Cancer Risk = Dose X CPF x ASF x (ED/AT) X FAH

Risk per Million = Cancer Risk X Constant 2

Non-Cancer Hazard Quotent = Average Annual Concentration x Chronic Inhalation REL

Note: Number of years may be greater than the total number of years per age group due to the overlapping of sub-development schedules. For example, building construction for one development may be as long as 230 days and more than one development may occur at the same time.

Construction Schedule

The project consists of the construction of 1,000 residences over a 3.5 year periond between the 3rd quarter of 2020 and 4th quarter of 2024. As the exact schedule is unknown, project phasing assumes one year per sub-development and 14 sub-development phases one beginning each quarter. Therefore, emissions for the different construction phases will occur for verying lenghts of time throughout the overall construction period. The construction schedule reports the total numer of days that each construction phase will occur during the year. Emissions are scaled to reflect the total emissions within the year for each construction subphase.
