## EXECUTIVE SUMMARY

---

This Phase I Environmental Site Assessment (Phase I ESA) of the property identified as The Alhambra at 1000 S. Fremont Avenue and Alhambra Medical University at 2215 West Mission Road in the city of Alhambra, California (the Site) was performed by Equipoise Corporation (Equipoise) and an Equipoise subcontractor, Haro Environmental, for The Ratkovich Company. Haro Environmental performed this Phase I ESA consistent with the American Society for Testing and Materials (ASTM) Practice E-1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM Standard). Exceptions to, or deletions from, this practice are described in this report.

The purpose of this assessment was to identify known, potential or historic recognized environmental conditions (RECs) resulting from historic and/or current uses of hazardous substances or petroleum products at the Site. We understand The Ratkovich Company has requested this Phase I ESA in support of an Environmental Impact Report (EIR) being prepared for the Site. The findings of this environmental assessment are based on Haro Environmental's knowledge of the Site from observations and information gathered during this Phase I ESA.

The Site occupies approximately 45 acres at an average elevation of 470 feet above mean sea level (MSL). Site topography is generally flat and slopes slightly to the southwest. The nearest surface water body is greater than one-mile from the Site. The Site consists of a multi-building campus including various offices, two parking structures, landscaped courtyards and common areas, walkways, surface parking lots, and storage buildings.

The Site had 46 listings on the regulatory databases searched by EDR and included the following databases: Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), Facility Index System (FINDS), RCRA Nongenerator/No Longer Regulated (RCRA Nongenerator/NLR), California Hazardous Materials Incident Reporting System (CHMIRS), Emissions Inventory Data (EMI), Historic Leaking Underground Storage Tank Sites (HIST LUST), National Discharge Elimination System (NPDES), Well Investigation Program (WIP), Spills, Leaks, Investigations, and Cleanups Program (SLIC), Statewide Environmental Evaluation and Planning System Underground Storage Tank Database (SWEEPS UST), California UST Database (CA FID UST), Historical UST Registered Database (HIST UST), Enforcement and Compliance History (ECHO), EDR Historic Cleaners (EDR Hist Cleaner), EDR Historic Auto Station (EDR HIST AUTO), Hazardous Waste Manifest Data (HAZNET), Underground Storage Tank (UST), and the Aboveground Storage Tank (AST). Much of the information obtained from the database records search was duplicated in the files maintained by local agencies, and contained listings for former underground

storage tanks and hazardous material handling. Known issues include the location of the Site within the San Gabriel Valley Super Fund Area 3 Operable Unit (Area 3) and the detection of chemicals, particularly trichloroethene (TCE) and tetrachloroethene (PCE), in soil vapor beneath portions of the Site. TCE and PCE detections in soil vapor have been addressed under regulatory oversight and the current status of these cases are discussed below.

Based on a review of historic aerial photographs, topographic maps, Sanborn Fire Insurance Maps, and historic directories listings, the following development summary is provided: In approximately the late 1800s, the first improvement was completed at the Site and included a road. By the early 1920s, the majority of the Site was developed with the C.F. Braun & Company manufacturing plant and associated railroad, as well as research, design and administrative offices. The eastern portion of the Site, along Date Avenue was occupied by smaller commercial/industrial uses and residences. By the 1950s, the C.F. Braun & Company facility extended farther east across the Site. A Southern California Edison shipping/receiving and storage facility with a small shop occupied an area in the northeastern portion of the Site. In addition, separate commercial/industrial uses, such as, woodworking, warehouse, ink and paint manufacturing, machine shop, gas station and auto repair, sheet metal working, light wood and steel manufacturing, and foundry, occupied the eastern portion of the Site along Date Avenue. C.F. Braun & Company was sold in the early 1980s. Industrial uses continued on the eastern portion of the Site until the late 1990s and has since then operated as a mixed-use office, commercial, and educational complex.

A reconnaissance of the Site was conducted by a Haro Environmental representative on December 28, 2017. During the reconnaissance, Haro Environmental did observe hazardous materials and petroleum products at several locations at the Site, however, under the conditions observed, these hazardous materials and petroleum products would not be expected to pose an environmental concern to the Site. Hazardous materials or petroleum products at nearby properties were not observed under conditions that could be expected to pose an environmental concern to the Site.

Based on the data gathered and reviewed during this Phase I ESA, Haro Environmental identified the following REC:

- The location of the Site within the San Gabriel Valley Super Fund Area 3 and groundwater contamination beneath the Site.

The Site is located within the southwest portion of the San Gabriel Valley Superfund Fund Site – Area 3 Operable Unit (Area 3). Area 3 is one of 8 Operable Units identified by United States Environmental Protection Agency (USEPA) for the San Gabriel Valley Superfund Sites and is known as the San Gabriel Valley Superfund Site Area 3 Operable Unit. Covering 19 square miles in the western portion of the San Gabriel Valley, Area 3 is located west of Rosemead Boulevard, north of I-10, and south of the Raymond

Fault (which separates the main San Gabriel Basin from the Raymond Basin to the northwest). Area 3 includes all of the City of San Gabriel, as well as portions of the Cities of Alhambra, Rosemead, Temple City, San Marino and South Pasadena.

Discovery of contamination in water purveyor production wells led USEPA to designate Area 3 as a NPL site in 1984. Volatile organic compounds (VOCs) have been detected in production wells and safeguards are in place to ensure acceptable drinking water quality. Area 3 groundwater is contaminated with VOCs (most commonly PCE and TCE), perchlorate, and nitrate at concentrations exceeding state and federal water quality standards.

The USEPA is overseeing the groundwater investigation and remediation for Area 3, and the California Regional Water Quality Control Board – Los Angeles Region (LARWQCB) is primarily responsible for overseeing soil investigation and cleanup for the majority of the release sites that may have contributed to the Area 3 groundwater plume. The USEPA issued the Remediation Investigation (RI) Report in June 2009. The RI Report indicates that groundwater contamination is present in the western bedrock aquifer, western alluvial aquifer, and eastern alluvial aquifer (shallow, intermediate, and deep zones). The RI Report also indicates that groundwater production in the eastern portion of Area 3 impacts contaminant migration. To identify the sources of the groundwater contamination and determine what additional cleanup is needed, the State of California has directed and overseen investigations of multiple current and former industrial facilities. USEPA supplemented these investigations with ground water monitoring wells and soil testing at several industrial facilities identified as possible sources of groundwater contamination. USEPA is using the data generated by these investigations to identify and evaluate groundwater cleanup options. In 2016, USEPA expected to complete a feasibility study and develop a proposed soil and groundwater cleanup plan, and this plan is still being prepared.

Multiple addresses at the Site based on historic operations have been identified as possible sources contributing to the Area 3 groundwater contamination. The LARWQCB working with the USEPA developed a list of these possible sources of contamination through a well investigation program (WIP) database. Based on a prioritization of the properties, several were investigated further by opening a case for the property overseen by the SLIC group within the LARWQCB. The following properties at the Site are currently listed in the WIP and/or SLIC databases and the current status is noted:

- 1000 S. Fremont (SLIC Site Number T10000001005; WIP 115.0559), 1000 South Fremont Avenue, with a cleanup status of “Completed – Case Closed” as of June 19, 2017.
- A-1 Signal Division (SLIC Site Number SL603799147; WIP 115.0011), 635 S. Date Avenue, with a cleanup status of “Completed – Case Closed” as of September 27, 2017.

- Dickinson Ink Corporation (SLIC Site Number SL603799396; WIP 115.0289), 625 S. Date Avenue, with a cleanup status of “Completed – Case Closed” as of March 13, 2019.
- The Witteman (SLIC Site Number SL603799518; WIP 115.0413), 705 S. Date Avenue, with a cleanup status of “Completed – Case Closed” as of July 29, 2015.
- Balance Plating (SLIC Site Number SL603799361, WIP 115.0253), 2204 West Orange Street, with a cleanup status of “Completed – Case Closed” as of September 27, 2017.
- Crown Pattern Works Foundry (SLIC Site Number SL603799394; WIP 115.0287), 815 S. Date Avenue, with a cleanup status of “Open – Inactive” as of October 28, 2014.
- Charter Communications (SLIC Site Number SL603799213; WIP 115.0098), 2215 W. Mission Road, with a cleanup status of “Completed – Case Closed” as of August 12, 2013.
- Allmetal Engineering Co. (WIP 115.0237), 1003 Date Avenue, with a file status of “Backlog”.
- Page Screw Machine Products (WIP 115.0369), 823 Date Avenue, with a file status of “Backlog”.
- J. E. Engineering Corp. (WIP 115.0322), 823 Date Avenue, with a file status of “Backlog”.
- Forrest Corp (WIP 115.0307), 829 Date Avenue, with a file status of “Backlog”.

Of the above seven listed SLIC cases for the Site, five of those are closed. For the closed 1000 S Fremont case, the property was divided into two sites, Site A and Site B (see Appendix B for locations). Site A encompasses the majority of the 1000 S. Fremont property, includes APNs 5342-001-021, -022, -023, -025, -026, and -027, and is closed with unrestricted future land use. Site B is located near the southeast corner of the property adjacent to the north of 2215 W. Mission, includes APN 5342-001-024, and has been closed with restricted future land use (deed restriction for commercial/industrial land uses only). It is our understanding that this restricted land use is consistent with the planned future use of the area for a parking structure. It should be noted that the closures at the Site are for soil only as the Site remains within the NPL listed Area 3.

Charter Communications located at 2215 W. Mission Road was closed by the LARWQCB in a letter dated August 8, 2013. The letter indicates no further action requirements for soil only and identifies the property to include APNs 5342-001-019 (2215 W. Mission), -010 (1003 S. Date), and -009 (825 S. Date). Continuing obligations include groundwater monitoring every other year of three wells at this property. Records maintained by the LARWQCB indicate the most recent groundwater sampling was performed on

December 16, 2015 and the findings reported in the *2015 Annual Groundwater Monitoring and Sampling Event, 2215 West Mission Road, Alhambra, California* report dated March 6, 2016 and prepared by Equipoise. Depth to water was encountered at approximately 160 feet bgs, and groundwater flow direction was to the northwest. Groundwater analytical data indicated that PCE was detected at a maximum concentration of 7.0 micrograms per liter ( $\mu\text{g/L}$ ) and TCE was detected at a maximum concentration of 62  $\mu\text{g/L}$ .

The one site that is currently identified as “Open” is Crown Pattern Works at 815 S. Date Avenue. Crown Pattern Works at 815 S. Date Avenue has been transferred to the USEPA for regulatory oversight. Ms. Mariam Fawaz, remedial project manager with the USEPA, was contacted and indicated that although the case remains open, the USEPA has no plans to require investigation and/or remediation of this property in the near future.

The four WIP only listings are discussed below:

- J. E. Engineering Corp. is located at 825 Date and Allmetal Engineering Co. is located at 1003 Date. Based on the APNs, these two properties are included under the 2215 W. Mission closure. In addition, Forrest Corp. at 829 is located between 825 and 1003 S Date, however, this address is not associated with a current APN. Mr. Charmley indicated that the “Backlog” status for these three properties is not current, and that the current status as “Closed” will be reflected in the agency database in the near future.
- Page Screw Machine Products is located at 823 Date and is not associated with a current APN. Based on the location of this property to the north of 825 S. Date, this property should be included under the 1000 S. Fremont Site B closure. Mr. Charmley indicated that the “Backlog” status is not current, and that the current status as “Closed” with institutional controls will be reflected in the agency database in the near future.

Based on the data gathered and reviewed during this Phase I ESA, Haro Environmental identified the following Controlled RECs:

- The former presence of USTs and historic operational activities at the Site.

Numerous soil and soil vapor investigations were performed at the Site between 1999 and 2007 by Geomatrix, Equipoise and Project Navigator and the findings are summarized in a *2016 Soil Closure Risk Evaluation* prepared by Equipoise. The 2005 and 2007/2008 site investigations were performed under the direction of the LARWQCB in consultation with the USEPA to evaluate potential historic release points not evaluated previously and identified through records searches and file reviews. According to the report,

a total of 138 soil samples and 219 soil vapor samples were collected during previous investigations and the results of the soil analyses indicated that all compounds were below Preliminary Remediation Goals (PRGs) and/or background for all 138 soil samples. Soil vapor analyses indicated all compounds were below Risk-Based Screening Levels (RBSLs) for 195 samples. In the report, Equipoise noted that “the discussion regarding the results of the above combined investigations make reference to preliminary remediation goals (PRGs), risk based screening levels (RBSLs), and other nomenclature that is not readily used in 2016 but was pertinent regulatory screening criteria at the time of the submittals of the subject reports. These references are included to provide a more complete context of the logic used in data evaluation at the time of the preparation of the Geomatrix, Equipoise, and Project Navigator reports and the basis for the subsequent conclusions of the investigations. The soil vapor sampling activities and the human health risk screening evaluation discussed later in this report were performed to current regulatory criteria”. Geomatrix concluded that concentrations of constituents detected were below RBSLs or PRGs, with the exception of arsenic, which was within the range of background concentrations for California Soils, and the exception of samples collected in the vicinity of 2215 W. Mission. Concentrations of PCE and TCE in shallow soil gas did exceed the industrial RBSL in 18 out of 93 samples for areas to the west and north of 2215 W. Mission. The Equipoise investigation concluded that all concentrations of constituents detected were below RBSLs or PRGs, with the exception of soil vapor probe SG-21.

Within probe SG-21 completed as multi-nested soil vapor probes, concentrations of PCE in shallow soil gas did exceed the industrial RBSL in six samples. However, soil vapor probe SG-21 was the closest point on the Site to the soil vapor plume from the 2215 W. Mission site and Equipoise concluded that the PCE exceedances from the six samples were likely attributable to activities associated with the 2215 W. Mission Road property that had been subsequently addressed by the operation of a soil vapor extraction (SVE) system. In conclusion, Equipoise reported that the Project Navigator investigation found no detections of VOCs in any soil vapor samples and values less than the industrial and residential PRG or within the range of background concentrations for all soil samples. The stated purpose of the Project Navigator investigation was to provide additional information in order to determine whether or not soil contamination was present in the subsurface soil and whether or not a release of VOCs occurred that posed a threat to the groundwater quality beneath the Site. During the Project Navigator investigation detections of other compounds in soil were either below residential/industrial PRGs, or soil levels for groundwater protection, or were within background for California soils. Therefore, the Project Navigator investigation fulfilled the LARWQCB’s request for additional investigations, at locations specified by the LARWQCB, and had shown that VOC contamination was not present in the subsurface soils and there was no evidence of any significant release at the Site.

The *2016 Soil Closure Risk Evaluation* included the collection of soil and soil vapor samples for analysis from 1000 S. Fremont, with the results used to perform a human health risk analysis (HHRA) for the Site. Thirteen borings were advanced throughout Site A of the Site. Soil sampling activities at Site A were

performed on November 20 and 21, 2015 by Equipoise. Soil samples were collected at 5 and 10 feet bgs for chemical analysis at each sample locations proposed in the LARWQCB-approved work plans with the exception of ACP-A-SB-B12, which was limited to a single soil sample at 5 feet bgs due to wet utilities located between 5 and 10 feet. VOCs were not detected above their respective reporting limits in any of the Site A soil samples analyzed during this investigation. After the soil borings were advanced, soil vapor probes were constructed. Sampling of the Site A soil vapor probes contained a total of 17 VOCs. The primary constituent reported in Site A soil vapor samples was PCE, with the remaining 16 constituents found at low to trace levels.

Two borings were advanced on Site B of the Site. Soil samples were collected for chemical analysis at the two locations proposed in the work plans. VOCs were not detected above their respective reporting limits in any of the Site B soil samples analyzed. Sampling of the Site B soil vapor probes detected a total of nine VOCs. The primary constituent reported in Site A soil vapor samples was PCE, with the remaining eight constituents found at low to trace levels.

The HHRA process consisted of a tiered approach by first comparing the analytical data to published California screening levels (DTSC, 2016), followed by default modeled risk screening values (RSVs), and then finally site-specific RSVs. The screening was used to evaluate investigation results that could pose a potential future risk users at the Site. Based on the results of the HHRA, no significant risks are projected to future site users associated with soil vapors reported in Site A under unrestricted land use conditions. Equipoise recommended that Site A be granted the status of “No Further Action” with regards to soil and soil vapor constituents. Potential risks were projected to future site users associated with soil vapors reported in Site B under unrestricted land use conditions, therefore, Equipoise recommended institutional controls to mitigate potential receptor exposure. A restricted land use condition was deemed viable and consistent with planned future development of Site B as commercial/industrial. Therefore, it was recommended that Site B be granted the status of “No Further Action” with regards to soil and soil vapor constituents following the implementation of institutional controls whereby future land use is limited to commercial industrial purposes.

Based on the findings of the HHRA, Site A was granted soil closure by the LARWQCB for unrestricted land use, and Site B was granted soil closure by the LARWQCB for restricted commercial/industrial land use only. The restricted land use at Site B is consistent with the planned future use of the property as a parking structure.

Based on the findings, Haro Environmental identified the following potential environmental concerns:

- Based on the age of the transformers, PCB-containing oil may be present within the transformers located at the substation to the west of Building B12. The substation is operated by and is the responsibility of Southern California Edison, and is not under the control of The Ratkovich Company. If these transformers are replaced or leak, Edison should be contacted to coordinate the proper handling and/or disposal in accordance with applicable laws and regulations.
- Groundwater and soil vapor wells are located at the Site. Once these wells are no longer needed for regulatory oversight, they should be destroyed under permit and in accordance with all applicable laws and regulations.

## 1.0 INTRODUCTION

---

This Phase I Environmental Site Assessment (Phase I ESA) of the property identified as The Alhambra at 1000 S. Fremont Avenue and Alhambra Medical University at 2215 West Mission Road in the city of Alhambra, California (the Site) was performed by Equipoise Corporation (Equipoise) and an Equipoise subcontractor, Haro Environmental, for The Ratkovich Company. A Site vicinity map is provided on Plate 1. Haro Environmental performed this Phase I ESA consistent with the American Society for Testing and Materials (ASTM) Practice E-1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM Standard). Exceptions to, or deletions from, this practice are described in this report.

### 1.1 PURPOSE

This Phase I ESA was conducted in an effort to identify known, potential or historic recognized environmental conditions (RECs) resulting from historic and/or current uses of the Site. We understand The Ratkovich Company has requested this Phase I ESA in support of an Environmental Impact Report (EIR) being prepared for the Site. The ASTM Standard defines a REC as:

“The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.” The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions”

The ASTM Standard defines a historical REC as:

“An environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently.” For example, a historical REC could be identified if a past release of any hazardous substances or petroleum products has occurred in connection with the property and has

been remediated to the satisfaction of the lead regulatory agency as evidenced by a no further action letter or a case closure determination.

At the request of The Ratkovich Company, which we understand currently owns the Site, Haro Environmental has completed this Phase I ESA. This report is subject to the limitations presented in this Phase I ESA report.

This report describes Haro Environmental's assessment methodology, presents our findings, and provides our opinion as to the potential presence of RECs in connection with the Site.

## **1.2 SCOPE OF SERVICES**

The scope of services conducted for this study included the following tasks:

- Perform an on-site reconnaissance to identify indicators of the existence of hazardous materials or petroleum products.
- Observe adjacent or nearby properties from the Site and public thoroughfares in an attempt to see if such properties are likely to use, store, generate, or dispose of hazardous materials or petroleum products.
- Obtain and review an environmental records database search from Environmental Data Resources, Inc. (EDR) to acquire information about the potential for hazardous materials to exist on-site or at nearby properties.
- Review the current U.S. Geological Survey (USGS) topographic map to obtain information about topography and uses of the Site and nearby properties.
- Review historic aerial photographs, topographic maps, Sanborn Fire Insurance maps, and historic city directories listings to obtain information about historic uses of the Site and adjacent properties.
- Review California Division of Oil and Gas records to obtain information about historic oil and gas activity in the vicinity of the Site.

- Conduct interviews with persons familiar with the Site development and local and/or State government agencies, as warranted, to obtain information about current and historic uses of the property.
- Prepare this report documenting the findings of the Phase I study.

Our scope of services did not include any inquiries with respect to non-scope ASTM considerations including but not limited to asbestos containing materials, lead-based paint, mold, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, electromagnetic fields or geologic hazards.

## 2.0 SITE SETTING

The Site setting presented in this section describes the condition of the Site at the time of the Phase I ESA. Tables 2-1 and 2-2 summarize the physical characteristics of the Site and adjoining properties. A Site and Adjacent Land Use Map is provided on Plate 2.

### 2.1 SITE DESCRIPTION

Table 2-1 provides a summary of the physical location and size of the Site, as well as the current uses. This information was obtained from review of various maps (such as topographic maps and tax assessor maps), aerial photographs, and a site visit. Additional site description information was obtained during the site visit; please refer to the Section 5.0 of the report that covers site reconnaissance information.

**TABLE 2-1  
SITE LOCATION AND LAND USE**

Parameter	Information/Comments
Location	The Site is located in the City of Alhambra, and occupies an entire city block bound by Orange Street to the north, South Fremont Avenue to the west, Date Avenue to the east, and West Mission Road to the south.
Assessor's Parcel Nos. (APNs)	5342-001-006 (629 S. Date), 5342-001-007 (635 S. Date), 5342-001-008 (701 S. Date), 5342-001-009 (825 S. Date), 5342-001-010 (1003 S Date), 5342-001-019 (2215 W. Mission), 5342-001-021 (1000 S Fremont), 5342-001-022 (no address), 5342-001-023 (no address), 5342-001-024 (no address), 5342-001-025 (no address), 5342-001-026 (no address), and 5342-001-027 (no address).
Section, Township, and Range	Section 16, Township 1 South, Range 12 West of the San Bernardino Base and Meridian.
Current Use	Offices, class rooms, parking, parking structure, warehouse, and fitness center.
Current Ownership	County of Los Angeles Assessor's office identify the property owners as Alhambra Office Community, LLC and Alhambra Residential Community, LLC for 1000 S. Fremont, and The Corner Company for 2215 W. Mission.

## 2.2 REGIONAL GEOLOGY AND HYDROGEOLOGY

Information on regional geology and hydrogeology is presented in Table 2-2. This information was obtained from published data and maps of the Site vicinity.

**TABLE 2-2  
PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS**

<b>Geologic/Hydrogeologic Parameter</b>	<b>Information/Comments</b>
Site Topography	Based on a review of the USGS Los Angeles 7.5-Minute Topographic Quadrangle Map dated 2012; elevation at the Site ranges from approximately 480 feet above mean sea level (MSL) at the northeast corner to approximately 450 feet above MSL at the southwest corner, and the relief across the Site slopes gently to the southwest. Storm water runoff at the Site empties either into multiple storm water drains present within the Site which eventually empty into the storm water conveyance system or offsite onto the adjoining streets.
Site Geology and Soil Types	<p>The Site is situated near the boundary between the Peninsular Ranges and Transverse Ranges Geomorphic Provinces in the westernmost portion of the San Gabriel Valley. The valley is bounded on the north by the San Gabriel Mountains, on the east by a subsurface bedrock high (between San Dimas and La Verne) separating the valley from the Upper Santa Ana Valley, and on the southeast, south, and west by the watershed divides of the San Jose, Puente, Merced, and Repetto Hills. The valley floor consists of a broad piedmont plain sloping downward from the base of the San Gabriel Mountains to Whittier Narrows, the lowest point of the area, approximately 6 miles southeast of the site (California Department of Water Resources, 1966). Although most natural surface outflow from the San Gabriel Valley passes through Whittier Narrows, the westernmost portion of the valley (including the subject site) is an exception where drainage passes through two low gaps in the Repetto Hills south of Alhambra and Monterey Park.</p> <p>The Site is underlain by Pleistocene alluvium of the Lakewood formation, which is composed of sands, silty sands, and gravels. The Lakewood formation in this area is expected to be no more than approximately 150 feet thick. The San Pedro formation of early Pleistocene age lies below the Lakewood Formation and consists of sands, gravels, and silts (Dibblee and Ehrenspeck, 1989).</p> <p>According to information obtained from subsurface investigations at the Site, the vicinity is underlain by interbedded clayey sand, well graded sand with gravel, silty sand and fine to medium grained sand from ground surface to approximately 30 feet below ground surface (bgs). This unit is underlain by approximately 80 feet of predominately silt, clay, and fines with between 10 and 30% fine sand. Hard clayey sediments were encountered at depths of approximately 110 to 115 feet bgs.</p> <p>Environmental Data Resources, Inc. (EDR, 2018) indicates that the dominant soil composition in the general area of the subject-site is “urban</p>

	<p>land.” This classification reflects the fact that the subject-site vicinity has been heavily developed for many years. The Web Soil Survey site (United States Department of Agriculture, 2005) indicates that the subject-site vicinity has no soil data available.</p>
<p>Site Hydrogeologic Setting</p>	<p>The Site is located near the western edge of the San Gabriel Valley Groundwater Basin. The San Gabriel Valley is a structural basin filled with permeable alluvial deposits, which are underlain and surrounded by relatively impermeable rock, making the alluvium the subsurface reservoir which provides water to wells drilled in the area (California Department of Water Resources, 1966). The alluvium thins in the westernmost portion of the San Gabriel Valley where the Site is located.</p> <p>The Site is located within the San Gabriel Valley Super Fund Site – Area 3 Operable Unit (Area 3 or Area 3 OU). The following was taken from the <i>Data Gap Investigation Report, Southwest Operable Unit, San Gabriel Valley Area 3 Superfund Site, Los Angeles County, California</i> report (CH2M Hill, 2015; a copy is provided in Appendix B). “The hydrostratigraphy and aquifer properties of Area 3 are distinctly different to the west and east of the structural bedrock discontinuity. The western Area 3 alluvium primarily consists of relatively fine-grained sediments with less prevalent layers of coarse-grained sediments. The eastern Area 3 alluvium primarily consists of a thick sequence of coarse-grained to fine-grained sediments and forms a heterogeneous alluvial aquifer (Lamar, 1970).</p> <p>Three distinct groundwater zones occur in Area 3: shallow, intermediate, and deep. The shallow groundwater zone is the first-encountered groundwater in Area 3, with the exception of the western area where the shallow groundwater zone is absent. Each groundwater zone generally dips to the southeast.</p> <p>Although there is considerably variability across Area 3, the transition between groundwater zones is typically observed between 200 and 250 feet bgs for the shallow and intermediate zones, and between 450 and 650 feet bgs for the intermediate and deep zones (USEPA, 2009). Currently, the depth to groundwater ranges from 65 to 195 feet bgs in western Area 3 and from 190 to 365 feet bgs in eastern Area 3.</p> <p>Groundwater in the western alluvial aquifer flows generally southeastward to eastward following the bedrock structural features, and exhibits steeper horizontal hydraulic gradients than the eastern alluvial aquifer. Finer-grained alluvium restricts groundwater flow. The eastern alluvial aquifer consists of multiple, leaky aquifers, with groundwater flow generally to the west/southwest in the vicinity of the NEOU (northeast operable unit). The main influences on groundwater flow in the eastern alluvial aquifer include groundwater pumping, the presence of fine-grained units that either allow leakage or obstruct vertical groundwater flow, and limited groundwater recharge.</p> <p>CH2M Hill (2015) reports that there is a geologic discontinuity traversing Area 3 which is possibly an unnamed fault associated with the Whittier fault system. The bedrock discontinuity apparently serves as a barrier to groundwater flow between the western and eastern portions of Area 3. The Site is located west of this discontinuity, in the western portion of Area 3.</p>

	<p>According to the GeoCheck® section of the EDR report, no groundwater wells are located within a one mile radius of the Site. Based on information provided in <i>2015 Annual Groundwater Monitoring and Sampling Report</i> dated March 6, 2016 and prepared by Equipoise (Equipoise, 2016), groundwater flow direction at the Site in December 2015 was to the northwest and first groundwater was found at approximately 160 feet bgs. The nearest surface water body is located greater than 1-mile away from the Site.</p>
--	---

### **2.3 ADJOINING AREA LAND USE**

A drive-by survey of the area adjoining the Site was performed by Haro Environmental personal on December 28, 2017. The results of this survey indicate Orange Street followed by the County of Los Angeles Department of Public Works building is present to the north, S. Fremont Avenue followed by commercial buildings, vacant land, and retail shops to the west, S. Mission Road followed by ministorage to the south, and S. Date Avenue industrial and commercial land uses to the east. Site and adjoining land uses are depicted on Plate 2.

### **2.4 LOCATION AND LEGAL DESCRIPTIONS**

The Site is located in the City of Alhambra, and is bound by Orange Street to the north, South Fremont Avenue to the west, Date Avenue to the east, and West Mission Road to the south.

### **2.5 USER PROVIDED INFORMATION**

Ms. Megan Moloughney, Senior Development Manager with The Ratkovich Company, was interviewed for actual knowledge pertaining to the Site and the information obtained is presented below. Although Ms. Moloughney is employed by The Ratkovich Company, she is affiliated with the ownership entities Alhambra Office Community, LLC and Alhambra Residential Community, LLC, and has ownership knowledge of the Site.

#### **2.5.1 Title Records**

Haro Environmental was not provided and did not review a preliminary title report for the Site.

### **2.5.2 Environmental Liens or Activity and Use Limitations**

Ms. Moloughney did not provide information pertaining to environmental liens or activity and use limitations for the Site. Haro Environmental was not provided with a copy of an environmental lien records search for the Site.

### **2.5.3 Specialized Knowledge**

Ms. Moloughney was unaware of specialized knowledge or experience regarding the Site.

### **2.5.4 Commonly Known or Reasonably Ascertainable Information**

Ms. Moloughney was unaware of commonly known or reasonably ascertainable information about the Site.

### **2.5.5 Valuation Reduction for Environmental Issues**

Ms. Moloughney was unaware of any information pertaining to a valuation reduction for the Site relative to any known environmental issues.

### **2.5.6 Owner, Property Manager, and Occupant Information**

Ms. Moloughney indicated that based on her knowledge and experience related to the property, there are no obvious indicators that point to the presence or likely presence of contamination at the Site other than the existing environmental reports.

### **2.5.7 Reason for Performing Phase I ESA**

The purpose of this Phase I ESA was to assess the environmental conditions of the Site, taking into account commonly and reasonably ascertainable information.

### **2.5.8 Other**

No other information pertaining to environmental issues related to the Site was provided by Ms. Moloughney.

## **2.6 ENVIRONMENTAL LIENS**

No environmental lien search was conducted by the preparer or the User of this Phase I report.

### 3.0 RECORDS REVIEW

---

Government agency database records are sources of information that may be helpful in evaluating activities that may have contributed to a release of hazardous substances or petroleum products to soil and/or groundwater. Haro Environmental contracted a government agency database search from EDR. A copy of the EDR report, which specifies the approximate minimum search distance for each public list as defined in the ASTM Standard, is included as Appendix A.

Properties that were identified as located at the Site are listed in Table 3-1, EDR Listing Summary of Onsite Properties (see Appendix A for a complete listing of properties reported and acronyms used by EDR). Although nearby properties could have the potential to impact the Site, based on previous site assessments, and soil, soil vapor, and groundwater investigation and remediation performed at the Site, the Site is well characterized and off-site impacts are not expected to pose an environmental concern above those identified at the Site.

The Site had 46 listings on the regulatory databases searched by EDR and included the following databases: Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), Facility Index System (FINDS), RCRA Nongenerator/No Longer Regulated (RCRA Nongenerator/NLR), California Hazardous Materials Incident Reporting System (CHMIRS), Emissions Inventory Data (EMI), Historic Leaking Underground Storage Tank Sites (HIST LUST), National Discharge Elimination System (NPDES), Well Investigation Program (WIP), Spills, Leaks, Investigations, and Cleanups Program (SLIC), Statewide Environmental Evaluation and Planning System Underground Storage Tank Database (SWEEPS UST), California UST Database (CA FID UST), Historical UST Registered Database (HIST UST), Enforcement and Compliance History (ECHO), EDR Historic Cleaners (EDR Hist Cleaner), EDR Historic Auto Station (EDR HIST AUTO), Hazardous Waste Manifest Data (HAZNET), Underground Storage Tank (UST), and the Aboveground Storage Tank (AST).

### 3.1 RESULTS OF DATABASE SEARCH

The following sections contain information on the results of the government records search conducted by EDR. Opinions presented below are based on information provided in EDR’s report (unless otherwise noted) and on criteria such as nature of listing (release vs. non-release) and any reported violations. Three soil vapor monitoring wells are located at 2215 W Mission and are screened into the groundwater zone. The most recent sampling report titled *2015 Annual Groundwater Monitoring and Sampling Report* dated March 6, 2016 and prepared by Equipoise (Equipoise, 2016) indicated groundwater flow direction at the Site in December 2015 was to the northwest and first groundwater was found at about 160 feet bgs. In a Figure produced by the USEPA for Area 3, possibly from data collected in 2014, groundwater flow varied from the east-northeast to the southeast in the vicinity of the Site. Therefore, in assessing the potential impact to buildings materials, soil, soil vapor, and/or groundwater beneath the Site the shallowest groundwater was assumed with an anticipated regional groundwater movement direction varying from the east-northeast to the southeast.

#### 3.1.1 Subject Property

The Site is located within the southwest portion of the San Gabriel Valley Superfund Fund Site – Area 3 Operable Unit (Area 3). Area 3 is one of 8 Operable Units identified by USEPA for the San Gabriel Valley Superfund Sites and is known as the San Gabriel Valley Area 3 Superfund Site. Covering 19 square miles in the western portion of the San Gabriel Valley, Area 3 is located west of Rosemead Boulevard, north of

I-10, and south of the Raymond Fault (which separates the main San Gabriel Basin from the Raymond Basin to the northwest). Area 3 includes all of the City of San Gabriel, as well as portions of the Cities of Alhambra, Rosemead, Temple City, San Marino and South Pasadena.

Discovery of contamination in water purveyor production wells led USEPA to designate Area 3 as a National Priorities List (NPL) site in 1984. Volatile organic compounds (VOCs) have been detected in production wells and safeguards are in place to ensure acceptable drinking water quality. Area 3 groundwater is contaminated with VOCs (most commonly tetrachloroethene [PCE] and trichloroethene [TCE]), perchlorate, and nitrate at concentrations exceeding state and federal water quality standards.

The USEPA issued the Remediation Investigation (RI) Report in June 2009. The RI Report indicates that groundwater contamination is present in the western bedrock aquifer, western alluvial aquifer, and eastern alluvial aquifer (shallow, intermediate, and deep zones). The RI Report also indicates that groundwater production in the eastern portion of Area 3 impacts contaminant migration. To identify the sources of the groundwater contamination and determine what additional cleanup is needed, the State of California has directed and overseen investigations of more than 20 current and former industrial facilities. USEPA supplemented these investigations with 10 new ground water monitoring wells and soil testing at four industrial facilities identified as possible sources of groundwater contamination. USEPA is using the data generated by these investigations to identify and evaluate groundwater cleanup options. In 2016, USEPA expects to complete a feasibility study and develop a proposed soil and groundwater cleanup plan.

Multiple addresses at the Site based on historic operations have been identified as possible sources contributing to the Area 3 groundwater contamination. The Los Angeles Regional Water Quality Control Board (LARWQCB) working with the USEPA developed a list of these possible sources of contamination through a well investigation program (WIP) database. Based on a prioritization of the properties, several were investigated further by opening a case for the property overseen by the SLIC group within the LARWQCB. The following properties at the Site are listed in the WIP and/or SLIC databases and the current status is noted:

- 1000 S. Fremont (SLIC Site Number T10000001005; WIP 115.0559), 1000 South Fremont Avenue, with a cleanup status of “Completed – Case Closed” as of June 19, 2017.
- A-1 Signal Division (SLIC Site Number SL603799147; WIP 115.0011), 635 S. Date Avenue, with a cleanup status of “Completed – Case Closed” as of September 27, 2017.

- Dickinson Ink Corporation (SLIC Site Number SL603799396; WIP 115.0289), 625 S. Date Avenue, with a cleanup status of “Completed – Case Closed” as of March 13, 2019.
- The Witteman (SLIC Site Number SL603799518; WIP 115.0413), 705 S. Date Avenue, with a cleanup status of “Completed – Case Closed” as of July 29, 2015.
- Balance Plating (SLIC Site Number SL603799361, WIP 115.0253), 2204 West Orange Street, with a cleanup status of “Completed – Case Closed” as of September 27, 2017.
- Crown Pattern Works Foundry (SLIC Site Number SL603799394; WIP 115.0287), 815 S. Date Avenue, with a cleanup status of “Open – Inactive” as of October 28, 2014.
- Charter Communications (SLIC Site Number SL603799213; WIP 115.0098), 2215 W. Mission Road, with a cleanup status of “Completed – Case Closed” as of August 12, 2013.
- Allmetal Engineering Co. (WIP 115.0237), 1003 Date Avenue, with a file status of “Backlog”.
- Page Screw Machine Products (WIP 115.0369), 823 Date Avenue, with a file status of “Backlog”.
- J. E. Engineering Corp. (WIP 115.0322), 823 Date Avenue, with a file status of “Backlog”.
- Forrest Corp (WIP 115.0307), 829 Date Avenue, with a file status of “Backlog”.

Of the above seven listed SLIC cases, five of those are closed. For the closed 1000 S Fremont case, the property was divided into two sites, Site A and Site B (see Appendix B for locations). Site A encompasses the majority of the 1000 S. Fremont property, includes APNs 5342-001-021, -022, -023, -025, -026, and -027, and has been closed with unrestricted future land use. Site B is located near the southeast corner of the property adjacent to the north of 2215 W. Mission, includes APN 5342-001-024, and has been closed with restricted future land use (deed restriction for commercial/industrial land uses only). This restricted land use is consistent the planned future use of the area for a parking structure. It should be noted that the closure is for soil only as the Site remains within the NPL listed Area 3.

The one open site is Crown Pattern Works at 815 S. Date Avenue. Crown Pattern Works at 815 S. Date Avenue has been transferred to the USEPA for regulatory oversight. Ms. Mariam Fawaz, remedial project manager with the USEPA, was contacted and she indicated that although the case remains open, the USEPA has no plans to require investigation and/or remediation in the near future.

Charter Communications located at 2215 W. Mission Road was closed by the LARWQCB in a letter dated August 8, 2013. The letter indicates no further action requirements for soil only and identifies the property to include APNs 5342-001-019 (2215 W. Mission), -010 (1003 S. Date), and -009 (825 S. Date).

The four WIP only listings are discussed below:

- J. E. Engineering Corp. is located at 825 Date and Allmetal Engineering Co. is located at 1003 Date. As noted in the previously, these two properties are included under the 2215 W. Mission closure. In addition, Forrest Corp. at 829 is located between 825 and 1003 S Date, however, this address is not associated with a current APN. Mr. Charmley indicated that the “Backlog” status for these three properties is not current, and that the current status as closed will be reflected in the agency database in the near future.
- Page Screw Machine Products is located at 823 Date and is not associated with a current APN. Based on the location of this property to the north of 825 S. Date, this property should be included under the 1000 S. Fremont Site B closure. Mr. Charmley indicated that the “Backlog” status is not current, and that the current status as closed will be reflected in the agency database in the near future.

The remaining listings for the Site are representative of non-release facilities, and because no violations were reported in the databases reviewed, and because of the spatially distributed soil and soil vapor sampling data collected from the Site (discussed in Section 3.2.2), these listings would not be expected to pose a significant environmental concern to the Site.

### **3.1.2 Adjacent and Nearby Properties**

Multiple site investigations have been performed at the Site under regulatory oversight, which have resulted in closure for the majority of the cases, and the findings are summarized in Section 3.2.2. Although numerous properties are listed in the databases adjacent to the Site and within the approximate minimum search distances as defined in the ASTM Standard, because the Site lies within the boundaries of USEPA OU3, and because the site has institutional controls in place to mitigate for potential health risks to current and future site users, the presence of release cases near the site are not expected to pose an environmental concern to soil, soil vapor, and or/or groundwater beneath the site exceeding those already mitigated for by the institutional controls.

### **3.1.3 EDR Orphan List**

Sites not plotted by EDR due to poor or inadequate address information are referred to as orphan sites. The orphan summary/unmapped sites report was reviewed by Haro Environmental to assess the potential for off-site properties to affect the subject-site. Because they have incomplete addresses, orphan sites are not practically reviewable as defined by the ASTM standard. However, based upon the street name, location reported, and Haro Environmental's knowledge of the area, one orphan/unmapped site identified by EDR has the potential to pose a significant environmental concern to subsurface soil vapor and groundwater beneath the Site. The orphan site included the San Gabriel Valley Superfund Fund Site – Area 3 Operable Unit, and is discussed in Section .3.1.1.

### **3.1.4 Non-ASTM Issues**

Assessment of non-ASTM issues including but not limited to asbestos containing materials, lead-based paint, mold, regulatory compliance, wetlands, flood plains, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, electromagnetic fields or geologic hazards were not included as part of this Phase I ESA.

## **3.2 OTHER RECORDS REVIEWED**

The following additional sources of information were reviewed as part of this Phase I ESA.

### **3.2.1 Public Agency Records**

Environmental files related to the LARWQCB cases were obtained from the Geotracker website. Files obtained and reviewed included:

Equipoise Corporation (Equipoise). 2016a. *2015 Annual Groundwater Monitoring and Sampling Event, 2215 West Mission Road, Alhambra, California.* March 6, 2016.

Equipoise. 2016b. *Soil Closure Risk Evaluation, 1000 South Fremont Avenue, Alhambra, California.* May 24, 2016.

Copies of the reports reviewed are include in Appendix B and a discussion of the reports is provided below.

Equipoise, 2016a: This report documented the monitoring and sampling of three vapor monitoring wells screened within the groundwater zone performed on December 16, 2015 at the 2215 W. Mission property. Depth to water was approximately 160 feet bgs, and groundwater flow direction was to the northwest. Groundwater analytical data indicated that PCE was detected at a maximum concentration of 7.0 micrograms per liter ( $\mu\text{g/L}$ ) and TCE was detected at a maximum concentration of 62  $\mu\text{g/L}$ .

Equipoise, 2016b: This report was prepared at the request of the LARWQCB staff whom indicated that additional spatially distributed analytical data was required before they could concur with consultant recommendations for closure. The objective of the *2016 Soil Closure Risk Evaluation* was “to provide sufficient spatially distributed analytical data characterizing the nature and extent of volatiles in subsurface soil vapor and provide high quality data for regulatory agency decision-making regarding the regulatory closure of the property under proposed future land use development conditions”. The investigation activities performed in support of the following risk evaluation focused on soil and soil vapor sampling at both Site A and Site B (defined previously). The scope of work was performed to meet requirements for a “No Further Action” determination for the Site.

According to the report, numerous soil and soil vapor investigations were performed at the Site between 1999 and 2007 by Geomatrix, Equipoise and Project Navigator. It is noted that these previous investigations were not provided to Haro for review and the information summarized below come from the report in its entirety. According to Equipoise, a total of 138 soil samples and 219 soil vapor samples were collected during the investigations and the results of the soil analyses indicated that all compounds were below Preliminary Remediation Goals (PRGs) and/or background for all 138 soil samples. Soil vapor analyses indicated all compounds were below Risk-Based Screening Levels (RBSLs) for 195 samples. In the report, Equipoise noted that “the discussion below regarding the results of the above combined investigations make reference to preliminary remediation goals (PRGs), risk based screening levels (RBSLs), and other nomenclature that is not readily used in 2016 but was pertinent regulatory screening criteria at the time of the submittals of the subject reports. These references are included to provide a more complete context of the logic used in data evaluation at the time of the preparation of the Geomatrix, Equipoise, and Project Navigator reports and the basis for the subsequent conclusions of the investigations. The soil vapor sampling activities and the human health risk screening evaluation discussed later in this report were performed to current regulatory criteria”. Geomatrix concluded that concentrations of constituents detected were below RBSLs or PRGs, with the exception of arsenic, which was within the range of background concentrations for California Soils, and the exception of samples collected in the vicinity of the southeast adjoining 2215 W. Mission Road property. Concentrations of PCE and TCE in shallow soil gas did exceed the industrial RBSL in 18 out of 93 samples for areas to the west and north of

2215 W. Mission. The Equipoise investigation concluded that all concentrations of constituents detected were below RBSLs or PRGs, with the exception of soil vapor probe SG-21.

Within probe SG-21 completed as a multi-nested soil vapor probe, concentrations of PCE in shallow soil gas did exceed the industrial RBSL in six samples. However, soil vapor probe SG-21 was the closest point on the Site to the soil vapor plume from the 2215 W. Mission Road property and Equipoise concluded that the PCE exceedances from the six samples were likely attributable to activities associated with the 2215 W. Mission Road property that had been subsequently addressed by the operation of a soil vapor extraction (SVE) system. In conclusion, Equipoise reported that the Project Navigator investigation found no detections of VOCs in any soil vapor samples and values less than the industrial and residential PRG or within the range of background concentrations for all soil samples. The stated purpose of the Project Navigator investigation was to provide additional information in order to determine whether or not soil contamination was present in the subsurface soil and whether or not a release of VOCs occurred that posed a threat to the groundwater quality beneath the Site. During the Project Navigator investigation detections of other compounds in soil were either below residential/industrial PRGs, or soil levels for groundwater, or were within background for California soils and the soil and enhanced soil vapor investigations resulted in no detection of VOCs. Therefore, the Project Navigator investigation fulfilled the LARWQCB's request for additional investigations, at locations specified by the LARWQCB, and had shown that VOC contamination was not present in the subsurface soils and there was no evidence of any significant release at the Site.

The *2016 Soil Closure Risk Evaluation* included the collection of soil and soil vapor samples for analysis. Additionally, the results of the soil and soil vapor sample analysis were used to perform a human health risk analysis (HHRA) for the Site.

Thirteen borings were advanced throughout Site A of the Site. Soil sampling activities at Site A were performed on November 20 and 21, 2015 by Equipoise. Soil samples were collected at 5 and 10 feet bgs for chemical analysis at each sample locations proposed in the LARWQCB-approved work plans with the exception of ACP-A-SB-B12, which was limited to a single soil sample at 5 feet bgs due to wet utilities located between 5 and 10 feet. VOCs were not detected above their respective reporting limits in any of the Site A soil samples analyzed during this investigation. After the soil borings were advanced, soil vapor probes were constructed. Sampling of the Site A soil vapor probes contained a total of 17 VOCs. The primary constituent reported in Site A soil vapor samples was PCE, with the remaining 16 constituents found at low to trace levels.

Two borings were advanced on Site B of the Site. Soil samples were collected for chemical analysis at the two locations proposed in the work plans. VOCs were not detected above their respective reporting limits in any of the Site B soil samples analyzed. Sampling of the Site B soil vapor probes detected a total of nine VOCs. The primary constituent reported in Site A soil vapor samples was PCE, with the remaining eight constituents found at low to trace levels.

The human health risk analysis (HHRA) process consisted of a tiered approach in which published California screening levels (DTSC, 2016), default modeled risk screening values (RSVs), and site-specific RSVs were used sequentially to evaluate investigation results that could pose a potential future risk in soil vapor at the Site. Based on the results of the HHRA, no significant risks are projected to future site users associated with soil vapors reported in Site A under unrestricted land use conditions. Equipoise recommended that Site A be granted the status of “No Further Action” with regards to soil and soil vapor constituents. Potential risks were projected to future site users associated with soil vapors reported in Site B under unrestricted land use conditions, therefore, Equipoise recommended institutional controls to mitigate potential receptor exposure. A restricted land use condition was deemed viable and consistent with planned future development of Site B as commercial/industrial. Therefore, it was recommended that Site B be granted the status of “No Further Action” with regards to soil and soil vapor constituents following the implementation of institutional controls whereby future land use is limited to commercial industrial purposes.

Based on the findings of the HHRA, Site A was granted soil closure by the LARWQCB for unrestricted land use, and Site B was granted soil closure by the LARWQCB for restricted commercial/industrial land use only. The restricted land use at Site B is consistent with the planned future use of the property as a parking structure.

Permit records maintained by the Los Angeles Department of Building and Safety (LADBS) for the Site were reviewed online and the files included one building permit for alternations in 1919.

The Los Angeles County Department of Public Health (LACDPH) was contacted regarding files for the Site and as of the writing of this report, the LACDPH has not responded to our request for information. If information is provided by the LACDPH after issuance of this report that alter the findings of this Phase I ESA, an addendum letter will be prepared summarizing the findings.

Underground storage tank (UST) and hazardous materials files maintained by the Los Angeles County Fire Department – Health Hazardous Materials Division (LACFD-HHMD) were requested, and the LACFD-HHMD indicated they do not maintain files for the Site.

Permit records maintained by the City of Alhambra Development Service Department – Building Division were reviewed for the Site and included various permits for electrical, building, and tenant improvements. Copies of the permits reviewed are included in Appendix B. The records reviewed did not provide any additional information regarding potential environmental concerns not already identified through other sources of information reviewed during preparation of this Phase I ESA.

Air permit records maintained by the South Coast Air Quality Management District were reviewed for the Site and included various permits for boilers, emergency generators, spray booths, gasoline storage tanks, and a spray booth and solvents. Copies of the permits reviewed are included in Appendix B. The records reviewed indicated potential environmental concerns that have been investigated through multiple site investigations.

The DTSC Envirostor website was reviewed and indicated no DTSC oversight cases are located at the Site.

The Alhambra Fire Department (AFD) was contacted regarding files for the Site and as of the writing of this report, the AFD has not responded to our request for information. If information is provided by the AFD after issuance of this report that alter the findings of this Phase I ESA, an addendum letter will be prepared summarizing the findings.

### **3.2.2 Previous Environmental Reports**

Multiple previous environmental reports have been prepared for the Site beginning in at least 1999, and a list of these reports is presented in the *2016 Soil Closure Risk Assessment Report* (Appendix B). In general, the findings of these reports indicated the Site has historical uses for C.F.Braun & Co. Manufacturing and Oil Refinery Office Campus, machine shops, foundry activities, railroad spurs, unspecified manufacturing facilities, power generation buildings, maintenance shops, spray booths, and automotive repair shops. As part of this Phase I ESA, the *2016 Soil Closure Risk Assessment Report* prepared by Equipoise was reviewed and the information obtained is provided in Section 3.2.1.

A Phase I ESA prepared by EBI Consultants was reviewed (EBI, 2016; Appendix B). EBI identified RECs and provided the following findings:

- “The known groundwater contamination beneath the Subject Property and the open case status of the SLIC listing for The Alhambra and four of the five additional listings constitutes a recognized environmental condition (REC).”

- Based on the results of the numerous previous investigations at the Subject Property, it appears that the historic use of the Subject Property does not represent an environmental concern, with the exception of the SLIC listings that were previously discussed above.

EBI identified the following historical RECs, and de minimis conditions:

- Based on the results of the site investigations, the former presence of USTs are considered a historic recognized environmental condition (HREC), and no further action is recommended.
- Monitoring wells were observed on the Subject Property and are associated with the assessment and remediation activities conducted as the Subject Property. Once assessment and/or remediation activities are completed on the Subject Property, these monitoring wells should be properly closed in accordance with all applicable guidelines as part regulatory closure activities.
- Based on the condition of suspect asbestos containing materials (ACM), these materials do not currently pose a significant environmental threat to the occupants of the Subject Property.

## **4.0 SITE HISTORY**

---

The history of the site was researched to identify obvious uses of the site back to the first developed use, or at least 40 years ago, whichever is earlier or readily available.

Several data gaps since 1894 of greater than 5 years were identified in the historical records reviewed and included the years from 1894 to 1900, from 1900 to 1924, from 1928 to 1938, from 1938 to 1948, from 1953 to 1960, from 1966 to 1972, from 1981 to 1989, from 1989 to 1994 and from 1994 to 2002. These data gaps are considered insignificant because the Site use appears to be similar during the data gaps.

### **4.1 GENERAL SITE HISTORY**

In approximately the late 1800s, the first improvement was completed at the Site and included a road. By the early 1920s, the majority of the Site was developed with the C.F. Braun & Company manufacturing plant and associated railroad, as well as research, design and administrative offices. The eastern portion of the Site, along Date Avenue was occupied by smaller commercial/industrial uses and residences. By the 1950s, the C.F. Braun & Company facility extended farther east across the Site. A Southern California Edison shipping/receiving and storage facility with a small shop occupied an area in the northeastern portion of the Site. In addition, separate commercial/industrial uses, such as, woodworking, warehouse, ink and paint manufacturing, machine shop, gas station and auto repair, sheet metal working, light wood and steel manufacturing, and foundry, occupied the eastern portion of the Site along Date Avenue. C.F. Braun & Company was sold in the early 1980s. Industrial uses continued on the eastern portion of the Site until the late 1990s and has since then operated as a mixed-use office, commercial, and educational complex.

### **4.2 AERIAL PHOTOGRAPHS**

A review of historical aerial photography may indicate past activities at a property that may not be documented by other means, or observed during a site visit. The effectiveness of this technique depends on the scale and quality of the photographs and the available coverage. Aerial photographs were obtained from several historical photograph collections through EDR. A tabulation of the aerial photographs reviewed is presented in Table 4-1.

**TABLE 4-1  
HISTORICAL AERIAL PHOTOGRAPHS REVIEWED**

<b>Date</b>	<b>Approximate Scale</b>	<b>Source</b>
1928	1" = 500'	USGS
1938	1" = 500'	USDA
1948	1" = 500'	USGS
1952	1" = 500'	USGS
1964	1" = 500'	USGS
1977	1" = 500'	EDR Proprietary Brewster Pacific
1979	1" = 500'	EDR Proprietary Brewster Pacific
1981	1" = 500'	EDR Proprietary Brewster Pacific
1989	1" = 500'	USDA
1994	1" = 500'	USGS/DOQQ
2002	1" = 500'	USDA
2005	1" = 500'	USDA/NAIP
2009	1" = 500'	USDA/NAIP
2010	1" = 500'	USDA/NAIP
2012	1" = 500'	USDA/NAIP

**Note:** Aerial photographs only provide information on indications of land use and no conclusions regarding the release of hazardous substances or petroleum products can be drawn from the review of photographs alone.

DOQQ = Digital Ortho Quarter Quads

NAIP = National Agriculture Industry Program

Copies of the reviewed aerial photographs are included in Appendix A. The following is a summary of our review of these photographs.

- **1928** – The Site appears developed with multiple industrial and office buildings on the central, southern and western portions of the property. The northern and eastern portions of the Site appear to consist of vacant parcels and residences. A rail line traverses the Site from north to south, to the east of the industrial facility. The adjacent properties to the north, across Orange Street and to the east, across Date Avenue appear to consist of vacant land, commercial/industrial developments and residences. The adjacent properties to the south, across West Mission Road appear occupied by a railroad, Front Street and residences beyond. The adjacent properties to the west, across South Fremont Avenue appear to consist of vacant land and commercial/industrial developments.
- **1938** – The Site and nearby properties appear similar to the 1928 aerial photograph with the exception of the southeastern portion of the Site consisting of a commercial/industrial development.

- **1948** – The C.F. Braun & Co. development on the Site appears to have been redeveloped with multiple new industrial and office buildings on the western portion of the site, along South Fremont Avenue. The northeastern and southeastern portions are occupied by parking lots. Additions have been made to the northern and southern portions of the industrial building on the central portion of the Site to the east of the rail line. Increased commercial/industrial development can be seen to the east of the rail line on the Site, as well as on nearby properties to the north, east and west of the Site.
- **1952** – The Site appears similar to the 1948 aerial photograph with the exception of additional industrial/office buildings on the northern portions, as well as rerouting and addition of railroads on the Site. Several residences located on the southeastern portion of the Site have been replaced by commercial/industrial structures. Nearby properties appear similar to the 1948 aerial photograph with the exception of some grading and redevelopment to the north, as well as a new commercial development on the northwest corner of West Mission Road and South Fremont Avenue.
- **1964** – The majority of the large industrial/warehouse building on the central portion of the Site has been demolished with the exception of the northern portion. Dirt-covered land is located on the central portion and asphalt-paved land is located on the southern portion of the former building location. Improvements and additions have been made to several of the industrial/office buildings on the western portion of the Site. A new industrial building is located on the southeastern corner of the Site. Areas on the eastern portion of the Site, along Date Avenue formerly containing residences and vacant land have been redeveloped with commercial/industrial buildings. Nearby properties appear similar to the 1952 aerial photograph with the exception that the commercial/industrial buildings Site located to the west of the Site, across South Fremont Avenue have also been demolished and the land is graded. In addition, a commercial/industrial building, as well as several residences located to the north of the Site, across Orange Street have been demolished.
- **1977** – Significant redevelopment has occurred on the Site including the demolition of the on-site railroad and the former warehouse located on the central portion of the Site. The central and southern portions of the Site consist primarily of parking. Multiple remodeled and new buildings, along with new landscaped and paved walkways occupy the western portion of the Site. The former locations of residential and small commercial structures have been replaced by larger commercial/industrial buildings and associated parking lots on the eastern portion of the Site. The adjacent property to the north has been redeveloped as a large municipal facility with associated

parking. Several residential and commercial properties to the east of the Site, across Date Avenue have been redeveloped with larger commercial/industrial buildings and associated parking lots. Nearby properties to the south and west appear similar to the 1964 aerial photograph.

- **1979** – The Site and nearby properties appear similar to the 1977 aerial photograph with the exception of demolition of several structures on the northeastern portion of the Site.
- **1981** – The Site appears similar to the 1979 aerial photograph with the exception of a large graded area in the central portion of the site where a parking lot was located. In addition, a new parking area is located on the northeastern portion of the Site. Nearby properties appear similar to the 1979 aerial photograph with the exception of development of a large parking lot on a previously vacant parcel located to the west of the Site, across South Fremont Avenue.
- **1989** – The Site appears similar to the 1981 aerial photograph with the exception of construction of two large buildings in the central portion of the Site, which was previously depicted as graded land. Nearby properties appear similar to the 1981 aerial photograph with the exception of redevelopment of several properties located to the east of the Site, across Date Avenue.
- **1994** – The Site and nearby properties appear similar to the 1989 aerial photograph.
- **2002** – The Site and nearby properties appear similar to the 1994 aerial photograph with the exception that a new commercial structure is located on the eastern portion of the Site, near the intersection of Chestnut Street and Date Avenue.
- **2005** – The Site and nearby properties appear similar to the 2002 aerial photograph with the exception of development of three commercial structures in the location of a former parking lot to the west of the Site, across South Fremont Avenue and the removal of a building located on the northwestern corner of West Mission Road and South Fremont Avenue.
- **2009** – The Site and nearby properties appear similar to the 2005 aerial photograph with the exception of the removal of three structures and a parking lot on the northwestern portion of the Site, and construction of two large buildings in this location.
- **2010** – The Site and nearby properties appear similar to the 2009 aerial photograph.
- **2012** – The Site and nearby properties appear similar to the 2010 aerial photograph.

### 4.3 HISTORICAL TOPOGRAPHIC MAPS

Haro Environmental reviewed historical topographic maps of the Site vicinity. The topographic maps reviewed for this assessment are listed below in Table 4-2.

**TABLE 4-2  
HISTORICAL TOPOGRAPHIC MAPS REVIEWED**

<b>Year</b>
1894
1900
1924
1928
1953
1966
1972
1981
1994

The Site is bound by Orange Street to the north with a municipal facility beyond, West Mission Road to the south with residences beyond, Date Avenue to the east with commercial and industrial developments beyond, and South Fremont Avenue to the west with commercial and industrial developments beyond. The following is a summary of our review of the maps.

- **1894** – The Site and surrounding properties are primarily depicted as undeveloped land, with the exception of an unidentified road traversing the northwest corner of the site from the northeast to southwest. Orange Street can be seen to the north, West Mission Road to the south with railroad tracks beyond, and South Fremont Avenue is to the west.
- **1900** – The Site and surrounding properties are depicted similar to the 1894 map.
- **1924** – The Site is depicted with four industrial structures on the southern portion of the property. A rail line traverses the Site from north to south. Smaller commercial/industrial and residential dwellings are depicted along the eastern Site Boundary, as well as on the surrounding properties. Date Avenue is now depicted to the east of the Site.
- **1928** – The Site and surrounding properties are depicted similar to the 1924 map.

- **1953** – The Site is depicted with a large industrial building in the central portion and multiple smaller buildings on the western portion. Due to the poor quality of the map, the adjacent property land uses could not be confirmed.
- **1966** – The large industrial building formerly located on the central portion of the Site is no longer depicted. The Site is depicted with multiple industrial and office buildings throughout the property. The eastern part of the Site is depicted with pink shading, indicating urban development. Adjacent properties to the north are depicted as vacant land and those to the west are depicted with multiple commercial/industrial buildings. The adjacent properties to the northeast, south and east are depicted with pink shading, indicating urban development.
- **1972** – The Site and surrounding properties are depicted similar to the 1966 map with the exception that the adjacent property to the north is depicted with a large municipal facility.
- **1981** – The Site and surrounding properties are depicted similar to the 1972 map, with the exception of the construction of new industrial buildings on the central portion of the Site.
- **1994** – The Site and surrounding properties are depicted similar to the 1981 map.

#### **4.4 SANBORN® FIRE INSURANCE MAPS**

Sanborn® Fire Insurance Maps provide historical land use information in some metropolitan areas and small, established towns. Copies of the reviewed Sanborn® Fire Insurance Maps are included in Appendix A. The following is a summary of our review of these photographs.

- **1925** – The Site is depicted with the C.F. Braun & Company facility extending throughout the central, and western portions. The Sanborn® Map identifies the locations of auto sheds, offices, wood work shop, pattern shop and storage, machine shop, foundry, pipe shop as well as coal ovens, an incinerator, a 50,000 gallon water tank, Southern Pacific Rail Company spur and other features of the facility. The eastern portions of the Site along Date Avenue are primarily occupied by residences, with the exception of one aero shop.
- **1950** – The northwestern and central portion of the Site is depicted with C.F. Braun & Company structures to the west of the railroad, including a pattern shop, woodworking, machine shop and an incinerator, new test building, sheet metal shop, cooling towers, brick core ovens, change room, power generating house, transformers, generator, blue print room, template shop, spray painting,

plate forming and pipe fabricating, oil and paint storage, stone cutting, laboratory, offices, restaurant and garage. The northeastern portion of the Site is depicted with Southern California Edison Company Ltd. with two structures including a garage and storage room, shipping and receiving, gasoline storage, a shop and an outdoor pole storage area. The eastern portions of the Site along Date Avenue are primarily occupied by commercial and industrial uses including a restaurant, woodworking, lumber storage, carpentry, paint spraying, warehouse, ink and paint manufacturing, machine shop with spray paint booth, gas station and auto repair, sheet metal working with drying oven and spray paint booth, light wood and steel manufacturing, Venetian blind manufacturing with paint spraying, office and foundry.

- **1960** – Southern California Edison Company Ltd. is no longer on the Site and C.F. Braun & Company occupies this portion of the Site. The building on this portion of the Site is used for plant equipment and storage. Additional changes to the C.F. Braun & Company facility include a fuel oil storage tank on the northwestern portion of the Site, janitors supply and storage building, offices, research building, pilot plant, fractionation test unit, mobile equipment storage, heavy welding multiple cupolas and ovens on the northwestern portion of the facility. The C.F. Braun & Company office buildings on the western portion of the Site are depicted with underground structures and associated tunnels. A die casting business is now located on the northeastern portion of the Site. Additional manufacturing and industrial businesses occupy the eastern portion of the Site along Date Avenue.
- **1981** – C.F. Braun & Company continues to occupy the western portion of the Site, including two new manufacturing buildings on the northwestern portion of the Site. The large manufacturing building that formerly occupied the central portion of the Site is no longer present. Three smaller buildings can be seen in this location which are occupied by Santa Fe International Corporation. No other significant changes were noted on this Sanborn® Map.

#### **4.5 CITY DIRECTORIES**

Haro Environmental contacted EDR to obtain a historical City Directory Abstract, which lists the names and/or businesses that historically occupied an address. City Directory coverage was not available for the Site within the timeframe of this report's publication. However, a City Directory Abstract was discussed in a Phase I Environmental Site Assessment prepared by EBI Consulting dated September 27, 2016. The following is a summary of the City Directories:

From 1950 to 1971, the Site is listed as C.F. Braun & Co. Engineers and Heat-Transfer Research Inc. From 1981 to 1990, The Site is listed as C.F. Braun & Co. Engineers; Santa Fe Braun Inc., and Santa Fe International Corp. From 1995 to 2013, the Site is listed as Alhambra offices, with several offices, educational institutions listings, retail listings, and a drop-off dry cleaning facility.

#### **4.6 OIL AND GAS MAPS**

Maps provided online by the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources were reviewed to determine the current or historic presence of oil or gas wells in the vicinity of the Site (DOGGR, 2018). The maps reviewed indicated that no oil or gas wells are located on or adjacent to the Site.

#### **4.7 CHAIN OF TITLE RECORDS**

Haro Environmental was not provided and therefore did not review a Preliminary Title Report for the Site.

#### **4.8 BUILDING RECORDS**

Haro Environmental contacted EDR to obtain building records for the Site and adjoining properties for information regarding historical tenants and property use of the subject property. Building Records coverage was not available for the Site within the timeframe of this report's publication.

## 5.0 SITE RECONNAISSANCE AND INTERVIEWS

---

Haro Environmental's assessment activities included a site reconnaissance. This section summarizes the findings from the site reconnaissance.

### 5.1 SITE RECONNAISSANCE

#### 5.1.1 Methodology and Limiting Conditions

Mr. Elliot Haro of Haro Environmental performed a reconnaissance of the Site on December 28, 2017 accompanied by Mr. Fernando Sanchez, Facilities Engineer. Mr. Sanchez indicated he's been associated with the Site since 2004. The site reconnaissance was conducted by: 1) observing the Site from public thoroughfares, 2) observing the adjoining properties from public thoroughfares, 3) observing the interior of the onsite structures, 4) observing the exterior of the onsite structures, 5) backtracking to correlate exterior features with interior features, as necessary, and 6) observing the Site from walking paths. The purpose of the site reconnaissance was to identify the presence or likely presence of hazardous substances or petroleum products under conditions that indicate an existing release, a past release, or threat of release into soil, groundwater, or surface water at the Site (recognized environmental conditions). Observations from the site reconnaissance are summarized in the following sections. A photolog of photographs taken during the site reconnaissance is provided in Appendix C.

#### 5.1.2 Current Use of the Property and Adjoining Properties

The Site is currently developed with multiple commercial buildings. Site uses include offices, classrooms, storage buildings, maintenance areas within the basement, and a fitness gym.

Solid waste services are provided by Republic Services. Electricity is provided to the Site by Southern California Edison. Water and sewer services are provided by the City of Alhambra. Natural gas is provided by Southern California Gas Company. Heating and cooling is provided by rooftop-mounted electric / natural gas HVAC units; and a central plant system consisting of two cooling towers, a gas-fired hot water boiler, and two chiller units. Emergency backup power is provided by 5 diesel-powered generators with either belly tanks or ASTs.

Adjoining properties include Orange Street followed by a commercial building occupied by the County of Los Angeles Public Works present to the north, S. Fremont Avenue followed by commercial buildings, vacant land, and retail shops to the west, S. Mission Road followed by ministorage to the south, and S. Date Avenue industrial and commercial land uses to the east. Site and adjoining land uses are depicted on Plate 2.

### **5.1.3 General Description of Structures**

The majority of the Site is currently developed as The Alhambra consisting of multiple commercial buildings of varying height, several storage buildings, two parking structures, and parking areas. The southwest corner of the Site, 2215 W. Mission Road, is developed with a two-story commercial building and associated parking. A solid waste collection area is located southeast of the parking garage and includes two former spray booths.

### **5.1.4 Interior and Exterior Observations**

All external areas of the Site were accessible at the time of the site reconnaissance. Interior spaces inspected include offices, LA Fitness, maintenance areas, and storage buildings.

### **5.1.5 Hazardous Substances and Petroleum Products**

Various container types and quantities of hazardous substance and petroleum products were observed at multiple locations at the Site and included:

- Diesel fuel for backup generators (discussed in Section 5.1.7).
- HVAC treatment compounds were stored in the basement and near the cooling towers, and included 5- and 30-gallon containers of algaecide and chlorine. No significant leaks or spills were noted.
- Janitorial chemicals were observed at several locations throughout the Site and no significant leaks or spills were observed.

- Paints, lubricants, small quantities of gasoline, and cleaners were observed with a storage room in the basement beneath Building A4. The majority of the chemicals were stored in chemical cabinets. No significant leaks or spills were observed.

#### **5.1.6 Unidentified Substance Containers**

Unidentified hazardous substance containers or unidentified containers that might contain hazardous substances were not observed during the site reconnaissance

#### **5.1.7 Storage Tanks**

During the site reconnaissance, Haro Environmental observed several above-ground storage tanks (ASTs) to support the backup generators. This included one approximately 5,000-gallon diesel AST south of Building A13, one approximately 2,000-gallon diesel, belly AST northwest of Building B1, and one approximately 2,000-gallon diesel, belly AST along the western edge on top of the parking structure. No indications of leaks or spills were observed.

During the site reconnaissance, Haro Environmental did not observe evidence of underground storage tanks (USTs) at the Site.

#### **5.1.8 Odors**

During the site reconnaissance, Haro Environmental did not identify any strong, pungent, or noxious odors.

#### **5.1.9 Pools of Liquid**

During the site reconnaissance, Haro Environmental did not observe pools of liquid under conditions indicative of a release. Water on the ground water was observed within the basement in the cooling tower area.

#### **5.1.10 Drums**

Several 30-gallon drums were observed in the basement and are used to store treatment chemicals for the cooling towers. No significant leaks or spills were observed in the area of the drums.

Haro Environmental did not observe evidence of drums on any other areas of the Site.

#### **5.1.11 Indications of Polychlorinated Biphenyls (PCBs)**

During the site reconnaissance, Haro Environmental noted several transformers and electrical equipment cabinets located throughout the Site. These were associated with either hydraulic elevators or the transformers west of Building B12, or were the dry type. No significant staining of the floor or spills was noted in the area of the transformers or other electrical equipment. It should be noted that the electrical transformers west of Building B12 first appeared in historic records in 1950, and therefore, may contain PCBs.

During the site reconnaissance, Haro Environmental observed the locations of multiple elevators. Of those, several were of the mechanical type and would not pose an environmental concern to the Site. Several hydraulic elevators were observed and included Buildings A3, A9, and A11 and two at parking garage B2. No significant staining of the floor or spills was noted in the area of the elevator control room at these locations.

During the site reconnaissance, Haro Environmental did not observe any additional evidence of PCBs onsite.

#### **5.1.12 Other Conditions of Concern**

During the site reconnaissance, Haro Environmental noted the following additional areas of concern:

- Storm drains were observed in the parking area, landscaped areas, and common areas throughout the Site. The floor drains reportedly discharge to the storm water conveyance system. No staining or evidence of spills were noted in the areas of the storm drains.
- Multiple floor drains were observed within the basement. According to Mr. Sanchez, the floor drains convey to a sump pump which discharges to the municipal sewer system. No significant leaks or spills were noted in the area of the floor drains.

During the site reconnaissance, Haro Environmental did not note any of the following:

- Corrosion
- Pits, ponds, and/or lagoons
- Stressed vegetation
- Septic Tanks

## **5.2 INTERVIEWS**

As part of the Phase I ESA, Haro Environmental interviewed Mr. Sanchez who has been associated with 1000 S. Fremont since 2004. Mr. Sanchez did not provide any additional information above that summarized in Section 5.1.

Haro Environmental also interviewed Ms. Moloughney whom did not provide additional information regarding RECs not already noted during the site reconnaissance.

Ms. Moloughney also indicated that she is unaware of any environmental liens, environmental deed restrictions, land use regulations, engineering controls, environmental violations, environmental assessments, or past, threatened, or pending lawsuits concerning releases of hazardous materials relating to the Site other than the deed restrictions for 1000 S. Fremont Site B and 2215 W. Mission.

## 6.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

---

This Phase I ESA of the property identified as The Alhambra at 1000 S. Fremont Avenue and Alhambra Medical University at 2215 West Mission Road in the city of Alhambra, California (the Site) was performed by Equipoise Corporation (Equipoise) and an Equipoise subcontractor, Haro Environmental, for The Ratkovich Company. Haro Environmental performed this Phase I ESA consistent with ASTM Practice E-1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM Standard). Exceptions to, or deletions from, this practice are described in this report.

Based on the data gathered and reviewed during this Phase I ESA, Haro Environmental identified the following REC:

- The location of the Site within the San Gabriel Valley Super Fund Area 3 and groundwater contamination beneath the Site.

The Site is located within the southwest portion of the San Gabriel Valley Superfund Fund Site – Area 3 Operable Unit (Area 3). Area 3 is one of 8 Operable Units identified by United States Environmental Protection Agency (USEPA) for the San Gabriel Valley Superfund Sites and is known as the San Gabriel Valley Superfund Site Area 3 Operable Unit. Covering 19 square miles in the western portion of the San Gabriel Valley, Area 3 is located west of Rosemead Boulevard, north of I-10, and south of the Raymond Fault (which separates the main San Gabriel Basin from the Raymond Basin to the northwest). Area 3 includes all of the City of San Gabriel, as well as portions of the Cities of Alhambra, Rosemead, Temple City, San Marino and South Pasadena.

Discovery of contamination in water purveyor production wells led USEPA to designate Area 3 as a NPL site in 1984. Volatile organic compounds (VOCs) have been detected in production wells and safeguards are in place to ensure acceptable drinking water quality. Area 3 groundwater is contaminated with VOCs (most commonly tetrachloroethene [PCE] and trichloroethene [TCE]), perchlorate, and nitrate at concentrations exceeding state and federal water quality standards.

The USEPA is overseeing the groundwater investigation and remediation for Area 3, and the California Regional Water Quality Control Board – Los Angeles Region (LARWQCB) is primarily responsible for overseeing soil investigation and cleanup for the majority of the release sites that may have contributed to the Area 3 groundwater plume. The USEPA issued the Remediation Investigation (RI) Report in June 2009. The RI Report indicates that groundwater contamination is present in the western bedrock aquifer,

western alluvial aquifer, and eastern alluvial aquifer (shallow, intermediate, and deep zones). The RI Report also indicates that groundwater production in the eastern portion of Area 3 impacts contaminant migration. To identify the sources of the groundwater contamination and determine what additional cleanup is needed, the State of California has directed and overseen investigations of multiple current and former industrial facilities. USEPA supplemented these investigations with ground water monitoring wells and soil testing at several industrial facilities identified as possible sources of groundwater contamination. USEPA is using the data generated by these investigations to identify and evaluate groundwater cleanup options. In 2016, USEPA expected to complete a feasibility study and develop a proposed soil and groundwater cleanup plan, and this plan is still being prepared.

Multiple addresses at the Site based on historic operations have been identified as possible sources contributing to the Area 3 groundwater contamination. The LARWQCB working with the USEPA developed a list of these possible sources of contamination through a well investigation program (WIP) database. Based on a prioritization of the properties, several were investigated further by opening a case for the property overseen by the SLIC group within the LARWQCB. The following properties at the Site are currently listed in the WIP and/or SLIC databases and the current status is noted:

- 1000 S. Fremont (SLIC Site Number T10000001005; WIP 115.0559), 1000 South Fremont Avenue, with a cleanup status of “Completed – Case Closed” as of June 19, 2017.
- A-1 Signal Division (SLIC Site Number SL603799147; WIP 115.0011), 635 S. Date Avenue, with a cleanup status of “Completed – Case Closed” as of September 27, 2017.
- Dickinson Ink Corporation (SLIC Site Number SL603799396; WIP 115.0289), 625 S. Date Avenue, with a cleanup status of “Completed – Case Closed” as of March 13, 2019.
- The Witteman (SLIC Site Number SL603799518; WIP 115.0413), 705 S. Date Avenue, with a cleanup status of “Completed – Case Closed” as of July 29, 2015.
- Balance Plating (SLIC Site Number SL603799361, WIP 115.0253), 2204 West Orange Street, with a cleanup status of “Completed – Case Closed” as of September 27, 2017.
- Crown Pattern Works Foundry (SLIC Site Number SL603799394; WIP 115.0287), 815 S. Date Avenue, with a cleanup status of “Open – Inactive” as of October 28, 2014.
- Charter Communications (SLIC Site Number SL603799213; WIP 115.0098), 2215 W. Mission Road, with a cleanup status of “Completed – Case Closed” as of August 12, 2013.

- Allmetal Engineering Co. (WIP 115.0237), 1003 Date Avenue, with a file status of “Backlog”.
- Page Screw Machine Products (WIP 115.0369), 823 Date Avenue, with a file status of “Backlog”.
- J. E. Engineering Corp. (WIP 115.0322), 823 Date Avenue, with a file status of “Backlog”.
- Forrest Corp (WIP 115.0307), 829 Date Avenue, with a file status of “Backlog”.

Of the above seven listed SLIC cases for the Site, six of those are closed. For the closed 1000 S Fremont case, the property was divided into two sites, Site A and Site B (see Appendix B for locations). Site A encompasses the majority of the 1000 S. Fremont property, includes APNs 5342-001-021, -022, -023, -025, -026, and -027, and is closed with unrestricted future land use. Site B is located near the southeast corner of the property adjacent to the north of 2215 W. Mission, includes APN 5342-001-024, and has been closed with restricted future land use (deed restriction for commercial/industrial land uses only). It is our understanding that this restricted land use is consistent the planned future use of the area for a parking structure. It should be noted that the closures at the Site are for soil only as the Site remains within the NPL listed Area 3.

Charter Communications located at 2215 W. Mission Road was closed by the LARWQCB in a letter dated August 8, 2013. The letter indicates no further action requirements for soil only and identifies the property to include APNs 5342-001-019 (2215 W. Mission), -010 (1003 S. Date), and -009 (825 S. Date). Continuing obligations include annual groundwater monitoring of three wells at this property. Records maintained by the LARWQCB indicate the most recent groundwater sampling was performed on December 16, 2015 and the findings reported in the *2015 Annual Groundwater Monitoring and Sampling Event, 2215 West Mission Road, Alhambra, California* report dated March 6, 2016 and prepared by EQC. Depth to water was encountered at approximately 160 feet bgs, and groundwater flow direction was to the northwest. Groundwater analytical data indicated that PCE was detected at a maximum concentration of 7.0 micrograms per liter ( $\mu\text{g/L}$ ) and TCE was detected at a maximum concentration of 62  $\mu\text{g/L}$ .

The one site that is currently identified as “Open” is Crown Pattern Works at 815 S. Date Avenue. Crown Pattern Works at 815 S. Date Avenue has been transferred to the USEPA for regulatory oversight. Ms. Mariam Fawaz, remedial project manager with the USEPA, was contacted and she indicated that although the case remains open, the USEPA has no plans to require investigation and/or remediation of this property in the near future.

The four WIP only listings are discussed below:

- J. E. Engineering Corp. is located at 825 Date and Allmetal Engineering Co. is located at 1003 Date. Based on the APNs, these two properties are included under the 2215 W. Mission closure. In addition, Forrest Corp. at 829 is located between 825 and 1003 S Date, however, this address is not associated with a current APN. Mr. Charmley indicated that the “Backlog” status for these three properties is not current, and that the current status as “Closed” will be reflected in the agency database in the near future.
- Page Screw Machine Products is located at 823 Date and is not associated with a current APN. Based on the location of this property to the north of 825 S. Date, this property should be included under the 1000 S. Fremont Site B closure. Mr. Charmley indicated that the “Backlog” status is not current, and that the current status as “Closed” with institutional controls will be reflected in the agency database in the near future.

Based on the data gathered and reviewed during this Phase I ESA, Haro Environmental identified the following Controlled RECs:

- The former presence of USTs and historic operational activities at the Site.

Numerous soil and soil vapor investigations were performed at the Site between 1999 and 2007 by Geomatrix, Equipoise and Project Navigator and the findings are summarized in a *2016 Soil Closure Risk Evaluation* prepared by Equipoise. The 2005 and 2007/2008 site investigations were performed under the direction of the LARWQCB in consultation with the USEPA to evaluate potential historic release points not evaluated previously and identified through records searches and file reviews. According to the report, a total of 138 soil samples and 219 soil vapor samples were collected during previous investigations and the results of the soil analyses indicated that all compounds were below Preliminary Remediation Goals (PRGs) and/or background for all 138 soil samples. Soil vapor analyses indicated all compounds were below Risk-Based Screening Levels (RBSLs) for 195 samples. In the report, Equipoise noted that “the discussion regarding the results of the above combined investigations make reference to preliminary remediation goals (PRGs), risk based screening levels (RBSLs), and other nomenclature that is not readily used in 2016 but was pertinent regulatory screening criteria at the time of the submittals of the subject reports. These references are included to provide a more complete context of the logic used in data evaluation at the time of the preparation of the Geomatrix, Equipoise, and Project Navigator reports and the basis for the subsequent conclusions of the investigations. The soil vapor sampling activities and the human health risk screening evaluation discussed later in this report were performed to current regulatory criteria”. Geomatrix concluded that concentrations of constituents detected were below RBSLs or PRGs, with the exception of arsenic, which was within the range of background concentrations for California Soils, and the exception of samples collected in the vicinity of 2215 W. Mission. Concentrations of PCE and TCE in shallow soil gas did exceed the industrial RBSL in 18 out of 93 samples for areas to the west and north of

2215 W. Mission. The Equipoise investigation concluded that all concentrations of constituents detected were below RBSLs or PRGs, with the exception of soil vapor probe SG-21.

Within probe SG-21 completed as multi-nested soil vapor probes, concentrations of PCE in shallow soil gas did exceed the industrial RBSL in six samples. However, soil vapor probe SG-21 was the closest point on the Site to the soil vapor plume from the 2215 W. Mission and Equipoise concluded that the PCE exceedances from the six samples were likely attributable to activities associated with the 2215 W. Mission Road property that had been subsequently addressed by the operation of a soil vapor extraction (SVE) system. In conclusion, Equipoise reported that the Project Navigator investigation found no detections of VOCs in any soil vapor samples and values less than the industrial and residential PRG or within the range of background concentrations for all soil samples. The stated purpose of the Project Navigator investigation was to provide additional information in order to determine whether or not soil contamination was present in the subsurface soil and whether or not a release of VOCs occurred that posed a threat to the groundwater quality beneath the Site. During the Project Navigator investigation detections of other compounds in soil were either below residential/industrial PRGs, or soil levels for groundwater protection, or were within background for California soils. Therefore, the Project Navigator investigation fulfilled the LARWQCB's request for additional investigations, at locations specified by the LARWQCB, and had shown that VOC contamination was not present in the subsurface soils and there was no evidence of any significant release at the Site.

The *2016 Soil Closure Risk Evaluation* included the collection of soil and soil vapor samples for analysis from 1000 S. Fremont, with the results used to perform a human health risk analysis (HHRA) for the Site. Thirteen borings were advanced throughout Site A of the Site. Soil sampling activities at Site A were performed on November 20 and 21, 2015 by Equipoise. Soil samples were collected at 5 and 10 feet bgs for chemical analysis at each sample locations proposed in the LARWQCB-approved work plans with the exception of ACP-A-SB-B12, which was limited to a single soil sample at 5 feet bgs due to wet utilities located between 5 and 10 feet. VOCs were not detected above their respective reporting limits in any of the Site A soil samples analyzed during this investigation. After the soil borings were advanced, soil vapor probes were constructed. Sampling of the Site A soil vapor probes contained a total of 17 VOCs. The primary constituent reported in Site A soil vapor samples was PCE, with the remaining 16 constituents found at low to trace levels.

Two borings were advanced on Site B of the Site. Soil samples were collected for chemical analysis at the two locations proposed in the work plans. VOCs were not detected above their respective reporting limits in any of the Site B soil samples analyzed. Sampling of the Site B soil vapor probes detected a total of nine VOCs. The primary constituent reported in Site A soil vapor samples was PCE, with the remaining eight constituents found at low to trace levels.

The HHRA process consisted of a tiered approach by first comparing the analytical data to published California screening levels (DTSC, 2016), followed by default modeled risk screening values (RSVs), and then finally site-specific RSVs. The screening was used to evaluate investigation results that could pose a potential future risk users at the Site. Based on the results of the HHRA, no significant risks are projected to future site users associated with soil vapors reported in Site A under unrestricted land use conditions. Equipoise recommended that Site A be granted the status of “No Further Action” with regards to soil and soil vapor constituents. Potential risks were projected to future site users associated with soil vapors reported in Site B under unrestricted land use conditions, therefore, Equipoise recommended institutional controls to mitigate potential receptor exposure. A restricted land use condition was deemed viable and consistent with planned future development of Site B as commercial/industrial. Therefore, it was recommended that Site B be granted the status of “No Further Action” with regards to soil and soil vapor constituents following the implementation of institutional controls whereby future land use is limited to commercial industrial purposes.

Based on the findings of the HHRA, Site A was granted soil closure by the LARWQCB for unrestricted land use, and Site B was granted soil closure by the LARWQCB for restricted commercial/industrial land use only. The restricted land use at Site B is consistent with the planned future use of the property as a parking structure.

Based on the findings, Haro Environmental identified the following potential environmental concerns:

- Based on the age of the transformers, PCB-containing oil may be present within the transformers located at the substation to the west of Building B12. The substation is operated by and is the responsibility of Southern California Edison, and is not under the control of The Ratkovich Company. If these transformers are replaced or leak, Edison should be contacted to coordinate the proper handling and/or disposal in accordance with applicable laws and regulations.
- Groundwater and soil vapor wells are located at the Site. Once these wells are no longer needed for regulatory oversight, they should be destroyed under permit and in accordance with all applicable laws and regulations.

## 7.0 STANDARD OF CARE

---

The findings and conclusions contained in this Phase I ESA are based upon professional opinions with regard to the subject matter. These opinions have been arrived at in accordance with currently accepted industry standards and practices applicable to this location and are subject to the following inherent limitations:

**Accuracy of Information.** Certain information utilized by Haro Environmental in this assessment has been obtained, reviewed, and evaluated from various sources believed to be reliable. Although Haro Environmental's conclusions, opinions, and recommendations are based, in part, on such information, Haro Environmental's services did not include the verification of the information's accuracy or authenticity. Should such information prove to be inaccurate or unreliable, Haro Environmental reserves the right to amend or revise its conclusions, opinions and/or recommendations.

**Reconnaissance.** Haro Environmental performed a reconnaissance of the Site that is the subject of this assessment to document current conditions. Haro Environmental focused on areas deemed more likely to exhibit hazardous materials conditions while other areas received limited attention. No known areas were inaccessible at the time of our reconnaissance.

**Limitations.** Haro Environmental does not guarantee that the Site is free of hazardous or potentially hazardous materials or conditions, or that latent or undiscovered conditions will not become evident in the future. This assessment has been prepared in accordance with currently accepted industry standards, and no other warranties, representations, or certifications are made. Unless stated otherwise herein, this report is intended for and restricted to the sole use of Equipoise and The Ratkovich Company. Any other use, interpretation, or reliance upon this assessment is at the sole risk of the user and Haro Environmental shall have no liability for such unauthorized use, interpretation or reliance.

**Qualifications of Environmental Professionals.** Mr. Elliot Haro representing Haro Environmental performed this ESA. Mr. Haro is an environmental consultant who has performed over 100 ESAs for a variety of clients. Mr. Haro's resume is provided in Appendix D.

**Reliance.** This ESA report has been prepared for the exclusive use and reliance of Equipoise and The Ratkovich Company. Use or reliance by any other party is prohibited without the written authorization of Equipoise, The Ratkovich Company, and Haro Environmental.

**Scope Limitations and ASTM Exceptions.** This ESA did not include any inquiries with respect to non-scope ASTM considerations (including but not limited to asbestos containing materials, radon gas, lead-based paint, lead in drinking water, mold, wetlands, regulatory compliance, cultural and historic resources,

industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality or electromagnetic fields), subsurface or other invasive assessments, business environmental risk evaluations or other services not particularly identified and discussed herein.

Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested may not be received by the issuance date of the report. In the event information obtained from sources mentioned previously alters the findings stated in this report, an addendum letter will be forwarded to Equipoise and The Ratkovich Company under separate cover providing Haro Environmental's findings and conclusions. Additional Phase I ESA limitations include:

- Several data gaps since 1896 of greater than 5 years were identified in the historical records reviewed and included the years from 1896 to 1921, from 1927 to 1944, from 1952 to 1963, from 1983 to 1989, and from 1994 to 2002. These data gaps are considered insignificant because the Site use appears to be similar during the data gaps.
- A title report was not reviewed as part of this Phase I ESA. This data gap is considered insignificant based on other sources of information.

This report represents our service to you as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the Site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances or petroleum products may have been latent, inaccessible, unobservable or not present during the reconnaissance and may subsequently become observable (such as after site renovation or development). Further, these services are not to be construed as legal interpretation or advice.

**Certification.** I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Haro Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

MINES.....	Mines Site Location Listing
MWMP.....	Medical Waste Management Program Listing
PEST LIC.....	Pesticide Regulation Licenses Listing
PROC.....	Certified Processors Database
LA Co. Site Mitigation.....	Site Mitigation List
UIC.....	UIC Listing
WASTEWATER PITS.....	Oil Wastewater Pits Listing
WDS.....	Waste Discharge System

### EDR RECOVERED GOVERNMENT ARCHIVES

#### *Exclusive Recovered Govt. Archives*

RGA LF.....	Recovered Government Archive Solid Waste Facilities List
RGA LUST.....	Recovered Government Archive Leaking Underground Storage Tank

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 05/30/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

#### ***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/11/2017 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

#### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/11/2017 has revealed that there

## EXECUTIVE SUMMARY

is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 23 RCRA-SQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/31/2017 has revealed that there are 12 ENVIROSTOR sites within approximately 1 mile of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

### ADDITIONAL ENVIRONMENTAL RECORDS

#### ***Local Lists of Hazardous waste / Contaminated Sites***

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there are 2 HIST Cal-Sites sites within approximately 1 mile of the target property.

#### ***Local Lists of Registered Storage Tanks***

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 21 SWEEPS UST sites within approximately 0.25 miles of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

**FINDS:** The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 07/23/2017 has revealed that there are 6 FINDS sites within approximately 0.001 miles of the target property.

<b>A 1 SIGNAL DIV</b> Facility Id: 11525	<b>635 S DATE AV</b>	<b>0 - 1/8 (0.000 mi.)</b>	<b>B37</b>	<b>58</b>

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2016 has revealed that there are 3 HAZNET sites within approximately 0.001 miles of the target property.

## EXECUTIVE SUMMARY

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SO CAL GAS/ALHAMBRA	FRONT ST. AND EDITH	E 1/2 - 1 (0.677 mi.)	BB321	551

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
JACKS AUTO SERVICE	701 S DATE AVE	0 - 1/8 (0.000 mi.)	B28	51

MICKEY'S GEO W UNION	2601 W MISSION BLVD	SW 0 - 1/8 (0.061 mi.)	G89	113

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist

## EXECUTIVE SUMMARY

Cleaner site within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California. The plume is about 2 miles long and 1 mile wide. Ground water is contaminated with trichloroethylene (TCE) and perchloroethylene (PCE), according to analyses by State agencies and local water companies. Many public wells in the area exceed the EPA Suggested No Adverse Response Levels (SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion (ppb) of TCE, a level considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service. Status June 1984): A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/ feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of the contamination. This site, along with the three other San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

**FINDS:**

Registry ID: 110002814606

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Waste2: Stormwater Runoff  
 Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).  
 Secondary Waste: Not reported  
 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The facility is not a POTW.  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

**Actual:  
 451 ft.**

Complexity:

Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Biennial Reports:**

Last Biennial Reporting Year: 2017

**Annual Waste Handled:**

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**1000203445**

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 9052

Waste code: D003  
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

**FINDS:**

Registry ID: 110000478420

**Environmental Interest/Information System**

**AIR EMISSIONS CLASSIFICATION UNKNOWN**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 SIC Code: 3471  
 SIC Code 2: Not reported  
 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.  
 Primary Waste: STORMS  
 Waste Type2: Not reported  
 Waste2: Stormwater Runoff  
 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.  
 Secondary Waste: Not reported  
 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The facility is not a POTW.  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

COAST TO COAST METAL FINISHING CORP (Continued)

1019327117

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.  
Amount (Lbs): 100

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.  
Amount (Lbs): 83.4

Waste code: D008  
Waste name: LEAD  
Amount (Lbs): 10600

Waste code: D010  
Waste name: SELENIUM  
Amount (Lbs): 2293.6

Violation Status: No violations found

**Actual:**  
**450 ft.**

Site History: J W Auto has operated at the site since 1998. The Regional Board issued a Chemical Use Questionnaire to the business owner in 2001 and it was returned with no information about any chemicals used at the site. This site is part of a larger parcel that includes several buildings with long manufacturing and industrial history. The back property line is the railroad tracks.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 1354

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

Description:	A customer had a hole in their fuel tank and gasoline leaked on the pavement. A small amount spilled into a catch basin and will be recovered.

**FINDS:**

Registry ID: 110012240379

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Agency Type: Private  
 SIC Code: 4911  
 SIC Code 2: Not reported  
 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.  
  
 Primary Waste: STORMS  
 Waste Type2: Not reported  
 Waste2: Stormwater Runoff  
 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.  
  
 Secondary Waste: Not reported  
 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The facility is not a POTW.  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Design/Implementation Workplan  
Completed Date: 05/15/2002  
Comments: DES - AOC2 -- Approved the design of the in-situ thermal oxidation system for area of concern 2 (AOC2).

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Remedial Action Plan  
Completed Date: 08/22/2001  
Comments: RAP - DTSC approved the draft Remedial Action Plan (RAP) for AOC-2 at the Alhambra combined facility Site. The draft RAP Proposed utilizing an in Situ Thermal Desorption System to treat contaminated soils impacted by past wood treating activities. It is anticipated that the project will take 6-8 months to complete. CEQA - DTSC approved the negative declaration in conjunction with the draft Remedial Action Plan (RAP) for the Alhambra combined facility Site. The draft RAP Proposes utilizing an in Situ Thermal Desorption system to treat contaminated soils impacted by past wood treating activities. It is anticipated that the project will take 6-8 months to complete.

Background Info: The site was the location of a pole treating facility from 1922 until 1957. Since 1957 the 32.55 acre property was used by Southern California Edison Company as a salvage center for metals recycling, storage of new and used electrical transformers, employee training facilities, and maintenance of fleet vehicles. A Preliminary Endangerment Assessment (PEA) conducted in 1999, determined that past uses of the site have resulted in the contamination of onsite soils with various metals, volatiles, polycyclic aromatic hydrocarbons, polychlorinated biphenyls, and pentachlorophenol. Soil contamination has not impacted groundwater therefore the main threat is from direct contact. To expedite cleanup efforts the site was divided into three Areas of Concern (AOC). Currently AOC-2 where the former pole treatment area was located is undergoing remediation. The selected remedy for AOC-2 is In Situ Thermal Desorption The other AOC's still require further investigation.  
Comments Date: 01311995  
Comments: Need to verify RCRA Lead.  
Comments Date: 02012003  
Comments: In Situ Thermal Desorption system begins operating.  
Comments Date: 02251999  
Comments: PEA - A Preliminary Endangerment Assessment (PEA) was completed  
Comments Date: 02251999  
Comments: for the site on February 25, 1999. The PEA showed that based on

**MERCURY DIE & CONTAINER (Continued)**

**S100939919**

Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.

Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

Subregion: 4

Facility Telephone: 6262849524

Facility Contact: STEVE NELSON

Agency Name: SUNCLIPSE

Agency Address: 3201 W Mission Rd

Agency City,St,Zip: Alhambra 918031113

Agency Contact: STEVE NELSON

Agency Telephone: 6262849524

Agency Type: Private

SIC Code: 0

SIC Code 2: Not reported

Primary Waste Type: Not reported

Primary Waste: Not reported

Waste Type2: Not reported

Waste2: Not reported

Primary Waste Type: Not reported

Secondary Waste: Not reported

Secondary Waste Type: Not reported

Design Flow: 0

Baseline Flow: 0

Reclamation: Not reported

POTW: Not reported

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Document Type: \* Remedial or Removal Design  
Completed Date: 07/14/1997  
Comments: DES/SOIL -- Approved the Engineering Design Report for the Alhambra MGP Site. The Design provides technical specifications for the excavation and removal of contaminated soil at the site.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Remedial Action Plan  
Completed Date: 05/30/1997  
Comments: RAP -- The Remedial Action Plan was approved for the project. The project will involve the relocation of affected residents and the excavation and removal of contaminated soil. All impacted residential properties will be returned to a safe use. It is anticipated that the project will begin on July 1 and take roughly 6 months to complete. ALLOC -- The allocation of liability was completed in conjunction with approval of the RAP. The allocation of liability apportioned 82% to the Gas Company and 18% to orphan share. The allocation of liability was mailed to the Gas Company, and affected community and the public. CEQA -- The negative declaration for the Alhambra MGP was finalized in conjunction with approval of the remedial action plan.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Remedial Investigation / Feasibility Study  
Completed Date: 08/23/1996  
Comments: RI/FS -- The Department approved the RI/FS for the Alhambra Manufactured Gas Plant Site. The RI/FS identified wide-spread PAH and lead contamination in the surface and subsurface soils. The RI/FS characterized the lateral and vertical extent of the PAH and lead contamination at the site.

**Environmental Interest/Information System**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**SUPERFUND (NON-NPL)**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/30/2017	Source: EPA
Date Data Arrived at EDR: 06/08/2017	Telephone: N/A
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 11/03/2017
Number of Days to Update: 99	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017	Source: EPA

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017	Source: EPA

## ***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 10/06/2017
Number of Days to Update: 92	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Number of Days to Update: 77	Next Scheduled EDR Contact: 01/29/2018
	Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/11/2017	Source: EPA
Date Data Arrived at EDR: 07/28/2017	Telephone: 800-424-9346

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency

## ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 08/21/2017

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/13/2017  
Date Data Arrived at EDR: 09/06/2017

Data Release Frequency: No Update Planned

## Local Land Records

### LIENS: Environmental Liens Listing

A listing of property locations with environmental liens for California where DTSC is a lien holder.

Date of Government Version: 08/31/2017  
Date Data Arrived at EDR: 09/05/2017  
Date Made Active in Reports: 11/08/2017  
Number of Days to Update: 64

Source: Department of Toxic Substances Control  
Telephone: 916-323-3400  
Last EDR Contact: 11/30/2017  
Next Scheduled EDR Contact: 03/19/2018  
Data Release Frequency: Varies

### LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 07/11/2017  
Date Data Arrived at EDR: 07/26/2017  
Date Made Active in Reports: 10/13/2017

Data Release Frequency: Semi-Annually

### DEED: Deed Restriction Listing

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Number of Days to Update: 22	Next Scheduled EDR Contact: 01/08/2018
	Data Release Frequency: Quarterly

### **CHMIRS: California Hazardous Material Incident Report System**

California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 05/09/2017	Source: Office of Emergency Services
Date Data Arrived at EDR: 07/26/2017	Telephone: 916-845-8400
Date Made Active in Reports: 09/21/2017	Last EDR Contact: 10/27/2017
Number of Days to Update: 57	Next Scheduled EDR Contact: 02/05/2018
	Data Release Frequency: Varies

### **LDS: Land Disposal Sites Listing (GEOTRACKER)**

Land Disposal sites (Landfills) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Date of Government Version: 09/11/2017	Source: State Water Quality Control Board
Date Data Arrived at EDR: 09/12/2017	Telephone: 866-480-1028
Date Made Active in Reports: 11/09/2017	Last EDR Contact: 12/12/2018
Number of Days to Update: 58	Next Scheduled EDR Contact: 03/26/2018
	Data Release Frequency: Quarterly

### **MCS: Military Cleanup Sites Listing (GEOTRACKER)**

Military sites (consisting of: Military UST sites; Military Privatized sites; and Military Cleanup sites [formerly known as DoD non UST]) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Date of Government Version: 09/11/2017	Source: State Water Resources Control Board
Date Data Arrived at EDR: 09/12/2017	Telephone: 866-480-1028
Date Made Active in Reports: 11/09/2017	Last EDR Contact: 12/12/2018
Number of Days to Update: 58	Next Scheduled EDR Contact: 03/26/2018
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012	Source: FirstSearch
Date Data Arrived at EDR: 01/03/2013	Telephone: N/A

Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency

Date Made Active in Reports: 10/06/2017	Last EDR Contact: 09/26/2017
Number of Days to Update: 10	Next Scheduled EDR Contact: 01/08/2018
	Data Release Frequency: Quarterly

### FUDS: Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 01/31/2015	Source: U.S. Army Corps of Engineers
Date Data Arrived at EDR: 07/08/2015	Telephone: 202-528-4285
Date Made Active in Reports: 10/13/2015	Last EDR Contact: 11/22/2017
Number of Days to Update: 97	Next Scheduled EDR Contact: 03/05/2018
	Data Release Frequency: Varies

### DOD: Department of Defense Sites

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 12/31/2005	Source: USGS
Date Data Arrived at EDR: 11/10/2006	Telephone: 888-275-8747
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 10/13/2017
Number of Days to Update: 62	Next Scheduled EDR Contact: 01/22/2018
	Data Release Frequency: Semi-Annually

### FEDLAND: Federal and Indian Lands

Federally and Indian administrated lands of the United States. Lands included are administrated by: Army Corps of Engineers, Bureau of Reclamation, National Wild and Scenic River, National Wildlife Refuge, Public Domain Land, Wilderness, Wilderness Study Area, Wildlife Management Area, Bureau of Indian Affairs, Bureau of Land Management, Department of Justice, Forest Service, Fish and Wildlife Service, National Park Service.

Date of Government Version: 12/31/2005	Source: U.S. Geological Survey

Number of Days to Update: 339	Next Scheduled EDR Contact: 01/22/2018
	Data Release Frequency: N/A

### SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

Data Release Frequency: Quarterly

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Next Scheduled EDR Contact: 02/05/2018  
Data Release Frequency: Varies

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

## HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2016	Source: California Environmental Protection Agency

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Longitude (West):	118.150609 - 118° 9' 2.19"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	393840.2
UTM Y (Meters):	3771592.5
Elevation:	464 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map:	5630795 LOS ANGELES, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

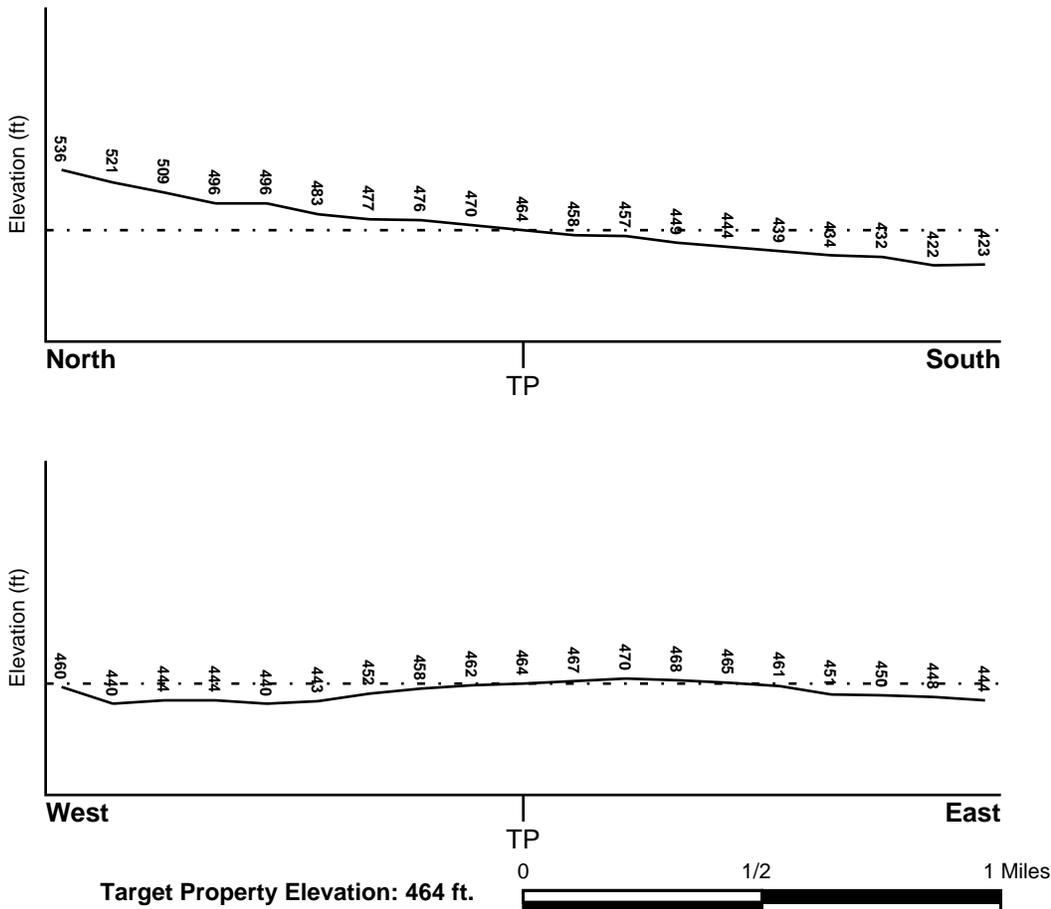

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06037C1635F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
LOS ANGELES	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### **Site-Specific Hydrogeological Data\*:**

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### ROCK STRATIGRAPHIC UNIT

Era: Cenozoic

## Los Angeles Regional Water Quality Control Board

August 8, 2013

Ms. Victoria Deise-Wilson  
c/o The Corner Company, LLC  
1000 S. Fremont, Unit 1  
Alhambra, CA 91803

**SUBJECT: NO FURTHER REQUIREMENTS FOR SOILS ONLY**

**SITE: FORMER CHARTER COMMUNICATIONS PROPERTY (THE CORNER COMPANY) - 2215 WEST MISSION ROAD, ALHAMBRA, CA (WIP FILE NO. 115.0098; SITE ID NO.2040357) LOS ANGELES COUNTY ASSESSOR PARCEL NUMBERS (APNs) 5342-001-019, 5342- 001-010, AND 5342-001-009**

Dear Ms. Deise-Wilson:

The California Regional Water Quality Control Board, Los Angeles Region (Regional Board) is the public agency with primary responsibility for the protection of the beneficial uses of groundwater and surface water within major portions of Los Angeles County and Ventura County, including the above referenced property (Site).

The Site is located on the northwest corner of the intersection of Mission Road and Date Avenue in Alhambra, California. The Site consists of a two-story commercial building and associated parking lots on approximately 1.6 acres of land located within a mixed commercial industrial area.

The Site is located within the San Gabriel Valley Area 3 Operable Unit (Area 3 OU) of the United States Environmental Protection Agency (USEPA) Superfund site, an area known for regional groundwater pollution primarily by chlorinated volatile organic compounds (VOCs) specifically, trichloroethylene (TCE) and tetrachloroethylene (PCE).

Between 1969 and 1984 Nardon Manufacturing Company, Incorporated (Nardon) occupied the site. From 1984 to 1995, the Site was owned and occupied by Santa Fe International Corporations (SFIC) Properties, Inc, and was used for furniture and electrical parts storage. The property was occupied by Charter Communications from 1995 to 2001. Campus 1000 Fremont, LLC purchased the property in 2001. The Site is currently occupied by Corinthian Colleges, Inc. (CCI). CCI offers classes for training medical and dental assistants in the building. The Site was part of a larger 30-acre facility owned by Campus 1000 Fremont LLC. Campus 1000 Fremont LLC sold the site to the Corner Company, LLC in June 2003.

Historical operations on the property resulted in the discharges of chlorinated VOCs to the subsurface soil and groundwater and caused soil and groundwater pollution. These constituents constitute "waste" as

defined in Water Code section 13050(d). The discharge of waste resulted in pollution at the Site, as defined in Water Code section 13050(l).

Subsurface investigation and remedial activities at the Site have been conducted since 2000 (Attachment 1, Site Cleanup Activities Summary). The primary chemicals of concern (wastes) discharged to the subsurface soil and groundwater are PCE and TCE.

Subsurface investigations and remedial activities have been conducted since 2000. Between June 2003 and August 2011, soil remediation was conducted by using soil vapor extraction (SVE) systems. One SVE system included six cluster wells and another SVE system included three horizontal wells. In August 2008, impacted soils were excavated and removed from targeted areas. These remedial activities have resulted in the removal of 7,380 cubic yards of impacted soils via excavation, and 26.22 pounds of VOC mass removed via SVE, and an overall 98.9% of VOCs removed from the impacted soil.

The TCE vapor screening concentrations (VSCs) for the 5- and 10-foot depth intervals are 2.77 micrograms per liter of air ( $\mu\text{g/L}$ ) and 5.33  $\mu\text{g/L}$ , respectively. The PCE VSC for the 5- and 10-foot depth intervals are 1.04  $\mu\text{g/L}$  and 2.020  $\mu\text{g/L}$ , respectively. These site-specific values have been verified (April and September, 2012) by the Office of Environmental Health Hazard Assessment (OEHHA) based on an uncontrolled closure target risk level of  $1 \times 10^{-6}$ .

Regional Board staff has reviewed the case files including submitted reports that document the environmental assessment and remedial activities, as well as the post remedial confirmation sampling conducted at the Site. The discharges of PCE and TCE to the subsurface soils have been adequately delineated and subsequently remediated to residual levels using soil excavation and SVE systems. A site specific human health risk assessment (HHRA) was prepared to evaluate the health risk from the residual PCE and TCE remaining in the subsurface. The HHRA has been reviewed by OEHHA.

The Office of Environmental Health Hazard Assessment (OEHHA) reviewed and confirmed the following VSCs for uncontrolled conditions (including residential use) at the Burdened Property based on a cancer risk isopleth of  $1 \times 10^{-6}$ : 2.77  $\mu\text{g/L}$  of air and 5.33  $\mu\text{g/L}$  for TCE at 5- and 10-foot depth intervals, respectively; and 1.04  $\mu\text{g/L}$  and 2.020  $\mu\text{g/L}$  for PCE at 5- and 10-foot depth intervals, respectively. Post-remediation sampling conducted in October 2011 produced no samples exceeding the site specific VSCs for uncontrolled conditions (including residential use) for TCE at either the 5- or 10-foot depths. All 10-foot samples and all but two 5-foot samples exceeded the VSCs for PCE under uncontrolled conditions (including residential use), but are within the same order of magnitude as the VSCs. These residual soil vapor levels can be mitigated further by the installation and the operation of a soil vapor mitigation system. The two 5-foot sample exceptions contained higher PCE concentrations and occurred at sampling locations (SVP-1 IR and SVP-12 at 5 feet), located within the planned parking structure. The highest PCE concentrations at 5 feet detected at SVP- 11R and SVP-12 were 21 $\mu\text{g/L}$  and 18  $\mu\text{g/L}$ , respectively. Exposure to soil vapor at locations of higher PCE concentrations can be mitigated further by paving the area and excluding the area from the footprint of any building.

### **No Further Requirement Determination**

Based on Regional Board staff's review of the information on source removal, confirmation soil sampling, and acceptable risk assessment determinations for the subject property, Regional Board staff has determined that the wastes in the subsurface at the subject property have been cleaned up to standards suitable for commercial and industrial land use pursuant to the conditions included in the Covenant and Environmental Land Use Restriction on Property attached hereto. This letter makes no determination with respect to waste in groundwater. **Therefore, a no further requirement (NFR) status for soils only is granted for the property with respect to commercial and industrial land use.**

The subject property is unique in circumstance and remediation history. The Regional Board staff's decision considered the site-specific aspects of the subject property and the remediation efforts by the property owner. By issuing this NFR and requiring the related Covenant and Environmental Land Use Restriction on Property, the Regional Board does not intend to create a precedent to be used by unrelated entities or for other properties subject to the jurisdiction of the Regional Board.

### **Residential Land Use Option (For Mixed Land Use)**

The soils impacted by PCE and TCE have been cleaned up to standards suitable for commercial and industrial land use, subject to the conditions described in the Covenant and Environmental Land Use Restriction on Property attached hereto

If permitted by local zoning, the Site may be considered for a residential land use scenario provided that the following measures are implemented:

- A. Use of engineering controls to abate potential VOC soil vapor intrusion.
  - (1) A vapor mitigation system is incorporated into any future residential building design and will include as a minimum a permeable sub-slab support material (e.g., gravel), passive venting (including solar powered fans) of all sub-slab areas below occupied spaces, properly sized piping, and a suitable sealed vapor intrusion barrier. Approved examples of vapor intrusion barriers and passive venting systems include the Liquid Boot™ System [or equivalent] coupled with the GeoVent™ [or equivalent] gas venting system or Geo-Seal™ [or equivalent] vapor intrusion barrier coupled with the Vapor-Vent™ [or equivalent] vapor collection system. The most technically-appropriate vapor intrusion barrier (< 1 US perm) and passive venting system (maintaining negative pressure even during calm periods), meeting the minimum system reduction requirements (100 times) sufficient to protect residential uses, shall be selected during residential building design and incorporated into building construction. The entire residential structure should be underlain by the combination of the sub-slab permeable material, vapor barrier and passive collection system that must be properly maintained.

- (2) The property owner monitors the effectiveness of the vapor mitigation system at the subsequent specified frequencies for 5 years, subject to modification as directed by the Executive Officer of the Regional Board. The property owner must report any soil vapor compounds levels exceeding the California Human Health Screening Levels (CHHSLs) [<http://www.calepa.ca.gov/brownfields/documents/2005/CHHSLsGuide.pdf>] for residential land use scenario to the Regional Board. Under the proposed controlled closure scenario, the final vapor mitigation system shall include a detailed monitoring and maintenance program implemented post-construction to confirm that the system is functioning as designed. The monitoring and maintenance program shall include the following components:
- a. Baseline post-construction monitoring of vent pipes for air velocity, volumetric airflow, oxygen concentrations, and volatile organic compound concentrations (using USEPA Method 8260B).
  - b. Quarterly post-construction monitoring of vent pipes for the parameters measured during the first year of post-construction monitoring effort shall be conducted.
  - c. After the first year of post-construction monitoring, the frequency of monitoring may be modified to an annual monitoring event.
  - d. On a quarterly basis, visual inspection and any identified maintenance requirements shall be performed on the vent stack and fan(s) to ensure proper system operation and performance.
- (3) The property owner records with the Los Angeles County Assessor's office the Covenant and Environmental Land Use Restriction on Property (Attachment 1).

Therefore, an NFR status for soils only is granted to the property with respect to residential land use provided the conditions regarding a vapor mitigation system, described above, and the conditions included in the Covenant and Environmental Land Use Restriction on Property (Attachment 1) are met.

The Regional Board's determination is made based upon the most current data contained in the case file. The determination applies only to the known chemicals of concern existing in soil at the Site which have been tested during the site assessment phase of work and with the provision that information provided to the Regional Board staff is accurate and representative of Site conditions. If waste constituents, other than as described in this letter, are encountered during future Site construction or redevelopment activities or the VOC vapor exceeds the regulatory levels for residential use if the Site is used for residential purposes, the land owner is required to provide a verbal notification to this Regional Board immediately and submit a follow-up written report with 72 hours. In addition, appropriate health and safety measures must be fully implemented if conditions change.

Please note that the remaining environmental issues in groundwater beneath the property will continue to be regulated by USEPA under its Superfund Program. This letter does not address, nor does it affect the Board's authority to regulate, waste found in groundwater at the Site.

The jurisdictional requirements of other agencies, such as the USEPA, are not affected by the Regional Board's issuance of this letter at the Site. Such agencies may choose to make their own determination concerning this Site.

### **Well Abandonment and Destruction**

You may proceed with the abandonment of SVE wells SVE-1 through SVE-5B (see attached Figure 1) in accordance with the guidelines provided in the California Department of Water Resources, Bulletin 74-81 and Bulletin 74-90, California Well Standards. Please submit to Regional Board staff a copy of the report for abandonment of the SVE wells approximately three weeks after the completion of the abandonment work. This report must include, at a minimum, a site map showing the well location, a description of the well abandonment process and waste handling, and copies of all signed permits.

### **Cost Recovery Billing and Invoices**

Please note that Regional Board staff oversight charges for work associated with this NFR letter and case review and evaluation package will be billed on the invoices for 2<sup>nd</sup> and 3<sup>rd</sup> quarters of 2013, in the same manner as previously billed.

We thank you for your cooperation with the Regional Board during the course of the site assessments, remediation, and groundwater monitoring. Should you have any [questions](#) regarding this matter, please contact Mr. Curt M. Charmley, project manager, at (213) 576-6774 or [cccharmley@waterboards.ca.gov](mailto:cccharmley@waterboards.ca.gov).

Sincerely,

  
Samuel Unger, P.E.  
Executive Officer

**Former Charter Communications (The Corner Company)**

**Site Cleanup Activity Summary**

- March 2000- Regional Board staff inspects Site.
- May 2000- An initial soil vapor assessment conducted. A total of 30 soil vapor Probes installed at 23 locations at depths ranging from 10 feet below ground surface to (bgs) to 30 feet bgs.
- May 2001- Enhanced soil Vapor assessment conducted. Nested soil vapor probes installed at approximately 20-foot intervals from 15 feet bgs to 100 feet bgs.
- December 2001- Additional deep nested soil vapor and groundwater monitoring well Installed (VMW-3).
- September 2002- Two additional groundwater monitoring wells installed (VMW-4 and VMW-5).
- January 2003- Equipoise Submits soil remedial action plan (RAP).
- June 2003- Soil vapor extraction (SVE) system installed. Six cluster wells (SVE-1 through (SVE-6) wells started.
- July 2003- Baseline soil vapor samples collected, begin SVE operation and maintenance.
- December 2006- Initial SVE system soil vapor completion. System ran from June 2003 – December 2006.
- January 2007- Implement soil vapor confirmation sampling
- August 2008- Shallow soil excavation and removal
- November 2010- Installation of horizontal SVE wells (SVE-2, SVE-3, and SVE-4).
- January 2011- Start-up of horizontal SVE wells
- August 2011- Completion of horizontal SVE well operation
- October 2011- System performance monitoring/soil physical parameter sampling

COVENANT AND ENVIRONMENTAL RESTRICTION  
ON PROPERTY

The Corner Company  
2215 West Mission Road  
Alhambra, California 91803  
APNs: 5342 001009, 5342 001 010, and 5342 001 019  
LARWQCB WIP FILE NO. 115.0098

This Covenant and Environmental Restriction on Property ("Covenant") is made as of the 25<sup>th</sup> day of July, 2013 by The Corner Company, LLC ("Covenantor") who is the Owner of record of that certain property situated at 2215 West Mission Road, in the City of Alhambra, County of Los Angeles, State of California, which is more particularly described in Exhibit A and as depicted on Exhibit B, both of which are attached hereto and incorporated herein by this reference (hereinafter referred to as the "Burdened Property"), for the benefit of the California Regional Water Quality Control Board, Los Angeles Region ("Board"), with reference to the following facts:

A. Nature of Covenant. This Covenant is an environmental covenant provided for by Civil Code section 1471 and is a necessary remedial action required by the Board pursuant to Water Code section 13304. The Burdened Property is contaminated by hazardous materials as defined in section 25260 of the Health and Safety Code. This Covenant addresses only waste in soil and soil vapor at the Burdened Property, and does not address waste in groundwater.

B. Contamination of the Burdened Property. The soil, soil gas and groundwater at the Burdened Property are contaminated by historic operations onsite that resulted in the discharges of chlorinated volatile organic compounds (VOCs) to the subsurface soil and groundwater.

VOCs are hazardous materials as defined in section 25260 of the Health and Safety Code. VOCs constitute "waste" as defined in Water Code section 13050(d). The discharge of VOCs resulted in pollution at the Site, as defined in Water Code section 13050(1).

Subsurface investigations and remedial activities have been conducted at the Burdened Property. Soil remediation was performed by operation of a soil vapor extraction system. Impacted soils were also excavated and removed from targeted areas. By means of these remedial activities, the known contamination at the Burdened Property was significantly reduced.

C. Exposure Pathways. The contaminants addressed in this Covenant are present in the soil at the Burdened Property. Contaminants in groundwater at the Burdened Property are not addressed by this Covenant. Without the mitigation measures which have been performed and those required to be performed to address risks identified by the Office of Environmental Health Hazard Assessment on the Burdened Property, exposure to the contaminants in the soil could take place via soil vapor intrusion resulting in inhalation by humans. The risk of public exposure to the contaminants has been substantially lessened by the remediation and controls described herein.

D. Land Uses and Population Potentially Affected. The Burdened Property is currently used for commercial purposes and is adjacent to commercial and industrial land uses. The Burdened Property may be developed at a future time to include residential uses.

E. Disclosure and Sampling. Disclosure of the presence of hazardous materials on the Burdened Property has been made to the Board and extensive sampling of the Burdened Property has been conducted.

F. Use of Burdened Property. Covenantor desires and intends that in order to benefit the Board, and to protect the present and future public health and safety, the Burdened Property shall be used in such a manner as to avoid potential harm to persons or property that might result from any hazardous materials that might remain deposited on portions of the Burdened Property.

ARTICLE I  
GENERAL PROVISIONS

1.1 Provisions to Run with the Land. This Covenant sets forth protective provisions, covenants, conditions and restrictions (collectively referred to as "Restrictions") upon and subject to which the Burdened Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. These Restrictions are reasonably necessary to protect present and future human health and safety or the environment as a result of the presence on the land of hazardous materials. Each and all of the Restrictions shall run with the land and pass with each and every portion of the Burdened Property, and shall apply to, inure to the benefit of, and bind the respective successors, assigns, and lessees thereof for the benefit of the Board and all Owners and Occupants. Each and all of the Restrictions: (a) are imposed upon the entire Burdened Property, unless expressly stated as applicable to a specific portion of the Burdened Property; (b) run with the land pursuant to section 1471 of the Civil Code; and (c) are enforceable by the Board.

1.2 Concurrence of Owners and Lessees Presumed. All purchasers of all or any portion of the Burdened Property shall become Owners as defined herein and shall be deemed by their purchase of the Burdened Property to be bound by the Restrictions and to agree for and among themselves, their heirs, successors, and assignees, that the Restrictions herein established must be adhered to for the benefit of the Board and all Owners and Occupants, and that the interest of all Owners and Occupants of the Burdened Property shall be subject to the Restrictions.

1.3 Incorporation into Deeds and Leases. Covenantor desires and covenants that the Restrictions shall be incorporated in and attached to each and all deeds and ground leases of all or any portion of the Burdened Property. Recordation of this Covenant shall be deemed binding on all successors, assigns, and lessees, regardless of whether a copy of this Covenant has been attached to or incorporated into any given deed or lease.

1.4 Purpose. It is the purpose of this instrument to convey to the Board an interest in real property which will run with the land, to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

ARTICLE II  
DEFINITIONS

2.1 Board. "Board" shall mean the California Regional Water Quality Control Board, Los Angeles Region and shall include its successor agencies, if any.

2.2 Improvements. "Improvements" shall mean all buildings, structures, roads, driveways, gradings, re-gradings, and paved areas, constructed or placed upon any portion of the Burdened Property.

2.3 Occupant or Occupants. "Occupant" or "Occupants" shall mean Owners and those persons entitled by ownership, leasehold, or other legal relationship to the right to use and/or occupy all or any portion of the Burdened Property.

2.4 Owner or Owners. "Owner" or "Owners" shall mean the Covenantor and Covenantor's successors in interest who hold title or a ground lease interest to all or any portion of the Burdened Property.

ARTICLE III  
DEVELOPMENT, USE AND CONVEYANCE OF THE BURDENED PROPERTY

3.1 Restrictions on Development and Use. Covenantor promises to restrict the use of the Burdened Property as follows, subject to an exception to the terms of 3.1.(a-e) provided in 3.1.1:

- a. Development and use of the Burdened Property shall be restricted to industrial, commercial, and/or office space;
- b. No residence for human habitation shall be permitted on the Burdened Property;
- c. No hospitals shall be permitted on the Burdened Property;
- d. No public or private schools serving K-12 students shall be permitted on the Burdened Property;
- e. No care or community centers for children or senior citizens, or other uses that would involve the regular congregation of children or senior citizens, shall be authorized on the Burdened Property;
- f. Any contaminated soils brought to the surface by grading, excavation, trenching, or backfilling shall be managed by the Owner, Owner's agent, Occupant or Occupant's agent in accordance with all applicable provisions of local, state and federal law;
- g. Any excavation conducted on the Burdened Property shall be performed pursuant to an appropriate and fully implemented Health and Safety Plan;
- h. All uses and development of the Burdened Property shall preserve the integrity of any cap and remedial measures taken or remedial equipment installed on the Burdened Property pursuant to the requirements of the Board, unless otherwise expressly permitted in writing by the Board;

- i. The Owner and Occupant shall notify the Board of each of the following: (1) the type, cause, location and date of any disturbance to any cap and any remedial measures taken or remedial equipment installed, which could affect the ability of such cap or remedial measures, remedial equipment, or monitoring system to perform their respective functions and (2) the type and date of repair of such disturbance. Notifications to the Board shall be made by registered mail within ten (10) working days of both the date of discovery of such disturbance and the date of completion of repairs;
- j. The Covenantor agrees that the Board, and any persons acting pursuant to Board orders, shall have reasonable access to the Burdened Property for the purposes of inspection, surveillance, maintenance, or monitoring as provided in Division 7 of the Water Code; and
- k. No Owner or Occupant shall act in any manner that threatens or is likely to aggravate or contribute to the existing contaminated conditions of the Burdened Property. All use and development of the Burdened Property shall preserve the integrity of any capped areas.
- l. Restrictions on the use of the Burdened Property imposed by 3.1(a-e) shall not apply, if the following conditions are met at the Burdened Property:

(i) A vapor mitigation system that meets the following standards and conditions is included in any residential building design, incorporated into any residential building construction, and maintained at any building used for residential purposes:

1. The vapor mitigation system includes, at a minimum: permeable sub-slab support material (e.g., gravel); passive venting (which may include solar powered fans) of all sub-slab areas below occupied spaces; properly sized piping; and a suitable sealed vapor intrusion barrier. The vapor intrusion barrier is the most technically-appropriate and performs to at least  $< 1$  perm. The passive venting system maintains negative pressure even during calm periods.

2. The combination of sub-slab permeable material, vapor barrier and passive collection system underlies the entire residential structure.

3. The vapor mitigation system reduces potential exposure by at least 100 times over existing conditions, reduces vapor intrusion levels to meet a cancer risk isopleth of  $1 \times 10^{-6}$ , and is sufficient to protect present and future human health and safety.

(ii) Monitoring to evaluate the effectiveness of any vapor mitigation system is conducted by the Owner or Occupant as may be directed by the Board. The Owner or Occupant must notify the Board of any soil vapor components levels exceeding the California Human Health Screening Levels (CHHSLs) for residential use. Notifications to the Board shall be made in writing within 72 hours of the time of discovery of the exceedance.

3.2 Enforcement. Failure of an Owner or Occupant to comply with any of the Restrictions set forth in Paragraph 3.1 shall be grounds for the Board, by the authority of this Covenant, to require that the Owner or Occupant modify or remove, or cause to be modified or removed, any Improvements constructed in violation of that Paragraph. Violation of this Covenant shall also be grounds for the Board to file civil actions against the Owner or Occupant as provided by law. Nothing in this Covenant shall limit the Water Board's authority under Division 7 (commencing with section 13000) of the Water Code or other applicable laws.

3.3 Notice in Agreements. After the date of recordation hereof, all Owners shall execute a written instrument which shall accompany all purchase agreements or ground leases relating to all or any portion of the Burdened Property. Any such instrument shall contain the following statement:

The land described herein contains hazardous materials in soils and in the groundwater under the property, and is subject to a Covenant and Environmental Restriction dated as of \_\_\_\_\_, 20\_\_\_\_, and recorded on \_\_\_\_\_, 20\_\_\_\_, in the Official Records of \_\_\_\_\_ County, California, as Document No. \_\_\_\_\_, which Covenant and Environmental Restriction imposes certain covenants, conditions, and restrictions on usage of the property described herein. This statement is not a declaration that a hazard exists.

#### ARTICLE IV VARIANCE AND TERMINATION

4.1 Variance. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a written variance from the provisions of this Covenant.

4.2 Termination. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a termination of the Restrictions as they apply to all or any portion of the Burdened Property.

4.3 Term. Unless terminated in accordance with Paragraph 4.2 above, by law or otherwise, this Covenant shall continue in effect in perpetuity.

#### ARTICLE V MISCELLANEOUS

5.1 No Dedication Intended. Nothing set forth herein shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Burdened Property or any portion thereof to the general public.

5.2 Notices. Whenever any person gives or serves any notice, demand, or other communication with respect to this Covenant, each such notice, demand, or other communication shall be in writing and shall be deemed effective (a) when delivered, if personally delivered to

the person being served or an official of a government agency being served, or (b) three (3) business days after deposit in the mail if mailed by United States mail, postage paid certified, return receipt requested, addressed:

*If To: "Covenantor"*

The Corner Company, LLC  
1000 S. Fremont, Unit 1  
Alhambra, CA 91803  
Attn: Senior Development Manager

*If To: "Board"*

Regional Water Quality Control Board  
Los Angeles Region  
Attention: Executive Officer  
320 W. 4<sup>th</sup> Street, Suite 200  
Los Angeles, California 90013

5.3 Partial Invalidity. If any portion of the Restrictions or terms set forth herein is determined by a court having jurisdiction to be invalid for any reason, the remaining portion shall remain in full force and effect as if such portion had not been included herein.

5.4 Recordation. This instrument shall be executed by the Covenantor and by the Executive Officer of the Board. This instrument shall be recorded by the Covenantor in the County of Los Angeles within ten (10) days of the date of execution.

5.5 References. All references to Code sections include successor provisions.

5.6 Construction. Any general rule of construction to the contrary notwithstanding, this instrument shall be liberally construed in favor of the Covenant to preserve and implement the purpose of this instrument and the policies and purposes of the Water Code. If any provision of this instrument is found to be ambiguous, an interpretation consistent with the purpose of this instrument that would render the provision valid shall be favored over any interpretation that would render it invalid.

IN WITNESS WHEREOF, the parties execute this Covenant as of the date set forth above.

## Los Angeles Regional Water Quality Control Board

June 19, 2017

Megan Moloughney  
C/O Elite-TRC Alhambra Community LLC  
1000 South Fremont Avenue, Unit 1  
Building A7, Suite 7300  
Alhambra CA. 91803-5038

**SUBJECT: NO FURTHER REQUIREMENTS (NFR) DETERMINATION FOR SOILS ONLY**

**SITE/CASE: CAMPUS 1000, SITE A, 1000 SOUTH FREMONT AVENUE, ALHAMBRA, CA. 91803 (SCP FILE NO. 115.0559; SITE ID. NO. 2040398), APNS 5342-001-021, 5342-001-022, 5342-001-023, 5342-001-025, 5342-001-026, AND 5342-001-027**

Dear Ms. Moloughney:

The California Regional Water Quality Control Board, Los Angeles Region (Regional Board) is the state agency with primary responsibility for the protection of groundwater and surface water quality within major portions of Los Angeles and Ventura counties, including the above-referenced property (Site). To accomplish this, the Regional Board oversees the investigation and cleanup of discharges of waste that may affect the quality of waters of the state as authorized by the Porter-Cologne Water Quality Control Act (California Water Code [CWC], Division 7).

The Regional Board has reviewed the investigation reports prepared for the Site by Equipoise Corporation (Equipoise) on behalf of The Alhambra Office Community, LLC, and the Alhambra Residential Community LLC including the report entitled *Soil Closure Risk Evaluation*, dated May 24, 2016, and other relevant information regarding the Site. The following information is presented in the submitted reports:

1. From 1923 to 1965, CF Braun & Co. operated as an office, engineering, research laboratory and manufacturing facility of large ferrous metal components used in petroleum refineries and chemical processing plants from 1923 to 1965. CF Braun & Co. occupied the property between 1941 and 1967. CF Braun & Co. and Heat Transfer Research Inc. occupied the property between 1972 and 1977. Regional Board file information indicates that in 1987, the site was occupied by Santa Fe Braun Inc. Current onsite operations are limited to engineering and general office activities.
2. Multiple phases of investigation were conducted between 1999 and 2007. Regional Board staff provided workplan review and approval, subsurface characterization guidance, and field oversight during the phases of work. A total of 138 soil samples and 219 soil vapor samples were collected and analyzed during the Geomatrix, Equipoise, and Project Navigator investigations.

3. Groundwater is present beneath the Site at approximately 185 feet below ground surface. However no groundwater assessment was required based on the volatile organic compound (VOC) soil and soil vapor results that indicated the VOCs detected were limited in mass and/or attenuated with depth.
4. The recent assessment conducted by Equipoise included the collection of 25 soil and soil vapor samples including 4 soil samples for soil geophysical parameters. The soil and soil vapor samples were collected at 5 feet below ground surface (bgs) and 10 feet bgs.
5. The Office of Environmental Health Hazard Assessment (OEHHA) review verified that the maximum concentrations of Tetrachloroethylene (PCE) detected were below the respective risk screening values (RSVs) calculated for  $1 \times 10^{-6}$  residential risk for the Site.

### **Notification Prior to a No Further Requirements**

On May 16, 2017, the Regional Board mailed the *Site Cleanup Program – Notice of Opportunity to Comment – No Further Requirements (NFR) Determination* to you and interested parties. This notification requested the submission of comments pertaining to the no further requirements determination for the Site by June 16, 2017. To date, the Regional Board has not received any comments regarding the proposed NFR.

### **No Further Requirements Determination for Soil**

Based upon information provided to the Regional Board, and with the provision that the information was accurate and representative of Site conditions, the Regional Board requires no further requirements (NFR) for unsaturated soils be taken at the Site at this time. However, the Site owner/operator must notify the Regional Board immediately if additional waste in soil and/or groundwater is encountered at the Site. Please note that NFR specified in this letter applies only to soil at this time. Our records indicate that the groundwater in the vicinity of the Site is regionally impacted with VOCs and is being addressed by the United States Environmental protection Agency (USEPA) Superfund program.

### **Soil Vapor Probe Destruction**

All soil vapor probes must be removed and their respective boreholes shall be backfilled with a pre-hydrated bentonite and cement slurry and capped with concrete to match the existing surface. All necessary permits must be obtained from appropriate agencies prior to starting fieldwork. A report documenting the removal of soil vapor probes and surface restoration shall be submitted to the Regional Board 60 days following completion of the soil vapor probe removal and surface restoration work.

### **Cost Recovery Billing and Invoices**

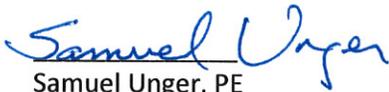

Please note that the Regional Board staff oversight charges for work associated with this No Further Requirements for Soils Only NFR and case evaluation effort will be billed on invoices for the 2<sup>nd</sup>, 3<sup>rd</sup>, and 4<sup>th</sup> quarter of 2017 in the same manner as previously billed.

The jurisdictional requirements of other agencies, such as the USEPA, are not affected by the Regional Board's issuance of a NFR for Soils Only letter for the Site. Such agencies may choose to make their own determination concerning this site.

We would like to take the opportunity to thank you for your full cooperation with the Regional Board during the course of the site assessment.

**Should you have any questions regarding this matter, please contact Curt M. Charmley, Project Manager, at (213) 576-6774, [Curt.Charmley@waterboards.ca.gov](mailto:Curt.Charmley@waterboards.ca.gov), or Jeffrey Hu, Unit Chief, at (213) 576-6803, [Jeffrey.Hu@waterboards.ca.gov](mailto:Jeffrey.Hu@waterboards.ca.gov).**

Sincerely,

Samuel Unger, PE

## Los Angeles Regional Water Quality Control Board

June 19, 2017

Megan Moloughney  
C/O The ELITE-TRC Alhambra Community, LLC  
1000 South Fremont Avenue, Unit 1  
Building A7, Suite 7300  
Alhambra CA. 91803-5038

**SUBJECT: NO FURTHER REQUIREMENTS FOR THE SOILS ONLY (NFR) DETERMINATION WITH AN ENVIRONMENTAL LAND USE COVENANT**

**SITE: CAMPUS 1000, SITE B, 1000 SOUTH FREMONT AVENUE, ALHAMBRA, CA. 91803, APN 5342-001-024 (SCP FILE NO. 115.0559; SITE ID. NO. 2040398)**

Dear Ms. Moloughney:

The California Regional Water Quality Control Board, Los Angeles Region (Regional Board) is the state agency with primary responsibility for the protection of groundwater and surface water quality within major portions of Los Angeles and Ventura counties, including the above-referenced property (Site). To accomplish this, the Regional Board oversees the investigation and cleanup of discharges of waste that may affect the quality of waters of the state as authorized by the Porter-Cologne Water Quality Control Act (California Water Code [CWC], Division 7).

### BACKGROUND

The Regional Board has reviewed the investigation reports prepared for the Site by Equipoise Corporation (Equipoise) on behalf of The Alhambra Office Community, LLC, and the Alhambra Residential Community LLC, including the report entitled *Soil Closure Risk Evaluation* dated May 24, 2016, and other relevant information regarding the Site. The following information was presented in the submitted reports:

1. From 1923 to 1965, CF Braun & Co. operated as an office, engineering, research laboratory and manufacturing facility of large ferrous metal components used in petroleum refineries and chemical processing plants from 1923 to 1965. CF Braun & Co. occupied the property between 1941 and 1967. CF Braun & Co. and Heat Transfer Research Inc. occupied the property between 1972 and 1977. In 1987, the site was listed as Santa Fe Braun Inc. Current onsite operations are limited to engineering and general office activities.
2. Multiple phases of investigation were conducted between 1999 and 2007. Regional Board staff provided workplan review and approval, subsurface characterization guidance, and field oversight efforts during the phases of work for Site A and Site B. A total of 138 soil samples and 219 soil

vapor samples were collected and analyzed during the Geomatrix, Equipoise, and Project Navigator investigations.

3. Groundwater is present beneath the adjacent property, Regional Board File No. 115.0098, at approximately 185 feet below ground surface. However no groundwater assessment was required on the subject Site based on the volatile organic compound (VOC) soil and soil vapor results that were limited in mass and/or attenuated with depth.
4. The recent assessment conducted by Equipoise included the collection of 25 soil and soil vapor samples including 4 soil samples for geophysical parameters. The soil and soil vapor samples were collected at 5 feet below ground surface (bgs) and 10 feet bgs.
5. Results of the Office of Environmental Health Hazard Assessment (OEHHA) review verified that that Site B use should be restricted to industrial commercial purposes.

On May 15, 2017, the Regional Board mailed the Site Cleanup Program – Notice of Opportunity to Comment – No Further Requirements (NFR) for Soils Only Determination with the execution of an environmental Land Use covenant (LUC, Deed Restriction) to you and interested parties. This notification requested the submission of comments pertaining to the NFR and environmental LUC designation for the Site by June 15, 2017. To date, the Regional Board has not received any comments regarding the proposed NFR.

#### **NO FURTHER REQUIREMENTS DETERMINATION**

Based upon a review of the information in the case file, Regional Board staff has determined that no further requirements are warranted for the Site with an environmental land use covenant (LUC, Deed Restriction). The NFR determination for the Site is made based upon the most current data contained in the case file. The NFR applies only to the known chemicals of concern that have been analyzed during the phases of subsurface investigations and with the provision that the information provided to the Regional Board is accurate and representative of site conditions.

If soil contamination is encountered during future site construction or redevelopment activities, the landowner is required to provide a verbal notification to this Regional Board immediately and submit a follow-up written report within 72-hours. In addition, appropriate health and safety measures must be fully implemented if conditions change.

Regional Board file information indicate that the groundwater in the vicinity of the Site is regionally impacted with VOCs and is being addressed by the United States Environmental protection Agency (USEPA) Superfund program.

#### **SOIL VAPOR PROBE DESTRUCTION**

All soil vapor probes must be removed and their respective boreholes shall be backfilled with a pre-hydrated bentonite/cement slurry and capped with concrete to match the existing surface. All necessary permits must be obtained from appropriate agencies prior to starting fieldwork. A report documenting the removal of soil vapor probes and surface restoration shall be submitted to the Regional Board 60 days following completion of the soil vapor probe removal and surface restoration work.

### **COST RECOVERY BILLING AND INVOICES**

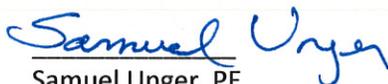

Please note that the Regional Board staff oversight charges for work associated with this No Further Requirements for Soils Only NFR and case review and evaluation package will be billed on invoices for the 2<sup>nd</sup>, 3<sup>rd</sup>, and 4<sup>th</sup> quarters of 2017 in the same manner as previously billed.

The jurisdictional requirements of other agencies, such as the USEPA, are not affected by the Regional Board's issuance of the NFR letter for the Site. Such agencies may choose to make their own determination concerning this Site.

We would like to take the opportunity to thank you for your full cooperation with the Regional Board during the course of the site assessment.

Should you have any questions regarding this matter, please contact Curt M. Charmley, Project Manager, at (213) 576-6774, [Curt.Charmley@waterboards.ca.gov](mailto:Curt.Charmley@waterboards.ca.gov), or Jeffrey Hu, Unit Chief, at (213) 576-6803, [Jeffrey.Hu@waterboards.ca.gov](mailto:Jeffrey.Hu@waterboards.ca.gov).

Sincerely,

  
Samuel Unger, PE  
Executive Officer

**2015 Annual Groundwater Monitoring and Sampling Event  
2215 West Mission Road  
Alhambra, California**

Dear Mr. Charmley:

Equipoise Corporation (Equipoise), on behalf of the Corner Company, is pleased to present this report documenting the annual groundwater monitoring and sampling event activities conducted during the fourth quarter of 2015 at the property located at 2215 West Mission Road (the Site) in Alhambra, California (Plate 1). The activities conducted during the quarter consisted of groundwater monitoring and sampling.

**Site Description**

The Site is located on the northwest corner of West Mission Road and Date Avenue in Alhambra, California (Plate 1). The Site consists of a single two-story commercial building and associated parking lots on approximately 1.6 acres of land in a commercial/industrial area.

**Groundwater Monitoring Well and Sampling Activities – December 2015**

Three groundwater monitoring wells (VMW-3, VMW-4, VMW-5) were monitored for depth to groundwater, purged, and sampled on December 16, 2015. Samples were analyzed for volatile organic compounds (VOCs) by EPA Test Method 8260B. The samples were sealed, labeled, recorded on chain-of-custody forms, placed in an ice-chilled cooler, and delivered to Eurofins Calscience Environmental Laboratories Inc. (Calscience) of Garden Grove, a State of California certified laboratory. Each of the on-site monitoring wells was sampled and gauged for depth to water. Analytical results and gauging data are presented in Table 1. Plate 2 presents the groundwater elevation contours for the fourth quarter of 2015. The groundwater flow direction changed from a northeasterly direction to a northwesterly direction. Laboratory data sheets are included as Attachment A.

**Analytical Results**

Results of groundwater samples collected in VMW-3, VMW-4, and VMW-5 indicate that VOCs were detected in samples collected from monitoring wells. Trichloroethene (TCE) is the primary constituent detected in all three groundwater samples analyzed. In summary:

- VMW-3: The TCE concentration detected in the sample collected from well VMW-3 was 54 micrograms per liter ( $\mu\text{g/L}$ ), the tetrachloroethene (PCE) concentration was 5.4  $\mu\text{g/L}$ , and the cis-1,2-dichloroethene (cis-1,2-DCE) concentration was 1.7  $\mu\text{g/L}$ ;

March 6, 2016  
Page 2 of 2

- VMW-4: The TCE concentration detected in the sample collected from well VMW-4 was 60 µg/L, the PCE concentration was 7.0 µg/L, and the cis-1,2-DCE concentration was 2.2 µg/L;
- VMW-5: The TCE concentration detected in the sample collected from up-gradient well VMW-5 was 62 µg/L, the PCE concentration was 4.9 µg/L, and the cis-1,2-DCE concentration was 3.1 µg/L.

Plate 3 presents a visual summary of groundwater analytical results. The groundwater concentration versus time plots for wells VMW-3, VMW-4, and VMW-5 are presented on Graphs 1 through 3, respectively. The graphs clearly illustrate stable and/or declining trends in TCE and PCE groundwater concentrations at the Site. Results of groundwater samples from well VMW-5 were relatively consistent with pre-December 2011 results, strongly suggesting that the TCE result from December 2011 was anomalous, as now indicated on the pertinent table and graph.

Based on the information above, Equipoise requests modifying the sample frequency to every other year from the current annual sample frequency. Please call either of the undersigned at (949) 366-0266 with any questions.

Very truly yours,

**EQUIPOISE CORPORATION**

Richard W. Blackmer, P.E.  
Principal Engineer

Kathryn Galang  
Staff Scientist

Notes:

µg/L = micrograms per liter

ND = Not Detected; Sample is below the reported limit of quantitation.

TCE = Trichloroethene

PCE = Tetrachloroethene

Freon 12 = Dichlorodifluoromethane

1,1-DCE = 1,1-Dichloroethene

cis-1,2-DCE = cis-1,2-Dichloroethene

1,2-DCA = 1,2-Dichloroethane

Monitoring well casings were surveyed for elevation based on a known City of Alhambra benchmark on January 22, 2004 by HB Surveying a State of California Licensed Land Surveyor.

ft amsl = feet above mean sea level

NS = Not sampled

\* = Data point considered to be an anomaly.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

**Work Order Narrative**

---

Work Order: 15-12-1232

Page 1 of 1

---

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 12/16/15. They were assigned to Work Order 15-12-1232.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Glossary of Terms and Qualifiers

Work Order: 15-12-1232

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

## 1 INTRODUCTION

On behalf of The Alhambra Office Community LLC and The Alhambra Residential Community LLC, Equipoise Corporation (Equipoise) submits this Soil Closure Risk Evaluation report for activities performed at 1000 South Fremont Avenue, Alhambra, California (Plate 1). The investigation activities were executed per the *Soil Closure Work Plan – Soil Vapor Confirmation Sampling* (Equipoise, 2015a), and the *Addendum to the Soil Vapor Confirmation Sampling Work Plan* (Equipoise, 2015b). The investigation was conducted in coordination with Regional Water Quality Control Board – Los Angeles (LARWQCB) staff.

Results of several previous field investigations performed at the property that are documented in the background section of this report indicated lead to a previous request for no further action. LARWQCB staff indicated that additional spatially distributed analytical data was required before they could concur with the results from previous assessments.

Therefore, the objective of the recent sampling effort was to provide sufficient spatially distributed analytical data characterizing the nature and extent of volatiles in subsurface soil vapor and provide high quality data for regulatory agency decision-making regarding the regulatory closure of the property under proposed future land use development conditions.

As illustrated in Plate 2, the 1000 South Fremont Avenue property is comprised of two distinct Assessor Parcel Identification Numbers, 5342-001-021 (Site A – Office Areas) and 5342-001-024 (Site B – Parking Areas). For the purposes of the risk screening evaluation, each of these legal parcels is being addressed separately in the presentation of recent investigation activities and subsequent risk screening.

The investigation activities performed in support of the following risk evaluation focused on soil and soil vapor sampling at both Site A and Site B. This scope of work was conducted to meet requirements for a “No Further Action” letter. Sampling efforts and the subsequent risk screening evaluation were performed by Equipoise in a manner consistent with applicable federal, state, and local risk assessment guidelines.

## 2 HISTORICAL SITE INVESTIGATIONS

Numerous soil and soil vapor investigations were performed at the Site between 1999 and 2007. This section provides a brief summary of the background information available for the soil and soil vapor investigation activities that have been performed at the Site. More details of the soil and soil vapor investigation discussed below are provided in the referenced technical reports.

Three of these investigations stand out because of the extensive nature of the scope of work of the investigation: Geomatrix Consultants, Inc. (Geomatrix) in 2002/2003; Equipoise in 2005; and Project Navigator, LTD (Project Navigator) in 2007. The Geomatrix investigation was performed site-wide as part of a property transfer. The Equipoise investigation was performed at locations of interest identified by the LARWQCB. The Project Navigator investigation further investigated specific locations identified by the LARWQCB and the United States Environmental Protection Agency (USEPA).

Please note that the discussion below regarding the results of the above combined investigations make reference to preliminary remediation goals (PRGs), risk based screening levels (RBSLs), and other nomenclature that is not readily used in 2016 but was pertinent regulatory screening criteria at the time of the submittals of the subject reports. These references are included to provide a more complete context of the logic used in data evaluation at the time of the preparation of the Geomatrix, Equipoise, and Project Navigator reports and the basis for the subsequent conclusions of the investigations. The soil vapor sampling activities and the human health risk screening evaluation discussed later in this report were performed to current regulatory criteria.

### 2.1 HISTORY OF INVESTIGATIONS

May 1999	Law Crandall performs Phase I Environmental Site Assessment for 1000 South Fremont Avenue and 2601 West Mission Road for Santa Fe (U.S. Holdings) (Law Crandall, 1999).
July 1999	Blasland, Bouck, and Lee (BBL) performed site investigation activities to support the prospective purchase of the Site (BBL, 1999a). The investigation included the following tasks: review of available agency records, figures, maps, drawings, and reports associated with previous/current environmental conditions regarding the subject property and adjacent properties; a site reconnaissance to further identify potential areas of environmental concern; a subsurface soil investigation based on the findings of the document review and site walk over; and a building material survey including sampling for asbestos containing material (ACM), lead-based paint and other building materials of environmental concern.
November 1999	BBL completes soil investigation in the former manufacturing area (BBL, 1999b). Six soil sampling locations were drilled and 24 soil samples were collected at depths of 3, 5, 10 and 15 feet below ground surface (feet bgs). Soil samples were analyzed for CAM 17 Metals using USEPA Test Method 6010 and results were within anticipated background concentrations for all metals.
December 2000	BBL performs Phase I Environmental Site Assessment for 1000 South Fremont Avenue (BBL, 2000).

- February 2003 USEPA sends letter “Request for Information – Area 3 Operable Unit – San Gabriel Valley Superfund Sites, East Los Angeles County, California” dated February 10, 2003.
- March 2003 Geomatrix (on behalf of iStar Financial, Inc. the lender on the property at the time) performs Phase II Environmental Site Assessment for The Alhambra Campus, 1000 and 1101 South Fremont Avenue and 2215 and 2601 West Mission Road (Geomatrix, 2003). Conclusions from these activities indicated the following:
- 1) With the exception of the samples collected in the vicinity of the former Charter property (2215 W. Mission Road), the concentrations of constituents detected during Geomatrix’s assessment were all below regulatory screening levels used at the time of the assessment (RBSLs and PRGs), except for arsenic, which was within the range of background concentrations for California soils.
  - 2) Concentrations of tetrachloroethene (PCE) in shallow soil gas exceed the industrial RBSL for PCE areas of the Site to the west and north of the Charter property.
  - 3) Constituents including petroleum hydrocarbons and volatile organic compounds (VOCs) were detected at several locations across the site. The majority of the detections were low and below regulatory screening levels.
- April 2003 Submittal of response to USEPA letter “Request for Information – Area 3 Operable Unit – San Gabriel Valley Superfund Sites, East Los Angeles County, California” dated February 10, 2003.
- April 2005 California Regional Water Quality Control Board – Los Angeles Region requires preparation of a “Soil Vapor Survey work plan, 1000 South Fremont, Alhambra, California” for the seven areas identified within the letter dated April 8, 2005. The locations of interest identified by the LARWQCB are:
1. 1101 South Fremont Avenue;
  2. Northeast portion of 1000 South Fremont;
  3. Former Sump/Clarifier and Gas Fractionation/Distillation Unit;
  4. Southwest Corner – Adjacent Areas to 2215 West Mission Road;
  5. Incinerator Locations;
  6. 61,500 Gallon Diesel Tank; and
  7. 20,000 Gallon Solvent Tanks.
- May 2005 A Soil Vapor Survey Work Plan responsive to the following locations is submitted to LARWQCB by Equipoise on behalf of the property owner:
- Northeast portion of 1000 South Fremont;
  - Former Sump/Clarifier and Gas Fractionation/Distillation Unit;
  - Southwest Corner – Adjacent Areas to 2215 West Mission Road;
  - Incinerator Locations;
  - 61,500 Gallon Diesel Tank;

Regarding 1101 South Fremont: The LARWQCB was informed that this property was owned by a different entity.

Regarding the 20,000 Gallon Solvent Tank: The LARWQCB required

sampling be performed at the reported locations of the two 20,000 gallon solvent tanks located at 2400 West Orange Street. This address no longer is associated with any existing building or facility, but corresponds with the Site's northern boundary along Orange Street. Review of the Sanborn map for 1950 indicated a property outline for 2400 West Orange Street. Existing permits on file found from the Los Angeles County Department of Public Works (LACDPW) indicate that the tanks were operated by Union Oil Company from 1930 to 1932. Note: If these tanks were ever installed, they likely contained mineral spirits or toluene, not chlorinated solvents because chlorinated solvents had not been developed at the time of these permits.

As Union Oil Company (UNOCAL) is still a viable entity, it was requested that the LARWQCB contact UNOCAL to investigate their former operations.

- July 2005 LARWQCB approves Soil Vapor Survey work plan submitted by Equipoise.
- July - October 2005 Equipoise implemented the field activities as outlined in the Soil Vapor Survey work plan.
- November 2005 *Soil Vapor Survey and Soil Matrix Sample Results, 1000 South Fremont, Alhambra, California* report (Equipoise, 2005) is submitted to LARWQCB. The report shows that with the exception of results from soil vapor probe SG-21, the maximum detected concentrations of PCE and trichloroethene (TCE) are 8.8 and 1.7 microgram per liter (ug/L), respectively. Soil vapor probe SG-21 is the closest survey point on 1000 S. Fremont Avenue to the soil vapor plume from the adjacent property (2215 W. Mission Road) and results at this location are attributable to that property. Based on these results, additional soil vapor survey activities were not recommended.
- October 2006 LARWQCB issues a Technical Report Requirement letter to Mr. Dick Denney, counsel for Santa Fe Corporation, for the 1000 South Fremont property. The LARWQCB requires a work plan to perform a soil and soil vapor investigation, implementation of the work plan, and a report documented field activities and that results are provided to the LARWQCB.
- December 2006 LARWQCB provides comments on *Soil Vapor Survey and Soil Matrix Sample Results* report submitted by Equipoise in November 2005 (Equipoise, 2005) and describes requirements for additional investigative activities.
- January 2007 Equipoise, submits a Response to the LARWQCB December 2006 letter regarding requirements for additional investigative activities. The response letter clarifies that Santa Fe Braun, a successor to the historical owner, will prepare the work plan requested of both parties.
- June 2007 Project Navigator, on behalf of Santa Fe Braun, submits the *Final Supplemental Subsurface Investigation work plan, Former C.F. Braun & Co., 1000 South Fremont, Alhambra, California 91803*, to the LARWQCB in response to letter of October 2006.

March 2008 Project Navigator, on behalf of Santa Fe Braun, submits the *Supplemental Subsurface Investigation Report, 1000 South Fremont, Alhambra, California* (Project Navigator, 2008) to the LARWQCB. The report indicates that the LARWQCB requests for additional investigation have been fulfilled and that VOC contamination is not present in the subsurface soils, and therefore, could not have contributed to the presence of VOCs in groundwater. The report recommends No Further Action at the site and requests that the LARWQCB grant a No Further Requirements letter at its earliest convenience.

April 2008 Project Navigator, on behalf of Santa Fe Braun, submits the Case Review Form to the LARWQCB. The Case Review Form is the internal LARWQCB document used by the LARWQCB Project Manager as part of the backup documentation for a case closure request.

June 2015 Equipoise submits the *Soil Closure Work Plan, Soil Vapor Confirmation Sampling, 1000 South Fremont Avenue* to the LARWQCB. The field work is implemented in November 2015 and February 2016 and results are presented later in this report.

## 2.2 RESULTS OF GEOMATRIX INVESTIGATION - 2002 AND 2003

Geomatrix conducted soil vapor and soil investigations at fifteen locations on-site and off-site. The results of those investigations were summarized by Geomatrix and are excerpted in tables provided in the work plan (Equipoise 2015a). The tables are organized by the 15 areas identified in the Geomatrix report. The table below shows the number of borings and the results of the analysis of the samples collected in comparison to the applicable PRGs, RBSLs and/or background concentrations.

Geomatrix Investigation	Total Samples Collected	Samples Above PRGs, RBSLs, and/or Background from on-site sources at Time of the Geomatrix 2003 Report <sup>1</sup>
Soil	37	0
Soil Vapor	93	7

### 2.2.1 *Soil Analytical Results*

A total of 37 soil samples were collected from 17 locations and analyzed using a combination of the following USEPA Test Methods:

---

<sup>1</sup> Please note that the discussion of this investigation references PRGs, RBSLs, and other nomenclature that is not readily used in 2016 but was pertinent regulatory screening criteria at the time of the submittals of the reports. These references are included to provide a more complete context of the logic used in data evaluation and the basis for the subsequent conclusions of the investigations.

- USEPA Test Method 6010B: Metals
- USEPA Test Method 7471: Mercury
- USEPA Test Method 7199: Hexavalent Chromium
- USEPA Test Method 9045C: pH
- USEPA Test Method 8015B: TPHcc (Total Petroleum Hydrocarbons – carbon chain)
- USEPA Test Method 8260B: VOCs
- USEPA Test Method 8270C: Semi-VOCs (Semi-volatile organic compounds)
- USEPA Test Method 8081A: Pesticides
- USEPA Test Method 8082: Polychlorinated Biphenyls (PCBs)
- USEPA Test Method 8151A: Herbicides
- USEPA Test Method 314.0: Perchlorate
- GC/MS Isotope Dilution: Dioxins

Soil samples were collected from depths ranging from 1.5 to 20 feet bgs<sup>2</sup>. The table below shows the number of soil samples, the number of detections, and that none of the analyses from of the results of the soil samples were above regulatory limits.

<b>Compound</b>	<b>Total Samples</b>	<b>Samples with Detection</b>	<b>Samples Greater Than Regulatory Limits at Time of the Geomatrix 2003 Report</b>
Arsenic	17	17	No
Heavy Metals	17	17	No
TPHcc	14	9	No
VOCs	26	0	No
PCE	26	3	No
TCE	26	0	No
Xylene	26	1	No
SVOCs	9	0	No
Pesticides	19	0	No
PCBs	19	0	No
Herbicides	6	0	No
Perchlorate	6	1	No
Dioxins	6	0	No

The results of the analyses for the soil samples collected are summarized below:

- Arsenic occurrences fall within the range of background concentrations in California soils.

---

<sup>2</sup> Details of soil sample collection depth: 15 samples from depth 1 to 4 feet bgs; 19 samples from depths 5 to 8 feet bgs; 8 samples from depths 9 to 14 feet bgs; 12 samples from depths 14 to 18 feet bgs; and 13 samples from 19 to 20 feet bgs.

- Heavy metal concentrations (except arsenic) were below both their respective industrial and residential soil PRG.
- TPH hydrocarbon distribution components were below regulatory limits for diesel range hydrocarbons where depth to water is greater than 150 feet bgs.
- PCE results detected in the soil analytical results were below residential RBSL values.
- TCE was not detected in the soil analytical results.
- Xylene results detected in the soil analytical results were below residential RBSL values.
- SVOCs were not detected in the soil analytical results
- Pesticides were not detected in the soil analytical results
- PCBs were not detected in the soil analytical results
- Perchlorate result detected in the soil analytical results was below residential RBSL values
- Dioxins were not detected in the soil analytical results

The Geomatrix investigation concluded that all concentrations of constituents detected in soil samples were below RBSLs or PRGs, with the exception of arsenic, which was within the range of background concentrations (Geomatrix, 2003).

### 2.2.2 Soil Vapor Analytical Results

A total of 93 soil vapor samples (including duplicates) were collected from 43 locations. Samples were analyzed, using USEPA Method 8260B, after collection from depths between:

- 5 and 9 or 11 feet bgs from two locations,
- 15 and 25 feet bgs from 43 locations, and
- 3.5 feet bgs at one location.

The table below shows the number of borings and the results of the analysis of the soil vapor samples collected in terms of residential RBSLs.

Compound	Total Samples	Samples with Detection	Samples Greater than Regulatory Limits at the Time of the Geomatrix 2003 Report
PCE	93	25	23
TCE	93	16	6
1,1-DCE (1,1-dichloroethene)	93	5	5
Freon 12	93	6	0
Freon 113	93	8	0
Toluene	93	24	0

Ethylbenzene	93	1	0
Xylene	93	4	0

The results of the analyses for the soil vapor samples collected are summarized below:

- Six of the soil vapor PCE analytical results (with a maximum concentration of 14 ug/L) above the RBSL are from sample locations SG-9, SG-10, and SG-39 which were located near the former machine shop in the parking lot north of the 2215 W. Mission Road property.
- The remaining 17 of the 23 soil vapor PCE analytical results above the RBSL are from sample locations SG-2 through SG-8, SG-37, and SG-38 which are immediately north or west of the 2215 W. Mission Road property and these concentrations are attributable to the 2215 W. Mission Road property.
- The 6 soil vapor TCE analytical results above the RBSL are from sample locations SG-2 through SG-8, SG-37, and SG-38 which are immediately north or west of the 2215 W. Mission Road property and these concentrations are attributable to the 2215 W. Mission Road property.
- Two of the soil vapor 1,1-DCE analytical results (with a maximum concentration of 1.1 ug/L) above the RBSL are from sample locations SG-9 and SG-10 which were located near the former machine shop in the parking lot north of the 2215 W. Mission Road property. An additional sample result (with a maximum concentration of 1.1 ug/L) was at sample location SG-18 which was located near the former paint spraying area in the northeast corner of the property.
- Both of the remaining soil vapor 1,1-DCE analytical results above the RBSL, are from sample location SG-38 which is immediately north of the 2215 W. Mission Road property and these concentrations are attributable to the 2215 W. Mission Road property.

Concentrations of PCE and/or 1,1-DCE in soil vapor exceeded the residential RBSL in 7 out of 93 samples for areas of the Site not attributed to the 2215 W. Mission Road property. An additional 17 locations where concentrations of PCE, TCE, and/or 1,1-DCE in soil vapor exceed the residential RBSL are immediately west and north of the 2215 W. Mission Road property and have been attributed to the 2215 W. Mission Road property.

Please note that the locations identified above (north and west of the 2215 W. Mission Road property, the former machine shop, and the former paint spraying area) where PCE, TCE, and 1,1-DCE were detected above the RBSL were further investigated as part of the 2005 Equipoise investigation and the 2007 Project Navigator investigation. In addition, it should be noted that the 2002/2003 Geomatrix Investigation was performed prior to implementation of remediation activities at the 2215 W. Mission Road property. In July 2003, an extensive soil vapor extraction (SVE) remediation program was implemented using multiple wells with multiple extraction zones, The SVE system operated at the 2215 W. Mission Road property for approximately 42 months between July 2003 and December 2006. The SVE remediation system operations dramatically reduced the VOC concentrations in soil vapor probes. Details of the remediation system activities are presented in numerous reports submitted to the LARWQCB for the 2215 W. Mission Road property and this property had a No Further Action letter issued by the LARWQCB.

## 2.3 RESULTS OF EQUIPOISE INVESTIGATION - 2005

The LARWQCB identified six areas of interest on the Site following the review of the Geomatrix report and required that the property owner conduct further investigation at the identified locations (Geomatrix, 2003). Equipoise, on behalf of the property owner, investigated five of these locations in 2005. The one location not investigated was the potential tanks at the former Union Oil facility that was identified by the USEPA described previously. The table below shows the number of borings and the results of the analysis of the samples collected in terms of PRGs, RBSLs and/or background concentrations, as applicable.

<b>Equipoise Investigation</b>	<b>Total Samples Collected</b>	<b>Samples Above PRGs, RBSLs, and/or Background from on-site sources at the Time of the Equipoise 2005 Report<sup>3</sup></b>
Soil	10	0
Soil Vapor	59	0

The following sections present the results of the analysis of the soil and soil vapor samples.

### 2.3.1 Soil Vapor Analytical Results

A total of 59 soil vapor samples were collected from 24 locations. Samples were analyzed, using USEPA Method 8260B, after collection from depths between:

- 5 and/or 15 feet bgs from three locations,
- 15 and 25 feet bgs from twenty locations, and
- 15 to 60 feet bgs at one location.

The table below shows the number of borings and the results of the analysis of the soil vapor samples collected in terms of RBSLs.

<b>Compound</b>	<b>Total Samples</b>	<b>Sample with Detections</b>	<b>Samples Greater Than Regulatory Limits at the Time of the Equipoise 2005 Report</b>
PCE	59	18	6
TCE	59	1	No
cis-1,2-DCE (cis-1,2-dichloroethene)	59	1	No
Freon 11	59	1	No
Freon 113	59	1	No

---

<sup>3</sup> Please note that the discussion of this investigation reference PRGs, RBSLs, and other nomenclature that is not readily used in 2016 but was pertinent regulatory screening criteria at the time of the submittals of the reports. These references are included to provide a more complete context of the logic used in data evaluation and the basis for the subsequent conclusions of the investigations.

BTEX (benzene, toluene, ethylbenzene, xylene)	59	0	No
---	----	---	----

The results of the analyses for the 59 soil vapor samples collected are summarized below:

- PCE was detected in 18 of the 59 soil vapor analytical results.
- TCE was detected in 1 of the 59 soil vapor analytical results with a maximum concentration of 1.7 ug/L from a sample from soil vapor probe SG-22. Soil vapor probe SG-22 is immediately north of the 2215 W. Mission Road property and this TCE result in this soil vapor probe is attributable to activities associated with the 2215 W. Mission Road property.
- cis-1,2-DCE was detected in 1 of the 59 soil vapor analytical results with a maximum concentration of 2.1 ug/L from a sample from soil vapor probe SG-22. Soil vapor probe SG-22 is immediately north of the 2215 W. Mission Road property and this cis-1,2-DCE result in this soil vapor probe is attributable to activities associated with the 2215 W. Mission Road property.
- Freon 11 was detected in 1 of the 59 soil vapor analytical results with a maximum concentration of 2.1 ug/L.
- Freon 113 was detected in 1 of the 59 soil vapor analytical results with a maximum concentration of 1.1 ug/L.
- BTEX components were not detected in any of the 59 soil vapor analytical results.

The summary of the soil vapor detections for PCE is as follows:

- PCE results for 41 out of 59 samples were below the laboratory detection limit of 1.0 ug/L.
- PCE results for 10 out of 59 samples were between 1.0 and 1.4 ug/L.
- PCE results for 2 out of 59 samples that were between 1.4 and 10 ug/L are from samples from soil vapor probe SG-22. Soil vapor probe SG-22 is immediately north of the 2215 W. Mission Road property and the PCE results in this soil vapor probe are attributable to activities associated with the 2215 W. Mission Road property.
- The remaining 6 samples were collected from multiple depths of the nested soil vapor probe SG-21. Soil vapor probe SG-21 was the closest point on the Site to the former soil vapor plume from the adjacent property and the PCE concentrations results in this soil vapor probe are attributable to activities associated with the 2215 W. Mission Road property. The maximum detected PCE concentration from soil vapor probe SG-21 was 33 ug/l at 40 feet.

### 2.3.2 Soil Analytical Results

A total of 10 soil samples were collected from 4 locations and were analyzed using the USEPA Test Methods below:

- USEPA Test Method 6010B: Metals
- USEPA Test Method 7471: Mercury
- USEPA Test Method 8015B: TPHcc (Hydrocarbon Distribution)
- USEPA Test Method 8082: PCBs
- USEPA Test Method 8260B: VOCs

- USEPA Test Method 8310: PAHs
- USEPA Test Method 8290: Dioxins and Furans

Soil samples were collected from depths of 10, 15 and 20 feet bgs from the diesel tank locations and from 5 and 10 feet bgs from the incinerator locations. The table below shows the number of soil samples, those with detections, and results of the analyses, which indicated that none of the soil samples were above regulatory limits.

<b>Compound</b>	<b>Total Samples</b>	<b>Samples with Detections</b>	<b>Samples Greater Than Regulatory Limits at the Time of the Equipoise 2005 Report</b>
BTEX	10	0	No
TPHcc	6	0	No
Arsenic	4	3	No
Heavy Metals	4	4	No
PCE	10	0	No
TCE	10	0	No
cis-1,2-DCE	10	0	No

The results of the analyses for the soil samples collected are summarized below:

- PCE was not detected in the soil analytical results.
- TCE was not detected in the soil analytical results.
- cis-1,2-DCE was not detected in the soil analytical results.
- Freon 11 and 113 were not detected in the soil analytical results.
- BTEX components were not detected in the soil analytical results.
- TPH components were not detected in the soil analytical results.
- PAHs were not detected in the soil analytical results
- PCBs were not detected in the soil analytical results
- Dioxins and furans were not detected in the soil analytical results
- Heavy metal concentrations (except arsenic) were below both their respective industrial and residential soil PRG
- Arsenic occurrences fall within the range of background concentrations in California soils

The 2005 Equipoise investigation concluded that all concentrations of constituents in soil and soil vapor detected were below RBSLs or PRGs, with the exception of PCE concentrations in soil vapor probe SG-21 which is the closest point on the Site to the soil vapor plume from the adjacent 2215 W. Mission Road property and the PCE exceedances of the occupational RBSL from the 6 samples were attributable to

activities associated with the 2215 W. Mission Road property. The area near soil vapor probe SG-21 was further investigated as part of the Project Navigator investigation.

## **2.4 RESULTS OF PROJECT NAVIGATOR INVESTIGATION - 2007**

In a December 6, 2006 letter, the LARWQCB identified three areas of potential concern (APC) to be further investigated:

- APC-A,
- APC-B, and
- APC-C.

These areas are oriented north-south and roughly divide the Site into three strips (“A” is the westernmost and “C” is the easternmost) to be used for location purposes. The central “B” strip encompasses the major manufacturing building that previously existed on the historic land use or other activities were identified for soil or soil vapor assessment by the LARWQCB. The LARWQCB stated that although there had been several phases of investigative site characterization of soil matrix and soil vapor profiling undertaken by the current property owners, additional characterization was required to make a determination of environmental impact from past Site operations. The LARWQCB’s specific requirements were to:

- Provide additional information in order to determine whether or not soil contamination was present in the subsurface soil, and
- Whether or not a release of VOCs occurred that posed a threat to the groundwater quality beneath the Site. The LARWQCB requested that a shallow soil investigation and an enhanced soil vapor survey be conducted in the APC. Furthermore, the LARWQCB specified the locations for the borings in relation to the APC.

APC-A included the following areas and associated former structures:

- The drum storage area on the north side of Building B-3,
- The fuel oil tank near the northwest corner of Building B-3,
- The sump/clarifier/UST between Buildings B-2 and B-3,
- The auto shed areas,
- The location of the 61,500-gallon diesel underground storage tank (UST) southwest of Building A-13,
- The power generating plant,
- The machine shop, and
- The research laboratory.

APC-B includes the following areas and associated former structures:

- The north end of the former factory building and nearby railroad alignment,
- The location of the reported former 20,000- gallon solvent tank in the area of 2400 W. Orange Street (the former Union Oil location),
- The location of the current cooling tower in the northern parking area,

- The southern portion of the former factory building, and
- The location of the former south cooling tower.

APC-C includes the following areas and associated former structures:

- The paint spray booth, machine shop, and the middle paint spray booth, and
- Areas surrounding the southeast corner of the Site near 2215 West Mission Road facility.

#### **2.4.1 Scope of Work**

The Project Navigator investigation consisted of 30 shallow borings (shallow soil investigation) and four deep (to 100 feet bgs) borings (enhanced soil vapor investigation). Boring location selection was at the direction of the LARWQCB and was based on the LARWQCB's identification of the APC areas, described above, with emphasis on those areas that were not extensively reviewed in the previous investigations. Activities during the Project Navigator investigation included drilling, sampling and analysis of soil matrix and soil vapor as described in the following subsections.

**Shallow Borings:** Soil samples were planned for collection at depths of 15 and 50 feet bgs. However, a number of the borings showed refusal at less than the planned total depth. When refusal occurred, samples were collected from the deepest penetration achieved. A total of 67 soil vapor samples were collected from 32 locations. Samples were analyzed, using USEPA Test Method 8260B, after collection from depths between:

- 15 and 50 feet bgs from 28 locations, and
- 25 and 100 feet bgs from the remaining four locations.

**Deep Borings:** Vapor sample collection was facilitated by the well construction using dedicated, nested probes. The four 100-ft borings contained nested probes that were sampled at least two weeks after drilling. Samples were withdrawn and analyzed using the same technique as described above for the shallow borings. Analysis of soil vapor samples was performed using a mobile laboratory.

A total of 91 soil samples were collected from thirty-four locations and analyzed using the USEPA Test Methods below:

- USEPA Test Method 6010B: Metals
- USEPA Test Method 8015B: TPH as Gasoline, Diesel, Crude
- USEPA Test Method 8082: PCBs
- USEPA Test Method 7471: Mercury
- USEPA Test Method 8260B: VOCs
- USEPA Test Method 8270C: SVOCs

Samples were collected from depths between 15 and 50 feet bgs from 30 locations and from depths between 10 and 100 feet bgs from the remaining four locations. Soil matrix samples were analyzed using USEPA Test Method 8015B (M).

#### **2.4.2 Analytical Results**

The following sections present the results of the analysis of the soil and soil vapor samples.

<b>Project Navigator Investigation</b>	<b>Total Samples Collected</b>	<b>Samples Above RBSLs at the Time of the Project Navigator 2008 Report<sup>4</sup></b>
Soil Vapor	67	0
Soil	91	0

Soil vapor samples were analyzed for VOCs, BTEX and/or TPH. The table below shows the number of borings and the results of the analysis of the samples collected in terms of RBSLs. The results of the analyses showed that all compounds were below the laboratory detection limits for the 67 samples taken and summarized in the table below.

<b>Compound</b>	<b>Total Samples</b>	<b>Samples with Detections</b>	<b>Samples Greater Than Regulatory Limits at the Time of the Project Navigator 2008 Report</b>
PCE	67	0	No
TCE	67	0	No
cis-1,2-DCE	67	0	No
BTEX	67	0	No
All other compounds	67	0	No

Soil samples were analyzed for a wide range of compounds. The table below shows the number of samples, those with detections, and results of the analyses, which indicated that none of the samples were above regulatory limits.

<b>Compound</b>	<b>Total Samples</b>	<b>Samples with Detections</b>	<b>Samples Greater Than Regulatory Limits at the Time of the Project Navigator 2008 Report</b>
BTEX	91	12	No
TPH	91	39	No
Arsenic	91	21	No
Heavy Metals	91	23	No
Naphthalene	91	1	No
PCE	91	0	No
TCE	91	0	No
cis-1,2-DCE	91	0	No

---

<sup>4</sup> Please note that the discussion of this investigation references PRGs, RBSLs, and other nomenclature that is not readily used in 2015 but was pertinent regulatory screening criteria at the time of the submittals of the reports. These references are included to provide a more complete context of the logic used in data evaluation and the basis for the subsequent conclusions of the investigations.

The results of the analyses generally show compounds to be below the laboratory detection limits and are summarized as follows:

- BTEX (benzene, ethylbenzene, o-xylene, p/m-xylene and toluene) was detected in 12 of the 91 soil samples taken from 6 of the 34 soil sampling locations at concentrations between 0.85 and 27 milligrams per kilogram (mg/kg). However, all concentrations were below their respective PRG for both industrial and residential soil as well as soil screening levels for groundwater, where available
- Hydrocarbons (C7-C36 Total) were detected in 39 of the 91 soil samples taken from 20 of the 34 soil matrix sampling locations at concentrations between 0.0012 and 32 mg/kg. However, all concentrations were below the Board's regulatory requirements (100 mg/kg gasoline and 1,000 mg/kg for diesel). No hydrocarbons were detected at the location of the diesel tank (boring A-5-1) or the solvent tank (borings B-1-2, B-1-3 and B-1-4) investigated in this study.
- Arsenic was detected in 21 of the 91 soil samples taken from 13 of the 34 soil sampling locations at concentrations between 0.813 and 3.73 mg/kg. Twelve of the 20 soil samples had arsenic in concentrations above the industrial soil PRG. However, the arsenic occurrences fall within the range of background concentrations in California soils<sup>5</sup>.
- Heavy metals (barium, total chromium, cobalt, copper, lead, mercury, molybdenum, nickel, vanadium and zinc), were detected in 23 of the 91 soil samples taken from 14 of the 34 soil matrix sampling locations at concentrations between 0.119 and 96.4 mg/kg; however, all concentrations were below both their respective industrial and residential soil PRG as well as soil screening levels for groundwater, where available.
- Naphthalene was detected in 1 of the 91 soil samples taken from 1 of the 34 soil matrix sampling locations at a concentration of 0.85 mg/kg. However, the concentration was below both the industrial and residential soil PRG as well as soil screening levels for groundwater, where available. Low concentrations of arsenic, heavy metals, hydrocarbons, BTEX and naphthalene were detected in soil samples. In summary, all concentrations were below their respective PRG for both industrial and residential soil and as well as soil screening level for groundwater, where available, with the exception of arsenic.
- PCE was not detected in any of the soil analytical results.
- TCE was not detected in any of the soil analytical results.
- cis-1,2- DCE was not detected in any of the soil analytical results.

---

<sup>5</sup> The assertion that the detected arsenic concentration results at the Site are naturally occurring background conditions is further supported by a technical paper prepared by California Department of Toxic Substances Control (DTSC) risk assessment professionals in 2005 titled, *Determination of a Southern California Regional Background Arsenic Concentration in Soil*. Results of this paper suggest that in Southern California, six (6) mg/kg is a conservative screening number for evaluating arsenic as a chemical of concern.

## 2.5 COMBINED INVESTIGATION CONCLUSIONS AND RECOMMENDATIONS

### 2.5.1 Conclusions

A total of 138 soil samples and 219 soil vapor samples were taken during the Geomatrix, Equipoise and Project Navigator investigations. The results of the soil analyses indicated that all compounds were below PRGs and/or background for all 138 soil samples, and soil vapor analyses indicated all compounds were below RBSLs for 195 samples. The Geomatrix investigation concluded that all concentrations of constituents detected were below RBSLs or PRGs, with the exception of arsenic, which was within the range of background concentrations for California Soils, and those samples collected in the vicinity of the 2215 W. Mission Road property. Concentrations of PCE and TCE in shallow soil gas did exceed the industrial RBSL in 18 out of 93 samples for areas of the Site to the west and north of the 2215 W. Mission Road property. The Equipoise investigation concluded that all concentrations of constituents detected were below RBSLs or PRGs, with the exception of soil vapor probe SG-21. Within probe SG-21, concentrations of PCE in shallow soil gas did exceed the industrial RBSL in 6 samples. However, soil vapor probe SG-21 is the closest point on the Site to the soil vapor plume from the adjacent 2215 W. Mission Road property and Equipoise believes that the PCE exceedances from the 6 samples are attributable to activities associated with the 2215 W. Mission Road property that have been addressed by operation of an existing SVE system at that location.

The Project Navigator investigation concluded that all concentrations of constituents detected were below RBSLs or PRGs and/or within background concentrations for the 67 soil vapor and 91 soil samples. In total, 138 soil and 195 soil vapor samples taken from the 3 above-mentioned investigations, indicated that no samples had any constituents above PRGs and/or background for soil and the remaining 24 soil vapor samples had constituents above RBSLs, but were all related to the adjacent 2215 W. Mission Road property.

<b>Geomatrix Investigation – 2002/2003</b>	<b>Total Samples Collected</b>	<b>Samples Above RBSLs at the Time of the Project Navigator 2008 Report</b>
Soil Vapor	93	7
Soil	37	0

<b>Equipoise Investigation - 2005</b>	<b>Total Samples Collected</b>	<b>Samples Above RBSLs at the Time of the Project Navigator 2008 Report</b>
Soil Vapor	59	0
Soil	10	0

<b>Project Navigator Investigation - 2007</b>	<b>Total Samples Collected</b>	<b>Samples Above RBSLs at the Time of the Project Navigator 2008 Report</b>
Soil Vapor	67	0
Soil	91	0

### **2.5.2 Recommendation**

The Project Navigator investigation found no detections of VOCs in any soil vapor samples and values less than the industrial and residential PRG or within the range of background concentrations for all soil samples.

The stated purpose of the Project Navigator investigation was to: *provide additional information in order to determine whether or not soil contamination was present in the subsurface soil and whether or not a release of VOCs occurred that posed a threat to the groundwater quality beneath the Site.*

During the Project Navigator investigation:

- Detections of other compounds in soil were either below residential/industrial PRGs, or soil levels for groundwater, or were within background for California soils.
- The soil and enhanced soil vapor investigations resulted in no detection of VOCs.

Therefore, the Project Navigator investigation:

- Fulfilled the LARWQCB's request for additional investigations, at locations specified by the LARWQCB, and
- Has shown that VOC contamination is not present in the subsurface soils and there is no evidence of any release at the Site.

### **3 SOIL VAPOR PROBE INSTALLATION AND SAMPLING ACTIVITIES**

The objective of the recent sampling effort was to provide sufficient spatially distributed analytical data characterizing the nature and extent of volatiles in subsurface soil vapor and provide high quality data for regulatory agency decision-making regarding the long-term protection of human health and the issuance of a No Further Action letter under proposed future land use development conditions at Site A (Office Areas) and Site B (Parking Areas). Soil vapor sampling was conducted in accordance with the procedures and methodologies documented in the *Advisory – Active Soil Gas Investigations, Department of Toxic Substance Control, July 2015* (Cal/EPA, 2015); and the *Soil Closure Work Plan – Soil Vapor Confirmation Sampling* (Equipoise, 2015a) approved by the LARWQCB. Figure 1 (below) presents the data collection scope of work that was completed, per the work plans (Equipoise, 2015a and 2015b).

#### **3.1 BORING LOCATION MARK OUT**

A 10-foot radius was surveyed around each boring location using electromagnetic and ground penetrating radar (GPR) technologies in order to ensure the safety of the field crew during the drilling event and to prevent damage to utilities. Subsurface features were marked, and proposed locations were adjusted if anomalous subsurface features were identified. Plate 3 presents the discrete soil and soil vapor sampling locations following adjustment for underground structures.

#### **3.2 SOIL SAMPLING AND RESULTS**

Prior to drilling, borings were hand augered to five feet bgs. Soil borings were advanced with a direct push drill rig from 5 to 10 feet bgs. Upon retrieval, the soil in the hand auger or acetate sleeve was logged by the on-site scientist in accordance with the Unified Soil Classification System (USCS), screened for the presence of VOCs using a photoionization detector (PID) and recorded on the field boring logs. Boring logs are presented in Appendix A. Acetate sleeve samples collected for chemical analysis were capped with Teflon<sup>®</sup> sheets, labeled, and placed in a cooler maintained at approximately four degrees Celsius (4°C). Soil samples were then transferred, under chain-of-custody procedures, to Eurofins-Calscience Environmental Laboratories, Inc. (Calscience) for analysis by USEPA Test Method 8260B.

Additional soil samples at select locations (APC-B-SB-B2/SVP2, APC-B-SB-B5/SVP5, APC-C-SB-B8/SVP8, and APC-C-SB-B9/SVP9) were collected for testing of soil physical parameters (Plate 3). The soil physical parameter samples were capped with Teflon<sup>®</sup> sheets, labeled, and placed in a separate ice-chilled cooler. Samples were transferred under chain-of-custody procedures to PTS Laboratories for analysis of California Environmental Protection Agency (Cal/EPA) DTSC Vapor Transport Package (Johnson-Ettinger) physical parameters. This analysis is comprised of air permeability, porosity (total and water filled), volumetric air and water, moisture content, intrinsic permeability/hydraulic conductivity, grain density, dry bulk density, total organic carbon (toc), and soil classification.

**Figure 1 Project Scope**

Sample Locations	Sample Depth (feet)	General Location	Rationale	Soil Vapor Analysis	Soil Chemical Analysis	Soil Physical Analysis
B1/SVP1	5, 10	APC-B Northern Portion	Sample locations within footprint of former large manufacturing building; north of existing building	X	X	
B2/SVP2	5, 10			X	X	X
B3/SVP3	5, 10			X	X	
B4/SVP4	5, 10	APC-B Southern Portion	Sample locations within footprint of former large manufacturing building; south of existing building	X	X	
B5/SVP5	5, 10			X	X	X

B12**	5	APC-A Southern Portion		--	X	
B13/SVP13	5, 10			X	X	

\* B9/SVP9 a supplemental soil physical sample was collected to address observed soil variability.

\*\* B12 was completed to 8 feet bgs and not sampled for soil vapor because a sewer line was hit during drilling activities.

**3.2.1 Site A (Office Areas) Soil Sampling and Results**

Soil sampling activities at Site A were performed on November 20 and 21, 2015 by Equipoise. Soil samples were collected at 5 and 10 feet bgs for chemical analysis at each sample locations proposed in the LARWQCB-approved work plans (Equipoise, 2015a and 2015b) with the exception of ACP-A-SB-B12 (Plate 3). ACP-A-SB-B12 was limited to a single soil sample at 5 feet bgs because of wet utilities located between 5 and 10 feet. VOCs were not detected above their respective reporting limits in any of the Site A

soil samples analyzed during this investigation. Soil sample analytical results for VOCs are summarized in Table 1 with laboratory analytical reports and supporting chain-of-custody documentation provided in Appendix B.

Soil physical parameter samples were collected from three locations (APC-B-SB-B2/SVP2, APC-B-SB-B5/SVP5, and ABC-C-SB-B9/SVP9) believed to be representative of Site A geologic conditions (0 to 10 feet bgs) based on field observations. The soil textures sampled across the Site were classified by PTS laboratories as loam, sandy loam, loamy sand, or sand in accordance with United States Department of Agriculture (USDA) guidance. Loam means that there is approximately the same amount of course and fine particles in the sample. Utilizing the USCS definitions, soils at Site A would be classified predominantly as sand, silt, and clay. There appears to be some variability throughout the Site with regards to texture, as it is not uniformly distributed by depth. Bulk density, soil water-filled porosity and soil total porosity was highest in the clayey soils and lowest in the soils with higher sand contents. Clay soil was observed in APC-B-SB-B2/SVP2 at 5 and 10 feet bgs, and at ABC-C-SB-B9/SVP9 at 5 feet bgs. Moisture content was low in boring APC-B-SB-B5/SVP5 at 5 and 10 feet bgs and in ABC-C-SB-B9/SVP9 at 10 feet bgs, which also had the highest sand contents. A summary of soil physical parameter characteristics is shown in Table 2. The PTS laboratory analytical reports are presented in Appendix B.

### **3.2.2 Site B (Parking Areas) Soil Sampling and Results**

Soil sampling activities at Site B were performed on November 20, 2015 by Equipoise. Soil samples were collected for chemical analysis at the two locations, APC-C-SB-B7/SVP7 and APC-C-SB-B8/SVP8, proposed in the work plans (Equipoise, 2015a and 2015b) (Plate 3). VOCs were not detected above their respective reporting limits in any of the Site B soil samples analyzed. Soil sample analytical results for VOCs are summarized in Table 1 with laboratory analytical reports and supporting chain-of-custody documentation provided in Appendix B.

Soil physical parameter samples were collected from APC-C-SB-B8/SVP8 which was thought to be representative of Site B geologic conditions (0 to 10 feet bgs) based on field observations during soil sampling for chemical analysis. The soil texture at APC-C-SB-B8/SVP8 was predominantly comprised of sand and clay at 5 feet and silt and sand 10 feet bgs. The water filled porosity measured in both samples collected at APC-C-SB-B8/SVP8 were relatively lower than other samples collected from Site A because of the high sand content. The sample collected at 5 feet bgs (containing clay and sand) had higher water filled porosity than the sample collected at 10 feet bgs (predominantly silt and sand). Bulk density and total porosity was also lowest in the 10-foot sample at APC-C-SB-B8/SVP8. A summary of soil physical parameter characteristics is shown in Table 2. The analytical laboratory reports are presented in Appendix B.

### **3.3 SOIL VAPOR SAMPLING AND RESULTS**

After the soil borings were advanced to a total depth of 10 feet bgs, soil vapor probes were constructed as shown in Plate 4, and in accordance with the *Advisory for Active Soil Gas Investigations* (Cal/EPA, 2015). Each vapor probe consists of a high density polyethylene (HDPE) vapor implant (0.5-inch outer diameter by 1.75-inches long), including a 1-inch long 30-micron filter attached to 0.25-inch outer diameter Nylaflow<sup>®</sup> tubing. The soil vapor probe and tubing was installed through the drill rods, to prevent the boring walls from caving in during installation. Six inches of sand was poured through the drill rods and the depth was measured while pulling the drill rods up to ensure that three inches of sand was installed below and

above the HDPE vapor probe. Six inches of dry granular bentonite was poured over the sand filter pack and then hydrated to protect the integrity of the sand filter pack. Granular bentonite hydrated in lifts was used to grout up to 4.5 feet bgs and 6 inches of dry bentonite was placed underneath the 5-foot sand pack. The 5-foot sand pack was installed to match the 10-foot probe. Each probe was sealed with a multi-way valve, which was left in the closed position to prevent infiltration of water/moisture and ambient air. Probes were labeled and protected at the surface with a 5-inch diameter traffic-rated well box with a concrete surface seal.

Soil vapor probes were allowed to equilibrate for a minimum of two hours prior to sampling by H&P Mobile Geochemistry, Inc. (H&P) in accordance with current DTSC guidance (Cal/EPA, 2015). Following the equilibration period and prior to initiating sampling, a shut-in test was conducted to leak check the sampling train and ensure against ambient air dilution of samples. The shut-in test was performed by installing an in-line vacuum gauge and evacuating the sampling train to a measured vacuum of 100 inches of water (inH<sub>2</sub>O). The sampling train was closed and the vacuum gauge was then observed for a period of one minute. No noticeable dissipation in vacuum (0.5 inH<sub>2</sub>O or greater) was observed at any of the sample locations.

Three purge volumes were evacuated from each probe prior to sampling in accordance with DTSC guidance (Cal/EPA, 2015). Each purge volume included the calculated volume of the tubing, the pores space of the sand around the probe tip, and the void space of the one foot of dry granular bentonite placed above the filter pack in the annular space. Probe vacuum was monitored during purging to remain at less than 200 inches of water, and a flow rate of 100 to 200 milliliters per minute was maintained and recorded. During purging a leak check compound (1,1-difluoroethane) was placed at the well head to ascertain if an adequate seal had been established at the soil vapor probe interface with the ground surface and ensure against ambient air dilution. Following purging, soil vapor samples were collected in a 50 milliliter (ml) syringe by H&P and analyzed using an on-site mobile Environmental Laboratory Accreditation Program (ELAP) certified laboratory following USEPA Test Method TO-15.

### **3.3.1 Site A (Office Areas) Soil Vapor Sampling and Results**

Sampling of the Site A soil vapor probes (SVP1, SVP2, SVP3, SVP4, SVP5, SVP6, SVP9, SVP10, SVP11 and SVP13) was conducted on November 23 and 24, 2015 by H&P. The samples collected contained a total of 17 VOCs, as summarized in Table 3. The primary constituent reported in Site A soil vapor samples was PCE with the remaining 16 constituents found at low to trace levels. Appendix B provides a complete set of analytical results.

### **3.3.2 Site B (Parking Areas) Soil Vapor Sample Collection**

Sampling of the Site B soil vapor probes (SVP7 and SVP8) was conducted on November 23, 2015 by H&P. The samples collected contained a total of 9 VOCs, as summarized in Table 3. The primary constituent reported in Site A soil vapor samples was PCE with the remaining 8 constituents found at low to trace levels. Appendix B provides a complete set of analytical results.

## **3.4 INVESTIGATION-DERIVED WASTE**

Soil cuttings were containerized during sampling activities in Department of Transportation (DOT)-compliant 55-gallon drums and stored on-site pending waste characterization. The waste was profiled and determined to be non-hazardous. The drums were subsequently transported and disposed of off-site by a licensed waste-hauler at an appropriate waste receiving facility under proper manifest.

## 4 HUMAN HEALTH RISK SCREENING

The human health risk analysis (HHRA) process consists of a three-part comparative-analysis in which published California screening levels (DTSC, 2016), default modeled risk screening values (RSVs), and site-specific RSVs were used sequentially to identify and target constituents posing potential future risk in soil vapor at the Site, if any. Figure 2, below, summarizes the human health risk screening process per the work plan (Equipoise, 2015a).

As illustrated in Figure 2, screening levels published in the Human and Ecological Risk Organization (HERO) Human Health Risk Assessment Note #3 (HERO Note #3; DTSC, 2016) are initially applied for use as screening values for the analytical results; however, due to the potential influence of sample depth and site-specific conditions (soil physical properties) on future exposure pathways, additional screening measures using RSVs are used to ascertain the significance of those constituents exceeding HERO Note #3 screening levels relative to regulatory default and site-specific measured transport conditions.

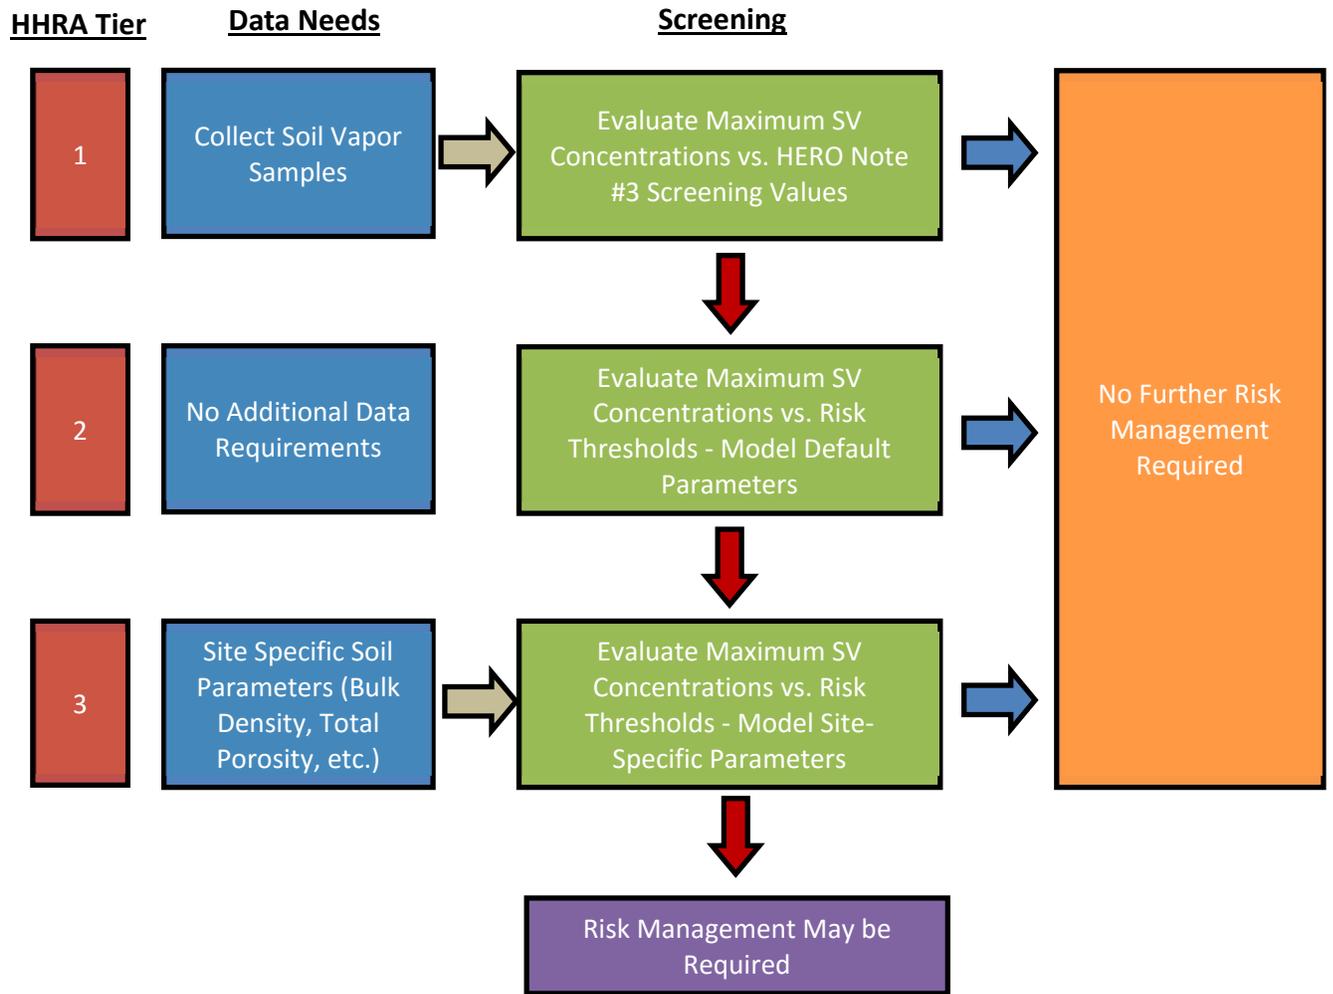

In support of site-specific RSV development, site-specific soil physical properties were collected in conjunction with soil vapor sampling as detailed in Section 3 of this report. Similar to HERO Note #3 screening levels, the RSVs are fundamental for the assessment and identification of potential risk driving constituents at the Site, if any. Should all constituents reported at an individual sampling location be below their respective HERO Note #3 screening levels and/or RSVs, it can be and was concluded in this report that the detected constituents pose insignificant risk relative to typically acceptable risk standards.

The assumptions and methods used for the development of RSVs reflect standard regulatory practice. A detailed description of the methodologies and resultant risk evaluation is presented below and includes the presentation of a conceptual exposure model, the screening process using HERO Note #3 screening levels (Tier 1), development of default RSVs (Tier 2) and site-specific RSVs (Tier 3) including the modeling of soil vapor RSVs, and the subsequent use of the RSVs.

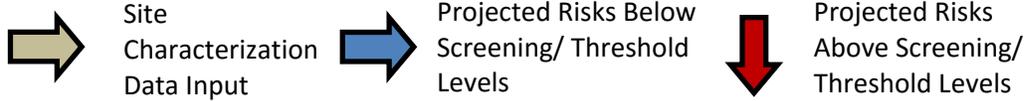

### 4.1 CONCEPTUAL EXPOSURE MODEL

For the purpose of defining conservative receptor exposures, residential land use is often associated with the greatest potential exposure. Therefore, it is the most conservative land use for establishing a condition of no further action or defining risk-based cleanup goals with no institutional controls. The hypothetical residential exposure scenario has been incorporated into this risk screening evaluation for both Site A and Site B in accordance with Cal/EPA and USEPA risk assessment guidelines (Cal/EPA, 1992, 1994, 1999; USEPA, 1989). However, it should be noted that Site B is currently a parking area and is slated for development as a parking structure, traditionally categorized as commercial industrial. A conceptual exposure model summarizing the residential receptor specific exposure scenarios for residual soil vapor is provided in Plate 5. The conceptual exposure model shows that the indoor air inhalation (vapor intrusion) and outdoor air pathways are the only complete exposure pathway from soil vapor concentrations. Potential exposures to soil vapors in outdoor air are anticipated to be minor due to ambient air dilution and dispersion in comparison to those vapors trapped inside a residential building. Therefore, the only significant exposure pathway is considered to be potential indoor air inhalation; the vapor intrusion exposure pathway.

**Figure 2 Multi-Tiered Risk Screening Model**

Notes:

## **4.2 TIER 1 – INITIAL SCREENING USING HERO NOTE #3**

The initial step in the risk evaluation (Tier 1) is the comparative analysis of individual reported constituent concentrations to media-specific published screening levels recommended in HERO Note #3 by Cal/EPA DTSC (2016). Reported analytical results for soil vapor concentrations represent the concentration of target constituent in the air-filled soil pore space. In order to complete the comparison of reported soil vapor concentrations to HERO Note #3 health protective indoor air concentrations, a regulatory recommended soil vapor to indoor air concentration attenuation factor is applied. Attenuation factors have been recommended by DTSC based on variables including building construction (new versus existing) and use (residential versus commercial). For this conservative analysis and in accordance with the conceptual exposure model, the regulatory recommended (Cal/EPA, 2011) attenuation factor (0.001) reflecting residential development has been applied in the Tier 1 analysis. The maximum reported constituent-specific concentration, regardless of depth, was used in the Tier 1 screening process for each Site.

### **4.2.1 Site A (Office Areas)**

The 24 samples collected in Site A were found to contain a total of 17 VOCs, as summarized in Table 3. The primary constituent reported in Site A soil vapor samples was PCE. It is important to note, no screening value for 4-ethyltoluene is provided in the referenced HERO Note #3 sources, therefore the Tier 1 RSV for ethylbenzene (a similarly structured compound) was used as a surrogate for the screening process.

Of the detected VOCs, the maximum reported concentration of two constituents were found to exceed the HERO Note #3 screening levels: chloroform and PCE. Based on this conservative screening process, these compounds represent constituents that may pose potential risk to future site users and thus require further risk screening evaluation due to the limitation of Tier 1 RSVs to assess site-specific conditions (sample depth and/or soil physical properties) on potential exposures. Table 4 summarizes the maximum reported soil vapor concentration, projected indoor air concentration, and HERO Note #3 screening level for each of the reported VOCs at Site A.

### **4.2.2 Site B (Parking Areas)**

The four samples collected in Site B were found to contain a total of 9 VOCs, as summarized in Table 3. The primary constituent reported in Site B soil vapor samples was PCE. It is important to note, no screening value for 4-ethyltoluene is provided in the referenced HERO Note #3 sources, therefore the Tier 1 RSV for ethylbenzene (a similarly structured compound) was used as a surrogate for the screening process.

Of the detected VOCs, the maximum reported concentration of one constituent was found to exceed the HERO Note #3 screening levels: PCE. Based on the conservative screening process, PCE may pose potential risk to future site users and thus require further risk screening evaluation due to the limitation of Tier 1 RSVs to assess site-specific conditions (sample depth and/or soil physical properties) on potential exposures. Table 5 summarizes the maximum reported soil vapor concentration, projected indoor air concentration, and HERO Note #3 screening level for each of the reported VOCs at Site B.

## **4.3 TIER 2 – DEFAULT MODELED RISK SCREENING VALUES**

Given the limitation of HERO Note #3 screening levels to account for site-specific transport conditions like soil vapor source depth, a second tier of RSVs are necessary to thoroughly assess potential risks associated

with the vapor intrusion pathway. The following section provides a detailed discussion of depth-specific RSVs (Tier 2 RSVs).

DTSC guidance recommends that measured soil vapor concentrations be assessed for site-specific exposure via vapor intrusion into buildings using the Johnson and Ettinger Vapor Intrusion Model. This model contains a database of over 100 common volatile contaminants found at regulated locations throughout California. As an infinite source screening-model that describes the vertical migration of sub-surface soil vapors into a hypothetical residential building, the Johnson and Ettinger model is sensitive to the initial depth of the soil vapor concentration source term. In the soil vapor sampling described in this report, two distinct depth intervals were targeted; 5 feet bgs and 10 feet bgs. For Johnson and Ettinger modeling and subsequent Tier 2 RSV development, both depth intervals have been conservatively assessed and incorporated into the Johnson and Ettinger model.

Projected target health risk thresholds (carcinogenic risk and non-carcinogenic hazard) using the Johnson and Ettinger model were set at the regulatory recommended carcinogenic threshold of one in one million ( $1 \times 10^{-6}$ ) and non-carcinogenic hazard index management level of 1. Model input concentrations were systematically adjusted until one of the above target threshold values was projected by the model. The resultant concentration reflects the Tier 2 RSV for the subject constituent at the subject depth interval under conservative regulatory default geologic conditions (sand). The driving toxicity endpoint, carcinogenic risk or noncarcinogenic hazard, is identified in the Johnson and Ettinger model printouts. Table 6 summarizes the modeled Tier 2 RSVs. The Johnson and Ettinger Vapor Intrusion Model spreadsheet printouts for the calculation of the Tier 2 RSVs for each depth interval are presented in Appendix C. The maximum reported concentration by depth interval (5 or 10 feet bgs) of the constituents found to exceed Tier 1 screening criteria for Site A and Site B were compared to depth-specific Tier 2 RSVs.

#### **4.3.1 Site A (Office Areas)**

The two VOCs (chloroform and PCE) found to exceed the Tier 1 screening were compared to depth-specific Tier 2 RSVs. Only PCE at both 5 feet bgs and 10 feet bgs was found to exceed the Tier 2 screening levels at location SVP9 (Plate 3). Chloroform was found to not exceed the Tier 2 screening levels at both 5 feet bgs and 10 feet bgs depth intervals. Table 6 summarizes the maximum reported soil vapor concentration, projected indoor air concentration, and Tier 2 RSV for each of the subject Tier 2 VOCs at Site A.

#### **4.3.2 Site B (Parking Areas)**

The lone VOC (PCE) found to exceed the Tier 1 screening was compared to depth-specific Tier 2 RSVs and was found to exceed the Tier 2 screening levels at sample locations SVP7 and SVP8 (Plate 3). Table 6 summarizes the maximum reported soil vapor concentration, projected indoor air concentration, and Tier 2 RSV for PCE at Site B.

While the above Tier 2 screening process was designed to conservatively incorporate and address modeling sensitivities to soil vapor origin depth, the Tier 3 risk screening process below is designed to incorporate and address additional modeling sensitivities associated with site-specific soil conditions.

### **4.4 TIER 3 – SITE-SPECIFIC MODELED RISK SCREENING VALUES**

The Johnson and Ettinger model is sensitive with respect to soil physical parameter input values. To ensure applicability of soil vapor Tier 3 RSVs to individual site conditions, site-specific soil physical parameters

were collected in accordance with the work plan during the sampling activities of Site A and Site B. The resultant soil physical parameters are used in support of vapor intrusion modeling efforts to calculate Tier 3 RSVs. Specifically, soil physical parameters from the nearest applicable sample point is applied in location-specific Tier 3 RSVs for soil vapor results. The use of location-specific values for these parameters minimizes the reliance of risk projections on professional assumption and thereby ensures every effort has been made to protect and document safe conditions for future Site users under observed and measured Site conditions.

Tier 3 RSVs require the identification of representative soil conditions based on observed geologic conditions and subsequent soil physical parameter testing results. In this case, soil physical parameters were collected at both APC-C-SB-B9/SVP9 (Site A Tier 2 exceedance point) and APC-C-SB-B8/SVP8 (Site B Tier 2 exceedance point). No soil physical parameter sample was collected at APC-C-SB-B7/SVP7, a subsequent Tier 2 RSV exceedance point in Site B. However, given the proximity of APC-C-SB-B7/SVP7 (Plate 3) and similar geologic conditions observed during sampling (Appendix A), the soil physical parameters collected at APC-C-SB-B8/SVP8 are believed to be representative of Site B vapor transport conditions.

Projected target health risk thresholds (carcinogenic risk and non-carcinogenic hazard) using the Johnson and Ettinger model were set at the regulatory recommended carcinogenic threshold of one in one million ( $1 \times 10^{-6}$ ) and non-carcinogenic hazard index management level of 1. Model input concentrations were systematically adjusted until one of the above target threshold values is projected by the model. The resultant concentration reflects the Tier 3 RSV (Table 7) for the subject constituent at the subject depth interval under the given site-specific geologic conditions. The driving toxicity endpoint, carcinogenic risk or noncarcinogenic hazard, is identified in the Johnson and Ettinger model printouts. The Johnson and Ettinger Vapor Intrusion Model spreadsheet printouts for the calculation of the Site A and Site B Tier 3 RSVs by depth interval and soil parameter type are presented in Appendix C.

#### 4.4.1 Site A (Office Areas)

Soil physical parameter samples collected from boring APC-C-SB-B9/SVP9 (Table 2) were incorporated into the development of Site A Tier 3 PCE RSVs using the advanced version of the Johnson and Ettinger Vapor Intrusion Model. The advanced model allows the user to define up to three distinct lithologic layers for the soils observed between the soil vapor source and overlying structure. The soil lithology at APC-C-SB-B9/SVP9 was logged as a sandy, lean clay to a depth of 7 feet bgs. However, as noted in the boring logs, the upper 1.75 feet bgs was comprised of asphaltic materials (Appendix A). This asphalt layer is likely to be excavated during future construction and no assumption can be made with regards to import material properties. Therefore, it was conservatively assumed no import would be placed over the existing soils and the source depth and layer thicknesses would be reduced by 1.75 feet during the development of a RSV for PCE concentrations measured at 5 and 10 feet bgs. As shown in Table 7 and Appendix C, the resultant Tier 3 RSVs were modeled to be 9,500 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) and 16,000  $\mu\text{g}/\text{m}^3$  for the two sample depths (5 and 10 feet bgs). A comparison of the Tier 2 RSV exceeding soil vapor PCE concentrations at SVP9 against the Tier 3 RSVs clearly indicates reported PCE concentrations are well below the Tier 3 RSVs (Table 7). Therefore, no significant risks are projected to future site users associated with soil vapors reported in Site A under unrestricted land use conditions.

#### 4.4.2 Site B (Parking Areas)

Soil physical parameter samples collected from boring APC-C-SB-B8/SVP8 were incorporated into the development of Site B Tier 3 RSV using the advanced version of the Johnson and Ettinger Vapor Intrusion Model. The soil lithology at APC-C-SB-B8/SVP8 was logged as a clay to a depth of 6 feet bgs. However, as noted in the boring logs, the upper 1.5 feet bgs was comprised of asphalt and concrete materials (Appendix A). This hardscape layer is likely to be excavated during future construction and no assumption can be made with regards to import material properties. Therefore, it was conservatively assumed no import would be placed over the existing soils and the source depth and layer thicknesses would be reduced by 1.5 feet during the development of a RSV for PCE concentrations measured at 5 and 10 feet bgs. As shown in Table 7 and Appendix C, the resultant Tier 3 RSV was modeled to be 745  $\mu\text{g}/\text{m}^3$  and 1,050  $\mu\text{g}/\text{m}^3$  for the two sample depths (5 and 10 feet bgs). A comparison of the Tier 2 RSV exceeding soil vapor PCE concentrations at SVP7 and SVP8 against the Tier 3 RSVs indicates reported PCE concentrations slightly exceed the Tier 3 RSVs (Table 7). Therefore, potential risks are projected to future site users associated with soil vapors reported in Site B under unrestricted land use conditions. Risk management may be necessary to mitigate potential unrestricted land use and subsequent receptor exposure potential.

Given Site B soil vapor PCE concentrations are projected to exceed unrestricted land use closure conditions, an alternative set of Tier 3 RSV values were developed to ascertain if Site B PCE soil vapor concentrations would exceed typical restricted land use (commercial/industrial deed restriction) closure conditions. Using the same soil parameter data (APC-C-SB-B8/SVP8) used in the Site B Tier 3 RSV modeling effort above, the Johnson and Ettinger model was modified to reflect default regulatory commercial industrial exposure conditions and building air exchange rates. Projected target health risk thresholds (carcinogenic risk and non-carcinogenic hazard) using the Johnson and Ettinger model were set at the regulatory accepted commercial industrial carcinogenic threshold of one in one hundred thousand ( $1 \times 10^{-5}$ ) and non-carcinogenic hazard index management level of 1. Model input concentrations were systematically adjusted until one of the above target threshold values is projected by the model. Thus, the resultant concentration reflects the restricted land use scenario Tier 3 RSVs (Table 8) for PCE at the subject depth intervals and site-specific geologic conditions. The Johnson and Ettinger Vapor Intrusion Model spreadsheet printouts for the calculation of the Site B restricted land use scenario Tier 3 RSVs by depth interval are presented in Appendix C.

The resultant Tier 3 RSV for restricted land use conditions were modeled to be 21,000  $\mu\text{g}/\text{m}^3$  for 5 feet bgs and 30,750  $\mu\text{g}/\text{m}^3$  for 10 feet bgs. A comparison of the maximum soil vapor PCE concentrations reported at Site B at 5 feet bgs (2,200  $\mu\text{g}/\text{m}^3$ ) and 10 feet bgs (2,700  $\mu\text{g}/\text{m}^3$ ) indicates PCE concentrations are significantly below the restricted land use Tier 3 RSVs (Table 8). Thus, no significant risks are projected to future site users associated with detected soil vapors under restricted land use conditions. A restricted land use condition is viable and consistent with planned future development of Site B as commercial/industrial.

## 5 CONCLUSIONS

The objective of the recent sampling effort was to provide sufficient spatially distributed analytical data characterizing the nature and extent of volatiles in subsurface soil vapor and provide high quality data for regulatory agency decision-making regarding the long-term protection of human health and the issuance of a No Further Action letter under proposed future land use development conditions.

This report has presented the recent set of analytical results for soil chemical, soil physical parameter, and soil vapor confirmation sampling in near surface soils (0 to 10 feet bgs) from sampling conducted by Equipoise in November 2015 and February 2016 at the 1000 South Fremont Avenue, Alhambra, California property. Soil samples analyzed for VOCs had no detections above the method detection limit. Results of soil vapor testing indicated the presence of PCE with trace levels of 16 other volatile constituents. These analytical results were used to perform a multi-tiered risk screening evaluation, as detailed in Section 5.2 of the *Soil Closure Work Plan – Soil Vapor Confirmation Sampling* (Equipoise, 2015a) previously approved by the LARWQCB.

As illustrated in Plate 2, the 1000 South Fremont Avenue property is comprised of two distinct Assessor Parcel Identification Numbers, 5342-001-021 (Site A) and 5342-001-024 (Site B). For the purposes of the risk screening evaluation, each of these legal parcels is being addressed separately in the presentation of recent investigation activities and subsequent risk screening. Based on the findings of the latest analytical results and a multi-tiered risk screening evaluation, the following actions are recommended:

- **Site A:** It is recommended that Site A be granted the status of “No Further Action” with regards to soil and soil vapor constituents.
- **Site B:** It is recommended that Site B be granted the status of “No Further Action” with regards to soil and soil vapor constituents following the implementation of institutional controls whereby future land use is limited to commercial industrial purposes. Commercial/industrial land use at Site B is consistent with the current zoning, site use, and planned future development.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

# Contents

Client Project Name: ALHAMBRA SOIL VAPOR CONFIRMATION WP / C1K.HZ.H7  
Work Order Number: 15-11-1600

1	Work Order Narrative. . . . .	3
2	Sample Summary. . . . .	4
3	Client Sample Data. . . . .	5
	3.1 EPA 8260B Volatile Organics (Solid). . . . .	5
4	Quality Control Sample Data. . . . .	37
	4.1 MS/MSD. . . . .	37
	4.2 LCS/LCSD. . . . .	39
5	Sample Analysis Summary. . . . .	41
6	Glossary of Terms and Qualifiers. . . . .	42
7	Chain-of-Custody/Sample Receipt Form. . . . .	43

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 11/20/15. They were assigned to Work Order 15-11-1600.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Glossary of Terms and Qualifiers

Work Order: 15-11-1600

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

5	Sample Analysis Summary. . . . .	31
6	Glossary of Terms and Qualifiers. . . . .	32
7	Chain-of-Custody/Sample Receipt Form. . . . .	33

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 11/24/15. They were assigned to Work Order 15-11-1823.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

## Glossary of Terms and Qualifiers

Work Order: 15-11-1823

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

H&P Project: EQ112315-A1  
Client Project: Alhambra Soil Vapor Assessment

Dear Ms. Kelly Steffan:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 11/23/2015-11/24/2015 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis Villarreal  
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP, the National Environmental Laboratory Accreditation Conference (NELAC) and the Department of Defense Accreditation Programs.

MDL      Method Detection Limit  
%REC      Percent Recovery  
RPD      Relative Percent Difference

### Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP and the ISO 17025 programs, certification number L11-175.

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at [www.handpmg.com/about/certifications](http://www.handpmg.com/about/certifications).

Re: PTS File No: 45693R1  
Physical Properties Data  
Soil Vapor Confirmation; C1K.HZ.H7

Dear Ms. Steffen:

Please find enclosed REVISED report for Physical Properties analyses conducted upon samples received from your Soil Vapor Confirmation; C1K.HZ.H7 project. All analyses were performed by applicable ASTM, EPA, or API methodologies. The report has been revised to correct a transcription error for USDA soil texture classifications. The samples are currently in storage and will be retained for thirty days past completion of testing at no charge. Please note that the samples will be disposed of at that time. You may contact me regarding storage, disposal, or return of the samples.

PTS Laboratories appreciates the opportunity to be of service. If you have any questions or require additional information, please give me a call at (562) 347-2502.

Sincerely,  
PTS Laboratories, Inc.

Michael Mark Brady, P.G.  
Laboratory Director

Encl.

Laboratory Test Program Notes

Contaminant identification: \_\_\_\_\_

Standard TAT for basic analysis is 10 business days.

Vapor Transport Package (Johnson-Ettinger): Input parameters for Johnson-Ettinger Model; Air permeability (native + specific); porosity (total, effective, air-filled, water-filled), volumetric air and water, moisture content, intrinsic permeability/hydraulic conductivity, grain density, dry bulk density, TOC/foc, soil classification USDA/USCS (grain size + Atterberg limits). There are only six (6) samples for analyses; two 0.5 foot sections from each location were collected in sequence and should be treated as one sample. Per K. Steffen/Equipoise 20151207.

PTS File No: 45693R1  
 Client: Equipoise Corporation  
 Report Date: 01/28/16

(1) Sample Orientation: H = horizontal; V = vertical; R = remold

(2) Total Porosity = all interconnected pore channels; Air Filled = pore channels not occupied by pore fluids; Effective = drainage porosity.

(3) Fluid density used to calculate pore fluid saturations: Water = 0.9996 g/cc.

Vb = Bulk Volume, cc; Pv = Pore Volume, cc; ND = Not Detected
