PROJECT DESCRIPTION: (Briefly describe project including need, purpose, location, limits, right-of-way requirements, and activities involved in this box. Use *Continuation Sheet*, if necessary.)

The Office of Geotechnical Design West (OGDW) proposes to complete a geotechnical investigation to support the design and installation of several mechanically stabilized earth embankments (MSE) on State Route (SR) 299 between post miles 20.5 and 30.15 for Caltrans project 01-0F460. The project includes 4 segments within the approximately 10-mile long project. Drilling is proposed in segments 1, 2, and 4. All the borings proposed are located within existing fills and will be drilled from the existing highway surface. The purpose of the geotechnical drilling is to assess the in-situ density of the existing fill prism and characterize the textural makeup of the fill prism for foundation purposes. The subsurface data will be summarized, interpreted, used in project design and provided in a Geotechnical Report to be included in the contract plans. All work will be in the existing State right of way. Air, hazardous waste, water quality, biological and cultural reviews were completed.
