

CITY OF MENIFEE CEQA Environmental Checklist Form

- 1. **Project title:** Forterra Pipe Expanded Manufacturing Facility Conditional Use Permit No. 2018-199
- 2. **Lead agency name and address:** City of Menifee, Community Development Department, 29844 Haun Road, Menifee, CA 92586.
- 3. **Contact person and phone number:** Ryan Fowler, Senior Planner: 951-723-3740
- 4. **Project location:** The project site is located at the northwest and northeast corners of the intersection of Matthews Road and Palomar Road. Refer to Figures 1 *Project Vicinity*, and Figure 2, *Project Location*.

A. Total Project Area: 27.9 gross acres.

Residential Acres: 0 Commercial Acres: 0 Industrial Acres: 3.4 (new storage area west of Palomar Rd.) & 24.5

(existing industrial area east

of Palomar) Other: 0 Lots: 0 Units: 0

Lots: 0 Sq. Ft. of Bldg. Area: 0 Lots: 1 (New Building) Sq. Ft. of Bldg.

Area: 16,500 (Building Addition) Sq. Ft. of

Bldg. Area: 4,200

Projected No. of Residents: 0 Est. No. of Employees: 0

Est. No. of Employees: Two shifts

of 10 and 16 employees

B. Assessor's Parcel No: 331-190-046 and 220-022 through -025, -037, and -040.

C. Map: Thomas Brothers Page 838 F-2, 2016 Edition

D. Section 14, Township 5S & Range 3W of the San Bernardino Base and Meridian.

E. Longitude: 117° 09'48.8760 W Latitude: 33° 22'31.79 N

5. **Project Applicant/Owners:** Forterra, 26380 Palomar Road, Menifee CA 92585

Representative: Grant Becklund Civil Engineering, 951-288-0601 (Contact: Grant Becklund)

- 6. **General Plan Designation**: Business Park (BP)
- 7. **Existing Zoning:** Medium Manufacturing (M-M)

Proposed Zoning: Medium Manufacturing (M-M)

8. **Description of Project: Revised Conditional Use Permit No. (CUP 2018-099)** proposes a revision to CUP 2016-263 which was previously approved by the City of Menifee on July 27, 2017.

Background

The easterly portion of the project site is currently occupied by the Forterra pipe manufacturing use. Plot Plan No. 10557 was approved by the County of Riverside in 1988 for the construction of a concrete manufacturing plant, which included the existing 1,680 square foot office trailer and the existing 53,008 square foot kiln plant building. Subsequently, Plot Plan No. 10557S2 was approved in

2003 adding the existing 4,806 square foot building for storage, restrooms, and break room. Then, in 2017, CUP 2016-263 was approved by the City of Menifee for a revision to the previous County-approved Plot Plan Nos. 10557 by constructing a new 16,323 square foot metal building addition in two phases. That building addition (proposed under CUP 2016-263) proposed to enclose new concrete pipe manufacturing equipment. Presently, only Phase 1, which included a portion of the overall metal building additional (12,323 square feet), has been constructed. Construction documents for Phase 2, which include the remaining portion of the addition (4,000 square footage), have not yet been submitted to the City.

Current Proposal

The currently proposed project, CUP 2018-199, includes the construction of an approximately 47'-foot-high new 16,500 square foot metal building on the portion of the project site east of Palomar Road for water quality boxes and internal equipment with a weather tight roof and shed roof to provide sun and water protection for on-site activities. Three traveling electric cranes will be installed to assist in the assembly and movement of materials and concrete.

A precast concrete mixer will be installed under the shed roof along with sand and aggregate material bins and a concrete silo for the storage of raw cement. This concrete batching equipment will replace the delivery of ready-mix concrete from local suppliers and, according to the Applicant, will provide a more efficient manufacturing process and better-quality control of the concrete used in the process. The proposed material storage bins and cement silo will be shielded from views from Matthews Road by dense perimeter landscape, a perimeter block wall and the existing intervening storage of materials.

A second 4,200 square foot, 23'-high metal building addition will be added to the existing 3,800 square feet metal storage building located east of Palomar Road, to provide weather proof storage of the materials and equipment installed in the water quality boxes.

Both new buildings and equipment will be pre-painted to match the existing buildings and trim. The products proposed to be manufactured under CUP 2018-099 are currently being manufactured on-site on an open slab on the east side of Palomar Road where the building additions would be located. The Applicant's stated purpose for the project is to cover the manufacturing area with a roof and install fixed cranes to move the materials within the building. This operation will not add additional employees or traffic.

The storage area east of Palomar Road is currently walled and fenced, with walls located along the Matthew Road frontages and fencing along the remainder of the perimeter. CUP 2018-199 also proposes an additional (new) concrete box and pipe storage area on the portion of the project site west of Palomar Road. The products would be manufactured in the existing Forterra facility on the east side of Palomar Road and then delivered to the storage area for temporary storage of the products until they are delivered to a job site.

The two access driveways (the one existing driveway on the east and the other new driveway on the west side of Palomar Road) will be directly aligned with each other. The new storage area will be fenced with a 6-foot-tall block wall and landscaping to shield the storage materials from view along Matthews and Palomar Road. In addition, a 6'-tall block wall would be constructed along a portion of the north and west property lines to shield views of the storage area from the adjoining properties and roadways. The remainder of the west and north property lines will be fenced with tubular steel fencing.

A double gate would be installed at the new driveway with a Fire Department knox box. The new storage area would include gravel installed over native ground to provide a stable driving and storage area.

Site Preparation/Phasing

The portion west of Palomar Road was originally graded in 1992 when the existing surrounding buildings were constructed, and the site is currently flat. For this reason, the portion of the project site west of Palomar Road will not require additional grading. The construction of the portion of the project site will be limited to minimally smoothing in certain areas for fire access lanes. The new building and building addition to be located on the east side of Palomar Road are within an area with existing development which has been previously disturbed and graded; no grading is anticipated for the addition of these buildings.

The project is anticipated to be constructed in two phases: (1) the first phase includes the portion of the project site east of Palomar Road; and (2) the second phase include the portion of the project west of Palomar Road. Construction is anticipated to last approximately 8 months and project operations are anticipated to begin in 2020.

Access and Circulation

Regional access is provided via Highway 74 off Interstate 215 (I-215) and local access is provided via Palomar Road. Primary access would be from Palomar Road via a thirty-foot driveway. The project provides internal circulation via a thirty-foot road developed mainly for fire access. A Class III bike lane is proposed on both the east and west sides of Palomar Road and a Class II bike lane is proposed on the north side of Matthews Road east of Palomar Road.

Parking

The project site currently includes 33 existing parking spaces (including 3 accessible spaces). In addition, two (2) existing Class I bicycle lockers are located adjacent to the existing office trailer.

Other Site Improvements and Amenities

The existing outdoor storage area is set back 50 feet from the existing wash at the northerly project boundary. Existing onsite and offsite landscaping within the easterly portion of the project site covers 32,910 and 7,180 square feet, respectively. On the westerly portion of the project site there is 14,861 square feet of landscaping.

Infrastructure, Utilities, and Public Services

The following public services are available to the Project:

- Fire Protection Services (City of Menifee through contract with the Riverside County Fire Department);
- Police Protection Services (City of Menifee through contract with the Riverside County Sheriff's Department);
- Public Schools (Romoland School District and Perris Union High School District)
- Library Services (Riverside County Library System); and
- · City Administrative Services (City of Menifee).

The following utilities/infrastructure systems and services are available to the Project:

- · Water/Sewer (Eastern Municipal Water District);
- Electricity (Southern California Edison); the project site has existing 33KV power lines.
- Natural Gas (Southern California Gas Company); and
- Telephone/Communications (AT&T, Frontier Communications).

9. Surrounding Land Uses and Environmental Setting:

The westerly portion of the project site is currently vacant, has been previously grade and is located at an elevation of approximately 1,458 feet above sea level (MSL). The easterly portion of the project site include an existing pipe manufacturing and storage facility. The topography of the property and surrounding area is generally flat and slopes gently to the southwest.

The adjacent General Plan Area Plan(s), Land Use Designation(s), and Zoning(s), if any:

Surrounding Land Uses

Direction	General Plan Designation	Zoning District	Existing Land Use
Project Site	Business Park (BP)	Medium Manufacturing (M-M)	Vacant and Previously Graded Land
North	Business Park (BP)	Medium Manufacturing (M-M)	Industrial (Whited Cemetery Services, Amerimax Building Products Inc., Miller Jones funeral services)
South	Business Park (BP), Railroad, and Menifee North Specific Plan (SP)	Rural Residential (R-R) and Menifee North Specific Plan	Industrial, railroad line, and vacant land
East	Public/Quasi Public Facilities (PF)	Rural Residential (R-R)	Industrial (BP John Recycling), Utility (Valley Substation)
West	Business Park (BP)	Medium Manufacturing (M-M)	Industrial (Block Graphics Sun City)

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):

Based on the current Project design concept, other permits necessary to realize the proposal will likely include, but are not limited to, the following.

- Approval Revised Conditional Use Permit
- Permitting (e.g., Permit to Construct and Operate) may be required by/through South Coast Air Quality Management District (SCAQMD) for certain project operations and its associated equipment (e.g., concrete batch plant)
- Building permit approval
- Encroachment permit
- Various other approvals (including landscaping [working drawings], etc.)

Figure 3A: Site Plan Concept (East Portion)

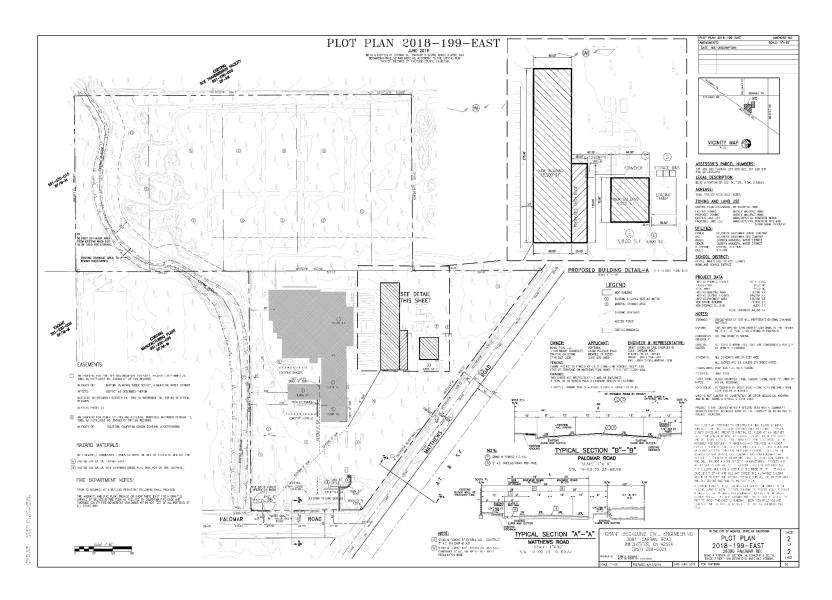

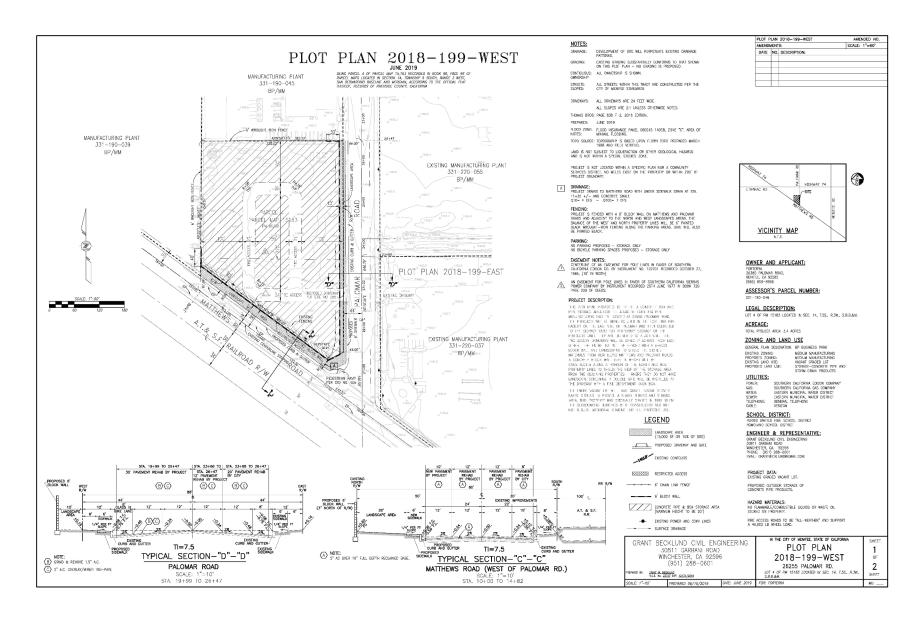

Figure 3B: Site Plan Concept (West Portion)

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below (x) would be potentially affected by this project, involving at least one impact that is a " Potentially Significant Impact " as indicated by the checklist on the following pages.						
☐ Aesthetics☐ Agriculture Resources☐ Air Quality☐ Biological Resources☐ Cultural Resources☐ Geology/Soils	☐ Greenhouse Gas Emissions ☐ Hazards & Hazardous Materials ☐ Hydrology/Water Quality ☐ Land Use/Planning ☐ Mineral Resources ☐ Noise	☐ Population and Housing ☐ Public Services ☐ Recreation ☐ Transportation/Traffic ☐ Tribal Cultural Resources ☐ Utilities and Service Systems ☐ Mandatory Findings of Significance				
		ly affected by this project, involving at least orporated" as indicated by the checklist on				
 ☐ Aesthetics ☐ Agriculture Resources ☑ Air Quality ☑ Biological Resources ☐ Cultural Resources ☐ Energy ☐ Geology/Soils 	☐ Greenhouse Gas Emissions ☐ Hazards & Hazardous Materials ☐ Hydrology/Water Quality ☐ Land Use/Planning ☐ Mineral Resources ☐ Noise	☐ Population and Housing ☐ Public Services ☐ Recreation ☐ Transportation ☐ Tribal Cultural Resources ☐ Utilities and Service Systems ☐ Wildfire ☐ Mandatory Findings of Significance				
	checked below (x) would be potential than Significant" as indicated by the	ly affected by this project, involving at least e checklist on the following pages.				
 Aesthetics Agriculture Resources Air Quality Biological Resources Cultural Resources Energy Geology/Soils 	 ☑ Greenhouse Gas Emissions ☑ Hazards & Hazardous Materials ☑ Hydrology/Water Quality ☑ Land Use/Planning ☑ Mineral Resources ☑ Noise 	 □ Population and Housing □ Public Services □ Recreation □ Transportation □ Tribal Cultural Resources □ Utilities and Service Systems □ Wildfire □ Mandatory Findings of Significance 				
The environmental factors checklist on the following p		Impact " by this project as indicated by the				
 ☐ Aesthetics ☐ Agriculture Resources ☐ Air Quality ☐ Biological Resources ☐ Cultural Resources ☐ Energy ☐ Geology/Soils 	☐ Greenhouse Gas Emissions ☐ Hazards & Hazardous Materials ☐ Hydrology/Water Quality ☐ Land Use/Planning ☐ Mineral Resources ☐ Noise	 ☑ Population and Housing ☐ Public Services ☑ Recreation ☐ Transportation ☐ Tribal Cultural Resources ☐ Utilities and Service Systems ☐ Wildfire ☐ Mandatory Findings of Significance 				

On the basis of this initial evaluation: I find that the proposed project COULD NOT have a significant effect on the environment, and a П NEGATIVE DECLARATION will be prepared. I find that although the proposed project could have a significant effect on the environment, there \square will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared. I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required. I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed. I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required. Ryan Fowler, Senior Planner For Cheryl Kitzerow, Printed Name Community Development Director

DETERMINATION: (To be completed by the Lead Agency)

EVALUATION OF ENVIRONMENTAL IMPACTS:

- A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analyses," as described in (5) below, may be cross-referenced).
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. State CEQA Guidelines §15063(c)(3)(D). In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
 - a) the significance criteria or threshold, if any, used to evaluate each question; and
 - b) the mitigation measure identified, if any, to reduce the impact to less than significance.

Issues:

I. AESTHETICS – Except as provided in Public Resources Code Section 21099, would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect on a scenic vista?			X	
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			X	
c) In non urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?			X	
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	_		X	

<u>Sources</u>: Menifee General Plan (MGP) Exhibit C-8, "Scenic Highways" and Riverside County General Plan Figure 5, "Mt. Palomar Nighttime Lighting Policy"; MGP Draft EIR; State of California, Department of Transportation, *California State Scenic Highway Mapping System;* Ordinance No. 655 (Regulating Light Pollution); City of Menifee Ordinance No. 2009-24 (Dark Sky).

Applicable General Plan Policies:

- Goal C-6: Scenic highway corridors that are preserved and protected from change which would diminish the aesthetic value of lands adjacent to the designated routes.
- Policy C-6.1: Design developments within designated scenic highway corridors to balance the objectives of maintaining scenic resources with accommodating compatible land uses.
- Policy C-6.4: Incorporate riding, hiking, and bicycle trails and other compatible public recreational facilities within scenic corridors.
- Policy C-6.5: Ensure that the design and appearance of new landscaping, structures, equipment, signs, or grading within eligible county scenic highway corridors are compatible with the surrounding scenic setting or environment.
- Goal CD-3: Projects, developments, and public spaces that visually enhance the character of the community and are appropriately buffered from dissimilar land uses so that differences in type and intensity do not conflict.
- Policy CD-3.1: Preserve positive characteristics and unique features of a site during the design and development of a new project; the relationship to scale and character of adjacent uses should be considered.
- Policy CD-3.2: Maintain and incorporate the City's natural amenities, including its hillsides, indigenous vegetation, and rock outcroppings, within proposed projects.

Policy CD-3.3: Minimize visual impacts of public and private facilities and support structures through sensitive site design and construction. This includes, but is not limited to: appropriate placement of facilities; undergrounding, where possible; and aesthetic design (e.g., cell tower stealthing).

Policy CD-3.10: Employ design strategies and building materials that evoke a sense of quality and permanence.

Policy CD-3.12: Utilize differing but complementary forms of architectural styles and designs that incorporate representative characteristics of a given area.

Policy CD-3.14: Provide variations in color, texture, materials, articulation, and architectural treatments. Avoid long expanses of blank, monotonous walls or fences.

Policy CD-3.15: Require property owners to maintain structures and landscaping to high standards of design, health, and safety.

Policy CD-3.17: Encourage the use of creative landscape design to create visual interest and reduce conflicts between different land uses.

Policy CD-3.19: Design walls and fences that are well integrated in style with adjacent structures and terrain and utilize landscaping and vegetation materials to soften their appearance.

Policy CD-3.20: Avoid the blocking of public views by solid walls.

Policy CD-3.21: Use open space, greenways, recreational lands, and water courses as community separators.

Goal CD-4: Recognize, preserve, and enhance the aesthetic value of the City's enhanced landscape corridors and scenic corridors.

Policy CD-4.1: Create unifying streetscape elements for enhanced landscape streets, including coordinated streetlights, landscaping, public signage, street furniture, and hardscaping.

Policy CD-4.2: Design new and, when necessary, retrofit existing streets to improve walkability, bicycling, and transit integration; strengthen connectivity; and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting, and street furniture.

Policy CD-4.7: Design new landscaping, structures, equipment, signs, or grading within the scenic corridors for compatibility with the surrounding scenic setting or environment.

Policy CD-4.8: Preserve and enhance view corridors by undergrounding and/or screening new or relocated electric or communication distribution lines, which would be visible from the City's scenic highway corridors.

Policy CD-4.9: Require specialized design review for development along scenic corridors, including but not limited to, building height restrictions, setback requirements, and site-orientation guidelines.

Analysis of Project Effect and Determination of Significance:

Impact I.a) **Less Than Significant Impact.** Under CEQA, a scenic vista is defined as a viewpoint that provides expansive views of a highly-valued landscape for the public's benefit. Scenic vistas can be impacted by development in two ways. First, a structure may be constructed that blocks the view of a vista. Second, the vista itself may be altered (i.e., development on a scenic hillside).

Menifee's natural mountainous setting is critical to its overall visual character and provides scenic vistas for the community. Topography and a lack of dense vegetation or urban development offer scenic views throughout the City, including to and from hillside areas. Scenic features include gently sloping alluvial fans, rugged mountains and steep slopes, mountain peaks and ridges, rounded hills with boulder outcrops, farmland and open space. Scenic vistas provide views of these features from public spaces. Many scenic resources are outside the City limits and beyond the planning area boundary. Scenic views from Menifee include: the San Jacinto Mountains to the northeast and east, the San Bernardino Mountains to the north, the San Gabriel Mountains to the northwest, and the Santa Ana Mountains to the west and southwest. The Canyon Lake Reservoir is adjacent to the City's western boundary. The westerly portion of the project site is a vacant lot bounded by developed industrial parcels to the north and east, Matthews Road and vacant property to the south, and industrial property to the west. The easterly portion of the project site is currently developed and utilized as a pipe manufacturing facility.

The project site and its vicinity is flat and not located within a scenic resource, nor would it comprise a portion of a scenic vista. While the project would construct new approximately 48-foot-high storage structure and an addition to an existing building located east of Palomar Road, the structures would be similar to the uses directly north, east, and west of the project site and currently existing on the project site. As such, the project would not introduce a new visual obstacle to an existing scenic vista. Therefore, the proposed project would have a less than significant impact on scenic vistas.

Impact I.b): **Less Than Significant Impact.** While the project is not adjacent to an officially designated state scenic highway, it is located approximately 0.25 miles south of an eligible County scenic highway (CA-74) and approximately 0.5 miles west of eligible State scenic highway Menifee Road as identified on the California Scenic Highway Mapping System and the General Plan Circulation Element, Exhibit C-6. The project site is within a suburbanized area comprised of industrial uses and vacant land. The project site does not contain significant trees, rock outcroppings, or historical buildings. Therefore, the project would not substantially damage scenic resources within a state scenic highway and no mitigation would be required.

Impact I.c): Less Than Significant Impact. The project site is located in a semi-urbanized area where surrounding parcels are developed with similar uses, with vacant parcels in the vicinity. The proposed project is anticipated to develop a vacant lot consistent to the City's underlain zoning designation. While the project site's existing visual quality would change by developing a storage area on the 3.4-acre site west of Palomar Road and a new building and an addition to an existing building east of Palomar Road, this would not degrade the existing visual character, site quality, or surroundings. The site's visual character would be altered; however, the project would not become visually incompatible or visually unexpected when viewed in the context of its surroundings. Moreover, the project would be subject to compliance with City design and building height requirements and limitations. Therefore, the proposed project would have a less than significant impact on the site's visual character and its surroundings and no mitigation is required.

Impact I.d): Less Than Significant Impact. Excessive or inappropriately directed lighting can adversely impact nighttime views by reducing the ability to see the night sky and stars. Glare can be caused from unshielded or misdirected lighting sources. Reflective surfaces (i.e., polished metal) can also cause glare. Impacts associated with glare range from simple nuisance to potentially dangerous situations (i.e., if glare is directed into the eyes of motorists).

Existing outdoor lighting at and near the project site is associated with businesses and street lighting typical of suburban areas. The proposed project would generate lighting from two primary sources: lighting from building interiors that would pass through windows, and lighting from exterior sources (e.g., street lighting, parking lot lighting, building illumination, security lighting, and landscape lighting). Lighting associated with the project would not be directed towards adjacent properties.

MMC Chapter 6.01 (Dark Sky; Light Pollution) indicates that low-pressure sodium lamps are the preferred illuminating source and that all non-exempt outdoor light fixtures shall be shielded. A maximum of 8,100 total lumens per acre or per parcel if less than one acre would be allowed. When lighting is "allowed", it must be fully shielded if feasible and partially shielded in all other cases, and must be focused to minimize spill light

into the night sky and onto adjacent properties (MMC §6.01.040). The project would be conditioned that, prior to the issuance of building permits, all new construction which introduces light sources would be required to have shielding or other light pollution limiting characteristics such as hood or lumen restrictions.

The MGP Community Design Element includes goals that encourage attractive landscaping, lighting, and signage that conveys the community's (Goal CD-6) positive image and that limit light leakage and spillage that may interfere with the Palomar Observatory operations (Goal CD-6.5). Lighting proposed by the project would be subject to compliance with MMC §6.01 and MGP goals and policies. Accordingly, the project would have a less than significant impact related to interference with Mt. Palomar Observatory nighttime use. Further, the City would also review new lighting for conformance with the 2016 California Green Building Standards Code (CALGreen) (CCR Title 24 Part 11) such that only the minimum amount of lighting is used, and no light spillage occurs.

Buildings with large facades constructed of reflective surfaces (e.g., brightly colored building façades, metal surfaces, and reflective glass) could increase existing levels of daytime glare. The project's proposed design does not include such surfaces or components. Therefore, the project would result in a less than significant impact concerning a new source of glare and no mitigation is required.

Mitigation Measures: No mitigation is required.

II. AGRICULTURE AND FORESTRY RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the Project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				X
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				×
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code §12220(g)), timberland (as defined in Public Resources Code section 4526), or timberland zoned Timberland Production (as defined in Government Code §51104(g))?			0	×
d) Result in the loss of forest land or conversion of forest				X

land to non-forest use?		
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?		X

<u>Sources</u>: State of California, Department of Conservation, Division of Land Resource Protection, Farmland Mapping and Monitoring Program. *Riverside County Important Farmland 2016, Sheet 1 of 3*, map published July 2017; and *Phase I Environmental Site Assessment of Vacant Lot 26255 Palomar Road, Menifee, CA*, dated October 4, 2018, and located as Appendix A of this document.

Applicable General Plan Policies:

Goal OSC-6: High-value agricultural lands available for long-term agricultural production in limited areas of the City.

Policy OSC-6.1: Protect both existing farms and sensitive uses around them as agricultural acres transition to more developed land uses.

Analysis of Project Effect and Determination of Significance:

Impact II.a): **No Impact**. The project site does not contain any Prime Farmland or Unique Farmland, as mapped by the California Department of Conservation California Important Farmland Finder, the project site is designated as Urban and Built Up Land, and the project site is currently zoned as Manufacturing Medium (M-M) according to the City's Zoning Map. Additionally, the project site has been graded previously and has not been used for agricultural purposes. Because the project would not Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) to non-agricultural use, a less than significant impact would occur, and no mitigation is required.

Impacts II.b-c): **No Impact**. The project site is zoned Manufacturing Medium (M-M) and is not under a Williamson Act Contract. The project site is not zoned for agricultural use or forestland; therefore, the project would not conflict with existing zoning for agricultural use or forestland, or a Williamson Act contract.

Impact II.d): **No Impact**. The project site and surrounding properties are not currently being managed or used for forest land; therefore, the project would not result in the loss of forest land or conversion of forest land to non-forest use.

Impact II.e): **No Impact**. Surrounding land uses include industrial uses to the east, west, north, and vacant properties, industrial uses and a railroad line to the south. The surrounding land use designations are Medium Business Park (BP) to the north, and west, Public/Quasi Public Facilities (PF) to the east, and Menifee North Specific Plan (SP) to the south. Forest land are not present in the area surrounding the project site.

Based upon the project-specific Phase I Environmental Site Assessment, the project site was historically used for agricultural uses. However, according to the General Plan EIR, historical aerial images, and current site conditions, the project site is not currently used for agricultural uses. The project would not divide any agricultural parcels or impede access to any agricultural parcels and would therefore not cause indirect conversion of farmland to non-agricultural use.

Mitigation Measures: No mitigation is required.

III. AIR QUALITY Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the	Potentially Significant	•	Less Than Significant Impact	No Impact
--	----------------------------	---	------------------------------------	--------------

project:			
a) Conflict with or obstruct implementation of the applicable air quality plan?		X	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	\boxtimes		
c) Expose sensitive receptors to substantial pollutant concentrations?		X	
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?		X	

<u>Sources</u>: South Coast Air Quality Management District, *CEQA Air Quality Handbook*, 1993; Menifee General Plan; MGP Draft EIR; Urban CrossRoads – Forterra Pipe Manufacturing Facility Focused Air Quality and Greenhouse Gas Evaluation, 2018. See Appendix B, *Air Quality and Greenhouse Gas Assessment*.

Federal, State, and Regional Standards:

Appendix A (State and Federal Criteria Pollutant Standards) presents the federal and state standards. Appendix A (SCAQMD Air Quality Significance Thresholds) shows the ambient air quality standards for NO2, CO, PM10, and PM2.5.

Applicable General Plan Policies:

Goal OSC-9: Reduced impacts to air quality at the local level by minimizing pollution and particulate matter.

Policy OSC-9.1: Meet state and federal clean air standards by minimizing particulate matter emissions from construction activities.

Policy OSC-9.2: Buffer sensitive land uses, such as residences, schools, care facilities, and recreation areas from major air pollutant emission sources, including freeways, manufacturing, hazardous materials storage, wastewater treatment, and similar uses.

Policy OSC-9.3: Comply with regional, state, and federal standards and programs for control of all airborne pollutants and noxious odors, regardless of source.

Policy OSC-9.5: Comply with the mandatory requirements of Title 24 Part 11 of the California Building Standards Code (CALGreen) and Title 24 Part 6 Building and Energy Efficiency Standards.

Analysis of Project Effect and Determination of Significance:

Impact III.a): **Less than Significant Impact.** A significant impact would occur if the proposed project would conflict with or obstruct South Coast Air Basin 2016 Air Quality Management Plan (AQMP) implementation. Conflicts and obstructions that hinder AQMP implementation can delay efforts to meet attainment deadlines for criteria pollutants and maintain existing compliance with applicable air quality standards. Pursuant to the methodology in 1993 SCAQMD CEQA Air Quality Handbook Chapter 12, AQMP consistency is affirmed when a project (1) does not increase the frequency or severity of an air quality standards violation or cause a new violation and (2) is consistent with the AQMP's growth assumptions. Consistency review is presented below.

1. The project would result in short-term construction and long-term operational pollutant emissions that would be less than the SCAQMD's CEQA significance emissions thresholds, as demonstrated by the project Air Quality Assessment presented in Response III.b-e) below and Appendix B. The project's

- short-term construction and long-term operational impacts would be less than significant. Therefore, the project would not increase the frequency or severity of any air quality standards violation or cause a new air quality standard violation and is found to be consistent with the AQMP for the first criterion.
- 2. The CEQA Air Quality Handbook indicates that consistency with AQMP growth assumptions must be analyzed for new or amended General Plan Elements, Specific Plans, and significant projects. Consistency with AQMP growth assumptions is determined by analyzing the proposed project with AQMP growth assumptions. The emphasis of this criterion is to ensure that the project's analyses are based on the same forecasts as the AQMP. The MGP Land Use Map depicts the land use assumptions represented in the AQMP. The site's existing land use designation is Business Park and the zoning classification is Manufacturing Medium (M-M). As concluded in III.b-e) below, the project would be consistent with the site's existing land use designations, and thus, the assumptions represented in the AQMP. Significant projects include airports, electrical generating facilities, petroleum and gas refineries, designation of oil drilling districts, water ports, solid waste disposal sites, and offshore drilling facilities. The proposed project is not considered a significant project. Therefore, the project would not exceed the AQMP assumptions for the project site and is found to be consistent with the AQMP for the second criterion.

Impacts III.b-d): **Less Than Significant Impact with Mitigation.** A project may have a significant impact if project-related emissions exceed federal, state, or regional standards or thresholds, or if project-related emissions substantially contribute to existing or projected air quality violations. The proposed project is located within the South Coast Air Basin (Basin or SCAB), where efforts to attain state and federal air quality standards are governed by the South Coast Air Quality Management District (SCAQMD). Both the State of California (state) and the federal government have established health-based ambient air quality standards (AAQS) for seven air pollutants (known as 'criteria pollutants'): volatile organic compound (VOC), carbon monoxide (CO), nitrogen oxide (NO_x), sulfur oxide (SO_x), inhalable particulate matter with a diameter of 10 microns or less (PM₁₀), and fine particulate matter with a diameter of 2.5 microns or less (PM_{2.5}). The state has also established AAQS for additional pollutants. The AAQS are designed to protect the health and welfare of the populace within a reasonable margin of safety. Where the state and federal standards differ, California AAQS are more stringent than national AAQS.

SHORT-TERM CONSTRUCTION

Construction activities associated with the project will result in emissions of CO, VOCs, NOx, SOx, PM10, and PM2.5. Construction related emissions are expected from demolition and building construction activities. The duration of construction activity was based on information provided by the project applicant and are summarized on **Table 1**, **Construction Schedule**. The associated construction equipment was based on CalEEMod defaults.

The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per California Environmental Quality Act (CEQA) guidelines. Site-specific construction fleet may vary due to specific project needs at the time of construction. It is anticipated that a maximum of 20,700 square feet of pavement will be scraped (demolished) in order to allow for the construction of the new metal building. Additionally, no grading will be required, and no painting of the metal structures is anticipated. Construction emissions for construction worker vehicles traveling to and from the Project site, as well as vendor trips (construction materials delivered to the project site) were estimated based on CalEEMod defaults. **Table 2, Construction Equipment**, summarizes the anticipated construction equipment list.

Table 1: Construction Schedule

Phase Name	Start Date	End Date	Days

Greenhouse Gas Evaluation. 2018.

Air pollution levels are measured at monitoring stations located throughout the air basin. Areas that are in nonattainment concerning federal or state AAQS are required to prepare plans and implement measures to bring the region into attainment. Table 3, Proposed Project Construction Emissions Summary summarizes the project area's attainment status for the criteria pollutants. The project's short-term construction and long-term operational emissions and their context for subsequently impacting the environment are discussed below.

Table3: Proposed Project Construction Emissions Summary

Year	Pollutant Emissions (pounds/day)						
	VOC	NOx	CO	SOX	PM10	PM2.5

Construction-Related Toxic Air Contaminant Impacts

The greatest potential for toxic air contaminant emissions would be related to diesel particulate emissions associated with heavy equipment operations during project construction. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of "Individual Cancer Risk." Individual Cancer Risk is the likelihood that a person exposed to concentrations of toxic air contaminants over a 30-year lifetime will contract cancer, based on the use of standard risk-assessment methodology. Given the relatively limited number of heavy-duty construction equipment and relatively short construction schedule, the proposed project would not result in a long-term (i.e., 30 years) substantial source of toxic air contaminant emissions and corresponding individual cancer risk. Further, construction-based particulate matter (PM) emissions (including diesel exhaust emissions) would not exceed any local or regional thresholds. Therefore, project construction activities would not result in significant short-term toxic air contaminant impacts.

Construction-Related Odor Impacts

Potential sources that may emit odors during construction activities include the application of materials such as asphalt pavement. The objectionable odors that may be produced during the construction process are short-term and the odor emissions would cease upon the drying or hardening of the odor-producing materials. Due to the relatively short-term nature of project construction activities and limited amounts of odor-producing materials being utilized, the project would result in a less than significant impact concerning construction-related odors. Additionally, project construction activities would emit diesel exhaust and VOCs, which are objectionable to some; however, emissions would disperse rapidly from the project site and therefore would not reach an objectionable level at the nearest sensitive receptors. A less than significant impact would occur in this regard.

OPERATIONAL EMISSIONS

The proposed Project would not result in any additional employee or truck trips. The only additional emissions generated by the proposed Project, in addition to the emissions totals summarized in the previous Forterra Pipe Manufacturing Focused Air Quality and Greenhouse Gas Evaluation (Urban Crossroads April 2017), would be additional PM10 and PM2.5 emissions associated with the concrete batching.

Additional PM10 and PM2.5 emissions would result from the following activities:

- Aggregate delivery to ground storage 18.1 cubic yards (cy) day
- Sand Delivery to ground storage 12.5 cy day
- Aggregate transfer to conveyor -18.1 cy day
- Sand transfer to conveyor -12.5 cy day
- Cement delivery to Silo 7.5 cy day

The throughput levels above were determined to be maximum throughput levels based on discussion with the applicant. The throughput is ultimately limited by the materials brought into the site that are used for limited production of concrete structures. The curing process of the cement within the forms prohibits additional output until the forms are cured, thus limiting the overall concrete production process. While the onsite concrete production would be limited by the production process and the limited work area within the project site, the applicant has not proposed a physical operating limit on the amount of concrete (and associated raw material use) that could be produced on the site. As such, Mitigation Measure AQ-1 is required to limit operations such that production does not exceed 562 cubic yards of concrete per month. This figure represents a 50-percent increase in production over the level of concrete needed for existing production and represents the anticipated maximum future level of concrete needed.

It should be noted raw materials are delivered by truck and stored in bins and silos until needed. The cement silo is a closed design tank partially within the proposed building with a built-in dust capture/filtration system with no emissions escaping the silo. The concrete would therefore be batched in a closed loop system that is self-contained and sealed. The mixed concrete is prepared in batches which are loaded into an aerial bucket for delivery by a crane system to the forms used for casting the boxes. The operational time of the mixing equipment to produce 562 cubic yards of concrete per month is 12 hours. Because of the closed loop system, the only emissions anticipated during the process would be during the dry delivery of materials, and the loading of the materials into the bins. The concrete batch plant operation will require a "Permit to Construct and Operate" from AQMD. The need for the permit is based on the capacity of the batch plant. As such, although the applicant has stated they will not utilize the full capacity of the batch plant, the proposed capacity triggers the need for a permit. AQMD will conduct their own analysis as part of the permitting process and will limit the throughput of the batch plant operation. Once the permit is obtained, the Project Applicant is required to submit an annual emission report (AER) that identifies what the Project's annual emissions are, based on the project's actual throughput. Mitigation Measure AQ-1 requires the project's throughput to be limited to ensure emissions are below thresholds, but enforces this via the obtaining and annual screening associated with the "Permit to Construct and Operate" process. Thus, although it is anticipated that the project will create

50-percent increase in production over existing levels, emissions would not exceed established thresholds with the implementation of Mitigation Measure AQ-1.

PM10 emissions have been calculated based on the United States Environmental Protection Agency (see Table 11.12-5 Plant Wide Emission Factors Per Yard of Truck Mix Concrete). Further Environmental Protection Agency's (USEPA's) Compilation of Emission Factors (AP-42) Section 11.12 *Concrete Batching*, there are no emissions associated with "truck mix loading" or "central mix loading", since the material is picked up by a crane and dropped into a bucket for production. Lastly, there is no baghouse proposed or needed for the anticipated operations of the project.

Year	PM10 (lb/CY)	CY/day	Total PM10 lb/day
Aggregate delivery to ground storag	e0.0031	26	0.081
Sand delivery to ground storage	0.0007	18	0.013
Aggregate transfer to conveyor	0.0031	26	0.081
Sand transfer to conveyor	0.0007	18	0.013
Cement delivery to Silo	0.0001	11	0.0011
		Total PM10	0.19

Table 4: Emissions from Concrete Batching

PM2.5 emissions have been calculated based on the CEIDARS PM2.5 fraction of PM10 published by the SCAQMD in their report *Final – Methodology to Calculate Particulate Matter (PM) 2.5 and PM 2.5 Significance Thresholds* (October 2006). As such, PM2.5 emissions would equal 67.4% of PM10 emissions calculated above, resulting in 0.13 pounds per day of PM2.5 emissions associated with the concrete batching.

Table 5 includes a summary of total emissions in addition to emissions associated with the proposed concrete batching operation. As shown, the proposed Project would result in emissions of VOC, NOx, CO, SOx, PM10, and PM2.5 that would not exceed the applicable SCAQMD thresholds. As such, no impacts would occur, and no mitigation is required.

Table 5: Operational Emissions Summary

LOCALIZED IMPACTS

The SCAQMD established Localized Significance Thresholds (LSTs) in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most-stringent applicable federal or state ambient air quality

standard at the nearest residence or sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

For this Project, there are no sensitive land uses adjacent to the Project. In fact, the nearest residential communities are located more than ¼ mile (1,320 feet) from the Project site. As such, no impacts to sensitive receptors would occur from short-term project construction or on-going project operations.

AIR QUALITY MANAGEMENT PLANNING

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743-square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of what used to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the Southern California Association of Governments (SCAG), county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the Basin. In response, the SCAQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the state and federal ambient air quality standards. AQMPs are updated regularly to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

In March 2017, the AQMD released the Final 2016 AQMP. The 2016 AQMP continues to evaluate current integrated strategies and control measures to meet the NAAQS, as well as, explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels.

The 2016 AQMP was based on assumptions provided by both CARB and SCAG in the latest available EMFAC model for the most recent motor vehicle and demographics information, respectively. The air quality levels projected in the 2016 AQMP are based on several assumptions. For example, the 2016 AQMP has assumed that development associated with general plans, specific plans, residential projects, and wastewater facilities will be constructed in accordance with population growth projections identified by SCAG in its 2016 RTP. The 2016 AQMP also has assumed that such development projects will implement strategies to reduce emissions generated during the construction and operational phases of development.

Criteria for determining consistency with the 2016 AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the SCAQMD's CEQA Air Quality Handbook (1993) (28). These indicators are discussed below:

 Consistency Criterion No. 1: The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

Construction Impacts

The analysis above demonstrates that, project construction-source emissions would not exceed the applicable regional significance thresholds for any criteria pollutant. Therefore, the Project would not have the potential to result in or cause violations of the CAAQS and NAAQS.

Operational Impacts

The analysis above demonstrates that, project operational-source emissions would not exceed the applicable regional significance thresholds for any criteria pollutant. Therefore, the Project would not have the potential to result in or cause violations of the CAAQS and NAAQS. On the basis of the preceding discussion, the project would not conflict with the first criterion.

• Consistency Criterion No. 2: The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

Overview

The 2016 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the Southern California Association of Governments (SCAG), which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in the City of Menifee General Plan is considered to be consistent with the AQMP.

Construction Impacts

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. Thus, construction emissions from the Project would be consistent with the 2016 AQMP assumptions for construction activities throughout the SCAB.

Operational Impacts

The project's intended use is similar to the historic use of the site and consistent with applicable land use designations. No substantive change to the existing land use will occur. On the basis of the preceding discussion, the project is determined to be consistent with the second criterion.

AQMP Consistency Conclusion

The Project would not have the potential to result in or cause NAAQS or CAAQS violations. The project's development intensity is consistent with than the development intensities allowed within the General Plan. The project is therefore consistent with the AQMP and a potential conflict would not occur.

Mitigation Measures:

AQ-1

Concrete Production Limit. The proposed capacity of the concrete mixer is 48 cubic yards per hour, or 384 cubic yards per day for an 8-hour day, or approximately 8,450 cubic yards per month (assuming an 8-hour day and 22 work days). Therefore, to ensure potential emission do not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard, the Project Applicant shall obtain a "Permit to Construct and Operate" from AQMD and shall provide proof that the permit has been obtained to the City that will ensure that operations shall be limited to and shall not exceed 562 cubic yards per month. The AQMD permit shall be maintained throughout the life of the Conditional Use Permit issued by the City.

IV. BIOLOGICAL RESOURCES Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the		\boxtimes		

California Department of Fish and Game or U.S. Fish and Wildlife Service?			
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	0	0	X
c) Have a substantial adverse effect on federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?		0	X
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?		\boxtimes	
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			X
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?			X

<u>Sources</u>: Menifee General Plan; MGP Draft EIR; Riverside County Transportation and Land Management Agency, *Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP)*, Approved June 7, 2003; U.S. FWS Threatened and Endangered Species Active Critical Habitat Report, Updated May 2019; and *Hernandez Environmental Services. 2018. General Biological Assessment and Western County MSHCP Consistency Analysis*) included in Appendix C.

Applicable General Plan Policies:

Goal OSC-8: Protected biological resources, especially sensitive and special status wildlife species and their natural habitats.

Policy OSC-8.1: Work to implement the Western Riverside County Multiple Species Habitat Conservation Plan in coordination with the Regional Conservation Authority.

Policy OSC-8.2: Support local and regional efforts to evaluate, acquire, and protect natural habitats for sensitive, threatened, and endangered species occurring in and around the City.

Policy OSC-8.4: Identify and inventory existing natural resources in the City of Menifee.

Policy OSC-8.5: Recognize the impacts new development will have on the City's natural resources and identify ways to reduce these impacts.

Policy OSC-8.8: Implement and follow MSHCP goals and policies when making discretionary actions pursuant to Section 13 of the Implementing Agreement.

Existing Conditions:

The project site is undeveloped, relatively flat, and disturbed. It is bordered by commercial development to the north and east, and undeveloped land to the south and west. Elevations on the site range from 1,456 feet above mean sea-level (AMSL) to 1,460 AMSL.

Soils

According to the USDA Web Soil Survey, the soils at the project site are classified as Exeter sandy loam, 2 to 8 percent slopes, eroded.

Ruderal/Disturbed

The westerly portion of the project site contains approximately 3.40 acre of ruderal/disturbed habitat. The easterly portion of the project site is currently developed and used as a pipe manufacturing facility. The ruderal areas on the easterly portion of the site are dominated by non-native plant species. Dominant vegetation observed in this habitat type includes ripgut brome (*Bromus diandrus*), foxtail chess (*Bromus madritensis*), black mustard (*Brassica nigra*), Russian thistle (*Salsola tragus*), London rocket (*Sisymbrium irio*), and filaree (*Erodium sp.*).

The site is located within the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) boundary, but not in a Criteria Cell. The MSHCP is a comprehensive, multi-jurisdictional Habitat Conservation Plan intended to conserve species and their habitats while allowing the County and its cities to better control local land use and more efficiently implement requirements of the State and federal Endangered Species Acts.

Analysis of Project Effect and Determination of Significance:

Impact IV.a): Less Than Significant Impact with Mitigation.

SENSITIVE PLANT RESOURCES

A total of twenty plant species are listed as state and/or federal Threatened, Endangered, or Candidate species; are required to be reviewed under the Narrow Endemic Plant section of the Western Riverside MSHCP; are 1B.1 listed plants on the CNPS Rare Plant Inventory; or have been found to have a potential to exist on the project site, as identified in **Table 6, Sensitive Plant Species**.

Table 6: Sensitive Plant Species

Name	Designation	Present Onsite
Chaparral sand-verbena (Abronia villosa var. aurita)	Rare Plant	No
Munz's onion (Allium munzii)	Federally Endangered and State Threatened	No
San Diego ambrosia (<i>Ambrosia pumila</i>)	Federally Endangered	No
Rainbow Manzanita (<i>Arctostaphylos rainbowensis</i>)	Rare Plant	No
Jaeger's milk-vetch (Astragalus pachypus var. jaegeri)	Rare Plant	No
San Jacinto Valley crownscale (Atriplex coronata var. notatior)	Federally Listed	No
Parish's brittlescale (Atriplex parishii)	Rare Plant	No
The thread-leaved brodiaea (Brodiaea filifolia)	Federally Threatened	No
Smooth tarplant (Centromadia pungens ssp. laevis)	Rare Plant	No
Parry's spineflower (Chorizanthe parryi var. parryi)	Rare Plant	No
Slender-horned spineflower (Dodecahema leptoceras)	Federally and State Endangered	No
San Diego button-celery (<i>Eryngium aristulatum var.</i> parishii)	Federally and State Listed Endangered	No

Campbell's liverwort (Geothallus tuberosus)	Rare Plant	No		
Tecate cypress (Hesperocyparis forbesii)	Rare Plant	No		
Coulter's goldfields (<i>Lasthenia glabrata ssp.coulteri</i>)	Rare Plant	No		
Parish's measowfoam (<i>Limnanthes alba ssp.</i> parishii)	State Endangered	No		
Spreading navarretia (Navarretia fossalis)	Federally Threatened	No		
Prostrate vernal pool navarretia (Navarretia prostrata)	Rare Plant	No		
Prostrate vernal pool navarretia (Navarretia prostrata)	Rare Plant	No		
California Orcutt grass (Orcuttia californica)	Federally and State Listed Endangered	No		
Bottle liverwort (Sphaerocarpos drewei)	Rare Plant	No		
Note: 1B.1 listed plants on the CNPS Rare Plan Inventory				

The General Biological Assessment MSHCP Consistency Analysis determined that none of the potential twenty plant species are present on site. Refer to Appendix C for a complete list of plant species.

SENSITIVE ANIMAL RESOURCES

A total of 15 animal species listed as state and/or federal Threatened, Endangered, Candidate were reviewed for the project, as identified in **Table 7**, **Sensitive Animal Species**. All sensitive species within a 5-mile radius of project area were reviewed and a complete list of those species are discussed within Appendix C.

Table 7: Sensitive Animal Species

Name	Designation	Present Onsite
Tricolored blackbird (Agelaius tricolor)	State Candidate Endangered Specie CDFW Species of Special Concern	No
Arroyo Toad (Anaxyrus californicus)	Federally Listed Threatened Species CDFW Species of Special Concern	No
Vernal pool fairy shrimp (Branchinecta lynchi)	Federally Listed Threatened Species	No
San Diego fairy shrimp (<i>Branchinecta</i> sandiegonensis)	Federally Listed Endangered Species	No
Swainson's hawk (<i>Buteo swainsoni</i>)	State Listed Endangered Species	No
Western snowy plover (<i>Charadrius alexandrinus nivosus</i>)	Federally Listed Threatened Species CDFW Species of Special Concern	No
San Bernardino kangaroo rat (<i>Dipodomys merriami</i> parvus)	Federally Listed Endangered Species CDFW Species of Special Concern	No
Stephens' kangaroo rat (<i>Dipodomys stephensi</i>)	Federally Listed Endangered Species State Listed Threatened Species	No
Quino checkerspot butterfly (<i>Euphydryas editha</i> quino)	Federally Listed Endangered Species	No
Bald eagle (Haliaeetus leucocephalus)	State Listed Endangered Species CDFW Fully Protected Species	No
Coastal California gnatcatcher (<i>Polioptila californica</i> californica)	Federally Listed Endangered Species CDFW Species of Special Concern	No
California red-legged frog (Rana draytonii)	Federally Listed Endangered Species CDFW Species of Special Concern	No
Riverside fairy shrimp (Streptocephalus woottoni)	Federally Listed Endangered Species	No
Least Bell's vireo (Vireo bellii pusillus)	Federally and State Listed Endangered Species	No

Burrowing owl (Athene cunicularia)	CDFW Species of Special Concern	No			
Note: 1B.1 listed plants on the CNPS Rare Plan Inventory					

There is the potential for nesting birds to utilize the shrubs and trees adjacent to the project site and utilize the project site itself. Nesting birds are protected under Section 3503 of the Fish and Game Code (FGC) and the Migratory Bird Treaty Act (MBTA). Construction of the proposed project could disturb nesting birds and result in potentially significant impacts. Mitigation Measure (MM) BIO-1 would reduce potential impacts to nesting birds to less than significant by requiring construction activity to occur outside nesting season or preconstruction surveys. Therefore, with the implementation of MM BIO-1, impacts to nesting birds to sensitive species would be less than significant.

CRITICAL HABITAT

The project is not located within federally designated federal critical habitat. Additionally, the project does not host any type of sensitive species. Therefore, with incorporation of the mitigation measure identified above, the project would not cause substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.

Impacts IV.b-c): No Impact.

RIPARIAN HABITATS AND JURISDICTIONAL WATERS

The project site does not contain any drainage features or associated riparian habitat that would be regulated under Section 1602 of the Fish and Game Code. Further, the project site does not contain any "waters of the United States" (WoUS) that would be under the jurisdiction of the Federal Clean Water Act or riparian/wetland habitat that would be considered Western Riverside MSHCP riparian/riverine resources. No vernal pools are located on the project site.

Given the absence of jurisdictional waters, state or federally protected wetlands and vernal pools, no impacts would occur.

Impact IV.d): **Less Than Significant Impact with Mitigation.** The project area was evaluated for its function as a wildlife corridor that species would use to move between wildlife habitat zones. Features (e.g., mountain canyons or riparian corridors) typically used by wildlife as corridors are not present in the project area. The project site is located within the Sun Valley/Menifee Valley Area Plan of the Western Riverside County MSHCP. However, the project site is not located within a Criteria Cell or sub-unit of the Sun Valley/Menifee Valley Area Plan. In addition, the project area does not contain mountain canyons or riparian corridors that have the potential to be used by wildlife as corridors. Further, the project area is surrounded by human activity in the form of industrial businesses and roadways.

The project site does not contain mountain canyons or riparian corridors between major wildlife habitats. The project area is surrounded by paved roads and manufacturing/industrial structures. Because no wildlife movement corridors were found to be present on the project site, no impact would occur in this regard.

Migratory non-game native bird species are protected under the federal Migratory Bird Treaty Act. Additionally, Sections 3503, 3503.5, and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests. As previously stated, Construction of the proposed project could disturb nesting birds and result in potentially significant impacts. Mitigation Measure (MM) BIO-1 would reduce potential impacts to nesting birds to less than significant by requiring construction activity to occur outside nesting season or preconstruction surveys. Therefore, with the implementation of MM BIO-1, impacts to nesting birds to sensitive species would be less than significant.

Impact IV.e): **No Impact.** Vegetation onsite is limited to grassland species and ruderal species. There are no trees onsite that are considered Heritage Trees as defined in the City's Tree Preservation Ordinance (MMC

§9.86.110). Therefore, the project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. No impact would occur in this regard.

Impact IV.f): **Less Than Significant Impact with Mitigation Incorporated.** The project site is located within the Western Riverside County MSHCP Harvest Valley/Winchester Area Plan. However, the project site is not located within a Sub Area Plan, Criteria Cell, or Cell Group. A discussion of the applicable Western Riverside County MSHCP requirements follows:

Section 6.1.2 Species Associated With Riparian/Riverine Habitat and Vernal Pools

The proposed project site does not contain any drainage features or associated riparian/wetland habitat that would be considered Western Riverside MSHCP riparian/riverine resources. Further, the site does not contain any depressions or areas where water could pool. No vernal pools or suitable habitat for fairy shrimp occur on the site.

Section 6.1.4 Urban/Wildlands Interface Guidelines

The project site is not located within or adjacent to a Western Riverside County MSHCP Conservation Area; therefore, the project site is not required to address Section 6.1.4 of the Western Riverside County MSHCP.

Section 6.3.2 Additional Surveys and Procedures

The project site is not located within plan-defined areas requiring surveys for narrow endemic plant species, criteria area plant species, or burrowing owl (*Athene cunicularia*). Therefore, no additional surveys are required at this time.

Overall, based upon the findings of this report, no further studies or mitigation measures will be needed. The project site does not contain sensitive habitats or native vegetation and is completely disturbed and regularly maintained.

Mitigation Measures:

BIO-1 Nesting Birds. To avoid impacting nesting birds, one of the following must be implemented:

Conduct grading activities from September 16th through January 31st, when birds are not likely to be nesting on the site; **OR**

Conduct pre-construction surveys for nesting birds if construction is to take place during the nesting season (February 1st through September 15th). A qualified wildlife biologist shall conduct a pre-construction nest survey no more than 14 days prior to initiation of grading to provide confirmation of the presence or absence of active nests on or immediately adjacent to the project site. If active nests are encountered, species-specific measures shall be prepared by a qualified biologist and implemented to prevent abandonment of the active nest. At a minimum, grading in the vicinity of the nest shall be deferred until the young birds have fledged. A minimum exclusion buffer of 100 feet shall be maintained during construction, depending on the species and location. The perimeter of the nest-setback zone shall be fenced or adequately demarcated with staked flagging at 20-foot intervals, and construction personnel and activities restricted from the area. A survey report by the qualified biologist verifying that (1) no active nests are present, or (2) that the young have fledged, shall be submitted to the City prior to initiation of grading in the nest-setback zone. The qualified biologist shall serve as a construction monitor during those periods when construction activities occur near active nest areas to ensure that no inadvertent impacts on these nests occur. A report of the findings prepared by a qualified biologist shall be submitted to the City prior to ground disturbance and/or issuance of a grading permit.

V. CULTURAL RESOURCES Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?				X
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?			X	
c) Disturb any human remains, including those interred outside of formal cemeteries?			×	

Sources: Menifee General Plan; MGP Draft EIR; and Riverside County Land Information System.

Applicable General Plan Policies:

Goal OSC-5: Archaeological, historical, and cultural resources that are protected and integrated into the City's built environment.

Policy OSC-5.1: Preserve and protect significant archeological, historic, and cultural sites, places, districts, structures, landforms, objects and native burial sites, and other features, such as Ringing Rock and Grandmother Oak, consistent with state law.

Policy OSC-5.3: Preserve sacred sites identified by the Pechanga Band of Luiseno Indians and Soboba Band of Luiseno Indians, such as tribal burial grounds, by avoiding activities that would negatively impact the sites.

Policy OSC-5.5: Establish clear and responsible practices to identify, evaluate, and protect previously unknown archeological, historic, and cultural sites, following CEQA and NEPA procedure.

Analysis of Project Effect and Determination of Significance:

Impact V.a): **No Impact**. The westerly portion of the project site is vacant and no buildings are present onsite. The project does not propose grading at the storage area (westerly portion of the project site west of Palomar Road). The project would minimally smooth a portion of the site for the proposed Fire Dept. access lane. On the east side of Palomar Road, it is an existing developed site and no grading will occur for the installation of the new building or the proposed building addition. Minimal amount of earth moving will occur for the total project.

Because no grading would take place and negligible amounts of earth moving activities would occur, project implementation would not cause an adverse change in the significance of a historical resource and no impact would occur in this regard.

Impact V.b): **Less Than Significant Impact.** Refer to Impact V.a) above. No grading activities are anticipated as part of the project implementation. The project would be limited to partial smoothing of certain areas of the site for the proposed fire access road.

Standard Conditions (SC)-CUL-1 through SC-CUL-4 shall be implemented to reduce potentially significant impacts to previously undiscovered archaeological resources that may be accidentally encountered during Project implementation to a less than significant level. SC-CUL-1 requires that in the unlikely event that human remains are uncovered the contractor is required to halt work in the immediate area of the find and to

notify the County Coroner, in accordance with Health and Safety Code § 7050.5, who must then determine whether the remains are of forensic interest. If the Coroner, with the aid of a supervising archaeologist, determines that the remains are or appear to be of a Native American, he/she must contact the Native American Heritage Commission for further investigations and proper recovery of such remains, if necessary. SC-CUL-2 requires non-disclosure of Native American human remains. SC-CUL-3 pertains to procedures required due to any inadvertent finds during ground disturbance activities. SC-CUL-4 pertains to procedures for final disposition of inadvertent discoveries requires that the archaeological monitor prepare a final report at the conclusion of archaeological monitoring. Following compliance with these conditions, the project's potential impacts concerning the significance of an archaeological resource would be less than significant.

Impact V.c): Less Than Significant Impact. No formal cemeteries are on or near the project site. Most Native American human remains are found in association with prehistoric archaeological sites. Given the extent of past site disturbances, there is low potential for the project's ground-disturbing activities to encounter human remains. Notwithstanding, it is always a possibility that an unknown human remains are discovered during the project's ground-disturbing activities, a substantial adverse change in the significance of such a resource could occur. However, as previously mentioned, the project would not require any grading of the sites, the site preparation would be limited to smoothing of some portions for a fire access road, and Standard Condition (SC)-CUL-1 would be implemented if previously unknown human remains are unexpectedly discovered during project construction. Because no grading or ground disturbance is anticipated to occur, and with implementation of SC-CUL-1, a less than significant impact on archaeological resources would occur.

Standard Conditions and Requirements:

- SC-CUL-1 <u>Human Remains.</u> If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to Public Resource Code Section 5097.98(b) remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the Riverside County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "most likely descendant." The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98.
- SC-CUL-2 Non-Disclosure of Location Reburials. It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or associated grave goods shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, pursuant to the specific exemption set forth in California Government Code 6254 (r)., parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code 6254 (r).
- SC-CUL-3 Inadvertent Archeological Find. If during ground disturbance activities, unique cultural resources are discovered that were not assessed by the archaeological report(s) and/or environmental assessment conducted prior to project approval, the following procedures shall be followed. Unique cultural resources are defined, for this condition only, as being multiple artifacts in close association with each other, but may include fewer artifacts if the area of the find is determined to be of significance due to its sacred or cultural importance as determined in consultation with the Native American Tribe(s).
 - i. All ground disturbance activities within 100 feet of the discovered cultural resources shall be halted until a meeting is convened between the developer, the archaeologist, the tribal representative(s) and the Community Development Director to discuss the

- significance of the find.
- ii. At the meeting, the significance of the discoveries shall be discussed and after consultation with the tribal representative(s) and the archaeologist, a decision shall be made, with the concurrence of the Community Development Director, as to the appropriate mitigation (documentation, recovery, avoidance, etc.) for the cultural resources.
- iii. Grading of further ground disturbance shall not resume within the area of the discovery until an agreement has been reached by all parties as to the appropriate mitigation. Work shall be allowed to continue outside of the buffer area and will be monitored by additional Tribal monitors if needed.
- iv. Treatment and avoidance of the newly discovered resources shall be consistent with the Cultural Resources Management Plan Treatment and Monitoring Agreements entered into with the appropriate tribes. This may include avoidance of the cultural resources through project design, in-place preservation of cultural resources located in native soils and/or re-burial on the Project property so they are not subject to further disturbance in perpetuity as identified in Non-Disclosure of Reburial Condition.
- v. Pursuant to Calif. Pub. Res. Code § 21083.2(b) avoidance is the preferred method of preservation for archaeological resources and cultural resources. If the landowner and the Tribe(s) cannot agree on the significance or themitigation for the archaeological or cultural resources, these issues will be presented to the City Community Development Director for decision. The City Community Development Director shall make the determination based on the provisions of the California Environmental Quality Act with respect to archaeological resources, recommendations of the project archeologist and shall take into account the cultural and religious principles and practices of the Tribe. Notwithstanding any other rights available under the law, the decision of the City Community Development Director shall be appealable to the City Planning Commission and/or City Council."
- SC-CUL-4 <u>Cultural Resources Disposition</u>. In the event that Native American cultural resources are discovered during the course of grading (inadvertent discoveries), the following procedures shall be carried out for final disposition of the discoveries:
 - a) One or more of the following treatments, in order of preference, shall be employed with the tribes. Evidence of such shall be provided to the City of Menifee Community Development Department:
 - i. Preservation-In-Place of the cultural resources, if feasible. Preservation in place means avoiding the resources, leaving them in the place where they were found with no development affecting the integrity of the resources.
 - ii. Reburial of the resources on the Project property. The measures for reburial shall include, at least, the following: Measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed, with an exception that sacred items, burial goods and Native American human remains are excluded. Any reburial process shall be culturally appropriate. Listing of contents and location of the reburial shall be included in the confidential Phase IV report. The Phase IV Report shall be filed with the City under a confidential cover and not subject to Public Records Request.
 - iii. If preservation in place or reburial is not feasible then the resources shall be curated in a culturally appropriate manner at a Riverside County curation facility that meets State Resources Department Office of Historic Preservation Guidelines

for the Curation of Archaeological Resources ensuring access and use pursuant to the Guidelines. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees necessary for permanent curation. Evidence of curation in the form of a letter from the curation facility stating that subject archaeological materials have been received and that all fees have been paid, shall be provided by the landowner to the City. There shall be no destructive or invasive testing on sacred items, burial goods and Native American human remains. Results concerning finds of any inadvertent discoveries shall be included in the Phase IV monitoring report.

Mitigation Measures: No mitigation is required.

VI. ENERGY Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during construction or operation?			X	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			X	

<u>Sources</u>: Menifee General Plan; OPR's Technical Advisory; and Urban CrossRoads – Forterra Pipe Manufacturing Facility Focused Air Quality and Greenhouse Gas Evaluation, 2018. See Appendix B, *Air Quality and Greenhouse Gas Assessment*.

Applicable General Plan Policies:

Goal OSC-4: Efficient and environmentally appropriate use and management of energy and mineral resources to ensure their availability for future generations.

Policy OSC-4.1: Apply energy efficiency and conservation practices in land use, transportation demand management, and subdivision and building design.

Analysis of Project Effect and Determination of Significance:

Impact VI.a-b): **Less Than Significant Impact**. California Code Title 24, Part 6 (also referred to as the California Energy Code), was promulgated by the CEC in 1978 in response to a legislative mandate to create uniform building codes to reduce California's energy consumption. To these ends, the California Energy Code provides energy efficiency standards for residential and nonresidential buildings. California's building efficiency standards are updated on an approximately three-year cycle. The 2016 Standards for building construction, which went into effect on January 1, 2017, improved upon the former 2013 Standards for residential and nonresidential buildings.

For new development such as that proposed by the Project, compliance with California Building Standards Code Title 24 energy efficiency requirements (CalGreen) are considered demonstrable evidence of efficient use of energy. The Project site would be required to promote and provide for energy efficiencies beyond those required under other applicable federal or State of California standards and regulations, and in so doing would meet all California Building Standards Code 24 standards. Moreover, energy consumed by the Project is expected be primarily during construction activities. Additionally, energy use for operations would be expected to be comparable to, or less than, energy consumed by other similar uses of similar scale and intensity that are constructed and operating in California. On this basis, the Project would not result in the inefficient, wasteful, or unnecessary consumption of energy. Furthermore, the Project would not cause or

would occur.				
Mitigation Measures: No mitigation is required.				
VII. GEOLOGY AND SOILS Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	0		\boxtimes	
ii) Strong seismic ground shaking?			×	
iii) Seismic-related ground failure, including liquefaction?			×	
iv) Landslides?			X	
b) Result in substantial soil erosion or the loss of topsoil?			\boxtimes	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?		0	X	
d) Be located on expansive soil, as defined in Table 18- 1-B of the Uniform Building Code (1994), creating substantial risks to life or property?			X	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?		0		X
f) Be impacted by or result in an increase in wind erosion and blowsand, either on or off site?			\boxtimes	
g) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?			X	
Sources: Menifee General Plan Exhibits S-1, "Fault Map," S-2, "Slope Distribution," S-3, "Liquefaction and Landslides," and S-4, "Geologic Map"; MGP Draft EIR; Riverside County General Plan Figure S-8, Wind				

result in the need for additional energy facilities or energy delivery systems. Less than significant impacts

"Erosion Susceptibility Map;" and State of California Department of Conservation Website - EQ Zapp: California Earthquake Hazards Zone Application – Earthquake Zones of Required Investigation.

Applicable General Plan Policies:

Goal S-1: A community that is minimally impacted by seismic shaking and earthquake-induced or other geologic hazards.

Policy S-1.1: Require all new habitable buildings and structures to be designed and built to be seismically resistant in accordance with the most recent California Building Code adopted by the City.

Goal S-2: A community that has used engineering solutions to reduce or eliminate the potential for injury, loss of life, property damage, and economic and social disruption caused by geologic hazards such as slope instability; compressible, collapsible, expansive or corrosive soils; and subsidence due to groundwater withdrawal.

Policy S-2.1: Require all new developments to mitigate the geologic hazards that have the potential to impact habitable structures and other improvements.

Analysis of Project Effect and Determination of Significance:

Impact VII.a.i): **Less Than Significant Impact**. The project site is not located within an Alquist-Priolo Earthquake Fault Zone and there are no known active faults on or immediately adjacent to the property. Therefore, the project would not have substantial adverse effects involving rupture of a known earthquake fault and a less than significant impact would occur in this regard.

Impact VII.a.ii-iv, VII.c-d): **Less Than Significant Impact**. While the site is in a seismically active region, no active or potentially active faults are presently known to exist at this site. Also, the the site is "not in a fault zone" and "not within a ½ mile of a fault." The nearest zoned faults are the Elsinore Fault, located approximately 12 miles to the southwest, and the Glen Ivy North fault, located approximately 9 miles to the southwest. Further, the absence of shallow groundwater at the site reduces the potential for seismic-induced liquefaction. Given the potential for seismic activity in the region, moderate to strong seismic shaking may occur during the project's design life. Therefore, project implementation could expose people or structures to potential substantial adverse effects involving strong seismic ground shaking. The intensity of ground shaking on the project site would depend on several factors including: the distance to the earthquake focus, the earthquake magnitude, the response characteristics of the underlying materials, and the quality and type of construction. Moreover, the following geologic and seismic hazards based on site-specific parameters have been evaluated:

<u>Liquefaction/Seismic Settlement</u>. As identified in the General Plan, Exhibit S-3, the project site is not within an area currently mapped with seismic hazards such as liquefaction or landslides. The nearest liquefaction areas identified in Exhibit S-3 are located approximately 4.0 miles south of the project site.

Slope Failure, Landslides, Rock Falls. Due to the relatively flat nature of the property following proposed grading, and lack of evidence of existing landslides or slope instability, the potential for slope failure and landslides is negligible. Additionally, no grading would occur as part of the project. Site preparation would be limited to smoothing of some portions above ground. As such, risks associated with slope instability are considered "low."

<u>Subsidence</u>. Due to existing site topography, the project will not require imported soils to attain design grades. The City General Plan EIR states that it is unlikely that buildout of the General Plan would result in lowered groundwater levels under Menifee that could cause ground subsidence. Impacts from subsidence are anticipated to be less than significant.

In summary, the project is not anticipated to impact or change the existing geotechnical stability of the project site. No grading would occur and less than significant impact would occur.

Regulatory controls to address potential geologic and seismic hazards would be imposed on the project through the permitting process. Pursuant to MMC §8.04.010, the City has adopted the 2016 California Building Code (CBC), subject to certain amendments and changes. CBC design standards correspond to the level of seismic risk in a given location and are intended primarily to protect public safety and secondly to minimize property damage. The project would be subject to compliance with all applicable regulations in the most recently published CBC (as amended by MMC §8.04.010), which specifies design requirements to mitigate the effects of potential geologic and seismic hazards. Thus, the project's potential impacts concerning exposure of people or structures to potential substantial adverse effects involving geologic and seismic hazards, and unstable conditions, would be less than significant.

Impact VII.b): Less Than Significant Impact. No grading activities would take place as part of the proposed project on either side of Palomar Road. Minimal smoothing of portions of the site would take place. Nonetheless, during construction, the project would be subject to compliance with erosion and sediment control measures and the National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order No. 2009-0009-DWQ, and all subsequent amendments) (Construction General Permit); see Response X.a). MMC §15.01.015(B)(1) specifies that any person performing construction work in the City shall comply with the provisions of MMC Chapter 15.01 and control stormwater runoff so as to prevent any likelihood of adversely affecting human health or the environment. The Engineering/Public Works Department would identify the BMP's that may be implemented to prevent such deterioration and the manner of implementation. Further, the project proposes hardscapes throughout easterly portion (already developed portion) of the project site, which would stabilize soils and contain them onsite. Following compliance with the established regulatory framework (NPDES and MMC), the project's potential impacts concerning soil erosion and loss of topsoil would be less than significant and no mitigation is required.

Impact VII.e): **No Impact.** Sewers would be available for disposal of project generated wastewater; see Responses XIX.a. The project would be served by the Eastern Municipal Water District and would not utilize septic tanks or alternative waste water disposal systems. Therefore, no impact would occur in this regard and no mitigation is required.

Impact VII.f): **Less Than Significant Impact.** The project site, like the rest of the City, is located in an area designated as having moderate susceptibility to wind erosion. Further, the site is surrounded by industrial development to the west, east, and north, which would minimize exposure to wind erosion. As such, it is not anticipated that high winds or blowing sand would have substantial impacts on project-related improvements. Project implementation would cover currently exposed soils with buildings/improvements, further reducing potential impacts related to windblown dust or sand within the project vicinity.

Impact VII.g): **Less Than Significant Impact**. No grading is proposed as part of the project construction preparation. Site preparation would be limited to the smoothing of certain areas. Thus, the project is not anticipated to directly or indirectly destroy a unique paleontological resource or site or unique geological feature.

Mitigation Measures: No mitigation is required.

VIII. GREENHOUSE GAS EMISSIONS Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the			X	

environment?			
b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?		X	

<u>Sources</u>: Menifee General Plan; and Urban CrossRoads – Forterra Pipe Manufacturing Facility Focused Air Quality and Greenhouse Gas Evaluation, 2018. See Appendix B, *Air Quality and Greenhouse Gas Assessment*.

Applicable General Plan Policies:

Goal OSC-4: Efficient and environmentally appropriate use and management of energy and mineral resources to ensure their availability for future generations.

Policy OSC-4.1: Apply energy efficiency and conservation practices in land use, transportation demand management, and subdivision and building design.

Goal OSC-10: An environmentally aware community that is responsive to changing climate conditions and actively seeks to reduce local greenhouse gas emissions.

Policy OSC-10.1: Align the City's local GHG reduction targets to be consistent with the statewide GHG reduction target of AB 32.

Policy OSC-10.2: Align the City's long-term GHG reduction goal consistent with the statewide GHG reduction goal of Executive Order S-03-05.

Policy OSC-10.3: Participate in regional greenhouse gas emission reduction initiatives.

Policy OSC-10.4: Consider impacts to climate change as a factor in evaluation of policies, strategies, and projects.

Existing Setting:

Global Warming and Greenhouse Gases

Global climate change refers to changes in average climatic conditions on earth as a whole, including temperature, wind patterns, precipitation and storms. Global warming, a related concept, is the observed increase in average temperature of the earth's surface and atmosphere. The six major greenhouse gases (GHGs) identified by the Kyoto Protocol are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O_3), sulfur hexafluoride (SF_6), hydrofluorocarbons (HFCs), and perfluorocarbons (PFCs). GHGs absorb longwave radiant energy reflected by the earth, which warms the atmosphere. GHGs also radiate long wave radiation both upward to space and back down toward the surface of the earth. The downward part of this longwave radiation absorbed by the atmosphere is known as the "greenhouse effect." The potential effects of global climate change may include rising surface temperatures, loss in snow pack, sea level rise, more extreme heat days per year, and more drought years.

 CO_2 is an odorless, colorless natural GHG. Natural sources include the following: decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic (human-caused) sources of CO_2 are from burning coal, oil, natural gas, wood, butane, propane, etc. CH_4 is a flammable gas and is the main component of natural gas. N_2O , also known as laughing gas, is a colorless GHG. Some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to the atmospheric load of GHGs. HFCs are synthetic man-made chemicals that are used as a substitute for chlorofluorocarbons (whose production was stopped as required by the Montreal Protocol) for automobile air conditioners and refrigerants. The two main sources of PFCs are primary aluminum production and semiconductor manufacture. SF_6 is an inorganic, odorless, colorless, nontoxic, nonflammable gas. SF_6 is used for insulation in electric power transmission and

distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

Events and activities, such as the industrial revolution and the increased combustion of fossil fuels (e.g., gasoline, diesel, coal, etc.), have heavily contributed to the increase in atmospheric levels of GHGs. An air quality analysis of GHGs is a much different analysis than the analysis of criteria pollutants for the following reasons. For criteria pollutants significance thresholds are based on daily emissions because attainment or non-attainment is based on daily exceedances of applicable ambient air quality standards. Further, several ambient air quality standards are based on relatively short-term exposure effects on human health, e.g., one-hour and eight-hour. Since the half-life of CO₂ in the atmosphere is approximately 100 years, for example, the effects of GHGs are longer term, affecting global climate over a relatively long timeframe. As a result, the SCAQMD's current position is to evaluate GHG effects over a longer timeframe than a single day.

In its CEQA and Climate Change document (January 2008), the California Air Pollution Control Officers Association (CAPCOA) identifies many potential GHG significance threshold options. The CAPCOA document indicates that establishing quantitative thresholds is a balance between setting the level low enough to capture a substantial portion of future residential and non-residential development, while also setting a threshold high enough to exclude small development projects that would contribute a relatively small fraction of the cumulative statewide GHG emissions. Two potential significance thresholds were 10,000 metric tons per year and 25,000 metric tons per year.

Finally, another approach to determining significance is to estimate what percentage of the total inventory of GHG emissions are represented by emissions from a single project. If emissions are a relatively small percentage of the total inventory, it is possible that the project would have little or no effect on global climate change.

According to available information, the statewide inventory of CO₂ equivalent emissions is as follows: 1990 GHG emissions were estimated to equal 427 million metric tons of CO₂ equivalent, and 2020 GHG emissions are projected to equal 600 million metric tons of CO₂ equivalent, under a business as usual scenario. Interpolating an inventory for the year 2011 results in an estimated inventory of approximately 121 million metric tons of CO₂ equivalent. Interpolating an inventory for the year 2012 results in an estimated inventory of approximately 127 million metric tons of CO₂ equivalent. These amounts assume that between 1990 and 2020 there is an average increase of 5.76 million tons per year of GHG.

Analysis of Project Effect and Determination of Significance:

Impacts VIII.a): **Less Than Significant Impact.** The proposed concrete batching activity would not result in any substantive emissions increases than what was previously evaluated in the previous Forterra Pipe Manufacturing Focused Air Quality and Greenhouse Gas Evaluation (Urban Crossroads April 2017). The only additional GHG emissions would be a result of short-term construction activity associated with the proposed concrete batching operation.

The annual GHG emissions associated with the construction and operation of the proposed project are estimated to be 1,144.08 MTCO2e per year as summarized in **Table 8, Operational Greenhouse Gas Emissions Summary (Annual)**. Detailed construction model outputs are presented in Attachment "A". The proposed project would not exceed the 3,000 MTCO2e threshold. As such, the proposed project would result in a less than significant impact with respect to GHG emissions.

Table 8: Operational Greenhouse Gas Emissions Summary (Annual)

Emission Source	Emissions (Metric tons per year) (CO2e)
April 2017 Greenhouse Gas Assessment	1,142.80
Proposed construction-related emissions amortized (30 years)	1.28

Total CO₂E (All Sources)	1,144.08
Source: Urban Urban CrossRoads - Forterra	a Pipe Manufacturing Facility Focused Air
Quality and Greenhouse Gas Evaluation, 20	18

Additionally, the proposed concrete batching operation would not hinder or conflict with any of the Scoping Plan Consistency findings presented previously in the Forterra Pipe Manufacturing Focused Air Quality and Greenhouse Gas Evaluation (Urban Crossroads April 2017). Thus, the project would cause a less than significant impact regarding Greenhouse Gas Emissions.

Impacts VIII. b): Less Than Significant Impact. The City of Menifee has not yet adopted a qualified GHG reduction plan. The City of Menifee General Plan includes policies and measures (shown in General Plan Draft EIR GHG Section, Table 5.7-9) for the City to implement in support of achieving the reduction target of AB 32 and the statewide GHG reduction goal of Executive Order S-03-05. The City has adopted the 2016 edition of the California Building Code (Title 24), including the California Green Building Standards Code (pursuant to Menifee Municipal Code Chapter 8.06). The Project will be subject to the California Green Building Standards Code, which requires new buildings to reduce water consumption, employ building commissioning to increase building system efficiencies for large buildings, divert construction waste from landfills, and install low pollutant-emitting finish materials.

AB 32 requires the state to reduce statewide greenhouse gas emissions to 40% below 1990 levels by 2030, a reduction target that was first introduced in Executive Order B-30-15. The new legislation builds upon the AB 32 goal of 1990 levels by 2020 and provides an intermediate goal to achieving S-3-05, which sets a statewide greenhouse gas reduction target of 80% below 1990 levels by 2050.

Modeling shows the GHG emissions from the proposed project will fall below the 3,000 metric ton limit established by the SCAQMD in 2010. In addition, all proposed improvements associated with the project will meet current energy efficiency requirements of California Title 24. Those responsible for design and completion of the project are dedicated to regulatory compliance in all other areas of construction and operation, the requirements of many of which are mandated by the members of the Climate Action Team. For these reasons, this project will be consistent with the California Scoping plan and should not conflict with applicable plans, policies and regulations adopted for the purpose of reducing greenhouse gas emissions. Therefore, the impact is considered less than significant.

IX. HAZARDS AND HAZARDOUS MATERIALS Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?		0	\boxtimes	
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?				X

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	0	0	0	X
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	0	0	0	X
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	0		X	
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?			X	

<u>Sources</u>: Menifee General Plan, Exhibit S-6, "High Fire Hazard Areas," and Exhibit S-7, "Critical Facilities;" MGP Draft EIR; State of California, Department of Toxics Substances Control, EnviroStor Database; State of California, Department of Toxics Substances Control, Cortese list of Hazardous Waste and Substances Sites database; State of California, Water Resources Control Board, Geotracker, All Hazards Site Search; United States, Environmental Protection Agency, Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) Database; California Department of Forestry and Fire Protection (CAL FIRE) Website - Riverside County City Fire Hazard Severity Zone Maps.

Applicable General Plan Policies:

Goal S-5: A community that has reduced the potential for hazardous materials contamination.

Policy S-5.1: Locate facilities involved in the production, use, storage, transport, or disposal of hazardous materials away from land uses that may be adversely impacted by such activities and areas susceptible to impacts or damage from a natural disaster.

Policy S-5.2: Ensure that the fire department can continue to respond safely and effectively to a hazardous materials incident in the City, whether it is a spill at a permitted facility, or the result of an accident along a section of the freeway or railroads that extend across the City.

Policy S-5.4: Ensure that all facilities that handle hazardous materials comply with federal and state laws pertaining to the management of hazardous wastes and materials.

Policy S-5.5: Require facilities that handle hazardous materials to implement mitigation measures that reduce the risks associated with hazardous material production, storage, and disposal.

Goal S-6: A City that responds and recovers in an effective and timely manner from natural disasters such as flooding, fire, and earthquakes, and as a result is not impacted by civil unrest that may occur following a natural disaster.

Policy S-6.1: Continuously review, update, and implement emergency preparedness, response, and recovery plans that make the best use of the City- and county-specific emergency management resources available.

Analysis of Project Effect and Determination of Significance:

Impacts IX.a): **Less Than Significant Impact**. The project would not handle or transport hazardous materials. The proposed project site is located in an area designated for industrial uses and no residential areas would

be impacted. Additionally, the project would not place housing near any hazardous materials facilities. Project impacts associated with the routine transport and use of hazardous materials or wastes would be less than significant.

Impact IX.b): Less Than Significant Impact.

According to EnviroStor, the project site is not located in an area known for hazardous materials or releases. The nearest investigation site is High School No. 3 (33010072) Briggs Road/Pinacate Road, Romoland, CA 92585. However, the school investigation is label as requiring no further action.

Because the project would not require any grading nor would it handle hazardous materials, and based on the findings summarized above, the project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. A less than significant impact would occur in this regard.

Impact IX.c): **No Impact.** The proposed structures would be used for storage purposes. Both the proposed new building and building addition would store the products that are currently being manufactured onsite and stored outdoors. The project would not handle or emit hazardous materials onsite or to sensitive uses. Additionally, the nearest schools are located more than 1.0 miles away from the project site. Thus, because the project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste, no impact would occur in this regard and no mitigation is required.

Impact IX.d): **No Impact.** Government Code §65962.5 refers to the Hazardous Waste and Substances Site List, commonly known as the Cortese List, maintained by the Department of Toxic Substances Control (DTSC). According to the DTSC EnviroStor Database, the project site is not included on the Cortese List. Therefore, the project would not create a significant hazard to the public or the environment in this regard.

Impact IX.e): **No Impact.** The following airports/airstrips are located nearest the project site:

- Perris Valley Airport: at 2091 Goetz Road, Perris, approximately 5.0 miles to the northwest;
- Pines Airpark: at 32655 Flight Way, Winchester, approximately 8 miles to the southeast; and
- Skylark Field Airport: at 20701 Cereal St, Lake Elsinore, CA 92530, approximately 11 miles to the southwest.

The project site is not within the Perris Valley Airport Land Use Plan area, and is not within 2.0 miles of any other public airport/public use airport or in the vicinity of a private airstrip. The March Air Reserve Base is located approximately ten (10) miles northwest of the project site. The project site is located within Airport Compatibility Zone E of the March Air Reserve Base/Inland Port Airport Influence Area. Within Compatibility Zone E of the March Air Reserve Base/Inland Airport Land Use Compatibility Plan, residential density and nonresidential intensity are not restricted.

Therefore, the project would not result in an airport-/airstrip-related safety hazard for people residing or working in the project area. No impact would occur in this regard.

Impact IX.f): **Less than Significant Impact.** See Response XVI.e). The proposed project would not crease any additional noise that what is already created from the production of materials. Less than significant impact would occur.

Impact IX.g): **Less Than Significant Impact.** The project site is not located within a Moderate, High, or Very High Fire Hazard Severity Zone, as identified on the latest Fire Hazard Severity Zone (FHSZ) maps prepared by the California Department of Forestry and Fire Protection (CALFIRE).

The project would be subject to compliance with the CCR Title 24 Parts 2 and 9 – Fire Codes and California

Public Resources Code Sections 4290-4299 ad General Code Section 51178. Further, it is the City's goal (Goal S-4) for a community that has effective fire mitigation and response measures in place, and as a result is minimally impacted by wildland and structure fires. To this end, the project would be subject to compliance with the following City policies:

- Policy S-4.1: Require fire-resistant building construction materials, the use of vegetation control
 methods, and other construction and fire prevention features to reduce the hazard of wildland fire.
- Policy S-4.2: Ensure, to the maximum extent possible, that fire services, such as firefighting equipment and personnel, infrastructure, and response times, are adequate for all sections of the City.
- Policy S-4.4: Review development proposals for impacts to fire facilities and compatibility with fire areas or mitigate.

The Riverside County Fire Department (RCFD) provides fire protection and emergency medical response services in the City of Menifee. In coordination with the RCFD and California Department of Forestry and Fire Protection, the RCFD would evaluate the project to determine the necessary fire prevention features. Following compliance with the established local and state regulatory framework discussed above, the project would not expose people or structures to a significant risk involving wildland fires and impacts would be less than significant in this regard.

X. HYDROLOGY AND WATER QUALITY Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?			X	
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?		П	X	
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:			X	
i) result in substantial erosion or siltation on- or off-site;			×	
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;			X	
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or		0	X	
iv) impede or redirect flood flows?			X	

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to inundation?		X	О
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?		X	

<u>Sources</u>: Menifee General Plan Safety Element Exhibit S-5, "Flood Hazards"; MGP Draft EIR; Riverside County General Plan Figure S-9, "100- and 500-Year Flood Hazard Zones" and Figure S-10 "Dam Failure Inundation Zone".

Applicable General Plan Policies:

Goal S-3: A community that is minimally disrupted by flooding and inundation hazards.

Policy S-3.1: Require that all new developments and redevelopments in areas susceptible to flooding (such as the 100-year floodplain and areas known to the City to flood during intense or prolonged rainfall events) incorporate mitigation measures designed to mitigate flood hazards.

Policy S-3.2: Reduce flood hazards in developed areas known to flood.

Policy OSC-7.8: Protect groundwater quality by decommissioning existing septic systems and establishing connections to sanitary sewer infrastructure.

Policy OSC-7.9: Ensure that high-quality potable water resources continue to be available by managing stormwater runoff, wellhead protection, and other sources of pollutants.

Policy OSC-7.10: Preserve natural floodplains, including Salt Creek, Ethanac Wash, Paloma Wash, and Warm Springs Creek, to facilitate water percolation, replenishment of the natural aquifer, proper drainage, and prevention of flood damage.

Analysis of Project Effect and Determination of Significance:

Impacts X.a-b: Less Than Significant Impact.

The California Porter-Cologne Water Quality Control Act (Section 13000 ["Water Quality"] et seq., of the California Water Code), and the Federal Water Pollution Control Act Amendment of 1972 (also referred to as the Clean Water Act [CWA]) require comprehensive water quality control plans be developed for all waters within the State of California.

SHORT-TERM CONSTRUCTION

The project's construction-related activities would include minimal ground smoothing and no grading is anticipated to occur. As previously stated, because the proposed project would involve the exposure of soil during the duration of project construction, the appropriate soil erosion and control techniques would be employed in conformance to the best practices Construction BMP Handbook. However, it is not anticipated that that project would displace significant quantities of soils and the potential for soils to be subject to wind and water erosion is also anticipated to be negligible.

LONG-TERM OPERATIONS

The project would be used for storage and industrial manufacturing purposes and no habitable structures requiring waste water discharge connections would be necessary. The project would not degrade surface or ground water quality.

Water usage would be limited to the irrigation of onsite landscaping. Based on the project site plan, no portion of the site design is anticipated to violate any water quality standards or waste discharge requirement or otherwise substantially degrade surface or ground water quality. The project's demand for domestic water service would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level. Therefore, impacts would be less than significant.

Impact X.c.i): **Less Than Significant Impact.** There are no natural drainage courses located on-site and the site is relatively flat. Because the proposed project would involve the exposure of soil during the duration of project construction, the appropriate soil erosion and control techniques would be employed in conformance to the best practices Construction BMP Handbook.

Impact X.c.ii): **Less Than Significant Impact.** The site does not include any streams or rivers, which could be altered by the proposed project. In addition, the project does not propose to add impervious surface area which would limit any net increase in the release of stormwater from the site, thereby minimizing the potential for flooding on-site or off-site. Additionally, storm water infrastructure already exists along Matthews Road which would capture any offsite runoff. Therefore, impacts would be less than significant.

Impact X.c.iii): **Less Than Significant Impact.** The project is not anticipated to create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Water would continue to drain to Matthews Road where storm water infrastructure already exits. Therefore, impacts would be less than significant.

Impact X.c.vi): **Less Than Significant Impact.** Flood hazards for the City include dam inundation in the event of a catastrophic failure, such as seismically induced dam failure. The California Division of Dam Safety monitors the structural safety of dams that are greater than 25 feet high or have more than 50 acre-feet of storage capacity. Parts of Menifee are within existing dam inundation areas for three dams at Diamond Valley Lake, two dams at Canyon Lake, and one at Lake Perris Reservoir. The General Plan Exhibit S-5 – Flood Hazards, shows that the project site is within a FEMA Flood Zone A. This zone corresponds with a 100-year flood area. Diamond Valley Lake, Canyon Lake, and Perris Reservoir are located within 7 miles of the project site. The design and construction of the dams for earthquake resistance, in combination with continued monitoring by the California Division of Dam Safety reduces risks of dam failure due to earthquakes. Dam inundation impacts would be less than significant.

Impact X.d): **Less Than Significant Impact.** Because the site is not immediately adjacent to any impounded bodies of water, risk associated with tsunamis and seiches is considered negligible. The site is situated on relatively flat ground and the potential for landslides, rock falls, earthflows and slumps are negligible. As such, risks associated with slope instability is considered "low." Therefore, potential impact concerning release of pollutants due to inundation from flood, tsunami, or seiche are considered less than significant.

Impact X.e): **No Impacts.** The project would not violate any water quality standards or degrade water quality during construction or operation, and would not interfere with the Basin Plan. The project is located within the San Jacinto Groundwater Basin. Currently the Basin is in a basin boundary modification process and the prioritization of the Basin has not yet been determined (DWR 2018). The project would not involve the extraction or injection of groundwater. Since the Basin has not yet been prioritized, there is currently no sustainable groundwater management plan. The Eastern Municipal Water District (EMWD) prepared a West San Jacinto Groundwater Management Area Annual Report in 2017 (EMWD 2017). The plan includes a number of recommendations for the management of the groundwater basin; the project would conflict with any of these recommendations. The project would not conflict with or obstruct the Basin Plan or sustainable management of the Groundwater Basin and there would be no impacts.

XI. LAND USE AND PLANNING - Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
				\boxtimes

a) Physically divide an established community?			
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	_	X	

Sources: Menifee General Plan, Exhibit LU-2, "Land Use Map"; and Menifee Zoning Map.

Applicable General Plan Policies:

Goal LU-1: Land uses and building types that result in a community where residents at all stages of life, employers, workers, and visitors have a diversity of options of where they can live, work, shop, and recreate within Menifee.

Policy LU-1.1: Concentrate growth in strategic locations to help preserve rural areas, create place and identity, provide infrastructure efficiently, and foster the use of transit options.

Policy LU-1.5: Support development and land use patterns, where appropriate, that reduce reliance on the automobile and capitalize on multimodal transportation opportunities.

Policy LU-1.6: Coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.

Policy LU-1.8: Ensure new development is carefully designed to avoid or incorporate natural features, including washes, creeks, and hillsides.

Policy LU-1.9: Allow for flexible development standards provided that the potential benefits and merit of projects can be balanced with potential impacts.

Policy LU-1.10: Buffer sensitive land uses, such as residences, schools, care facilities, and recreation areas from major air pollutant emission sources, including freeways, manufacturing, hazardous materials storage, wastewater treatment, and similar uses.

Goal ED-1: A diverse and robust local economy capable of providing employment for all residents desiring to work in the City.

Policy ED-1.2: Diversify the local economy and create a balance of employment opportunities across skill and education levels, wages and salaries, and industries and occupations.

Goal ED-3: A mix of land uses that generates a fiscal balance to support and enhance the community's quality of life.

Policy ED-3.1: Incorporate short-term and long-term economic and fiscal implications of proposed actions into decision making.

Analysis of Project Effect and Determination of Significance:

Impact XI.a): **No Impact.** An example of a project that has the potential to divide an established community includes the construction of a new freeway or highway through an established neighborhood. The project proposes a new building and building addition on the portion of the project site east of Palomar Road where the existing pipe manufacturing facility is located. The project also proposes a storage area on the vacant portion of the project site west of Palomar Road. This vacant portion is a disturbed lot which is surrounded by developed lots on the north, east, and west sides. This area would serve to store products fabricated on the portion of the project site east of Palomar Road. The project does not propose any buildings that would hinder natural connection paths for people or communities. No impact would occur in this regard and no mitigation is required.

Impact XI.b): Less Than Significant Impact. The MGP Land Use Map depicts the City's land use designations and indicates the project site is designated Business Park (BP) 0.25 – 0.60 FAR. The City Zoning Map indicates the project site is zoned Manufacturing – Medium (M-M). The project proposes manufacturing uses, which are permitted in the BP land use designation and M-M zoning classification. Therefore, the project would be consistent with the applicable land use plans. Given that the General Plan EIR considered the potential environmental impacts associated with development of the project site assuming the BP land use designation, this project would not create any new or greater environmental impacts than those identified in the General Plan EIR.

Mitigation Measures: No mitigation is required.

XII. MINERAL RESOURCES Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				X
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				X

Sources: Menifee General Plan; MGP Draft EIR Figure 5.11-1, "Mineral Resource Zones."

Applicable General Plan Policies:

Goal OSC-4: Efficient and environmentally appropriate use and management of energy and mineral resources to ensure their availability for future generations.

Policy OSC-4.4: Require that any future mining activities be in compliance with the State Mining Reclamation Act, federal and state environmental regulations, and local ordinances.

Policy OSC-4.5: Limit the impacts of mining operations on the City's natural open space, biological and scenic resources, and any adjacent land uses.

Analysis of Project Effect and Determination of Significance:

Impact XII.a-b): **No Impact.** There are no mineral extraction or process facilities on or near the project site. The nearest MRZ-1 area where available geological information indicates that little likelihood exists for the presence of significant minerals resources occurs is located approximately 2.0 miles west. No mineral resources are known to exist in the site's vicinity, and no known significant mineral resources have been designated in the City of Menifee.ⁱⁱⁱ Therefore, the project would not impact mineral resources.

XIII. NOISE Would the project result in:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards			X	

of other agencies?			
b) Generation of excessive groundborne vibration or groundborne noise levels?		X	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			X

<u>Sources</u>: Menifee General Plan, Noise Element; MGP Draft EIR Figure 5.12-3, "Airport Noise Contours"; and Menifee Municipal Code (MMC).

Applicable General Plan Policies:

- Goal N-1: Noise-sensitive land uses are protected from excessive noise and vibration exposure.
- Policy N-1.1: Assess the compatibility of proposed land uses with the noise environment when preparing, revising, or reviewing development project applications.
- Policy N-1.2: Require new projects to comply with the noise standards of local, regional, and state building code regulations, including but not limited to the City's Municipal Code, Title 24 of the California Code of Regulations, the California Green Building Code, and subdivision and development codes.
- Policy N-1.3: Require noise abatement measures to enforce compliance with any applicable regulatory mechanisms, including building codes and subdivision and zoning regulations, and ensure that the recommended mitigation measures are implemented.
- Policy N-1.7: Mitigate exterior and interior noises to the levels listed in the table below to the extent feasible, for stationary sources adjacent to sensitive receptors:
- Policy N-1.8 Locate new development in areas where noise levels are appropriate for the proposed uses. Consider federal, state, and City noise standards and guidelines as a part of new development review.
- Policy N-1.9: Limit the development of new noise-producing uses adjacent to noise-sensitive receptors and require that new noise-producing land be are designed with adequate noise abatement measures.
- Policy N-1.10: Guide noise-tolerant land uses into areas irrevocably committed to land uses that are noise-producing, such as transportation corridors adjacent to the I-215 or within the projected noise contours of any adjacent airports.
- Policy N-1.11: Discourage the siting of noise-sensitive uses in areas in excess of 65 dBA CNEL without appropriate mitigation.
- Policy N-1.13: Require new development to minimize vibration impacts to adjacent uses during demolition and construction.
- Goal N-2: Minimal Noise Spillover. Minimal noise spillover from noise-generating uses, such as agriculture, commercial, and industrial uses into adjoining noise-sensitive uses.

Analysis of Project Effect and Determination of Significance:

Impacts XIII.a-b): Less Than Significant Impact.

SHORT-TERM CONSTRUCTION

Site grading and preparation is anticipated to be negligible, because the site is leveled and minimal site preparation would be required. Site preparation would be limited to smoothing of portions of the site to allow for the proposed fire access road. Thus, project-generated construction noise would be minimal.

The construction of the proposed project would not require the use of substantial vibration inducing equipment or activities, such as pile drivers or blasting. The main sources of vibration impacts during construction of the project would be limited to trucks. The site is surrounded by industrial uses contiguous to the north, east and west and the railroad line to the south, and the nearest sensitive land uses/residential units are located 0.3 miles northwest. Therefore, noise and vibration impacts from construction would be less than significant.

LONG-TERM OPERATIONS

Noise and Vibratory Impacts to Off-Site Receptors

The project would develop a new building and building addition that would store materials that are currently being produced onsite and cover current manufacturing area. The existing project would move materials currently stored outdoors to indoors. Additionally, materials produced east of Palomar Road would be stored immediately west of Palomar Road within the westerly portion of the project site.

Because the project's operational noise impacts would be limited to storage and manufacturing activity that current take place on the project site and the project site is surrounded by planned or existing industrial uses, the potential impacts are anticipated to be negligible and a less than significant impact is anticipated.

Impact XIII.c): No Impact. The following airports/airstrips are located nearest the project site:

- Perris Valley Airport: at 2091 Goetz Road, Perris, approximately 5.0 miles to the northwest;
- Pines Airpark: at 32655 Flight Way, Winchester, approximately 8 miles to the southeast; and
- Skylark Field Airport: at 20701 Cereal St, Lake Elsinore, CA 92530, approximately 11 miles to the southwest.

The project site is not within the Perris Valley Airport Land Use Plan area and is not within 2.0 miles of any other public airport/public use airport or near a private airstrip. The March Air Reserve Base is located approximately ten (10) miles northwest of the project site and the project site is located within Airport Compatibility Zone E of the March Air Reserve Base/Inland Port Airport Influence Area and is not located within any mapped noise impact area of the March Air Reserve Base (per Figure 5.12-3 of the MGP). Therefore, the project is not anticipated to result in an airport-/airstrip-related excessive noise for people residing or working in the project area. No impact would occur in this regard.

XIV. POPULATION AND HOUSING Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				X

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				X
---	--	--	--	---

<u>Sources</u>: Menifee General Plan; U.S. Census Bureau, Annual Estimates of the Resident Population for Incorporated Places over 50,000; and State of California, Department of Finance, *E-5 Population and Housing Estimates for Cities, Counties and the State — January 1, 2011-2018.* Sacramento, California, May 2018.

Analysis of Project Effect and Determination of Significance:

Impact XIV.a): **No Impact**. The City's current population is approximately 91,902 persons. The City's housing stock totaled 33,884 dwelling units (DU) with approximately 2.94 persons per household (PPH).

No land uses generating additional permanent employment or extension of roads capable of inducing direct/indirect population growth in the City are proposed. The project proposes the development of one new building, one building addition and additional storage area for the existing pipe manufacturing facility. The products proposed to be manufactured on the project site are already being produced onsite and are stored outdoors. The proposed building and building addition would not add additional employees.

The project does not propose any housing or habitable structures. Additionally, the project does not propose the extension of roads or infrastructure that would trigger population growth. No impact related to unplanned population growth would occur from project implementation.

Impact XIV.b): **No Impact.** There are no housing units or other structures on the project site; therefore, the project would not displace housing or people, or require construction of replacement housing elsewhere. No impact would occur in this regard and no mitigation is required.

Mitigation Measures: No mitigation is required.

XV. PUBLIC SERVICES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
a) Fire protection?			X	
b) Police protection?			X	
c) Schools?			X	
d) Parks?			X	
e) Other public facilities?			X	

Sources: Menifee General Plan Safety Element; Menifee Union School District, Romoland School District, and

Perris Union High School District websites.

Applicable General Plan Policies:

Goal S-4: A community that has effective fire mitigation and response measures in place, and as a result is minimally impacted by wildland and structure fires.

Policy S-4.1: Require fire-resistant building construction materials, the use of vegetation control methods, and other construction and fire prevention features to reduce the hazard of wildland fire.

Policy S-4.2: Ensure, to the maximum extent possible, that fire services, such as firefighting equipment and personnel, infrastructure, and response times, are adequate for all sections of the City.

Policy S-4.4: Review development proposals for impacts to fire facilities and compatibility with fire areas or mitigate.

Goal OSC-1: A comprehensive system of high-quality parks and recreation programs that meets the diverse needs of the community.

Policy OSC-1.7: Ensure that parks and recreational facilities are well-maintained by the responsible agency.

Analysis of Project Effect and Determination of Significance:

Impacts XV.a): **Less Than Significant Impact.** The Riverside County Fire Department (RCFD) provides fire protection and emergency medical response services for the City. RCFD Station No. 7, which is part of Battalion 13, is at 28349 Bradley Road, Sun City, approximately 2.5 miles southwest of the project site. The Riverside County Fire Department in cooperation with the California Department of Forestry and Fire Protection serves more than 1,360,000 residents and employs nearly 1,700 career and volunteer firefighters and 240 administrative support personnel.^{iv}

No population growth is anticipated to occur from project implementation, because the project is limited to the development of one new building, a new building addition, and additional outdoor storage area. No habitable structures nor additional jobs would be created; therefore, the project is not anticipated to create a substantial direct or indirect need for additional fire station facilities. Therefore, project impacts concerning fire protection services would be less than significant and no mitigation is required.

Impacts XV.b): **Less Than Significant Impact.** The City of Menifee contracts with the Riverside County Sheriff (Sheriff) to provide police services for the City. Menifee-specific police services are coordinated out of the Sheriff's Perris office at 137 North Perris Boulevard approximately 4.75 miles northwest of the project site. In January 2013 the Perris Station was staffed with 138 sworn deputies and 30 classified employees, including 33 patrol and traffic officers assigned to patrol in Menifee. Average Sheriff response time to emergency calls is 7.28 minutes, and average response time for nonemergency calls is 49.58 minutes.

The Riverside County Sheriff's Office provides a crime prevention program to Menifee, consisting of support to the Neighborhood Watch program in the City and officer visits to schools and churches with presentations on topics including drug education and personal safety.

Because no population growth would be associated with the project, it is not anticipated that the project would increase the demand for police protection (Sheriff) services to the project site. Additionally, if Sheriff services are required, the project would not have a significant impact on Sheriff response times, because the project site is within the Sheriff's existing service area. Therefore, project impacts concerning police protection services would be less than significant and no mitigation is required.

Impacts XV.c): **Less Than Significant Impact.** The project site is within jurisdiction of the Romoland School District and Perris Union High School District. The student population growth in the school district would not change as part of the project implementation, because no new permanent jobs would be created; thus, no new families nor students would move into the City.

Additionally, Assembly Bill (AB) 2926 passed in 1986 allows school districts to collect impact fees from developers of new residential and commercial/industrial building space. Senate Bill 50 and Proposition 1A, both of which passed in 1998, provided a comprehensive school facilities financing and reform program. The provisions of SB 50 prohibit local agencies from denying either legislative or adjudicative land use approvals on the basis that school facilities are inadequate and reinstates the school facility cap for legislative actions. According to Government Code Section 65996, the payment of development fees authorized by SB 50 are deemed to be full and complete school facilities mitigation. The Project would be required to pay mandated development fees for commercial/industrial buildings. Impacts would be less than significant.

Impact XV.d): Less Than Significant Impact. See Response XVI below.

Impact XV.e): **Less Than Significant Impact.** Due to the nature of the Project, no new residents would be generated that would be likely to impact or create a need for additional local parks or other public facilities. Therefore, impacts would be less than significant.

Mitigation Measures: No mitigation is required.

XVI. RECREATION	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				X
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				X

Sources: Menifee General Plan; and MGP Draft EIR.

Applicable General Plan Policies:

Goal OSC-1: A comprehensive system of high-quality parks and recreation programs that meets the diverse needs of the community.

Policy OSC-1.1: Provide parks and recreational programs to meet the varied needs of community residents, including children, youth, adults, seniors, and persons with disabilities, and make these facilities and services easily accessible and affordable to all users.

OSC-1.2: Require a minimum of five acres of public open space to be provided for every 1,000 City residents.

OSC-1.3: Locate and distribute parks and recreational facilities throughout the community so that most residents are within walking distance (one-half mile) of a public open space.

Analysis of Project Effect and Determination of Significance:

Impact XVI.a-b): **No Impact**. The Project is industrial in nature and would not introduce new residents to the area. While some of the existing employees associated with the project may use local recreation facilities, such use would be minor and insufficient to contribute to substantial physical deterioration of recreation facilities. Additionally, the project does not include recreational facilities, nor would it require the expansion of recreational facilities which might have an adverse physical effect on the environment because the project is industrial in nature and no new employees or residents are anticipated as part of the project. No impact would occur.

Mitigation Measures: No mitigation is required.

XVII. TRANSPORTATION Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?			X	
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?			×	
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?				X
d) Result in inadequate emergency access?			X	

<u>Sources</u>: Menifee General Plan Circulation Element; Riverside County Transportation Commission, 2010 Riverside County Congestion Management Program adopted March 10, 2010; Riverside Transit Agency. 2010 Annual Report Ride Guides and System Map; and Forterra Pipe Manufacturing Facility Trip Generation Assessment.

Applicable General Plan Policies:

Goal C-1: A roadway network that meets the circulation needs of all residents, employees, and visitors to the City of Menifee.

Policy C-1.1: Require roadways to:

- Comply with federal, state and local design and safety standards.
- Meet the needs of multiple transportation modes and users.
- Be compatible with the streetscape and surrounding land uses.
- Be maintained in accordance with best practices.

Policy C-1.2: Require development to mitigate its traffic impacts and achieve a peak hour Level of Service (LOS) D or better at intersections, except at constrained intersections at close proximity to the I-215 where LOS E may be permitted.

Policy C-1.5: Minimize idling times and vehicle miles traveled to conserve resources, protect air quality, and limit greenhouse gas emissions.

Goal C-2: A bikeway and community pedestrian network that facilitates and encourages nonmotorized travel throughout the City of Menifee.

Policy C-2.1: Require on- and off-street pathways to:

- Comply with federal, state and local design and safety standards.
- Meet the needs of multiple types of users (families, commuters, recreational beginners, exercise experts) and meet ADA standards and guidelines.
- Be compatible with the streetscape and surrounding land uses.
- Be maintained in accordance with best practices.

Policy C-2.2: Provide off-street multipurpose trails and on-street bike lanes as our primary paths of citywide travel and explore the shared use of low-speed roadways for connectivity wherever it is safe to do so.

Policy C-2.4: Explore opportunities to expand the pedestrian and bicycle networks; this includes consideration of utility easements, drainage corridors, road rights-of-way and other potential options.

Goal C-3: A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit dependent.

Policy C-3.2: Require new development to provide transit facilities, such as bus shelters, transit bays, and turnouts, as necessary.

Analysis of Project Effect and Determination of Significance:

Impact XVII.a): **Less Than Significant Impact**. A trip generation assessment was prepared by Urban Crossroads in April 2017. According to the 2017 Urban Crossroad trip generation assessment, the proposed project is consistent with the project site's land use designation of Business Park (BP) and zoning classification of Medium Manufacturing (M-M) and is not anticipated to generate any additional traffic from the concrete batching operation and additional storage capacity. As such, further detailed traffic evaluation (e.g., traffic study), in addition to the 2017 trip generation assessment, is not required based on the proposed project. Similarly, no additional impacts, not already previously anticipated, would occur as part of the proposed project.

The Project would be required to comply with any applicable traffic and circulation regulation set forth by the City. Any project-associated traffic would utilize Interstate 215 (I-215) and California Highway 74 (identified as a local truck route) in the Potential Truck Routes, Exhibit C-7 in the General Plan. Additionally, Exhibit C-4, Proposed Bikeway and Community Pedestrian Network of the General Plan identifies Palomar Road as a Class II Bike Route and Menifee Road east of Palomar Road as a Class II Bike Lane and west of Palomar Road as a Class I Bike Lane. The proposed project will provide sufficient rights-of-way to accommodate these facilities. However, the Class I Bike Lane west of Palomar Road would be installed by others in the future, since it was determined by the Community Services Department to be located on the south side of Menifee Road. The project would increase pedestrian access on Palomar Road with the implementation of sidewalk on Palomar Road and Matthews Road and the previously mentioned bike lanes/routes.

Construction work would consist on onsite and offsite improvements, However, Palomar Road and Matthews Road are not anticipated to be impacted from construction activities. Construction work in the street associated with the project would be limited to minor roadway improvements that will be limited to nominal potential traffic diversion. A traffic control plan, which is a standard condition of approval, will be required to be submitted and approved by the Engineering and Public Works Department and will limit circulation impacts during project construction.

With adherence to any relevant circulation regulations, the Project would have a less than significant impact on circulation policies.

Impacts XVII.b): **Less Than Significant Impact**. CEQA Guidelines Section 15064.3 contains several subdivisions. In brief, these Guidelines provide that transportation impacts of projects are, in general, best measured by evaluating the project's vehicle miles traveled (VMT). Methodologies for evaluating such impacts are already in use for most land use projects, as well as many transit and active transportation projects. Methods for evaluating VMT for roadway capacity projects continue to evolve, however, and so these Guidelines recognize a lead agency's discretion to analyze such projects, provided such analysis is consistent with CEQA and applicable planning requirements.

Section 15064.3(b) Criteria for Analyzing Transportation Impacts states the following:

(2) Land Use Projects. Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high-quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact.

The Project is immediately adjacent to an existing transit (bus) stop along an existing high-quality transit corridor; however, because the project would not create any new jobs and no new employees are anticipated, the close proximity to the transit stop located on the corner of Menifee Road and Highway 74 would not make a difference to the overall project impact related to traffic. Additionally, as discussed above in Impact XVII a), a trip generation assessment was prepared for the proposed project in 2017 which found no significant impact from project implementation due to traffic. The project would generate a nominal increase in traffic and is not anticipated to exceed adopted thresholds for LOS. As such, less than significant impacts would occur.

Impact XVII.c): **No Impact.** The proposed project does not include the use of any incompatible vehicles or equipment on site, such as farm equipment. The project would not provide any offsite roadway improvements that could substantially increase hazards due to a design feature. The project would be compatible with the surrounding uses. All on-site and site-adjacent improvements would be constructed as approved by the City of Menifee Engineering/Public Works Department. Sight distance at project access points would comply with applicable City of Menifee sight distance standards. Therefore, no impact would occur in this regard and no mitigation is required.

Impact XVII.d): **Less Than Significant Impact.** The Project provides one 30-foot driveway/fire access road on Palomar Road. Project design features and ingress and egress are developed to comply with all relevant emergency regulations. Additionally, construction of the proposed Project is not expected to require road closures or otherwise adversely affect emergency access around the site perimeter.

As a standard practice, if road closures (complete or partial) were necessary, the Police and Fire Departments would be notified of the construction schedule and any required detours would allow emergency vehicles to use alternate routes for emergency response. The impact on emergency access would be less than significant.

XVIII. TRIBAL & CULTURAL RESOURCES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project cause a substantial adverse change in in Public Resources Code section 21074 as either a geographically defined in terms of the size and scope of value to a Cultural Native American tribe, and that is:	a site, featur	e, place, cultu	ıral landscap	e that is
a) Listed or eligible for listing in the California Register of Historical resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or			X	
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.			X	

Sources: Menifee General Plan; MGP Draft EIR; Riverside County Land Information System.

Applicable General Plan Policies:

Goal OSC-5: Archaeological, historical, and cultural resources that are protected and integrated into the City's built environment.

Policy OSC-5.1: Preserve and protect significant archeological, historic, and cultural sites, places, districts, structures, landforms, objects and native burial sites, and other features, such as Ringing Rock and Grandmother Oak, consistent with state law.

Policy OSC-5.2: Work with local schools, organizations, the Pechanga Band of Luiseño Indians, Soboba Band of Luiseño Indians, and other agencies to educate the public about the rich archeological, historic, and cultural resources found in the City.

Policy OSC-5.3: Preserve sacred sites identified by the Pechanga Band of Luiseno Indians and Soboba Band of Luiseno Indians, such as tribal burial grounds, by avoiding activities that would negatively impact the sites.

Policy OSC-5.4: Enhance local interest, pride, and sense of place for City residents by making locally recovered artifacts more easily accessible to students, researchers, and the interested public.

Policy OSC-5.5: Establish clear and responsible practices to identify, evaluate, and protect previously unknown archeological, historic, and cultural sites, following CEQA and NEPA procedure.

Policy OSC-5.6: Maintain active communication and coordination with the Pechanga Band of Luiseño Indians and Soboba Band of Luiseño Indians.

Analysis of Project Effect and Determination of Significance:

Impact XVIII.a-b): **Less Than Significant Impact**. The project is not proposing grading at the storage area (west side of Palomar Road). The project is only minimally smoothing out areas for the Fire access lane. And on the east side of Palomar Road is an existing developed site. Minimal amount of earth moving will occur for the total project. Because the project is not proposing grading or significant excavation activities, it is not anticipated that the project would impact tribal or cultural resources.

In addition, as previously mentioned in Section V.b above, Standard Conditions (SC)-CUL-1 through SC-CUL-4 shall be implemented to reduce potentially significant impacts to previously undiscovered archaeological resources that may be accidentally encountered during Project implementation to a less than significant level. SC-CUL-1 requires that in the unlikely event that human remains are uncovered the contractor is required to halt work in the immediate area of the find and to notify the County Coroner, in accordance with Health and Safety Code § 7050.5, who must then determine whether the remains are of forensic interest. If the Coroner, with the aid of a supervising archaeologist, determines that the remains are or appear to be of a Native American, he/she must contact the Native American Heritage Commission for further investigations and proper recovery of such remains, if necessary. SC-CUL-2 requires non-disclosure of Native American human remains. SC-CUL-3 pertains to procedures required due to any inadvertent finds during ground disturbance activities. SC-CUL-4 pertains to procedures for final disposition of inadvertent discoveries requires that the archaeological monitor prepare a final report at the conclusion of archaeological monitoring.

Based on the City's prior experience with and written request from potentially interested Tribes, AB 52 Notices were sent to the following four (4) Tribes on October 2, 2018

- Agua Caliente Band of Cahuilla Indians;
- Pechanga Band of Luiseño Mission Indians;
- · Rincon Band of Luiseño Indians; and
- Soboba Band of Luiseño Indians.

A response was received from the Soboba Band of Luiseño Mission Indians dated November 28, 2018, requesting formal consultation. No other tribes requested consultation. The City met with the Soboba Band on April 18, 2019 to discuss the project. The City conducted follow-up correspondence with Soboba Bands on April 18, 2019 and then met again with the Soboba Band on July 23, 2019.

Based on these meetings, standard conditions of approval SC-CUL-1 through SC-CUL-4 were added (see Cultural Resources discussion, above). No tribal monitoring was included per the Soboba Band. At the July 23, 2019, the Soboba Band representative stated that with inclusion of these standard conditions the AB 52 consultation could be concluded.

Following compliance with the standard conditions specified above, the project's potential impacts concerning the significance of an archaeological and tribal resource would be less than significant.

XIX. UTILITIES AND SERVICE SYSTEMS Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			\boxtimes	
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?			X	
c) Result in a determination by the wastewater treatment			X	

provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?		X	
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?		X	

<u>Sources</u>: Menifee General Plan; MGP Draft EIR; Menifee Municipal Code; EMWD 2015 UWMP, and CalRecycle.

Applicable General Plan Policies:

Goal LU-3: A full range of public utilities and related services that provide for the immediate and long-term needs of the community.

Policy LU-3.1: Work with utility providers in the planning, designing, and siting of distribution and support facilities to comply with the standards of the General Plan and Development Code.

Policy LU-3.2: Work with utility providers to increase service capacity as demand increases.

Policy LU-3.3: Coordinate public infrastructure improvements through the City's Capital Improvement Program.

Policy LU-3.4: Require that approval of new development be contingent upon the project's ability to secure appropriate infrastructure services.

Policy LU-3.5: Facilitate the shared use of right-of-way, transmission corridors, and other appropriate measures to minimize the visual impact of utilities infrastructure throughout Menifee.

Goal OSC-7: A reliable and safe water supply that effectively meets current and future user demands.

Policy OSC-7.2: Encourage water conservation as a means of preserving water resources.

Policy OSC-7.4: Encourage the use of reclaimed water for the irrigation of parks, golf courses, public landscaped areas, and other feasible applications as service becomes available from the Eastern Municipal Water District.

Policy OSC-7.5: Utilize a wastewater collection, treatment, and disposal system that adequately serves the existing and long-term needs of the community.

Policy OSC-7.7: Maintain and improve existing level of sewer service by improving infrastructure and repairing existing deficiencies.

Analysis of Project Effect and Determination of Significance:

Impact XIX.a Less Than Significant Impacts. The proposed project would not affect Regional Water Quality Control Board (RWQCB) treatment standards, because it would not increase wastewater production such that expansion of existing facilities or construction of new facilities would be required. The project would not require the relocation or construction of new or expanded water, wastewater treatment, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. However, the project would implement storm water drainage (sewer) along Palomar Road and Matthews Road.

Anticipated utilities to be used onsite would be power (SoCal Edison), gas (Southern California Gas Company), water (Eastern Municipal Water District), and sewer (Eastern Municipal Water District). The

undergrounding of these utilities would not create or result in significant environmental effects. A less than significant impact would occur.

Impact XIX.b) Less Than Significant Impact. The Eastern Municipal Water District (EMWD) provides water service to the City of Menifee. EMWD has four sources of water supply: imported water from the Metropolitan Water District of Southern California (MWD), local groundwater, desalinated groundwater, and recycled water. State Water Code § 10910-10915 require the preparation of a Water Supply Assessment (WSA) demonstrating sufficient water supplies for any subdivision that involves the construction of more than 500 dwelling units, or the equivalent thereof. As the project is below the established thresholds, no WSA is required.

Under "normal year," "single dry year," and "multiple dry year" scenarios presented in the 2015 EMWD Urban Water Management Plan, supply would meet demand under the normal year, single dry year, and multiple dry year scenarios per Eastern Municipal Water District's 2015 Urban Water Management Plan. EMWD is able to respond to supply shortages through implementation of its Water Shortage Contingency Plan (WSCP) and MWD's Water Supply Allocation Plan (WSAP).

The project includes a new building and addition to an existing building for the storage and manufacture of concrete products (which are currently produced onsite, as well as additional outdoor storage area. Less than significant additional water usage is anticipated. Impacts would be less than significant.

Impact XIX.c) **Less Than Significant Impact.** Refer to Impact XIX.b). The project would not require the use of waste water treatment facilities. A less than significant impact would occur.

Impact XIX.d-e) **Less Than Significant Impact.** The proposed project would not generate solid waste either from construction or demolition activities. The project would be used for storage and manufacturing purposes for products currently developed onsite. The project would not conflict with federal, state, and local management regulations. A less than significant impact would occur.

XX. WILDFIRE-If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?			X	
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire?		0	\boxtimes	
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel, breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts the environment?	0	0	\boxtimes	
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			X	

<u>Sources</u>: Menifee General Plan, Exhibit S-6, "High Fire Hazard Areas," and Exhibit S-7, "Critical Facilities;" MGP Draft EIR; California Department of Forestry and Fire Protection (CAL FIRE) Website - Riverside County City Fire Hazard Severity Zone Maps.

Applicable General Plan Policies:

Policy S-5.2: Ensure that the fire department can continue to respond safely and effectively to a hazardous materials incident in the City, whether it is a spill at a permitted facility, or the result of an accident along a section of the freeway or railroads that extend across the City.

Policy S-5.5: Require facilities that handle hazardous materials to implement mitigation measures that reduce the risks associated with hazardous material production, storage, and disposal.

Goal S-6: A City that responds and recovers in an effective and timely manner from natural disasters such as flooding, fire, and earthquakes, and as a result is not impacted by civil unrest that may occur following a natural disaster.

Policy S-6.1: Continuously review, update, and implement emergency preparedness, response, and recovery plans that make the best use of the City- and county-specific emergency management resources available.

Analysis of Project Effect and Determination of Significance:

Impacts XX.a-b: Less Than Significant Impact. See Response IX.g

Impact XX.c: **Less Than Significant Impact.** The project includes standard infrastructure, including fire access roadway, utilities, and fire suppression systems. All of this infrastructure is designed to reduce the risk of fire. Following compliance with the established local and state regulatory framework discussed above, the project would not expose people or structures to a significant risk involving wildland fires and impacts would be less than significant in this regard.

Impact XX.d: **Less Than Significant Impact.** Due to the relatively flat nature of the property, and lack of evidence of existing landslides or slope instability, the potential for slope failure and landslides is negligible. Grading for site development would not be required. Site preparation would be limited to the smoothing of the fire access road. As such, impacts would be less than significant in this regard.

Mitigation Measures: No mitigation is required.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?		X		

Findings of Fact: Less Than Significant Impact. As discussed throughout the analyses contained in this

Initial Study, the project does not have the potential to degrade the quality of the environment or result in significant impacts to the environment that cannot be reduced to less than significant following compliance with the established regulatory framework (i.e., local, state, and federal regulations), project conditions of approval, and the recommended mitigation measures.

As concluded in Section IV, the project would not reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal following compliance with the recommended mitigation measures.

The City hereby finds that impacts concerning degradation of the environment and biological and cultural resources would be less than significant.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	\boxtimes	

<u>Findings of Fact</u>: **Less Than Significant Impact.** The proposed project would result in significant impacts unless mitigated for the following environmental issues: biological resources. A Mitigation Monitoring Program has been prepared to reduce impacts to less than significant. City conditions of approval would also be imposed upon the project. Other development projects within the City would also be subject to these requirements, as appropriate

All other project impacts were determined either to have no impact or to be less than significant following compliance with the established regulatory framework and with standard conditions of approval, without the need for mitigation. Cumulatively, the proposed project would not result in any significant impacts that would substantially combine with impacts of other current or probable future impacts. Therefore, the proposed project, in conjunction with other future projects, would not result in any cumulatively considerable impacts and no mitigation is required.

Therefore, the City hereby finds that the project's contribution to cumulative impacts would be less than significant.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?		X	
---	--	---	--

<u>Findings of Fact</u>: **Less Than Significant Impact.** Based on the analysis of the project's impacts in the responses to items I thru XX above, there is no indication that the project would result in substantial adverse effects on human beings. The analysis herein concludes that direct and indirect environmental effects would not require mitigation to reduce impacts to less than significant. Generally, the project's environmental effects would be less than significant. Based on the analysis in this Initial Study, the City finds that direct and indirect impacts to human beings would be less than significant.

XVIII. EARLIER ANALYSES

Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration as per California Code of Regulations, Section 15063(c)(3)(D).

Senior Reviewer / Environmental Professional

1.2 Findings and Conclusions Summary

ATC Group Services LLC (ATC) has performed this Phase I Environmental Site Assessment (ESA) of the property in conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property.

		FINDINGS	AND CONCL	USIONS S	SUMMARY		
	Report Section	Further Action?	De minimis Condition	REC and/or CREC	Historical REC	ASTM Non-Scope Condition	Description
4.0	User Provided Information	No					
5.1.1	Federal Database Findings	No					
5.1.2	State and Tribal Database Findings	No					
5.1.3	Local Environmental Record Sources	No					
5.3	Historical Records Sources	No					See Note 1
6.2	Hazardous Substance Use, Storage and Disposal	No					
6.3	Underground Storage Tanks	No					
6.4	Aboveground Storage Tanks	No					
6.5	Other Petroleum Products	No					
6.6	Polychlorinated Biphenyls (PCBs)	No					
6.7	Unidentified Substance Containers	No					
6.8	Nonhazardous Solid Waste	No					
6.9	Wastewater	No					
6.10	Waste Pits, Ponds and Lagoons	No					
6.11	Sumps	No					
6.12	Septic Systems	No					
6.13	Stormwater Management System	No					
6.14	Wells	No					
7.0	Subsurface Vapor Migration	No					
8.0	Interviews	No					
9.1	Asbestos-Containing Material (ACM)	No					
9.2	Radon	No					
9.3	Lead in Drinking Water	No					
9.4	Lead-Based Paint (LBP)	No					
9.5	Mold Screening	No					
9.6	Additional User Requested Services	No					

Note 1: Based on the review of historical information, the property was utilized for agricultural purposes from at least 1938 until as recently as 1985. It is possible that pesticides and/or herbicides were historically applied to surficial or near surface soil during the agricultural use of the property. The potential presence of relatively low concentrations of residual pesticides and/or herbicides is not expected to adversely impact the future use or development of the property. However, in the event that the future development of the property is to include sensitive land uses such as a school or day care center, consideration should be given to collecting soil samples for analysis of residual pesticides or herbicides.

1.3 Significant Data Gap Summary

Data gaps may have been encountered during the performance of this Phase I ESA and are discussed within the section of the report where they were encountered. However, according to ASTM Standard Practice E1527-13, data gaps are only significant if "other information and/or professional experience raise reasonable concerns involving the data gap." The following is a summary of *significant data gaps* identified in this report.

	SIGNIFICANT DATA GAP SUMMARY				
	Report Section	Description			
3.5	Current Uses of Adjoining Properties	No significant data gap identified.			
4.2	Environmental Liens or Activity and Use Limitations (AULs)	No significant data gap identified.			
5.1	Standard Environmental Records	No significant data gap identified.			
5.2	Physical Setting Sources	No significant data gap identified.			
5.3	Historical Records Sources	No significant data gap identified.			
6.1	Methodology and Limiting Conditions	No significant data gap identified.			
7.0	Interviews	No significant data gap identified.			

1.4 Recommendations

Based on information collected from the Phase I ESA, ATC offers no recommendations for further action. However, given the historical use of the subject property for agricultural purposes, it is possible that pesticides and/or herbicides were historically applied to the surficial or near surface soil. The potential presence of relatively low concentrations of residual pesticides and/or herbicides is not expected to adversely impact the future use or development of the property. In the event that the future development of the subject property is to include sensitive land uses such as a school or day care center, consideration should be given to collecting soil samples for analysis of residual pesticides or herbicides.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify *recognized environmental conditions* in connection with the property at the time of the site reconnaissance. The scope of work for this Phase I ESA may also include certain potential environmental conditions beyond the scope of ASTM Standard Practice E1527-13 as listed below. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E1527-13, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E1527-13 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.
- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Observations and interviews regarding current property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.
- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on or at the property.
- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.
- Potential for subsurface vapor migration in, on or at the property as described in Section 7.0.

The scope of the assessment also included consideration of the following potential environmental issues or conditions that are beyond the scope of ASTM Standard Practice E1527-13:

- Radon document review, consisting of the review of published radon data with regard to the
 potential for elevated levels of radon gas in the surrounding area of the property. No radon
 sampling was conducted.
- Lead in drinking water data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the property meets the drinking water standards for lead.
- Wetlands document review, consisting of a review of a current National Wetlands Inventory map
 of the surrounding area to note if the property is identified as having a wetland.
- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the property is identified as being located within a flood plain.

2.3 Significant Assumption

The assumptions in this report were not considered as having significant impact on the determination of recognized environmental conditions associated with the property.

2.4 Limitations and Exceptions

ATC Group Services LLC has prepared this Phase I ESA report using reasonable efforts to identify recognized environmental conditions associated with hazardous substances or petroleum products in, on or at the property. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- Uncertainty Not Eliminated A Phase I ESA cannot completely eliminate uncertainty regarding the potential for recognized environmental conditions in connection with any property.
- Not Exhaustive A Phase I ESA is not an exhaustive investigation of the property and environmental conditions on such property.
- Past Uses of the Property Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of property at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E1527-13 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC (and not prepared by ATC/ATC Associates Inc.) and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior

reports provided to ATC (and not prepared by ATC/ATC Associates Inc.) and discussed in this Phase I ESA report.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not "certify" the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The statement is intended to document ATC's opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E1527-13 and the scope of work for this assessment.

Per ASTM Standard Practice E1527-13, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of recognized environmental conditions in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E1527-13, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard PracticE1527-13 and therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by Forterra Pipe & Precast LLC and third parties authorized in writing by Forterra Pipe & Precast LLC and ATC, including the lender(s) in

connection with a secured financing of the property, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of ATC, is at the sole risk and expense of such third party.

ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall not exceed the amounts recoverable from the insurance limits.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The property consists of an irregularly-shaped parcel, approximately 3.4 acres in area, located at the northwestern corner of Palomar Road and Matthews Road in Menifee, Riverside County, California. A Site Vicinity Map is provided in Appendix A and a Site Plan is located in Appendix B. A photograph log is provided in Appendix C. According to information obtained from the Riverside County Assessor's Office, the property is identified with Assessor's Parcel Number (APN) 331-190-046. The legal description is provided in the Lien and AUL report, a copy of which is included in Appendix L.

3.2 Surrounding Area General Characteristics

The area surrounding the property includes a combination of developed commercial properties and vacant, undeveloped land. A railroad right-of-way runs south of the property along Matthews Road. Specific adjacent property uses are discussed in Section 3.5.

3.3 Current Use of the Property

The property is an approximately 3.4-acre parcel and currently exists as an unimproved lot that appears to have been recently cleared of vegetation. An approximately 15' x 20' x 6' debris pile, consisting primarily of soil, shrubs, and minor quantities of trash, was observed at the northwestern corner of the property. A fire hydrant was located near the southwestern corner of the property. A second fire hydrant and telecommunications box was observed along the eastern property boundary and a large pipe labeled "backflow preventer" was observed along the southern property boundary. A chain-link fence encloses the property with an access gate located off Palomar Road.

3.4 Description of Property Improvements

The following table provides general descriptions of the property improvements.

PROPERTY IMPROVEMENTS			
Size of Property (approximate)	3.4-acre lot		
General Topography of Property	Slopes to the southwest		
Adjoining and/or Access/Egress Roads	Palomar Road and Matthews Road are located adjacent to		
	the east and south of the property, respectively.		
Paved or Concrete Areas (including parking)	None		
Unimproved Areas	Entire property		
Landscaped Areas	None		
Surface Water	None		
Potable Water Source	Eastern Municipal Water District (EMWD)		
Sanitary Sewer Utility	EMWD		
Storm Sewer Utility	Riverside County Flood Control District		
Electrical Utility	Southern California Edison (SCE)		
Natural Gas Utility	Southern California Gas		
Current Occupancy Status	Unoccupied		
Unoccupied Buildings/Spaces/Structures	None		
Number of Occupied Buildings	None		
Building Name or General Building	Not Applicable (N/A)		
Description			
Number of Floors	N/A		
Total Square Feet of Space (approximate)	N/A		
Construction Completion Date (year)	N/A		
Construction Type	N/A		

PROPERTY IMPROVEMENTS			
Interior Finishes Description	N/A		
Exterior Finishes Description	N/A		
Cooling System Type	N/A		
Heating System Type	N/A		
Emergency Power	N/A		

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as follows:

North- Adjacent to the north are commercial /office buildings occupied by Miller Jones Mortuary and Crematory/ West Coast Cremation (26245 Palomar Road), beyond which is

undeveloped land.

East- Adjacent to the east is Palomar Road, beyond which are a large commercial property

and associated storage yard occupied by Whited Cemetery Services (26250 Palomar Road) and another large commercial property and associated storage yard occupied by

Forterra (26380 Palomar Road).

Southeast- Adjacent to the southeast is the intersection of Matthews Road and Palomar Road,

beyond which are a railroad right-of-way and a commercial property that was formerly occupied by Decorative Concrete but currently appears vacant (26240 Palomar Road).

South- Adjacent to the south is Matthews Road, beyond which are a railroad right-of-way and

undeveloped land.

Southwest- Adjacent to the southwest is Matthews Road, beyond which are a railroad right-of-way

and undeveloped land.

West - Adjacent to the west is a commercial warehouse/office building occupied by Block

Graphics (28401 Matthews Road), beyond which is undeveloped land.

Please refer to Sections 5.1.1 and 5.1.2 for information regarding the listing of the adjacent properties on the federal and/or state and local agency databases researched.

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by Forterra Pipe & Precast LLC (User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

The User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

The User provided no information regarding property environmental liens or activity and use limitations (AULs). ATC contracted Environmental Data Resources, Inc. (EDR) to perform an environmental lien search for the property. According to the lien search report, no environmental liens or AULs (such as engineering controls, land use restrictions or institutional controls) were identified for the property. The grant deed included in the lien search report identifies Romoland Investors LP as the current owner. The review of the environmental lien and AUL search did not identify past uses indicating *recognized environmental conditions* in connection with the property.

4.3 Specialized Knowledge or Experience of the User

The User provided no specialized knowledge regarding *recognized environmental conditions* associated with the property.

4.4 Significant Valuation Reduction for Environmental Issues

The User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.5 Owner, Property Manager and Occupant Information

The User provided no information regarding an owner or property manager. The property was identified as unimproved/unoccupied.

4.6 Reason for Performing Phase I ESA

According to information provided by the User, this Phase I ESA will be used in connection with a commercial real estate transaction to identify *recognized environmental conditions* associated with the property.

4.7 Other User Provided Documents

The User provided no other documents as described in the ASTM Standard Practice E 1527-13.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR of Shelton, Connecticut, was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for recognized environmental condition (REC), controlled recognized environmental condition (CREC), historical recognized environmental condition (HREC) or de minimis condition determinations without conducting supplemental agency file reviews. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property, based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as being within the approximate minimum search distance from the property, based on the site reconnaissance and/or cross-referencing to mapped listings is included in the discussion within this section. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

SUMMARY OF FEDERAL, STATE	AND TRIBAL DATABASE	FINDINGS	
Regulatory Database	Approx. Minimum Search Distance	Property Listed?	# Sites Listed
Federal National Priority List (NPL)	1 mile	No	0
Federal Delisted NPL	½ mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list	½ mile	No	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	½ mile	No	0
Federal Resource Conservation and Recovery Act (RCRA) Corrective Action facilities (CORRACTS)	1 mile	No	0
Federal RCRIS non- CORRACTS Treatment, Storage, and Disposal Facilities (TSDF)	½ mile	No	0
Federal RCRA Generators (Including RCRA NonGen / NLR)	Property & Adjoining	No	1
Federal Institutional Control/Engineering Control Registry	Property	No	0
Federal Emergency Response Notification System (ERNS) list	Property	No	0
State and Tribal NPL (RESPONSE)	1 mile	No	0
State and Tribal CERCLIS (ENVIROSTOR)	½ mile	No	1
State and Tribal Landfill or Solid Waste Disposal Sites	½ mile	No	2
State and Tribal Leaking Underground Storage Tanks (LUST)	½ mile	No	0
California Spills, Leaks, and Incident Clean-Ups (CA SLIC)	½ mile	No	0
State and Tribal Registered Aboveground Storage Tanks (AST)	Property & Adjoining	No	0
State and Tribal Registered Underground Storage Tanks (UST)	Property & Adjoining	No	0
Historical UST (HIST UST) list	Property & Adjoining	No	0
California Facility Inventory Database (CA FID UST)	Property & Adjoining	No	0
Statewide Environmental Évaluation and Planning System (SWEEPS UST)	Property & Adjoining	No	0

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS					
Regulatory Database	Approx. Minimum Search Distance	Property Listed?	# Sites Listed

Hist Cleaners	½ mile	No	0		

5.1.1 Federal Agency Database Findings

The property was not identified on the federal databases reviewed for this assessment. However, listings with a known or significant potential for release and impact on the property were identified in the federal agency databases searched, as follows. The facilities are also listed on state databases, which will be discussed herein and not repeated within Section 5.1.2.

Block Graphics 28401 Matthews Road Romoland, California 92585

Databases: RCRA-SQG, HAZNET, FINDS, ECHO

Approximate Distance from the Property: Adjacent to the west

Assumed Groundwater Gradient: Downgradient

Regulatory Data Summary: Block Graphics was identified as a Resource Conservation and Recovery Act small-quantity generator (RCRA-SQG) since 2000. According to the database report, this site is defined as a handler, generating more than 100 and less than 1,000 kilograms (kg) of hazardous waste during any calendar month and accumulates less than 6,000 kg of hazardous waste at any time or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1,000 kg of hazardous waste at any time. The types of generated waste were identified as ignitable hazardous waste, off-specification, aged or surplus inorganics, and photo chemicals/photo processing waste. According to a summary of the handler activities, no violations were found. The facility's listing on the FINDS database is likely for its identification as a RCRA facility. The Environmental Compliance History Online (ECHO) website tracks compliance issues for listed facilities for the last three years. No violations were reported during that interval.

Discussion: Based on the lack of reported violations/ releases, this listing is not considered to represent an environmental concern to the property.

Matthews International Corp.

28261 Highway 74

Romoland, California 92585

Databases: RCRA-SQG, HAZNET, FINDS, ECHO, EMI

Approximate Distance from the Property: Approximately 1,500 feet to the northwest

Assumed Groundwater Gradient: Downgradient

Regulatory Data Summary: Matthews International Corp. was identified as a RCRA-SQG since 1986. According to the database report, this site is defined as a handler, generating more than 100 and less than 1,000 kg of hazardous waste during any calendar month and accumulates less than 6,000 kg of hazardous waste at any time or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1,000 kg of hazardous waste at any time. The types of generated waste were identified as contaminated soil from site clean-up, oxygenated solvents, aqueous solution with total organic residues less than 10 percent, and other inorganic solid waste. According to a summary of the handler activities, no violations were found. The

facility's listing on the FINDS database is likely for its identification as an EMI facility, which is an estimate of air pollution emissions in a given area. Air emissions were reported to the South Coast Air Quality Management District (SCAQMD) for the years 1990, 1995, and 1997-2001. The ECHO website tracks compliance issues for listed facilities for the last three years; however, no information was reported during that interval. The last RCRA inspection was conducted on June 24, 2003 and no violations were issued. The reference to the contaminated soil indicated that 7.58 tons were disposed of at a disposal landfill in 2006. No other details were provided and the facility was not identified on any database indicating that a release had occurred.

Discussion: Based on the lack of reported violations/ releases, distance, and presumed hydrological gradient, this listing is not considered to represent an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the federal agency databases are considered to represent a likely past, present or material threat of release in, on, or at the property. Given the physical setting characteristics of the property and surrounding area supplemental agency file reviews were not warranted to verify the database report information.

5.1.2 State and Tribal Database Findings

The property was not identified on the state and tribal databases searched by EDR. However, listings with a known or significant potential for release and impact on the property were identified in the state and tribal agency databases searched, as follows.

Orco Block Company Romoland 26380 Palomar Road Romoland, California 92585

Databases: AST

Approximate Distance from the Property: Adjacent to the east, beyond Palomar Road

Assumed Groundwater Gradient: Upgradient

Regulatory Data Summary: Orco Block Company Romoland was identified as an AST facility.

No details regarding the capacity or contents of the AST(s) were provided.

Discussion: Based on the lack of reported violations/ releases, this listing is not considered to represent an environmental concern to the property.

Sannipoli Corporations 26250 Palomar Road Romoland, California 92585

Databases: AST

Approximate Distance from the Property: Adjacent to the east, beyond Palomar Road

Assumed Groundwater Gradient: Upgradient

Regulatory Data Summary: Sannipoli Corporations was identified as an AST facility. No details regarding the capacity or contents of the AST(s) were provided.

Discussion: Based on the lack of reported violations/ releases, this listing is not considered to represent an environmental concern to the property.

B.P. John Recycling Inc. 28700 Matthews Road Romoland, California 92585 **Databases**: SWF/LF, LDS

Approximate Distance from the Property: Approximately 1,400 feet to the southeast, beyond

Palomar Road

Assumed Groundwater Gradient: Upgradient

Regulatory Data Summary: B.P. John Recycling Inc. was identified as an active, 6.2-acre composting facility that accepts green materials and wood waste. The facility was also listed as a land disposal site on GeoTracker. According to GeoTracker, the facility was formerly a municipal solid waste landfill and has a closed case status as of January 1965. The facility is no longer regulated by the Regional Water Quality Control Board (RWQCB), pending the adoption of a general conditional waiver for composting operations.

Discussion: Based on the lack of reported violations/ releases and type of waste accepted, this listing is not considered to represent an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state or tribal agency databases are considered to represent a likely past, present or material threat of release in, on, or at the property. Given the physical setting characteristics of the property and surrounding area supplemental agency file reviews were not warranted to verify the database report information.

5.1.3 Local Environmental Records Sources

Riverside County Department of Environmental Health (RCDEH)

ATC requested a search of available records pertaining to USTs, hazardous materials use and hazardous waste generation at the property from the RCDEH. According to a response from the RCDEH, there are no records for the property.

California Department of Toxic Substances Control (DTSC)

According to the DTSC EnviroStor website, http://www.envirostor.dtsc.ca.gov/public, the DTSC has no records pertaining to the property.

Regional Water Quality Control Board (RWQCB)

According to the RWQCB GeoTracker website, http://geotracker.waterboards.ca.gov, no LUST or SLIC cases are located on the property.

South Coast Air Quality Management District (SCAQMD)

ATC researched Permits to Operate (P/O), Facility Equipment List Reports (EQL), Notices to Comply (NTCs), and Notices of Violations (NOVs) pertaining to the property using the South Coast Air Quality Management District's (SCAQMD) on-line Facility Information Detail (FIND) database. No records were found for the property.

Zoning Information

According to a City of Menifee Land Use map, dated April 2018, the property is currently zoned as M-M (i.e., Manufacturing-Medium), with a land use designation of BP (Business Park). A copy of the Land Use map is included in Appendix L.

Sewer and Water Utility

According to a representative with the EMWD, there is no account connected to the property address, likely because there are currently no water and sewer services at the property. Based on service area maps reviewed on the EMWD website, https://www.emwd.org/home, the EMWD is the agency responsible for providing the services if and when they are requested.

ATC reviewed the 2017 Consumer Confidence/ Water Quality Report for the EMWD. No water quality issues, including those associated with lead, were reported for the supplied water to the property. A copy of the water quality report is included in Appendix L. *Electrical Utility Company*

There is currently no electrical service at the property. However, SCE is the agency responsible for providing service if and when it is requested.

Gas Utility Company

There is currently no natural gas service at the property. However, Southern California Gas Company is the agency responsible for provided service if and when it is requested.

5.2 Physical Setting Sources

5.2.1 Topography

The property is located on the United States Geological Survey (USGS) 7.5-Minute Series Topographic Map, Romoland, California Quadrangle, dated 1979. Based on ATC's review of this topographic map, the property is located at an elevation of approximately 1,458 feet above mean sea level (MSL). The topography of the property and surrounding area is generally flat and slopes gently to the southwest. A copy of the topographic map is included in Appendix A.

5.2.2 Geology

According to the EDR Radius Map Report, the stratigraphic units underlying the property are Mesozoic era, Cretaceous system, and Cretaceous granitic rock series in a plutonic and intrusive rock sequence. EDR obtains its geologic age and stratigraphic unit information from P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale, USGS Digital Data Series DDS - 11 (1994).

5.2.3 Soils

Soil survey maps for the area of the property were not readily available for review. Therefore, ATC reviewed information provided in the EDR database report. According to EDR, the soils at the property belong to the Exeter component. Exeter soils consists of sandy loam soil texture with slow infiltration rates and are well drained. This component does not meet the classification requirements to be considered a hydric soil.

5.2.4 Hydrology

ATC conducted an online search using the State of California Department of Water Resources Groundwater Information Center Interactive Map Application. According to the search, a well is located approximately 3,600 feet south of the property. Depth to groundwater was last measured in this well on March 7, 2018 at a depth of 48.1 feet below ground surface (bgs). The general groundwater flow direction was not noted for this well. According to an EMWD map of approximate direction of groundwater flow, the groundwater flow for the property area is expected to be to the northwest. Therefore, in assessing potential external environmental impact, properties located directly southeast of the property are of primary environmental concern due to their inferred upgradient location. Actual depth to groundwater and groundwater flow direction can only be accurately determined through installation of groundwater monitoring wells, which was beyond the scope of work for this project. Estimated groundwater levels and/or flow direction(s) may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations.

5.2.5 Other Physical Setting Sources

Flood Plain Map

According to information provided by the Federal Emergency Management Agency (FEMA) website, http://www.fema.gov, the property is located in both Flood Zones A and X. Zone A is the flood insurance rate zone that corresponds to the 100-year floodplains and Zone X is defined as areas of minimal to moderate flood hazard. The Community/Panel Number for the Flood Insurance Rate Map (FIRM) for the property is 06065C2060H and the effective date is August 18, 2014. A copy of the flood plain map is included in Appendix L.

Wetlands Map

According to information obtained from the United States Fish & Wildlife Service (USFWS) National Wetland Inventory (NWI) database, http://www.fws.gov/wetlands/Data/Mapper.html, no designated wetlands are depicted on the property. Based on visual observations during the site reconnaissance, no evidence of a natural wetlands area was observed. A copy of the web-generated map is included in Appendix L.

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical property and surrounding area uses.

	HISTORICAL USE SUMMARY				
Daviad	Period Identified Historical Uses		Course(s)	Intervals/Comments	
Period	Property Surrounding Area		Source(s)	intervals/Comments	
Prior to 1940	Undeveloped Agricultural	Undeveloped Agricultural	Topographic Maps Aerial Photographs	The earliest record identified is a 1901 topographic map, which depicts the property as undeveloped. Data gaps exist for the period between 1902 and 1937. The property was depicted as agricultural land in the 1938 aerial photograph. No concerns identified.	
1940 - 1960	Agricultural	Undeveloped Agricultural	Topographic Maps Aerial Photographs	Data gap for the period from 1954 to 1960. No use change across gap. No concerns identified.	
1961 - 1980	Undeveloped Agricultural Agricultural Commercial	Agricultural	Topographic Maps Aerial Photographs	No data gaps or concerns identified.	
1981 - 2000	Agricultural Undeveloped	Undeveloped Agricultural Commercial	Topographic Maps Aerial Photographs City Directories	No data gaps or concerns identified. The property is depicted as vacant land from at least 1989.	

HISTORICAL USE SUMMARY					
Period	Identified H	listorical Uses	Source(s)	Intervals/Comments	
Periou	Property	Surrounding Area	Source(s)	intervals/Comments	
2001 - present	Undeveloped	Undeveloped Agricultural Commercial	Topographic Maps Aerial Photographs City Directories Assessor's Records	No data gaps or concerns identified.	

Based on the review of historical information, the property was used for agricultural purposes from at least 1938 until 1985. During the agricultural use of the property, it is possible that pesticides and/or herbicides were historically applied to the surficial or near surface soil. The potential presence of relatively low concentrations of residual pesticides and/or herbicides is not expected to adversely impact the future use or development of the property. However, in the event that the future development of the property is to include sensitive land uses such as a school or day care center, consideration should be given to collecting soil samples for analysis of residual pesticides or herbicides.

5.3.1 Aerial Photographs

ATC reviewed available aerial photographs of the property and surrounding areas from EDR. Aerial photographs depicting the property and surrounding area were available for the period between 1938 and 2016. The following are descriptions and interpretations from the aerial photograph review.

AERIAL PHOTOGRAPH SUMMARY			
Year	Scale	Comments	
1938	1 inch = 500 feet	Property: The property is agricultural land. Surrounding Area: To the north, south, and west is agricultural land and to the east and southeast is a dense area of trees. Two roads (currently Palomar Road and Matthews Road) are depicted adjacent to the east and south, respectively.	
1949, 1953, and 1961	1 inch = 500 feet	Property: The property is agricultural land. Surrounding Area: The surrounding areas appear the same as in the 1938 aerial photograph, with the exception of the east-adjacent site which is depicted as agricultural land. A riverbed appears to flow toward the southeastern corner of the property.	
1967 and 1978	1 inch = 500 feet	Property: The property is agricultural land. Surrounding Area: The surrounding areas appear the same as in the 1949, 1953, and 1961 aerial photographs. Sparse commercial buildings are depicted further to the northeast and northwest.	
1985	1 inch = 500 feet	Property: The property is agricultural land. Surrounding Area: The surrounding areas appear the same as in the 1967 and 1978 aerial photographs. Sparse commercial buildings are depicted further to the north, northeast, and northwest.	
1989	1 inch = 500 feet	Property: The property is undeveloped/graded land. Surrounding Area: The areas to the north, south, and west are undeveloped/graded land. The areas to the east are developed with commercial properties with large graded yards.	
1997	1 inch = 500 feet	Property: The property is undeveloped/graded land. Surrounding Area: The areas to the north and south are undeveloped/graded land. The areas to the east, southeast, and west appear the same as currently developed.	
2002, 2006, and 2009	1 inch = 500 feet	Property: The property is undeveloped/graded land. It should be noted that in the 2006 aerial photograph, the outline of a rectangular structure, possibly a foundation, is depicted in the center of the property. Surrounding Area: The areas to the east, southeast, south, and west appear the same as currently developed. A commercial building is depicted to the north.	

AERIAL PHOTOGRAPH SUMMARY			
Year Scale Comments			
2012 and 2016	1 inch = 500 feet	Property: The property is undeveloped/graded land. Surrounding Area: The surrounding areas appear the same as currently developed.	

The review of aerial photographs depicted agricultural land on the property and surrounding area from at least 1938 to 1985. Although it is possible that pesticides and/or herbicides were historically applied to the surficial or near surface soil, the potential presence of relatively low concentrations of residual pesticides and/or herbicides is not expected to adversely impact the future use or development of the property. Reproducible copies of the aerial photographs are included in Appendix F.

5.3.2 Fire Insurance Maps

A search for fire insurance maps for the property and surrounding area was conducted by EDR. According to EDR, no such maps depicting the property or immediately surrounding area were available. A copy of the "unmapped property" report is included in Appendix G.

5.3.3 Property Tax Files

ATC attempted to review tax files on the Riverside County Assessor's Office website for historical ownership information pertaining to the property. However, ownership information was not readily available.

5.3.4 Recorded Land Title Records

The acquisition of recorded land title records was not required by the scope of work for the Phase I ESA.

5.3.5 Historical USGS Topographic Maps

ATC reviewed available historical USGS Topographic Quadrangles provided by EDR for information regarding past uses of the property. The topographic maps were dated 1901, 1942, 1943, 1947, 1953, 1973, 1979, and 2012. The 1901 topographic map depicts the property and surrounding areas as undeveloped land. A railroad right-of-way is depicted adjacent to the south. The 1942, 1943, and 1947 topographic maps resemble the 1901 topographic map with the addition of a paved road (currently Matthews Road) depicted to the east. The 1953, 1973, and 1979 topographic maps depict the property, and north, east, south, and west adjacent areas as undeveloped land. An agricultural area is depicted to the southeast, beyond Case Road (currently Matthews Road). No structures are depicted on the 2012 map. However, Palomar Road is identified to the east and Matthews Road is identified to the south.

The review of topographic maps depicted agricultural land at the southeast adjacent site from at least 1953 to 1979. It should be noted that the historical topographic maps did not identify agricultural land on the property. However, agricultural land was depicted on the aerial photographs review by ATC. Although it is possible that pesticides and/or herbicides were historically applied to the surficial or near surface soil, the potential presence of relatively low concentrations of residual pesticides and/or herbicides is not expected to adversely impact the future use or development of the property. Documentation is included in Appendix G.

5.3.6 City Directories

Research regarding the availability of historical city directories was conducted by EDR for the period between 1975 and 2014. However, listings for the general property area did not exist prior to 1985. The following are descriptions and interpretations from the historical city directory review. Documentation is included in Appendix G.

	CITY DIRECTORY SUMMARY			
Year	Comments			
1985	Property: Not listed. Surrounding Area: Palomar Road- 25300, 26430, 26600: Residences Matthews Road- No listings			
1992	Property: Not listed. Surrounding Area: Palomar Road- 26250: Sannipoli Corp., Sannipoli Tank Corporation; 26380: Orco Block Co.; 26420: Kenyon Construction Inc., Nottson Construction Inc. Matthews Road- No listings			
1995	Property: Not listed. Surrounding Area: Palomar Road- 26250: Sannipoli Corp.; 26420: Kenyon Construction Inc. Matthews Road- No listings			
2000	Property: Not listed. Surrounding Area: Palomar Road- 26245: Miller-Jones Technical Facility; 26380: Orco Block Co. Inc. Matthews Road- No listings			
2005	Property: Not listed. Surrounding Area: Palomar Road- 26035: Polar Beer Systems Inc.; 26245: Miller-Jones Technical Facility, West Coast Cremation; 26380: Orco Block Co. Inc.; 26420: Cabo Truss, JT Welding Co., Machinery Recycling Inc. Matthews Road- No listings			
2010	Property: Not listed. Surrounding Area: Palomar Road- 26035: Polar Beer Systems Inc.; 26245: JJ&J Enterprises LLC; Miller-Jones Technical Facility, West Coast Cremation; 26380: Orco Block Co. Inc.; 26420: Cabo Truss, JT Welding Co., Machinery Recycling Inc. Matthews Road- No listings			
2014	Property: Not listed. Surrounding Area: Palomar Road- 26035: Polar Beer Systems Inc.; 26245: Miller-Jones Mortuary Cremations, Miller Jones Mortuary, West Coast Cremation; 26380: Orco Block Co. Inc. Matthews Road- No listings			

The review of city directories did not identify specific past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area. Refer to Section 5.1.2 for details regarding the listing of the adjacent sites on the databases researched as part of this assessment.

5.3.7 Building Department Records

ATC visited the City of Menifee Building and Safety Department to review available historical building department records for information regarding past uses of the property. According to a search conducted by Ms. Paradise Winters, no permits were found for the property.

5.3.8 Zoning/Land Use Records

According to a City of Menifee Land Use map, dated April 2018, the property is currently zoned as M-M (i.e., Manufacturing, Medium), with a land use designation of BP (Business Park). No historical use information was available for the property. The review of current zoning/land use records did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area. A copy of the Land Use map is included in Appendix L.

5.3.9 Prior Reports

No prior reports were provided to ATC for review.

5.3.10 Other Historical Sources

No other historical sources were reviewed.

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the property on the day of the site visit. Photographs obtained during the site reconnaissance are provided in Appendix C.

6.1 Methodology and Limiting Conditions

Ms. Victoria Rojo, Staff Scientist with ATC, conducted the site reconnaissance on September 26, 2018 and was unescorted at the vacant property. The site reconnaissance consisted of visual and/or physical observations of: the property and improvements; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property. Unimproved portions of the property (if any) were observed along the perimeter and in a general grid pattern in safely accessible areas, if accessible and possible. No access limitations were encountered on the day of the site visit. The weather at the time of the site reconnaissance was sunny and warm and did not impact visibility or accessibility to the property for the purpose of the site reconnaissance.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC did not observe the use, storage or disposal of hazardous substances on the property.

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs on the property.

6.4 Aboveground Storage Tanks (ASTs)

ATC did not observe evidence of ASTs on the property.

6.5 Other Petroleum Products

No other petroleum products were observed.

6.6 Polychlorinated Biphenyls (PCBs)

ATC did not observed the presence of PCBs on the property.

6.7 Unidentified Substance Containers

ATC did not observe evidence of unidentified substance containers on the property.

6.8 Nonhazardous Solid Waste

An approximately 15' x 20' x 6' debris pile, consisting of mostly soil, shrubs, and small quantities of trash, was observed at the northwestern corner of the property. The observed debris is not considered to represent an environmental concern and will most likely be disposed of when the property is redeveloped.

6.9 Wastewater

ATC observed no evidence of wastewater generated, treated or discharged on the property or to adjoining properties.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe evidence of waste pits, ponds or lagoons in, on or at the property.

6.11 Drains and Sumps

ATC did not observe evidence of drains or sumps in, on or at the property.

6.12 Septic Systems

ATC did not observe evidence of a septic system in, on or at the property.

6.13 Stormwater Management System

Stormwater at the property is expected to percolate into the unimproved property lot or flow south toward Matthews Road. A catch basin was observed just south of the intersection of Palomar Road and Matthews Road. ATC did not observe any evidence of stained soil or pavement and stressed vegetation within or around the property.

6.14 Wells

ATC did not observe evidence of wells in, on or at the property.

7.0 SUBSURFACE VAPOR MIGRATION

ATC conducted a limited screening for potential vapor encroachment conditions (VECs) that may affect the property. The VEC screening focused on the current and historical usage of the Property and also utilized the aforementioned regulatory agency database report provided by EDR and an EDR Vapor Encroachment Screen (VES) Report to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons. To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, ATC utilized the approximate minimum search distance defined by ASTM E 2600-10 of 1,760 feet (1/3 mile) from the property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, ATC utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. The EDR VES report calculates the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology: (non-petroleum hydrocarbon COCs) 1,760 feet in the upgradient direction; 365 feet in the cross-gradient direction; and 100 feet in the downgradient direction and (petroleum hydrocarbon COCs) 528 feet in the upgradient direction; 165 feet in the cross-gradient direction if Light, Non-Aqueous Phase Liquid, (LNAPL i.e. floating product) is suspected; 95 feet in the cross-gradient direction if no LNAPL is suspected; 100 feet in the downgradient direction (LNAPL suspected); and 30 feet in the downgradient position (LNAPL not suspected).

The screening was further refined by evaluating the Critical Distance (CD) factor. The CD is the upper distance a vapor may migrate through soil in the vadose zone assuming the path of least resistance is directly from the closest boundary of the contaminated media (i.e., groundwater or soil) to the nearest property boundary. For non-petroleum hydrocarbon COCs, the CD is 100 feet. For LNAPL petroleum hydrocarbon COCs, the CD is also 100 feet. For dissolved petroleum hydrocarbon COCs, the CD is 30 feet.

ATC reviewed potential sources of COCs from the facilities reported on the EDR database report and VES report. No VECs were identified in relation to the property.

8.0 INTERVIEWS

ATC was unescorted during the site reconnaissance. As such, no interviews were conducted.

Not included in this listing are employees of city, county, or state government, who were contacted for the purpose of retrieving routine public information pertaining to the site, and who were not expected to possess first-hand knowledge regarding *recognized environmental conditions* at the property.

Pertinent information from the interviews is discussed in applicable sections of this repot with details (including failed attempts to interview) documented on Record of Communication forms / other correspondence in Appendix J.

9.0 OTHER ENVIRONMENTAL CONDITIONS

9.1 Asbestos-Containing Materials (ACM)

The property is undeveloped and is not improved with any site structures. Consequently, no building materials suspected of containing ACM were identified. ATC did not observe the presence of debris piles or other materials suspected to contain asbestos.

9.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

ATC's review of published radon data from EDR's Regulatory Database Report indicates that the property is located in EPA Zone 2, identified as an area of moderate propensity with regard to the potential for elevated levels of radon gas. According to EDR's Regulatory Database Report, of the six sites tested in the property's zip code, none of the sites tested returned a result over 4.0 pCi/L. Based on the available statistics and the absence of occupied property improvements, no additional radon investigations are recommended.

9.3 Lead in Drinking Water

There are currently no water and sewer services at the property. However, the EMWD is the agency responsible for providing the services if/when they are requested. ATC confirmed with the EMWD's 2017 Water Quality Report that the municipally supplied water meets or exceeds all drinking water standards, including those for lead. A copy of the Water Quality Report is included in Appendix L.

9.4 Lead-Based Paint (LBP)

The property is vacant and undeveloped. No suspect LBP was observed on the property at the time of the site visit.

9.5 Mold Screening

The property is vacant and undeveloped. ATC did not observe suspect mold at the property.

9.6 Additional User Requested Conditions

No additional User requested services were included in the scope of work for this ESA.

11.0 TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

material threat - a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional (EP), is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

de minimis condition – is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. An example might include a release of hazardous substances or petroleum products that could reasonably and foreseeably result in a concentration exceeding the applicable regulatory agency risk-based residential standards or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment. If an enforcement action would be less likely than not, then the condition is considered to be generally not likely the subject of an enforcement action. A condition determined to be de minimis is not a REC or controlled recognized environmental condition (CREC).

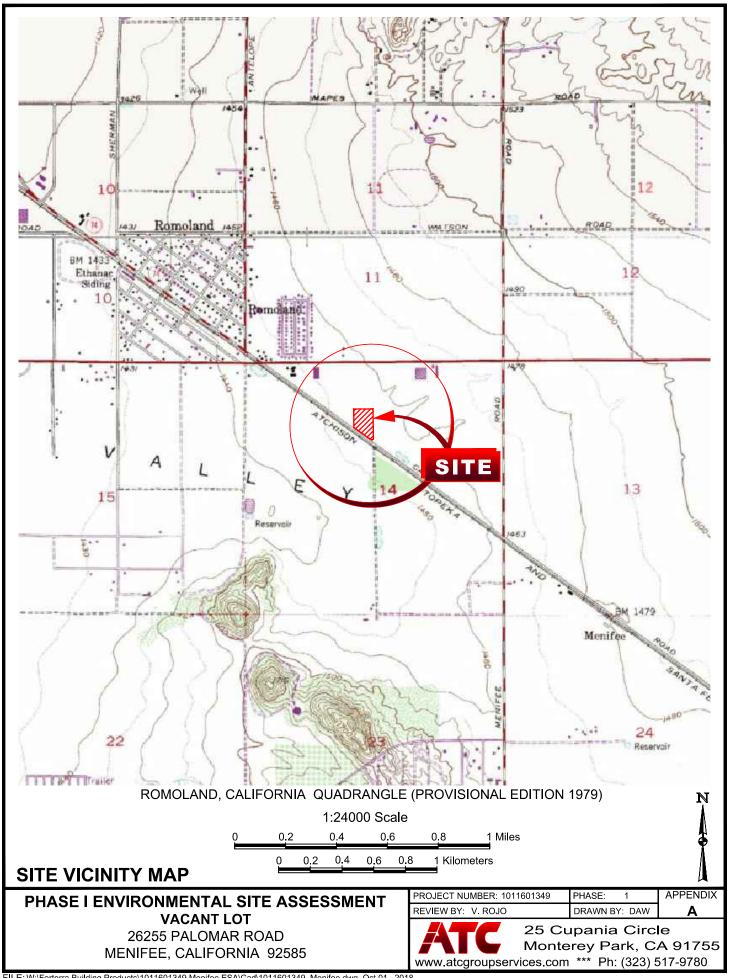

historical recognized environmental condition(s) (HREC) - a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a HREC, the EP must determine whether the past release is a REC at the time the assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a REC at the time the Phase I ESA is conducted, the condition will be reported in Section 1.2 the Findings and Conclusions Summary table as a REC.

controlled recognized environmental condition (CREC) - a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitation, institutional controls, or engineering controls). Per E1527-13, a CREC will be reported in the Section 1.2 Findings and Conclusions Summary table as a CREC and a REC.

migrate/migration - refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
BLOCK GRAPHICS EPA ID:: CAR000076968	28401 MATTHEWS	WNW 1/8 - 1/4 (0.183 mi.)	4	9
MATTHEWS INTERNATION EPA ID:: CAD981386956	28261 HWY. 74	NW 1/8 - 1/4 (0.232 mi.)	B8	16

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/30/2018 has revealed that there is

1 ENVIROSTOR site within approximately 1 mile of the target property.

HIGH SCHOOL NO. 3 Facility Id: 33010072	BRIGGS ROAD/PINACATE	NW 1/2 - 1 (0.532 mi.)	9	22	
Status: No Further Action					

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NO SITES FOUND

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

CUPA YUBA: CUPA Facility List

CUPA facility listing for Yuba County.

Date of Government Version: 05/10/2018 Date Data Arrived at EDR: 05/15/2018 Date Made Active in Reports: 06/15/2018

Number of Days to Update: 31

Source: Yuba County Environmental Health Department

Telephone: 530-749-7523 Last EDR Contact: 08/07/2018

Next Scheduled EDR Contact: 11/12/2018

Data Release Frequency: Varies

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

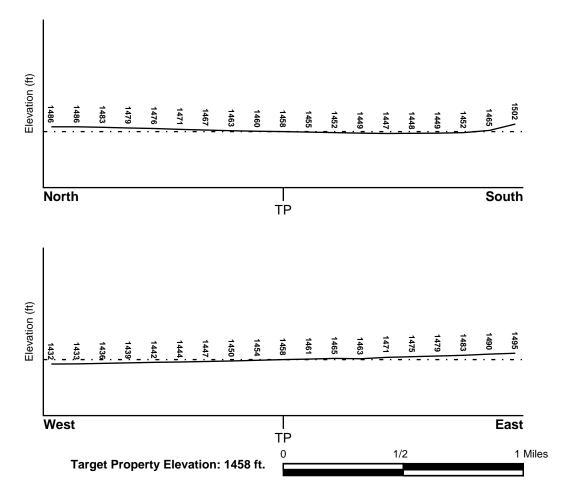

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Additional Panels in search area: FEMA Source Type

06065C1445H FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

NOT AVAILABLE YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION
MAP ID FROM TP GROUNDWATER FLOW
Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: EXETER

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR°

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by ATC Group Services LLC were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

PRIOR REPORTS

THIS SECTION IS INTENTIONALLY LEFT BLANK

APPENDIX I

RESUMES

VICTORIA ROJO

Staff Scientist

PROFESSIONAL SUMMARY

Ms. Rojo has been involved in the environmental field since 1996. At ATC she is responsible for conducting Phase I environmental site assessments, data interpretation and report preparation. Tasks include site reconnaissance, public record searches, aerial photo review and personal interviews. Ms. Rojo has strong experience with identifying areas of environmental concern as well as a good working knowledge of government regulations relating to environmental issues.

Additionally, Ms. Rojo has experience with natural resource and biological aspects of the environmental industry. She previously served in roles which involved soil and water conservation; endangered species studies; natural resource risk assessments, planning recommendations and restoration; landscape design and species mapping; plant and wildlife surveys; and preparation of environmental compliance documents including EIRs, Habitat Conservation Plans and Biological Assessments.

PROJECT EXPERIENCE

Due Diligence

- § Environmental Site Assessments / Various Clients / Southern CA and HI. Conducted numerous Phase I ESAs for confidential clients throughout Southern California and also Hawaii. Target sites include vacant properties, commercial/retail, multi-family housing, and former service station facilities. Project duties included conducting interviews, gathering current and historical site information, observing the physical aspects of the site, and report preparation.
- § Property Transaction Screens / Confidential Client / Southern CA. Conducted numerous due diligence property transaction screens for a confidential client at multiple locations throughout Southern California. Target sites include light industrial, commercial, and hotel/motel facilities. Project duties included conducting interviews, gathering current and historical site information, observing the physical aspects of the site, and report preparation.

Telecommunications Projects

§ Environmental Site Assessments & NEPA Compliance/ Telecommunications Clients / Various Locations, CA and AZ. Conducted Phase I ESAs and completed NEPA reports/checklists. Services are being provided to various telecommunications clients as part of a comprehensive Environmental Site Assessment program for all proposed monopole sites.

PROFESSIONAL REGISTRATIONS

§ Certified Desert Tortoise Monitor, California Dept. of Fish & Game, 1999

EDUCATION

- § B.A., Environmental Analysis and Design, University of California, Irvine, CA
- § B.A., Criminology, Law and Society, University of California, Irvine, CA

PROFESSIONAL SUMMARY

Ms. Reed serves as Program Manager of the NEPA Program for ATC's California and Arizona offices. She is responsible for coordination, resource management and quality control activities for projects/clients in the telecommunications and public sector.

Ms. Reed has more than 20 years of experience in the environmental field with an extensive background in the following: NEPA Studies, Phase I ESAs, Phase II Subsurface Investigations, and Asbestos / Lead-Based Paint Management.

PROJECT EXPERIENCE

- Microbial Survey and Monitoring, The Home Depot, Southern California
 Project Manager responsible for scheduling and report review for various sites throughout southern California.
- NEPA Environmental Summary Reports, Telecommunications Clients, California and Arizona Program Manager for NEPA Environmental Summary Reports throughout California for various telecommunications clients. Services include research regarding wilderness areas, wildlife preserves, endangered species, historic places, Native American Consultation, and potential impact from proposed wireless facilities.
- CEQA Report, Administrative Office of the Courts, California
 Provided management oversight of CEQA Initial Study for the construction of the new Long Beach Courthouse.
- Biological Assessments, Telecommunications Clients, California and Arizona
 Manage Biological Assessments in relation to endangered species impact on telecommunication sites throughout California and Arizona.
- Environmental Site Assessments & Investigations, Various Clients, California
 Performed and managed numerous Phase I and Phase II Environmental Site Assessments for commercial, residential, and industrial properties/clients.
- Hazardous Material Sampling, Various Clients, California
 Managed and performed lead in paint, lead in water, radon, and asbestos sampling for Phase I ESAs and telecommunications projects throughout California.
- Site Investigations, Various Clients, California
 Performed groundwater and soil sampling for site characterization projects.

PROFESSIONAL REGISTRATIONS

Engineer in Training (CA #XE083539)

EDUCATION

B.S., Civil Engineering, California Polytechnic, San Luis Obispo, 1991

ATC hire date: April/1991 Branch office: Monterey Park, CA

Todd Stanford, REHS, CEM Principal Scientist

PROFESSIONAL SUMMARY

Todd Stanford has more than 29 years of experience in site assessment, soil and groundwater remediation, pharmacology, risk assessment, occupational health and safety, and air toxics. His qualifications include extensive experience planning, directing, and completing environmental site assessments, designing remedial projects for soil and groundwater, performing human and ecological risk assessments, and evaluating the fate and transport of chemicals in soil, groundwater, and air. His experience also includes environmental, health, and safety management program development, multi-media environmental, health, and safety compliance auditing, risk management planning, solid waste management, and construction and redevelopment of environmentally impacted properties. Mr. Stanford has served on the Scientific Advisory Board for California AB 2588 and the Private Site Management Advisory Committee for AB 1876.

During Mr. Stanford's career, his project management experience has been applied to capital construction projects, underground storage tank facilities, chemical production and bulk storage facilities, manufactured gas plant sites, aerospace and industrial manufacturing facilities, power generation and distribution facilities, and State and Federal Superfund sites. His expertise also has been called upon in support of legal issues involving fate and transport and human health effects resulting from exposures to toxic chemicals.

PROJECT EXPERIENCE

Environmental Program Management

- Program Manager / Los Angeles County Metropolitan Transportation Authority (Metro), Environmental Engineering Services (Contracts EN073 and EN076) - Multiple Locations, Los Angeles County, CA. From 2005 through 2016, Mr. Stanford served as the Project Director for a multi-task environmental engineering contract with Metro. This contract covered environmental engineering, energy efficiency, and sustainability services for a variety of facilities including bus and rail maintenance divisions, existing and planned dedicated bus and Light Rail alignments, and various capital programs and projects. Environmental engineering services provided to Metro include geotechnical evaluation of new facilities and proposed facility improvements, underground and aboveground storage tank inspections and compliance program development for 22 operating bus and rail facilities, and stormwater management program development and implementation at 30 industrial facilities. Capital construction program support services provided under these contracts included environmental due diligence associated with the acquisition of properties for expansion of bus, light rail, heavy rail and subway services; preparation and review of environmental assessment documents; preparation and review of pilot testing reports for soil vapor. groundwater extraction, and construction dewatering; development of construction mitigation measures for vapor intrusion control; preparation and review of Remedial Action Plans, engineering design drawings and construction specifications; development, review, and implementation of construction stormwater plans, community air monitoring plans, soil and groundwater management plans, and soil reuse criteria for various capital improvement projects including the Metro Orange Line, Metro Gold Line East Extension, Crenshaw/LAX and Exposition Light Rail Lines, Union Division Bus Maintenance Facility, and Taylor Yard Joint Development Project. Provided field verification and contractor oversight during various phases of construction to ensure compliance with written programs, policies, specifications, and design criteria: applicable waste management and discharge permit requirements; noise and vibration monitoring and mitigation measures; and community dust and contaminant action levels.
- Program Manager / Various Public Agencies / On-Call Environmental Services, Southern California. Since 1997, Mr. Stanford has provide program management leadership for on-call environmental contracts with a variety of public agencies in Southern California. Since 1997, these agencies have included the Cities of Anaheim, Ontario, Riverside, Brea, and Burbank; the County Sanitation Districts of Los Angeles County, the Los Angeles County Department of Public Works, Los Angeles County CEO Office, and the Los Angeles Community Design Center. Representative project activities include environmental due

ATC hire date: October 2016 Branch office: Los Angeles, CA

diligence associated with the acquisition of real property and rights-of-way; environmental site assessment of soil and groundwater impacts; asbestos, lead-based paint, and hazardous materials evaluations; solid and liquid waste characterization, management, and disposal; preparation of Integrated Pest Management Plans; landfill post-closure monitoring and reporting; development of remedial alternatives and project development cost analyses; and preparation of engineering design drawings and specifications for capital construction projects with impacted soil and groundwater.

Project Manager / Honolulu Harbor Working Group, Iwilei District Participating Parties / Honolulu, HI. Oversaw a multi-party PRP group for a 0.5 square mile area that is impacted by petroleum hydrocarbons in soil and groundwater and methane gas in the subsurface. Developed a conceptual site model of fate, transport, and human and ecological exposure pathways, calculated health-based screening levels for chemicals of potential concern, and developed a comprehensive database and GIS application that provided focus to ongoing assessment and interim remedial activities. Also, interfaced with State of Hawaii and USEPA regulators and developed vapor migration and vapor intrusion screening algorithms to evaluate potential impacts to indoor and outdoor air and prioritize parcels for active mitigation, institution of land use covenants, and application of administrative controls.

Multi-media Compliance Auditing and EHS Compliance

- Lead Auditor / Port of Long Beach, Maintenance Facility & Operations, Environmental Compliance Audit / Long Beach, CA. Led an environmental compliance audit of multiple Port of Long Beach operations focusing on review and determination of compliance status of various operations relative to applicable Federal, State, and local air regulations. The audit focused on air quality, hazardous materials, hazardous waste, aboveground and underground storage tanks, Spill Prevention Control and Countermeasure (SPCC) Planning, stormwater, and wastewater. The audit also evaluated the status of existing formal environmental health programs, including written programs, policies, span of control, and definitions of personnel roles and responsibilities.
- Project Director and Lead Auditor / California Institute of Technology/Jet Propulsion Laboratories, Multi-Media Compliance Auditing / Pasadena, CA. Managed a series of multi-media assessments and audits of educational and research oriented facilities. Provided environmental compliance auditing services as related to hazardous waste management, above-ground and underground storage tank management, business emergency planning, air emissions and Title V permit compliance, asbestos, lead-based paint, and PCBs management, CalARP Risk Management Planning, Greenhouse Gas emissions reporting and verification, and related environmental compliance programs.
- Lead Environmental Auditor / Confidential Water District, EH&S Program Compliance Assessment / California. Managed a multi-disciplinary assessment of a public water utility's environmental, health, and safety programs. The environmental component of the assessment focused on CalARP, Clean Air Act/Air Quality Permit Compliance, Clean Water Act compliance, Hazard Communication, Hazardous Materials and Hazardous Waste Management, Spill Prevention Control and Countermeasure Planning, Stormwater Pollution Prevention and Monitoring Plans, and above-ground and underground storage tank programs. The assessment covered facilities constructed an operated by the utility including maintenance activities, two (2) water treatment plants, a desalination plant, two (2) active groundwater production well fields and a water blending facility. Completed an organizational management assessment that considered several staffing and placement of EH&S functions within the organization as related to comparable utilities of similar size and operations. The organizational management assessment provided recommendations on EH&S staffing, suggested management and reporting structures, and management systems development.
- Lead Auditor / Biomass and Fossil Fuel Power Plants, CalARP and Process Safety Management Audits / Multiple Locations, California and Nevada. Completed focused environmental and safety compliance audits relative to California Accidental Release Program (CalARP)/Federal Risk Management

Program and CalOSHA Process Safety Management (PSM) audits of several biomass and fossil fuel power plants in California and Nevada. The focus of the audits related to processes involving the storage and use of anhydrous and aqueous ammonia subject to the requirements of CalARP/PSM and federal RMP programs. Audit activities included a detailed review of covered processes, accident history, prevention program, process safety information, update of Process Hazard Analyses, offsite consequence analysis, operating and training procedures, mechanical integrity program, management of change, and employee participation and incident investigation programs.

- Lead Auditor / CalPeak Power, Risk Management Plan and Process Safety Management Auditing / Multiple Locations. Supported five (5) electrical power generating facilities that utilize aqueous ammonia to control emissions of nitrogen oxides. The audit program elements included detailed reviews of covered processes, accident history, prevention programs, process safety information, update of Process Hazard Analyses, offsite consequence analysis, operating and training procedures, mechanical integrity programs, management of change, and employee participation and incident investigation programs.
- Environmental Compliance Manager / Precision Specialty Metals, Environmental Compliance Support / Los Angeles, CA. Developed a comprehensive, multi-media environmental compliance program involving hazardous waste profiling, manifesting, and tracking; industrial wastewater treatment system monitoring and reporting; air permitting and related compliance activities (including Title V and RECLAIM programs); EPCRA reporting; RMPP compliance; and Stormwater Pollution Prevention Planning, implementation, and reporting. Interfaced with various regulatory agencies including the State Board of Equalization, Air Pollution Control Districts, Sanitation and Industrial Wastewater Discharge agencies, US Environmental Protection Agency, and Regional Water Quality Control Boards. Provided ongoing technical support including identification of hazardous waste source reduction alternatives and general facility compliance with community right-to-know regulations.
- Principal Consultant / Russell Standard, TSCA Chemical Data Reporting / OH, VA, PA, MD, and NC. Served as the Principal Consultant leading preparation and submittal of the 2016 Toxic Substances Control Act (TSCA) Chemical Data Reporting (CDR) Rule for eight (8) asphalt emulsion facilities located in Ohio, Virginia, Pennsylvania, Maryland, and North Carolina. Facilitated kick-off meetings, reviewed facility inventory and production details to identify TSCA-listed chemical substances manufactured and imported at each facility, managed acquisition of relevant details from product suppliers involving confidential business information pertaining to TSCA-listed chemical use and manufacturing, prepared Form U submittals and uploaded required reporting details electronically through the EPA CDX e-CDRweb application.
- Principal Consultant / Vertex Energy, TSCA Chemical Data Reporting / Fallon, NV. Served as the Principal Consultant leading preparation and submittal of the 2016 Toxic Substances Control Act (TSCA) Chemical Data Reporting (CDR) Rule for a lubricating oil refinery oil located in Nevada. Facilitated kick-off meetings, reviewed facility inventory and production details to identify TSCA-listed chemical substances manufactured and imported at each facility, managed acquisition of relevant details from product suppliers involving confidential business information pertaining to TSCA-listed chemical use and manufacturing, prepared Form U submittals and uploaded required reporting details electronically through the EPA CDX e-CDRweb application.
- Lead Auditor / Danaher Corporation / Multiple Locations / California and Arizona. Performed multimedia environmental health and safety compliance audits of four (4) aerospace and manufacturing facilities in support of corporate auditing practices for two different operating divisions within Danaher. Auditing services included focus on hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, Permit by Rule/Tiered Permitting, SARA Title III and EPCRA, OSHA, DOT, and TSCA. Provided supplemental consulting services and assisted in the development of inventory management and reporting tools and in the preparation of electronic report filings under EPCRA.

- Lead Auditor / Project Cardinal, EH&S Compliance Auditing / Western and Central US. Managed multi-media environmental health and safety compliance audits of aerospace and industrial manufacturing facilities located in California, Arizona, Nevada, and Florida. The compliance evaluations were performed subsequent to various acquisitions by a confidential parent company. Provided environmental compliance auditing services as related to hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, SARA Title III and EPCRA, OSHA, DOT, and TSCA. Observed deficiencies were recorded and reported to USEPA under provisions of the EPA's Incentives for Self-Policing: Discovery, Disclosure, Correction and Prevention of Violations Policy, 65 Fed. Reg 19618.
- Lead Auditor / Confidential Client / Los Angeles, CA. Managed several comprehensive multi-media compliance audits of a company that is engaged in maintenance and leasing of corporate aircraft, as a component of pre-merger due diligence. Provided environmental compliance auditing services as related to hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, SARA Title III and EPCRA, OSHA, DOT, and TSCA.
- Project Manager / Kirkland & Ellis, M&A Environmental Auditing / Various Locations / Western and Central US. Performed limited environmental compliance audits of several food production and distribution facilities located in California and Texas. The environmental compliance evaluations were performed as a component of pre-acquisition due diligence. Provided environmental compliance auditing services as related to air emissions and permitting, underground storage tanks, spill prevention and control, ozone depleting substances, Risk Management Planning, SARA Title III and EPCRA, and Process Safety Management.
- Project Manager / Nixon Peabody, M&A Environmental Auditing / Various Locations / Western US. Managed several comprehensive multi-media compliance audits of industrial manufacturing facilities located in the Western US. Compliance evaluations were performed subsequent to various acquisitions by a confidential parent company. Provided environmental compliance auditing services as related to hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, SARA Title III and EPCRA, OSHA, DOT, and TSCA.
- Project Manager / Metal Finishing Companies, Environmental Health and Safety Consulting / Various Locations, CA. Managed environmental and health & safety compliance issues for a number of metal finishing companies operating in Southern California. Typical consulting services included evaluating exposures to personnel working near open process tanks containing phosphoric, nitric, and sulfuric acids, nickel, tin, copper, and hexavalent chromium; general and specific requirements for air emissions from degreasing solvents and air emissions from anodizing and etching, and electro and electroless plating of nickel, chromium, copper, tin, silver, and gold. Reviewed source testing results, established emissions estimates based on normalized facility-specific indices, conducted screening level risk evaluations, assisted in optimizing wastewater treatment system efficiency, identified source reduction alternatives, and provided training to facility personnel in the areas of environmental compliance and worker and community right to know regulations. Also, developed occupational safety and training programs for eye and face protection, hearing conservation, confined space identification and permitting, lockout/tagout, foot protection, respiratory protection, and operation of industrial trucks.

Human and Ecological Risk Assessment

 Project Manager / Confidential Clients, Proposition 65 Exposure Assessment / Various Locations, California. Evaluated 100 consumer products and over 20 chemicals listed by the State of California as carcinogens, developmental or reproductive toxicants. Listed chemicals evaluated included acrylamide, volatile organic compounds, dioxins/furans, polynuclear aromatic hydrocarbons, metals, and phthalates.

The evaluations were performed for a wide range of consumer products including paper products, toiletries, and durable goods. The evaluations ranged from quantitative exposure assessments utilizing default exposure parameters for typical use scenarios to detailed exposure assessment sampling and analysis to establishing exposure point concentration estimates based on gravimetric, bulk, and wipe sampling protocols. The evaluations included a three phase review process which included identification of listed chemicals in the supply or manufacturing chain, a qualitative evaluation of exposure potential based on the finished product composition, and a final quantitative assessment of exposure under typical product use conditions. The results of the analysis were utilized to inform the manufacturer or supplier on potential Proposition 65 notification requirements, to assist in the identification or alternative product formulations that would not result in Proposition 65 notifications, and to establish protocols for further refinement of exposure parameters that contribute most-significantly to potential consumer exposures and risks.

- Technical Lead/ Various Industrial Companies, Vapor Intrusion Assessment, Mitigation, and Health Risk Assessment Services / Western United States. Completed human health risk assessments for a variety of petroleum, chlorinated solvent, heavy metal, dioxin/furan, and radionuclide impacted sites and facilities throughout the continental United States. Risk assessment clients include, among others, ConocoPhillips, ExxonMobil, Farmer Brothers, Chevron, Unocal, Simpson Paper Company, Lockheed Martin Corporation, Coastal Corporation, Rohr Industries, Signet Armorlite, BP/Arco, Gatron Industries, Home Depot, BNSF Railroad, Kinder-Morgan Energy Partners, State of Hawaii Department of Transportation, Montrose Chemical Company, Weyerhauser, Kimberly Clark, Chromalloy, and Jorgensen Steel. The health risk assessments have ranged in complexity from single exposure pathway analyses to complex multi-media exposure pathways involving multiple chemicals. The risk assessment results have been used in internal risk-management decision making and prioritization, litigation support, and as regulatory compliance tools. Assessed and refined several vapor intrusion evaluation methodologies and the integration of risk management measures for more than 28 years. Performed field pilot testing of subslab ventilation and subslab depressurization systems and prepared engineering design specifications for soil vapor barriers, subslab ventilation and depressurization systems, and supervised the installation of operation of engineered mitigation systems. Assessments have been approved by agencies including the California Department of Toxic Substances Control, California Air Resources Board, Hawaii Department of Health, Nevada Department of Environmental Protection, Arizona Department of Environmental Quality, the United States Environmental Protection Agency, Lahontan, Central Coast, Los Angeles, Santa Ana, San Diego, Central Valley, and San Francisco RWQCBs.
- Risk Assessment Manager / Confidential School Districts, School Site Characterization, Risk Assessment and Remedial Action Planning / Southern California: Supervised the preparation of preliminary endangerment assessments and associated remedial action planning for several proposed and existing school sites for several school districts in Southern California. Chemicals of potential concern evaluated included volatile organic compounds, heavy metals, PCBs, chlorinated herbicides and pesticides, petroleum hydrocarbons, and semi-volatile organic compounds in soil, groundwater, and soil vapor. Performed Human Health Risk Assessments to identify specific constituents and exposure pathways which warranted implementation of remedial action plans and removal action workplans and provided oversight and management during implementation of remedial and removal actions pertaining to soil and groundwater. Provided post-construction monitoring and verification to ensure that the potential risks to current and future building occupants and students were consistent with project-specific objectives.
- Risk Assessment Manager / Molycorp Minerals, Mountain Pass Mine / Human Health Risk Assessment (HHRA) / Mountain Pass, CA: Supervised the Human Health Risk Assessment (HHRA) component of the Corrective Action and Closure Plan for the Mountain Pass Mine and Mill Site located in San Bernardino County, California. The HHRA included quantitative evaluation of potential human health risks and qualitative evaluation of potential ecological risks associated with current site conditions for lanthanides, actinides, and radionuclides (e.g., radium, thorium, and uranium decay series). Health-based cleanup goals for soil were also derived for lanthanides and actinides. For radionuclides, cleanup goals

were developed based on surface radiation exposure rates for specific areas. The HHRA and cleanup goals were used to identify additional geographic areas that warrant additional investigation and/or mitigation and established the basis for determining that post-remediation concentrations met the site risk management objectives.

- Risk Assessment Manager / Riverside Agricultural Park, HHRA / Riverside, CA: Managed the post-remediation Human Health Risk Assessment (HHRA) pursuant to the California Land Reuse and Revitalization Act Agreement. The Site encompasses approximately 62 acres of undeveloped land that was first developed as a sewage treatment plan in 1942. The sewage treatment plant was decommissioned in 1965. However, environmental assessment activities identified the presence of polychlorinated biphenyls (PCBs), semi-volatile organic compounds, volatile organic compounds, pesticides, herbicides, dioxins/furans, and metals in soil. Implemented a remedial action plan which included the excavation and off-site disposal of approximately 174,000 tons of impacted soil. Prepared dust mitigation and air monitoring plans for remedial excavation activities to ensure that emissions during construction did not pose a significant risk to the surrounding residential community. DTSC subsequently approved the remedial action completion report and HHRA and issued a certificate of completion in 2014.
- Risk Assessment Manager / Carroll Hall Shelby Trust, HHRA / Gardena, CA. Managed the Human Health Risk Assessment (HHRA) in order to further refine the chemicals of potential concern, establish health-based soil and groundwater remediation objectives, and to evaluate vapor intrusion conditions resulting from remedial activities implemented during pilot testing. Potential exposures considered in the HHRA included direct contact with soil and vapor intrusion to existing or future site structures. Supplemental monitoring of soil gas and indoor air was performed during the pilot remediation testing period to confirm that mitigation measures were adequate to protect current building occupants from exposures to chlorinated VOCs emanating from the subsurface.
- Risk Assessment Manager / Los Angeles County Department of Public Works / Oxford Basin, HHRA / Marina Del Rey, CA: Managed the Human Health Risk Assessment (HHRA) in support of proposed improvements to a storm retention basin. Previous environmental investigations identified the presence of heavy metals, PCBs, chlorinated herbicides and pesticides, petroleum hydrocarbons, and semi-volatile organic compounds in basin sediments and surrounding soil. Proposed site enhancement activities include construction of new features to increase its storage capacity and improve the general appearance and recreational use of this feature. The results of the HHRA were used to support the future site development activities and to identify specific risk management measures that would be used to reduce potential exposures and risks to future site workers and recreational users.
- Risk Assessment Manager / Pacific Gas and Electric Company, Hunters Point Power Plant Dismantlement Contract, HHRA / San Francisco, CA. Managed the Human Health Risk Assessment (HHRA) component of the Remedial Investigation/Feasibility Study (RI/FS) activities. Activities performed in support of the RI/FS activities involved development of general data quality objectives for soil, groundwater, sediment and soil vapor to facilitate the application of field data in human health and screening ecological risk assessments. Developed a Conceptual Site Risk model for the site based on the anticipated future unrestricted use of the property. Specific elements of the HHRA completed as a component of this project include statistical data evaluation for determining background concentrations of metals and asbestos in soil, identification of chemicals of potential concern for inclusion in the quantitative HHRA, quantification of plausible human exposure pathways involving soil, soil vapor (vapor intrusion), and groundwater, identification of Chemicals of Concern (COCs) that influence the site-wide risk estimates, and determination of health-based screening levels for COCs in soil, groundwater, and soil vapor. The health-based screening levels were used in conjunction with the statistically-derived background concentrations to establish the remediation goals that served as the basis for evaluation potential response, mitigation, and engineering control alternatives.

- Principal Scientist / Chevron/Unocal and ExxonMobil Petroleum Tank Farms and Operating Fields, Site Assessment, Fate and Transport Modeling, Health Risk Evaluation, and Remedial Action Planning and Implementation / Various Locations. Conducted environmental site assessment and establishment of remedial action goals for former bulk storage facilities, tank farms, production fields, and crude-oil gathering and distribution lines. Coordinated acquisition of sampling data regimen and laboratory analyses for soil, groundwater, and soil vapor; performed remedial feasibility testing; and prepared and implemented remedial action plans for active and idle properties. Assessment and remediation activities were performed to both support proposed divestment and redevelopment activities and in defense of third-party suits. The results of fate and transport modeling and human health risk assessments were used to establish land use-specific remedial goals for COPCs in soil, soil vapor, and groundwater. Assessment and remediation activities were performed under the jurisdiction of variety of regulatory agencies including the Lahontan, Central Coast, Los Angeles, Santa Ana, San Diego, Central Valley, and San Francisco RWQCBs, Department of Toxic Substances Control, and California Air Resources Board.
- Risk Assessment Manager / Former Railroad Facility, Health Risk Evaluation and Remedial Action Planning / San Jose, CA. Managed all aspects of a human health risk assessment for an approximately 13 acre former rail facility impacted by surficial and subsurface metals, polynuclear aromatic hydrocarbons (PAHs), pesticides/herbicides, and volatile organic compounds. The health risk assessment considered the redevelopment of the property for residential use. Consequently, performed an evaluation of potential risks under a proposed future residential land-use scenario under baseline (i.e., pre-remediation) conditions for direct exposure and vapor diffusion exposure pathways. The health risk assessment also included an evaluation of the potential migration of methane gas and volatile organic compounds in soil vapor from two adjacent landfills. Developed health-based remediation goals for metals, PAHs, and pesticides/herbicides in soil to protect future site residents from direct contact with these constituents. The results of the vapor diffusion analysis were used to establish engineering controls to prevent the migration of methane gas and VOCs from the adjacent landfills to the subject property and from the subsurface to indoor air within the residences. Following approval of the health-risk assessment and regulatory concurrence with the remediation goals, the remedy was implemented and a no further action determination was obtained and the property was redeveloped for residential use.
- Principal Scientist / Pacific Gas and Electric Company, Humboldt Bay Generating Station (HBGS) Demolition and Abatement Project / California. Completed a screening level risk assessment for potential construction-related exposures associated with the fast-track demolition and abatement project. The results of the human health risk assessment demonstrated that residual chemicals in soil do not pose a significant threat to construction workers or future site workers and that no additional risk management measures or remediation is warranted.
- Principal Scientist / Lockheed Martin Corporation, Former Industrial Light Metals Facility / Torrance, CA. Provided risk assessment services for chlorinated and aromatic hydrocarbons in soil and groundwater at a former aerospace facility. Risk assessment services included evaluation of vapor intrusion into indoor air under current and anticipated future site conditions and hypothetical future groundwater use scenarios. Analysed the fate and transport of chlorinated solvents in soil to determine whether residual soil impacts represent a potential source of impact to groundwater. The results of the risk assessment have been used to support site development and use during remedial testing and remedy implementation. The results of the fate and transport analyses were used to justify closure of several solid waste management units associated with the facility.
- Principal Scientist / Confidential Clients, Risk Assessment and Risk Management Planning / Multiple Locations, California and Nevada. Prepared documentation related to potential releases of anhydrous and aqueous ammonia and hydrofluoric acid from onsite storage and NO_x control (Selective Catalytic Reduction) systems for several proposed and existing power generation facilities and manufacturing facilities. Lead process hazard reviews and identified potential mitigation measures for deployment at facilities in conjunction with site selection and preliminary engineering design of facilities.

Performed offsite consequence analyses for facilities based on mitigated and unmitigated alternatives in accordance with Federal RMP and CalARP requirements.

- Project Manager / City of Monterey, Monterey Swim Gym Facility / Monterey, CA. Oversaw the human health risk assessment portion of the Monterey Swim Gym Facility and assisted in comprehensive site assessment and remedial design for a former manufactured gas plant site. Specific project responsibilities included identifying potential constituents of concern related to former facility operations, designing a statistical sampling plan, completing a human health risks assessment involving current and potential future exposures related to property development, and establishing remedial design objectives. The remedial design objectives were used to establish the geographic limits of the remedial response in consideration of the intended site development and to support the beneficial reuse of impacted soil.
- Project Manager / Ramco, Mace Ranch Development Davis, CA. Supervised tasks for a former pesticide and fertilizer bulk facility located in an agricultural area of Central California. Historical dumping of bulk pesticides including ethylene dibromide (EDB), dichloropropane (DCP), and dibromochloropropane (DBCP) into an unlined wash basin created a plume of pesticides in soil and perched groundwater that threatened a nearby municipal water well. Remedial investigations focused on establishing health based remedial goals for soil and groundwater that are protective of the underlying utilized aquifer and allow for residential development of the adjacent property. The selected remedial alternative included both limited remedial excavation of impacted soil and groundwater plume control.
- Risk Assessment Manager / Confidential Client, Risk Characterization and Management / Chubut Province, Argentina. Evaluated potential risks to human health of mine site workers and nearby residents resulting from mine site operation and potential catastrophic event scenarios. Activities evaluated as a component of this project included transport of hazardous substances during mine operation, plant operations and process-related activities, impoundment and sterile rock pile facilities, and onsite use of hazardous substances. Also, identified risk management measures for the activities associated with the greatest risk probability and consequence.
- Risk Assessment Manager / Former Cannery, Remedial Investigation and Mitigation / Honolulu, HI. Performed a comprehensive evaluation of the presence and distribution of multiple chemicals in soil and groundwater beneath a former cannery. Chemicals evaluated include substituted benzene compounds and polynuclear aromatic hydrocarbons. Conducted an analysis of the potential fate and transport potential of chemicals in groundwater and evaluated potential onsite and offsite health risks associated with direct contact and inhalation of chemicals during and after site development. The results of the health-risk assessment were used to establish vapor control criteria for volatile compounds and methane gas and to secure approval for site redevelopment for commercial use.
- Risk Assessment Manager / Unocal Corporation, Emissions Inventory Planning, Reporting, Fugitive Emissions Monitoring, and Health Risk Assessments / Santa Maria, CA. Conducted emissions quantifications for pressure distillates, crude towers, coker wet gas, overhead gas, tail gas treatment, straight run naphtha, crude heaters, crude and recovered oil storage tanks, and coker naphtha for emissions of benzene, ammonia, toluene, hydrogen sulfide, chlorine, zinc, xylenes, and C8 aromatics. Conducted source testing of sump vapor recovery units and obtained permits to operate facility equipment at various pump stations. Developed source testing and emissions quantifications methodologies and completed AB2588 health risk assessments for facility emissions.
- Project Director / City of Burbank Redevelopment Agency, B-1 Remediation Oversight / Burbank, CA. Assisted the City of Burbank in determining whether the Vapor Extraction System was operating in compliance with the Conditional Use Permit issued by the City. Activities performed include collection and analysis of verification samples of system air emissions, evaluate calibration of in-line VOC detectors and programmable logic controllers, and completion of weekly and quarterly health risk assessments based on

facility emissions. Developed and maintained a webpage for the City of Burbank containing the results of verification samples, health risk evaluations, and vapor extraction system operational data.

Environmental Due Diligence

- Project Director / Union Bank / Environmental Due Diligence / Multiple Locations: Managed Union Bank's environmental risk management and environmental due diligence activities related to secured loans and real estate used as collateral for loan securitization. Completed more than 200, Phase 1 Environmental Site Assessments and Transaction Screen Reports for Union Bank of California for locations throughout the continental United States. Also, completed environmental site assessments, removed underground storage tanks, developed remedial action plans, and installed and operated soil and groundwater remediation systems at a variety of industrial, commercial, and retail properties.
- Project Director / Combined Properties, Incorporated / Environmental Due Diligence, Assessment and Remediation / Multiple Locations, Southern California: Directed environmental due diligence activities for acquisition and divestment of commercial properties. Managed all aspects of pre-acquisition environmental due diligence activities including preparing Phase I Environmental Site Assessment (ESA) documents, characterizing subsurface soil and groundwater conditions for petroleum hydrocarbons and hazardous substances, conducting geotechnical evaluations, completing asbestos and lead-based paint evaluations, designing, installing and operating remedial systems, and providing assistance on mitigation of subsurface and building hazards.
- Project Director / Related Companies of California / Environmental Due Diligence, Assessment and Remediation / Multiple Locations, Southern California: Oversaw environmental due diligence activities for acquisition and divestment of residential and mixed-use properties. Responsible for all aspects of preacquisition environmental due diligence activities including preparing Phase I ESA documents, characterizing subsurface soil and groundwater conditions for petroleum hydrocarbons and hazardous substances, conducting geotechnical evaluations, completing asbestos and lead-based paint evaluations, designing, and providing assistance on mitigation of subsurface and building hazards.
- Project Director / First Republic Bank, Environmental Due Diligence / Multiple Locations, Southern California: Managed First Republic Bank's environmental risk management and environmental due diligence activities related to secured loans and real estate used as collateral for loan securitization. Completed more a dozen Phase I ESAs and Transaction Screen Reports at various locations throughout Southern California.
- Project Director / Confidential Aerospace and Metal Finishing Locations / Multiple Locations, Southern California: Performed environmental compliance and operational liability assessments for several aerospace finishing companies in Southern California. Due diligence activities included evaluation of facility environmental health and safety compliance programs, review of business environmental risks as related to limitations of existing wastewater and air discharge permits, and preparation of life-cycle environmental assessment and remediation costs for impacts to soil and groundwater resulting from historical facility operations. Deliverables prepared in support of these projects included detailed cash flow and probability-based life-cycle cost estimates for remedial action.

PROFESSIONAL REGISTRATIONS

- Registered Environmental Health Specialist (REHS), California #6183, 1991
- Certified Environmental Manager, Nevada #1814, 2002
- California Air Resources Board Accredited Greenhouse Gas Emissions Lead Verifier (H-18-147)
- California Air Resources Board Accredited Oil & Gas Systems Process Specialist (H-18-147)

EDUCATION

- M.S., Environmental Health, California State University, Northridge
- B.S., Environmental & Occupational Health, California State University, Northridge

TRAINING AND CERTIFICATIONS

- CARB Greenhouse Gas Emissions Verifier Training General, February 2018
- CARB Oil & Gas Sector Specialty Training, March 2018
- Project Manager Training
- Total Quality Management Training
- 40-Hour HAZWOPER Training and Annual 8-Hour Refresher Training
- Supervisory OSHA Health and Safety Training
- CPR and First Aid Training

REQUEST FOR RECORDS

Requests for review of records are processed on a first come, first serve basis and the processing time is approximately 2-4 weeks. As required by California Public Records Act Section 6250 et seq., a response will be given within ten (10) business days to confirm receipt of your request.

Pursuant to California Government Code, Section 6254 (f), records of pending investigations and informant's names, addresses, and telephone numbers, will not be released.

For access to electronic records available online, visit the Public Information section at www.rivcoeh.org for more details.

REQUESTOR INFORMATION		
NAME: Victoria Rojo	DATE OF REQUESTS 9-18-19	:
BUSINESS NAME (IF ANY): ATC Group Services LLC		
RETURN LEGAL MAILING ADDRESS: 25 Cupania Circle		
CITY: Monterey Park	STATE: CA	ZIP: 91755
PHONE: 323-517-9656	·	

The following information is required. List each street address separately.

RELEASE OF RECORDS RESPONSE

September 28, 2018

Service Request No: 42878

ATC Group Services LLC 25 Cupania Circle Monterey Park, CA 91755 Attn: Victoria Rojo

Your request concerning **Hazardous Materials Management Records** has been received and a file search has been conducted. The appropriate action has been taken.

Site Address	City	Records Found
26255 Palomar Rd.	Menifee	☐ YES ⊠ NO
THIS IS NOT AN INVOICE	Estimated Cost	\$0.00

If no records are found, no further action will be taken.

If records are found, please contact our office at (951) 358-5055 to schedule a file review appointment. Records will be available for 30 days from the date of this letter, after which a new Records Request will need to be submitted.

** There is a clerical records research fee of \$.50 for the first page, plus \$.10 per additional page **Records will not be made available until this fee is paid**

Other fees may apply

Note: Additional time for processing may be required

Appointments are scheduled in one (1) hour increments, not to exceed two (2) hours.

Per ASTM Standard Practice E1527-13, Section 6, User Responsibilities, the User of an ESA has specific obligations for performing tasks during the ESA that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may result in a *data gap* being identified in the report and may impact their ability to use the report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). If this questionnaire is not returned to ATC prior to issuance of the draft report, then ATC assumes that the User does not have any information or actual knowledge pursuant to ASTM Standard Practice E1527-13, Section 6, User Responsibilities. ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

Todd Stanford; Email: todd.stanford.reed@atcgs.com If other parties are intending to be the Users of the ESA report, then please forward a copy of this questionnaire for them to complete and return to ATC.	
Site Name:	Potential Lease Property
Site Address:	26255 Palomar Road, Menifee, CA 92585
Parcel Number(s):	
Site Contact:	RYPH WRIGHT 469 859-8956
Relying Parties:	
ATC Project Number:	
Please provide the follow	ring information (if available) per the requirements of ASTM E1527-13.
1. Environmental clear	nup liens that are filed or recorded against the site (40 CFR 312.25)
Are you aware of any env federal, tribal, state or loc	rironmental cleanup liens against the site that are filed or recorded under al law? Yes or No
f yes, please provide a d	escription of the lien(s).

Are you	ctivity and land use limitations (AULs) that are in place on the site or that have been or recorded in a registry (40 CFR 312.26) but aware of any AULs, such as engineering controls, land use restrictions or institutional last state are in place at the site and/or have been filed or recorded in a registry under federal, state or local law? Yes or No If yes, please provide.
	pecialized knowledge or experience of the person seeking to qualify for the ndowner Liability Protections (40 CFR 312.28)
or nea	user of this ESA do you have any specialized knowledge or experience related to the site or by properties? For example, are you involved in the same line of business as the current mer occupants of the site or an adjoining property so that you would have specialized edge of the chemicals and processes used by this type of business? If yes, please explain.
	Plationship of the purchase price to the fair market value of the site if it were not minated (40 CFR 312.29) Does the purchase price being paid for this site reasonably reflect the fair market value of
	the site? Yes or No
-	
b.	If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the site? Yes or No If yes, please explain.

5. Co 312.30	ommonly known or reasonably ascertainable information about the site (40 CFR
would	ou aware of commonly known or reasonably ascertainable information about the site that help the environmental professional to identify conditions indicative of releases or ened releases? For example, as user,
a	Do you know the past uses of the site? Yes or No If yes, please state.
-	
b.	Do you know of specific chemicals that are present or once were present at the site? Yes or No If yes, please state.
C.	Do you know of spills or other chemical releases that have taken place at the site? Yes or No If yes, please state.
d.	Do you know of any environmental cleanups that have taken place at the site? Yes ☐ or No ☒ If yes, please state.
	e degree of obviousness of the presence or likely presence of contamination at the and the ability to detect the contamination by appropriate investigation (40 CFR
	user of this ESA, based on your knowledge and experience related to the site are there vious indicators that point to the presence or likely presence of contamination at the site? or No I If yes, please explain.

Public meeting and contact information

OUR MISSION

To deliver value to our customers and the communities we serve by providing safe, reliable, economical and environmentally sustainable water, wastewater and recycled water services.

OUR VISION

To provide essential services to our community at a level that exceeds the performance of any other public or private agency.

EMWD wants you, our valued customer, to be confident that your drinking water is safe.

OUR CONTINUING COMMITMENT TO YOU

EMWD and its trained, certified water quality professionals are committed to...

- Providing high quality, safe drinking water at the lowest price possible.
- Monitoring and testing the water we serve to optimize quality and ensure it is always safe to drink.
- Finding and developing new water supply sources to ensure continued reliability for our customers.
- Providing educated staff to answer any questions from our customers.

Dear Valued EMWD Customer,

Eastern Municipal Water District (EMWD) is pleased to present its annual water quality report. Once again, we provided you with consistently high quality drinking water throughout 2017. This annual water quality report shows how EMWD continues to meet or surpass all drinking water quality standards established by the United States Environmental Protection Agency (USEPA) and the State Water Resources Control Board (State Board).

EMWD is committed to providing a safe, high quality and reliable water supply while protecting public health. Using state-of-the-art water treatment processes; efficiently maintaining and operating our facilities; and conducting rigorous monitoring and testing of the water we serve, EMWD is able to achieve high quality tap water. Water samples are collected throughout the year from EMWD's 29 drinking water sources to carefully test for 200 contaminants and impurities. In 2017, EMWD's laboratory personnel collected 7,316 water samples and performed 40,060 tests to monitor and ensure quality.

EMWD supports science-based standards that provide health benefits to the public in an economically balanced manner. While groundwater or surface waters can have trace contaminants, EMWD protects your health and safety by treating the water we deliver—ensuring your water meets or surpasses all regulated drinking water standards.

The State Board requires that EMWD customers receive an annual copy of this report which summarizes the results of water quality tests and provides specific details about sources and quality of the water served in your community. The guidelines for distributing this report allow for electronic delivery of the report instead of a paper copy in the mail. By delivering these reports electronically, we reduce costs and eliminate paper waste associated with printing and mailing the full report to our more than 145,000 accounts.

Please note that you may change your delivery preference at any time. We will be happy to provide you with a paper copy of this report upon request through our web site at www.emwd.org/CCR or by calling us at (951) 928-3777, extension 3430.

We strongly encourage you to read this report and if you have any water quality questions, please feel free to contact Michelle Karras, Senior Environmental Analyst, or any of our Water Quality staff at (951) 928-3777, extension 3327. We also encourage you to get the latest news and information from EMWD through our website at www.emwd.org.

Thank you for being part of the EMWD family – we're here to serve you.

Pull Digner II BE

Paul D. Jones II, P.E.

GENERAL MANAGER

EASTERN MUNICIPAL WATER DISTRICT

This annual water quality report contains important and useful information about the source(s) and the tests used to ensure the quality and safety of your drinking water. It also describes how EMWD meets all drinking water standards as set by the United States Environmental Protection Agency (USEPA) and enforced by the State Water Resources Control Board (State Board).

About Regulations

In order to ensure that tap water is safe to drink, the United States Environmental Protection Agency (USEPA) and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The United States Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health.

CONTAMINANTS THAT MAY BE PRESENT IN SOURCE WATER INCLUDE:

- MICROBIAL CONTAMINANTS, such as viruses and bacteria, may come from sewage treatment plants, septic systems, agricultural livestock, and wildlife.
- INORGANIC CONTAMINANTS, such as salts and metals, can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- ORGANIC CHEMICAL CONTAMINANTS, including synthetic and volatile organic chemicals may be by-products of industrial processes or petroleum production, and can also come from gas stations, urban storm water runoff, agricultural application, and septic systems.
- PESTICIDES AND HERBICIDES may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- RADIOACTIVE CONTAMINANTS can be naturally-occurring or be the result of oil and gas production and mining activities.

ABOUT NITRATE

Nitrate in drinking water at levels above 10 parts per million (ppm) is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of an infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 ppm may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should seek advice from your health care provider.

SENSITIVE POPULATIONS

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised individuals such as those with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about their drinking water from their health care providers. USEPA and Centers for Disease Control and Prevention (CDC) guidelines on

appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at **(800) 426-4791**.

ARSENIC

While your drinking water meets the federal and state standard for arsenic, some of our sources do contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. The USEPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

UNREGULATED CONTAMINANTS

Unregulated contaminant monitoring helps USEPA and the State Board determine where certain contaminants occur and whether the contaminants need to be regulated.

ABOUT LEAD AND COPPER

Lead and copper are rarely found in source waters; however, both of these metals can enter drinking water by leaching from household plumbing and fixtures. Water that sits in your pipes for long periods of time may dissolve tiny amounts of lead and/or copper (parts per billion levels) into household water. The USEPA has developed the Lead and Copper Rule to protect public health by establishing an action level of 15 parts per billion (ppb) for lead and 1300 ppb for copper.

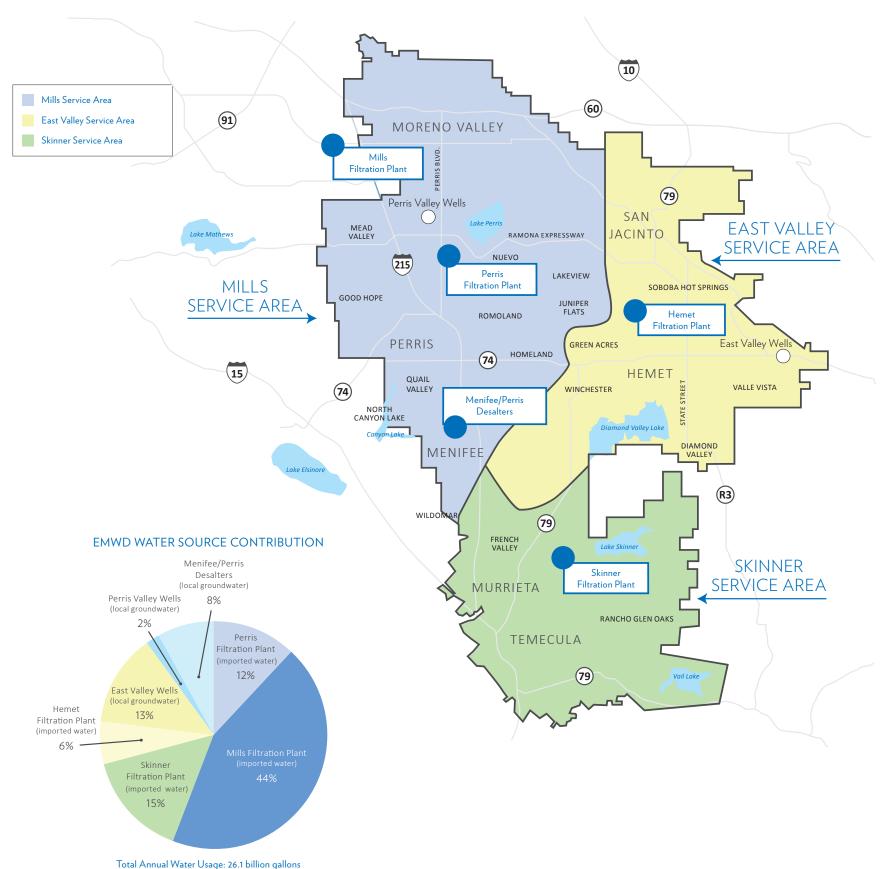

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. EMWD is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. If your water has been sitting in your household plumbing for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at (800) 426-4791 or at www.epa.gov/lead.

As part of the recent lead testing requirement, five schools in the San Jacinto Unified School District requested sampling for lead in 2017. Mandatory testing for lead in public schools began in 2018 and will continue through 2019. For more information visit www.waterboards.ca.gov/drinking water/certlic/drinkingwater/leadsamplinginschools.html.

2 EASTERN MUNICIPAL WATER DISTRICT 2017 CONSUMER CONFIDENCE REPORT 3

THE SOURCES OF YOUR TAP WATER...

To help you find specific details about your tap water, we have organized this report according to the communities we serve.

THE COMMUNITIES WE SERVE...

COMMUNITIES SERVED

Good Hope
Homeland
Juniper Flats
Lakeview
Mead Valley
Menifee**
Moreno Valley
North Canyon Lake
Nuevo
Perris
Quail Valley

MILLS SERVICE AREA | Water for this service area comes from a combination of sources:

• The Henry J. Mills Filtration Plant* treats imported surface water supplied solely from northern California through the State Water Project (SWP). The Mills Filtration Plant adjusts the fluoride levels in the water to an optimal level recommended by the Centers for Disease Control and Prevention (CDC) for oral health, and uses chloramine for final disinfection.

WATER FROM THE MILLS FILTRATION PLANT IS BLENDED WITH SEVERAL OTHER EMWD WATER SOURCES:

- Two Perris Valley Wells serve a limited area of Perris along Perris Boulevard south of the Ramona Expressway.
- The Perris Water Filtration Plant (PWFP) treats both Colorado River and SWP
 waters. This plant uses the latest ultrafiltration technology to remove particulate
 contaminants to produce quality, potable water. The PWFP serves Lakeview,
 Nuevo, Romoland, Homeland, and Juniper Flats. This plant uses chloramine for final
 disinfection.
- The Menifee and Perris Desalters convert salty groundwater into potable water using a reverse osmosis process. Menifee, North Canyon Lake, and Quail Valley are the only communities within the Mills Service Area to receive blended water from this desalination plant. The Menifee and Perris Desalters use chloramine for final disinfection.

WEST COMMUNITIES SERVED

Romoland

Wildomar

Diamond Valley
Green Acres
Hemet
San Jacinto
Winchester***

EAST COMMUNITIES SERVED

Hemet San Jacinto Soboba Hot Springs Valle Vista

French Valley

Menifee**

Murrieta

Rancho Glen Oaks****

Temecula

Winchester*

WEST OF STATE STREET:

EAST VALLEY SERVICE AREA | This service area is split into two regions:

 The Hemet Water Filtration Plant (HWFP) treats both Colorado River and SWP waters. This plant uses the latest ultrafiltration technology to remove particulate contaminants and produce quality, drinking water. This treatment plant uses chloramine for final disinfection. Local groundwater also supplies this area.

EAST OF STATE STREET:

• A system of deep groundwater wells serves these communities. These wells are treated by adding free chlorine for final disinfection.

COMMUNITIES SERVED SKINNER SERVICE AREA | Water for this service area comes from:

• The Robert A. Skinner Filtration Plant* treats water from the Colorado River and from the SWP. The Skinner Plant adjusts the fluoride levels in the water to an optimal level recommended by the CDC for oral health, and uses chloramine for final disinfection.

* The Mills and Skinner Filtration Plants are owned and operated by The Metropolitan Water District of Southern California (Metropolitan). ** Typically served by the Mills Filtration Plant and occasionally served by the Skinner Filtration Plant. *** Typically served by the Hemet Water Filtration Plant and occasionally served by the Skinner Filtration Plant. **** This area is served water produced by Rancho California Water District. (RCWD). You may view RCWD's Consumer Confidence Report on their website at www.ranchowater.com.

PROTECTING YOUR DRINKING WATER

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline at (800) 426-4791.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. The land that the water comes into contact with is called the watershed; everything that happens to or in the watershed can affect the quality of your drinking water supply.

EMWD uses several sources of water to serve its customers, including surface water from the Colorado River and the State Water Project (SWP), as well as local groundwater

An initial assessment of all the watersheds, both surface water and groundwater, was completed in 2002. The Colorado River, a surface water source, was reassessed in 2010 and found to be most vulnerable to recreational activities, urban and storm water runoff, increasing urbanization in the watershed, and wastewater.

Water from the SWP, also a surface water source, was reassessed in 2011 and found to be most vulnerable to urban and storm water runoff, wildlife, agriculture, recreational activities, and wastewater.

An assessment of all EMWD wells was completed in 2013. Two sources were considered vulnerable to airports and airplane maintenance associated with a contaminant detected in the water supply. In addition, other EMWD wells were considered most vulnerable to the following due to proximity (not associated with any contaminants): commercial and industrial activities, residential activities, agriculture, and other activities such as recreation and transportation.

You can view vulnerability assessments on line at http://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/DWSAP.shtml and then click on "Summary of Assessments." You can also call (951) 928-3777, ext. 3327 for a copy of EMWD's vulnerability assessments.

Protecting the sources of drinking water helps protect our health. It's everyone's responsibility, and here are a few ways you can help:

- Eliminate excess use of lawn and garden fertilizers and pesticides they contain hazardous chemicals that can reach your drinking water source.
- Pick up after your pets.
- Dispose of chemicals properly; take used motor oil to a recycling center.

4 EASTERN MUNICIPAL WATER DISTRICT 2017 CONSUMER CONFIDENCE REPORT 5

Facts about Total Coliform Bacteria

Water agencies test for the presence of coliform bacteria as an indicator of drinking water quality.

Coliform bacteria are naturally present in the environment and are generally not harmful. Coliform bacteria may occur in soil, vegetation, animal waste, sewage,

This Consumer Confidence Report (CCR) reflects changes in drinking water regulatory requirements during 2017. All water systems are required to comply with the state Total Coliform Rule. All water systems are also required to comply with the federal Revised Total Coliform Rule. The new federal rule maintains the purpose to protect public health by ensuring the integrity of the drinking water distribution system and monitoring for the presence of microbials (i.e. total coliform and E. coli bacteria). The USEPA anticipates greater public health protection as the new rule requires water systems that are vulnerable to microbial contamination to identify and fix problems. Water systems that exceed a specified frequency of total coliform occurrences are required to conduct an assessment to determine if any sanitary defects exist. If found, these must be corrected by the Eastern Municipal Water District routinely tests for the presence of coliform bacteria as an indicator of the sanitary quality of drinking water. EMWD analyzed 3.065 coliform samples in 2017, two of which were total coliform positive. The maximum allowed by EPA for coliforms is no more than 5 percent in any month. The highest monthly coliform result was 0.4 percent, which complies with this standard. EMWD also tests for E. coli bacteria, which indicate fecal or sewage contamination. Zero samples tested positive for *E. coli* in 2017.

A positive coliform test result does not necessarily mean a maximum contaminant level (MCL) has been exceeded, or that there is a problem in the water system.

More information and general guidelines on ways to lessen the risk of infection by microbes are available from the EPA's Safe Drinking Water Hotline at (800) 426-4791 or at http://water.epa.gov/drink/info/.

ABBREVIATIONS

AL	Action Level	MRDLG
CFU/mL	Colony-Forming Units per milliliter	MRL

parts per million or milligrams per liter (mg/L) parts per trillion or nanograms per liter (ng/L) ppt RAA Running Annual Average Threshold Odor Number microSiemens per centimeter; or micromhos per centimeter (umho/cm) Greater than Less than Less than or equal to Percent

DEFINITIONS

90th Percentile: The value in a data set in which 90 percent of the set is less than or equal to this value.

Disinfection By-Product: Compounds which are formed from mixing of organic or mineral precursors in the water with ozone, chlorine or chloramine. Bromate, Total Trihalomethanes, and Haloacetic Acids are disinfection

Locational Running Annual Average (LRAA): The Running Annual Average (RAA) at one sample location.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the Public Health Goals (PHGs) or Maximum Contaminant Level Goals (MCLGs) as is Primary Drinking Water Standard (Primary Standard): economically and technologically feasible. Secondary MCLs and MRDLs for contaminants that affect health along MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of Public Health Goal (PHG): The level of a contaminant in a contaminant in drinking water below which there is no drinking water below which there is no known or expected known or expected risk to health. MCLGs are set by the risk to health. PHGs are set by the California Environmental USEPA.

Maximum Residual Disinfectant Level (MRDL): The highest Regulatory Action Level (AL): The concentration of a level of a disinfectant allowed in drinking water. There contaminant which, if exceeded, triggers treatment or is convincing evidence that addition of a disinfectant is other requirements that a water system must follow. necessary for control of microbial contaminants.

level of a disinfectant added for water treatment below data. which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Notification Level (NL): Notification levels are healthbased advisory levels established by the State Board for chemicals in drinking water that lack MCLs.

with their monitoring and reporting requirements, and water treatment requirements.

Protection Agency.

Running Annual Average (RAA): The yearly average which Maximum Residual Disinfectant Level Goal (MRDLG): The is calculated every 3 months using the previous 12 months'

> Secondary Drinking Water Standard (Secondary Standard): MCLs for contaminants that do not affect health but are used to monitor the aesthetics of the water

> Treatment Technique (TT): A required treatment process intended to reduce the level of a contaminant in drinking

The State Board allows EMWD to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Data presented is from sampling completed in 2017, unless otherwise indicated. Some of EMWD's data, though representative, are more than one year old

EMWD supports science-based standards that provide health henefits to the public in an economically balanced manner. Should more stringent standards be set. EMWD will meet them. EMWD's water has met and will continue to meet all regulations.

Board determine where certain contaminants occur and whether the contaminants need to be regulated.

FOOTNOTES

- A Total coliform MCLs: No more than 5.0% of the monthly samples may be total coliform-positive. Compliance is based on distribution system samples. EMWD analyzed 3,065 coliform samples in 2017, four of which were total coliform positive. The highest monthly coliform result was 0.4%. The MCL was not violated in 2017
- B Fecal coliform/*E. coli* MCLs: An MCL violation is the occurrence of two (2) consecutive total coliform-positive samples, one of which contains fecal coliform or *E. coli*. There were zero detected fecal coliforms. The MCL was not violated in 2017.
- HPCs were tested only in distribution system samples which had no detectable chlorine residual. No less than 95% of all distribution system samples in one month may have no detectable chlorine residual and an HPC greater than 500 colony forming units per mL. The HPC results were no less than 99.2% in any month in 2017
- Bromate is a disinfection by-product resulting from the use of ozone. Currently, the Mills and Skinner Filtration plants use
- E DLR = 1.0 ppb for each Haloacetic Acid 5 (HAA5) analyte (dichloroacetic acid, trichloroacetic acid, monobromoacetic acid, and dibromoacetic acid) except for monochloroacetic acid which has a DLR = 2.0 ppb. Locational running annual averages and ranges are calculated from 12 samples sites collected quarterly throughout the distribution system. HAA5s are a byproduct of drinking water chlorination
- Total Trihalomethanes (TTHMs) are the sum of the following analytes: bromodichloromethane, bromoform, chloroform and dibromochloromethane. Locational Running Annual Averages (IRAA) and ranges are calculated from 12 sample sites collected quarterly throughout the distribution system, TTHMs are a by-product of drinking water chlorination.
- G Lead and Copper are regulated as a Treatment Technique under the Lead and Copper Rule, which requires systems to take 50 water samples at the consumers' tap every three years. Results are from 2016. Neither lead nor copper are typically found in the source waters but can get into water by way of internal corrosion of household plumbing.
- Compliance for physical parameters is determined by the average, however all samples are reviewed and any values outside the compliance range are noted and corrected if possible. Values above the MCL may be acceptable so long as the average complies with the MCL
- Unregulated contaminant monitoring spanned four consecutive quarters from 2013 to 2014. Total Chromium and Chromium-6 are regulated contaminants, however they were tested using reporting limits that were much lower than regulation as part f an unregulated contaminant rule. There is currently no MCL for hexavalent chromium. The previous MCI of 0.010 mg/l was withdrawn on September 11, 2017. Any results above the detection limit of 1 ppb is reported

FOOTNOTES

- J Values are from blended Well 57 and raw well values from other wells in area. Well 57 is blended on site with Mills water
- The turbidity level of the combined filter effluent at the Mills and Skinner Filtration plants shall be less than or equal to 0.3 NTU in 95% of the measurements taken each month and shall not exceed 1 NTU at any time. For the Perris and Hemet Filtration plants, the turbidity level of the combined filter effluent shall be less than or equal to 0.1 NTU in 95% of the measurements taken each month and shall not exceed 1 NTU at any time. Turbidity is a measure of the cloudiness of the water and is an indicator of treatment performance.
- Aluminum has both primary (1,000 ppb) and secondary (200 ppb) standards (MCLs).
- M While your drinking water meets the federal and state standard for arsenic, some of our sources do contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. The EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects
- such as skin damage and circulatory problems. Metropolitan began fluoride treatment of water at Mills and Skinner Filtration plants in 2007. Fluoride is not added to the water in the East Valley Area.

The State Board allows EMWD to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Data presented is from sampling completed in 2017, unless otherwise indicated. Some of EMWD's data, though representative, are more than one year old.

EMWD supports science-based standards that provide health benefits to the public in an economically balanced manner. Should more stringent standards be set, EMWD will meet them. EMWD's water has met and will continue to meet all regulations.

Unregulated contaminant monitoring helps EPA and the State Board determine where certain contaminants occur and whether the contaminants need to be regulated.

FOOTNOTES

- Unregulated contaminant monitoring spanned four consecutive quarters from 2013 to 2014. Total Chromium and Chromium-6 are regulated contaminants, however they were tested using reporting limits that were much lower than regulation as part of an unregulated contaminant rule. There is currently no MCL for hexavalent chromium. The previous MCL of 0.010 mg/L was withdrawn on September 11, 2017. Any results above the detection limit of 1 ppb is reported.
- Values are from blended Well 57 and raw well values from other wells in area. Well 57 is blended on site with Mills water to improve Total Dissolved Solids. Well 59 data is from 2015 since we discontinued its use early in 2016 due to a new USEPA health advisory exceedance of PFOS and PFOA.
- Turbidity is a measure of the cloudiness of the water and is an indicator of treatment performance. Secondary standards were based either on the treatment plant effluent or raw well water
- Water hardness, measured in grains per gallon as calcium carbonate, is characterized by the following scale: 0 4.4 is soft, 4.4 8.8 is moderately hard, 8.8 17.5 is hard and greater than
- EPA has established the health advisory for a combined PFOA and PFOS concentration of 70 parts per trillion. EPA health advisories provide information on contaminants that may cause health effects or are anticipated to occur in drinking water but are non-enforceable and non-regulatory.
- R Result from one raw well sample.

The State Board allows EMWD to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of EMWD's data, though representative, are more than one year old.

EMWD supports science-based standards that provide health benefits to the public in an economically balanced manner. Should more stringent standards be set, EMWD will meet them. EMWD's water has met and will continue to meet all regulations.

Unregulated contaminant monitoring helps EPA and the State Board determine where certain contaminants occur and whether the contaminants need to be regulated.

Public Meetings

EMWD's Board of Directors meetings are generally held on the 1st and 3rd Wednesdays of each month beginning at 9:00 a.m.

If you wish to attend a meeting, please call the Board Secretary during normal business hours at (951) 928-3777, extension 4235 to confirm meeting dates or check the Board Meeting Calendar online at www.emwd.org/BoardMeetings.

For more information on this report, contact: Water Quality (951) 928-3777, extension 3327 or visit www.emwd.org/WaterQuality.

Why You Should Read This Report

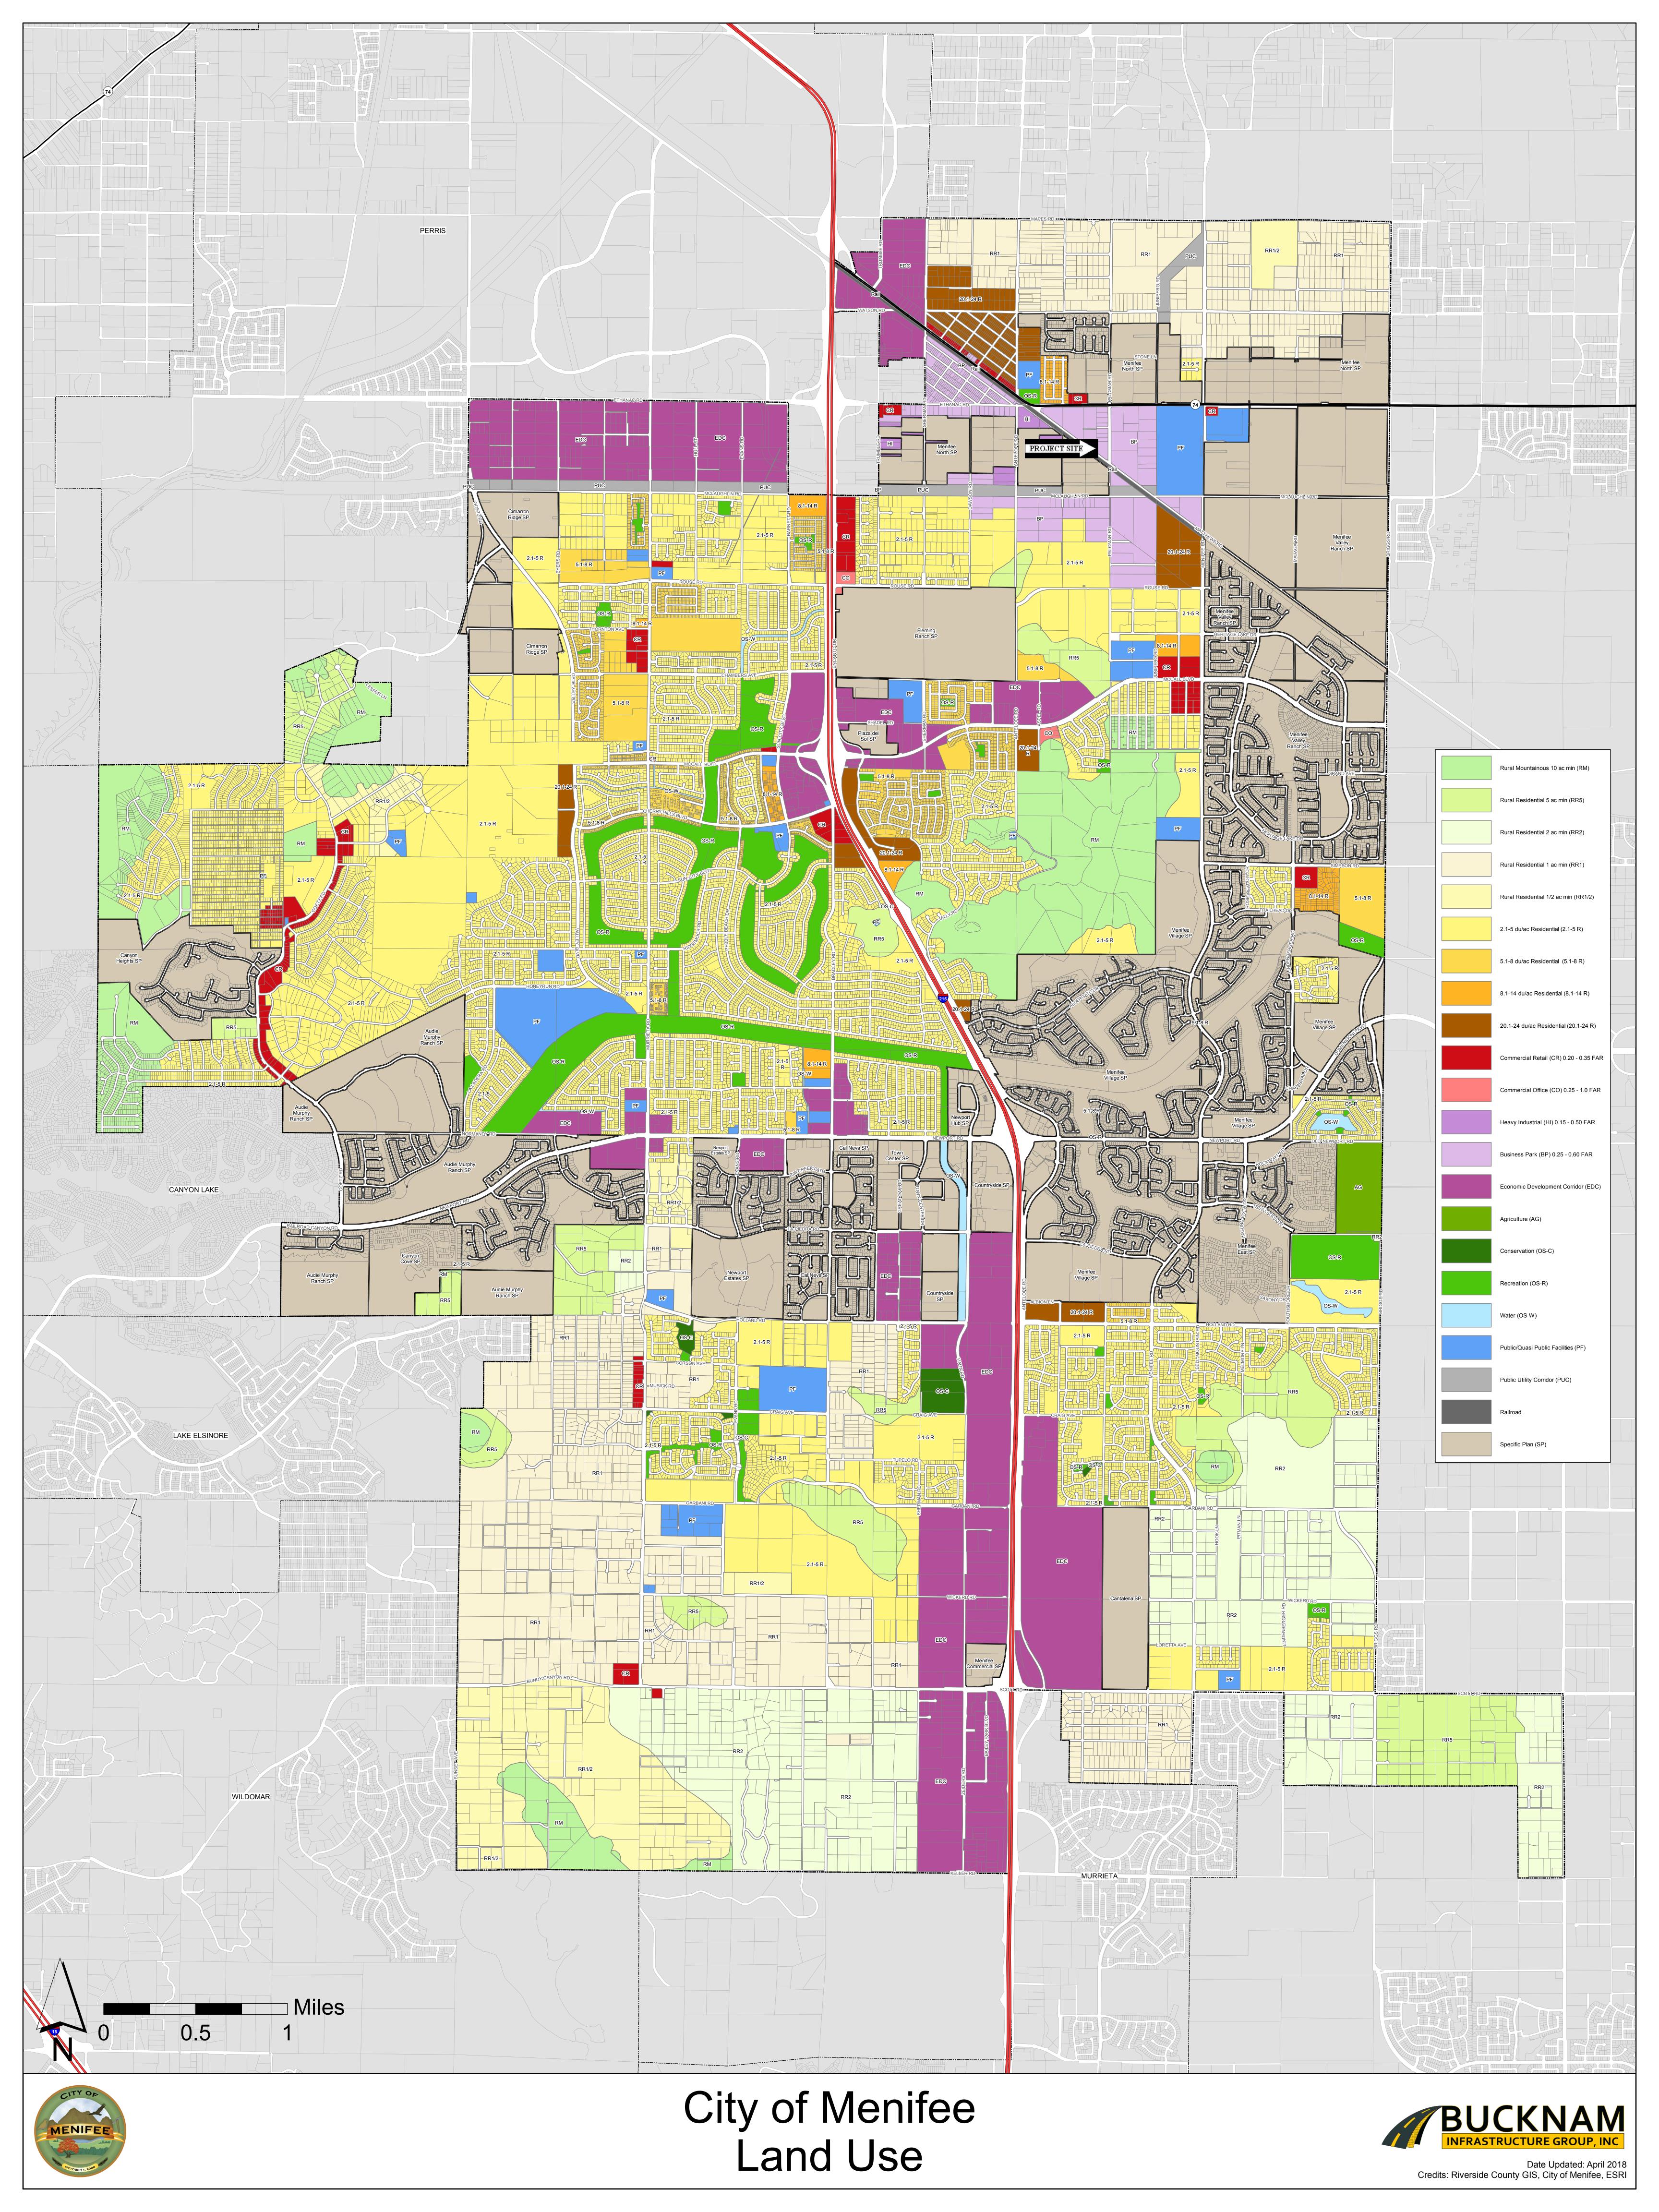

THIS YEAR'S DRINKING WATER QUALITY REPORT...

- Examines how EMWD ensures your drinking water is safe, high quality, and reliable.
- Provides science-based data and facts about the sources, quality, and safety of your drinking water.
- Explains how customers can always choose how they wish to receive future water quality reports

Would You Like to Receive This Report in Spanish?

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- · search for parcel information and/or legal description;
- · search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050 with any questions or comments.

Appendix B Air Quality and Greenhouse Gas Assessment

December 17, 2018

Mr. Grant Becklund 30811 Garbani Road Winchester, CA 92596

SUBJECT: FORTERRA PIPE MANUFACTURING FACILITY FOCUSED AIR QUALITY AND GREENHOUSE GAS EVALUATION

Dear Mr. Grant Becklund:

Urban Crossroads, Inc. is pleased to submit this Focused Air Quality and Greenhouse Gas Evaluation for the Forterra Pipe Manufacturing Facility development ("Project"), which is located at the northeast corner of Matthews Road and Palomar Road in the City of Menifee.

The Project site is currently occupied by the Forterra Pipe Manufacturing use which includes approximately 74,090 square feet of manufacturing use. The Project proposes to construct a new 16,500 square foot metal building to accommodate internal equipment with a weather tight roof and shed roof to provide sun and water protection for on-site activities. Three traveling cranes to assist in the assembly and movement of materials and concrete will be utilized. A precast concrete mixer will be installed under the shed roof along with sand and aggregate material bins and a concrete silo for the storage of raw cement. This concrete batching equipment will replace the delivery of ready-mix concrete from local suppliers and will provide a more efficient manufacturing process and better-quality control of the concrete used in the process. The proposed material storage bins and cement silo will be shielded by the new building from view from Matthews Road. A second 4,200 square foot metal building addition will be added to the existing 3,800 square feet metal storage building to provide weather proof storage of the materials and equipment installed in the water quality boxes. Both new buildings and equipment will be pre-painted to match the existing buildings and trim.

These products are currently being manufactured on-site on an open slab and Forterra would like to cover the manufacturing area with a roof and install fixed cranes to move the materials within the building. This operation will not add additional employees or traffic.

The existing facility includes forming, casting and outfitting concrete water quality vaults. The concrete used int eh process is currently being manufactured offsite by concrete ready-mix companies and delivered on an "as-needed" basis. The amount of concrete delivered over the past year has been 375 cubic yards (CY) per month. The quantity may increase slightly over time but is limited by the lengthy production process and limited work area and is estimated to increase by 50% to 562 CY per month in the future.

The raw materials are delivered by truck and stored in bins and a silo until needed. The cement silo is a

Mr. Grant Becklund December 17, 2018 Page 2 of 10

"closed" design tank with built-in dust capture/filtration system with no emissions. The concrete is then batched in a "closed loop" system that is self-contained and sealed. The mixed concrete is prepared in 2 CY batches which are loaded into an aerial bucket for delivery the the crane system to the steel forms used for casting the boxes. The time to produce 2 CY of concrete is 3 minutes and the maximum output from the proposed mixer is 48 CY per hour. The operational time of the mixing equipment to produce 375 CY would be 8 hours per month at present production levels and would increase to 12 hours at 562 CY per month.

The only emissions produced during this process would be during the "dry" portion of the delivery of sand and aggregate and the loading of this material into the bins. The balance of the mixing occurs in "closed loop" equipment and is a "wet" process. The total daily emissions are based on an approximate of 200% of the daily average which would result in a 100% increase of production over time. Attachment "B" includes a breakdown of the average and maximum daily CY that are anticipated in the process.

Necessary permits will be obtained from SCAQMD prior to operating. SCAQMD rules and regulations that are applicable to the Project include but are not limited to Regulation IV, and Regulation XI. Based on discussion with the applicant, the Project will apply for all necessary and applicable permits with SCAQMD.

SUMMARY OF FINDINGS

The proposed Project would not exceed the applicable SCAQMD threshold for air quality and would not exceed the 3,000 MTCO2e threshold for greenhouse gases. As such, the proposed Project would not result in any significant impacts and no further mitigation is required.

AIR QUALITY

CONSTRUCTION EMISSIONS

Construction activities associated with the Project will result in emissions of CO, VOCs, NOx, SOx,PM10, and PM2.5. Construction related emissions are expected from demolition and building construction activities.

The duration of construction activity was based on information provided by the project applicant and are summarized on Table 1. The associated construction equipment was based on CalEEMod defaults. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per California Environmental Quality Act (CEQA) guidelines. Site specific construction fleet may vary due to specific project needs at the time of construction.

Based on discussion with the project applicant, a maximum of 20,700 square feet of pavement will be scraped (demolished) in order to allow for the construction of the new metal building. Additionally, no grading will be required, and no painting of the metal structures is anticipated.

Mr. Grant Becklund December 17, 2018 Page 3 of 10

Construction emissions for construction worker vehicles traveling to and from the Project site, as well as vendor trips (construction materials delivered to the Project site) were estimated based on CalEEMod defaults. Table 2 summarizes the anticipated construction equipment list.

TABLE 1: CONSTRUCTION SCHEDULE

Phase Name	Start Date	End Date	Days
Demolition	1/1/2019	1/14/2019	10
Building Construction	1/15/2019	3/25/2019	50

TABLE 2: CONSTRUCTION EQUIPMENT

Activity	Equipment	Number	Hours Per Day
	Concrete/Industrial Saws	1	8
Demolition	Rubber Tired Dozers	1	1
	Tractors/Loaders/Backhoes	2	6
	Cranes	1	4
Building Construction	Forklifts	2	6
	Tractors/Loaders/Backhoes	2	8

The estimated maximum daily construction emissions for the proposed Project are summarized on Table 3. Detailed construction model outputs are presented in Attachment "A".

TABLE 3: PROPOSED PROJECT CONSTRUCTION EMISSIONS SUMMARY

Year	Emissions (pounds per day)									
Tear	voc	NOx	со	SOx	PM10	PM2.5				
Maximum Daily Emissions	1.05	10.55	8.32	0.02	2.29	0.89				
SCAQMD Regional Threshold	75	100	550	150	150	55				
Threshold Exceeded?	NO	NO	NO	NO	NO	NO				

OPERATIONAL EMISSIONS

The proposed Project would not result in any additional employee or truck trips, the only additional emissions generated by the proposed Project, in addition to the emissions totals summarized in the previous <u>Forterra Pipe Manufacturing Focused Air Quality and Greenhouse Gas Evaluation</u> (Urban

Mr. Grant Becklund December 17, 2018 Page 4 of 10

Crossroads April 2017), would be additional PM10 and PM2.5 emissions associated with the concrete batching.

Additional PM10 and PM2.5 emissions would result from the following activities:

- Aggregate delivery to ground storage 18.1 cubic yards (cy) day
- Sand Delivery to ground storage 12.5 cy day
- Aggregate transfer to conveyor -18.1 cy day
- Sand transfer to conveyor -12.5 cy day
- Cement delivery to Silo 7.5 cy day

The throughput levels above were determined to be maximum throughput levels based on our discussion with the applicant. The throughput is ultimately limited by the materials brought into the site that are used for limited production of concrete structures.

PM10 emissions have been calculated based on the United States (see Table 11.12-5 Plant Wide Emission Factors Per Yard of Truck Mix Concrete). Further Environmental Protection Agency's (USEPA's) Compilation of Emission Factors (AP-42) Section 11.12 *Concrete Batching*, there are no emissions associated with "truck mix loading" or "central mix loading" since the material is picked up by a crane and dropped into a bucket for production. Lastly, there is no baghouse proposed or needed for the anticipated operations of the Project.

PM10 (lb/CY) Total PM10/day **Activity** CY/day Aggregate delivery to ground storage 0.081 0.0031 26 Sand delivery to ground storage 0.0007 18 0.013 Aggregate transfer to conveyor 26 0.081 0.0031 Sand transfer to conveyor 0.0007 18 0.013 Cement delivery to Silo 0.0001 11 0.0011 Total PM10 0.19

TABLE 4: EMISSIONS FROM CONCRETE BATCHING

PM2.5 emissions have been calculated based on the CEIDARS PM2.5 fraction of PM10 published by the SCAQMD in their report *Final – Methodology to Calculate Particulate Matter (PM) 2.5 and PM 2.5 Significance Thresholds* (October 2006). As such, PM2.5 emissions would equal 67.4% of PM10 emissions calculated above, resulting in 0.13 pounds per day of PM2.5 emissions associated with the concrete batching.

Table 5 includes a summary of total emissions as summarized in the April 2017 assessment in addition to emissions associated with the proposed concrete batching operation. As shown, the proposed Project would result in emissions of VOC, NOx, CO, SOx, PM10, and PM2.5 that would not exceed the applicable SCAQMD thresholds. As such, no impacts would occur, and no mitigation is required.

TABLE 5: OPERATIONAL EMISSIONS SUMMARY

On anational Astinition		Emissions (pounds per day)									
Operational Activities	voc	NO _x	со	SO _x	PM ₁₀	PM _{2.5}					
April 2017 Air Quality Evaluation	4.02	19.20	21.79	0.05	3.76	1.72					
Concrete Batching					0.19	0.13					
Total Maximum Daily Emissions	4.09	19.30	21.79	0.05	3.95	1.85					
SCAQMD Regional Threshold	55	55	550	150	150	55					
Threshold Exceeded?	NO	NO	NO	NO	NO	NO					

LOCALIZED IMPACTS

The SCAQMD established Localized Significance Thresholds (LSTs) in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

For this Project, there are no sensitive land uses adjacent to the Project. In fact, the nearest residential communities are located more than ¼ mile (1,320 feet) from the Project site. As such, no impacts to sensitive receptors would occur from short-term project construction or on-going project operations.

AIR QUALITY MANAGEMENT PLANNING

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743 square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of what use to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the Southern California Association of Governments (SCAG), county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the Basin. In response, the SCAQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

In March 2017, the AQMD released the Final 2016 AQMP. The 2016 AQMP continues to evaluate current integrated strategies and control measures to meet the NAAQS, as well as, explore new and innovative methods to reach its goals. Some of these approaches include utilizing

Mr. Grant Becklund December 17, 2018 Page 6 of 10

incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (27).

The 2016 AQMP was based on assumptions provided by both CARB and SCAG in the latest available EMFAC model for the most recent motor vehicle and demographics information, respectively. The air quality levels projected in the 2016 AQMP are based on several assumptions. For example, the 2016 AQMP has assumed that development associated with general plans, specific plans, residential projects, and wastewater facilities will be constructed in accordance with population growth projections identified by SCAG in its 2016 RTP. The 2016 AQMP also has assumed that such development projects will implement strategies to reduce emissions generated during the construction and operational phases of development.

Criteria for determining consistency with the 2016 AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the SCAQMD's CEQA Air Quality Handbook (1993) (28). These indicators are discussed below:

 Consistency Criterion No. 1: The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

CONSTRUCTION IMPACTS

The analysis above demonstrates that, Project construction-source emissions would not exceed the applicable regional significance thresholds for any criteria pollutant. Therefore, the Project would not have the potential to result in or cause violations of the CAAQS and NAAQS.

OPERATIONAL IMPACTS

The analysis above demonstrates that, Project operational-source emissions would not exceed the applicable regional significance thresholds for any criteria pollutant. Therefore, the Project would not have the potential to result in or cause violations of the CAAQS and NAAQS.

On the basis of the preceding discussion, the Project would not conflict with the first criterion.

• Consistency Criterion No. 2: The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

OVERVIEW

The 2016 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the Southern California Association of Governments (SCAG), which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in County of Riverside General Plan is considered to be consistent with the AQMP.

Mr. Grant Becklund December 17, 2018 Page 7 of 10

CONSTRUCTION IMPACTS

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. Thus, construction emissions from the Project would be consistent with the 2016 AQMP assumptions for construction activities throughout the SCAB.

OPERATIONAL IMPACTS

The Project's intended use is similar to the historic use of the site and consistent with applicable land use designations. No substantive change to the existing land use will occur.

On the basis of the preceding discussion, the Project is determined to be consistent with the second criterion.

AQMP CONSISTENCY CONCLUSION

The Project would not have the potential to result in or cause NAAQS or CAAQS violations. The Project's development intensity is consistent with than the development intensities allowed within the General Plan. The Project is therefore consistent with the AQMP and a potential conflict would not occur.

GREENHOUSE GAS EMISSIONS

CONSTRUCTION AND OPERATIONAL EMISSIONS

The proposed concrete batching activity would not result in any substantive emissions increases than what was previously evaluated in the previous <u>Forterra Pipe Manufacturing Focused Air Quality and Greenhouse Gas Evaluation</u> (Urban Crossroads April 2017). The only additional GHG emissions would be a result of short-term construction activity associated with the proposed concrete batching operation.

The annual GHG emissions associated with the construction and operation of the proposed Project are estimated to be 1,144.08 MTCO2e per year as summarized in Table 6. Detailed construction model outputs are presented in Attachment "A". The proposed Project would not exceed the 3,000 MTCO2e threshold. As such, the proposed Project would result in a less than significant impact with respect to GHG emissions.

TABLE 6: OPERATIONAL GREENHOUSE GAS EMISSIONS SUMMARY (ANNUAL)

Emission Source	Emissions (metric tons per year) (CO2e)
April 2017 Greenhouse Gas Assessment	1,142.80
Proposed construction-related emissions amortized (30 years)	1.28
Total CO₂E (All Sources)	1,144.08

Additionally, the proposed concrete batching operation would not hinder or conflict with any of the Scoping Plan Consistency findings presented previously in the <u>Forterra Pipe Manufacturing Focused</u> Air Quality and Greenhouse Gas Evaluation (Urban Crossroads April 2017).

If you have any questions, please contact me directly at (949) 336-5987.

Respectfully submitted,

URBAN CROSSROADS, INC.

Haseeb Qureshi, Senior Associate

1.0 Introduction

HES was contracted to prepare a general biological assessment (GBA) and Western Riverside County MSHCP consistency analysis for Riverside County Assessor's Parcel Number (APN) 331-190-046. The project site consists of approximately 3.40 acres located at the northwest corner of Matthews Road and Palomar Road in the city of Menifee, Riverside County, California.

1.1 Project Site Location

The project site is located at the northwest corner of Matthews Road and Palomar Road in the city of Menifee, Riverside County, California. The project site consists of Riverside County APN 331-190-046. Specifically, the project site is located within the northwest portion of Section 14, Township 5 south, Range 3 west of the *San Bernardino* United States Geological Survey (USGS) 7.5' topographic quadrangle. The center point latitude and longitude for the project site are 33°44'22.3179" North and 117°09'48.8760" West (Figures 1 and 2).

1.2 Project Description

The project proposes to use APN 331-190-046 as an additional 3.4 acre storage area for the adjacent Forterra Pipe Manufacturing Facility.

2.0 Methodology

2.1 Literature Review

HES conducted a literature review and reviewed aerial photographs and topographic maps of the project sites and surrounding areas. A five-mile radius was used to identify sensitive species with the California Natural Diversity Data Base (CNDDB), the U.S. Fish and Wildlife Service (USFWS) Endangered Species Lists, and the California Native Plant Society (CNPS) rare plant lists to obtain species information for the project area. The CNDDB and USFWS critical habitat databases were utilized, together with Geographic Information System (GIS) software, to locate the previously recorded locations of sensitive plant and wildlife occurrences and designated critical habitat and determine the distance from the project sites. Additionally, the Western Riverside County MSHCP was reviewed for information on known occurrences of sensitive species within Riverside County.

2.1.1 Western Riverside County MSHCP

The Western Riverside County MSHCP (Dudek and Associates 2003) is a comprehensive, multijurisdictional habitat conservation planning program for western Riverside County, California. The purpose of the Western Riverside County MSHCP is to preserve native habitats, and to this end, the plan focuses upon the habitat needs of multiple species rather than one

species at a time. The Western Riverside County MSHCP provides coverage/take authorization for some species listed under the federal or state Endangered Species Act (ESA) as well as non-listed special-status plant and wildlife species. It also provides mitigation for impacts to special-status species and their associated habitats.

Through agreements with the USFWS and California Department of Fish and Wildlife (CDFWG), 146 listed and special-status plant and animal species receive some level of coverage under the Western Riverside County MSHCP. Of the 146 covered species, the majority have no additional survey needs or conservation requirements. Furthermore, the Western Riverside County MSHCP provides mitigation for project-specific impacts to these species, thereby reducing the degree of impact to below a level of significance, pursuant to the California Environmental Quality Act (CEQA).

Several of the species covered under the Western Riverside County MSHCP have additional survey requirements. These include the riparian communities and associated species addressed in Section 6.1.2 of the Western Riverside County MSHCP document ("Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools"), plants identified in Section 6.1.3 ("Narrow Endemic Plant Species"); and plants and animal species addressed in Section 6.3.2 ("Additional Survey Needs and Procedures").

2.1.2 Project Relationship to the Western Riverside County MSHCP

The project area is located within the Western Riverside County MSHCP boundaries. The County of Riverside, acting as the lead agency for the proposed project, is a permittee under the Western Riverside County MSHCP and, therefore, is afforded coverage under the state or federal ESAs for impacts to listed species covered by the plan. The County is required to document consistency with the Western Riverside County MSHCP in conjunction with any discretionary approvals for the project. As such, this report was prepared to provide all necessary information required to determine project consistency with the Western Riverside County MSHCP.

The project site is located within Western Riverside County MSHCP Harvest Valley/Winchester Area Plan and is not located within an Area Plan Subunit, Criteria Cell, or Cell Group. Further, the project site is not located within plan-defined areas requiring surveys for narrow endemic plant species, criteria area plant species, or burrowing owl (*Athene cunicularia*).

2.2 Field Survey

On November 16, 2018, HES biologist Juan Hernandez conducted a field survey of the project site. The ambient temperature at 9:00 a.m. was 70 degrees Fahrenheit, sunny, with winds ranging from zero to three miles per hour from the southwest. The purpose of the field survey was to document the existing habitat conditions, obtain plant and animal species information, view the surrounding land uses, assess the potential for state and federal waters, assess the

potential for wildlife movement corridors, and assess the presence of constituent elements for critical habitat, if present.

Linear transects spaced approximately 50 to 100 feet apart were walked across the project site for 100 percent coverage. All species observed were recorded. Global Positioning System (GPS) waypoints were taken to delineate specific habitat types, species locations, state or federal waters, and any other information that would be useful for the assessment of the project site. A comprehensive list of all plant and wildlife species that were detected during the field survey within the project site is included in Appendix A. Sensitive plant and wildlife species with the potential to occur within the project area are listed in Appendix B. Representative site photographs were taken and are included within Appendix C.

3.0 Existing Conditions and Results

3.1 Environmental Setting

The site is located within the city of Menifee, Riverside County, California. The project site is undeveloped, relatively flat, and disturbed. It is bordered by commercial development to the north and east, and undeveloped land to the south and west. Elevations on the site range from 1,456 feet above mean sea-level (AMSL) to 1,460 AMSL.

3.2 Soils

According to the USDA Web Soil Survey, one soil type occurs on the project site (Appendix G). The soils at the project site are classified as Exeter sandy loam, 2 to 8 percent slopes, eroded.

3.3 Plant and Habitat Communities

The project site is undeveloped, relatively flat, and heavily disturbed with sparse vegetation. The site is characterized by one habitat type, ruderal/disturbed (Figure 3).

Ruderal/Disturbed

The project site contains approximately 3.40 acre of ruderal/disturbed habitat. The ruderal areas on the site are dominated by non-native plant species. Dominant vegetation observed in this habitat type includes ripgut brome (*Bromus diandrus*), foxtail chess (*Bromus madritensis*), black mustard (*Brassica nigra*), Russian thistle (*Salsola tragus*), London rocket (*Sisymbrium irio*), and filaree (*Erodium sp.*).

3.4 Wildlife

General wildlife species documented on the project sites or within the vicinity of the sites include, red-tailed hawk (*Buteo jamaicensis*), house finch (*Carpodacus mexicanus*), American crow (*Corvus brachyrhynchos*), western fence lizard (*Sceloporus occidentalis*), common raven

(*Corvus corax*), California ground squirrel (*Otospermophilus beecheyi*), and western kingbird (*Tyrannus verticalis*). The complete list of species observed is included as Appendix A.

3.5 Regional Connectivity/Wildlife Movement

Wildlife movement corridors link together areas of suitable habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbances. The project area was evaluated for its function as a wildlife corridor that species would use to move between wildlife habitat zones. The project area is relatively flat and surrounded by paved roads and residential structures. No wildlife movement corridors were found to be present on the project sites.

3.6 Sensitive Biological Resources

According to the CNDDB, a total of 53 sensitive species of plants and 59 sensitive species of animals have the potential to occur on or within the vicinity of the project area. These include those species listed or candidates for listing by the U. S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW) and California Native Plant Society (CNPS). All habitats with the potential to be used by sensitive species were evaluated during the site visit and a determination has been made for the presence or probability of presence within this report. This section will address those species listed as Candidate, Rare, Threatened, or Endangered under the state and federal endangered species laws or directed to be evaluated under the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP). Sensitive species which have a potential to occur will also be discussed in this section. Other special status species are addressed within Appendix B.

3.6.1 Sensitive Plant Resources

A total of 20 plant species are listed as state and/or federal Threatened, Endangered, or Candidate species; are required to be reviewed under the Narrow Endemic Plant section of the Western Riverside MSHCP; are 1B.1 listed plants on the CNPS Rare Plan Inventory; or have been found to have a potential to exist on the project site. Below are descriptions of these species:

Chaparral sand-verbena

Chaparral sand-verbena (*Abronia villosa var. aurita*) is ranked 1B.1 in the CNPS rare plant inventory. It is found in sandy areas of chaparral, coastal scrub, and desert dunes habitats. No habitat for this species is present on the project site. **This species is not present.**

Munz's onion

Munz's onion (*Allium munzii*) is a federally endangered, state threatened, and CNPS 1B.1 listed plant. It is found in chaparral, coastal scrub, valley and foothill grasslands, cismontane woodland, and pinyon and juniper woodland. It is commonly found in heavy clay soils. No habitat for this species is present on the project site. **This species is not present.**

San Diego ambrosia

San Diego ambrosia (*Ambrosia pumila*) is listed as federally endangered and ranked 1B.1 in the CNPS rare plant inventory. Its habitat includes wetlands in chaparral, coastal sage scrub, valley and foothill grassland. It is commonly found in sandy loam or clay soil and sometimes in alkaline soils. This species persists where disturbance has been superficial. It is also sometimes found on margins or near vernal pools. No habitat for this species is present on the project site. **This species is not present.**

Rainbow Manzanita

Rainbow Manzanita (*Arctostaphylos rainbowensis*) is ranked 1B.1 in the CNPS rare plant inventory. It is usually found in gabbro chaparral habitat. No habitat for this species is present on the project site. **This species is not present.**

Jaeger's milk-vetch

Jaeger's milk-vetch (*Astragalus pachypus var. jaegeri*) is ranked 1B.1 in the CNPS rare plant inventory. It is often found in dry ridges and valleys, and open sandy slopes. Its habitat includes coastal scrub, chaparral, valley and foothill grassland, and cismontane woodland. No habitat for this species is present on the project site. **This species is not present.**

San Jacinto Valley crownscale

San Jacinto Valley crownscale (*Atriplex coronata var. notatior*) is a federally listed endangered species and is ranked 1B.1 in the CNPS rare plant inventory. Its habitat includes playas, valley and foothill grassland, and vernal pools. It is commonly found in the alkaline areas in the San Jacinto River Valley. No habitat for this species is present on the project site. **This species is not present.**

Parish's brittlescale

Parish's brittlescale (*Atriplex parishii*) is ranked 1B.1 in the CNPS rare plant inventory. Its habitat includes shadescale scrub, alkali sink, riparian, playas, vernal pools and wetland. It is usually found on drying alkali flats with fine soils. No habitat for this species is present on the project site. **This species is not present.**

Thread-leaved brodiaea

The thread-leaved brodiaea (*Brodiaea filifolia*) is a federally threatened, state endangered and a CNPS 1B.1 listed plant. This species is usually associated with annual grassland and vernal pools and is often surrounded by shrubland habitats. Its habitats include chaparral, cismontane woodlands, coastal sage scrub, valley and foothill grasslands, vernal pools and wetland. No habitat for this species is present on the project site. **This species is not present.**

Smooth tarplant

Page | 8

Smooth tarplant (*Centromadia pungens ssp. laevis*) is ranked 1B.1 in the CNPS rare plant inventory. Its habitat includes alkali playa, chenopod scrub, meadows and seeps, riparian woodlands, wetlands, and valley and foothill grasslands. It is most commonly found in alkali meadow, alkali scrub, and disturbed habitat. No habitat for this species is present on the project site. **This species is not present.**

Parry's spineflower

Parry's spineflower (*Chorizanthe parryi var. parryi*) is ranked 1B.1 in the CNPS rare plant inventory. The species occurs in dry, sandy soils on dry slopes and flats, sometimes at the interface of two vegetations types, such as chaparral and oak woodland. Its habitat includes coastal scrub, chaparral, cismontane woodland, valley and foothill grassland. No habitat for this species is present on the project site. **This species is not present.**

Slender-horned spineflower

Slender-horned spineflower (*Dodecahema leptoceras*) is a federally and state listed endangered species and is ranked 1B.1 in the CNPS rare plant inventory. This species is typically found near flood deposited terraces and washes. Its habitat includes chaparral, cismontane woodland, and coastal scrub (alluvial fan sage scrub). No habitat for this species is present on the project site. **This species is not present.**

San Diego button-celery

San Diego button-celery (*Eryngium aristulatum var. parishii*) is a federally and state listed endangered species and is ranked 1B.1 in the CNPS rare plant inventory. Its habitat includes coastal scrub, valley & foothill grasslands, vernal pools, and wetlands. Its flowering period is from May to June. No habitat for this species is present on the project site. **This species is not present.**

Campbell's liverwort

Campbell's liverwort (*Geothallus tuberosus*) is ranked 1B.1 in the CNPS rare plant inventory. Its habitat includes coastal scrub, and vernal pools. No habitat for this species is present on the project site. **This species is not present.**

Tecate cypress

Tecate cypress (*Hesperocyparis forbesii*) is ranked 1B.1 in the CNPS rare plant inventory. It is found on clay or gabbro, primarily on north-facing slopes and in groves often associated with chaparral habitat. Its habitat includes closed-cone coniferous forest, and chaparral. No habitat for this species is present on the project site. **This species is not present.**

Coulter's goldfields

Coulter's goldfields (*Lasthenia glabrata ssp.coulteri*) is ranked 1B.1 in the CNPS rare plant inventory. Its habitat includes alkali playas, marsh, swamp, salt marsh, vernal pool, and wetland. No habitat for this species is present on the project site. **This species is not present.**

Parish's meadowfoam

Parish's measowfoam (*Limnanthes alba ssp. parishii*) is a state listed endangered species. It is ranked 1B.2 in the CNPS rare plant inventory. This species is typically found in vernally moist areas and temporary seeps of highland meadows and plateaus. They are also often found bordering lakes and streams. It is found in lower montane coniferous forest, meadows and seeps, wetland, and vernal pools. No habitat for this species exists on the project site. **This species is not present.**

Spreading navarretia

Spreading navarretia (*Navarretia fossalis*) is a federally listed threatened species and is ranked 1B.1 in the CNPS rare plant inventory. Its habitat includes alkali playa, chenopod scrub, marsh and swamp, vernal pools, and wetlands. This species is typically found in swales and vernal pools, often surrounded by other habitat types. No habitat for this species is present on the project site. **This species is not present.**

Prostrate vernal pool navarretia

Prostrate vernal pool navarretia (*Navarretia prostrata*) is ranked 1B.1 in the CNPS rare plant inventory. It is typically found in alkaline soils in grassland habitat, or in vernal pools. Its habitat includes coastal scrub, valley and foothill grasslands, vernal pools, meadows, and seeps. No habitat for this species is present on the project site. **This species is not present.**

California Orcutt grass

California Orcutt grass (*Orcuttia californica*) is a federal and state endangered species. It is ranked 1B.1 in the CNPS rare plant inventory. It is found in vernal pools. No habitat for this species is present on the project site. **This species is not present.**

Bottle liverwort

Bottle liverwort (*Sphaerocarpos drewei*) is ranked 1B.1 in the CNPS rare plant inventory. Its habitats include chaparral and coastal scrub. No habitat for the species is present on the project site. **This species is not present.**

3.6.2 Sensitive Animal Resources

A total of 15 animal species listed as state and/or federal Threatened, Endangered, Candidate will be reviewed in this section. Sensitive species which have a potential to occur will also be

discussed in this section. All sensitive species within a 5-mile radius of project area were reviewed and a complete list of those species are discussed within Appendix B. Below are descriptions of these species:

Tricolored blackbird

Tricolored blackbird (*Agelaius tricolor*) is a state listed candidate endangered species and listed by the CDFW as a species of special concern. Its habitat includes freshwater marsh, marsh and swamp, swamp, and wetland. This species is largely endemic to California and is most numerous in and around Central Valley. This species requires open accessible water, protected nesting substrate, and foraging area with insect prey within a few kilometers of the colony. There is no habitat for this species on the project site. **This species is not present.**

Arroyo Toad

Arroyo Toad (*Anaxyrus californicus*) is a federally listed endangered species and a CDFW Species of Special Concern. The most favorable breeding habitat for this species consists of slow-moving shallow pools, nearby sandbars, and adjacent stream terraces. Its habitat includes desert wash, riparian scrub, riparian woodland, south coast flowing waters, and south coast standing waters. There is no habitat for this species on the project site. **This species is not present.**

Vernal pool fairy shrimp

Vernal pool fairy shrimp (*Branchinecta lynchi*) is a federally listed threatened species. This species is found in seasonal pools of water in valley and foothill grasslands. This species typically inhabits small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools. The project site does not contain suitable habitat for this species. **This species is not present.**

San Diego fairy shrimp

San Diego fairy shrimp (*Branchinecta sandiegonensis*) is a federally listed endangered species. This species is found in chaparral, coastal scrub, vernal pool, and wetland habitats. It is endemic to San Diego and Orange County mesas. There is no habitat for this species on the project site. **This species is not present.**

Swainson's hawk

Swainson's hawk (*Buteo swainsoni*) is a state listed threatened species. This species favors open grasslands for foraging but also occurs in agricultural settings. It relies on scattered stands of trees near agricultural fields and grasslands for nesting sites. Its habitats include great basin grassland, riparian forest, riparian woodland, and valley and foothill grassland. The project site does not contain suitable habitat for this species. **This species is not present.**

Western snowy plover

Western snowy plover (*Charadrius alexandrinus nivosus*) is federally listed threatened species and a CDFW Species of Special Concern. It is found in great basin standing waters, sand shore, and wetland. This species needs sandy, gravelly, or friable soils for nesting. The project site does not contain suitable habitat for this species. **This species is not present.**

San Bernardino kangaroo rat

San Bernardino kangaroo rat (*Dipodomys merriami parvus*) is a federally listed endangered species and a CDFW Species of Special Concern. It is found in coastal scrub habitat. This species is found in alluvial scrub vegetation on sandy loam substrates, characteristic of alluvial fans and flood plains. It needs early to intermediate seral stages. The project site does not contain suitable habitat for this species. **This species is not present.**

Stephen's kangaroo rat

Stephens' kangaroo rat (*Dipodomys stephensi*) is a federally listed endangered and state listed threatened species. This species is found in coastal sage scrub with sparse vegetation cover, and in valley and foothill grasslands. This species prefers buckwheat, chamise, brome grass, and filaree, and will burrow into firm soil. The project site does not contain suitable habitat for this species. **This species is not present.**

Quino checkerspot butterfly

Quino checkerspot butterfly (*Euphydryas editha quino*) is a federally listed endangered species. It is found in chaparral and coastal sage scrub. This species requires high densities of food plants, including *Plantago erecta*, *P. insularis*, and *Orthocarpus purpurescens*. The project site does not have suitable habitat for this species. **This species is not present.**

Bald eagle

Bald eagle (*Haliaeetus leucocephalus*) is a state listed endangered and CDFW fully protected species. This species is found in lower montane coniferous forest and old-growth. They nest in large old-growth or tress with open branches, especially ponderosa pine. The project site does not contain suitable habitat for this species. **This species is not present.**

Coastal California gnatcatcher

Coastal California gnatcatcher (*Polioptila californica californica*) is a federally listed threatened species and CDFW Species of Special Concern. This species is found in coastal bluff scrub and coastal scrub habitat. This species is typically found in low, coastal sage scrub in arid washes, on mesas and slopes. The project site does not contain suitable habitat for this species. **This species is not present.**

California red-legged frog

California red-legged frog (*Rana draytonii*) is a federally listed threatened species and a CDFW Species of Special Concern. Its habitat includes aquatic, artificial flowing waters, artificial standing waters, freshwater marsh, marsh and swamp, riparian forest, riparian scrub, riparian woodland, Sacramento and San Juaquin flowing and standing waters, and south coast. It requires 11 to 20 weeks for larval development and must have access to estivation habitat. It is most commonly found in lowlands and foothills, in or near permanent sources of deep water, with dense, shrubby, or emergent riparian vegetation. The project site does not contain suitable habitat for this species. **This species is not present.**

Riverside fairy shrimp

Riverside fairy shrimp (*Streptocephalus woottoni*) is a federally listed endangered species. This species is found in coastal scrub, valley and foothill grassland, vernal pool, and wetland habitat. This species typically inhabits seasonally astatic pools filled by winter/spring rains. It is endemic to Western Riverside, Orange, and San Diego counties in areas of tectonic swales, or earth slump basins in grassland and coastal sage scrub habitat. The project site does not contain suitable habitat for this species. **This species is not present.**

Least Bell's vireo

Least Bell's vireo (*Vireo bellii pusillus*) is a federal and state listed endangered species. This species is found in riparian forest, riparian scrub, and riparian woodland. Nesting habitat of this species is restricted to willow and/or mulefat dominated riparian scrub along permanent or nearly permanent streams. The project site does not contain suitable habitat for this species. **This species is not present.**

Burrowing owl

Burrowing owl (*Athene cunicularia*) is a CDFW species of special concern. This species is found in coastal prairie, coastal scrub, great basin grassland, great basin scrub, mojavean desert scrub, sonaran desert scrub, and valley and foothill grassland. The site does not provide suitable habitat for the species. **This species is not present.**

3.6.3 Nesting Birds

Migratory non-game native bird species are protected under the federal Migratory Bird Treaty Act. Additionally, Sections 3503, 3503.5, and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests. The project site does not contain shrubs and trees that can support nesting song birds or raptors. The ruderal habitat present on the project site is not suitable for nesting birds and raptors.

3.7 Jurisdictional Waters

The project site does not contain any drainage features or associated riparian habitat that would be regulated under Section 1602 of the Fish and Game Code. Further, the project site does not contain any "waters of the United States" (WUS) that would be under the jurisdiction of the Federal CWA or riparian/wetland habitat that would be considered Western Riverside MSHCP riparian/riverine resources. No vernal pools are located on the project site.

4.0 Project Impacts

4.1 Impacts to Habitats

The proposed project will impact the entire project site consisting of 3.40-acres of ruderal habitat.

4.2 Impacts to Sensitive Species

No sensitive species have a potential to occur on the project site, therefore no sensitive species will be impacted by this project.

4.3 Impacts to Nesting Birds

No impacts to nesting birds are expected.

4.4 Impacts to Critical Habitat

The project is not located within designated federal critical habitat. No impact to critical habitat would occur.

4.5 Impacts to Wildlife Movement Corridors

The project site does not contain mountain canyons or riparian corridors between major wildlife habitats. The project area is surrounded by paved roads and residential structures. No wildlife movement corridors were found to be present on the project sites.

4.6 Conflict with Local Policies or Ordinances Protecting Biological Resources

Should the proposed project result in the removal of trees, it will be required to comply with County of Riverside Ordinance No. 559.

4.7 Conflict with the Provisions of an Adopted Habitat Conservation Plan, Natural Community Conservation Plan, or Other Approved Local, Regional, or State Habitat Conservation Plan

No impacts to adopted habitat conservation plans, natural community conservation plans, or other approved local, regional or state habitat conservation plans are expected.

4.8 State and Federal Drainages

The project site does not contain any state or federal jurisdictional drainages, streams, or lakes.

5.0 Western Riverside County MSHCP Consistency Analysis

5.1 MSHCP Requirements

The project site is located within the Western Riverside County MSHCP Harvest Valley/Winchester Area Plan. However, the project site is not located within a Sub Area Plan, Criteria Cell, or Cell Group. A discussion of the applicable Western Riverside County MSHCP requirements follows:

Section 6.1.2 Species Associated With Riparian/Riverine Habitat and Vernal Pools

The proposed project site does not contain any drainage features or associated riparian/wetland habitat that would be considered Western Riverside MSHCP riparian/riverine resources. Further, the site does not contain any depressions or areas where water could pool. No vernal pools or suitable habitat for fairy shrimp occur on the site.

Section 6.1.4 Urban/Wildlands Interface Guidelines

The project site is not located within or adjacent to a Western Riverside County MSHCP Conservation Area; therefore, the project site is not required to address Section 6.1.4 of the Western Riverside County MSHCP.

Section 6.3.2 Additional Surveys and Procedures

The project site is not located within plan-defined areas requiring surveys for narrow endemic plant species, criteria area plant species, or burrowing owl (*Athene cunicularia*). Therefore, no additional surveys are required at this time.

6.0 Recommendations

Based upon the findings of this report, no further studies or mitigation measures will be needed. The project site does not contain sensitive habitats or native vegetation and is completely disturbed and maintained.

7.0 Certification

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Appendix A Species Observed

Plant List

Brassica nigra Black mustard

Bromus diandrus Ripgut brome

Bromus madritensis Foxtail brome

Erodium sp. Filaree

Salsola tragus Russian thistle

Sisymbrium irio London rocket

Animal List

Buteo jamaicensis Red-tailed hawk

Carpodacus mexicanus House finch

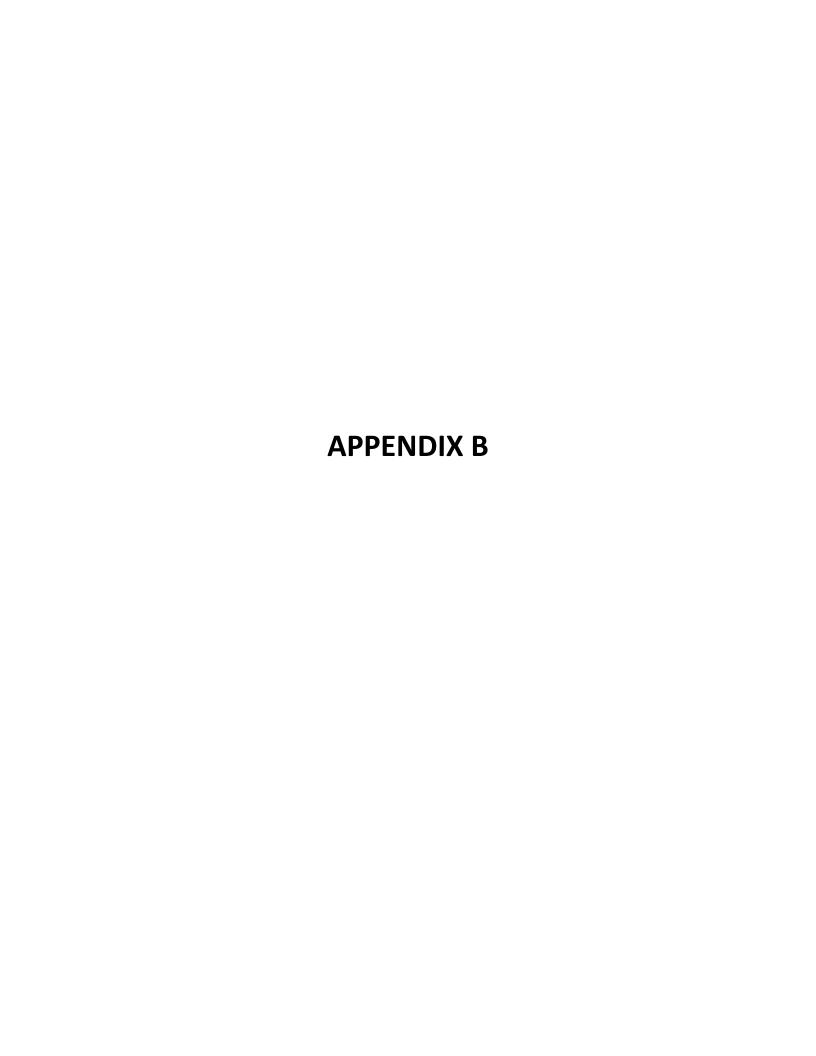

Corvus brachyrhynchos American crow

Corvus corax Common raven

Otospermophilus beecheyi California ground squirrel

Sceloporus occidentalis Western fence lizard

Tyrannus verticalis Western kingbird

Scientific Name	Common Name	Federal Listing	State Listing	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Accipiter cooperii	Cooper's hawk	None	None	CDFW_WL-Watch List IUCN_LC-Least Concern	Cismontane woodland Riparian forest Riparian woodland Upper montane coniferous forest	Woodland, chiefly of open, interrupted or marginal type.	Nest sites mainly in riparian growths of deciduous trees, as in canyon bottoms on river flood-plains; also, live oaks.	No habitat present. Not present.
Agelaius tricolor	tricolored blackbird	None	Candidate Endangered	BLM_S-Sensitive CDFW_SSC-Species of Special Concern IUCN_EN- Endangered NABCI_RWL- Red Watch List USFWS_BCC-Birds of Conservation Concern	Freshwater marsh Marsh & swamp Swamp Wetland	Highly colonial species, most numerous in Central Valley & vicinity. Largely endemic to California.	Requires open water, protected nesting substrate, and foraging area with insect prey within a few km of the colony.	No habitat present. Not present.
Aimophila ruficeps canescens	southern California rufous- crowned sparrow	None	None	CDFW_WL-Watch List	Chaparral Coastal scrub	Resident in Southern California coastal sage scrub and sparse mixed chaparral.	Frequents relatively steep, often rocky hillsides with grass and forb patches.	No habitat present. Not present.
Anaxyrus californicus	arroyo toad	Endangered	None	CDFW_SSC-Species of Special Concern IUCN_EN- Endangered	Desert wash Riparian scrub Riparian woodland South coast flowing waters South coast standing waters	Semi-arid regions near washes or intermittent streams, including valley- foothill and desert riparian, desert wash, etc.	Rivers with sandy banks, willows, cottonwoods, and sycamores; loose, gravelly areas of streams in drier parts of range.	No habitat present. Not present .
Aquila chrysaetos	golden eagle	None	None	BLM_S-Sensitive CDF_S-Sensitive CDFW_FP-Fully Protected CDFW_WL- Watch List IUCN_LC-Least Concern USFWS_BCC- Birds of Conservation Concern	Broadleaved upland forest Cismontane woodland Coastal prairie Great Basin grassland Great Basin scrub Lower montane coniferous forest Pinon & juniper woodlands Upper montane coniferous forest Valley & foothill grassland	Rolling foothills, mountain areas, sage-juniper flats, and desert.	Cliff-walled canyons provide nesting habitat in most parts of range; also, large trees in open areas.	No habitat present. Not present .
Arizona elegans occidentalis	California glossy snake	None	None	CDFW_SSC-Species of Special Concern		Patchily distributed from the eastern portion of San Francisco Bay, southern San Joaquin Valley, and the Coast, Transverse, and Peninsular ranges, south to Baja California.	Generalist reported from a range of scrub and grassland habitats, often with loose or sandy soils.	No habitat present. Not present .
Artemisiospiza belli belli	Bell's sage sparrow	None	None	CDFW_WL-Watch List USFWS_BCC-Birds of Conservation Concern	Chaparral Coastal scrub	Nests in chaparral dominated by fairly dense stands of chamise. Found in coastal sage scrub in south of range.	Nest located on the ground beneath a shrub or in a shrub 6-18 inches above ground. Territories about 50 yds apart.	No habitat present. Not present.
Asio otus	long-eared owl	None	None	CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern	Cismontane woodland Great Basin scrub Riparian forest Riparian woodland Upper montane coniferous forest	Riparian bottomlands grown to tall willows and cottonwoods; also, belts of live oak paralleling stream courses.	Require adjacent open land, productive of mice and the presence of old nests of crows, hawks, or magpies for breeding.	No habitat present. Not present.

Scientific Name	Common Name	Federal Listing	State Listing	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Aspidoscelis hyperythra	orange-throated whiptail	None	None	CDFW_WL-Watch List IUCN_LC-Least Concern USFS_S-Sensitive	Chaparral Cismontane woodland Coastal scrub	Inhabits low-elevation coastal scrub, chaparral, and valley-foothill hardwood habitats.	Prefers washes and other sandy areas with patches of brush and rocks. Perennial plants necessary for its major food: termites.	No habitat present. Not present .
Aspidoscelis tigris stejnegeri	coastal whiptail	None	None	CDFW_SSC-Species of Special Concern		Found in deserts and semi- arid areas with sparse vegetation and open areas. Also found in woodland & riparian areas.	Ground may be firm soil, sandy, or rocky.	No habitat present. Not present .
Athene cunicularia	burrowing owl	None	None	BLM_S-Sensitive CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern USFWS_BCC-Birds of Conservation Concern	Coastal prairie Coastal scrub Great Basin grassland Great Basin scrub Mojavean desert scrub Sonoran desert scrub Valley & foothill grassland	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low- growing vegetation.	Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	No habitat present. Not present .
Bombus crotchii	Crotch bumble bee	None	None			Coastal California east to the Sierra-Cascade crest and south into Mexico.	Food plant genera include Antirrhinum, Phacelia, Clarkia, Dendromecon, Eschscholzia, and Eriogonum.	No habitat present. Not present .
Branchinecta lynchi	vernal pool fairy shrimp	Threatened	None	IUCN_VU-Vulnerable	Valley & foothill grassland Vernal pool Wetland	Endemic to the grasslands of the Central Valley, Central Coast mountains, and South Coast mountains, in astatic rain-filled pools.	Inhabit small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools.	No habitat present. Not present .
Branchinecta sandiegonensis	San Diego fairy shrimp	Endangered	None	IUCN_EN-Endangered	Chaparral Coastal scrub Vernal pool Wetland	Endemic to San Diego and Orange County mesas.	Vernal pools.	No habitat present. Not present.
Buteo regalis	ferruginous hawk	None	None	CDFW_WL-Watch List IUCN_LC-Least Concern USFWS_BCC-Birds of Conservation Concern	Great Basin grassland Great Basin scrub Pinon & juniper woodlands Valley & foothill grassland	Open grasslands, sagebrush flats, desert scrub, low foothills and fringes of pinyon and juniper habitats.	Eats mostly lagomorphs, ground squirrels, and mice. Population trends may follow lagomorph population cycles.	No habitat present. Not present.
Buteo swainsoni	Swainson's hawk	None	Threatened	BLM_S-Sensitive IUCN_LC- Least Concern USFWS_BCC-Birds of Conservation Concern	Great Basin grassland Riparian forest Riparian woodland Valley & foothill grassland	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, & agricultural or ranch lands with groves or lines of trees.	Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	No habitat present. Not present .
Campylorhynchus brunneicapillus sandiegensis	coastal cactus wren	None	None	CDFW_SSC-Species of Special Concern USFS_S- Sensitive USFWS_BCC- Birds of Conservation Concern	Coastal scrub	Southern California coastal sage scrub.	Wrens require tall opuntia cactus for nesting and roosting.	No habitat present. Not present.
Chaetodipus californicus femoralis	Dulzura pocket mouse	None	None	CDFW_SSC-Species of Special Concern	Chaparral Coastal scrub Valley & foothill grassland	Variety of habitats including coastal scrub, chaparral & grassland in San Diego County.	Attracted to grass-chaparral edges.	No habitat present. Not present.

Scientific Name	Common Name	Federal Listing	State Listing	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Chaetodipus fallax fallax	northwestern San Diego pocket mouse	None	None	CDFW_SSC-Species of Special Concern	Chaparral Coastal scrub	Coastal scrub, chaparral, grasslands, sagebrush, etc. in western San Diego County.	Sandy, herbaceous areas, usually in association with rocks or coarse gravel.	No habitat present. Not present.
Charadrius alexandrinus nivosus	western snowy plover	Threatened	None	CDFW_SSC-Species of Special Concern NABCI_RWL-Red Watch List USFWS_BCC-Birds of Conservation Concern	Great Basin standing waters Sand shore Wetland	Sandy beaches, salt pond levees & shores of large alkali lakes.	Needs sandy, gravelly or friable soils for nesting.	No habitat present. Not present .
Cicindela senilis frosti	senile tiger beetle	None	None		Mud shore/flats Wetland	Inhabits marine shoreline, from Central California coast south to salt marshes of San Diego. Also found at Lake Elsinore	Inhabits dark-colored mud in the lower zone and dried salt pans in the upper zone.	No habitat present. Not present.
Circus hudsonius	northern harrier	None	None	CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern	Coastal scrub Great Basin grassland Marsh & swamp Riparian scrub Valley & foothill grassland Wetland	Coastal salt & freshwater marsh. Nest and forage in grasslands, from salt grass in desert sink to mountain cienagas.	Nests on ground in shrubby vegetation, usually at marsh edge; nest built of a large mound of sticks in wet areas.	No habitat present. Not present .
Coleonyx variegatus abbotti	San Diego banded gecko	None	None	CDFW_SSC-Species of Special Concern	Chaparral Coastal scrub	Coastal & cismontane Southern California.	Found in granite or rocky outcrops in coastal scrub and chaparral habitats.	No habitat present. Not present.
Crotalus ruber	red-diamond rattlesnake	None	None	CDFW_SSC-Species of Special Concern USFS_S- Sensitive	Chaparral Mojavean desert scrub Sonoran desert scrub	Chaparral, woodland, grassland, & desert areas from coastal San Diego County to the eastern slopes of the mountains.	Occurs in rocky areas and dense vegetation. Needs rodent burrows, cracks in rocks or surface cover objects.	No habitat present. Not present.
Diadophis punctatus modestus	San Bernardino ringneck snake	None	None	USFS_S-Sensitive		Most common in open, relatively rocky areas. Often in somewhat moist microhabitats near intermittent streams.	Avoids moving through open or barren areas by restricting movements to areas of surface litter or herbaceous veg.	No habitat present. Not present.
Dipodomys merriami parvus	San Bernardino kangaroo rat	Endangered	None	CDFW_SSC-Species of Special Concern	Coastal scrub	Alluvial scrub vegetation on sandy loam substrates characteristic of alluvial fans and flood plains.	Needs early to intermediate seral stages.	No habitat present. Not present.
Dipodomys stephensi	Stephens' kangaroo rat	Endangered	Threatened	IUCN_EN-Endangered	Coastal scrub Valley & foothill grassland	Primarily annual & perennial grasslands, but also occurs in coastal scrub & sagebrush with sparse canopy cover.	Prefers buckwheat, chamise, brome grass and filaree. Will burrow into firm soil.	No habitat present. Not present.
Elanus leucurus	white-tailed kite	None	None	BLM_S-Sensitive CDFW_FP-Fully Protected IUCN_LC-Least Concern	Cismontane woodland Marsh & swamp Riparian woodland Valley & foothill grassland Wetland	Rolling foothills and valley margins with scattered oaks & river bottomlands or marshes next to deciduous woodland.	Open grasslands, meadows, or marshes for foraging close to isolated, densetopped trees for nesting and perching.	No habitat present. Not present .

Scientific Name	Common Name	Federal Listing	State Listing	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Emys marmorata	western pond turtle	None	None	BLM_S-Sensitive CDFW_SSC-Species of Special Concern IUCN_VU- Vulnerable USFS_S- Sensitive	Aquatic Artificial flowing waters Klamath/North coast flowing waters Klamath/North coast standing waters Marsh & swamp Sacramento/San Joaquin flowing waters Sacramento/San Joaquin standing waters South coast flowing waters South coast standing waters Wetland	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation.	Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying.	No habitat present. Not present.
Eremophila alpestris actia	California horned lark	None	None	CDFW_WL-Watch List IUCN_LC-Least Concern	Marine intertidal & splash zone communities Meadow & seep	Coastal regions, chiefly from Sonoma County to San Diego County. Also main part of San Joaquin Valley and east to foothills.	Short-grass prairie, "bald" hills, mountain meadows, open coastal plains, fallow grain fields, alkali flats.	No habitat present. Not present .
Eumops perotis californicus	western mastiff bat	None	None	BLM_S-Sensitive CDFW_SSC-Species of Special Concern WBWG_H-High Priority	Chaparral Cismontane woodland Coastal scrub Valley & foothill grassland	Many open, semi-arid to arid habitats, including conifer & deciduous woodlands, coastal scrub, grasslands, chaparral, etc.	Roosts in crevices in cliff faces, high buildings, trees and tunnels.	No habitat present. Not present .
Euphydryas editha quino	quino checkerspot butterfly	Endangered	None	XERCES_CI-Critically Imperiled	Chaparral Coastal scrub	Sunny openings within chaparral & coastal sage shrublands in parts of Riverside & San Diego counties.	Hills and mesas near the coast. Need high densities of food plants Plantago erecta, P. insularis, and Orthocarpus purpurescens.	No habitat present. Not present.
Gila orcuttii	arroyo chub	None	None	AFS_VU-Vulnerable CDFW_SSC-Species of Special Concern USFS_S- Sensitive	Aquatic South coast flowing waters	Native to streams from Malibu Creek to San Luis Rey River basin. Introduced into streams in Santa Clara, Ventura, Santa Ynez, Mojave & San Diego river basins.	Slow water stream sections with mud or sand bottoms. Feeds heavily on aquatic vegetation and associated invertebrates.	No habitat present. Not present.
Haliaeetus leucocephalus	bald eagle	Delisted	Endangered	BLM_S-Sensitive CDF_S-Sensitive CDFW_FP-Fully Protected IUCN_LC-Least Concern USFS_S-Sensitive USFWS_BCC-Birds of Conservation Concern	Lower montane coniferous forest Oldgrowth	Ocean shore, lake margins, and rivers for both nesting and wintering. Most nests within 1 mile of water.	Nests in large, old-growth, or dominant live tree with open branches, especially ponderosa pine. Roosts communally in winter.	No habitat present. Not present.
Icteria virens	yellow-breasted chat	None	None	CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern	Riparian forest Riparian scrub Riparian woodland	Summer resident; inhabits riparian thickets of willow and other brushy tangles near watercourses.	Nests in low, dense riparian, consisting of willow, blackberry, wild grape; forages and nests within 10 ft of ground.	No habitat present. Not present.

Scientific Name	Common Name	Federal Listing	State Listing	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Lanius ludovicianus	loggerhead shrike	None	None	CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern USFWS_BCC-Birds of Conservation Concern	Broadleaved upland forest Desert wash Joshua tree woodland Mojavean desert scrub Pinon & juniper woodlands Riparian woodland Sonoran desert scrub	Broken woodlands, savannah, pinyon-juniper, Joshua tree, and riparian woodlands, desert oases, scrub & washes.	Prefers open country for hunting, with perches for scanning, and fairly dense shrubs and brush for nesting.	No habitat present. Not present.
Lasiurus xanthinus	western yellow bat	None	None	CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern WBWG_H- High Priority	Desert wash	Found in valley foothill riparian, desert riparian, desert wash, and palm oasis habitats.	Roosts in trees, particularly palms. Forages over water and among trees.	No habitat present. Not present.
Lepus californicus bennettii	San Diego black-tailed jackrabbit	None	None	CDFW_SSC-Species of Special Concern	Coastal scrub	Intermediate canopy stages of shrub habitats & open shrub / herbaceous & tree / herbaceous edges.	Coastal sage scrub habitats in Southern California.	No habitat present. Not present.
Linderiella santarosae	Santa Rosa Plateau fairy shrimp	None	None		Vernal pool	Found only in the vernal pools on Santa Rosa Plateau in Riverside County.	Southern basalt flow vernal pools.	No habitat present. Not present.
Neotoma lepida intermedia	San Diego desert woodrat	None	None	CDFW_SSC-Species of Special Concern	Coastal scrub	Coastal scrub of Southern California from San Diego County to San Luis Obispo County.	Moderate to dense canopies preferred. They are particularly abundant in rock outcrops, rocky cliffs, and slopes.	No habitat present. Not present.
Nyctinomops femorosaccus	pocketed free-tailed bat	None	None	CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern WBWG_M- Medium Priority	Joshua tree woodland Pinon & juniper woodlands Riparian scrub Sonoran desert scrub	Variety of arid areas in Southern California; pine- juniper woodlands, desert scrub, palm oasis, desert wash, desert riparian, etc.	Rocky areas with high cliffs.	No habitat present. Not present .
Onychomys torridus ramona	southern grasshopper mouse	None	None	CDFW_SSC-Species of Special Concern	Chenopod scrub	Desert areas, especially scrub habitats with friable soils for digging. Prefers low to moderate shrub cover.	Feeds almost exclusively on arthropods, especially scorpions and orthopteran insects.	No habitat present. Not present.
Perognathus longimembris brevinasus	Los Angeles pocket mouse	None	None	CDFW_SSC-Species of Special Concern	Coastal scrub	Lower elevation grasslands and coastal sage communities in and around the Los Angeles Basin.	Open ground with fine, sandy soils. May not dig extensive burrows, hiding under weeds and dead leaves instead.	No habitat present. Not present.
Perognathus longimembris internationalis	Jacumba pocket mouse	None	None	CDFW_SSC-Species of Special Concern	Coastal scrub Desert wash Sonoran desert scrub	Desert riparian, desert scrub, desert wash, coastal scrub and sagebrush.	Rarely found on rocky sites; uses all canopy coverages.	No habitat present. Not present.
Phrynosoma blainvillii	coast horned lizard	None	None	BLM_S-Sensitive CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern	Chaparral Cismontane woodland Coastal bluff scrub Coastal scrub Desert wash Pinon & juniper woodlands Riparian scrub Riparian woodland Valley & foothill grassland	Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes.	Open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	No habitat present. Not present.

Scientific Name	Common Name	Federal Listing	State Listing	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Plegadis chihi	white-faced ibis	None	None	CDFW_WL-Watch List IUCN_LC-Least Concern	Marsh & swamp Wetland	Shallow freshwater marsh.	Dense tule thickets for nesting, interspersed with areas of shallow water for foraging.	No habitat present. Not present.
Polioptila californica californica	coastal California gnatcatcher	Threatened	None	CDFW_SSC-Species of Special Concern NABCI_YWL-Yellow Watch List	Coastal bluff scrub Coastal scrub	Obligate, permanent resident of coastal sage scrub below 2500 ft in Southern California.	Low, coastal sage scrub in arid washes, on mesas and slopes. Not all areas classified as coastal sage scrub are occupied.	No habitat present. Not present.
Rana draytonii	California red-legged frog	Threatened	None	CDFW_SSC-Species of Special Concern IUCN_VU- Vulnerable	Aquatic Artificial flowing waters Artificial standing waters Freshwater marsh Marsh & swamp Riparian forest Riparian scrub Riparian woodland Sacramento/San Joaquin flowing waters Sacramento/San Joaquin standing waters South coast flowing waters South coast standing waters Wetland	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation.	Requires 11-20 weeks of permanent water for larval development. Must have access to estivation habitat.	No habitat present. Not present .
Salvadora hexalepis virgultea	coast patch-nosed snake	None	None	CDFW_SSC-Species of Special Concern	Coastal scrub	Brushy or shrubby vegetation in coastal Southern California.	Require small mammal burrows for refuge and overwintering sites.	No habitat present. Not present.
Setophaga petechia	yellow warbler	None	None	CDFW_SSC-Species of Special Concern USFWS_BCC-Birds of Conservation Concern	Riparian forest Riparian scrub Riparian woodland	Riparian plant associations in close proximity to water. Also nests in montane shrubbery in open conifer forests in Cascades and Sierra Nevada.	Frequently found nesting and foraging in willow shrubs and thickets, and in other riparian plants including cottonwoods, sycamores, ash, and alders.	No habitat present. Not present.
Socalchemmis icenoglei	Icenogle's socalchemmis spider	None	None		Coastal scrub	Known only from the type locality in the vicinity of Winchester, Riverside County.		No habitat present. Not present.
Spea hammondii	western spadefoot	None	None	BLM_S-Sensitive CDFW_SSC-Species of Special Concern IUCN_NT- Near Threatened	Cismontane woodland Coastal scrub Valley & foothill grassland Vernal pool Wetland	Occurs primarily in grassland habitats, but can be found in valley-foothill hardwood woodlands.	Vernal pools are essential for breeding and egg-laying.	No habitat present. Not present.
Sphaerocarpos drewei	bottle liverwort	None	None		Chaparral Coastal scrub	Chaparral, coastal scrub.	Liverwort in openings; on soil. 90-600 m.	No habitat present. Not present.
Streptocephalus woottoni	Riverside fairy shrimp	Endangered	None	IUCN_EN-Endangered	Coastal scrub Valley & foothill grassland Vernal pool Wetland	Endemic to Western Riverside, Orange, and San Diego counties in areas of tectonic swales/earth slump basins in grassland and coastal sage scrub.	Inhabit seasonally astatic pools filled by winter/spring rains. Hatch in warm water later in the season.	No habitat present. Not present.

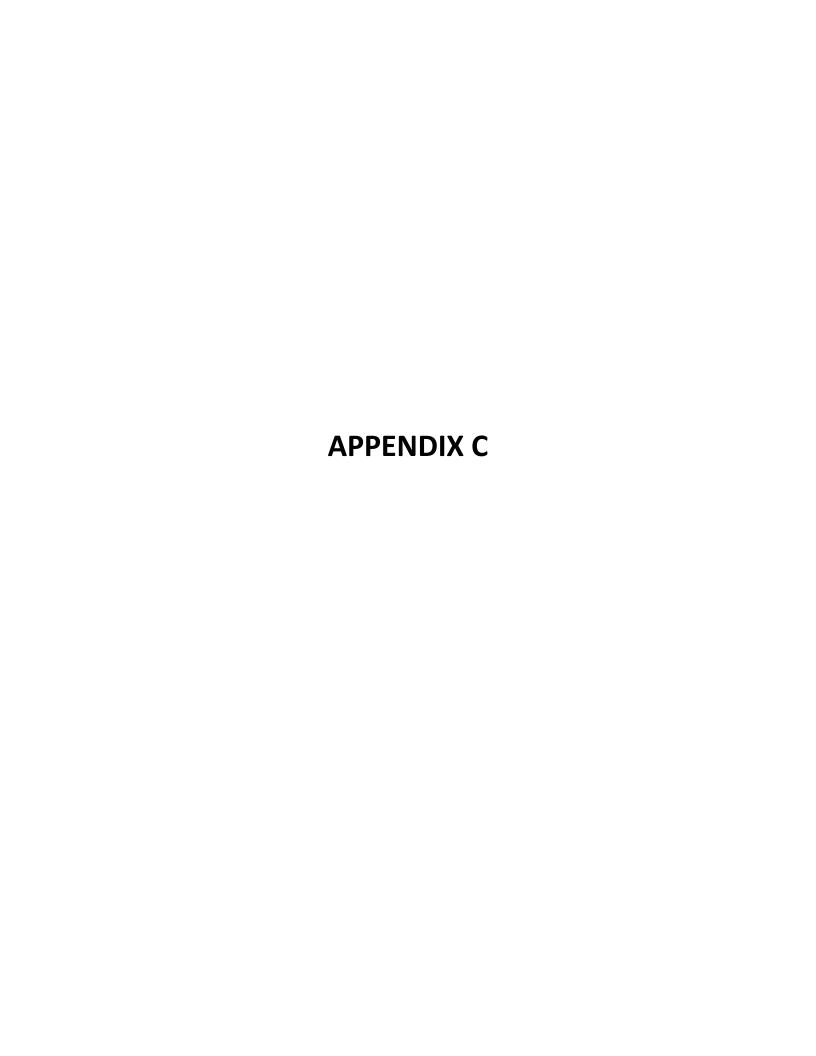

Scientific Name	Common Name	Federal Listing	State Listing	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Taricha torosa	Coast Range newt	None	None	CDFW_SSC-Species of Special Concern		Coastal drainages from Mendocino County to San Diego County.	Lives in terrestrial habitats & will migrate over 1 km to breed in ponds, reservoirs & slow moving streams.	No habitat present. Not present.
Taxidea taxus	American badger	None	None	CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern	Alkali marsh Alkali piaya Alpine Alpine Alpine dwarf scrub Bog & fen Brackish marsh Broadleaved upland forest Chaparral Chenopod scrub Cismontane woodland Closed-cone coniferous Foest Coastal bluff scrub Coastal dunes Coastal prairie Coastal scrub Desert dunes Desert wash Freshwater marsh Great Basin grassland Great Basin grassland Great Basin scrub Interior dunes Ione formation Joshua tree woodland Limestone Lower montane coniferous forest Marsh & swamp Meadow & seep Mojavean desert scrub North coast coniferous forest Oldgrowth Pavement plain Redwood Riparian forest Riparian scrub Riparian woodland Salt marsh Sonoran desert scrub	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils.	Needs sufficient food, friable soils and open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	No habitat present. Not present.
Thamnophis hammondii	two-striped gartersnake	None	None	BLM_S-Sensitive CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern USFS_S- Sensitive	Marsh & swamp Riparian scrub Riparian woodland Wetland	Coastal California from vicinity of Salinas to northwest Baja California. From sea to about 7,000 ft elevation.	Highly aquatic, found in or near permanent fresh water. Often along streams with rocky beds and riparian growth.	No habitat present. Not present.
Vireo bellii pusillus	least Bell's vireo	Endangered	Endangered	IUCN_NT-Near Threatened NABCI_YWL-Yellow Watch List	Riparian forest Riparian scrub Riparian woodland	Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 ft.	Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, Baccharis, mesquite.	No habitat present. Not present.
Xanthocephalus xanthocephalus	yellow-headed blackbird	None	None	CDFW_SSC-Species of Special Concern IUCN_LC- Least Concern	Marsh & swamp Wetland	Nests in freshwater emergent wetlands with dense vegetation and deep water. Often along borders of lakes or ponds.	Nests only where large insects such as Odonata are abundant, nesting timed with maximum emergence of aquatic insects.	No habitat present. Not present .

Scientific Name	Common Name	Federal Listing	State Listing	Rare Plant Rank	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Abronia villosa var. aurita	chaparral sand-verbena	None	None	1B.1	BLM_S-Sensitive USFS_S- Sensitive	Chaparral Coastal scrub Desert dunes	Chaparral, coastal scrub, desert dunes.	Sandy areas60-1570 m.	No habitat present. Not present.
Allium munzii	Munz's onion	Endangered	Threatened	18.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral Cismontane woodland Coastal scrub Pinon & juniper woodlands Valley & foothill grassland	Chaparral, coastal scrub, cismontane woodland, pinyon and juniper woodland, valley and foothill grassland.	Heavy clay soils; grows in grasslands & openings within shrublands or woodlands. 375-1040 m.	No habitat present. Not present.
Almutaster pauciflorus	alkali marsh aster	None	None	2B.2		Meadow & seep	Meadow and seeps.	Alkaline. 60-765 m.	No habitat present. Not present.
Ambrosia pumila	San Diego ambrosia	Endangered	None	18.1		Chaparral Coastal scrub Valley & foothill grassland	Chaparral, coastal scrub, valley and foothill grassland.	Sandy loam or clay soil; sometimes alkaline. In valleys; persists where disturbance has been superficial. Sometimes on margins or near vernal pools. 3-580 m.	No habitat present. Not present .
Arctostaphylos rainbowensis	Rainbow manzanita	None	None	1B.1	BLM_S-Sensitive USFS_S- Sensitive	Chaparral Ultramafic	Chaparral.	Usually found in gabbro chaparral. 100-870 m.	No habitat present. Not present.
Astragalus pachypus var. jaegeri	Jaeger's milk-vetch	None	None	18.1	BLM_S-Sensitive SB_RSABG-Rancho Santa Ana Botanic Garden USFS_S-Sensitive	Chaparral Cismontane woodland Coastal scrub Valley & foothill grassland	Coastal scrub, chaparral, valley and foothill grassland, cismontane woodland.	Dry ridges and valleys and open sandy slopes; often in grassland and oak-chaparral. 365-915 m.	No habitat present. Not present.
Atriplex coronata var. notatior	San Jacinto Valley crownscale	Endangered	None	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Alkali playa Valley & foothill grassland Vernal pool Wetland	Playas, valley and foothill grassland, vernal pools.	Alkaline areas in the San Jacinto River Valley. 35-460 m.	No habitat present. Not present.
Atriplex parishii	Parish's brittlescale	None	None	18.1	USFS_S-Sensitive	Alkali playa Chenopod scrub Meadow & seep Vernal pool Wetland	Vernal pools, chenopod scrub, playas.	Usually on drying alkali flats with fine soils. 5-1420 m.	No habitat present. Not present.
Atriplex serenana var. davidsonii	Davidson's saltscale	None	None	1B.2		Coastal bluff scrub Coastal scrub	Coastal bluff scrub, coastal scrub.	Alkaline soil. 0-480 m.	No habitat present. Not present.
Ayenia compacta	California ayenia	None	None	2B.3		Desert wash Mojavean desert scrub Sonoran desert scrub	Mojavean desert scrub, Sonoran desert scrub.	Sandy and gravelly washes in the desert; dry desert canyons. 60-1830 m.	No habitat present. Not present.
Bombus crotchii	Crotch bumble bee	None	None				Coastal California east to the Sierra-Cascade crest and south into Mexico.	Food plant genera include Antirrhinum, Phacelia, Clarkia, Dendromecon, Eschscholzia, and Eriogonum.	No habitat present. Not present .
Brodiaea filifolia	thread-leaved brodiaea	Threatened	Endangered	18.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral Cismontane woodland Coastal scrub Valley & foothill grassland Vernal pool Wetland	Chaparral (openings), cismontane woodland, coastal scrub, playas, valley and foothill grassland, vernal pools.	Usually associated with annual grassland and vernal pools; often surrounded by shrubland habitats. Occurs in openings on clay soils. 15- 1030 m.	No habitat present. Not present .
Brodiaea santarosae	Santa Rosa Basalt brodiaea	None	None	1B.2	USFS_S-Sensitive	Valley & foothill grassland	Valley and foothill grassland.	Santa Rosa Basalt. 585-1045 m.	No habitat present. Not present.
Calochortus plummerae	Plummer's mariposa-lily	None	None	4.2	SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral Cismontane woodland Coastal scrub Lower montane coniferous forest Valley & foothill grassland	Coastal scrub, chaparral, valley and foothill grassland, cismontane woodland, lower montane coniferous forest.	Occurs on rocky and sandy sites, usually of granitic or alluvial material. Can be very common after fire. 60-2500 m.	No habitat present. Not present.
Calochortus weedii var. intermedius	intermediate mariposa-lily	None	None	1B.2	SB_RSABG-Rancho Santa Ana Botanic Garden USFS_S-Sensitive	Chaparral Coastal scrub Valley & foothill grassland	Coastal scrub, chaparral, valley and foothill grassland.	Dry, rocky calcareous slopes and rock outcrops. 60-1575 m.	No habitat present. Not present.

Scientific Name	Common Name	Federal Listing	State Listing	Rare Plant Rank	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Caulanthus simulans	Payson's jewelflower	None	None	4.2	USFS_S-Sensitive	Chaparral Coastal scrub	Chaparral, coastal scrub.	Frequently in burned areas, or in disturbed sites such as streambeds; also on rocky, steep slopes. Sandy, granitic soils. 90-2200 m.	No habitat present. Not present.
Centromadia pungens ssp. laevis	smooth tarplant	None	None	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Alkali playa Chenopod scrub Meadow & seep Riparian woodland Valley & foothill grassland Wetland	Valley and foothill grassland, chenopod scrub, meadows and seeps, playas, riparian woodland.	Alkali meadow, alkali scrub; also in disturbed places. 5- 1170 m.	No habitat present. Not present.
Chorizanthe parryi var. parryi	Parry's spineflower	None	None	1B.1	BLM_S-Sensitive SB_RSABG-Rancho Santa Ana Botanic Garden USFS_S-Sensitive	Chaparral Cismontane woodland Coastal scrub Valley & foothill grassland	Coastal scrub, chaparral, cismontane woodland, valley and foothill grassland.	Dry slopes and flats; sometimes at interface of 2 vegetation types, such as chaparral and oak woodland. Dry, sandy soils. 90-1220 m.	No habitat present. Not present.
Chorizanthe polygonoides var. longispina	long-spined spineflower	None	None	1B.2	BLM_S-Sensitive SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral Coastal scrub Meadow & seep Ultramafic Valley & foothill grassland Vernal pool	Chaparral, coastal scrub, meadows and seeps, valley and foothill grassland, vernal pools.	Gabbroic clay. 30-1630 m.	No habitat present. Not present.
Clinopodium chandleri	San Miguel savory	None	None	1B.2	BLM_S-Sensitive USFS_S- Sensitive	Chaparral Cismontane woodland Coastal scrub Riparian woodland Ultramafic Valley & foothill grassland	Chaparral, cismontane woodland, coastal scrub, riparian woodland, valley and foothill grassland.	Rocky, gabbroic or metavolcanic substrate. 120- 975 m.	No habitat present. Not present.
Cryptantha wigginsii	Wiggins' cryptantha	None	None	1B.2		Coastal scrub	Coastal scrub.	Often on clay soils. 45-110 m.	No habitat present. Not present.
Dodecahema leptoceras	slender-horned spineflower	Endangered	Endangered	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral Cismontane woodland Coastal scrub	Chaparral, cismontane woodland, coastal scrub (alluvial fan sage scrub).	Flood deposited terraces and washes; associates include Encelia, Dalea, Lepidospartum, etc. Sandy soils. 200-765 m.	No habitat present. Not present.
Dudleya multicaulis	many-stemmed dudleya	None	None	1B.2	BLM_S-Sensitive SB_RSABG-Rancho Santa Ana Botanic Garden USFS_S-Sensitive	Chaparral Coastal scrub Valley & foothill grassland	Chaparral, coastal scrub, valley and foothill grassland.	In heavy, often clayey soils or grassy slopes. 1-910 m.	No habitat present. Not present.
Eryngium aristulatum var. parishii	San Diego button-celery	Endangered	Endangered	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Coastal scrub Valley & foothill grassland Vernal pool Wetland	Vernal pools, coastal scrub, valley and foothill grassland.	San Diego mesa hardpan & claypan vernal pools & southern interior basalt flow vernal pools; usually surrounded by scrub. 15-880 m.	No habitat present. Not present .
Geothallus tuberosus	Campbell's liverwort	None	None	1B.1		Coastal scrub Vernal pool Wetland	Coastal scrub, vernal pools.	Liverwort known from mesic soil. 10-600 m.	No habitat present. Not present.
Harpagonella palmeri	Palmer's grapplinghook	None	None	4.2	SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral Coastal scrub Valley & foothill grassland	Chaparral, coastal scrub, valley and foothill grassland.	Clay soils; open grassy areas within shrubland. 20-955 m.	No habitat present. Not present.
Hesperocyparis forbesii	Tecate cypress	None	None	1B.1	BLM_S-Sensitive SB_RSABG-Rancho Santa Ana Botanic Garden SB_USDA-US Dept of Agriculture USFS_S- Sensitive	Chaparral Closed-cone coniferous forest	Closed-cone coniferous forest, chaparral.	Primarily on north-facing slopes; groves often associated with chaparral. On clay or gabbro. 60-1650 m.	No habitat present. Not present.

Scientific Name	Common Name	Federal Listing	State Listing	Rare Plant Rank	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Juncus luciensis	Santa Lucia dwarf rush	None	None	1B.2	USFS_S-Sensitive	Chaparral Great Basin scrub Lower montane coniferous forest Meadow & seep Vernal pool Wetland	Vernal pools, meadows and seeps, lower montane coniferous forest, chaparral, Great Basin scrub.	Vernal pools, ephemeral drainages, wet meadow habitats and streamsides. 280-2035 m.	No habitat present. Not present.
Lasthenia glabrata ssp. coulteri	Coulter's goldfields	None	None	1B.1	BLM_S-Sensitive SB_RSABG-Rancho Santa Ana Botanic Garden	Alkali playa Marsh & swamp Salt marsh Vernal pool Wetland	Coastal salt marshes, playas, vernal pools.	Usually found on alkaline soils in playas, sinks, and grasslands. 1-1375 m.	No habitat present. Not present.
Lepidium virginicum var. robinsonii	Robinson's pepper-grass	None	None	4.3		Chaparral Coastal scrub	Chaparral, coastal scrub.	Dry soils, shrubland. 4-1435 m.	No habitat present. Not present.
Lilium parryi	lemon lily	None	None	1B.2	SB_RSABG-Rancho Santa Ana Botanic Garden USFS_S-Sensitive	Lower montane coniferous forest Meadow & seep Riparian forest Upper montane coniferous forest Wetland	Lower montane coniferous forest, meadows and seeps, riparian forest, upper montane coniferous forest.	Wet, mountainous terrain; generally in forested areas; on shady edges of streams, in open boggy meadows & seeps. 625-2930 m.	No habitat present. Not present.
Limnanthes alba ssp. parishii	Parish's meadowfoam	None	Endangered	1B.2	BLM_S-Sensitive SB_RSABG-Rancho Santa Ana Botanic Garden SB_USDA-US Dept of Agriculture USFS_S- Sensitive	Lower montane coniferous forest Meadow & seep Vernal pool Wetland	Lower montane coniferous forest, meadows and seeps, vernal pools.	Vernally moist areas and temporary seeps of highland meadows and plateaus; often bordering lakes and streams. 605-1805 m.	No habitat present. Not present.
Monardella hypoleuca ssp. intermedia	intermediate monardella	None	None	1B.3		Chaparral Cismontane woodland Lower montane coniferous forest	Chaparral, cismontane woodland, lower montane coniferous forest (sometimes).	Often in steep, brushy areas. 195-1675 m.	No habitat present. Not present.
Myosurus minimus ssp. apus	little mousetail	None	None	3.1		Valley & foothill grassland Vernal pool Wetland	Vernal pools, valley and foothill grassland.	Alkaline soils. 20-640 m.	No habitat present. Not present.
Nama stenocarpa	mud nama	None	None	2B.2		Marsh & swamp Wetland	Marshes and swamps.	Lake shores, river banks, intermittently wet areas. 5-500 m.	No habitat present. Not present.
Navarretia fossalis	spreading navarretia	Threatened	None	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Alkali playa Chenopod scrub Marsh & swamp Vernal pool Wetland	Vernal pools, chenopod scrub, marshes and swamps, playas.	San Diego hardpan and San Diego claypan vernal pools; in swales & vernal pools, often surrouded by other habitat types. 15-850 m.	No habitat present. Not present.
Navarretia prostrata	prostrate vernal pool navarretia	None	None	1B.1		Coastal scrub Meadow & seep Valley & foothill grassland Vernal pool Wetland	Coastal scrub, valley and foothill grassland, vernal pools, meadows and seeps.	Alkaline soils in grassland, or in vernal pools. Mesic, alkaline sites. 3-1235 m.	No habitat present. Not present.
Orcuttia californica	California Orcutt grass	Endangered	Endangered	18.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Vernal pool Wetland	Vernal pools.	10-660 m.	No habitat present. Not present.
Pseudognaphalium leucocephalum	white rabbit-tobacco	None	None	2B.2		Chaparral Cismontane woodland Coastal scrub Riparian woodland	Riparian woodland, cismontane woodland, coastal scrub, chaparral.	Sandy, gravelly sites. 35-515 m.	No habitat present. Not present.
Scutellaria bolanderi ssp. austromontana	southern mountains skullcap	None	None	1B.2	USFS_S-Sensitive	Chaparral Cismontane woodland Lower montane coniferous forest	Chaparral, cismontane woodland, lower montane coniferous forest.	In gravelly soils on streambanks or in mesic sites in oak or pine woodland. 425-2000 m.	No habitat present. Not present.
Sibaropsis hammittii	Hammitt's clay-cress	None	None	1B.2	SB_RSABG-Rancho Santa Ana Botanic Garden USFS_S-Sensitive	Chaparral Valley & foothill grassland	Valley and foothill grassland, chaparral.	Mesic microsites in open areas on clay soils in Stipa grassland. Often surrounded by Adenostoma chaparral. 715-1040 m.	No habitat present. Not present.

Scientific Name	Common Name	Federal Listing	State Listing	Rare Plant Rank	Other Status	Habitats	General Habitat	Micro Habitat	Presence/Absence
Sidalcea neomexicana	salt spring checkerbloom	None	None	2B.2	USFS_S-Sensitive	Alkali playa Chaparral Coastal scrub Lower montane coniferous forest Mojavean desert scrub Wetland	Playas, chaparral, coastal scrub, lower montane coniferous forest, Mojavean desert scrub.	Alkali springs and marshes. 3- 2380 m.	No habitat present. Not present.
Southern Coast Live Oak Riparian Forest	Southern Coast Live Oak Riparian Forest	None	None			Riparian forest			No habitat present. Not present.
Southern Cottonwood Willow Riparian Forest	Southern Cottonwood Willow Riparian Forest	None	None			Riparian forest			No habitat present. Not present.
Southern Interior Basalt Flow Vernal Pool	Southern Interior Basalt Flow Vernal Pool	None	None			Vernal pool Wetland			No habitat present. Not present.
Southern Riparian Scrub	Southern Riparian Scrub	None	None			Riparian scrub			No habitat present. Not present.
Southern Sycamore Alder Riparian Woodland	Southern Sycamore Alder Riparian Woodland	None	None			Riparian woodland			No habitat present. Not present.
Sphaerocarpos drewei	bottle liverwort	None	None	1B.1		Chaparral Coastal scrub	Chaparral, coastal scrub.	Liverwort in openings; on soil. 90-600 m.	No habitat present. Not present.
Symphyotrichum defoliatum	San Bernardino aster	None	None	18.2	BLM_S-Sensitive USFS_S- Sensitive	Cismontane woodland Coastal scrub Lower montane coniferous forest Marsh & swamp Meadow & seep Valley & foothill grassland	Meadows and seeps, cismontane woodland, coastal scrub, lower montane coniferous forest, marshes and swamps, valley and foothill grassland.	Vernally mesic grassland or near ditches, streams and springs; disturbed areas. 3- 2045 m.	No habitat present. Not present .
Texosporium sancti-jacobi	woven-spored lichen	None	None	3		Chaparral	Chaparral.	Open sites; in California with Adenostoma fasciculatum, Eriogonum, Selaginella. At Pinnacles, on small mammal pellets. 290-660 m.	No habitat present. Not present.
Tortula californica	California screw moss	None	None	1B.2	BLM_S-Sensitive	Chenopod scrub Valley & foothill grassland	Chenopod scrub, valley and foothill grassland.	Moss growing on sandy soil. 10-1460 m.	No habitat present. Not present.
Trichocoronis wrightii var. wrightii	Wright's trichocoronis	None	None	2B.1		Marsh & swamp Meadow & seep Riparian forest Vernal pool Wetland	Marshes and swamps, riparian forest, meadows and seeps, vernal pools.	Mud flats of vernal lakes, drying river beds, alkali meadows. 5-435 m.	No habitat present. Not present.
Valley Needlegrass Grassland	Valley Needlegrass Grassland	None	None			Valley & foothill grassland			No habitat present. Not present.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15.800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Western Riverside Area, California Survey Area Data: Version 11, Sep 12, 2018

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 5, 2015—Feb 4. 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
EnC2	Exeter sandy loam, 2 to 8 percent slopes, eroded	3.6	100.0%
Totals for Area of Interest		3.6	100.0%

Appendix D Trip Generation Assessment

October 3, 2018

Mr. Grant Becklund 30811 Garbani Road Winchester, CA 92596

SUBJECT: FORTERRA PIPE MANUFACTURING FACILITY TRIP GENERATION ASSESSMENT

Dear Mr. Grant Becklund:

Urban Crossroads, Inc. is pleased to submit this Trip Generation Assessment for the Forterra Pipe Manufacturing Facility development ("Project"), which is located at the northeast corner of Matthews Road and Palomar Road in the City of Menifee.

The Project site is currently occupied by the Forterra Pipe Manufacturing use which includes approximately 74,090 square feet of manufacturing use. The Project proposes to construct a new 16,500 square foot metal building to accommodate internal equipment with a weather tight roof and shed roof to provide sun and water protection for on-site activities. Three traveling cranes to assist in the assembly and movement of materials and concrete will be utilized. A precast concrete mixer will be installed under the shed roof along with sand and aggregate material bins and a concrete silo for the storage of raw cement. This concrete batching equipment will replace the delivery of ready-mix concrete from local suppliers and will provide a more efficient manufacturing process and better-quality control of the concrete used in the process. The proposed material storage bins and cement silo will be shielded by the new building from view from Matthews Road. A second 4,200 square foot metal building addition will be added to the existing 3,800 square feet metal storage building to provide weather proof storage of the materials and equipment installed in the water quality boxes. Both new buildings and equipment will be pre-painted to match the existing buildings and trim.

These products are currently being manufactured on-site on an open slab and Forterra would like to cover the manufacturing area with a roof and install fixed cranes to move the materials within the building. This operation will not add additional employees or traffic beyond what was evaluated in the

Forterra Pipe Manufacturing Focused Trip Generation Assessment (Urban Crossroads April 2017). The proposed Project is consistent with the allowable land use per the City's General Plan and is not anticipated to generate any additional traffic from the concrete batching operation. As such, further detailed traffic evaluation (e.g., traffic study), in addition to the trip generation evaluation (previously prepared), is not required based on the proposed Project.

If you have any questions, please contact me directly at (949) 336-5987.

Respectfully submitted,

URBAN CROSSROADS, INC.
