1.0 INTRODUCTION

The Traffic Impact Analysis (TIA) has been prepared for the proposed Kaiser Permanente Moreno Valley Medical Center Master Plan Project (project) to be located east of Interstate 215 (I-215) and south of State Route 60 (SR-60) at 27300 Iris Avenue in the City of Moreno Valley (City). Figure 1-1 illustrates the regional and project location. (Figures and tables are located at the end of each chapter.)

This report is intended to satisfy the requirements established by the City of Moreno Valley Transportation Engineering Division *Traffic Impact Analysis Preparation Guide* dated August 2007, the Riverside County Transportation Department *Traffic Impact Analysis Preparation Guide*, dated April 2008, as well as the requirements for the disclosure of potential impacts and mitigation measures pursuant to the California Environmental Quality Act (CEQA). The scope of work for this TIA, including trip generation, trip distribution, study area, and analysis methodologies, has been approved by City staff via the Scoping Agreement process. A copy of the Scoping Agreement is included as Appendix A.

This study examines traffic operations in the vicinity of the proposed project under the following 10 scenarios:

- Existing Conditions;
- Existing with Project Conditions;
- Phase I Project Completion Year (2023) without Project Conditions;
- Phase I Project Completion Year (2023) with Project Conditions;
- Phase II Project Completion Year (2032) without Project Conditions;
- Phase II Project Completion Year (2032) with Project Conditions;
- Phase III Project Completion Year (2038) without Project Conditions;
- Phase III Project Completion Year (2038) with Project Conditions (Project Build-out);
- General Plan Build-out (2040) without Project Conditions; and
- General Plan Build-out (2040) with Project Conditions (Project Build-out).

Traffic conditions were examined for the weekday daily, a.m., and p.m. peak hour conditions. The a.m. peak hour is defined as the one hour of highest traffic volumes occurring between 7:00 and 9:00 a.m. The p.m. peak hour is the one hour of highest traffic volumes occurring between 4:00 and 6:00 p.m. Roadway segments were analyzed using daily volume counts and comparisons were made to the daily service volume standards provided by the Cities of Moreno Valley and Perris.

1.1 PROJECT DESCRIPTION

The current project site includes a 130,000-square foot (sf) 100-bed hospital, along with two medical office buildings and education trailers totaling approximately 85,000 sf. The project will be replacing

and adding onto existing uses and has been proposed to be built in three phases. Phase I consists of the demolition of the Iris Medical Office Building (MOB) 1 and Education Trailers medical office buildings (10,500 sf) and the construction of a 95,000 sf Diagnostics and Treatment (D&T) Expansion (hospital) and 22,000 sf Energy Center. Phase II consists of the construction of a 65,000 sf medical office building (MOB 3), 380,000 sf expansion of the D&T center, patient towers North and East, and 8,000 sf Energy Center. Phase III consists of the demolition of 130,000 sf of the existing hospital and construction of a 95,000 sf medical office building (MOB 4) and a 375,000 sf expansion of the D&T center along with patient towers South and West. Table 1-A summarizes each of the proposed phases.

Phase I of the project is planned for completion in 2023 (typical 5 years from existing per discussion with City of Moreno Valley staff). Phase II of the project is planned for completion in Year 2032. Phase III of the project is planned for completion in Year 2038. Figures 1-2, 1-3, and 1-4 illustrate the conceptual completion site plans for Phases I, II, and III of the proposed project, respectively.

As shown in the site plans, access to the project would be provided via the three existing driveways along Iris Avenue. The existing signalized driveway (Driveway 2) will continue to operate as a full-access driveway. The driveway farthest west (Driveway 1) would remain operating as right-in/right-out (RIRO) only. Phase I proposes the modification of the driveway farthest east (Driveway 3) to operate as a RIRO only driveway. Based on comments from the City, the project applicant can also coordinate with the adjacent property owner(s) to obtain reciprocal access agreement for an additional project access to Oliver Street. For purposes of this analysis, no access has been considered to Oliver Street from the project.

1.2 STUDY AREA

Based on the City's TIA guidelines, the TIA is required to analyze all intersections of Collector or higher classification streets where the project will contribute 50 or more peak hour trips or intersections identified by City staff for analysis. All study intersections were analyzed during the a.m. and p.m. peak hours.

1.2.1 Study Intersections

Per the Scoping Agreement (Appendix A), intersections considered for this study and their jurisdictions are as follows:

1. Interstate 215 (I-215) Southbound Ramps/Alessandro Boulevard (Caltrans);
2. I-215 Northbound Ramps/Alessandro Boulevard (Caltrans);
3. I-215 Southbound Ramps/Cactus Avenue (Caltrans);
4. I-215 Northbound Ramps/Cactus Avenue (Caltrans);
5. I-215 Northbound Ramps-Old 215 Frontage Road/Cactus Avenue (Caltrans);
6. Day Street/Alessandro Boulevard (Moreno Valley);
7. Elsworth Street/Alessandro Boulevard (Moreno Valley);

8. Elsworth Street/Cactus Avenue (Moreno Valley);
9. Frederick Street/Alessandro Boulevard (Moreno Valley);
10. Frederick Street/Cactus Avenue (Moreno Valley);
11. Graham Street/Alessandro Boulevard (Moreno Valley);
12. Graham Street-Riverside Drive/Cactus Avenue (Moreno Valley);
13. Heacock Street/Alessandro Boulevard (Moreno Valley);
14. Heacock Street/Cactus Avenue (Moreno Valley);
15. Heacock Street/Iris Avenue (Moreno Valley);
16. Indian Street/Alessandro Boulevard (Moreno Valley);
17. Indian Street/Cactus Avenue (Moreno Valley);
18. Indian Street/Iris Avenue(Moreno Valley);
19. Perris Boulevard/Alessandro Boulevard (Moreno Valley);
20. Perris Boulevard/Cactus Avenue (Moreno Valley);
21. Perris Boulevard/Iris Avenue (Moreno Valley);
22. Perris Boulevard/Krameria Avenue (Moreno Valley);
23. Perris Boulevard/San Michele Road (Moreno Valley);
24. Perris Boulevard/Nandina Avenue (Moreno Valley);
25. Perris Boulevard/Harley Knox Boulevard (Perris);
26. Kitching Street/Alessandro Boulevard (Moreno Valley);
27. Kitching Street/Cactus Avenue (Moreno Valley);
28. Kitching Street/Iris Avenue (Moreno Valley);
29. Lasselle Street/Alessandro Boulevard (Moreno Valley);
30. Lasselle Street/Cactus Avenue (Moreno Valley);
31. Lasselle Street/John F Kennedy Drive (Moreno Valley);
32. Lasselle Street/Iris Avenue (Moreno Valley);
33. Lasselle Street/Krameria Avenue (Moreno Valley);
34. Lasselle Street/Via Xavier Lane (Moreno Valley);
35. Lasselle Street/Lasselle Sports Park-Rojo Tierra (Moreno Valley);
36. Lasselle Street/Cremello Way-Avenida De Plata (Moreno Valley);
37. Lasselle Street/Avenida Classica-Kentucky Derby Drive (Moreno Valley);
38. Lasselle Street/Via De Anza-Rancho Verde High School (Moreno Valley);

39. Evans Road/Ramona Expressway (Perris);
40. Camino Flores/Iris Avenue (Moreno Valley);
41. Coachlight Court-Avenida De Circo/Iris Avenue (Moreno Valley);
42. Grande Vista Drive/Iris Avenue (Moreno Valley);
43. Nason Street/Elder Avenue-State Route 60 (SR-60) Westbound Ramps (Caltrans);
44. Nason Street/SR-60 Eastbound Ramps (Caltrans);
45. Nason Street/Eucalyptus Avenue (Moreno Valley);
46. Nason Street/Cottonwood Avenue (Moreno Valley);
47. Nason Street/Alessandro Boulevard (Moreno Valley);
48. Nason Street/Cactus Avenue (Moreno Valley);
49. Nason Street-Hillrose Lane/Iris Avenue (Moreno Valley);
50. Pearl Lane-Oliver Street/Alessandro Boulevard (Moreno Valley);
51. Oliver Street/Cactus Avenue (Moreno Valley);
52. Oliver Street/John F Kennedy Drive (Moreno Valley);
53. Oliver Street/Iris Avenue (Moreno Valley);
54. Via Del Lago/Iris Avenue-Moreno Beach Drive (Moreno Valley);
55. Moreno Beach Drive/SR-60 Westbound Ramps (Caltrans);
56. Moreno Beach Drive/SR-60 Eastbound Ramps (Caltrans);
57. Moreno Beach Drive/Eucalyptus Avenue (Moreno Valley);
58. Moreno Beach Drive/Cottonwood Avenue (Moreno Valley);
59. Moreno Beach Drive/Alessandro Boulevard (Moreno Valley);
60. Moreno Beach Drive/Cactus Avenue (Moreno Valley);
61. Moreno Beach Drive/John F Kennedy Drive (Moreno Valley);
62. Driveway 1/Iris Avenue (Moreno Valley);
63. Driveway 2/Iris Avenue (Moreno Valley); and
64. Driveway 3/Iris Avenue (Moreno Valley).

Figure 1-5 illustrates the locations of all analysis intersections.

1.2.2 Roadway Segments

Per the Scoping Agreement and based on discussion with City staff, the following roadway segments are included in the analysis:

Perris Boulevard

1. Between Iris Avenue and Krameria Avenue (Moreno Valley);
2. Between Krameria Avenue and San Michele Road (Moreno Valley);
3. Between San Michele Road and Nandina Avenue (Moreno Valley); and
4. Between Nandina Avenue and Harley Knox Boulevard (Moreno Valley/Perris).

Lasselle Street

5. Between John F Kennedy Drive and Iris Avenue (Moreno Valley);
6. Between Iris Avenue and Krameria Avenue (Moreno Valley);
7. Between Krameria Avenue and Via Xavier Lane (Moreno Valley);
8. Between Via Xavier Lane and Lasselle Sports Park-Rojo Tierra (Moreno Valley);
9. Between Lasselle Sports Park-Rojo Tierra and Cremello Way-Avenida De Plata (Moreno Valley);
10. Between Cremello Way-Avenida De Plata and Avenida Classica-Kentucky Derby Drive (Moreno Valley); and
11. Between Avenida Classica-Kentucky Derby Drive and Via De Anza-Rancho Verde High School (Moreno Valley).

Lasselle Street-Evans Road

12. Between Via De Anza-Rancho Verde High School and Ramona Expressway (Moreno Valley/ Perris).

Nason Street

13. Between SR-60 Eastbound Ramps and Eucalyptus Avenue (Moreno Valley);
14. Between Eucalyptus Avenue and Cottonwood Avenue (Moreno Valley);
15. Between Cottonwood Avenue and Alessandro Boulevard (Moreno Valley);
16. Between Alessandro Boulevard and Cactus Avenue (Moreno Valley); and
17. Between Cactus Avenue and Iris Avenue (Moreno Valley).

Oliver Street

18. Between Alessandro Boulevard and Cactus Avenue (Moreno Valley);
19. Between Cactus Avenue and John F Kennedy Drive (Moreno Valley); and
20. Between John F Kennedy Drive and Iris Avenue (Moreno Valley).

Moreno Beach Drive

21. Between SR-60 Eastbound Ramps and Eucalyptus Avenue (Moreno Valley);
22. Between Eucalyptus Avenue and Cottonwood Avenue (Moreno Valley);
23. Between Cottonwood Avenue and Alessandro Boulevard (Moreno Valley);

24. Between Alessandro Boulevard and Cactus Avenue (Moreno Valley);
25. Between Cactus Avenue and John F Kennedy Drive (Moreno Valley); and
26. Between John F Kennedy Drive and Via Del Lago (Moreno Valley).

2.0 ANALYSIS METHODOLOGY

2.1 LEVEL OF SERVICE DEFINITIONS

Level of service (LOS) can be characterized for the whole intersection, each intersection approach, and by each lane group. Control delay alone is used to characterize LOS for the entire intersection. Control delay quantifies the increase in travel time due to the traffic signal control, and is a surrogate measure of driver discomfort and fuel consumption.

A complete description of the meaning of LOS can be found in the Transportation Research Board Special Report 209, *Highway Capacity Manual* (HCM). The HCM establishes LOS A through F for intersections. A description of LOS for signalized and unsignalized intersections is summarized in Table 2-A. A description of LOS for roadway segments is summarized in Table 2-B.

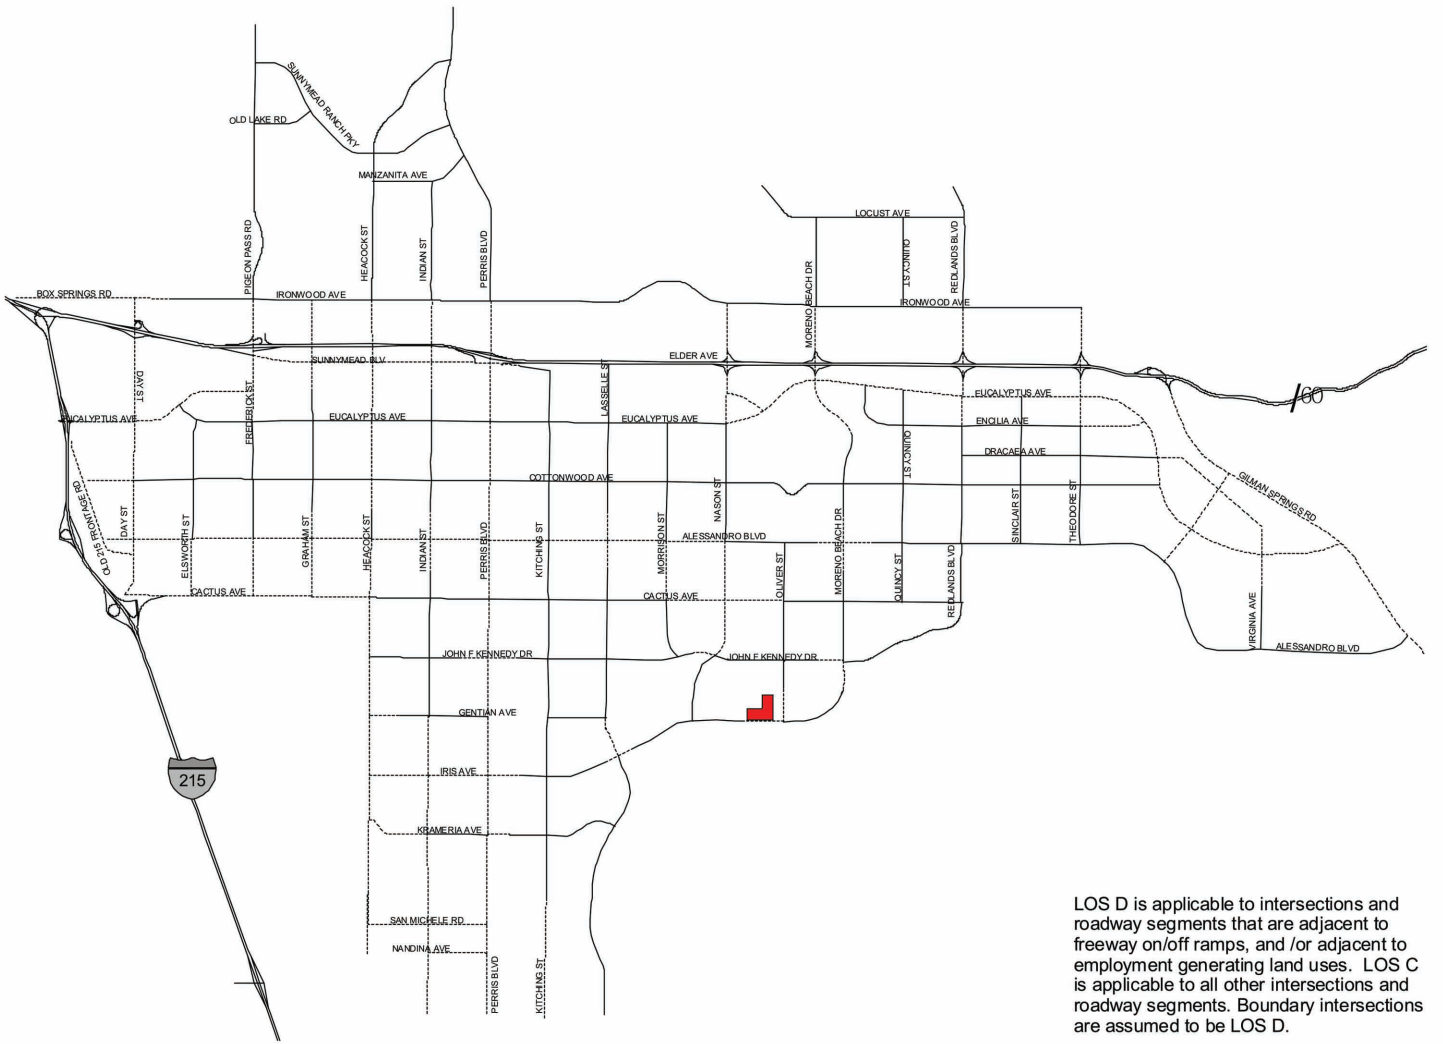
Table 2-C shows the LOS criteria for unsignalized and signalized intersections. Tables 2-D and 2-E summarize the LOS criteria used to evaluate roadway segments based on the daily capacity for each functional classification as per the City's TIA guidelines and the *City of Perris General Plan Circulation Element* (amended August 2008), respectively. The daily traffic volumes represent the total vehicles (both directions) traveling on a roadway segment within 24 hours.

For all study area intersections, the *Highway Capacity Manual 6th Edition* (HCM 6) analysis methodologies were used to determine intersection LOS. Intersection LOS was calculated using Synchro 10 software, which uses the HCM 6 methodologies.

2.2 LEVEL OF SERVICE PROCEDURES AND THRESHOLDS

Study intersections and roadway segments analyzed in this report are under the jurisdiction of the Cities of Moreno Valley and Perris. Intersections located at freeway on-ramps and off-ramps are under the jurisdiction of Caltrans. The City of Moreno Valley uses both LOS C and LOS D as its minimum LOS criteria for intersections and roadway segments. As stated in both the City of *Moreno Valley General Plan* (dated July 11, 2006) and the City's TIA guidelines, LOS D is applicable to intersections and roadway segments adjacent to employment-generating land uses while LOS C is applicable to all other areas. Figure 2-1 illustrates the LOS standards for intersections and roadway segments within the City. The City of Perris uses LOS D as its minimum level of service criterion for intersections and roadway segments. Caltrans considers an acceptable LOS to be between LOS C and D at all intersections under its jurisdiction (delay of 45 seconds at signalized intersections and delay of 30 seconds at unsignalized intersections).

2.3 PROJECT SIGNIFICANCE THRESHOLD



At study intersections and roadway segments under the jurisdiction of the City of Moreno Valley, the determination of a significant circulation impact is based on the impact criteria contained in the City's TIA guidelines, which state that, for projects in conformance with the General Plan, a significant impact occurs at a study intersection or roadway segment when the LOS falls below the target LOS of C or D with the addition of project traffic or when a project contributes to an unsatisfactory condition (LOS D, E, or F).

At study intersection and roadway segments under the jurisdiction of the City of Perris, the determination of a significant circulation impact is based on the impact criteria contained in the Riverside County TIA guidelines, which state that a significant impact occurs at a study intersection or roadway segment when the project traffic deteriorates the LOS to below the target LOS of D or when the cumulative traffic exceeds the target LOS.

Caltrans does not have significant impact criteria for study intersections. Therefore, a significant impact occurs when the project causes an unsatisfactory condition (deteriorate from LOS A through D to E or F) for intersections or when the project contributes to an existing deficiency.

2.4 LIST OF CHAPTER 2.0 FIGURES AND TABLES

- Figure 2-1: City of Moreno Valley LOS Standards
- Table 2-A: Intersection Level of Service Definitions
- Table 2-B: Roadway Segment Level of Service Definitions
- Table 2-C: Level of Service Criteria for Unsignalized and Signalized Intersections
- Table 2-D: Roadway Segment Capacity and Levels of Service (Moreno Valley)
- Table 2-E: Roadway Segment Capacity and Levels of Service (Perris)

LOS D is applicable to intersections and roadway segments that are adjacent to freeway on/off ramps, and /or adjacent to employment generating land uses. LOS C is applicable to all other intersections and roadway segments. Boundary intersections are assumed to be LOS D.

Table 2-A: Intersection Level of Service Definitions

LOS	Description
A	Traffic operations with a control delay of 10 seconds per vehicle or less and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is low and either progression is exceptionally favorable or the cycle length is very short. If LOS A is the result of favorable progression, most vehicles arrive during the green indication and travel through the intersection without stopping.
B	Traffic operations with control delay between 10 seconds per vehicle and 20 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is low and either progression is highly favorable or the cycle length is short. More vehicles stop than with LOS A.
C	Traffic operations with control delay between 20 and 35 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when progression is favorable or the cycle length is moderate. Individual cycle failures (i.e., one or more queued vehicles are not able to depart as a result of the insufficient capacity during the cycle) may begin to appear at this level. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.
D	Traffic operations with control delay between 35 and 55 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is high and either progression is ineffective or the cycle length is long. Many vehicles stop and individual cycle failures are noticeable.
E	Traffic operations with control delay between 55 and 80 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when volume-to-capacity ratio is high, progression is unfavorable, and the cycle length is long. Individual cycle failures are frequent.
F	Traffic operations with control delay exceeding 80 seconds per vehicle or a volume-to-capacity ratio greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.

Source: *Highway Capacity Manual* (6th Edition)

Table 2-B: Roadway Segment Level of Service Definitions

LOS	Description
A	Describes primarily free-flow operation. Vehicles are completely unimpeded in their ability to maneuver within the traffic stream. Control Delay at the boundary intersection is minimal. The travel speed exceeds 80% of the base free-flow speed, and the volume-to-capacity ratio is no greater than 1.0.
B	Describes reasonably unimpeded operation. The ability to maneuver within the traffic stream is only slightly restricted, and control delay at the boundary is not significant. The travel speed is between 67% and 80% of the base free-flow speed, and the volume-to-capacity ratio is no greater than 1.0.
C	Describes stable operation. The ability to maneuver and change lanes at mid-segment locations may be more restricted than at LOS B. Longer queues at the boundary intersection may contribute to lower travel speeds. The travel speed is between 50% and 67% of the base free-flow speed, and the volume-to-capacity ratio is no greater than 1.0.
D	Indicates a less stable condition in which small increases in flow may cause substantial increases in delay and decreases in travel speed. This operation may be due to adverse signal progression, high volume, or inappropriate signal timing at the boundary intersections. The travel speed is between 40% and 50% of the base free-flow speed, and the volume-to-capacity ratio is no greater than 1.0.
E	Characterized by unstable operation and significant delay. Such operations may be due to some combination of adverse progression, high volume, and inappropriate signal timing at the boundary intersections. The travel speed is between 30% and 40% of the base free-flow speed, and the volume-to-capacity ratio is no greater than 1.0.
F	Characterized by flow at extremely low speed. Congestion is likely occurring at the boundary intersections, as indicated by high delay and extensive queuing. The travel speed is between 30% or less of the base free-flow speed, and the volume-to-capacity ratio is greater than 1.0.

LOS = Level of Service

3.0 CIRCULATION NETWORK SETTING

3.1 EXISTING CIRCULATION NETWORK

This section provides a description of the circulation network within the study area. Figure 3-1 illustrates existing geometrics and traffic control for study intersections. Within the City of Moreno Valley, all major roadways are classified based on the City's Circulation Plan. Figure 3-2 illustrates roadway classifications per the City's Circulation Plan. Within the City of Perris, all major roadways are classified based on the City's General Plan Circulation Element. Figure 3-3 illustrates roadway classifications per the City of Perris General Plan Circulation Element.

Table 3-A summarizes the classifications of major roadways within the TIA study area limits. Following is a brief description of these roadways:

- **Alessandro Boulevard:** Alessandro Boulevard is an east-west arterial within the City of Moreno Valley. From the westerly limit of the study area to Kitching Street, Alessandro Boulevard is a partly divided arterial varying from five to six lanes. From Kitching Street to the easterly limit of study area, Alessandro Boulevard is an undivided arterial with two lanes. In the City of Moreno Valley Circulation Plan, Alessandro Boulevard is designated partly as "Divided Major Arterial" and partly as "Divided Arterial – 4 Lane."
- **Cactus Avenue:** Cactus Avenue is an east-west divided arterial within the City of Moreno Valley. The number of lanes varies from four to six. In the City of Moreno Valley Circulation Plan, Cactus Avenue is designated partly as "Divided Major Arterial – Reduced Cross Section" and partly as "Minor Arterial."
- **Iris Avenue:** Within the City of Moreno Valley, Iris Avenue is an east-west divided arterial with the number of lanes varying from three to six. In the City of Moreno Valley Circulation Plan, Iris Avenue is designated partly as "Divided Major Arterial" and partly as "Arterial."
- **Perris Boulevard:** Perris Boulevard is a north-south six-lane divided arterial within the study area in both the City Moreno Valley and the City of Perris. Perris Boulevard is designated as "Divided Arterial – 6 Lane" within Moreno Valley (as per the City's Circulation Plan) and as "Primary Arterial" within Perris (as per the City Perris General Plan Circulation Element).
- **Lasselle Street/Evans Road:** Lasselle Street is a north-south divided arterial with the number of lanes varying from four to five. Within the study area, the designation of Nason Street on the City of Moreno Valley Circulation Plan is "Arterial," "Divided Major Arterial," and Divided Major Arterial- Reduced Cross Section." South of the intersection with Camino Del Rey, it continues as Evans Road into the City of Perris. In Perris, Evans Road is designated as "Primary Arterial" (per the City Perris General Plan Circulation Element).
- **Nason Street:** Within the City of Moreno Valley, Nason Street is a north-south is a divided arterial. Travel lanes within the study vary between four and five lanes. Nason Street is designated partly as "Divided Major Arterial – Reduced Cross Section," partly as "Divided Arterial – 4 Lane," and partly as "Arterial" in the City's Circulation Plan.

- **Oliver Street:** Oliver Street runs north-south and is a partly divided and partly undivided arterial with the number of lanes varying from two to four. There are no existing bike lanes and sidewalks exist on both sides of the segments except for the stretch between John F Kennedy Drive and Filaree Avenue, where sidewalks are present only on one side of the road.
- **Moreno Beach Drive:** Moreno Beach Drive runs north-south in the City. Within the study area, it is designated as "Divided Major Arterial" in the City's Circulation Plan. Under existing conditions, it is a partly divided and partly undivided arterial with the number of lanes varying from two to six.

3.2 BIKES, TRAILS, AND TRANSIT

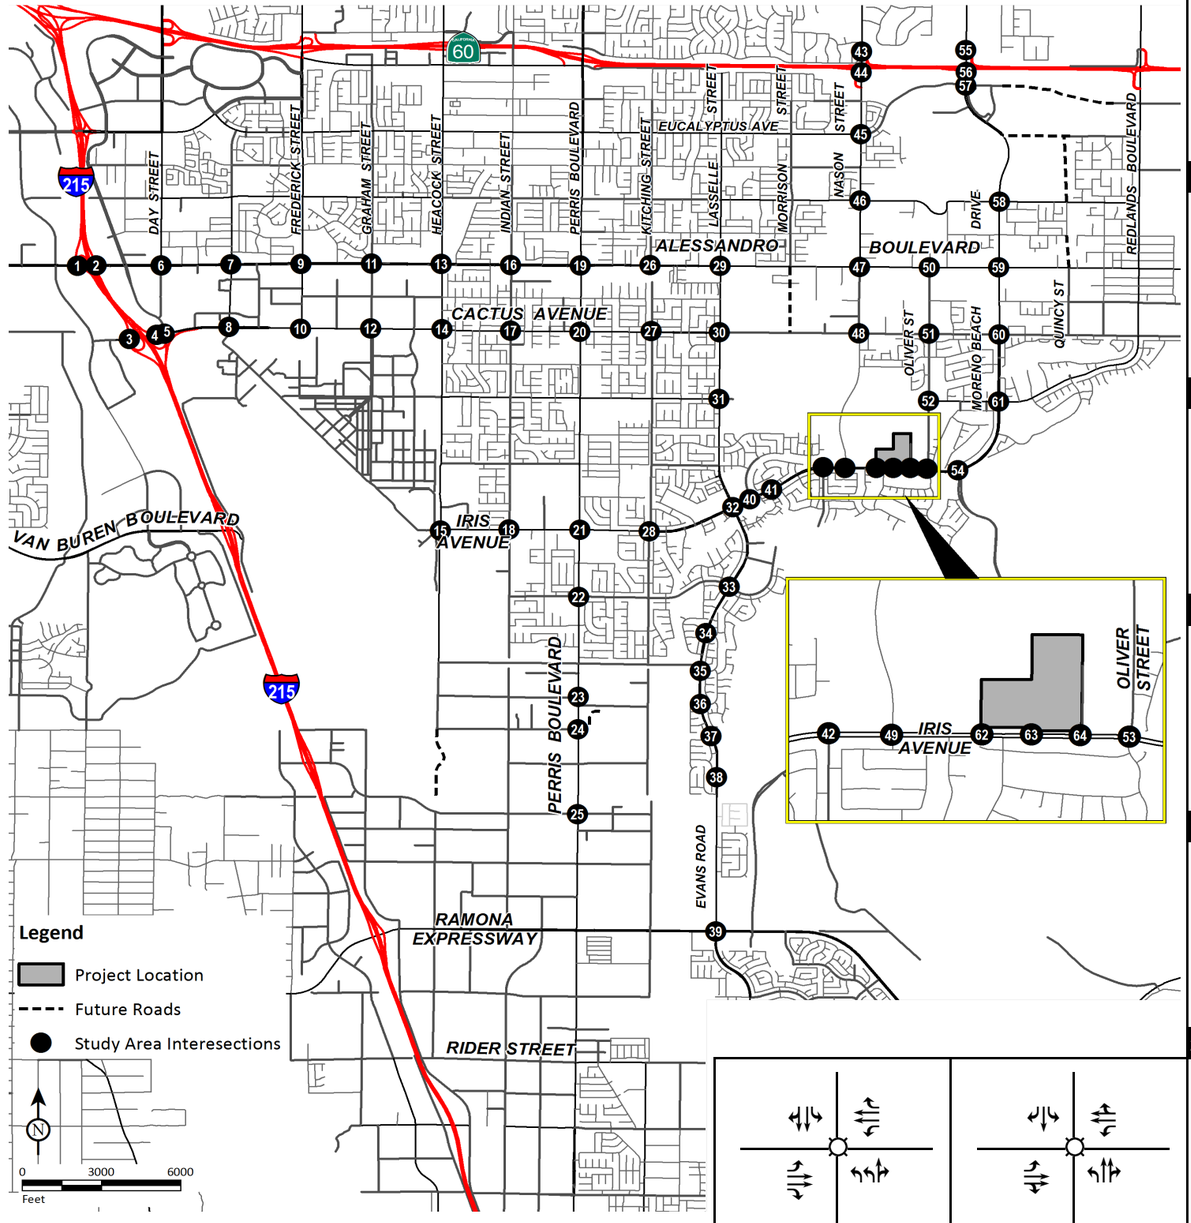
Figure 3-4 illustrates the master plan of trails within the City and surrounding region. These trails include bikeways and multiuse trails readily available and planned for both pedestrian and cyclist usage.

The existing bicycle facilities include Class I, Class II, and Class III routes and are described as follows:

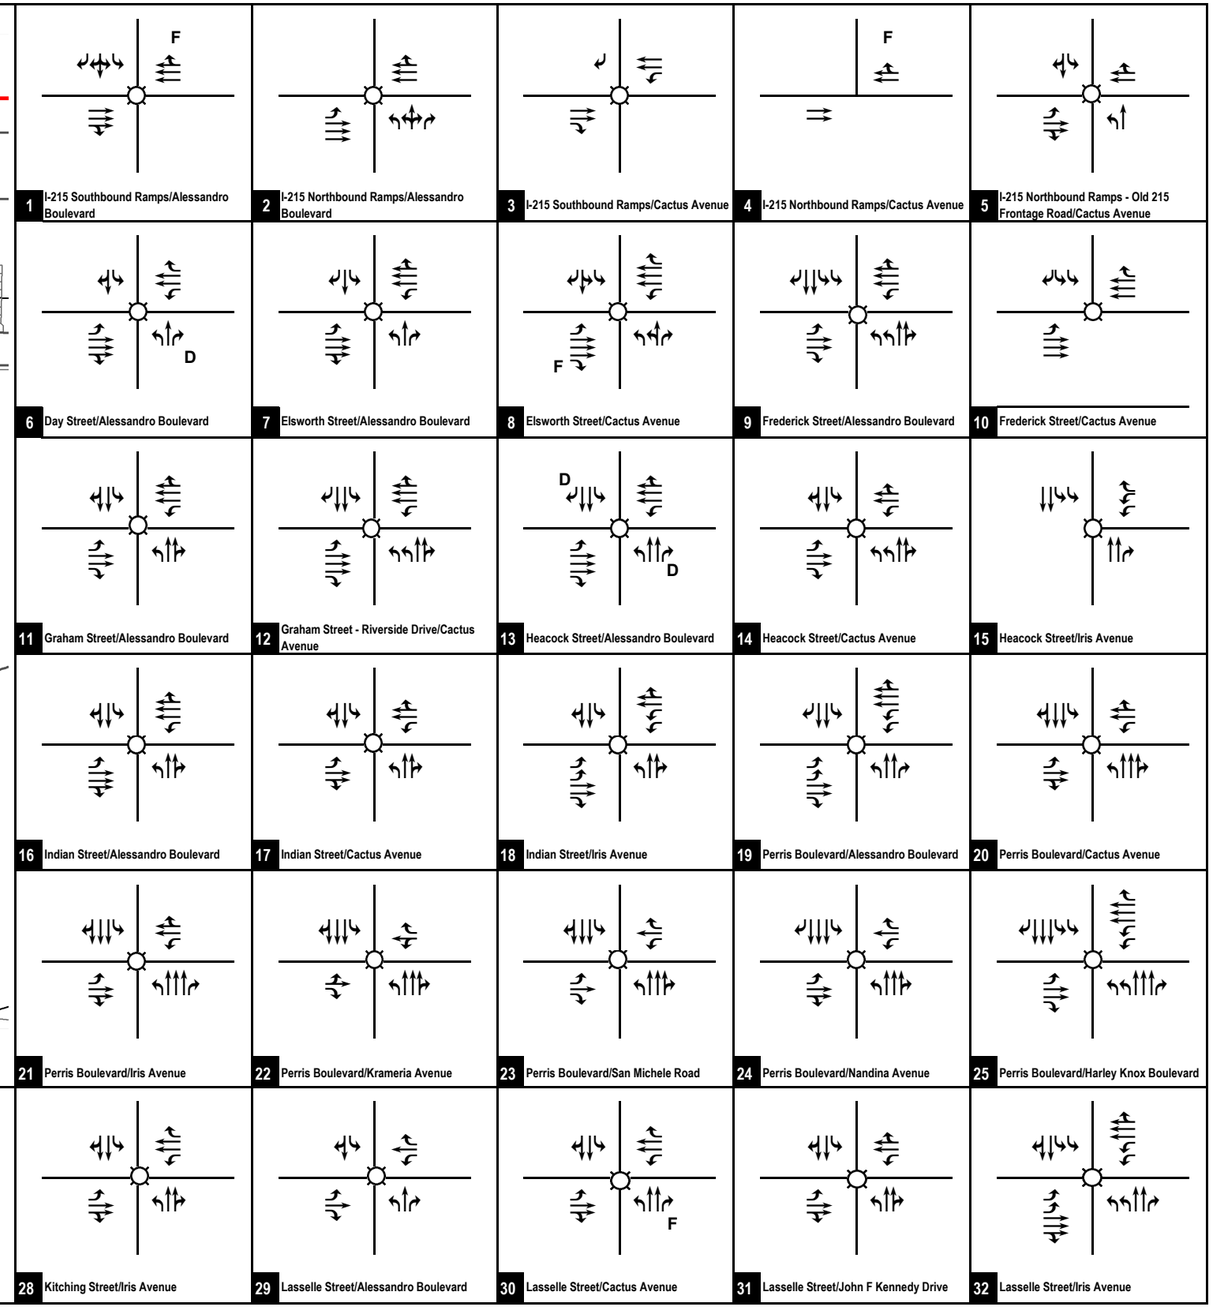
- Class I bike facilities provide completely separate right-of-way (ROW) and are designated for the exclusive use of bicycles and pedestrians with minimal vehicle and pedestrian cross-flow.
- Class II bike facilities provide restricted ROW and are designated for the use of bicycles with a striped lane on a street or highway.
- Class III bike facilities provide for a ROW designated by signs or pavement markings (sharrows) for shared use with pedestrian or motor vehicles.

Table 3-A summarizes the classifications of bicycle lanes within the TIA study area limits. Figure 3-5 illustrates the Moreno Valley bicycle lane network plan.

Public transportation with the study area includes bus and rail service. Service providers include Riverside Transportation Authority (RTA), Sunlight Transit, and Metrolink. Table 3-B documents the operators and transit service they each provide within the study area.



3.3 PROJECT DESIGN FEATURES



As stated in the Project Description section of this report, access to the project would be provided via the three existing driveways along Iris Avenue. While Driveway 2 will continue to operate as a full-access driveway and Driveway 1 as a RIRO only driveway, Driveway 3 will start operating as a RIRO only driveway with the implementation of Phase I of the project. Also, the on-site median along Driveway 2 will be modified to extend both the left-turn and right-turn lanes to the existing roundabout and thereby extend the stacking for both the egress lanes up to 200 feet when forecasted queue lengths exceed the existing available storage.

LSA

Table 3-B - Moreno Valley Transit Services

Operator	Route[1]
Bus	
RTA 11	Loop route with stops at Moreno Valley Mall, Perris Avenue & Hemlock Street, Alessandro Boulevard and Heacock Avenue, Meyer Drive and 6th St., and Frederick Street and Alessandro Boulevard.
RTA 16	Operates on an north-south express route between Moreno Valley Mall and University of California, Riverside.
RTA 18	Operates on an north-south route between Moreno Valley Mall and Moreno Valley College.
RTA 19	Operates on an north-south route between Moreno Valley Mall and Perris Transit Center, mostly via Perris Boulevard.
RTA 20	Operates on an north-south route between Magnolia Avenue/Elizabeth Street in Riverside and Iris Boulevard/Lasselle Street, mostly along Alessadro Boulevard with stops at Moreno Valley Community College, Kaiser Medical Center, and Moreno Valley Metrolink Station.
RTA 26	Operates two loop routes. West Loop route stops at Moreno Valley Metrolink, Mission Grove at Social Security, and a transfer stop at Orange Terrace/Van Buren Boulevard
RTA 31	Operates on an north-south express route between Hemet Valley Mall and Moreno Valley Mall, via Route 79 and SR-60.
RTA 41	Operates on an east-west route between Mead Valley Community Center and Riverside University Medical Center, mostly via Cajalco Express, Lasselle Street and Evans Road.
RTA 208	Operates on an north-south commuter link express route between Promenade Mall in Temecula and Vine Street layover in Downtown Riverside.
RTA 210/Sunline 220	Operates on an east-west commuter link express limited route between Palm Desert Mall and Vine Street layover in Riverside.
Rail	
Metrolink 91/Perris Valley	Operates on an east-west commuter rail from Perris to Norwalk with a stop in Moreno Valley/March Field.

Notes:

[1] Route information obtained from Riverside Transit Authority website (www.riversidetransit.com) and Metrolink's website (www.metrolinktrains.com).

4.0 TRAFFIC VOLUMES FOR WITHOUT PROJECT SCENARIOS

4.1 EXISTING TRAFFIC VOLUMES

Existing traffic volumes are based on counts collected by National Data and Surveying Services (NDS) and Counts Unlimited in November 2017 and January 2018. Daily tube counts were collected for roadway segments while a.m. and p.m. peak hour turning movement counts were collected at study intersections. All U-turns were considered as left turns for analysis purposes. Detailed count sheets are included in Appendix B.

Vehicle classification counts were conducted at selected intersections. At these locations, counts were converted to Passenger Car Equivalent (PCE) volumes. The concept of PCEs accounts for the larger impact of trucks on traffic operations. It does so by assigning each type of truck a PCE factor that represents the number of passenger vehicles that could travel through an intersection in the same time that a particular type of truck could. PCE volumes at study intersections were computed using a factor of 1.5 for 2-axle trucks, 2.0 for 3-axle trucks, and 3.0 for trucks with four or more axles. The percentage of trucks at the remaining study intersections without classification counts was determined based on truck percentages derived from adjacent intersections with classification counts. At these locations, truck PCE volumes were computed using a PCE factor of 2.0 for all trucks, consistent with the HCM 6 methodologies.

Figures 4-1A and 4-1B illustrate existing peak hour traffic volumes at study intersections. Table 4-A summarizes the existing roadway segment daily traffic volumes.

4.2 GENERAL PLAN BUILD-OUT (2040) WITHOUT PROJECT PEAK HOUR TRAFFIC VOLUMES

General Plan build-out conditions traffic volumes were developed using forecast volumes obtained from Moreno Valley Traffic Model (MVTM) and by applying the National Cooperative Highway Research Program (NCHRP) post-processing methodologies. Information concerning cumulative projects in the City was obtained from the City of Moreno Valley Economic Development website. Cumulative projects were also considered for the adjacent jurisdictions of County of Riverside, City of Riverside, City of Perris, and the March Joint Powers Authority. As such, the future year scenario in MVTM includes all projects anticipated to be built over the next 25 years. The model socioeconomic data for the future scenario were reviewed to check whether the cumulative projects that are anticipated to affect the study area are included in the model. If a project was missing or not appropriately included in the model, the model's socioeconomic data were accordingly updated to include those projects. Figure 4-2 illustrates the cumulative project locations. Table 4-B lists the cumulative projects included in the analysis.

Figures 4-3A and 4-3B illustrate peak hour traffic volumes at study intersections for General Plan build-out without project conditions. Table 4-C summarizes the General Plan build-out roadway segment daily traffic volumes.

4.3 PHASE I PROJECT COMPLETION YEAR (2023) WITHOUT PROJECT TRAFFIC VOLUMES

Based on discussion with City staff during the scoping agreement process, it was determined that the traffic volumes for each phase will be developed by interpolating between the existing and General Plan build-out without project traffic volumes. Traffic volumes for Phase I project completion year without project conditions were obtained by interpolating the forecast volume growth from MVTM and adding it to the existing traffic volumes.

Figures 4-4A and 4-4B illustrate peak hour traffic volumes at study intersections for Phase I project completion year without project conditions. Table 4-D summarizes the Phase II project completion year roadway segment daily traffic volumes.

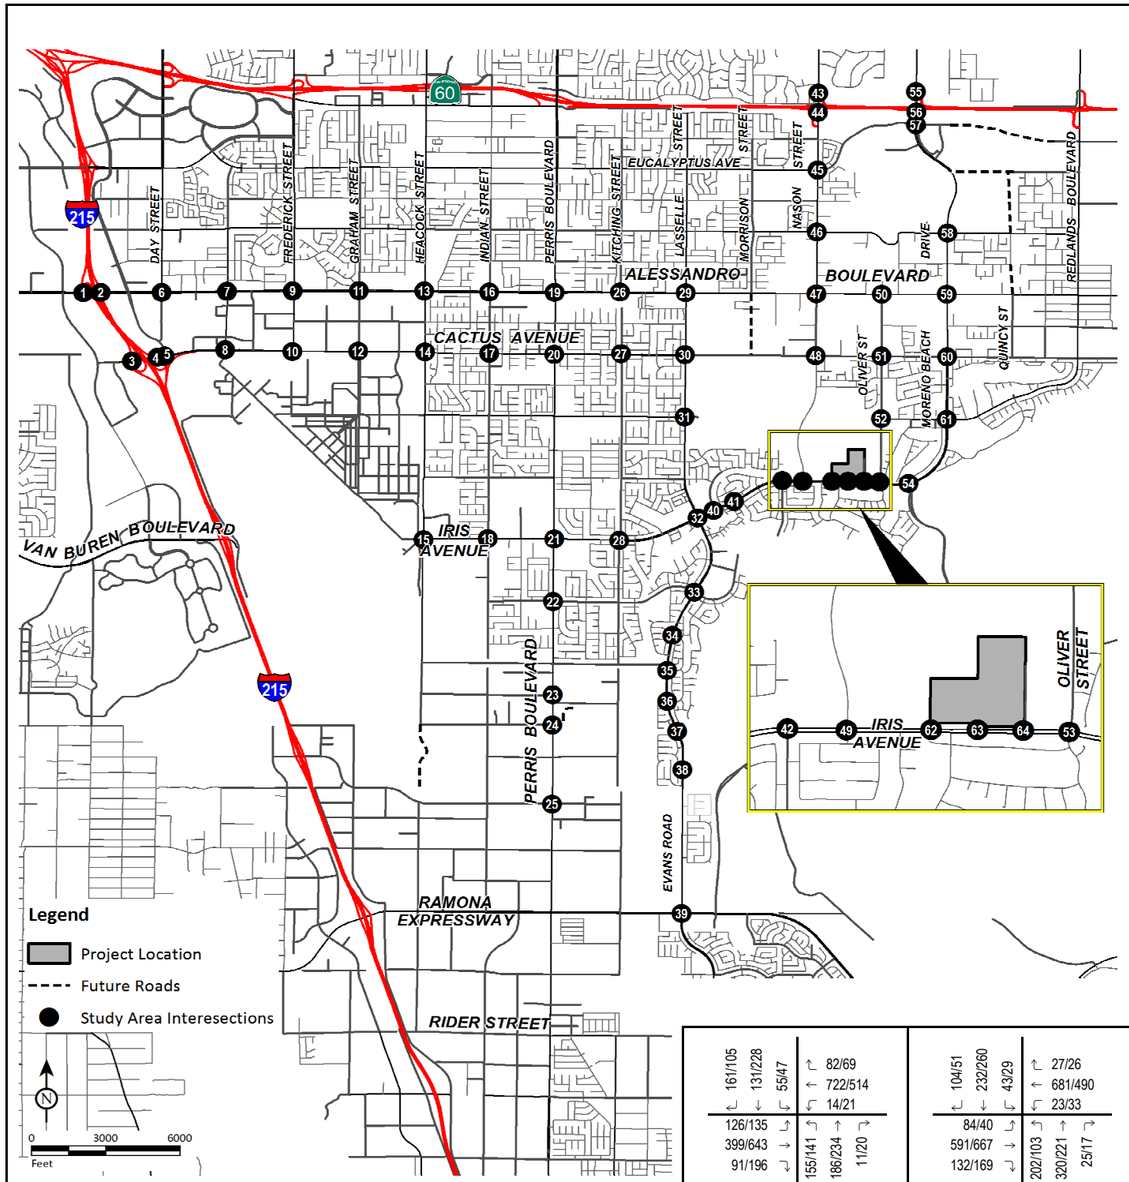
4.4 PHASE II PROJECT COMPLETION YEAR (2032) WITHOUT PROJECT TRAFFIC VOLUMES

Traffic volumes for Phase II project completion year without project conditions were obtained by interpolating the forecast volume growth from MVTM and adding it to the existing traffic volumes.

Figure 4-5A and 4-5B illustrate peak hour traffic volumes at study intersections for Phase II project completion year without project conditions. Table 4-E summarizes the Phase II project completion year roadway segment daily traffic volumes.

4.5 PHASE III PROJECT COMPLETION YEAR (2038) WITHOUT PROJECT TRAFFIC VOLUMES

Traffic volumes for Phase III project completion year without project conditions were obtained by interpolating the forecast volume growth from MVTM and adding it to the existing traffic volumes.



Figures 4-6A and 4-6B illustrate peak hour traffic volumes at study intersections for Phase III project completion year without project conditions. Table 4-F summarizes the Phase III project completion year roadway segment daily traffic volumes.

Detailed volume development worksheets are included in Appendix C.

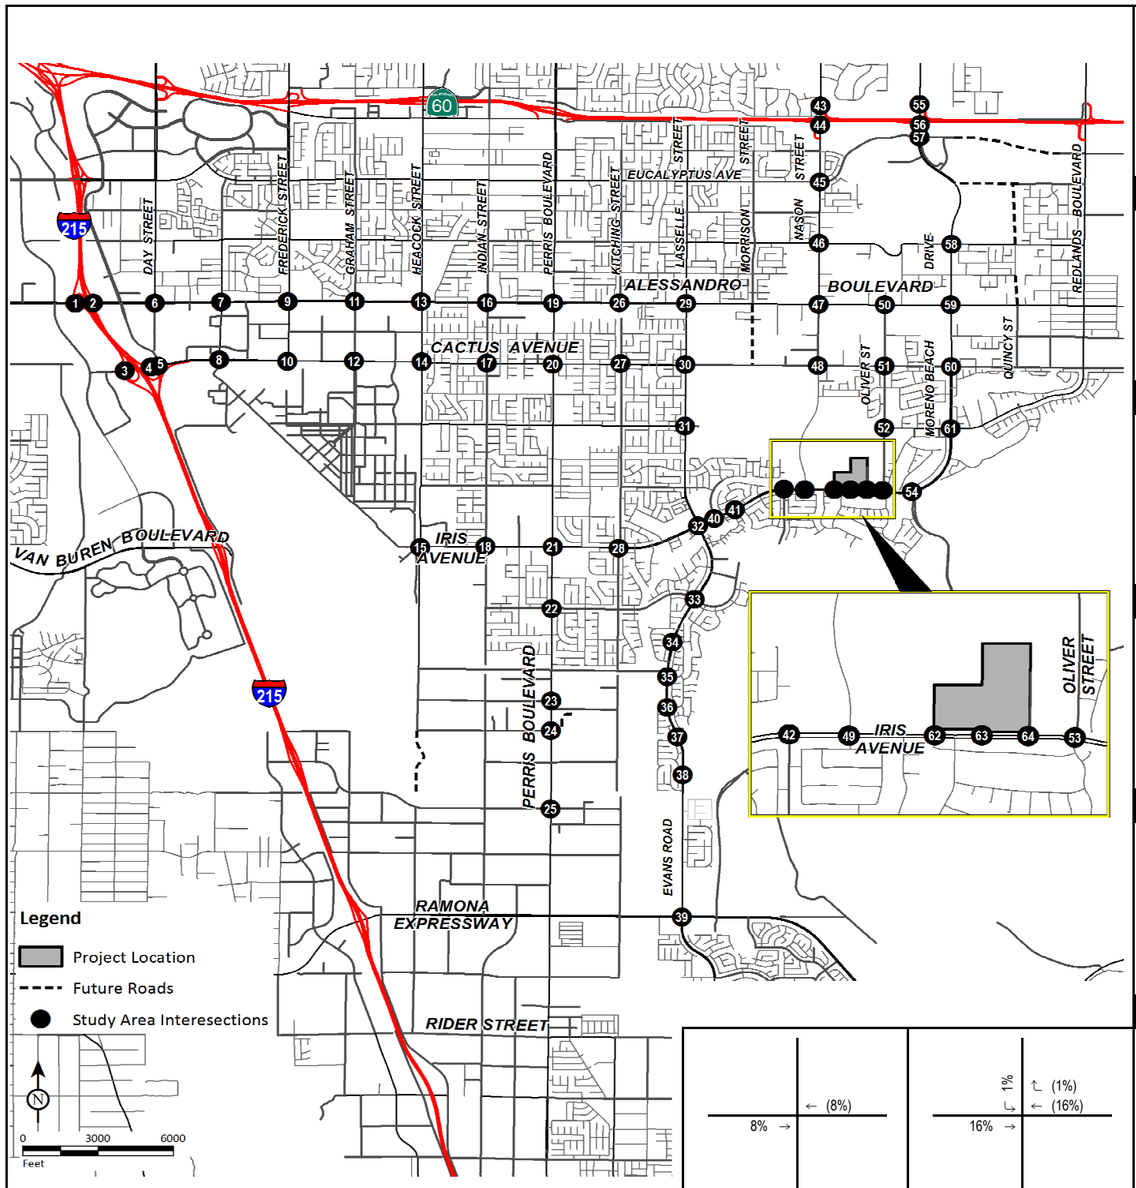
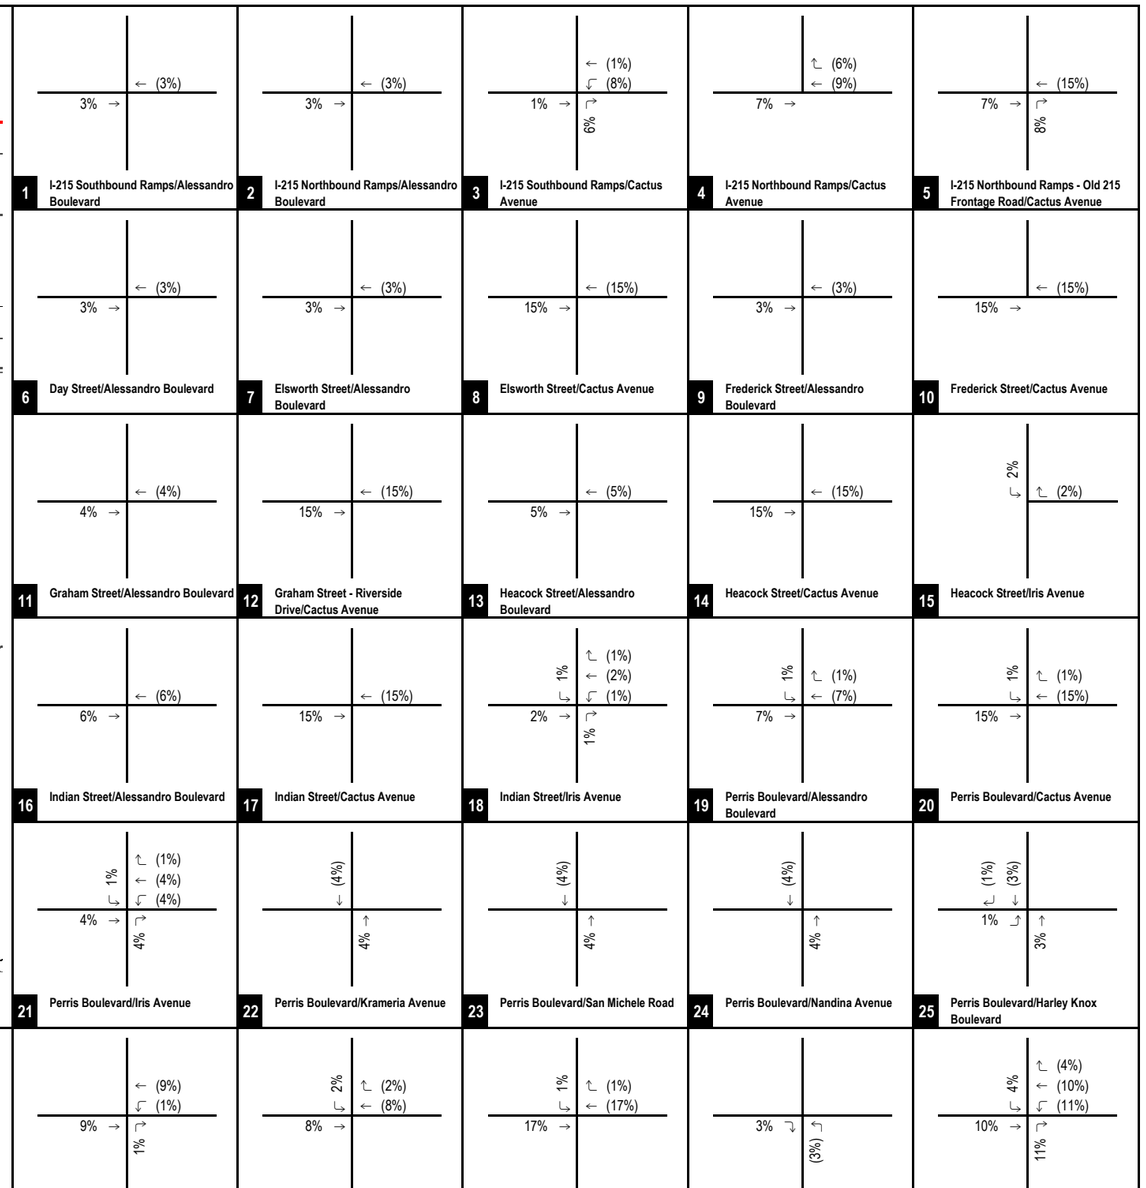
5.0 PROJECT TRAFFIC

5.1 PROJECT TRIP GENERATION



The trip generation for the proposed project was developed using rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 10th Edition, for Land Uses 610 – "Hospital" and 720 – "Medical-Dental Office Building." Trip credits have been taken for the existing medical office building and hospital to be demolished in Phases I and III, respectively. The credits have been obtained using ITE trip generation rates for the demolished uses. Table 5-A summarizes the project trip generation. As illustrated in Table 5-A, in Phase I, the proposed project will generate 653 net daily trips, with 55 net trips occurring during the a.m. peak hour and 56 net trips occurring during the p.m. peak hour. After the completion of Phase II, the project will generate 6,989 net daily trips, with 574 net trips occurring during the a.m. peak hour and 650 net trips occurring during the p.m. peak hour. Under full build-out condition, the project will generate 12,921 net daily trips, with 1,056 net trips occurring during the a.m. peak hour and 1,216 net trips occurring during the p.m. peak hour.



5.2 PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

The project trip distribution was developed using the select zone model run obtained from the MVTM. The select zone model plot for the proposed project is attached as part of the scoping agreement in Appendix A. Figures 5-1A and 5-1B illustrate the project trip distribution. Figure 5-2 illustrates the regional project distribution. The project trip assignment in various phases is the product of the total project trip generation in the respective phase and the project trip distribution percentages. Figures 5-3A and 5-3B, 5-4A and 5-4B, 5-5A and 5-5B, and 5-6A and 5-6B illustrate the existing, project completion years Phases I, II, III, and General Plan build-out project trip assignments, respectively.

6.0 TRAFFIC VOLUMES FOR WITH PROJECT SCENARIOS

Existing, project completion year (Phases I, II, and III), and General Plan build-out with project traffic volumes were developed by adding project traffic to the corresponding without project scenarios. Figures 6-1A and 6-1B, 6-2A and 6-2B, 6-3A and 6-3B, 6-4A and 6-4B, and 6-5A and 6-5B illustrate "with project" peak hour traffic volumes at study intersections under existing, Phases I, II, and III project completion years, and General Plan build-out conditions, respectively. Previously referenced Tables 4-A, 4-B, 4-C, 4-D, and 4-E summarize the "with project" roadway segment daily traffic volumes under existing, Phases I, II, and III project completion years, and General Plan build-out conditions, respectively.

Detailed volume development worksheets are included in Appendix C.

Kaiser Permanente Moreno Valley Medical Center Master Plan Project

Traffic Impact Analysis

General Plan Build-out (2040) with Project Peak Hour Traffic Volumes (Int. 33-64)

7.0 INTERSECTION AND ROADWAY SEGMENT LEVELS OF SERVICE

7.1 EXISTING LEVELS OF SERVICE

7.1.1 Study Intersections

Previously referenced Figure 3-1 illustrates existing study geometrics and traffic control. An intersection LOS analysis was conducted for existing conditions using the methodologies previously discussed. Table 7-A summarizes the results of the analysis and shows that the following intersections are currently operating at an unsatisfactory LOS:

- Indian Street/Cactus Avenue (a.m. peak hour only);
- Kitching Street/Cactus Avenue (a.m. peak hour only);
- Lasselle Street/Cactus Avenue (a.m. peak hour only);
- Lasselle Street/Krameria Avenue (a.m. peak hour only);
- Lasselle Street/Via De Anza-Rancho Verde High School (a.m. peak hour only);
- Nason Street-Hillrose Lane/Iris Avenue (p.m. peak hour only); and
- Pearl Lane-Oliver Street/Alessandro Boulevard (a.m. peak hour only).

All other intersections currently operate at a satisfactory LOS.

Figure 7-1 illustrates intersection levels of service under existing conditions.

7.1.2 Roadway Segments

A roadway segment LOS analysis was conducted for existing conditions using the methodologies previously discussed. Table 7-B summarizes the results of this analysis and shows that the following roadway segments are currently operating at an unsatisfactory LOS:

- Moreno Beach Drive between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between Alessandro Boulevard and Cactus Avenue; and
- Cactus Avenue between I-215 Northbound Ramps-Old Frontage Road and Elsworth Street.

All other roadway segments operate at a satisfactory LOS.

Roadway segment levels of service under existing conditions are illustrated in Figure 7-2.

7.2 EXISTING WITH PROJECT LEVELS OF SERVICE

Analysis of the existing with project scenario is provided for CEQA compliance to identify direct project impacts if the project were to be built and in operation today. This scenario eliminates the effects of ambient growth and other cumulative projects and deals specifically with project impacts.

7.2.1 Study Intersections

An intersection LOS analysis was conducted for existing with project conditions using the methodologies previously discussed. Table 7-A summarizes the results of the analysis and shows that the following intersections are forecast to operate at an unsatisfactory LOS under existing with project conditions:

- Indian Street/Cactus Avenue (a.m. peak hour only);
- Kitching Street/Cactus Avenue (a.m. peak hour only);
- Lasselle Street/Cactus Avenue (a.m. peak hour only);
- Lasselle Street/Krameria Avenue (a.m. peak hour only);
- Lasselle Street/Via De Anza-Rancho Verde High School (a.m. peak hour only);
- Nason Street-Hillrose Lane/Iris Avenue (a.m. and p.m. peak hours); and
- Pearl Lane-Oliver Street/Alessandro Boulevard (a.m. peak hour only).

All these intersections operate at an unsatisfactory LOS even under existing conditions; therefore, the project contributes to the existing deficiency at these intersections. As such, the project has a significant impact at these intersections. All other intersections are forecast to operate at a satisfactory LOS.

Figure 7-1 illustrates intersection levels of service under existing with project conditions.

7.2.2 Roadway Segments

A roadway segment LOS analysis was conducted for existing with project conditions using the methodologies previously discussed. Table 7-B summarizes the results of this analysis and shows that the following roadway segments are forecast to operate at an unsatisfactory LOS under existing with project conditions:

- Moreno Beach Drive between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between Alessandro Boulevard and Cactus Avenue;
- Alessandro Boulevard between Kitching Street and Lasselle Street;
- Alessandro Boulevard between Lasselle Street and Nason Street; and
- Cactus Avenue between I-215 Northbound Ramps-Old Frontage Road and Elsworth Street.

The two segments on Alessandro Boulevard do not operate at an unsatisfactory LOS under existing conditions; therefore, the project has a significant direct impact at these two segments. However, the two segments on Moreno Beach Drive and the one on Cactus Avenue operate at an unsatisfactory LOS even under existing conditions. Thus, the project contributes to the existing deficiency at these segments. As such, the project has a significant impact at these segments. All other roadway segments are forecast to operate at a satisfactory LOS.

Roadway segment levels of service under existing with project conditions are illustrated in Figure 7-3.

7.3 PHASE I PROJECT COMPLETION YEAR (2023) WITHOUT PROJECT LEVELS OF SERVICE

7.3.1 Study Intersections

An intersection LOS analysis was conducted for Phase I project completion year without project conditions using the methodologies previously discussed. Table 7-C summarizes the results of the analysis and shows that the following intersections are forecast to operate at an unsatisfactory LOS under Phase I project completion year without project conditions:

- Elsworth Street/Cactus Avenue (p.m. peak hour only);
- Indian Street/Cactus Avenue (a.m. peak hour only);
- Kitching Street/Cactus Avenue (a.m. peak hour only);
- Kitching Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Lasselle Street/Cactus Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Krameria Avenue (a.m. peak hour only);
- Lasselle Street/Via De Anza-Rancho Verde High School (a.m. and p.m. peak hours);
- Evans Road/Ramona Expressway (a.m. peak hour only);
- Nason Street-Hillrose Lane/Iris Avenue (p.m. peak hour only);
- Pearl Lane-Oliver Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Moreno Beach Drive/SR-60 Eastbound Ramps (p.m. peak hour only); and
- Moreno Beach Drive/Alessandro Boulevard (p.m. peak hour only).

All other intersections are forecast to operate at a satisfactory LOS.

Figure 7-4 illustrates intersection levels of service under Phase I project completion year without project conditions.

7.3.2 Roadway Segments

A roadway segment LOS analysis was conducted for Phase I project completion year without project conditions using the methodologies previously discussed. Table 7-D summarizes the results of this analysis and shows that the following roadway segments are forecast to operate at an unsatisfactory LOS under Phase I project completion year without project conditions:

- Moreno Beach Drive between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between Alessandro Boulevard and Cactus Avenue;

- Alessandro Boulevard between Kitching Street and Lasselle Street;
- Alessandro Boulevard between Lasselle Street and Nason Street;
- Alessandro Boulevard between Nason Street and Moreno Beach Drive; and
- Cactus Avenue between I-215 Northbound Ramps-Old Frontage Road and Elsworth Street.

All other roadway segments are forecast to operate at a satisfactory LOS.

Roadway segment levels of service under Phase I project completion year without project conditions are illustrated in Figure 7-5.

7.4 PHASE I PROJECT COMPLETION YEAR (2023) WITH PROJECT LEVELS OF SERVICE

7.4.1 Study Intersections

An intersection LOS analysis was conducted for Phase I project completion year with project conditions using the methodologies previously discussed. Table 7-C summarizes the results of the analysis and shows that the following intersections are forecast to operate at an unsatisfactory LOS under Phase I project completion year with project conditions:

- Elsworth Street/Cactus Avenue (p.m. peak hour only);
- Indian Street/Cactus Avenue (a.m. peak hour only);
- Kitching Street/Cactus Avenue (a.m. peak hour only);
- Kitching Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Lasselle Street/Cactus Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Krameria Avenue (a.m. peak hour only);
- Lasselle Street/Via De Anza-Rancho Verde High School (a.m. and p.m. peak hours);
- Evans Road/Ramona Expressway (a.m. peak hour only);
- Nason Street-Hillrose Lane/Iris Avenue (p.m. peak hour only);
- Pearl Lane-Oliver Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Moreno Beach Drive/SR-60 Eastbound Ramps (p.m. peak hour only); and
- Moreno Beach Drive/Alessandro Boulevard (p.m. peak hour only).

All these intersections are forecast to operate at an unsatisfactory LOS even under Phase I project completion year without project conditions. Thus, the project contributes to the forecast deficiency at these intersections. As such, the project has a cumulative impact at these intersections. All other intersections are forecast to operate at a satisfactory LOS.

Figure 7-4 illustrates intersection levels of service under Phase I project completion year with project conditions.

7.4.2 Roadway Segments

A roadway segment LOS analysis was conducted for Phase I project completion year with project conditions using the methodologies previously discussed. Table 7-D summarizes the results of this analysis and shows that the following roadway segments are forecast to operate at an unsatisfactory LOS under Phase I project completion year with project conditions:

- Moreno Beach Drive between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between Alessandro Boulevard and Cactus Avenue;
- Alessandro Boulevard between Kitching Street and Lasselle Street;
- Alessandro Boulevard between Lasselle Street and Nason Street;
- Alessandro Boulevard between Nason Street and Moreno Beach Drive; and
- Cactus Avenue between I-215 Northbound Ramps-Old Frontage Road and Elsworth Street.

These six segments are forecast to operate at an unsatisfactory LOS even under Phase I project completion year without project conditions. Thus, the project contributes to the forecast deficiency at these segments. As such, the project has a cumulative impact at all these segments. All other roadway segments are forecast to operate at a satisfactory LOS.

Roadway segment levels of service under Phase I project completion year with project conditions are illustrated in Figure 7-6.

7.5 PHASE II PROJECT COMPLETION YEAR (2032) WITHOUT PROJECT LEVELS OF SERVICE

7.5.1 Study Intersections

An intersection LOS analysis was conducted for Phase II project completion year without project conditions using the methodologies previously discussed. Table 7-E summarizes the results of the analysis and shows that the following intersections are forecast to operate at an unsatisfactory LOS under Phase II project completion year without project conditions:

- I-215 Northbound Ramps-Old Frontage Road/Cactus Avenue (a.m. and p.m. peak hours);
- Day Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Elsworth Street/Alessandro Boulevard (p.m. peak hour only);
- Elsworth Street/Cactus Avenue (p.m. peak hour only);
- Graham Street/Alessandro Boulevard (p.m. peak hour only);
- Graham Street-Riverside Drive/Cactus Avenue (a.m. peak hour only);
- Indian Street/Cactus Avenue (a.m. peak hour only);
- Perris Boulevard/Alessandro Boulevard (p.m. peak hour only);
- Perris Boulevard/Harley Knox Boulevard (a.m. peak hour only);

- Kitching Street/Cactus Avenue (a.m. and p.m. peak hours);
- Kitching Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Lasselle Street/Cactus Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Iris Avenue (p.m. peak hour only);
- Lasselle Street/Krameria Avenue (a.m. peak hour only);
- Lasselle Street/Via De Anza-Rancho Verde High School (a.m. and p.m. peak hours);
- Evans Road/Ramona Expressway (a.m. peak hour only);
- Nason Street/Eucalyptus Avenue (a.m. peak hour only);
- Nason Street-Hillrose Lane/Iris Avenue (p.m. peak hour only);
- Pearl Lane-Oliver Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Moreno Beach Drive/SR-60 Eastbound Ramps (a.m. and p.m. peak hours); and
- Moreno Beach Drive/Alessandro Boulevard (a.m. and p.m. peak hours).

All other intersections are forecast to operate at a satisfactory LOS.

Figure 7-7 illustrates intersection levels of service under Phase II project completion year without project conditions.

7.5.2 Roadway Segments

A roadway segment LOS analysis was conducted for Phase II project completion year without project conditions using the methodologies previously discussed. Table 7-F summarizes the results of this analysis and shows that the following roadway segments are forecast to operate at an unsatisfactory LOS under Phase II project completion year without project conditions:

- Lasselle Street, between Iris Avenue and Krameria Avenue;
- Lasselle Street between Krameria Avenue and Via Xavier Lane;
- Lasselle Street between Via Xavier Lane and Lasselle Sports Park-Rojo Tierra;
- Lasselle Street between Lasselle Sports Park-Rojo Tierra and Cremello Way-Avenida De Plata;
- Lasselle Street between Cremello Way-Avenida De Plata and Avenida Classica-Kentucky Derby Drive;
- Lasselle Street-Evans Road between Via De Anza-Rancho Verde High School and Ramona Expressway;
- Nason Street between Eucalyptus Avenue and Cottonwood Avenue;
- Nason Street between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between Cottonwood Avenue and Alessandro Boulevard;

- Moreno Beach Drive between Alessandro Boulevard and Cactus Avenue;
- Alessandro Boulevard between I-215 Northbound Ramps and Day Street;
- Alessandro Boulevard between Day Street and Elsworth Street;
- Alessandro Boulevard between Frederick Street and Graham Street;
- Alessandro Boulevard between Graham Street and Heacock Street;
- Alessandro Boulevard between Kitching Street and Lasselle Street;
- Alessandro Boulevard between Lasselle Street and Nason Street;
- Alessandro Boulevard between Nason Street and Moreno Beach Drive; and
- Cactus Avenue between I-215 Northbound Ramps-Old Frontage Road and Elsworth Street.

All other roadway segments are forecast to operate at a satisfactory LOS.

Roadway segment levels of service under Phase II project completion year without project conditions are illustrated in Figure 7-8.

7.6 PHASE II PROJECT COMPLETION YEAR (2032) WITH PROJECT LEVELS OF SERVICE

7.6.1 Study Intersections

An intersection LOS analysis was conducted for Phase II project completion year with project conditions using the methodologies previously discussed. Table 7-E summarizes the results of the analysis and shows that the following intersections are forecast to operate at an unsatisfactory LOS under Phase II project completion year with project conditions:

- I-215 Northbound Ramps-Old Frontage Road/Cactus Avenue (a.m. and p.m. peak hours);
- Day Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Elsworth Street/Alessandro Boulevard (p.m. peak hour only);
- Elsworth Street/Cactus Avenue (p.m. peak hour only);
- Graham Street/Alessandro Boulevard (p.m. peak hour only);
- Graham Street-Riverside Drive/Cactus Avenue (a.m. peak hour only);
- Indian Street/Cactus Avenue (a.m. peak hour only);
- Perris Boulevard/Alessandro Boulevard (p.m. peak hour only);
- Perris Boulevard/Harley Knox Boulevard (a.m. peak hour only);
- Kitching Street/Cactus Avenue (a.m. and p.m. peak hours);
- Kitching Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Lasselle Street/Cactus Avenue (a.m. and p.m. peak hours);

- Lasselle Street/Iris Avenue (p.m. peak hour only);
- Lasselle Street/Krameria Avenue (a.m. peak hour only);
- Lasselle Street/Via De Anza-Rancho Verde High School (a.m. and p.m. peak hours);
- Evans Road/Ramona Expressway (a.m. peak hour only);
- Nason Street/Eucalyptus Avenue (a.m. peak hour only);
- Nason Street-Hillrose Lane/Iris Avenue (p.m. peak hour only);
- Pearl Lane-Oliver Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Moreno Beach Drive/SR-60 Eastbound Ramps (a.m. and p.m. peak hours); and
- Moreno Beach Drive/Alessandro Boulevard (a.m. and p.m. peak hours).

All these intersections are forecast to operate at an unsatisfactory LOS even under Phase II project completion year without project conditions. Thus, the project contributes to the forecast deficiency at these intersections. As such, the project has a cumulative impact at these intersections. All other intersections are forecast to operate at a satisfactory LOS.

Figure 7-7 illustrates intersection levels of service under Phase II project completion year with project conditions.

7.6.2 Roadway Segments

A roadway segment LOS analysis was conducted for Phase II project completion year with project conditions using the methodologies previously discussed. Table 7-F summarizes the results of this analysis and shows that the following roadway segments are forecast to operate at an unsatisfactory LOS under Phase II project completion year with project conditions:

- Lasselle Street between Iris Avenue and Krameria Avenue;
- Lasselle Street, between Krameria Avenue and Via Xavier Lane;
- Lasselle Street between Via Xavier Lane and Lasselle Sports Park-Rojo Tierra;
- Lasselle Street between Lasselle Sports Park-Rojo Tierra and Cremello Way-Avenida De Plata;
- Lasselle Street between Cremello Way-Avenida De Plata and Avenida Classica-Kentucky Derby Drive;
- Lasselle Street-Evans Road between Via De Anza-Rancho Verde High School and Ramona Expressway;
- Nason Street between Eucalyptus Avenue and Cottonwood Avenue;
- Nason Street between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between SR-60 Eastbound Ramps and Eucalyptus Avenue;
- Moreno Beach Drive between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between Alessandro Boulevard and Cactus Avenue;

- Alessandro Boulevard between I-215 Northbound Ramps and Day Street;
- Alessandro Boulevard between Day Street and Elsworth Street;
- Alessandro Boulevard between Frederick Street and Graham Street;
- Alessandro Boulevard between Graham Street and Heacock Street;
- Alessandro Boulevard between Kitching Street and Lasselle Street;
- Alessandro Boulevard between Lasselle Street and Nason Street;
- Alessandro Boulevard between Nason Street and Moreno Beach Drive; and
- Cactus Avenue between I-215 Northbound Ramps-Old Frontage Road and Elsworth Street.

All these segments, except for the segment of Moreno Beach Drive between SR-60 Eastbound Ramps and Eucalyptus Avenue, are forecast to operate at an unsatisfactory LOS even under Phase II project completion year without project conditions. Thus, the project contributes to the forecast deficiency at these segments. As such, the project has a cumulative impact at all these segments. All other roadway segments are forecast to operate at a satisfactory LOS.

Roadway segment levels of service under Phase II project completion year with project conditions are illustrated in Figure 7-9.

7.7 PHASE III PROJECT COMPLETION YEAR (2038) WITHOUT PROJECT LEVELS OF SERVICE

7.7.1 Study Intersections

An intersection LOS analysis was conducted for Phase III project completion year without project conditions using the methodologies previously discussed. Table 7-G summarizes the results of the analysis and shows that the following intersections are forecast to operate at an unsatisfactory LOS under Phase III project completion year without project conditions:

- I-215 Northbound Ramps-Old Frontage Road/Cactus Avenue (a.m. and p.m. peak hours);
- Day Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Elsworth Street/Alessandro Boulevard (p.m. peak hour only);
- Elsworth Street/Cactus Avenue (p.m. peak hour only);
- Frederick Street/Alessandro Boulevard (p.m. peak hour only);
- Graham Street/Alessandro Boulevard (p.m. peak hour only);
- Graham Street-Riverside Drive/Cactus Avenue (a.m. peak hour only);
- Indian Street/Cactus Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Alessandro Boulevard (a.m. and p.m. peak hours);
- Perris Boulevard/Cactus Avenue (p.m. peak hour only);
- Perris Boulevard/Iris Avenue (p.m. peak hour only);

- Perris Boulevard/Harley Knox Boulevard (a.m. and p.m. peak hours);
- Kitching Street/Cactus Avenue (a.m. and p.m. peak hours);
- Kitching Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Lasselle Street/Cactus Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Krameria Avenue (a.m. peak hour only);
- Lasselle Street/Via De Anza-Rancho Verde High School (a.m. and p.m. peak hours);
- Evans Road/Ramona Expressway (a.m. and p.m. peak hours);
- Nason Street/Eucalyptus Avenue (a.m. peak hour only);
- Nason Street/Alessandro Boulevard (p.m. peak hour only);
- Nason Street-Hillrose Lane/Iris Avenue (p.m. peak hour only);
- Pearl Lane-Oliver Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Moreno Beach Drive/SR-60 Eastbound Ramps (a.m. and p.m. peak hours);
- Moreno Beach Drive/Eucalyptus Avenue (p.m. peak hour only);
- Moreno Beach Drive/Cottonwood Avenue (p.m. peak hour only); and
- Moreno Beach Drive/Alessandro Boulevard (a.m. and p.m. peak hours).

All other intersections are forecast to operate at a satisfactory LOS.

Figure 7-10 illustrates intersection levels of service under Phase III project completion year without project conditions.

7.7.2 Roadway Segments

A roadway segment LOS analysis was conducted for Phase III project completion year without project conditions using the methodologies previously discussed. Table 7-H summarizes the results of this analysis and shows that the following roadway segments are forecast to operate at an unsatisfactory LOS under Phase III project completion year without project conditions:

- Perris Boulevard between Krameria Avenue and San Michele Road;
- Perris Boulevard between San Michele Road and Nandina Avenue;
- Perris Boulevard between Nandina Avenue and Harley Knox Boulevard;
- Lasselle Street between Iris Avenue and Krameria Avenue;
- Lasselle Street between Krameria Avenue and Via Xavier Lane;
- Lasselle Street between Via Xavier Lane and Lasselle Sports Park-Rojo Tierra;

- Lasselle Street between Lasselle Sports Park-Rojo Tierra and Cremello Way-Avenida De Plata;
- Lasselle Street between Cremello Way-Avenida De Plata and Avenida Classica-Kentucky Derby Drive;
- Lasselle Street between Avenida Classica-Kentucky Derby Drive and Via De Anza-Rancho Verde High School;
- Lasselle Street-Evans Road between Via De Anza-Rancho Verde High School and Ramona Expressway;
- Nason Street between Eucalyptus Avenue and Cottonwood Avenue;
- Nason Street between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between SR-60 Eastbound Ramps and Eucalyptus Avenue;
- Moreno Beach Drive between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between Alessandro Boulevard and Cactus Avenue;
- Alessandro Boulevard between I-215 Northbound Ramps and Day Street;
- Alessandro Boulevard between Day Street and Elsworth Street;
- Alessandro Boulevard between Frederick Street and Graham Street;
- Alessandro Boulevard between Graham Street and Heacock Street;
- Alessandro Boulevard between Heacock Street and Indian Street;
- Alessandro Boulevard between Perris Boulevard and Kitching Street;
- Alessandro Boulevard between Kitching Street and Lasselle Street;
- Alessandro Boulevard between Lasselle Street and Nason Street;
- Alessandro Boulevard between Nason Street and Moreno Beach Drive;
- Cactus Avenue between I-215 Northbound Ramps-Old Frontage Road and Elsworth Street;
- Cactus Avenue between Frederick Street and Graham Street-Riverside Drive;
- Iris Avenue between Perris Boulevard and Kitching Street;
- Iris Avenue between Camino Flores and Coachlight Court-Avenida De Circo;
- Iris Avenue between Coachlight Court-Avenida De Circo and Grande Vista Drive; and
- Iris Avenue between Grande Vista Drive and Nason Street-Hillrose Lane.

All other roadway segments are forecast to operate at a satisfactory LOS.

Roadway segment levels of service under Phase III project completion year without project conditions are illustrated in Figure 7-11.

7.8 PHASE III PROJECT COMPLETION YEAR (2038) WITH PROJECT LEVELS OF SERVICE

7.8.1 Study Intersections

An intersection LOS analysis was conducted for Phase III project completion year with project conditions using the methodologies previously discussed. Table 7-G summarizes the results of the analysis and shows that the following intersections are forecast to operate at an unsatisfactory LOS under Phase III project completion year with project conditions:

- I-215 Northbound Ramps-Old Frontage Road/Cactus Avenue (a.m. and p.m. peak hours);
- Day Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Elsworth Street/Alessandro Boulevard (p.m. peak hour only);
- Elsworth Street/Cactus Avenue (p.m. peak hour only);
- Frederick Street/Alessandro Boulevard (p.m. peak hour only);
- Graham Street/Alessandro Boulevard (p.m. peak hour only);
- Graham Street-Riverside Drive/Cactus Avenue (a.m. and p.m. peak hours);
- Heacock Street/Alessandro Boulevard (p.m. peak hour only);
- Indian Street/Cactus Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Alessandro Boulevard (a.m. and p.m. peak hours);
- Perris Boulevard/Cactus Avenue (p.m. peak hour only);
- Perris Boulevard/Iris Avenue (p.m. peak hour only);
- Perris Boulevard/Harley Knox Boulevard (a.m. and p.m. peak hours);
- Kitching Street/Cactus Avenue (a.m. and p.m. peak hours);
- Kitching Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Lasselle Street/Cactus Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Krameria Avenue (a.m. peak hour only);
- Lasselle Street/Via De Anza-Rancho Verde High School (a.m. and p.m. peak hours);
- Evans Road/Ramona Expressway (a.m. and p.m. peak hours);
- Nason Street/Eucalyptus Avenue (a.m. and p.m. peak hours);
- Nason Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Nason Street-Hillrose Lane/Iris Avenue (a.m. and p.m. peak hours);
- Pearl Lane-Oliver Street/Alessandro Boulevard (a.m. and p.m. peak hours);

- Moreno Beach Drive/SR-60 Eastbound Ramps (a.m. and p.m. peak hours);
- Moreno Beach Drive/Eucalyptus Avenue (p.m. peak hour only);
- Moreno Beach Drive/Cottonwood Avenue (p.m. peak hour only);
- Moreno Beach Drive/Alessandro Boulevard (a.m. and p.m. peak hours); and
- Driveway 1/Iris Avenue (p.m. peak hour only).

All these intersections except for the intersections of Heacock Street/Alessandro Boulevard and Driveway 1/Iris Avenue are forecast to operate at an unsatisfactory LOS even under Phase III project completion year without project conditions. Thus, the project contributes to the forecast deficiency at these intersections. As such, the project has a cumulative impact at these intersections. All other intersections are forecast to operate at a satisfactory LOS.

Figure 7-10 illustrates intersection levels of service under Phase III project completion year with project conditions.

7.8.2 Roadway Segments

A roadway segment LOS analysis was conducted for Phase III project completion year with project conditions using the methodologies previously discussed. Table 7-H summarizes the results of this analysis and shows that the following roadway segments are forecast to operate at an unsatisfactory LOS under Phase III project completion year with project conditions:

- Perris Boulevard between Krameria Avenue and San Michele Road;
- Perris Boulevard between San Michele Road and Nandina Avenue;
- Perris Boulevard between Nandina Avenue and Harley Knox Boulevard;
- Lasselle Street between Iris Avenue and Krameria Avenue;
- Lasselle Street between Krameria Avenue and Via Xavier Lane;
- Lasselle Street between Via Xavier Lane and Lasselle Sports Park-Rojo Tierra;
- Lasselle Street between Lasselle Sports Park-Rojo Tierra and Cremello Way-Avenida De Plata;
- Lasselle Street between Cremello Way-Avenida De Plata and Avenida Classica-Kentucky Derby Drive;
- Lasselle Street between Avenida Classica-Kentucky Derby Drive and Via De Anza-Rancho Verde High School;
- Lasselle Street-Evans Road between Via De Anza-Rancho Verde High School and Ramona Expressway;
- Nason Street between Eucalyptus Avenue and Cottonwood Avenue;
- Nason Street between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between SR-60 Eastbound Ramps and Eucalyptus Avenue;

- Moreno Beach Drive between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between Alessandro Boulevard and Cactus Avenue;
- Alessandro Boulevard between I-215 Northbound Ramps and Day Street;
- Alessandro Boulevard between Day Street and Elsworth Street;
- Alessandro Boulevard between Frederick Street and Graham Street;
- Alessandro Boulevard between Graham Street and Heacock Street;
- Alessandro Boulevard between Heacock Street and Indian Street;
- Alessandro Boulevard between Perris Boulevard and Kitching Street;
- Alessandro Boulevard between Kitching Street and Lasselle Street;
- Alessandro Boulevard between Lasselle Street and Nason Street;
- Alessandro Boulevard between Nason Street and Moreno Beach Drive;
- Cactus Avenue between I-215 Northbound Ramps-Old Frontage Road and Elsworth Street;
- Cactus Avenue between Elsworth Avenue and Frederick Street;
- Cactus Avenue between Frederick Street and Graham Street-Riverside Drive;
- Iris Avenue between Perris Boulevard and Kitching Street;
- Iris Avenue between Lasselle Street and Camino Flores;
- Iris Avenue between Camino Flores and Coachlight Court-Avenida De Circo;
- Iris Avenue between Coachlight Court-Avenida De Circo and Grande Vista Drive; and
- Iris Avenue between Grande Vista Drive and Nason Street-Hillrose Lane.

All these segments, except for the segment of Cactus Avenue between Elsworth Street and Frederick Street and the segment of Iris Avenue between Lasselle Street and Camino Flores, are forecast to operate at an unsatisfactory LOS even under Phase III project completion year without project conditions. Thus, the project contributes to the forecast deficiency at these segments. As such, the project has a cumulative impact at all these segments. All other roadway segments are forecast to operate at a satisfactory LOS.

Roadway segment levels of service under Phase III project completion year with project conditions are illustrated in Figure 7-12.

7.9 GENERAL PLAN BUILD-OUT (2040) WITHOUT PROJECT LEVELS OF SERVICE

7.9.1 Study Intersections

An intersection LOS analysis was conducted for General Plan build-out without project conditions using the methodologies previously discussed. Table 7-I summarizes the results of this analysis and shows that the following intersections are forecast to operate at an unsatisfactory LOS under General Plan build-out without project conditions:

- I-215 Northbound Ramps-Old 215 Frontage Road/Cactus Avenue (a.m. and p.m. peak hours);
- Day Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Elsworth Street/Alessandro Boulevard (p.m. peak hour only);
- Elsworth Street/Cactus Avenue (p.m. peak hour only);
- Frederick Street/Alessandro Boulevard (p.m. peak hour only);
- Graham Street/Alessandro Boulevard (p.m. peak hour only);
- Graham Street-Riverside Drive/Cactus Avenue (a.m. and p.m. peak hours);
- Heacock Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Indian Street/Cactus Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Alessandro Boulevard (a.m. and p.m. peak hours);
- Perris Boulevard/Cactus Avenue (p.m. peak hour only);
- Perris Boulevard/Iris Avenue (p.m. peak hour only);
- Perris Boulevard/Krameria Avenue (p.m. peak hour only);
- Perris Boulevard/Harley Knox Boulevard (a.m. and p.m. peak hours);
- Kitching Street/Cactus Avenue (a.m. and p.m. peak hours);
- Kitching Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Lasselle Street/Cactus Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Krameria Avenue (a.m. peak hour only);
- Lasselle Street/Via De Anza-Rancho Verde High School (a.m. and p.m. peak hours);
- Evans Road/Ramona Expressway (a.m. and p.m. peak hours);
- Nason Street/Eucalyptus Avenue (a.m. and p.m. peak hours);
- Nason Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Nason Street-Hillrose Lane/Iris Avenue (a.m. and p.m. peak hours);
- Pearl Lane-Oliver Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Moreno Beach Drive/SR-60 Eastbound Ramps (a.m. and p.m. peak hours);
- Moreno Beach Drive/Eucalyptus Avenue (p.m. peak hour only);
- Moreno Beach Drive/Cottonwood Avenue (p.m. peak hour only); and
- Moreno Beach Drive/Alessandro Boulevard (a.m. and p.m. peak hours).

All other study intersections are forecast to operate at a satisfactory LOS.

Figure 7-13 illustrates intersection levels of service under General Plan build-out without project conditions.

7.9.2 Roadway Segments

A roadway segment LOS analysis was conducted for General Plan build-out without project conditions using the methodologies previously discussed. Table 7-J summarizes the results of this analysis and shows that the following roadway segments are forecast to operate at an unsatisfactory LOS under General Plan build-out without project conditions:

- Perris Boulevard between Iris Avenue and Krameria Avenue;
- Perris Boulevard between Krameria Avenue and San Michele Road;
- Perris Boulevard between San Michele Road and Nandina Avenue;
- Perris Boulevard between Nandina Avenue and Harley Knox Boulevard;
- Lasselle Street between Iris Avenue and Krameria Avenue;
- Lasselle Street between Krameria Avenue and Via Xavier Lane;
- Lasselle Street between Via Xavier Lane and Lasselle Sports Park-Rojo Tierra;
- Lasselle Street between Lasselle Sports Park-Rojo Tierra and Cremello Way-Avenida De Plata;
- Lasselle Street between Cremello Way-Avenida De Plata and Avenida Classica-Kentucky Derby Drive;
- Lasselle Street between Avenida Classica-Kentucky Derby Drive and Via De Anza-Rancho Verde High School;
- Lasselle Street-Evans Road, between Via De Anza-Rancho Verde High School and Ramona Expressway;
- Nason Street between Eucalyptus Avenue and Cottonwood Avenue;
- Nason Street between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between SR-60 Eastbound Ramps and Eucalyptus Avenue;
- Moreno Beach Drive between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between Alessandro Boulevard and Cactus Avenue;
- Alessandro Boulevard between I-215 Northbound Ramps and Day Street;
- Alessandro Boulevard between Day Street and Elsworth Street;
- Alessandro Boulevard between Frederick Street and Graham Street;
- Alessandro Boulevard between Graham Street and Heacock Street;
- Alessandro Boulevard between Heacock Street and Indian Street;
- Alessandro Boulevard between Indian Street and Perris Boulevard;
- Alessandro Boulevard between Perris Boulevard and Kitching Street;

- Alessandro Boulevard between Kitching Street and Lasselle Street;
- Alessandro Boulevard between Lasselle Street and Nason Street;
- Alessandro Boulevard between Nason Street and Moreno Beach Drive;
- Cactus Avenue between I-215 Northbound Ramps-Old Frontage Road and Elsworth Street;
- Cactus Avenue between Elsworth Avenue and Frederick Street;
- Cactus Avenue between Frederick Street and Graham Street-Riverside Drive;
- Iris Avenue between Perris Boulevard and Kitching Street;
- Iris Avenue between Lasselle Street and Camino Flores;
- Iris Avenue between Camino Flores and Coachlight Court-Avenida De Circo;
- Iris Avenue between Coachlight Court-Avenida De Circo and Grande Vista Drive; and
- Iris Avenue between Grande Vista Drive and Nason Street-Hillrose Lane.

All other roadway segments are forecast to operate at a satisfactory LOS.

Roadway segment levels of service under General Plan build-out without project conditions are illustrated in Figure 7-14.

7.10 GENERAL PLAN BUILD-OUT (2040) WITH PROJECT LEVELS OF SERVICE

7.10.1 Study Intersections

An intersection LOS analysis was conducted for General Plan build-out with project conditions using the methodologies previously discussed. Table 7-I summarizes the results of this analysis and shows that the following intersections are forecast to operate at an unsatisfactory LOS under General Plan build-out with project conditions:

- I-215 Northbound Ramps-Old 215 Frontage Road/Cactus Avenue (a.m. and p.m. peak hours);
- Day Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Elsworth Street/Alessandro Boulevard (p.m. peak hour only);
- Elsworth Street/Cactus Avenue (p.m. peak hour only);
- Frederick Street/Alessandro Boulevard (p.m. peak hour only);
- Graham Street/Alessandro Boulevard (p.m. peak hour only);
- Graham Street-Riverside Drive/Cactus Avenue (a.m. and p.m. peak hours);
- Heacock Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Indian Street/Cactus Avenue (a.m. and p.m. peak hours);
- Perris Boulevard/Alessandro Boulevard (a.m. and p.m. peak hours);
- Perris Boulevard/Cactus Avenue (p.m. peak hour only);

- Perris Boulevard/Iris Avenue (p.m. peak hour only);
- Perris Boulevard/Krameria Avenue (p.m. peak hour only);
- Perris Boulevard/Harley Knox Boulevard (a.m. and p.m. peak hours);
- Kitching Street/Cactus Avenue (a.m. and p.m. peak hours);
- Kitching Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Lasselle Street/Cactus Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Iris Avenue (a.m. and p.m. peak hours);
- Lasselle Street/Krameria Avenue (a.m. peak hour only);
- Lasselle Street/Via De Anza-Rancho Verde High School (a.m. and p.m. peak hours);
- Evans Road/Ramona Expressway (a.m. and p.m. peak hours);
- Nason Street/Eucalyptus Avenue (a.m. and p.m. peak hours);
- Nason Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Nason Street-Hillrose Lane/Iris Avenue (a.m. and p.m. peak hours);
- Pearl Lane-Oliver Street/Alessandro Boulevard (a.m. and p.m. peak hours);
- Moreno Beach Drive/SR-60 Eastbound Ramps (a.m. and p.m. peak hours);
- Moreno Beach Drive/Eucalyptus Avenue (p.m. peak hour only);
- Moreno Beach Drive/Cottonwood Avenue (p.m. peak hour only);
- Moreno Beach Drive/Alessandro Boulevard (a.m. and p.m. peak hours); and
- Driveway 1/Iris Avenue (p.m. peak hour only).

All the intersections except for the intersection of Driveway 1/Iris Avenue are forecast to operate at an unsatisfactory LOS even under General Plan build-out without project conditions. Thus, the project contributes to the forecast deficiency at these intersections. As such, the project has a cumulative impact at these intersections. All other intersections are forecast to operate at a satisfactory LOS.

Figure 7-13 illustrates intersection levels of service under General Plan build-out with project conditions.

Detailed intersection level of service worksheets are provided in Appendix D.

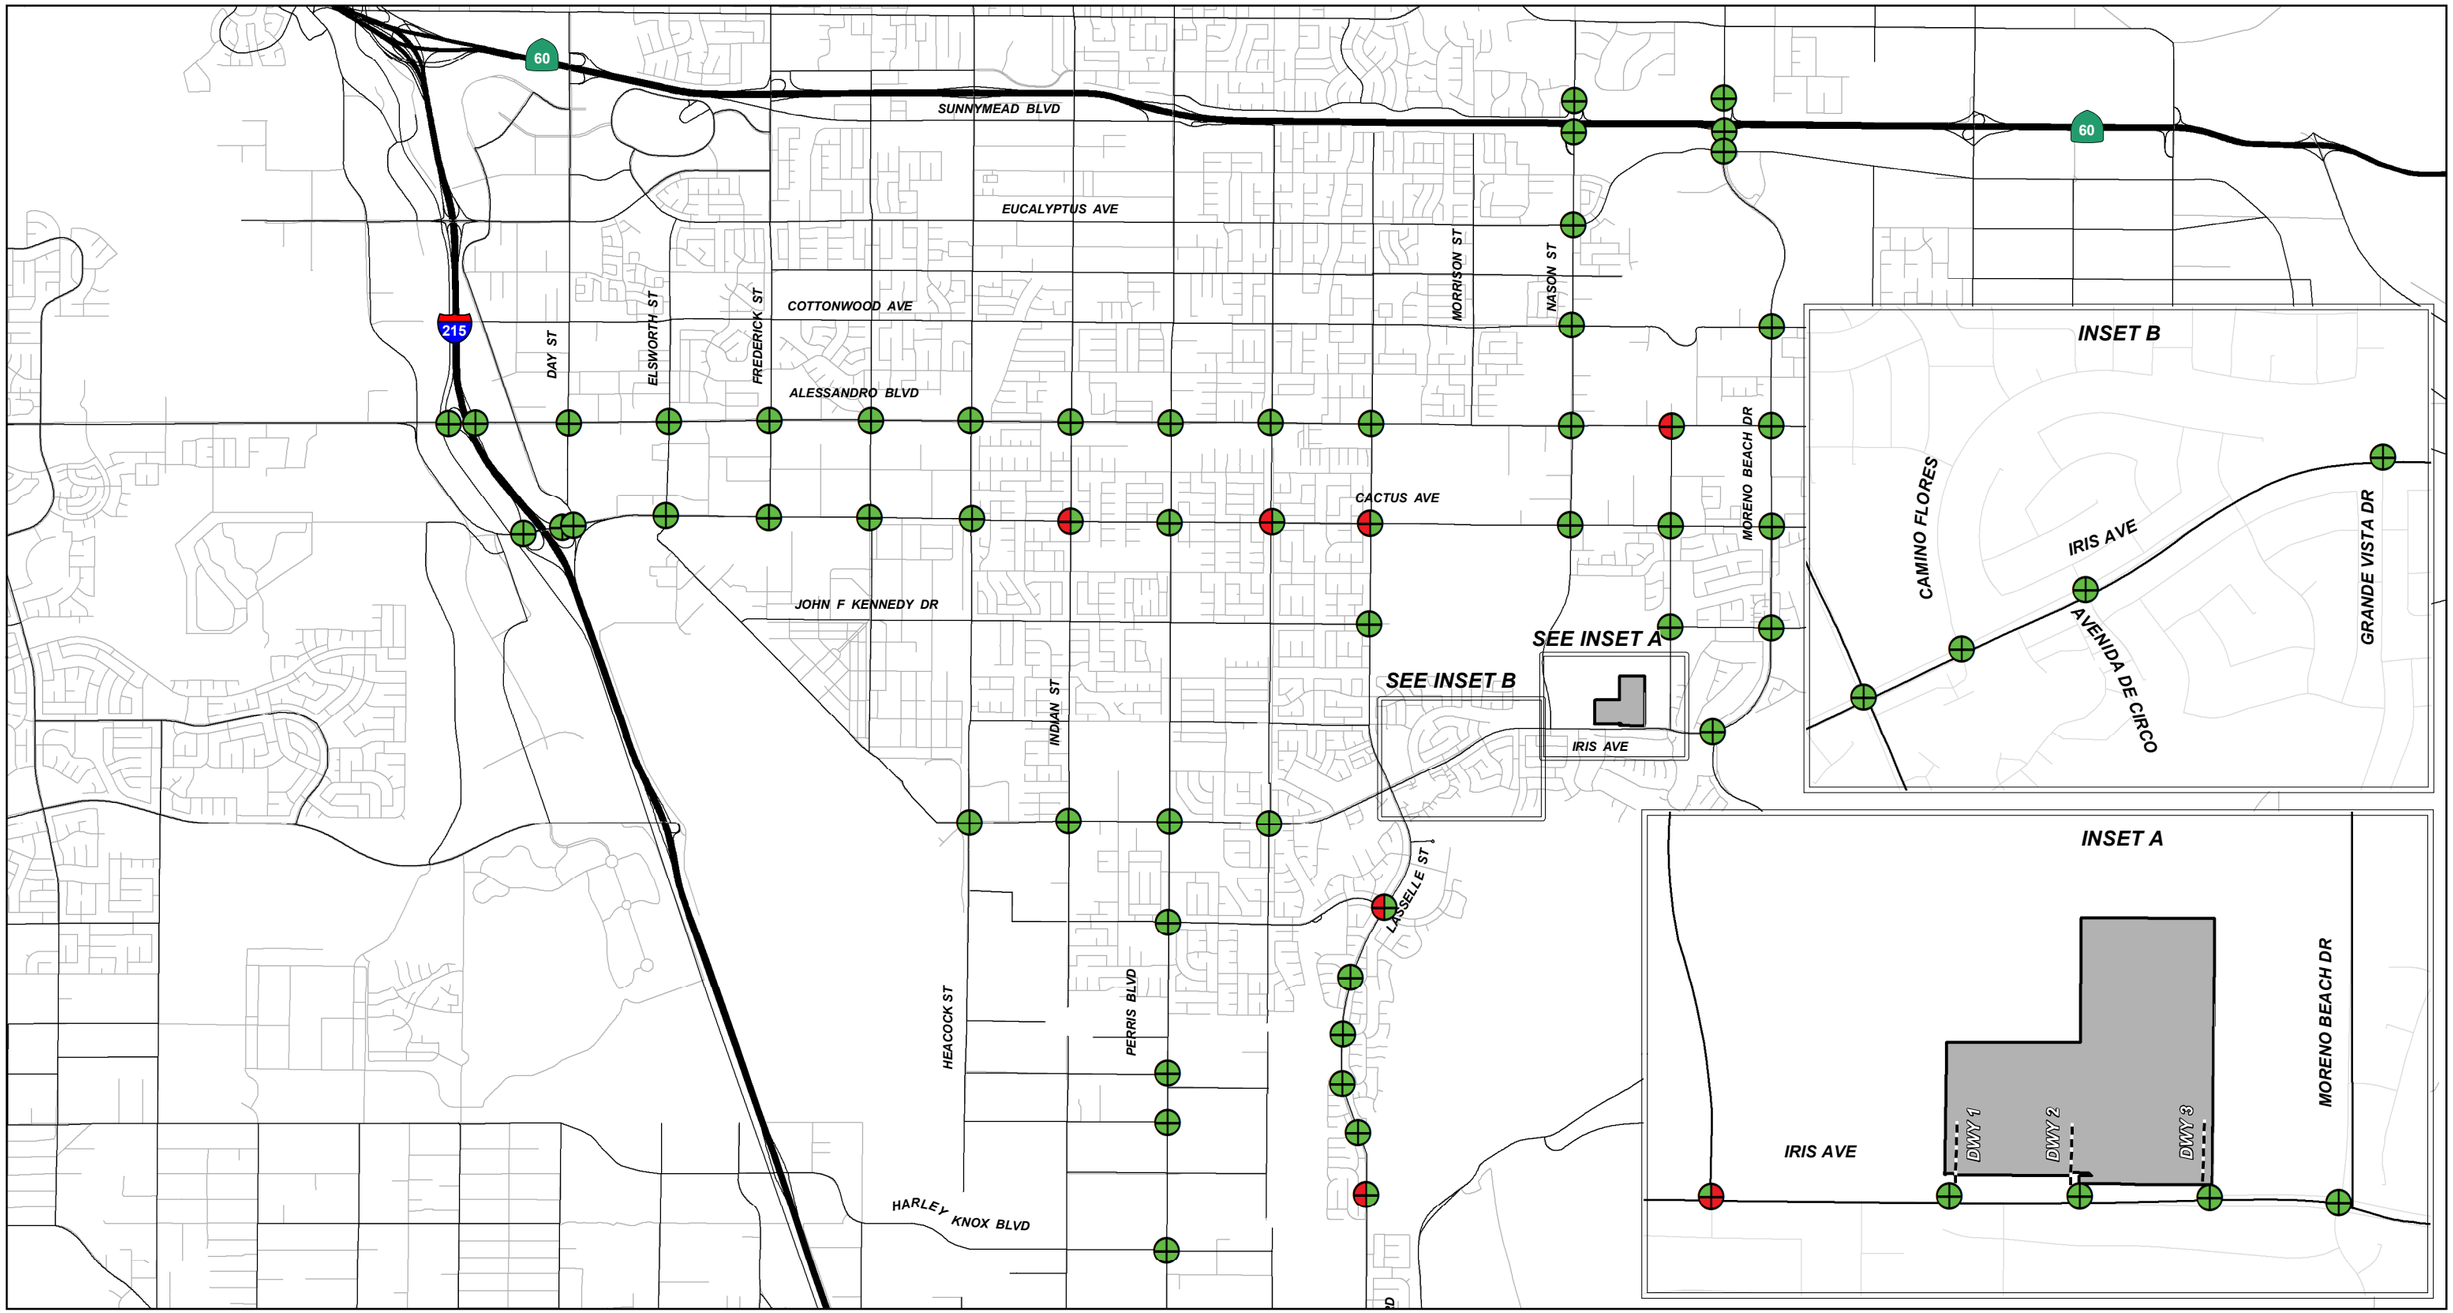
7.10.2 Roadway Segments

A roadway segment LOS analysis was conducted for General Plan build-out with project conditions using the methodologies previously discussed. Table 7-J summarizes the results of this analysis and shows that the following roadway segments are forecast to operate at an unsatisfactory LOS under General Plan build-out with project conditions:

- Perris Boulevard between Iris Avenue and Krameria Avenue;
- Perris Boulevard between Krameria Avenue and San Michele Road;
- Perris Boulevard between San Michele Road and Nandina Avenue;
- Perris Boulevard between Nandina Avenue and Harley Knox Boulevard;
- Lasselle Street between Iris Avenue and Krameria Avenue;
- Lasselle Street between Krameria Avenue and Via Xavier Lane;
- Lasselle Street between Via Xavier Lane and Lasselle Sports Park-Rojo Tierra;
- Lasselle Street between Lasselle Sports Park-Rojo Tierra and Cremello Way-Avenida De Plata;
- Lasselle Street between Cremello Way-Avenida De Plata and Avenida Classica-Kentucky Derby Drive;
- Lasselle Street between Avenida Classica-Kentucky Derby Drive and Via De Anza-Rancho Verde High School;
- Lasselle Street-Evans Road between Via De Anza-Rancho Verde High School and Ramona Expressway;
- Nason Street between Eucalyptus Avenue and Cottonwood Avenue;
- Nason Street between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between SR-60 Eastbound Ramps and Eucalyptus Avenue;
- Moreno Beach Drive between Cottonwood Avenue and Alessandro Boulevard;
- Moreno Beach Drive between Alessandro Boulevard and Cactus Avenue;
- Alessandro Boulevard between I-215 Northbound Ramps and Day Street;
- Alessandro Boulevard between Day Street and Elsworth Street;
- Alessandro Boulevard between Frederick Street and Graham Street;
- Alessandro Boulevard between Graham Street and Heacock Street;
- Alessandro Boulevard between Heacock Street and Indian Street;
- Alessandro Boulevard between Indian Street and Perris Boulevard;
- Alessandro Boulevard between Perris Boulevard and Kitching Street;
- Alessandro Boulevard between Kitching Street and Lasselle Street;
- Alessandro Boulevard between Lasselle Street and Nason Street;
- Alessandro Boulevard between Nason Street and Moreno Beach Drive;
- Cactus Avenue between I-215 Northbound Ramps-Old Frontage Road and Elsworth Street;
- Cactus Avenue between Elsworth Avenue and Frederick Street;
- Cactus Avenue between Frederick Street and Graham Street-Riverside Drive;

- Iris Avenue between Perris Boulevard and Kitching Street;
- Iris Avenue between Lasselle Street and Camino Flores;
- Iris Avenue between Camino Flores and Coachlight Court-Avenida De Circo;
- Iris Avenue between Coachlight Court-Avenida De Circo and Grande Vista Drive;
- Iris Avenue between Grande Vista Drive and Nason Street-Hillrose Lane; and
- Iris Avenue between Nason Street-Hillrose Lane and Driveway 1.

All these segments, except for the segment of Iris Avenue between Hillrose Lane and Driveway 1, are forecast to operate at an unsatisfactory LOS even under General Plan build-out without project conditions. Thus, the project contributes to the forecast deficiency at these segments. As such, the project has a cumulative impact at all these segments. All other roadway segments are forecast to operate at a satisfactory LOS.



Roadway segment levels of service under General Plan build-out with project conditions are illustrated in Figure 7-15.

Detailed Level of Service Worksheets are included in Appendix E.

Notes:

OWSC = One-Way Stop Control; TWSC = Two-Way Stop Control; AWSC = All-Way Stop Control; LOS = Level of Service

Delay = Average control delay in seconds (For OWSC intersections, reported delay is for worst-case movement).

* Exceeds LOS Standard

[1] This intersection has no conflicting movements. Hence, Synchro did not report a queue for this intersection.

Notes:

OWSC = One-Way Stop Control; TWSC = Two-Way Stop Control; AWSC = All-Way Stop Control; LOS = Level of Service

Delay = Average control delay in seconds (For OWSC intersections, reported delay is for worst-case movement).

* Exceeds LOS Standard

[1] This intersection has no conflicting movements. Hence, Synchro did not report a queue for this intersection.

Notes:

OWSC = One-Way Stop Control; TWSC = Two-Way Stop Control; AWSC = All-Way Stop Control; LOS = Level of Service

Delay = Average control delay in seconds (For OWSC intersections, reported delay is for worst-case movement).

* Exceeds LOS Standard

[1] This intersection has no conflicting movements. Hence, Synchro did not report a queue for this intersection.

Notes:

OWSC = One-Way Stop Control; TWSC = Two-Way Stop Control; AWSC = All-Way Stop Control; LOS = Level of Service

Delay = Average control delay in seconds (For OWSC intersections, reported delay is for worst-case movement).

* Exceeds LOS Standard

[1] This intersection has no conflicting movements. Hence, Synchro did not report a queue for this intersection.

Notes:

LOS = Level of Service

* Exceeds LOS Standard

[1] Classifications for all segments except for the segment of Lasselle Street - Evans Road between Via De Anza - Rancho Verde High School and Ramona Expressway have been obtained from the City of Moreno Valley Transportation Engineering Division *Traffic Impact Analysis Preparation Guide,* dated August 2007. Classification for the segment of Lasselle Street - Evans Road between Via De Anza - Rancho Verde High School and Ramona Expressway has been obtained from the *City of Perris General Plan.*

[2] Roadway capacities for all segments except for the segment of Lasselle Street - Evans Road between Via De Anza - Rancho Verde High School and Ramona Expressway have been obtained from the City of Moreno Valley Transportation Engineering Division *Traffic Impact Analysis Preparation Guide,* dated August 2007. The capacity for the segment of Lasselle Street - Evans Road between Via De Anza - Rancho Verde High School and Ramona Expressway has been obtained from the *City of Perris General Plan.*

8.0 QUEUING ANALYSIS

Tables 8-A through 8-E list the available turn-pocket storage lengths and summarize the 95th percentile back-of-queue lengths at the study intersections under existing, Phase I project completion year, Phase II project completion year, Phase III project completion year, and General Plan build-out conditions. The queues for the signalized intersections have been reported from Synchro, while for unsignalized intersections, the SimTraffic queues have been reported since Synchro does not appropriately report queues at unsignalized intersections. As shown in Tables 8-A through 8-E, queues for some of the movements are projected to exceed the existing available turn-pocket storage lengths under existing, Phases I, II, and III project completion years, and General Plan build-out without and with project conditions. With the exception of intersections adjacent to the project and project driveway intersections, the queuing results at the remaining study intersections have been included for informational purposes only.

Detailed queuing worksheets are included in Appendix E.

Notes:

ft/ln = feet per lane

AWSC = All-Way Stop Control; TWSC = Two-Way Stop Control; OWSC = One-Way Stop Control

EB = Eastbound; WB = Westbound; NB = Northbound; SB = Southbound

L = Left; T = Through; R = Right

Bold = Queue exceeds available storage.

[1] Storage length for all movements obtained from Google Earth measurements.

[2] All queues reported are 95th percentile queues. Queues for signalized intersections have been reported from Synchro, while queues for unsignalized intersections have been reported from SimTraffic.

[3] Available storage lane length reported is the sum of two different storage lane lengths.

[4] Storage lane length is 110 feet for no project condition and 230 feet for with project conditions.

Notes:

ft/ln = feet per lane

AWSC = All-Way Stop Control; TWSC = Two-Way Stop Control; OWSC = One-Way Stop Control

EB = Eastbound; WB = Westbound; NB = Northbound; SB = Southbound

L = Left; T = Through; R = Right

Bold = Queue exceeds available storage.

[1] Storage length for all movements obtained from Google Earth measurements.

[2] All queues reported are 95th percentile queues. Queues for signalized intersections have been reported from Synchro, while queues for unsignalized intersections have been reported from SimTraffic.

[3] Available storage lane length reported is the sum of two different storage lane lengths.

[4] Storage lane length is 110 feet for no project condition and 230 feet for with project conditions.

OWSC						

Notes:

ft/ln = feet per lane

AWSC = All-Way Stop Control; TWSC = Two-Way Stop Control; OWSC = One-Way Stop Control

EB = Eastbound; WB = Westbound; NB = Northbound; SB = Southbound

L = Left; T = Through; R = Right

Bold = Queue exceeds available storage.

[1] Storage length for all movements obtained from Google Earth measurements.

[2] All queues reported are 95th percentile queues. Queues for signalized intersections have been reported from Synchro, while queues for unsignalized intersections have been reported from SimTraffic.

[3] Available storage lane length reported is the sum of two different storage lane lengths.

[4] Storage lane length is 110 feet for no project condition and 230 feet for with project conditions.

OWSC						

Notes:

ft/ln = feet per lane

AWSC = All-Way Stop Control; TWSC = Two-Way Stop Control; OWSC = One-Way Stop Control

EB = Eastbound; WB = Westbound; NB = Northbound; SB = Southbound

L = Left; T = Through; R = Right

Bold = Queue exceeds available storage.

[1] Storage length for all movements obtained from Google Earth measurements.

[2] All queues reported are 95th percentile queues. Queues for signalized intersections have been reported from Synchro, while queues for unsignalized intersections have been reported from SimTraffic.

[3] Available storage lane length reported is the sum of two different storage lane lengths.

[4] Storage lane length is 110 feet for no project condition and 230 feet for with project conditions.

Notes:

ft/ln = feet per lane

AWSC = All-Way Stop Control; TWSC = Two-Way Stop Control; OWSC = One-Way Stop Control

EB = Eastbound; WB = Westbound; NB = Northbound; SB = Southbound

L = Left; T = Through; R = Right

Bold = Queue exceeds available storage.

[1] Storage length for all movements obtained from Google Earth measurements.

[2] All queues reported are 95th percentile queues. Queues for signalized intersections have been reported from Synchro, while queues for unsignalized intersections have been reported from SimTraffic.

[3] Available storage lane length reported is the sum of two different storage lane lengths.

[4] Storage lane length is 110 feet for no project condition and 230 feet for with project conditions.

9.0 CIRCULATION IMPROVEMENTS AND FUNDING SOURCES

9.1 RECOMMENDED IMPROVEMENTS

At intersections and roadway segments where the level of service is forecast to be unsatisfactory or where the project would have a significant impact, the City requires that improvements be identified to improve the LOS to D or better. Based on the results, improvements have been recommended for study intersections and roadway segments where impacts are identified.

9.1.1 Recommended Improvements – Full Project Responsibility

Table 9-A illustrates the recommended improvements at the project driveways that the project will be required to implement as each phase of the project is constructed. As described in Table 9-A, Project Driveway 1 is forecasted to operate at a deficient LOS when Phase III is completed and there are no mitigations feasible due to right-of-way constraints. For Project Driveway 2, specific improvements required with the completion of each phase is described in Table 9-A. Improvements recommended at Project Driveway 2 will result in this driveway operating at LOS D or better under all analysis scenarios.

9.1.2 Recommended Improvements – Fair Share or TUMF Contribution

Table 9-B illustrates the recommended improvements for study intersections under all scenarios. Figures 9-1A and 9-1B, 9-2A and 9-2B, 9-3A and 9-3B, 9-4A and 9-4B, and 9-5A and 9-5B illustrate the existing, Phases I, II, and III project completion years, and General Plan build-out with project with improvements study intersection geometrics and traffic control. Tables 9-C through 9-G illustrate the post-improvement intersection levels of service for the different scenarios. As shown in these tables, impacts at some of the intersections in some scenarios cannot be fully mitigated because of right-of-way constraints. As such, these intersections will continue to operate at a deficient LOS.

Tables 9-H through 9-L illustrate the proposed roadway segment improvements and the corresponding levels of service for the different scenarios. As shown in these tables, multiple roadway segments are either currently built out or additional improvements are feasible. The feasibility of the recommended improvements are based on the City's General Plan classification or as stated in the Transportation Uniform Mitigation Fee (TUMF) Program and also considering availability of right-of-way. As such, many of these segments which have either already been built to the General Plan classification or do not have adequate right-of-way will continue to operate at a deficient LOS as no further mitigations are feasible.

It should be noted that recommended improvements covered through TUMF are not considered adequate mitigation measures. This is because there is no guaranteed timeline for implementation of these improvements through the TUMF program. Therefore, impacts at intersections or roadway segments where mitigations are included through the TUMF program should be considered significant and unavoidable.

9.2 FUNDING SOURCES AND MECHANISMS

Where there is a funding mechanism (fee program) for the recommended improvements, payment into the fee program would be considered sufficient project obligation to alleviate project impacts. At study locations where the addition of project traffic creates a direct significant impact (existing with project conditions) and there is no funding mechanism in place, the project will be responsible for the implementation of the improvement. At locations where the project adds to or creates a forecast deficiency and there is no funding mechanism in place (project completion and cumulative conditions), the project is responsible for its fair-share payment.

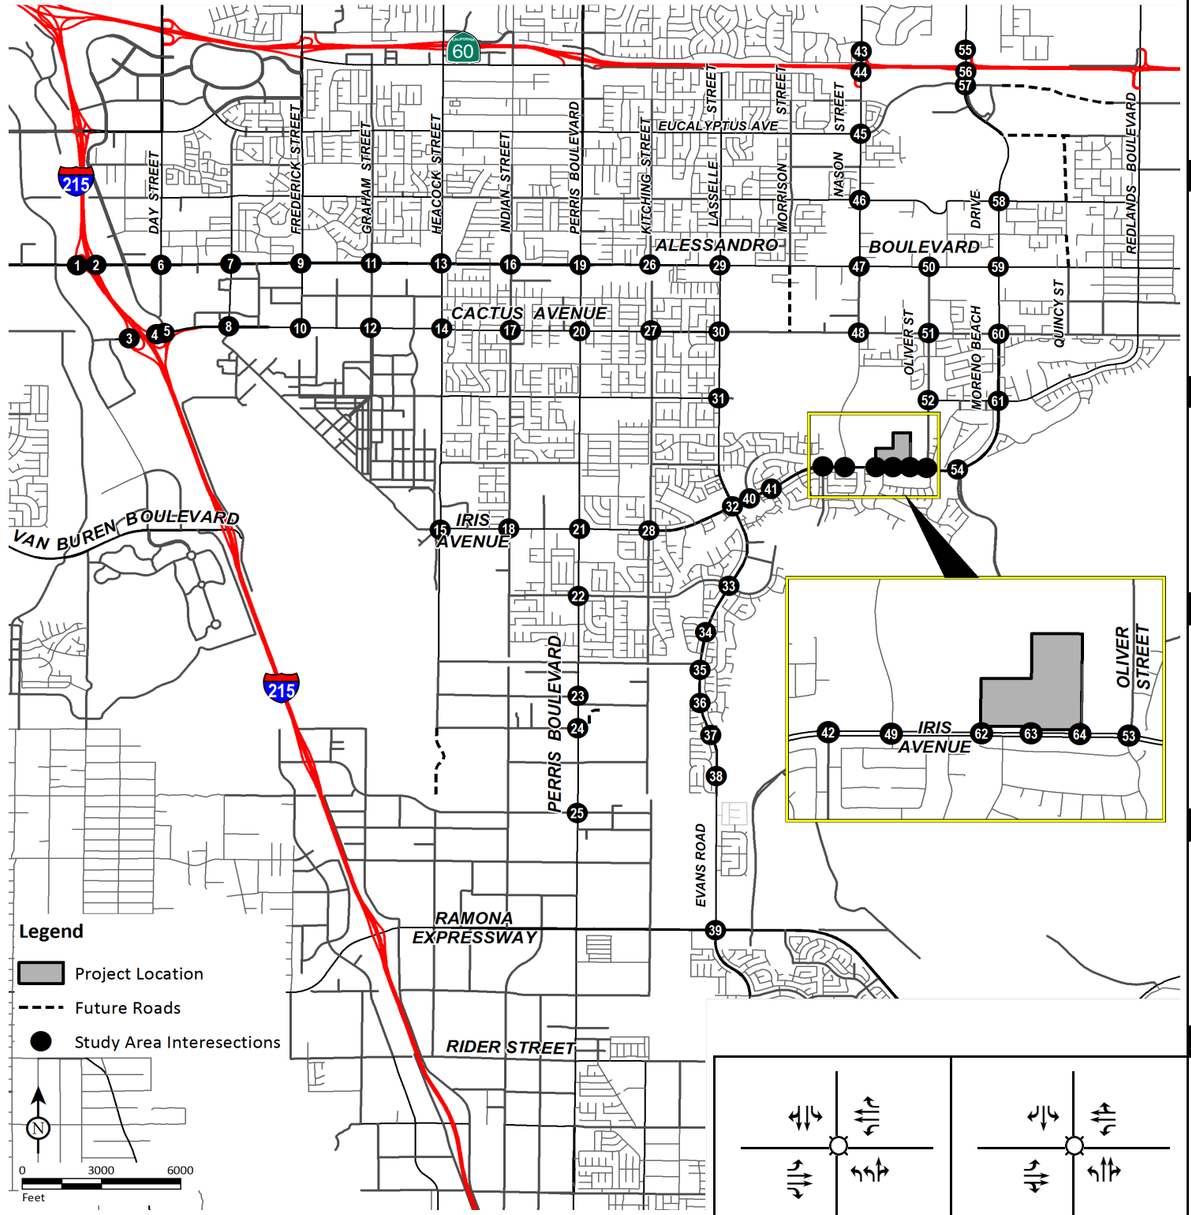
9.2.1 TUMF Program

The underlying purpose of the TUMF program is "the need to establish a comprehensive funding source to mitigate the cumulative regional transportation impacts of new development on regional arterial highways." As new development occurs in western Riverside County, the cumulative transportation impacts of this new development are reflected in increased demand for transportation infrastructure leading to decreased levels of service, increased delay and increased congestion on regional transportation facilities, and an overall decline in regional mobility. Therefore, the need to invest in additional transportation infrastructure to meet the increased travel demand and to sustain pre-development traffic conditions to "keep traffic flowing" represents the fundamental premise of the TUMF program.

9.2.2 Project Fair Share

In the absence of a fee program, where the project has an impact on the roadway network, the project shall pay its fair share of the cost required to mitigate the impacts. The project's fair share has been calculated based on project traffic as a percentage of total growth from existing to General Plan build-out conditions.

Tables 9-M and 9-N summarize the project fair share corresponding to the improvements recommended and the funding programs in place that covers recommended improvements for intersections and roadway segments, respectively.



As shown in Tables 9-M and 9-N, several intersections and roadway segments have no feasible mitigations due to right-of-way constraints. To mitigate the project cumulative impacts at these locations, the project shall pay a fair share contribution for the development of trip reduction and/or trip redistribution strategies on the City's roadway network. The fair share contribution for this purpose will be based on the percentages shown in Tables 9-M and 9-N. A fair share cost calculation table will be required prior to construction of the project.

Intersection will continue to operate at a deficient LOS.	No mitigations feasible due to right-of-way constraints. Intersection will continue to operate at a deficient LOS.	No mitigations feasible due to right-of-way constraints. Intersection will continue to operate at a deficient LOS.
39 . Evans Road/Ramona Expressway		Add right-turn overlap phasing for WBR and SBR.	Add right-turn overlap phasing for WBR and SBR.	Add WBT. Add right-turn overlap phasing for WBR and SBR. No further mitigations feasible due to right-of-way constraints. Intersection is forecasted to operate at a deficient LOS after implementation of the recommended improvements.	Add WBT. Add right-turn overlap phasing for WBR and SBR. No further mitigations feasible due to right-of-way constraints. Intersection is forecasted to operate at a deficient LOS after implementation of the recommended improvements.
45 . Nason Street/Eucalyptus Avenue			Add EBR, NBR, and SBR. Add right-turn overlap phasing for NBR and SBR.	Add EBR, NBR, and SBR. Add right-turn overlap phasing for NBR and SBR. No further mitigations feasible due to right-of-way constraints. Intersection is forecasted to operate at a deficient LOS after implementation of the recommended improvements.	Add EBR, NBR, and SBR. Add right-turn overlap phasing for NBR and SBR. No further mitigations feasible due to right-of-way constraints. Intersection is forecasted to operate at a deficient LOS after implementation of the recommended improvements.
47 . Nason Street/Alessandro Boulevard				Add WBT.	Add second NBL and WBT.
49 . Nason Street-Hillrose Lane/Iris Avenue	Add a second SBL.	Add a second SBL.	Add a second SBL, second SBR. No further mitigations feasible due to right-of-way constraints. Intersection is forecasted to operate at a deficient LOS after implementation of the recommended improvements.	Add a second SBL, second SBR. No further mitigations feasible due to right-of-way constraints. Intersection is forecasted to operate at a deficient LOS after implementation of the recommended improvements.	Add a second SBL, second SBR. No further mitigations feasible due to right-of-way constraints. Intersection is forecasted to operate at a deficient LOS after implementation of the recommended improvements.
50 . Pearl Lane - Oliver Street/Alessandro Boulevard	Install a signal.	Install a signal.	Install a signal.	Add EBL. Install a Signal.	Add EBL. Add WBL. Install a Signal.
56 . Moreno Beach Drive/SR-60 Eastbound Ramps		Add SBT. Restripe SBTL to SBL. Restripe EBTL to EBLTR.[3]	Add second NBT. Add SBT. Restripe SBTL to SBL. Restripe EBTL to EBLTR.	Add second NBT. Add SBT. Restripe SBTL to SBL. Restripe EBTL to EBLTR.	Add second NBT. Add SBT. Restripe SBTL to SBL. Restripe EBTL to EBLTR.
57 . Moreno Beach Drive/Eucalyptus Avenue				No mitigations feasible due to right-of-way constraints. Intersection will continue to operate at a deficient LOS.	No mitigations feasible due to right-of-way constraints. Intersection will continue to operate at a deficient LOS.
58 . Moreno Beach Drive/Cottonwood Avenue				Add WBL, and restripe westbound approach as WBL and WBTR. Change the split phasing for the east-west approach to permitted phasing.	Add WBL, and restripe westbound approach as WBL and WBTR. Change the split phasing for the east-west approach to permitted phasing.
59 . Moreno Beach Drive/Alessandro Boulevard		Add second SBT and NBT.	Add second EBT, second WBT, second NBT, second SBT, and NBR.	Add second EBL, second WBL, second EBT, second WBT, second NBT, second SBT, and NBR.	Add second EBL, second WBL, second EBT, second WBT, second NBT, second SBT, and NBR.

Notes:

NB = Northbound, SB = Southbound, EB = Eastbound, WB = Westbound

L = Left, T = Through, R = Right

[1] Recommended mitigation for Existing with Project is for informational purposes only. As such, the project shall only implement the recommended mitigations for Phase I and beyond.

[2] Recommended improvements covered through the Transportation Uniform Mitigation Fee (TUMF) program are not considered adequate mitigation measures. This is because there is no guaranteed timeline for implementation of these improvements through the TUMF program. Therefore, impacts at intersections where mitigations are included through TUMF should be considered signficiant and unavoidable.

[3] Improvements recommended for this interchange are included in the TUMF program. There is no guaranteed timeline or adequate funding available for implementation of the proposed improvements. Therefore, impacts at this intersection should be considered significant and unavoidable.

Notes:

NB = Northbound, SB = Southbound, EB = Eastbound, WB = Westbound

L = Left, T = Through, R = Right

TUMF refers to the Transportation Uniform Mitigation Fee program.

[1] Recommended improvements covered through the Transportation Uniform Mitigation Fee (TUMF) program are not considered adequate mitigation measures. This is because there is no guaranteed timeline for implementation of these improvements through the TUMF program. Therefore, impacts at intersections where mitigations are included through TUMF should be considered signficiant and unavoidable.

[2] Project Fair Share Percentage is the highest fair share value of the AM and PM peak hour when both peak hours are impacted by the project, or only in the peak hour where the project has an impact.

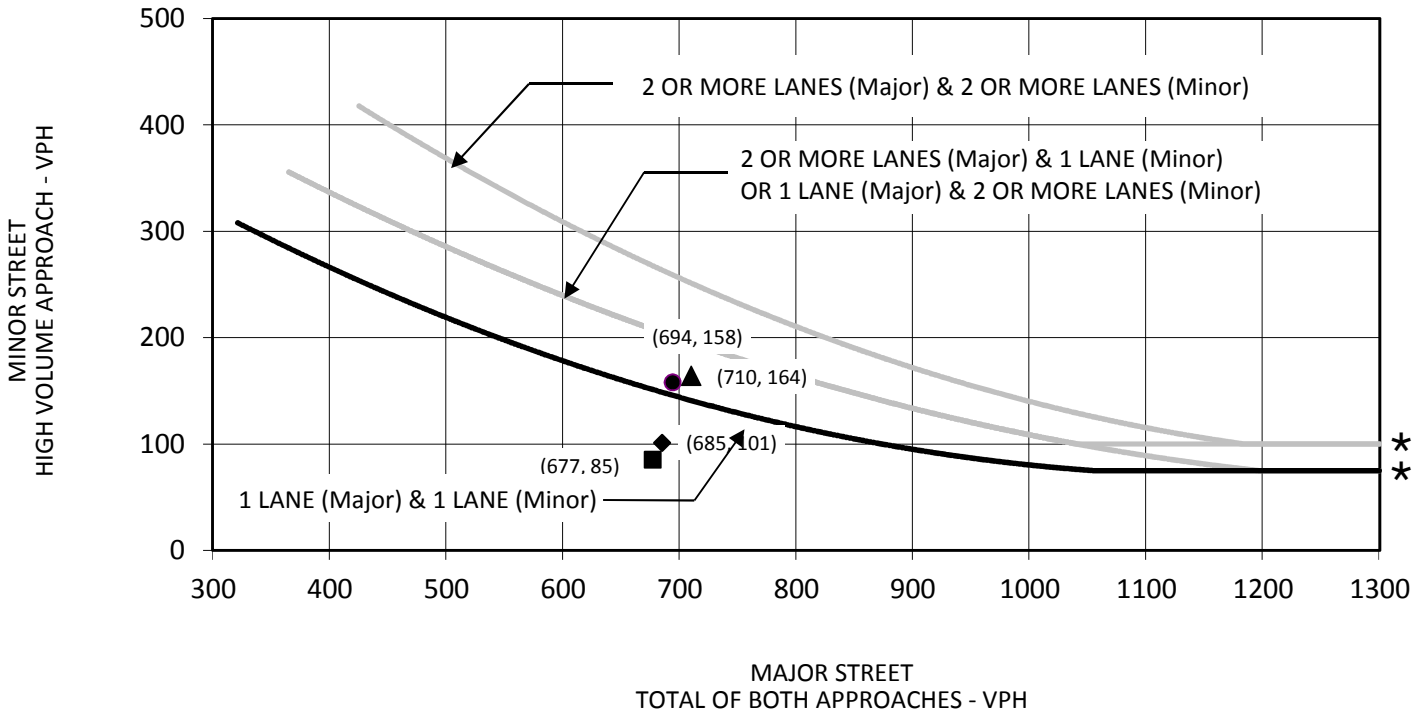
10.0 SIGNAL WARRANT ANALYSIS



A peak hour signal warrant analysis was conducted at the intersection of Pearl Lane-Oliver Street/ Alessandro Boulevard for existing, Phases I, II, and III project completion years, and General Plan build-out conditions. As stated in the City's TIA guidelines, a peak hour signal warrant analysis shall utilize the peak hour warrants from the most recent edition the *California Manual on Uniform Traffic Control Devices (CAMUTCD)*. Therefore, this analysis is based on the provisions of the CAMUTCD, 2014, Chapter 4C *Traffic Control Signal Needs Studies* for Warrant 3 – Peak Hour. The peak hour signal warrant is intended for use where traffic conditions are such that for a minimum of one hour on an average day, the minor-street traffic suffers undue delay when entering or crossing the major street. Figures 10-1, 10-2, 10-3, 10-4, and 10-5 illustrate the signal warrants for existing, Phases I, II, and III project completion years, and General Plan build-out conditions, respectively. Based on the signal warrant analysis, a signal will be warranted at the intersection of Pearl Lane-Oliver Street/Alessandro Boulevard in all the five scenarios.

11.0 SITE ACCESS ANALYSIS

The City requires a site access analysis evaluating project driveways to identify LOS and queuing issues at the driveways. The purpose of this analysis is to provide recommendations that will help the driveways operate at satisfactory LOS and meet the vehicle queuing requirements. As such, a driveway analysis was conducted for all scenarios and appropriate improvements have been recommended to address circulation needs at these locations. Tables 11-A through 11-E illustrate the LOS and queues at these driveways without and with these proposed improvements.

Based on the analysis of these driveways, the following improvements are recommended for satisfactory operations at this location:

- **Project Driveway 2:** Under Phase I project completion conditions, extend the existing eastbound left-turn storage by 30 feet. Under Phase II project completion conditions, remove existing raised median on Iris Avenue for the eastbound approach, restripe eastbound approach to accommodate a second eastbound left-turn lane, and extend the dual left-turn pocket up to 375 feet. Additionally, the existing southbound left-turn lane storage needs to be extended to 200 feet (back to the existing roundabout) under Phase II project completion conditions.

Figure 11-1 is a conceptual striping plan illustrating the proposed driveway improvements. As shown in Tables 11-A through 11-E, with implementation of the proposed improvements, the driveways are forecast to operate at a satisfactory LOS and meet the queuing requirements at these locations.

L = Left; R = Right

Bold = Queue exceeds available storage.

[1] Storage length for all movements for with project conditions obtained from Google Earth measurements.

[2] All queues reported are 95th percentile queues. Queues for signalized intersections have been reported from Synchro, while queues for unsignalized intersections have been reported from SimTraffic.

[3] Storage lengths for all movements at the intersections of Driveway 3/Iris Avenue for with project with improvements conditions have been obtained from Google Earth measurements. Storage lengths for the different movements at the intersection of Driveway 2/Iris Avenue have been obtained based on the recommended improvements at the intersection.

12.0 SUMMARY AND CONCLUSIONS

The proposed Kaiser Permanente Moreno Valley Medical Center Master Plan Project will be replacing and adding onto existing uses at the current project site, which includes a 130,000 sf 100-bed hospital, along with two medical office buildings and education trailers totaling approximately 85,000 sf. The project has been proposed to be built in three phases. Under full build-out condition, the project will generate 12,921 net daily trips, with 1,056 net trips occurring during the a.m. peak hour and 1,216 net trips occurring during the p.m. peak hour.

12.1 EXISTING CONDITIONS SUMMARY

Based on the significance criteria as discussed in the Significance Threshold section of this report, under existing conditions, a significant project impact occurs at seven intersections and three roadway segments, while a significant direct impact occurs at two segments. With the implementation of the improvements listed in Chapter 9.0 of this report, some of the intersections and roadway segments are forecast to operate at a satisfactory LOS, while the impacts at other intersections and roadway segments cannot be mitigated due to right-of-way constraints.

12.2 PHASE I PROJECT COMPLETION YEAR (2023) CONDITIONS SUMMARY

Based on the significance criteria as discussed in the Significance Threshold section of this report, under Phase I project completion conditions, a cumulative project impact occurs at 13 intersections and six roadway segments. With the implementation of the improvements listed in Chapter 9.0 of this report, some of the intersections and roadway segments are forecast to operate at a satisfactory LOS, while the impacts at other intersections and roadway segments cannot be mitigated due to right-of-way constraints.

12.3 PHASE II PROJECT COMPLETION YEAR (2032) CONDITIONS SUMMARY

Based on the significance criteria as discussed in the Significance Threshold section of this report, under Phase II project completion conditions, a cumulative project impact occurs at 22 intersections and 19 roadway segments. With the implementation of the improvements listed in Chapter 9.0 of this report, some of the intersections and roadway segments are forecast to operate at a satisfactory LOS, while the impacts at other intersections and roadway segments cannot be mitigated due to right-of-way constraints.

12.4 PHASE III PROJECT COMPLETION YEAR (2038) CONDITIONS SUMMARY

Based on the significance criteria as discussed in the Significance Threshold section of this report, under Phase III project completion conditions, a cumulative project impact occurs at 30 intersections and 32 roadway segments. With the implementation of the improvements listed in Chapter 9.0 of this report, some of the intersections and roadway segments are forecast to operate at a satisfactory LOS, while the impacts at other intersections and roadway segments cannot be mitigated due to right-of-way constraints.

12.5 GENERAL PLAN BUILD-OUT (2040) CONDITIONS SUMMARY

Based on the significance criteria as discussed in the Significance Threshold section of this report, under General Plan build-out conditions, a cumulative project impact occurs at 31 intersections and 35 roadway segments. With the implementation of the improvements listed in Chapter 9.0 of this report, some of the intersections and roadway segments are forecast to operate at a satisfactory LOS, while the impacts at other intersections and roadway segments cannot be mitigated due to right-of-way constraints.

12.6 SITE ACCESS ANALYSIS

Based on the analysis of the project driveways, the following improvements are recommended for satisfactory operations at this location:

- **Project Driveway 2:** Under Phase I project completion conditions, extend the existing eastbound left-turn storage by 30 feet. Under Phase II project completion conditions, remove existing raised median on Iris Avenue for the eastbound approach, restripe eastbound approach to accommodate a second eastbound left-turn lane, and extend the dual left-turn pocket up to 375 feet. Additionally, the existing southbound left-turn lane storage needs to be extended to 200 feet (back to the existing roundabout) under Phase II project completion conditions.

Subject: Kaiser Permanente Moreno Valley Medical Center Master Plan Project Traffic Impact Analysis Scoping Agreement Letter

This letter acknowledges the City of Moreno Valley Transportation Engineering Division requirements for the traffic impact analysis of the following project:

Case No.	To Be Assigned
Project Name:	Kaiser Permanente Moreno Valley Medical Center Master Plan Project
Project Address:	27300 Iris Avenue, Moreno Valley, CA 92555
Project Description:	Medical Office and Hospital Expansion

	Consultant	Developer
Name:	LSA Associates, Inc. Attn: Ambarish Mukherjee	Kaiser Foundation Hospitals Attn: Skyler Denniston
Address:	1500 Iowa Avenue, Suite 200 Riverside, CA 92507	393 E. Walnut Street, 4th Floor Pasadena, CA 91188
Telephone:	(951) 781-9310	(626) 405-6333

I. BACKGROUND

LSA will be preparing a traffic impact analysis (TIA) for the proposed Kaiser Permanente Moreno Valley Medical Center Master Plan Project (project) to be located east of Interstate 215 (I-215) and south of State Route 60 (SR-60) at 27300 Iris Avenue, Moreno Valley, CA 92555. Figure 1 illustrates the regional and project location (All figures and tables attached). The current project site includes a 130,000 square-foot (SF) 100-bed hospital, along with two medical office buildings and education trailers totaling approximately 85,000 SF. The project will be replacing and adding onto existing uses and is anticipated to be built in three (3) phases. The proposed project will consist of expansion of the current site as illustrated in the following table:

Phase	Medical Office Building	Hospital (D&T Expansion, Patient Towers and ED)	Ancillary Uses
Existing	10,500 SF (IRIS MOB 1 and Education Trailers) 74,500 SF (MOB 2)	130,000 SF (Hospital)	
Phase I	10,500 SF (Demolition of IRIS MOB 1 and Education Trailers)	95,000 SF (D&T Expansion)	22,000 (CUP - Energy Center)
Phase II	65,000 SF (MOB 3)	380,000 SF (D&T Expansion, Patient Towers North & East)	8,000 (CUP - Energy Center)
Phase III	95,000 SF (MOB 4)	375,000 SF (D&T Expansion, Patient Towers South & West, ED) 130,000 SF (Demolition of Existing Hospital)	
Total	**149,500 SF**	**720,000 SF**	**30,000 SF**
Net Total	**899,500 SF**		

Phase I of the project is planned for completion in Year 2023 (typical 5 years from existing per discussion with City of Moreno Valley staff). Phase II of the project is planned for completion in Year 2032. Phase III of the project is planned for completion in Year 2038. Figures 2, 3, and 4 illustrate the conceptual site plan per each phase of the proposed project, respectively.

As shown in the site plans, access to the project would be provided via the three existing driveways along Iris Avenue. Because of an existing median on Iris Avenue, the furthest west driveway would operate as right-in/right-out (RIRO) only. Phase I of the project will modify the existing landscaped median at the furthest east driveway so that it operates as a right-in/right-out (RIRO) driveway. The existing signalized driveway will continue to operate as a full access driveway for the project. Based on comments from the City, the project applicant can also coordinate with the adjacent property owner(s) to obtain reciprocal access agreement for an additional project access to Oliver Street. For purposes of this analysis, no access has been considered to Oliver Street from the project.

The traffic study shall follow the City of Moreno Valley's (City) *Transportation Engineering Division Traffic Impact Analysis Preparation Guidelines,* dated August 2007, for preparation of TIAs. Based on these guidelines the following scope of work is being proposed for the preparation of this TIA.

II. SITE TRIP GENERATION FORECAST

A. The trip generation for the existing land use and the proposed project was developed using rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition) for Land Use 610 – "Hospital", and Land Use 720 – "Medical-Dental Office Building."

B. The a.m. peak hour is defined as the one hour of highest traffic volumes occurring between 7:00 and 9:00 a.m.

C. The p.m. peak hour is defined as the one hour of highest traffic volume occurring between 4:00 and 6:00 p.m.

D. Intersections and roadway segments within Moreno Valley have an acceptable Level of Service (LOS) standard "C" or "D" based upon the current city policy. (Use Highway Capacity Manual 6 (HCM 6) operations procedures; parameters per County of Riverside Traffic Impact Analysis Guidelines for intersections and LOS for roadway segments based on the City's General Plan Circulation Element roadway capacity.)

Trip Generation Rates[1]

Medical-Dental Office Building (per TSF)	Daily: 34.800	AM: 2.780	PM: 3.460
Hospital (per TSF)	Daily: 10.720	AM: 0.890	PM: 0.970
Energy Center (per TSF)	Daily: 0.000	AM: 0.000	PM: 0.000
Internal Trip Allowance:	Yes: _____	No: X	Percentage: _____%
Pass-by Trip Allowance:	Yes: _____	No: X	Percentage: _____%

[1] Institute of Transportation Engineers (ITE) *Trip Generation* Manual (10th Edition).

Table A shows the net new project trips for the proposed project. As shown in Table A, the project is anticipated to generate 12,921 net new daily trips with 1,056 net new trips occurring during the a.m. peak hour and 1,216 net new trips occurring during the p.m. peak hour.

III. PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

The project trip distribution was developed using the select zone model run obtained from the Moreno Valley Traffic Model (MVTM). Attached Appendix A illustrates the select zone model plot for the proposed project.

Based on the City's TIA Guidelines, the TIA is required to analyze all intersections of Collector or higher classification streets where the project will contribute 50 or more peak hour trips or locations

identified for analysis by City staff. The study area intersections have been identified based on these criteria. Figure 5 illustrates the study area intersections. Figures 6A and 6B illustrate the project trip distribution. Figure 7 illustrates the regional project trip distribution. Figures 8A and 8B, 9A and 9B, 10A and 10B, 11A, and 11B illustrate the existing, Phase I, Phase II, and Phase III and General Plan Build-out project trip assignments, respectively.

Regional Distribution

N: 48% **S:** 3% **E:** 22% **W:** 27%

IV.STUDY OF HORIZON YEARS

The TIA will be prepared to satisfy the requirements established by the TIA Guidelines, as well as the requirements for the disclosure of potential impacts and mitigation measures pursuant to the California Environmental Quality Act (CEQA). Based on the TIA Guidelines, the TIA will address existing traffic conditions, future traffic forecasts, project-related impacts and mitigations under the following scenarios:

A. Existing Traffic Conditions;
B. Existing plus Project Traffic Conditions (Project Buildout);
C. Phase I Project Completion Year (2023) without Project Conditions;
D. Phase I Project Completion Year (2023) with Project Conditions;
E. Phase II Project Completion Year (2032) without Project Conditions;
F. Phase II Project Completion Year (2032) with Project Conditions;
G. Phase III Project Completion Year (2038) without Project Conditions;
H. Phase III Project Completion Year (2038) with Project Conditions (Project Buildout);
I. General Plan Build-out without Project Conditions; and
J. General Plan Build-out with Project Conditions (Project Buildout).

Volume Development

Traffic volumes for existing conditions will be developed by collecting existing traffic counts at study intersections and roadway segments and converted to Passenger Car Equivalents (PCEs) using the regionally accepted PCE conversion factors.

General Plan Build-out conditions traffic volumes will be developed using forecast volumes obtained from MVTM and by applying the National Cooperative Highway Research Program (NCHRP) post-processing methodologies. Based on discussion with City staff, Phase I, Phase II, and Phase III traffic volumes will be developed by interpolating the forecast volume growth from MVTM and added to the existing traffic volumes. LSA will ensure that all major cumulative projects are included in the

future year scenario of MVTM prior to interpolating volumes to develop volumes for intermediate phases.

Existing, Opening Year (Phases I, II, and III), and General Plan Build-out with project traffic volumes will be developed by adding project traffic volumes to the corresponding without project scenarios.

V.SPECIFIC PROJECT ISSUES TO BE ANALYZED

A. The traffic study will address the adequacy of site access and identify specific near-term and long-term circulation improvements required to maintain acceptable peak hour and daily levels of service (LOS).

B. The TIA will identify project significant impacts based on the following significance thresholds:

- Moreno Valley - Based on City's TIA guidelines, a significant impact occurs if a project causes any intersection or roadway segment to operate above its LOS threshold of "C" or "D" (depending on location).
- Perris - Based on the City of Perris General Plan, a significant impact occurs when the intersection or roadway segment LOS exceeds their respective minimum LOS threshold. The City of Perris adopted a minimum LOS standard of "D" for both intersections and roadway segments.
- Caltrans - All freeway ramp intersections are under the jurisdiction of Caltrans, which considers acceptable level of service to be between "C" and "D" for all intersections under its jurisdiction. Therefore, all signalized intersections under Caltrans jurisdiction must operate with a weighted average delay of 45 seconds or less (30 seconds for unsignalized ramps). A project significant impact occurs when the proposed project causes the intersection delay to fall below 45 seconds and intersections are required to be mitigated to acceptable standards.

C. The traffic study shall address the project traffic impacts at all study intersections and roadway segments listed in Section VI of this scoping letter. Peak-hour traffic signal warrants shall be evaluated for all intersections that are not currently signalized.

- Mitigation measures will be recommended at locations operating at an unsatisfactory LOS or where the project causes significant impacts. Mitigation measures may include intersection turn lanes, signalization, and segment lane additions. The LOS with mitigation will be calculated and summarized, along with a comparison of the LOS without mitigation. At project driveways and study intersections adjacent to the project, mitigation measures will be recommended to address both intersection LOS and queues. For remaining study intersections, queuing analysis will be provided for disclosure purposes only. Mitigation measures at these locations will only address intersection LOS. Synchro LOS and queueing analysis will be included in the Appendix of the study.

VI.FACILITIES TO BE STUDIED

Study Area Intersections

Based on the TIA Guidelines, the TIA is required to analyze all intersections of Collector or higher classification streets where the project will contribute 50 or more peak hour trips or intersections identified by City staff for analysis. Based on the guidelines, an operational analysis of the following intersections is proposed during the a.m. and p.m. peak hours.

LSA proposes to include the following intersections:

1. I-215 Southbound Ramps/Alessandro Boulevard (Caltrans);
2. I-215 Northbound Ramps/Alessandro Boulevard (Caltrans);
3. I-215 Southbound Ramps/Cactus Avenue (Caltrans);
4. I-215 Northbound Ramps/Cactus Avenue (Caltrans);
5. I-215 Northbound Ramps – Old 215 Frontage Road/Cactus Avenue (Caltrans);
6. Day Street/Alessandro Boulevard (Moreno Valley);
7. Elsworth Street/Alessandro Boulevard (Moreno Valley);
8. Elsworth Street/Cactus Avenue (Moreno Valley);
9. Frederick Street/Alessandro Boulevard (Moreno Valley);
10. Frederick Street/Cactus Avenue (Moreno Valley);
11. Graham Street/Alessandro Boulevard (Moreno Valley);
12. Graham Street/Cactus Avenue (Moreno Valley);
13. Heacock Street/Alessandro Boulevard (Moreno Valley);
14. Heacock Street/Cactus Avenue (Moreno Valley);
15. Heacock Street/Iris Avenue (Moreno Valley);
16. Indian Street/Alessandro Boulevard (Moreno Valley);
17. Indian Street/Cactus Avenue (Moreno Valley);
18. Indian Street/Iris Avenue(Moreno Valley);
19. Perris Boulevard/Alessandro Boulevard (Moreno Valley);
20. Perris Boulevard/Cactus Avenue (Moreno Valley);
21. Perris Boulevard/Iris Avenue (Moreno Valley);
22. Perris Boulevard/Krameria Avenue (Moreno Valley);
23. Perris Boulevard/San Michele Road (Moreno Valley);
24. Perris Boulevard/Nandina Avenue (Moreno Valley);

25. Perris Boulevard/Harley Knox Boulevard (Perris);
26. Kitching Street/Alessandro Boulevard (Moreno Valley);
27. Kitching Street/Cactus Avenue (Moreno Valley);
28. Kitching Street/Iris Avenue (Moreno Valley);
29. Lasselle Street/Alessandro Boulevard (Moreno Valley);
30. Lasselle Street/Cactus Avenue (Moreno Valley);
31. Lasselle Street/John F Kennedy Drive (Moreno Valley);
32. Lasselle Street/Iris Avenue (Moreno Valley);
33. Lasselle Street/Krameria Avenue (Moreno Valley);
34. Lasselle Street/Via Xavier Lane (Moreno Valley);
35. Lasselle Street/Rojo Tierra (Moreno Valley);
36. Lasselle Street/Cremello Way – Avenida De Plata (Moreno Valley);
37. Lasselle Street/Avenida Classica – Kentucky Derby Drive (Moreno Valley);
38. Lasselle Street/Via De Anza – Rancho Verde High School (Moreno Valley);
39. Evans Road/Ramona Expressway (Perris);
40. Camino Flores/Iris Avenue (Moreno Valley);
41. Coachlight Court – Avenida De Circo/Iris Avenue (Moreno Valley);
42. Grande Vista Drive/Iris Avenue (Moreno Valley);
43. Nason Street/Elder Avenue – SR-60 Westbound Ramps (Caltrans);
44. Nason Street/SR-60 Eastbound Ramps (Caltrans);
45. Nason Street/Eucalyptus Avenue (Moreno Valley);
46. Nason Street/Cottonwood Avenue (Moreno Valley);
47. Nason Street/Alessandro Boulevard (Moreno Valley);
48. Nason Street/Cactus Avenue (Moreno Valley);
49. Nason Street – Hillrose Lane/Iris Avenue (Moreno Valley);
50. Oliver Street/Alessandro Boulevard (Moreno Valley);
51. Oliver Street/Cactus Avenue (Moreno Valley);
52. Oliver Street/John F Kennedy Drive (Moreno Valley);
53. Oliver Street/Iris Avenue (Moreno Valley);
54. Via Del Lago/Iris Avenue – Moreno Beach Drive (Moreno Valley);

55. Moreno Beach Drive/SR-60 Westbound Ramps (Caltrans);
56. Moreno Beach Drive/SR-60 Eastbound Ramps (Caltrans);
57. Moreno Beach Drive/Eucalyptus Avenue (Moreno Valley);
58. Moreno Beach Drive/Cottonwood Avenue (Moreno Valley);
59. Moreno Beach Drive/Alessandro Boulevard (Moreno Valley);
60. Moreno Beach Drive/Cactus Avenue (Moreno Valley);
61. Moreno Beach Drive/John F Kennedy Drive (Moreno Valley);
62. Driveway 1/Iris Avenue (Moreno Valley);
63. Driveway 2/Iris Avenue (Moreno Valley); and
64. Driveway 3/Iris Avenue (Moreno Valley).

All study intersections will be analyzed during the a.m. and p.m. peak hours. Levels of service for all analysis intersections will be based on the Highway Capacity Manual (6 for signalized and unsignalized intersections, using Synchro 10 software. Previously referenced Figure 5 illustrates the study area intersections.

Roadway Segments

Based on discussion with City staff, LSA will analyze the following roadway segments:

Perris Boulevard

1. between Iris Avenue and Krameria Avenue (Moreno Valley);
2. between Krameria Avenue and San Michele Road (Moreno Valley);
3. between San Michele Road and Nandina Avenue (Moreno Valley);
4. between Nandina Avenue and Harley Knox Boulevard (Moreno Valley/Perris);

Lasselle Street

5. between John F Kennedy Drive and Iris Avenue (Moreno Valley);
6. between Iris Avenue and Krameria Avenue (Moreno Valley);
7. between Krameria Avenue and Via Xavier Lane (Moreno Valley);
8. between Via Xavier Lane and Rojo Tierra (Moreno Valley);
9. between Rojo Tierra and Cremello Way (Moreno Valley);
10. between Cremello Way and Kentucky Derby Drive (Moreno Valley);
11. between Kentucky Derby Drive and Via De Anza (Moreno Valley); and

12. Lasselle Street-Evans Road, between Via De Anza and Ramona Expressway (Moreno Valley/Perris);

Nason Street

13. between SR-60 Eastbound Ramps and Eucalyptus Avenue (Moreno Valley);
14. between Eucalyptus Avenue and Cottonwood Avenue (Moreno Valley);
15. between Cottonwood Avenue and Alessandro Boulevard (Moreno Valley);
16. between Alessandro Boulevard and Cactus Avenue (Moreno Valley);
17. between Cactus Avenue and Iris Avenue (Moreno Valley);

Oliver Street

18. between Alessandro Boulevard and Cactus Avenue (Moreno Valley);
19. between Cactus Avenue and John F Kennedy Drive (Moreno Valley);
20. between John F Kennedy Drive and Iris Avenue (Moreno Valley);

Moreno Beach Drive

21. between SR-60 Eastbound Ramps and Eucalyptus Avenue (Moreno Valley);
22. between Eucalyptus Avenue and Cottonwood Avenue (Moreno Valley);
23. between Cottonwood Avenue and Alessandro Boulevard (Moreno Valley);
24. between Alessandro Boulevard and Cactus Avenue (Moreno Valley);
25. between Cactus Avenue and John F Kennedy Drive (Moreno Valley);
26. between John F Kennedy Drive and Via Del Lago (Moreno Valley);

Alessandro Boulevard

27. between I-215 Northbound Ramps – Day Street (Moreno Valley);
28. between Day Street and Elsworth Street (Moreno Valley);
29. between Elsworth Street and Frederick Street (Moreno Valley);
30. between Frederick Street and Graham Street (Moreno Valley);
31. between Graham Street and Heacock Street (Moreno Valley);
32. between Heacock Street and Indian Street (Moreno Valley);
33. between Indian Street and Perris Boulevard (Moreno Valley);

34. between Perris Boulevard and Kitching Street (Moreno Valley);
35. between Kitching Street and Lasselle Street (Moreno Valley);
36. between Lasselle Street and Nason Street (Moreno Valley);
37. between Nason Street and Moreno Beach Drive (Moreno Valley);

Cactus Avenue

38. between I-215 Northbound Ramps – Old Frontage Road and Elsworth Street (Moreno Valley);
39. between Elsworth Street and Frederick Street (Moreno Valley);
40. between Frederick Street and Graham Street (Moreno Valley);
41. between Graham Street and Heacock Street (Moreno Valley);
42. between Heacock Street and Indian Street (Moreno Valley);
43. between Indian Street and Perris Boulevard (Moreno Valley);
44. between Perris Boulevard and Kitching Street (Moreno Valley);
45. between Kitching Street and Lasselle Street (Moreno Valley);
46. between Lasselle Street and Nason Street (Moreno Valley);

John F Kennedy Drive

47. between Oliver Street and Moreno Beach Drive (Moreno Valley);

Iris Avenue

48. between Heacock Street and Indian Street (Moreno Valley);
49. between Indian Street and Perris Boulevard (Moreno Valley);
50. between Perris Boulevard and Kitching Street (Moreno Valley);
51. between Kitching Street and Lasselle Street (Moreno Valley);
52. between Lasselle Street and Camino Flores (Moreno Valley);
53. between Camino Flores and Avenida De Circo (Moreno Valley);
54. between Avenida De Circo and Grande Vista Drive (Moreno Valley);
55. between Grande Vista Drive and Nason Street – Hillrose Lane (Moreno Valley);
56. between Nason Street – Hillrose Lane and Driveway 1 (Moreno Valley);
57. between Driveway 1 and Driveway 2 (Moreno Valley);
58. between Driveway 2 and Driveway 3 (Moreno Valley);

59. between Driveway 3 and Oliver Street (Moreno Valley); and

60. between Oliver Street and Via Del Lago (Moreno Valley).

VII. DELIVERABLES

A. Draft TIA (2 hard copies and PDF)

B. Final TIA (4 hard copies and PDF)

A signed copy of this Scoping Agreement will be included in the submitted draft and final traffic studies. The 1st submittal of the draft traffic study will be delivered with a review fee of $3,118 to the Permit Technician, Land Development Division – Moreno Valley City Hall, 14177 Frederick Street, Moreno Valley, CA 92552. Please contact the Land Development Division at 951-413-3110 prior to the delivery of the traffic study. If you have any questions regarding this Scoping Agreement, please contact Eric Lewis at (951) 413-3140.
