Revised 2010

Project Proposal: Revised Conditional Use Permit No. 2018-199 proposes a revision to the previous City-approved CUP 2016-263, by constructing a new 16,500 sq. ft. metal building with a 3,125 sq. ft. shed roof overhang within the existing manufacturing and storage area in the eastern portion of the project site (east of Palomar Road). The new building will have a height of 47'-3" and will be used for the fabrication of concrete water quality boxes. The project also includes three (3) traveling cranes to assist in the assembly and movement of materials and concrete. Concrete batching equipment will be installed and will include a precast concrete mixer with sand and aggregate material bins and a cement silo for the storage of raw cement. The material storage bins and cement silo will be 19 and 48 feet high, respectively. This concrete batching equipment will replace the delivery of ready-mix concrete from local suppliers.

A new 4,200 sq. ft. metal building addition will be added to an existing 3,800 sq. ft. metal storage building to provide weatherproof storage of the materials and equipment. The previously mentioned concrete batching equipment will be partially screened from Matthew Road by the proposed 4,200 sq. ft. building, and will also be screened by the existing 6-foot-tall perimeter block wall and landscaping.

The project also includes the addition of a storage yard on 3.4 acres on the west side of Palomar Road. Products will be manufactured on the east side of Palomar Road and then delivered to the storage yard for temporary storage of the products until they are delivered to a job site. Six-foot-tall block walls will be constructed along Palomar Road and Mathews Road and wrought iron/chain link fencing will be provided on the north and west sides of the storage yard. The project also includes landscaping surrounding the storage yard.
