EXECUTIVE SUMMARY

This health risk assessment assesses potential health risk impacts on residents from exposure to diesel emissions generated by trucks due to the proposed Project. The Project site is currently developed with a telecommunications service yard, which would be displaced due to the construction of two warehouse buildings totaling 233,987 square feet.

A 30-year exposure scenario was assessed to identify lifetime health risk values. A 9-year exposure scenario was also assessed to identify the health risk values associated with the average time individuals are likely to reside at a given residence. Both scenarios assess potential cancer (carcinogenic) and noncancer (noncarcinogenic) effects from contaminant exposures. The estimated maximum cancer risk at nearby residences would not exceed SCAQMD's significance criterion of 10 per 1 million for both 30-year and 9-year exposure scenarios. In addition, the maximum noncancer hazard indices for the Project's MEIR would be less than 1 and would not be considered significant.

INTRODUCTION

This health risk assessment (HRA) has been prepared for the Irwindale Industrial Center Project (Project) to assess potential health risk impacts on residents from exposure to diesel emissions generated by trucks. Based on the California Air Resources Board's (CARB's) *Air Quality and Land Use Handbook: A Community Perspective,* citing sensitive land uses such as residential uses close to freeways and high-traffic roads can increase the potential for adverse health effects.[1] The Project would maintain the two existing full access driveways at Azusa Canyon Road roughly opposite the intersections of Sandstone Street and Nubia Street.

[1] CARB, *Air Quality and Land Use Handbook: A Community Health Perspective* (April 2005), accessed December 2018, https://www.arb.ca.gov/ch/handbook.pdf.

PROJECT DESCRIPTION

The Project Site is in the City of Irwindale (City) within Los Angeles County, as shown in **Figure 1: Regional Location Map.** The City is located in the San Gabriel Valley, roughly 20 miles east of downtown Los Angeles, northeast of the City of Baldwin Park, and south of the City of Monrovia.

The Project is located at 5010 Azusa Canyon Road (Project Site), at the northeast corner of Nubia Street and Azusa Canyon Road, roughly 675 feet south of Arrow Highway, as shown in **Figure 2: Project Site Location**. The Proposed Project involves the demolition of existing on-site buildings and structures, and the development of two speculative stand-alone concrete tilt-up buildings and associated parking. The Project Site comprises four existing parcels (Assessor Parcel Numbers 8417-025-800, 8417-025-801, 8417-026-800, and 8417-026- 801), totaling roughly 10.7 acres. The proposed Project will maintain the two existing full access driveways at Azusa Canyon Road, roughly opposite the intersections of Sandstone Street and Nubia Street. The proposed project is anticipated to be constructed and fully operational by year 2021.

HEALTH RISK ASSESSMENT

Background

The primary toxic air contaminant (TAC) of concern from diesel exhaust is diesel particulate matter (DPM). In 1998, CARB identified DPM from diesel-powered engines as a TAC based on its potential to result in an increased cancer risk, as well as other noncancer adverse health effects, due to prolonged exposure. Some short-term (acute) effects of DPM exposure include eye, nose, throat, and lung irritation; coughs; headaches; light-headedness; and nausea. Long-term (chronic) effects include aggravation of existing respiratory and cardiovascular disease; alteration in the body's defense systems against foreign materials; damage to lung tissue and reduced lung function; carcinogenesis; premature birth rates; and premature death.

TAC generators located with the South Coast Air Basin are associated with diesel-fueled vehicles producing DPM, as well as with specific types of facilities, such as dry cleaners, gas stations, distribution centers, and ports. The CARB has made specific recommendations with respect to siting new sensitive uses near existing TAC-emitting facilities. Among other specific recommendations, CARB suggests siting sensitive receptors (such as residences) no less than 500 feet from freeways or major roadways.

This HRA evaluates the potential for increased health risks to residents at the west of the Project site resulting from exposure to diesel exhaust emissions (a TAC) generated by trucks entering and leaving the site. Because the Project is not located within the buffer distance of any other major TAC-emitting facilities, this HRA is limited to the impacts from DPM associated with the diesel trucks.

Additionally, given that diesel-powered trucks are the primary contributors of DPM on roadways and freeways, this HRA analysis evaluates the adverse health risks of the residents' increased exposure to DPM associated with trucks traveling along Azusa Canyon Road, specifically. Adverse health risks are discussed in terms of cancer and cancer risks. Noncancer health risks can be measured quantitively, with the risk designated as a hazard index.

Cancer risks have no set thresholds because carcinogens are considered to be nonthreshold pollutants. This means that for any nonzero concentration of a carcinogen, there is an increased risk of developing cancer. Therefore, significance exposure to a carcinogen is evaluated based on the increase in risk. The increased risk is determined by multiplying a calculated dose with the cancer potency factor and then by 1 million to express risk in the common term of the risk per million people. An HRA evaluates the increased cancer risk from the continuous exposure to a pollutant over a lifetime.

Inhalable particulate matter equal to or less than 10 microns in diameter (PM10) from diesel exhaust is used as a surrogate for evaluating the cancer and chronic noncancer risk from DPM exposure. The health

risks for the proposed Project are evaluated by first estimating the DPM emissions produced by diesel vehicles trips to the Project site. Dispersion modeling is then used to convert those emissions to ambient (existing background) concentrations. Finally, the ambient concentrations are used to determine whether the residents along Azusa Canyon Road would be exposed to an increased potential for health risks from operations of the proposed Project.

Significance Criteria

Neither the State nor the South Coast Air Quality Management District (SCAQMD) has developed a quantitative threshold for the purposes of evaluating the health impacts on residential developments from exposure to TAC emissions associated with a nearby freeway or high-volume roadway. Currently, the SCAQMD has only developed significance thresholds that apply to single stationary and mobile sources of TAC emissions, such as projects involving truck stops or warehouses. However, in the absence of a threshold specific to assessing health impacts from a freeway, the SCAQMD's stationary-source TAC thresholds of 10 in 1 million for cancer risk and 1 for hazard index would serve as the most appropriate thresholds for use in this HRA analysis.

Truck Routes

"Truck traffic routes" have been established within the City to accommodate vehicles that exceed 3 tons of maximum gross weight. The City's Municipal Code (Section 10.40.020) does not permit the movement or parking of such heavy vehicles (with the exception of public transportation buses) on any streets other than those designated as truck traffic routes, as shown in **Figure 3: Designated Truck Routes**. **Table 1: Major Designated Truck Routes in Irwindale** identifies the designated truck routes in the City.

Trip Generation

Table 2: Project Truck Trip Generation provides the net number of truck trips resulting from displacement of the existing use and development of the proposed Project. The proposed project is forecast to result in a net increase of 207 trucks trips, including 26 trips during the morning (AM) peak hour and 27 evening (PM) peak hour.

Project Trip Distribution and Assignment

Figure 4: Project Truck Trip Distribution shows the forecast directional distribution patterns for the Project-generated truck trips. The project trip distribution patterns were determined in consultant with City staff and are based on a review of existing volume data, surrounding land use, and the local and regional roadway facilities in the Project's vicinity. As shown in **Figure 2**, approximately 95 percent (197) of trucks would travel to the north of the site towards Arrow Highway, a designated truck traffic route (refer to **Table 1**). In addition, approximately 5 percent (10) of trucks would travel south along Azusa Canyon Road adjacent to the single- and multifamily residential residences to the west of the Project site, as shown in **Figure 5: Sensitive Receptor Locations**.

Methodology

Detailed Modeling

Air dispersion modeling was conducted using the Lakes Environmental American Meteorological Society/US Environmental Protection Agency (USEPA) Regulator Model (AERMOD v. 9.6.5). This model is a steady-state, multiple-source, Gaussian dispersion model designed for use with emission sources situated in terrain where ground elevations can exceed the release heights of the emission sources (i.e., complex terrain). AERMOD is the USEPA's regulatory dispersion model specified in the Guideline for Air Quality Models.[2] AERMOD is recommended for use by the SCAQMD, which has established its own modeling guidance for the model.[3]

Emission Sources

Within AERMOD, diesel vehicle traffic was modeled as a line source comprised of separate volume sources along Azusa Canyon Road. As mentioned previously, the proposed Project will maintain the two existing full access driveways at Azusa Canyon Road, which are roughly opposite the intersections of Sandstone Street and Nubia Street. Diesel exhaust emissions were modeled using a release height of 5 feet. The plume height and width used for each volume source were 9.6 feet and 24 feet, respectively.

Emission Rates

The quantification of diesel exhaust emissions requires a diesel exhaust emission rate (in grams per second) from trucks. To estimate this emission rate, emission factors (in grams per mile) for the various vehicle classes of diesel-powered trucks were obtained from the EMFAC web database.[4] EMFAC2017 and EMFAC2014 versions of the Web Database are currently provided. The most recent USEPA-approved version is EMFAC2014. Pollutant emission rates were identified for diesel particulates. Using the emission factors and the daily truck trips from the traffic study,[5] the total grams of diesel exhaust emissions that would be generated by the proposed Project were modeled and obtained. In turn, the total emissions amount was then converted into an exhaust emission rate in grams per second.

Meteorological Data

To run AERMOD, the following hourly surface meteorological data are required: wind speed, wind direction, ambient temperature, and opaque cloud cover. These meteorological variables are used to estimate air dispersion of pollutants in the atmosphere. Wind speed determines how rapidly pollutants are diluted and influences the rise of the emission plume in the air, thus affecting downwind pollutant concentrations. Wind direction determines where pollutants will be transported. The opaque cloud cover and upper air surrounding data are used in calculations to determine other important dispersion parameters. These include atmospheric stability (a measure of turbulence and the rate at which pollutants disperse laterally and vertically) and mixing height (the vertical depth of the atmosphere within which dispersion occurs). The greater the mixing height is, the larger the volume of atmosphere is available to dilute the pollutant concentration.

The dispersion modeling for the Project utilized preprocessed meteorological data from the Azusa Air Monitoring station.[6] The meteorological data was collected for the years between January 2012 and December 2016.

Sensitive Receptors

To determine the DPM concentrations at the adjacent residences, discrete receptors were placed at the surrounding residences of the Project site (refer to **Figure 5**). Based on SCAQMD's AERMOD modeling guidance, all receptors were set to a height of 0 feet (0 meters) so that ground-level concentrations were analyzed.

Terrain Data

The modeling analysis also included terrain data to accurately assess impacts in three dimensions. The terrain data used for the analysis was from the digital elevation model data for the San Bernardino 1-degree quadrangles obtained through the AERMOD program.

Urban/Rural

The AERMOD model requires that the user specify whether a site should be modeled as either urban or rural. The urban option allows the user to incorporate the effects of increased surface heating from an urban area on pollutant dispersion under stable atmospheric conditions. This surface heating typically causes better dispersion, which results in lower pollutant concentrations.

6 SCAQMD, "AERMOD Table 1: Meteorological Sites," accessed December 2018, https://www.aqmd.gov/home/air-quality/air-quality-data-studies/meteorological-data/aermod-table-1.

Based on SCAQMD's AERMOD modeling guidance, all air quality impact analyses in the Basin should be executed using the urban modeling option. In addition, all sources should be modeled with urban effects using the population of the City where the Project is located. As such, the population of 76,402[7] was used in the AERMOD run.

Exposure Health Risks and Hazards

Table 3: Estimated Inhalation Cancer Risk and Chronic Hazards shows the estimated range of excess cancer risk and chronic hazard indices for residences near the proposed Project site (refer to **Figure 5**). The maximally exposed individual receptor (MEIR) is represented by the residences located adjacent to Azusa Canyon Road.

As shown in **Table 3**, the maximum 30-year and 9-year cancer risks at the Project site from DPM emissions generated by diesel truck travel along Azusa Canyon Road are 2.15 E-06 and 1.52 E-06, respectively. The cancer risk for residents would not exceed the SCAQMD's suggested significance criteria of 10 per one million (1.0 E-06). Additionally, the maximum noncancer hazard indices for the Project's residents are 4.96 E-04 for the MEIR receptors. A hazard index of less than 1 is considered to be not significant.

Table 3
Estimated Inhalation Cancer Risk and Chronic Hazards

Receptor	Cancer Risk		Chronic Noncancer Hazard Index
	30-year	9-year	
Resident MEIR	2.15 E-06	1.52 E-06	4.96 E-04

*Note: See **Appendix A** for calculations.*

APPENDIX B

On-Road Mobile Sources Emission Rate

On-Road Mobile Sources
Emission Rate

DSL Particulate Emissions (Southbound)

Number of Sources	28
Link Length (meters)	398.2
Volume/Baseline (VPH)	10
Pollutant Mass Emission Rate (gr/mi)	8.89E-04

Emission Rate (gr/sec) = ((Mass Emission Rate x Volume/Baseline)/(1609.3 m/mile) x (3600 sec/hr)) x (Link Length)

Pollutant Emission Rate (gr/sec)	6.1E-07
Pollutant Emission Rate/Source (gr/sec/source)	2.18E-08

DSL Particulate Emissions (Northbound)

Number of Sources	16
Link Length (meters)	216.2
Volume/Baseline (VPH)	197
Pollutant Mass Emission Rate (gr/mi)	8.89E-04

Emission Rate (gr/sec) = ((Mass Emission Rate x Volume/Baseline)/(1609.3 m/mile) x (3600 sec/hr)) x (Link Length)

Pollutant Emission Rate (gr/sec)	6.5E-06
Pollutant Emission Rate/Source (gr/sec/source)	4.08E-07

APPENDIX C

Cancer and Hazard Risk

Cancer and Hazard Risk

30-year Cancer Risk

                                              ***     MODEL SETUP OPTIONS
SUMMARY       ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for    44 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =     76402.0 ;  Urban Roughness Length =  1.000 m

 **Model Allows User-Specified Options:
         1. Stack-tip Downwash.
         2. Allow FLAT/ELEV Terrain Option by Source,
            with      0 FLAT and     44 ELEV Source(s).
         3. Use Calms Processing Routine.
         4. Use Missing Data Processing Routine.
         5. No Exponential Decay.
         6. Full Conversion Assumed for NO2.
         6. Urban Roughness Length of 1.0 Meter Used.

 **Other Options Specified:
         ADJ_U*   - Use ADJ_U* option for SBL in AERMET
         TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  DPM

 **Model Calculates  2 Short Term Average(s) of:   1-HR  24-HR
     and Calculates ANNUAL Averages

 **This Run Includes:     44 Source(s);       1 Source Group(s); and
166 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:     44 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.
```

```
 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor
(RECTABLE Keyword)
          Model Outputs External File(s) of High Values for Plotting
(PLOTFILE Keyword)
          Model Outputs Separate Summary File of High Ranked Values
(SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for
Calm Hours
                                                                  m for
Missing Hours
                                                                  b for
Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   189.00 ;
Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC
;  Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.5 MB of RAM.

 **Input Runstream File:          aermod.inp
 **Output Print File:             aermod.out

 **Detailed Error/Message File:   5010AzusaCanyon.err
 **File for Summary of Results:   5010AzusaCanyon.sum
```

Appendix B.1

Annual—Existing

5010 Azusa Canyon Road (Existing)

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	33.42	1000sqft	10.00	33,420.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2018
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - 10 acre site with three buildings totaling 33,420 sq. ft.

Construction Phase - Existing Run

Vehicle Trips - Based on daily trip generation of 330 trips

Table Name	Column Name	Default Value	New Value
tblConstructionPhase	NumDays	20.00	1.00
tblLandUse	LotAcreage	0.77	10.00
tblVehicleTrips	WD_TR	6.97	9.87

5010 Azusa Canyon Road (Project)

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	233.99	1000sqft	10.00	233,987.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Based on 10 acre site

Construction Phase - Construction duration: 9 months total

Off-road Equipment - Two manlifts, two compressors

Off-road Equipment - Six generators, two loaders, one water truck, four excavators, one crane for a week, laser screed, concrete pump, one asphalt tanker

Off-road Equipment - Two excavators, two loaders

Off-road Equipment - Four scrapers, one blade, one loader & one water truck

Off-road Equipment - Two scrapers, one loaders, two bobcats, laser screed

Trips and VMT - Location of landfill TBD

Demolition - Three buildings totaling 33,420 square feet exist on the site that would be demolished. The majority of the onsite buildings and pavement consisting of concrete and asphalt will be crushed and used onsite as base.

Grading -

Vehicle Trips - Based on traffic trip generation of 1,161 trips

Construction Off-road Equipment Mitigation - 'Per CARB Title 13 CCR Section 2520-2427, equipment required to be Tier 4 Final for new equipment. Project will utilize Tier 3 as Tier IV not available yet in commercial/industrial construction.

Area Mitigation - SCAQMD Rule 1113 - Architectural Coating

Water Mitigation -

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

3.2 Demolition - 2019

Baseline Construction On-Site

Project Characteristics -

Land Use - Based on 10 acre site

Construction Phase - Construction duration: 9 months total

Off-road Equipment - Two manlifts, two compressors

Off-road Equipment - Six generators, two loaders, one water truck, four excavators, one crane for a week, laser screed, concrete pump, one asphalt tanker

Off-road Equipment - Two excavators, two loaders

Off-road Equipment - Four scrapers, one blade, one loader & one water truck

Off-road Equipment - Two scrapers, one loaders, two bobcats, laser screed

Trips and VMT - Location of landfill TBD

Demolition - Three buildings totaling 33,420 square feet exist on the site that would be demolished. The majority of the onsite buildings and pavement consisting of concrete and asphalt will be crushed and used onsite as base.

Grading -

Vehicle Trips - Based on traffic trip generation of 1,161 trips

Construction Off-road Equipment Mitigation - 'Per CARB Title 13 CCR Section 2520-2427, equipment required to be Tier 4 Final for new equipment. Project will utilize Tier 3 as Tier IV not available yet in commercial/industrial construction.

Area Mitigation - SCAQMD Rule 1113 - Architectural Coating

Water Mitigation -

Winter—Proposed

5010 Azusa Canyon Road (Project)

Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	233.99	1000sqft	10.00	233,987.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Based on 10 acre site

Construction Phase - Construction duration: 9 months total

Off-road Equipment - Two manlifts, two compressors

Off-road Equipment - Six generators, two loaders, one water truck, four excavators, one crane for a week, laser screed, concrete pump, one asphalt tanker

Off-road Equipment - Two excavators, two loaders

Off-road Equipment - Four scrapers, one blade, one loader & one water truck

Off-road Equipment - Two scrapers, one loaders, two bobcats, laser screed

Trips and VMT - Location of landfill TBD

Demolition - Three buildings totaling 33,420 square feet exist on the site that would be demolished. The majority of the onsite buildings and pavement consisting of concrete and asphalt will be crushed and used onsite as base.

Grading -

Vehicle Trips - Based on traffic trip generation of 1,161 trips

Construction Off-road Equipment Mitigation - 'Per CARB Title 13 CCR Section 2520-2427, equipment required to be Tier 4 Final for new equipment. Project will utilize Tier 3 as Tier IV not available yet in commercial/industrial construction.

Area Mitigation - SCAQMD Rule 1113 - Architectural Coating

Water Mitigation -

Historic Resources Assessment

Introduction

Executive Summary

Environmental Science Associates (ESA) was retained by Jason Hines on behalf of Overton Moore Properties (Client) to prepare this Historical Resources Assessment Report and CEQA Impacts Analysis (Report). The purpose of this Report is to identify and evaluate potential historical resources located at 5010 Azusa Canyon Road (Project Site), Irwindale (City), California, on assessor parcel number (APN) 8417-025-800, 8417-025-801, 8417-026-800, and 8417-026-801 (Project Site). This Report, completed by ESA, was prepared to comply with California Environmental Quality Act (CEQA), to assess the existing buildings and landscapes on the Project Site and neighboring parcels for eligibility as historical resources for listing in the National Register of Historic Places (National Register or NR), California Register of Historical Resources (California Register or CR), as well as for local designation as a City of Irwindale Landmark. The Report includes a discussion of the survey methods used, a brief historic context of the property and surrounding area, and the identification and evaluation of the Project Site.

The Project Site is situated on the east side of Azusa Canyon Road which forms the border between the City of Irwindale and the City of Baldwin Park. The Project Site is a 10.3-acre site which contains four buildings and one structure: Office Building, Fleet Maintenance Building, Warehouse, storage area ("Barn"), and Truck Wash. The Office Building, Warehouse, Barn, and Truck Wash were designed by architectural firm Beckhart & Mill in 1967. The Warehouse, Barn, and Truck Wash were designed in Utilitarian style, and the Office Building was designed in the Mid-Century Modern style. The Fleet Maintenance Building was built in 1957 and designed by architects Daniel, Mann, Johnson & Mendenhall (DMJM) in a Utilitarian style.

ESA's architectural historian Ashley Brown, M.A. conducted a site visit of the Project Site on April 12, 2018. This site visit included an intensive pedestrian survey to document the existing conditions of the Project Site including the buildings and structure located on the site, and the immediate vicinity. During the site visit the Project Site was documented with digital photography.

The Project Site was evaluated under the following historical and architectural themes: Commercial and Industrial Development (1920s-1970), Mid-Century Modern Architecture (1945-1970), Utilitarian style (1860-present), and architects Beckhart & Mill and DMJM. ESA

also conducted research on the Project Site's construction and occupancy history. ESA evaluated the buildings on the Project Site against the criteria for the National Register, California Register, and City of Irwindale local landmark status.

ESA found the Project Site ineligible under the applicable federal and state criteria for its significant historical associations A-D and 1-4, respectively. ESA also found the buildings and structure on the Project Site ineligible under local criteria A-H. ESA recommends that the Project Site be assigned a California Historic Resource (CHR) Status Code of 6Z; noting it as ineligible for listing in the National Register of Historic Places, the California Register of Historical Resources, and local register through survey evaluation. As such, the four buildings and one structure on the Project site (Office Building, Fleet Maintenance Building, Warehouse, Barn, and Truck Wash) are cleared for demolition as part of the proposed Project's redevelopment.

Project Location

The project site (Project Site) is located at 5010 Azusa Canyon Road in Irwindale, California on APN: 8417-025-800, shown on **Figure 1**, *Regional and Project Vicinity Map*. As mentioned above and shown in **Figure 2**, *Aerial Photograph of Project Site*, the Project Site is improved with the General Telephone "Office Building" built in the Mid-Century Modern architectural style; a Fleet Maintenance building on the northern property line, with an adjacent Truck Wash; a Warehouse in the middle of the Project Site; and a storage facility known as the "Barn" on the eastern edge of the property line. The Project Site is bounded to the west by Azusa Canyon road, to the north, south, and east by further commercial buildings. The Project Site is located in Irwindale, which consists of grid streets, houses, commercial buildings, and gravel pits. The nearest major arteries are Azusa Canyon Road to the west and Arrow Highway to the north.

Project Description

The Client proposes to demolish current improvements (Office Building, Fleet Maintenance Building, Warehouse, Barn, and Truck Wash) on the Project Site. The Project plans were developed by HPA Architecture, and dated March 14, 2018. The Project plans would include the construction of "Building 1," which would be 186,720 square-feet warehouse/office with 21 dock doors at the rear of the property. Building 1 would be a contemporary design that would be located along Azusa Canyon Road. This building would have the potential to be one or two stories, and be used as a warehouse, office, or a combination of the two. The second building, "Building 2," would be sited at the current southeast rear parking lot. It would be similar in design to Building 1, however it would only be 49,300 square-feet with six dock doors. Building 2, will also have the potential to be one or two floors. Project Plans are included in **Appendix A.**

Figure 1 Regional and Project Site Vicinity Map

Figure 2 Aerial Photograph of Project Site and Vicinity

Research and Field Methodology

This Report was prepared by ESA's architectural historians, including Margarita Jerabek, Ph.D., Director of Historic Resources; Joel Levanetz, Historic Resources Manager; Ashley Brown, M.A., Senior Architectural Historian; Max Loder, Associate Architectural Historian; and Hanna Winzenried, M.S.C., Associate Architectural Historian, all of whom meet and exceed the *Secretary of the Interior's Professional Qualification Standards* in history and architectural history. Professional qualifications are provided in **Appendix B**.

The historical resources evaluation involved a review of the National Register and its annual updates, the California Register, the Statewide Historical Resources Inventory (HRI) database maintained by the State Office of Historic Preservation (OHP), the California Historical Resources Information System (CHRIS), and the Cities of Irwindale and Baldwin Park's inventory of historic properties to identify any previously recorded properties within or near the Project Site. An intensive pedestrian survey was also undertaken to document the existing conditions of the property and vicinity. In addition, the following tasks were performed for the study:

- Conducted field inspections of the Project Site and utilized the survey methodology of the State OHP.
- Photographed the Project Site and associated landscape features, and examined other properties in the vicinity that exhibited potential architectural and/or historical associations.
- Conducted site-specific research on the property utilizing building permits, Sanborn Fire Insurance Maps (not available for this area), City directories, historical photographs, California Index, Avery Index, Online Archive of California, Huntington Library, Calisphere, University of Southern California (USC) Digital Collections, Newspapers.com, and other published sources.
- Conducted research at the City's Building and Safety and Community Development departments as well as the Los Angeles County Office of the Assessor (Assessor).
- Reviewed and analyzed ordinances, statutes, regulations, bulletins, and technical materials relating to federal, state, and local historic preservation, designation assessment processes, and related programs.
- Evaluated potential historical resources based upon criteria used by the National Register, California Register, and City of Irwindale Local Official Register.

Regulatory Framework

Historical resources fall within the jurisdiction of the federal, state, and local designation programs. Federal laws provide the framework for the identification, and in certain instances, protection of historical resources. Additionally, state and local jurisdictions play active roles in the identification, documentation, and protection of such resources within their communities. The National Historic Preservation Act (NHPA) of 1966, as amended and the California Public Resources Code (PRC), Section 5024.1, are the primary federal and state laws and regulations governing the evaluation and significance of historical resources of national, state, regional, and local importance. Descriptions of these relevant laws and regulations are presented below.

Federal Eligibility Criteria and Integrity Aspects

National Register of Historic Places

The National Register was established by the NHPA as "an authoritative guide to be used by federal, state, and local governments, private groups and citizens to identify the Nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment."[1] The National Register recognizes properties that are significant at the national, state, and/or local levels.

To be eligible for listing in the National Register, a resource must be significant in American history, architecture, archaeology, engineering, or culture. Four criteria for evaluation have been established to determine the significance of a resource:

A. Associated with events that have made a significant contribution to the broad patterns of our history;

B. Associated with the lives of persons significant in our past;

C. Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction;

D. Yields, or may be likely to yield, information important in prehistory or history.[2]

Districts, sites, buildings, structures, and objects that are 50 years in age must meet one or more of the above criteria *and* retain integrity (that is, convey their significance) to be eligible for listing.

Under the National Register, a property can be significant not only for the way it was originally constructed, but also for the way it was adapted at a later period, or for the way it illustrates changing tastes, attitudes, and uses over a period of time.[3]

Within the concept of integrity, the National Register recognizes seven aspects or qualities that, in various combinations, define integrity: Location, Design, Setting, Materials, Workmanship, Feeling, and Association:

Location is the place where the historic property was constructed or the place where the historic event occurred. The relationship between the property and its location is often important to understanding why the property was created or why something happened. The actual location of a historic property, complemented by its setting, is particularly important in recapturing the sense of historic events and persons. Except in rare cases, the relationship between a property and its historic associations is destroyed if the property is moved.

1 36 CFR Section 60.2.

2 "Guidelines for Completing National Register Forms," in National Register Bulletin 16, U.S. Department of Interior, National Park Service, 1977, Revised 1997. This bulletin contains technical information on comprehensive planning, survey of cultural resources and registration in the NRHP.

3 National Register Bulletin 15, p. 19.

Design is the combination of elements that create the form, plan, space, structure, and style of a property. It results from conscious decisions made during the original conception and planning of a property (or its significant alteration) and applies to activities as diverse as community planning, engineering, architecture, and landscape architecture. Design includes such elements as organization of space, proportion, scale, technology, ornamentation, and materials. A property's design reflects historic functions and technologies as well as aesthetics. It includes such considerations as the structural system; massing; arrangement of spaces; pattern of fenestration; textures and colors of surface materials; type, amount and style of ornamental detailing; and arrangement and type of plantings in a designed landscape.

Setting is the physical environment of a historic property. Whereas location refers to the specific place where a property was built or an event occurred, setting refers to the *character* of the place in which the property played its historic role. It involves *how*, not just where, the property is situated and its relationship to surrounding features and open space.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. It is the evidence of artisans' labor and skill in constructing or altering a building, structure, object, or site. Workmanship can apply to the property as a whole or to its individual components.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.

The choice and combination of materials reveal the preferences of those who created the property and indicate the availability of particular types of materials and technologies. A property must retain key exterior materials dating from the period of its historic significance.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. It results from the presence of physical features that, taken together, convey the property's historic character.

Association is the direct link between an important historic event or person and a historic property. A property retains association if it *is* the place where the event or activity occurred and is sufficiently intact to convey that relationship to an observer.[4]

To retain historic integrity, a property will always possess most of the aspects and depending upon its significance, retention of specific aspects of integrity may be paramount for a property to convey its significance.[5] Determining which of these aspects are most important to a particular

[4] National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation, 44-45, http://www.nps.gov/nr/publications/bulletins/pdfs/nrb15.pdf, accessed July 7, 2013.

[5] The National Register defines a property as an "area of land containing a single historic resource or a group of resources, and constituting a single entry in the National Register of Historic Places." A "Historic Property" is defined as "any prehistoric or historic district, site, building, structure, or object at the time it attained historic significance." Glossary of National Register Terms, http://www.nps.gov/nr/publications/bulletins/nrb16a/nrb16a_appendix_IV.htm, accessed June 1, 2013.

property requires knowing why, where and when a property is significant.[6] For properties that are considered significant under National Register Criteria A and B, *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation (National Register Bulletin 15)* explains, "a property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s)."[7] In assessing the integrity of properties that are considered significant under National Register Criterion C, *National Register Bulletin 15* states, "a property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique."[8]

State Register and Eligibility Criteria

California Register of Historical Resources

The OHP, as an office of the California Department of Parks and Recreation (DPR), implements the policies of the NHPA on a statewide level.

The OHP also carries out the duties as set forth in the PRC and maintains the HRI and the California Register. The State Historic Preservation Officer (SHPO) is an appointed official who implements historic preservation programs within the state's jurisdictions.

Also implemented at the state level, CEQA requires projects to identify any substantial adverse impacts which may affect the significance of identified historical resources.

The California Register was created by Assembly Bill 2881 which was signed into law on September 27, 1992. The California Register is "an authoritative listing and guide to be used by state and local agencies, private groups, and citizens in identifying the existing historical resources of the state and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change."[9] The criteria for eligibility for the California Register are based upon National Register criteria.[10]

6 National Register Bulletin 15, 44.

7 "A property retains association if it is the place where the event or activity occurred and is sufficiently intact to convey that relationship to an observer. Like feeling, association requires the presence of physical features that convey a property's historic character. Because feeling and association depend on individual perceptions, their retention alone is never sufficient to support eligibility of a property for the National Register." Ibid, p. 46.

8 "A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style." Ibid.

9 PRC Section 5024.1(a).

10 PRC Section 5024.1(b).

The California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally Determined Eligible for the National Register; 11
- California Registered Historical Landmarks from No. 770 onward;
- Those California Points of Historical Interest (PHI) that have been evaluated by the OHP and have been recommended to the State Historical Commission for inclusion on the California Register.[12]

Other resources which may be nominated to the California Register include:

- Individual historical resources;
- Historical resources contributing to historic districts;
- Historical resources identified as significant in historical resources surveys with significance ratings of Category 1 through 5;
- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an HPOZ.[13]

To be eligible for the California Register, a historical resource must be significant at the local, state, or national level, under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

Additionally, a historical resource eligible for listing in the California Register must meet one or more of the criteria of significance described above and retain enough of its historic character or appearance to be recognizable as a historical resource and to convey the reasons for its significance. Historical resources that have been rehabilitated or restored may be evaluated for listing. Integrity is evaluated with regard to the retention of seven aspects of integrity similar to the National Register (location, design, setting, materials, workmanship, feeling, and association). Also like the National Register, it must also be judged with reference to the particular criteria under which a resource is proposed for eligibility. Alterations over time to a resource or historic changes in its use may themselves have historical, cultural, or architectural significance. It is possible that historical resources may not retain sufficient integrity to meet the criteria for listing in the National Register, but they may still be eligible for listing in the California Register. A

11 PRC Section 5024.1(d).

12 Ibid.

13 PRC Section 5024.1(e)

resource that has lost its historic character or appearance may still have sufficient integrity for the California Register if it maintains the potential to yield significant scientific or historical information or specific data.[14]

California Historical Resources Status Codes

The California State OHP developed National Register Status Codes in 1975 as a standardized system for classifying historical resources in the state's Historic Resources Inventory. In 2003 these codes were revised to reflect the application of California Register and local criteria and the name was changed to California Historical Resource (CHR) Status Codes. CHR Status codes consist of three digits and are assigned to properties or historic districts through a survey process and as a result of varying regulatory processes. The first digit ranges from 1-7. Code categories 1-5 reflect properties determined eligible for designation according to the criteria established for the National Register, California Register and local government criteria for significance. Code categories 6-7 generally identify properties that do not meet established criteria for significance, have not been evaluated, or need to be reevaluated. The code categories are as follows:

1. Properties listed in the National Register or the California Register;
2. Properties determined eligible for listing in the National Register or the California Register;
3. Appears eligible for National Register or the California Register through survey evaluation;
4. Appears eligible for the National Register or the California Register through other evaluation;
5. Properties recognized as historically significant by local government;
6. Not eligible for listing or designation as specified; and
7. Not evaluated for the National Register or California Register or needs re-evaluation.

The second digit of the CHR Status Code is a letter code indicating whether the resource is separately eligible (S), eligible as part of a district (D), or both (B). The third digit is a number that is used to further specify significance and refine the relationship of the property to the National Register and/or California Register. Under this evaluation system, categories 1 through 4 pertain to various levels of National Register and California Register eligibility. Locally eligible resources are given a rating code level 5. Properties found ineligible for listing in the National Register, California Register, or for designation under a local ordinance are given an evaluation Status Code of 6. Properties given an evaluation Status Code of 6Z are "found ineligible for the National Register, California Register, or Local designation through survey evaluation."[15]

[14] Codified in California Code of Regulations, Title 14, Chapter 11.5, Section 4852(c) which can be accessed on the internet at http://ohp.parks.ca.gov

Local Official Register of Historic Resources

City of Irwindale Code

The City of Irwindale's Code (Resolution No. 2009-60-2418) establishes criteria for designating local historic landmarks.[16]

PURPOSE OF RESOLUTION:

WHEREAS, the recognition, protection and use of historic resources are required in the interest of the public peace, health, safety, prosperity, social and cultural enrichment, and general welfare; and

WHEREAS, the City intends to safeguard the heritage of the City by protecting designated buildings and structures which reflect the city's cultural history; and

WHEREAS, the City intends to encourage public understanding and involvement in the unique heritage of the City; and

WHEREAS, the City intends to strengthen civic pride in the notable accomplishments of the past; and

WHEREAS, the City desires to enhance the visual and aesthetic character of the City; and

WHEREAS, the City intends to promote the use of historic buildings and structures; and

WHEREAS, the City desires to protect and safeguard the property rights of the owners whose property is declared to be a historic building or structure; and

WHEREAS, the City, through this resolution, wishes to establish a Local Official Register of Historic Resources; and

WHEREAS, pursuant to the authority and criteria contained in the California Environmental Quality Act ("CEQA") and the CEQA guidelines, it has been determined that the proposed establishment of a Local Official Register of Historic Resources is categorically exempt under Section 15061(b)(3) of the CEQA Guidelines in that CEQA applies only to projects which have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, that activity is not subject to CEQA.

METHOD OF DESIGNATION:

Local historical landmarks may be designated as follows:

A. The building or structure proposed for designation is particularly representative of a historic period, type, style, region, or way of life.

B. The building or structure was connected with someone renowned, important, or a local personality.

C. The building or structure is connected with a business or use which was once common but is now rare

16 City of Irwindale, "Ordinance Resolution 2009-60-2418," Irwindale: City of Irwindale, 2009.

D. The building or structure represents the work of a master builder, engineer, designer, and artist or architect whose individual genius influenced his/her age.

E. The building or structure is the site of an important historic event or is associated with events that have made a meaningful contribution to the nation, state or city.

F. The building or structure exemplifies a particular architectural style.

G. The building or structure exemplifies the best remaining architectural type of a neighborhood.

H. The construction materials or engineering methods used in the building or structure embody elements of outstanding attention to architectural or engineering design, detail, material or craftsmanship.

Environmental Setting

Historic Context

The historic context developed below presents the background necessary to evaluate the historical and architectural significance of the Project Site, including the history of its construction and alterations, as well as the surrounding neighborhood and City's development. ESA evaluated the Project Site under the following historical and architectural themes: Commercial and Industrial Development (1920s-1970), Mid-Century Modern Architecture (1945-1970), architectural firm Beckhart & Mill.

City of Irwindale

Early Settlement

Before European settlement of what is today the City of Irwindale, the native Tongva people had been living in the area for thousands of years. By the mid-19th century, the land had been divided into the Rancho Azusa de Dalton.[17] Being located where the San Gabriel River leaves the steep mountains and levels out on its path to the ocean, the rancho was noted for little more than its unusually rocky, gravel-laden soil. This precluded much of it from being set aside for large-scale farming or livestock operations. In the 1850s, Gregorio Fraijo, a ranch overseer, settled his family on a 100-acre piece of land near present day City Hall. He was able to grow corn thanks to the waters of the nearby river water. Many immigrants soon began to move the area, particularly from the Mexican state of Sonora. A sizeable portion of Irwindale's over 1,400 residents can trace their ancestry to these early families.[18]

Commercial and Industrial Development (1920s-1970)

By the 1920s, the name "Irwindale" had begun to be widely applied to the area. Irwindale soon began to be known as the supplier of much of the material used to build Los Angeles' roads, buildings, freeways, and buildings. The same soil which made Irwindale unsuited for large scale agriculture made it ideal for mining the aggregate used to build much of the region's transportation infrastructure, and, when used as a component of concrete, many buildings and

17 Robert Petersen, "Irwindale: Mining the Building Blocks of Los Angeles," *KCET*, August 2, 2016.

18 Robert Petersen, "Irwindale: Mining the Building Blocks of Los Angeles," *KCET*, August 2, 2016.

structures.[19] "The first commercial-scale aggregate production sites began operating out of Irwindale in 1900," and railroads were built to ship the finished product throughout the region.[20] As the population of Los Angeles grew ten times by 1900 to 1930, and the demand for automobiles grew accordingly, Irwindale's fortunes grew in kind. Aggregate from Irwindale's unique soil was also used to construct many notable buildings and structures in Los Angeles: Los Angeles City Hall; the Biltmore Hotel; Los Angeles Memorial Coliseum; Union Station; Dodger Stadium; the Bonaventure Hotel; and the Los Angeles Convention Center; and the Arroyo Seco Highway, among others.[21]

"Mining became the town's principal industry," as "17 mining sites came to occupy 70 percent of the land in Irwindale."[22] This brought the area to the attention of adjacent cities which sought to annex parts of then-unincorporated Irwindale to increase their own revenue. In order to avoid higher municipal taxes, the mining companies persuaded Irwindale to incorporate as its own municipality. It successfully did this in 1957, and the mining companies dominated the young city until the 1970s. City leaders tried to diversify the economy with varying levels of success. Today, Irwindale is still known for mining, but also for the Irwindale Speedway, the Santa Fe Dam Recreation Area, breweries for seven different major brands of beer, and the Sriracha hot sauce factory.

History and Land Use of the Project Site

The Project Site is located at "E 300 FT OF W 340 FT OF SW 1/4 OF NW 1/4 OF NW 1/4 OF SEC 9 T 1S R 10W on the USGS Topographic Map, the land was never formally subdivided within a tract. To better understand the history of the Project Site and surrounding area, USGS topographic maps and aerial imagery were reviewed.

Aerial and Map Observations

A review of aerials from 1928, 1956, 1960, 1968, and 1976 indicate a variety of land uses for the Project Site. The 1928 aerial reveals agricultural usage (**Figure 3**), as does the 1956 aerial. The 1956 aerial also shows a large gravel pit immediately to the east of the Project Site, indicating the large increase in mining of aggregate that occurred in the first half of the twentieth century (**Figure 4**). The 1960 aerial shows the Project Site improved with commercial development including a large building on the southwest corner with vast parking lot, unlike today's present conditions (**Figure 5**). Also of note is the appearance of suburban development immediately to the west, in Baldwin Park. While some of this development was apparent in the 1956 aerial, the 1960 aerial shows it in full swing. The next available aerial from 1968 shows the Project Site developed much as it is now, with expanded parking lots, the Beckhart & Mill designed Office Building fronting Azusa Canyon Road, and the smaller Warehouse in the middle of the Project Site (**Figure 6**). The next available aerial is from 1976 (**Figure 7**) and shows that some small

General Telephone Company's Development of 5010 Azusa Canyon Road

As mentioned above, prior to the General Telephone Company acquiring the four parcels, it remained undeveloped from its prior agricultural use. General Telephone acquired the property in 1957 and built an office and warehouse on the Project Site, in addition to the fleet maintenance building on the property. These three buildings were designed by Daniel, Mann, Johnson, & Mendenhall (DMJM). The original warehouse and office were located on the southern lot line of 5010 Azusa Canyon Road, as was a vehicle service building on the northern lot line of the property. The warehouse/office building was the telephone company's main equipment storage center in the San Gabriel Valley and stored thousands of telephones.[23] On April 30, 1965, General Telephone Co. held an auction of their instillation trucks, sedans, pickups, trucks, and dollies at their property at 5010 Azusa Canyon Road.[24] On February 10, 1966 at 10 am, a blaze erupted in the office building/warehouse and was fumed out of control by high winds. The interior of the structure was gutted with damages estimating around $500,000.[25]

After the original office and warehouse were destroyed by fire, the General Telephone Company hired Beckhart & Mill to design the current Office Building and Warehouse that is situated on the west property line of the lot as well as a Truck Wash and other Ancillary Building located in the middle of the lot and at the east lot line. Verizon obtained the lot at around 2000, and then Frontier Communications obtained the lot around 2016.

Construction History

The original building permits for the property were issued to owner General Telephone Company of California on January 15, 1957 for the delivery of concrete. The building permit for the original office building and warehouse that were destroyed by fire was issued on March 13, 1957. The architect was Daniel, Mann, Johnson, & Mendenhall (DMJM). The first permit called for a 25'x550' two-story office and warehouse building valued at $290,000.00 (Building Permits are included in **Appendix C**). On November 12, 1957, a permit was issued for a 40'x225' vehicle service building to be built on the north property line and to be designed by DMJM. Also built in 1957 was a gasoline pump canopy, salvage shed, and tool shed. In 1964, a permit was issued for telephone equipment storage and vehicular access as well as a liquid gas storage shelter and a tool shed.

Subsequent of the fire that gutted the original warehouse/office building, General Telephone Co had a permit issued on June 17, 1966 for its demolition. On July 14, 1967, a permit was issued for a retaining wall, and on July 26, a permit was issued for a new 5,980 square foot Office Building and Warehouse designed by Beckhart & Mill valued at $370,000. A permit for an underground tank was issued on July 28, 1967, and for a new 6,750 square foot truck and for a 280 square foot gas island were issued on August 14, 1967. Two lubrication lifts were added to the existing

vehicle service building on August 9, 1968, and an addition to the Truck Wash as well as the Office Building was permitted on November 7, 1969.

The Office Building was being remodeled and General Telephone Co. received a permit on January 9, 1985 for a trailer for temporary office use during the remodeling. On January 6, 1986, General Telephone Company of California and the architect R.T. Santos, AIA got a permit to remodel the Office Building to add a wall, four new doors, a unisex bathroom, exit ramp, air conditioning, and to rearrange the offices. The contractor was Larry Brown. The roofing of the main office building was repaired on March 12, 1986. On July 27, 1993, a permit was issued for industrial waste operations to treat/store/dispose industrial waste materials located at the facility. Further interior rehab was issued on October 14, 1994, June 7, 1995, and August 15, 1995. On February 13, 1996, a permit was issued to install a new fueling system. The architect was Tait and Associates and the contractor was Petroleum Contractors Inc. A new canopy designed by Wharton and Associates was issued on June 30, 1996.

After Verizon acquired the property, they were issued a permit on November 20, 2000 for a new Verizon sign. They also reroofed the building on April 7, 2014. The final permit to be issued was to Frontier Communications Inc. on September 14, 2016 for three new non-illuminated aluminum signs. This history is summarized below in **Table 1**.

Observed Alterations

Unpermitted or undocumented changes to the Project Site include the replacement of large portion of the glazing (windows) on the west elevation of the Office Building; and the replacement of the original entry railings. The rear (west) elevation of the Office Building also features alterations to the curtain wall (asbestos panels), the entry railings have been replaced, and glazing has been replaced. There have also have been two additions to the Fleet Maintenance Building on the west and east elevation.

10/14/1994	-	GTE	Jean Amador	$9,492	Interior Rehab
1/31/1995	-	-	-	$27,000	Partial (106 square feet) reroof of building
6/7/1995	-	GTE	Jean Amador	$21,000	Tenant improvement, coin center repair, storage areas
8/15/1995	-	GTE	Jean Amador	$16,000	T-bar ceiling grid (2nd Adm Building)
2/13/1996	IR96043-03	GTE California	Tait and Associates (A); petroleum Contractors, Inc. (C)	$10,000	Install fueling system-remodel and install (500 gal, 12,000 gal
6/30/1996	IR96043-03	GTE California	Wharton and Associates	$13,125	Install new canopy
11/20/2000	-	Verizon	Swain Sign	$1,500	Put a Verizon sign
4/7/2014	BL 0506 1312110052	Verizon Communications	Nations Roof	$46,280	Reroof commercial building: tear off built-up roof; install (N) dens decking and polyisocyanurate insulation and .6 mil tpo.
9/14/2016	BL 0506 1604130071	Frontier Communications Inc	All California Signs	$3,670	3 new non-illuminated aluminum signs for "Frontier" Communications: 20 square feet/11 square feet/1.6 square feet

Beckhart & Mill, Architectural Firm

Beckhart & Mill were an architectural firm that was established in 1962 by architects Delmer Denman Beckhart and John Stuart Mill.[27] They were responsible for the design of the Office, Warehouse, and Truck Wash on the Project Site, which were built in 1967. In 1963, the firm was selected by Ralph's Grocery Co. to renovate and enlarge the Colorado-Verdugo Outlet in Glendale.[28] A 1967 newspaper noted that they designed buildings for Ralph's (Grocery Stores), the General Telephone of California, Janss Corporation, Electro-Optical Systems Inc., and Pacific Telephone, as well as for private residences.[29]

The firm added another partner in 1969, and became Harrison, Beckhart & Mill.[30] After the addition of the new partner they took on larger contracts, and in 1972 were awarded the contract

to design the East Los Angeles College Library annex.[31] In 1977, the firm was again selected to design the Nursing Building on the East Los Angeles Campus, and the Pasadena Athletic Club.[32]

In 1980s, the firm designed "One South Orange Grove," in the Postmodern style (**Figure 8).** In 1983, the firm merged with Pedersen & Wesley.

In 1993, Delmer Beckhart at the age of 59 passed away from cancer.[33] Beckhart was most remembered as the Pasadena Chamber of Commerce President, President of the Rose Bowl Parade, and an active volunteer in Pasadena. No additional information was found on John S. Mill.

Daniel, Mann, Johnson & Mendenhall (DMJM), Architect

The Fleet Maintenance Facility on the Project Site was designed by the firm Daniel, Mann, Johnson & Mendenhall (DMJM) which was "one of the first combined architect and engineering firms in the Western United States."[34] It began in 1946 as a partnership between architects Phillip

31 C.R. Donaldson, "Firm Named to Design ELAC Library Annex," *Los Angeles Times* (Los Angeles, CA), August, 5, 1972.

32 "$1.7 Million Nursing Building Underway on East LA College Campus," *Los Angeles Times* (Los Angeles, CA), August 28, 1977; and "Pasadena Athletic Club Opens at New Location," *Los Angeles Times* (Los Angeles, CA).

James Daniel, Arthur Edwin Mann, and S. Kenneth Johnson, and engineer Irvan F. Mendenhall.[35] DMJM grew rapidly in postwar Southern California, and was one of the region's largest full-service design and engineering firms. By 1970, it comprised offices across the Western United States and Hawaii. In 1973, it opened a branch office in Baltimore, Maryland.[36]Ashland Oil, Inc., of Kentucky purchased the firm in 1984 before selling it in 1990 back to its employees, who proceeded to form the parent firm AECOM in 1990. In 2000, AECOM split DMJM into several subsidiaries.[37]

DMJM designed numerous, mostly modernist buildings and infrastructure in Southern California over its decades in operation. Its clientele was mainly institutional and reflected work for governmental and corporate entities. Some notable examples of its work, all in the City of Los Angeles, include the American Cement Company office building in 1964, later converted to lofts (**Figure 9**); the Century City Medical Plaza in 1966 (**Figure 10**), the United States Postal Service Worldway Postal Center in 1968, which was designed by DMJM associate architects Cesar Pelli and Anthony Lumsden and won an Honor Award from the Southern California chapter of the American Institute of Architects in 1969; the Bunker Hill Third Street Tunnel Extension in 1968, also designed by Lumsden and Pelli; and the County of Los Angeles Edward R. Roybal Comprehensive Health Center in 1979.

Occupancy and Ownership History

City directories and building permits on file with the City's Building Division, as well as newspapers, were reviewed to determine if the Project Site has any significant associations with the productive lives of historic personages or companies. **Table 2** summarizes the occupancy and ownership history of 5010 Azusa Canyon Road.

TABLE 2
OCCUPANCY HISTORY FOR 5010 AZUSA CANYON ROAD

Year	Source	Occupant
1967-2000	Irwindale Department of Building and Safety Permits	General Telephone Company of California
2000-2016	"General Telephone and Electronics Corporation," *Techopedia*, accessed April 24, 2018, https://www.techopedia.com/definition/11576/general-telephone-and-electronics-corporation-gte.	Verizon
2016-present	Frontier.com	Frontier Communications Inc.

The first company to acquire and develop 5010 Azusa Canyon Road was the General Telephone Company of California, a part of GTE Corporation, in 1957. GTE was founded in 1926 as Associated Telephone utilities by Sigurd Odegard in Wisconsin, but it went bankrupt during the great depression. In 1934, it was reorganized as GTE. It manufactured industrial electronic consumer devices, even electronic equipment for the U.S. military. Donald C. Power became president in 1950. Under Power's leadership, the business bought the Automatic Electric Company, a telephone equipment manufacturer in 1958, and then merged with Sylvania

Electronics. These two acquisitions made it so GTE could manufacture the electronic switching systems needed by a telephone company.[38]

It became the largest independent company providing telephone services to large areas in the United States through their operating companies. In 1979, it acquired Telenet and entered the data processing field. By the late 1980s, GTE was operating in around 40 countries around the world. In 1997, it bought one of the earliest internet service providers, BBN Planet.[39]

On June 30, 2000, GTE merged with Bell Atlantic and became Verizon Communications with Verizon California in California. On April 1, 2016, Verizon California was sold to Frontier Communications.

Mid-Century Modern Architecture (1945-1980)

The Office Building on the Project Site is a later example of the Mid-Century Modern Style. Mid-Century Modern style architecture is a regional derivative of the International Style and was widely constructed in Post-World War II Los Angeles and its environs and was used for both residential and commercial buildings. High or International Style modernism conforms to specific character defining features as discussed by Henry-Russell Hitchcock and Phillip Johnson in their seminal 1932 publication, *The International Style*. Here the authors state that buildings must have a rectilinear form, open floor plan articulated through materials, and lack of ornamentation. The International Style tenants diffused in local culture. In 1945 John Entenza initiated the Case Study program in Los Angeles through his magazine, *Arts & Architecture* in an effort to bring High Style modernist design to the masses through affordable and functional housing. In addition, modernist architectural design was suitable to the Southern California climate through its use of glass to emulate an ideal of indoor/outdoor living. Local and vernacular interpretations of the International Style allowed for less formality through the use of materials, forms, and spatial arraignments. Mid-Century Modern architecture is more modest than the International Style and emphasis is often placed on stylized architectural focal points and features.

Mid-Century Modern design used sleek, simplified geometry and asymmetrical, intersecting angular planes of masonry volumes and glass curtain walls, locked together by a flat planar roof. Designers embraced the optimistic spirit of the time, experimenting with the newest technologies and materials in building, such as concrete and aluminum, and incorporating futuristic elements. The features of the Mid-Century Modern style are simple geometric forms, post-and-beam construction, flat or low-pitched gabled roofs often with overhanging eaves, flush mounted steel framed windows or large single-paned wood-framed windows, and brick or stone often used as primary accent material.

One of the earliest examples in Irwindale of the style is the Electrotechnic Corporation building, built circa 1950. Many of the commercial buildings in Irwindale built during this era were very

[38] The Editors of Encyclopedia Britannica, "GTE Corporation, American Company," *Encyclopedia Britannica,* accessed April 24, 2018, https://www.britannica.com/topic/GTE-Corporation.

simplistic in their design as many of the buildings were being built for industrial uses and not for aesthetics.

5010 Azusa Canyon Road HRA/D171221.00

SOURCE: J. Allen Hawkins Collection at the Pasadena Museum of History

Figure 11
Exterior of Electrotechnic Corporation at 15601 Arrow Highway, 1950

Utilitarian Style (1860 – present)

As their name indicates, Utilitarian buildings are designed to be functional, and are usually constructed with inexpensive materials and have limited applied design. Their era of construction or location often dictates the materials utilized to construct these buildings. The buildings on the Project Site are from the 1950s and 1960s, and as such their construction methods and appearance are characteristic of the modern post-World War II period.

Evaluation

Historic Resources Identified

Located within an urban setting, the archival records search was conducted within a quarter (0.25) mile radius to capture all known resources within the Project vicinity which may have views of the Project Site for the purpose of analyzing potential indirect impacts. The archival records

search involved review of ESA in-house files and review of the National Register, California Register, California Historic Resources Inventory, City of Irwindale Official Register of Historic Resources, and the City of Baldwin Park's Local Register to identify previously identified historical resources within the Project vicinity. In the pedestrian survey of the area, ESA did not identify any unevaluated potentially eligible properties within the project vicinity. One potential historical resource was identified, which is located at 4951 Azusa Canyon Road in Baldwin Park. This resource was previously evaluated as part of a Section 106 and HUD Housing process. It was given a 6Y status which indicates that it was "Determined ineligible for NR by consensus through Section 106 process – Not evaluated for CR or Local Listing." As such, it may be eligible for the CR or local listing. 4951 Azusa Canyon Road would have indirect views of the Project Site upon project completion.

Previous Evaluations of the Project Site

The Project Site has not been previously evaluated in a city-wide survey or other historic resources evaluations.

Evaluation of Potential Historical Resources within the Project Site

Architectural Description

The Office Building occupies a parcel on the east side of Azusa Canyon Road. It is improved with a two-story mid-century modern commercial building built in 1963 along the front (west) property line.

Office Building

The Office Building is a rectangular shaped, westward oriented building with horizontal massing, clad in yellow brick, concrete framing, and curtain wall with aluminum mullions, asbestos spandrel panels, and a flat roof **(Figure 12)**. In front of the building along the street is a long thin lawn area with bushes and mature trees on either side of the building. Vehicular access to the parking lot behind the subject building is on Nubia Street or through a driveway north of the structure.

The west (front) façade has an entry porch under a flat concrete slab and up concrete steps. The entryway is set back from the front façade. Above the entry porch is a ribbon of five iron-framed windows. To the south of the entryway are three additional sets of iron framed ribbon windows on the top and bottom floors **(Figure 13)**.

The north (side) elevation has brick walls and concrete framing with one floor-to-ceiling iron window on the second floor and a glass and iron door on the first floor **(Figure 14)**. The south (side) elevation has a floor-to-ceiling iron window on the second floor, a glass and iron door on the first floor, and grilles to the east **(Figure 15 and 16)**.

South (side) elevation

Warehouse

The Warehouse is a large rectangular building located in the center of the parking lot that is built in the Utilitarian style and is simplistic in design. It has vertical wood siding with iron detailing at the windows and doors. The north portion is slightly higher than the south. It has aluminum windows and doors **(Figure 17 and 18)**.

Figure 18
East elevation of the Warehouse

Fleet Maintenance Building

The Fleet Maintenance Building is located on the north lot line. It has 10 bays (garage openings with rolling garage doors. It has stucco siding and a flat roof **(Figure 19)**. It is a Utilitarian style building and devoid of architectural character, and is utilitarian in function and design.

5010 Azusa Canyon Road HRA/D171221.00

SOURCE: ESA 2018

Figure 19
South elevation of the Fleet Maintenance Building

Barn

The Barn is located on the rear (east) property line. It is a Utilitarian style and void of architectural character. Its walls are made from corrugated iron and has a corrugated iron side-facing gable roof. There are three small door openings and one large door opening on the west façade **(Figure 20)**.

Figure 20
West and south elevation of the Barn

Truck Wash

The Truck Wash is located west of the Fleet Maintenance Building. It is Utilitarian style structure and void of architectural character. It has corrugated metal walls with ribbon window openings near the flat roof. Its east and west elevations don't have walls to facilitate trucks driving through for cleaning **(Figure 21)**.

Significance Evaluation

The Project Site was evaluated under the following historical and architectural themes: Commercial and Industrial Development of Irwindale; Mid-Century Modern style (1945-1970), Utilitarian style (1860-present); and architects Beckhart & Mill and DMJM. ESA also conducted research on the Project Site's construction and occupancy history. ESA evaluated the Project Site against the criteria for the National Register, California Register, and as a local landmark.

As explained below, ESA found the buildings and the structure on the Project Site ineligible under all applicable federal and state criteria. Furthermore, ESA found the buildings and structure on the Project Site ineligible at the local level under all criteria (A through H).

National Register, California Register, City of Irwindale

Broad Patterns of History

With regard to broad patterns of history, the following are the relevant criteria:

- National Register Criterion A: Is associated with events that have made a significant contribution to the broad patterns of our history.
- California Register Criterion 1: Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

The buildings and structure (Office Building, Fleet Maintenance Building, Warehouse, Truck Wash, and Barn) on the Project Site do not significantly represent broad patterns of our history or heritage. The Project Site was first developed in 1957 with the Fleet Maintenance Building (extant) and the original office and warehouse building that were destroyed in a fire in 1966. In 1967, General Telephone Company built the remaining extant buildings and structure on the site to be able to dispatch and repair their fleet of trucks. By this time the area including the City of Irwindale were well established as a commercial industrial hub for the greater Los Angeles area, which began in the 1920s and diminished by 1970. Once the City was incorporated in 1957, the City continued to be dominated by the mining industry through the 1970s. Furthermore, the General Telephone Company within the City did not have a significant impact on the City of Irwindale, California or United States. **As result, the Project Site is recommended ineligible for listing under National Register Criterion A and California Register Criterion 1 for its significant historical associations with Commercial and Industrial Development of Irwindale.**

Significant Persons

With regard to associations with important persons, the following are the relevant criteria:

- National Register Criterion B: Is associated with the lives of persons significant in our past.
- California Register Criterion 2: Is associated with the lives of persons important in our past.

There is no evidence to suggest the Project Site is associated with the productive lives of historic personages. The known longtime occupant of the Office Building and other buildings on the

Project Site was General Telephone Company. No other individual people of importance were found to be associated with the Project Site. **Therefore, the Project Site is recommended ineligible for listing under National Register Criterion B or California Register Criterion 2**

Architecture

With regard to architecture, design, or construction, the following are the relevant criteria:

- National Register Criterion C: Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.
- California Register Criterion 3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.

The Warehouse (1967), Fleet Maintenance Building (1957), Barn (1967), and Truck Wash (1967) are all simplistic and utilitarian in design and void of architectural detailing. As mentioned above, the Fleet Maintenance Building was designed by DMJM in 1957; the Warehouse, Barn, and Truck Wash were designed by Beckhart & Mill in 1967. These buildings and structures are not architecturally distinctive and have simple rectangular massing, flat or gabled roofs, a mix of cladding (stucco, steel, or aluminum siding). These buildings were utilitarian support facilities for the General Telephone Company operations and were not architecturally or historically significant in design or development of commercial buildings. Furthermore, though they were designed by their respective architects DMJM, and Beckhart & Mill, these are not the best representative works of these two architectural firms. DMJM is considered an influential firm whom transformed much of the late twentieth century corporate architecture, the Fleet Maintenance Building is a simple long rectangular building with a Utilitarian style, a building that is not influential, nor distinctive, and does not rise to threshold of significance, which DMJM is known for.

The remaining buildings, including the Office Building were designed by local Eagle Rock architectural firm Beckhart & Mill. Early in the firm's career they designed many smaller low-key commercial buildings for different corporate entities (Ralph's, Janss Corporation, Electro-Optical Systems). It was not until the business became Harrison, Beckhart, & Mill in 1969 that the firm expanded their reach and developed their portfolio. Similar to the Fleet Maintenance Building, the Warehouse, Barn, and Truck Wash are not the best representation of the Beckhart & Mill firm, as these two buildings and structure are very simplistic and represent ancillary and support buildings for the General Telephone Company.

The Beckhart & Mill designed Office Building on the Project Site was designed in the Mid-Century Modern style, a prolific style throughout Southern California at the time. The Office Building, has some of the character-defining features of the style, such as a flat roof, flat concrete canopy over the entry, a curtain wall with aluminum mullions and asbestos spandrel panels. The Office Building's design, in particular, the curtain wall element with aluminum mullions and asbestos panels, was very popular across the United States and gained popularity in 1948 but

withered by 1965. Some of the first buildings that featured the curtain wall were the Equitable Savings & Loan Building (1948) in Portland, Oregon and the Leverhouse (1952) in New York City. In Los Angeles County there are many excellent examples of the Mid-Century style by master architects including Welton Becket & Associates, William L. Pereira & Associates, O. Stiles Clement, and A.C. Martin. As a late addition to the Mid-Century Modern architectural landscape that only emulated the features of the popular style of the time, the Office Building on the Project Site was not original in its design and does not rise to the threshold of a building that exemplifies the style. Furthermore, Beckhart & Mill are not considered master, or even notable architects. Finally, the Office Building does not possess high artistic value and was not distinctive in its design. As such, the Office Building does not meet the criteria for listing on the National or California register. **Therefore, the Project Site is recommended ineligible for listing under National Register Criterion C and California Register Criterion 3.**

Data

- National Register Criterion D. It yields, or may be likely to yield, information important in prehistory or history.
- California Register Criterion 4. Has yielded, or may be likely to yield, information important in prehistory or history.

While most often applied to archaeological districts and sites, Criterion D/4 can also apply to buildings, structures, and objects that contain important information. In order for these types of properties to be eligible under Criterion D/4, they themselves must be, or must have been, the principal source of the important information. The buildings and structures on the Project Site do not appear to yield significant information that would expand our current knowledge or theories of design, methods of construction, operation, or other information that is not already known about the period of significance of the Residence, its method of construction, or its design. **Therefore, the Project Site is recommended ineligible for listing under National Register Criterion D and California Register Criterion 4.**

City of Irwindale

Criteria for listing on the Official Register of Historic Places
A building or structure shall be designated a historic building if the City Council finds one or more conditions (including but not limited to the following) exist with reference to such building or structure:

A. The building or structure proposed for designation is particularly representative of a historic period, type, style, region, or way of life.

   The buildings and structure (Office Building, Fleet Maintenance Building, Warehouse, Truck Wash, and Barn) do not particularly represent a specific historic period, type, region, or way of life. As mentioned in the historic context section, the City of Irwindale's commercial and industrial period began in the 1920s and culminated in the 1950s, when the City of Irwindale was incorporated. Early commercial buildings were built in the city to support the aggregate mining operations that Irwindale was known for. By 1957 and 1967 when the buildings were constructed on the Project Site, the City of Irwindale commercial and industrial identity was fully developed. Most of the buildings and the structure on the Project Site are simplistic and

utilitarian in design, and are support buildings that do not reflect a particularly style or type. The Office Building on the Project Site is an example of the Mid Century style, but is not a particularly representative of the style, as there are many excellent examples of the style across Los Angeles County and Southern California. Furthermore, the buildings and structure on the Project Site do not represent a particular way of life as they include a commercial building and support buildings, which do not readily not communicate a way of life, unlike an aggregate mine or agricultural facility would represent a way of life. *Therefore, the Project Site is recommended not eligible under this criterion.*

B. The building or structure was connected with someone renowned, important, or a local personality.

There is no evidence to suggest the Project Site is associated with the productive lives of historic personages. The known longtime occupant of the Office Building and other buildings on the Project Site was General Telephone Company. No other individual people of importance were found to be associated with the Project Site. *Therefore, the Project Site is recommended not eligible under this criterion.*

C. The building or structure is connected with a business or use which was once common but is now rare.

The buildings on the Project Site are associated with the General Telephone Company, which merged with the Verizon company. Telecommunication companies are not a rare business as there are many examples with in Southern California, including AT&T, Verizon, Sprint, Frontier, Spectrum, Comcast, etc. *Therefore, the Project Site is recommended not eligible under this criterion.*

D. The building or structure represents the work of a master builder, engineer, designer, and artist or architect whose individual genius influenced his/her age.

The buildings on the Project Site were designed by two separate firms DMJM and Beckhart & Mill. The oldest is the Fleet Maintenance Building, which was designed by notable architect DMJM. However, this building features a utilitarian design and does not represent an excellent, or even good example of their work.

The other buildings and structures on the Project Site (Office Building, Warehouse, and Truck Wash) were designed by the architectural firm Beckhart & Mill. Beckhart & Mill were architects that primarily worked in East Los Angeles and Pasadena. Many of their early commissions were for commercial buildings and private residence and clients included Ralph's (Grocery Stores), General Telephone of California, Janss Corporation, Electro-Optical Systems Inc., and Pacific Telephone. Beckhart & Mill did not influence the trends of architecture, or the Modern style, which they most often designed in and are not considered master architects. *Therefore, the Project Site is recommended not eligible under this criterion.*

E. The building or structure is the site of an important historic event or is associated with events that have made a meaningful contribution to the nation, state or city.

No important events were identified in research that indicated that the building and structures on the Project Site are not associated with events that have made a meaningful contribution to the nation, state, or city. The Project Site was built for the General Telephone Company who used the facility for office, storage, and fleet maintenance and dispatch. Only one event was documented on the Project Site, which was a 1966 fire that caused damage to the original

office and warehouse, which does not contribute to nation, state, or city history. *Therefore, the Project Site is recommended not eligible under this criterion.*

F. The building or structure exemplifies a particular architectural style.

The Office Building on the Project Site is the only building with a notable style. The Office Building was designed in the Mid-Century Modern style in 1967, toward the latter end of the Mid-Century style movement. The Office Building has some of the character-defining features of the style, such as a flat roof, flat concrete canopy over the entry, a curtain wall with aluminum mullions and asbestos spandrel panels. The Office Building design in particular, the curtain wall element with aluminum mullions and asbestos panels, was very popular across the United States and gained popularity in 1948 and withered by 1965. Some of the first buildings that featured the curtain wall were the Equitable Savings & Loan Building (1948) in Portland, Oregon and the Leverhouse (1952) in New York City. In Los Angeles County there are many excellent examples of the Mid-Century style by master architects including Welton Becket & Associates; William L. Pereira & Associates; Skidmore, Owings, & Merrill; and A.C. Martin. The Office Building on the property does not rise to the threshold of a building that exemplifies the style, and furthermore it is a late addition to the Mid-Century Modern architectural landscape, and only emulated the popular style of the time and was not original in design. *Therefore, the Project Site is recommended not eligible under this criterion.*

G. The building or structure exemplifies the best remaining architectural type of a neighborhood.

As mentioned above, the only building with a notable style is the Office Building designed in the Mid-Century Modern style in 1967. Though the Mid-Century style is not popular in commercial buildings with in Irwindale, there is another excellent example within the City, which was a precursor to the original DMJM building and the Office Building on the Project Site. The 1950 Electrotechnic Corporation building at 15601 Arrow Highway was one of the earliest Mid-Century Modern designed building in the City and reflects the early trends in the style. This building along with the larger Mid-Century style movement in Southern California most likely influenced General Telephone's first commission for an office and warehouse building by DMJM in 1957. After the fire in 1966 that destroyed the original office building and warehouse, General Telephone commissioned local architects to design a similar style building on the Project Site. As such, the Office Building on the Project Site is not the best remaining architectural type remaining. *Therefore, the Project Site is recommended not eligible under this criterion.*

H. The construction materials or engineering methods used in the building or structure embody elements of outstanding attention to architectural or engineering design, detail, material or craftsmanship.

The four buildings and structure on the Project Site do not embody elements of outstanding attention to architectural or engineering design, material, or craftsmanship. The buildings and structure use common place materials such as brick, concrete block, aluminum mullions, large glazing (which has been extensively replaced throughout the building), and other prefabricated materials. *Therefore, the Project Site is recommended not eligible under this criterion.*

Integrity Analysis

Integrity

The National Register and California Register recognizes a property's integrity through seven aspects or qualities: location, design, setting, materials, workmanship, feeling, and association. Eligible properties should retain several, if not most, of these aspects. Both registers require that a resource retain sufficient integrity to convey its significance, and the property must retain the essential physical features that enable it to convey its historical identity. Integrity is based on significance and understanding why a property is important. *National Register Bulletin 15* states that "only after significance is fully established can you proceed to the issue of integrity" (U.S. Department of the Interior, 2002). Since the buildings on the Project Site were not identified as significant under any of the applicable national or state criteria, an integrity analysis was not conducted.

CEQA Impacts

Direct

The Office Building, Warehouse, Fleet Maintenance Building, Barn, and Truck Wash on the Project Site were evaluated for listing in the National Register, California Register, and local register and are recommended not eligible. As such, the Office Building, Warehouse, Fleet Maintenance Building, Barn, and Truck Wash on the Project Site do not meet the definition historical resources as outlined in CEQA Guidelines Section 15064.5(a)(1) or (2), and the Project would not have a direct impact on historical resources.

Indirect

Indirect impacts were analyzed to determine if the Project would result in a substantial material change to the integrity and significance of historical resources and their immediate surroundings within the Project vicinity such that their eligibility would be materially impaired. The indirect impacts study area was defined as a 0.25-mile radius from the Project Site. One potential historical resource was identified, which is located at 4951 Azusa Canyon Road in Baldwin Park. This resource was previously evaluated as part of a Section 106 and HUD Housing process. It was given a 6Y status which indicates that it was "Determined ineligible for NR by consensus through Section 106 process – Not evaluated for CR or Local Listing." As such, it may be eligible for the CR or local listing. 4951 Azusa Canyon Road was built in 1952 and is a one-story Minimal Traditional style single-family residence, which appears to be altered. 4951 Azusa Canyon Road is located approximately 300 feet southwest of the Project Site and would have indirect views of the Project Site upon project completion. The Project would include at the maximum a two one-story or two-story warehouse/office buildings. Building 1 would be approximately 186,720 square-feet and be located on the western property line along Azusa Canyon Road. Building 2 would be located at the southeastern corner where the current rear parking lot is located. This building would be similar in design to Building 1, however only be 49,300 square-feet. The residence's setting, which attributes to the residence's potential eligibility as a historical resource, has already been altered as later infill development has occurred in the area. Furthermore, the main views of the residence are towards the west and not northeast, where the Project Site is located. As such, upon Project completion, 4951 Azusa Canyon Road would

retain the same potential to be identified as eligible for either the CR or Local Listing in subsequent evaluations, as the proposed Project would not materially demolish, alter, or affect the historical integrity of the residence at 5951 Azusa Canyon Road. **Therefore, the Project would have no indirect impact on historical resources.**

Conclusion

The Project Site was evaluated under the following historical and architectural themes: Commercial and Industrial Development (1920s-1970), Mid-Century Modern Architecture (1945-1970), Utilitarian style (1860-present), and architects Beckhart & Mill and DMJM. ESA also conducted research on the Project Site's construction and occupancy history. ESA evaluated the Project Site against the criteria for the National Register, California Register, and the City's local register.

ESA found the Project Site ineligible under the applicable federal and state criteria for its significant historical associations A-D and 1-4, respectively. ESA also found the buildings and structure on the Project Site ineligible under local criteria A-H. ESA recommends that the Project Site be assigned a California Historic Resource (CHR) Status Code of 6Z; noting it as ineligible for listing in the National Register of Historic Places, the California Register of Historical Resources, and local register through survey evaluation. As such, the four buildings and one structure on the Project site (Office Building, Fleet Maintenance Building, Warehouse, Barn, and Truck Wash) are cleared for demolition as part of the proposed Project's redevelopment.

ESA analyzed potential impacts based on the proposed Project and found the Project would not have a direct impact on historical resources. Furthermore, only one potential historical resource was identified, and the Project would have no impact on that resource since, upon Project completion, 4951 Azusa Canyon Road would retain the same potential to be identified as eligible for either the CR or Local Listing in subsequent evaluations, as the proposed project would not materially demolish, alter, or affect the historical integrity of the residence at 5951 Azusa Canyon Road.

PROFESSIONAL AFFILIATIONS

California Preservation Foundation

Santa Monica Conservancy

Society of Architectural Historians, Life Member

American Institute of Architects (AIA), National Allied Member

Margarita Jerabek has 30 years of professional practice in the United States with an extensive background in historic preservation, architectural history, art history and decorative arts, and historical archaeology. She specializes in Visual Art and Culture, 19th-20th Century American Architecture, Modern and Contemporary Architecture, Architectural Theory and Criticism, Urbanism, and Cultural Landscape, and is a regional expert on Southern California architecture. Her qualifications and experience meet and exceed the Secretary of the Interior's Professional Qualification Standards in History, Archaeology, and Architectural History. Margarita has managed and conducted a wide range of technical studies in support of environmental compliance projects, developed preservation and conservation plans, and implemented preservation treatment projects for public and private clients in California and throughout the United States.

Relevant Experience

Margarita has prepared a broad range of environmental documentation and conducted preservation projects throughout the Los Angeles metropolitan area and Southern California. She provides expert assistance to public agencies and private clients in environmental review, from due diligence through planning/design review and permitting and when necessary, implements mitigation and preservation treatment measures on behalf of her clients. As primary investigator and author of hundreds of technical reports, plan review documents, preservation and conservation plans, HABS/HAER/HALS reports, construction monitoring reports, salvage reports and relocation plans, she is a highly experienced practitioner and expert in addressing historical resources issues while supporting and balancing project goals.

She is an expert in the evaluation, management and treatment of historic properties for compliance with Sections 106 and 110 of the NHPA, NEPA, Section 4(f) of the Department of Transportation Act, CEQA, and local ordinances and planning requirements. Margarita regularly performs assessments to ensure conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties, and assists clients with adaptive reuse/rehabilitation projects by providing preservation design and treatment consultation, agency coordination, legally defensible documentation, construction monitoring and conservation treatment.

Margarita is a regional expert on Southern California architecture. She has prepared a broad range of environmental documentation and conducted preservation projects throughout the Los Angeles metropolitan area as well as in Ventura, Orange, Riverside, San Bernardino and San Diego counties. Beyond her technical skill, she is a highly experienced project manager with broad national experience throughout the United States. She currently manages ESA's on-call historic preservation services with the City of Santa Monica, and Los Angeles Unified School District.

JOEL LEVANETZ, M.A., AICP, RPA

Senior Architectural Historian/Cultural Resources Specialist

Mr. Levanetz is a Secretary of Interior Professional Qualified Archaeologist, Historian and Architectural Historian. Mr. Levanetz has 15 years of experience specializing in projects involving cultural and historic resource assessments, Historic American Building Survey (HABS)/Historic American Engineering Record (HAER) documentation, and DPR 523 series form preparation.

Mr. Levanetz has overseen projects that range in scale and complexity. As project manager, Mr. Levanetz has coordinated surveys, supervised staff and subcontractors, provided quality control for data collection and technical report writing, interacted with regulatory agency personnel, maintained client communications, tracked budgets, met crucial project deadlines and established strong networks through business development.

Mr. Levanetz has a detailed understanding of relevant regulations and ordinances that affect cultural resources and historic properties, such as Sections 106 and 110 of National Historic Preservation Act (NHPA), the National Environmental Protection Act (NEPA), the California Environmental Quality Act (CEQA), and the Secretary of Interior Standards for the Treatment of Historic Properties. He has completed numerous impacts assessments and determinations of eligibility across a range of administrative levels including local, state, and National Register of Historic Places (NRHP). Among the agencies served by Mr. Levanetz are the California Department of Transportation (Caltrans), Federal Rail Administration (FRA), California High Speed Rail Authority, Federal Highway Administration, Department of Defense (DOD), Federal Emergency Management Agency (FEMA), Bureau of Land Management (BLM), National Park Service (NPS), California Energy Commission (CEC), Federal Communications Commission (FCC), Federal Aviation Administration (FAA), Department of Housing and Urban Development (HUD) and the General Services Administration (GSA)

M.A. Public History: Historic Preservation, Middle Tennessee State University

B.A. History, California University of Pennsylvania

Ashley Brown

Senior Architectural Historian

Ashley Brown is a senior architectural historian with more than six years of academic and professional experience preparing documentation to address the restoration, rehabilitation, and adaptive reuse of historic properties—including historic structures reports, preservation and interpretation plans, and National Register of Historic Places nominations. Ashley also has experience contributing to California Environmental Quality Act CEQA-level documents. She is adept at developing and implementing historic resources surveys to address architectural, building, and cemetery condition assessments utilizing such programs ArcGIS and Survey123. She has worked closely with individuals, preservation groups, Native American tribes, small and large communities, and state legislators to preserve their heritage. Ashley continues to expand her knowledge of Southern California history by conducting primary source research and developing historic contexts.

Relevant Experience

City of Pasadena

280 Avenue 64 Historic Resources Assessment, Pasadena, CA. *Project Manager and Report Author.* ESA prepared an historic resources assessment report for a single-family residence built between 1909 and 1910 as the ranch office for the San Rafael Ranch Company. In 1955, it was converted to residential use and expanded. ESA found that residence was eligible for the National and California Registers and for local designation for its historical associations for the development of Pasadena west of the Arroyo Seco, and its historical associations with the productive life of Robert H. Lindsay, ranch manager and vice president of the ranch company. ESA prepared the draft and final reports in a timely manner to support a Certificate of Appropriateness decision.

City of San Marino

3325 Monterey Road, City of San Marino, CA Historic Resources Assessment and SOI Plan Review. *Architectural Historian and Report Co-author.* 3325 Monterey Road is a Modern style residence designed by notable architectural historian Frederick Hust. The house is the only remaining early Modern style residence in the City and emulates some elements of the Prairie School. Ms. Brown evaluated the residence for listing at the federal, state, and local levels. Ms. Brown found the house eligible for its historical and architectural associations.

City of Glendale

Scholl Canyon Organics Recovery to Energy, LLC, Scholl Canyon Organics Recovery to Energy Station (SCORE) Cultural Resources Technical Report, Glendale, CA. *Cultural Resources Specialist and Report Author*. Ms. Brown wrote project specific historic context and authored the Report for the Scholl Canyon Organics Recovery to Energy Station (SCORE) Cultural Resources Survey Report. In addition, she also identified the potential for archeological resources. The Project would develop, construct, and operate an integrated resource recovery and energy conversion facility at the Scholl Canyon Landfill (SCLF) in Glendale, California. This report was completed in support of a MND.

Hanna Winzenried

Architectural Historian

EDUCATION

MSc Historic Conservation, Oxford Brookes University

BA, European Studies, Brigham Young University

2 YEARS EXPERIENCE

PROFESSIONAL AFFILIATIONS

The Society for the Protection of Ancient Buildings

Historic England

National Trust for Places of Historic Interest or Natural Beauty

Hanna is an architectural historian intern with 3 years of academic and professional experience performing building conservation, historic research, and field surveys and conducting plan reviews for conformance with local regulations and ordinances. She has 1.5 years of experience with the City of Los Angeles, Department of Planning, in the Office of Historic Resources Historic Preservation Overlay Zones (HPOZ) Unit. Her experience and education both in California and abroad have given her a wide set of interdisciplinary skills, including strong technical and research skills.

Relevant Experience

9120 W. Olympic Boulevard Preliminary Assessment and Character Defining Features Analysis for the Harkham Hillel Hebrew Academy, Beverly Hills, CA. *Contributor.* ESA prepared a Phase I Historic Resources Assessment for the modernist educational building at 9120 W. Olympic Boulevard. The purpose of the report is to identify and evaluate potential historic resources. The subject property was built in 1963 as the largest Jewish day school. It was built in the Modernist architectural style by the renowned architect Sydney Eisenshtate. The Academy enrollment has outgrown the existing space, and the school is looking for a way to expand its square footage. Hanna is performing research and assisting in the preparation of the reports.

3325 Monterey Road Historic Resources Assessment for 3325 Monterey Road, San Marino, CA. *Contributor*. ESA prepared a Historic Resources Assessment for the Moderne residence at 3325 Monterey road. The purpose of the report is to identify and evaluate potential historic resources. The subject property was built in 1927 as a retirement residence for William F. Tempel, a real estate broker from Chicago. It was designed by Frederick Hust, an architect from Salt Lake City who would go on to design the new China Town in Los Angeles. The homeowners are looking for a way to expand square footage of the residence. Hanna is performing research and assisting in the preparation of the report.

Universal Hilton Environmental Impacts Report and Historic Resources Technical Report for 555 W Universal Terrace Parkway, Los Angeles, CA. *Contributor.* ESA prepared an Environmental Impacts Report including a Historic Resources Technical Report. The Universal Hilton Hotel was designed by master architect, William L. Pereira in 1983 in the postmodern style. The hotel was designed to accommodate visitors to the Universal Theme Parks. The hotel management wants to expand the number of rooms by building a large addition. Hanna is performing research and assisting in the preparation of the report.

361 Myrtle Street Peer Review Letter for the residence at 361 Myrtle Street, Glendale, CA. *Contributor.* ESA prepared a peer review letter to conduct a peer review of previous historic resource evaluations and analyze potential cumulative impacts of the demolition for the property at 361 Myrtle Street. Previous

REPORT

We have conducted additional soil compaction tests at the subject job with results as tabulated below.

Sample No.	Dry Density Lbs/cu.ft.	Moisture, %	% Max. Density	Remarks
12	107.5	8.8	92.4	
13	115.0	9.0	98.8	
14	105.8	10.0	90.9	
15	113.0	10.2	97.1	
16	112.2	10.1	96.4	
17	106.0	7.0	91.1	
18	111.0	7.7	95.4	
19	113.0	8.5	97.1	

The approximate location of the tests is shown in the attached sketch.

Compaction results based on a maximum dry density of 116.4 lbs. per cu.ft. as obtained by the modified AASHO Method of test for maximum density and previously reported.

Respectfully submitted,

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code): Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

(_) I, as owner of the property, or my employees with wages as their sole compensation, will do (✓) all of or (_) portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built or improved for the purpose of sale.).

(_) I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law).

(_) I am exempt from licensure under the Contractors' State License Law for the following reason:

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: http://www.leginfo.ca.gov/calaw.html.

LOBBYIST ORDINANCE CERTIFICATION

Complete this section for permits in Unincorporated Los Angeles County only

This is to certify that I, as permit applicant, am familiar with the requirements of Los Angeles County Code Chapter 2.160 et seq., (relating to the Los Angeles County Lobbyist Ordinance) and that all persons acting on behalf of myself complied and will continue to comply therewith through the application process.

Applicant (Print Name) Applicant Signature

Company Name Date

JOB ADDRESS

LOCALITY

HAZARDOUS MATERIAL DECLARATION

Will the applicant or future building occupant handle a hazardous material or a mixture containing a hazardous material equal to or greater than the amount specified on the hazardous materials information guide?

Yes ☐ No ☐

Will the intended use of the building by the applicant or future building occupant require a permit for construction or modification from the South Coast Air Quality Management District (SCAQMD)? See permitting checklist for guidelines.

Yes ☐ No ☐

I have read the hazardous materials information guide and the SCAQMD permitting checklist, I understand my requirements under the Los Angeles County Code Title 2, Chapter 220 Sections 220.100 through 220.140 concerning hazardous material reporting and for obtaining a permit from the SCAQMD.

ASBESTOS NOTIFICATION

☐ Notification letter sent to AQMD and/or EPA

☐ I declare that notification of asbestos removal is not applicable to addressed project.

DECLARATION REGARDING CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a Construction lending agency for the performance of the work for which this permit is issued (Section 3097, Civil Code).

Lender's Name

Lender's Address

By my signature below, I certify to each of the following:
I am the property owner or authorized to act on the property owner's behalf.
I have read this application and the information I have provided is correct.
I agree to comply with all applicable city and county ordinances and state laws relating to building construction.
I authorize representatives of this county to enter the above-identified property for inspection purposes.

INSPECTOR'S NOTES

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason. (Sec. 7031.5) *Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9) (commencing with Section 7000 of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).:*

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044) *Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.*

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044) *Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) Licensed pursuant to the Contractor's License laws.*

Mr. Emery Simon, Jr.,
General Building Engineer
General Telephone Company of California
2020 Santa Monica Boulevard
Santa Monica, California

Attention: Dick Hall

Re: Irwindale Facility - Temporary Building

Gentlemen:

Your request to this office to check with the local Building Department regarding the status of your "temporary" building has been carried out. After checking with Mr. Edwards of Temple City Building Department, Los Angeles County, it was stated that the County does not recognize any structure as a temporary structure. Therefore, the original plan check and building permit that was obtained on this building is good indefinitely.

We would like to recommend that if you are contemplating keeping the structure here for a length of time, you consider painting the building so as not to detract from the newly erected buildings on the site. We would be happy to suggest a color and handle any necessary work with a contractor.

Cordially,

Armando L. Gonzalez, Jr.

ALGJR:gb

Policy No. WP8614215 Company Fremont Ind. Co

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the county building inspection department.

Date 3-13-86 Applicant H&M Roofing

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

(This section need not be completed if the permit is for one hundred dollars ($100) or less.)

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws.

Date _____ Applicant _____

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

LICENSED CONTRACTORS DECLARATION

I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Number 426915 Lic. Class C-39

Contractor H&M Roofing Date 3/13/86

☐ I am exempt under Sec. _____

B.&P.C. for this reason _____

_____ Date: _____

Signature _____

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Section 7044, Business and Professions Code).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code).

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____

Lender's Address _____

I certify that I have read this application and state that the above information is correct. I agree to comply with all County ordinances and State laws relating to building construction, and hereby authorize representatives of this County to enter upon the above-mentioned property for inspection purposes.

B2. Common Name: _____
B3. Original Use: Industrial building B4. Present Use: Industrial Building
***B5. Architectural Style:** Mid-Century Modern
***B6. Construction History:** (Construction date, alterations, and date of alterations)

The original building permits for the property were issued to owner General Telephone Company of California on January 15, 1957 for the delivery of concrete. The building permit for the original office building and warehouse that were destroyed by fire was issued on March 13, 1957. The architect was Daniel, Mann, Johnson, & Mendenhall (DMJM). The first permit called for a 25'x550' two-story office and warehouse building valued at $290,000.00. On November 12, 1957, a permit was issued for a 40'x225' vehicle service building to be built on the north property line and to be designed by DMJM. Also built in 1957 was a gasoline pump canopy, salvage shed, and tool shed. In 1964, a permit was issued for telephone equipment storage and vehicular access as well as a liquid gas storage shelter and a tool shed. [See Continuation Sheets]

Period of Significance 1964 **Property Type** Industrial building **Applicable Criteria** _____
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The Project Site was evaluated under the following historical and architectural themes: Commercial and Industrial Development of Irwindale; Mid-Century Modern style (1945-1970), Utilitarian style (1860-present); and architects Beckhart & Mill and DMJM. ESA also conducted research on the Project Site's construction and occupancy history. ESA evaluated the Project Site against the criteria for the National Register, California Register, and as a local landmark.

ESA found the buildings and the structure on the Project Site ineligible under all applicable federal and state criteria. Furthermore, ESA found the buildings and structure on the Project Site ineligible at the local level under all criteria (A through H).

***P3a. Description (continued)**:

The Office Building occupies a parcel on the east side of Azusa Canyon Road. It is improved with a two-story mid-century modern commercial building built in 1963 along the front (west) property line.

Office Building

The Office Building is a rectangular shaped, westward oriented building with horizontal massing, clad in yellow brick, concrete framing, and curtain wall with aluminum mullions, asbestos spandrel panels, and a flat roof. In front of the building along the street is a long thin lawn area with bushes and mature trees on either side of the building. Vehicular access to the parking lot behind the subject building is on Nubia Street or through a driveway north of the structure.

The west (front) façade has an entry porch under a flat concrete slab and up concrete steps. The entryway is set back from the front façade. Above the entry porch is a ribbon of five iron-framed windows. To the south of the entryway are three additional sets of iron framed ribbon windows on the top and bottom floors.

The north (side) elevation has brick walls and concrete framing with one floor-to-ceiling iron window on the second floor and a glass and iron door on the first floor. The south (side) elevation has a floor-to-ceiling iron window on the second floor, a glass and iron door on the first floor, and grilles to the east.

Warehouse

The Warehouse is a large rectangular building located in the center of the parking lot that is built in the Utilitarian style and is simplistic in design. It has vertical wood siding with iron detailing at the windows and doors. The north portion is slightly higher than the south. It has aluminum windows and doors.

Fleet Maintenance Building

The Fleet Maintenance Building is located on the north lot line. It has 10 bays (garage openings with rolling garage doors. It has stucco siding and a flat roof. It is a Utilitarian style building and devoid of architectural character, and is utilitarian in function and design.

Barn

The Barn is located on the rear (east) property line. It is a Utilitarian style and void of architectural character. Its walls are made from corrugated iron and has a corrugated iron side-facing gable roof. There are three small door openings and one large door opening on the west façade.

Truck Wash

The Truck Wash is located west of the Fleet Maintenance Building. It is Utilitarian style structure and void of architectural character. It has corrugated metal walls with ribbon window openings near the flat roof. Its east and west elevations don't have walls to facilitate trucks driving through for cleaning.

*B6. Construction History (continued):

Subsequent of the fire that gutted the original warehouse/office building, General Telephone Co had a permit issued on June 17, 1966 for its demolition. On July 14, 1967, a permit was issued for a retaining wall, and on July 26, a permit was issued for a new 5,980 square foot Office Building and Warehouse designed by Beckhart & Mill valued at $370,000. A permit for an underground tank was issued on July 28, 1967, and for a new 6,750 square foot truck and for a 280 square foot gas island were issued on August 14, 1967. Two lubrication lifts were added to the existing vehicle service building on August 9, 1968, and an addition to the Truck Wash as well as the Office Building was permitted on November 7, 1969.

The Office Building was being remodeled and General Telephone Co. received a permit on January 9, 1985 for a trailer for temporary office use during the remodeling. On January 6, 1986, General Telephone Company of California and the architect R.T. Santos, AIA got a permit to remodel the Office Building to add a wall, four new doors, a unisex bathroom, exit ramp, air conditioning, and to rearrange the offices. The contractor was Larry Brown. The roofing of the main office building was repaired on March 12, 1986. On July 27, 1993, a permit was issued for industrial waste operations to treat/store/dispose industrial waste materials located at the facility. Further interior rehab was issued on October 14, 1994, June 7, 1995, and August 15, 1995. On February 13, 1996, a permit was issued to install a new fueling system. The architect was Tait and Associates and the contractor was Petroleum Contractors Inc. A new canopy designed by Wharton and Associates was issued on June 30, 1996.

After Verizon acquired the property, they were issued a permit on November 20, 2000 for a new Verizon sign. They also reroofed the building on April 7, 2014. The final permit to be issued was to Frontier Communications Inc. on September 14, 2016 for three new non-illuminated aluminum signs.

*B10. Significance (continued):

National Register and California Register

a. Broad Patterns of History

With regard to broad patterns of history, the following are the relevant criteria:

National Register Criterion A: Is associated with events that have made a significant contribution to the broad patterns of our history.

California Register Criterion 1: Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

The buildings and structure (Office Building, Fleet Maintenance Building, Warehouse, Truck Wash, and Barn) on the Project Site do not significantly represent broad patterns of our history or heritage. The Project Site was first developed in 1957 with the Fleet Maintenance Building (extant) and the original office and warehouse building that were destroyed in a fire in 1966. In 1967, General Telephone Company built the remaining extant buildings and structure on the site to be able to dispatch and repair their fleet of trucks. By this time the area including the City of Irwindale were well established as a commercial industrial hub for the greater Los Angeles area, which began in the 1920s and diminished by 1970. Once the City was incorporated in 1957, the City continued to be dominated by the mining industry through the 1970s. Furthermore, the General Telephone Company within the City did not have a significant impact on the City of Irwindale, California or United States. **As result, the Project Site is recommended ineligible for listing under National Register Criterion A and California Register Criterion 1 for its significant historical associations with Commercial and Industrial Development of Irwindale.**

b. Significant Persons

With regard to associations with important persons, the following are the relevant criteria:

National Register Criterion B: Is associated with the lives of persons significant in our past.

California Register Criterion 2: Is associated with the lives of persons important in our past.

There is no evidence to suggest the Project Site is associated with the productive lives of historic personages. The known longtime occupant of the Office Building and other buildings on the Project Site was General Telephone Company. No other individual people of importance were found to be associated with the Project Site. **Therefore, the Project Site is recommended ineligible for listing under National Register Criterion B or California Register Criterion 2**

c. Architecture

With regard to architecture, design, or construction, the following are the relevant criteria:

National Register Criterion C: Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

California Register Criterion 3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.

The Warehouse (1967), Fleet Maintenance Building (1957), Barn (1967), and Truck Wash (1967) are all simplistic and utilitarian in design and void of architectural detailing. As mentioned above, the Fleet Maintenance Building was designed by DMJM in 1957; the Warehouse, Barn, and Truck Wash were designed by Beckhart & Mill in 1967. These buildings and structures are not architecturally distinctive and have simple rectangular massing, flat or gabled roofs, a mix of cladding (stucco, steel, or aluminum siding). These buildings were utilitarian support facilities for the General Telephone Company operations

and were not architecturally or historically significant in design or development of commercial buildings. Furthermore, though they were designed by their respective architects DMJM, and Beckhart & Mill, these are not the best representative works of these two architectural firms. DMJM is considered an influential firm whom transformed much of the late twentieth century corporate architecture, the Fleet Maintenance Building is a simple long rectangular building with a Utilitarian style, a building that is not influential, nor distinctive, and does not rise to threshold of significance, which DMJM is known for.

The remaining buildings, including the Office Building were designed by local Eagle Rock architectural firm Beckhart & Mill. Early in the firm's career they designed many smaller low-key commercial buildings for different corporate entities (Ralph's, Janss Corporation, Electro-Optical Systems). It was not until the business became Harrison, Beckhart, & Mill in 1969 that the firm expanded their reach and developed their portfolio. Similar to the Fleet Maintenance Building, the Warehouse, Barn, and Truck Wash are not the best representation of the Beckhart & Mill firm, as these two buildings and structure are very simplistic and represent ancillary and support buildings for the General Telephone Company.

The Beckhart & Mill designed Office Building on the Project Site was designed in the Mid-Century Modern style, a prolific style throughout Southern California at the time. The Office Building, has some of the character-defining features of the style, such as a flat roof, flat concrete canopy over the entry, a curtain wall with aluminum mullions and asbestos spandrel panels. The Office Building's design, in particular, the curtain wall element with aluminum mullions and asbestos panels, was very popular across the United States and gained popularity in 1948 but withered by 1965. Some of the first buildings that featured the curtain wall were the Equitable Savings & Loan Building (1948) in Portland, Oregon and the Leverhouse (1952) in New York City. In Los Angeles County there are many excellent examples of the Mid-Century style by master architects including Welton Becket & Associates, William L. Pereira & Associates, O. Stiles Clement, and A.C. Martin. As a late addition to the Mid-Century Modern architectural landscape that only emulated the features of the popular style of the time, the Office Building on the Project Site was not original in its design and does not rise to the threshold of a building that exemplifies the style. Furthermore, Beckhart & Mill are not considered master, or even notable architects. Finally, the Office Building does not possess high artistic value and was not distinctive in its design. As such, the Office Building does not meet the criteria for listing on the National or California register. **Therefore, the Project Site is recommended ineligible for listing under National Register Criterion C and California Register Criterion 3.**

d. Data

National Register Criterion D. It yields, or may be likely to yield, information important in prehistory or history.

California Register Criterion 4. Has yielded, or may be likely to yield, information important in prehistory or history.

While most often applied to archaeological districts and sites, Criterion D/4 can also apply to buildings, structures, and objects that contain important information. In order for these types of properties to be eligible under Criterion D/4, they themselves must be, or must have been, the principal source of the important information. The buildings and structures on the Project Site do not appear to yield significant information that would expand our current knowledge or theories of design, methods of construction,

operation, or other information that is not already known about the period of significance of the Residence, its method of construction, or its design. **Therefore, the Project Site is recommended ineligible for listing under National Register Criterion D and California Register Criterion 4.**

3. City of Irwindale

Criteria for listing on the Official Register of Historic Places
A building or structure shall be designated a historic building if the City Council finds one or more conditions (including but not limited to the following) exist with reference to such building or structure:

Criterion A: A. The building or structure proposed for designation is particularly representative of a historic period, type, style, region, or way of life.

The buildings and structure (Office Building, Fleet Maintenance Building, Warehouse, Truck Wash, and Barn) do not particularly represent a specific historic period, type, region, or way of life. As mentioned in the historic context section, the City of Irwindale's commercial and industrial period began in the 1920s and culminated in the 1950s, when the City of Irwindale was incorporated. Early commercial buildings were built in the city to support the aggregate mining operations that Irwindale was known for. By 1957 and 1967 when the buildings were constructed on the Project Site, the City of Irwindale commercial and industrial identity was fully developed. Most of the buildings and the structure on the Project Site are simplistic and utilitarian in design, and are support buildings that do not reflect a particularly style or type. The Office Building on the Project Site is an example of the Mid Century style, but is not a particularly representative of the style, as there are many excellent examples of the style across Los Angeles County and Southern California. Furthermore, the buildings and structure on the Project Site do not represent a particular way of life as they include a commercial building and support buildings, which do not readily not communicate a way of life, unlike an aggregate mine or agricultural facility would represent a way of life. *Therefore, the Project Site is recommended not eligible under this criterion.*

Criterion B: B. The building or structure was connected with someone renowned, important, or a local personality.

There is no evidence to suggest the Project Site is associated with the productive lives of historic personages. The known longtime occupant of the Office Building and other buildings on the Project Site was General Telephone Company. No other individual people of importance were found to be associated with the Project Site. *Therefore, the Project Site is recommended not eligible under this criterion.*

Criterion C: The building or structure is connected with a business or use which was once common but is now rare.

The buildings on the Project Site are associated with the General Telephone Company, which merged with the Verizon company. Telecommunication companies are not a rare business as there are many examples with in Southern California, including AT&T, Verizon, Sprint, Frontier, Spectrum, Comcast, etc. *Therefore, the Project Site is recommended not eligible under this criterion.*

Criterion D: D. The building or structure represents the work of a master builder, engineer, designer, and artist or architect whose individual genius influenced his/her age.

The buildings on the Project Site were designed by two separate firms DMJM and Beckhart & Mill. The oldest is the Fleet Maintenance Building, which was designed by notable architect DMJM. However, this building features a utilitarian design and does not represent an excellent, or even good example of their work.

The other buildings and structures on the Project Site (Office Building, Warehouse, and Truck Wash) were designed by the architectural firm Beckhart & Mill. Beckhart & Mill were architects that primarily worked in East Los Angeles and Pasadena. Many of their early commissions were for commercial buildings and private residence and clients included Ralph's (Grocery Stores), General Telephone of California, Janss Corporation, Electro-Optical Systems Inc., and Pacific Telephone. Beckhart & Mill did not influence the trends of architecture, or the Modern style, which they most often designed in and are not considered master architects. *Therefore, the Project Site is recommended not eligible under this criterion.*

Criterion E: The building or structure is the site of an important historic event or is associated with events that have made a meaningful contribution to the nation, state or city.

No important events were identified in research that indicated that the building and structures on the Project Site are not associated with events that have made a meaningful contribution to the nation, state, or city. The Project Site was built for the General Telephone Company who used the facility for office, storage, and fleet maintenance and dispatch. Only one event was documented on the Project Site, which was a 1966 fire that caused damage to the original office and warehouse, which does not contribute to nation, state, or city history. *Therefore, the Project Site is recommended not eligible under this criterion.*

Criterion F: The building or structure exemplifies a particular architectural style.

The Office Building on the Project Site is the only building with a notable style. The Office Building was designed in the Mid-Century Modern style in 1967, toward the latter end of the Mid-Century style movement. The Office Building has some of the character-defining features of the style, such as a flat roof, flat concrete canopy over the entry, a curtain wall with aluminum mullions and asbestos spandrel panels. The Office Building design in particular, the curtain wall element with aluminum mullions and asbestos panels, was very popular across the United States and gained popularity in 1948 and withered by 1965. Some of the first buildings that featured the curtain wall were the Equitable Savings & Loan Building (1948) in Portland, Oregon and the Leverhouse (1952) in New York City. In Los Angeles County there are many excellent examples of the Mid-Century style by master architects including Welton Becket & Associates; William L. Pereira & Associates; Skidmore, Owings, & Merrill; and A.C. Martin. The Office Building on the property does not rise to the threshold of a building that exemplifies the style, and furthermore it is a late addition to the Mid-Century Modern architectural landscape, and only emulated the popular style of the time and was not original in design. *Therefore, the Project Site is recommended not eligible under this criterion.*

Criterion G. The building or structure exemplifies the best remaining architectural type of a neighborhood.

As mentioned above, the only building with a notable style is the Office Building designed in the Mid-Century Modern style in 1967. Though the Mid-Century style is not popular in commercial buildings with

in Irwindale, there is another excellent example within the City, which was a precursor to the original DMJM building and the Office Building on the Project Site. The 1950 Electrotechnic Corporation building at 15601 Arrow Highway was one of the earliest Mid-Century Modern designed building in the City and reflects the early trends in the style. This building along with the larger Mid-Century style movement in Southern California most likely influenced General Telephone's first commission for an office and warehouse building by DMJM in 1957. After the fire in 1966 that destroyed the original office building and warehouse, General Telephone commissioned local architects to design a similar style building on the Project Site. As such, the Office Building on the Project Site is not the best remaining architectural type remaining. *Therefore, the Project Site is recommended not eligible under this criterion.*

Criterion H: The construction materials or engineering methods used in the building or structure embody elements of outstanding attention to architectural or engineering design, detail, material or craftsmanship.

The four buildings and structure on the Project Site do not embody elements of outstanding attention to architectural or engineering design, material, or craftsmanship. The buildings and structure use common place materials such as brick, concrete block, aluminum mullions, large glazing (which has been extensively replaced throughout the building), and other prefabricated materials. *Therefore, the Project Site is recommended not eligible under this criterion.*

Subject: **Geotechnical Investigation**
Two Proposed Warehouse Buildings
5010 Azusa Canyon Road
Irwindale, California

Gentlemen:

In accordance with your request, we have conducted a geotechnical investigation at the subject site. We are pleased to present this report summarizing the conclusions and recommendations developed from our investigation.

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

SOUTHERN CALIFORNIA GEOTECHNICAL, INC.

1.0 EXECUTIVE SUMMARY

Presented below is a brief summary of the conclusions and recommendations of this investigation. Since this summary is not all inclusive, it should be read in complete context with the entire report.

Geotechnical Design Considerations

- Artificial fill soils were encountered at all of trench locations, with the exception of Trench Nos. T-2 and T-3, extending from the ground surface to depths of 2 to 5½± feet.
- The fill soils and near-surface alluvial soils possess low strengths. In addition, the existing fill soils are considered to represent undocumented fill. These soils, in their present condition, are not considered suitable for support of the foundation loads of the new structures.
- Remedial grading will be necessary to remove all of the undocumented fill soils in their entirety as well as the upper portion of the near-surface native alluvium soils, and replace these materials as compacted structural fill.
- It should be noted that the northern wall of the northern-most existing building appears to be in a zero-lot-condition with respect to the northern property line and the building/s on the northern adjacent property. Demolition and excavation operations within this area should be performed in order to prevent the undermining of the influence zones of the neighboring building foundations as it is stated in section 1803.5.7 Excavation near foundations of the 2016 CBC. Special demolition techniques may be required in order to protect the existing structures.

Site Preparation Recommendations

- The site plan provided to our office indicates that several existing structures at the subject site will be demolished in order to facilitate the construction of the proposed development. Demolition should include all foundations, floor slabs, pavements, utilities and any other subsurface improvements that will not remain in place with the new development. Debris resultant from demolition should be disposed of offsite. Alternatively, concrete and asphalt debris may be pulverized to a maximum 2-inch particle size, well mixed with the on-site soils, and incorporated into new structural fills or it may be crushed and made into CMB.
- Remedial grading is recommended to be performed within the proposed building areas in order to remove all of the artificial fill soils and a portion of the native alluvium soils. The soils within the proposed building areas should be overexcavated to a depth of 3 feet below existing grade and to a depth of at least 3 feet below proposed building pad subgrade elevations.
- The depth of overexcavation should also be sufficient to remove any existing fill soils. The proposed foundation influence zones should be overexcavated to a depth of at least 2 feet below proposed foundation bearing grade.
- Following completion of the overexcavation, the exposed soils should be scarified and moisture conditioned to achieve a moisture content of 2 to 4 percent above optimum moisture, to a depth of at least 12 inches. The overexcavation subgrade soils should then be recompacted to at least 90% of the ASTM D-1557 maximum dry density. The previously excavated soils may then be replaced as compacted structural fill.
- The new pavement and flatwork subgrade soils are recommended to be scarified to a depth of 12± inches, thoroughly moisture conditioned and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density.

Foundation Design Recommendations

- Conventional shallow foundations, supported in newly placed compacted fill.
- 3,000 lbs/ft^2 maximum allowable soil bearing pressure.
- Reinforcement consisting of at least two (2) No. 5 rebars (1 top and 1 bottom) in strip footings. Additional reinforcement may be necessary for structural considerations.

Building Floor Slab Design Recommendations

- Conventional Slab-on-Grade: minimum 5 inches thick.
- Modulus of Subgrade Reaction: k = 150 psi/in.
- Reinforcement is not expected to be necessary for geotechnical considerations.
- The actual thickness and reinforcement of the floor slab should be determined by the structural engineer.

Pavement Design Recommendations

ASPHALT PAVEMENTS (R=60)					
Materials	**Thickness (inches)**				
	Auto Parking and Auto Drive Lanes (TI = 4.0 to 5.0)	Truck Traffic			
		TI = 6.0	TI = 7.0	TI = 8.0	TI = 9.0
Asphalt Concrete	3	3½	4	5	5½
Aggregate Base	3	3	3	3	4
Compacted Subgrade	12	12	12	12	12

PORTLAND CEMENT CONCRETE PAVEMENTS (R=60)				
Materials	**Thickness (inches)**			
	Autos and Light Truck Traffic (TI = 6.0)	Truck Traffic		
		TI = 7.0	TI = 8.0	TI = 9.0
PCC	5	6	7	8
Compacted Subgrade (95% minimum compaction)	12	12	12	12

2.0 SCOPE OF SERVICES

The scope of services performed for this project was in accordance with our Proposal No. 16P440, dated November 21, 2016. The scope of services included a visual site reconnaissance, subsurface exploration, field and laboratory testing, and geotechnical engineering analysis to provide criteria for preparing the design of the building foundations, building floor slabs, and parking lot pavements along with site preparation recommendations and construction considerations for the proposed development. The evaluation of the environmental aspects of this site was beyond the scope of services for this geotechnical investigation.

3.0 SITE AND PROJECT DESCRIPTION

3.1 Site Conditions

The subject site is located on the east side of Azusa Canyon Road east of the intersection with Sandstone Street at the street address of 5010 Azusa Canyon Road in Irwindale, California. The site is bounded to the north by existing commercial/industrial buildings, to the west by Azusa Canyon Road and commercial/industrial buildings, to east by a railroad easement and commercial/industrial buildings, and to the south by commercial/industrial buildings. The general location of the site is illustrated on the Site Location Map, enclosed as Plate 1 in Appendix A of this report.

The site consists of two (2) contiguous rectangular-shaped parcels, which total 10.64± acres. The site is currently being utilized by Frontier Communications and is fully operational. The northern parcel, 8.22±, acres in size, is currently developed with four (4) buildings and several storage containers and canopies. An office building is located in the west-central area of the northern parcel and has a footprint of approximately 9,750 ft^2. This building is a two-story structure of masonry block construction. The three other buildings located in the northern parcel are single-story buildings of wood frame and stucco construction and assumed to be supported on conventional shallow foundations with a concrete slab-on-grade floor. The building located in the northern portion of the northern parcel, with its northern wall directly on the northern property line, is approximately 9,500 ft^2 in size. The building located in the central portion of the northern parcel is approximately 5,860 ft^2 in size. The building located in the east-central portion of the northern parcel is approximately 6,000 ft^2 in size and utilizes metal siding. There is also a 280± ft^2 storage shed located in the northeastern portion of the northern parcel. The ground surface surrounding the buildings consists of asphaltic concrete and Portland cement concrete pavements. The southern parcel, 2.42± acres in size, is developed as an asphaltic concrete parking lot for the Frontier Communications facility. The pavements in both parcels are in poor to fair condition with moderate to severe cracking throughout.

As part of our research, we reviewed available data in order to determine any environmental concerns within the subject site. The primary reference used was obtained from the California State Water Resources Control Board, GeoTracker, website, http://geotracker.waterboards.ca.gov/. Records for the subject site indicate the presence of an underground storage tank (UST) and is identified as General Telephone Co. (T0603704631).

Aerial photographs from 1964 and 1965 indicate the presence of a building located to the northeast of the intersection of Nubia Street and Azusa Canyon Road within the subject site. Aerial photographs indicate that the previously existing building was demolished between 1965 and 1972. Furthermore, aerial photographs indicate that the subject site was developed to its current condition in 1972.

Detailed topographic information was not available at the time of this report. However, based on topographic information obtained from Google Earth, the site topography ranges from 460± feet

mean sea level (msl) in the northern area of the site to 451± feet msl in the southern area of the site. The site topography slopes gently downward toward the south at a gradient of approximately 1± percent.

3.2 Proposed Development

A conceptual site plan, prepared by HPA Architecture for the proposed development was provided to our office by the client. Based on the site plan, two (2) new warehouse buildings, identified as Building 1 and Building 2, will be constructed at the subject site. The northern parcel will be developed with Building 1 (185,260± ft^2 in size), with a loading dock along the east side of the building. The southern parcel will be developed with Building 2 (49,050± ft^2 in size) with a loading dock along the north side of the building. It is assumed that both of the buildings will be surrounded by asphaltic concrete pavements in the parking and drive area and Portland cement concrete pavements in the truck court areas. Limited areas of landscaped planters and concrete flatwork may also be included in the proposed development.

Detailed structural information has not been provided. It is assumed that the new buildings will be of concrete tilt-up construction, typically supported on conventional shallow foundations, with concrete slab-on-grade floors. Based on the assumed construction, maximum column and wall loads are expected to be on the order of 80 kips and 3 to 5 kips per linear foot, respectively.

No significant amounts of below grade construction, such as basements or crawl spaces, are expected to be included in the proposed development. Based on the assumed topography, cuts and fills of up to 5± feet are expected to be necessary to achieve the proposed site grades. It should be noted that this estimate does not include any remedial grading recommendations which are presented in a subsequent section of this report.

4.0 SUBSURFACE EXPLORATION

4.1 Scope of Exploration/Sampling Methods

The subsurface exploration conducted for this project consisted of nine (9) exploratory trenches (identified as Trench Nos. T-1 through T-9) excavated to depths of 5½ to 11½± feet below the existing site grades. The trenches were excavated using a backhoe with a 24-inch wide bucket. All of the trenches were logged during excavation by a member of our staff.

Representative bulk and in-situ soil samples were taken during excavation. Relatively undisturbed in-situ samples were taken at Trench Nos. T-7 and T-9 at depths of 2± feet below the existing site grades. The relatively undisturbed samples were taken with a split barrel "California Sampler" containing a series of one inch long, 2.416± inch diameter brass rings. This sampling method is described in ASTM Test Method D-3550. The relatively undisturbed ring samples were placed in molded plastic sleeves that were then sealed and transported to our laboratory. Bulk samples were collected in plastic bags to retain their original moisture content. The bulk samples were then sealed and also transported to our laboratory.

The approximate trench locations are indicated on the Trench Location Plan, included as Plate 2 in Appendix A of this report. The Trench Logs, which illustrate the conditions encountered at the trench locations, as well as the results of some of the laboratory testing, are included in Appendix B.

4.2 Geotechnical Conditions

Pavements

Asphaltic concrete pavements were encountered at the ground surface at all of the trench locations. At these locations, the pavement section consists of 2 to 6½± inches of asphaltic concrete, underlain by 0 to 4± inches of aggregate base.

Artificial Fill

Artificial fill soils were encountered beneath the asphaltic concrete pavements at all of trench locations, with the exception of Trench Nos. T-2 and T-3, extending to depths of 2 to 5½± feet below the existing site grades. The fill soils generally consist of medium dense silty sands to sandy silts with varying amounts of fine to coarse gravel. The fill soils possess a disturbed appearance, and some samples possess debris (asphaltic concrete/brick fragments and metal) resulting in their classification as artificial fill.

Alluvium

Native alluvial soils were encountered beneath the pavements at Trench Nos. T-2 and T-3 and beneath the fill soils at the remaining trench locations, extending to the maximum depth explored of 11½± feet. The alluvium generally consists of medium dense to very dense sands, sandy gravel and gravelly sands with occasional to extensive cobbles and boulders.

Groundwater

Free water was not encountered during excavation of any of the trenches. Based on the lack of any water within the trenches, and the moisture contents of the recovered soil samples, the static groundwater table is considered to have existed at a depth in excess of 11½± feet at the time of the subsurface exploration.

As part of our research, we reviewed available groundwater data in order to determine the historic high groundwater level for the site. The primary reference used to determine the historic groundwater depths in this area is CGS Open File Report 98-13, the Seismic Hazard Evaluation of the Baldwin Park Quadrangle which indicates that the historic high groundwater level for the site was 160 feet below the ground surface. More recent water level data was obtained from the California Department of Water Resources website, http://www.water.ca.gov/waterdatalibrary/. The nearest monitoring well is located approximately 3,900 feet south of the site. Water level readings within this monitoring well indicates high groundwater levels of 174± feet (January 2012) below the ground surface. Therefore, the high groundwater depth of 160 feet reported in OFR 98-13 is considered to be conservative with respect to the recent site conditions.

5.0 LABORATORY TESTING

The soil samples recovered from the subsurface exploration were returned to our laboratory for further testing to determine selected physical and engineering properties of the soils. The tests are briefly discussed below. It should be noted that the test results are specific to the actual samples tested, and variations could be expected at other locations and depths.

Classification

All recovered soil samples were classified using the Unified Soil Classification System (USCS), in accordance with ASTM D-2488. Field identifications were then supplemented with additional visual classifications and/or by laboratory testing. The USCS classifications are shown on the Trench Logs and are periodically referenced throughout this report.

In-situ Density and Moisture Content

The density has been determined for selected relatively undisturbed ring samples. These densities were determined in general accordance with the method presented in ASTM D-2937. The results are recorded as dry unit weight in pounds per cubic foot. The moisture contents are determined in accordance with ASTM D-2216, and are expressed as a percentage of the dry weight. These test results are presented on the Trench Logs.

Consolidation

Selected soil samples have been tested to determine their consolidation potential, in accordance with ASTM D-2435. The testing apparatus is designed to accept either natural or remolded samples in a one-inch high ring, approximately 2.416 inches in diameter. Each sample is then loaded incrementally in a geometric progression and the resulting deflection is recorded at selected time intervals. Porous stones are in contact with the top and bottom of the sample to permit the addition or release of pore water. The samples are typically inundated with water at an intermediate load to determine their potential for collapse or heave. The results of the consolidation testing are plotted on Plates C-1 and C-2 in Appendix C of this report.

Maximum Dry Density and Optimum Moisture Content

A composite representative bulk sample, from the upper 5 feet of Trench Nos. T-5 and T-8, has been tested for its maximum dry density and optimum moisture content. The results have been obtained using the Modified Proctor procedure, per ASTM D-1557, and are presented on Plate C-3 in Appendix C of this report. These tests are generally used to compare the in-situ densities of undisturbed field samples, and for later compaction testing. Additional testing of other soil types or soil mixes may be necessary at a later date.

Soluble Sulfates

Representative samples of the near-surface soils were submitted to a subcontracted analytical laboratory for determination of soluble sulfate content. Soluble sulfates are naturally present in soils, and if the concentration is high enough, can result in degradation of concrete which comes

into contact with these soils. The results of the soluble sulfate testing are presented below, and are discussed further in a subsequent section of this report.

Sample Identification	Soluble Sulfates (%)	Sulfate Classification
T-1 @ 0 to 5 feet	0.002	Negligible
T-8 @ 0 to 5 feet	0.003	Negligible

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of our review, field exploration, laboratory testing and geotechnical analysis, the proposed development is considered feasible from a geotechnical standpoint. The recommendations contained in this report should be taken into the design, construction, and grading considerations. The recommendations are contingent upon all grading and foundation construction activities being monitored by the geotechnical engineer of record. The Grading Guide Specifications, included as Appendix D, should be considered part of this report, and should be incorporated into the project specifications. The contractor and/or owner of the development should bring to the attention of the geotechnical engineer any conditions that differ from those stated in this report, or which may be detrimental for the development.

6.1 Seismic Design Considerations

The subject site is located in an area which is subject to strong ground motions due to earthquakes. The performance of a site specific seismic hazards analysis was beyond the scope of this investigation. However, numerous faults capable of producing significant ground motions are located near the subject site. Due to economic considerations, it is not generally considered reasonable to design a structure that is not susceptible to earthquake damage. Therefore, significant damage to structures may be unavoidable during large earthquakes. The proposed structures should, however, be designed to resist structural collapse and thereby provide reasonable protection from serious injury, catastrophic property damage and loss of life.

Faulting and Seismicity

Research of available maps indicates that the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, SCG did not identify any evidence of faulting during the geotechnical investigation. Therefore, the possibility of significant fault rupture on the site is considered to be low.

Seismic Design Parameters

The 2016 California Building Code (CBC) was adopted by all municipalities within Southern California on January 1, 2017. The CBC provides procedures for earthquake resistant structural design that include considerations for on-site soil conditions, occupancy, and the configuration of the structure including the structural system and height. The seismic design parameters presented below are based on the soil profile and the proximity of known faults with respect to the subject site.

The 2016 CBC Seismic Design Parameters have been generated using U.S. Seismic Design Maps, a web-based software application developed by the United States Geological Survey. This software application, available at the USGS web site, calculates seismic design parameters in accordance with the 2016 CBC, utilizing a database of deterministic site accelerations at 0.01 degree intervals. The table below is a compilation of the data provided by the USGS application. A copy of the output generated from this program is included in Appendix E of this report. A copy

of the Design Response Spectrum, as generated by the USGS application is also included in Appendix E. Based on this output, the following parameters may be utilized for the subject site:

2016 CBC SEISMIC DESIGN PARAMETERS

Parameter		Value
Mapped Spectral Acceleration at 0.2 sec Period	S_S	2.040
Mapped Spectral Acceleration at 1.0 sec Period	S_1	0.720
Site Class	---	D
Site Modified Spectral Acceleration at 0.2 sec Period	S_{MS}	2.040
Site Modified Spectral Acceleration at 1.0 sec Period	S_{M1}	1.080
Design Spectral Acceleration at 0.2 sec Period	S_{DS}	1.360
Design Spectral Acceleration at 1.0 sec Period	S_{D1}	0.720

Liquefaction

Liquefaction is the loss of strength in generally cohesionless, saturated soils when the pore-water pressure induced in the soil by a seismic event becomes equal to or exceeds the overburden pressure. The primary factors which influence the potential for liquefaction include groundwater table elevation, soil type and plasticity characteristics, relative density of the soil, initial confining pressure, and intensity and duration of ground shaking. The depth within which the occurrence of liquefaction may impact surface improvements is generally identified as the upper 50 feet below the existing ground surface. Liquefaction potential is greater in saturated, loose, poorly graded fine sands with a mean (d_{50}) grain size in the range of 0.075 to 0.2 mm (Seed and Idriss, 1971). Non-sensitive clayey (cohesive) soils which possess a plasticity index of at least 18 (Bray and Sancio, 2006) are generally not considered to be susceptible to liquefaction, nor are those soils which are above the historic static groundwater table.

The Seismic Hazards Map for the Baldwin Park, California 7.5 Minute Quadrangle, published by the California Geological Survey (CGS) indicates that the subject site is not located within a designated liquefaction hazard zone. In addition, the subsurface conditions encountered at the site are not considered to be conducive to liquefaction. Based on the mapping performed by CGS and the conditions encountered at the trench locations, liquefaction is not considered to be a significant design concern for this project.

6.2 Geotechnical Design Considerations

General

The ground surface at the site generally consists of asphaltic concrete pavements which are in poor to fair condition with moderate to severe cracking throughout. Artificial fill soils were encountered beneath the pavement at all of the trench locations, with the exception of Trench Nos. T-2 and T-3, extending to depths of 2 to 5½± feet below the existing site grades. No

documentation regarding the placement or compaction of these fill soils is known to exist. Based on these characteristics, the existing fill materials are considered to represent undocumented fill. Native alluvium was encountered beneath the pavements at Trench Nos. T-2 and T-3 and beneath the undocumented fill soils at the remaining trench locations, extending to the maximum depth explored of 11½± feet. The alluvial soils generally consist of medium dense to very dense sandy gravel to gravelly sands with occasional to extensive cobbles and occasional boulders. The fill soils and near-surface alluvial soils possess low strengths. Based on these conditions, remedial grading is recommended within the proposed building areas to remove the existing undocumented fill materials and a portion of the underlying alluvium, and replace these materials as compacted structural fill.

Demolition of the existing pavements and structures is expected to cause significant disturbance to the near surface soils. Any soils disturbed during demolition should also be removed prior to the placement of structural fill soils.

Settlement

The recommended remedial grading will remove the existing undocumented fill soils and a portion of the near-surface native alluvium soils and replace these materials as compacted structural fill. The native alluvium soils that will remain in place below the recommended depth of overexcavation will not be subject to significant stress increases from the foundations of the new structures. Therefore, following completion of the recommended grading, post-construction settlements are expected to be within tolerable limits.

Expansion

The near-surface soils generally consist of silty sands, sands, and gravelly sands. These materials have been visually classified as very low to non-expansive. Therefore, no design considerations related to expansive soils are considered warranted for this site.

Soluble Sulfates

The results of the soluble sulfate testing indicate that the selected samples of the on-site soils contain negligible concentrations of soluble sulfates, in accordance with American Concrete Institute (ACI) guidelines. Therefore, specialized concrete mix designs are not considered to be necessary, with regard to sulfate protection purposes. It is, however, recommended that additional soluble sulfate testing be conducted at the completion of rough grading to verify the soluble sulfate concentrations of the soils which are present at pad grade within the building areas.

Shrinkage/Subsidence

Removal and recompaction of the near-surface fill and/or alluvial soils is estimated to result in an average shrinkage of 10 to 15 percent. Please note that based on the limited number of in-place density tests, this average shrinkage estimate should be considered to be a rough estimate. Minor ground subsidence is expected to occur in the soils below the zone of removal, due to settlement and machinery working. The subsidence is estimated to be 0.1± feet. This estimate may be used for grading in areas that are underlain by native alluvial soils.

These estimates are based on previous experience and the subsurface conditions encountered at the trench locations. The actual amount of subsidence is expected to be variable and will be dependent on the type of machinery used, repetitions of use, and dynamic effects, all of which are difficult to assess precisely.

Grading and Foundation Plan Review

No grading or foundation plans were available at the time of this report. It is therefore recommended that we be provided with copies of the preliminary plans, when they become available, for review with regard to the conclusions, recommendations, and assumptions contained within this report.

6.3 Site Grading Recommendations

The grading recommendations presented below are based on the subsurface conditions encountered at the trench locations and our understanding of the proposed development. We recommend that all grading activities be completed in accordance with the Grading Guide Specifications included as Appendix D of this report, unless superseded by site-specific recommendations presented below.

Demolition

The site plan provided to our office indicates that several existing structures at the subject site will be demolished in order to facilitate the construction of the proposed development. Demolition should include all foundations, floor slabs, pavements, utilities and any other subsurface improvements that will not remain in place with the new development. Debris resultant from demolition should be disposed of offsite. Alternatively, concrete and asphalt debris may be pulverized to a maximum 2-inch particle size, well mixed with the on-site soils, and incorporated into new structural fills or it may be crushed and made into CMB.

It should be noted that the northern wall of the northern-most building appears to be in a zero-lot-condition with respect to the northern property line and the building/s on the northern adjacent property. Demolition operations within the area of this northern-most building should be performed in order to prevent the undermining of the influence zones of the neighboring building foundations as it is stated in section 1803.5.7 Excavation near foundations of the 2016 CBC. Special demolition techniques may be required in order to protect the existing structures. **It is recommended that we be provided with copies of the preliminary demolition plans for review**.

Treatment of Existing Soils: Building Pads

Remedial grading should be performed within the proposed building pad areas in order to remove the existing undocumented fill soils, a portion of the underlying alluvium, and soils disturbed during demolition. Based on conditions encountered at the trench locations, the existing soils within the proposed building areas are recommended to be overexcavated to a depth of at least 3 feet below existing grade and to a depth of at least 3 feet below proposed building pad subgrade elevations, whichever is greater. **The depth of the overexcavation should also extend to a depth sufficient to remove all undocumented fill soils**. Undocumented fill soils at the

trench locations extend to depths of 2 to 5½± feet. Additional overexcavation should be performed within the influence zones of the new foundations, to provide for a new layer of compacted structural fill extending to a depth of at least 2 feet below proposed bearing grades.

The overexcavation areas should extend at least 5 feet beyond the building and foundation perimeters, and to an extent equal to the depth of fill below the new foundations. If the proposed structures incorporate any exterior columns (such as for a canopy or overhang) the area of overexcavation should also encompass these areas.

After a suitable overexcavation subgrade has been achieved, the exposed soils should be scarified to a depth of at least 12 inches and moisture conditioned to achieve a moisture content of 2 to 4 percent above optimum moisture content. The subgrade soils should then be recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. The building pad areas may then be raised to grade with previously excavated soils or imported structural fill.

Treatment of Existing Soils: Retaining Walls and Site Walls

The existing soils within the areas of proposed retaining and non-retaining site walls should be overexcavated to a depth of at least 2 feet below foundation bearing grade and replaced as compacted structural fill. Any undocumented fill soils within any of these foundation areas should be removed in their entirety. In both cases, the overexcavation subgrade soils should be evaluated by the geotechnical engineer prior to scarifying, moisture conditioning and recompacting the upper 12 inches of exposed subgrade soils. The previously excavated soils may then be replaced as compacted structural fill.

Treatment of Existing Soils: Parking and Drive Areas

Based on economic considerations, overexcavation of the existing near-surface soils in the new parking and drive areas is not considered warranted, with the exception of areas where lower strength or unstable soils are identified by the geotechnical engineer during grading.

Subgrade preparation in the new parking and drive areas should initially consist of removal of all soils disturbed during stripping and demolition operations. The geotechnical engineer should then evaluate the subgrade to identify any areas of additional unsuitable soils. The subgrade soils should then be scarified to a depth of 12± inches, moisture conditioned to 2 to 4 percent above optimum, and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. Based on the presence of variable strength soils throughout the site, it is expected that some isolated areas of additional overexcavation may be required to remove zones of lower strength, unsuitable soils.

The grading recommendations presented above for the proposed parking and drive areas assume that the owner and/or developer can tolerate minor amounts of settlement within the proposed parking areas. The grading recommendations presented above do not mitigate the extent of undocumented fill soils in the parking and drive areas. As such, settlement and associated pavement distress could occur. Typically, repair of such distressed areas involves significantly lower costs than completely mitigating these soils at the time of construction. If the owner cannot tolerate the risk of such settlements, the parking and drive areas should be overexcavated to a depth of 2 feet below proposed pavement subgrade elevation, with the resulting soils replaced as compacted structural fill.

Fill Placement

- Fill soils should be placed in thin (6± inches), near-horizontal lifts, moisture conditioned to 2 to 4 percent above the optimum moisture content, and compacted.
- On-site soils may be used for fill provided they are cleaned of any debris to the satisfaction of the geotechnical engineer.
- All grading and fill placement activities should be completed in accordance with the requirements of the CBC and the grading code of the city of Irwindale.
- All fill soils should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Fill soils should be well mixed.
- Compaction tests should be performed periodically by the geotechnical engineer as random verification of compaction and moisture content. These tests are intended to aid the contractor. Since the tests are taken at discrete locations and depths, they may not be indicative of the entire fill and therefore should not relieve the contractor of his responsibility to meet the job specifications.

Selective Grading and Oversized Material Placement

The native alluvial soils possess significant cobble and/or boulder content. It is expected that large scrapers (Caterpillar 657 or equivalent) will be adequate to move the cobble containing soils as well as some of the soils containing smaller boulders. However, some larger boulders (2± feet in size) were also encountered at the trench locations. It will likely be necessary to move such larger boulders individually, and place them as oversized materials in accordance with the Grading Guide Specifications, in Appendix D of this report.

Since the proposed grading will require excavation of cobble and boulder containing soils, it may be desirable to selectively grade the proposed building pad area. The presence of particles greater than 3 inches in diameter within the upper 1 to 3 feet of the building pad subgrade will impact the utility and foundation excavations. Depending on the depths of fills required within the proposed parking areas, it may be feasible to sort the on-site soils, placing the materials greater than 3 inches in diameter within the lower depths of the fills, and limiting the upper 1 to 3 feet of soils to materials less than 3 inches in size. Oversized materials could also be placed within the lower depths of the recommended overexcavations. In order to achieve this grading, it would likely be necessary to use rock buckets and/or rock sieves to separate the oversized materials from the remaining soil. Although such selective grading will facilitate further construction activities, it is not considered mandatory and a suitable subgrade could be achieved without such extensive sorting. However, in any case, it is recommended that all materials greater than 6 inches in size be excluded from the upper 1 foot of the surface of any compacted fills.

The placement of any oversized materials should be performed in accordance with the Grading Guide Specifications included in Appendix D of this report. If disposal of oversized materials is required, rock blankets or windrows should be used and such areas should be observed during construction and placement by a representative of the geotechnical engineer.

Imported Structural Fill

All imported structural fill should consist of very low expansive (EI < 20), well graded soils possessing at least 10 percent fines (that portion of the sample passing the No. 200 sieve).

Additional specifications for structural fill are presented in the Grading Guide Specifications, included as Appendix D.

Utility Trench Backfill

In general, all utility trench backfill soils should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. It is recommended that materials in excess of 3 inches in size not be used for utility trench backfill. Compacted trench backfill should conform to the requirements of the local grading code, and more restrictive requirements may be indicated by the city of Irwindale. All utility trench backfills should be witnessed by the geotechnical engineer. The trench backfill soils should be compaction tested where possible; probed and visually evaluated elsewhere.

Utility trenches which parallel a footing, and extending below a 1h:1v plane projected from the outside edge of the footing should be backfilled with structural fill soils, compacted to at least 90 percent of the ASTM D-1557 standard. Pea gravel backfill should not be used for these trenches.

6.4 Construction Considerations

Excavation Considerations

The near-surface soils generally consist of sands, silty sands and gravelly sands. Some of these materials will likely be subject to minor caving within shallow excavations. Where caving does occur, flattened excavation slopes may be sufficient to provide excavation stability. On a preliminary basis, the inclination of temporary slopes should not exceed 2h:1v. Deeper excavations may require some form of external stabilization such as shoring or bracing. Maintaining adequate moisture content within the near-surface soils will improve excavation stability. All excavation activities on this site should be conducted in accordance with Cal-OSHA regulations.

As discussed in a previous section of this report, the northern wall of the northern-most building appears to be in a zero-lot-condition with respect to the northern property line and the building/s on the northern adjacent property. Excavation operations within this area should be performed in order to prevent the undermining of the influence zones of the neighboring building foundations as it is stated in section 1803.5.7 Excavation near foundations of the 2016 CBC. Special demolition techniques may be required in order to protect the existing structures. **It is recommended that we be provided with copies of the preliminary demolition plans for review**.

Groundwater

The static groundwater table is considered to have existed at a depth in excess of 11½± feet at the time of the subsurface exploration. Therefore, groundwater is not expected to impact the grading or foundation construction activities.

6.5 Foundation Design and Construction

Based on the preceding grading recommendations, it is assumed that the new building pads will be underlain by new structural fill soils used to replace existing undocumented fill soils and near surface alluvial soils. These structural fill soils are expected to extend to depths of at least 2 feet below proposed foundation bearing grades, underlain by 1± foot of additional soil that has been densified and moisture conditioned in place. Based on this subsurface profile, the proposed structures may be supported on conventional shallow foundations.

Foundation Design Parameters

New square and rectangular footings may be designed as follows:

- Maximum, net allowable soil bearing pressure: 3,000 lbs/ft^2.
- Minimum wall/column footing width: 14 inches/24 inches.
- Minimum longitudinal steel reinforcement within strip footings: Two (2) No. 5 rebars (1 top and 1 bottom).
- Minimum foundation embedment: 12 inches into suitable structural fill soils, and at least 18 inches below adjacent exterior grade. Interior column footings may be placed immediately beneath the floor slab.
- It is recommended that the perimeter building foundations be continuous across all exterior doorways. Any flatwork adjacent to the exterior doors should be doweled into the perimeter foundations in a manner determined by the structural engineer.

The allowable bearing pressures presented above may be increased by 1/3 when considering short duration wind or seismic loads. The minimum steel reinforcement recommended above is based on geotechnical considerations; additional reinforcement may be necessary for structural considerations. The actual design of the foundations should be determined by the structural engineer.

Foundation Construction

The foundation subgrade soils should be evaluated at the time of overexcavation, as discussed in Section 6.3 of this report. It is further recommended that the foundation subgrade soils be evaluated by the geotechnical engineer immediately prior to steel or concrete placement. Soils suitable for direct foundation support should consist of newly placed structural fill, compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Any unsuitable materials should be removed to a depth of suitable bearing compacted structural fill, with the resulting excavations backfilled with compacted fill soils. As an alternative, lean concrete slurry (500 to 1,500 psi) may be used to backfill such isolated overexcavations.

The foundation subgrade soils should also be properly moisture conditioned to at least 2 to 4 percent of the Modified Proctor optimum, to a depth of at least 12 inches below bearing grade. **Since it is typically not feasible to increase the moisture content of the floor slab and**

foundation subgrade soils once rough grading has been completed, care should be taken to maintain the moisture content of the building pad subgrade soils throughout the construction process.

Estimated Foundation Settlements

Post-construction total and differential settlements of shallow foundations designed and constructed in accordance with the previously presented recommendations are estimated to be less than 1.0 and 0.5 inches, respectively. Differential movements are expected to occur over a 30-foot span, thereby resulting in an angular distortion of less than 0.002 inches per inch.

Lateral Load Resistance

Lateral load resistance will be developed by a combination of friction acting at the base of foundations and slabs and the passive earth pressure developed by footings below grade. The following friction and passive pressure may be used to resist lateral forces:

- Passive Earth Pressure: 300 lbs/ft^3
- Friction Coefficient: 0.30

These are allowable values, and include a factor of safety. When combining friction and passive resistance, the passive pressure component should be reduced by one-third. These values assume that footings will be poured directly against compacted structural fill soils. The maximum allowable passive pressure is 2,500 lbs/ft^2.

6.6 Floor Slab Design and Construction

Subgrades which will support the new floor slabs should be prepared in accordance with the recommendations contained in the ***Site Grading Recommendations*** section of this report. Based on the anticipated grading which will occur at this site, the floors of the proposed structures may be constructed as conventional slabs-on-grade supported on newly placed structural fill (or densified existing soils), extending to a depth of at least 3 feet below finished pad grades. Based on geotechnical considerations, the floor-slab may be designed as follows:

- Minimum slab thickness: 5 inches.

- Modulus of Subgrade Reaction: k = 150 psi/in.

- Minimum slab reinforcement: Reinforcement is not considered necessary from a geotechnical standpoint. The actual floor slab reinforcement should be determined by the structural engineer, based on the imposed slab loading.

- Slab underlayment: If moisture sensitive floor coverings will be used then minimum slab underlayment should consist of a moisture vapor barrier constructed below the entire area of the proposed slab where such moisture sensitive floor coverings are anticipated. The moisture vapor barrier should meet or exceed the Class A rating as defined by ASTM E 1745-97 and have a permeance rating less than 0.01 perms as described in ASTM E 96-95 and ASTM E 154-88. A polyolefin material such as Stego®

Wrap Vapor Barrier or equivalent will meet these specifications. The moisture vapor barrier should be properly constructed in accordance with all applicable manufacturer specifications. Given that a rock free subgrade is anticipated and that a capillary break is not required, sand below the barrier is not required. The need for sand and/or the amount of sand above the moisture vapor barrier should be specified by the structural engineer or concrete contractor. The selection of sand above the barrier is not a geotechnical engineering issue and hence outside our purview. Where moisture sensitive floor coverings are not anticipated, the vapor barrier may be eliminated.

- Moisture condition the floor slab subgrade soils to 2 to 4 percent above the Modified Proctor optimum moisture content, to a depth of 12 inches. The moisture content of the floor slab subgrade soils should be verified by the geotechnical engineer within 24 hours prior to concrete placement.

- Proper concrete curing techniques should be utilized to reduce the potential for slab curling or the formation of excessive shrinkage cracks.

The actual design of the floor slab should be completed by the structural engineer to verify adequate thickness and reinforcement.

6.7 Retaining Wall Design and Construction

Although not indicated on the site plan, some small (less than 6 feet in height) retaining walls may be required to facilitate the new site grades. The parameters recommended for use in the design of these walls are presented below.

Retaining Wall Design Parameters

Based on the soil conditions encountered at the trench locations, the following parameters may be used in the design of new retaining walls for this site. The following parameters assume that only the on-site soils will be utilized for retaining wall backfill. The near-surface soils generally consist of silty sands, sands and gravelly sands. Based on their composition, the on-site soils have been assigned a friction angle of 32 degrees.

If desired, SCG could provide design parameters for an alternative select backfill material behind the retaining walls. The use of select backfill material could result in lower lateral earth pressures. In order to use the design parameters for the imported select fill, this material must be placed within the entire active failure wedge. This wedge is defined as extending from the heel of the retaining wall upwards at an angle of approximately 60° from horizontal. If select backfill material behind the retaining wall is desired, SCG should be contacted for supplementary recommendations.

RETAINING WALL DESIGN PARAMETERS

Design Parameter		Soil Type
		On-site Silty Sands
Internal Friction Angle (ϕ)		32°
Unit Weight		130 lbs/ft^3
Equivalent Fluid Pressure:	Active Condition (level backfill)	40 lbs/ft^3
	Active Condition (2h:1v backfill)	61 lbs/ft^3
	At-Rest Condition (level backfill)	61 lbs/ft^3

The walls should be designed using a soil-footing coefficient of friction of 0.30 and an equivalent passive pressure of 300 lbs/ft^3. The structural engineer should incorporate appropriate factors of safety in the design of the retaining walls.

The active earth pressure may be used for the design of retaining walls that do not directly support structures or support soils that in turn support structures and which will be allowed to deflect. The at-rest earth pressure should be used for walls that will not be allowed to deflect such as those which will support foundation bearing soils, or which will support foundation loads directly.

Where the soils on the toe side of the retaining wall are not covered by a "hard" surface such as a structure or pavement, the upper 1 foot of soil should be neglected when calculating passive resistance due to the potential for the material to become disturbed or degraded during the life of the structure.

Seismic Lateral Earth Pressures

In accordance with the CBC, any retaining walls more than 6 feet in height must be designed for seismic lateral earth pressures. If walls 6 feet or more are required for this site, the geotechnical engineer should be contacted for supplementary seismic lateral earth pressure recommendations.

Retaining Wall Foundation Design

The retaining wall foundations should be supported within newly placed compacted structural fill, extending to a depth of at least 2 feet below proposed foundation bearing grade. Foundations to support new retaining walls should be designed in accordance with the general Foundation Design Parameters presented in a previous section of this report.

Backfill Material

On-site soils may be used to backfill the retaining walls. **However, all backfill material placed within 3 feet of the back wall face should have a particle size no greater than 3 inches.** Some sorting and/or crushing operations may be required. The retaining wall backfill materials should be well graded.

It is recommended that a properly installed prefabricated drainage composite such as the MiraDRAIN 6000XL (or approved equivalent), which is specifically designed for use behind retaining walls be used. If the drainage composite material is not covered by an impermeable surface, such as a structure or pavement, a 12-inch thick layer of a low permeability soil should be placed over the backfill to reduce surface water migration to the underlying soils. The drainage composite should be separated from the backfill soils by a suitable geotextile, approved by the geotechnical engineer.

All retaining wall backfill should be placed and compacted under engineering controlled conditions in the necessary layer thicknesses to ensure an in-place density between 90 and 93 percent of the maximum dry density as determined by the Modified Proctor test (ASTM D1557). Care should be taken to avoid over-compaction of the soils behind the retaining walls, and the use of heavy compaction equipment should be avoided.

Subsurface Drainage

As previously indicated, the retaining wall design parameters are based upon drained backfill conditions. Consequently, some form of permanent drainage system will be necessary in conjunction with the appropriate backfill material. Subsurface drainage may consist of either:

- A weep hole drainage system typically consisting of a series of 4-inch diameter holes in the wall situated slightly above the ground surface elevation on the exposed side of the wall and at an approximate 8-foot on-center spacing. The weep holes should include a 2 cubic foot pocket of open graded gravel, surrounded by an approved geotextile fabric, at each weep hole location.

- A 4-inch diameter perforated pipe surrounded by 2 cubic feet of gravel per linear foot of drain placed behind the wall, above the retaining wall footing. The gravel layer should be wrapped in a suitable geotextile fabric to reduce the potential for migration of fines. The footing drain should be extended to daylight or tied into a storm drainage system.

6.8 Pavement Design Parameters

Site preparation in the pavement area should be completed as previously recommended in the ***Site Grading Recommendations*** section of this report. The subsequent pavement recommendations assume proper drainage and construction monitoring, and are based on either PCA or CALTRANS design parameters for a twenty (20) year design period. However, these designs also assume a routine pavement maintenance program to obtain the anticipated 20-year pavement service life.

Pavement Subgrades

It is anticipated that the new pavements will be primarily supported on a layer of compacted structural fill, consisting of scarified, thoroughly moisture conditioned and recompacted existing soils. The near-surface soils generally consist of sands, silty sands and gravelly sands. These soils are generally considered to possess good to excellent pavement support characteristics, with R-

values in the range of 60 to 70. The subsequent pavement design is therefore based upon an assumed R-value of 60. Any fill material imported to the site should have support characteristics equal to or greater than that of the on-site soils and be placed and compacted under engineering controlled conditions. It is recommended that R-value testing be performed after completion of rough grading. Depending upon the results of the R-value testing, it may be feasible to use thinner pavement sections in some areas of the site.

Asphaltic Concrete

Presented below are the recommended thicknesses for new flexible pavement structures consisting of asphaltic concrete over a granular base. The pavement designs are based on the traffic indices (TI's) indicated. The client and/or civil engineer should verify that these TI's are representative of the anticipated traffic volumes. If the client and/or civil engineer determine that the expected traffic volume will exceed the applicable traffic index, we should be contacted for supplementary recommendations. The design traffic indices equate to the following approximate daily traffic volumes over a 20-year design life, assuming six operational traffic days per week.

Traffic Index	No. of Heavy Trucks per Day
4.0	0
5.0	1
6.0	3
7.0	11
8.0	35
9.0	93

For the purpose of the traffic volumes indicated above, a truck is defined as a 5-axle tractor trailer unit with one 8-kip axle and two 32-kip tandem axles. All of the traffic indices allow for 1,000 automobiles per day.

ASPHALT PAVEMENTS (R=60)					
Materials	**Thickness (inches)**				
	Auto Parking and Auto Drive Lanes (TI = 4.0 to 5.0)	Truck Traffic			
		TI = 6.0	TI = 7.0	TI = 8.0	TI = 9.0
Asphalt Concrete	3	3½	4	5	5½
Aggregate Base	3	3	3	3	4
Compacted Subgrade	12	12	12	12	12

The aggregate base course should be compacted to at least 95 percent of the ASTM D-1557 maximum dry density. The asphaltic concrete should be compacted to at least 95 percent of the Marshall maximum density, as determined by ASTM D-2726. The aggregate base course may consist of crushed aggregate base (CAB) or crushed miscellaneous base (CMB), which is a recycled gravel, asphalt and concrete material. The gradation, R-Value, Sand Equivalent, and Percentage Wear of the CAB or CMB should comply with appropriate specifications contained in the current edition of the "Greenbook" Standard Specifications for Public Works Construction.

Portland Cement Concrete

The preparation of the subgrade soils within concrete pavement areas should be performed as previously described for proposed asphalt pavement areas. The minimum recommended thicknesses for the Portland Cement Concrete pavement sections are as follows:

PORTLAND CEMENT CONCRETE PAVEMENTS (R=60)				
Materials	**Thickness (inches)**			
	Autos and Light Truck Traffic (TI = 6.0)	Truck Traffic		
		TI = 7.0	TI = 8.0	TI = 9.0
PCC	5	6	7	8
Compacted Subgrade (95% minimum compaction)	12	12	12	12

The concrete should have a 28-day compressive strength of at least 3,000 psi. Any reinforcement within the PCC pavements should be determined by the project structural engineer. The maximum joint spacing within all of the PCC pavements is recommended to be equal to or less than 30 times the pavement thickness.

7.0 GENERAL COMMENTS

This report has been prepared as an instrument of service for use by the client, in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, civil engineer, and/or structural engineer. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur. The client(s)' reliance upon this report is subject to the Engineering Services Agreement, incorporated into our proposal for this project.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between trench locations and sample depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted.

The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

APPENDIX B

BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

COLUMN DESCRIPTIONS

DEPTH: Distance in feet below the ground surface.

SAMPLE: Sample Type as depicted above.

BLOW COUNT: Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

POCKET PEN.: Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

GRAPHIC LOG: Graphic Soil Symbol as depicted on the following page.

DRY DENSITY: Dry density of an undisturbed or relatively undisturbed sample in lbs/ft^3.

MOISTURE CONTENT: Moisture content of a soil sample, expressed as a percentage of the dry weight.

LIQUID LIMIT: The moisture content above which a soil behaves as a liquid.

PLASTIC LIMIT: The moisture content above which a soil behaves as a plastic.

PASSING #200 SIEVE: The percentage of the sample finer than the #200 standard sieve.

UNCONFINED SHEAR: The shear strength of a cohesive soil sample, as measured in the unconfined state.

APPENDIX D

GRADING GUIDE SPECIFICATIONS

These grading guide specifications are intended to provide typical procedures for grading operations. They are intended to supplement the recommendations contained in the geotechnical investigation report for this project. Should the recommendations in the geotechnical investigation report conflict with the grading guide specifications, the more site specific recommendations in the geotechnical investigation report will govern.

General

- The Earthwork Contractor is responsible for the satisfactory completion of all earthwork in accordance with the plans and geotechnical reports, and in accordance with city, county, and applicable building codes.

- The Geotechnical Engineer is the representative of the Owner/Builder for the purpose of implementing the report recommendations and guidelines. These duties are not intended to relieve the Earthwork Contractor of any responsibility to perform in a workman-like manner, nor is the Geotechnical Engineer to direct the grading equipment or personnel employed by the Contractor.

- The Earthwork Contractor is required to notify the Geotechnical Engineer of the anticipated work and schedule so that testing and inspections can be provided. If necessary, work may be stopped and redone if personnel have not been scheduled in advance.

- The Earthwork Contractor is required to have suitable and sufficient equipment on the job-site to process, moisture condition, mix and compact the amount of fill being placed to the approved compaction. In addition, suitable support equipment should be available to conform with recommendations and guidelines in this report.

- Canyon cleanouts, overexcavation areas, processed ground to receive fill, key excavations, subdrains and benches should be observed by the Geotechnical Engineer prior to placement of any fill. It is the Earthwork Contractor's responsibility to notify the Geotechnical Engineer of areas that are ready for inspection.

- Excavation, filling, and subgrade preparation should be performed in a manner and sequence that will provide drainage at all times and proper control of erosion. Precipitation, springs, and seepage water encountered shall be pumped or drained to provide a suitable working surface. The Geotechnical Engineer must be informed of springs or water seepage encountered during grading or foundation construction for possible revision to the recommended construction procedures and/or installation of subdrains.

Site Preparation

- The Earthwork Contractor is responsible for all clearing, grubbing, stripping and site preparation for the project in accordance with the recommendations of the Geotechnical Engineer.

- If any materials or areas are encountered by the Earthwork Contractor which are suspected of having toxic or environmentally sensitive contamination, the Geotechnical Engineer and Owner/Builder should be notified immediately.

- Major vegetation should be stripped and disposed of off-site. This includes trees, brush, heavy grasses and any materials considered unsuitable by the Geotechnical Engineer.

- Underground structures such as basements, cesspools or septic disposal systems, mining shafts, tunnels, wells and pipelines should be removed under the inspection of the Geotechnical Engineer and recommendations provided by the Geotechnical Engineer and/or city, county or state agencies. If such structures are known or found, the Geotechnical Engineer should be notified as soon as possible so that recommendations can be formulated.

- Any topsoil, slopewash, colluvium, alluvium and rock materials which are considered unsuitable by the Geotechnical Engineer should be removed prior to fill placement.

- Remaining voids created during site clearing caused by removal of trees, foundations basements, irrigation facilities, etc., should be excavated and filled with compacted fill.

- Subsequent to clearing and removals, areas to receive fill should be scarified to a depth of 10 to 12 inches, moisture conditioned and compacted

- The moisture condition of the processed ground should be at or slightly above the optimum moisture content as determined by the Geotechnical Engineer. Depending upon field conditions, this may require air drying or watering together with mixing and/or discing.

Compacted Fills

- Soil materials imported to or excavated on the property may be utilized in the fill, provided each material has been determined to be suitable in the opinion of the Geotechnical Engineer. Unless otherwise approved by the Geotechnical Engineer, all fill materials shall be free of deleterious, organic, or frozen matter, shall contain no chemicals that may result in the material being classified as “contaminated,” and shall be very low to non-expansive with a maximum expansion index (EI) of 50. The top 12 inches of the compacted fill should have a maximum particle size of 3 inches, and all underlying compacted fill material a maximum 6-inch particle size, except as noted below.

- All soils should be evaluated and tested by the Geotechnical Engineer. Materials with high expansion potential, low strength, poor gradation or containing organic materials may require removal from the site or selective placement and/or mixing to the satisfaction of the Geotechnical Engineer.

- Rock fragments or rocks less than 6 inches in their largest dimensions, or as otherwise determined by the Geotechnical Engineer, may be used in compacted fill, provided the distribution and placement is satisfactory in the opinion of the Geotechnical Engineer.

- Rock fragments or rocks greater than 12 inches should be taken off-site or placed in accordance with recommendations and in areas designated as suitable by the Geotechnical Engineer. These materials should be placed in accordance with Plate D-8 of these Grading Guide Specifications and in accordance with the following recommendations:

    - Rocks 12 inches or more in diameter should be placed in rows at least 15 feet apart, 15 feet from the edge of the fill, and 10 feet or more below subgrade. Spaces should be left between each rock fragment to provide for placement and compaction of soil around the fragments.

    - Fill materials consisting of soil meeting the minimum moisture content requirements and free of oversize material should be placed between and over the rows of rock or

concrete. Ample water and compactive effort should be applied to the fill materials as they are placed in order that all of the voids between each of the fragments are filled and compacted to the specified density.

- Subsequent rows of rocks should be placed such that they are not directly above a row placed in the previous lift of fill. A minimum 5-foot offset between rows is recommended.

- To facilitate future trenching, oversized material should not be placed within the range of foundation excavations, future utilities or other underground construction unless specifically approved by the soil engineer and the developer/owner representative.

- Fill materials approved by the Geotechnical Engineer should be placed in areas previously prepared to receive fill and in evenly placed, near horizontal layers at about 6 to 8 inches in loose thickness, or as otherwise determined by the Geotechnical Engineer for the project.

- Each layer should be moisture conditioned to optimum moisture content, or slightly above, as directed by the Geotechnical Engineer. After proper mixing and/or drying, to evenly distribute the moisture, the layers should be compacted to at least 90 percent of the maximum dry density in compliance with ASTM D-1557-78 unless otherwise indicated.

- Density and moisture content testing should be performed by the Geotechnical Engineer at random intervals and locations as determined by the Geotechnical Engineer. These tests are intended as an aid to the Earthwork Contractor, so he can evaluate his workmanship, equipment effectiveness and site conditions. The Earthwork Contractor is responsible for compaction as required by the Geotechnical Report(s) and governmental agencies.

- Fill areas unused for a period of time may require moisture conditioning, processing and recompaction prior to the start of additional filling. The Earthwork Contractor should notify the Geotechnical Engineer of his intent so that an evaluation can be made.

- Fill placed on ground sloping at a 5-to-1 inclination (horizontal-to-vertical) or steeper should be benched into bedrock or other suitable materials, as directed by the Geotechnical Engineer. Typical details of benching are illustrated on Plates D-2, D-4, and D-5.

- Cut/fill transition lots should have the cut portion overexcavated to a depth of at least 3 feet and rebuilt with fill (see Plate D-1), as determined by the Geotechnical Engineer.

- All cut lots should be inspected by the Geotechnical Engineer for fracturing and other bedrock conditions. If necessary, the pads should be overexcavated to a depth of 3 feet and rebuilt with a uniform, more cohesive soil type to impede moisture penetration.

- Cut portions of pad areas above buttresses or stabilizations should be overexcavated to a depth of 3 feet and rebuilt with uniform, more cohesive compacted fill to impede moisture penetration.

- Non-structural fill adjacent to structural fill should typically be placed in unison to provide lateral support. Backfill along walls must be placed and compacted with care to ensure that excessive unbalanced lateral pressures do not develop. The type of fill material placed adjacent to below grade walls must be properly tested and approved by the Geotechnical Engineer with consideration of the lateral earth pressure used in the design.

Foundations

- The foundation influence zone is defined as extending one foot horizontally from the outside edge of a footing, and proceeding downward at a ½ horizontal to 1 vertical (0.5:1) inclination.

- Where overexcavation beneath a footing subgrade is necessary, it should be conducted so as to encompass the entire foundation influence zone, as described above.

- Compacted fill adjacent to exterior footings should extend at least 12 inches above foundation bearing grade. Compacted fill within the interior of structures should extend to the floor subgrade elevation.

Fill Slopes

- The placement and compaction of fill described above applies to all fill slopes. Slope compaction should be accomplished by overfilling the slope, adequately compacting the fill in even layers, including the overfilled zone and cutting the slope back to expose the compacted core

- Slope compaction may also be achieved by backrolling the slope adequately every 2 to 4 vertical feet during the filling process as well as requiring the earth moving and compaction equipment to work close to the top of the slope. Upon completion of slope construction, the slope face should be compacted with a sheepsfoot connected to a sideboom and then grid rolled. This method of slope compaction should only be used if approved by the Geotechnical Engineer.

- Sandy soils lacking in adequate cohesion may be unstable for a finished slope condition and therefore should not be placed within 15 horizontal feet of the slope face.

- All fill slopes should be keyed into bedrock or other suitable material. Fill keys should be at least 15 feet wide and inclined at 2 percent into the slope. For slopes higher than 30 feet, the fill key width should be equal to one-half the height of the slope (see Plate D-5).

- All fill keys should be cleared of loose slough material prior to geotechnical inspection and should be approved by the Geotechnical Engineer and governmental agencies prior to filling.

- The cut portion of fill over cut slopes should be made first and inspected by the Geotechnical Engineer for possible stabilization requirements. The fill portion should be adequately keyed through all surficial soils and into bedrock or suitable material. Soils should be removed from the transition zone between the cut and fill portions (see Plate D-2).

Cut Slopes

- All cut slopes should be inspected by the Geotechnical Engineer to determine the need for stabilization. The Earthwork Contractor should notify the Geotechnical Engineer when slope cutting is in progress at intervals of 10 vertical feet. Failure to notify may result in a delay in recommendations.

- Cut slopes exposing loose, cohesionless sands should be reported to the Geotechnical Engineer for possible stabilization recommendations.

- All stabilization excavations should be cleared of loose slough material prior to geotechnical inspection. Stakes should be provided by the Civil Engineer to verify the location and dimensions of the key. A typical stabilization fill detail is shown on Plate D-5.

- Stabilization key excavations should be provided with subdrains. Typical subdrain details are shown on Plates D-6.

Subdrains

- Subdrains may be required in canyons and swales where fill placement is proposed. Typical subdrain details for canyons are shown on Plate D-3. Subdrains should be installed after approval of removals and before filling, as determined by the Soils Engineer.

- Plastic pipe may be used for subdrains provided it is Schedule 40 or SDR 35 or equivalent. Pipe should be protected against breakage, typically by placement in a square-cut (backhoe) trench or as recommended by the manufacturer.

- Filter material for subdrains should conform to CALTRANS Specification 68-1.025 or as approved by the Geotechnical Engineer for the specific site conditions. Clean ¾-inch crushed rock may be used provided it is wrapped in an acceptable filter cloth and approved by the Geotechnical Engineer. Pipe diameters should be 6 inches for runs up to 500 feet and 8 inches for the downstream continuations of longer runs. Four-inch diameter pipe may be used in buttress and stabilization fills.

Subject: Phase I Environmental Site Assessment
5010 Azusa Canyon Road
Irwindale, California

Dear Messrs. Hines and Feibusch:

Ardent Environmental Group, Inc. (Ardent) has performed a Phase I Environmental Site Assessment (ESA) of the above-referenced property (site). Work was conducted in general accordance with the proposal between Ardent and Overton Moore Properties, dated January 13, 2017, and the Master Agreement between LaSalle Investment Management, Inc. and Ardent, dated November 3, 2015. The attached report presents our methodology, findings, opinions, and conclusions regarding the environmental conditions at the site. We appreciate the opportunity to be of service to you on this project. If there are any questions, please feel free to call the undersigned at your convenience.

Sincerely,
Ardent Environmental Group, Inc.

EXECUTIVE SUMMARY

Ardent Environmental Group, Inc. (Ardent) was retained by Overton Moore Properties (OMP) and LaSalle Investment Management, Inc. (LIM, collectively referred to as "OMP/LIM") to perform a Phase I Environmental Site Assessment (ESA) of the property located at 5010 Azusa Canyon Road in the city of Irwindale, California (site). Frontier Communications Corporation (Frontier) currently owns the site. The site has historically been used by GTE, Verizon, and Frontier as a telecommunication maintenance yard. The telecommunication maintenance yard comprises five main buildings, referred to as the Office Building, Supply Building, Large Storage Building, Vehicle Service Building, and Truck Wash Tunnel, and numerous small outbuildings. OMP/LIM is considering purchasing the site as part of a portfolio of Frontier properties located throughout Southern California. Following acquisition, OMP/LIM is planning to lease the property back to Frontier for approximately two years, after which, the property will be redeveloped for commercial purposes. Site assessment activities for this report were conducted between January 17, 2017 and February 21, 2017.

In summary, the following findings and conclusions were noted:

- From at least 1928 through 1952, the site was used for agricultural purposes and residences. In approximately 1957, the site began to be used as a telecommunication maintenance yard. The Vehicle Service Building was constructed in 1957. In 1964, a large office building was located in the southwestern portion of the site and oriented in an east-west direction. By 1966, the historical office building was replaced with the existing Office Building, Supply Building, Large Storage Building, and Truck Wash Tunnel.
- Groundwater has been measured in the site vicinity at depths of approximately 250 feet below the ground surface (bgs) and flows in a southwesterly direction. The site is located within the San Gabriel Valley Groundwater Basin. Portions of the San Gabriel Valley Groundwater Basin have been listed on the National Priority List (NPL), or Superfund Site. The site is located within the Baldwin Park Operable Unit of the San Gabriel Valley Groundwater Basin which has been impacted with volatile organic compounds (VOCs), namely the chlorinated solvents trichloroethene (TCE) and tetrachloroethylene (PCE), which were historically used by the commercial and industrial facilities located in this area. Based on our review of groundwater plume maps provided by the United States Environmental Protection Agency (EPA or USEPA), the site is located within a VOC plume and groundwater beneath the site has been impacted with chlorinated solvents ranging from the Maximum Contaminant Levels (MCLs) to 10 times the MCLs. On behalf of the EPA, the Regional Water Quality Control Board, Los Angeles Region (RWQCB) has investigated the site as part of their Well Investigation Program (WIP). Two investigations were completed at the site which indicated relatively low concentrations of VOCs, including chlorinated solvents. An initial soil and soil gas survey completed in 1991 resulted in a no further action (NFA) letter dated September 3, 1992, and an additional investigation completed in 1995 resulted in another NFA letter dated June 5, 1998. The regional VOC-impacted groundwater would be

considered a recognized environmental condition (REC). Issuance of the NFA letter indicates that the site operations have not contributed to the regional groundwater contamination, and therefore, the site owner would not be considered a Responsible Party.

- As part of the maintenance activities, fueling and maintenance of fleet vehicles included the use of underground storage tanks (USTs). Throughout the years, these tanks were removed and replaced with aboveground storage tanks (ASTs). The on-site USTs included one 10,000-gallon diesel UST associated with the southern dispenser which was removed in 1988, a 12,000-gallon gasoline UST associated with the northern dispenser which was removed in 1996, a 10,000-gallon gasoline UST which replaced the 12,000-gallon UST and was removed in 2009, and a 1,000-gallon waste oil UST located immediately south of the Vehicle Service Building which was removed in 1996. It should be noted that a fifth UST may have been located in the same general area as the tank associated with the southern dispenser island. A building permit dated 1957 was noted for a “gas pump canopy.” At this time, only the southern dispenser was noted on-site. It is assumed this tank was replaced with the 10,000-galon UST discussed above, which was ultimately removed. The four USTs were removed under the direction and oversight of the Los Angeles County Department of Public Works (LACDPW), and impacted soils were remediated by excavation. Laboratory results of confirmation samples showed no detectable to low concentrations of residual contaminants. Based on these results, NFA letters were issued by the LACDPW. Ardent has reviewed these data and concur with the regulatory agency that no further work is necessary. Based on these results, these former USTs would no longer be considered an environmental concern to the site. According to American Society for Testing and Materials (ASTM) Standards, these former features would be considered a historical recognized environmental condition (HREC).
- The Vehicle Service Building formerly used four hydraulic lifts (which have been removed) and currently uses three hydraulic lifts. None of these features have been investigated. Based on this information, these features would be considered an environmental concern to the site. Solvents are also typically used to clean parts. Due to the possible solvent use in the Vehicle Service Building, a vapor intrusion issue may be present.
- A former steam cleaning area was also located in the mid-central portion of the Vehicle Service Building. The former steam cleaning area was reportedly connected to two clarifiers. The clarifiers were reportedly “removed” or “abandoned,” it was not clarified which occurred. The area has since been remodeled to include an office area. Steam cleaning activities typically use solvents as degreaser agents. One soil gas point was placed in the vicinity of the clarifiers in 1991 as part of the WIP investigations. Laboratory results indicated no detectable concentrations of VOCs and low concentrations of petroleum hydrocarbons (10 milligrams per kilogram [mg/kg]) in soil and total VOC concentrations of 4.85 to 8.94 micrograms per liter (ug/l), a breakdown per constituent was not provided. Although these laboratory results are relatively low, it is our judgement that the clarifiers and former steam cleaning area were not adequately assessed. Based on this information, these features would be considered an environmental concern to the site and may pose a possible vapor intrusion issue.
- Three 120-gallon underground hydraulic fluid reservoirs were located immediately south of the Vehicle Service Building. Although representatives of Frontier did not know what these features were used for, it is our assumption, based on their location, that the reservoirs were used to store hydraulic oil for the hydraulic lifts. Hydraulic oil is now supplied to the lifts by

two ASTs. The reservoirs have not been previously investigated, and therefore, would be considered an environmental concern to the site.

- The Truck Wash Tunnel includes an area in the northwestern portion of the site that contains a truck washing area, a clarifier, a steam cleaning pad and floor drain, former hazardous waste storage area, former septic tank, two cesspools, and a waste drum storage enclosure. This area was investigated in 1991 as part of the WIP investigations and included the collection of shallow soil and soil gas samples. Laboratory results of soil samples indicated no detectable concentrations of VOCs, and only one soil sample reported elevated concentrations of petroleum hydrocarbons next to the clarifier (at 11,000 mg/kg at 7.5 feet). Total VOCs in soil gas ranged from 0.89 ug/l in a former hazardous waste storage area located near the northeastern corner of the Truck Wash Tunnel to 215.1 ug/l near the clarifier outlet. A breakdown of the VOC constituents was not provided. Although the RWQCB issued a NFA letter, the consultant completing the project recommended that the petroleum hydrocarbon impacted soil and clarifier be removed. In 1992, the clarifier and 47 tons of impacted soils were excavated and removed. Laboratory results of confirmation samples indicated no detectable to low concentrations of petroleum hydrocarbons and VOCs. The RWQCB issued a NFA letter dated January 20, 1993. Although the impacted materials appear to have been removed, the remediation effort was completed over 24 years ago and this area has continued to be used to clean vehicles and store hazardous wastes. Based on this information, the Truck Wash Tunnel area would be considered an environmental concern to the site and may pose a vapor intrusion issue.
- In 1956, a site plan referenced the installation of a dry well located in the northeastern portion of the site. The dry well was connected to a former truck scale, that has since been removed from the site. Based on a review of the site plan, the dry well would now be located beneath the existing Large Storage Building. A circular steel plate was noted in this general area. Rainwater accumulated within the subsurface compartment holding the truck scale would drain to the dry well. Since rainwater would likely contain oil and grease from the truck scale, this feature would be considered an environmental concern to the site. A circular steel plate was also located near the Large Storage Building, which may also be a dry well. In additional, solvent storage was noted by Ardent in the Large Storage Building.
- Verizon was listed as a small quantity generator of hazardous waste, including chlorinated solvents. Solvents are typically used for parts cleaning and degreasing purposes. Due to the possible solvent uses in the Vehicle Service Building, former steam cleaning area, Truck Wash Tunnel area, and Large Storage Building, a possible vapor intrusion issue may be present.
- Numerous 55-gallon drums and other containers were noted throughout the site used to contain waste oil, virgin oil, oil filters, and/or other liquid or hazardous materials. Due to the lack of staining or evidence of a release, these containers would not be considered an environmental concern to the site.
- Based on the age of the buildings (1957, 1964, and 1966), asbestos containing building materials (ACMs) and lead-based paint (LBP) may be present.
- No other on- or off-site environmental concerns were noted.

Ardent has performed this Phase I ESA in general conformance with the scope and limitations of the ASTM Practice E 1527-13, ASTM Practice E 2600-15, and the Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiry (AAI), Final Rule (40 CFR, Part 312), for the property located at 5010 Azusa Canyon Road in the city of Irwindale, California. Any limitations or exceptions encountered during completion of this report are stated in Section 1.4. Based on this Phase I ESA, no evidence or indication of recognized environmental conditions (RECs), or conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the site has been revealed, except for the former and current hydraulic lifts in the Vehicle Service Building, features associated with the Truck Wash Tunnel (including the truck washing area, clarifier, steam cleaning pad and floor drain, former cesspool, waste drum storage enclosure, and former hazardous waste storage area), three underground hydraulic oil reservoirs, the former steam cleaning area and two former clarifiers in the Vehicle Service Building (former steam cleaning operations), dry wells, Large Storage Building (solvent storage), and the VOC-impacted groundwater. Although not considered an REC in accordance with ASTM Standards, ACMs and LBP may be present in the on-site buildings.

Based on the information obtained during this assessment, Ardent has the following recommendations:

- Although the VOC-impacted groundwater is considered an REC in accordance with ASTM Standards, the site has been investigated and issued a NFA letter. However, the investigations were completed over 22 years ago and solvent uses have continued, and therefore, additional investigations should be completed to further assess whether impacted soil exists. In addition, since completing the investigations at the site, regulatory agencies have issued screening levels for VOCs in soil gas for the protection of human health through vapor intrusion. These screening levels have much lower concentrations than those used to assess whether a significant release has occurred (i.e. a threat to groundwater). Verizon was noted in agency files to generate hazardous wastes including chlorinated solvents. Based on the uncertainty of solvent uses in the Vehicle Service Building, former steam cleaning area and clarifiers, Large Storage Building, and Truck Wash Tunnel area (which would include the active Truck Wash Tunnel and associated clarifier, former cesspools, former septic tank, and active steaming pad), the recorded use of chlorinated solvents at the site, and due to the lower screening levels associated with human health risk criteria, Ardent recommends completing a soil gas survey in the area of possible solvent uses to assess whether a vapor intrusion issue is present.
- Soil sampling should be completed in the location of the former features of environmental concern that are not going to be used by Frontier during its lease. The former steam cleaning area and two former clarifiers in the Vehicle Service Building are inaccessible (currently being used as an office). Also, lithological conditions may not allow the advancement of deep soil borings (i.e. due to the presence of gravel and cobbles), and

therefore, investigation in the locations of the dry wells (also described as the circular steel plates beneath, and in close proximity to, the Large Storage Building) may be difficult. Dry wells are sometimes installed at depths of up to 30 feet deep. Based on this information, Ardent suggests using the soil gas survey described above as a screening technique in these areas. Soil borings should be attempted in the former hazardous waste storage area near the Truck Wash Tunnel and next to the former hydraulic lifts, where investigations would be limited to 15 feet bgs.

- Prior to Frontier vacating the property, all miscellaneous containers of waste, liquids or hazardous substances should be profiled and disposed. All regulatory permits should be closed. All features with possible environmental concerns that will continue to be used by Frontier during its lease should be removed at the end of its lease, including clarifiers, active hydraulic lifts, Truck Wash Tunnel, steam cleaning pad and floor drain, waste drum storage enclosure, ASTs, and hydraulic oil reservoirs. Following removal, confirmation samples should be collected. If regulated, the removal activities should be completed under the direction and oversight of the lead regulatory agency.
- Prior to demolition, a comprehensive asbestos and LBP survey should be completed. If present, these materials should be removed by a State-licensed abatement contractor.

1 INTRODUCTION

Ardent Environmental Group, Inc. (Ardent) was retained by Overton Moore Properties (OMP) and LaSalle Investment Management, Inc. (collectively referred to as "OMP/LIM") to perform a Phase I Environmental Site Assessment (ESA) of the property located at 5010 Azusa Canyon Road in the city of Irwindale, California (site; Figure 1). Work was completed in general accordance with the proposal dated January 13, 2017 between OMP and Ardent and the Master Agreement between LIM and Ardent, dated November 3, 2015. Frontier Communications Corporation (Frontier) currently owns the site. The site has historically been used by GTE, Verizon, and Frontier as a telecommunication maintenance yard. The telecommunication maintenance yard comprises five main buildings, referred to as the Office Building, Supply Building, Large Storage Building, Vehicle Service Building, and Truck Wash Tunnel, and numerous small outbuildings. OMP/LIM is considering purchasing the site as part of a portfolio of Frontier properties located throughout Southern California. Following acquisition, OMP/LIM is planning to lease the property back to Frontier for approximately two years, after which, the property will be redeveloped for commercial purposes. The following sections identify the purpose, the involved parties, the scope of work, and the limitations and exceptions associated with the Phase I ESA.

1.1 Purpose of Phase I ESA

In accordance with the American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Standard E 1527-13), the objective of the Phase I ESA was to identify, to the extent feasible pursuant to ASTM Standard E 1527-13, recognized environmental conditions (RECs), which are defined by ASTM as "…the presence or likely presence of any hazardous substance or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

The United States Environmental Protection Agency ("USEPA" or "EPA") has stated that ASTM Standard E 1527-13, is consistent with the Standards and Practices for All Appropriate Inquires (AAI), Final Rule (40 Code of Federal Regulations [CFR], Part 312) and is compliant with the statutory criteria for all appropriate inquires. All appropriate

inquires, as defined in the AAI Final Rule, must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) prior to acquiring a property or seeking or receiving federal Brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, was to identify releases and threatened releases of hazardous substances which cause or threaten to cause the incurrence of response costs.

As part of this Phase I ESA, Ardent also assessed whether a vapor encroachment condition (VEC) exists at the site. The VEC assessment was completed following the ASTM E 2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM Standard E 2600-15). The objective of this work was to evaluate whether possible contaminants (e.g. VOCs) are present in soil and/or groundwater in the site vicinity which might pose a possible vapor intrusion risk into existing or future buildings at the site.

1.2 Involved Parties

Ms. Heidi Heggeness of Ardent conducted the historical research, site reconnaissance, regulatory inquiries, and document review. Mr. Paul Roberts, who meets the definition of an *environmental professional* as set forth in the AAI Final Rule, completed oversight and review.

1.3 Scope of Work

Ardent's scope of work for this Phase I ESA is consistent with ASTM Standard E1527-13 and E-2600-15, the LIM Phase I Environmental Assessment Minimum Investigation and Reporting Policy, and included the activities listed below.

- **Review of User Provided Information** – Review of information regarding title and judicial records for environmental liens or activity and use limitations, recorded environmental liens, actual or specialized knowledge or commonly known information regarding environmental conditions at the site, the relationship of the purchase price of the property to the fair market value, readily available maps, environmental reports, and other environmental documents pertaining to the site, as available and obtained from the user/client.
- **Records Review** – Acquisition and review of records, including federal, state, tribal, and local regulatory agency databases, for the site and for properties located within a specified radius of the site; local regulatory agency files for the site and selected nearby properties of potential environmental concern; physical setting sources, including topographic maps, geologic maps, and geologic and hydrogeologic reference documents; and historic land use information including aerial photographs, historical fire

insurance rate maps, building department records, and city directories, as necessary, that are reasonably ascertainable, publicly available, can be obtained within reasonable time and cost, and are practically reviewable.

- **Vapor Encroachment Condition (VEC)** – Review available regulatory and client provided data to assess Tier 1 non-numeric screening for the site. Ardent evaluated whether contaminants were present in soil and/or groundwater in the site vicinity which might pose a VEC at the site.
- **Site Reconnaissance** – Performance of a site reconnaissance to visually observe the site and any structure(s) located on the site to the extent not obstructed by bodies of water, adjacent buildings, or other obstacles. The purpose of the site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the site, including the general site setting, site usage, use and storage of hazardous materials and petroleum products, disposal of waste products and materials, sources of polychlorinated biphenyls (PCBs), and evidence of releases and possible risks of contamination from activities at adjacent properties.
- **Interviews** – Interviews with site representatives, including owners, occupants, and site managers, regarding the environmental condition of the site to the extent necessary and such persons are available. Interviews with state and/or local government officials as necessary.
- **Report** – Evaluation of the information and data obtained by the Phase I ESA process outlined above and preparation of this Phase I ESA report documenting findings and providing opinions and conclusions regarding possible environmental impacts and RECs at the site.

1.4 Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ardent should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the observed site conditions and the referenced literature. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of man at the site or nearby properties. In addition, changes to the applicable laws, regulations, codes, and

standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ardent has no control. Ardent cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material or any other hazardous materials do not exist on the site. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.5 Special Terms and Conditions

As indicated in Section 13.1.5 of ASTM Standard E 1527-13, the following, which is not intended to be all inclusive, represents out-of-scope items with respect to a Phase I ESA: asbestos-containing materials (ACMs), radon, lead-based paint (LBP), lead in drinking water, wetlands, regulatory compliance, cultural and historic risk, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, biological agents, and mold. As part of our agreement with the client, Ardent visually assessed site buildings (if present) for possible ACMs, LBP, and mold. In addition, ASTM Standard E 2600-15 supplements the ASTM Standard E 1527-13 to include evaluation of VEC using Tier 1 screening.

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, Ardent did not address interpretations of zoning regulations, building code requirements, or property title issues.

1.6 User Reliance

This report may be relied upon and is intended exclusively for use by OMP and LIM. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than the foregoing parties is undertaken at said parties' sole risk.

1.7 Physical Limitations

No physical limitations were encountered during the completion of this Phase I ESA report.

1.8 Data Gaps

No significant data gaps were noted during the preparation of this Phase I ESA report.

2 GENERAL SITE CHARACTERISTICS

The following sections describe the location and the current uses of the site and adjacent properties. A site location map is presented as Figure 1, a site vicinity map is presented as Figure 2, and a site plan is presented as Figure 3. Selected photographs of the site and surrounding properties are provided in Appendix A.

2.1 Location and Legal Description

The site is located on the northeast corner of the intersection of Nubia Street and Azusa Canyon Road in the city of Irwindale, county of Los Angeles, California (Figure 1). The site has been assigned the address 5010 Azusa Canyon Road and the Los Angeles County Tax Assessor's Parcel Numbers (APNs) 8417-025-8001, 8417-025-801, 8417-026-800, and 8417-026-801. The legal description of the site is provided on the Preliminary Title Report, included in Appendix B.

The site is bounded as shown on Figure 2. The site boundary information was obtained during the site reconnaissance and information provided by the client.

2.2 Site Description and Current Site Uses/Operations

The following paragraphs present a description of the site, the activities being conducted on-site, the heating and cooling systems utilized in the site building, the sewage disposal system, and the potable water provider for the site, if any.

2.2.1 Site Description

The site is an irregular-shaped property that comprises approximately 10.52-acres. The site is developed with a number of buildings such as the Office Building, Supply Building, Large Storage Building, Vehicle Service Building, and Truck Wash Tunnel, and numerous small outbuildings (Figure 3).

2.2.2 Occupants

The site was occupied by Frontier which uses the site as a telecommunication maintenance yard.

2.2.3 Heating and Cooling Systems

General heating or cooling systems for the on-site building use electricity and natural gas obtained from local utility providers.

2.2.4 Sewage Disposal/Septic Systems

On-site sewage disposal, such as septic tanks or leach fields, were not observed at the site, although historical use, including septic tanks, a cesspool, and dry well were reported for the site. The site is currently connected to the municipal sewer system.

2.2.5 Potable Water

Potable water is supplied by the local water purveyor.

2.3 Adjacent Properties

In general, the site vicinity consists of industrial, commercial, and residential properties (Figure 2). The site is bound to the north, east, and south by commercial and industrial properties and to the west, beyond Azusa Canyon Road, by residential. Immediately north and west of the site are multi-tenant industrial buildings, followed by warehouse and distribution facilities. Commercial properties, such as AAG Ice Cream and Malcom Drilling are located south of the site.

No above ground storage tanks (ASTs), evidence of underground storage tanks (USTs), or large quantities of possible hazardous materials or wastes were noted being stored by off-site facilities along the site property line. In general, these adjacent properties would not be considered an environmental concern to the site.

3 USER PROVIDED INFORMATION

The following sections summarize information provided by the user to assist the environmental professional in identifying the possibility of RECs in connection with the site, and to fulfill the user's responsibilities in accordance with Section 6 of ASTM Standard E 1527-13. A copy of the user questionnaire is presented in Appendix B. The questionnaire was completed by Mr. Jason Hines of OMP.

3.1 Current Title Information

A Preliminary Title Report provided by OMP/LIM was reviewed by Ardent. The title report was prepared by First American Title Insurance Company National Commercial Services dated January 4, 2017. According to the Preliminary Title Report, the current owner of the site is "GTE California Incorporated, a corporation which acquired title and formerly known as General Telephone Company of California." A copy of the Preliminary Title Report is included in Appendix B.

3.2 Environmental Liens or Activity and Use Limitations

Information regarding environmental liens or activity and use limitations (AULs) was not provided to Ardent. Mr. Hines was not aware of any environmental liens or AULs against the site that are filed or recorded under federal, state, or local law. No environmental liens or AULs were noted in the preliminary title report.

3.3 Specialized Knowledge

Mr. Hines indicated that, for purposes of this assessment, the client has no specialized knowledge or experience pertaining to the site or the adjacent properties that are material to RECs in connection with the site.

3.4 Commonly Known or Reasonably Ascertainable Information

Mr. Hines is not aware of commonly known or reasonably ascertainable information pertaining to the site.

3.5 Valuation Reduction for Environmental Issues

In a transaction involving the purchase of a parcel of commercial real estate, the user shall consider the relationship of the purchase price of the property to fair market value of the property if the property was not affected by hazardous substances or petroleum products. Mr. Hines indicated that the purchase price reflects fair market value.

3.6 Reason for Performing Phase I ESA

Ardent was retained by OMP/LIM to perform the Phase I ESA as part of its real estate due diligence activities for acquisition of the site.

3.7 Other User Provided Information

As part of this investigation, Ardent was provided a previous Phase I ESA prepared by ATC Group Services LLC (ATC) dated December 12, 2016 (referred to herein as the "ATC Phase I ESA"). The ATC Phase I ESA was recently completed for Frontier in preparation to sell the property. This report was very comprehensive and contained a number of additional reports regarding UST closure and other investigations. Ardent reviewed the ATC Phase I ESA and the attached environmental documents and compared laboratory results of previous investigations with current regulatory guidelines. The following presents a summary of the information reviewed. Detailed information and copies of previous reports are presented in Appendix C.

3.7.1 Historical Land Use

The current telecommunication maintenance yard comprises five main buildings, referred to as the Office Building, Supply Building, Large Storage Building, Vehicle Service Building, and Truck Wash Tunnel, and numerous small outbuildings.

From at least 1928 through 1952, the site was used for agricultural purposes and residences. In approximately 1957, the site began to be used as a telecommunication maintenance yard. The Vehicle Service Building was constructed in 1957. In 1964, a large office building was located in the southwestern portion of the site and oriented in an east-west direction. By 1966, the historical office building was replaced with the existing Office Building, Supply Building, Large Storage Building, and Truck Wash Tunnel. Since the site has been developed occupants included GTE, Verizon and Frontier and utilized as a telecommunication maintenance yard.

3.7.2 Underground Storage Tanks

As part of the maintenance activities, fueling and maintenance of fleet vehicles included the use of underground storage tanks (USTs). Throughout the years, these tanks were removed and replaced with aboveground storage tanks (ASTs). The on-site USTs included one 10,000-gallon diesel UST associated with the southern dispenser which was removed in 1988, a 12,000-gallon gasoline UST associated with the northern dispenser which was removed in 1996, a 10,000-gallon gasoline UST which replaced the 12,000-gallon UST and was removed in 2009, and a 1,000-

gallon waste oil UST located immediately south of the Vehicle Service Building which was removed in 1996. It should be noted that a fifth UST may have been located in the same general area as the tank associated with the southern dispenser island. A building permit dated 1957 was noted for a "gas pump canopy." At this time, only the southern dispenser was noted on-site. It is assumed this tank was replaced with the 10,000-galon UST discussed above, which was ultimately removed. The four USTs were removed under the direction and oversight of the Los Angeles County Department of Public Works (LACDPW), and impacted soils were remediated by excavation. Laboratory results of confirmation samples showed no detectable to low concentrations of residual contaminants. Based on these results, NFA letters were issued by the LACDPW. Ardent has reviewed these data and concur with the regulatory agency that no further work is necessary. Based on these results, these former environmental issues would no longer be considered an environmental concern to the site. According to American Society for Testing and Materials (ASTM) Standards, these former features would be considered a historical recognized environmental condition (HREC).

Three 120-gallon underground hydraulic fluid reservoirs were located immediately south of the Vehicle Service Building. See Section 6.0 for further discussion.

3.7.3 Other Possible Environmental Concerns

A former steam cleaning area was also located in the mid-central portion of the Vehicle Service Building. The former steam cleaning area was reportedly connected to two clarifiers. The clarifiers were reportedly "removed" or "abandoned," it was not clarified which occurred. The area has since been remodeled to include an office area. Steam cleaning activities typically use solvents as degreaser agents. One soil gas point was placed in the vicinity of the clarifiers in 1991 as part of the WIP investigations. Laboratory results indicated no detectable concentrations of VOCs and low concentrations of petroleum hydrocarbons (10 milligrams per kilogram [mg/kg]) in soil and total VOC concentrations of 4.85 to 8.94 micrograms per liter (ug/l), a breakdown per constituent was not provided. Although these laboratory results are relatively low, it is our judgement that the clarifiers and former steam cleaning area were not adequately assessed. Based on this information, these

features would be considered an environmental concern to the site and may pose a possible vapor intrusion issue. Based on the age of the buildings (1957, 1964, and 1966), asbestos containing building materials (ACMs) and lead-based paint (LBP) may be present.

4 PHYSICAL SETTING

The following sections include discussions of topographic, geologic, and hydrogeologic conditions in the vicinity of the site, based upon our document review and our visual reconnaissance of the site and adjacent areas.

4.1 Site Topography

Based on the review of the United States Geological Survey (USGS) 7.5 Minute Series, Baldwin Park, California, Topographic Quadrangle Map dated 2012, the site has an elevation of approximately 449 feet above mean sea level (msl) and slopes to the southwest.

4.2 Geology

The site is located in the northern area of the Peninsular Ranges geomorphic province. The active Sierra Madre Fault which separates the Peninsular Range from the Transverse Range is located approximately 2 miles north of the site. According to the 2010 Geologic map of California the underlying geology of the site consists of older Quaternary alluvium associated with lake, playa and terrace deposits. This alluvium consists of a pebble to boulder gravel with a course grained sand matrix. Irwindale is a rock quarry area; therefore soil lithology is mostly sand, gravel, and large cobbles.

4.3 Oil and Gas Maps

Based on a review of the Division of Oil, Gas, and Geothermal Resources (DOGGR) on-line well finder, the site does not lie within an active oil field and no oil or natural gas wells have been drilled on the site or within the site vicinity.

4.4 Site Hydrology

The following sections discuss the site hydrology in terms of both surface waters and groundwater.

4.4.1 Surface Waters

No natural surface water bodies, including ponds, streams, or other bodies of water, are present on the site. The Santa Fe Damn, an earthen dam, is located approximately 0.90-mile northwest of the site.

4.4.2 Groundwater

Groundwater has been measured in the site vicinity at depths of approximately 250 feet below the ground surface (bgs) and flows in a southwesterly direction. The site is located within the San Gabriel Valley Groundwater Basin. Portions of the San Gabriel Valley Groundwater Basin have been listed on the National Priority List (NPL), or Superfund Site. The site is located within the Baldwin Park Operable Unit of the San Gabriel Valley Groundwater Basin which has been impacted with VOCs, namely the chlorinated solvents trichloroethene (TCE) and tetrachloroethylene (PCE), which were historically used by the commercial and industrial facilities located in this area. Based on our review of groundwater plume maps provided by the United States Environmental Protection Agency (EPA or USEPA), the site is located within a VOC plume and groundwater beneath the site has been impacted with chlorinated solvents. On behalf of the EPA, the Regional Water Quality Control Board, Los Angeles Region (RWQCB) has investigated the site as part of their Well Investigation Program (WIP). Two investigations were completed at the site which indicated concentrations of VOCs in soil gas, including chlorinated solvents. These concentrations did not identify a significant release source that would pose a threat to groundwater. Based on these results, a no further action (NFA) letter was issued dated September 3, 1992, following the initial investigation, and an additional investigation completed in 1995 resulted in another NFA letter dated June 5, 1998. The regional VOC-impacted groundwater would be considered a recognized environmental condition (REC). Issuance of the NFA letter indicates that the site operations have not contributed to the regional groundwater contamination, and therefore, the site owner would not be considered a Responsible Party.

5 HISTORICAL LAND USE

Ardent conducted a historical land use record search for both the site and surrounding areas. This included a review of one or more of the following sources that were found to be both reasonably

ascertainable and useful for the purposes of this Phase I ESA: historical aerial photographs, historical fire insurance maps, historical city directories, building permits and plans, topographic maps, property tax records, zoning/land use records, and a review of prior environmental assessment reports regarding the site. Ardent used some of the historical land use information provided in the ATC Phase I ESA to summarize the following sections. A copy of this document is provided in Appendix C.

5.1 Summary of Historical Land Use of the Property

From at least 1928 through 1952, the site was used for agricultural purposes and residences. In approximately 1957, the site began use as a telecommunication maintenance yard. The Vehicle Service Building was constructed in 1957. In 1964, a large office building was located in the southwestern portion of the site and oriented in an east-west direction. By 1966, the historical office building was replaced with the existing Office Building, Supply Building, Larger Storage Building, and Truck Wash Tunnel.

5.2 Summary of Historical Land Use of Adjoining Properties

The site vicinity was used for residential and agricultural purposes from at least 1928 through 1952. By 1964, an increase in commercial buildings were noted in the site vicinity. From at least 1928 through 1983, the large property located immediately east of the site was used as a sand and gravel quarry. By 1990, the quarry had been filled.

5.3 Fire Insurance Rate Maps

Historical Sanborn Fire Insurance Rate Maps (Sanborn maps) were requested from Environmental Data Resources Inc. (EDR) of Shelton, Connecticut. According to EDR, no Sanborn maps were available for the site or the site vicinity.

5.4 Historical Aerial Photographs

Historical aerial photographs for selected years between 1928 and 2012 were provided by EDR in ATC's Phase I ESA. The following presents a summary of our review.

- **1928, 1938, 1948, and 1952** – The site was used for residential and agricultural purposes. A large sand and gravel quarry was located immediately east of the site. An increase in residential use was located west and south of the site in 1952. Azusa Canyon Road was noted west of the site.

- **1964** – The site was used as a telecommunication maintenance yard. A large office building was noted in the southwestern portion of the site, orientated in an east-west direction. An increase of commercial use was noted south of the site.
- **1977** – The large office building located in the southwestern portion of the site had been razed and replaced with the current buildings. An increase in commercial activity was noted in the site vicinity.
- **1979, 1981, 1983, 1990, 1994, 2002, 2005, 2009, 2010, and 2012** – The site showed little change from the 1977 photograph. The larger quarry had been filled in by 1990 and by 2002, this eastern property had been developed with large warehouse/distribution buildings.

5.5 Building Department

The City of Irwindale Building Department (IBD) maintains building permits for the site. As presented in the ATC Phase I ESA, building permits dated 1957 were issued for a 24,500-square foot office and warehouse and septic system, vehicle service building, truck scale pit, gas pump canopy, and a small tool shed. In 1966, permits were noted for the demolition of the office building and warehouse, and to abandon its septic system. In 1967, a number of permits were noted in the file including a permit to install a UST (the location was not provided), a permit to construct the Truck Wash Tunnel and connect the system to the municipal sewer, and a permit to connect the vehicle Service Building to the municipal sewer.

In 1992, a permit was issued to remove and replace the clarifier in the Truck Wash Tunnel area. In 1996, a permit was issued to construct a fueling system, including the north canopy and 12,000-gallon UST, and to install the existing duel compartment 500-gallon AST used to store virgin and waste oils.

5.6 City Directories

City directories were obtained from EDR for the site and immediate site vicinity. Selected city directories between the years 1920 through 2013 were reviewed. The site was designated as “Verizon California” in the 2008 city directories. No other listings for the site address were noted. The properties in the site vicinity were mainly listed as residences from the 1950s.

5.7 Historical Topographic Maps

Historical topographic maps for the site were provided by EDR for review. The maps provided for the site were dated 1894, 1897, 1898, 1904, 1925, 1927, 1928, 1933, 1939,

1953, 1966, 1972, 1981, and 2012. The maps indicate the site consisted of vacant land from at least 1984 through 1953. By 1966, the site was being used as the telecommunication maintenance yard. The site vicinity was also vacant from 1984 through 1933. In 1939, the beginning of the sand and gravel pit located immediately east of the site was shown.

5.8 Interviews

Interviews were conducted by Ardent with key site personnel (e.g., past and present owners, operators, and/or occupants) with the objective of obtaining information indicating RECs in connection with the site. The following are the site personnel interviewed for purposes of this assessment.

5.8.1 Interview with Owner

Mr. Mark Norton, Building Services Specialist with Frontier, was interviewed during the site visit. Findings of this interview are presented throughout the report.

5.8.2 Interview with Site Manager

No Site Manager was available to interview.

5.8.3 Interviews with Occupant

As noted above, Ardent met with Mr. Norton with Frontier. Findings of this interview are presented throughout the report.

5.8.4 Interviews with Local Government Officials

Representatives of local regulatory agencies were interviewed during completion of this report. The information obtained is presented throughout this report.

5.8.5 Interviews with Others

No other interviews were conducted during this Phase I ESA.

5.9 Previous Reports and Documents

Previous environmental investigations at the site are discussed in Section 3.7.

6 SITE RECONNAISSANCE

The site and site vicinity reconnaissance was performed by Ardent on January 30, 2017. The site reconnaissance involved a walking tour of the site and visual observations of adjoining properties. At the time of the site reconnaissance, the weather was sunny, and there were no weather-related obstructions at the site. Selected photographs taken during these activities are included in Appendix A.

At the time of the site reconnaissance, the site was occupied by Frontier and used as a telecommunication maintenance yard. The telecommunication maintenance yard comprises five main buildings, referred to as the Office Building utilized for offices, Supply Building utilized for equipment storage and offices, Large Storage Building utilized for storage, Vehicle Service Building utilized for maintenance of fleet vehicles, and Truck Wash Tunnel utilized for fleet vehicle washing purposes (Figure 3A). There are numerous small outbuildings throughout the property utilized for storage of various new and used telecommunication equipment. No fueling systems were noted.

During the site reconnaissance, Ardent observed numerous features in the northwest corner of the site including:

- Steam cleaning pad and floor drain
- Drum and compressor storage area
- Dual tank AST containing new and used oil
- Waste/drum storage enclosure
- A pump and reported soap chambers associated with the Car Wash Tunnel
- Compressor enclosure
- Circular access plate
- Two reported sample boxes for the truck wash or former steam clean area
- Clarifier
- Three reported vapor wells

These features are located immediately west of the Vehicle Service Building and discussed in greater detail throughout this report (Figure 3B).

During the site reconnaissance, Ardent was provided access to the Vehicle Service Building. The Vehicle Service Building included offices, various storage areas, a former boiler room, and a shop area utilized for maintenance of fleet vehicles (Figure 3C). The shop area included an alignment rack, evidence of four former hydraulic lifts, three active underground hydraulic lifts and two aboveground lifts (Figure 3C). These features are further discussed throughout this report.

Three 120-gallon underground hydraulic fluid reservoirs were located immediately south of the Vehicle Service Building. Although representatives of Frontier did not know what these features were used for, it is our assumption, based on their location, that the reservoirs were used to store hydraulic oil for the hydraulic lifts. Hydraulic oil is now supplied to the lifts by two ASTs. The reservoirs have not been previously investigated, and therefore, would be considered an environmental concern to the site.

6.1 Use and Storage of Hazardous Substances and Petroleum Products

One 55-gallon metal drum of engine oil, one 55-gallon metal drum of antifreeze, and two 5-gallon plastic containers of gear lubricant, were stored on a secondary containment system in the shop area of the Vehicle Service Building (Figure 3C). One 120-pound metal drum of motor grease and one 55-gallon metal drum of motor oil were stored on a secondary containment system located in the drum and compressor storage area immediately west of the Vehicle Service Building (Figure 3B). No staining or evidence of leaks were noted in these areas. Based on the lack of surficial staining, evidence of a release, and/or type of materials being stored, there is a low likelihood that a significant release has occurred and these features would not be considered an environmental concern to the site.

Numerous 1-gallon plastic containers containing chemicals including “ND-165”, a biodegradable degreasing solvent, “Chemstrip”, a heavy-duty paint stripper containing methylene chloride (a chlorinated solvent), and “Dichloron L.O.”, an insecticide, were noted in the northeast portion of the Large Storage Building (Figure 3A). Approximately three 5-gallon plastic containers of a scaling and corrosion inhibitor solution containing sulfuric acid and one “Virginia No. 10”, a degreasing solvent containing petroleum distillates and chlorinated hydrocarbons (a chlorinated solvent) were also stored in the northeast portion of the Large Storage Building (Figure 3A). Frontier representatives indicated the chemicals stored in this area were no longer used on the site and were in the process of disposing of the chemicals in accordance with Frontier’s environmental policy. No staining or evidence of leaks were noted in the Large Storage Building; however chlorinated solvents are highly toxic carcinogens and are heavily regulated by regulatory agencies. Based on the types of materials (chlorinated solvents) being stored, the Large Storage Building would be considered an environmental concern to the site.

6.2 Storage and Disposal of Hazardous Wastes

Approximately one 55-gallon drum of waste oil, one 55-gallon drum of used oil filters, one 55-gallon drum of used fuel and diesel filters, two 55-gallon drums of universal waste, two 55-gallon drums of solid oily debris, one 55-gallon drum of "ArmaKleen" cleaning solution (connected to a parts washer), one 55-gallon drum of used antifreeze, and three approximately 40-gallon drums of gear lubricant were located throughout the shop area of the Vehicle Service Building (Figure 3C). Based on the lack of surficial staining, evidence of a release, and/or type of materials being stored, there is a low likelihood that a significant release has occurred and these features would not be considered an environmental concern to the site.

6.3 Unidentified Substance Containers

Two unlabeled 55-gallon metal drums containing unknown material were stored on a secondary containment system in the drum and compressor storage area (Figure 3B). One unlabeled 55-gallon plastic drum was located immediately north of the Truck Wash Tunnel and in close proximity to the soap chambers (Figure 3B). Frontier representatives did not know the contents inside the unlabeled drums. No staining or evidence of leaks were noted in these areas. Based on the lack of staining, evidence of leaks, and/or utilization of secondary containment these features would not be considered an environmental concern to the site.

No other unidentified substance containers were observed site during the site reconnaissance.

6.4 Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs)

One dual compartment AST containing two approximately 250-gallon new and waste oil tanks were located immediately west of the former steam cleaning area (Figure 3B). No staining or evidence of leaks were noted. Two approximately 60-gallon hydraulic oil ASTs associated with the existing hydraulic lifts were noted on the west side of the Vehicle Service Building (Figure 3C). No staining or evidence of leaks were noted. Based on the lack of staining these features would not be considered an environmental concern to the site.

As previously discussed, three underground hydraulic fluid reservoirs were located south of the Vehicle Service Building (Figure 3C). Frontier representatives did not know what these features were used for and whether or not they contained material. Based on this information, these features would be considered an environmental concern to the site.

6.5 Evidence of Releases

Evidence of chemical releases on the site, such as odors, stressed vegetation, stains, leaks, pools of liquid, and spills, was not observed during the site reconnaissance.

6.6 Polychlorinated Biphenyls (PCBs)

Historically, PCBs (a group of hazardous substances and suspected human carcinogens) were widely used as an additive in cooling oils for electrical components. Typical sources of PCBs can include electrical transformers. A pole-mounted electrical transformer was noted in the southwest corner of the site (Figure 3A). No staining or evidence of a release were noted; therefore, this transformer does not represent a significant environmental concern to the site.

6.7 Suspect Asbestos-Containing Building Materials (ACM)

The manufacture of most ACM was phased out in the 1970s, ending in 1980. Previously manufactured ACM that were in stock continued to be used through approximately 1981. Some non-friable ACM are still manufactured. In general, buildings constructed after 1981 have a negligible potential to contain friable ACM and a low potential for most non-friable ACM. Based on the age of the site buildings (1957, 1964, and 1966), ACMs may be present.

6.8 Lead Based Paint (LBP)

The manufacture of LBP was phased out in approximately 1978. Based on the age of the site buildings (1957, 1964, and 1966), LBP may be present.

6.9 Indications of Water Damage or Mold Growth

No visual indications of water damage or visible mold growth were noted.

6.10 Wastewater Systems

One clarifier was noted in the northwest portion of the property and is associated with the Truck Wash Tunnel. As previously discussed, two clarifiers associated with a former steam clean area were located within the Vehicle Service Building (Figure 3C). See Section 3.7.3. for further detail. Based on the observed storage and reported use of chlorinated solvents at the site these existing and former features would be considered an environmental concern to the site.

6.11 Stormwater Systems

Stormwater drains were located throughout the site parking and driveway areas.

6.12 Wells

Three reported soil vapor monitoring wells were located within and/or northeast of the existing clarifier (Figure 3B). During the site reconnaissance, Ardent was able to access the two soil vapor monitoring well boxes northeast of the clarifier. Each of the well boxes contained two soil vapor points installed at depths of 10- and 20-feet bgs and were constructed with 0.25-inch Nylaflow tubing. These features are sealed and contained within permanent well boxes and therefore would not be considered an environmental concern to the site.

6.13 Other Subsurface Structures

A circular access plate was located northeast of the existing clarifier (Figure 3B). During the site reconnaissance, Ardent was able to open the circular access plate and noted electrical wiring. Frontier representatives did not know what the electrical wiring was associated with. Based on the contents of the access plate, this feature would not be considered an environmental concern to the site.

Ardent observed two approximately 4-foot diameter circular steel plates on the eastern portion of the property (Figure 3A). One of the circular steel plates, located underneath the southwest corner of the Large Storage Building, was partially exposed and appeared to have been paved over. Ardent assumes this feature is associated with the approximate location of the dry well identified in ATC's Phase I ESA (Figure 3A). An additional circular steel plate was located approximately 40-feet southwest of the Large Storage Building. Frontier representatives did not know what the steel plates were associated with; however,

based on our professional opinion this feature could be an additional dry well. Based on the observed storage and reported uses of chlorinated solvents at the site these features would be considered an environmental concern to the site.

No other subsurface structures were noted.

6.14 Other Issues

No other on- or off-site issues of environmental concern were noted.

7 ENVIRONMENTAL DATABASE SEARCH

A computerized environmental information database search was performed by EDR for this Phase I ESA on January 19, 2017. The database search included federal, state, local, and tribal databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted facilities of environmental concern is presented in Appendix E. In addition, a description of the assumptions and approach to the database search is also provided in Appendix E. The review was conducted to evaluate whether the site or properties within the vicinity of the site have been reported as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

Two unmapped properties, due to poor or inadequate address information, were identified in the database report. Based on the location and/or database, these listings do not represent a significant environmental concern to the site.

The following paragraphs describe the databases that contain noted properties of environmental concern, and include a discussion of the regulatory status of the facilities and potential environmental impact to the subject site.

7.1 Federal National Priorities List (NPL): Distance Searched – 1 mile

The NPL is the USEPA's database of uncontrolled or abandoned hazardous waste properties identified for priority remedial actions under the Superfund program. This database includes proposed NPL listings.

The site is located within the San Gabriel Valley Groundwater Basin. Portions of the San Gabriel Valley Groundwater Basin have been listed on the National Priority List (NPL), or

Superfund Site. The site is located within the Baldwin Park Operable Unit of the San Gabriel Valley Groundwater Basin which has been impacted with VOCs, namely the chlorinated solvents trichloroethene (TCE) and tetrachloroethylene (PCE), which were historically used by the commercial and industrial facilities located in this area. Based on our review of groundwater plume maps provided by the United States Environmental Protection Agency (EPA or USEPA), the site is located within a VOC plume and groundwater beneath the site has been impacted with chlorinated solvents. On behalf of the EPA, the Regional Water Quality Control Board, Los Angeles Region (RWQCB) has investigated the site as part of their Well Investigation Program (WIP). Two investigations were completed at the site which indicated relatively low concentrations of VOCs, including chlorinated solvents. An initial soil and soil gas survey completed in 1991 resulted in a no further action (NFA) letter dated September 3, 1992, and an additional investigation completed in 1995 resulted in another NFA letter dated June 5, 1998. The regional VOC-impacted groundwater would be considered a REC. Issuance of the NFA letter indicates that the site operations have not contributed to the regional groundwater contamination, and therefore, the site owner would not be considered a Responsible Party.

Although the VOC-impacted groundwater is considered an REC in accordance with ASTM Standards, the site has been investigated and issued a NFA letter. However, the investigations were completed over 22 years ago and solvent uses have continued, and therefore, additional investigations should be completed to further assess whether impacted soil exists.

7.2 Federal Delisted NPL: Distance Searched – 0.5 mile

This database contains delisted NPL properties under the Superfund program. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the USEPA uses to delete properties from the NPL. In accordance with 40 Code of Federal Regulations (CFR) 300.425. (e), properties may be deleted from the NPL where no further response is appropriate.

Neither the site nor properties within a 0.5-mile radius were listed on this database.

7.3 Federal Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List: Distance Searched – 0.5 mile

The CERCLIS database has been replaced by the Superfund Enterprise Management System (SEMS) database, which tracks hazardous waste sites and remedial activities performed in support of the EPA's Superfund Program. This database also includes properties listed on the SEMS-ARCHIVE database for facilities with statuses of No Further Remedial Action Planned (NFRAP).

The site was not listed on this database. The San Gabriel Valley Groundwater Basin, Baldwin Park Operable Unit, is listed on the SEMS database, and is further discussed above. As noted in Section 7.1, the VOC-impacted groundwater associated with the Baldwin Park Operable Unit would be considered an REC.

Specially Organics located approximately 0.38-mile northeast of and potentially upgradient from the site, was listed on the SEMS-ARCHIVE database with a NFA designation. Based on the distance, depth to groundwater, and regulatory status, this listing would not be considered an environmental concern to the site.

7.4 Federal Corrective Action Report (CORRACTS): Distance Searched – 1 mile

The USEPA maintains this database of Resource Conservation and Recovery Act (RCRA) facilities that are undergoing corrective action. A corrective action order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.

The site was not listed. One property was listed within the search radius. Norac Pharmaceutical is located approximately 1-mile north to northeast of the site and potentially cross- to upgradient. Based on the distance and depth to groundwater, this facility would not be considered a significant environmental concern to the site.

7.5 Federal Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) Facilities List: Distance Searched – 0.5 mile

The RCRA TSD database (non-CORRACTS) is a compilation by the EPA of facilities that report generation, storage, transportation, treatment, or disposal of hazardous waste.

Neither the site nor properties within a 0.5-mile radius were listed on this database.

7.6 Federal RCRA Generators List: Distance Searched – Site and Adjoining Properties

This list identifies sites that generate hazardous waste as defined by RCRA. Inclusion on this list is for permitting purposes and is not indicative of a release.

Frontier was listed in 2016 as a small quantity generator of hazardous waste, including ignitable wastes. In 2000, Verizon was also listed as a small quantity generator. Verizon's wastes included ignitable, corrosive, and reactive wastes, benzene, tetrachloroethylene (PCE), and halogenated solvents including PCE, methylene chloride, trichloroethene (TCE), 1,1,1-TCA, Freon 11,and Freon 13. No violations were noted.

From 1997 through 2004, Malcolm Drilling, located immediately south of the site, was listed as a small quantity generator of hazardous wastes. In 1992, a former occupant of this property, referred to as CMZ Trucking Company, was also listed as a small quantity generator. No violations were noted.

7.7 Federal Institutional Control/Engineering Control Registries: Distance Searched – Site

These lists identify properties with engineering and/or institutional controls. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on the site. Deed restrictions are generally required as part of the institutional controls.

The site was not listed on this database.

7.8 Federal Emergency Response Notification System (ERNS) List: Distance Searched – Site

The ERNS database, maintained by the USEPA, contains information on reported releases of oil and hazardous substances.

The site was not listed on this database.

7.9 Federal Brownfield List: Distance Searched – 0.5 mile

The USEPA Brownfield database, entitled Targeted Brownfield's Assessments (TBA), lists properties for which the USEPA is providing funding and/or technical support for environmental assessments and investigations. The objective of the TBA is to promote cleanup and redevelopment of undesirable properties with environmental issues.

The site was not listed on this database. The San Gabriel Valley Groundwater Basin was listed. Groundwater obtained from aquifers is treated at the well heads by purveyors of drinking water.

7.10 State Calsites Database (Calsites) or State-Equivalent CERCLIS: Distance Searched – 1 mile

The Calsites database, also known as the State-equivalent CERCLIS, is maintained by the Cal-EPA DTSC. This database contains information on AWP and both known and potentially contaminated properties. Two-thirds of these properties have been classified, based on available information, as needing no further action (NFA) by the DTSC. The remaining properties are in various stages of review and remediation to determine if a problem exists. These properties are presented by EDR on the EnviroStor database.

The site is not listed. Six active facilities located within the search radius were listed. Four facilities located greater than 0.65-miles of and potentially upgradient from the site were listed. Based on the distance and depth to groundwater, these facilities would not be considered a direct environmental concern to the site. As noted above, groundwater beneath the site is impacted with VOCs from surrounding industrial use.

The two remaining facilities are located greater than approximately 0.75-mile south and southeast of and potentially crossgradient from the site. Based on the distance, direction, and depth to groundwater, these facilities would not be considered an environmental concern to the site.

7.11 State Solid Waste Landfill Sites (SWLF): Distance Searched – 0.5 mile

The SWLF database consists of open and closed solid waste disposal facilities and transfer stations. The data comes from the Integrated Waste Management Board's Solid Waste

Information System (SWIS) and the State Water Resources Control Board (SWRCB) Waste Management Unit Database (WMUD) database.

Neither the site nor properties within a 0.5-mile radius were listed on this database.

7.12 State Leaking Underground Storage Tank (LUST) Lists: Distance Searched – 0.5 mile

The LUST information system is obtained from by the SWRCB and the Regional Water Quality Control Board (RWQCB).

The site was listed on this database as GTE from 1993 through 2012. As noted above, the on-site USTs included one 10,000-gallon diesel UST associated with the southern dispenser which was removed in 1988, a 12,000-gallon gasoline UST associated with the northern dispenser which was removed in 1996, a 10,000-gallon gasoline UST which replaced the 12,000-gallon UST and was removed in 2009, and a 1,000-gallon waste oil UST located immediately south of the Vehicle Service Building which was removed in 1996. The USTs were all removed under the direction and oversight of the Los Angeles County Department of Public Works (LACDPW) and received NFA letters due to the no detectable to low concentrations of residual contaminants in confirmation samples. Based on these results, these features would not be considered an environmental concern to the site.

Six facilities are located in the site vicinity, five of which are located greater than 0.2-mile of and cross- to downgradient from the site, and/or considered close cases with the lead regulatory agency. The remaining facility is located approximately 0.36-mile northeast of and upgradient from the site. This facility is considered a closed case. Based on the distance, direction, depth to groundwater, and/or regulatory status, these facilities would not be considered an environmental concern to the site.

7.13 State Spills, Leaks, Investigations, and Cleanups (SLIC) List: Distance Searched – 0.5 mile

The SLIC information system is obtained from by the SWRCB and the Regional Water Quality Control Board (RWQCB). Although not required for reporting by ASTM standards, this database provides pertinent information regarding environmental concerns at the site and facilities in the site vicinity.

The site was not listed. Four facilities were listed, two of which are located greater than approximately 0.2-mile of and crossgradient from the site. The remaining two are located greater than approximately 0.4-mile of and potentially upgradient from the site. Both of these facilities are listed as open, inactive cases. These facilities have impacted groundwater with VOCs. Based on the distance and depth to groundwater, these facilities would not be considered a direct environmental concern to the site. As noted above, groundwater beneath the site is impacted with VOCs from surrounding industrial use.

7.14 State Underground Storage Tank (UST) and Aboveground Storage Tank (AST) Registration List: Distance Searched – Site and Adjoining Properties

UST and AST databases are provided by the SWRCB. Inclusion on these lists is for permitting purposes and is not indicative of a release.

The site was listed on the UST database for historical UST. As noted herein, no current USTs are present at the site. Malcolm Drilling Company, located immediately south of the site, is listed as having a UST. Listing on this database reports a permitted activity and is not indicative of a release.

7.15 State Voluntary Cleanup Programs (VCPs): Distance Searched – 0.5 mile

The State VCP database lists low threat level properties with either confirmed or unconfirmed releases. Project proponents have requested that the DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Neither the site nor properties within a 0.5-mile radius were listed on this database.

7.16 Indian Reservations: Distance Searched – 1 mile

This list depicts Indian administered lands of the United States that have an area equal to or greater than 640-acres. No Indian Reservations were listed within a 1-mile radius from the site. Due to the lack of Indian Reservations within 1-mile of the site, other tribal database listings required by ASTM and AAI were deemed not applicable. These listings would include tribal-equivalent NPL, CERCLIS, Landfill and/or Solid Waste Disposal, LUST, UST and AST Registrations, Institutional Control/Engineering Control Registries, VCPs, and Brownfields.

7.17 Other Non-ASTM and AAI Database: Distance Searched – Site

Other databases were included in the EDR report, but are not required by ASTM or AAI. Based on our review, the site was listed on FINDS and Los Angeles County HMS for permitting purposes. The site was not listed on other databases representing a release.

8 REGULATORY RECORDS REVIEW

The RWQCB, DTSC, South Coast Air Quality Management District (SCAQMD), LACDPW, Los Angeles County Sanitation District (LACSD), and Los Angeles County Public Health (LACPH) are lead regulatory agencies for permitting and regulating USTs, ASTs, LUST cases, and facilities that use, store, or generate hazardous waste or hazardous materials. Ardent requested file information for the site using the current address assigned to the site. No LACSD records pertaining to the site were available for review.

8.1 Regional Water Quality Control Board, Los Angeles Region (RWQCB)

Ardent reviewed information on the GeoTracker website. According to the information on the website, the site was listed as GTE for a closed UST case in 1996.

8.2 Department of Toxic Substances Control (DTSC)

Ardent reviewed state case file listings on the DTSC's EnviroStor website. According to the DTSC, the site is not listed.

8.3 South Coast Air Quality Management District (SCAQMD)

Ardent reviewed records for the site from the SCAQMD website. Frontier is listed for a permit in 2016 of its air conditioning units. Verizon is listed with inactive permits dated 1988 through 2005 for use of USTs at the site, and active permits for its air conditioning units. Other inactive permits for amine regeneration and NH3 injection. One minor violation was noted.

8.4 Los Angeles County Department of Public Works (LACDPW)

The LACDPW maintains UST, AST, hazardous waste, hazardous materials inventory, and wastewater information. Information obtained from the LACDPW included a number of reports associated with the UST removal activities. These reports are summarized in Section 3.7 and detailed in the ATC Phase I ESA report.

A set of plans dated 1956 showed the former office building in the southwestern portion of the site. This plan indicated that the building was connected to a septic system. As noted in building permits, this building and septic system were removed in 1966.

The 1956 plan also shows the former truck scale and associated dry well, located approximately 25 feet from the scale. The well was reported to extend to 9.5 feet bgs (the well is suspected to be located beneath the current Large Storage Building).

A plan dated 1966 showed the existing Office Building, Supply Building, and the south dispenser canopy as "new." This plan depicts the location of a 12-foot deep cesspool at the southeastern corner of the Truck Wash Tunnel, and a 20-foot deep cesspool northwest of the former clarifier. As noted above, this clarifier and some impacted soils were excavated and the clarifier was replaced with the existing feature. A septic system (six 900-gallon septic tanks and four cesspools) were associated with the existing Office Building. As noted above, the site was connected to the municipal sewer system in 1967.

In a plan dated 1969, the former steam cleaning area and two associated clarifiers were shown immediately east of the current boiler room.

9 VAPOR ENCROACHMENT CONDITION (VEC)

Ardent completed a VEC study for the site using Tier 1 criteria as recommended by ASTM E 2600-15. The Tier 1 screening identifies surrounding facilities that pose a possible vapor intrusion source to the site based on the results of the Phase I ESA investigations and certain criteria outlined by ASTM. These criteria include a certain distance from the target site (referred to by ASTM as within the "area of concern"); the types of chemicals used (referred to by ASTM as the "chemicals of concern"); and a plume test to determine if the plume associated with a source of contamination is close enough to the site to impact indoor air quality.

Although VOC-impacted groundwater is reported to exist beneath the site, due to the depth of groundwater, there is a low likelihood that off-gassing contaminants would pose a possible threat to human health through vapor intrusion. However, investigations at the site have shown concentrations of chlorinated solvents in soil gas samples. Since completing these investigations, regulatory agencies have issued screening levels for VOCs in soil gas for the protection of human health through vapor intrusion. These screening levels have much lower

concentrations than those used to assess whether a significant release has occurred (i.e. a threat to groundwater). In addition, chlorinated solvent uses have been discovered in regulatory databases reviewed during this assessment. Based on the uncertainty of solvent uses in the Vehicle Service Building, former steam cleaning area, and Truck Wash Tunnel area, the recorded use of chlorinated solvents at the site, and due to the lower screening levels associated with human health risk criteria, Ardent has concluded that a possible vapor intrusion risk may be present.

10 FINDINGS, OPINIONS AND CONCLUSIONS

Based upon the results of this Phase I ESA the following findings, opinions and conclusions are provided.

10.1 Findings and Opinions

The following presents a summary of the findings and opinions associated with this Phase I ESA performed for the site, including known or suspect RECs, controlled RECs, and de minimus environmental conditions (i.e., conditions that generally do not present a material risk of harm to public health or the environment).

- From at least 1928 through 1952, the site was used for agricultural purposes and residences. In approximately 1957, the site began to be used as a telecommunication maintenance yard. The Vehicle Service Building was constructed in 1957. In 1964, a large office building was located in the southwestern portion of the site and oriented in an east-west direction. By 1966, the historical office building was replaced with the existing Office Building, Supply Building, Large Storage Building, and Truck Wash Tunnel.
- Groundwater has been measured in the site vicinity at depths of approximately 250 feet bgs and flows in a southwesterly direction. The site is located within the San Gabriel Valley Groundwater Basin. Portions of the San Gabriel Valley Groundwater Basin have been listed on the NPL, or Superfund Site. The site is located within the Baldwin Park Operable Unit of the San Gabriel Valley Groundwater Basin which has been impacted with VOCs, namely the chlorinated solvents TCE and PCE, which were historically used by the commercial and industrial facilities located in this area. Based on our review of groundwater plume maps provided by the EPA, the site is located within a VOC plume and groundwater beneath the site has been impacted with chlorinated solvents ranging from the MCLs to 10 times the MCLs. On behalf of the EPA, the RWQCB has investigated the site as part of their WIP. Two investigations were completed at the site which indicated relatively low concentrations of VOCs, including chlorinated solvents. An initial soil and soil gas survey completed in 1991 resulted in a NFA letter dated September 3, 1992, and an additional investigation completed in 1995 resulted in another NFA letter dated June 5, 1998. The regional VOC-impacted groundwater would

be considered a REC. Issuance of the NFA letter indicates that the site operations have not contributed to the regional groundwater contamination, and therefore, the site owner would not be considered a Responsible Party.

- As part of the maintenance activities, fueling and maintenance of fleet vehicles included the use of USTs. Throughout the years, these tanks were removed and replaced with ASTs. The on-site USTs included one 10,000-gallon diesel UST associated with the southern dispenser which was removed in 1988, a 12,000-gallon gasoline UST associated with the northern dispenser which was removed in 1996, a 10,000-gallon gasoline UST which replaced the 12,000-gallon UST and was removed in 2009, and a 1,000-gallon waste oil UST located immediately south of the Vehicle Service Building which was removed in 1996. It should be noted that a fifth UST may have been located in the same general area as the tank associated with the southern dispenser island. A building permit dated 1957 was noted for a “gas pump canopy.” At this time, only the southern dispenser was noted on-site. It is assumed this tank was replaced with the 10,000-galon UST discussed above, which was ultimately removed. The four USTs were removed under the direction and oversight of the LACDPW, and impacted soils were remediated by excavation. Laboratory results of confirmation samples showed no detectable to low concentrations of residual contaminants. Based on these results, NFA letters were issued by the LACDPW. Ardent has reviewed these data and concur with the regulatory agency that no further work is necessary. Based on these results, these former USTs would no longer be considered an environmental concern to the site. According to ASTM Standards, these former features would be considered a HREC.
- The Vehicle Service Building formerly used four hydraulic lifts (which have been removed) and currently uses three hydraulic lifts. None of these features have been investigated. Based on this information, these features would be considered an environmental concern to the site. Solvents are also typically used to clean parts. Due to the possible solvent use in the Vehicle Service Building, a vapor intrusion issue may be present.
- A former steam cleaning area was also located in the mid-central portion of the Vehicle Service Building. The former steam cleaning area was reportedly connected to two clarifiers. The clarifiers were reportedly “removed” or “abandoned,” it was not clarified which occurred. The area has since been remodeled to include an office area. Steam cleaning activities typically use solvents as degreaser agents. One soil gas point was placed in the vicinity of the clarifiers in 1991 as part of the WIP investigations. Laboratory results indicated no detectable concentrations of VOCs and low concentrations of petroleum hydrocarbons (10 mg/kg) in soil and total VOC concentrations of 4.85 to 8.94 ug/l, a breakdown per constituent was not provided. Although these laboratory results are relatively low, it is our judgement that the clarifiers and former steam cleaning area were not adequately assessed. Based on this information, these features would be considered an environmental concern to the site and may pose a possible vapor intrusion issue.
- Three 120-gallon underground hydraulic fluid reservoirs were located immediately south of the Vehicle Service Building. Although representatives of Frontier did not know what these features were used for, it is our assumption, based on their location, that the reservoirs were used to store hydraulic oil for the hydraulic lifts. Hydraulic oil is now

supplied to the lifts by two ASTs. The reservoirs have not been previously investigated, and therefore, would be considered an environmental concern to the site.

- The Truck Wash Tunnel includes an area in the northwestern portion of the site that contains a truck washing area, a clarifier, a steam cleaning pad and floor drain, former hazardous waste storage area, former septic tank, two cesspools, and a waste drum storage enclosure. This area was investigated in 1991 as part of the WIP investigations and included the collection of shallow soil and soil gas samples. Laboratory results of soil samples indicated no detectable concentrations of VOCs, and only one soil sample reported elevated concentrations of petroleum hydrocarbons next to the clarifier (at 11,000 mg/kg at 7.5 feet). Total VOCs in soil gas ranged from 0.89 ug/l in a former hazardous waste storage area located near the northeastern corner of the Truck Wash Tunnel to 215.1 ug/l near the clarifier outlet. A breakdown of the VOC constituents was not provided. Although the RWQCB issued a NFA letter, the consultant completing the project recommended that the petroleum hydrocarbon impacted soil and clarifier be removed. In 1992, the clarifier and 47 tons of impacted soils were excavated and removed. Laboratory results of confirmation samples indicated no detectable to low concentrations of petroleum hydrocarbons and VOCs. The RWQCB issued a NFA letter dated January 20, 1993. Although the impacted materials appear to have been removed, the remediation effort was completed over 24 years ago and this area has continued to be used to clean vehicles and store hazardous wastes. Based on this information, the Truck Wash Tunnel area would be considered an environmental concern to the site and may pose a vapor intrusion issue.
- In 1956, a site plan referenced the installation of a dry well located in the northeastern portion of the site. The dry well was connected to a former truck scale, that has since been removed from the site. Based on a review of the site plan, the dry well would now be located beneath the existing Large Storage Building. A circular steel plate was noted in this general area. Rainwater accumulated within the subsurface compartment holding the truck scale would drain to the dry well. Since rainwater would likely contain oil and grease from the truck scale, this feature would be considered an environmental concern to the site. A circular steel plate was also located near the Large Storage Building, which may also be a dry well. In additional, solvent storage was noted by Ardent in the Large Storage Building.
- Verizon was listed as a small quantity generator of hazardous waste, including chlorinated solvents. Solvents are typically used for parts cleaning and degreasing purposes. Due to the possible solvent uses in the Vehicle Service Building, former steam cleaning area, Truck Wash Tunnel area, and Large Storage Building, a possible vapor intrusion issue may be present.
- Numerous 55-gallon drums and other containers were noted throughout the site used to contain waste oil, virgin oil, oil filters, and/or other liquid or hazardous materials. Due to the lack of staining or evidence of a release, these containers would not be considered an environmental concern to the site.
- Based on the age of the buildings (1957, 1964, and 1966), ACMs and LBP may be present.
- No other on- or off-site environmental concerns were noted.

10.2 Conclusions

Ardent has performed this Phase I ESA in general conformance with the scope and limitations of the ASTM Practice E 1527-13, ASTM Practice E 2600-15, and the EPA Standards and Practices for AAI, Final Rule (40 CFR, Part 312), for the property located at 5010 Azusa Canyon Road in the city of Irwindale, California. Any limitations or exceptions encountered during completion of this report are stated in Section 1.4. Based on this Phase I ESA, no evidence or indication of RECs, or conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the site has been revealed, except for the former and current hydraulic lifts in the Vehicle Service Building, features associated with the Truck Wash Tunnel (including the truck washing area, clarifier, steam cleaning pad and floor drain, former cesspool, waste drum storage enclosure, and former hazardous waste storage area), three underground hydraulic oil reservoirs, the former steam cleaning area and two former clarifiers in the Vehicle Service Building (former steam cleaning operations), dry wells, Large Storage Building (solvent storage), and the VOC-impacted groundwater. Although not considered an REC in accordance with ASTM Standards, ACMs and LBP may be present in the on-site buildings.

11 RECOMMENDATIONS

Based on the information obtained during this assessment, Ardent has the following recommendations:

- Although the VOC-impacted groundwater is considered an REC in accordance with ASTM Standards, the site has been investigated and issued a NFA letter. However, the investigations were completed over 22 years ago and solvent uses have continued, and therefore, additional investigations should be completed to further assess whether impacted soil exists. In addition, since completing the investigations at the site, regulatory agencies have issued screening levels for VOCs in soil gas for the protection of human health through vapor intrusion. These screening levels have much lower concentrations than those used to assess whether a significant release has occurred (i.e. a threat to groundwater). Verizon was noted in agency files to generate hazardous wastes including chlorinated solvents. Based on the uncertainty of solvent uses in the Vehicle Service Building, former steam cleaning area and clarifiers, Large Storage Building, and Truck Wash Tunnel area (which would include the active Truck Wash Tunnel and associated clarifier, former cesspools, former septic tank, and active steaming pad), the recorded use of chlorinated solvents at the site, and due to the lower screening levels associated with human health risk criteria, Ardent recommends completing a soil gas survey in the area of possible solvent uses to assess whether a vapor intrusion issue is present.

- Soil sampling should be completed in the location of the former features of environmental concern that are not going to be used by Frontier during its lease. The former steam cleaning area and two former clarifiers in the Vehicle Service Building are inaccessible (currently being used as an office). Also, lithological conditions may not allow the advancement of deep soil borings (i.e. due to the presence of gravel and cobbles), and therefore, investigation in the locations of the dry wells (also described as the circular steel plates beneath, and in close proximity to, the Large Storage Building) may be difficult. Dry wells are sometimes installed at depths of up to 30 feet deep. Based on this information, Ardent suggests using the soil gas survey described above as a screening technique in these areas. Soil borings should be attempted in the former hazardous waste storage area near the Truck Wash Tunnel and next to the former hydraulic lifts, where investigations would be limited to 15 feet bgs.
- Prior to Frontier vacating the property, all miscellaneous containers of waste, liquids or hazardous substances should be profiled and disposed. All regulatory permits should be closed. All features with possible environmental concerns that will continue to be used by Frontier during its lease should be removed at the end of its lease, including clarifiers, active hydraulic lifts, Truck Wash Tunnel, steam cleaning pad and floor drain, waste drum storage enclosure, ASTs, and hydraulic oil reservoirs. Following removal, confirmation samples should be collected. If regulated, the removal activities should be complete under the direction and oversight of the lead regulatory agency.
- Prior to demolition, a comprehensive asbestos and LBP survey should be completed. If present, these materials should be removed by a State-licensed abatement contractor.

13 QUALIFICATIONS STATEMENT AND SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

Mr. Paul Roberts states that the Phase I ESA was performed under his direct supervision, and that he has reviewed and approved the report, and the methods and procedures employed in the development of the report conform to the minimum industry standards. Mr. Roberts certifies that Ardent project personnel and subcontractors are properly licensed and/or certified to do the work described herein.

Pursuant to Paragraph 12.13 of the ASTM Standard E1527-13:

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Paul Roberts
Principal Geologist

Commitment

Thank You for your confidence and support. We at First American Title Insurance Company maintain the fundamental principle:

Customer First!

First American Title Insurance Company

INFORMATION

The Title Insurance Commitment is a legal contract between you and the company. It is issued to show the basis on which we will issue a Title Insurance Policy to you. The Policy will insure you against certain risks to the land title, subject to the limitations shown in the policy.

The Company will give you a sample of the Policy form, if you ask.

The Commitment is based on the land title as of the Commitment Date. Any changes in the land title or the transaction may affect the Commitment and the Policy.

The Commitment is subject to its Requirements, Exceptions and Conditions.

This information is not part of the title insurance commitment.

COMMITMENT FOR TITLE INSURANCE

Issued by

First American Title Insurance Company

Agreement to Issue Policy

We agree to issue a policy to you according to the terms of this Commitment.

When we show the policy amount and your name as the proposed insured in Schedule A, this Commitment becomes effective as of the Commitment Date shown in Schedule A.

If the Requirements shown in this Commitment have not been met within six months after the Commitment Date, our obligation under this Commitment will end. Also, our obligation under this Commitment will end when the Policy is issued and then our obligation to you will be under the Policy.

Our obligation under this Commitment is limited by the following:

The Provisions in Schedule A.

The Requirements in Schedule B-1.

The Exceptions in Schedule B-2.

The Conditions.

This Commitment is not valid without Schedule A and Sections 1 and 2 of Schedule B.

SCHEDULE A

1. Commitment Date: December 08, 2016 at 7:30 A.M.

2. Policy or Policies to be issued: Amount

   (A) ALTA Standard Owner's Policy $TBD

   Proposed Insured:

   To Be Determined

   (B) ALTA Extended Loan Policy $TBD

   Proposed Insured:

   To Be Determined

3. (A) The estate or interest in the land described in this Commitment is:

   Fee Simple

   (B) Title to said estate or interest at the date hereof is vested in:

   GTE California Incorporated, a corporation which acquired title and formerly known as General Telephone Company of California

4. The land referred to in this Commitment is situated in the City of Irwindale, County of Los Angeles, State of California, and is described as follows:

   PARCEL 1: APN: 8417-026-801

   THE NORTH HALF OF THE WEST HALF OF THE SOUTHWEST QUARTER OF THE NORTHWEST QUARTER OF SECTION 9, TOWNSHIP 1 SOUTH, RANGE 10 WEST, SAN BERNARDINO MERIDIAN, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, ACCORDING TO THE OFFICIAL PLAT OF SAID LAND FILED IN THE DISTRICT LAND OFFICE APRIL 21, 1877.

   EXCEPT THEREFROM THE SOUTH 5 ACRES THEREOF.

   ALSO EXCEPT THEREFROM THE NORTH 30 FEET THEREOF.

   EXCEPT ALSO FROM THE REMAINDER THE WEST 340 FEET.

   PARCEL 2: APN: 8417-026-800

   THE NORTH 30 FEET OF THE WEST HALF OF THE SOUTHWEST QUARTER OF THE NORTHWEST QUARTER OF SECTION 9, TOWNSHIP 1 SOUTH, RANGE 10 WEST, SAN BERNARDINO MERIDIAN, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, ACCORDING TO THE OFFICIAL PLAT OF SAID LAND FILED IN THE DISTRICT LAND OFFICE, APRIL 21, 1877.

   EXCEPT THE WESTERLY 20 FEET THEREOF DEEDED TO THE COUNTY OF LOS ANGELES FOR ROAD PURPOSES BY DEED RECORDED IN BOOK 6676, PAGE 150 OF DEEDS.

ALSO EXCEPT ALL OF THE OIL, GAS, AND OTHER MINERAL RIGHTS (BOTH METALLIC AND NON-METALLIC) IN AND UNDER SAID LAND, AND THE RIGHT TO EXTRACT THE SAME BY SLANT DRILLING OR SLANT MINING WHICH DOES NOT SUBSTANTIALLY INTERFERE WITH THE USE OF SAID LAND BY GRANTOR, ITS SUCCESSORS AND ASSIGNS, AS RESERVED BY CONSOLIDATED ROCK PRODUCTS CO., A CORPORATION, IN DEED RECORDED JULY 31, 1953 IN BOOK 42353, PAGE 414, OFFICIAL RECORDS.

PARCEL 3: APNS: 8417-025-800 AND 801

THE SOUTHWEST QUARTER OF THE NORTHWEST QUARTER OF THE NORTHWEST QUARTER OF SECTION 9, TOWNSHIP 1 SOUTH, RANGE 10 WEST SAN BERNARDINO MERIDIAN ACCORDING TO THE OFFICIAL PLAT OF SAID LAND FILED IN THE DISTRICT LAND OFFICE 4-21-1877,

EXCEPT THE EAST 100 FEET THEREOF.

ALSO EXCEPT THE WEST 40 FEET THEREOF CONVEYED TO THE COUNTY OF LOS ANGELES FOR ROAD PURPOSES.

SCHEDULE B

SECTION ONE

REQUIREMENTS

The following requirements must be met:

(A) Pay the agreed amounts for the interest in the land and/or the mortgage to be insured.

(B) Pay us the premiums, fees and charges for the policy.

(C) Documents satisfactory to us creating the interest in the land and/or the mortgage to be insured must be signed, delivered and recorded.

(D) You must tell us in writing the name of anyone not referred to in this Commitment who will get an interest in the land or who will make a loan on the land. We may then make additional requirements or exceptions.

(E) Releases(s) or Reconveyance(s) of Item(s): None

(F) Other: None

(G) You must give us the following information:
1. Any off record leases, surveys, etc.
2. Statement(s) of Identity, all parties.
3. Other: None

The following additional requirements, as indicated by "X", must be met:

[X] (H) Provide information regarding any off-record matters, which may include, but are not limited to: leases, recent works of improvement, or commitment statements in effect under the Environmental Responsibility Acceptance Act, Civil Code Section 850, et seq.

The Company's Owner's Affidavit form (as provided by company) must be completed and submitted prior to close in order to satisfy this requirement. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.

[] (I) An ALTA/NSPS survey of recent date, which complies with the current minimum standard detail requirements for ALTA/NSPS land title surveys, must be submitted to the Company for review. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.

[] (J) The following LLC documentation is required:
(i) a copy of the Articles of Organization
(ii) a copy of the Operating Agreement, if applicable
(iii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
(iv) express Company Consent to the current transaction

[] (K) The following partnership documentation is required **:**
(i) a copy of the partnership agreement, including all applicable amendments thereto
(ii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
(iii) express Partnership Consent to the current transaction

[X] (L) The following corporation documentation is required:
(i) a copy of the Articles of Incorporation
(ii) a copy of the Bylaws, including all applicable Amendments thereto
(iii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
(iv) express Corporate Resolution consenting to the current transaction

[**X**] (M) Based upon the Company's review of that certain partnership/operating agreement dated **Not disclosed** for the proposed insured herein, the following requirements must be met:

Any further amendments to said agreement must be submitted to the Company, together with an affidavit from one of the general partners or members stating that it is a true copy, that said partnership or limited liability company is in full force and effect, and that there have been no further amendments to the agreement. This Commitment will then be subject to such further requirements as may be deemed necessary.

[] (N) A copy of the complete lease, as referenced in Schedule A, #3 herein, together with any amendments and/or assignments thereto, must be submitted to the Company for review, along with an affidavit executed by the present lessee stating that it is a true copy, that the lease is in full force and effect, and that there have been no further amendments to the lease. This Commitment will then be subject to such further requirements as may be deemed necessary.

[X] (O) Approval from the Company's Underwriting Department must be obtained for issuance of the policy contemplated herein and any endorsements requested thereunder. This Commitment will then be subject to such further requirements as may be required to obtain such approval.

[X] (P) Potential additional requirements, if ALTA Extended coverage is contemplated hereunder, and work on the land has commenced prior to close, some or all of the following requirements, and any other requirements which may be deemed necessary, may need to be met:

[] (Q) The Company's "Indemnity Agreement I" must be executed by the appropriate parties.

[] (R) Financial statements from the appropriate parties must be submitted to the Company for review.

[] (S) A copy of the construction contract must be submitted to the Company for review.

[] (T) An inspection of the land must be performed by the Company for verification of the phase of construction.

[] (U) The Company's "Mechanic's Lien Risk Addendum" form must be completed by a Company employee, based upon information furnished by the appropriate parties involved.

SCHEDULE B

SECTION TWO

EXCEPTIONS

Any policy we issue will have the following exceptions unless they are taken care of to our satisfaction. The printed exceptions and exclusions from the coverage of the policy or policies are set forth in Exhibit A attached. Copies of the policy forms should be read. They are available from the office which issued this Commitment.

A. General and special taxes and assessments for the fiscal year 2017-2018, a lien not yet due or payable.

1. Real property taxes are currently assessed under the State Board of Equalization Public Utility Tax Roll; Code Area No. S B of E Par 3 Map 201 19 412. Which includes this and other property; for full particulars, please contact the State Board of Equalization Property Tax Validation Division, Telephone Number (916) 322-2323. Additional information to follow upon request.

   (Affects APN: 8417-026-801)

2. Real property taxes are currently assessed under the State Board of Equalization Public Utility Tax Roll; Code Area No. S B of E Par 3 Map 201 19 412. Which includes this and other property; for full particulars, please contact the State Board of Equalization Property Tax Validation Division, Telephone Number (916) 322-2323. Additional information to follow upon request.

   (Affects APN: 8417-026-800)

3. Real property taxes are currently assessed under the State Board of Equalization Public Utility Tax Roll; Code Area No. S B of E Par 3 Map 201 19 412. Which includes this and other property; for full particulars, please contact the State Board of Equalization Property Tax Validation Division, Telephone Number (916) 322-2323. Additional information to follow upon request.

   (Affects APN: 8417-025-800)

4. Real property taxes are currently assessed under the State Board of Equalization Public Utility Tax Roll; Code Area No. S B of E Par 3 Map 201 19 412. Which includes this and other property; for full particulars, please contact the State Board of Equalization Property Tax Validation Division, Telephone Number (916) 322-2323. Additional information to follow upon request.

   (Affects APN: 8417-025-801)

5. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.

6. The right to use said Parcel 2 for roadway purposes and both the surface and subsurface thereof for the purpose of constructing and maintaining thereon telephone poles, water and gas, pipe lines and other similar purposes. Said roadway is to be used in connection with that land located in the County of Los Angeles, State of California, described as follows:

   The South 5 acres of the East half of the Northwest quarter of the Northwest quarter of Section 9, Township 1 South, Range 10 West, San Bernardino Meridian, excepting therefrom the

Westerly 40 feet thereof as conveyed to Pacific Electric Railway Company. The East half of the Southwest quarter of the Northwest quarter of Section 9, Township 1 South, Range 10 West, San Bernardino Meridian, in the County of Los Angeles, State of California, excepting therefrom the West 40 feet thereof.

Provided that none of the rights reserved by grantors pursuant to the provisions of this paragraph shall preclude the construction, maintenance, use and operation by grantees, or their successors in interest, of one or more railroad sidings over, upon and across the land described in deed dated July 21, 1953, from Consolidated Rock Products Co., a corporation, to H & A Realty Company, a corporation, recorded July 31, 1953 in Book 42353, Page 414, Official Records, as reserved by grantor in said deed.

7. The condition that grantees, their successors and assigns, shall at no time use said Parcel 2 directly or indirectly in the conduct of any phase of the rock, sand and/or gravel business, contained in the above mentioned deed, which provide that a violation thereof shall not defeat or render invalid the lien of any mortgage or deed of trust made in good faith and for value.

8. The fact that the land lies within the boundaries of the Irwindale City Industrial Redevelopment Project Area, as disclosed by the document recorded August 06, 1976 as Instrument No. 5641 of Official Records.

9. This item has been intentionally deleted.

10. This item has been intentionally deleted.

11. Rights of parties in possession.

INFORMATIONAL NOTES

1. According to the public records, there has been no conveyance of the land within a period of twenty-four months prior to the date of this report, except as follows:

   None

2. We find no open deeds of trust. Escrow please confirm before closing.

3. If this preliminary report/commitment was prepared based upon an application for a policy of title insurance that identified land by street address or assessor's parcel number only, it is the responsibility of the applicant to determine whether the land referred to herein is in fact the land that is to be described in the policy or policies to be issued.

The map attached, if any, may or may not be a survey of the land depicted hereon. First American Title Insurance Company expressly disclaims any liability for loss or damage which may result from reliance on this map except to the extent coverage for such loss or damage is expressly provided by the terms and provisions of the title insurance policy, if any, to which this map is attached.

*****To obtain wire instructions for deposit of funds to your escrow file please contact your Escrow Officer.******

CONDITIONS

1. **DEFINITIONS**
(a)"Mortgage" means mortgage, deed of trust or other security instrument.
(b)"Public Records" means title records that give constructive notice of matters affecting the title according to the state law where the land is located.

2. **LATER DEFECTS**
The Exceptions in Schedule B - Section Two may be amended to show any defects, liens or encumbrances that appear for the first time in the public records or are created or attached between the Commitment Date and the date on which all of the Requirements (a) and (c) of Schedule B - Section One are met. We shall have no liability to you because of this amendment.

3. **EXISTING DEFECTS**
If any defects, liens or encumbrances existing at Commitment Date are not shown in Schedule B, we may amend Schedule B to show them. If we do amend Schedule B to show these defects, liens or encumbrances, we shall be liable to you according to Paragraph 4 below unless you knew of this information and did not tell us about it in writing.

4. **LIMITATION OF OUR LIABILITY**
Our only obligation is to issue to you the Policy referred to in this Commitment, when you have met its Requirements. If we have any liability to you for any loss you incur because of an error in this Commitment, our liability will be limited to your actual loss caused by your relying on this Commitment when you acted in good faith to:

comply with the Requirements shown in Schedule B - Section One
or
eliminate with our written consent any Exceptions shown in Schedule B - Section Two.

We shall not be liable for more than the Policy Amount shown in Schedule A of this Commitment and our liability is subject to the terms of the Policy form to be issued to you.

5. **CLAIMS MUST BE BASED ON THIS COMMITMENT**
Any claim, whether or not based on negligence, which you may have against us concerning the title to the land must be based on this commitment and is subject to its terms.

First American Title

Privacy Information

We Are Committed to Safeguarding Customer Information

In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information - particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our subsidiaries we have adopted this Privacy Policy to govern the use and handling of your personal information.

Applicability

This Privacy Policy governs our use of the information that you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its Fair Information Values.

Types of Information

Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

Use of Information

We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.

Former Customers

Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

Confidentiality and Security

We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's Fair Information Values. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

Information Obtained Through Our Web Site

First American Financial Corporation is sensitive to privacy issues on the Internet. We believe it is important you know how we treat the information about you we receive on the Internet.

In general, you can visit First American or its affiliates' Web sites on the World Wide Web without telling us who you are or revealing any information about yourself. Our Web servers collect the domain names, not the e-mail addresses, of visitors. This information is aggregated to measure the number of visits, average time spent on the site, pages viewed and similar information. First American uses this information to measure the use of our site and to develop ideas to improve the content of our site.

There are times, however, when we may need information from you, such as your name and email address. When information is needed, we will use our best efforts to let you know at the time of collection how we will use the personal information. Usually, the personal information we collect is used only by us to respond to your inquiry, process an order or allow you to access specific account/profile information. If you choose to share any personal information with us, we will only use it in accordance with the policies outlined above.

Business Relationships

First American Financial Corporation's site and its affiliates' sites may contain links to other Web sites. While we try to link only to sites that share our high standards and respect for privacy, we are not responsible for the content or the privacy practices employed by other sites.

Cookies

Some of First American's Web sites may make use of "cookie" technology to measure site activity and to customize information to your personal tastes. A cookie is an element of data that a Web site can send to your browser, which may then store the cookie on your hard drive.

FirstAm.com uses stored cookies. The goal of this technology is to better serve you when visiting our site, save you time when you are here and to provide you with a more meaningful and productive Web site experience.

Fair Information Values

Fairness We consider consumer expectations about their privacy in all our businesses. We only offer products and services that assure a favorable balance between consumer benefits and consumer privacy.

Public Record We believe that an open public record creates significant value for society, enhances consumer choice and creates consumer opportunity. We actively support an open public record and emphasize its importance and contribution to our economy.

Use We believe we should behave responsibly when we use information about a consumer in our business. We will obey the laws governing the collection, use and dissemination of data.

Accuracy We will take reasonable steps to help assure the accuracy of the data we collect, use and disseminate. Where possible, we will take reasonable steps to correct inaccurate information. When, as with the public record, we cannot correct inaccurate information, we will take all reasonable steps to assist consumers in identifying the source of the erroneous data so that the consumer can secure the required corrections.

Education We endeavor to educate the users of our products and services, our employees and others in our industry about the importance of consumer privacy. We will instruct our employees on our fair information values and on the responsible collection and use of data. We will encourage others in our industry to collect and use information in a responsible manner.

Security We will maintain appropriate facilities and systems to protect against unauthorized access to and corruption of the data we maintain.

EXHIBIT A
LIST OF PRINTED EXCEPTIONS AND EXCLUSIONS (BY POLICY TYPE)

1. CALIFORNIA LAND TITLE ASSOCIATION STANDARD COVERAGE POLICY - 1990
SCHEDULE B

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records. Proceedings by a public agency which may result in taxes or assessments, or notice of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the public records.

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with applicable "doing business" laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by their policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

2. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY FORM B - 1970
SCHEDULE OF EXCLUSIONS FROM COVERAGE

1. Any law, ordinance or governmental regulation (including but not limited to building and zoning ordinances) restricting or regulating or prohibiting the occupancy, use or enjoyment of the land, or regulating the character, dimensions or location of any improvement now or hereafter erected on the land, or prohibiting a separation in ownership or a reduction in the dimensions of area of the land, or the effect of any violation of any such law, ordinance or governmental regulation.
2. Rights of eminent domain or governmental rights of police power unless notice of the exercise of such rights appears in the public records at Date of Policy.
3. Defects, liens, encumbrances, adverse claims, or other matters (a) created, suffered, assumed or agreed to by the insured claimant; (b) not known to the Company and not shown by the public records but known to the insured claimant either at Date of Policy or at the date such claimant acquired an estate or interest insured by this policy and not disclosed in writing by the insured claimant to the Company prior to the date such insured claimant became an insured hereunder; (c) resulting in no loss or damage to the insured claimant; (d) attaching or created subsequent to Date of Policy; or (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the estate or interest insured by this policy.

3. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY FORM B - 1970
WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 2 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage by reason of the matters shown in parts one and two following:
Part One

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material heretofore or hereafter furnished, imposed by law and not shown by the public records.

4. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1970
WITH A.L.T.A. ENDORSEMENT FORM 1 COVERAGE
SCHEDULE OF EXCLUSIONS FROM COVERAGE

1. Any law, ordinance or governmental regulation (including but not limited to building and zoning ordinances) restricting or regulating or prohibiting the occupancy, use or enjoyment of the land, or regulating the character, dimensions or location of any improvement now or hereafter erected on the land, or prohibiting a separation in ownership or a reduction in the dimensions or area of the land, or the effect of any violation of any such law ordinance or governmental regulation.
2. Rights of eminent domain or governmental rights of police power unless notice of the exercise of such rights appears in the public records at Date of Policy.
3. Defects, liens, encumbrances, adverse claims, or other matters (a) created, suffered, assumed or agreed to by the insured claimant, (b) not known to the Company and not shown by the public records but known to the insured claimant either at Date of Policy or at the date such claimant acquired an estate or interest insured by this policy or acquired the insured mortgage and not disclosed in writing by the insured claimant to the Company prior to the date such insured claimant became an insured hereunder, (c) resulting in no loss or damage to the insured claimant; (d) attaching or created subsequent to Date of Policy (except to the extent insurance is afforded herein as to any statutory lien for labor or material or to the extent insurance is afforded herein as to assessments for street improvements under construction or completed at Date of Policy).
4. Unenforceability of the lien of the insured mortgage because of failure of the insured at Date of Policy or of any subsequent owner of the indebtedness to comply with applicable "doing business" laws of the state in which the land is situated.

5. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1970
WITH REGIONAL EXCEPTIONS

When the American Land Title Association Lenders Policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy, the exclusions set forth in paragraph 4 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage by reason of the matters shown in parts one and two following:
Part One

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

6. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1992
WITH A.L.T.A. ENDORSEMENT FORM 1 COVERAGE
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy;
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims, or other matters:
(a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
(b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
(c) resulting in no loss or damage to the insured claimant;
(d) attaching or created subsequent to Date of Policy (except to the extent that this policy insures the priority of the lien of the insured mortgage over any statutory lien for services, labor or material or the extent insurance is afforded herein as to assessments for street improvements under construction or completed at date of policy); or
(e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable "doing business" laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any statutory lien for services, labor or materials (or the claim of priority of any statutory lien for services, labor or materials over the lien of the insured mortgage) arising from an improvement or work related to the land which is contracted for and commenced subsequent to Date of Policy and is not financed in whole or in part by proceeds of the indebtedness secured by the insured mortgage which at Date of Policy the insured has advanced or is obligated to advance.
7. Any claim, which arises out of the transaction creating the interest of the mortgagee insured by this policy, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that is based on:
(i) the transaction creating the interest of the insured mortgagee being deemed a fraudulent conveyance or fraudulent transfer; or
(ii) the subordination of the interest of the insured mortgagee as a result of the application of the doctrine of equitable subordination; or
(iii) the transaction creating the interest of the insured mortgagee being deemed a preferential transfer except where the preferential transfer results from the failure:
(a) to timely record the instrument of transfer; or
(b) of such recordation to impart notice to a purchaser for value or a judgment or lien creditor.

7. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1992 WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 6 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

8. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 1992 EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
(b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims, or other matters:
(a) created, suffered, assumed or agreed to by the insured claimant;
(b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
(c) resulting in no loss or damage to the insured claimant;
(d) attaching or created subsequent to Date of Policy; or

(e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the estate or interest insured by this policy.

4. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by this policy, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that is based on:
(i) the transaction creating the estate or interest insured by this policy being deemed a fraudulent conveyance or fraudulent transfer; or
(ii) the transaction creating the estate or interest insured by this policy being deemed a preferential transfer except where the preferential transfer results from the failure:
(a) to timely record the instrument of transfer; or
(b) of such recordation to impart notice to a purchaser for value or a judgment or lien creditor.

9. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 1992
WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 8 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:
Part One:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

ALTA RESIDENTIAL TITLE INSURANCE POLICY (6-1-87)
EXCLUSIONS

In addition to the Exceptions in Schedule B, you are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes building and zoning ordinances and also laws and regulations concerning:
   (a) and use
   (b) improvements on the land
   (c) and division
   (d) environmental protection

   This exclusion does not apply to violations or the enforcement of these matters which appear in the public records at Policy Date.
   This exclusion does not limit the zoning coverage described in Items 12 and 13 of Covered Title Risks.
2. The right to take the land by condemning it, unless:
   (a) a notice of exercising the right appears in the public records on the Policy Date
   (b) the taking happened prior to the Policy Date and is binding on you if you bought the land without knowing of the taking
3. Title Risks:
   (a) that are created, allowed, or agreed to by you
   (b) that are known to you, but not to us, on the Policy Date -- unless they appeared in the public records
   (c) that result in no loss to you
   (d) that first affect your title after the Policy Date -- this does not limit the labor and material lien coverage in Item 8 of Covered Title Risks
4. Failure to pay value for your title.
5. Lack of a right:
   (a) to any land outside the area specifically described and referred to in Item 3 of Schedule A OR
   (b) in streets, alleys, or waterways that touch your land
   This exclusion does not limit the access coverage in Item 5 of Covered Title Risks.

11. EAGLE PROTECTION OWNER'S POLICY

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE - 1998
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE - 1998

Covered Risks 14 (Subdivision Law Violation). 15 (Building Permit). 16 (Zoning) and 18 (Encroachment of boundary walls or fences) are subject to Deductible Amounts and Maximum Dollar Limits of Liability

EXCLUSIONS

In addition to the Exceptions in Schedule B, you are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes ordinances, laws and regulations concerning:
   a. building
   b. zoning
   c. land use
   d. improvements on the land
   e. land division
   f. environmental protection

   This exclusion does not apply to violations or the enforcement of these matters if notice of the violation or enforcement appears in the Public Records at the Policy Date.
   This exclusion does not limit the coverage described in Covered Risk 14, 15, 16, 17 or 24.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not apply to violations of building codes if notice of the violation appears in the Public Records at the Policy Date.
3. The right to take the Land by condemning it, unless:
   a. a notice of exercising the right appears in the Public Records at the Policy Date; or
   b. the taking happened before the Policy Date and is binding on You if You bought the Land without Knowing of the taking.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they appear in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they appear in the Public Records at the Policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.d, 22, 23, 24 or 25.
5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any Land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This exclusion does not limit the coverage described in Covered Risk 11 or 18.

12. THIRD GENERATION EAGLE LOAN POLICY AMERICAN LAND TITLE ASSOCIATION EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (1/01/08)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to (i) the occupancy, use, or enjoyment of the Land; (ii) the character, dimensions, or location of any improvement erected on the Land; (iii) the subdivision of land; or(iv) environmental protection; or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b)Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage which would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.

13. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 2006
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or

expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

   (i) the occupancy, use, or enjoyment of the Land;

   (ii) the character, dimensions, or location of any improvement erected on the Land;

   (iii) the subdivision of land; or

   (iv) environmental protection;

   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.

3. Defects, liens, encumbrances, adverse claims, or other matters

   (a) created, suffered, assumed, or agreed to by the Insured Claimant;

   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;

   (c) resulting in no loss or damage to the Insured Claimant;

   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or

   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.

4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.

5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.

6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is

   (a) a fraudulent conveyance or fraudulent transfer, or

   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.

7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

14. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 2006 WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 13 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.

15. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 2006 EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

   (i) the occupancy, use, or enjoyment of the Land;

   (ii) the character, dimensions, or location of any improvement erected on the Land;

   (iii) the subdivision of land; or

   (iv) environmental protection;or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

(b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.

3. Defects, liens, encumbrances, adverse claims, or other matters

(a) created, suffered, assumed, or agreed to by the Insured Claimant;

(b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;

(c) resulting in no loss or damage to the Insured Claimant;

(d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risks 9 and 10); or

(e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.

4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors rights laws, that the transaction vesting the Title as shown in Schedule A, is

(a) a fraudulent conveyance or fraudulent transfer; or

(b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.

5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

16. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 2006 WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 15 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.

PHASE I ENVIRONMENTAL SITE ASSESSMENT (ESA)
USER QUESTIONNAIRE

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user of the Phase I ESA* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

Project Information	
Facility Name and Address:	Frontier: 5010 Alisa Canyon Road Irwindale, CA
Reason for the Phase I ESA:	Due Diligence
Type of Property:	Industrial
Site Owner and Contact Information:	See Below
Site Contact Name and Contact Information	Windolp A Wallace C: 949-246-3324 windolph.wallace@ftr.com
Tax Assessors Parcel Number (APN):	8417-025-800/ 8417-025-801 8417-026-801 8417-026-802

	Yes	No
1. Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, state, or local law?		✓
2. Are you aware of any activity use limitations, such as engineering controls (engineered caps, liners, treatment methods, etc.), land use restrictions, or institutional controls (administrative measures restricting groundwater use, construction, or property use, etc.) that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?		✓
3. Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property so that you would have specialized knowledge of the chemicals or processes used by this type of business?		✓
4a. Does the purchase price being paid for the subject property reasonably reflects the fair market value of the subject property?	✓	
4b. If you conclude that there is a difference in fair market price, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?		✓
5. Are you aware of any commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as a user,		✓
5 (a) Do you know of the past uses of the property?		✓
5 (b) Do you know of any specific chemicals that are present or were once present on the subject property?		✓
5 (c) Do you know of spills or other chemical releases that have taken place at the subject property?		✓

5 (d) Do you know of any environmental cleanups that have taken place at the subject property?		✓
6. As the user of this ESA, based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of contamination at the subject property?		✓

If you answered "yes" to any of the questions (except 4a) above, please provide more detail below, or attach additional information to this document:

1.2 Findings and Conclusions Summary

ATC has performed this Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13, and Frontier Communications Corporation's specific requirements. Any exceptions to, or deletions from, this practice are described in **Section 2.0** of this report. This Phase I ESA was completed in connection with a proposed sale and lease-back of the Property.

The Property consists of an irregularly-shaped parcel, approximately 10.52 acres in area, located at 5010 Azusa Canyon Boulevard. The Property is developed (starting in 1957) with a two-story office building, a supply warehouse, an automotive service building, truck wash station, various storage buildings, two former dispenser island canopies, facility truck yard and an employee parking lot.

This assessment has revealed one off-site and five on-site *recognized environmental conditions,* three (3) *historical recognized environmental conditions,* and one (1) *vapor encroachment condition* in connection with the Property. The following table provides a summary of findings of this Phase I ESA for the Property:

FINDINGS AND CONCLUSIONS SUMMARY						
Report Section		**Recognized and/or Controlled Environmental Condition (REC and/or CREC)**	**Historical Recognized Environmental Condition**	**De Minimis Condition**	**ASTM Non-Scope Condition**	**Description**
4.0	**Client Provided Information**		**X (1B, C, D)** **X(1E)** **X(1F)** **X(1G)**	**X(1I)**		(1) Frontier Communications provided the following documents: A. Phase II Diesel UST, 1985 B. Soil Gas Study, 1991 C. Replacement and Remediation Clarifier, 1992 D. Remediation North Dispenser, 1992 E. Phase II Diesel UST, 1993 F. Soil Gas Survey, 1995 G. UST Closure Report, 1996 H. UST Closure Report, 2009 I. Limited Phase II, 2001
5.1.1	**Federal Database Findings**	**X (2)**				(2) The Property is located within the boundaries of the San Gabriel Valley Area 2 NPL site (3) The Property is listed on the following databases: RCRA Small-Quantity Generator, FINDS, ECHO
5.1.2	**State and Tribal Database Findings**		**X (4A), same as Finding 1E,G** **X(4D), same as Findings 1B and 1C**			(4) The Property is listed on the following databases: A. LUST, Historical Cortese, RGA LUST B. UST, HIST UST, SWEEPS C. HMS D. WIP E. HAZNET
5.1.3	**Local Environmental Record Sources**	**X(5)**				(5) An air quality permit was issued in 1975 for a paint spray booth in an unknown location
	Physical Setting Sources					

FINDINGS AND CONCLUSIONS SUMMARY						
Report Section		**Recognized and/or Controlled Environmental Condition (REC and/or CREC)**	**Historical Recognized Environmental Condition**	**De Minimis Condition**	**ASTM Non-Scope Condition**	**Description**
5.3	**Historical Records Sources**					(6) The Property was partly agricultural and partly vacant prior to development with the current telephone service yard
6.2	**Hazardous Substance Use, Storage and Disposal**					
6.3	**Underground Storage Tanks (UST)**	**X(7)**	**X(8), same as 1D, E, G**			(7) Three previously unassessed 120-gallon subsurface hydraulic oil reservoirs are present on-site. Currently, there are three active in-ground lifts and five removed in-ground lift locations. Two aboveground lifts are in use at the Property. (8) USTs and/or dispensers with associated impacts removed in 1988, 1989, 1993, and 1996
6.4	**Aboveground Storage Tanks (AST)**					(9) One 500-gallon dual-compartment oil AST and two 60-gallon hydraulic oil ASTs on-site.
6.5	**Other Petroleum Products**					
6.6	**Polychlorinated Biphenyls (PCBs)**	**X(10),** *same as* **Finding 7**				(10) Five removed in-ground hydraulic lifts and three active hydraulic lifts located in the vehicle service building
6.7	**Unidentified Substance Containers**					(11) One old-appearing unlabeled drum observed without secondary containment
6.8	**Non-hazardous Liquid/Solid Waste**					
6.9	**Wastewater**	**X (12)**	**X (13), same as 1D and 1F**			(12) At least one and possibly two prior clarifiers were reportedly located inside the service building near a former steam cleaning area. (13) A former clarifier located west of the service building in the same location as the current clarifier was replaced and impacted soil was excavated and removed.
6.10	**Waste Pits, Ponds and Lagoons**					
6.11	**Sumps and Drains**					
6.12	**Septic Systems**		**X(14), same as 1F**			(14) Two former septic systems were present on-site. One was remediated as part of the WIP case, while the other served an office building that has since been demolished.
6.13	**Stormwater Management System**					
6.14	**Wells**					(15) The following types of wells are located on the Property: A. Three vapor monitoring wells are present.

FINDINGS AND CONCLUSIONS SUMMARY						
Report Section		Recognized and/or Controlled Environmental Condition (REC and/or CREC)	Historical Recognized Environmental Condition	De Minimis Condition	ASTM Non-Scope Condition	Description
		X(15B)				B. One dry well, formerly associated with a truck scale, was located beneath the current large storage building
6.15	Other					
7.0	Subsurface Vapor Migration					(16) Low level VOCs were identified in 1991 but left in-situ beneath the vehicle service building.
8.0	Interviews					
9.1	Asbestos-Containing Material (ACM)				X(17)	(17) Pipe wrap in the main office building was identified as ACM. Based on the construction date of the buildings (1957/1966), other ACM may be present
9.2	Radon					
9.3	Lead in Drinking Water					
9.4	Lead-Based Paint (LBP)				X (18)	(18) Based on the construction date of the buildings (1957/1966), LBP may be present.
9.5	Mold Screening				X (19)	(19) Some stained ceiling tiles noted in the main office building. No evidence of mold was observed.
9.6	Additional Client Requested Conditions					

1) ATC was provided with the following prior reports/documents from Frontier Communications:

A. Phase II Final Report – Irwindale Plant Yard, prepared by *McLaren Environmental Engineering (McLaren),* dated November 8, 1985.

This report presents the results of a subsurface investigation conducted adjacent to a 10,000-gallon diesel underground storage tank (UST) associated with the southern dispenser island and a precision tightness test conducted on a 10,000-gallon gasoline UST associated with the northern dispenser island. One boring was advanced to a depth of 15 feet, adjacent to the southern UST. Soil samples were collected at depths of 3.5 to 5.0 feet, 8.5 to 10.0 feet, and 13.5 to 15.0 feet and analyzed for petroleum hydrocarbons by infrared spectroscopy (IR). Petroleum hydrocarbons were detected at a maximum concentration of 30 milligrams per kilogram (mg/kg) in the deepest sample. The gasoline tank tested as tight. McLaren recommended performing a tightness test on the diesel tank and annual tests for both tanks thereafter.

B. Soil Gas Study Report, GTE Irwindale Site, Irwindale, California, Regional Board File No. AB108.0212, prepared by Camp Dresser & McKee, Inc. (CDM), and dated August 1991.

This report presents the results of a soil gas investigation with associated soil sampling, conducted in response to requests made by the Regional Water Quality Control Board (RWQCB) following an inspection in March 1991, which identified two principal areas of the Property requiring investigation. The investigation was part of an area-wide search by the RWQCB, under the Well Investigation Program (WIP), for Potentially Responsible Parties (PRPs) for the San Gabriel Valley Groundwater Basin (Area 2) National Priorities List (NPL) site, a region of where groundwater impacted with a number of industrial solvents and other compounds. The Property is located within the boundaries of the NPL

site. The first area identified by the RWQCB was the truck wash tunnel and steam cleaning bay, with associated drains and clarifier, and inactive cesspools and septic tanks. In particular, degradation was noted to the concrete of the western drain/sump of the wash tunnel and grouted portions of the clarifier. The second area consisted of certain bays within the eastern half of the service building that formerly contained a truck wash/steam clean area and at least one clarifier (Note: a set of plans observed at the Los Angeles County Department of Public Works (LACDPW) as well as a hand drawn diagram referenced two clarifiers in this second area. A total of 63 soil gas and four soil samples were collected and analyzed from 28 locations. Soil gas probe locations included the the above referenced vehicle washing, steam cleaning, and septic waste water system as well as the soap sump, and current and former hazardous waste storage enclosures. Soil gas probe depths ranged from four to eight feet below ground surface (bgs) due to the presence of cobbles and gravelly soils in the subsurface. Soil gas samples were analyzed for 1,1,1-trichloroethane (TCA, a compound previously identified in clarifier waste water), 1,1-dichloroethane, chloroethane, tetrachloroethane (PCA, erroneously referred to in the text as tetrachloroethene [PCE]), trichloroethene (TCE), and total volatile organic compounds (VOCs) by gas chromatograph. Soil samples were located in Area One near the rear of the steam cleaning area, the former cesspool within the truck wash tunnel, near the outflow of the clarifier, and in Area Two, adjacent to the estimated location of the former clarifier. Soil samples were analyzed for VOCs by EPA Methods 8010/8020 and total recoverable petroleum hydrocarbons (TRPH) by EPA Method 418.1. All soil samples had non-detectable concentrations of VOCs and only one, located near the Area One clarifier, had an elevated concentration of TRPH (11,000 mg/kg at a depth of 7.5 feet bgs). Soil gas readings indicated that TCA was detected in all samples at concentrations ranging from 0.05 micrograms per liter (µg/L) to 1.81 µg/L, with the maximum occurring near the clarifier inlet. Total VOCs ranged from 0.89 µg/L in a former waste storage area located near the northeastern corner of the truck wash tunnel to 215.1 µg/L near the clarifier outlet. The specific additional VOCs whose concentrations were summed to make up the "total" was not reported. No DCE or TCE was detected in any of the samples and low concentrations of chloroethane and PCA were in one sample each. The eastern area of investigation had TCA concentrations ranging from 0.13 µg/L to 1.12 µg/L, while total VOC concentrations ranged from 1.19 µg/L to 11.92 µg/L.

CDM recommended that the clarifier and surrounding TRPH-contaminated soil be removed and disposed of appropriately.

The RWQCB subsequently issued a provisional closure letter dated September 3, 1992 stating that no further action was required at that time with respect to the former septic tank and cesspool area, but reserved the possibility that additional investigation might be required in the future (which proved to be the case). A copy of that closure letter is included in **Appendix L**. Final closure was eventually achieved, as indicated by the succeeding reports and/or documents discussed below, and the soil impacts are considered to represent a *historical recognized environmental condition*; however, the identification of VOCs in soil vapors beneath the property in varying concentrations is considered to represent a *vapor encroachment condition* **(**see **Section 7.0** of this report**)**.

C. Site Assessment and Remediation Closure Report, Sand and Grease Interceptor, GTE-Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California, prepared by CDM and dated November 24, 1992.

This report documents a number of activities including the removal of a two-stage clarifier located north of the truck wash tunnel and replacement with a three-stage clarifier utilizing a geomembrane secondary containment and epoxy coating of interior surfaces, the removal of a septic tank system located a short distance to the northeast of the clarifier, the removal and replacement of two drains (one in the steam cleaning bay and the other within the truck wash tunnel), and collection of soil samples for analysis from the excavations of the clarifier, septic tank and estimated cesspool areas. Soils identified as impacted through field screening were excavated.

A total of 47 tons of impacted soil was removed from a broad area between the steam cleaning drain and the outlet of the clarifier. Confirmation samples from the bottom of the excavation were collected

from locations specified by the RWQCB representative and analyzed for halogenated and aromatic VOCs by EPA Methods 8010 and 8020, as well as TRPH by EPA Method 418.1. Apart from one sample from beneath the septic tank, which reportedly contained 11 mg/kg of chloromethane and 24 mg/kg of 1,4-dichlorobenzene, no VOCs were detected in the confirmation samples, and TRPH concentrations ranged from non-detect to 27 mg/kg, or well below the target clean-up level of 100 mg/kg. An addendum letter dated February 9, 1993 was observed by ATC during our review of RWQCB files for the Property that corrected the units reported for the VOC concentrations to micrograms per kilogram (µg/kg).

Based on the results, CDM requested that the RWQCB approve closure for the investigated area. In a letter dated January 20, 1993, the RWQCB responded that due to the sampling method employed (glass jars filled with a hand trowel), the VOC concentrations detected were likely to be low and not representative of site conditions. Nonetheless, the RWQCB provisionally stated that no further action was required at that time, but indicated that additional investigation might be required. A copy of the January 20, 1993 letter is included in **Appendix L**. On April 1, 1993, the LACDPW issued a joint closure letter for this investigation and for the following report dated December 2, 1992, a copy of which is included in **Appendix L**.

D. Site Assessment and Remediation Closure Report, Gasoline Pump Island, GTE-Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California, prepared by CDM and dated December 2, 1992.

This report documents soil excavation efforts to remediate soils beneath the northern dispenser island in 1992. On January 4, 1992, CDM collected a soil sample beneath the gasoline dispenser island, which was then analyzed for the fuel constituents benzene, toluene, ethylbenzene, and total xylenes (BTEX). The analysis revealed BTEX concentrations of 14, 75, 68, and 620 micrograms per kilogram (µg/kg), respectively. To remediate these impacts, an area approximately ten feet by ten feet was excavated beneath, and along the northern side of the dispenser island to an approximate depth of eight feet. Sidewall samples were analyzed for BTEX and total extractable petroleum hydrocarbons as gasoline (TPHg). The bottom sample was analyzed for BTEX only. All samples had non-detectable concentrations of the analytes.

CDM recommended that the LACDPW issue a closure letter for the northern pump area. As previously stated, on April 1, 1993, the LACDPW issued a joint closure letter for this investigation and for the preceding report dated November 24, 1992, a copy of which is included in **Appendix L**.

E. Additional Site Assessment of Diesel Pump Island, GTE – Irwindale Plant Yard, Irwindale, California, prepared by CDM and dated February 4, 1993.

This report documents the result of a limited subsurface investigation consisting of a single boring advanced along the northern side of the south pump island at the Property. Soil samples were collected at depths of 12 and 17 feet bgs and analyzed for BTEX and total extractable petroleum hydrocarbons as diesel (TPHd). Both samples had non-detectable concentrations of all analytes. CDM recommended that regulatory closure for the southern pump island should be requested from the LACDPW. What appears to be a closure letter for this former diesel UST removed in 1989 (and possibly intended to include the former gasoline UST removed in 1988 under the same permit) was issued by the LACDPW on May 6, 1993. A copy of that letter is included in **Appendix L**.

F. Report of Soil Gas Investigation, GTE-Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California, prepared by CDM and dated November 9, 1995.

In May of 1995, the RWQCB requested additional soil gas sampling in the vicinity of the former clarifier inlet and former septic tanks. In September 1995, vapor well VW-1 was advanced to a depth of 19 feet bgs a short distance northeast of the clarifier inlet and vapor well VW-2 was advanced to a depth of 20 feet bgs, and was located west of the former septic tanks. Two soil vapor probes were placed in each

well at approximate ten-foot intervals. Vapor samples were analyzed for VOCs by an on-site mobile laboratory. No VOCs were detected in any of the soil vapor samples collected. CDM requested that the RWQCB grant closure for the former clarifier/septic tank areas. The RWQCB determined that the work performed to that point had adequately evaluated the VOC contamination and that no further action was required with regard to the San Gabriel Valley Cleanup Program (i.e., WIP) and issued a letter to that effect dated June 5, 1998, a copy of which is included in **Appendix L**. However, the RWQCB did caution that other agencies such as the USEPA were not bound by this letter and could make their own determination regarding the Property. Accordingly, while the WIP case file is considered to represent a *historical recognized environmental condition*, the presence of the Property within the National Priorities List (NPL) site boundary is still considered to represent a *recognized environmental condition*.

G. Report, Environmental Investigation Related to the Removal of Two Underground Storage Tanks, prepared by Environmental Resolutions, Inc. (ERI), dated August 7, 1996.

This report documents the removal of a 12,000-gallon gasoline UST located near the northern dispenser island and a 1,000-gallon waste oil UST located at a point farther to the east along the southern side of the vehicle maintenance building. Both USTs were removed on January 19, 1996, along with the dispenser island. Neither tank was reported to have holes. Soil samples collected in connection with the gasoline UST were analyzed for total petroleum hydrocarbons (TPH) by EPA Method 8015M and BTEX compounds by EPA Method 8020. Soil samples collected from the waste oil excavation were analyzed for TRPH by EPA Method 418.1. Low concentrations of TPH, ethylbenzene, and total xylenes of 34 mg/kg, 0.15 mg/kg, and 0.18 mg/kg, respectively, were detected in a sample collected from the stockpile, but no residual impacts were identified in the samples collected directly from the excavation, piping, or dispenser areas. Low levels of TRPH (10-21 mg/kg) were detected at each end of the waste oil tank. ERI concluded that no further work was necessary. The LACDPW issued a closure letter for the UST removals dated November 26, 1996, a copy of which is included in **Appendix L**.

In February 1996, a replacement 12,000-gallon gasoline UST was installed in essentially the same location as the first along with a new dispenser island and canopy. The waste oil UST was replaced at the same time with a dual-compartment aboveground storage tank (AST) for the storage of both new oil and waste oil that is currently located on-site at the western end of the service building.

H. Underground Storage Tank Removal Report, Verizon – Irwindale Fleet Yard, GLC 071207B, 5010 Azusa Canyon Road, Irwindale, California, prepared by Shaw Environmental, Inc. (Shaw), and dated June 2009.

This report documents the activities and soil sampling results in connection with the removal of a 12,000-gallon gasoline UST from the vicinity of the northern dispenser island. The UST was removed on May 20, 2009. Confirmation samples from the excavation and stockpile were analyzed for TPHg and TPHd by EPA Method 8015B Modified, BTEX compounds and fuel oxygenates by EPA Method 8260B. All samples had non-detectable concentrations of all analytes. Shaw recommended no further action.

The LACDPW issued a closure letter for the UST removal dated December 3, 2015, a copy of which is included in **Appendix L**. Since no releases were identified, this UST closure does not represent either a *recognized environmental condition* or a *historical recognized environmental condition*.

I. Limited Focused Phase II Site Assessment, Site: Verizon Irwindale Plant Yard, 5010 Azusa Canyon Rd, Irwindale, CA 91706-1884, prepared by Hydrologue Inc., and dated November 26, 2001.

This report documents the results of a limited subsurface investigation on the northeastern portion of the employee parking lot, where it was observed that runoff originating from the east-adjacent industrial park at 15558-15562 Arrow Highway was flowing onto the Property. The report did not specify whether

the runoff was from stormwater or some other activity. Four shallow borings were advanced to an approximate depth of one foot in the area affected by the runoff. Soil samples were analyzed for TRPH, VOCs, chromium and lead. TRPH was detected in all four shallow samples at concentrations ranging from 12 to 34 mg/kg. Chromium concentrations ranged from 10.3 to 20.2 mg/kg. Lead concentrations ranged from 5.16 to 7.47 mg/kg. No VOCs were detected. Hydrologue concluded that the hydrocarbon contamination in the samples appeared to have originated from the runoff from the adjacent industrial park. No comment was offered by Hydrologue regarding the metal concentrations. Hydrologue recommended that Verizon contact the adjacent property to improve its housekeeping practices and discontinue any industrial discharge. Hydrologue also recommended advancing four additional soil borings to a depth of 20 feet to collect background samples to compare with those from the area affected by the runoff. ATC does not know whether or not the recommendations were adopted; however, during the site reconnaissance, ATC did not observe suspicious staining in the employee parking lot near the location where the four shallow borings were advanced. ATC considers this finding to be an offsite potential environmental concern.

2) The Property is located within the boundary of the San Gabriel Valley Groundwater Basin (Area 2) NPL site, a region where groundwater is impacted with various volatile organic compounds (VOCs). According to a plume map accompanying the 2015 Annual Performance Evaluation Report for the NPL site, total combined concentrations for all Contaminants of Concern (COCs) beneath the Property range between the maximum contaminant levels (MCLs) and five-times the MCLs. The principal contaminant in the groundwater beneath the Property is depicted as perchlorate, the MCL of which is 6.0 micrograms per liter (µg/L). Perchlorate does not appear to have been used on the Property. Nonetheless, the presence of impacted groundwater is considered to represent a *recognized environmental condition*.

3) The Property is listed as a Resource Conservation Recovery Act (RCRA) Small-Quantity Generator (SQG) of hazardous waste. The wastes listed for the more recent occupant, Frontier, were described as Ignitable wastes. The wastes for the historical generator, Verizon, were described as ignitable, corrosive, and reactive materials, benzene, tetrachloroethylene, and various halogenated solvent mixtures. No violations were reported. The Property is also listed on the Facility Index System (FINDS) database and the Environmental Compliance History Online (ECHO) website, neither of which reported releases or violations. Based on the absence of violations, the federal database listings for the Property do not represent a *recognized environmental condition*.

4) The Property was identified on several state or local regulatory databases including the following listings:

   A. The Property is listed on as a leaking underground storage tank (LUST) site on the LUST, Historical Cortese, and Recovered Government Archives (RGA) LUST databases. The LUST database listing appears to refer to a soil-only release associated with a former diesel UST that achieved closure in 1996 (discussed above in client-provided prior reports, **Findings 1A and 1E**). The Historical Cortese database and RGA LUST database listings provide no relevant added details. This particular release is considered to represent a *historical recognized environmental condition*.

   B. The Property is listed as a registered UST facility on the UST, Historical UST (HIST UST), and Statewide Environmental Evaluation and Planning System (SWEEPS) databases. The various UST listings provided no relevant details regarding the USTs in question. No active USTs are believed to remain on the Property.

   C. The Property is listed as on the LACDPW HMS list, which simply indicates that case files for UST removals and/or industrial waste discharge permits are on file and available for review. EDR did not provide information on the contents of the files, which ATC did review and are discussed in **Section 5.1.3** of this report.

   D. The Property is listed as a Well Investigation Program (WIP) site. WIP was a program to identify potentially responsible parties (PRPs) for the NPL site (within the boundaries of which, the Property

was located). In general, the scope of work required for WIP investigations ranged from completion and submittal of a chemical use questionnaire to the conducting of a subsurface investigation. At the request of the Regional Water Quality Control Board (RWQCB), a subsurface investigation was conducted at the Property in certain identified areas of concern, including damaged and undamaged clarifiers, steam cleaning operations, drains, and a septic system. Impacted soil was discovered and remediated. Regulatory closure was granted for the WIP investigation by the RWQCB and the Property was not named as a PRP. A copy of the closure letter, dated June 5, 1998, is included in **Appendix L**. ATC concludes this listing is a *historical recognized environmental condition* as discussed in **Findings 1B and 1C**.

E. The Property appears on the Facility and Manifest Data (HAZNET) list, as a facility that generates, or has generated, manifested waste. The wastes generated were reported as laboratory waste chemicals, other organic solids, off-specification, aged, or surplus organics, unspecified oil-containing waste, pharmaceutical waste, oil/water separation sludge, and aqueous solutions with total organic residues of less than 10 percent. Apart from the reference to laboratory waste and pharmaceutical waste, which appear to be erroneous listings, the wastes generated appear to be typical for the Property. HAZNET does not track violators and the presence of a facility on this database does not necessarily indicate that a problem exists at that facility. Based on the wastes generated, the appearance of the Property on the HAZNET database is not considered to represent a *recognized environmental condition.*

5) The South Coast Air Quality Management District (SCAQMD) had a record of a permit issued in 1975 for a paint spray booth. An image of the 1975 permit was available online, which identified the manufacturer as Binks, and the dimensions as 7'8" wide, 7" high, and 8'8" deep and indicated that the booth utilized one exhaust fan. No renewal permits were observed and it may have been present for a limited time; however, given the time-frame of its use, it is possible that chlorinated solvents were used in connection with the booth. The former spray booth is considered to represent a *recognized environmental condition*; however, its former location is unknown. A large spray booth used as a storage building (for non-chemical items) was observed on-site along the east property line. As the manufacturer, dimensions, and number of exhaust fans on this spray booth do not match those cited on the permit, and early site plans for the Property reviewed at the LACDPW note the continual presence of a shed in the same location, ATC considers it unlikely that this spray booth is the one referenced in the 1975 SCAQMD permit.

6) The historical use of the Property consisted primarily of vacant land with portions under cultivation. Circa 1957, the first structures of the current facility were constructed. Given the past agricultural use, there is some potential for environmentally persistent pesticides and herbicides to be present in the subsurface. However, given the amount of grading and mixing accompanying the development of the Property along with the fact that the entire Property is essentially paved, it is unlikely that former pesticide and/or herbicide use would present a hazard to occupants, or otherwise impact the current use of the Property.

7) The access plates for three subsurface 120-gallon hydraulic oil reservoirs are present along the southern exterior of the vehicle service building. Given that approximately five of the former in-ground hydraulic hoists have been removed, and aboveground hydraulic oil tanks appear to be serving the three active in-ground hydraulic oil lifts on-site, it is assumed that the subsurface reservoirs, if present, are not in use. However, as they do not appear to have been previously assessed, the hydraulic oil reservoirs are considered to represent a *recognized environmental condition*. The seven lift locations are depicted on **Figure 3 C** (Note that in one instance an active and inactive lift location occupy the same bay). Given the lack of subsurface testing and/or maintenance data demonstrating the absence of leaks, the seven in-ground hoist locations are considered to represent a *recognized environmental condition.*

8) At least five prior USTs have been present on-site as discussed in **Finding 1**. It is possible that at least one earlier UST to any of the above was present on-site, as a January 1957 building permit for a "gas

pump canopy" was observed in building department files. If the associated UST(s) represents an earlier generation than that of the 10,000-gallon gasoline UST removed in November of 1988 (the earliest known with certainty), then no indication of its former location has been identified. As this suggestion of an earlier UST cannot be confirmed, it is considered to be a potential environmental concern but does not rise to the level of a *recognized environmental condition*.

9) One 500-gallon dual-compartment aboveground storage tank (AST) is located on the western side of the vehicle service building within a shallow drip-containment berm. One compartment is used for new oil and the other for waste oil. In addition, located within the service building are two small hydraulic oil ASTs, estimated to be approximately 60 gallons each. The hydraulic oil ASTs are used in connection with the two active in-ground hydraulic lifts located within the garage. No releases were observed in connection with the Property ASTs and they are not considered to represent a *recognized environmental condition*.

10) Approximately five former in-ground hydraulic hoist locations and three active in-ground hoists are present in the service building. Two active aboveground hoists are present as well. Based on the pre-1979 age of the Property improvements, it is possible that the former hydraulic hoists have utilized hydraulic fluids containing polychlorinated biphenyls (PCBs). Given the lack of subsurface testing and/or maintenance data demonstrating the absence of leaks, the seven in-ground hoist locations are considered to represent a *recognized environmental condition* as discussed in **Finding 7**. Other potential sources of PCBs such as utility-owned transformers or fluorescent light ballasts may be present, but as there is no indication of a release from these sources and the transformers are the responsibility of Southern California Edison, other potential PCB sources are not considered to represent a *recognized environmental condition*.

11) ATC observed one old-appearing unlabeled 55-gallon drum on the northeastern exterior side of the large storage building. Based on the weight of the drum, it was not empty, although its contents are unknown. The drum sitting on concrete and was not within secondary containment; however, there was no observed evidence of associated staining. Based on the apparent absence of releases from the drum, the drum is not considered to represent a *recognized environmental condition*.

12) According to various sources, at least one, and possibly two, clarifiers were formerly located inside the vehicle service building, approximately mid-way between the eastern and western ends, in what was once a steam cleaning area. A set of plans observed at the LACDPW references the two "sand traps" to be removed, and a second hand-drawn plat observed at the LACDPW depicted two sand traps as being "abandoned" (presumably in place), although prior reports typically depict only one. No trace of the former clarifier(s) is visible as the room has been converted into an office, and the floor finished with suspect asbestos-containing 9" x 9" floor tile. As part of the initial WIP investigation, one soil boring was advanced in 1991 to a depth of five feet alongside the clarifier (only one was identified at that time) and two soil gas samples were collected near the estimated inlet at depths of four feet and six feet, four inches. The soil sample identified no VOCs but detected 10 mg/kg of TRPH. The two soil gas samples contained total VOC concentrations ranging from 4.85 to 8.94 µg/L. While these laboratory results are comparatively low, ATC does not believe that the clarifier or clarifiers were adequately assessed. ATC considers the clarifier(s) in the former steam cleaning area to be a *recognized environmental condition.*

13) A two-stage clarifier with identified deterioration and associated impacted soils was removed in 1992 from its location on the north side of the truck wash tunnel and replaced with the current three-stage clarifier (utilizing a geomembrane and interior sealant). The impacted soils were excavated and regulatory closure was granted by the RWQCB on January 20, 1993 and the LACDPW on April 1, 1993. The former clarifier and associated impacts are considered to be a *historical recognized environmental condition* as discussed in **Finding 1D and 1F**.

14) Two septic systems were formerly located at the Property. The first was located north of the current truck wash tunnel, which consisted of two 900-gallon septic tanks arranged end-to-end and two associated cesspools. The other septic system consisted of six septic tanks arranged in two end-to-

end rows of three each and five associated cesspools. The first septic system was among the areas assessed in the WIP investigation, and was granted regulatory closure. The second septic system does not appear to have been previously assessed; however, given that it served an office building formerly located farther to the south and out of the investigation area, it is not considered to represent an environmental concern to the Property.

15) Three vapor monitoring wells are located between the eastern end of the clarifier and extending to the northeast where the former septic tanks were located. The wells reportedly extend to an approximate depth of 20 feet. Soil gas samples collected from the wells in 1995 had no detectable concentrations of VOCs. The soil gas sampling report **(see Section 5.3.9)** indicated that only two wells were installed and sampled, but three are present on-site. It is not known when the third well was installed. While the vapor monitoring wells are not considered to represent a *recognized environmental condition*, these wells should be abandoned in accordance with applicable standards and regulations unless they serve a useful purpose or are required to be maintained through a regulatory directive.

    A 1956 site plan observed in the LACDPW file references the installation of a dry well at the Property. The well is shown on the plan as connected to a truck scale that was formerly located on the east side of the Property adjacent to the south of the current large storage building. Presumably the well was used to drain rain water that might have seeped into the cavity beneath the scale. It is possible that oil and grease may have been discharged to the subsurface through the well. The well was shown in a detail as extending from 3 feet six inches below the surface to a depth of 9 feet six inches. ATC estimated from the plan that the well was approximately 25 feet north of the truck scale, which would place it beneath the large storage building (constructed later in 1966). The truck scale was removed at an unknown date, but it is assumed that the drywell is likely still present. Because of the former potential for discharging petroleum products to the subsurface, the former dry well is considered to represent a *recognized environmental condition*.

16) A soil gas survey conducted at the Property by in 1991 **(see Finding 1B)** identified relatively low levels of total VOCs at depths of four and eight feet bgs in areas beneath the central portion and western side of the vehicle maintenance building that do not appear to have been remediated. Remnant vapors beneath the building at shallow depths are considered to represent a *vapor encroachment condition*. Given that the RWQCB chose to exclude these areas from required remediation, the remnant vapors are not considered to represent a *recognized environmental condition*.

17) ATC conducted a limited visual survey for the presence of readily accessible suspect asbestos-containing materials (ACM) within the Property buildings. Suspect materials observed during the course of the survey included wallboard/joint compound, baseboard, resilient floor tiles (12”x12” and 9”x9”), resilient sheet flooring, acoustical ceiling panels, and thermal system insulation (pipe wrap). The pipe wrap, located in the heating, ventilation, and air conditioning (HVAC) room on the ground floor of the main office, has a warning label indicating that it was known to contain asbestos. The site escort, Mr. Mark Norton of Frontier, indicated that he had no knowledge of an asbestos Operations and Maintenance (O&M) plan at the facility. Suspect materials were observed in fair to good condition. While not a concern under typical operations, ACM would be considered an environmental concern should renovation or demolition activities occur. Asbestos is outside the scope of work of ASTM Practice E 1527-13, and therefore is not considered a *recognized environmental condition*.

18) Based on the construction dates of the Property improvements (1957-1966), it is possible that lead-based paint (LBP) has been used on the Property in the past. Painted surfaces appeared to be in generally good condition. While not a concern under typical operations, LBP would be considered an environmental concern should renovation or demolition activities occur. LBP is outside the scope of ASTM Practice E 1527-13; therefore, the potential presence of LBP is not considered to represent a *recognized environmental condition*.

19) ATC conducted a screening survey for mold conditions at the Property. The screening consisted of limited interview, document review (if applicable) and physical observation. ATC spoke with Mr. Mark

Norton, Building Services Specialist at the Property for approximately one year. Mr. Norton indicated that there have been no roof leaks or significant water-intrusion events within the time he was associated with the Property. Furthermore, Mr. Norton could not recall previous mold occurrences at the Property or prior surveys for mold. Accordingly, there was no prior mold documentation for ATC to review. During the site reconnaissance, ATC did not observe suspect mold at the Property or, apart from occasional water stains on acoustical ceiling panels on the first floor of the office, indications of current or former water intrusion events conducive to mold growth. Mold is outside the scope of ASTM Practice E 1527-13, and therefore the potential for mold is not considered to represent a *recognized environmental condition*.

1.3 Significant Data Gap Summary

The following is a summary of *significant data gaps* identified in this report.

SIGNIFICANT DATA GAP SUMMARY		
Report Section		**Description**
3.5	**Current Uses of Adjoining Properties**	No *significant data gap* identified.
4.2	**Environmental Liens or Activity and Use Limitations (AULs)**	No *significant data gap* identified.
5.1	**Standard Environmental Records**	No *significant data gap* identified.
5.2	**Physical Setting Sources**	No *significant data gap* identified.
5.3	**Historical Records Sources**	No *significant data gap* identified.
6.1	**Methodology and Limiting Conditions**	No *significant data gap* identified.
8.0	**Interviews**	No *significant data gap* identified.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify recognized environmental conditions in connection with the Property at the time of the site reconnaissance. The scope of work for this Phase I ESA may also include certain potential environmental conditions beyond the scope of ASTM Standard Practice E1527-13 as listed below. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E1527-13, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E1527-13 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the Property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.

- Usage of the Property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.

- Observations and interviews regarding current Property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.

- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on or at the Property.

- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the Property.

- Potential for subsurface vapor migration in, on or at the Property as described in **Section 7.0**.

The scope of the assessment also included consideration of the following potential environmental issues or conditions that are beyond the scope of ASTM Standard Practice E1527-13:

- Visual observation of suspect asbestos-containing materials (ACM), consisting of providing an opinion on the condition of suspect ACM on the Property based upon visual observation during the site reconnaissance. No sampling of suspect ACM was conducted.

- Visual observation of Lead-based paint (LBP), consisting of providing an opinion on the potential for suspect LBP based on the construction date of buildings on the Property and visual observation of the condition of suspect LBP.

- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the Property. No radon sampling was conducted.

- Lead in Drinking Water Data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the Property meets the drinking water standards for lead.

- The scope of work for the Mold Screening was intended to be consistent with ASTM E 2418-06: Standard Guide for Readily Observable Mold and Conditions Conducive to Mold in Commercial Buildings: Baseline Survey Process. The scope of work, including potential deviations from the Standard Guide, is described as follows. The interview was limited to at least one knowledgeable person from Property management or engineering staff. The document review was limited to only those relevant documents made readily available to ATC in a timely manner. The physical observations were limited to certain Heating, Ventilation and Air Conditioning (HVAC) system areas and other readily accessible building areas likely to become subject to water damage, plumbing leaks, and flooding. Unless noted otherwise herein, ATC observed the HVAC equipment room(s) and accessible mechanical rooms and, in buildings with package units in the ceiling, at least one unit per floor. Also, unless noted otherwise, ATC observed accessible areas of the basement (or lowest level), the top floor, the roof (including any penthouse areas) and at least one mid-level floor (if applicable). For multi-story buildings, the total number of floors observed (inclusive of those already mentioned) was intended to be up to 10% of the total number of floors (if readily accessible). The Mold Screening did not include destructive methods of observation. No sampling or laboratory analyses were conducted. The Mold Screening service as described herein was limited in scope and by the time and cost considerations typically associated with performing a Phase I ESA. No method can guarantee that a hazard will be discovered if evidence of the hazard is not encountered within the performance of the Mold Screening as authorized and that opinions and conclusions must, out of necessity, be extrapolated from limited information and discrete, non-continuous data points. Unidentified mold or other microbial conditions may exist on the Property.

- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the Property is identified as having a wetland.

- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the Property is identified as being located within a flood plain.

2.3 Significant Assumptions

Any assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the Property.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products in, on or at the Property. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any Property.

- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the Property and environmental conditions on such Property.

- *Past Uses of the Property* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of Property at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E1527-13 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other Property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the Property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in **Section 1.1** of this report does not "certify" the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The statement is intended to document ATC's opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E1527-13 and the scope of work for this assessment.

Per ASTM Standard Practice E1527-13, **Section 6**, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the Property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E1527-13, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard Practice E1527-13 and therefore, the entire report must be updated to reflect current conditions and Property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (Client Reliance)

This report is for the use and benefit of, and may be relied upon by, Frontier Communications (Client), and any of its affiliates, and third parties authorized in writing by Client and ATC, including the lender(s) in connection with a secured financing of the Property, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the Property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of ATC, is at the sole risk and expense of such third party.

ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a total maximum amount of $100,000.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The Property consists of an irregularly-shaped parcel, approximately 10.52 acres in area, located at 5010 Azusa Canyon Boulevard. The Property is developed with a two-story office building, a supply warehouse, an automotive service building, truck wash station, various storage buildings, two former dispenser island canopies, facility truck yard and an employee parking lot **(Photographs 1-6)**. The legal description of the Property consists of a lengthy metes-and-bounds description representing a portion of the northwest quarter of Section 9 in Township 1 South, Range 10 West, San Bernardino Base and Meridian. Copies of the legal descriptions of the four parcels comprising the Property are included with four lien search reports obtained for this ESA (see **Section 4.2**) and included in **Appendix L**. The Assessor's Parcel Numbers for the property are 8417-025-800 and -801, and 8417-026-800 and -801. A Topographic Location Map (**Figure 1**) is attached in **Appendix A**. A Site Vicinity Map is provided as **Figure 2,** and a Site Plan and a Site Plan Detail are provided as **Figures 3A** and **3B** (in **Appendix B)**.

3.2 Surrounding Area General Characteristics

The surrounding area is generally level and characterized by industrial and residential uses. The adjacent parcel to the north is developed with a multi-tenant industrial building **(Photograph 7)**. Adjacent to the east of the northern portion of the Property is a multi-tenant industrial building **(Photograph 8)**. Adjacent to the east of the southern portion of the Property is a railroad right-of-way, beyond which are an office warehouse and a portion of another **(Photograph 9)**. Adjacent to the south of the northern portion of the Property is a multi-tenant industrial building **(Photograph 10)**. Adjacent to the south of the southern portion of the Property is the equipment yard of Malcolm Drilling **(Photograph 11)**. Adjacent to the west, is Azusa Canyon Road, beyond which are single-family residences **(Photograph 12)**. A detailed listing of adjoining properties is provided in **Section 3.5**.

3.3 Current Use of the Property

The facility is occupied by Frontier Communications Corporation (Frontier, formerly Verizon) and is identified as a Garage Work Center (GWC). Uses of the facility generally include office space, a supply warehouse, employee training facilities, storage of miscellaneous equipment and parts, and areas for vehicle servicing, washing, and parking.

3.4 Description of Property Improvements

The following table provides general descriptions of the Property improvements.

PROPERTY IMPROVEMENTS	
Size of Property (approximate)	10.52 acres
General Topography of Property	Generally level
Adjoining and/or Access/Egress Roads	Azusa Canyon Road to the west
Paved or Concrete Areas (including parking)	The entire site apart from building footprints is paved, primarily with asphalt, although concrete is present locally.
Unimproved Areas	None
Landscaped Areas	Shrubbery is present in planters along the western edge of the Property.
Surface Water	None
Potable Water Source	Valley County Water District
Sanitary Sewer Utility	City of Irwindale
Storm Sewer Utility	City of Irwindale
Electrical Utility	Southern California Edison (SCE)
Natural Gas Utility	Southern California Gas
Current Occupancy Status	100%

PROPERTY IMPROVEMENTS	
Unoccupied Buildings/Spaces/Structures	Portions of the office building are not in use due to low staff
Number of Occupied Buildings	Four
General Building Description	Office, supply building, automotive service building, and a large storage building
Number of Floors	Office: two; Remaining buildings: one.
Total Square Feet of Space (approximate)	Office: 18,459; Service Building: 10,835 Supply Building: 5,888 Large Storage Building: 1,925
Construction Completion Date (year)	Office: 1966 Service Building: 1957 with an addition in 1969 Supply Building: 1966 Large Storage Building: 1966 (estimated)
Construction Type	Office: wood-frame and brick; Supply Building and Service Building: concrete masonry; Storage Building: metal
Interior Finishes Description	Walls: wallboard/joint compound, ceramic tile, painted concrete masonry; Floors: resilient floor tile, ceramic tile, resilient sheet flooring, unfinished concrete; Ceilings: wallboard/joint compound, acoustical ceiling panels, and wood.
Exterior Finishes Description	Painted concrete and stucco
Cooling System Type	Office: circulation of chilled water; Other buildings: roof-mounted package unit, window-mounted air conditioning unit, or none.
Heating System Type	Office: circulation of hot water; Other buildings: roof-mounted natural gas package unit or none.
Emergency Power	None:

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as follows:

Direction	Address	Occupant	Current Use	Potential Environmental Conditions
North	5102-5108 Azusa Canyon Road	Multiple tenants	Industrial	See Note 1 below.
East	15558-15562 Arrow Highway	Multiple tenants	Industrial	See Note 2 below.
East, beyond a railroad right-of-way	4981 4th Street	No signage	Industrial	None.
East, beyond a railroad right-of-way	5091 4th Street	No signage	Industrial	None.
South	4926 Azusa Canyon Road	Malcolm Drilling	Industrial	See Note 3 below.
West	4938 Azusa Canyon Road	AAG Ice Cream	Industrial	See Note 4 below.
West	4946 Azusa Canyon Road	Arrow Engineering	Industrial	See Note 5 below
South and West	4954 Azusa Canyon Road	Multiple tenants	Industrial	See Note 6 below

Direction	Address	Occupant	Current Use	Potential Environmental Conditions
West, beyond Azusa Canyon Road	5011 – 5041 Azusa Canyon Road, 15440-15441 Sandstone Street, and 15437 Nubia Street	Private individuals	Residential	None

Note 1: Two addresses in this range were listed as Well Investigation Program (WIP) cases.

Note 2: Four tenants occupying two addresses in this range were listed as WIP cases.

Note 3: This facility is listed as a Resource Conservation and Recovery Act (RCRA) Small-Quantity Generator, as a registered underground storage tank (UST) facility on the UST list, the Los Angeles County HMS list, and the Statewide Environmental Evaluation and Planning System (SWEEPS) database, and as a WIP case.

Note 4: This facility is listed as a leaking UST (LUST) site on the LUST database and on the Los Angeles County HMS list of case files. The facility is also listed as a WIP case site.

Note 5: This facility is listed as a WIP case file site and on the Historical Auto Station database.

Note 6: This address is listed as a WIP case file site and on the Historical Auto Station database.

The potential for these adjacent facilities to impact the Property adversely is discussed in **Sections 5.1.1. and 5.1.2**.

4.0 CLIENT PROVIDED INFORMATION

The following section summarizes information (if any) provided by the Frontier (Client) with regard to the Phase I ESA. Documentation may be found in **Appendix D** or where referenced in this report.

4.1 Title Records

The Client provided no title records information. The acquisition of a chain-of-title report was not a part of the scope of services for this Phase I ESA.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

The Client provided no information regarding Property environmental liens or activity and use limitations (AULs).

ATC contracted Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut to perform an environmental lien search for the Property. According to EDR, there are no environmental liens or AULs associated with the Property. Copies of the reports for each Assessor's parcel comprising the Property are included in **Appendix L**.

4.3 Specialized Knowledge

Apart from information contained in prior environmental reports provided by the Client (see **Sections 4.7 and 5.3.9**), the Client representative provided no specialized knowledge regarding *recognized environmental conditions* associated with the Property.

4.4 Significant Valuation Reduction for Environmental Issues

The Client provided no information regarding a significant valuation reduction for environmental issues associated with the Property.

4.5 Owner, Property Manager, and Occupant Information

The Client indicated that the Property is owned and occupied by Frontier Communications. No manager was identified, but the Client identified Mr. Stephen Odle with Frontier as the site contact.

4.6 Reason for Performing Phase I ESA

The ESA is being performed in connection with a proposed sale and lease-back transaction involving the Property.

4.7 Other Client Provided Documents

Per the ASTM Standard Practice E1527-13, ATC requested documents from the Client. ATC was provided with a copy of the documents listed below from the Client. Further discussion of these reports can be found in **Section 5.3.9**.

USER PROVIDED DOCUMENTS		
Title	**Date**	**Author and/or Source**
Phase II Final Report – Irwindale Plant Yard	November 8, 1985	McLaren Environmental Engineering
Soil Gas Study Report, GTE Irwindale Site, Irwindale, California, Regional Board File No. AB108.0212	August 1991	Camp Dresser & McKee, Inc.
Site Assessment and Remediation Closure Report, Sand and Grease Interceptor, GTE-Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California	November 24, 1992	Camp Dresser & McKee, Inc.

USER PROVIDED DOCUMENTS		
Title	**Date**	**Author and/or Source**
Site Assessment and Remediation Closure Report, Gasoline Pump Island, GTE-Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California	December 2, 1992	Camp Dresser & McKee, Inc.
Additional Site Assessment of Diesel Pump Island, GTE – Irwindale Plant Yard, Irwindale, California	February 4, 1993	Camp Dresser & McKee, Inc.
Report of Soil Gas Investigation, GTE Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California	November 9, 1995	Camp Dresser & McKee, Inc.
Report, Environmental Investigation Related to the Removal of two Underground Storage Tanks, GTE – Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California	August 7, 1996	Environmental Resolutions, Inc.
Underground Storage Tank Removal Report, Verizon – Irwindale Fleet Yard, GLC 071207B, 5010 Azusa Canyon Road, Irwindale, California	June 2009	Shaw Environmental, Inc.
Limited Focused Phase II Site Assessment, Site: Verizon Irwindale Plant Yard, 5010 Azusa Canyon Rd, Irwindale, CA 91706-1884	November 26, 2001	Hydrologue Inc.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR of Shelton, Connecticut, was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the Property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for *recognized environmental condition (REC)*, *controlled recognized environmental condition (CREC)*, *historical recognized environmental condition (HREC)* or *de minimis condition* determinations without conducting supplemental agency file reviews. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the Property, based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as being within the approximate minimum search distance from the Property, based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. The complete regulatory agency database report may be found in **Appendix E**.

The following is a summary of the findings of the database review.

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Property Listed?**	**Additional Sites Listed**
Federal National Priorities List (NPL)	1 mile	No	1
Federal Delisted NPL	½ mile	No	0
Federal Superfund Enterprise Management System (SEMS)	½ mile	No	1
Federal SEMS Archive	½ mile	No	1
Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS)	1 mile	No	1
Federal RCRA non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD)	½ mile	No	0
Federal RCRA Generators	Property & Adjoining	**Yes**	1
Federal Institutional Control/Engineering Control Registry	Property	No	N/A
Federal Emergency Response Notification System (ERNS) list	Property	No	N/A
Environmental Compliance History Online (ECHO)	Property	**Yes**	N/A
Federal Facility Index System (FINDS)	Property	**Yes**	N/A
State and Tribal NPL (RESPONSE and Bond Expenditure Plan [BEP])	1 mile	No	1
State and Tribal CERCLIS and Brownfields (EnviroStor)	½ mile	No	0
State and Tribal Landfill or Solid Waste Disposal Sites	½ mile	No	2
State and Tribal Leaking Underground Storage Tanks (LUST)	½ mile	**Yes**	9
Historical Cortese	½ mile	**Yes**	6
Recovered Government Archives (RGA) LUST	Property	**Yes**	N/A
State Spills, Leaks, Investigations, and Clean-Ups (SLIC)	½ mile	No	8
State and Tribal Registered Underground Storage Tanks (UST), the California Facility Inventory Database (CA FID), Historical UST (HIST UST) database, and the Statewide Environmental Evaluation and Planning System (SWEEPS) list; Los Angeles County HMS list	Property & Adjoining	**Yes**	1

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	**Approx. Minimum Search Distance**	**Property Listed?**	**Additional Sites Listed**
State and Tribal Institutional Control/Engineering Control Registry	Property	No	N/A
State and Tribal Voluntary Cleanup Site	½ mile	No	0
State Well Investigation Program (WIP)	¼ mile	**Yes**	89
Facility and Manifest Data (HAZNET)	Property	**Yes**	N/A
Historical Auto Stations	¼ mile	No	6
Historical Cleaners	¼ mile	No	0

5.1.1 Federal Agency Database Findings

The Property was identified on the following federal agency databases researched.

Frontier California aka Verizon California
5010 Azusa Canyon Road
Databases: RCRA SQG, FINDS, ECHO
Approximate Distance from the Property: Not Applicable (N/A) (Property)
Assumed Groundwater Gradient: N/A
Regulatory Data Summary: The Property is listed as a Resource Conservation Recovery Act (RCRA) Small-Quantity Generator (SQG) of hazardous waste. The wastes listed for the more recent occupant, Frontier, were described as Ignitable wastes. The wastes for the historical generator, Verizon, were described as ignitable, corrosive, and reactive materials, benzene, tetrachloroethylene, and various halogenated solvent mixtures. No violations were reported. The Property is also listed on the Facility Index System (FINDS) database. FINDS does not track any specific environmental issue, but serves as a research aid by listing other databases where information about a given site may be found. In this case, the FINDS database simply listed the RCRA database. The facility is also referenced on the Environmental Compliance History Online (ECHO) website, http://echo.epa.gov. The ECHO website had no reported violations for the last three years, the interval tracked by ECHO.
Discussion: While the former use of chlorinated solvents at the Property represents a potential concern, based on the absence of violations the presence of the Property on the RCRA SQG list is not considered to represent a *recognized environmental condition*.

The Property is located within the boundary of the San Gabriel Valley Groundwater Basin (Area 2) NPL site, a region where groundwater is impacted with various volatile organic compounds (VOCs). According to a plume map accompanying the 2015 Annual Performance Evaluation Report for the NPL site, total combined concentrations for all Contaminants of Concern (COCs) beneath the Property range between the maximum contaminant levels (MCLs) and five-times the MCLs. The principal contaminant in the groundwater beneath the Property is depicted as perchlorate, the MCL of which is 6.0 micrograms per liter (µg/L). Perchlorate does not appear to have been used on the Property. Nonetheless, the presence of impacted groundwater is considered to represent a *recognized environmental condition*.

The following adjacent site was listed on federal databases, identified as follows:

Malcolm Drilling
4926 Azusa Canyon Road
Databases: RCRA SQG
Approximate Distance from the Property: Adjacent to the south
Assumed Groundwater Gradient: Cross-gradient
Regulatory Data Summary: This site is listed as a RCRA SQG facility. The wastes generated included ignitable and corrosive wastes. No violations were reported.
Discussion: Based on the cross-gradient location and absence of violations, the presence of this adjacent facility on the RCRA SQG database is not considered to represent a *recognized environmental condition* for the Property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the federal agency databases searched are considered to represent a likely past, present or material threat of release in, on, or at the Property. Given the physical setting characteristics of the Property and surrounding area, supplemental agency file reviews deemed unnecessary.

5.1.2 State and Tribal Database Findings

The Property was identified in the following State and tribal databases reviewed:

General Telephone Co., aka Verizon California and Frontier California
5010 Azusa Canyon Road
Databases: UST, HIST UST, SWEEPS, HMS, LUST, HIST Cortese, RGA LUST, WIP, HAZNET
Approximate Distance from the Property: Not Applicable (N/A) (Property)
Assumed Groundwater Gradient: N/A
Regulatory Data Summary: The Property is listed as a registered underground storage tank (UST) facility on the UST database, and the Historical UST (HIST UST), the Statewide Environmental Evaluation and Planning System (SWEEPS), and Los Angeles County HMS databases. The facility is also listed as a leaking UST (LUST) site on the LUST, Historical Cortese, and Recovered Government Archives (RGA) LUST lists. The LUST site has a case-closed status and reportedly affected the local soils only. A copy of the closure letter is included in **Appendix L**. The facility is also listed as a Well Investigation Program (WIP) site. WIP was a program to identify potentially responsible parties (PRPs) for the NPL site. WIP investigations ranged from having a business complete a chemical use questionnaire to the conducting of a subsurface investigation. At the request of the Regional Water Quality Control Board (RWQCB), a subsurface investigation was conducted at the Property in certain identified areas of concern, including damaged and undamaged clarifiers, steam cleaning operations, drains, and a septic system. Impacted soil was discovered and remediated. Regulatory closure was granted for the WIP investigation by the RWQCB and the Property was not named as a PRP. A copy of the closure letter, dated June 5, 1998, is included in **Appendix L**. The Property appears on the Facility and Manifest Data (HAZNET) list, as a facility that generates, or has generated, manifested waste. The wastes generated were reported as laboratory waste chemicals, other organic solids, off-specification, aged, or surplus organics, unspecified oil-containing waste, pharmaceutical waste, oil/water separation sludge, and aqueous solutions with total organic residues of less than 10 percent. Apart from the reference to laboratory waste and pharmaceutical waste, which appear to be erroneous listings, the wastes generated appear to be typical for the Property uses.
Discussion: Based on the granting of regulatory closure, the LUST and WIP case files are considered to represent *historical recognized environmental conditions*. HAZNET does not track violators and the presence of a facility on this database does not necessarily indicate that a probable exists at that facility. Based on the wastes generated, the HAZNET listings are not considered to represent a *recognized environmental condition* for the Property.

The following adjacent sites were listed on state, tribal, or local databases, identified as follows:

Ford Printing & Mail and Plastech Transparencies
5102 and 5108 Azusa Canyon Road
Databases: WIP
Approximate Distance from the Property: Adjacent to the north
Assumed Groundwater Gradient: Cross-gradient
Regulatory Data Summary: These tenants and respective addresses, both located in the same building, were listed as WIP investigation cases. No details were provided by EDR regarding the rationale for, or scope of, the WIP inquiry, but the status of the case files was reported as "Historical" indicating that the WIP cases received a 'No Further Action' (NFA) determination.
Discussion: Based on the cross-gradient location and historical status, neither of the north-adjacent WIP cases is considered to represent a *recognized environmental condition* for the Property.

A.J. Brewer Specialties, Plastech, A-Artistic Printing
15558 Arrow Highway
Databases: WIP
Approximate Distance from the Property: Adjacent to the east
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: These tenants were listed as WIP investigation cases. No details were provided by EDR regarding the rationale for, or scope of, the WIP inquiry, but the status of each of the case files was reported as "Historical" indicating that the WIP cases received an NFA determination.
Discussion: Based on the historical status, none of these east-adjacent WIP cases is considered to represent a *recognized environmental condition* for the Property.

Carter's Metal Fabricators and Saavedra Wood Prod. & Constr. (Saavedra)
15560 Arrow Highway
Databases: WIP
Approximate Distance from the Property: Adjacent to the east
Assumed Groundwater Gradient: Upgradient
Regulatory Data Summary: These tenants were listed as WIP investigation cases. No details were provided by EDR regarding the rationale for, or scope of, the WIP inquiry, but the status of the first of these tenants, Carter's Metal Fabricators, was reported as "Historical" indicating that the WIP case received an NFA determination. The status of the other tenant, Saavedra, was not reported; however, ATC reviewed a list of PRPs for the NPL site and this tenant was not listed, suggesting that its status is NFA as well.
Discussion: Based on the known or presumed historical status, neither of these east-adjacent WIP cases is considered to represent a *recognized environmental condition* for the Property.

CMZ Company
4926 Azusa Canyon Road
Databases: UST, SWEEPS, HMS, WIP
Approximate Distance from the Property: Adjacent to the south
Assumed Groundwater Gradient: Cross-gradient
Regulatory Data Summary: This site is listed as a registered UST facility on the UST and SWEEPS databases and the Los Angeles County HMS database. The facility is not listed as a LUST site. The facility is also listed as a WIP case with a 'historical' status.
Discussion: Based on the cross-gradient location and absence of reported releases associated with the USTs present, as well as the historical status of the WIP case file, the presence of this adjacent facility on the registered UST and WIP databases is not considered to represent a *recognized environmental condition* for the Property.

Rodriquez Trucking
4938 Azusa Canyon Road
Databases: LUST, HMS, WIP
Approximate Distance from the Property: Adjacent to the west
Assumed Groundwater Gradient: Downgradient
Regulatory Data Summary: This site is listed as an open LUST site on the LUST and HMS databases. Reportedly only the local soil is affected. The facility is not listed as a LUST site. The facility is also listed as a WIP case with a 'historical' status.
Discussion: Based on the downgradient location, medium affected by the LUST site, and the historical status of the WIP case file, the presence of this adjacent facility on the LUST, HMS and WIP databases is not considered to represent a *recognized environmental condition* for the Property.

D-L Machine Shop, Arrow Engineering
4946 Azusa Canyon Road
Databases: WIP, Historical Auto Stations
Approximate Distance from the Property: Adjacent to the west
Assumed Groundwater Gradient: Downgradient
Regulatory Data Summary: This site is listed twice on the WIP list, each with a status of 'historical.' The address is also listed on EDR's Historical Auto Station database under the current tenant name, Arrow Engineering for the years 2006, 2007, and 2008.
Discussion: The Historical Auto Station database does not list violators or releases, but simply indicates that the current occupant was present since at least 2006. Based on the historical status of the WIP case file, the presence of this adjacent facility on the WIP database is not considered to represent a *recognized environmental condition* for the Property.

Advance Marine & Development, Sam's Foreign and Domestic Auto Center
4954 Azusa Canyon Road
Databases: WIP, Historical Auto Stations
Approximate Distance from the Property: Adjacent to the south and west
Assumed Groundwater Gradient: Cross-gradient and Downgradient of different portions of the Property
Regulatory Data Summary: This site is listed on the WIP list, with a status of 'historical.' The address is also listed on EDR's Historical Auto Station database under a current tenant name, Sam's Foreign and Domestic Auto Center for the years 1999 through 2012.
Discussion: The Historical Auto Station database does not list violators or releases, but simply indicates that a current occupant was present since at least 1999. Based on the historical status of the WIP case file, the presence of this adjacent facility on the WIP database is not considered to represent a *recognized environmental condition* for the Property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state and tribal agency databases searched are considered to represent a likely past, present or material threat of release in, on, or at the Property. Given the physical setting characteristics of the property and surrounding area, supplemental agency file reviews were not warranted to verify the database report information.

5.1.3 Local Environmental Records Sources

Los Angeles County Public Health Investigation (PHI)

ATC requested a search of available records pertaining to hazardous materials use and hazardous waste generation at the Property from the PHI. Hazardous materials inspections were conducted by the PHI in 1994, 1999, and 2005. No violations were observed during those inspections. Three 120-gallon hydraulic oil reservoirs were depicted on a site drawing attached to a Hazardous Materials Business Plan on file with the PHI. The reservoirs are shown along the southern side of the vehicle service building and are believed

to correspond with rectangular access plates observed during the site reconnaissance. It is not known if these reservoirs are still in use. While active in-ground hydraulic lifts are present on-site, ATC noted the presence of two aboveground hydraulic oil tanks inside the garage that were interpreted at the time of the site reconnaissance to supply the oil for the lifts. As no information regarding the condition and/or service history of the subsurface hydraulic oil reservoirs is available, they are considered to represent a *recognized environmental condition* for the Property.

California Environmental Protection Agency, Department of Toxic Substances Control (DTSC)

According to the DTSC EnviroStor website, http://www.envirostor.dtsc.ca.gov/public, the DTSC has no files for the Property.

Los Angeles County Department of Public Works (LACDPW)

ATC reviewed files pertaining to the Property at the LACDPW. Items of potential environmental significance identified in the LACDPW file included the following:

- Part of a set of plans, dated December 1956, which shows a large office building, oriented east-west, and located a short distance south of the current office. A septic system is shown located on the northern side of this building. This plan also depicts a truck scale located on the eastern side of the Property along the south side of where the large storage building is currently. A shallow dry well is connected to the truck scale, approximately 25 feet away on the northern side. The top of this well is 3.5 feet below the surface and no surface expression of it is visible. The well reportedly extends to 9.5 feet below ground surface (bgs). The large storage building is now located above the well's location. As a potential conduit to the subsurface from any discharge associated with the former truck scale, this dry well is considered to represent a *recognized environmental condition*. The portion of the 1956 plan depicting the dry well is included in **Appendix L.**

- Part of a set of plans, dated August 1966 depicting the office building, supply building, and south dispenser canopy as 'new.' A 12-foot deep cesspool beneath the southeast corner of the truck wash tunnel and a 20-foot deep cesspool a short distance to the northwest of the clarifier, two 900-gallon septic tanks arranged in tandem located to the north of the truck wash tunnel with a notation to fill them with sand after pumping out, and a septic system located consisting of six 900-gallon septic tanks and four cesspools located a short distance to the southeast of the current office building.

- Part of a set of plans, dated January 1969 that depict a steam cleaning area to the east of the current boiler room within the service building, a notation to remove two sand traps and drains associated with the steam clean area, a 1,600 square-foot addition to the eastern end of the service building, and a notation to demolish the large storage building currently located on the eastern side of the Property.

- Plans for installation of a 12,000-gallon Plasteel gasoline UST to the southeast of the northern dispenser island. This UST replaced an earlier 10,000-gallon gasoline UST that was removed from a location northeast of the dispenser island in November of 1988.

- A copy of a November 1990 soil remediation report prepared by Jetco Environmental and Associates Inc. for impacted soils found beneath and adjacent to the southern dispenser island. This report is discussed in greater detail in **Section 5.3.9,**

- Copies of various reports provided to ATC by the client, all of which are discussed in **Section 5.3.9**.

Regional Water Quality Control Board (RWQCB)

ATC requested a review of the LUST and WIP files associated with the Property. ATC was informed all LUST case files were stored at the LACDPW. Apart from numerous pages of correspondence, the WIP case file contained the prior reports provided by the Client and discussed in **Section 5.3.9**. One item of note observed in the RWQCB file, was a report addendum to the November 24, 1992 report by CDM entitled *Site Assessment and Remediation Closure Report, Sand and Grease Interceptor, GTE-Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California*. The addendum indicated that VOC concentrations in the 1992 report were incorrectly reported as mg/kg when they should have been µg/kg. Otherwise, the review of RWQCB files did not reveal additional relevant information pertaining to the Property.

South Coast Air Quality Management District (SCAQMD)

According to information contained on the SCAQMD website, http://www.aqmd.gov, the SCAQMD has a record of inactive permits for storage and dispensing of gasoline, various control measures including amine treating, amine regeneration, and NH3 Injection, and Banking Plans. A current application by Frontier for a Banking Plan is in review. No formal violations were of record; however, Verizon received a warning in 2010 for operating a portable generator of more than 50 horsepower without a permit. The SCAQMD also had a record of a permit issued in 1975 for a paint spray booth. An image of the 1975 permit was available online, which identified the manufacturer as Binks, and the dimensions as 7'8" wide, 7" high, and 8'8" deep and utilized one exhaust fan. It is not known with certainty that the spray booth was installed; however, assuming that it was, no renewal permits were observed and it may have been present for a limited time. Given the time-frame that the permit was issued, it is possible that chlorinated solvents were used in connection with the booth. The former spray booth is considered to represent a *recognized environmental condition*; however, its former location is unknown.

A large spray booth used as a storage building (for non-chemical items) is present on-site along the east Property line. As the manufacturer, dimensions, and number of exhaust fans on this spray booth do not match those cited on the permit, and early site plans for the Property observed at the LACDPW note the continual presence of a shed in the same location, ATC considers it unlikely that this spray booth is the one referenced in the 1975 SCAQMD permit. This storage/spray booth is not considered to represent a *recognized environmental condition*.

Department of Planning and Zoning

According to information on the Planning Department link of the City of Irwindale website, http://ci.irwindale,ca,us, the Property is zoned M-1 for light manufacturing.

5.2 Physical Setting Sources

5.2.1 Topography

According to the United States Geological Survey (USGS) 7.5-Minute Series Topographic Map of the *Baldwin Park, California* Quadrangle, the pre-development elevation of the Property ranged approximately between 440 and 450 feet above mean sea level. The area has a slope to the south-southwest. A copy of the topographic map is included as **Figure 1** (**Appendix A**).

5.2.2 Geology

The Property is situated on approximately 800 feet of unconsolidated and semi-consolidated Recent gravelly sediments derived from erosion of the nearby San Gabriel Mountains. These sediments most likely rest on several thousand feet of consolidated sedimentary rocks (California Department of Water Resources, 1966).

5.2.3 Soils

According to the United States Department of Agriculture, Soil Conservation Service publication, *Report and General Soil Map, Los Angeles County*, soils of the Property most likely belong to the Hanford Association. Hanford soils are over 60 inches deep, are well-drained, and have moderately rapid subsoil permeability. They have pale brown coarse sandy loam surface layers about eight inches thick, underlain by light yellowish-brown coarse sandy loam subsoil and a gravelly loamy coarse sand substratum. They are slightly acid to mildly alkaline throughout, and have an available water-holding capacity of 5.0 to 7.5 inches for 60 inches of soil depth. Shrink-swell potential is low and corrosivity for untreated steel is low.

5.2.4 Hydrology

According to a July 2014 groundwater elevation contour map of the San Gabriel Valley, the depth to groundwater at the Property is approximately 250 feet below ground surface. The direction of groundwater flow at that time was to the west (San Gabriel Basin Watermaster, 2014).

Estimated groundwater levels and/or flow direction may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations.

5.2.5 Other Physical Setting Sources

Flood Plain Map

According to information provided by the Federal Emergency Management Agency (FEMA) website, http://www.fema.gov, the property is located in flood zone X, or areas outside of 500-year flood risk. The community/panel number for the Flood Insurance Rate Map for the property is 06037C 1700F and the effective date is September 26, 2008. A copy of the flood plain map is included in **Appendix L**.

Wetlands Map

According to the United States Fish and Wildlife Service (USFWS) Wetlands Mapper website, http://www.fws.gov/wetlands/Data/Mapper.html, no wetlands are present on, or adjacent to, the property. A copy of the National Wetlands Inventory map is included in **Appendix L**.

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical Property and surrounding area uses.

HISTORICAL USE SUMMARY				
Period	**Identified Historical Uses**		**Source(s)**	**Intervals/Comments**
	Property	**Surrounding Area**		
Prior to 1940	Vacant Agricultural	Vacant Agricultural Industrial Residential	Topographic Maps Aerial Photographs	An 1894 topographic map is the earliest record identified. One data gap of 20 years (1905-1924). No use changes across the data gap.

HISTORICAL USE SUMMARY				
Period	**Identified Historical Uses**		**Source(s)**	**Intervals/Comments**
	Property	**Surrounding Area**		
1940-1960	Vacant Agricultural Industrial	Vacant Agricultural Industrial Residential	Topographic Map Building Permits Aerial Photographs	One eight-year data gap (1940-1947). No use changes across the data gap. The Property is developed with the auto service building and an office building, circa 1957.
1961-1980	Industrial Vacant	Vacant Industrial Residential	Topographic Maps Aerial Photographs Building Permits	One six-year data gap (1958-1963). No use changes across the data gap. The current office, supply building, and large storage building were constructed circa 1966.
1981 to 2000	Industrial	Vacant Industrial Residential	Aerial Photographs Topographic Map Building Permits Prior Reports	No data gaps.
2001-present	Industrial	Vacant Industrial Residential	Aerial Photographs Topographic Map City Directory Prior Reports	No data gaps.

ASTM Standard E 1527-13 requires review of historical use resources at approximately five-year intervals. Since gaps in data occur at greater than five-year intervals, data failure occurs relative to the standard requirements. However, based on the agreement of multiple historical sources concerning prior Property use, ATC does not consider the data gaps to be *significant*.

The Property was vacant or partially under cultivation until at least 1952. By late 1956, the first building permits were issued for the eventual development of the Property for its current use. The surrounding area was predominantly agricultural or vacant through the early 1950s, although a large quarry, present a short distance to the southeast, in 1938, had expanded to occupy the adjacent property to the east by at least 1948. The southeastern portion of the Property, currently used as a parking lot, remained undeveloped until at least 1964. Additional buildings were constructed on the main Property parcel in 1966, and a pre-existing office, constructed in 1957, was demolished. It is probable that the Property appeared essentially as it does currently by about this time. Residential development on the west-adjacent parcels began prior to 1952 and was complete by at least 1964. The adjacent quarry was filled in by 1990. The adjacent parcels to the north, west, and south appeared essentially as they do currently by 1994. The east-adjacent parcels were developed with the current industrial buildings prior to 2002.

5.3.1 Aerial Photographs

ATC reviewed available aerial photographs of the Property and surrounding areas provided by EDR. Available aerial photographs ranged from 1928 to 2012. The following are descriptions and interpretations from the aerial photograph review.

AERIAL PHOTOGRAPH SUMMARY		
Year	**Scale**	**Comments**
1928	1"=500'	**Property**: Except for what appear to be a few plow rows on the northwestern portion of the Property, along with one or two small structures, the Property appears to consist primarily of vacant land. **Surrounding Area**: The adjacent parcel to the north is under cultivation with an orchard. The adjacent lands to the east and south of the eastern half of the property are undeveloped. Adjacent to the south of the western half of the property are several buildings of unknown nature, possibly commercial or rural residences and farm buildings. Adjacent to the west, beyond Azusa Canyon Road, is an orchard.
1938	1"=500'	**Property**: Several small buildings are located on the northwestern portion of the Property. Apart from what appear to be two small cultivated areas on the southeastern portion of the Property, the remainder of the Property appears to be vacant. **Surrounding Area**: The adjacent parcel to the north is under cultivation with an orchard. The adjacent lands to the east and south of the eastern half of the property are undeveloped, although some disturbance to the soil east of the Property appears associated with quarrying activity farther to the east. Adjacent to the south of the western half of the property are several buildings of unknown nature, possibly commercial or rural residences and farm buildings. Adjacent to the west, beyond Azusa Canyon Road, is an orchard.
1948 and 1952	1"=500'	**Property**: The western half of the main Property parcel is under cultivation with an orchard. Small buildings are present along the northern property line of the main parcel. The southeastern portion of the Property has a dirt road along the western edge and two small buildings at its northern end. **Surrounding Area**: The adjacent parcel to the north is under cultivation with an orchard. Adjacent to the east of the main Property parcel is undeveloped land. Farther east, beyond where the railroad right-of-way is currently located is a large quarry, which is also directly east of the southeastern portion of the Property. Adjacent to the south of the eastern half of the Property is vacant land. Adjacent to the south of the western half of the Property are what appear to be farm buildings. Adjacent to the west, beyond Azusa Canyon Road, is an orchard.
1964	1"=500'	**Property**: The main parcel of the Property is developed with a large office building located near the southwestern corner and the auto service building, which is not as long. Most of the main parcel appears to be used for parking of company trucks. The southeastern portion of the Property is undeveloped and has what appears to be a large soil or debris pile that appears to extend onto the adjacent rural parcels. **Surrounding Area**: The adjacent parcel to the north is vacant land. The adjacent parcel to the east of the main Property parcel appears to be developed with one or two small buildings with associated parking. Farther east is a large quarry. Adjacent to the east of the southeastern Property parcel is part of the quarry property. Adjacent to the south of the eastern half of the property is an industrial equipment yard. Adjacent to the south of the western portion of the Property are what appear to be remnants of the rural buildings and a portion of the aforementioned on-site soil pile. Adjacent to the west, beyond Azusa Canyon Road, are single-family residences.
1977 and 1979	1"=500'	**Property**: The Property is developed much as it is currently with the current office building, supply building, large storage building and auto service buildings. The truck wash tunnel does not appear to be present and the dispenser canopies are not discernible, possibly due to the scale of the photograph. The southeastern portion of the Property is developed as a parking lot as it is currently. **Surrounding Area**: The adjacent parcel to the north is vacant land. The adjacent parcel to the east of the main Property parcel is undeveloped. Farther east is a large quarry. Adjacent to the east of the southeastern Property parcel is part of the quarry property. Adjacent to the south of the eastern half of the property is an industrial equipment yard. Adjacent to the south of the western portion of the Property are what appear to be some of the current industrial buildings. Adjacent to the west, beyond Azusa Canyon Road, are single-family residences.

AERIAL PHOTOGRAPH SUMMARY		
Year	**Scale**	**Comments**
1981 and 1983	1"=500'	**Property**: The Property appears essentially as it does currently. **Surrounding Area**: The adjacent parcel to the north appears to be in an early stage of development on the 1981 photograph and is developed with the current industrial park on the 1983 photograph. The adjacent parcel to the east of the main Property parcel has a number of what may be storage containers located along its length on the 1981 photograph; however, the current east-adjacent multi-tenant industrial building is present on the 1983 photograph. Farther east and adjacent to the east of the southeastern portion of the Property is the large quarry. Adjacent to the south of the eastern half of the property is an industrial equipment yard. Adjacent to the south of the western portion of the Property are the current industrial buildings. Adjacent to the west, beyond Azusa Canyon Road, are single-family residences.
1990 and 1994	1"=500'	**Property**: The Property appears essentially as it does currently. **Surrounding Area**: The adjacent parcels to the north, south, west, of the Property and east of the main Property parcel, appear essentially as they do currently. Farther to the east, the quarry has been completely filled in and appears as a large, undeveloped tract of land.
2002, 2005, 2009, 2010, and 2012	1"=500'	**Property**: The Property appears essentially as it does currently. **Surrounding Area**: The adjacent parcels on all sides appear essentially as they do currently.

Given the past agricultural use, there is some potential for environmentally persistent pesticides and herbicides to be present in the subsurface. However, given the amount of grading and mixing accompanying the development of the Property along with the fact that the entire Property is essentially paved, it is unlikely that former pesticide and/or herbicide use would present a hazard to occupants or otherwise impact the current use of the Property. Additionally, although certain past activities and/or features following development are considered to represent either a *recognized environmental condition* or a *historical recognized environmental condition* for the Property, these specific features and/or conditions are not specifically identifiable as such from the review of historical aerial photographs. Each on-site concern is discussed in the respective report sections where the concerns are first made apparent. Copies of the aerial photographs are included in **Appendix F**.

5.3.2 Fire Insurance Maps

ATC requested copies of historical Sanborn Fire Insurance Maps (Sanborn Maps) depicting the Property and surrounding area from EDR. According to EDR, Sanborn Map coverage of the Property is not available. A copy of EDR's "unmapped property" letter is included in **Appendix G**.

5.3.3 Property Tax Files

According to information on file with the Los Angeles County Assessor, the current owner of the Property is listed as GTE California Inc. No acquisition date was given and no prior owners were listed. The review of tax files did not identify *recognized environmental conditions* at the Property.

5.3.4 Recorded Land Title Records

The acquisition of recorded land title records was not part of the scope of work for the Phase I ESA.

5.3.5 Historical USGS Topographic Quadrangles

ATC reviewed historical USGS Topographic Quadrangle maps, which were obtained from EDR, for information regarding past uses of the Property. The historical topographic maps were dated 1894, 1897,

1898, 1904, 1925, 1928, 1933, 1939, 1953, 1966, 1972, 1981, and 2012. The 1894 through 1933 map editions show no development on, or adjacent to the Property. The 1939 map edition shows a small structure at, or just north of the northwest corner of the Property. The east-adjacent railroad track is depicted as are two small houses nearby to the south. The 1953 map edition shows agriculture on the western half of the main parcel and no other development on-site. A mix of residences and agricultural uses are present to the west. Small structures are present to the south, and a large gravel pit is adjacent to the east. The 1966 map edition shows the original on-site office building near the southwestern corner of the Property and the auto service building. The west-adjacent parcels are shown in a pink shading indicative of a developed urban setting, most likely the current residential development, small structures on the south-adjacent parcel, and a water-filled gravel pit to the east. The north-adjacent parcel is shown as undeveloped. The 1972 and 1981 depicts the current office, supply building and service building on-site. The west-adjacent parcels are shown in a pink shading indicative of a developed urban setting, most likely the current residential development, small structures on the south-adjacent parcel, and a water-filled gravel pit to the east. The north-adjacent parcel is shown as undeveloped. The 2012 map edition shows only streets and does not depict structures or property uses. However, the east-adjacent parcel erroneously depicts the former gravel pit. Copies of the historical topographic maps are provided in **Appendix G**.

The review of historical topographic maps did not identify past uses indicating any *recognized environmental conditions* at the Property or surrounding areas. Copies of the historical topographic maps are included in **Appendix G**.

5.3.6 City Directories

Research regarding the availability of historical city directories was conducted by EDR. City directories dated 1920 through 2013 were reviewed at approximate five-year intervals by EDR. EDR identified a city directory listing for the Property for only one year, 2008. ATC's findings are summarized as follows.

CITY DIRECTORY SUMMARY	
Year	**Comments**
2008	**Property:** Azusa Canyon Road: 5010-Verizon California. **Surrounding Properties:** Azusa Canyon Road: 4926-Malcolm Drilling Co. Inc.; 4938-Alondras Ice Cream; 4946-Arrow Engineering; 4954-Sam's Foreign and Domestic Auto Center; 5102-Esmond Natural USA Inc.; 5106-Yutaka Electric International; 5108-Top Three Enterprises Inc., Penavico Group International; Arrow Highway: 15558-Interstate Battsey System of East SA;

Although an auto repair shop was listed on a south-adjacent parcel, based on its cross-gradient location and absence of known releases, it is not considered to represent an environmental concern to the Property. The review of historical city directories did not reveal the presence of recognized environmental conditions at the Property or the surrounding area.

5.3.7 Building Department Records

ATC reviewed the historical Building Department records at the City of Irwindale, Building Department. A large number of building permits were on-file. The earliest permits on file, dated December 1956, were for a liquid gas storage shelter and a tool shed. No location was provided for either improvement. Other notable permits observed, included the following:

- A permit for a two-story 24,550 square-foot office and warehouse, dated January 1957;
- A permit for the vehicle service building, dated January 1957;
- A permit for a truck scale pit, dated January 1957;
- A permit for a new gas pump canopy, dated January 1957;
- A permit to connect the office to a private septic system, dated March 1957;
- A permit for a new tool shed (12'x26'), dated July 1957;
- A demolition permit for a two-story office and warehouse, dated April 1966;
- A permit to abandon cesspools, dated April 1966;

- Initial construction permits for a 5,980 square-foot office/warehouse (the supply building), a two-story, 19,000 square-foot office, and a 6,750 square-foot truck wash station, dated October 1966;
- A permit for a gas island (no location provided), dated October 1966;
- A permit for a sand trap with two sump drains (location unknown), dated November 1966;
- A permit dated December 1966 to connect the new office and supply building to the municipal sewer;
- A January 1967 permit to install an underground storage tank (UST), no location reported;
- A permit for a new 300 square-foot truck wash station, dated February 1967 (this appears to be the current truck wash tunnel);
- A sewer connection permit dated April 1967. A diagram depicts a line running from the truck wash tunnel to a two-stage clarifier located in the same place as the current three-stage clarifier (on the north side of the truck wash tunnel);
- Permits dated June 1967 to connect the service building and one other unidentified building to the municipal sewer;
- A permit, dated August 1992, to remove and replace a clarifier and sample box (located on the north side of the truck wash tunnel);
- A February 1996 permit to install fueling system – Remove and install (500 gallon, 12,000 gallon). These figures appear to refer to the installation of the current 500-gallon dual compartment oil aboveground storage tank (AST) and a 12,000-gallon gasoline UST (believed to be the northern dispenser area).
- A February 1996 permit to install a new fuel canopy;

Some of the features referenced in these permits are associated with various subsurface investigations. Their possible connection with *recognized environmental conditions* or *historical recognized environmental conditions* is discussed elsewhere where appropriate.

5.3.8 Zoning/Land Use Records

Historical building permits for the Property indicate a zone of M-1 for light industrial uses. Based on aerial photographs, it appears that portions of the Property were under cultivation until at least the early 1950s. Presumably the Property was zoned for agriculture prior to then.

5.3.9 Prior Reports

During the preparation of this Phase I ESA, ATC was provided with the following prior environmental reports by the Client pertaining to the Property:

Phase II Final Report – Irwindale Plant Yard, prepared by *McLaren Environmental Engineering (McLaren),* dated November 8, 1985.

This report presents the results of a subsurface investigation conducted adjacent to a 10,000-gallon diesel UST associated with the southern dispenser island and a precision tightness test conducted on a 10,000-gallon gasoline UST associated with the northern dispenser island. One boring was advanced to a depth of 15 feet, adjacent to the southern UST. Soil samples were collected at depths of 3.5 to 5.0 feet, 8.5 to 10.0 feet, and 13.5 to 15.0 feet and analyzed for petroleum hydrocarbons by infrared spectroscopy (IR). Petroleum hydrocarbons were detected at a maximum concentration of 30 milligrams per kilogram (mg/kg) in the deepest sample. The gasoline tank tested as tight. McLaren recommended performing a tightness test on the diesel tank and annual tests for both tanks thereafter.

Site Investigation, GTE Irwindale Facility, 5010 Azusa Canyon Road, Irwindale, prepared by Jetco Environmental & Associates Inc. (Jetco), dated November 14, 1990.

This report, which was not among those provided to ATC by the Client, but was instead reviewed in the files of the LACDPW, presents the results of exploratory soil sampling and remediation of the southern dispenser island on-site. (Note: ATC learned from the review of LACDPW files that the 10,000-gallon gasoline UST associated with the northern dispenser island was removed in November of 1988 and the 10,000-gallon diesel UST associated with the southern dispenser island was removed in February 1989. No initial closure documentation was identified).

This report documents the remediation efforts associated with impacted soils beneath the southern dispenser island. According to the background summary section of this report, a soil sample collected in September 1990 by Jetco from a shallow boring in the center of the dispenser island identified 4,200 mg/kg of total petroleum hydrocarbons (TPH) at a depth of two feet. In response, soil beneath the island was excavated to a depth of five feet. Additionally, two trenches were excavated on each side of the dispenser island to a depth of 12 feet. Confirmation samples from the bottom of the trenches had TPH concentrations ranging from non-detect to 26 mg/kg. The confirmation sample beneath the island had a TPH concentration of 50 mg/kg. As these concentrations were below the target clean-up level of 100 mg/kg, Jetco recommended no additional investigation.

Soil Gas Study Report, GTE Irwindale Site, Irwindale, California, Regional Board File No. AB108.0212, prepared by Camp Dresser & McKee, Inc. (CDM), and dated August 1991.

This report presents the results of a soil gas investigation with associated soil sampling, conducted in response to requests made by the RWQCB following an inspection in March 1991, which identified two principal areas of the Property requiring investigation. The investigation was part of an area-wide search by the RWQCB, under the Well Investigation Program (WIP), for Potentially Responsible Parties (PRPs) for the San Gabriel Valley Groundwater Basin (Area 2) National Priorities List (NPL) site, a region of where groundwater impacted with a number of industrial solvents and other compounds. The Property is located within the boundaries of the NPL site. The first area identified by the RWQCB was the truck wash tunnel and steam cleaning bay, with associated drains and clarifier, and inactive cesspools and septic tanks. In particular, degradation was noted to the concrete of the western drain/sump of the wash tunnel and grouted portions of the clarifier. The second area consisted of certain bays within the eastern half of the service building that formerly contained a truck wash/steam clean area and at least one clarifier (Note: a set of plans as well as a hand-drawn diagram observed at the LACDPW referenced two clarifiers in this second area. A total of 63 soil gas and four soil samples were collected and analyzed from 28 locations. Soil gas probe locations included the above-referenced current and former vehicle washing, steam cleaning, and septic waste water system as well as the soap sump and current and former hazardous waste storage enclosures. Soil gas probe depths ranged from four to eight feet due to the presence of cobbles and gravelly soils in the subsurface. Soil gas samples were analyzed for 1,1,1-trichloroethane (TCA, a compound previously identified in clarifier waste water), 1,1-dichloroethane, chloroethane, tetrachloroethane (PCA, erroneously referred to in the text as tetrachloroethene [PCE]), trichloroethene (TCE), and total volatile organic compounds (VOCs) by gas chromatograph. Soil samples were located in Area One near the rear of the steam cleaning area, the former cesspool within the truck wash tunnel, near the outflow of the clarifier, and in Area Two, adjacent to the estimated location of the former clarifier. Soil samples were analyzed for VOCs by EPA Methods 8010/8020 and total recoverable petroleum hydrocarbons (TRPH) by EPA Method 418.1. All soil samples had non-detectable concentrations of VOCs and only one, located near the Area One clarifier, had an elevated concentration of TRPH (11,000 mg/kg at a depth of 7.5 feet). Soil gas readings indicated that TCA was detected in all samples at concentrations ranging from 0.05 micrograms per liter (µg/L) to 1.81 µg/L, with the maximum occurring near the clarifier inlet. Total VOCs ranged from 0.89 µg/L in a former waste storage area located near the northeastern corner of the truck wash tunnel to 215.1 µg/L near the clarifier outlet. The specific additional VOCs whose concentrations were summed to make up the “total” was not reported. No DCE or TCE was detected in any of the samples and low concentrations of chloroethane and PCA were in one sample each. The eastern

area of investigation had TCA concentrations ranging from 0.13 µg/L to 1.12 µg/L, while total VOC concentrations ranged from 1.19 µg/L to 11.92 µg/L.

CDM recommended that the clarifier and surrounding TRPH-contaminated soil be removed and disposed of appropriately.

The RWQCB subsequently issued a provisional closure letter dated September 3, 1992 stating that no further action was required at that time with respect to the former septic tank and cesspool area, but reserved the possibility that additional investigation might be required in the future (which proved to be the case). A copy of that closure letter is included in **Appendix L**. Final closure was eventually achieved, as indicated by the succeeding reports and/or documents discussed below, and the soil impacts are considered to represent a *historical recognized environmental condition*; however, the identification of VOCs in soil vapors beneath the property in varying concentrations is considered to represent a *vapor encroachment condition* **(see Section 7.0)**.

Site Assessment and Remediation Closure Report, Sand and Grease Interceptor, GTE-Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California, prepared by CDM and dated November 24, 1992.

This report documents a number of activities including the removal of a two-stage clarifier located north of the truck wash tunnel and replacement with a three-stage clarifier utilizing a geomembrane secondary containment and epoxy coating of interior surfaces, the removal of a septic tank system located a short distance to the northeast of the clarifier, the removal and replacement of two drains (one in the steam cleaning bay and the other within the truck wash tunnel), and collection of soil samples for analysis from the excavations of the clarifier, septic tank and estimated cesspool areas. Soils identified as impacted through field screening were excavated.

A total of 47 tons of impacted soil was removed from a broad area between the steam cleaning drain and the outlet of the clarifier. Confirmation samples from the bottom of the excavation were collected from locations specified by the RWQCB representative and analyzed for halogenated and aromatic VOCs by EPA Methods 8010 and 8020, as well as TRPH by EPA Method 418.1. Apart from one sample from beneath the septic tank, which reportedly contained 11 mg/kg of chloromethane and 24 mg/kg of 1,4-dichlorobenzene, no VOCs were detected in the confirmation samples, and TRPH concentrations ranged from non-detect to 27 mg/kg, or well below the target clean-up level of 100 mg/kg. An addendum letter dated February 9, 1993 was observed by ATC during our review of RWQCB files for the Property that corrected the units reported for the VOC concentrations to µg/kg.

Based on the results, CDM requested that the RWQCB approve closure for the investigated area. In a letter dated January 20, 1993, the RWQCB responded that due to the sampling method employed (glass jars filled with a hand trowel), the VOC concentrations detected were likely to be low and not representative of site conditions. Nonetheless, the RWQCB provisionally stated that no further action was required at that time, but indicated that additional investigation might be required. A copy of the January 20, 1993 letter is included in **Appendix L**. On April 1, 1993, the LACDPW issued a joint closure letter for this investigation and for the following report dated December 2, 1992, a copy of which is included in **Appendix L**.

Site Assessment and Remediation Closure Report, Gasoline Pump Island, GTE-Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California, prepared by CDM and dated December 2, 1992.

This report documents soil excavation efforts to remediate soils beneath the northern dispenser island in 1992. On January 4, 1992, CDM collected a soil sample beneath the gasoline dispenser island, which was then analyzed for the fuel constituents benzene, toluene, ethylbenzene, and total xylenes (BTEX). The analysis revealed BTEX concentrations of 14, 75, 68, and 620 micrograms per kilogram (µg/kg), respectively. To remediate these impacts, an area approximately ten feet by ten feet was excavated beneath, and on the northern side of the dispenser island to an approximate depth of eight feet. Sidewall samples were analyzed for BTEX and total extractable petroleum hydrocarbons as gasoline (TPHg). The

bottom sample was analyzed for BTEX only. All samples had non-detectable concentrations of the analytes.

CDM recommended that the LACDPW issue a closure letter for the northern pump area. As previously stated, on April 1, 1993, the LACDPW issued a joint closure letter for this investigation and for the preceding report dated November 24, 1992, a copy of which is included in **Appendix L**.

Additional Site Assessment of Diesel Pump Island, GTE – Irwindale Plant Yard, Irwindale, California, prepared by CDM and dated February 4, 1993.

This report documents the result of a limited subsurface investigation consisting of a single boring advanced along the northern side of the south pump island at the Property. Soil samples were collected at depths of 12 and 17 feet bgs and analyzed for BTEX and total extractable petroleum hydrocarbons as diesel (TPHd). Both samples had non-detectable concentrations of all analytes. CDM recommended that regulatory closure for the southern pump island should be requested from the LACDPW. What appears to be a closure letter for this former diesel UST removed in 1989 (and possibly intended to include the former gasoline UST removed in 1988 under the same permit) was issued by the LACDPW on May 6, 1993. A copy of that letter is included in **Appendix L**.

Report of Soil Gas Investigation, GTE-Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California, prepared by CDM and dated November 9, 1995.

In May of 1995, the RWQCB requested additional soil gas sampling in the vicinity of the former clarifier inlet and former septic tanks. In September 1995, vapor well VW-1 was advanced to a depth of 19 feet bgs a short distance northeast of the clarifier inlet and vapor well VW-2 was advanced to a depth of 20 feet bgs, and was located west of the former septic tanks. Two soil vapor probes were placed in each well at approximate ten-foot intervals. Vapor samples were analyzed for VOCs by an on-site mobile laboratory. No VOCs were detected in any of the soil vapor samples collected. CDM requested that the RWQCB grant closure for the former clarifier/septic tank areas. The RWQCB determined that the work performed to that point had adequately evaluated the VOC contamination and that no further action was required with regard to the San Gabriel Valley Cleanup Program (i.e., WIP) and issued a letter to that effect dated June 5, 1998, a copy of which is included in **Appendix L**. However, the RWQCB did caution that other agencies such as the USEPA were not bound by this letter and could make their own determination regarding the Property. Accordingly, while the WIP case file is considered to represent a *historical recognized environmental condition*, the presence of the Property within the NPL site boundary is still considered to represent a *recognized environmental condition*.

Report, Environmental Investigation Related to the Removal of Two Underground Storage Tanks, prepared by Environmental Resolutions, Inc. (ERI), dated August 7, 1996.

This report documents the removal of a 12,000-gallon gasoline UST located near the northern dispenser island and a 1,000-gallon waste oil UST located at a point farther to the east along the southern side of the vehicle maintenance building. Both USTs were removed on January 19, 1996, along with the dispenser island. Neither tank was reported to have holes. Soil samples collected in connection with the gasoline UST were analyzed for total petroleum hydrocarbons TPH by EPA Method 8015M and BTEX compounds by EPA Method 8020. Soil samples collected from the waste oil excavation were analyzed for TRPH by EPA Method 418.1. Low concentrations of TPH, ethylbenzene, and total xylenes of 34 mg/kg, 0.15 mg/kg, and 0.18 mg/kg, respectively, were detected in a sample collected from the stockpile, but no residual impacts were identified in the samples collected directly from the excavation, piping, or dispenser areas. Low levels of TRPH (10-21 mg/kg) were detected at each end of the waste oil tank. ERI concluded that no further work was necessary. The LACDPW issued a closure letter for the UST removals dated November 26, 1996, a copy of which is included in **Appendix L**.

In February 1996, a replacement 12,000-gallon gasoline UST was installed in essentially the same location as the first along with a new dispenser island and canopy. The waste oil UST was replaced at the same time with a dual-compartment aboveground storage tank (AST) for the storage of both new oil and waste oil that is currently located on-site at the western end of the service building.

Underground Storage Tank Removal Report, Verizon – Irwindale Fleet Yard, GLC 071207B, 5010 Azusa Canyon Road, Irwindale, California, prepared by Shaw Environmental, Inc. (Shaw), and dated June 2009.

This report documents the activities and soil sampling results in connection with the removal of a 12,000-gallon gasoline UST from the vicinity of the northern dispenser island. The UST was removed on May 20, 2009. Confirmation samples from the excavation and stockpile were analyzed for TPHg and TPHd by EPA Method 8015B Modified, BTEX compounds and fuel oxygenates by EPA Method 8260B. All samples had non-detectable concentrations of all analytes. Shaw recommended no further action.

The LACDPW issued a closure letter for the UST removal dated December 3, 2015, a copy of which is included in **Appendix L**. Since no releases were identified, this UST closure does not represent either a *recognized environmental condition* or a *historical recognized environmental condition*.

Limited Focused Phase II Site Assessment, Site: Verizon Irwindale Plant Yard, 5010 Azusa Canyon Rd, Irwindale, CA 91706-1884, prepared by Hydrologue Inc., and dated November 26, 2001.

This report documents the results of a limited subsurface investigation on the northeastern portion of the employee parking lot, where it was observed that runoff originating from the east-adjacent industrial park at 15558-15562 Arrow Highway was flowing onto the Property. The report did not specify whether the runoff was from stormwater or some other activity. Four shallow borings were advanced to an approximate depth of one foot in the area affected by the runoff. Soil samples were analyzed for TRPH, VOCs, chromium and lead. TRPH was detected in all four shallow samples at concentrations ranging from 12 to 34 mg/kg. Chromium concentrations ranged from 10.3 to 20.2 mg/kg. Lead concentrations ranged from 5.16 to 7.47 mg/kg. No VOCs were detected. Hydrologue concluded that the hydrocarbon contamination in the samples appeared to have originated from the runoff from the adjacent industrial park. No comment was offered by Hydrologue regarding the metal concentrations. Hydrologue recommended that Verizon contact the adjacent property to improve its housekeeping practices and discontinue any industrial discharge. Hydrologue also recommended advancing four additional soil borings to a depth of 20 feet to collect background samples to compare with those from the area affected by the runoff. ATC does not know whether or not the recommendations were adopted; however, during the site reconnaissance, ATC did not observe suspicious staining in the employee parking lot near where the four shallow borings were advanced. ATC considers this finding to be an offsite potential environmental concern.

Copies of the above prior reports are included in **Appendix H**.

5.3.10 Other Historical Sources

No other historical sources were reviewed.

6.0 SITE RECONNAISSANCE

ATC conducted the site reconnaissance on October 26, 2016 and November 8, 2016. ATC was accompanied during the site reconnaissance by Mr. Mark Norton, Building Services Specialist with Frontier. ATC was also accompanied for a portion of the initial site visit by Mr. Stephen Odle, Facility Supervisor for the Property with Frontier. At the time of the site reconnaissance, Mr. Norton had been familiar with the Property for approximately one year and Mr. Odle had been familiar with the Property for approximately two months. The following is a summary of visual and/or physical observations of the property on the day of the site visit. Photographs can be found in **Appendix C**.

6.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of: the Property and improvements; adjoining sites as viewed from the Property; and, the surrounding area based on visual observations made during the trip to and from the Property. Unimproved portions of the Property (if any) were observed along the perimeter and in a general grid pattern in safely accessible areas. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Access was unavailable to the roofs of the vehicle service building, the large storage building, and the supply building, as well as several locked walk-in storage containers (generally used by contractors who have the only keys). Otherwise, there were no access restrictions encountered at the property. The weather during the site reconnaissance was sunny and warm (approximately 85ºF). There were no visibility restrictions due to weather conditions.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC reviewed the Property for hazardous materials storage and use, as well as indications that such materials may have been spilled or dumped. ATC's findings by area were as follows:

The Main Office: Chemical use in this building consists primarily of janitorial supplies and maintenance materials such as paint. The first-floor janitorial closet contained two 1-gallon and three 5-gallon containers of paint stored on shelving along with two 1-gallon containers of cleaner and two boxes of Borax. The first floor is lightly staffed and used for office space **(Photograph 13)**, while the upper floor is unoccupied. A mechanical room for HVAC equipment is located on the first floor at the southern end of the building. Located in this room were two large cylinders of compressed nitrogen, one 5-gallon container of water-treatment chemicals, and an air compressor with some associated oil stains **(Photograph 14)**. Based on the good condition of the concrete floor, the stains are not considered to represent an environmental concern.

The Truck Wash Tunnel and Vicinity: The truck wash tunnel is located generally in the northwestern portion of the Property, a short distance southwest of the western end of the vehicle service building. What is shown on site plans observed at the LACDPW as a subsurface soap chamber, is located along the northern edge of the tunnel at its eastern end. According to Mr. Norton, truck washing is now done with water only. On the north side of the tunnel, adjacent to the soap chamber is a fenced enclosure containing several compressors. On the western side of the compressor cage is a three-stage clarifier that receives rinse water from the wash tunnel. The interior of the clarifier could not be observed, but it is ATC's understanding that the clarifier, which was installed in 1992, is reportedly lined with sealant on the interior and exterior surfaces **(Photographs 15-17)**. To the north of the was tunnel is a hazardous materials enclosure with built-in secondary containment. Within the enclosure were two spill kits, a five-gallon gasoline can, an empty 20-gallon drum, two rag containers, and a small metal box with a closed lid. The westernmost bay of the service building is a steam cleaning bay **(Photograph 18)**. Near the rear of the bay, ATC observed a compressor and two spill trays, one with two unopened 55-gallon drums of oil, and one with one 55-gallon oil drum and a 120-pound drum of grease. No staining was observed in the drum storage area or the steam clean bay. Rinsate from the steam cleaning bay is also discharged to the aforementioned clarifier.

Vehicle Service Building: The western portion of the service building has a small office, a parts storeroom, a restroom, and six vehicle bays, within which are work stations, cabinets for tools and parts, two carriages containing pairs of oxygen and acetylene gas cylinders, two aboveground hydraulic lifts and three active in-ground hydraulic lifts **(Photograph 19)**. Along the back wall were two 55-gallon drums, one each of oil and anti-freeze and two 5-gallon containers of lubricant on a secondary containment tray **(Photograph 20)**, an aqueous parts washer **(Photograph 21)**, and a flame-resistant cabinet containing numerous aerosol cans of paint, brake cleaner, and lubricants. The first area of the eastern half of the service building has a large alignment rack, and, along the back wall, four 55-gallon and two 30-gallon drums of various types wastes including universal waste, oily rags, radiator parts, and used oil filters. None of the drums were stored within secondary containment; however, ATC did not observe associated staining on the floor surrounding the drums **(Photograph 22)**. The remainder of the building consists of offices, a break room, training rooms, or storage rooms. One storage/office area, according to site plans observed at the LACDPW, was formerly used as a steam cleaning area, with either one or two clarifiers within the building. No sign of these former clarifiers remains and the only remnants of this former steam cleaning area are a boiler in a small room at the north side of the office/storeroom and what appears to be a covered former trench drain running through the storage area.

Large Storage Building: This building has approximately three rooms, each of which contained a wide variety of surplus or aged equipment and chemical items, generally stored in shelves or cabinets. Materials stored here included paint, cleaners, small compressed gas cylinders of acetylene and map gas, refrigeration oil, vacuum pump oil, various aerosol cans, five-gallon containers of optic cable lubricant, and wire lubricant. No stains were observed in the storage rooms, but evidence of poor housekeeping was observed in the eastern room in particular **(Photographs 23-24)**. Adjacent to the storage building to the south is a large asphalt patch that was the former location of a truck scale. Nearby, a short distance farther to the south, are racks of compressed gas cylinders within a chain-link enclosure **(Photograph 25)**. On the southern side of this enclosure is a smaller rack containing seven propane forklift fuel canisters. Adjacent to the north of the storage building is a large spray booth that is being used as a storage shed for non-chemical items **(Photograph 26)**. A storage shed is shown on site plans in this same location as far back as 1966. Given this, and the fact that this spray booth is significantly larger and of different make from the spray booth referenced in a 1975 SCAQMD permit **(See Section 5.1.3)**, ATC considers it unlikely that this spray booth is the one referenced in the 1975 SCAQMD permit.

The Supply Building: Located more or less in the center of the yard, this structure contains a few small offices attached to a warehouse area holding supplies used by repair service crews. Most were non-chemical in nature and the few containers with lubricant or other supplies of the same type were unopened. The warehouse was well organized and maintained.

Employee Parking Lot: The employee parking lot is a large asphalt-paved lot abutting the main parcel to the southeast. At the northeastern corner of this lot were two large storage bins used to contain decommissioned telephone poles. The poles, which are coated with creosote, require special disposal. At the southeastern corner of the lot was a large soil pile. According to Mr. Norton, the soil, which includes gravel, is clean material used for packing around the base of telephone poles that are erected on-site for training purposes **(Photograph 27)**. The southern edge of the employee parking lot is used as a storage area for old, out-of-service equipment. No equipment of concern was noted in this area.

Hazardous and controlled wastes generated at the Property consists of waste oil and antifreeze, used oil filters, clarifier sludge, waste telephone poles, and universal wastes. According to a representative of Frontier, apart from used batteries and tires, which are removed by the suppliers, all hazardous/controlled wastes are removed by Ecology Control Industries (ECI) on a monthly basis. Hazardous wastes such as flammable or toxic materials in small containers or universal wastes are sent to a waste center located in the main yard southeast of the office building. The hazardous materials are sorted, placed in appropriately labeled drums, that in turn are stored within designated walk-in storage bins. It is not known how frequently ECI removes hazardous or controlled wastes.

6.3 Underground Storage Tanks (USTs)

With the possible exception of three 120-gallon hydraulic oil reservoirs of unknown status, no active USTs are present on-site. The access plates for three subsurface 120-gallon hydraulic oil reservoirs are present along the southern exterior of the vehicle service building **(Photograph 28**. Given that approximately five of the former in-ground hydraulic hoists have been removed, and aboveground hydraulic oil tanks appear to be serving the three active in-ground hydraulic oil lifts on-site **(see Section 6.4)**, it is assumed that the subsurface reservoirs, if present, are not in use. However, as they do not appear to have been previously assessed, the hydraulic oil reservoirs are considered to represent a *recognized environmental condition*.

At least five prior USTs have been present on-site. Two former dispenser islands are located at the northern and southern ends of the main yard. The northern dispenser has historically been used for gasoline while the southern dispenser was used for diesel.

- A 10,000-gallon gasoline UST was removed from a position northeast of the north dispenser island in November of 1988 and a 10,000-gallon diesel UST was removed from a position to the south of the south dispenser island in February 1989. Some impacted soil was associated with the diesel UST dispenser that was subsequently remediated by excavation. A closure letter for the two USTs was issued by the LACDPW on May 6, 1993. Impacted soil was later identified with the northern (i.e., gasoline) dispenser although those releases may have occurred after the replacement gasoline UST was installed. The closure letter for the north dispenser soil impacts was dated April 1, 1993.

- The diesel UST was not replaced, but in 1989, a 12,000-gallon gasoline UST was installed in a position southeast of the north dispenser island. This UST was, in turn, removed in January of 1996 along with a 1,000-gallon waste oil UST that was removed from a location along the southern side of the vehicle maintenance building. Low-level soil impacts were identified in associated with the waste oil UST. Regulatory closure for the pair of USTs was granted on November 26, 1996. A second 12,000-gallon gasoline UST was installed in the same excavation as a replacement. This UST was removed in 2009. No impacted soil was identified. A closure letter for this UST removal was issued by the LACDPW on December 3, 2015.

Copies of all closure letters are included in **Appendix L**. Based on the granting of regulatory closure, those USTs and/or dispenser areas with associated past releases are considered to represent *historical recognized environmental conditions*.

It is possible that at least one earlier UST to any of the above was present on-site, as a January 1957 building permit for a “gas pump canopy” was observed in building department files. If the associated UST(s) represents an earlier generation than that of the 10,000-gallon gasoline UST removed in November of 1988 (the earliest known with certainty), then no indication of its former location has been identified. As this suggestion of an earlier UST cannot be confirmed, it is considered to be a potential environmental concern but does not rise to the level of a *recognized environmental condition*.

6.4 Aboveground Storage Tanks (ASTs)

One 500-gallon dual-compartment AST is located on the western side of the vehicle service building within a shallow drip-containment berm **(Photograph 29)**. One compartment is used for new oil and the other for used oil. In addition, located within the service building are two small hydraulic oil ASTs, estimated to be approximately 60 gallons each. The hydraulic oil ASTs are used in connection with the in-ground hydraulic lifts located within the garage **(Photograph 30)**.

6.5 Other Petroleum Products

Apart from what has been discussed previously in Section 6.2, ATC did not observe other petroleum products.

6.6 Polychlorinated Biphenyls (PCBs)

Three pole-mounted SCE transformers are located on-site a short distance east of the southwestern corner of the Property. At least one pole-mounted transformer is located along the western sidewalk. Based on the pre-1979 age of the Property improvements, it is possible that the on-site transformers contain PCBs. No evidence of leaks or damage to the transformers was observed. SCE would be responsible for the clean-up of any PCB-impacts resulting from a leak from one of their transformers.

Another potential source of PCBs is the ballasts of fluorescent lights. Fluorescent lighting is present in the Property buildings. Based on the pre-1979 age of the Property improvements, it is possible that PCB-containing ballasts are present. During the course of regular maintenance, ballasts should be inspected for labeling indicating their PCB content. In general, any ballast not specifically labeled as not containing PCBs is presumed to contain them and will require special disposal practices when eventually discarded.

PCBs have also been used as an additive in hydraulic fluid. Approximately five removed in-ground hydraulic hoists and three active in-ground hoists are present in the service building. Two active aboveground hoists are present as well. Based on the pre-1979 age of the Property improvements, it is possible that the former hydraulic hoists have utilized hydraulic fluids containing PCBs. Given the lack of subsurface testing and/or maintenance data demonstrating the absence of leaks, the seven in-ground hoist locations are considered to represent a *recognized environmental condition*.

6.7 Unidentified Substance Containers

ATC observed one old-appearing unlabeled 55-gallon drum on the northeastern exterior side of the large storage building. Based on the weight of the drum, it was not empty, although its contents are unknown. The drum sitting on concrete and was not within secondary containment; however, there was no observed evidence of associated staining **(Photograph 31)**. Based on the apparent absence of releases from the drum, the drum is not considered to represent a *recognized environmental condition*. ATC suggests that the contents of this drum be characterized and arrangements made for its appropriate transport and disposal.

6.8 Non-hazardous Liquid/Solid Waste

Non-hazardous wastes generated at the Property consist of typical municipal refuse that are stored in standard dumpsters located in the waste sorting and storage area. Two dumpsters are designated for trash and three for recyclable materials. Athens is the waste removal firm. Mr. Norton expressed the belief that Athens emptied the standard dumpsters once per week. In addition, there are two large bins reserved for scrap metal. It is not known which firm removes this material.

Non-hazardous liquid wastes consist of sanitary sewage, stormwater runoff, and rinse water from vehicle washing.

6.9 Wastewater

As mentioned previously, apart from stormwater and municipal sewage, wastewater is generated through vehicle washing and steam cleaning. Rinsate from both areas passes through a three-stage clarifier before entering the municipal sewer system. According to Mr. Norton, the clarifier is pumped approximately every six months and the sediment is removed by ECI. The generation of waste rinse water is not considered to represent a *recognized environmental condition*.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe the presence of waste pits, ponds, or lagoons at the Property.

6.11 Sumps and Drains

One sump, reportedly for containing and recirculating soapy water is located on the northern side of the truck wash tunnel at the tunnel's east end. According to Mr. Norton, washing now utilizes water only. The sump interior was inspected during the WIP investigation of 1991 and 1992 and was found to be in good condition at that time. The observed sump is not considered to be a *recognized environmental condition* to the Property.

Drains were observed inside the truck wash tunnel and the steam cleaning bay (**refer to Photographs 15 and 18**). A small, two-inch drain was observed near the former boiler room located in the middle of the vehicle service building. In the office area outside of the boiler room, ATC observed an elongated cover plate that may overlie a former trench drain. No staining was observed near any of these drains.

6.12 Septic Systems

Two septic systems were formerly located at the Property. The first was located north of the current truck wash tunnel, which consisted of two 900-gallon septic tanks arranged end-to-end and two associated cesspools. The other septic system consisted of six septic tanks arranged in two end-to-end rows of three each and five associated cesspools. The first septic system was among the areas assessed in the WIP investigation and was granted regulatory closure. The second septic system does not appear to have been previously assessed; however, given that it served an office building, it is not considered to represent an environmental concern to the Property.

6.13 Stormwater Management System

Stormwater is conveyed from building roofs by a combination of internal drains, exterior downspouts, and gravity flow. Stormwater falling on the main yard travels by sheetflow or concrete drainage swales to Azusa Canyon Road, where it flows along the curb to the nearest municipal storm drain. Stormwater falling on the southeastern parking lot travels by sheetflow to a concrete drainage swale which carries it eastward to the adjacent railroad right-of-way.

6.14 Wells

Three vapor monitoring wells are located between the eastern end of the clarifier and extending to the northeast where the former septic tanks were located **(Photograph 32**). The wells reportedly extend to an approximate depth of 20 feet. Soil gas samples collected from the wells in 1995 had no detectable concentrations of VOCs. The soil gas sampling report **(see Section 5.3.9)** indicated that only two wells were installed and sampled, but three are present on-site. It is not known when the third well was installed.

A 1956 site plan observed in the LACDPW file references the installation of a dry well at the Property. The well is shown on the plan as connected to a truck scale that was formerly located on the east side of the Property adjacent to the south of the current large storage building. Presumably the well was used to drain rain water that might have seeped into the cavity beneath the scale. It is possible that oil and grease may have been discharged to the subsurface through the well. The well was shown in a detail as extending from 3 feet six inches below the surface to a depth of 9 feet six inches. ATC estimated from the plan that the well was approximately 25 feet north of the truck scale, which would place it beneath the large storage building (constructed later in 1966). The truck scale was removed at an unknown date, but it is assumed that the drywell is likely still present. Because of the former potential for discharging petroleum products to the subsurface, the former dry well is considered to represent a *recognized environmental condition*.

6.15 Other

No other issues of environmental concern were observed during the Property reconnaissance.

7.0 SUBSURFACE VAPOR MIGRATION

ATC conducted a limited screening for potential vapor encroachment conditions (VECs) that may affect the property. The VEC screening focused on the current and historical usage of the property and also utilized the aforementioned regulatory agency database report provided by EDR to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons. To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, ATC utilized the approximate minimum search distance defined by ASTM E 2600-10 of 1,760 feet (1/3 mile) from the property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, ATC utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. The EDR VES report calculates the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology: (non-petroleum hydrocarbon COCs) 1,760 feet in the upgradient direction; 365 feet in the cross-gradient direction; and 100 feet in the downgradient direction and (petroleum hydrocarbon COCs) 528 feet in the upgradient direction; 165 feet in the cross-gradient direction if Light, Non-Aqueous Phase Liquid, (LNAPL i.e. floating product) is suspected; 95 feet in the cross-gradient direction if no LNAPL is suspected; 100 feet in the downgradient direction (LNAPL suspected); and 30 feet in the downgradient position (LNAPL not suspected).

The screening was further refined by evaluating the Critical Distance (CD) factor. The CD is the upper distance a vapor may migrate through soil in the vadose zone assuming the path of least resistance is directly from the closest boundary of the contaminated media (i.e. groundwater or soil) to the nearest property boundary. For non-petroleum hydrocarbon COCs, the CD is 100 feet. For LNAPL petroleum hydrocarbon COCs, the CD is also 100 feet. For dissolved petroleum hydrocarbon COCs, the CD is 30 feet.

ATC reviewed potential sources of COCs from the facilities reported on the EDR database report.

The following condition was identified as a VEC:

- A soil gas survey conducted at the Property by CDM in 1991 identified comparatively low levels of total VOCs at depths of four and eight feet bgs in areas beneath the central portion and western side of the vehicle maintenance building that do not appear to have been remediated. Remnant vapors beneath the building at shallow depths are considered to represent a VEC. Given that the RWQCB chose to exclude these areas from required remediation, the remnant vapors are not considered to represent a *recognized environmental condition*.

The regional groundwater impacts that characterize the San Gabriel Valley Area 2 NPL site are below the CD and therefore not considered to represent a VEC for the Property. Due to the depth to groundwater, all nearby release sites are considered unlikely to represent a VEC to the Property.

8.0 INTERVIEWS

The following persons were interviewed to obtain information regarding *recognized environmental conditions* in connection with the property:

INTERVIEW SUMMARY				
Role	**Name**	**Title/Company**	**Years Assoc. With Property**	**Interview Type**
EH&S	Masood Choudhury	Manager, Environmental, Health & Safety	16	Email
Site Contact / Escort	Mr. Stephen Odle	Facility Supervisor / Frontier Communications Corp.	Approximately two months	In person
Escort	Mr. Mark Norton	Building Services Specialist / Frontier Communications Corp.	One	In person

Not included in this listing are those governmental employees that were contacted solely for the purpose of retrieving public information pertaining to the property and who would not be expected to have first-hand knowledge of *recognized environmental conditions* at the property.

ATC was unable to interview previous owners or operators of the Property. In addition, the escorts did not have extensive information regarding past activities at the Property beyond approximately one year.

Pertinent information from the interviews is discussed in applicable sections of this report with details (including failed attempts to interview, if any) documented on Record of Communication forms in **Appendix J**.

9.0 OTHER ENVIRONMENTAL CONDITIONS

9.1 Asbestos-Containing Material (ACM)

ATC conducted a limited visual survey for the presence of readily accessible suspect asbestos-containing materials (ACM) within the Property buildings. The intent of the building survey was to identify suspect ACM. No testing of these materials was conducted and, for purposes of this report, the identified materials have been assumed to be ACM. No destructive means were utilized to gain access to hidden or inaccessible areas such as pipe chases, wet-columns, wall voids and ceiling cavities.

Suspect materials observed during the course of the survey included wallboard/joint compound, baseboard, resilient floor tiles (12"x12" and 9"x9"), resilient sheet flooring, acoustical ceiling panels, and thermal system insulation (pipe wrap) (**refer to Photograph 13**). The pipe wrap, located in the HVAC room on the ground floor of the main office, has a warning label indicating that it was known to contain asbestos (**refer to Photograph 14**). Mr. Norton indicated that he had no knowledge of an asbestos Operations and Maintenance (O&M) plan at the facility.

Suspect materials were observed in fair to good condition. Based on the observed condition of the suspect ACM, ATC did not identify any immediate environmental concerns, apart from the need to properly train personnel that come into contact with known or presumed ACM.

ACM would be considered an environmental concern should renovation or demolition activities occur. ACM is outside the scope of work of ASTM Practice E1527-13 and therefore, the presence of ACM is not considered to represent a *recognized environmental condition*.

9.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

ATC's review of published radon data indicates that the Property is located in a county designated by the EPA as Zone 2. Zone 2 areas have a predicted radon concentration of greater than or equal to 2.0 pCi/L and less than or equal to 4.0 pCi/L. According to statistical data provided by EDR, an EPA survey of 63 sites in Los Angeles County revealed two percent with radon concentrations in excess of 4.0 pCi/L. Additionally, a state survey of five sites located within the same zip code as the Property identified none with radon concentrations in excess of 4.0 pCi/L.

9.3 Lead in Drinking Water

According to a 2016 Valley County Water District water-quality report, the potable water supplied to the Property neighborhood, meets all state and federal standards for drinking water, including lead.

9.4 Lead-Based Paint (LBP)

Based on the ages of the Property improvements (1957-1966), it is possible that LBP has been used on the Property in the past. Prior to any renovation or demolition activity, a survey for lead-containing materials should be conducted in all areas likely to be disturbed. LBP is outside the scope of ASTM; therefore, the potential presence of LBP is not considered to represent a *recognized environmental condition*.

9.5 Mold Screening

ATC conducted a screening survey for mold conditions at the Property. The screening consisted of limited interview, document review (if applicable) and physical observation.

ATC spoke with Mr. Mark Norton, Building Services Specialist at the Property for approximately one year. Mr. Norton indicated that there have been no roof leaks or significant water-intrusion events within the time he was associated with the Property. Furthermore, Mr. Norton could not recall previous mold occurrences at the property or prior surveys for mold. Accordingly, there was no prior mold documentation for ATC to review.

During the site reconnaissance, ATC did not observe suspect mold at the Property or, apart from occasional water stains on acoustical ceiling panels on the first floor of the office, indications of current or former water intrusion events conducive to mold growth.

Mold is outside the Scope of ASTM Practice E 1527-13 and, therefore, the potential presence of Mold is not considered a *recognized environmental condition*.

9.6 Additional Client Requested Conditions

No additional client requested conditions were included in this report.

11.0 TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

material threat - a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional (EP), is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

de minimis condition – is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. An example might include a release of *hazardous substances* or *petroleum products* that could reasonably and foreseeably result in a concentration exceeding the applicable regulatory agency risk-based residential standards or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment. If an enforcement action would be less likely than not, then the condition is considered to be generally not likely the subject of an enforcement action. A condition determined to be *de minimis* is not a *REC* or *controlled recognized environmental condition (CREC)*.

historical recognized environmental condition(s) (HREC) - a past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a *HREC*, the EP must determine whether the past release is a *REC* at the time the assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a *REC* at the time the Phase I ESA is conducted, the condition will be reported in **Section 1.2** the Findings and Conclusions Summary table as a *REC*.

controlled recognized environmental condition (CREC) - a *recognized environmental condition* resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitation, institutional controls, or engineering controls). Per E1527-13, a *CREC* will be reported in the **Section 1.2** Findings and Conclusions Summary table as a *CREC* and a *REC*.

migrate/migration - refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

APPENDIX C

SITE PHOTOGRAPHS

Photograph No. 1: The entrance to the Property main office building. East direction view.

Photograph No. 2: Northeast direction view of the vehicle service building.

Photograph No. 3: The truck wash tunnel, northeast direction view.

Photograph No. 4: The supply building, east direction view.

Photograph No. 5: The large storage building, northeast direction view.

Photograph No. 6: One of the two inactive dispenser islands, southwest direction view.

Photograph No. 7: The north-adjacent multi-tenant industrial building, east direction view.

Photograph No. 8: The east-adjacent multi-tenant industrial building, north direction view.

Photograph No. 9: The east-adjacent railroad right-of-way, beyond which is an industrial building at 4981 4th Street.

Photograph No. 10: The south-adjacent multi-tenant building at 4954 Azusa Canyon Road, south direction view.

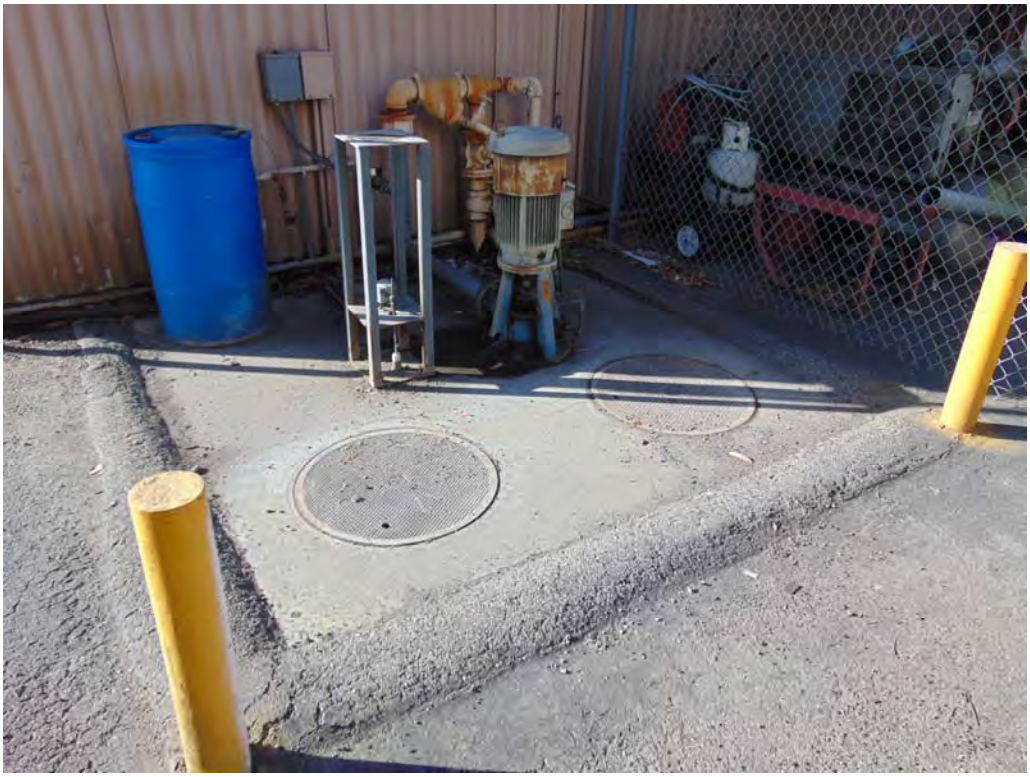
Photograph No. 11: South direction view of the south-adjacent yard at Malcolm Drilling.

Photograph No. 12: The west-adjacent residential neighborhood, southwest direction view.

Photograph No. 13: A typical view of the first-floor interior of the main office building.

Photograph No. 14: The interior of the HVAC room in the main office building.

Photograph No. 15: West-direction view along the interior of the truck wash tunnel.



Photograph No. 16: The former soap sump on the northern side of the truck wash tunnel.

Photograph No. 17: The clarifier alongside of the truck wash tunnel, west direction view.

Photograph No. 18: The steam cleaning area on the west side of the service building.

Photograph No. 19: One of three on-site in-ground lifts (right) and an aboveground lift. Former lifts are in each location as well. Note the hydraulic oil AST against the wall beneath the fan at the right.

Photograph No. 20: Drum storage in the vehicle service building.

Photograph No. 21: An aqueous parts washer in the vehicle service building.

Photograph No. 22: Various waste drums in the vehicle storage building.

Photograph No. 23: Some of the stored items in the east room of the large storage building.

Photograph No. 24: A storage cabinet in the southern room of the large storage building.

Photograph No. 25: Compressed gas cylinder storage area south of the large storage building, east direction view.

Photograph No. 26: Side view of a spray booth used as a storage shed, north direction view.

Photograph No. 27: A soil pile at the southeast corner of the Property, southeast direction view.

Photograph No. 28: Access plate to one of three subsurface hydraulic oil reservoirs located along the south side of the vehicle service building.

Photograph No. 29: The 500-gallon oil AST located at the west side of the service building, east direction view.

Photograph No. 30: One of two hydraulic oil ASTs inside the service building.

Photograph No. 31: An unlabeled drum stored on the northeast side of the large storage building.

Photograph No. 32: One of the three vapor monitoring wells on-site. Another may be seen at the upper left, adjacent to the clarifier.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SAN GABRIEL VALLEY (	*SUNSET & SAN BERNARD*	*0 - 1/8 (0.000 mi.)*	*0*	*21*

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

SAN GABRIEL VALLEY (	*SUNSET & SAN BERNARD*	*0 - 1/8 (0.000 mi.)*	*0*	*21*

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

SPECIALTY ORGANICS I	*5263 N FOURTH ST*	*NNE 1/4 - 1/2 (0.285 mi.)*	*134*	*124*

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/27/2016 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NORAC PHARMA	*405 S MOTOR AVE*	*NNE 1/2 - 1 (0.836 mi.)*	*V152*	*245*

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/01/2016 has revealed that there are 8 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 8 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/21/2016 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected

listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CAS #: 79-01-6
Pathway: GROUND WATER PATHWAY
Scoring: 2

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 2) is a ground water plume that parallels the San Gabriel River to the west in the San Gabriel ground water basin in the Baldwin Park area of Los Angeles County, California. The plume is about 7.5 miles long and 1.5 miles wide. Ground water is contaminated with trichloroethylene TCE), perchloroethylene PCE), and carbon tetrachloride, according to analyses by State agencies and local water companies. Many public wells in the area exceed the EPA Suggested No Adverse Response Levels SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies containless than 5 parts per billion ppb) of TCE, a level considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service. Status June 1984): A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/ feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of the contamination. This site, along with the threeother San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Site Description: Four areas of groundwater contamination are listed on the National Priorities List: San Gabriel Valley Area 1, San Gabriel Valley Area 2, San Gabriel Valley 3, and San Gabriel Valley 4. The four areas represent a significant portion of the 170 square mile San Gabriel Valley in Los Angeles County, California. More than one million residents live in the San Gabriel Valley alongside a variety of commercial and industrial operations. The San Gabriel Aquifer, which underlies most of the San Gabriel Valley Basin, stores an estimated three trillion gallons of water and is the primary source of water for most of the Basin?s residents. Major surface water features in the San Gabriel Valley include the San Gabriel River, tributaries to the San Gabriel River system, and spreading basins located in or adjacent to the river channels. The approximate location of the San Gabriel Valley Area 2 Site is west of highway 39, south of the San Gabriel Mountains, east of the San Gabriel River, and north of Walnut Creek. Nearly all of the Baldwin Park area is fully developed for residential, commercial, and industrial use. The largest parcels of open land are active and inactive gravel pits and the Santa Fe flood Control Basin. Water purveyors in the site area include: the City of Azusa, California Domestic Water Company, City of Glendora, La Puente Valley County Water District, San Gabriel Valley Water Company, Suburban Water Systems, and Valley County Water District. Volatile Organic Compounds (VOCs), major contaminants of concern at the San Gabriel Valley Sites, were used in large quantities at industrial facilities as early as the 1940?s. From the 1940?s through the 1980?s, carbon tetrachloride, tetrachloroethane, thrichlorethene, and other chlorinated solvents were used by hundreds of businesses for degreasing, as raw materials for automotive products, by a solvent recycler, for chemical extractions , and for other purposes. VOCs have been released by a combination of intentional disposal, careless handling during loading and unloading, leaking tanks and pipes, and other means. VOCs were not detected in ground water until 1979 during environmental monitoring activities conducted by Aerojet Electrosystems near its facility in Azusa. In May 1984, EPA listed four areas of contamination were listed as San Gabriel Valley Area 1 through 4. EPA began its enforcement efforts in the site area in 1985 with searches for and evaluations of historical Federal, State, and local records on chemical usage, handling, and disposal. In 1985, the California Regional Water Quality Board began its Well Investigation Program (WIP) to identify the sources of ground water contamination detected in water supply wells. In 1989, EPA entered into a cooperative agreement to expand the WIP program to determine the nature and extent of contamination in the San Gabriel Valley. The RI/FS for the Baldwin Park OU was conducted concurrently with source identification efforts, as a fund-lead project. In March 1994, the Record of Decision (ROD) document was signed.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description:	Faxed from NRC to OES: the suspected responsible party has been hiding magnesium chips and metal shavings in the center of the parking lot. Caller to NRC also stated there is a building across the street where they are dumping solvents down the drainns in the bathroom. The caller to NRC stated the dumping was ongoing.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

SPECIALTY ORGANICS INC (Continued) **1000171503**

Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Substance: Waste Oil
Substance Quantity: Not reported
Local Case No: Not reported
Case Type: Soil
Abatement Method Used at the Site: Not reported
Global ID: T0603700169
W Global ID: Not reported
Staff: WIP
Local Agency: 19000
Cross Street: GLADSTONE ST.
Enforcement Type: Not reported
Date Leak Discovered: 7/30/1990
Date Leak First Reported: 8/7/1990
Date Leak Record Entered: 12/2/1990
Date Confirmation Began: Not reported
Date Leak Stopped: 7/30/1990
Date Case Last Changed on Database: 5/20/1996
Date the Case was Closed: 5/20/1996
How Leak Discovered: Tank Closure
How Leak Stopped: Not reported
Cause of Leak: UNK
Leak Source: UNK
Operator: BURNHAM, DALE E.
Water System: Not reported
Well Name: Not reported
Approx. Dist To Production Well (ft): 4331.60584645069896500541597 43
Source of Cleanup Funding: UNK
Preliminary Site Assessment Workplan Submitted: Not reported

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 07/21/1994
Comments: Site screening/visit conducted. Ejie Solomon at RWQCB is Project Manager supervising cleanup activities at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/26/1991
Comments: RWQCB conducted a site inspection of Baxter Pharmaseal in December 1989. As a result of the investigation, a subsurface investigation was conducted to determine the extent of contamination in the dioctyl phthalate (DOP) tank/precipatate collection and clarifier areas. Phase I and Phase II investigations were completed on 06/22/90 and 01/14/91 respectively. Phase I and Phase II investigations indicate that hazardous substances (PCE), toluene, freon-TF, Bis (2-ethyl hexyl phthalate (BEHP) have contaminated the soil. EPA recommends for a high priority SSI, DHS recommends high priority PEA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 05/03/1991
Comments: Listed on RCRA database as a hazardous waste generator since 07/30/1980.

AMERICAN PHARMASEAL LABORATORIES (Continued) **1000360641**

Registry ID: 110000477378

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

STATE MASTER

HAZARDOUS WASTE BIENNIAL REPORTER

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Facility Type: Historical - Non-Operating
Unit Names: CONTAIN1, TANKSTR1, TANKSTR2
Event Description: New Operating Permit - FINAL PERMIT (EXPIRES)
Actual Date: 12/30/1988

EPA Id: CAD008352957
Facility Type: Historical - Non-Operating
Unit Names: CONTAIN1, TANKSTR1, TANKSTR2
Event Description: New Operating Permit - DRAFT PERMIT
Actual Date: 08/29/1983

EPA Id: CAD008352957
Facility Type: Historical - Non-Operating
Unit Names: CONTAIN1, TANKSTR1, TANKSTR2

NORAC PHARMA (S&B PHARMA DBA NORAC PHARMA) (Continued) **U001568706**

Event Description: New Operating Permit - CALL-IN LETTER ISSUED
Actual Date: 02/07/1983

Closure:
EPA Id: CAD008352957
Facility Type: Historical - Non-Operating
Unit Names: CONTAIN1, TANKSTR1, TANKSTR2
Event Description: Closure - RESPONSE TO 1ST NOD RECEIVED
Actual Date: 09/01/1992

EPA Id: CAD008352957
Facility Type: Historical - Non-Operating
Unit Names: CONTAIN1, TANKSTR1, TANKSTR2
Event Description: Closure - PUBLIC COMMENT (BEGIN)
Actual Date: 10/28/1993

EPA Id: CAD008352957
Facility Type: Historical - Non-Operating
Unit Names: CONTAIN1, TANKSTR1, TANKSTR2
Event Description: Closure - PUBLIC COMMENT (END)
Actual Date: 10/28/1993

EPA Id: CAD008352957
Facility Type: Historical - Non-Operating
Unit Names: CONTAIN1, TANKSTR1, TANKSTR2
Event Description: Closure - CLOSURE PLAN RECEIVED
Actual Date: 04/15/1991

EPA Id: CAD008352957
Facility Type: Historical - Non-Operating
Unit Names: CONTAIN1, TANKSTR1, TANKSTR2
Event Description: Closure - 1ST NOTICE OF DEFICIENCY ISSUED
Actual Date: 06/11/1992

EPA Id: CAD008352957
Facility Type: Historical - Non-Operating
Unit Names: CONTAIN1, TANKSTR1, TANKSTR2
Event Description: Closure - CLOSURE PLAN APPROVED
Actual Date: 03/02/1994

EPA Id: CAD008352957
Facility Type: Historical - Non-Operating
Unit Names: CONTAIN1, TANKSTR1, TANKSTR2
Event Description: Referred for closure to other agency - REFERRED FOR CLOSURE TO OTHER AGENCY
Actual Date: 09/29/2014

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 43216

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 11343

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 17688

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 15460

NORAC PHARMA (Continued) **1000143907**

Waste code: P098
Waste name: POTASSIUM CYANIDE
Amount (Lbs): 6.6

Waste code: U102
Waste name: 1,2-BENZENEDICARBOXYLIC ACID, DIMETHYL ESTER
Amount (Lbs): 482

Waste code: U123
Waste name: FORMIC ACID (C,T)
Amount (Lbs): 482

Waste code: U194
Waste name: 1-PROPANAMINE (I,T)
Amount (Lbs): 482

Waste code: U196
Waste name: PYRIDINE
Amount (Lbs): 482

Waste code: U213
Waste name: FURAN, TETRAHYDRO-(I)
Amount (Lbs): 482

Waste code: U218
Waste name: ETHANETHIOAMIDE
Amount (Lbs): 482

Waste code: U404
Waste name: ETHANAMINE, N,N-DIETHYL- (OR) TRIETHYLAMINE
Amount (Lbs): 482

Corrective Action Summary:

Event date: 06/01/1990
Event: CA029EP

Event date: 06/01/1990
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

FINDS:

Registry ID: 110055898328

Environmental Interest/Information System
HAZARDOUS AIR POLLUTANT MAJOR

STATE MASTER

Registry ID: 110001150227

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource

CEMEX CONSTRUCTION MATERIALS PACIFIC (Continued) **1000376530**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AIR MAJOR

US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/07/2016

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 09/14/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007
Date Made Active in Reports: 04/10/2007
Number of Days to Update: 40

Data Release Frequency: Varies

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Target Property Map:	5619056 BALDWIN PARK, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

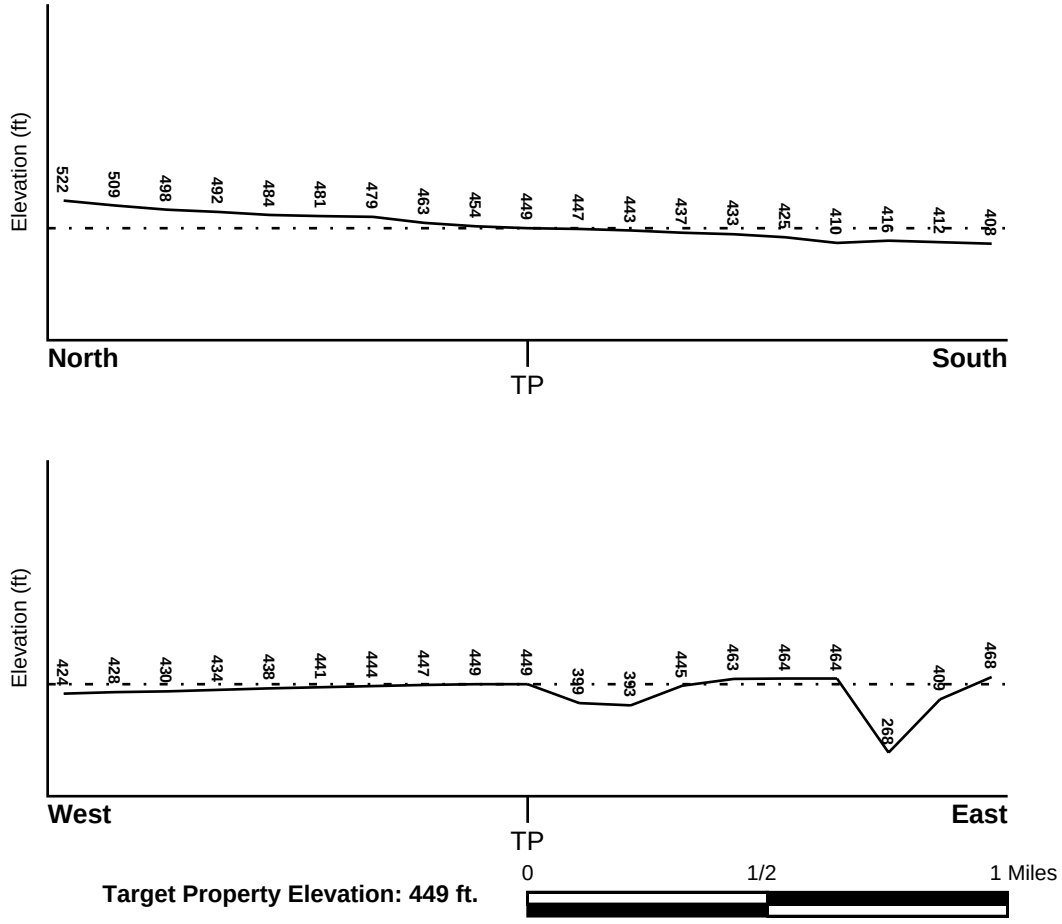
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

BALDWIN PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile SSE
Site Name:	Baxter Healthcare Corp. Site
Site EPA ID Number:	CAD000628099
Groundwater Flow Direction:	Southwest
Measured Depth to Water:	196 feet in a well located one-quarter of a mile west of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifer(s) under the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by ATC Group Services LLC were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 5609-4FC1-B30E

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

ATC Group Services LLC (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

IRWINDALE PLANT YARD

As part of GTC's Phase II Underground Tank Program, McLaren Engineering conducted one soil boring at the Irwindale Plant Yard facility on October 2, 1985. The soil boring was placed to investigate soil conditions adjacent to a 10,000 gallon diesel tank. Two other tanks at the yard were not investigated for soil contamination because the soil contained a large amount of cobbles which made drilling an unsuitable investigative technique. As a result, the drilling operation was moved to another site and a proposal was made to GTE to have the tanks precision tested.

The soil boring was placed at the north side of the 10,000 gallon diesel tank and drilled to a depth of 15.0 feet (Figure 1). Samples were collected at 3.5 to 5.0 feet, 8.5 to 10.0 feet and 13.5 to 15.0 feet. No odor or discoloration of the soil was evident in the samples collected. Petroleum hydrocarbon concentrations in the soil were 19 ppm at 3.5 to 5.0 feet, <10 ppm at 8.5 to 10.0 feet, and 30 ppm at 13.5 to 15.0 feet (Table 1).

On October 24, 1985, a precision test was performed on the 10,000 gallon unleaded gasoline tank (Figure 2). The tank was found to be tight. No approval was given by GTE to precision test the other 2 tanks.

The field geologist on the project was John Reay; the tank testers, Bud Amorfini and Tim Hopper; the supervising geologist, Dennis Nakamoto: and the supervising engineer, Larry Smith.

A copy of the soil boring log documented at the site is contained in Appendix 1. The soil sampling protocol is contained in Appendix 2. McLaren's laboratory methodology adapted from EPA Method 418.1 for petroleum hydrocarbons is contained in Appendix 3. The certified tank precision test results are contained in Appendix 4.

Conclusion

The results of the soil sampling program at GTC's Irwindale Plant Yard indicate that there are low concentrations of petroleum hydrocarbons in the soil adjacent to the 10,000 gallon diesel tank. No additional borings were drilled in the yard because of the difficulty associated with drilling through cobbles. McLaren Engineering recommends that this tank be precision tested as soon as scheduling permits.

The precision test performed on the 10,000 gallon unleaded gasoline tank shows that the tank is tight. Because the tanks at the Irwindale Plant Yard facility are 18 years old, and McLaren Engineering recommends that they be precision tested annually until they can be conveniently removed and replaced.

SUBJECT: UNDERGROUND TANK TESTS AT IRWINDALE AND MONROVIA

We have completed the underground tank tests on your 10,000 gallon unleaded tank at N. Azusa Canyon Road in Irwindale and the 1,000 gallon diesel tank at W. Lime Street in Monrovia in accordance with the regulations set forth by Los Angeles County. Attached are the test data charts for your review.

The test in Monrovia has shown the 1,000 gallon diesel tank to be leaking at the rate of .09 gal/hr. After compensating for tank end deflection and temperature gain, the data consistently indicate a net loss over each 15-minute interval, conclusively showing a leak greater than the .05 gal/hr criteria.

The test on the 10,000 gallon unleaded tank in Irwindale shows it to be tight. Test data indicate proper product circulation with consistent temperature increases and normal compensation for tank end deflection. Results indicate a net gain of .039 gal/hr which is sufficient to certify the tank as tight.

Dear Mr. Thierno:

Subject: CLOSURE PERMIT NO. 4994B
FILE: 1-3882-3S
5010 AZUSA CANYON ROAD, IRWINDALE

In a letter to GTE California (GTEC) dated March 29, 1990, you indicated that an insufficient number of soil samples were taken during the removal of two underground storage tanks at the above mentioned GTEC Irwindale Plant Yard in November 1988, and February 1989. Specifically, you requested two additional soil samples be obtained from beneath the diesel island and one sample from below the gasoline island.

Enclosed is a report prepared by Jetco Environmental & Assoc., Inc. (Jetco) for GTEC dated November 14, 1990, presenting the results of the requested sampling under the diesel island and minor remediation that became necessary. A two foot soil sample (SP-1), taken beneath the diesel island, showed concentrations of 4200 parts per million (PPM) total petroleum hydrocarbons (TPH).

Remediation of the contaminated soils was achieved by the excavating to a depth of 5 feet. Approximately one 55 gallon drum of soil was removed and transported via manifest to Omega Recovery in Whittier. Verification samples were taken from the walls and bottom of the excavation to ensure all contaminated soils were removed.

SITE INVESTIGATION

GTE IRWINDALE FACILITY
5010 AZUSA CANYON RD.
IRWINDALE, CA

100183

NOVEMBER 14, 1990

1.0 INTRODUCTION AND SUMMARY

1.1 INTRODUCTION

The site investigation was conducted to determine the extent of hydrocarbon contamination present in the soil detected by previous sampling and laboratory analysis at the GTE facility located at 5010 Azusa Canyon Road, Irwindale, CA. The site location is shown in Attachment 1. The investigation was performed for GTE California at the request of Mr. Al Hollis, by JETCO Environmental & Assoc., Inc.

These activities are associated with daily operations of the GTE facility. The investigation specifically focused on the soil conditions of the area surrounding a previously removed fuel island. The the fuel island and the immediate surrounding area are depicted in Attachment 2.

The findings of a preliminary site sampling by JETCO indicated Total Non-volatile Petroleum Hydrocarbons (Diesel) of 4200 mg/kg at the location of sample SP-1. The location of sample SP-1 in relation to the fuel island is shown in Attachment 2. The concentration of contamination for sample SP-1 was significantly greater than the regulatory action level. Therefore further investigation was warranted to determine the limits of contamination and what course of remedial action should be taken.

The scope of work included in the site investigation, and subsequent remediation of the contaminated material follows:

- Exploratory excavations of the area surrounding the fuel island
- Soil sampling and laboratory analysis of samples.
- Geological evaluation of subsurface conditions.
- Removal and disposal of all contaminated material.
- Backfill and compaction of excavations.

A summary of the f...

The findings of this investigation indicate Total Petroleum Hydrocarbon levels up to 4200 mg/kg in a limited area directly below the pump island. The contaminated soil centers around sample SP - 1. Perimeter samplings of the exploratory excavations show the contamination does not spread beyond a small section of the fuel island. Once identified the contaminate was excavated in its entirety, placed in a D.O.T. approved drum, and transported to a licensed disposal facility. Further investigation of this site does not appear warranted at this time.

2.0 SUMMARY - AREA GEOLOGY

The Irwindale area is located south of the San Gabriel Mountains in the Transverse Ranges Geomorphic Province. Locally, alluvial deposits from the San Gabriel Valley. The dominate alluvial feature of the valley is the San Gabriel River Fan. A generalized geologic map of the area is provided in Attachment 3.

The study area of the site consists of artificial fill overlying natural alluvial deposits of the San Gabriel River Fan. The trench logs depict the subsurface character of the area.

Artificial Fill (AF)

The fill consists of sand with trace rocks. It is found to be medium dark brown and gray, moist and medium dense. The soil is fine to medium grained and slightly mottled with gray brown sand and silty sand. Rocks comprise up to 5 percent of the unit, measured up to 8 inches in diameter and are granitic in composition. The USCS designation for this soil composition is SP-SM.

Alluvium (Qal)

The Alluvium is designated as the San Gabriel River Fan deposits. These deposits consist of partially stratified sand, cobbles, and boulders. The materials medium brown gray, moist, medium dense and unconsolidated. The sand is fine to medium grained and the cobbles and boulders range up to 24 inches in diameter. Minor caving within the alluvium was observed from below the fill deposit to the depth of the trench. The USCS designation for this soil composition is GP-GW.

Groundwater

No groundwater was encountered in either the exploratory trenches. However, local wells drilled in the vicinity indicate that ground water is roughly 230 feet below ground surface. Data provided in attachment 4, by the County of Los Angeles substanciates the depth of ground water in this area.

3.0 FIELD INVESTIGATION

On August 23, 1990 JETCO began excavation of two exploratory trenches on either side of the fuel island. The eventual depths of the trenches were 12 feet. The logs of both exploratory trenches are presented in Appendix A. Soil samples were taken from the excavations, in locations necessary to assure proper areal coverage. The locations of those samples are shown in Attachments 2 and 5. The samplings performed during excavation and instrument analysis utilizing a Bacharach TLV model no. 0023-7256 calibrated to Hexane, demonstrated that the contamination zone was restricted to the area directly below the fuel island. Having made an accurate assessment of the extent of contamination, the contamination was removed. The excavated contaminate was then packaged in a DOT drum and removed from the site. Asbury Environmental, a licensed California Hazardous Waste Transporter ID No. 108687, transported the material to Omega Recovery, an Authorized TSD facility, US EPA ID No. CAD042245001, located at 12504 E. Whittier Blvd, Whittier, CA. Attachment 6 shows a copy of the Hazardous Waste Manifest for that removal. Following removal, the exploratory excavations were backfilled and compacted.

4.0 LABORATORY ANALYSIS

4.1 SAMPLE SELECTION AND LABORATORY ANALYSIS METHODS

All sampling was conducted by Harry Audell, Registered Geologist No. 3958, for JETCO Environmental & Assoc. Inc. Samples were selected for analysis based on location, TLV instrument readings, odors, and visual observation. All sample locations are displayed in Attachment 4. Chain of Custody records and laboratory analysis results are presented in Appendix B.

In the north wall exploratory trench a total of four samples were pulled, at two separate depths. Samples SP-T1-1 and SP-T1-4 were taken, one from each side of the excavation at a 5 foot depth. Samples

From the south wall exploratory trench a total of four samples were also pulled. SP-T2-2 and SP-T2-3 were taken, one from each side of the trench, at a 5 foot depth. SP-T2-1 and SP-T2-4 were taken, one from each side of the trench, at a 12 foot depth. Each of the four samples was analyzed for total petroleum hydrocarbons by EPA method 418.1.

In the area of directly below the fuel island between the two exploratory excavations, two samples were taken. Sample SP-1 was taken at a depth of 2 feet. Sample SP T2-10 was removed at a 5 foot depth, from the floor of the actual contamination zone. Both samples were analyzed by EPA method 418.1 for total petroleum hydrocarbons.

4.2 LABORATORY ANALYSIS RESULTS

The table below shows the results of each sample taken.

SAMPLE	RESULT
SP-1	4200 mg/kg (ppm) TPH
SP T1-1	24 mg/kg (ppm) TPH
SP-T1-2	Non-Detect
SP T1-3	Non Detect
SP-T1-4	32 mg/kg (ppm) TPH
SP T2-1	11 mg/kg (ppm) TPH
SP-T2-2	17 mg/kg (ppm) TPH
SP T2-3	22 mg/kg (ppm) TPH
SP-T2-4	26 mg/kg (ppm) TPH
SP-T2-10	30 mg/kg (ppm) TPH

5.0 FINDINGS

Based on the results of the field investigation, the significant occurrence of soil contamination is represented by the 4200 ppm total petroleum hydrocarbons concentration in the 2 foot sample, SP-1, located directly below the fuel island. This level is above the 100 ppm regulatory action level for TPH. The efforts of the investigation, however, show that the contaminate plume to be restricted to an area not deeper than 5 feet and contained horizontally between the walls of each of the exploratory trenches.

Remediation of the area was achieved by the excavation of all contaminated soil in the described area and the removal of that material from the site to a licensed Disposal Facility. The remaining soil demonstrates TPH levels well

Remediation of the area was achieved by the excavation of all contaminated soil in the described area and the removal of that material from the site to a licensed Disposal Facility. The remaining soil demonstrates TPH levels well below 100 ppm and, therefor, no further investigation appears warranted at this time.

1.0 INTRODUCTION

This report presents the findings of a soil gas investigation with confirmatory soil sampling conducted at the GTE Irwindale Facility located at 5010 North Azusa Canyon Road in Irwindale, California. The site location is shown on Figure 1. This investigation was conducted in response to requests itemized in a letter from the California Regional Water Quality Control Board (CRWQCB) - Los Angeles Region, to GTE dated March 13, 1991. This letter, included in Appendix A, refers to a March 7, 1991 inspection of portions of the GTE Irwindale facility by Board staff. During this inspection, two areas were identified as requiring assessment using soil gas techniques with confirmatory soil sampling. One area includes the current truck wash and steam clean bay, with the active subsurface structures including drain sumps and clarifier; inactive, abandoned, subsurface structures including two cesspools and two septic tanks; and storage areas including the former and current hazardous waste storage and drum storage. This area is shown on Figure 2. The other area identified for assessment is the adjacent bays within the maintenance building that formerly housed the truck wash and steam clean areas, including an abandoned clarifier. Figure 3 shows the approximate location of the former truck wash/steam clean bay which was located in the east end of the vehicle maintenance building. This figure is based on available plans provided by GTE.

A workplan was submitted to the CRWQCB for review, and was approved in a letter from the Board to GTE dated May 29, 1991. The workplan is included in Appendix B and the letter is included in Appendix C.

This soil gas investigation was conducted on June 24-27, 1991, sampling a total of 28 locations, with 63 soil gas samples analyzed, and 4 soil samples collected and analyzed. This study was conducted in accordance with the workplan included in Appendix B.

Soil gas samples were collected and analyzed on a real-time basis by Hydro Geo Chem, Inc. (HGC) under subcontract to Camp Dresser & McKee Inc. (CDM). Soil samples were

2.0 SOIL GAS AND SOIL SAMPLING LOCATIONS

The locations for soil gas and soil sampling were chosen to investigate areas of concern noted during the March 7, 1991 inspection by CRWQCB staff. Table 1 lists the areas investigated and the number of soil gas probes placed, number of soil gas samples, and soil samples obtained.

3.0 FIELD INVESTIGATION

3.1 Surface Obstructions

The site is underlain in the shallow subsurface by coarse gravel and cobbles to 8-inches in diameter. Due to this condition, soil gas probe depths of exactly 8 feet below ground surface (BGS) were not attainable at all locations. Probes were deeper than 6 feet instead, all soil gas probe depths of 4 feet BGS were attained.

3.2 Soil Gas Study

Soil gas samples were collected using the system developed by Hydro Geo Chem, Inc. Sampling probes are made of five-foot sections of 1-3/8 inch hardened drill rod. These rods were pushed into the soil with a hydraulic hammer mounted on a flat bed truck. The points are made of hardened steel and are left behind when the rod is hydraulically pulled back approximately 12 inches to allow the soil gases to be withdrawn. The soil gases were drawn through the drill rod using an oil-less, diaphragm vacuum pump. This vacuum pump drew the sample through a 3-layer carbon absorption (Supelco) tube. The tubes are filled with a three-layer packing of various types of absorptive carbon. The soil gas passes through

TABLE 1
GTE IRWINDALE

Former Hazardous Waste Storage Area	1	2	
Sand and Grease Intercepter	3	7	1
Drum Storage	1	2	1
Total	28	63	4

the tubes and is collected by these carbon layers. A minimum of three probe volumes of soil gas were purged through each tube. Gas samples were collected at about four feet and six to eight feet below ground surface to minimize atmospheric effects. Details of soil gas sample collection and analytical procedures including quality assurance and quality control are found in Appendix D.

Twenty soil gas probe locations were placed at the current truck wash and steam clean areas (see Figure 2). Eight soil gas probe locations were placed at the location of the former stream clean and truck wash areas (see Figure 3). The soil gas samples are identified numerically preceded by the letter prefix "SG." For example, SG-01 identifies the first soil gas location to be sampled. The sample node radii were located less than 30 feet apart.

3.3 Soil Gas Analysis

Soil gas samples were analyzed on a "real time" basis using Hydro Geo Chem's on-site mobile laboratory equipped with Varian 3300 and 3400 gas chromatographs. The Varian chromatographs were equipped with a photo ionization detector (PID), a flame ionization detector (FID) and a Hall electrolytic conductivity (HALL) detectors. These detectors were capable of detection limits of 0.01 μg/L.

Soil gas samples were analyzed for 1,1,1-trichloroethane and its anaerobic dehalogenated products, 1,1-dichloroethane and chloroethane. The samples were also analyzed for the presence of tetrachloroethene, trichloroethene, and total volatile organic compounds. Chromatograms and field data sheets are included in Appendix D.

3.4 Soil Samples

Confirmatory soil samples were obtained at four locations, one of which was located at the former truck wash and steam clean bay and three were located at the current truck wash and steam clean bays. The locations for the soil samples were based on both analytical results of

the soil gas survey and sample distribution. CRWQCB staff was part of the data review conducted to determine the location of confirmatory soil sampling. The soil samples were identified with the letter prefix "SS" and a number which corresponds to the adjacent soil gas sample location.

Soil samples were collected by driving a 1-inch ring with 3-inch stainless steel sleeves in the same method as the soil gas probes. The deepest or bottom sleeve was selected for laboratory analysis. The split-spoon samples holding the sleeve for SS-04 was damaged so that the sleeve containing the sample soil was wedged in the sampling tool. Soil from the damaged tube was pushed directly into a sleeve capped on one end. The sleeve was tightly packed with soil and capped. The method of soil sample collection is discussed in Section 1.3.3 of Appendix D.

3.5 Soil Sample Analysis

All soil samples were analyzed for volatile organic compounds using EPA methods 8010/8020 and for total recoverable petroleum hydrocarbons (TRPH) by EPA method 418.1. The samples were analyzed at a California certified laboratory, Terra Tech Labs. EPA PQLs of 5-10 μg/Kg for VOCs and 1 mg/Kg for TRPH were achieved by the laboratory. The chain of custody and analytical reports for these samples are found in Appendix E.

4.0 DISCUSSION OF ANALYTICAL RESULTS

4.1 Soil Gas Data

Table 2 shows a summary of the field laboratory results for soil gas samples collected from the current truck wash and steam clean area. Table 3 shows the tabulated field laboratory results for the former truck wash and steam clean area. These tables show the gas probe number (the locations of which are shown in Figures 2 and 3), the date sampled, clarification

notes, depth of collection, and the field laboratory results for chloroethene, 1,1,1-TCA, TCE, 1,1,2,2-PCA, 1,1-DCE and total VOCs. The following compounds were not detected among the samples analyzed: 1,1-dichloroethane; trichloroethene.

4.2 Discussion of Soil Gas Analytical Results

The results of the soil gas study showed the following:

Chloroethane was not detected (<0.01 μg/L) among the samples analyzed except for the samples taken at the current clarifier outlet.

1,1-DCE was not detected (<0.01 μg/L) among the samples analyzed.

Low levels of 1,1,1-TCA were found among the soil gas samples analyzed. The peak occurrence of 1,1,1-TCA was found at the truck wash clarifier (1.81 μg/L). However, 1,1,1-TCA was not detected among the soil samples analyzed <1.0 μg/L.

TCE was not detected (<0.01 μg/L) among the samples analyzed.

1,1,2,2-PCA was not detected among the samples analyzed (<0.01 μg/L) except in the sample from SG-26 at 4 feet BGS, at 0.09 μg/L. The duplicate of this sample did not show a detectable amount of 1,1,2,2-PCA (<0.01 μg/L).

Total VOC samples showed less than 10 μg/L in most of the concentrations detected. The peak occurrence (215.10 μg/L) was at the clarifier outlet. Methods 8010 and 8020 analysis of the soil at this location showed no detectable concentrations of volatile or halogenated organic compounds.

4.3 Discussion of Confirmatory Soil Samples Analysis

Table 4 shows the tabulated results of the California certified laboratory analysis of the four soil samples collected to confirm the soil gas data.

ND= Not Detected

4.3.1 Clarifier

This structure, also called the sand/grease intercepter, is found at the northwest corner of the truck wash. Soil gas samples taken at the clarifier outlet at 8 feet BGS (SG-04) showed concentrations of chloroethane to 1.00 μg/L; 1,1,1-TCA to 0.93 μg/L; and total VOC to 215.10 μg/L. The inlet area of the clarifier also showed the peak occurrence of 1,1,1-TCA in soil gas, 1.81 μg/L. Soil sample SG-04 taken at 7.75 feet BGS adjacent to SG-04 showed no detectable concentrations of 8010 or 8020 compounds and a TRPH concentration of 11,000 mg/Kg.

4.3.2 Cesspool B

This abandoned cesspool is located at the eastern end of the current truck wash. Soil gas results showed 1,1,1-TCA concentrations to 0.13 μg/Kg in SG-25 from 8 feet BGS and total VOC to 1.41 μg/Kg in the same sample. Soil sample SS-25 from 7.75 feet BGS adjacent to SG-25 showed no detectable concentrations of 8010 or 8020 compounds and a TRPH concentration of 27 mg/Kg.

4.3.3 Drum Storage Area

This area is separated from the northern end of the current steam clean area by a block wall. Drums of oils and lubricants and cleaning solvents are stored here for dispensing. Soil gas sample point SG-24 was placed in the steam clean area, adjacent to the block wall. The four feet BGS sample showed concentrations of 1,1,1-TCA to 0.50 μg/L and total VOC to 3.18 μg/L. Soil sample SS-24 from 9 feet BGS showed no detectable concentrations of 8010, or 8020 compounds or TRPH.

4.3.4 Former Clarifier Inlet

This clarifier is located at the former truck wash/steam clean area. Soil gas sample point

SG-22 showed a peak concentration of 1,1,1-TCA of 0.45 μg/L at the 6 feet 4 inch BGS sample. At four feet BGS, the total VOC concentration was 8.94 μg/L. Soil sample SS-22 from 5 feet BGS had no detectable concentrations of 8010 or 8020 compounds and a TRPH concentration of 10 mg/Kg.

5.0 ISOCONCENTRATION MAPS

5.1 Contour Program

The isoconcentration maps presented in this report were developed using the Digital Terrain Modeling (DTM) program. DTM allows site design and terrain modeling inside AutoCAD^{R}. DTM is used primarily for complex civil engineering projects such as site, roadway and excavated structure design and modeling. DTM lends itself for use in isoconcentration maps because it interpolates contours based on observed concentration (or elevation) data only within the boundaries of the study area. This feature is contrasted to some programs which extrapolate contours beyond the boundaries of the study area. The main limitation of DTM is that it applies a precise, high contrast resolution mapping technique to soil gas measurements which are an approximation of the parameter of interest.

Soil gas data presented in isoconcentration map form must be interpreted keeping magnitude of concentration and possible source points in perspective. For instance, 1,1,1-TCA concentrations found in soil gas ranged from 0.03 μg/L sample SG-25 4 foot at the cesspool in the current truck wash) to 1.81 μg/L (sample SG-06 8 foot at the inlet of the sand/grease to intercepter inlet). Presentation of these data in isoconcentration map form shows steep contours over the truck wash and steam clean area where the variation in observed data is less than 2.0 μg/L (Figure 6).

Table 5 shows the isoconcentration map figure number, area of concern parameter of interest, sample depth, and range of concentration.

TABLE 5
GTE IRWINDALE
SOIL GAS CONCENTRATION RANGE

Figure No.	Area of Concern	Parameter of Interest	Sample Depth (ft.)	Range of Concentration (µg/L)	Contour Gradient Interval (µg/L)
4	Truck Wash and Steam Clean Bays	Total VOC	4	1.15 to 54.90	5.0
5	Truck Wash and Steam Clean Bays	Total VOC	8	0.89 to 215.10	5.0
6	Truck Wash and Steam Clean Bays	1,1,1-TCA	4	0.03 to 1.35	0.2
7	Truck Wash and Steam Clean Bays	1,1,1-TCA	8	0.04 to 1.81	0.2
8	Former Truck Wash and Steam Clean Bays	Total VOC	4	2.15 to 11.92	1.0
9	Former Truck Wash and Steam Clean Bays	Total VOC	8	1.19 to 11.73	1.0
10	Former Truck Wash and Steam Clean Bays	1,1,1-TCA	4	0.13 to 0.60	0.2
11	Former Truck Wash and Steam Clean Bays	1,1,1-TCA	8	0.17 to 1.12	0.2

5.2 Truck Wash and Steam Clean Area

5.2.1 Total VOCs

The isoconcentration maps on Figures 4 and 5 show plotted total VOC concentration in the current truck wash and steam clean area. Concentration plots show to a lesser degree at 4 feet BGS in Figure 4 and to a greater degree at the 8 feet BGS on Figure 5 that soil gas total VOC concentrations are greater in the area from the septic tanks to cesspool A, in the center of which lies the clarifier.

5.2.2 1,1,1-TCA

The 4-foot BGS map for 1,1,1-TCA (Figure 6) shows an area of concentration centering on SG-13 and extending from SG-24 to SG-28. 1,1,1-TCA concentration for this area ranges from 0.50 μg/L (SG-24-4 feet) to 0.29 μg/L (SG-28-4 feet). A soil sample from the area near SG-24 showed no detectable 1,1,1-TCA concentration. On Figure 7 (8 feet BGS), the area from the septic tanks to cesspool A shows a central peak at the clarifier caused by a concentration of 1.81 μg/L.

5.3 Former Truck Wash and Steam Clean Area

5.3.1 Total VOC
