Potential Media Affected: Under Investigation
Potential Contaminants of Concern: Dichloroethene (DCE), Tetrachloroethylene (PCE), Trichloroethylene (TCE), Gasoline, Toluene
Site History: 1960-1980's - Wastewater from wash rack systems used to service trailers reportedly discharged to a currently unused on-site septic system in the northwestern corner of the subject property (precise location unknown). Drains at the two on-site wash areas reportedly discharged to the on-site leach field for approximately 20 years until the property was connected to the City sewer system in the late 1960s. Early 1990's - Environmental investigations began. Source of contamination linked to the on-site septic system. Contaminants detected in soil and groundwater beneath the site and included gasoline, diesel, and volatile organic compounds (VOCs), including tetrachloroethene (PCE), trichloroethene (TCE), and dichloroethene

- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Violation Notes: Returned to compliance on 03/06/2015. Tank #2, L-9 VR 208 turbine sump sensor failed to shut-down the turbine when dipped in liquid however it did send an alarm to the monitor console. Monitor console was found by Afforda-Test technician to be incorrectly programmed for positive turbine shut-down on L-9. *Correction Required* UST service tech with veeder root certification must properly program the monitor console so that the L-9 VR208 sensor will shut down tank 2 turbine when dipped in liquid. Citation: 23 CCR 16 2636(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)
Violation Description: Failure to continuously monitor the interstitial space of the tank, piping and/or sumps sump such that the leak detection activates an audible/visual alarm when a leak is detected.
Violation Notes: Returned to compliance on 05/26/2016. OBSERVATION: At the time of inspection YCEH and Afforda-Test service technicians were unable to verify if Tank #1&2 product lines and vent lines were under constant vacuum because it was not possible to verify vacuum communication at the end of each pipe run in each UDC and Vent sump. It was observed however that each product line & vent line penetrations into their respective sumps had what appeared to be a potential testing port located on the bottom side of the pipes where communication could be verified but solid plugs were threaded into each port thus making it unable to test. At this time it is unknown if the product and vent lines are being maintained under constant vacuum pursuant to CA Health & Safety Code chapter 6.7 requirements for UST's installed after July 1, 2004. It is also worth mentioning that vacuum & brine sensors must be tested for communication on UST systems installed after July 1, 2004 which includes the UST system installed at this location. Violation Description: Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).
Violation Notes: Returned to compliance on 06/16/2017. 23 CCR 16 2638 OBSERVATION: The Owner/Operator failed to test leak detection equipment every 12 months (VPH, sensor, LLD, ATG, etc.). Annual monitoring system certification and/or leak detector testing performed today failed to include testing of many sensors servicing Diesel Tank #1 due to a fault/error code displaying in dispenser #1. The following sensors were not able to be certified on Diesel Tank #1 during today's annual monitor certification: Disp 1 & satellite VR 208 sensor, STP sump sensor, Electronic LLD, and Smart Sensor(liquid & vac). Fail Safe & Sensor Out also was not tested on any part of the UST system during today's annual monitor certification due to the fault/error code displayed in D#1. Violation Description: Failure to keep water out of the secondary containment of UST systems installed on or after July 1, 2003 and before July 1, 2004, or on or after July 1, 2004.
Violation Notes: Returned to compliance on 03/03/2017. HSC 6.7 25290.1, 25290.2, 25291 OBSERVATION: The Owner/Operator failed to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid. Observed approx. 1 inch of liquid in the bottom of the vent sump and approx. 1 inch of diesel fuel in the bottom of dispenser #4/5. The diesel fuel observed in Disp 4/5 is due to a leaky flex line. The flex line must be replaced immediately to mitigate the leak. CORRECTIVE ACTION: Owner/Operator must maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid. Submit verification of compliance to the CUPA within 30 days. Afforda-Test removed the liquid at the time of inspection.

Failure of sensor to be located in the proper position/location.
OBSERVATION: Observed Tank# 2 VR 304 mini-brine sensor(L-6) in the gravel area inside the top of the sump approx. 3 feet away from the designated location. This sensor was not located in the proper position which should have been in the designated location at the top of the the fill sump to monitor the brine level. The sensor was not in alarm at the start of inspection and operated properly when tested by Afforda-Test technicians thus demonstrating that the sensor float was in the up position while it lay on its side in the gravel(if the sensor was in the down position it would go into alarm). According to the alarm history this sensor has not alarmed since the last Annual Monitoring Certification which was conducted on March 4, 2016. Violation Description: Failure to continuously monitor the interstitial space of the tank, piping and/or sumps sump such that the leak detection activates an audible/visual alarm when a leak is detected.

Violation Notes: Returned to compliance on 05/26/2016. OBSERVATION: At the time of inspection YCEH and Afforda-Test service technicians were unable to verify if Tank #1&2 product lines and vent lines were under constant vacuum because it was not possible to verify vacuum communication at the end of each pipe run in each UDC and Vent sump. It was observed however that each product line & vent line penetrations into their respective sumps had what appeared to be a potential testing port located on the bottom side of the pipes where communication could be verified but solid plugs were threaded into each port thus making it unable to test. At this time it is unknown if the product and vent lines are being maintained under constant vacuum pursuant to CA Health & Safety Code chapter 6.7 requirements for UST's installed after July 1, 2004. It is also worth mentioning that vacuum & brine sensors must be tested for communication on UST systems installed after July 1, 2004 which includes the UST system installed at this location. Violation Description: Failure of the leak detection equipment to be properly programmed or properly operated.
Violation Notes: Returned to compliance on 03/06/2015. Tank #2, L-9 VR 208 turbine sump sensor failed to shut-down the turbine when dipped in liquid however it did send an alarm to the monitor console. Monitor console was found by Afforda-Test technician to be incorrectly programmed for positive turbine shut-down on L-9. *Correction Required* UST service tech with veeder root certification must properly program the monitor console so that the L-9 VR208 sensor will shut down tank 2 turbine when dipped in liquid. Violation Description: Failure to continuously monitor the interstitial space of the tank, piping and/or sumps sump such that the leak detection activates an audible/visual alarm when a leak is detected.
Violation Notes: Returned to compliance on 05/26/2016. OBSERVATION: At the time of inspection YCEH and Afforda-Test service technicians were unable to verify if Tank #1&2 product lines and vent lines were under constant vacuum because it was not possible to verify vacuum communication at the end of each pipe run in each UDC and Vent sump. It was observed however that each product line & vent line penetrations into their respective sumps had what appeared to be a potential testing port located on the bottom side of the pipes where communication could be verified but solid plugs were threaded into each port thus making it unable to test. At this time it is unknown if the product and vent lines are being maintained under constant vacuum pursuant to CA Health & Safety Code chapter 6.7 requirements for UST's installed after July 1, 2004. It is also worth mentioning that vacuum & brine sensors must be tested for communication on UST systems installed after July 1, 2004 which includes the UST system installed at this location. Violation Notes: Returned to compliance on 06/16/2017. 23 CCR 16 2638 OBSERVATION: The Owner/Operator failed to test leak detection equipment every 12 months (VPH, sensor, LLD, ATG, etc.). Annual monitoring system certification and/or leak detector testing performed today failed to include testing of many sensors servicing Diesel Tank #1 due to a fault/error code displaying in dispenser #1. The following sensors were not able to be certified on Diesel Tank #1 during today's annual monitor certification: Disp 1 & satellite VR 208 sensor, STP sump sensor, Electronic LLD, and Smart Sensor(liquid & vac). Fail Safe & Sensor Out also was not tested on any part of the UST system during today's annual monitor certification due to the fault/error code displayed in D#1. Violation Description: Failure to keep water out of the secondary containment of UST systems installed on or after July 1, 2003 and before July 1, 2004, or on or after July 1, 2004.

Violation Notes: Returned to compliance on 03/03/2017. HSC 6.7 25290.1, 25290.2, 25291 OBSERVATION: The Owner/Operator failed to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid. Observed approx. 1 inch of liquid in the bottom of the vent sump and approx. 1 inch of diesel fuel in the bottom of dispenser #4/5. The diesel fuel observed in Disp 4/5 is due to a leaky flex line. The flex line must be replaced immediately to mitigate the leak. CORRECTIVE ACTION: Owner/Operator must maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid. Violation Notes: Returned to compliance on 03/03/2017. 23 CCR 16 2630(d), 2641(a) Failure of sensor to be located in the proper position/location. OBSERVATION: Observed Tank# 2 VR 304 mini-brine sensor(L-6) in the gravel area inside the top of the sump approx. 3 feet away from the designated location. This sensor was not located in the proper position which should have been in the designated location at the top of the the fill sump to monitor the brine level. The sensor was not in alarm at the start of inspection and operated properly when tested by Afforda-Test technicians thus demonstrating that the sensor float was in the up position while it lay on its side in the gravel(if the sensor was in the down position it would go into alarm). According to the alarm history this sensor has not alarmed since the last Annual Monitoring Certification which was conducted on March 4, 2016. Violation Notes: Returned to compliance on 10/12/2017. 23 CCR 16 2630(d), 2641(a)
Failure of sensor to be located in the proper position/location.
OBSERVATION: Owner/Operator did not locate the sensor in the proper location/position. The diesel stp sump VR208 sensor (L7) was observed to be placed near the top of the tank saddle and therefore raised approximately 4 inches off the lowest point of the sump and not located to detect a leak at the earliest opportunity. It is also worth mentioning that liquid was also present in this sump, enough to cover approx. 1 1/2 inches over the tank saddle where the sensor was located but not enough to trigger an alarm in that location. There was much more liquid observed in the lower parts of the sump where the sensor was supposed to be positioned. The last alarm in this sump was recorded on Nov. 1, 2016 at around midnight. Walton Engineering positioned this sensor in the proper location at the end of last years annual monitor certification(AMC). Picture documentation of proper [Truncated]

Violation Description: Failure to adequately discuss the facility transfer operations, pumping, and facility process within the SPCC plan.
Violation Notes: Returned to compliance on 11/16/2015. OBSERVATION: SPCC Plan fails to adequately discuss discharge prevention methods. The E85 tank has a VR 430 annular sensor and an inventory probe that is connected to a VR TLS 350 monitor console(all discharge prevention measures) however the SPCC Plan fails to discuss any of that. Additionally, the Overfill Prevention section on page 10 fails to indicate the type of overfill prevention that is installed on the tank(Clock Gauge) and how it is regularly tested to ensure proper operation in the Inspection Section on page 11. Garrett Dugger - Maint. Tech reported that the Clock Gauge is removed and tested at 3 separate times throughout the year. CORRECTIVE ACTION: SPCC Plan must be amended to discuss the above in accordance with the above code sections within 45 days and submit amendment to YCEH within that time.

Violation Description: Failure of the line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements:Monitor at least hourly.Be capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g. Restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes: Returned to compliance on 10/05/2016. 23 CCR 16 2636(f)(2) OBSERVATION: The Red Diesel Electronic LLD failed to shut-down the turbine when tested and therefore could not detect a 3gph leak rate. The Owner/Operator failed to repair/maintain pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs. CORRECTIVE ACTION: The ELLD must be replaced and/or further investigation must occur to determine why the ELLD was unable to detect a 3gph leak rate. Demonstrate compliance to the CUPA within 30 days. The ELLD was replaced and retested during the inspection and passed the retest.

Violation Description: Failure to adequately discuss the facility transfer operations, pumping, and facility process within the SPCC plan.

Violation Notes: Returned to compliance on 11/16/2015. OBSERVATION: SPCC Plan fails to adequately discuss discharge prevention methods. The E85 tank has a VR 430 annular sensor and an inventory probe that is connected to a VR TLS 350 monitor console(all discharge prevention measures) however the SPCC Plan fails to discuss any of that. Additionally, the Overfill Prevention section on page 10 fails to indicate the type of overfill prevention that is installed on the tank(Clock Gauge) and how it is regularly tested to ensure proper operation in the Inspection Section on page 11. Garrett Dugger - Maint. Tech reported that the Clock Gauge is removed and tested at 3 separate times throughout the year. CORRECTIVE ACTION: SPCC Plan must be amended to discuss the above in accordance with the above code sections within 45 days and submit amendment to YCEH within that time.

Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. Monthly AST inspection check list indicates that the secondary containment is being checked however Garrett Dugger - Maint. Tech. reported that he has not removed the access caps for the secondary to check this area. Additionally, the Inspection Section on page 11 of the SPCC Plan fails to discuss Annual Inspections. Appendix B of the plan has an inspection checklist for monthly and yearly inspections. CORRECTIVE ACTION: Monthly inspections must include all aspects of the checklist and a discussion of yearly inspections must be included in the proper section of the SPCC Plan. Please submit amended section of SPCC Plan to YCEH within 45 days. Facility must conduct tests/inspections in accordance with written procedures and maintain records for 3 years. [Truncated]

Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes: Returned to compliance on 10/12/2017. 23 CCR 16 2630(d), 2641(a) Failure of sensor to be located in the proper position/location.
OBSERVATION: Owner/Operator did not locate the sensor in the proper location/position. The diesel stp sump VR208 sensor (L7) was observed to be placed near the top of the tank saddle and therefore raised approximately 4 inches off the lowest point of the sump and not located to detect a leak at the earliest opportunity. It is also worth mentioning that liquid was also present in this sump, enough to cover approx. 1 1/2 inches over the tank saddle where the sensor was located but not enough to trigger an alarm in that location. There was much more liquid observed in the lower parts of the sump where the sensor was supposed to be positioned. The last alarm in this sump was recorded on Nov. 1, 2016 at around midnight. Walton Engineering positioned this sensor in the proper location at the end of last years annual monitor certification(AMC). Picture documentation of proper [Truncated]

Violation Description: Failure to adequately discuss the facility transfer operations, pumping, and facility process within the SPCC plan.
Violation Notes: Returned to compliance on 11/16/2015. OBSERVATION: SPCC Plan fails to adequately discuss discharge prevention methods. The E85 tank has a VR 430 annular sensor and an inventory probe that is connected to a VR TLS 350 monitor console(all discharge prevention measures) however the SPCC Plan fails to discuss any of that. Additionally, the Overfill Prevention section on page 10 fails to indicate the type of overfill prevention that is installed on the tank(Clock Gauge) and how it is regularly tested to ensure proper operation in the Inspection Section on page 11. Garrett Dugger - Maint. Tech reported that the Clock Gauge is removed and tested at 3 separate times throughout the year. CORRECTIVE ACTION: SPCC Plan must be amended to discuss the above in accordance with the above code sections within 45 days and submit amendment to YCEH within that time.

Violation Description: Failure of the line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitor at least hourly. Be capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g. Restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes: Returned to compliance on 10/05/2016. 23 CCR 16 2636(f)(2) OBSERVATION: The Red Diesel Electronic LLD failed to shut-down the turbine when tested and therefore could not detect a 3gph leak rate. The Owner/Operator failed to repair/maintain pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs. CORRECTIVE ACTION: The ELLD must be replaced and/or further investigation must occur to determine why the ELLD was unable to detect a 3gph leak rate. It is worth mentioning that the facility obtained a UST repair / upgrade permit from the Yolo County in August 2016 but failed to follow a portion of the UST permit condition that required to contact a Yolo County HazMat inspector at least 48 hours before doing any repair. Therefore, Yolo County EH was not aware of the repair that took place. Facility operator must provide Yolo County with all the information regarding the repair /

Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted. Various pilot tests were conduct before 2006 to evaluate possible remediation alternatives. Dual Phase Extraction was selected to be the remediation alternative for this site and LUSTIS Site No. 570080, Chevron No. 9-6726 at 4800 West Capitol Ave; adjacent to and west of the Epoch Site. Implementation of this system began in 2008. Delays in operation of the system has occurred since 2008 due to permit requirements, change of City/County discharge facility, remodeling work at station and location of power drop.

. Waste code: D002
 . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

File Location: Regional Board
Local Case Number: Not reported
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted. Various pilot tests were conduct before 2006 to evaluate possible remediation alternatives. Dual Phase Extraction was selected to be the remediation alternative for the Epoch Truck Stop, LUSTIS Site No. 570215 at 4790 West Capitol Ave; adjacent to and east of the Chevron site, LUSTIS Site No. 570080. Implementation of this system began in 2008. Delays in operation of the system has occurred since 2008 due to permit requirements, change of City/County discharge facility, remodeling work at station and location of power drop.

According to Tanknology technician the spill bucket had damaged/ faulty drain valve components. The drain valve was completely replaced by Tanknology and retested however it failed again. Other methods were also used to determine the cause of the failure, i.e. new fill cap installed and the swivel adaptor swapped from the 91 fill. It is unknown how long the spill bucket has been faulty. [Truncated]

Violation Description: Chapter 16, Section(s) 2636(f)(2)
Failure of the line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitor at least hourly. Be capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g. Restrict or shut off the flow of product through the piping when a leak is detected.

Violation Notes: Returned to compliance on 01/27/2017. 23 CCR 16 2636(f)(2)
OBSERVATION: The 87 product Electronic LLD failed to detect a 3gph leak rate when tested. Two tests back to back were performed and the LLD failed each time. It is unknown how long the LLD has been unable to function properly. The Owner/Operator failed to repair/maintain pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour and trigger an alarm when a release occurs or the LLD is tested. It was determined by Tanknology technician that the Siphon jet on the FE Petro turbine head was faulty and was one cause of the LLD to not operate properly. The siphon jet was replaced during the inspection and the LLD was retest however it failed again. The LLD testing apparatus suggested excessive air in the line. Excessive air in the line may be from various causes. [Truncated]

Violation Date: 01-27-2017
Citation: HSC 6.7 Multiple - California Health and Safety Code, Chapter 6.7, Section(s) Multiple
Violation Description: UST Program - Administration/Documentation - General - Must include violation description, proper statute and regulation citation in the "comment" section.
Violation Notes: Returned to compliance on 01/27/2017. This violation was updated because Violation Type ID "2030054" matches no entry within the effective date range in the CERS Violation Library. 23 CCR 16 2635(b), 2715(c)(2) OBSERVATION: The 87 product spill bucket failed the Tanknology approved vacuum test and did not hold vacuum when tested therefore if a release occurred into the spill bucket the bucket would be unable to contain the release completely and would be unable to contain 5 gallons of capacity. According to Tanknology technician the spill bucket had damaged/ faulty drain valve components. The drain valve was completely replaced by Tanknology and retested however it failed again. Other methods were also used to determine the cause of the failure, i.e. new fill cap installed and the swivel adaptor swapped from the 91 fill. It is unknown how long the spill bucket has been faulty. [Truncated]

the LLD is tested. It was determined by Tanknology technician that the Siphon jet on the FE Petro turbine head was faulty and was one cause of the LLD to not operate properly. The siphon jet was replaced during the inspection and the LLD was retest however it failed again. The LLD testing apparatus suggested excessive air in the line. Excessive air in the line may be from various causes. [Truncated]

Eval Notes: Note: Facility reported 14 chemicals to the Yolo County through the California Environmental Reporting System (CERS). I informed the facility operator regarding the requirement for reporting reportable quantities of Hazardous Materials (55 gallons or more for Liquids, 200 CF or more for compressed gases and 500 Lbs. or more for solids) and the fact that some of their chemicals are below the threshold quantity and not required for reporting. Facility operator stated that they would like to go above and beyond when reporting their chemicals and that's why they are reporting everything.

located inside the HazWaste storage area. When I opened the trash bin I noticed a body of a person laying inside the bin with no movement. After knocking on the side of the bin and calling the person inside to get his attention we noticed that the person was sleeping inside the trash bin. The gentleman stated that he had to sleep there due to the cold weather last night. I informed the gentleman that he should have gone to the local shelter for safety reasons and asked if I/we can be of any assistance, however, he immediately left the site. It is recommended that the facility secure the HazWaste storage area and place a lock on trash bins in order to prevent people from getting inside and endangering their health, safety and/or possibly their lives. The Facility operator agreed to do so.
