Violations

Violation Date: 7/8/2016
Violation Program: UST
Violation Division: San Diego County Department of Env Health
Violation Source: CERS
Citation: 23 CCR 16 2635(b)(1), 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2635(b)(1), 2665
Violation Notes:

Returned to compliance on 07/21/2016.

Violation Description:

Failure to comply with one or more of the following:

Failure to install or maintain a liquid-tight spill bucket.

Have a minimum capacity of five gallons.

Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container.

Be resistant to galvanic corrosion.

Violations

Violation Date: 6/1/2016
Violation Program: HW
Violation Division: San Diego County Department of Env Health
Violation Source: CERS
Citation: 22 CCR 15 66265.192(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(a)
Violation Notes:

Returned to compliance on 08/08/2016.

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.

Citation: 23 CCR 16 2715(c)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)(2)
Violation Notes:

Returned to compliance on 05/15/2015.

Violation Description:

Failure to comply with one or more of the following: maintain the spill bucket in good condition, containment free of debris/liquid, and/or to remove the contents of the spill bucket when a release/leak/spill was observed.

Violations

Violation Date: 11/12/2013 **Violation Program:** UST
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Notes:

Returned to compliance on 12/11/2013.

Violation Description:

Failure of the overfill prevention system to meet one of the following requirements:
1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Violations

Violation Date: 4/1/2014 **Violation Program:** UST
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Notes:

Returned to compliance on 04/01/2014.

Violation Description:

Failure of the overfill prevention system to meet one of the following requirements:
1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Violations

Potential Media Of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Potential Media Affected: Soil
How Discovered Description: MONITORING
Stop Description: REPLACE PRODUCT PIPING
Cal Water Watershed Name: Penasquitos - Tecolote (906.50)
DWR Groundwater Subbasin Name:
Site History:

On November 11, 1990, an unauthorized release of hydraulic oil was reported at Metropolitan Transit System (MTS) Kearny Mesa Bus Maintenance Yard, located at 4630 Ruffner Street in San Diego, California. Malfunction of a hydraulic lift in a service bay of Building 100 at the facility was apparently caused by the loss of hydraulic oil from leaking underground hoist piping. The remaining five hydraulic systems in the building had apparently also experienced leaks, resulting in a loss of approximately 670 gallons of hydraulic oil over a two-year period. A limited subsurface assessment was performed in October 1991 by Ninyo & Moore. Saw cuts were made into the concrete foundation of Building 100 to expose the 2-inch-diameter hydraulic piping. Eighty-one soil samples were collected from the base and sidewalls of the pipe trenches. The maximum sampling depth using a hand-auger was four feet below grade. A layer of free hydraulic oil was observed at the base of one pipe trench with a thickness of less than one-half inch. A limited access rig was used to drill borings and collect soil samples to a maximum depth of 19 feet below grade. Engineered fill was observed to underlie the building to depths of 5 to 15 feet. The fill was underlain by sandstone of the Linda Vista Formation. Petroleum hydrocarbons were not detected in the soil samples collected greater than five feet below grade. However, a maximum total recoverable petroleum hydrocarbon (TRPH) concentration of 125,000 milligrams per kilogram (mg/kg) was detected in a sample collected from the base of a pipe trench. The lateral extent of petroleum hydrocarbon impacts was not assessed. In 1992, the underground hydraulic piping was abandoned in place and replaced with an overhead system. A work plan was submitted to DEH by Earth Tech, Inc., in July 1995 to further assess the lateral and vertical extent of petroleum hydrocarbon-impacted soils. Fifty-two soil samples were collected and analyzed. Elevated petroleum hydrocarbon impacts to soil were found to extend to a maximum of nine feet below grade and were less than 10 mg/kg below that depth. Toxicity Characteristic Leaching Procedure (TCLP) tests were performed for the two soil samples with the highest TRPH concentrations. The two soil samples were also analyzed for volatile organic compounds and polynuclear aromatic hydrocarbons. The lateral extent of hydraulic oil impacts in soil has not been delineated and no estimate was provided as to the volume of impacted soil remaining in place. However, DEH stated in January 1993 that the impacted soil could remain in place if the land use of the property did not change due to the low volatility of hydraulic oil, the lack of associated health risk, the limited vertical migration of the release, the presence of an estimated 46 feet minimum of non-impacted formation between impacted soil and groundwater, and the lack of beneficial use for underlying groundwater. MTS continues to operate the maintenance yard and has stated it has no plans to change the present land use (commercial). Ninyo & Moore has recommended case closure and DEH concurs with this recommendation.

Case Type: LUST Cleanup Site
Status: Completed - Case Closed
Status Date: 2009-12-17 00:00:00
RB Case No: 9UT3913
LOC Case No: H24731-003
Lead Agency: SAN DIEGO COUNTY LOP
Case Worker: CF
Local Agency: SAN DIEGO COUNTY LOP
CUF Case: NO
Begin Date: 1998-11-19 00:00:00
How Discovered: UST System Modification
Stop Method: Repair Product Piping
County: San Diego
Latitude: 32.8245876341776
Longitude: -117.158038498282
File Location: Local Agency
Potential Media Of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Potential Media Affected: Soil
How Discovered Description: PIPING UPGRADE
Stop Description: REPAIR PRODUCT PIPING
Cal Water Watershed Name: Penasquitos - Tecolote (906.50)
DWR Groundwater Subbasin Name:
Site History:

In March 1999, soils were sampled from two test pits excavated along a product pipeline that extended from Building 100 to Building 400 at the bus facilities and fueling yard. The Metropolitan Transit and Development Board (MTDB, currently known as the Metropolitan Transit System) was in the process of upgrading fuel and product lines at the facility. The test pits were each three feet deep. One of the pits was located about 40 feet south of the Building 400 service bay at a 90° elbow in the pipeline, while the other was located midway between the elbow and the point where the pipeline surfaced. Based on observations and laboratory analysis of the soil samples, the MTDB authorized repair of the product line and remediation of the petroleum hydrocarbon-impacted soils. On May 13, 1999, the product pipeline (which apparently had transported motor oil), was repaired and impacted soils were excavated to a depth of four feet below ground surface (bgs). Well-indurated, gravelly sandstone was encountered at depths of two-to-four

feet. Soil samples were collected that confirmed the petroleum hydrocarbon release had occurred and DEH was notified, resulting in the opening of DEH Case #H24731-003. Impacted soil was temporarily stockpiled on site, and the pipeline trench was backfilled with imported fill material. The impacted soils were transported off site for treatment and disposal. MTDB's consultant (Construction Engineering and Testing, Inc.) estimated that approximately five cubic yards (yd3) was left in place. [Note: Three additional product pipelines were located in the same trench as the motor oil delivery pipeline which transported ethylene glycol, lube oil, and transmission fluid, respectively. Releases were reported for the ethylene glycol and lube oil pipelines and were investigated under DEH Cases #H24731-002 and #H24731-004, respectively]. The four pipelines in the common trench were removed on January 26, 2006. Petroleum hydrocarbons were detected in a soil sample collected at a depth of 2.5 feet bgs from the 90° elbow location at a concentration of 1,400 milligrams per kilogram (mg/kg). During a subsequent investigation in July 2008, soils samples were collected at depths of 2.5, and 7.5 feet bgs from five "stepout" borings that were located within approximately 15 feet of the 90° elbow in the pipeline trench. Samples were collected at depths of 11.5 and 12.5 feet bgs from two of the stepout borings. The maximum detected concentrations of total petroleum hydrocarbons (C8 to C40) and total recoverable petroleum hydrocarbons (TRPH) were 57 and 260 mg/kg, respectively. Based on the soil sample results, the location of the site in a groundwater basin with no beneficial uses, and the presence of well-indurated sandstone at a shallow depth, the present consultant (Ninyo & Moore) recommends no further action and case closure. DEH concurs with these recommendations.

Cal Water Watershed Name: Penasquitos - Tecolote (906.50)
DWR Groundwater Subbasin Name:
Site History:

During upgrade of fuel and product lines that extended from Building 100 to Building 400 at the bus facilities and fueling yard (Kearny Mesa Division), a DEH inspector observed soil staining around a lubricating (lube) oil pipeline. A section of the lube oil pipeline that extended south from the Building 400 service bay to a 90° elbow, and then east approximately 10 feet, was replaced on May 13, 1999. The inspector oversaw the collection of four soil samples from the pipeline trench [Note that the laboratory results for these samples are not on file]. Based on observations and laboratory analysis of the soil samples, the Metropolitan Transit Development Board (MTDB, currently known as the Metropolitan Transit System) authorized remediation of the petroleum hydrocarbon-impacted soils. DEH was notified that an unauthorized release had occurred, and DEH Case #H24731-004 was opened. Impacted soils were excavated to a depth of four feet below ground surface (bgs). Well-indurated, gravelly sandstone was encountered at depths of two-

to-four feet. Impacted soil was temporarily stockpiled on site, and the pipeline trench was backfilled with imported fill material. The impacted soils were transported off site for treatment and disposal. MTDB's consultant (Construction Engineering and Testing, Inc.) estimated that approximately five cubic yards (yd3) of impacted soil were left in place. [Note: Three additional product pipelines were located in the same trench as the lube oil pipeline which transported ethylene glycol, motor oil, and transmission fluid, respectively. Releases were reported for the ethylene glycol and motor oil pipelines and were investigated under DEH Cases #H24731-002 and #H24731-003, respectively. It has been inferred that the laboratory results for samples collected by the consultant (Construction and Engineering Testing, Inc.) under Case #H25731-003 (on the same date as the lube oil pipeline replacement for the same section of the pipeline trench) are representative of the Case #H24731-004 release]. The four pipelines in the common trench were removed on January 26, 2006. Petroleum hydrocarbons were detected in a soil sample collected at a depth of 2.5 feet bgs from the 90° elbow location at a concentration of 1,400 milligrams per kilogram (mg/kg). During a subsequent investigation in July 2008, soils samples were collected at depths of 2.5, and 7.5 feet bgs from five "stepout" borings that were located within approximately 15 feet of the 90° elbow in the pipeline trench. Samples were collected at depths of 11.5 and 12.5 feet bgs from two of the stepout borings. The maximum detected concentrations of total petroleum hydrocarbons (C8 to C40) and total recoverable petroleum hydrocarbons (TRPH) were 57 and 260 mg/kg, respectively. Based on the soil sample results, the location of the site in a groundwater basin with no beneficial uses, and the presence of well-indurated sandstone at a shallow depth, the present consultant (Ninyo & Moore) recommends no further action and case closure. DEH concurs with this recommendation.

Violations

Violation Date: 2/28/2017 **Violation Program:** HMRRP
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Notes:

Returned to compliance on 03/28/2017.

Violation Description:

Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 2/28/2017 **Violation Program:** HMRRP
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 03/28/2017.

Violation Description:

Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 2/28/2017 **Violation Program:** HW

Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Notes:

Returned to compliance on 03/28/2017.

Violation Description:

Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Violations

Violation Date: 2/28/2017 **Violation Program:** HW
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS

Violation Description:

Hazardous Waste Generator Program - Training - General

Violations

Violation Date: 2/28/2017 **Violation Program:** HW
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Notes:

Returned to compliance on 03/28/2017.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.
(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).
(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

DWR Groundwater Subbasin Name:
Site History:

In March 1999, soils were sampled from two test pits excavated along a pipeline trench at a bus facilities and fueling yard (4620 Ruffner Street) in the Kearny Mesa area of San Diego. A pipeline transporting motor oil and three additional pipelines that carried ethylene glycol, lube oil, and transmission fluid, respectively, occupied the same trench. The Metropolitan Transit and Development Board (MTDB, currently known as the Metropolitan Transit System) was in the process of upgrading fuel and product lines at the facility when the ethylene glycol release was observed. The test pits were each three feet deep. One of the pits was located about 40 feet south of the Building 400 service bay at a 90° elbow in the pipeline, while the other was located midway between the elbow and the point where the pipeline surfaced. Based on observations, motor oil had leaked into the trench backfill, which was confirmed by laboratory analysis of the soil samples. Ten soil samples were collected and analytical results indicated elevated concentrations of undifferentiated petroleum hydrocarbons in each of the samples. Based on field observations, the consultant for MTDB (Construction Engineering and Testing, Inc. [CTE]) suspected that the ethylene glycol pipeline, as well as the motor oil and lube oil pipelines, had leaked. Three of the 10 soil samples collected were analyzed for total petroleum hydrocarbons using ethylene glycol as a standard. However, no ethylene glycol was detected in the samples. Releases from the motor oil and lube oil pipelines were investigated under DEH unauthorized release case numbers H24731-003 and H24731-004, respectively, which were both closed in 2009. Based on the consultant's field observations, presumably of the presence of ethylene glycol in the trench backfill, a Voluntary Assistance Progam (VAP) case (#H24731-002) was opened by DEH to investigate the release. On May 13, 1999, the product pipeline that had transported motor oil was repaired and impacted soils were excavated to a depth of four feet below ground surface (bgs). Well-indurated, gravelly sandstone was encountered at depths of two-to-four feet. Impacted soil was temporarily stockpiled on site, and the pipeline trench

was backfilled with imported fill material. The impacted soils were transported off site for treatment and disposal. CTE estimated that approximately five cubic yards (yd3) of impacted soil was left in place. The four pipelines in the common pipeline trench were removed on January 26, 2006, and 12 confirmation soil samples were collected. Ethylene glycol was not detected in the samples. On July 9 and 10, 2008, twenty borings were advanced using direct-push and hollow-stem auger drilling methods at four general areas along the former pipeline trench to evaluate the lateral and vertical extent of previously-identified impacted soils. At each of the four locations, soil samples were collected at or as close as possible to January 2006 sampling locations. Additional samples were collected at depths 5-to-10 feet deeper than the 2006 samples. At each of the four sampling locations, soil samples were also collected at four step-out locations also at the same approximate depths. Soil samples from depths ranging from 2.5 5o 14.5 feet bgs were tested for TPH as ethylene glycol. Ethylene glycol was not detected in the soil samples. Based on the soil sample results from 1999, 2006, and 2008, the location of the site in a groundwater basin with no beneficial uses, and the presence of well-indurated sandstone below a depth of five feet, the present consultant (Ninyo & Moore) recommends no further action and case closure. DEH concurs with these recommendations.

CUF Case: NO
Begin Date: 2006-03-16 00:00:00
How Discovered: Tank Closure
Stop Method: Close and Remove Tank
County: San Diego
Latitude: 32.8240987689456
Longitude: -117.159164196707
File Location: Local Agency
Potential Media Of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Potential Media Affected: Soil
How Discovered Description: TANK REMOVAL
Stop Description: CLOSE AND REMOVE TANK
Cal Water Watershed Name: Penasquitos - Tecolote (906.50)
DWR Groundwater Subbasin Name:
Site History:

Six underground storage tanks (USTs) were removed on March 16, 2006, at the Metropolitan Transit Development Board (MTDB, currently known as the Metropolitan Transit System) bus facilities and fueling yard in Kearny Mesa. The USTs were located under a concrete pad immediately north of Building 100. Five of the USTs had contained fluids that were piped from the tanks to vehicle-servicing areas and included oils of various weights, anti-freeze (i.e., ethylene glycol), and transmission fluid. One of the tanks was used to store waste oil from the servicing operations. Analytical results for two soil samples collected under the direction of a DEH inspector during the removal indicated that petroleum hydrocarbons had impacted soils beneath two of the USTs. The USTs had contained waste oil and ethylene glycol, respectively, and each had a 2,000-gallon capacity. The maximum detected concentration of Total Recoverable Petroleum Hydrocarbons (TRPH) in the samples was 16,000 milligrams per kilogram (mg/kg), while the maximum detected concentration of Total Petroleum Hydrocarbons (TPH)-full range was 280 mg/kg. Based on the soil sample analytical results, DEH Case #H24731-006 was opened on June 23, 2006. [Note: Piping associated with the USTs and former waste oil drains inside Building 100 were also inspected by DEH under the same removal period permit (DEH #AT 5214) and were closed under that permit]. During site assessment activities performed in October 2008, five borings were advanced in the vicinity of the former waste oil and ethylene glycol USTs to depths of approximately 25 feet below ground surface (bgs). One of the borings was advanced between the former excavations and the remaining four were advanced in each

compass direction within an approximate 12-foot radius of the center boring. Three of the borings advanced through approximately 14 feet of excavation backfill material (i.e., pea gravel) prior to encountering the well-indurated Linda Vista Formation. The remaining two borings were advanced through sandy, artificial fill material that was apparently derived from the Linda Vista Formation. Nineteen soil samples were collected from the five borings and analyzed for petroleum hydrocarbons. The maximum detected concentration of TPH (full range) was 3.8 mg/kg. The consultant (Ninyo & Moore) concluded that the petroleum hydrocarbon release impacted soils in a limited area and estimates that soil with a TPH concentration in excess of 100 mg/kg is 70 cubic yards. Based on the soil sample results, the removal of the sources of the release, the location of the site in a groundwater basin with no beneficial uses, and the presence of well-indurated sandstone at a shallow depth, the present consultant (Ninyo & Moore) recommends no further action and case closure. DEH concurs with this recommendation.

Cal Water Watershed Name:	Penasquitos - Tecolote (906.50)		
DWR Groundwater Subbasin Name:			
Site History:			

An underground storage tank (UST) system upgrade was performed on December 14, 2005, at the Metropolitan Transit Development Board (MTDB, currently known as MTS) bus facilities and fueling yard in Kearny Mesa. Nine dispensers and piping connected to a 20,000-gallon-capacity, diesel UST were removed in association with the upgrade operation. The diesel dispensers were located on four fueling islands that adjoined the west side of Building 400. The diesel UST was located south of the dispenser islands. Analytical results for soil samples collected under the direction of a DEH inspector during the removal indicated that petroleum hydrocarbons had impacted soils beneath the dispensers and associated pipelines. Based on the soil sample results, DEH Case #H24731-005 was opened on May 4, 2006. During site assessment activities performed in July 2008, soil samples were collected from 28 borings that were advanced in the fueling area. Attempts were made to drill the borings at the same locations sampled during December 2005 and at "step-out" locations within an approximate 10-foot radius. Samples were collected at multiple depths to a maximum depth of 13 feet below ground surface (bgs). Limited access under the fueling area canopy and around existing dispensers, as well as the presence of utility conduits, precluded sample collection in some areas. However, analytical results indicated that petroleum hydrocarbon-impacted soils were of limited horizontal and vertical extent, and that detected concentrations were one or two orders of magnitude less that those reported for the December 2005 samples. Based on the soil sample results, the location of the site in a groundwater basin with no beneficial uses, and the presence of well-indurated sandstone at a shallow depth, the consultant (Ninyo & Moore) recommends no further action and case closure. DEH concurs with these recommendations.

Update Description:

01/13/2011 08:58:22 AM - Per the NRC report # 964457, THE CALLER IS REPORTING THAT THEY HAD A CITY TRASH TRUCK THAT STRUCK A HAZARD WHILE IN THE COMMERCIAL TIPPING AREA. THIS PUNCTURED THE FUEL TANK AND RESULTED IN A DISCHARGE OF 25 GALLONS OF DIESEL ONTO THE GROUND. NO WATERWAYS WERE AFFECTED. THE CALLER STATED THAT THE DRIVER WAS NOT AT FAULT AND THAT IT WAS AN UNSEEN HAZARD.

Situation Update:

Per the NRC report # 964457, THE CALLER IS REPORTING THAT THEY HAD A CITY TRASH TRUCK THAT STRUCK A HAZARD WHILE IN THE COMMERCIAL TIPPING AREA. THIS PUNCTURED THE FUEL TANK AND RESULTED IN A DISCHARGE OF 25 GALLONS OF DIESEL ONTO THE GROUND. NO WATERWAYS WERE AFFECTED. NRC Report No:	886452	**Direction From City:**	
Type of Incident:	VESSEL	**Lat Quad:**	
Incident Cause:	OTHER	**Long Quad:**	
Incident Date:	10/7/2008 11:00:00 AM	**Location Section:**	
Incident Location:	MIRAMAR LANDFILL	**Location Township:**	
Incident Dtg:	OCCURRED	**Location Range:**	
Distance From City:		**Potential Flag:**	No
Distance Units:		**Year:**	Calendar Year 2008

Description of Incident: CALLER STATED THERE WAS A SPILL OF MATERIALS FROM A VESSEL THAT WAS BEING DISPOSED OF AT A LANDFILL. CALLER STATED THE MATERIALS CAME FROM THE GAS TANK ON THE VESSEL.

Material Spill Information

Chris Code:	GAS	**Name of Material:**	GASOLINE: AUTOMOTIVE (UNLEADED)
CAS No:	000000-00-0	**If Reached Water:**	NO
UN No:		**Amount in Water:**	
Amount of Material:	25	**Unit Reach Water:**	
Unit of Measure:	GALLON(S)

Site History:

This facility was manufacturer of resin optical lenses. Facility generated, stored, and transported sulfuric acid.

Facility submitted Part A in early 1980's but never obtained a Part B permit. ISD document could not be found for this facility. A note in file from "Miguel" to "Carmelita" states, "From inspection of 1/24/86, ISD was not issued. Only Part A application was in file"

Facility only had one container storage unit which was clean closed on 11/22/88. There is no documentation of corrective action work on the facility.

CUF Case: YES
Begin Date: 2003-05-27 00:00:00
How Discovered: UST System Modification
Stop Method: Close and Replace Tank
County: San Diego
Latitude: 32.821369
Longitude: -117.159425
File Location: Local Agency

Potential Media Of Concern: Gasoline
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
How Discovered Description:
Stop Description: CLOSE AND REPLACE TANK
Cal Water Watershed Name: Penasquitos - Tecolote (906.50)
DWR Groundwater Subbasin Name:
Site History:

In May 2003, soil samples were collected and analyzed under the direction of DEH as part of the UST system upgrade activities. Based on laboratory results, Case H15191-001 was opened on September 8, 2003. For site specific data, refer to ESI tab

Violations

Violation Date: 6/4/2015
Violation Program: HW
Violation Division: San Diego County Department of Env Health
Violation Source: CERS
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Notes:

Returned to compliance on 06/08/2015.

Violation Description:

Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.

Violations

Violation Date: 6/4/2015
Violation Program: HMRRP
Violation Division: San Diego County Department of Env Health
Violation Source: CERS
Citation: HSC 6.95 25508.1(a)-(e) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(e)
Violation Notes:

Returned to compliance on 06/08/2015.

Violation Description:

Failure to electronically update business plan within 30 days of any one of the following events:
A 100 percent or more increase in the quantity of a previously disclosed material.
Any handling of a previously undisclosed hazardous materials at or above reportable quantities.
A change of business address, business ownership, or business name.

Inspector: Burke Mike Inspection ID:5569746

Violations

Violation Date: 11/9/2016 **Violation Program:** HW
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 12/22/2016.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 11/9/2016 **Violation Program:** HW
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Notes:

Returned to compliance on 12/22/2016.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.
(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).
(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violations

Violation Date: 12/19/2014 **Violation Program:** HW
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Notes:

Returned to compliance on 09/11/2015.

Violation Description:

Failure to obtain and/or maintain an Active EPA ID.

Eval Type: Routine done by local agency
Eval Division: San Diego County Department of Env Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

Inspector: Garchitorena Bobby Inspection ID:4834311

Violations

Violation Date: 3/17/2016 ***Violation Program:*** UST
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 23 CCR 16 2638 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2638
Violation Notes:

Returned to compliance on 03/17/2016.

Violation Description:

Failure to test leak detection equipment as required every 12 months (VPH, sensor, LLD, ATG, etc.) and/or submit monitoring system certification to the CUPA within 30 days of completion of the test

Violations

Violation Date: 12/18/2015 ***Violation Program:*** HW
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Notes:

Returned to compliance on 12/23/2015.

Violation Description:

Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.

Violations

Violation Date: 3/17/2016 ***Violation Program:*** UST
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Notes:

Returned to compliance on 03/17/2016.

Violation Description:

Failure of the overfill prevention system to meet one of the following requirements:
1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Violations

Violation Date: 3/18/2015 ***Violation Program:*** UST
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Notes:

Returned to compliance on 03/18/2015.

Violation Description:

Failure of the pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs.

Violations

Violation Date: 3/14/2013 ***Violation Program:*** UST
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 23 CCR 16 2636(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)
Violation Notes:

Returned to compliance on 03/14/2013.

Violation Description:

Failure to continuously monitor the interstitial space of the tank, piping and/or sumps sump such that the leak detection activates an audible/visual alarm when a leak is detected.

Violations

Violation Date: 3/14/2017
Violation Program: UST
Violation Division: San Diego County Department of Env Health
Violation Source: CERS
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Notes:

Returned to compliance on 03/14/2017.

Violation Description:

Failure of the line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements:Monitor at least hourly.Be capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g.
Restrict or shut off the flow of product through the piping when a leak is detected.

Violations

Violation Date: 2/1/2016 **Violation Program:** HW
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Notes:

Returned to compliance on 02/08/2016.

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information:
(1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed;
(2) Hazardous characteristics of the waste(s) to be handled;
(3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of:
(A) Factors affecting the potential for corrosion, including but not limited to:
1. Soil moisture content;
2. Soil pH;
3. Soil sulfides level;
4. Soil resistivity;
5. Structure to soil potential;
6. Influence of nearby underground metal structures (e.g., piping);
7. Stray electric current; and,
8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and
(B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:
1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic;
2. Corrosion-resistant coating (such as epoxy or fiberglass) with cathodic protection (e.g., impressed current or sacrificial anodes); and
3. Electrical isolation devices such as insulating joints and flanges;
(4) For underground tank system components that are likely to be affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and

(5) Design considerations to ensure that:
(A) Tank foundations will maintain the load of a full tank;
(B) Tank systems will be anchored to prevent flotation or dislodgement where the tank system is placed in a saturated zone, or is located within a seismic fault zone;
(C) Tank systems will withstand the effects of frost heave; and
(D) The installation of a corrosion protection system that is field fabricated shall be supervised by an independent corrosion expert to ensure proper installation.

Citation: 22 CCR 15 66265.195(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.195(a)
Violation Notes:

Returned to compliance on 02/01/2016.

Violation Description:

Failure of the owner or operator to conduct inspections and maintain inspection records at the facility of the following tank equipment:
1) Overfill/spill control equipment (e.g., waste-feed cutoff systems, bypass systems, and drainage systems) to ensure that it is in good working order;
2) The aboveground portions of the tank system, if any, to detect corrosion or releases of waste;
3) Data gathered from monitoring equipment and leak-detection equipment, (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design;
4) The construction materials and the area immediately surrounding the externally accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation); and
5) For uncovered tanks, the level of waste in the tank, to ensure compliance with section 66265.194(b)(3).

Admin Agency: San Diego County Health Services Department
Notification Area: AA/CUPA,DFG-OSPR,DTSC,RWQCB,US EPA,USFWS,Co/E-Hlth
Location: 7560 Convoy Court
Description: Caller states a company tractor trailer was making a delivery to their warehouse. While backing, the tractor trailer collided with another vehicle. The axle of the trailer leaked a petroleum type product onto the asphalt in the amount of approximately 2 cups. A clean-up has been completed by on-site personnel. No waterways were impacted.

Violations

Violation Date: 5/18/2015 **Violation Program:** HMRRP
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 06/16/2015.

Violation Description:

Failure to establish and electronically submit an adequate training program in safety procedures in the event of a release or threatened release of a hazardous material.

Violations

Violation Date: 5/18/2015 **Violation Program:** HWLQG
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 22 CCR 15 66265.193 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.193
Violation Notes:

Returned to compliance on 06/16/2015.

Violation Description:

Failure of the LQG and/or TP generator, on all new and existing hazardous waste tank systems and ancillary equipment, to meet the following secondary containment requirements:
1) Designed, installed, and operated to prevent any migration of wastes or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the tank system; and
2) Capable of detecting and collecting releases and accumulated liquids until the collected material is removed.
3) Constructed of or lined with materials that are compatible with the waste(s) to be placed in the tank system and shall have sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrological forces), physical contact with the waste to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation (including stresses from nearby vehicular traffic);

4) Placed on a foundation or base capable of providing support to the secondary containment system and resistance to pressure gradients above and below the system and capable of preventing failure due to settlement, compression, or uplift;
5) Provided with a leak detection system that is designed and operated so that it will detect the failure of either the primary and secondary containment structure or any release of hazardous waste or accumulated liquid in the secondary containment system within 24 hours, or at the earliest practicable time if the existing detection technology or site conditions will not allow detection of a release within 24 hours;
6) Sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked waste and accumulated precipitation shall be removed from the secondary containment system within 24 hours, or in as timely a manner as is possible to prevent harm to human health or the environment, if removal of the released waste or accumulated precipitation cannot be accomplished within 24 hours.
7) Secondary containment for tanks shall include one or more of the following devices:
a) A liner (external to the tank); b) a vault; c) a double-walled tank; or d) an equivalent device as approved by the Department.
8) The secondary containment systems shall satisfy the following requirements:
a) External liner systems shall be designed or operated to contain 100 percent of the capacity of the largest tank within its boundary; or
b) Designed or operated to prevent run-on and infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on and infiltration. Such additional capacity shall be sufficient to contain run-on and infiltration of precipitation from a 25-year, 24-hour rainfall event;
c) Free of cracks or gaps; and
d) Designed and installed to completely surround the tank and to cover all surrounding earth likely to come into contact with the waste if released from the tank(s) (i.e., capable of preventing lateral as well as vertical migration of the waste).
9) Vault systems shall be:
a) Designed or operated to contain 100 percent of the capacity of the largest tank within its boundary;
b) Designed or operated to prevent run-on and infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on and infiltration. Such additional capacity shall be sufficient to contain run-on and infiltration of precipitation from a 25-year, 24-hour rainfall event;
c) Constructed with chemical-resistant water stops in place at all joints (if any);
d) Provided with an impermeable interior coating or lining that is compatible with the waste being transferred, stored or treated and that will prevent migration of waste into the concrete;
e) Provided with a means to protect against the formation of and ignition of vapors within the vault, if the w

Violations

Violation Date: 1/5/2015 **Violation Program:** HW
Violation Division: San Diego County Department of Env Health **Violation Source:** CERS
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Notes:

Returned to compliance on 01/07/2015.

Violation Description:

Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Site History:

Site History: REMEC began operations in the building in 1982. Currently, REMEC occupies five buildings, three at Roscoe Court, one at Chesapeake Drive, and one at Ruffin Road, all located in San Diego. REMEC manufactures electronic components for military and commercial clients. Manufacturing processes include machining, metals plating, photolithography, painting, assembly, and testing of electronic components. The majority of hazardous materials and processes including the PBR system are located in Building 2 at 5788 Roscoe Court. REMEC discontinued use of chlorinated solvents in 2000.

Violations

Violation Date: 9/10/2014 ***Violation Program:*** HW
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 22 CCR 15 66265.197 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.197
Violation Notes:

Returned to compliance on 11/05/2014.

Violation Description:

Failure to properly close a hazardous waste tank system ensuring the minimization of further maintenance and that the following requirements are met:
a) The owner or operator shall remove or decontaminate all waste residues, contaminated containment system components (liners, etc.), contaminated soils, and structures and equipment contaminated with waste, and manage them as hazardous waste. The closure plan, closure activities, cost estimates for closure, and financial responsibility for tank systems shall meet all of the requirements specified in articles 7 and 8 of this chapter.
b) If the owner or operator demonstrates that not all contaminated soils can be practicably removed or decontaminated as required in subsection (a) of this section, then the owner or operator shall close the tank system and perform post-closure care in accordance with the closure and post-closure care requirements that apply to landfills (section 66265.310). In addition, for the purposes of closure, post-closure, and financial responsibility, such a tank system is then considered to be a landfill, and the owner or operator shall meet all of the requirements for landfills specified in articles 7 and 8 of this chapter.
c) If an owner or operator has a tank system which does not have secondary containment that meets the requirements of section 66265.193(b) through (f) and which has not been granted a variance from the secondary containment requirements in accordance with section 66265.193(g), then:

1) The closure plan for the tank system shall include both a plan for complying with subsection (a) of this section and a contingent plan for complying with subsection b) of this section;
2) A contingent post-closure plan for complying with subsection (b) of this section shall be prepared and submitted as part of the permit application;
3) The cost estimates calculated for closure and post-closure care shall reflect the costs of complying with the contingent closure plan and the contingent post-closure plan, if these costs are greater than the costs of complying with the closure plan prepared for the expected closure under subsection (a) of this section;
4) Financial assurance shall be based on the cost estimates in subsection c)3) of this section;
5) For the purposes of the contingent closure and post-closure plans, such a tank system is considered to be a landfill, and the contingent plans shall meet all of the closure, post-closure, and financial responsibility requirements for landfills under articles 7 and 8 of this chapter.

Violation Description:

Failure to maintain the following records at the facility for a minimum of three years from the last date of any activity and made available to authorized representatives of the Department, the CUPA, or the U.S. EPA upon request:
1) Written approval from the agency operating the POTW receiving the facility's discharges;
2) Written method documented in the waste analysis plan for ensuring that the concentration of total cyanide does not exceed 5000 milligrams per liter in the aqueous waste resulting from the mixing; and
3) Documentation that the residual solids generated by the treatment have been either:
A) Sent offsite for metals recovery or reclamation; or
B) Determined to be not amenable for recycling.

Violation Description:

Failure of the new hazardous waste tank assessment to include all of the following information:
1) Tank configuration (i.e., horizontal, vertical), material of construction, and gross capacity (in gallons);
2) Design standard(s), if available, according to which the tank and ancillary equipment were or will be constructed and all of the following information;
A) Material of construction; B) material thickness and the method used to determine the thickness; C) description of tank system piping (material, diameter); D) description of any internal and external pumps; and E) sketch or drawing of tank including dimensions.
3) Documented age of the tank system (if tank was previously used), if available, (otherwise, an estimate of the age);
4) Description and evaluation of any leak detection equipment;
5) Description and evaluation of any corrosion protection equipment, devices, or material;
6) Description and evaluation of any spill prevention or overfill equipment;
7) Description and evaluation of secondary containment for the tank system (secondary containment must meet minimum standards as specified in subsections (j)(1) through (j)(3) of this section) including applicable secondary containment for ancillary equipment as required in subsection 66265.193(f);
8) Hazardous characteristics of the waste(s) that have been or will be handled;
9) Prior to placing a new tank system or component in use, an independent, qualified installation inspector or an independent, qualified, professional engineer, registered in California, either of whom is trained and experienced in the proper installation of tank systems, shall inspect the system or component for the presence of any of the following items and document in writing the results of the inspection:
A) Weld cracks or breaks; B) scrapes of protective coatings; C) corrosion; D) any structural damage or inadequate construction or installation such as cracks, punctures, damaged fittings. All discrepancies shall be documented in the assessment and remedied before the tank system is placed in use.
10) All new tanks and ancillary equipment shall be tested for tightness prior to being placed in use. The results of the test(s) shall be documented in this assessment. Tank system integrity or leak test requirements must be in compliance with all local requirements. Prior to conducting a tank system integrity test or leak test, contact local agency staff for local requirements.
11) Estimated remaining service life of the tank system based on findings of subsections 1) through 10).

Violation Description:

Failure of any person who recycles more than 100 kilograms per month of recyclable material under a claim that the material qualifies for exclusion or exemption, to provide the following information every two years:
1) The name, site address, mailing address, and telephone number of the owner or operator of any facility that recycles the material.
2) The name and address of the generator of the recyclable material.
3) Documentation that the requirements of any exemptions or exclusions pursuant to HSC 25143.2 are met, including the following:
A) Where a person who recycles the material is not the same person who generated the recyclable material, documentation that there is a known market for disposition of the recyclable material and any products manufactured from the recyclable material.
B) Where the basis for the exclusion is that the recyclable material is used or reused to make a product or as a safe and effective substitute for a commercial product, a general description of the material and products, identification of the constituents or group of constituents, and their approximate concentrations, that would render the material or product hazardous under the regulations adopted pursuant to HSC 25140 and 25141, if it were a waste, and the means by which the material is beneficially used.

Violation Description:

Failure of the owner or operator while adding spent cyanide-containing process solutions to the aqueous waste for the purpose of reducing cyanide processing hazards to meet the following requirements:
1) The concentration of cyanide in solutions treated shall not exceed 5000 milligrams per liter or parts per million (ppm) of total cyanide;
2) Residual solids generated by any treatment process allowed, such as filtercakes and sludges from clarifiers, are either:
A. Recycled by a facility that recovers metals from the residual solids, or are partially reclaimed for further processing by another metal recovery facility; or
B. Determined not amenable for recycling due to technological or economic reasons;
3) When any residual solids are not recycled, a justification statement shall be prepared . Owners or operators shall complete this justification statement by January 30, for any shipment of residual solids not recycled in the previous calendar year. The justification statement shall include all the following:
A. Chemical composition of the residual solids, including but not limited to, the concentration and type of metals present, cyanide concentration, and water content; and the total weight or volume of the residual solid not recycled during the previous calendar year.
B. Chemical composition of the spent process solutions, including but not limited to, the concentration and type of metals present, and cyanide concentration; and the total weight or volume of the spent process solution treated during the previous calendar year.
C. Current year cost estimates expressed in dollars per pound or dollars per gallon for the following hazardous waste management options, including transportation:
1. Offsite disposal of the residual solids including treatment;
2. Offsite recycling of the residual solids;

3. Offsite treatment of process solutions; and
4. Onsite treatment of process solutions.
D. A basis for the decision to not recycle the residual solids as either:
1. Technological and provide the chemical, physical, hazardous characteristics, or other properties that affect recycling the residual solids; or
2. Economic and provide a comparison of the hazardous waste management costs including, but be not limited to, all costs for both managing the residual solids and managing the spent process solutions; and
4) The justification statement may include any other information that influenced or formed the basis of the generator's decision to not recycle the residual solids. This supplemental information may include the availability of suitable processing technology and facilities; or the marketability of the residual solid or its reclaimed components; and

Citation: 22 CCR 15 66265.193 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.193
Violation Notes:

Returned to compliance on 02/11/2016.

Violation Description:

Failure of the LQG and/or TP generator, on all new and existing hazardous waste tank systems and ancillary equipment, to meet the following secondary containment requirements:
1) Designed, installed, and operated to prevent any migration of wastes or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the tank system; and
2) Capable of detecting and collecting releases and accumulated liquids until the collected material is removed.
3) Constructed of or lined with materials that are compatible with the waste(s) to be placed in the tank system and shall have sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrological forces), physical contact with the waste to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation (including stresses from nearby vehicular traffic);
4) Placed on a foundation or base capable of providing support to the secondary containment system and resistance to pressure gradients above and below the system and capable of preventing failure due to settlement, compression, or uplift;
5) Provided with a leak detection system that is designed and operated so that it will detect the failure of either the primary and secondary containment structure or any release of hazardous waste or accumulated liquid in the secondary containment system within 24 hours, or at the earliest practicable time if the existing detection technology or site conditions will not allow detection of a release within 24 hours;
6) Sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked waste and accumulated precipitation shall be removed from the secondary containment system within 24 hours, or in as timely a manner as is possible to prevent harm to human health or the environment, if removal of the released waste or accumulated precipitation cannot be accomplished within 24 hours.
7) Secondary containment for tanks shall include one or more of the following devices:
a) A liner (external to the tank); b) a vault; c) a double-walled tank; or d) an equivalent device as approved by the Department.
8) The secondary containment systems shall satisfy the following requirements:
a) External liner systems shall be designed or operated to contain 100 percent of the capacity of the largest tank within its boundary; or
b) Designed or operated to prevent run-on and infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on and infiltration. Such additional capacity shall be sufficient to contain run-on and infiltration of precipitation from a 25-year, 24-hour rainfall event;
c) Free of cracks or gaps; and
d) Designed and installed to completely surround the tank and to cover all surrounding earth likely to come into contact with the waste if released from the tank(s) (i.e., capable of preventing lateral as well as vertical migration of the waste).
9) Vault systems shall be:
a) Designed or operated to contain 100 percent of the capacity of the largest tank within its boundary;
b) Designed or operated to prevent run-on and infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on and infiltration. Such additional capacity shall be sufficient to contain run-on and infiltration of precipitation from a 25-year, 24-hour rainfall event;
c) Constructed with chemical-resistant water stops in place at all joints (if any);
d) Provided with an impermeable interior coating or lining that is compatible with the waste being transferred, stored or treated and that will prevent migration of waste into the concrete;
e) Provided with a means to protect against the formation of and ignition of vapors within the vault, if the w

Violation Description:

Failure to properly respond to a spill/leak with the following requirements:
a) General emergency procedures as required in section 66265.56.
b) Cessation of use; prevention of flow or addition of wastes into the tank system or secondary containment system and inspect the system to determine the cause of the release.
c) Removal of waste from tank system or secondary containment system:
1) If the release was from the tank system, the owner or operator shall, within 24 hours after detection of the leak or, if the owner or operator demonstrates that that is not possible, at the earliest practicable time remove as much of the waste as is necessary to prevent further release of hazardous waste to the environment and to allow inspection and repair of the tank system to be performed.
2) If the release was to a secondary containment system, all released materials shall be removed within 24 hours or in as timely a manner as is possible to prevent harm to human health and the environment.
d) The owner or operator shall immediately conduct a visual inspection of the release and, based upon that inspection:
1) Prevent further migration of the leak or spill to soils or surface water; and
2) Remove, and properly dispose of, any visible contamination of the soil or surface water.
e) Notifications, reports;
1) Any release to the environment, except as provided in subsection e)2) of this section, shall be reported within 24 hours of detection.
2) A leak or spill of hazardous waste is exempted from the requirements of subsection (e) of this section, but is not exempted from the requirements of section 66265.56, if it is:
A) Less than or equal to a quantity of one (1) pound, and
B) Immediately contained and cleaned-up.
3) Within 30 days of detection of a release to the environment, a report containing the following information shall be submitted:
A) Likely route of migration of the release;
B) Characteristics of the surrounding soil (soil composition, geology, hydrogeology, climate);
C) Results of any monitoring or sampling conducted in connection with the release, (if available). If sampling or monitoring data relating to the release are not available within 30 days, these data shall be submitted as soon as they become available;
D) Proximity to downgradient drinking water, surface water, and population areas; and
E) Description of response actions taken or planned.
f) Provision of secondary containment, repair, or closure.
1) Unless the owner or operator satisfies the requirements of subsections f)2) through 4) of this section, the tank system shall be closed in accordance with section 66265.197.

2) If the cause of the release was a spill that has not damaged the integrity of the system, the owner/operator may return the system to service as soon as the released waste is removed and repairs, if necessary, are made.
3) If the cause of the release was a leak from the primary tank system into the secondary containment system, the system shall be repaired prior to returning the tank system to service.
4) If the source of the release was a leak to the environment from a component of a tank system without secondary containment, the owner/operator shall provide the component of the system from which the leak occurred with secondary containment that satisfies the requirements of section 66265.193 before it can be returned to service, unless the source of the leak is an aboveground portion of a tank system. If the source is an aboveground component that can be inspected visually, the component shall be repaired and may be returned to service without secondary containment as long as the requirements of subsection g) of this section are satisfied. If a component is replaced to comply with the requirements of this subsection, that component shall satisfy the requirements for new tank systems or components in sections 66265.192 and 66265.193. Additionally, if a leak has occurred in any portion of a tank system component that is not

Returned to compliance on 06/07/2017.

Violation Description:

Failure to accumulate or store hazardous waste in container made of or lined with materials which will not react with, and are otherwise compatible with, the hazardous waste to be stored, so that the ability of the container to contain the waste is not impaired.

Violations

Violation Date: 9/10/2014 ***Violation Program:*** PBR
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 22 CCR 45 67450.11(d)(4)(D) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.11(d)(4)(D)
Violation Notes:

Returned to compliance on 02/09/2015. Container

Violation Description:

Failure of the owners or operators treating cyanide waste solutions to provide initial and annual training to employees, who handle cyanide process solutions, cyanide-containing rinse waters, or manage cyanide-containing aqueous waste, on how to reduce wastes in the production area, including, but not limited to, procedures to:
A) Reduce drag-out of plating baths,
B) Minimize contaminants in process baths,
C) Extend process bath life,

D) Minimize chemical spills and splashes from process and rinse solutions handling practices, and
E) Respond to chemical spills to reduce waste and minimize releases from process and rinse solutions handling practices.

Violations

Violation Date: 9/10/2014 ***Violation Program:*** PBR
Violation Division: San Diego County Department of Env Health ***Violation Source:*** CERS
Citation: 22 CCR 45 67450.11(d)(4)(C) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.11(d)(4)(C)
Violation Notes:

Returned to compliance on 02/09/2015. Container

Violation Description:

Failure of the owners or operators treating cyanide waste solutions to implement the following to reduce waste generation, and minimize or eliminate releases to work areas and the environment:
A) Use holding racks and/or drain boards between all process and rinse tanks to contain plating drag-out, rinse solution drag-out, and return drag-out solutions to process tanks;
B) Use countercurrent rinsing to reduce water use and wastewater generation when multiple sequential rinse tanks are used;
C) St a minimum, every four (4) years, review the use of cyanide-containing process baths to determine if a non-cyanide alternative with equivalent results is available as part of:
1. The Source Reduction Evaluation Review and Plan pursuant to HSC 25244.19,
2. An Environmental Management System, or
3. An environmental performance evaluation plan.

Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Notes:

Returned to compliance on 02/11/2016.

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion

protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information:
(1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed;
(2) Hazardous characteristics of the waste(s) to be handled;
(3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of:
(A) Factors affecting the potential for corrosion, including but not limited to:
1. Soil moisture content;
2. Soil pH;
3. Soil sulfides level;
4. Soil resistivity;
5. Structure to soil potential;
6. Influence of nearby underground metal structures (e.g., piping);
7. Stray electric current; and,
8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and
(B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:
1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic;
2. Corrosion-resistant coating (such as epoxy or fiberglass) with cathodic protection (e.g., impressed current or sacrificial anodes); and
3. Electrical isolation devices such as insulating joints and flanges;
(4) For underground tank system components that are likely to be affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and
(5) Design considerations to ensure that:
(A) Tank foundations will maintain the load of a full tank;
(B) Tank systems will be anchored to prevent flotation or dislodgement where the tank system is placed in a saturated zone, or is located within a seismic fault zone;
(C) Tank systems will withstand the effects of frost heave; and
(D) The installation of a corrosion protection system that is field fabricated shall be supervised by an independent corrosion expert to ensure proper installation.
