apparently spontaneously combusted. The rags are used to clean printing equipment. A neighbor noticed the smoke, the FD was called, and they watered down the release.

METALS
PETROLEUM
VOLATILE ORGANICS (8260B VOCS)

Site History:

Active facility undergoing closure and corrective action.
The facility was constructed in 1976 and it manufactures components and assembles and tests gas turbine engines and mechanical drive systems. A hazardous waste facility permit was issued on November 7, 1985 and expired in 1991. The facility did not renew the permit, instead submit a closure plan for regulated units. The closure was acknowledged by DTSC on February 14, 1997. DTSC is currently negotiated a corrective action consent agreement to proceed with corrective action at the facility, and it was signed on 2006. On November 10, 2006 a RFI Workplan was submitted to DTSC, and approved on January 24, 2007. The workplan activities commenced in April 2007 and continued through July 2007. A RCRA Facility Investigation Report was submitted to DTSC on September 7, 2007. On December 31, 2007 requested additional data analysis and groundwater monitoring to determine the source of metals detected, and the lateral and vertical extent of VOC contamination detected in the area of SWMU9, 10, 11, and 16.

A Human Health Risk Assessment (HHRA) was prepared in 2008 to assess the risk posed to humans based on industrial exposure scenarios. The results of the HHRA indicated that no adverse non-carcinogenic health effects were expected to occur to any receptor as a result of exposure to residual levels of COCs. The HHRA also indicated the total excess lifetime cancer risk for workers and trespassers in AOC-1 and SWMU-11 were at or below DTSC acceptable limit of 1x10-6. DTSC concurred with the HHRA's conclusions that chemical concentrations in soil and soil gas at the Facility do not pose an excess cancer risk or non-cancer hazard to present and future human receptors in a commercial/industrial land use scenario.

In early 2011, Arcadis collected and analyzed soil gas samples from seven on Facility multi-level soil vapor probes to evaluate the potential for vapor intrusion of subsurface volatile constituents into building structures located near the outdoor test pads adjacent to soil borings SB-11 and SB-12 and monitoring well MW-3. Soil and groundwater are impacted with petroleum-related compounds, primarily associated with the diesel release from underground pipelines. Groundwater is encountered beneath the Facility at depths that range from 27 to 38 feet below ground surface (bgs).

Benzene, ethylbenzene, naphthalene 1,2,4-Trimethylbenzene and vinyl chloride were detected at concentrations above their respective screening levels, all detected compounds in soil gas were selected as COPCs for a quantitative risk assessment. Estimated cancer risks were slightly above the total excess lifetime risk of 1x10-6, but below the 1x10-5 excess cancer risk threshold acceptable under California Proposition 65 for commercial/industrial land use scenario. The potential for inhalation of vapors in indoor air originating from VOCs in subsurface soil and/or groundwater do not pose an unacceptable risk to Facility workers in AOC-1, and no further investigation or remedial action was deemed necessary for this area.

UPDATED CURRENT CONDITIONS

Three new groundwater monitoring wells (MW-05, MW-06 and MW-07) were installed in late August and early September 2011 to further characterize groundwater conditions at the Facility (Figure 2). Wells MW-05 and MW-06 were installed south of MW-03 to further understand the groundwater concentrations toward the southern property boundary. Well MW-07 was installed "upgradient" of the hazardous waste management units as a background monitoring well. Wells MW-05 through MW-07 were sampled quarterly following their installation in 2011. Analytes detected above their MCLs have included 1,1-dichloroethene (1,1-DCE), 1,1-dichloroethane (1,1-DCA), cis-1,2-dichloroethene (cis-1,2-DCE), tetrachloroethene (PCE), and chromium in well MW- 05 and benzene and chromium in well MW-06. Arsenic concentrations in well MW-07 have slightly exceeded the MCL of 0.01 milligrams per liter (mg/L) during four quarterly monitoring events, however, arsenic concentrations detected at well MW-07 are consistent with regional background arsenic concentrations.

In December 2011, excavation, sampling, and backfill were performed at Build Pit No. 1 located within KM2 (Figure 2) following identification of a hydraulic fluid leak from a hydraulic lift housed at the Build Pit. Approximately 50 cubic yards of soil were excavated from the Build Pit. Soil and groundwater samples were collected from the excavation and analyzed for TPHs, VOCs and SVOCs. The groundwater sample was collected from the bottom of the excavation at a depth of approximately 26.25 feet below ground surface (bgs). The soil sample was collected at a depth of 24 feet bgs, the deepest part of the excavation accessible for collection. TPH-gasoline range (TPH-g), TPH-diesel range (TPH-d), and extended range TPH were detected in the soil sample at concentrations of 4.66 mg/kg, 30,000 mg/kg, and 1,650 mg/kg, respectively. 1,1-DCA, ethylbenzene, styrene, toluene, 1,2,4- trimethylbenzene (1,2,4-TMB), 1,3,5-trimethylbenzene, m,pxylene and o-xylene were detected at concentrations ranging from 8.00 ìg/kg to 484 ìg/kg. TPHd and extended range TPH were detected in the groundwater sample at concentrations of 697,000 mg/L and 134,000 mg/L, respectively. 1,1-DCA, toluene, 1,2,4-TMB, m,p-xylene, and o-xylene were detected in the groundwater sample at concentrations ranging from 2,100 micrograms per liter (ìg/L) to 102,000 ìg/L.

In response to the DTSC's request for additional investigation near two former solvent degreasers located in buildings KM2 and KM10, as well as the location of the former hydraulic lift at Build Pit No.1 in building KM2, one groundwater monitoring well (MW-08), two soil vapor probes (VP-8 and VP-9), and one soil boring (SB-17) were installed/advanced in late November and December 2012 (Figure 2). Well MW-08 was installed downgradient of the former hydraulic lift and VP-8, VP-9, and SB-17 were installed/advanced in the vicinity of the former solvent degreaser in building KM10. 1,1-DCE was the only analyte detected above MCLs in the groundwater sample collected at MW-08 and in the grab groundwater sample collected at SB-17. No other analytes (TPHs and VOCs) were detected above laboratory reporting limits in soil samples collected at MW-08 and SB-17 (ARCADIS 2013). Well MW-08 has been sampled quarterly since installation in 2012. Analytes detected above their MCLs have included 1,1-DCE, 1,1-DCA, and trichloroethene (TCE). In late August/early September 2014, six groundwater monitoring wells (MW-01 through MW-04,MW-06 and MW-07) were re-installed due to the top of the well screens being submerged.

In response to the DTSC's request for an additional downgradient investigation at the Facility, two groundwater monitoring wells (MW-09 and MW-10) were installed in late July 2015 at the downgradient property boundary (Figure 2). Five soil samples were collected from each borehole during installation. None of the constituents analyzed (TPHs and VOCs) were detected above laboratory reporting limits in soil. Three VOCs were detected above MCLs in the groundwater sample collected from well MW-09 (1,1,2-trichloroethane (1,1,2-TCA), 1,1-DCA, and 1,1-DCE. No constituent of concern (COCs) were detected above MCLs in the groundwater sample collected from well MW-10.

During the Third Quarter 2015, depth to groundwater measurements ranged from 21.98 to 37.20 feet below top of casing (BTOC). In general,

groundwater flows towards the southwest at an approximate gradient of 0.017 feet per foot. While TPH concentrations were detected during the Third Quarter 2015 in well MW-03, the plume appears to be localized and not migrating. TPH-g, TPH-d, and TPH-motor oil range detections at MW-03 were 2,500 ìg/L, 4,600 ìg/L, and 250 ìg/L, respectively. TPH concentrations at wells MW-01, MW- 02, and MW-04 through MW-10 were below laboratory reporting limits.

Analytical results for VOCs during Third Quarter 2015 were consistent with data collected during the recent groundwater monitoring events. Benzene, 1,2,4-TMB, 1,1-DCA, 1,1-DCE, cis-1,2-DCE, TCE, and 1,1,2-TCA were detected above their respective MCL.

VOC concentrations not related to petroleum related activities were detected above the MCL in wells MW-01, MW-02, MW-04, MW-05, MW-08, and MW-09. Results of the investigation in late November and December 2012 indicate these VOC concentrations are relatively low and could be related to the former degreasers and/or hydraulic lift located in buildings KM2 and KM10.

Arsenic and nickel were the only metals detected above their respective MCLs during the Third Quarter 2015 monitoring event. While slightly exceeding the MCL for arsenic of 0.01 mg/L, arsenic concentrations detected at well MW-01 and upgradient well MW-07 are consistent with regional background arsenic concentrations.

Based on the concentrations of VOCs that have been detected in the groundwater, DTSC recommended groundwater samples be analyzed for 1,4-dioxane starting with the Fourth Quarter 2012 monitoring event. During Third Quarter 2015, 1,4-dioxane was detected in samples collected from wells MW-01, MW-02, MW-05, and MW-09 with concentrations ranging from 6 ìg/L to 100 ìg/L (MW-01).

In 2015, after nearly 60 sampling events of the groundwater monitoring well network, groundwater data demonstrate a reducing trend of contaminant mass and/or concentration over time. Hydrogeological and geochemical data indicate that natural attenuation processes are active and data from field or microcosm studies demonstrate that COCs can be degraded overtime. DTSC determined that nature and extent of chemical releases to soil and groundwater had been sufficiently delineated and requested Solar submit an updated current conditions report and perform a Corrective Measures Study (CMS)

Facility Information

Comments: No significant changes since the last report. The report mirrors their previous report closely with little change in groundwater concentrations. VOC and Metals concentrations in most down gradient groundwater well are elevated. The metals are likely the result of background metals. The VOCs are noticeably above the MCL down gradient but have not reached concentrations where further action is needed.

Location: 4400 Ruffin Rd.

Description: While filling a drum, it over flowed. Employee immediately contacted their Hazmat team which placed absorbent blocks around the drain to prevent any further drainage into the storm drain. Absorbent material & pads were placed on spill. Materials have been placed in regulation containers for disposal. Unknown amount of fuel went into the dry storm drain. Fuel was absorbed within basin area of storm drain, no known fuel went further.

Site History:

Active facility undergoing closure and corrective action.
The facility was constructed in 1976 and it manufactures components and assembles and tests gas turbine engines and mechanical drive systems. A hazardous waste facility permit was issued on November 7, 1985 and expired in 1991. The facility did not renew the permit, instead submit a closure plan for regulated units. The closure was acknowledged by DTSC on February 14, 1997. DTSC is currently negotiated a corrective action consent agreement to proceed with corrective action at the facility, and it was signed on 2006. On November 10, 2006 a RFI Workplan was submitted to DTSC, and approved on January 24, 2007. The workplan activities commenced in April 2007 and continued through July 2007. A RCRA Facility Investigation Report was submitted to DTSC on September 7, 2007. On December 31, 2007 requested additional data analysis and groundwater monitoring to determine the source of metals detected, and the lateral and vertical extent of VOC contamination detected in the area of SWMU9, 10, 11, and 16.

A Human Health Risk Assessment (HHRA) was prepared in 2008 to assess the risk posed to humans based on industrial exposure scenarios. The results of the HHRA indicated that no adverse non-carcinogenic health effects were expected to occur to any receptor as a result of exposure to residual levels of COCs. The HHRA also indicated the total excess lifetime cancer risk for workers and trespassers in AOC-1 and SWMU-11 were at or below DTSC acceptable limit of 1x10-6. DTSC concurred with the HHRA's conclusions that chemical concentrations in soil and soil gas at the Facility do not pose an excess cancer risk or non-cancer hazard to present and future human receptors in a commercial/industrial land use scenario.

In early 2011, Arcadis collected and analyzed soil gas samples from seven on Facility multi-level soil vapor probes to evaluate the potential for vapor intrusion of subsurface volatile constituents into building structures located near the outdoor test pads adjacent to soil borings SB-11 and SB-12 and monitoring well MW-3. Soil and groundwater are impacted with petroleum-related compounds, primarily associated with the diesel release from underground pipelines. Groundwater is encountered beneath the Facility at depths that range from 27 to 38 feet below ground surface (bgs).

Benzene, ethylbenzene, naphthalene 1,2,4-Trimethylbenzene and vinyl chloride were detected at concentrations above their respective screening levels, all detected compounds in soil gas were selected as COPCs for a quantitative risk assessment. Estimated cancer risks were slightly above the total excess lifetime risk of 1x10-6, but below the 1x10-5 excess cancer risk threshold acceptable under California Proposition 65 for commercial/industrial land use scenario. The potential for inhalation of vapors in indoor air originating from VOCs in subsurface soil and/or groundwater do not pose an unacceptable risk to Facility workers in AOC-1, and no further investigation or remedial action was deemed necessary for this area.

UPDATED CURRENT CONDITIONS

Three new groundwater monitoring wells (MW-05, MW-06 and MW-07) were installed in late August and early September 2011 to further characterize groundwater conditions at the Facility (Figure 2). Wells MW-05 and MW-06 were installed south of MW-03 to further understand the groundwater concentrations toward the southern property boundary. Well MW-07 was installed "upgradient" of the hazardous waste management units as a background monitoring well. Wells MW-05 through MW-07 were sampled quarterly following their installation in 2011. Analytes detected above their MCLs have included 1,1-dichloroethene (1,1-DCE), 1,1-dichloroethane (1,1-DCA), cis-1,2-dichloroethene (cis-1,2-DCE), tetrachloroethene (PCE), and chromium in well MW- 05 and benzene and chromium in well MW-06. Arsenic concentrations in well MW-07 have slightly exceeded the MCL of 0.01 milligrams per liter (mg/L) during four quarterly monitoring events, however, arsenic concentrations detected at well MW-07 are consistent with regional background arsenic concentrations.

In December 2011, excavation, sampling, and backfill were performed at Build Pit No. 1 located within KM2 (Figure 2) following identification of a hydraulic fluid leak from a hydraulic lift housed at the Build Pit. Approximately 50 cubic yards of soil were excavated from the Build Pit. Soil and groundwater samples were collected from the excavation and analyzed for TPHs, VOCs and SVOCs. The groundwater sample was collected from the bottom of the excavation at a depth of approximately 26.25 feet below ground surface (bgs). The soil sample was collected at a depth of 24 feet bgs, the deepest part of the excavation accessible for collection. TPH-gasoline range (TPH-g), TPH-diesel range (TPH-d), and extended range TPH were detected in the soil sample at concentrations of 4.66 mg/kg, 30,000 mg/kg, and 1,650 mg/kg, respectively. 1,1-DCA, ethylbenzene, styrene, toluene, 1,2,4- trimethylbenzene (1,2,4-TMB), 1,3,5-trimethylbenzene, m,pxylene and o-xylene were detected at concentrations ranging from 8.00 ìg/kg to 484 ìg/kg. TPHd and extended range TPH were detected in the groundwater sample at concentrations of 697,000 mg/L and 134,000 mg/L, respectively. 1,1-DCA, toluene, 1,2,4-TMB, m,p-xylene, and o-xylene were detected in the groundwater sample at concentrations ranging from 2,100 micrograms per liter (ìg/L) to 102,000 ìg/L.

In response to the DTSC's request for additional investigation near two former solvent degreasers located in buildings KM2 and KM10, as well as the location of the former hydraulic lift at Build Pit No.1 in building KM2, one groundwater monitoring well (MW-08), two soil vapor probes (VP-8 and VP-9), and one soil boring (SB-17) were installed/advanced in late November and December 2012 (Figure 2). Well MW-08 was installed downgradient of the former hydraulic lift and VP-8, VP-9, and SB-17 were installed/advanced in the vicinity of the former solvent degreaser in building KM10. 1,1-DCE was the only analyte detected above MCLs in the groundwater sample collected at MW-08 and in the grab groundwater sample collected at SB-17. No other analytes (TPHs and VOCs) were detected above laboratory reporting limits in soil samples collected at MW-08 and SB-17 (ARCADIS 2013). Well MW-08 has been sampled quarterly since installation in 2012. Analytes detected above their MCLs have included 1,1-DCE, 1,1-DCA, and trichloroethene (TCE). In late August/early September 2014, six groundwater monitoring wells (MW-01 through MW-04,MW-06 and MW-07) were re-installed due to the top of the well screens being submerged.

In response to the DTSC's request for an additional downgradient investigation at the Facility, two groundwater monitoring wells (MW-09 and MW-10) were installed in late July 2015 at the downgradient property boundary (Figure 2). Five soil samples were collected from each borehole during installation. None of the constituents analyzed (TPHs and VOCs) were detected above laboratory reporting limits in soil. Three VOCs were detected above MCLs in the groundwater sample collected from well MW-09 (1,1,2-trichloroethane (1,1,2-TCA), 1,1-DCA, and 1,1-DCE. No constituent of concern (COCs) were detected above MCLs in the groundwater sample collected from well MW-10.

During the Third Quarter 2015, depth to groundwater measurements ranged from 21.98 to 37.20 feet below top of casing (BTOC). In general, groundwater flows towards the southwest at an approximate gradient of 0.017 feet per foot. While TPH concentrations were detected during the Third Quarter 2015 in well MW-03, the plume appears to be localized and not migrating. TPH-g, TPH-d, and TPH-motor oil range detections at MW-03 were 2,500 ìg/L, 4,600 ìg/L, and 250 ìg/L, respectively. TPH concentrations at wells MW-01, MW- 02, and MW-04 through MW-10 were below laboratory

reporting limits.

Analytical results for VOCs during Third Quarter 2015 were consistent with data collected during the recent groundwater monitoring events. Benzene, 1,2,4-TMB, 1,1-DCA, 1,1-DCE, cis-1,2-DCE, TCE, and 1,1,2-TCA were detected above their respective MCL.

VOC concentrations not related to petroleum related activities were detected above the MCL in wells MW-01, MW-02, MW-04, MW-05, MW-08, and MW-09. Results of the investigation in late November and December 2012 indicate these VOC concentrations are relatively low and could be related to the former degreasers and/or hydraulic lift located in buildings KM2 and KM10.

Arsenic and nickel were the only metals detected above their respective MCLs during the Third Quarter 2015 monitoring event. While slightly exceeding the MCL for arsenic of 0.01 mg/L, arsenic concentrations detected at well MW-01 and upgradient well MW-07 are consistent with regional background arsenic concentrations.

Based on the concentrations of VOCs that have been detected in the groundwater, DTSC recommended groundwater samples be analyzed for 1,4-dioxane starting with the Fourth Quarter 2012 monitoring event. During Third Quarter 2015, 1,4-dioxane was detected in samples collected from wells MW-01, MW-02, MW-05, and MW-09 with concentrations ranging from 6 ìg/L to 100 ìg/L (MW-01).

In 2015, after nearly 60 sampling events of the groundwater monitoring well network, groundwater data demonstrate a reducing trend of contaminant mass and/or concentration over time. Hydrogeological and geochemical data indicate that natural attenuation processes are active and data from field or microcosm studies demonstrate that COCs can be degraded overtime. DTSC determined that nature and extent of chemical releases to soil and groundwater had been sufficiently delineated and requested Solar submit an updated current conditions report and perform a Corrective Measures Study (CMS)

Facilities Details

Site Type 1:	CORRECTIVE ACTION	***Funding:***	RESPONSIBLE PARTY
Site Type 2:	CORRECTIVE ACTION	***Area:***	PROJECT WIDE
Site Code:	400309	***Sub Area:***	
Special Program:		***Date Recorded:***	3/7/2017
National Priorities List:	NO	***Assembly District:***	77
Acres:	44 ACRES		

Status:	ACTIVE
Cleanup Status:	ACTIVE AS OF 6/15/2009
APN:	3691705500
Summary Link:	http://www.envirostor.dtsc.ca.gov/public/profile_report.asp?global_id=80001812&starttab=landuserestrictions
Cl Up Oversight AGCS:	DTSC - SITE CLEANUP PROGRAM
Potential Cont. of Concern:	METALS: Aluminum, Antimony and compounds, Arsenic, Barium and compounds, Beryllium and compounds, Cadmium and compounds, Chromium III, Chromium VI, Cobalt, Copper and compounds, Iron, Lead, Manganese and compounds, Mercury (elemental), Mercury and compounds, Molybdenum, Nickel, Selenium, Silver, Thallium and compounds, Tin, Titanium, Total Chromium (1:6 ratio Cr VI:Cr III), Vanadium and compounds, Zinc; PETROLEUM: TPH-MOTOR OIL, TPH-diesel, TPH-gas; VOLATILE ORGANICS (8260B VOCS): Benzene, Ethylbenzene, Toluene, Xylenes
Past Use(s) Caused Contaminants:	ABOVE GROUND STORAGE TANKS, HAZARDOUS WASTE STORAGE - TANKS/CONTAINERS, OIL/WATER SEPARATORS, PAINT/DEPAINT FACILITY, UNDERGROUND STORAGE TANKS, VEHICLE MAINTENANCE
Potential Media Affected:	OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL
School District:

Eval Division: San Diego County Department of Env Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

Inspector: Fernandez Juan Inspection ID:5661914

Violations

Violation Date: 6/16/2016 ***Violation Program:*** UST
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 23 CCR 6.7 25284, 25286 - California Code of Regulations, Title 23, Chapter 6.7, Section(s) 25284, 25286
Violation Notes:

Returned to compliance on 06/23/2016.

Violation Description:

Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.

Cal Water Watershed Name: San Diego - Lower San Diego - Mission San Diego (907.11)
DWR Groundwater Subbasin Name:
Site History:

A Voluntary Assistance Program case was opened on 11/18/1997 to review a site assessment report dated October 8, 1997. The site had been historically occupied by a gas station which had two 6,000 gallon fuel underground storage tanks (USTs), two fuel dispenser islands with two dispensers per island, a 280 gallon waste oil UST, two in-ground hydraulic lifts, and a wastewater sump. The site assessment report detailed the results of soil sampling from 8 borings drilled on site. DEH determined that additional site assessment was necessary in the area of the western dispenser island so that estimates of the location and volume of petroleum hydrocarbon-impacted soil could be made. DEH also determined that a Leaking Underground Storage Tank case could be opened, but would not be opened if site assessment was completed as soon as possible. DEH did not receive any indication that additional site assessment had been completed, so a case was opened under the Local Agency Program. A Notice of Responsibility was sent to the responsible parties on 11/9/2010. On 12/10/2010, DEH received a site assessment report dated 1/27/1998, which had not previously been submitted to DEH. The report detailed the results of soil sampling from two borings installed to 19.5 feet below the western dispenser and to the south of the western dispenser. The consultant concluded that the horizontal extent of petroleum hydrocarbon-bearing soil had been delineated but the vertical

extent of petroleum hydrocarbon-bearing soil in the vicinity of the former western dispenser had not been fully assessed. As a result, the consultant could not provide an estimate of the volume of petroleum hydrocarbon-bearing soil on site. DEH concurred with the consultant's conclusions and required that a workplan be submitted to DEH to delineate the vertical extent of petroleum contamination and investigate potential impacts to groundwater. DEH reviewed a workplan, dated 3/22/11, to install an additional soil boring under the former western dispenser to 50 feet below ground surface and collect soil samples for analysis. DEH approved the workplan with the condition that the soil samples also be analyzed for fuel oxygenates and that potential impacts to groundwater be determined. Towards that end, DEH required that the boring be drilled to contact with groundwater or a maximum of 100 feet below ground surface, and that a groundwater sample be collected and analyzed if groundwater was encountered. Refer to the Environmental Data Tab for additional site-specific information.

Status: Completed - Case Closed
Status Date: 2016-07-27 00:00:00
RB Case No:
LOC Case No: H12476-003
Lead Agency: SAN DIEGO COUNTY LOP
Case Worker: EM
Local Agency: SAN DIEGO COUNTY LOP

CUF Case: NO
Begin Date: 2002-07-17 00:00:00
How Discovered: Tank Closure
Stop Method: Close and Replace Tank
County: San Diego
Latitude: 32.8332702985109
Longitude: -117.143860542328
File Location: Local Agency

Potential Media Of Concern: Diesel, Gasoline
Potential Media Affected: Other Groundwater (uses other than drinking water)
How Discovered Description: UST removal
Stop Description: CLOSE AND REPLACE TANK
Cal Water Watershed Name: Penasquitos - Miramar (906.40)
DWR Groundwater Subbasin Name:
Site History:

This site is currently an active gas station. Former case H12476-001 was opened in July 1991 due to a diesel release. That case was closed in August 1991. Release H12476-002 was opened in March 1998 due to the accidental release of fuel from a delivery truck into a tank cavity observation well (OW). Approximately 2,769 gallons of LPH was removed from OW-1 through OW-4. Three Monitoring Wells were installed to further evaluate the LPH plume which determined LPH had been removed by 1999. The case H12476-002 was closed in July 2001. This case (H12476-003) was opened in July 2002 due to elevated hydrocarbons noted in soil samples from dispenser samples taken during a tank removal and piping / dispenser upgrade. A total of 1,054 tons (approximately 680 cubic yards) of impacted soil was removed. From 2006 to 2014, 16 groundwater monitoring wells were installed. The figures 9 & 10 of the January, 2016 CAPA from URS show the distribution of dissolved impacts of benzene and MtBE. In November 2008, two soil gas probes were installed which indicated less than one in a million excess cancer risk. In addition, a sub slab probe was installed under the station building that also indicated a less than one in a million excess cancer risk. In 2011, a Dual Phase Extraction (DPE) pilot test was performed. In 2012, a Soil Vapor Extraction (SVE) test revealed a Radius of Influence (ROI) of 22 feet. In 2013, quarterly DPE High Intensity Target (HIT) events were performed. Between the pilot test and the HIT events, a total of 1,195 pounds of hydrocarbon vapors were removed. A May 2015 Corrective Action Plan (CAP) and January 2016 Corrective Action Plan Addendum (CAPA) were submitted for natural attenuation and was approved by DEH. The consultant proposed natural attenuation because: - The plume is stable per results from BIOSCREEN in the CAPA. - The site is in an area designated with having non-beneficial use groundwater. LPH has been limited to one well and has been removed to the extent practicable by skimming, DPE and bailing. - There are no supply wells within a ¼ mile of the site. - All utilities are above the groundwater table, which is on an average of 35' bgs. - There are no on or off-site health risks based on a 2008 soil gas survey. The consultant states that approximately 3,438 cubic yards of soil remain on site with over 100 mg/kg TPHg. This soil is located in the area of the existing USTs and dispensers on the eastern portion of the site at a depth of 5'-35' bgs. A small portion is at MW-8 at 10' bgs (south) and at MW-6 at 15' bgs (west). These locations are noted on Figure 4 of the May 2015 CAP by URS. DEH concurs with the consultant's conclusions and approves case closure. Permit # DEH2016-LMWP-002334 was issued by DEH for destruction of the 16 wells and 2 soil gas probes associated with the site.

Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Notes:

Returned to compliance on 01/23/2015.

Violation Description:

Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

File Location: Local Agency

The site occupies 2.6 acres of asphalt-paved land and has been used as a surface parking lot for SDG&E employees since 2004. Prior to 2004 the property was leased to a company that used the site as a vehicle towing, maintenance and repair yard. Four USTs were removed from the site in 1988 with no soil contamination observed at that time. Two hydraulic lifts and a concrete lined sump were also removed later. In 2005, SDG&E demolished the site structures and redeveloped it as an asphalt-paved parking area. Following the demolition, a complete site investigation and remediation was performed throughout the site. Shallow soil contamination was detected at the former locations of USTs, hydraulic lift, sump area and in a small surface stained area. Excavation of impacted soil was performed at all locations and the confirmation sampling and analysis showed low to non-detect levels of TPH and volatiles remained on-site. Approximately 2,640 cubic yards of soil were excavated and stockpiled on site. Later the stockpiled soil was characterized and transported to TPS Technologies, Adelanto CA, for recycling. Groundwater was not encountered to a depth of 50 feet below grade. The consultant requested "No Further Action", and DEH concurs with this recommendation.

Violations

Violation Date: 7/29/2014
Violation Program: HW
Violation Division: San Diego County Department of Env Health
Violation Source: CERS
Citation: 22 CCR 15 66265.195(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.195(a)
Violation Notes:

Returned to compliance on 08/25/2014.

Violation Description:

Failure of the owner or operator to conduct inspections and maintain inspection records at the facility of the following tank equipment:
1) Overfill/spill control equipment (e.g., waste-feed cutoff systems, bypass systems, and drainage systems) to ensure that it is in good working order;
2) The aboveground portions of the tank system, if any, to detect corrosion or releases of waste;
3) Data gathered from monitoring equipment and leak-detection equipment, (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design;
4) The construction materials and the area immediately surrounding the externally accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation); and
5) For uncovered tanks, the level of waste in the tank, to ensure compliance with section 66265.194(b)(3).

Description of Events: UPON ARRIVAL TO WORK STATION THIS LABORATORY PACK WAS ON MY DESK LEAKING SOMETHING LOOKING AND SMELLING LIKE URINE. IT APPEARS TO BE LEAKING FROM ONE OF 10 URINE SAMPLES IN THE BAG AND LEAKING OUT OF THE LABORATORY PACK ITSELF. IT APPEARS TO BE A LOOSE/DEFECTIVE LID ALLOWING URINE TO LEAK. FOLLOWED DMP PROCEDURES FOR BIO-HAZARD & NOTIFIED PLANT ENGINEERING.

Description of Events: I FOUND A LEAKING PACKAGE IN THE PRELOAD OPERATION IN FRONT OF P-6. LOOKING AT THE PACKAGE I NOTICED THAT IT HAD SHIPPING PAPERS AND A DIAMOND WARRING STICKER. I WENT TO THE PCS AREA AND PUT ON MY PPE. USING MY PPE I WENT AND PICKED UP THE PACKAGE AND BROUGHT IT BACK TO THE PCS AREA. STILL WEARING MY PPE I DISPOSED OF THE LEAKING PACKAGE THROUGHT THE DMP.
