ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description: Aboveground Petroleum Storage

Violations:

Site ID: 62225
Site Name: RIVERVIEW INTERNATIONAL TRUCKS
Violation Date: 11-05-2015
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to comply with all of the following requirements: 1. Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. 2. Failure to sign written procedures and/or a record of inspections and/or customary business records by the appropriate supervisor or inspector. 3. Failure to keep written procedures and/or a record of inspections and/or customary business records with the plan. AND 4. Failure to maintain written procedures and/or a record of inspections and/or customary business records for three years.

Violation Notes: Returned to compliance on 11/05/2015. OBSERVATION: SPCC Plan Monthly inspection checklist indicates that the secondary containment areas are inspected/checked for liquid however Jason Ehrlich - service manager and the person conducting the monthly inspections reported that he was not aware of how to properly inspect the secondary containment area(s) and that the secondary containment areas of the double wall tanks have not been inspected. Facility has failed to conduct inspections and tests in accordance with written procedures that they or a certifying engineer have developed for the facility. CORRECTIVE ACTION: Secondary containment areas must be adequately inspected within 60 days. Facility must submit in writing a description of how the areas were inspected and findings within 60 days. Tests/inspections must be conducted in accordance with written procedures and maintain records for 3 years. Jason Ehrlich removed all secondary containment bungs from tanks and inspected during the inspection. He reported [Truncated]

Violation Description: APSA Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 12/07/2015. OBSERVATION: The 550g AST containing new oil located in the service building (source#5 in SPCC Plan) may not be secondarily contained. SPCC Plan indicates that it has UL listed integral secondary containment however upon inspection secondary containment vents and other evidence of a secondarily contained tank were not observed. Facility owner/operator or designee must determine if this particular tank has integral secondary containment and submit findings to YCEH in writing. If it is determined that the tank is not secondarily contained then secondary containment must be provided immediately. If the tank will be removed and replaced with another tank then the SPCC Plan must be amended to discuss the new tank. CORRECTIVE ACTION: Facility must determine the above as soon as possible and demonstrate compliance within 60 days by submitting findings/evidence to YCEH within that time.

Violation Date: 11-05-2015
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to comply with all of the following requirements: 1. Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. 2. Failure to sign written procedures and/or a record of inspections and/or customary business records by the appropriate supervisor or inspector. 3. Failure to keep written procedures and/or a record of inspections and/or customary business records with the plan. AND 4. Failure to maintain written procedures and/or a record of inspections and/or customary business records for three years.
Violation Notes: Returned to compliance on 11/05/2015. OBSERVATION: SPCC Plan Monthly inspection checklist indicates that the secondary containment areas are inspected/checked for liquid however Jason Ehrlich - service manager and the person conducting the monthly inspections reported that he was not aware of how to properly inspect the secondary containment area(s) and that the secondary containment areas of the double wall tanks have not been inspected. Facility has failed to conduct inspections and tests in accordance with written procedures that they or a certifying engineer have developed for the facility. CORRECTIVE ACTION: Secondary containment areas must be adequately inspected within 60 days. Facility must submit in writing a description of how the areas were inspected and findings within 60 days. Tests/inspections must be conducted in accordance with written procedures and maintain records for 3 years. Jason Ehrlich removed all secondary containment bungs from tanks and inspected during the inspection. He reported [Truncated]

Site Name: RIVERVIEW INTERNATIONAL TRUCKS
Violation Date: 11-05-2015
Citation: HSC 6.67 Multiple Sections - California Health and Safety Code, Chapter 6.67, Section(s) Multiple Sections
Violation Description: APSA Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 12/07/2015. OBSERVATION: The 550g AST containing new oil located in the service building (source#5 in SPCC Plan) may not be secondarily contained. SPCC Plan indicates that it has UL listed integral secondary containment however upon inspection secondary containment vents and other evidence of a secondarily contained tank were not observed. Facility owner/operator or designee must determine if this particular tank has integral secondary containment and submit findings to YCEH in writing. If it is determined that the tank is not secondarily contained then secondary containment must be provided immediately. If the tank will be removed and replaced with another tank then the SPCC Plan must be amended to discuss the new tank. CORRECTIVE ACTION: Facility must determine the above as soon as possible and demonstrate compliance within 60 days by submitting findings/evidence to YCEH within that time.

Violations:
Site ID: 56297
Site Name: PERFORMANCE RACING DEVELOPMENT
Violation Date: 07-20-2016
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 09/14/2016. OBSERVATION: The Generator failed to properly close hazardous waste containers when not in active use in accordance with 22 CCR 12 66262.34(d)(2). There were two steel 55-gallon drums containing used oil, and one 55-gallon plastic drum containing used coolant and used oil without a secure lid. All hazardous waste containers shall be closed at all times except when adding or removing waste. This is a repeat violation from 06-17-10. Correction required. CORRECTIVE ACTION: Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing waste.

Violation Date: 07-20-2016
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 09/14/2016. OBSERVATION: The owner/operator failed to submit a Hazardous Material Inventory page for all reportable hazardous materials on site in accordance with H&SC 6.95 25507(a)(2) and 19 4 2729.2(a)(2). There were six 55-gallon drums containing different amounts of used oil, but appearing to be mostly full, that were on-site during the inspection. This potentially represents 330-gallons. Only 100-gallons have been reported. This is a repeat violation from 06-17-10 and 10-14-13. Correction required. CORRECTIVE ACTION: Reevaluate the maximum amount of used oil ever present on site at the facility, and complete and submit the Hazardous Materials Inventory Chemical Description page as appropriate electronically in the California Environmental Reporting System (CERS).

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 09/14/2016. OBSERVATION: The Generator failed to properly label hazardous waste accumulation containers with the following requirements: the words "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date in accordance with 22 CCR 12 66262.34(f). There is one 55-gallon steel drum containing used oil without a label, one 55-gallon plastic drum containing used oil labeled as used antifreeze, and one 55-gallon plastic drum containing used coolant and used oil without a complete label. This is a repeat violation from 06-17-10. Correction required. CORRECTIVE ACTION: The Generator shall immediately label these containers and ensure that all hazardous waste containers are marked with all the required information.

Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 09/09/2016. OBSERVATION: The Generator failed to dispose of hazardous waste within 180 days in accordance with 22 CCR 12 66262.34(d). There were five 55-gallon drums containing used oil with an accumulation start date of 06-19-12, which is beyond the 180-days allowed. Correction required. CORRECTIVE ACTION: The Generator shall immediately contact a licensed hazardous waste hauler to dispose of this waste and submit a copy of documentation to YCEH within 30 days.

Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 09/14/2016. OBSERVATION: The Generator failed to properly close hazardous waste containers when not in active use in accordance with 22 CCR 12 66262.34(d)(2). There were two steel 55-gallon drums containing used oil, and one 55-gallon plastic drum containing used coolant and used oil without a secure lid. All hazardous waste containers shall be closed at all times except when adding or removing waste. This is a repeat violation from 06-17-10. Correction required. CORRECTIVE ACTION: Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing waste.

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: Returned to compliance on 09/14/2016. OBSERVATION: The owner/operator failed to submit a Hazardous Material Inventory page for all reportable hazardous materials on site in accordance with H&SC 6.95 25507(a)(2) and 19 4 2729.2(a)(2). There were six 55-gallon drums containing different amounts of used oil, but appearing to be mostly full, that were on-site during the inspection. This potentially represents 330-gallons. Only 100-gallons have been reported. This is a repeat violation from 06-17-10 and 10-14-13. Correction required. CORRECTIVE ACTION: Reevaluate the maximum amount of used oil ever present on site at the facility, and complete and submit the Hazardous Materials Inventory Chemical Description page as appropriate electronically in the California Environmental Reporting System (CERS).

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Failure of sensor to be located in the proper position/location.
 OBSERVATION: Owner/Operator did not locate the sensor in the proper location/position. Observed the L3 Diesel Tank#1 VR 208 liquid sensor located in the stp sump raised approx. 6 inches off the bottom of the sump resting on the top of the tank manway thus not allowing the monitoring equipment to detect leaks at the earliest possible opportunity. This is the same position it was observed in during the annual monitoring certification on Nov. 8th, 2016. Recently a contractor (TLM Petro Labor Force) was on-site to ensure that the sensors were placed in the correct position however facility personnel raised the sensor off the lowest possible point due to an alarm

Failure of sensor to be located in the proper position/location.
OBSERVATION: Owner/Operator did not locate the sensor in the proper location/position. Observed the L3 Diesel Tank#1 VR 208 liquid sensor located in the stp sump raised approx. 6 inches off the bottom of the sump resting on the top of the tank manway thus not allowing the monitoring equipment to detect leaks at the earliest possible opportunity. This is the same position it was observed in during the annual monitoring certification on Nov. 8th, 2016. Recently a contractor (TLM Petro Labor Force) was on-site to ensure that the sensors were placed in the correct position however facility personnel raised the sensor off the lowest possible point due to an alarm received on the monitor console on Monday, January 9th. Facility personnel reported that they were instructed by PWI a third party contractor that Penske contacts when an alarm is observed, to raise the sensor therefore the [Truncated]

diesel spill container failed to have a minimum capacity of five gallons. When spill container was tested it could not contain 5 gallons because it was leaking water out of the container and into the drop tube. This spill bucket is contained inside a sump. All spill containers shall have a minimum capacity of five gallons and should maintain 5 gallons during the duration of the test. **CORRECTIVE ACTION:** Immediately contact a properly licensed, trained, and certified contractor to repair or replace the spill container under permit and inspection of the CUPA. Contact YCEH 48 hours prior to retest. Correct within 30 days.

Violation Notes: Returned to compliance on 01/25/2017. 23 CCR 16 2630(d), 2641(a)
Failure of sensor to be located in the proper position/location.
OBSERVATION: Owner/Operator did not locate the sensor in the proper location/position. Observed the L3 Diesel Tank#1 VR 208 liquid sensor located in the stp sump raised approx. 6 inches off the bottom of the sump resting on the top of the tank manway thus not allowing the monitoring equipment to detect leaks at the earliest possible opportunity. This is the same position it was observed in during the annual monitoring certification on Nov. 8th, 2016. Recently a contractor (TLM Petro Labor Force) was on-site to ensure that the sensors were placed in the correct position however facility personnel raised the sensor off the lowest possible point due to an alarm received on the monitor console on Monday, January 9th. Facility personnel reported that they were instructed by PWI a third party contractor that Penske contacts when an alarm is observed, to raise the sensor therefore the [Truncated]

Failure of sensor to be located in the proper position/location.
OBSERVATION: Owner/Operator did not locate the sensor in the proper location/position. Observed the L3 Diesel Tank#1 VR 208 liquid sensor located in the stp sump raised approx. 6 inches off the bottom of the sump resting on the top of the tank manway thus not allowing the monitoring equipment to detect leaks at the earliest possible opportunity. This is the same position it was observed in during the annual monitoring certification on Nov. 8th, 2016. Recently a contractor (TLM Petro Labor Force) was on-site to ensure that the sensors were placed in the correct position however facility personnel raised the sensor off the lowest possible point due to an alarm received on the monitor console on Monday, January 9th. Facility personnel reported that they were instructed by PWI a third party contractor that Penske contacts when an alarm is observed, to raise the sensor therefore the [Truncated]

Case Worker: DFS
RB Case Number: 570250
Local Agency: YOLO COUNTY
File Location: Regional Board
Local Case Number: Not reported
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History:

The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted. In the 30 November 2007 Report, proposed soil excavation around the dispenser area where the highest concentrations of gasoline hydrocarbons were detected. Excavation of soil and replacement of dispenser island piping occurred in October and November 2008. Monitored natural attenuation has followed.

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 04/12/2017. OBSERVATION: There were three 55-gallon drums containing used oil without complete labels. There was one complete label representing all three drums attached to the wall behind the drums. There was one 55-gallon drum containing used antifreeze/coolant without an accumulation start date. The Generator failed to properly label hazardous waste accumulation containers with the following requirements: the words "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date in accordance with 22 CCR 12 H&SC 66262.43(f). This is a repeat violation from 08-26-10. CORRECTIVE ACTION: This was corrected during the time of the inspection. Ensure that all hazardous waste containers are marked with all the required information. Each container used to accumulate hazardous waste must have its own completed label with an accumulation start date. [Truncated]

Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.

Violation Notes: Returned to compliance on 04/12/2017. 22 CCR 16 66266.130 OBSERVATION: There were two 55-gallon drums containing used oil and/or fuel filters without an accumulation start date. The Generator failed to properly handle, manage, label, and/or recycle used oil and fuel filters in accordance with 22 CCR 16 66266.130. This is a repeat violation from 08-26-10' CORRECTIVE ACTION: This was corrected during the time of the inspection. Ensure the facility complies with the Title 22 regulations with regards to the proper handling, management, labeling and recycling of used oil and fuel filters. The accumulation start date goes on the container when the first filter is added to it. The facility then has up to one year to accumulate filters before being required to dispose of them.

ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 06/27/2017. OBSERVATION: There were two steel 55-gallon drums containing used oil not kept closed with a locking ring. The Generator failed to ensure that hazardous waste containers are kept closed at all times except when adding or removing waste in accordance with 22 CCR 15 66265.173. Correction required. CORRECTIVE ACTION: Close these containers and ensure all hazardous waste containers are closed when not adding or removing waste.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Failure of the double wall pressurized piping in the under dispenser containment to be continuously monitored by a method that either shuts down the flow of product to the dispenser or activates an audible/visual alarm when a leak is detected.
Violation Notes: Returned to compliance on 05/13/2016. OBSERVATION: Owner/Operator did not maintain the double wall pressurized piping in the under dispenser containment to be continuously monitored by a method that either shuts down the flow of product to the dispenser or activates an audible/visual alarm when a leak is detected. The 91 product piping in dispenser #5/6 failed to have continuous monitoring because there is not a mechanical float mechanism installed in the UDC for that product. Without a mechanical float mechanism the 91 piping in that UDC has not been continuously monitored and has been unable to shut-down product flow to that dispenser. There is a chain connected

Violation Description: Failure of the line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitor at least hourly. Be capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g. Restrict or shut off the flow of product through the piping when a leak is detected.

Violation Notes: Returned to compliance on 04/03/2017. 23 CCR 16 2636(f)(2) OBSERVATION: The Owner/Operator failed to repair/maintain pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs. Diesel product Red Jacket Mechanical Line Leak Detector failed to restrict flow to dispenser and therefore failed to detect a 3 gph leak rate when tested. When tested, the pressure immediately stepped through to full operating pressure and did not stop at a lower pressure demonstrating a restricted product flow to the dispenser. CORRECTIVE ACTION: LLD was replaced by BZ Service Station Maintenance during the inspection. A VMI LLD was installed and no permit was necessary. [Truncated]

Be capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g. Restrict or shut off the flow of product through the piping when a leak is detected.

Violation Notes: Returned to compliance on 04/03/2017. 23 CCR 16 2636(f)(2) OBSERVATION: The Owner/Operator failed to repair/maintain pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs. Diesel product Red Jacket Mechanical Line Leak Detector failed to restrict flow to dispenser and therefore failed to detect a 3 gph leak rate when tested. When tested, the pressure immediately stepped through to full operating pressure and did not stop at a lower pressure demonstrating a restricted product flow to the dispenser. IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: Solvents were detected in groundwater collected from the on-site monitoring wells. The UST case was closed in July 2009 following the removal of over 80 cubic yards of petroleum-impacted soil, extraction of 200,000 gallons of groundwater, delineation of petroleum hydrocarbons in groundwater, an assessment of indoor-air exposure risks, and a sensitive receptors survey. The PCE/TCE plume extends at least 300 feet northwestward from the suspected release area off the site. Quarterly groundwater monitoring of PCE and other constituents continues. Delineation of the vertical and horizontal extent of the source of PCE in soil vapor and groundwater is in progress. In 2017 a SB445 grant was awarded to continue and expand groundwater remediation at the site. Groundwater is being remediated via bioaugmentation and enhanced reductive dechlorination.

COMMUNITY WATER SYSTEM

AIR EMISSIONS CLASSIFICATION UNKNOWN

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes: Inspection report emailed to Javier Rios, aztecautorepair1@yahoo.com.

Advisements: Used oil filters are allowed to accumulate for up to 1 year from the date when the first filter is added to the waste drum. Please dispose of the used oil filters when they have accumulated for 1 year, or sooner. If you store hazardous materials in quantities greater than 55 gallons for liquids, 200 cubic feet for gases, or 500 pounds for solids, please report on the California Environmental Reporting System (CERS) online database within 30 days of acquiring these materials, and annually thereafter.

Eval Notes: Field Note / Observation: 1) Due to wind and vibration caused by traffic in Highway (I-80) the spill bucket could not be tested using Incon device. After many attempts and failing to use the Incon system the service technician used the regular lake test procedure (1 hour test). Spill bucket passed the test. 2) It was recommended to place / secure the 208 liquid sensor inside a PVC pipe in order to hold the sensor at a vertical position. Ms. McDaniel (AT&T Environmental Site Manager) agreed to discuss the issue with their management. Thank you for your cooperation.

Eval Notes: Field Note / Observation: 1) Due to wind and vibration caused by traffic in Highway (I-80) the spill bucket could not be tested using Incon device. After many attempts and failing to use the Incon system the service technician used the regular lake test procedure (1 hour test). Spill bucket passed the test. 2) It was recommended to place / secure the 208 liquid sensor inside a PVC pipe in order to hold the sensor at a vertical position. Ms. McDaniel (AT&T Environmental Site Manager) agreed to discuss the issue with their management. Thank you for your cooperation.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
 Violation Notes: Returned to compliance on 08/15/2016. 22 CCR 12 66262.34(d)(2); 40 CFR 1 262.34(d)(5)(iii) OBSERVATION: The Generator failed to ensure employees are familiar with the handling and compliance of hazardous waste regulations and emergency response. At the time of inspection, it could not be demonstrated (not necessarily documented) that employees who handle hazardous waste were properly trained. On 6-8-2016 facility could no show that training was being conducted. The generator must ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and emergency procedures. CORRECTIVE ACTION: Immediately provide training to all employees who handle hazardous waste and submit a copy of the training records to the CUPA within 30 days.

Citation: 40 CFR 1 265.172 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.172

Violation Description: Failure to accumulate or store hazardous waste in container made of or lined with materials which will not react with, and are otherwise compatible with, the hazardous waste to be stored.

Violation Notes: Returned to compliance on 08/15/2016. 22 CCR 12 66262.34(d)(2); 40 CFR 1 265.172 OBSERVATION: The Generator failed to use a container made of or lined with materials which will not react with, and is otherwise compatible with, the hazardous waste to be transferred or stored, so that the ability of the container to contain the waste is not impaired. [Note type of waste stored and type of container used]. No determination was made as to the compatibility of this container with the waste inside. On 6-8-2016 the facility had one open top 55 gallon drum of waste antifreeze. This is a violation because it stored in a drum that is for solids and not liquid. The facility must store waste antifreeze in liquid drums. CORRECTIVE ACTION: Immediately transfer the waste antifreeze waste to another container or manage in another way in accordance with Title 22 regulations. Submit verification of compliance to the CUPA within 30 days. [Truncated]

Violation Date: 06-08-2016
Citation: 40 CFR 1 265.201(c)(3) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.201(c)(3)

Violation Description: Failure to inspect hazardous waste tanks at least once each operating day for the following, when present: (1) Discharge control equipment (e.g., waste feed cutoff systems, by-pass systems, and drainage systems) to ensure that it is in good working order; (2) Data gathered from monitoring equipment (e.g., pressure and temperature gauges) to ensure that the tank is being operated according to its design; (3) The level of waste in the tank.

Violation Notes: Returned to compliance on 08/15/2016. 22 CCR 12 66262.34(d)(2); 40 CFR 1 265.201(c)(1), 265.201(c)(2), 265.201(c)(3) OBSERVATION: The Generator failed to conduct daily tank inspection of the discharge systems, monitoring equipment, and tank levels. On 6-7-16 facility did not conduct daily tank inspections of its two waste oil tanks. CORRECTIVE ACTION: The Generator shall immediately begin to conduct daily inspections of the discharge systems, monitoring equipment, and tank levels for all tanks containing hazardous waste. Submit verification of these inspections to the CUPA within 30 days.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description:	Per the NRC Report: "A shipment containing four 4 liter bottles of 99.8 chloroform was damaged during a sorting operation. One of the 4 liter bottles broke and released 100 of its contents and estimated to be 13 LBS. The onsite hazardous materials response team responded to the incident and contained the spill, cleaned up the spill area, and lab packed the waste and will be stored in the temporary storage for profiling by third party vendor. Once profiled, the waste will be containerized in drum for disposal. No drains, no soil, no employee exposure."

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

Site Description: it appears unlikely that federal funds are a viable source of revenue for this site.
 B.O.R. Industries (B.O.R.) is currently registered as a hazardous waste transporter and used oil transfer facility. The facility on this two acre site has operated since approximately 1972. The previous owner operated a similar business at the same location. The current owners are Norman Bennett and Steven Bennett.

Hazardous Waste Desc: Heavy metals are the contaminants of greatest concern. Areas of concern include: underground tanks, soils underlying cracked asphalt pavement and soils near the discharge end of the outfall pipe in an adjacent ditch. Soil samples taken in the ditch on March, 29, 1984, indicated elevated levels of lead, zinc and copper.

Threat To Public Health & Env: Because of the high water table in this area (25 feet from the surface) and the direct discharge of waste to surface soils, ground water degradation is the major concern. The immediate area depends on ground water for drinking and irrigation uses. This includes the Cities of Bryte, Broderick and West Sacramento. Also of concern is the proximity of the site to an irrigation canal. The site is fenced and locked when unattended.

Site Activity Status: In August 1984, the Yolo County Municipal Court found B.O.R. in violation of the Health and Safety Code for recycling used oil and storage of used oil and other hazardous wastes. A preliminary assessment has been completed. DHS is projecting to use State Bond funds to perform the remedial investigations and subsequent work.

Site Screening completed. A 1986 PA recommended soil sampling at drum storage sites on the property. During a March 1984 inspection, the Dept. of Health Services observed one hundred drums, some of which were leaking and in very poor condition. BOR was cited for Health and Safety Code violations for illegal discharge of wastes to a drainage canal that runs along the west end of the property. Soil sampling revealed zinc at levels up to 6,800 ug/g at an outfall pipe that drains into the west side canal. In January 1986 two underground storage tanks were removed under the supervision of Yolo County Dept. of Health. One tank stored petroleum products, including solvents, and the other smaller tank stored waste water. No leaks were detected from an inspection of the tanks and no contamination was detected from soil samples taken from the tank excavation pits. Four other tanks have been removed since 1986. DTSC files contain no dates or removal sampling information. A Preliminary Endangerment Assessment (PEA) is required due to past waste discharges, drum leakage and high concentrations of zinc found in the drainage pipe.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Engineering Depot site was occupied by numerous commercial and industrial facilities. No structures were identified to be of the definite DOD origin.

Current Program: Not reported

History: In the 1942 the Army leased 27.8 acres from the Sacramento Northern Railway. The are was used by the Corps of Engineers, the former Pacific Division, as a closed storage area for the military supplies. The government constructed 18,051 square feet of shop space. Ten acres of gravel paving was added to the property. A directive dated 20 February 1945 authorized the acquisition of the property in a fee interest, in lieu of leasehold interest. At the end of the war, a military necessity was no longer required; thus the property was surplusd 31 July 1947 and the lease cancelled defective 31 October 1947. Copies of the lease, a yard plans for the building and lease cancellation could not be found.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Vinyl chloride
Site History: The property is currently occupied by the River City Baseball Group, the current owner and operator of the ballpark facility, a new multi-use open-air structure stadium that serves as the home for the Sacramento River Cats. Univar USA Inc. (Formerly Van Waters & Rogers) purchased the facility in 1959 for chemical storage and distribution operations, resulting in the storage, handling, and re-packaging of PCE; 1,1,1-TCA, acetic acid, acetone, Texanol, diesel, and propylene glycol. These chemical distribution operations at the site caused contamination of soil and groundwater with solvents, mostly PCE, TCE, vinyl chloride, cis-1,2-DCE and trans-1,2-DCE. Initial cleanup operations for soil and groundwater were incorporated into the stadium design during construction of Raley Field. Univar USA Inc. is primarily responsible for the environmental cleanup operations at the site. Site investigative activities were initiated in 1988 in response to potential leaks from Underground Storage Tanks (USTs). The USTs were subsequently removed in 1991 and since then, no chemicals have been stored in bulk at the site. Univar operated soil vapor extraction/air sparging from 1995 to 1997. In 1999, the system was decommissioned and a combination of in-situ bioremediation and groundwater extraction and treatment systems were installed. Groundwater is being amended with a food source (sodium lactate) and nutrients to stimulate the growth of indigenous bacteria for enhanced anaerobic dechlorination.

Comments: RAW - The public comment period for the Draft Final Groundwater Engineering Evaluation/Cost Analysis (EE/CA) and Remedial Action Work Plan (RAW) for the Front & T Street sites, Sacramento, California, for the Front Street Joint Defense Group (JDG) ended on April 3, 2001. DTSC received no comment on the above mentioned document and therefore granted final approval for said RAW. The RAW calls for a monitored natural attenuation (MNA) remedy combined with continued operation of the pump and treat system on PG&E site. A contingent remedy, which will be implemented if Site conditions change, is also funded as part of this RAW. Implementation of this RAW is designed to meet the groundwater cleanup objectives for all of the Front & T Street Sites. These Sites include: 1) PG&E Sacramento - Former MGP 2) CalTrans I-5, Q Street Off-ramp 3) SHRA - 1920 Front Street and 4) SMUD - Front and T Street.

Background Info: The Sacramento Housing and Redevelopment Agency (SHRA) site is located at 1920 Front Street in Sacramento. The site is located adjacent to the PG&E former manufactured gas plant and encompasses the location of a former lumberyard. Contamination was found at two areas on the site. The first area was in the Southwest portion of the site. A leaking underground storage tank was removed from the first area in 1988 and contaminated soils were removed during December 1996. The second area was located in the southwest area of the site, identified as Risk Management Zone (RMZ) VIIIa in the 1991 Remedial Action Plan (RAP). Manufactured gas plant (MGP) products from the PG&E site, located south of the site, were deposited in this zone. A Remedial Action Order (RAO) was issued on 08/16/93. A "Soil Excavation Workplan" was finalized in August 2001. The Soil Excavation Workplan satisfied the soil removal "Design" that was specified in the May 1991 RAP. The Workplan presented the design to remove approximately 700 cubic yards of polycyclic aromatic hydrocarbons (PAHs) contaminated soil from RMZ VIIIa. Contaminated soils were removed during November 2001. The Final Groundwater Engineering Evaluation/Cost Analysis (EE/CA) and Remedial Action Workplan (RAW) for the Front & T Street Sites, Sacramento California was completed in April 2001. The report was prepared for the Front Street Joint Defense Group (JDG) that consists of the following sites: 1) PG&E Sacramento; former MGP; 2) Cal Trans I-5, Q Street Off-ramp; 3) SHRA - 1920 Front Street; 4) SMUD - Front and T Street. The RAW implements a monitored natural attenuation (MNA) remedy combined with continued operation of the pump and treat system on the PG&E Site. A contingent remedy, which will be implemented if Site conditions change, was funded as a part of the RAW. The RAW implements the groundwater cleanup objectives for all of the Front & T Street Sites. PG&E has accepted responsibility for monitoring and maintenance of all implemented remedies at all the Front Street JDG sites. PG&E will continue to monitor the remaining groundwater contamination via a regularly scheduled sampling and monitoring program.

Comments Date: 03311997
Comments: RA -- Removal and disposition of 358 cu.yds. of soil contaminated from a leaking underground gasoline tank. The excavation was backfilled with clean pea gravel and oxygen release compound to enhance the bioremediation of any remaining contaminants.

will end on May 31, 2011. Fact sheets were mailed for delivery on the 29th and a public notice will be published on the 29th as well. A public meeting is scheduled for May 18 at the Towe Auto Museum in Sacramento. The Draft RAP proposes in-situ soil stabilization/solidification by the addition of Portland Cement and Activated carbon to the areas where the highest contamination is found in the vadose zone. The currently operating Groundwater remedy will continue to operate until RAOs are achieved. Modification of the remedy is necessary as the Ranney Collector, a nearby large volume well was decommissioned in 2009 and the contingent remedy was implemented.

Comments: RAW- The public comment period for the Draft Final Groundwater Engineering Evaluation/Cost Analysis (EE/CA) and Remedial Action Work Plan (RAW) for the Front & T Street Sites, Sacramento CA for the Front Street Joint Defense Group (JDG) ended on April 3, 2001 DTSC received no comment on the above mentioned document and therefore granted final approval for said RAW. The RAW calls for a monitored natural attenuation (MNA) remedy combined with continued operation of the pump and treat system on PG&E Site. A contingent remedy, which will be implemented if Site conditions change, is also funded as a part of this RAW. Implementation of this RAW is designed to meet the groundwater cleanup objectives for all of the Front & T Street Sites. These Sites include: 1) PG&E Sacramento - Former MGP 2) CalTrans I-5, Q Street Offramp 3) SHRA - 1920 Front Street and 4) SMUD - Front and T Street.

Completed Date: 05/16/2007
Comments: The Soil Vapor Extraction and Treatment System (SVETS) was constructed in 1999 to address contaminants present beneath the CalTrans and SMUD parcels. The evaluation presented indicates that the SVETS has had a minimal effect on the remediation and is not performing as expected. The concentrations of the contaminants of concern detected in samples collected in 2005 are roughly equivalent to those detected in 1999. The proposal recommends the removal of the SVETS as it is not effective in attaining the goals set forth in the Remedial Action Objectives set forth in either the Remedial Action Plan (RAP) or the Final Groundwater Engineering Evaluation/Cost Analysis and Remedial Action Workplan (EE/CA RAW). DTSC concurred with the proposal to decommission the SVETS and requested notification of the commencement of decommissioning and any deviation or modification from this proposal.

Completed Document Type: Treatability Study Workplan
Completed Date: 07/22/2009
Comments: On this date, DTSC approved the Treatability Study Plan for the in-situ soil stabilization/solidification. The objective of the study is to determine the proper stabilization mixture that will achieve the following: Permeability equal to, or less than, 1 x 10⁻⁶ centimeters per second; Unconfined compressive strength equal to or greater than, 30 pounds per square inch; and Reduce leaching of contaminants to groundwater to concentrations below target criteria. Additionally, the study will qualitatively examine vapor generation, temperature increase during treatment, and encapsulation of non-aqueous phase liquids.

Completed Document Type: Treatability Study Report
Completed Date: 06/08/2010
Comments: The Treatability Study concludes that an admixture of 10% Portland cement and 4% granulated activated carbon will achieve the criteria set forth in the study. The study did not evaluate the contaminant capture over a range of mixtures. This is a data gap that will have to be addressed during the design phase should this remedy be selected for use at the site.

Comments: DTSC approved the draft RAP for release on this date. The public comment period for the Draft RAP will commence on April 29, 2011 and will end on May 31, 2011. Fact sheets were mailed for delivery on the 29th and a public notice will be published on the 29th as well. A public meeting is scheduled for May 18 at the Towe Auto Museum in Sacramento. The Draft RAP proposes in-situ soil stabilization/solidification by the addition of Portland Cement and Activated carbon to the areas where the highest contamination is found in the vadose zone. The currently operating Groundwater remedy will continue to operate until RAOs are achieved. Modification of the remedy is necessary as the Ranney Collector, a nearby large volume well was decommissioned in 2009 and the contingent remedy was implemented.

CA BOND EXP. PLAN:

Responsible Party: RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: It is expected that Pacific Gas and Electric Company will fund the site characterization and remedial action. DHS entered into an enforceable agreement with the responsible parties. DHS has budgeted \$100,000 for oversight/monitoring of cleanup efforts. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with remedial investigations and cleanup activities.

Site Description: A former "City Gas Plant" or coal and crude oil gasification facility was located at this site. The former facility manufactured gas from coal and later used crude oil as a raw material.

Hazardous Waste Desc: Coal gasification facilities typically generated "coal tar" or "lamp black" residues. These residues contained compounds known as either Polynuclear Aromatic Hydrocarbons (PNA) or Polycyclic Aromatic Hydrocarbons (PAHs). These wastes were either sold for recycling purposes or used to fill in depressions or ponds and then covered or paved over with the wastes left in place.

Threat To Public Health & Env: The site is currently fenced and locked; access onto the site is controlled by PG&E. All exposed contaminant deposits have been paved to control migration and exposure. The avenues of exposure are ingestion of contaminated ground water and inhalation of contaminated dust or direct contact with contaminated soils. Presently, inadvertent exposure is not probable since the contaminated shallow ground water is not used for domestic purposes. Exposure to contaminated soil would only occur if the asphaltic cap were disturbed during construction onsite.

Site Activity Status: Pacific Gas and Electric Company has informed DHS that it is investigating a number of sites to determine if PNAs are present. PG&E has completed a major portion of the field work for the Remedial Investigation of the Sacramento site. The Feasibility Study Report is being prepared which will evaluate remedial alternatives.

Background Info: The PG&E Sacramento Site is a former manufactured gas plant that operated from 1873 to 1956 and produced gas from coal and petroleum as raw material. The contaminants found onsite are polycyclic aromatic hydrocarbons (PAH); total petroleum hydrocarbons (TPH); benzene, toluene, xylene, and ethylbenzene (B, T, X & E) and heavy metals in soil and groundwater. The site is currently paved to control soil migration and exposure. Groundwater contamination has not affected any domestic wells. PG&E signed an enforceable agreement with Department of Toxic Substances Control (DTSC) in March 1988. PG&E completed an onsite Remedial Investigation (RI) in March 1989 and offsite groundwater RI in June 1990. In October 1990, PG&E submitted an Feasibility Study and submitted the draft Remedial Action Plan (RAP) in November 1990. A final RAP was issued in May 1991. The proposed final remediation included excavation of

highly contaminated soils and offsite disposal, capping of remaining contamination and a groundwater extraction and treatment system. Contaminated soil was removed in November 1991. The groundwater treatment plant for the site went online during August 1995. The system includes 4 extraction wells, 4 reinjection wells, 3 observational piezometers and a carbon filter treatment plant. The Final Remedial Investigation and Removal Action reports, completed on September 1999, concluded that under current site conditions, protection of human health and the environment is achieved and that additional groundwater remediation is not necessary beyond the remedial processes in place.

The Final Groundwater Engineering Evaluation/Cost Analysis (EE/CA) and Remedial Action Work Plan (RAW) for the Front & T Street Sites, Sacramento, California was completed on April 2001. The report was prepared for the Front Street Joint Defense Group (JDG) that consists of the following sites: 1) PG&E Sacramento, Former MGP; 2) Cal Trans I-5, Q Street off-ramp; 3) Sacramento Housing and Redevelopment Agency-1920 Front Street; 4) SMUD - Front and T Street. The RAW implements a monitored natural attenuation(MNA) remedy combined with continued operation of the pump and treat system on the PG&E Site. A contingent remedy, which will be implemented if Site conditions change, was funded as a part of the RAW. The RAW implements the groundwater cleanup objectives for all of the Front & T Street Sites.

PG&E has accepted responsibility for monitoring and maintenance of all implemented remedies at all the Front Street JDG sites.

PG&E will continue to monitor the remaining groundwater contamination via a regularly scheduled sampling and monitoring program.

Completed Document Type: Removal Action Workplan
Completed Date: 04/27/2001
Comments: RAW - The public comment period for the Draft Final Groundwater Engineering Evaluation/Cost Analysis (EE/CA) and Remedial Action Work Plan (RAW) for the Front & T Street sites, Sacramento, California for the Front Street Joint Defense Group (JDG) ended on April 3, 2001. DTSC received no comment on the above mentioned document and therefore granted final approval for said RAW. The RAW calls for a monitored natural attenuation (MNA) remedy combined with continued operation of the pump and treat system on PG&E site. A contingent remedy, which will be implemented if Site conditions change, is also funded as a part of this RAW. Implementation of this RAW is designed to meet the groundwater cleanup objectives for all of the Front & T Street sites. These sites include: 1) PG&E Sacramento- Former MGP 2) CalTrans I-5, Q Street Off-ramp 3) SHRA - 1920 Front Street and 4) SMUD - Front and T Street.

Background Info: The Sacramento Municipal Utility District (SMUD) site is located near the former intersection of Front and T Streets in Sacramento and adjacent to the California Department of Transportation (CalTrans) property. The SMUD site was discovered during the groundwater investigation for the PG&E -Sacramento site. Soil boring analyses indicated that site was a source of petroleum hydrocarbon contamination to the groundwater. The Department issued a Remedial Action Order on 08/16/1993 to SMUD and CalTrans. Contaminated soil was excavated at the SMUD and CalTrans sites during fall 1998. A seasonal soil vapor extraction system, to remove contaminants below the depth

of excavation, began operations on 10/31/1999. This system operates on both the SMUD and the adjacent CalTrans site. The Final Groundwater Engineering Evaluation/Cost Analysis (EE/CA) and Remedial Action Work Plan (RAW) for the Front & T Street Sites, Sacramento, California was completed in April 2001. The report was prepared for the Front Street Joint Defense Group (JDG) that consists of the following sites: 1) PG&E Sacramento; Former MGP; 2) CalTrans I-5, Q Street Off-ramp; 3) SHRA - 1920 Front Street; 4) SMUD - Front and T Street. The RAW implements a monitored attenuation (MNA) remedy combined with continued operation of the pump and treat system on the P G & E site. A contingent remedy, which will be implemented if site conditions change, was funded as a part of the RAW. The RAW implements the groundwater cleanup objectives for all of the Front & T Street Sites. PG&E has accepted responsibility for monitoring and maintenance of all implemented remedies at all the Front Street JDG sites. PG&E will continue to monitor the remaining groundwater contamination via a regularly scheduled sampling and monitoring program.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

CA ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

CA DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

CA HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.
