In the former truck wash and steam clean area, the 4-foot BGS total VOC plot is shown on Figure 8. This map shows a central concentration peak caused by sample SG-21-4 feet which had a concentration of 11.92 μg/L. The 8 feet BGS total VOC data presented on Figure 9, show a northerly trending increased concentration plot to SG-16 which had a total VOC concentration of 11.13 μg/L at 8 feet BGS.

5.3.2 1,1,1-TCA

Figure 10 and Figure 11 show the 1,1,1-TCA concentration plots for the former truck wash area. Both of these plots show a gradually increasing concentration in a northwesterly direction toward SG-19, which had a peak concentration of 1.12 μg/L.

6.0 FINDINGS AND RECOMMENDATIONS

SoIL sample analysis to confirm soil gas data showed no detectable concentrations of aromatic or halogenated organic compounds.

Low concentrations (from 0.04 to 1.81 μg/L) of 1,1,1-TCA are found in soil gas samples analyzed. It does not appear that a source area was present based on either soil gas or soil sample analysis.

The peak occurrence of total VOC by soil gas analysis was found at the clarifier outlet. Other areas showing elevated concentrations in soil gas total VOC at the former septic tanks and former cesspool which are in close proximity to the clarifier.

The results of confirmatory soil sample analysis showed that the soils at the inlet of the clarifier have concentrations of TRPH to 11,000 mg/Kg, but not detectable levels of 8010 or 8020 compounds. Due to the nature of the subsurface soils at the site (cobbles and gravel), further driven or drilled soil sampling is not practical. Soil gas data from points surrounding the clarifier do not indicate extensive TRPH contamination.

It is recommended that this clarifier and surrounding TRPH contaminated soil be removed and disposed of at an appropriate landfill. The clarifier may then be replaced with a system providing double containment. Concurrent with this excavation, soil samples may be obtained from the septic tank and cesspool A areas, and analyzed for 8010 and 8020 compounds and TRPH by EPA Method 418.1.

CLARIFIER INSPECTION (FILE NO. AB108.0212)
GTE California Plant at 5010 North Azusa Canyon Rd., Irwindale, CA

This is in reference to the March 7, 1991 visual inspection of th clarifier and sumps conducted by Board staff after thes containments were pumped out and cleaned.

The steam cleaning and rinsewater/soap solution sumps appeare intact. Staff observed degraded concrete around the sump inlet a the west end of the truck wash bay. Also, the grout in the sea between the top of the clarifier and the concrete blocks buil above it was eroded. Clarifier materials may migrate through thi seam and impact the soil and potentially the ground water Analytical results of clarifier waste water indicated the presenc of 3,000 µg/l of 1,1,1 trichloroethane (TCA).

Note that clarifiers, operating or abandoned have been shown to b a source of soil contamination, which may be a threat to groun water.

You indicated on your December 17, 1990 letter that waste wate from the former truck wash and steam cleaning bays and boiler roo was diverted to the septic tank and cesspools prior to connectio to the sewer system.

Based on the above observations and information, you are directe to submit four (4) copies of a work plan for assessing th clarifier, current steam cleaning and truck wash bays and forme truck wash/steam cleaning bays, cesspools and septic tanks tha serviced the vehicle maintenance building. We request that yo conduct an active soil gas survey to field screen these areas an determine if soils beneath your the site have been impacted b septic tank/cesspool discharges and potential discharge from th current clarifier/sump system. The plan must address all of th items outlined on the enclosed WORK PLAN REQUIREMENTS FOR INITIA SUBSURFACE INVESTIGATION with the following changes:

I. Soil Gas Survey

Design a sensitive and quantitative active soil gas survey t screen the areas of concern for volatile organic compounds (VOC) The following are minimum requirements for the survey:

1. Locate sample nodes using 20-30 foot grids. Close-interval (10'-20') multi-depth sampling must be established in areas where elevated levels of VOCs are detected in the coarse survey. Provide a map of proposed sample nodes.

2. Obtain soil gas samples at an adequate depth below the ground surface to minimize any atmospheric effects.

3. Perform "real time" analysis of individual organic compounds with an on-site field laboratory using a gas chromatograph equipped with PID, ECD and/or Hall detectors.

4. Specify detection limits for soil gas analysis. Detection limits of 0.01 µg/l (soil gas) is generally required.

5. Discuss soil gas sample collection and analysis procedures. Provide quality assurance and quality control procedures, including chain of custody protocols.

6. Obtain discrete, undisturbed confirmatory soil samples, if possible, at soil gas "high" and "low" points. Note that the presence of cobbles in the subsurface may require multiple attempts to drill and obtain driven samples. The work plan should include alternative strategies to obtain discrete undisturbed samples.

7. Analyze all soil samples for volatile organic compounds (VOCs) in accordance with EPA Method(s) 8260 or 8010/8020 and for total petroleum hydrocarbons (TPH) using EPA Method 418.1. EPA practical quantitation limits of 5-10 µg/kg for VOCs and 1 mg/kg for TPH must be achieved by the laboratory.

8. Board staff wishes to be part of the data review conducted after the survey to determine the need for additional soil gas nodes and/or confirmatory soil sample borings.

II. Housekeeping Plan

Submit to this Board four (4) copies of a plan to:

1. Regrout the eroded seal between the top part of the clarifier and concrete blocks built above the clarifier in order to prevent potential discharges from migrating to the soil through this pathway.

2. Regrout eroded concrete around the sump inlet located at the west end of the truck wash bay.

3. Eliminate the discharge of TCA to the sump/clarifier system. Account for the TCA found in the clarifier waste water.

III. Schedule

Four copies of the subsurface investigation work plan and housekeeping plan must be submitted to this Regional Board by April 22, 1991. Please remember that neither plans should be implemented until they have been reviewed and approved by Board staff.

Please call Alex P. Carlos at (213) 266-7545 if you have any questions.

1.0 INTRODUCTION

1.1 Background and Purpose of the Work Plan

On March 17, 1991, the GTE facility located at 5010 North Azusa Road in Irwindale, California was inspected by California Regional Water Quality Control Board-Los Angeles Region (Board) staff. Staff observed degraded concrete around the sump inlet at the west end of the truck wash bay and eroded grout in the clarifier accepting water from the truck wash bay. Samples from the clarifier collected by Board staff indicated the presence of 3,000 $\mu g/L$ of 1,1,1-trichloroethane (TCA). Based on this inspection and on information provided to the Board by GTE, the Board, in a letter to GTE dated March 13, 1990, requested the submission of a Work Plan. This letter is included in Appendix A. This Work Plan is to describe appropriate methods to assess areas of concern which are detailed in the March 13, 1990 letter.

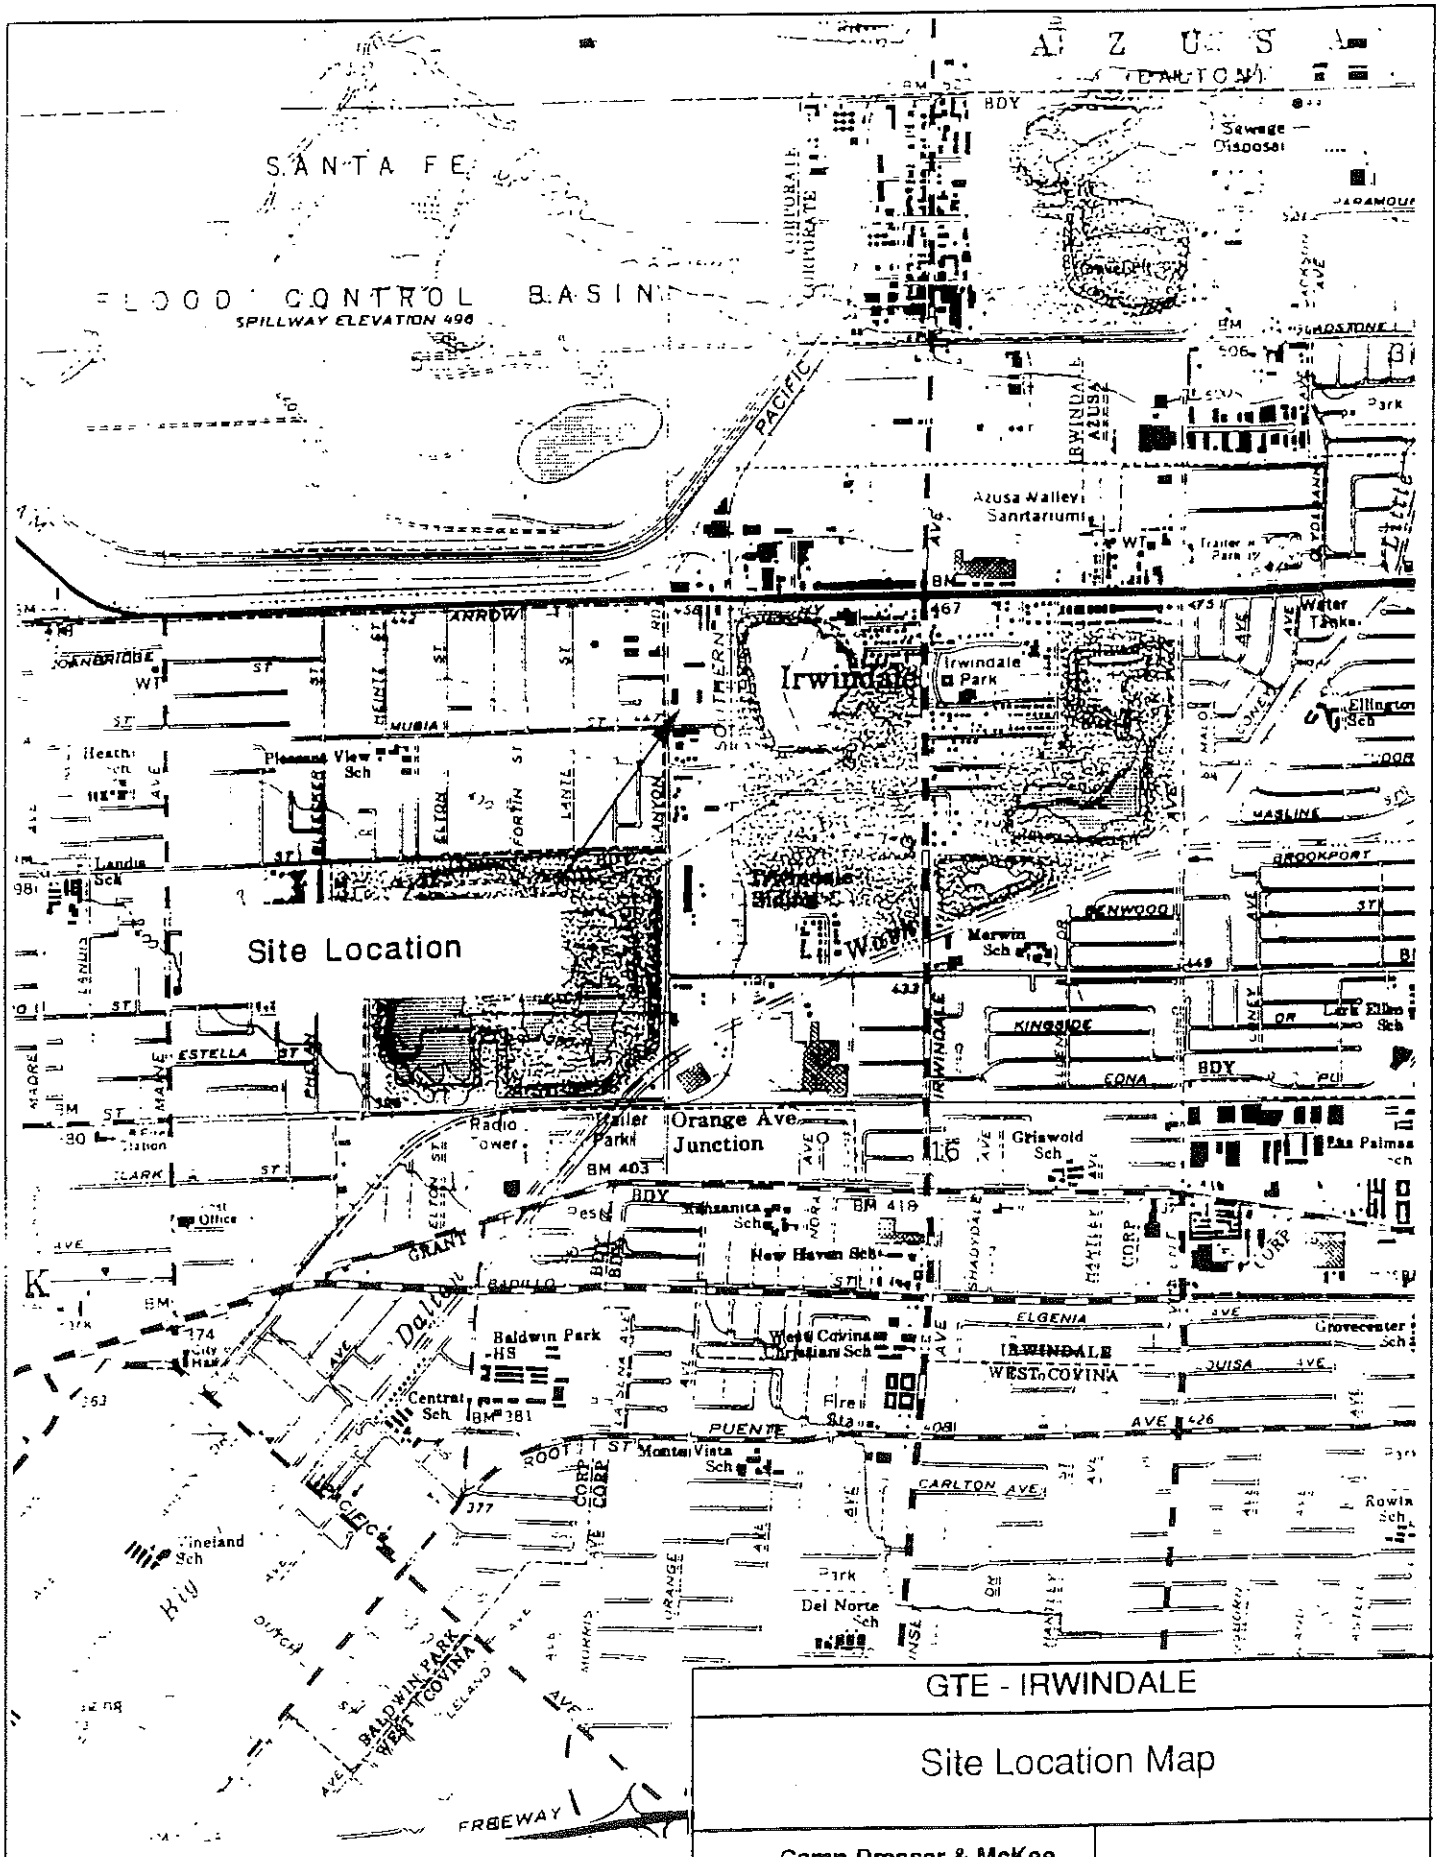
The Board has requested that an active soil gas survey be conducted at the areas of concern to determine if soils beneath the GTE Irwindale site have been impacted by current or past practices. This Work Plan outlines methodologies to perform an initial subsurface investigation at the GTE Irwindale site.

1.2 Site Location and Information

The GTE facility is located at 5010 North Azusa Canyon Road, in the city of Irwindale, California. A site location map is shown in Figure 1. The owner and operator of the site (GTE of California) is a public utility, telephone. The operations conducted at this facility include maintenance of service vehicles assigned to the facility. GTE began its occupation of the site in 1961. The prior land use is unknown, but the site was possibly vacant prior to 1961.

The owner of record (GTE Corporate headquarters) is:

GTE OF CALIFORNIA
1 GTE Place
Thousand Oaks, CA 91362



GTE - IRWINDALE

Site Location Map

Camp Dresser & McKee
CDM

FIGURE 1

GTE emergency contacts are: Ms. Jackie McCormick and/or Mr. Bill Westwood at 1-800-331-8891.

Appendix B is the business plan formulated for the site. This business plan identifies the areas and methods of storage of hazardous materials on the site.

1.3 Areas of Concern

The areas of concern detailed in the Board's letter dated March 13, 1991 are:

- Clarifier
- Current steam cleaning area
- Current truck wash bay
- Cesspools
- Septic tank

These areas are shown in Figure 2.

Figure 3 shows the approximate location of the former Truck Wash/Steam Clean Bay which was located in the east end of the vehicle maintenance building. This figure is based on available plans provided by GTE. Figure 4 is a site plan showing these areas in relation to the entire site.

2.0 SUBSURFACE INVESTIGATION DESCRIPTION

2.1 Soil Vapor Study

Soil vapor samples will be collected using the system developed by Hydro Geo Chem, Inc. Sampling probes are made of five-foot sections of 1-3/8" hardened drill rod. These rods are pushed, hydraulically, into the soil with a heavy duty hydraulic hammer mounted on a flat bed truck. The points are made of hardened steel and are left behind when the rod is hydraulically pulled back to allow the soil vapors to be withdrawn. This truck also comes equipped with an oil-less diaphragm vacuum pump and steam cleaner.

1.0 INTRODUCTION

At the request of GTE of California (GTE), Camp Dresser & McKee Inc. (CDM) has prepared this closure report regarding site assessment and remediation of a sand and grease interceptor located at the GTE - Irwindale Plant Yard, 5010 North Azusa Canyon Road, in the City of Irwindale, California. Site activities were conducted in accordance with the work plan entitled, "Work Plan for the Remediation of the Clarifier Area, GTE - Irwindale Plant Yard," dated October 1991. The work plan was reviewed and conditionally approved by the California Regional Water Quality Control Board (CRWQCB) - Los Angeles Region, on January 9, 1992.

Field construction and remediation activities were performed during the period beginning August 7 through October 1, 1992. This report documents these activities, including excavation, chemical analysis, verification, and disposal of the contaminated soil. Information regarding transportation and off-site disposal of contaminated sludge encountered during field construction will be compiled in an addendum to this report pending facility acceptance.

1.1 Site Description

The GTE - Irwindale Plant Yard is located at 5010 North Azusa Canyon Road, southeast of the intersection of Arrow Highway and North Azusa Canyon Road, in the City of Irwindale, California (Figure 1). Operations conducted at the plant yard include minor maintenance of service vehicles assigned to the facility.

The sand and grease interceptor was located at the northwest corner of the plant yard, north of the vehicle wash rack (Figure 2). The sand and grease interceptor had a 1,200-gallon capacity and received wastewater discharge from a vehicle wash rack and steam cleaning area located in the immediate vicinity. The cesspool and septic tank areas were located north of the sand and grease interceptor. It had been reported that the septic system consisted of two 900-gallon concrete tanks; however, recently available site plans indicated the septic system consisted of one 900-gallon, two-stage concrete tank. Reportedly, the cesspool was brick-lined and measured 5 feet in diameter by 20 feet deep.

1.2 Site Background

On March 7, 1991, a visual inspection of the sand and grease interceptor and related sumps was performed by the CRWQCB. The findings of this inspection were formalized in a letter addressed to GTE, dated March 13, 1991 (Appendix A). The inspection concluded that the steam cleaning and rinsewater/soap solution sumps appeared intact; however, degradation of the concrete within the sump at the west end of the vehicle wash rack, and the grout between the sand and grease interceptor lid and concrete riser block, were noted.

In response to a letter from the CRWQCB, dated March 13, 1991, CDM performed a preliminary site assessment, consisting of a soil gas survey and soil sampling program, of the vehicle wash rack and steam clean areas. A total of 22 soil gas samples were collected at discrete locations within the vicinity of the vehicle wash rack, steam clean area and clarifier (sand and grease interceptor). In addition, four soil samples were collected for confirmation laboratory analysis. The findings of the investigation documented elevated concentrations of total recoverable petroleum hydrocarbons (TRPH) and volatile organic compounds (VOCs) near the discharge of the sand and grease interceptor. The results of this investigation were compiled in a report entitled, "Soil Gas Survey of the GTE Irwindale Facility", (Hydro Geo Chem, July 1991) and submitted to the CRWQCB on August 13, 1991.

On September 10, 1991, the CRWQCB formalized their general approval of excavation of petroleum contaminated soil around the sand and grease interceptor with the condition that a remedial action work plan, inclusive of additional soil sampling of the former septic tank and cesspool area(s) be submitted. A formal work plan was prepared entitled, "Work Plan for the Remediation of the Clarifier Area, GTE - Irwindale Plant Yard," (CDM, October 1991) and submitted to the CRWQCB on November 18, 1991. The work plan was reviewed and conditionally approved by the CRWQCB on January 9, 1992 (Appendix A).

1.3 Geologic/Hydrogeologic Conditions

The regional and local hydrogeologic conditions relative to the GTE -Irwindale Plant Yard were

compiled from: Appendix A of the California Department of Water Resources Bulletin Number 104-2, entitled "Planned Utilization of Ground Water Basins - San Gabriel Valley," dated March 1966; and from a site investigation report prepared by Jetco Environmental & Associates, Inc, entitled "Site Investigation - GTE Irwindale Facility", dated November 14, 1990.

1.3.1 Regional Conditions

The GTE - Irwindale Plant Yard is located in the San Gabriel Valley in the eastern portion of Los Angeles County. The portion of the San Gabriel Valley that contains the principal groundwater-bearing deposits underlying the valley floor is called the San Gabriel Valley Groundwater Basin. The San Gabriel Valley Groundwater Basin is a subsurface reservoir and a structural basin of permeable alluvial deposits, underlain and surrounded by relatively impermeable rock. Alluvial deposits that fill the valley are mainly Quaternary in age.

The boundaries of the San Gabriel Valley Groundwater Basin are: the Raymond Fault to the northwest; the line of contact between alluvium and bedrock of the San Gabriel Mountains to the north; the bedrock high between San Dimas and La Verne to the east; and the line of contact between alluvium and bedrock of the low hills along the southern periphery of the basin.

Unconsolidated and semi-consolidated nonmarine sediments of Recent and Pleistocene age are the principal water-bearing formations underlying the subject property. Of lesser importance are marine sediments of probable Pleistocene age, and marine sediments of late Pliocene age. Sediments comprising the water-bearing formations in the San Gabriel Valley are derived primarily from the San Gabriel Mountains. The formations extend to a maximum depth of over 4,000 feet. The thickness of alluvial deposits resulted from sedimentation combined with uplift in the mountains and subsidence in the valley.

Water-bearing sediments forming this groundwater basin vary in size depending on proximity to the sediment source area. In general, these sediments grade from coarse gravel and boulders, close to the mountain front, to fine- and medium-grained sand containing a larger amount of silt and clay, as the distance from the source area increases.

Groundwater in the San Gabriel Valley generally moves from the perimeter of the valley toward the Whittier Narrows. Therefore, the direction of regional groundwater flow near the site is to the west/southwest.

1.3.2 Local Conditions

Sediments underlying the GTE - Irwindale Plant Yard site are alluvial deposits designated as the San Gabriel River Fan deposits. The Alluvium (Qal) consists of partially stratified sand, cobbles, and boulders. The material is unconsolidated and dense, and the sand is light gray to buff in color and fine- to medium-grained. The cobbles and boulders range up to approximately 2 feet in diameter. Overlying the alluvium is a relatively thin layer of artificial fill. The artificial fill consists of a silty fine-grained sand, averaging approximately 2 to 3 feet in thickness across the site.

According to report performed of the GTE - Irwindale Plant Yard (JETCO, December, 1991), groundwater was not encountered during trenching activities performed to a depth of 10 feet below ground surface (bgs). The report indicated that local wells drilled near the site encountered groundwater at approximately 230 feet bgs. Excavation activities performed during this program did not encounter groundwater.

2.0 PURPOSE AND SCOPE OF WORK

The purpose of this program was to remediate petroleum contaminated soil around the sand and grease interceptor and perform additional soil sampling of the septic tank and cesspool areas. Field construction activities included: removal of the existing sand and grease interceptor, excavation and off-site disposal of contaminated soil and other waste, and installation of a new sand and grease interceptor equipped with a geomembrane secondary containment system.

Specifically, the scope of work for the field activities consisted of the following major tasks:

- Chemical analysis of the liquid within the existing sand and grease interceptor. Off-site transportation and disposal of approximately 2,000 gallons of same.
- Removal of the 1,200-gallon, two-stage sand and grease interceptor.

- Excavation of overburden and contaminated soil around the sand and grease interceptor.

- Compliance monitoring of the soil excavation activities for VOC emissions, in accordance with South Coast Air Quality Management District (SCAQMD) Rule 1166 requirements.

- Field screening of the excavated soil for VOCs and TRPH concentrations using a portable flame-ionization detector (FID) and infrared spectrometer (IR).

- Collection of soil samples from the sand and grease interceptor excavation under the direction of the CRWQCB and chemical analysis for total halogenated volatile organic compounds (HVOCs), aromatic volatile organic compounds (AVOCs), and total recoverable petroleum hydrocarbons (TRPH) by California Department of Health Services (CA DHS) certified laboratory.

- Installation of one 1,200-gallon, three-stage, concrete sand and grease interceptor, equipped with a geomembrane secondary containment system, and upstream and downstream sample collection boxes. Application of an epoxy coating to the interior surfaces of the sand and grease interceptor.

- Collection of soil samples from the septic tank and cesspool areas under the direction of the CRWQCB. Chemical analysis for HVOCs, AVOCs, and TRPH by a CA DHS certified laboratory.

- Removal and replacement of two damaged floor drains (sumps) - one in the steam clean area and one in the vehicle wash rack. Removal and replacement of the related sewer lines leading to the sand and grease interceptor.

- Pre-disposal analysis of the stockpiled contaminated soil and other waste material generated from the remediation activities.

- Off-site transportation and disposal of contaminated soil, and other waste material generated from the remediation activities.

- Importation of fill material, excavation backfilling and resurfacing activities.

3.0 FIELD ACTIVITIES

Field activities were performed during the period beginning August 7 through October 1, 1992. The remediation of the contaminated soil was performed in accordance with the approved work plan and CRWQCB requirements. The installation of the sand and grease interceptor was performed in accordance with the approved construction plans and Los Angeles County Department of Public

Works (LACDPW) requirements. All tasks were conducted by CDM personnel or a designated subcontractor. Photographs of selected field construction activities are contained in Appendix B.

3.1 Geophysical Survey

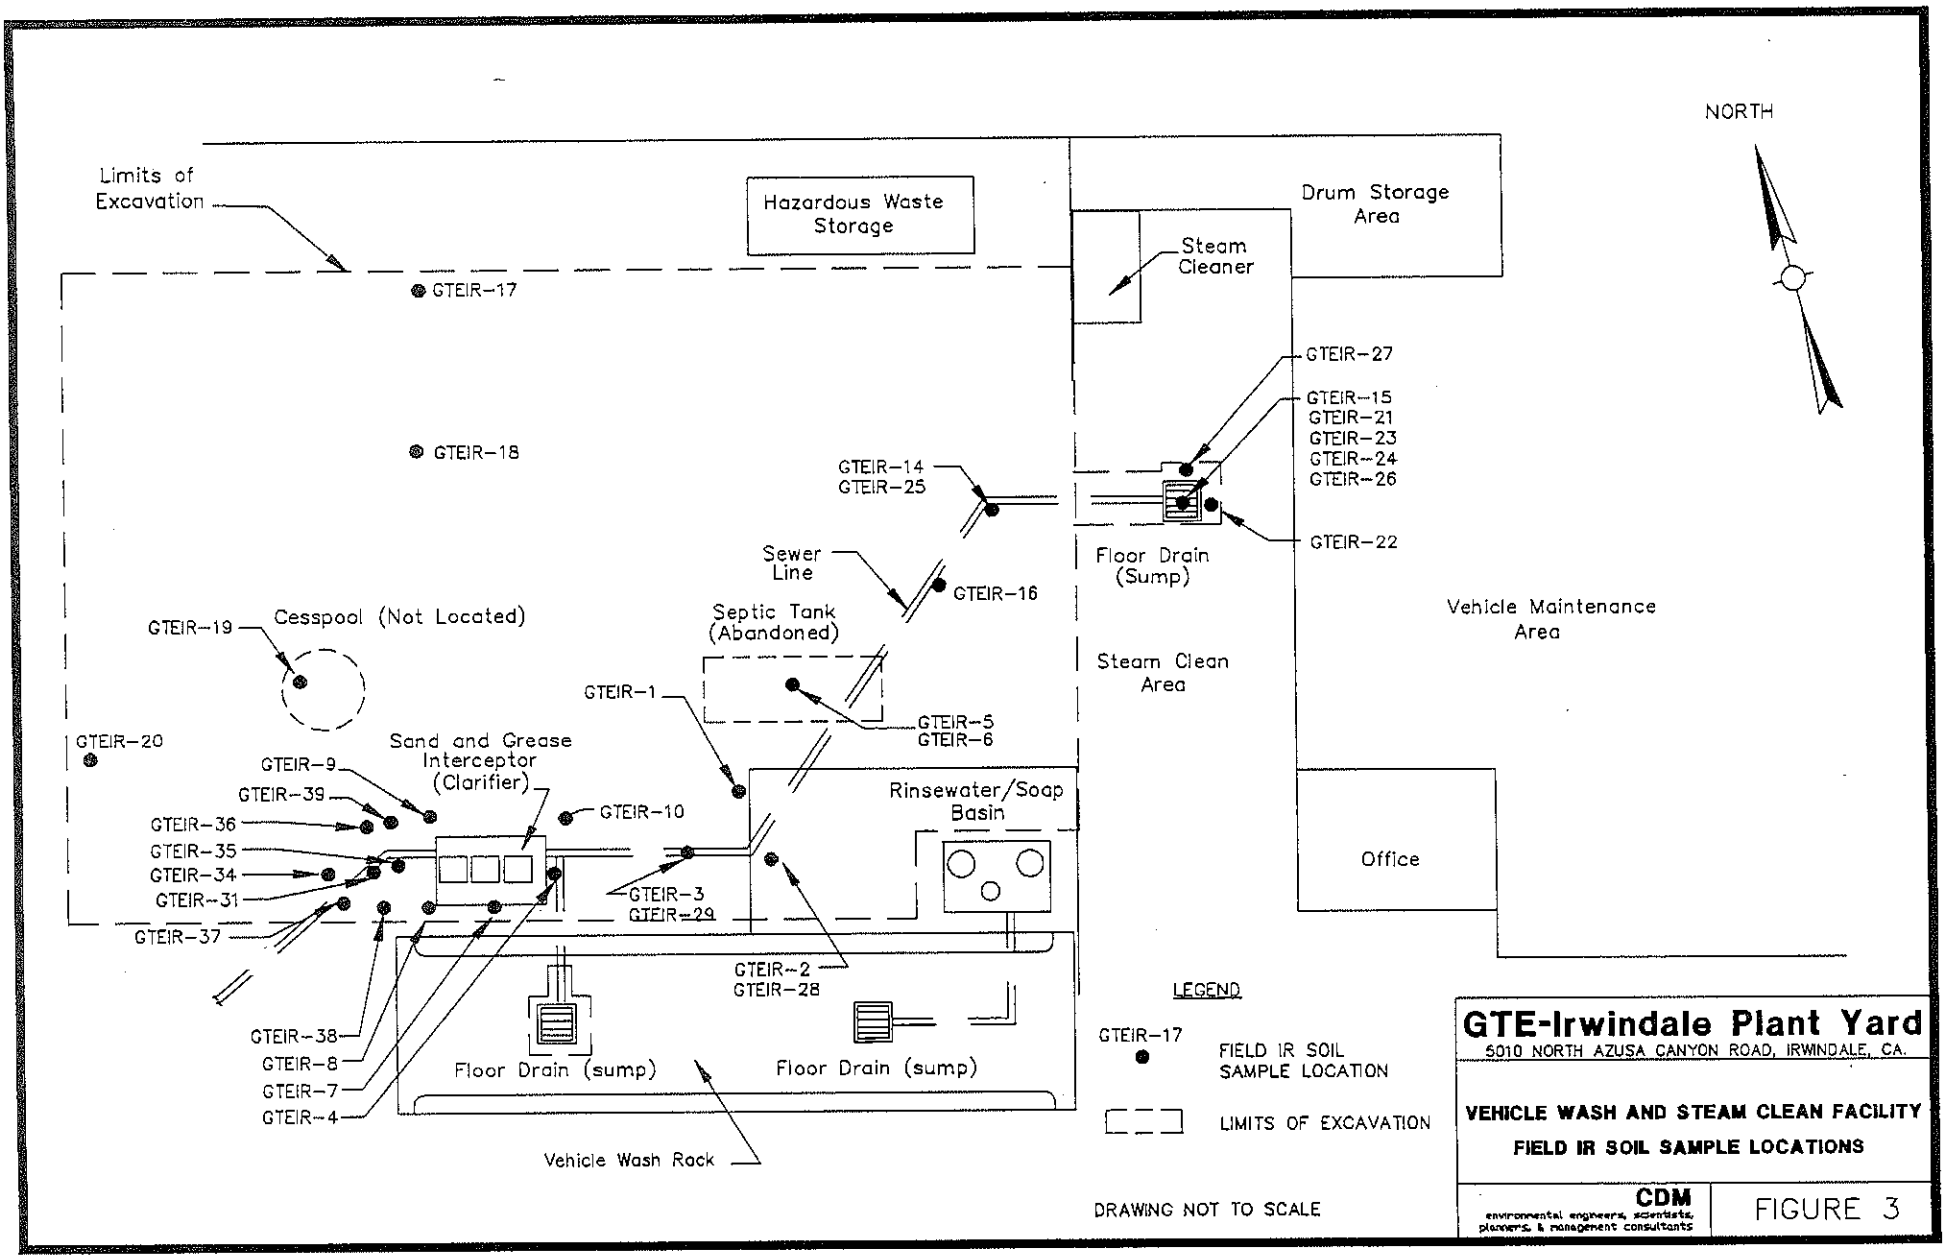
A geophysical survey was conducted during previous site activities by Spectrum E.S.I. (subcontractor) of San Fernando, California. The purpose of the survey was to locate any underground utilities, associated water and electrical lines, or other possible subsurface interferences within the area of proposed excavation.

3.2 Soil Remediation

Remediation of the petroleum contaminated soil was performed during the period beginning August 20 through 31, 1992, following the removal of the asphalt paving overlaying the area. Field construction was performed by MJK Construction, Inc. (subcontractor) of Compton, California. Environmental oversight was performed by CDM.

Soil excavation was performed in vertical lifts two feet or less in thickness. Soil samples were collected at discrete locations at the top of each lift using a trowel or a hand auger for field screening analyses (Figure 3). Headspace analysis for VOC emissions was performed on selected soil samples using a Foxboro™ Model 128 Organic Vapor Analyzer (OVA), equipped with a flame ionization detector. The OVA was calibrated to 50 parts per million (ppm) of hexane gas on a daily basis prior to first use. A total of 20 soil samples were screened by this method. VOC concentrations ranged from 0 ppm to a maximum of 70 ppm. VOC emissions were also monitored during the soil excavation in compliance with SCAQMD's Rule 1166. Measured VOC concentrations did not exceed 50 ppm.

Field screening for TRPH concentrations (modified EPA Method 418.1) was performed on selected soil samples using a Miran™ 1FF Infrared (IR) Spectrometer. A total of 42 soil samples were screened by this method. TRPH concentrations ranged from non-detected concentrations to a maximum of 425 milligrams per kilogram (mg/kg).



GTE-Irwindale Plant Yard

5010 NORTH AZUSA CANYON ROAD, IRWINDALE, CA.

VEHICLE WASH AND STEAM CLEAN FACILITY

FIELD IR SOIL SAMPLE LOCATIONS

environmental engineers, scientists, planners, & management consultants

FIGURE 3

In general terms, contaminated soil excavation activities continued until the VOC headspace analysis indicated concentrations at, or below, background levels and TRPH field analysis indicated concentrations below 100 mg/kg. The contaminated soil was stockpiled on plastic sheeting and covered at the end of each day pending further chemical analysis.

3.2.1 Sand and Grease Interceptor

The final excavation limits of the sand and grease interceptor measured 8 feet in width, by 14 feet in length, by 6.5 feet in depth. The sand and grease interceptor was removed under a permit issued by LACDPW (Appendix D). A total of 5 soil samples (GTEIR-7, GTEIR-8, GTEIR-9, AND GTEIR-10) were collected from the excavation and screened in the field for TRPH concentrations. The results indicated non-detectable TRPH concentrations in all five samples. A summary of the these results is contained in Table 1.

A total of two confirmatory soil samples (GTEIR-11 and GTEIR-12) were also collected under the direction of the CRWQCB. The soil samples were analyzed by an off-site laboratory for HVOCs (EPA Method 8010), AVOCs (EPA Method 8020), and TRPH (EPA Method 418.1). The analytical results indicated that non-detectable concentrations of halogenated and aromatic volatile organic compounds in both samples. The analytical results for GTEIR-12 indicated a TRPH concentration of 20 mg/kg, which is below the regulatory guideline of 100 mg/kg. GTEIR-11 was not analyzed for TRPH. A summary of the these results is contained in Table 1. Figure 4 shows the locations of the confirmatory soil samples, and Figure 5 is a cross-section showing the locations of the soil samples.

3.2.2 Sand and Grease Interceptor Discharge Area

As indicated by the soil gas survey, petroleum contamination was documented near the discharge (west end) of the sand and grease interceptor. Excavation of the contaminated soil in this area was performed. The limits of the excavation measured 9.5 feet in width by 10 feet in length by 9 feet in depth.

FIGURE 5

A total of six soil samples (GTEIR-31, GTEIR-32, GTEIR-33, GTEIR-34, GTEIR-35, and GTEIR-36) were collected from the excavation and screened in the field for TRPH concentrations. The results indicated the maximum TRPH concentration was 57 mg/kg - below the regulatory guideline of 100 mg/kg. A summary of the these results is contained in Table 1.

A total of three confirmatory soil samples (GTEIR-37, GTEIR-38, and GTEIR-39) were collected and analyzed by an off-site laboratory for HVOCs (EPA Method 8010), AVOCs (EPA method 8020), and TRPH (EPA Method 418.1). Analytical results indicated that no HVOCs or AVOCs were detected in any of the three samples. The maximum TRPH concentration was detected in GTEIR-39 at a concentration of 27 mg/kg - below the regulatory guideline. A summary of the these results is contained in Table 1. Figure 4 shows the locations of the confirmatory soil samples, and Figure 5 is a cross-section showing the locations of the soil samples.

3.2.3 Septic Tank and Cesspool Areas

An investigation of the septic tank revealed the tank to be backfilled with sand. A total of two soil samples (GTEIR-5 and GTEIR-6) were collected at depths of 6 feet and 10 feet and screened in the field for TRPH concentrations. The results indicated TRPH concentrations of 19 mg/kg and 300 mg/kg, respectively. A summary of the these results is contained in Table 1.

GTEIR-5 and GTEIR-6 were also analyzed by an off-site laboratory for HVOCs (EPA Method 8010), AVOCs (EPA method 8020) and TRPH (EPA Method 418.1). GTEIR-6 contained minor concentrations of chloromethane at 11 mg/kg, and 1,4-dichlorobenzene at 24 mg/kg. All other constituents analyzed were non-detectable. A summary of the these results is contained in Table 1. Figure 4 shows the locations of the soil samples, and Figure 5 is a cross-section showing the locations of the soil samples.

An investigation of the cesspool was unsuccessful, in that an intact cesspool structure was not located. An approximate 2,850 square-foot area surrounding the reported cesspool location was investigated with test-pits to an average depth of eight feet bgs (Figure 3). If undisturbed native soil (alluvium) was encountered, investigation of that particular area was stopped. In the reported area of the cesspool, brick and concrete fragments (up to four feet in length) were encountered extending to

a depth of approximately five feet bgs. Continued excavation in this area did not reveal the cesspool structure.

Based on the analytical data collected from the septic tank and the extensive search performed to locate the cesspool, the CRWQCB did not require additional investigation of these areas.

3.2.4 Sewer Line Piping

Approximately 65 feet of 6-inch cast iron pipe leading from steam clean area to the sand and grease interceptor was removed due to the deteriorated (corroded) condition of the pipe. In addition, approximately 55 gallons of sludge was extracted from within the piping and transferred into a 55-gallon drum. The sewer line pipe trench measured 3.5 feet in width by 3 feet in depth at the sand and grease interceptor, increasing to 7 feet bgs at the steam clean floor drain. No visible staining or discoloration of the surrounding soil was observed.

A total of three soil samples (GTEIR-2, GTEIR-3, and GTEIR-21) were collected at the pipe joints and other selected locations and screened in the field for TRPH and VOC concentrations. The results indicated non-detectable concentrations of VOCs. TRPH concentrations ranged from a minimum of 108 mg/kg to a maximum of 425 mg/kg. Contaminated soil excavation continued until TRPH concentrations of less than 100 mg/kg were encountered.

3.3 Installation of Sand and Grease Interceptor and Floor Drains

Installation of the sand and grease interceptor and both floor drains was performed during the period beginning August 31 through September 22, 1992. As installed, the new sand and grease interceptor is plumbed to receive wastewater discharge from the steam clean facility and the vehicle wash rack. Installation of the sand and grease interceptor was performed in accordance with the LACDPW Sanitation District and the LACDPW Industrial Waste Division requirements.

The former two-stage, sand and grease interceptor was replaced with a 1,200 gallon three-stage sand and grease interceptor (Nottingham™, Model PC-1200). A two-stage epoxy coating was applied to the interior surfaces of the sand and grease interceptor. The epoxy coating consisted of a concrete

4.2 Equipment Decontamination

To minimize the potential of cross-contamination, all sampling equipment was decontaminated between each sampling event. The equipment was placed in soapy water (Alconox or equal laboratory grade detergent) and thoroughly cleaned with a stiff brush. The equipment was then rinsed with deionized water.

4.3 Laboratory QA/QC

Chemical analyses were performed by Terra Tech Laboratories, Inc. (Terra Tech) of Santa Ana, California. Terra Tech is a CA DHS certified analytical laboratory with approved internal QA/QC procedures. Key laboratory QC elements typically include: calibration check samples, matrix-spiked samples, duplicates, replicates and other indicators. Laboratory QA/QC functions were performed by Terra Tech staff.

5.0 HAZARDOUS WASTE DISPOSITION

5.1 Waste Characterization

5.1.1 Soil

On August 21, 1992, one soil sample (GTEIR-Predisposal) was collected from the contaminated soil stockpile for pre-disposal waste characterization analyses by Terra Tech. The sample was analyzed for: flash point, pH, total recoverable petroleum hydrocarbons, cyanides, phenols, sulfides, water content, solid content, halogenated volatile organics, aromatic volatile organics, polychlorinated biphenyls, TCLP metals, fluoride, and ammonia. A copy of the laboratory analytical report is contained in Appendix C.

5.1.2 Sludge / Cast Iron Piping

On August 31, 1992, one sample (SL-1) was collected from the sludge contained in the cast-iron piping for pre-disposal waste characterization analyses by Terra Tech. The sample was analyzed for the same constituents listed in Section 5.1.1. A copy of the laboratory analytical report is also contained in Appendix C.

5.2 Hazardous Waste Disposal

5.2.1 Soil

A total of 46.84 tons of stockpiled soil were transported to Laidlaw Environmental Services' (Laidlaw's) Class I (Imperial valley) facility located at 5295 South Garvey Avenue in the City of Westmorland, California. The soil was transported to Laidlaw's facility on September 15, 1992, as hazardous waste. Appendix E contains the hazardous waste data forms and corresponding weight tickets for soil removed from the site.

5.2.2 Sludge / Cast Iron Piping

One 55-gallon drum of sludge and three 55-gallon drums containing the 6-inch cast iron piping was generated during remediation activities of the sewer line. Based on the pre-disposal analytical results, the pipe sludge was classified as hazardous. As of this writing, transportation and disposal of the pipe sludge is pending upon acceptance at the disposal facility. An addendum to this report will be submitted following disposal of these hazardous materials.

6.0 SUMMARY AND RECOMMENDATIONS

Remediation of the contaminated soil identified during site assessment activities, has been completed at the GTE - Irwindale Plant Yard, located at 5010 North Azusa Canyon Road, Irwindale, California.

The former two-stage sand and grease interceptor was removed and replaced with a 1200 gallon three-stage in accordance with the regulatory requirements, plans and specifications. In-line

discharge monitoring boxes were installed to allow monitoring of the separate wastestreams from the vehicle wash rack and steam clean facility.

Excavation and off-site disposal of the 47 tons of contaminated soil was performed in accordance with the work plan approved by the CRWQCB. Confirmation soil sample locations were specified by the on-site CRWQCB inspector and submitted to a CA DHS certified laboratory for chemical analyses. The soil samples were analyzed for halogenated volatile organics (EPA Method 8010), aromatic volatile organics (EPA Method 8020), and total recoverable petroleum hydrocarbons (EPA method 418.1). Second column confirmation was performed on samples with detectable contaminant concentrations. Results of the laboratory analyses collected from the confirmation soil sampling program, indicated that no petroleum hydrocarbon constituents were detected at concentrations above the regulatory guideline of 100 mg/kg.

Based on the information and data presented in this report, CDM requests that the CRWQCB approve closure of the subject sand and grease interceptor area at the GTE - Irwindale Plant Yard.

WORK PLAN FOR REMEDIATION OF CLARIFIER AREA (FILE NO. AB108.0212)
GTE California Plant at 5010 North Azusa Canyon Rd., Irwindale, CA

We have evaluated the November 18, 1991 work plan, prepared by Camp Dresser & McKee Inc., for removing the clarifier which services the truck wash bay and excavating contaminated soils surrounding the clarifier.

The work plan may be implemented subject to the following comments:

1. Your proposed cleanup goal for Total Petroleum Hydrocarbons (TPH) is not acceptable. TPH cleanup level may not exceed 100 mg/kg.

2. Additionally, the soil cleanup goal for volatile organic compounds (VOC) must be based on ten times the Maximum Contaminant Level and Applied Action Level for specific VOCs in drinking water with total VOCs not exceeding 300 µg/kg.

Please notify us ten days prior to initiating the work plan so a representative may be on-site and may request split soil samples. **Three** copies of the subsurface investigation report must be submitted to this Regional Board by **February 27, 1992.**

Please call Alex P. Carlos at (213) 266-7545 if you have any questions.

CLARIFIER INSPECTION (FILE NO. AB108.0212)
GTE California Plant at 5010 North Azusa Canyon Rd., Irwindale, CA

This is in reference to the March 7, 1991 visual inspection of the clarifier and sumps conducted by Board staff after these containments were pumped out and cleaned.

The steam cleaning and rinsewater/soap solution sumps appeared intact. Staff observed degraded concrete around the sump inlet at the west end of the truck wash bay. Also, the grout in the seam between the top of the clarifier and the concrete blocks built above it was eroded. Clarifier materials may migrate through this seam and impact the soil and potentially the ground water. Analytical results of clarifier waste water indicated the presence of 3,000 µg/l of 1,1,1 trichloroethane (TCA).

Note that clarifiers, operating or abandoned have been shown to be a source of soil contamination, which may be a threat to ground water.

You indicated on your December 17, 1990 letter that waste water from the former truck wash and steam cleaning bays and boiler room was diverted to the septic tank and cesspools prior to connection to the sewer system.

Based on the above observations and information, you are directed to submit four (4) copies of a work plan for assessing the clarifier, current steam cleaning and truck wash bays and former truck wash/steam cleaning bays, cesspools and septic tanks that serviced the vehicle maintenance building. We request that you conduct an active soil gas survey to field screen these areas and determine if soils beneath your the site have been impacted by septic tank/cesspool discharges and potential discharge from the current clarifier/sump system. The plan must address all of the items outlined on the enclosed WORK PLAN REQUIREMENTS FOR INITIAL SUBSURFACE INVESTIGATION with the following changes:

I. Soil Gas Survey

Design a sensitive and quantitative active soil gas survey to screen the areas of concern for volatile organic compounds (VOC). The following are minimum requirements for the survey:

1. Locate sample nodes using 20-30 foot grids. Close-interval (10'-20') multi-depth sampling must be established in areas where elevated levels of VOCs are detected in the coarse survey. Provide a map of proposed sample nodes.

2. Obtain soil gas samples at an adequate depth below the ground surface to minimize any atmospheric effects.

3. Perform "real time" analysis of individual organic compounds with an on-site field laboratory using a gas chromatograph equipped with PID, ECD and/or Hall detectors.

4. Specify detection limits for soil gas analysis. Detection limits of 0.01 µg/l (soil gas) is generally required.

5. Discuss soil gas sample collection and analysis procedures. Provide quality assurance and quality control procedures, including chain of custody protocols.

6. Obtain discrete, undisturbed confirmatory soil samples, if possible, at soil gas "high" and "low" points. Note that the presence of cobbles in the subsurface may require multiple attempts to drill and obtain driven samples. The work plan should include alternative strategies to obtain discrete undisturbed samples.

7. Analyze all soil samples for volatile organic compounds (VOCs) in accordance with EPA Method(s) 8260 or 8010/8020 and for total petroleum hydrocarbons (TPH) using EPA Method 418.1. EPA practical quantitation limits of 5-10 µg/kg for VOCs and 1 mg/kg for TPH must be achieved by the laboratory.

8. Board staff wishes to be part of the data review conducted after the survey to determine the need for additional soil gas nodes and/or confirmatory soil sample borings.

II. <u>Housekeeping Plan</u>

Submit to this Board four (4) copies of a plan to:

1. Regrout the eroded seal between the top part of the clarifier and concrete blocks built above the clarifier in order to prevent potential discharges from migrating to the soils through this pathway.

2. Regrout eroded concrete around the sump inlet located at the west end of the truck wash bay.

3. Eliminate the discharge of TCA to the sump/clarifier system. Account for the TCA found in the clarifier waste water.

III. Schedule

Four copies of the subsurface investigation work plan and housekeeping plan must be submitted to this Regional Board by April 22, 1991. Please remember that neither plans should be implemented until they have been reviewed and approved by Board staff.

Please call Alex P. Carlos at (213) 266-7545 if you have any questions.

1.0 INTRODUCTION

At the request of GTE of California (GTE), Camp Dresser & McKee Inc. (CDM) has prepared this closure report regarding site assessment and remedial activities performed at a gasoline pump island located at the GTE - Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California. Site activities were conducted in accordance the work plan entitled "Work Plan for Assessment and Remediation of the Gasoline Pump Island, GTE Irwindale Plant Yard", dated May 27, 1992.

Site remediation of the gasoline contaminated soil located beneath a gasoline pump island was performed during the period beginning August 5 through August 31, 1992. This report documents these activities, including excavation, chemical analysis, verification, and disposal of the contaminated soil, in conformance with the County of Los Angeles Department of Public Works (LADPW) requirements.

1.1 Site Description

The GTE - Irwindale Plant Yard is located at 5010 North Azusa Canyon Road, southeast of the intersection of Arrow Highway and North Azusa Canyon Road, in the city of Irwindale, California (Figure 1). The plant yard is located on relatively flat terrain with concrete and asphalt pavement covering a majority of the property. Existing structures on the property include office and vehicle service buildings.

Operations conducted at the plant yard include minor maintenance of service vehicles assigned to the facility. A plot plan of the site is included as Figure 2.

1.2 Site Background

At the request of GTE, CDM collected a soil sample on January 4, 1992, from the soil directly beneath the gasoline pump island at the GTE - Irwindale Plant Yard. The soil sample collected during this investigation was analyzed for aromatic volatile organic

compounds by EPA Method 8020. Results of the analysis indicated concentrations of benzene at 14 micrograms per kilogram (μg/kg), toluene at 75 μg/kg, ethylbenzene at 68 μg/kg, and total xylenes at 620 μg/kg. A letter report describing the sampling event was submitted to GTE on March 13, 1991.

Based on the results of this investigation, the LADPW requested the submission of a formal work plan for further assessment of the site. A work plan entitled, "Work Plan for Assessment and Remediation of the Gasoline Pump Island, GTE Irwindale Plant Yard", dated May 27, 1992 was prepared for the site. Initial comments regarding the work plan were received from by GTE on April 23, 1992. A formal response was submitted to the LADPW on April 27, 1992 and the work plan was subsequently verbally approved by the LADPW on July 30, 1992.

1.3 Geologic/Hydrogeologic Conditions

The regional and local hydrogeologic conditions relative to the GTE -Irwindale Plant Yard were compiled from readily available sources including: Appendix A of the California Department of Water Resources Bulletin Number 104-2, entitled "Planned Utilization of Ground Water Basins - San Gabriel Valley", dated March 1966; and from a site investigation report prepared by Jetco Environmental & Associates, Inc, entitled "Site Investigation - GTE Irwindale Facility", dated November 14, 1990.

1.3.1 Regional Conditions

The GTE - Irwindale Plant Yard is located in the San Gabriel Valley in the eastern portion of Los Angeles County. The portion of the San Gabriel Valley that contains the principal groundwater-bearing deposits underlying the valley floor is called the San Gabriel Valley Groundwater Basin. The San Gabriel Valley Groundwater Basin is a subsurface reservoir and a structural basin of permeable alluvial deposits, underlain and surrounded by relatively impermeable rock. Alluvial deposits which fill the valley are mainly Quaternary in age.

The boundaries of the San Gabriel Valley Groundwater Basin are: the Raymond Fault to the northwest; the line of contact between alluvium and bedrock of the San Gabriel Mountains to the north; the bedrock high between San Dimas and La Verne to the east; and the line of contact between alluvium and bedrock of the low hills along the southern periphery of the basin.

The principal water-bearing formations of the San Gabriel Valley are unconsolidated and semi-consolidated nonmarine sediments of Recent and Pleistocene age. Of lesser importance are marine sediments of probable Pleistocene age, and marine sediments of late Pliocene age. Water-bearing formations in the San Gabriel Valley were derived primarily from the San Gabriel Mountains. The formations extend to a maximum depth of over 4,000 feet. The thickness of alluvial deposits resulted from sedimentation combined with uplift in the mountains and subsidence in the valley.

Water-bearing sediments forming this groundwater basin vary in size depending on locality, but generally grade from coarse gravel and boulders, close to the mountain front, to fine- and medium-grained sand containing a larger amount of silt and clay, as the distance from the mountains increase.

Groundwater in the San Gabriel Valley generally moves from the perimeter of the valley toward the Whittier Narrows. Therefore, the direction of regional groundwater flow near the site is to the west/southwest.

1.3.2 Local Conditions

Due to the proximity of the GTE - Irwindale Plant Yard to the San Gabriel Mountains and to the San Gabriel River, the sediments underlying the site consist primarily of natural alluvial deposits of the San Gabriel River. The Alluvium (Qal) is designated as the San Gabriel River Fan deposits, which consist of partially stratified sand, cobbles, and boulders. The material is unconsolidated and dense,and the sand is light gray to buff in color and fine- to medium-grained. The cobbles and boulders range up to approximately 2 feet in diameter.

According to a site investigation report of the GTE - Irwindale facility performed by Jetco Environmental Associates, Inc. (December, 1990), groundwater was not encountered in two exploratory trenches to completed at 10 feet below ground surface (bgs). Furthermore, the report stated that local wells drilled in the vicinity of the site indicated that groundwater was roughly 230 feet bgs.

2.0 PURPOSE AND SCOPE OF WORK

The purpose of the site assessment phase of the program was determine the horizontal and vertical extent of gasoline contamination in the soil located beneath the gasoline pump island. Initial field screening measures identified areas with volatile organic compound (VOC) emission concentrations above background levels. Remediation of site was performed by excavation and off-site disposal of the contaminated soil.

The scope of work for the field activities consisted of the following major tasks:

- Saw-cut and remove the existing concrete overlying the area of investigation;
- Excavate gasoline contaminated soil and perform field screening analysis of the excavated soil for VOC emissions;
- Collect representative soil samples and submit for chemical analysis for: gasoline using CA DHS Method; and, benzene, toluene, ethylbenzene, and total xylenes (BTEX) using EPA Method 8020;
- Perform off-site transportation and disposal of the contaminated soil;
- Perform backfilling and site resurfacing to match existing grade and finish.

3.0 FIELD ACTIVITIES

Field activities were performed during the period beginning August 3 through 31, 1992. All

field activities were conducted in accordance with guidelines established by the LADPW, and in accordance with the approved CDM work plan, which included a site-specific Health and Safety Plan. As specified in the work plan, the LADPW was notified a minimum of 72 hours before field activities began. All tasks were conducted by CDM personnel or by CDM's subcontractors, as noted.

3.1 Geophysical Survey

A geophysical survey was conducted by Spectrum E.S.I., prior to the initiation of excavation activities. The purpose of their investigation was to locate any underground utilities, associated tank lines, or other possible subsurface interferences beneath the gasoline pump island.

3.2 Contaminated Soil Excavation

Excavation of gasoline contaminated soil began on August 5, 1992, following the removal of a 10- by 10-foot square of concrete overlaying the area of investigation. Contaminated soil was excavated in vertical lifts two feet or less in thickness. Soil samples were collected at the top of each lift.

On-site headspace analysis for VOCs emissions was performed on each soil sample to detect the presence of gasoline components in the soil. A Foxboro™ Model 128 Organic Vapor Analyzer (OVA), equipped with a flame ionization detector, was used to monitor volatile organic vapor concentrations in the headspace above each sample. The OVA was calibrated to 50 parts per million (ppm) hexane gas prior to first use.

Excavation of the soil was continued until VOC headspace analysis indicated emissions below background levels. The excavated soil was placed into closed-top, steel bins for future off-site transportation and disposal, pending analytical laboratory results. The maximum depth of the excavation was eight feet bgs.

3.3 Confirmation Soil Sampling Program

The confirmation soil sampling program was performed in the presence of a LADPW inspector. Five soil samples were collected at varying depths beneath the gasoline pump island and submitted for chemical analysis to an outside laboratory. One soil sample was collected from the bottom of the excavation and four soil samples were collected from the sidewalls of the excavation as selected by the LADPW inspector. The locations and respective sample identifications are indicated on Figure 3.

3.3.1 Soil Sample Collection

The soil samples were collected from the backhoe bucket and immediately placed into clean, laboratory provided, 250 milliliter (ml) glass jars. The samples were then labeled with indelible ink, and placed into an iced cooler for laboratory analyses. The samples were transported to the analytical laboratory on the same day as collection, accompanied by completed chain-of-custody documentation.

3.3.2 Chemical Analysis

A total of five soil samples were submitted for chemical analysis to Terra Tech Laboratories, Inc. (Terra Tech), located in Santa Ana, California. Terra Tech is a California Department of Health Services (CA DHS) certified, analytical laboratory with approved internal Quality Assurance/Quality Control (QA/QC) procedures.

The soil samples were analyzed for TVPH by the CA DHS Method, and for benzene, toluene, ethylbenzene, and total xylenes, by EPA Method 8020.

Results of the laboratory analyses indicated that benzene, toluene, ethylbenzene, and xylene constituents were not detected at concentrations above the practical quantitation limit (0.005 mg/kg) in any of the confirmation samples. Gasoline-range petroleum hydrocarbons, TVPH, were not detected (less than 0.50 mg/kg) in any of the sidewall samples. One sample

(GTEIR-Bottom) was not analyzed for TVPH. This sample was collected and submitted to the laboratory, prior to the inspection by LACDPW, as a preliminary confirmation sample.

A summary of the analytical results is contained in Table 1. Complete laboratory reports and chain-of-custody documentation are included in Appendix A.

3.4 Backfill and Resurfacing Operations

Based on the laboratory results of the confirmation soil sampling program, remediation of the gasoline contaminated soil was complete. The excavation was backfilled on August 12, 1992, using a two-sack concrete slurry. The backfilled excavation was repaved with concrete to match existing conditions, consistent with GTE specifications.

3.5 Contaminated Soil Disposal

Approximately 30 cubic yards of gasoline contaminated soil were excavated during remediation activities of the pump island. A representative soil sample of the excavated soil was collected and analyzed by Terra Tech for the following pre-disposal constituents: flash point and pH; sulfides and cyanides; phenols, fluoride and ammonia; TRPH; halogenated volatile organics; aromatic volatile organics; polychlorinated biphenyls and metals. The complete laboratory report is included as Appendix B.

Upon receipt of the pre-disposal analyses, the excavated soil was classified as non-hazardous and transported to the Laidlaw Environmental Services, Inc., Class III landfill located at 2500 Lokern Road, Buttonwillow, California. A total of 36.8 tons of soil was transported to this facility. Appendix C contains copies of the non-hazardous waste data forms and receiving weigh tickets.

4.0 SUMMARY AND RECOMMENDATIONS

Remediation of the contaminated soil identified during site assessment activities, has been

completed at the gasoline pump island located at the GTE - Irwindale Plant Yard, 5010 North Azusa Canyon Road, Irwindale, California.

Excavation and off-site disposal of the contaminated soil was performed in accordance with the work plan approved by the LADPW. Confirmation soil sample locations were specified by the on-site LADPW inspector and submitted to a CA DHS certified laboratory for chemical analyses. The soil samples were analyzed for BTEX using EPA Method 8020 and TVPH using CA DHS Method. Results of the laboratory analyses showed that no gasoline constituents were detected at concentrations above the respective practical quantitation limits.

Based on the foregoing, CDM requests that the LADPW approve closure of the subject pump island area located at the GTE - Irwindale facility.

Subject: Additional Site Investigation of Diesel Pump Island
GTE - Irwindale Plant Yard
Irwindale, California

CDM Project No.: 2425-113(J)-IR-RPT

Dear Ms. McCormick:

At the request of GTE of California (GTE), Camp Dresser & McKee Inc. (CDM) performed additional site investigation activities of the diesel pump island at the GTE - Irwindale Plant Yard located at 5010 North Azusa Canyon Road, in the City of Irwindale, California (Figure 1).

The investigation was performed in response to a request by the County of Los Angeles Department of Public Works (LACDPW) for additional soil sampling. The purpose of the investigation was to assess residual petroleum hydrocarbon contamination, if any, at a former boring location SP-1 (Figure 2). This report describes the field activities, presents the analytical results, and includes CDM's conclusions derived from the investigation.

1.0 INTRODUCTION

Preliminary site assessment activities were performed at the diesel pump island by JETCO Environmental and Associates, Inc. (JETCO) during the period beginning July through September 1990. The findings of the investigation indicated a maximum total petroleum hydrocarbon (TPH) concentration of 4,200 milligrams per kilogram (mg/kg) at a depth of two feet directly below the pump island. Contaminated soil excavation activities were completed during this period and documented in a report entitled "Site Investigation" (November 1990), compiled by JETCO.

On August 27, 1992, LACDPW issued a letter to GTE which requested additional soil sampling at depths of 5, 10 and 15 feet below ground surface (bgs) at the location of SP-1. LACDPW required that the soil samples be analyzed for benzene, toluene, ethylbenzene and xylenes (BTEX) using EPA Method 8020; and total extractable petroleum hydrocarbons (TEPH) using California Department of Health Services (CA DHS) Method for diesel fuel. In accordance with a September 15, 1992 telephone conversation between CDM and LACDPW, the requested sample depths were revised to 10 and 15 feet bgs.

2.0 SCOPE OF WORK

The scope of work for the soil sampling program included the completion of the following tasks:

- Collection of two soil samples, B-1-2 and B-1-4, at 12 and 17 feet bgs, respectively.
- Field screening of the soil samples for VOCs and TRPH concentrations using a portable flame ionization detector (FID) and infrared spectrometer (IR).
- Chemical analysis of both soil samples for BTEX (EPA Method 8020) and TEPH (CA DHS - Diesel) by a California State certified laboratory.

3.0 FIELD ACTIVITIES

Field activities were conducted by CDM personnel on December 10, 1992. The soil boring was advanced with conventional hollow-stem auger drill rig equipment (CME-55) operated by Spectrum Exploration, Inc. (Signal Hill, California). An on-site geologist supervised the drilling and sample collection activities under the guidance of a California registered professional engineer. Site personnel were trained in accordance with the Code of Federal Regulations, Part 29 Section 1910.120 (29 CFR 1910.120). Field activities were performed with Level D personal protection equipment (PPE).

Drilling and sample collection activities were witnessed by Mr. Matt Liao of LACDPW. Due to the presence of the diesel island overhang directly above SP-1, the

boring was off-set 4.5 feet to the north, perpendicular to the pump island (Figure 3). Boring B-1 was advanced at this location to a maximum depth of 17 feet bgs. Subsurface geologic and other information is depicted on the boring log (Attachment A).

3.1 Field Screening

A Foxboro™ 128 Organic Vapor Analyzer (OVA) equipped with an FID, was used to screen the soil samples for VOC concentrations. The OVA was calibrated with 50 parts per million (ppm) hexane gas prior to first use. Field screening for total recoverable petroleum hydrocarbons (TRPH) concentrations was also performed with a Miran™ 1 FF infrared spectrometer (IR) using modified EPA Method 418.1. Calibration of the field IR was performed at the beginning of the day against laboratory-prepared standards.

The results of the field screening analyses indicated VOC headspace concentrations of 2.0 ppm or less and TRPH concentrations of 4.0 ppm or less in the soil samples. Attachment A contains the IR field data form.

3.2 Sample Collection and Handling

Boring B-1 was advanced with 6-inch hollow-stem augers. To minimize the possibility of cross-contamination between each sampling event, all sampling equipment was cleaned with a soapy water (Alconox™ or equal laboratory-grade detergent) wash and thoroughly scrubbed with stiff brushes. The equipment was rinsed with tap water followed by a double deionized water rinse.

Sample B-1-2 was collected at 12 feet bgs with a split-spoon drive sampler fitted with clean, 2-inch by 6-inch, brass sleeves lining the interior. Upon removal of the completely filled brass sleeve from the sampler, aluminum foil was placed over each end. Plastic end-caps were placed over the ends and secured with non-volatile adhesive tape.

Boring B-1 was then advanced to 15 feet bgs; however, rocks encountered at this depth precluded the collection of a soil sample with the split-spoon sampler. The boring was first advanced to 16 feet bgs, and then to 17 feet bgs with the same conditions encountered. As sample collection with a spilt-spoon sampler was not possible at depth, sample B-1-4 was collected from the recovered sample material and then placed

into a clean, 8-ounce glass jar. The completely filled sample container was capped and securely sealed.

Both samples were immediately labeled with indelible ink, inserted into a resealable plastic freezer bag, and placed in an iced cooler. The samples were transported to the laboratory on the same day of collection, accompanied by a completed chain-of-custody (COC) form.

Upon completion of the drilling activities, the soil boring was backfilled with bentonite slurry (Volclay grout, or equivalent). Abandonment of the boring was performed in accordance with the guidelines set forth in the document entitled "California Well Standards, Bulletin 74-90" (January, 1990), published by the California Department of Water Resources. Surface completion was performed with portland concrete to match existing grade and finish. Soil boring cuttings and decontamination liquids were stored in 55-gallon steel drums pending future off-site disposal.

4.0 ANALYTICAL LABORATORY RESULTS

Two soil samples (B-1-2 and B-1-4) were submitted to Terra Tech Laboratories, Inc. (Terra Tech) located in Santa Ana, California. Terra Tech is California Department of Health Services certified, analytical laboratory with approved internal quality assurance/quality control procedures.

Samples B-1-2 and B-1-4 were both chemically analyzed for BTEX using EPA Method 8020 and TEPH using CA DHS Method. The results of the laboratory indicated non-detectable concentrations of these constituents in both samples.

Complete laboratory reports and chain-of-custody documents are included as Attachment B.

5.0 CONCLUSIONS

As requested by LACDPW, additional soil sampling was performed at the diesel pump island to assess the potential for any residual contamination not removed during the the underground storage tank removal performed by JETCO on November 30, 1988. The analytical results of the soil samples collected from boring B-1 at depths of 12 and 17 feet bgs indicated no presence of petroleum hydrocarbon contamination. Based on the data collected to date from this and past investigations, closure of the diesel pump island should be requested from LACDPW.

Section 1
Introduction

On behalf of GTE of California (GTE), Camp Dresser & McKee Inc. (CDM) has prepared this report for soil gas investigation activities at the GTE Irwindale Plant Yard facility located at 5010 North Azusa Canyon Road in the City of Irwindale, California. This report describes the field activities associated with the installation of two clustered soil vapor probes and related vapor probe sampling and chemical analysis.

The soil gas investigation described herein was performed at the request of the Regional Water Quality Control Board - Los Angeles Region (RWQCB), as outlined in the RWQCB letter to GTE dated May 30, 1995 (Appendix A). The purpose of the soil gas investigation was to evaluate the potential presence of vapor phase volatile organic compounds (VOCs) in soils adjacent to the wastewater clarifier and septic tank in the vehicle service area. All field activities and soil gas sampling and chemical analyses were performed in accordance with the latest edition of the RWQCB publication entitled *"Requirements for Active Soil Gas Investigation,"* dated March 1994.

1.1 Site Description

The site description contained within this section pertains to the immediate area in which the soil gas investigation was conducted. The GTE - Irwindale Plant Yard is located at 5010 North Azusa Canyon Road, southeast of the intersection of Arrow Highway and North Azusa Canyon Road, in the City of Irwindale, California (Figure 1). In general, operations conducted at the plant yard include maintenance of service vehicles assigned to the facility.

The vehicle wash area is located in the northeast corner of the property, adjacent to the vehicle maintenance garage (Figure 2). This area contains separate vehicle wash and steam-clean racks, a three-stage 1,200-gallon wastewater clarifier, a two-stage 900-gallon septic tank (abandoned in-place), a former brick-lined cesspool (removed), and a drum storage area that contains both hazardous and nonhazardous materials. The vehicle wash area is secured with a chain-link fence, except the drive-through portion of the vehicle wash rack. The vehicle wash rack consists of a covered, one-way, drive-through wash system and is used by GTE personnel to wash the facility vehicles on an as-needed basis. Concrete floor drains or sumps are located within the vehicle wash area (two sumps) and steam-clean (one sump) area. Wastewater collected in the sumps is conveyed to the clarifier via cast iron piping, prior to discharge into the sewer system. Asphalt paving covers the vehicle service area, except the vehicle wash and steam-clean areas, which are paved with concrete.

1.2 Background

1.2.1 RWQCB Site Inspection

On March 7, 1991, a visual inspection of the clarifier and related sumps was performed by the RWQCB. The inspection concluded that the steam cleaning and rinsewater/soap solution sumps appeared intact. However, concrete degradation was noted within the sump at the west end of the vehicle wash rack, and in grout between the clarifier lid and concrete riser block. Following the inspection, the RWQCB requested GTE to conduct a soil gas investigation in the vehicle wash area.

1.2.2 Preliminary Site Assessment

In 1991, CDM performed a preliminary site assessment, consisting of a soil gas survey and soil sampling program, of the vehicle wash rack and steam-clean areas. A total of 22 soil gas samples were collected at discrete locations within the vicinity of the vehicle wash rack, steam-clean area and clarifier. In addition, four soil samples were collected for confirmatory laboratory analysis. The findings of the investigation documented elevated concentrations of total recoverable petroleum hydrocarbons (TRPH) within the soil and vapor phase VOCs in soil gas samples collected near the clarifier outlet.

1.2.3 Site Assessment and Soil Remediation

In 1992, CDM performed further site assessment and soil remediation activities within the area of the clarifier, including soil sampling in the former septic tank and cesspool area(s). During this phase of work, the former two-stage concrete clarifier was removed and replaced with a 1,200 gallon three-stage concrete clarifier in accordance with the Los Angeles County Department of Public Works requirements, plans and specifications. A secondary containment system consisting of a flexible membrane was installed around the clarifier. In-line discharge monitoring boxes were installed to allow monitoring of the separate waste streams from the vehicle wash rack and steam-clean facility.

Excavation and off-site disposal of 47 tons of petroleum hydrocarbon-contaminated soil was performed during soil remediation activities. Seven confirmation soil samples were specified by the on-site RWQCB inspector and submitted to a CA DHS-certified laboratory for chemical analyses. Confirmation soil samples were analyzed for halogenated volatile organic compounds (HVOCs) using EPA Method 8010, aromatic volatile organic compounds (AVOCs) using EPA Method 8020, and TRPH using EPA Method 418.1. In the clarifier area, the maximum measured TRPH concentration was 27 milligrams per kilogram (mg/kg). No detectable concentrations of HVOCs or AVOCs were measured in the clarifier area soil samples. Confirmation soil sample results from the backfill material placed within the septic tank structure at a depth of 10 feet below ground surface (bgs) detected the HVOCs chloromethane and 1,4-dichlorobenzene at concentrations of 11 mg/kg and 24 mg/kg, respectively. TRPH was not detected at a concentration at or above the instrument detection limit in this sample. Confirmation soil sample analytical laboratory results indicated that no detected chemical concentrations were above the applicable regulatory guidelines of 100 mg/kg for TRPH, ten times the Maximum Contaminant Level (MCL) or ten times the applicable Applied Action Level in drinking water for VOCs. Closure of the clarifier area at the Irwindale Plant Yard was requested.

1.2.4 RWQCB Issues

In a letter dated May 30, 1995 to GTE, the RWQCB requested that additional soil vapor sampling at the clarifier inlet and abandoned septic tank be performed prior to assigning the site a "No Further Action" designation. The additional soil gas investigation was required because low-level soil vapor concentrations of 1,1,1-trichloroethane (TCA) and tetrachloroethane (PCA) were detected at these structures and because the confirmation soil samples were collected in a glass jar. It should be noted that numerous attempts to collect soil samples using a driven sampler with brass sleeves were performed. However, due to the soil lithology (unconsolidated sand with gravel), sample recovery was not possible using this methodology. Therefore, confirmation samples were collected under the supervision of an RWQCB representative using a hand trowel, and then transferred into a glass jar.

1.3 Geologic/Hydrogeologic Conditions

1.3.1 Regional Conditions

The GTE - Irwindale Plant Yard is located in the San Gabriel Valley Groundwater Basin (Basin) in the eastern portion of Los Angeles County. The Basin is a structural basin of permeable alluvial deposits, underlain and surrounded by relatively impermeable rock. Alluvial deposits that fill the basin are Recent to Quaternary in age.

The Basin is defined by the following structural features: the Raymond Fault to the northwest; the line of contact between alluvium and bedrock of the San Gabriel Mountains to the north; the bedrock high between San Dimas and La Verne to the east; and the line of contact between alluvium and bedrock of the low hills along the southern periphery of the basin.

Unconsolidated and semi-consolidated nonmarine sediments (alluvium) of Recent and Pleistocene age are the principal water-bearing formations within the groundwater basin. Of lesser importance are marine sediments of probable Pleistocene age, and marine sediments of late Pliocene age. Sediments comprising the water-bearing formations in the basin are derived primarily from the erosion and subsequent deposition of the crystalline rocks of the San Gabriel Mountains and are predominantly coarse-grained (sand, gravel, and boulders). These formations extend to a maximum depth of more than 4,000 feet. The thickness of the alluvial deposits resulted from deposition combined with uplift in the mountains and subsidence in the valley.

Water-bearing sediments within the Basin vary in size depending on proximity to the sediment source area. In general, these sediments grade from coarse gravel and boulders, close to the mountain front, to fine- and medium-grained sand containing a larger amount of silt and clay, as the distance from the source area (San Gabriel Mountains) increases.

Groundwater in the San Gabriel Valley generally moves from the perimeter of the valley toward the Whittier Narrows. Therefore, the direction of regional groundwater flow near the site is to the southwest (CH2M HILL, 1993).

1.3.2 Local Conditions

The Alluvium (Qal) underlying the Irwindale Plant Yard consists of poorly stratified sand, cobbles, and boulders. The sediments are unconsolidated and dense, and the sand is light gray to buff in color and fine- to coarse-grained. The boulders range in size up to approximately 2 feet in diameter. During remedial activities, a relatively thin layer of artificial fill was observed overlying the alluvium (CDM 1992). This fill material consists of silty fine-grained sand and is approximately two to 3 feet in thickness across the site. No artificial fill was noted during installation of the clustered soil vapor probes.

Groundwater was not encountered during site activities.

Section 2
Purpose and Scope of Work

The purpose of the soil gas investigation program was to confirm the presence or absence of RWQCB-targeted soil gas vapors within the former wastewater clarifier and septic tank areas. All work was performed in general accordance with the CDM's approved work plan, dated September 5, 1995.

The scope of work consisted of the following major tasks:

- Perform a geophysical survey to clear the proposed soil gas monitoring probe locations for underground utilities or other obstructions.

- Perform two hollow-stem auger borings to a depth of 20 feet below ground surface (bgs) within the vehicle wash area. One boring was located adjacent to the septic tank, and the second boring was located adjacent to the wastewater clarifier. Soil samples were collected, as subsurface conditions allowed, for lithologic classification and on-site field screening for volatile organic compounds (VOCs) using portable field instrumentation.

- Construct two clustered soil gas monitoring wells; soil vapor probes were installed at depths of 10-feet and 20-feet within each boring.

- Perform "real-time" soil gas sample analysis for the analytes listed on the RWQCB target compound list (TCL) using an on-site California Department of Health Services (CA DHS)-certified mobile analytical laboratory.

- Prepare this soil gas investigation report describing the investigation results including analytical reports, boring logs/vapor well construction details, conclusions, and recommendations.

Section 3
Field Investigation

Field activities were performed during the period beginning September 6, 1995 through October 18, 1995. Site activities were conducted under the supervision of a California registered geologist. An on-site geologist supervised the subsurface geophysical investigation, soil borings and soil vapor sample collection activities. Field activities and observations were recorded in a field logbook. Site personnel were trained in accordance with the Code of Federal Regulations, Part 29 Section 1910.120 (29 CFR 1910.120) and California Administrative Code (CAC) Title 8, requirements.

All field activities were conducted in strict accordance with the RWQCB publication "Requirements for Active Soil Gas Investigation," dated March 1994, and CDM's approved "Work Plan for Soil Gas Investigation Program," dated September 5, 1995.

3.1 Regulatory Permitting and Notification

In accordance with California Assembly Bill No. 73, Underground Service Alert was notified a minimum of 48 hours prior to the initiation of intrusive activities on the site.

A subsurface geophysical survey was performed at the facility by Cable, Pipe & Leak Detection (CPL) of Spring Valley, California, on September 6, 1995. The purpose of the geophysical survey was to locate any underground utilities, associated water and electrical lines, or other potential subsurface interferences at the proposed soil vapor well locations. GTE facility representatives were on-site to identify potential areas of concern (i.e., underground obstructions, etc.) and approve boring locations.

3.2 Soil Boring Program

The soil boring program was performed on September 8, 1995, and consisted of drilling two hollow-stem auger borings. Prior to subsurface penetration with the drill rig, hand augering was performed to a depth of approximately three to five feet at each boring location to check for underground utilities. The borings were advanced by BC^2, of Fullerton, California, using a Central Mining Equipment (CME) Model 85 drill rig equipped with 8-inch outside diameter (O.D.) hollow-stem augers. As indicated in the approved work plan, both borings were proposed to a depth of 20 feet bgs. However, due to auger refusal, boring B-1/VW-1 was advance to a depth of 19 feet bgs. At this location, large rocks (i.e., boulders) were encountered and the drill rig was unable to advance the borehole. Although the proposed total depth of boring B-1/VW-1 was not obtained, the final depth of 19 feet bgs is considered suitable for its intended purpose.

Boring B-1/VW-1 was located adjacent to the wastewater clarifier inlet and boring B-2/VW-2 was located adjacent to the abandoned septic tank. The locations of the borings are shown on Figure 2. Clustered soil gas vapor probes were installed within each boring.

3.2.1 Field Screening Methods

A Thermo™ 580B photo ionization detector (PID), was used to monitor VOC concentrations in the work area (breathing zone) and soil sample headspace. In accordance with CDM's site-specific Health and Safety Plan, VOC concentrations were monitored during drilling activities. The calibration of the PID was performed using a 100 ppm isobutylene standard calibration gas at the beginning of each work day.

Headspace readings on the soil samples were obtained by placing a representative soil sample into a resealable plastic bag and allowing it to equilibrate for approximately two to five minutes. During this period, VOCs, if any, volatilize within the plastic bag airspace. The PID sample probe is then inserted into the plastic bag permitting the PID to measure any VOC vapors emitting from the sample. Ambient air (i.e., background) VOC concentrations were measured at 6.0 parts per million (ppm). Sample headspace readings for the soil samples recovered during drilling ranged from 6.0 ppm to 11.9 ppm.

3.2.2 Soil Sample Collection

Soil samples were collected from each boring at approximately 5-foot intervals using a modified California split-spoon sampler. Soil samples were collected for lithologic classification and for visual evaluation of contamination.

The split-spoon sampler was 18-inches in length with a 3-inch inside diameter. Because no soil samples were being retained for laboratory analysis, brass liners were not used in the sampler during sample collection. Sample material recovered in the sampler, if any, was used for lithologic classification including visual (e.g., discoloration, staining, etc.) and olfactory (e.g., organic odor, etc.) indications of contamination, and field VOC screening analyses.

Each sample was described in accordance with the Unified Soil Classification System (USCS). All field screening results and sample characteristics were recorded on field lithologic logs and in a permanently-bound field notebook. Copies of the boring log/vapor well details are included as Appendix B.

3.3 Soil Gas Investigation

Clustered soil vapor probes were constructed in each soil boring. The vapor wells were constructed in accordance with CDM's standard field procedures manual and RWQCB's requirements. Following the completion of drilling, vapor probes were installed at the 10-foot and 19-foot depth intervals in vapor well B-1/VW-1, and 10-foot and 20-foot depth intervals for B-2/VW-2. KVA Analytical Systems stainless steel vapor probes were installed in each vapor well. The probes were attached to ¼-inch outside diameter Teflon tubing. The Teflon tubing was fitted with a brass SWAGLOK fitting at the surface for connection to the mobile analytical laboratory. The sample tubing extended to the surface where each well was numbered and designated as shallow or deep. Each probe within the cluster was designated with an "A" or a "B" indicating the shallow or deep probe location, respectively. The vapor probe clusters were secured in a traffic-rated monitoring well box.

Each probe was positioned near the center of the borehole and was backfilled with sand (Medium Lonestar). The sand interval was approximately one-foot thick with the vapor probe situated in the

center on the interval. Following placement of the sand filter pack, a bentonite seal consisting of ¼-inch bentonite chips, was placed in approximately 1.5-foot lifts and allowed to hydrate sufficiently, prior to adding the next lift. A two-foot thick concrete cap was placed at the surface.

All vapor probe construction materials were installed through the hollow-stem auger as augers were removed from the borehole. The augers were removed from the borehole in five-foot sections so as not to pull the augers above the level of the annular fill materials to avoid collapse of the borehole. Each clustered vapor well was secured in a water tight, traffic-rated utility box at the completion of vapor well installation.

Section 4
Quality Assurance Plan

4.1 Equipment Decontamination

To minimize the possibility of cross-contamination between each soil boring, all drilling and sample collection equipment was properly decontaminated in accordance with established procedures. The sampling equipment was placed in a soapy water (Alconox™) wash and thoroughly scrubbed with stiff brushes. Equipment was then rinsed with tap water followed by a double deionized water rinse. All down-hole drilling equipment was steam-cleaned before drilling and after each use. Decontamination water was stored in DOT-approved 55-gallon steel drums, pending the receipt of the predisposal analyses and off-site disposal, if necessary.

4.2 Sample Handling

4.2.1 Soil Samples

The soil samples were collected using a split-spoon sampler for lithologic logging and headspace screening. No undisturbed soil samples were submitted to the analytical laboratory for chemical analysis. Portions of the recovered soil sample were placed within a plastic resealable bag for VOC headspace analysis. The remaining sample was used for lithologic logging.

Following the completion of drilling and vapor probe installation, soil samples were collected from the drill cuttings for waste classification. The samples were submitted to Associated Laboratories, in Orange, California for waste disposal classification.

4.2.2 Soil Vapor Samples

Soil vapor samples were collected from the vapor probes through the ¼-inch O.D. Teflon sample tubing. Samples were collected and analyzed on-site using a mobile analytical laboratory in accordance with established RWQCB requirements.

4.2.3 Sample Identification

Each vapor probe was assigned a distinct identification number. The sample identification number included the following information:

- Site name.
- Unique identification number indicating soil vapor number and depth of vapor probe (e.g., VW-1A and VW-1B, A and B designating shallow and deep probe depths, respectively).
- Sample collection date and time.
- Analytical laboratory and sampler's name.
- Analytical method.

4.2.4 Chain-of-Custody (COC) Documentation

The COC form includes the following information:

- Site name and address.

- Signatures of persons involved in the chain-of-custody possession inclusive of dates of possession.
- Date and time of collection.
- Address of analytical laboratory.
- Sample identification.
- Description and condition of container.
- Preservative used.
- Turn-around time.
- Sample type.
- Analyses required.

4.3 Laboratory QA/QC

A mobile analytical laboratory from Hydro Geo Chem, Inc. (HGC) of Huntington Beach, California performed the soil gas sample analyses. HGC is a CA DHS-certified analytical laboratory with approved internal Quality Assurance/Quality Control (QA/QC) procedures to satisfy RWQCB soil gas investigation protocols. Key laboratory QC elements typically include calibration check samples, matrix-spiked samples, duplicates, replicates and other indicators. Soil gas analyses conducted by HGC were performed in strict accordance with RWQCB guidelines.

Section 5
Analytical Laboratory Results

As requested, all soil gas samples were analyzed using an on-site mobile analytical laboratory in accordance with RWQCB guidelines. Each vapor sample was analyzed for the following RWQCB TCL analytes:

- dichlorodifluoromethane;
- vinyl chloride;
- chloroethane;
- trichlorofluoromethane;
- dichloromethane;
- trans-1,2-dichloroethene
- 1,1-dichloroethane;
- chloroform;
- 1,1,1-trichloroethane;
- carbon tetrachloride;
- cis-1,2-dichloroethene;
- trichloroethene;
- 1,1,2-trichloroethane;
- tetrachloroethene;
- 1,1,1,2-tetrachloroethane;
- 1,1,2,2-tetrachloroethane;
- 1,1-dichloroethene;
- benzene;
- toluene;
- ethyl benzene;
- m-,p-xylene;
- o-xylene;
- 1,1,2-trichlorotrifluoroethane.

Based on the analytical laboratory results, none of the aforementioned RWQCB TCL analytes were detected at concentrations at or above the laboratory's practical quantitation limit of 1 microgram per liter (µg/l). The soil gas analytical results are summarized in Table 1. Complete laboratory reports and COC documentation are included as Appendix C.

TABLE 1

Notes:

1. ug/l - micrograms per liter
2. ND - Not detected at concentrations at or above the laboratory's practical quantitation limit (refer to analytical report).

Section 6
Conclusions and Recommendations

During the period beginning September 6, 1995 through October 18, 1995, CDM conducted soil gas investigation activities at the GTE Irwindale Plant Yard. Two clustered soil vapor monitoring wells were constructed. Soil gas collected from the shallow and deep vapor probes were sampled and analyzed in accordance with RWQCB requirements.

Results of the laboratory analysis indicate no detectable concentrations of RWQCB TLC analytes in any of the vapor samples. Additionally, no indications of soil contamination were observed during drilling.

Based on the herein-enclosed information, CDM requests that the RWQCB grant closure of the vehicle wash facility at the GTE Irwindale Plant Yard.

WELL INVESTIGATION PROGRAM - WORK PLAN APPROVAL FOR SOIL VAPOR INVESTIGATION AT THE GTE IRWINDALE PLANT YARD (CA301HJ), LOCATED AT 5010 NORTH AZUSA CANYON ROAD, IRWINDALE, CA (FILE NO. 108.0212)

Regional Board staff have reviewed the work plan dated August 3, 1995, and prepared by your consultants, Camp Dresser & McKee, for the soil vapor investigation at the aforementioned site. We have no objection to the work being conducted as described in this work plan with the following comments:

Vapor wells are being installed, therefore the waiting period between installation and sampling should be one month, rather than the two weeks as stated in your work plan. This will allow the vapor in the subsurface to approach equilibrium;

The use of PVC probes, rather than stainless steel, is discouraged. If re-sampling of the probes is required at a later date, the adsorption of contaminants by the PVC may alter the results;

The use of polyethylene tubing instead of Tygon or Teflon is also discouraged. Again adsorption of contaminants has been shown to be higher for polyethylene, and the small cost savings for four shallow probes, when compared to the drilling and analysis costs are not justified;

Sampling and analysis must follow the current guidelines (REQUIREMENTS FOR ACTIVE SOIL GAS INVESTIGATION - MARCH 1994), including the purge volume versus concentration test; and,

While the normal protocol for sampling vapor wells includes two rounds of sampling, one and two months after installation, we will put the second round into abeyance. However, if contaminant concentrations greater than 10 µg/l are detected during the first round, the second round of sampling will be required after the additional one month waiting period.

Three copies of a report detailing the results of this work are due to this office by October 20, 1995. Prior to commencement of work, please notify Board staff so that we may schedule a representative to be present.

Please contact Mark Smythe at (213) 266-7537 if you have any questions, and address all correspondence to his attention.

WELL INVESTIGATION PROGRAM - SOIL VAPOR MONITORING WELL FOR GTE IRWINDALE PLANT YARD LOCATED AT 5010 NORTH AZUSA CANYON ROAD, IRWINDALE, CA 91706 (FILE NO. 108.0212)

Regional Board staff has reviewed the past investigations at the aforementioned facility. These investigations include a soil vapor survey conducted during June 1991 and the excavation of subsurface structures in the vehicle wash area including: the sand and grease interceptor (clarifier), the septic tank, and two floor drains.

The soil vapor survey indicated the presence of 1,1,1-trichloroethane (TCA) and tetrachloroethylene (PCE) to a depth of eight feet (maximum probe depth) in the vehicle wash area. TCA was present in all vapor samples collected at the site and PCE was tentatively identified in several key locations. The maximum reported concentration of TCA was at 1.81 µg/l at 8 feet below ground surface (bgs) at the clarifier inlet. Concentrations of PCE were never quantified.

During the excavation of the vehicle wash area, confirmation soil samples analyzed for volatile organic compounds (VOCs) were for the most part, non-detect at 1 ppb. However sample lithology (unconsolidated sands and gravels), combined with sample collection methods (using a trowel to transfer soil to glass jars), would probably have resulted in volatilization of any VOCs prior to analysis.

Therefore, before this site can be assigned a "No Further Action" designation, the results of the investigations of the vehicle wash area must be confirmed.

In order to confirm the absence of contamination below the former clarifier and septic tank, you are required to submit a work plan which details the installation and sampling of semi-permanent vapor probes in these areas. The work plan must address all of the requirements in the enclosed current guidelines (REQUIREMENTS FOR ACTIVE SOIL GAS INVESTIGATION - MARCH 1993). The probes must be installed at 10 feet and 20 feet bgs adjacent to the former

clarifier inlet (soil gas probe SG-06 from the 6/91 investigation) and adjacent to the former septic tank (soil vapor probe SG-08 from the 6/91 investigation).

If the required depths cannot be achieved due to regional lithology, or if significant concentrations of chlorinated VOCs are detected, nested multi-level vapor wells may be required.

Three copies of a work plan which adequately address the above requirements are due to this Regional Board by June 30, 1995. No work should be initiated until staff has reviewed and approved your work plan.

Please contact Mark Smythe at (213) 266-7537 if you have any questions, and address all correspondence to his attention.

REPORT
ENVIRONMENTAL INVESTIGATION
RELATED TO THE REMOVAL OF TWO
UNDERGROUND STORAGE TANKS
at
GTE - Irwindale Plant Yard
5010 North Azusa Canyon Road
Irwindale, California

INTRODUCTION

On behalf of GTE California, Environmental Resolutions, Inc. (ERI) conducted a subsurface investigation to determine if hydrocarbons were present in the soil beneath one 1,000-gallon, single-walled steel waste-oil underground storage tank (UST), one 12,000-gallon, double-walled composit unleaded gasoline UST, one gasoline dispenser island, and the associated double-walled piping removed from the above-referenced site. ERI's field work during this investigation included: monitoring air for volatile organic compounds (VOCs) during soil excavation; observing the removal of the two tanks, the dispenser island, and the associated pipelines; directing soil segregation; inspecting the two removed tanks for signs of leakage; and collecting and analyzing soil samples from the two tank excavations and dispenser island area. This report describes the work elements associated with the tank removals and summarizes the results of the laboratory analyses.

SITE DESCRIPTION

The site is located at 5010 North Azusa Canyon Road between Nubia Street and Sandstone Street in Irwindale, California (Plate P-1). The site consists of a GTE garage building, an office building, a car wash, a parking lot, and a refueling area for GTE service vehicles. The site is mostly paved, fenced, and located on the eastern side of North Azusa Canyon Road.

The 12,000-gallon double-walled unleaded gasoline plasteel composit UST was removed and replaced with a 12,000-gallon tank of double-walled plasteel composit construction as a planned facility upgrade. The 1,000-gallon waste-oil steel UST removed from the site was replaced with an above ground waste oil / new oil system. The unleaded gasoline tank, located in the northwestern area of the facility, south of the GTE garage building, was used to provide fuel for the GTE service vehicles at the facility. The waste-oil tank, located adjacent to and south of the garage building, was used to store waste-oil accumulated from maintenance work performed on the GTE service vehicles. The former locations of the two tanks and other site features are shown on Plate P-2. The following are descriptions of the two tanks and their associated piping:

Tanks

Tank Capacity:	12,000 gallons	1,000 gallons
Manufacturer:	Joor	Unknown
Product:	Unleaded Gasoline	Waste Oil
Construction:	Double-walled, plasteel	Single-walled, steel
Dimensions:	7.92-foot diameter by 32-foot length	3.79-foot diameter by 12-foot length
Installed:	1988	1967
U.L. Number	U.L. #6044	U.L. #D196473

Other: The unleaded gasoline tank had cathodic protection, observed in good condition, with a turbine system and one 2" vent line. Leak detection consisted of TLS 250 and LA/04 tank monitoring systems. Waste-oil tank was corroded without any visible signs of leakage or holes.

Pipelines

The secondary containment on the supply line was constructed of 2-inch diameter black steel pipe and enclosed in a fiberglass wrap. The 2-inch diameter vent line and the 3-inch diameter risers on the tank were all protected by 20-mil plastic wrap. The pipelines appeared to be in good condition with no visual evidence of leakage. A gravity feed supply pipeline was associated with the waste-oil tank.

REGIONAL GEOLOGY AND HYDROGEOLOGY

The site is located approximately 0.5 miles southeast of the Santa Fe Flood Control Basin and 0.8 miles northwest of Big Dalton Wash. Topographically, the site is at an elevation of approximately 450 feet above mean sea level (MSL) and slopes to the southwest. Depth to groundwater in the area of the site ranges from approximately 150 to 200 feet below ground surface (bgs), or an elevation between 250 to 300 feet above MSL. During tank removal activities, groundwater was not encountered by ERI.

The site is in the northern most portion of the Peninsular Ranges Geomorphic Province in the San Gabriel Valley. The site lies on the historical flood plain of the San Gabriel River which is located approximately 2.1 miles to the west of the site. The shallow soils underlying the site have been mapped as Quaternary age sand and gravels deposited by the ancestral San Gabriel River (USGS, 1983) and alluvial fans from the nearby San Gabriel Mountains.

Groundwater recharge in the area surrounding the site is provided by the Santa Fe Flood Control Basin, Big Dalton Wash, and nearby commercial gravel pits. Commercial gravel pits are located within 0.2 miles to the west and northeast of the site.

The Los Angeles County Department of Public Works (LACDPW), Hydrologic Records Division, was contacted to obtain information on groundwater conditions in the area surrounding the site. According to the LACDPW the site is located near three groundwater wells. The closest well (Well No. 3050) is located approximately 0.4 miles due south near the intersection of Los Angeles Avenue and North Azusa Canyon Road. The next closest well (Well No. 3061) is located approximately 0.7

miles to the southeast near the intersection of San Bernardino Road and Sunset Avenue. The furthest well (Well No. 4289) is located 1.3 miles to the northeast at the intersection of Lark Ellen Avenue and Arrow Highway. The depths to groundwater in the wells were last measured in April 1995. The depth to water and elevation above MSL in the wells was as follows: 1) Well No. 3050 at a depth of 150.65 feet bgs [259.65 feet above MSL], 2) Well No. 3061 at a depth of 165.0 feet bgs [255.7 feet above MSL], and 3) Well No. 4289 at a depth of 207.6 feet bgs [263.4 feet above MSL]. The depth to groundwater beneath the site and the direction of regional groundwater flow were not available from the LACDPW. However, based upon the limited gauging data available from the LACDPW, the estimated depth to groundwater beneath the site is approximately 180 feet bgs and the local groundwater flow direction is apparently in a southwesterly direction toward the nearby San Gabriel River.

FIELD INVESTIGATION

Field work for this investigation included: 1) preparing and implementing a site safety plan; 2) monitoring air for VOCs during soil excavation and related activities; 3) observing the removal of the two tanks, the gasoline dispenser island, and the associated pipelines; 4) directing soil segregation; 5) inspecting the two removed tanks for signs of leakage, holes, or pitting; and 6) collecting and analyzing soil samples from the two excavations and dispenser island area.

Site Safety Plan

ERI conducted field work at the site under ERI's Site Safety Plan dated December 27, 1995. The site safety plan addressed the potential health hazards that might be encountered at the worksite and described the basic safety procedures to follow while performing work at the site. The plan applied

to ERI personnel. Daily tailgate safety meetings were conducted by the Site Safety Officer, an ERI staff member, and GTE's contractor representative prior to the start of work. A copy of the plan was available on site during tank removal and related activities.

Air Monitoring

During excavation work between January 17 to 19, 1996, ERI performed air monitoring for VOCs in accordance with South Coast Air Quality Management District (SCAQMD) Rule 1166. Measurements of VOC concentrations were made using an organic vapor meter (OVM) Gastechtor Model 1314.

At the beginning of the workday, the OVM was calibrated according to the manufacturer's specifications using a 50 parts per million (ppm) hexane gas-standard. Air monitoring was conducted by placing the inlet tip of the OVM no more than 3 inches above the freshly excavated soil. Readings were taken for every bucket load of soil removed by the backhoe no longer than 3 minutes after each load was removed. The highest VOC readings were reported for each 15-minute interval. Wind speed and direction were monitored during the soil excavation. VOC concentrations measured with the OVM during tank excavation operations did not exceed 50 ppm by volume (ppmv). SCAQMD Rule 1166 monitoring records are on file at ERI's Irvine, California, office.

Soil Sampling Procedures

Samples obtained during excavation activities were collected in accordance with sampling guidelines and procedures as outlined in ERI's Standard Operating Procedures Manual for collecting soil

samples. Soil samples were collected by Mr. Robert Weinberger of ERI under the supervision of Mr. Steve M. Zigan of ERI (R.G. 4333) .

Most samples were collected with the aid of a backhoe. Samples were collected from native soils by pushing a brass sample tube into the soils contained on or between the teeth of the backhoe bucket. Other soil samples were collected by hand-augering and then using a slide hammer sampler and sample tube to obtain a sample. Prior to and between each sampling, the hand auger and slide hammer sampler were washed in a Liquinox wash solution, triple-rinsed, and air-dried to reduce the chance of cross-contamination between samples. Following collection, each sample was immediately sealed with Teflon tape and plastic end caps, labeled, and placed in iced storage at 4°C. Samples were then analyzed by the on-site State-certified mobile laboratory.

Tank Removal and Inspection

The 12,000-gallon UST, the dispenser island, and the associated pipelines were removed on January 19, 1996. The 1,000-gallon waste-oil UST was also removed on January 19, 1996. Tank removal operations were conducted in accordance with the requirements stipulated in the Los Angeles County Fire Department's (LACFD) tank removal permit. The outer surface of the tanks were inspected by an ERI representative for signs of leakage, holes, pitting, or areas of weakness; none were observed on the 12,000-gallon tank; corrosion of the outside of the 1,000-gallon tank was observed with no signs of leakage. Photographs are included in Appendix A. Permitting, excavation, tank rinsing, and tank removal were conducted by Petroleum Contractors, Inc. (PCI, Long Beach, California) and their subcontractors. The rinsate was transported under hazardous waste manifest by G.V. Adams Services, Inc. (Gardena, California) and recycled at the DeMenno/Kerdoon facility in Compton,

California. After triple-rinsing and certification by Thomas D. Beck of Harbor Testing Laboratory, the 12,000-gallon tank was transported by G.V. Adams to Joor in Escondido, California, for re-certification and the 1,000-gallon tank was transported to L.A. Industrial Services in Los Angeles for destruction. Tank removal operations were witnessed by Inspector Elden Goodenow of the LACDPW, Inspector Gerardo Cantu of the LACFD, Mr. William Scharpenberg of Tait & Associates, Inc., and Mr. Weinberger of ERI. Copies of the LACFD and LACDPW tank removal permits, the hazardous waste manifest for recycling of the rinsate, the marine chemist certificate, the letter of tank re-certification, and the tank destruction certificate are included in Appendix B.

Soil Inspection, Excavation, and Sampling: Gasoline Tank

Fill soils excavated from the tank pit of the gasoline tank consisted of silty sand, sand, and pea-gravel to approximately 11 feet below ground surface (bgs). The native soils exposed in the walls of the tank pit excavation consisted of silty fine- to coarse-grained sand and sand with cobbles and boulders to the maximum depth excavated of 13 feet bgs.

On January 19, 1996, twelve (12) soil samples were obtained by ERI following the excavation and removal of the former tank and the dispenser island. Samples were collected from the bucket of the backhoe under the direction of Inspector Goodenow. Samples S-2-PL1 and S-2-PL2 were collected at a depth of approximately 2 feet bgs from beneath the gasoline product pipeline connecting the dispenser island and UST. Samples S-3-D1N, S-3-D1E, S-3-D1W, and S-3-D1S were collected from beneath the dispenser island at a depth of approximately 3 feet bgs, respectively, and samples S-6-T1N, S-6-T1E, S-6-T1W, and S-6-T1S were collected at a depth of approximately 6 feet bgs from the northern, eastern, western, and southern ends, respectively, of the tank pit for the gasoline UST.

Two (2) additional samples, S-13-T1 BOT N and S-13-T1 BOT S, were collected at a depth of approximately 13 feet bgs from the northern and southern ends, respectively, of the tank excavation bottom. Sample locations are shown on Plate P-2.

Soil Inspection, Excavation, and Sampling: Waste-Oil Tank

Fill soils excavated from the tank pit of the waste-oil tank consisted of silty sand, sand, and pea-gravel to approximately 8 feet bgs. The native soils exposed in the walls of the tank pit excavation were similar to those observed in the gasoline tank pit excavation. The maximum depth excavated in the waste-oil tank pit was approximately 9 feet bgs.

On January 19, 1996, two (2) soil samples were obtained by ERI following the excavation and removal of the former tank. Samples S-9-T2E and S-9-T2W were collected at a depth of approximately 9 feet bgs from the eastern and western ends, respectively, of the tank pit for the waste-oil UST. Seven (7) samples were also collected from the four (4) soil stockpiles on site. Stockpiles SP1 through SP4 and soil sample locations are shown on Plate P-2.

SOIL BACKFILL, COMPACTION, AND RECYCLING

On January 25, 1996 backfilling of the excavation for the former unleaded gasoline and product pipeline trench were backfilled with the clean stockpiled soil and imported, clean, washed sand to the degree necessary to facilitate the new installation. The waste-oil tank excavation was backfilled with the clean stockpiled soils and imported, clean, washed sand from the bottom of the excavation to near surface grade. Compaction grading and backfilling were performed by PCI.

Approximately 64 tons of hydrocarbon-impacted soil were transported under non-hazardous waste manifest by Ron Talbott Trucking (Norco, California) to TPS Technologies' permitted facility in Adelanto, California, for thermal remediation and recycling. Hydrocarbon-impacted soils were removed from the tank excavations and the dispenser island as part of the tank removal. Copies of the TPS Technologies Soil Recycling non-hazardous waste manifests and weight tickets are provided in Appendix C.

LABORATORY ANALYSES

Soil samples were submitted to Associated Laboratories (Orange, California) on-site mobile lab for analysis. Samples from the waste-oil tank were analyzed for total recoverable petroleum hydrocarbons (TRPH) by Environmental Protection Agency (EPA) Method 418.1. Samples from the unleaded gasoline tank were analyzed for total petroleum hydrocarbons (TPH) as gasoline by EPA Method 8015 Modified, and for benzene, toluene, ethylbenzene, and total xylenes (BTEX) by EPA Method 8020. Associated Laboratories is a GTE-approved Department of Health Services (DHS) State-certified laboratory for the specified analyses. Sample analytical results are summarized in Table 1. The laboratory reports and chain-of-custody records are presented in Appendix D.

OBSERVATIONS AND CONCLUSIONS

Based on field observations made during the completion of the two tank removals, the removal of the dispenser island, and results of the laboratory analyses of soil samples collected from the aforementioned areas, ERI makes the following observations:

- No obvious holes or pitting were observed in the USTs after removal.
- TRPH, TPH, and BTEX were detected in samples collected from the tank excavations and dispenser island.

- Hydrocarbon-impacted soils were excavated and removed from the tank excavations and the dispenser island as part of the tank removal.
- The tank excavations for the former gasoline tank and waste-oil tank were backfilled with the clean stockpiled soil and imported fill material.
- Approximately 64 tons of hydrocarbon-impacted soil were transported to TPS Technologies' permitted facility in Adelanto for thermal remediation and recycling.
- The gasoline tank was transported to Joor's facility in Escondido for re-certification. The waste-oil tank was transported to L.A. Industrial Services in Los Angeles for destruction.
- In ERI's opinion, based on the findings of the two tank removals and related soil excavation activities in the gasoline dispenser island area, no further work is necessary with regard to soils in the areas of the 1,000-gallon waste-oil tank and the 12,000-gallon unleaded gasoline tank.

LIMITATIONS

This report was prepared in accordance with generally accepted standards of environmental geological practice in California at the time this investigation was performed. This investigation was conducted solely for the purpose of evaluating environmental conditions of the soil with respect to hydrocarbon concentrations at the subject site. No soil engineering or geotechnical implications are stated or should be inferred. The evaluation of the geologic conditions at the site for the purpose of this investigation is made from a limited number of observation points. Subsurface conditions may vary away from the data points available. Additional work, including further subsurface investigations, can reduce the inherent uncertainties associated with this type of investigation.

Will new underground tanks be installed after closure?	[ ]	[X]
Will any wells, including monitoring wells, be abandoned?		

NOTICE: CONTAMINATED TANKS AND RESIDUES THAT MAY BE LEFT IN TANKS TO BE CLOS MAY BE A HAZARDOUS WASTE WHICH MUST BE TRANSPORTED AND DISPOSED OF PURSUANT CHAPTER 6.5, CALIFORNIA HEALTH & SAFETY CODE. FAILURE TO COMPLY MAY BE PROSECUTED AS A FELONY VIOLATION.

By signature below the applicant certifies that all statements and disclosures above are true and correct and that they have read and agree to abide by this permit and all conditions and limitations attached.

Applicant's Signature Laura D. Box Date Dec. 4, 1995
(Print Name) Laura D. Box Phone (714) 560-8200
Owner [ ] Operator [ ] Contractor [ ]

TO BE COMPLETED BY THE DEPARTMENT OF PUBLIC WORKS

PURSUANT TO SECTION 11.80.070B, LOS ANGELES COUNTY CODE, PERMISSION IS HERE GRANTED TO PROCEED WITH THE CLOSURE DESCRIBED ABOVE SUBJECT TO THE ATTACHED CONDITIONS AND LIMITATIONS [X]. THIS PERMIT EXPIRES 180 DAYS FROM THE DATE BELOW.

T.A. TIDEMANSON
Director of Public Works

By Deanedwo Date 12/05/95

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

Closure Permit
No.: 150480
File No.
I- 003755-003882

PART 1 OF 2

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B (gasoline)	2'-4' below tank invert	TPH, BTEX	8015M, 8020
under each dispenser (2 at each island)	2'-4' below	"	"
under each dispenser	2'-4' below	"	"
2A (waste oil)	2'-4' below tank invert	TRPH, BTEX	418.1, 8020

1.0 Introduction

On behalf of Verizon – Environment Management, Shaw Environmental, Inc. (Shaw) was contracted to provide environmental consulting services during the removal of one 12,000-gallon gasoline underground storage tank (UST), associated piping and fuel pump from the Verizon – Irwindale Fleet Yard (Site) located at 5010 Azusa Canyon Road, Irwindale, California (Figure 1). UST removal work discussed in this report was completed in compliance with local and state regulatory requirements on May 20, 2009.

1.1 Site Description

The Site is located in a well developed setting of Irwindale, California, primarily comprised of industrial buildings mixed with multi-family residential properties. A single-story building housing a Verizon fleet fueling operations facility, a canopy covered fuel pump island and Verizon fleet vehicle parking lot occupy the majority of the site (Figure 2).

One 12,000-gallon double-wall steel unleaded gasoline UST used to fuel fleet vehicles was located to the south of the Verizon building. As Verizon decided to discontinue maintaining a UST at the site, the UST was scheduled for removal.

1.2 Permits

Prior to initiation of UST removal activities, Tait Environmental Services, Inc. (Tait), of Santa Ana, California completed a UST Application for Closure (issued on November 6, 2008) from the Los Angeles County Department of Public Works (DPW) Environmental Programs Division and was granted a permit, which authorized removal of the UST. The DPW Site File number is 3755-3882 and the closure permit number is 591016.

Before commencing with the tank removal activities, Shaw submitted a Rule 1166 Notification Form under Mitigation Plan Number 498435 and South Coast Air Quality Management District (SCAQMD) Identification Number 159709. Additionally, in advance of the removal activities, a representative of the Los Angeles County Fire Department (LACFD) was scheduled to observe UST removal activities. Copies of the permit application/removal permit, regulatory notification documentation, and State forms are included in Appendix A.

2.0 Tank Removal Field Activities

2.1 UST Removal

The Site is located within the SCAQMD and therefore was required to have in place an approved Various Locations Rule 1166 Contaminated Soil Mitigated Plan (Mitigation Plan). Prior to commencing work, Shaw applied for and received an approved Mitigation Plan from SCAQMD, number 498435. A copy of the Mitigation Plan is included in Appendix F.

As required by the Mitigation Plan, Shaw performed organic vapor monitoring during all excavation activities in accordance with applicable Rule 1166 monitoring requirements. Vapor monitoring logs are included in Appendix F.

On May 18, 2009, prior to removal of the UST, Tait removed the system's fuel pump and associated components. (While the dispensing hoses were completely flushed and removed, the fuel dispenser was left intact and will be removed at a later date by Tait.) Upon completion of these activities, Tait commenced with jack hammering the concrete overlying the UST, associated piping, and vent line trench, and excavating the soil fill material surrounding the UST. Digging and trenching activities continued through May 19, 2009. The removed fill material was placed on a plastic liner adjacent to the excavation. Photographic documentation of the UST removal activities is included in Appendix B.

On May 20, 2009, prior to removal, the UST was triple-rinsed by Nieto & Sons (Nieto) personnel using a fresh water/detergent mixture and a hot water pressure washer. Following rinsing, visual inspection of the UST revealed no residual sludge or liquid on the visible portions of the interior of the tank. Approximately 200 gallons of fuel and rinsate were removed from the UST using a vacuum truck. The rinsate and fuel were then transported for disposal, under manifest number 002152481-FLE to DeMenno Kerdoon in Compton, California. A copy of the hazardous waste manifest for the rinseate is included in Appendix C.

On May 20, 2009, under the oversight of LACFD Certified Industrial Hygienist (CIH) Ms. Nancy Carraway, Nieto secured the tank hoist straps and prepared the UST for removal. Ms. Carraway subsequently granted Nieto permission to remove the UST after they used a combustible gas indicator to measure the concentrations of flammable vapor and percent oxygen within the UST which were measured at below 1 percent and at 20.9 percent,

respectively. Additionally, Mr. Frank Garcia of LACFD was present to provide safety oversight.

The UST was removed using a crane. Following removal, the UST was inspected for signs of deterioration, holes, or leakage. The excavated tank was observed to be in good condition, without holes or cracks. According to the Hazardous Waste Tank Closure Certification completed by Ms. Carraway, no product, sludge, scale, rinsate or debris was observed within the UST. Subsequent to Ms. Carraway's visual inspection, the UST and associated piping were then transported by Nieto to Ecology Auto Parts in Santa Fe Springs, California. A copy of the manifest and certificate of destruction for the UST and piping are presented in Appendix D.

Mr. Garcia left the site after observing the successful removal of the UST from the excavation and it being secured to a flatbed truck for off-site transportation.

2.2 *Soil Sampling Activities*

Confirmation soil samples and soil stockpile samples were collected on May 20, 2009 in accordance with LACFD, DPW and California Regional Water Quality Control Board – Los Angeles Region (RWQCB-LA) soil sampling requirements. All soil samples were collected in clean, unused two-inch diameter stainless steel sleeves, capped, labeled, placed on ice in a cooler, and transported to the contract laboratory by Shaw personnel under appropriate chain-of-custody.

After collection, the soil samples were transported under strict chain-of-custody and submitted to Chemical & Environmental Laboratories, Inc. (C&E Laboratory), an Environmental Laboratory Accreditation Program (ELAP)-certified laboratory (ELAP number 2268) located in Santa Fe Springs, California. The excavation and stockpile soil samples were analyzed for the following analytes:

- Benzene, toluene, ethylbenzene and xylenes (BTEX), plus the fuel oxygenates methyl tertiary butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tertiary-butyl ether (ETBE), tertiary butyl alcohol (TBA), and tertiary-amyl methyl ether (TAME) using EPA Method 8260B
- Total petroleum hydrocarbons as diesel (TPH-D) using EPA Method 8015B Modified (carbon chain range C10 to C24)
- Total petroleum hydrocarbons as gasoline (TPH-G) using EPA Method 8015B Modified (carbon chain range C6 to C12)

- Methanol and ethanol using EPA Method 8015B Modified

Confirmation Sample Collection

The location of the former UST is identified on Figures 2 and 3. The location description of the confirmation samples collected following removal of the UST system are as follows:

- SS-01-2'; vent side floor, collected at 11:40
- SS-02-4', vent side floor, collected at 12:10
- SS-03-2'; fill side floor, collected at 12:47
- SS-04-4'; fill side floor, collected at 13:14
- SS-05-4'; east vent line trench floor, collected at 13:40
- SS-06-6'; east vent line trench floor, collected at 14:00
- SS-07-4'; west vent line trench floor, collected at 14:29
- SS-08-6'; west vent line trench floor, collected at 14:45
- SS-09-4'; adjacent to dispenser, collected at 15:00

All samples were collected on May 20, 2009. Two floor samples were collected from each end of the tank pit at approximately 2-feet and 4-feet below the surface of the excavation bottom. Additionally, two samples were collected from each end of the former vent line trench at approximately 4-feet and 6-feet below the floor of the excavated trench. Finally, a sample was obtained immediately adjacent and north of the dispenser at approximately 4-feet below surface grade (bsg).

Excavation samples SS-01-2', SS-02-4', SS-03-2', SS-04-4', SS-05-4', SS-06-6', SS-07-4', and SS-08-6' were collected by hand in stainless steel sleeves, directly from the excavation bucket. Excavation sample SS-09-4' was collected by pushing a stainless steel sleeve into soil exposed using a hand shovel. The locations and results for the excavation samples are shown on Figure 3.

Stockpile Sample Collection

The stockpiled soil was planned for use as excavation backfill, pending the review of analytical data and physical testing results. To characterize the stockpile, four discrete soil samples were collected and submitted for analysis on May 20, 2009. These samples were collected by pushing a stainless steel sleeve into soil from four locations along the stockpile perimeter. The locations and results for the stockpile soil samples, identified as SP-01

(collected at 15:20), SP-02 (collected at 15:30), SP-03 (collected at 15:40), and SP-04 (collected at 15:50) are shown on Figure 3.

2.3 Confirmation Soil Sample Results

No BTEX, TPH-G, TPH-D or fuel oxygenates were detected in the UST system confirmation soil samples. Soil sample analytical results are summarized in Table 1 and depicted on Figure 3. Copies of the laboratory reports are included in Appendix E.

2.4 Stockpile Soil Sample Results

No BTEX, TPH-G, TPH-D or fuel oxygenates were detected in the stockpile soil samples. Stockpile soil sample analytical results are summarized in Table 1 and depicted on Figure 3. Copies of the laboratory reports are included in Appendix E

3.0 Site Restoration

Review of the laboratory analytical results for the excavation and soil stockpile samples indicated that the stockpiled material was appropriate for use as backfill. Backfilling activities commenced on May 22, 2009; additional, site restoration activities were performed independent of Shaw oversight.

The fuel dispenser is securely stored on site and will be removed by Tait at a later date.

4.0 Conclusions

Based on the field observations and laboratory analytical data presented in this report, Shaw concludes the following:

- On May 20, 2009, one 12,000-gallon unleaded gasoline UST and associated steel piping were removed from the site.
- Groundwater was not encountered during tank removal activities.
- No sheen or other evidence of petroleum impact was noted on the in-situ soils or removed fill material.
- No BTEX, TPH-G, TPH-D or fuel oxygenates were detected in the excavation confirmation soil samples.
- No BTEX, TPH-D, TPH-G or fuel oxygenates were detected in the stockpile soil samples.
- Results of the laboratory analyses did not indicate a release of petroleum had occurred.
- The tank excavation was subsequently backfilled using the stockpiled soil and clean imported fill gravel.
- No further action is recommended for this site.

4.1 Reporting Requirements

One copy of this report will be forwarded to the following regulatory agency:

County of Los Angeles Department of Public Works
Environmental Programs Division
P.O. Box 1460
Alhambra, California 91802-1460
Attention: Manny Regalado

Notes:
1 - see Figure 3 for UST location
2 - results for TBA are reported as ND to the laboratory's method detection limit
bsg - below surface grade
DIPE - diisopropyl ether
ETBE - ethyl tertiary-butyl ether
MTBE - methyl tertiary butyl ether
J - result less than reporting limit but greater than method detection limit and is therefore estimated
NA - not applicable
ND_x - not detected above "x" laboratory detection limits
TAME - tertiary amyl-methyl ether
TBA - tertiary butyl alcohol
TPH-D - total petroleum hydrocarbons as diesel (carbon chain range C10 to C24)
TPH-G - total petroleum hydrocarbons as gasoline (carbon chain range C6 to C12)
UST - underground storage tank

1.0 INTRODUCTION

Hydrologue Inc (HI) was retained by Verizon the property owner to conduct a limited Focused Phase II Site assessment at the property located at 5010 Azusa Canyon Rd, Irwindale CA 91706-1884.

Verizon staff had observed that runoff from the adjacent property was directed toward the northern and eastern boundary of the Verizon facility. Hence under the direction of Mr. Masood Choudhury of Verizon, soil samples were collected and analytically tested to verify if the runoff from the adjacent property have impacted Verizon's property.

1.1 Scope of Work

The scope of work for this limited Phase II investigation, as directed by Mr. Masood Choudhury was as follows:

- Drilling and soil sampling of four shallow soil borings in the suspect areas to a depth of 1-2 feet below ground surface (bgs) using a hand auger
- Analytical testing of all soil samples for Volatile Organic Compounds (VOCs) using EPA Method 8260 and total recoverable petroleum hydrocarbons (TRPH) using EPA Method 418.1, Selected Metals, lead and Chromium using EPA 6010B
- Data analysis and preparation of this report

2.0 FIELD INVESTIGATION

The locations of the proposed borings were marked with wooden stakes. Soil borings B-1 through B-4 (Figure 2) were drilled along the property line where the runoff from the adjacent IRSCO Industrial Park property was directed towards the northern and eastern boundary of the Verizon facility.

2.1 Shallow Soil Sampling

Four shallow soil borings (Figure 2) were drilled and sampled on November 9, 2001. The borings were drilled in areas as suspected by Verizon as discussed in above. Each boring was drilled using a hand auger to a maximum depth of approx. 1 foot below ground surface (bgs). Soil sampling was accomplished using a stainless steel hand core sampler equipped with a sliding drive hammer. Due to systematic refusal at about 1 foot bgs due to the prevalence of cobbles in the soil, HI could not drill deeper. After multiple attempts to drive a tip using a hammer and breaker bar, and sample at deeper locations, HI determined that hand auger and hand sampling techniques would not be feasible at deeper sampling depths.

To minimize the potential for cross-contamination, all hand augers and core sampler parts were cleaned of excess dirt and moisture prior to use and between sampling episodes. Prior to use, core sampler was washed in a non-phosphate cleanser solution, rinsed with tap water and then distilled water. The soil samples were collected in two 2.5-inch diameter by 3-inch long brass sleeves mounted within a 2.5-inch diameter hand core sampler. The drive sampler was hand driven into the undisturbed soil at each sampling depth. After sample recovery, the ends of the tube were covered with Teflon sheet and plastic caps and sealed with silicon tape over the ends. The samples were labeled with sample identification, date and time of sampling and HI project number, and sealed in Ziploc™ plastic bags. The plastic bags containing the soil samples were then immediately placed into an ice chest chilled using crushed ice. Prior to use, all the tubes were washed in a non-phosphate cleanser solution rinsed with tap water and then distilled water.

The soil cuttings from the hand auger borings were logged in accordance with the Unified Soil Classification System (USCS). Soil cuttings were screened for organic vapors in the field using a Photovac 2020 photoionization air monitor calibrated to an isobutylene standard.

3.0 LABORATORY ANALYSIS

The soil samples collected on November 9, 2001 were analytically tested offsite by Associated Laboratory (AL). AL is State certified for hazardous waste testing (Certification No. 1338) using a 48-hour turn-around-time. The soil samples were analyzed for Volatile Organic Compounds (VOCs) using EPA Method 8260 and total recoverable petroleum hydrocarbons (TRPH) using EPA Method 418.1, Selected Metals, lead and Chromium using EPA 6010B. All analysis were conducted within 72 hours following sampling. The laboratory reports are contained in Appendix A.

TABLE 1

Analytical Testing Results
(mg/kg)

Sample ID	TRPH	Chromium	Lead	VOCs
B-1@1'	14	20.2	5.65	ND
B-2@1'	16	13.9	6.52	ND
B-3@1'	34	20.1	7.47	ND
B-4@1.5'	12	10.3	5.16	ND

ND = Not Detected See laboratory results for detection limit
Concentrations in milligrams per kilograms (mg/kg)
Please refer to Appendix A for the results.

4.0 SITE CHARACTERIZATION

4.1 Analytical Testing

Analytical test results indicate that Total Recoverable Petroleum Hydrocarbons (TRPH), lead and Chromium concentrations were detected above the laboratory reporting limit for all of soil samples collected from the proximity of the runoff generated from the adjacent facility. The highest concentrations of TRPH was detected in soil samples B-3@1' (34 mg/Kg). The highest concentrations of chromium was detected in soil samples B-1@1' (20.2 mg/Kg). The highest concentrations of lead was detected in soil samples B-3@1' (7.47mg/Kg). No VOCs were detected in any of the soil samples collected.

Taking into consideration the concentrations of TRPH in the soil samples from the proximity of industrial waste discharge area, it is HI opinion that the hydrocarbon contamination in the above mentioned soil samples appears to have originated from the runoff from the adjacent facility.

4.2 Depth to Groundwater

Publicly available information indicates that the depth to usable groundwater in the vicinity of the Site is 236.5 feet bgs. This is based on information from Well #4259B (ground surface elevation of 450.00 feet above MSL) located on Lante St and Sandstone Street (to the northwest of the Site) last measured on 03/30/2001 (personal communication with Jemarie, County of Los Angeles Department of Public Works, Hydrology Division, November 26, 2001).

5.0 CONCLUSIONS

Based on the analytical test results, the following conclusions are made:

- Analytical test results indicate that TRPH, lead and chromium concentrations were detected above the laboratory reporting limit for the soil samples collected from the proximity of the discharge generated from the adjacent facility. No VOCs were detected in any of the soil samples collected. It is possible that excessive industrial discharge from the adjacent facility impacted the soil within Verizon's property.
- Taking into consideration the concentrations of TRPH in the soil samples, it is HI opinion that the hydrocarbon contamination in the above mentioned soil samples appears to have originated from the runoff from the adjacent IRSCO Industrial Park.
- HI recommends that Verizon contact adjacent property, IRSCO Industrial Park to improve its house keeping practices and discontinue any industrial discharge.
- HI recommends to drill four soil borings to a depth of 20 feet bgs using a drilling rig or trenching using a backhoe and collect background samples within the Site to compare concentrations of the background samples with those obtained where runoff was entering Verizon property.

6. 0 LIMITATIONS

Our professional services have been performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities. This report has been prepared for Verizon Only. The conclusions and recommendations included in this report are based on information contained or referenced herein, and our best judgment. No other warranty, expressed or implied, is made as to the professional advice contained in this report.

Cooler Receipt Form

Client: Verizon (IKWINDALE) Project: /

Cooler Received: 11/9 Cooler Opened: 11/9 By: [illegible]

Signed: [illegible]

Was cooler scanned for presence of radioactivity, and noted if found? (Yes) / No

Were custody seals present on outside of cooler? Yes / (No)

a: If Yes, were they intact? Yes / No

b: Were signature and date correct? Yes / No

Were custody papers completely filled out? (Yes) / No

Did you sign and date the custody papers in the appropriate place? (Yes) / No

Was a shippers packing slip attached to the cooler? Yes / (No)

What kind of packing material was used? Ice

Was sufficient ice used? (Yes) / No Temperature: 0.8°C Date: 11/9

Were all bottles sealed in plastic bags? Yes / (No)

Did all bottles arrive intact? ~~Yes~~ / No

Were all bottles labeled correctly? (ID, Analysis, Dates, Times) (Yes) / No

Were the correct containers included for the tests required? (Yes) / No

Were all VOA vials checked for headspace? (NA) / Yes / No

Was sufficient volume of sample sent in all containers? (Yes) / No

Were correct preservatives used? (Yes) / No

Approved by: [illegible] Date: 11/9

If not approved: Name of person contacted _____ Date: _____

APPENDIX I

RESUMES

STEVE ANDERSON
Staff Scientist

PROFESSIONAL SUMMARY

As a geologist in ATC's Los Angeles, California office, Mr. Anderson has had experience conducting environmental assessment and remediation projects since 1989. Mr. Anderson has performed Phase I site assessments in a wide range of residential, commercial, and industrial settings. He has designed and implemented sampling programs for subsurface assessments, asbestos, lead-in-drinking water, and radon. As a staff scientist, he is responsible for the day-to-day management of of technical and field personnel. Mr. Anderson has performed assessments, sampling projects, and remediation projects for large and small private clients.

PROJECT EXPERIENCE

Market Sector

§ **Environmental Site Assessments / Multiple Acquisition Projects / various locations throughout California.** Prominent clients include Morgan Stanley, Blackrock Realty, Lowe Enterprises, Panattoni Development Company, LaSalle Hotel Properties, SC Fuels, and AvalonBay Communities Corporation, among others. Provided environmental site assessments of commercial and residential properties.

§ **Environmental Site Assessments / Various Southern California Locations.** Provided site assessments of large scale or high profile sites including Neverland Ranch, the former Marineland site, Antelope valley Fairground, and a 650-acre BKK landfill.

§ **Environmental Site Assessments / Multiple Financial Clients / various locations throughout California.** Prominent clients include LaSalle Investment Properties, RREEF, Prudential Mortgage Capital Corporation, CB Richard Ellis, Fortress Investment Company, Union Bank, Bank of America, and Comerica Bank, among others.

§ **Environmental Site Assessments / Various Southern California Locations.** Provided site assessments for national clients including Verizon, Hertz, O'Reilly Auto Parts, and North American Terminals, among others.

§ **Subsurface Investigations / Former Service Station Sites / Multiple Private Clients / Southern California.** Served as Project manager responsible for planning and executing site assessment activities including drilling oversight, logging, soil sampling and groundwater grab sampling at former service station locations in Los Angeles, San Bernardino, and Kern Counties. Primary duties included interaction with subcontractors, owners, and report preparation.

§ **Remediation Management.** / Chevron USA, El Segundo, California / Coordinated remediation of petroleum-contaminated soil at the El Segundo refinery.

EDUCATION

§ M.S. Geology, California State University, Northridge, University, 1992
§ B.A. Earth Science, California State University, Northridge, University, 1974

TRAINING AND CERTIFICATIONS

§ 40-Hour OSHA HAZWOPPER Health and Safety Certification (29 CFR 1910.120)
§ EPA AHERA-Certified Asbestos Building Inspector
§ EPA AHERA-Certified Contractor Supervisor

Todd Stanford, REHS, CEM
Principal Scientist

PROFESSIONAL SUMMARY

Todd Stanford has more than 28 years of experience in site assessment, soil and groundwater remediation, pharmacology, risk assessment, occupational health and safety, and air toxics. His qualifications include extensive experience planning, directing, and completing environmental site assessments, designing remedial projects for soil and groundwater, performing human and ecological risk assessments, and evaluating the fate and transport of chemicals in soil, groundwater, and air. His experience also includes environmental, health, and safety management program development, multi-media environmental, health, and safety compliance auditing, risk management planning and solid waste management. Mr. Stanford has served on the Scientific Advisory Board for California AB 2588 and the Private Site Management Advisory Committee for AB 1876.

During Mr. Stanford's career, his project management experience has been applied to capital construction projects, underground storage tank facilities, chemical production and bulk storage facilities, manufactured gas plant sites, power generation and distribution facilities, and State and Federal Superfund sites.

PROJECT EXPERIENCE

Multi-media Compliance Auditing and EHS Compliance

- **Lead Auditor / Port of Long Beach, Maintenance Facility & Operations, Environmental Compliance Audit / Long Beach, CA.** Led an environmental compliance audit of multiple Port of Long Beach operations which focused on review and determination of compliance status of various operations relative to applicable Federal, State, and local air regulations. The audit focused on air quality, hazardous materials, hazardous waste, aboveground and underground storage tanks, stormwater, and wastewater. The audit also evaluated the status of existing formal environmental health programs, including written programs, policies, span of control, and definitions of personnel roles and responsibilities.

- **Project Director and Lead Auditor / California Institute of Technology/Jet Propulsion Laboratories, Multi-Media Compliance Auditing / Pasadena, CA.** Oversaw a series of multi-media assessments and audits of educational and research oriented facilities. Provided environmental compliance auditing services as related to hazardous waste management, above-ground and underground storage tank management, business emergency planning, air emissions and Title V permit compliance, asbestos, lead-based paint, and PCBs management, CalARP Risk Management Planning, Greenhouse Gas emissions reporting and verification, and related environmental compliance programs.

- **Lead Environmental Auditor / Confidential Water District, EH&S Program Compliance Assessment / California.** Managed a multi-disciplinary assessment of a public water utility's environmental, health, and safety programs. The environmental component of the assessment focused on CalARP, Clean Air Act/Air Quality Permit Compliance, Clean Water Act compliance, Hazard Communication, Hazardous Materials and Hazardous Waste Management, Spill Prevention Control and Countermeasure Planning, Stormwater Pollution Prevention and Monitoring Plans, and above-ground and underground storage tank programs. The assessment covered facilities constructed an operated by the utility including maintenance activities, two (2) water treatment plants, a desalination plant, two (2) active groundwater well fields and a water blending facility. Completed an organizational management assessment that considered several staffing and placement of EH&S functions within the organization as related to comparable utilities of similar size and operations. The organizational management assessment provided recommendations on EH&S staffing, suggested management and reporting structures, and management systems development.

- **Lead Auditor / DTE Energy, Biomass Power Plants, CalARP and Process Safety Management Audits / Multiple Locations, California.** Completed focused environmental and safety compliance audits relative to California Accidental Release Program (CalARP)/Federal Risk Management Program and CalOSHA Process Safety Management (PSM) audits of several biomass power plants in California. The focus of the audits related to processes involving the storage and use of anhydrous ammonia and facilities compliance with the CalARP/PSM requirements. Audit activities included a detailed review of covered processes, accident history, prevention program, process safety information, update of Process Hazard Analyses, offsite consequence analysis, operating and training procedures, mechanical integrity program, management of chance, and employee participation and incident investigation programs.

- **Lead Auditor / CalPeak Power, Risk Management Plan and Process Safety Management Auditing / Multiple Locations.** Supported five (5) electrical power generating facilities that utilize aqueous ammonia to control emissions of nitrogen oxides. The audit program elements included detailed reviews of covered processes, accident history, prevention programs, process safety information, update of Process Hazard Analyses, offsite consequence analysis, operating and training procedures, mechanical integrity programs, management of chance, and employee participation and incident investigation programs. (2015-2016)

- **Environmental Compliance Manager / Precision Specialty Metals, Environmental Compliance Support / Los Angeles, CA.** Developed a comprehensive, multi-media environmental compliance program involving hazardous waste profiling, manifesting, and tracking; industrial wastewater treatment system monitoring and reporting; air permitting and related compliance activities (including Title V and RECLAIM programs); EPCRA reporting; RMPP compliance; and Stormwater Pollution Prevention Planning, implementation, and reporting. Interfaced with various regulatory agencies including the State Board of Equalization, Air Pollution Control Districts, Sanitation and Industrial Wastewater Discharge agencies, US Environmental Protection Agency, and Regional Water Quality Control Boards. Provided ongoing technical support including identification of hazardous waste source reduction alternatives and general facility compliance with community right-to-know regulations.

- **Lead Auditor / Danaher Corporation / Multiple Locations / California and Arizona.** Performed multi-media environmental health and safety compliance audits of four (4) aerospace and manufacturing facilities in support of corporate auditing practices for two different operating divisions within Danaher. Auditing services included focus on hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, Permit by Rule/Tiered Permitting, SARA Title III and EPCRA, OSHA, DOT, and TSCA. Provided supplemental consulting services and assisted in the development of inventory management and reporting tools and in the preparation of electronic report filings under EPCRA.

- **Lead Auditor / Project Cardinal, EH&S Compliance Auditing / Western and Central US.** Managed multi-media environmental health and safety compliance audits of aerospace and industrial manufacturing facilities located in California, Arizona, Nevada, and Florida. The compliance evaluations were performed subsequent to various acquisitions by a confidential parent company. Provided environmental compliance auditing services as related to hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, SARA Title III and EPCRA, OSHA, DOT, and TSCA. Observed deficiencies were recorded and reported to USEPA under provisions of the EPA's Incentives for Self-Policing: Discovery, Disclosure, Correction and Prevention of Violations Policy, 65 Fed. Reg 19618.

- **Lead Auditor / Confidential Client / Los Angeles, CA.** Managed several comprehensive multi-media compliance audit of a company that is engaged in maintenance and leasing of corporate aircraft, as a component of pre-merger due diligence. Provided environmental compliance auditing services as related to hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, SARA Title III and EPCRA, OSHA, DOT, and TSCA.

- **Project Manager / Kirkland & Ellis, M&A Environmental Auditing / Various Locations / Western and Central US.** Performed limited environmental compliance audits of several food production and distribution facilities located in California and Texas. The environmental compliance evaluations were performed as a component of pre-acquisition due diligence. Provided environmental compliance auditing services as related to air emissions and permitting, underground storage tanks, spill prevention and control, ozone depleting substances, Risk Management Planning, SARA Title III and EPCRA, and Process Safety Management.

- **Project Manager / Nixon Peabody, M&A Environmental Auditing / Various Locations / Western US.** Managed several comprehensive multi-media compliance audits of industrial manufacturing facilities located in the Western US. Compliance evaluations were performed subsequent to various acquisitions by a confidential parent company. Provided environmental compliance auditing services as related to hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, SARA Title III and EPCRA, OSHA, DOT, and TSCA.

- **Project Manager / Metal Finishing Companies, Environmental Health and Safety Consulting / Various Locations, CA.** Managed environmental and health & safety compliance issues for a number of metal finishing companies operating in Southern California. Typical consulting services included evaluating exposures to personnel working near open process tanks containing phosphoric, nitric, and sulfuric acids, nickel, tin, copper, and hexavalent chromium; general and specific requirements for air emissions from degreasing solvents and air emissions from anodizing and etching, and electro and electro-less plating of nickel, chromium, copper, tin, silver, and gold. Reviewed source testing results, established emissions estimates based on normalized facility-specific indices, conducted screening level risk evaluations, assisted in optimizing wastewater treatment system efficiency, identified source reduction alternatives, and provided training to facility personnel in the areas of environmental compliance and worker and community right to know regulations. Also, developed occupational safety and training programs for eye and face protection, hearing conservation, confined space identification and permitting, lockout/tagout, foot protection, respiratory protection, and operation of industrial trucks.

Human and Ecological Risk Assessment

- **Project Manager / Confidential Clients, Proposition 65 Exposure Assessment / Various Locations, California.** Evaluated 100 consumer products and over 20 chemicals listed by the State of California as carcinogens, developmental or reproductive toxicants. Listed chemicals evaluated included acrylamide, volatile organic compounds, dioxins/furans, polynuclear aromatic hydrocarbons, metals, and phthalates. The evaluations were performed for a wide range of consumer products including paper products, toiletries, and durable goods. The evaluations ranged from quantitative exposure assessments utilizing default exposure parameters for typical use scenarios to detailed exposure assessment sampling and analysis to establishing exposure point concentration estimates based on gravimetric, bulk, and wipe sampling protocols. The evaluations included a three phase review process which included identification of listed chemicals in the supply or manufacturing chain, a qualitative evaluation of exposure potential based on the finished product composition, and a final quantitative assessment of exposure under typical product use conditions. The results of the analysis were utilized to inform the manufacturer or supplier on potential Proposition 65 notification requirements, to assist in the identification or alternative product formulations that would not result in Proposition 65 notifications, and to establish protocols for further refinement of exposure parameters that contribute most-significantly to potential consumer exposures and risks.

- **Technical Lead/ Various Industrial Companies, Vapor Intrusion and Health Risk Assessment Services / Western United States.** Completed human health risk assessments for a variety of petroleum, chlorinated solvent, heavy metal, dioxin/furan, and radionuclide impacted sites and facilities throughout the continental United States. Risk assessment clients include, among others, ConocoPhillips, ExxonMobil, Farmer Brothers, Chevron, Unocal, Simpson Paper Company, Lockheed Martin Corporation, Coastal Corporation, Rohr Industries, Signet Armorlite, BP/Arco, Gatron Industries, Home Depot, BNSF Railroad, Kinder-Morgan Energy Partners, State of Hawaii Department of Transportation, Montrose Chemical Company, Weyerhauser, Kimberly Clark, Chromalloy, and Jorgensen Steel. The health risk assessments have ranged in complexity from single exposure pathway analyses to complex multi-media exposure pathways involving multiple chemicals. The risk assessment results have been used in internal risk-management decision making and prioritization, litigation support, and as regulatory compliance tools. Assessed and refined several vapor intrusion evaluation methodologies and the integration of risk management measures for more than 28 years. Assessments have been approved by agencies including the California Department of Toxic Substances Control, California Air Resources Board, Hawaii Department of Health, Nevada Department of Environmental Protection, Arizona Department of Environmental Quality, the United States Environmental Protection Agency, Lahontan, Central Coast, Los Angeles, Santa Ana, San Diego, Central Valley, and San Francisco RWQCBs. Also, participated in the public communication of health risk in support of many projects. *(1991-2016)*

- **Risk Assessment Manager / Confidential School Districts, School Site Risk Assessment and Remedial Action Planning / Southern California:** Supervised the Human Health Risk Assessment (HHRA) component of the Preliminary Endangerment Assessment process for multiple proposed and existing school sites for several school districts in Southern California. Chemicals of potential concern evaluated included volatile organic compounds, heavy metals, PCBs, chlorinated herbicides and pesticides, petroleum hydrocarbons, and semi-volatile organic compounds in soil, groundwater, and soil vapor. The results of the HHRA were used to support the future site development activities and to identify specific risk management measures that would be used to reduce potential exposures and risks to future students and staff at the school sites.

- **Risk Assessment Manager / Molycorp Minerals, Mountain Pass Mine / Human Health Risk Assessment (HHRA) / Mountain Pass, CA:** Supervised the Human Health Risk Assessment (HHRA) component of the Corrective Action and Closure Plan for the Mountain Pass Mine and Mill Site located in San Bernardino County, California. The HHRA included quantitative evaluation of potential human health risks and qualitative evaluation of potential ecological risks associated with current site conditions for lanthanides, actinides, and radionuclides (e.g., radium, thorium, and uranium decay series). Health-based cleanup goals for soil were also derived for lanthanides and actinides. For radionuclides, cleanup goals were developed based on surface radiation exposure rates for specific areas. The HHRA and cleanup goals were used to identify additional geographic areas that warrant additional investigation and/or mitigation and established the basis for determining that post-remediation concentrations met the site risk management objectives.

- **Risk Assessment Manager / Riverside Agricultural Park, HHRA / Riverside, CA:** Managed the post-remediation Human Health Risk Assessment (HHRA) pursuant to the California Land Reuse and Revitalization Act Agreement. The Site encompasses approximately 62 acres of undeveloped land that was first developed as a sewage treatment plan in 1942. The sewage treatment plant was decommissioned in 1965. However, environmental assessment activities identified the presence of polychlorinated biphenyls (PCBs), semi-volatile organic compounds, volatile organic compounds, pesticides, herbicides, dioxins/furans, and metals in soil. Implemented a remedial action plan which included the excavation and off-site disposal of approximately 174,000 tons of impacted soil. The HHRA was conducted in order to assess the potential human health risks associated with the future residential development and use of the property and to confirm the adequacy of the remedial actions. DTSC subsequently approved the remedial action completion report and HHRA and issued a certificate of completion in 2014.

- **Risk Assessment Manager / Carroll Hall Shelby Trust, HHRA / Gardena, CA**. Managed the Human Health Risk Assessment (HHRA) in order to further refine the chemicals of potential concern, establish health-based soil and groundwater remediation objectives, and to evaluate vapor intrusion conditions resulting from remedial activities implemented during pilot testing. Potential exposures considered in the HHRA included direct contact with soil and vapor intrusion to existing or future site structures. Supplemental monitoring of soil gas and indoor air was performed during the pilot remediation testing period to confirm that mitigation measures were adequate to protect current building occupants from exposures to chlorinated VOCs emanating from the subsurface.

- **Risk Assessment Manager / Los Angeles County Department of Public Works / Oxford Basin, HHRA / Marina Del Rey, CA:** Managed the Human Health Risk Assessment (HHRA) in support of proposed improvements to a storm retention basin. Previous environmental investigations identified the presence of heavy metals, PCBs, chlorinated herbicides and pesticides, petroleum hydrocarbons, and semi-volatile organic compounds in basin sediments and surrounding soil. Proposed site enhancement activities include construction of new features to increase its storage capacity and improve the general appearance and recreational use of this feature. The results of the HHRA were used to support the future site development activities and to identify specific risk management measures that would be used to reduce potential exposures and risks to future site workers and recreational users.

- **Risk Assessment Manager / Pacific Gas and Electric Company, Hunters Point Power Plant Dismantlement Contract, HHRA / San Francisco, CA.** Managed the Human Health Risk Assessment (HHRA) component of the Remedial Investigation/Feasibility Study (RI/FS) activities. Activities performed in support of the RI/FS activities involved development of general data quality objectives for soil, groundwater, sediment and soil vapor to facilitate the application of field data in human health and screening ecological risk assessments. Developed a Conceptual Site Risk model for the site based on the anticipated future unrestricted use of the property. Specific elements of the HHRA completed as a component of this project include statistical data evaluation for determining background concentrations of metals and asbestos in soil, identification of chemicals of potential concern for inclusion in the quantitative HHRA, quantification of plausible human exposure pathways involving soil, soil vapor (vapor intrusion), and groundwater, identification of Chemicals of Concern (COCs) that influence the site-wide risk estimates, and determination of health-based screening levels for COCs in soil, groundwater, and soil vapor. The health-based screening levels were used in conjunction with the statistically-derived background concentrations to establish the remediation goals that served as the basis for evaluation potential response, mitigation, and engineering control alternatives.

- **Principal Scientist / Chevron/Unocal and ExxonMobil Petroleum Tank Farms and Operating Fields, Site Assessment, Fate and Transport Modelling, Health Risk Evaluation, and Remedial Action Planning and Implementation / Various Locations.** Conducted environmental site assessment and establishment of remedial action goals for former bulk storage facilities, tank farms, production fields, and crude-oil gathering and distribution lines. Coordinated acquisition of sampling data regimen and laboratory analyses for soil, groundwater, and soil vapor; performed remedial feasibility testing; and prepared and implemented remedial action plans for active and idle properties. Assessment and remediation activities were performed to both support proposed divestment and redevelopment activities and in defense of third-party suits. The results of fate and transport modeling and human health risk assessments were used to establish land use-specific remedial goals for COPCs in soil, soil vapor, and groundwater. Assessment and remediation activities were performed under the jurisdiction of variety of regulatory agencies including the Lahontan, Central Coast, Los Angeles, Santa Ana, San Diego, Central Valley, and San Francisco RWQCBs, Department of Toxic Substances Control, and California Air Resources Board.

- **Project Manager / Honolulu Harbor Working Group, Iwilei District Participating Parties / Honolulu, HI.** Oversaw a multi-party PRP group for a 0.5 square mile area that is impacted by petroleum hydrocarbons in soil and groundwater and methane gas in the subsurface. Developed a conceptual site model of fate, transport, and human and ecological exposure pathways, calculated health-based screening levels for chemicals of potential concern, and developed a comprehensive database and GIS application that provided focus to ongoing assessment and interim remedial activities. Also, interfaced with State of Hawaii and USEPA regulators and developed vapor migration and vapor intrusion screening algorithms to evaluate potential impacts to indoor and outdoor air and prioritize parcels for active mitigation, institution of land use covenants, and application of administrative controls.

- **Risk Assessment Manager / Former Railroad Facility, Health Risk Evaluation and Remedial Action Planning / San Jose, CA.** Managed all aspects of a human health risk assessment for an approximately 13 acre former rail facility impacted by surficial and subsurface metals, polynuclear aromatic hydrocarbons (PAHs), pesticides/herbicides, and volatile organic compounds. The health risk assessment considered the redevelopment of the property for residential use. Consequently, performed an evaluation of potential risks under a proposed future residential land-use scenario under baseline (i.e., pre-remediation) conditions for direct exposure and vapor diffusion exposure pathways. The health risk assessment also included an evaluation of the potential migration of methane gas and volatile organic compounds in soil vapor from two adjacent landfills. Developed health-based remediation goals for metals, PAHs, and pesticides/herbicides in soil to protect future site residents from direct contact with these constituents. The results of the vapor diffusion analysis were used to establish engineering controls to prevent the migration of methane gas and VOCs from the adjacent landfills to the subject property and from the subsurface to indoor air within the residences. Following approval of the health-risk assessment and regulatory concurrence with the remediation goals, the remedy was implemented and a no further action determination was obtained.

- **Principal Scientist / Pacific Gas and Electric Company, Humboldt Bay Generating Station (HBGS) Demolition and Abatement Project / California.** Completed a screening level risk assessment for potential construction-related exposures associated with the fast-track demolition and abatement project. The results of the human health risk assessment demonstrated that residual chemicals in soil do not pose a significant threat to construction workers or future site workers and that no additional risk management measures or remediation is warranted.

- **Principal Scientist / Lockheed Martin Corporation, Former Industrial Light Metals Facility / Torrance, CA.** Provided risk assessment services for chlorinated and aromatic hydrocarbons in soil and groundwater at a former aerospace facility. Risk assessment services included evaluation of vapor intrusion into indoor air under current and anticipated future site conditions and hypothetical future groundwater use scenarios. Analysed the fate and transport of chlorinated solvents in soil to determine whether residual soil impacts represent a potential source of impact to groundwater. The results of the risk assessment have been used to support site development and use during remedial testing and remedy implementation. The results of the fate and transport analyses were used to justify closure of several solid waste management units associated with the facility.

- **Principal Scientist / Confidential Clients, Risk Assessment and Risk Management Planning / Multiple Locations, California and Nevada.** Prepared documentation related to potential releases of anhydrous and aqueous ammonia and hydrofluoric acid from onsite storage and NO_x control (Selective Catalytic Reduction) systems for several proposed and existing power generation facilities and manufacturing facilities. Lead process hazard reviews and identified potential mitigation measures for deployment at facilities in conjunction with site selection and preliminary engineering design of facilities. Performed offsite consequence analyses for facilities based on mitigated and unmitigated alternatives in accordance with Federal RMP and CalARP requirements.

- **Project Manager / City of Monterey, Monterey Swim Gym Facility / Monterey, CA.** Oversaw the human health risk assessment portion of the Monterey Swim Gym Facility and assisted in comprehensive site assessment and remedial design for a former manufactured gas plant site. Specific project responsibilities included identifying potential constituents of concern related to former facility operations, designing a statistical sampling plan, completing a human health risks assessment involving current and potential future exposures related to property development, and establishing remedial design objectives. The remedial design objectives were used to establish the geographic limits of the remedial response in consideration of the intended site development and to support the beneficial reuse of impacted soil.

- **Project Manager / Ramco, Mace Ranch Development – Davis, CA.** Supervised tasks for a former pesticide and fertilizer bulk facility located in an agricultural area of Central California. Historical dumping of bulk pesticides including ethylene dibromide (EDB), dichloropropane (DCP), and dibromochloropropane (DBCP) into an unlined wash basin created a plume of pesticides in soil and perched groundwater that threatened a nearby municipal water well. Remedial investigations focused on establishing health based remedial goals for soil and groundwater that are protective of the underlying utilized aquifer and allow for residential development of the adjacent property. The selected remedial alternative included both limited remedial excavation of impacted soil and groundwater plume control.

- **Risk Assessment Manager / Confidential Client, Risk Characterization and Management / Chubut Province, Argentina.** Evaluated potential risks to human health of mine site workers and nearby residents resulting from mine site operation and potential catastrophic event scenarios. Activities evaluated as a component of this project included transport of hazardous substances during mine operation, plant operations and process-related activities, impoundment and sterile rock pile facilities, and onsite use of hazardous substances. Also, identified risk management measures for the activities associated with the greatest risk probability and consequence.

- **Risk Assessment Manager / Former Cannery, Remedial Investigation and Mitigation / Honolulu, HI.** Performed a comprehensive evaluation of the presence and distribution of multiple chemicals in soil and groundwater beneath a former cannery. Chemicals evaluated include substituted benzene compounds and polynuclear aromatic hydrocarbons. Conducted an analysis of the potential fate and transport potential of chemicals in groundwater and evaluated potential onsite and offsite health risks associated with direct contact and inhalation of chemicals during and after site development. The results of the health-risk assessment were used to establish vapor control criteria for volatile compounds and methane gas and to secure approval for site redevelopment for commercial use.

- **Risk Assessment Manager** / Unocal Corporation, Emissions Inventory Planning, Reporting, Fugitive Emissions Monitoring, and Health Risk Assessments / Santa Maria, CA. Conducted emissions quantifications for pressure distillates, crude towers, coker wet gas, overhead gas, tail gas treatment, straight run naphtha, crude heaters, crude and recovered oil storage tanks, and coker naphtha for emissions of benzene, ammonia, toluene, hydrogen sulfide, chlorine, zinc, xylenes, and C8 aromatics. Conducted source testing of sump vapor recovery units and obtained permits to operate facility equipment at various pump stations. Developed source testing and emissions quantifications methodologies and completed AB2588 health risk assessments for facility emissions.

- **Project Director / City of Burbank Redevelopment Agency, B-1 Remediation Oversight / Burbank, CA.** Assisted the City of Burbank in determining whether the Vapor Extraction System was operating in compliance with the Conditional Use Permit issued by the City. Activities performed include collection and analysis of verification samples of system air emissions, evaluate calibration of in-line VOC detectors and programmable logic controllers, and completion of weekly and quarterly health risk assessments based on facility emissions. Developed and maintained a webpage for the City of Burbank containing the results of verification samples, health risk evaluations, and vapor extraction system operational data.

Environmental Due Diligence

- **Project Director / Union Bank / Environmental Due Diligence / Multiple Locations:** Managed Union Bank's environmental risk management and environmental due diligence activities related to secured loans and real estate used as collateral for loan securitization. Completed more than 200, Phase 1 Environmental Site Assessments and Transaction Screen Reports for Union Bank of California for locations throughout the continental United States. Also, completed environmental site assessments, removed underground storage tanks, developed remedial action plans, and installed and operated soil and groundwater remediation systems at a variety of industrial, commercial, and retail properties.

- **Project Director / Combined Properties, Incorporated / Environmental Due Diligence, Assessment and Remediation / Multiple Locations, Southern California:** Directed environmental due diligence activities for acquisition and divestment of commercial properties. Managed all aspects of pre-acquisition environmental due diligence activities including preparing Phase I Environmental Site Assessment (ESA) documents, characterizing subsurface soil and groundwater conditions for petroleum hydrocarbons and hazardous substances, conducting geotechnical evaluations, completing asbestos and lead-based paint evaluations, designing, installing and operating remedial systems, and providing assistance on mitigation of subsurface and building hazards.

- **Project Director / Related Companies of California / Environmental Due Diligence, Assessment and Remediation / Multiple Locations, Southern California:** Oversaw environmental due diligence activities for acquisition and divestment of residential and mixed-use properties. Responsible for all aspects of pre-acquisition environmental due diligence activities including preparing Phase I ESA documents, characterizing subsurface soil and groundwater conditions for petroleum hydrocarbons and hazardous substances, conducting geotechnical evaluations, completing asbestos and lead-based paint evaluations, designing, and providing assistance on mitigation of subsurface and building hazards.

- **Project Director / First Republic Bank, Environmental Due Diligence / Multiple Locations, Southern California:** Managed First Republic Bank's environmental risk management and environmental due diligence activities related to secured loans and real estate used as collateral for loan securitization. Completed more a dozen Phase I ESAs and Transaction Screen Reports at various locations throughout Southern California.

Hello Mr. Choudhury:

I am with ATC doing Phase I ESAs for the Frontier facilities at Irwindale and Santa Fe Springs.

Do you know which firm or firms remove hazardous waste from these sites and on what schedule? – Ecology Control Industries, located in Torrance, CA / on a monthly basis.
My on-site contacts did not know.

The wastes would typically consist of used oil, oil filters, and other used automotive fluids, clarifier sludge, telephone poles, and universal wastes. – Yes

I assume old batteries and tires are returned to the suppliers and if you know those as well, so much the better.

Thank you for your time

WELL INVESTIGATION PROGRAM - FORMER SEPTIC TANK AND CESSPOOL
GTE California Plant at 5010 North Azusa Canyon Rd., Irwindale, CA
(File No. AB108.0212)

We are in receipt of the August 31, 1992, fax transmittal from your consultant, Camp Dresser & McKee Inc. (CDM), regarding the analytical results of soil samples taken from the former septic tank located north of the truck wash.

The former septic tank and riser contained sand backfill with about an inch of sludgy material at the bottom. Analyses of the sludgy material detected 11 mg/kg of chloromethane and 24 mg/kg of 1,4 - dichlorobenzene. According to CDM staff, the former cesspool was not located, but trenching operation a few feet west of the former septic tank revealed sand backfill and pieces of brick.

Based on the field information and laboratory data, no further action on your part is required at this time with respect to the former septic tank and cesspool area. It should be noted that additional subsurface investigation may be required in the future based on surrounding facility investigations and review of any site specific information.

Three copies of the subsurface investigation report summarizing the results of the clarifier modification and soil sampling must be submitted to this Regional Board by **September 30, 1992.**

Please call Alex P. Carlos at (213) 266-7545 if you have any questions.

SITE ASSESSMENT AND REMEDIATION - INDUSTRIAL WASTE CLARIFIER
GTE California Plant at 5010 North Azusa Canyon Rd., Irwindale, CA
(File No. AB108.0212)

We are in receipt of your December 1, 1992, letter transmitting the report, dated November 24, 1992, describing the site assessment and remediation of the industrial waste clarifier at the subject site.

As noted in the report, some soil samples were collected by using a hand trowel and transferred into a brass sleeve. Some confirmatory soil samples for volatile organic compound (VOC) analysis (e.g., GTEIR-11) were placed in glass jars and the quantitation limits (QL) of 1-2 mg/kg exceeded the required QL of 5-10 µg/kg for EPA Method 8010. No VOCs were detected in the samples. As a result, the analytical results are only a low estimate and not considered representative of site conditions.

We understand that an addendum to the subject report will be submitted to the Regional Board following the disposal of the sludge and piping material generated during the remediation of the sewer line associated with the clarifier.

On the basis of this investigation data, no further action on your part is required at this time with respect to the Well Investigation Program. However, it should be noted that additional subsurface investigation may be required in the future based on any site specific information and surrounding facility investigations.

If you have any questions, please call Alex P. Carlos at (213) 266-7545.

Dear Ms. McCormick:

UST LOCAL OVERSIGHT PROGRAM (LOP) REVIEW SHEET
RESPONSE TO THE LACDPW REVIEW LETTER DATED DECEMBER 28, 1992
SITE ASSESSMENT AND REMEDIATION CLOSURE REPORT FOR GASOLINE PUMP ISLAND
SITE ASSESSMENT AND REMEDIATION CLOSURE REPORT FOR SAND AND GREASE INTERCEPTOR
PREPARED BY: CAMP DRESSER AND MCKEE, INC.
REPORTS DATED: NOVEMBER 24, DECEMBER 2, 1992 AND FEBRUARY 9, 1993
CLOSURE PERMIT NO. 4994B
LOCATION: 5010 NORTH AZUSA CANYON ROAD, IRWINDALE

The Site Assessment Report and Remediation Closure Report for gasoline and pump island and response to the LACDPW December 28, 1992 letter have been reviewed and found adequate. However, the investigation and remediation in the area of sand and grease interceptor is under the jurisdiction of Industrial Waste Unit of LACDPW. Any related reports should be directed to this Unit. Please contact Mr. David Esfandi at (818) 458-3540 for any work conducted in this area.

Please note that as per our telephone conversation on February 10, 1993, a report for the investigation conducted on December 10, 1992 in the area of former diesel pump island will be submitted to this office. But, as of today, this office has not received the report. Be advised that in order for this office to consider issuing a closure on this site, this report must be submitted.

Submit the requested report to this office by May 13, 1993.

Failure to comply with the Los Angeles County Department of Public Works UST LOP directives may disallow you from participating in the UST Cleanup Fund.

Notify Dave Lobato at (818) 458-4374 a minimum of 72 hours prior to commencing any significant investigation, remediation, or assessment activities on site. The Los Angeles County Department of Public Works may disregard the work performed if the County was not properly notified.

Correspondence should be submitted in duplicate to the Los Angeles County Department of Public Works, UST Local Oversight Program, Annex Building, P. O. Box 1460, Alhambra, CA 91802-1460.

If you have any questions regarding this matter, please contact Matt Liao at (818) 458-3978.

Very truly yours,

T. A. TIDEMANSON

Dear Ms. McCormick:

HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE CERTIFICATION
CLOSURE PERMIT NO. 4994B
LOCATION: 510 NORTH AZUSA CANYON ROAD, IRWINDALE

This office has reviewed the Final Closure Report submitted on March 24, 1993. Based on the information submitted, this letter confirms the completion of site investigation and remedial action at the above site. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time. The closure however, pertains to the underground tank area only. The assessment and remediation for the contamination in the area of the sand and grease interceptor should be directed to the LACDPW, Industrial Waste Unit.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings or site usage.

If you have any questions regarding this matter, please contact Matt Liao at (818) 458-3978.

Very truly yours,

T. A. TIDEMANSON

Dear Mr. Brodecki:

HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE CERTIFICATION
FACILITY LOCATION: 5010 N. AZUSA CYN. RD., IRWINDALE (3S)
CLOSURE APPLICATION NUMBER 150480

This office has reviewed the final closure report dated August 7, 1996 required as a part of the subject closure permit. Based on the information submitted, we find that all closure requirements have been completed. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at this site. Nor does it relieve you of the responsibility to clean up existing, additional, or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

If you have any questions regarding this matter, please contact Mr. Hamid Kabar of this office at (818) 458-3516, Monday through Thursday, 7:00 a.m. to 5:30 p.m.

Very truly yours,

HARRY W. STONE

June 5, 1998

Ms. Kim D. Bray
GTE California Incorporated
Post Office Box 725
Chino, CA 91708

Dear Ms. Bray:

SAN GABRIEL VALLEY CLEANUP PROGRAM - NO FURTHER REQUIREMENTS - PROPERTY LOCATED AT 5010 NORTH AZUSA CANYON ROAD, IRWINDALE, CA - (FILE No. 108.0212)

We have reviewed the REPORT OF SOIL GAS INVESTIGATION dated November 9, 1995, submitted on your behalf by your consultant, Camp, Dresser & McKee. This report contains the analytical results for the seven soil vapor samples collected on October 18, 1995. These samples were collected for the assessment of potential volatile organic compound (VOC) contamination. The results of the chemical analysis did not detect VOC contamination in the soil vapor.

Based on these findings, Board staff concludes that the assessment work performed to date at your facility adequately evaluated the VOC contamination. As a result, no further requirements are required with respect to the San Gabriel Valley Cleanup Program.

Please notify this Regional Board of any change in your operations, regarding storage and handling of chemicals or disposal of wastes. It should be noted that this letter in no way releases you from any chemical and/or waste handling of this or any other agency. In addition, the jurisdictional requirements of other agencies such as the United States Environmental Protection Agency are not affected by this Regional Board's "no further requirement" determination. Such agencies may choose to make their own determination concerning the Site. If you have any questions regarding this matter, please contact Dave Rasmussen at (213) 266-7641.

Sincerely,

ARTHUR G. HEATH Ph.D.
Environmental Specialist IV

CLOSURE CERTIFICATION
CLOSURE APPLICATION NO. 591016
FACILITY LOCATED AT 5010 AZUSA CANYON ROAD, IRWINDALE (3S)

This office reviewed the final closure report dated June 19, 2009, required as a part of the subject closure permit. Based on the information submitted, we find that all closure requirements have been completed. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at this facility. Nor does it relieve you of the responsibility to cleanup existing, additional, or previously unidentified conditions at the facility, which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

If you have any questions, please contact Mr. Phillip Gharibians at (626) 458-5976, Monday through Thursday, 7 a.m. to 5:30 p.m.

Very truly yours,

GAIL FARBER

CELEBRATING 90 YEARS

1926-2016

VALLEY COUNTY WATER DISTRICT

Past Present and Future

VALLEY COUNTY WATER DISTRICT

2016 EDITION

Consumer Confidence Report

2015 WATER QUALITY /

Regulating Drinking Water Quality

Water utilities in California have provided an annual report to their customers since 1991 which summarizes the prior year's water quality and explains important issues regarding their drinking water. In 1996, the United States Congress reauthorized the Safe Drinking Water Act (SDWA), which was originally passed in 1974 and later amended in 1986. The 1996 reauthorization called for the enhancement of nation-wide drinking water regulations to include important components such as source water protection and public information. This year's water quality report covers water quality testing from calendar year 2015 and has been prepared in compliance with the consumer right-to-know regulations required by the SDWA 1996 amendments.

The United States Environmental Protection Agency (USEPA) and the State Water Resources Control Board, Division of Drinking Water (DDW) are the public agencies responsible for drafting and implementing regulations that ensure your tap water is safe to drink. USEPA and DDW establish drinking water standards that limit the amount of contaminants in water provided to the public. DDW also establishes water quality standards for bottled water that provide for the same protection of public health.

Valley County Water District regularly tests your drinking water using DDW-approved methods to ensure its safety. Over 100 compounds have been monitored in Valley County Water District's water supply. Only the detected constituents are reported in the accompanying table. Detected unregulated contaminants of interest are also included. Again in 2015, the water delivered to you by Valley County Water District met or surpassed all the State and Federal drinking water standards.

In addition, the Main San Gabriel Basin Watermaster (Watermaster), who manages our groundwater basin, continuously and vigilantly reviews upcoming State and Federal drinking water regulations. Watermaster has been proactive when monitoring unregulated contaminants in the Main San Gabriel Basin to ensure the water supply meets water quality standards.

If you have questions about your water or the District, please contact us for answers...

For information about this report, or your water quality in general, please contact Mr. Tom Mortenson at (626) 338-7301. The Board of Directors meets on the second and fourth Mondays of each month at 5:30 PM at 14521 East Ramona Boulevard in the City of Baldwin Park. These meetings are open to the public.

Source of Water

Valley County Water District's water supply comes from groundwater wells located in the Main San Gabriel Groundwater Basin. However, as a result of historic industrial discharges, several of Valley County Water District's groundwater wells are contaminated and have been taken out of service. Water treatment facilities have been constructed at Valley County Water District to clean up groundwater contamination.

In addition, Valley County Water District purchased water from Covina Irrigating Company (CIC) in 2015. CIC pumps groundwater from the Main San Gabriel Groundwater Basin.

Protecting the Consumer

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

CONSUMER CONFIDENCE REPORT

Potential Contaminants in Drinking Water

Sources of drinking water generally include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- **Inorganic contaminants**, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- **Pesticides and herbicides**, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- **Radioactive contaminants**, that can be naturally-occurring or can be the result of oil and gas production and mining activities.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gasoline stations, urban stormwater runoff, agricultural application and septic systems.

About Lead in Tap Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Valley County Water District is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at: **https://www.epa.gov/your-drinking-water/basic-information-about-lead-drinking-water.**

Nitrate

Nitrate in your tap water may have exceeded one-half the MCL in 2015, but it was never greater than the MCL. Nitrate in drinking water at levels above the MCL of 10 parts-per-million (ppm) is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 ppm may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider.

This book contains very important information about your drinking water. For more information or a translation, please contact the District office at (626) 338-7301.

Este informe contiene información muy importante sobre su agua potable. Para mas información ó traducción, favor de contactar a Mr. Tom Mortenson al (626) 338-7301.

如果您想對這些信息的翻譯版本，請致電（626)338-7301 的辦公區。

Kung gusto mo ng isang isinalin na bersyon ng impormasyong ito, mangyaring makipag-ugnayan sa opisina ng Distrito sa (626) 338-7301.

CONSUMER CONFIDENCE REPORT

Drinking Water Source Assessment

In accordance with the federal Safe Drinking Water Act, an assessment of the drinking water sources for Valley County Water District was completed in December 2002. The purpose of the drinking water source assessment is to promote source water protection by identifying types of activities in the proximity of the drinking water sources which could pose a threat to the water quality. The assessment concluded that Valley County Water District's sources are considered most vulnerable to the following activities or facilities associated with contaminants detected in the water supply: gasoline stations, chemical/petroleum processing and storage, automobile repair shops, fleet/truck/bus terminals, food processing, landfills/dumps, leaking underground storage tanks, dry cleaners and metal plating/finishing/fabricating. In addition, the sources are considered most vulnerable to the following activities or facilities not associated with contaminants detected in the water supply: pesticide/fertilizer/petroleum storage and transfer areas, railroad yards/maintenance/fueling area. A copy of the complete assessment is available at **Valley County Water District at 14521 Ramona Boulevard, Baldwin Park, California 91706.** You may request a summary of the assessment to be sent to you by contacting **Mr. Tom Mortensen at (626) 338-7301.**

In January 2002, Covina Irrigating Company completed its drinking source water assessment. The assessment showed that CIC's sources are considered most vulnerable to gasoline stations and underground tanks. A copy of the complete assessment can be requested by contacting **Valley County Water District at 14521 Ramona Boulevard, Baldwin Park, California 91706.** You may also request a summary of the assessment to be sent to you by contacting **Mr. Tom Mortensen at (626) 338-7301.**

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (**1-800-426-4791**), visit USEPA's Drinking Water website at **https://www.epa.gov/your-drinking-water** or visit DDW website at **http://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/publicwatersystems.shtml.**

GLOSSARY

Maximum Contaminant Level (MCL) The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible.

Maximum Contaminant Level Goal (MCLG) The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by EPA.

Maximum Residual Disinfectant Level (MRDL) The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standard MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.

Public Health Goal (PHG) The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Regulatory Action Level The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Secondary MCLs Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Measurements Water is sampled and tested throughout the year. Contaminants are measured in parts per million (ppm), parts per billion (ppb), and parts per trillion (ppt). If this is difficult to imagine, think about these comparisons:

Parts per million:
1 drop in 14 gallons; 1 second in 12 days; 1 penny in $10,000; 1 inch in 16 miles

Parts per billion:
1 drop in 14,000 gallons; 1 second in 32 years; 1 penny in $10 million; 1 inch in 16,000 miles

It is important to note, however, that even a small concentration of certain contaminants can adversely affect a water supply.

The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data, though representative, are more than one year old.

2015 VALLEY COUNTY WATER DISTRICT DRINKING WATER QUALITY

Chemical	MCL	PHG (MCLG)	Average Amount	Range of Detections	MCL Violation?	Most Recent Test Year	Typical Source of Contaminant
PRIMARY DRINKING WATER STANDARDS--Health-Related Standards							
RADIOLOGICALS							
Gross Alpha (pCi/L)	15	(0)	<3	ND - 3.6	No	2015	Erosion of natural deposits
Uranium (pCi/L)	20	0.43	<1	ND - 1.8	No	2015	Erosion of natural deposits
INORGANIC CHEMICALS							
Arsenic (ppb)	10	0.004	2.2	ND - 4	No	2015	Erosion of natural deposits
Barium (ppm)	1	2	<0.1	ND - 0.14	No	2015	Erosion of natural deposits
Fluoride (ppm) - naturally occurring	2	1	0.28	0.24 - 0.33	No	2015	Erosion of natural deposits
Nitrate as N (ppm)	10	10	3.6	1.3 - 6.3	No	2015	Leaching from fertilizer use
SECONDARY DRINKING WATER STANDARDS--Aesthetic Standards, Not Health-Related							
Chloride (ppm)	500	NA	31	20 - 40	No	2015	Runoff/leaching from natural deposits
Odor (threshold odor number)	3	NA	1	1	No	2015	Naturally-occuring organic materials
Specific Conductance (umho/cm)	1,600	NA	490	410 - 540	No	2015	Substances that form ions in water
Sulfate (ppm)	500	NA	34	23 - 41	No	2015	Runoff/leaching from natural deposits
Total Dissolved Solids (ppm)	1,000	NA	290	220 - 320	No	2015	Runoff/leaching from natural deposits
UNREGULATED CHEMICALS OF INTEREST							
Alkalinity as CaCO3 (ppm)	Not Regulated	NA	170	140 - 180	N/A	2015	Runoff/leaching from natural deposits
Boron (ppm)	NL = 1	NA	<0.1	ND - 0.1	N/A	2015	Runoff/leaching from natural deposits; industrial wastes
Calcium (ppm)	Not Regulated	NA	57	49 - 63	N/A	2015	Runoff/leaching from natural deposits
Hardness as CaCO3 (ppm)	Not Regulated	NA	190	160 - 210	N/A	2015	Runoff/leaching from natural deposits
Grains of Hardness (gpg)	Not Regulated	NA	11	9.4 - 12	N/A	2015	Runoff/leaching from natural deposits
Magnesium (ppm)	Not Regulated	NA	11	9.7 - 12	N/A	2015	Runoff/leaching from natural deposits
pH (pH Units)	Not Regulated	NA	7.9	7.9 - 8	N/A	2015	Hydrogen ion concentration
Potassium (ppm)	Not Regulated	NA	3.5	3.4 - 3.8	N/A	2015	Runoff/leaching from natural deposits
Sodium (ppm)	Not Regulated	NA	25	14 - 36	N/A	2015	Runoff/leaching from natural deposits
UNREGULATED CHEMICALS REQUIRING MONITORING							
Chlorate (ppb)	NL = 800	NA	65	55 - 80	N/A	2015	Byproduct of drinking water chlorination; industrial processes
Chromium, Hexavalent (ppb)*	10	0.02	0.58	0.31 - 1.1	N/A	2015	Runoff/leaching from natural deposits; industrial discharge
Chromium, Total (ppb)**	50	(100)	0.53	0.31 - 0.97	N/A	2015	Discharge from steel and pulp mills; natural deposits erosion
Molybdenum, Total (ppb)	Not Regulated	NA	1.8	1.3 - 2.6	N/A	2015	Runoff/leaching from natural deposits
Strontium, Total (ppb)	Not Regulated	NA	470	440 - 510	N/A	2015	Runoff/leaching from natural deposits
Vanadium, Total (ppb)	NL = 50	NA	2.2	1.6 - 3.3	N/A	2015	Runoff/leaching from natural deposits

MCL = maximum contaminant level; MCLG = maximum contaminant level goal; NA = not applicable; ND = not detected; PHG = public health goal; NL = Notification Level; gpg = grains per gallon; ppb = parts per billion or micrograms per liter; ppm = parts per million or milligrams per liter; NTU = Nephelometric Turbidity Units; umho/cm = micromhos per centimeter; < = average is less than the reporting limit; pCi/l = picoCuries per liter;

LEAD AND COPPER CONCENTRATIONS AT RESIDENTIAL TAPS

Chemical	Action Level (AL)	PHG	90th Percentile Value	Site Exceeding AL/ Number of Sites	AL Violation?	Typical Source of Contaminant
Copper (ppm)	1.3	0.3	0.2	0/31	No	Corrosion of household plumbing
Lead (ppb)	15	0.2	ND	1/31	No	Corrosion of household plumbing

Thirty one residences are tested every three years for lead and copper at-the-tap. The most recent set of samples was collected in 2014. Copper was detected in 29 samples; none exceeded the regulatory action level (AL). Lead was detected in 1 sample; 1 sample exceeded the regulatory AL. The AL is the concentration of lead or copper which if exceeded in more than ten percent of the samples tested, triggers treatment or other requirements that a water system must follow.

DISTRIBUTION SYSTEM WATER QUALITY

Chemical	MCL (MRDL/MRDLG)	Results	Range of Detections	MCL Violation?	Typical Source of Contaminant
Total Trihalomethanes (ppb)***	80	4.9	ND - 6.1	No	Byproduct of chlorine disinfection
Haloacetic Acids (ppb)***	60	0.38	ND	No	Byproduct of chlorine disinfection
Chlorine Residual (ppm)***	(4 / 4)	0.6	0.27 - 0.93	No	Drinking water disinfectant

Bacteria	MCL	Result	MCL Violation?	Typical Source of Contaminant
Total Coliform Bacteria****	5.0%	1.7	No	Naturally present in the environment

UNREGULATED CHEMICALS REQUIRING MONITORING IN THE DISTRIBUTION SYSTEM

Chemical	NL	PHG (MCLG)	Results	Range of Detections	Most Recent Test Year	Typical Source of Contaminant
Chlorate (ppb)	800	NA	66	66	2015	Byproduct of drinking water chlorination; industrial processes
Chromium, Hexavalent (ppb)*	MCL = 10	0.02	0.31	0.31	2015	Runoff/leaching from natural deposits; industrial discharge
Chromium, Total (ppb)**	MCL = 50	(100)	0.3	0.3	2015	Discharge from steel and pulp mills; natural deposits erosion
Molybdenum, Total (ppb)	N/A	NA	1.6	1.6	2015	Runoff/leaching from natural deposits
Strontium, Total (ppb)	N/A	NA	510	510	2015	Runoff/leaching from natural deposits
Vanadium, Total (ppb)	50	NA	1.6	1.6	2015	Runoff/leaching from natural deposits

MRDL = Maximum Residual Disinfectant Level; MRDLG = Maximum Residual Disinfectant Level Goal; MCLG = maximum contaminant level goal

* Hexavalent chromium was included as part of the unregulated chemicals requiring monitoring.

** Total chromium is regulated with an MCL of 50 ppb but was not detected, based on the detection limit for purposes of reporting of 10 ppb. Total chromium was included as part of the unregulated chemicals requiring monitoring.

*** The table shows the highest running annual average for 2015, and the range of the individual results for samples collected in 2015.

**** The result is the higest percentage of positive samples collected in a month during 2015. Coliforms are bacteria used as an indicator that if present, indicates other potentially harmful microorganisms may be present. No more that 5.0% of the monthly samples may be Coliform - positive; therefore, the MCL was not violated in 2015.

EDR Environmental Lien and AUL Search

The EDR Environment Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- Search for parcel information and/or legal description;
- Search for ownership information;
- Research official land title documents recorded at jurisdiction agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- Access to copy of deed;
- Search for environmental encumbering instrument(s) associated with the deed;
- Provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- Provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Environmental Lien and AUL Search

The EDR Environment Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- Search for parcel information and/or legal description;
- Search for ownership information;
- Research official land title documents recorded at jurisdiction agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- Access to copy of deed;
- Search for environmental encumbering instrument(s) associated with the deed;
- Provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- Provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

Contact: Steve Anderson

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by ATC Group Services LLC were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 5609-4FC1-B30E

PO # Ph3

Project 1011600776

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 5609-4FC1-B30E

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

ATC Group Services LLC (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 08/05/2016 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SAN GABRIEL VALLEY (	*SUNSET & SAN BERNARD*	*0 - 1/8 (0.000 mi.)*	*0*	*21*

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/10/2016 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

SAN GABRIEL VALLEY (	*SUNSET & SAN BERNARD*	*0 - 1/8 (0.000 mi.)*	*0*	*21*

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/10/2016 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

SPECIALTY ORGANICS I	*5263 N FOURTH ST*	*NE 1/4 - 1/2 (0.375 mi.)*	*115*	*112*

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/12/2016 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NORAC PHARMA	*405 SOUTH MOTOR AVEN*	*NNE 1/2 - 1 (0.923 mi.)*	*U124*	*221*

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/12/2016 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/31/2016 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 5 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/12/2016 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

ABANDONED MINES: An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

A review of the ABANDONED MINES list, as provided by EDR, and dated 06/09/2016 has revealed that there is 1 ABANDONED MINES site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
Not reported	4946 AZUSA CANYON R	S 0 - 1/8 (0.089 mi.)	B17	47
Not reported	4954 AZUSA CANYON R	SSW 0 - 1/8 (0.099 mi.)	D22	48

EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 7 records.

Site Name	Database(s)

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:
Conditions at listing September 1983): San Gabriel Valley Area 2) is a

SAN GABRIEL VALLEY (AREA 2) (Continued) **1000114961**

ground water plume that parallels the San Gabriel River to the west in the San Gabriel ground water basin in the Baldwin Park area of Los Angeles County, California. The plume is about 7.5 miles long and 1.5 miles wide.
Ground water is contaminated with trichloroethylene TCE), perchloroethylene PCE), and carbon tetrachloride, according to analyses by State agencies and local water companies. Many public wells in the area exceed the EPA Suggested No Adverse Response Levels SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies containless than 5 parts per billion ppb) of TCE, a level considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service. Status June 1984): A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/ feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of the contamination. This site, along with the threeother San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

SAN GABRIEL VALLEY (AREA 2) (Continued) **1000114961**

Site Description: Four areas of groundwater contamination are listed on the National Priorities List: San Gabriel Valley Area 1, San Gabriel Valley Area 2, San Gabriel Valley 3, and San Gabriel Valley 4. The four areas represent a significant portion of the 170 square mile San Gabriel Valley in Los Angeles County, California. More than one million residents live in the San Gabriel Valley alongside a variety of commercial and industrial operations. The San Gabriel Aquifer, which underlies most of the San Gabriel Valley Basin, stores an estimated three trillion gallons of water and is the primary source of water for most of the Basin?s residents. Major surface water features in the San Gabriel Valley include the San Gabriel River, tributaries to the San Gabriel River system, and spreading basins located in or adjacent to the river channels. The approximate location of the San Gabriel Valley Area 2 Site is west of highway 39, south of the San Gabriel Mountains, east of the San Gabriel River, and north of Walnut Creek. Nearly all of the Baldwin Park area is fully developed for residential, commercial, and industrial use. The largest parcels of open land are active and inactive gravel pits and the Santa Fe flood Control Basin. Water purveyors in the site area include: the City of Azusa, California Domestic Water Company, City of Glendora, La Puente Valley County Water District, San Gabriel Valley Water Company, Suburban Water Systems, and Valley County Water District. Volatile Organic Compounds (VOCs), major contaminants of concern at the San Gabriel Valley Sites, were used in large quantities at industrial facilities as early as the 1940?s. From the 1940?s through the 1980?s, carbon tetrachloride, tetrachloroethane, thrichlorethene, and other chlorinated solvents were used by hundreds of businesses for degreasing, as raw materials for automotive products, by a solvent recycler, for chemical extractions , and for other purposes. VOCs have been released by a combination of intentional disposal, careless handling during loading and unloading, leaking tanks and pipes, and other means. VOCs were not detected in ground water until 1979 during environmental monitoring activities conducted by Aerojet Electrosystems near its facility in Azusa. In May 1984, EPA listed four areas of contamination were listed as San Gabriel Valley Area 1 through 4. EPA began its enforcement efforts in the site area in 1985 with searches for and evaluations of historical Federal, State, and local records on chemical usage, handling, and disposal. In 1985, the California Regional Water Quality Board began its Well Investigation Program (WIP) to identify the sources of ground water contamination detected in water supply wells. In 1989, EPA entered into a cooperative agreement to expand the WIP program to determine the nature and extent of contamination in the San Gabriel Valley. The RI/FS for the Baldwin Park OU was conducted concurrently with source identification efforts, as a fund-lead project. In March 1994, the Record of Decision (ROD) document was signed.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Document Type: Site Screening

AMERICAN PHARMASEAL LABORATORIES (Continued) **1000360641**

Completed Date: 07/21/1994
Comments: Site screening/visit conducted. Ejie Solomon at RWQCB is Project Manager supervising cleanup activities at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/26/1991
Comments: RWQCB conducted a site inspection of Baxter Pharmaseal in December 1989. As a result of the investigation, a subsurface investigation was conducted to determine the extent of contamination in the dioctyl phthalate (DOP) tank/precipatate collection and clarifier areas. Phase I and Phase II investigations were completed on 06/22/90 and 01/14/91 respectively. Phase I and Phase II investigations indicate that hazardous substances (PCE), toluene, freon-TF, Bis (2-ethyl hexyl phthalate (BEHP) have contaminated the soil. EPA recommends for a high priority SSI, DHS recommends high priority PEA.

Environmental Interest/Information System

AMERICAN PHARMASEAL LABORATORIES (Continued) **1000360641**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SUPERFUND (NON-NPL)

STATE MASTER

HAZARDOUS WASTE BIENNIAL REPORTER

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

KEMAC TECHNOLOGY INC. (Continued) **1000133491**

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 43216

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 11343

NORAC PHARMA (Continued) **1000143907**

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 2785.6

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/05/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/05/2016

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 09/14/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Data Release Frequency: Annually

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009
Date Data Arrived at EDR: 12/10/2010

Data Release Frequency: Annually

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE CERTIFICATION
CLOSURE APPLICATION NO. 591016
FACILITY LOCATED AT 5010 AZUSA CANYON ROAD, IRWINDALE (3S)

This office reviewed the final closure report dated June 19, 2009, required as a part of the subject closure permit. Based on the information submitted, we find that all closure requirements have been completed. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at this facility. Nor does it relieve you of the responsibility to cleanup existing, additional, or previously unidentified conditions at the facility, which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

If you have any questions, please contact Mr. Phillip Gharibians at (626) 458-5976, Monday through Thursday, 7 a.m. to 5:30 p.m.

Very truly yours,

GAIL FARBER

Acting Director of Public Works

By: _____ Date: 11/06/08

 Complete Certification of Compliance with Los Angeles County Lobbyist Ordinance on back. ClosApp FORMAT DPW Rev. 07/08

UNDERGROUND STORAGE TANK
CLOSURE INFORMATION

1. This application is for authorization to temporarily or permanently close an underground storage tank (UST) pursuant to Los Angeles County Code, Title 11, Division 4 and California Code of Regulations, Title 23, Division 3, Chapter 16. This application may also be used for product piping removal associated with an existing or removed USTs.

2. This application will not be approved unless a valid Hazardous Material Underground Storage Permit (HMUSP) or Unified Program (UP) Permit application is on file with the Department of Public Works (DPW).

3. Additional fees may be imposed for closure of USTs that were not in compliance with December 22, 1998, standards for upgrade or temporary closure.

4. USTs closed on site by removal or cleaning and filling with an inert solid material prior to January 1, 1984, need not comply with current closure requirements, however, contamination related to these USTs must be reported and cleaned up.

5. This application must be accompanied by a UP UST FACILITY INFORMATION form for each site and UP UST TANK INFORMATION form for each UST to be removed or closed.

6. All work shall be carried out in full compliance with all applicable Federal, State and local laws, ordinances, rules and regulations.

7. All fees due to DPW and/or to the Certified Unified Program Agency (CUPA) for the operation and/or maintenance of the facility subject to closure through the date of closure shall be paid in full.

8. All inspection notification(s) shall be made as directed by the attached conditions of this approval.

9. Within 30 days after closure, the applicant shall furnish to the DPW a closure report per the DPW Closure Report Requirements and Supplements, describing all work completed, results of any required sampling, disposition of any contaminated soils or materials found and any other requirements made part of the closure application.

10. In all cases, closure permits expire 180 days from the date of issue unless otherwise specified. It is the responsibility of the owner or operator to make sure that the final report contains the required information and is submitted to the DPW within 30 days from the sampling date or 180 days from the date of the permit issuance, whichever is earlier. The total number of tanks listed on the HMUSP or UP Permit and the yearly annual permit maintenance billing will remain unchanged until the closure report is received by the DPW. Only one copy of the closure report needs to be submitted unless otherwise directed.

11. All closure applications are site specific and may be subject to additional sampling and site characterization requirements as necessary to protect the public health and safety, underground and surface water supplies, and may include requirements, requested by Federal, State or other regulatory agencies.

12. All correspondence related to this closure authorization shall include the SITE-FILE number listed on the front of this document, found in the upper right box and be addressed to the following location:

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.

2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.

3. Description of methods for obtaining, handling, and transporting samples.

4. Time and date samples were obtained.

5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for UST closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.

6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.

7. Disposal destination of tanks and evidence of legal disposal.

8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.

9. Documentation as to depth of groundwater at facility.

10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.

11. Evidence of legal disposal of soils designated as nonhazardous.

12. Any observations of site contamination.

13. Remedial action plan to mitigate contamination.

14. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.

General Laboratory Testing Requirements for Petroleum Hydrocarbon Impacted Sites

The purpose of this document is to supplement the Regional Board's Laboratory Report Form (6/00) in order to update obsolete testing requirements and set forth the new requirements for fuel oxygenates and natural attenuation testing. Each analytical method used must be certified by the California Environmental Accreditation Laboratory Program (ELAP).

1. General Laboratory QA/QC Requirements
Conform to the Regional Board's Laboratory Report Form (6/00) in general, except for items specified below.

2. Compounds to be Tested
Total petroleum hydrocarbons in gasoline range (TPHg) (C4 – C12); Total petroleum hydrocarbons in diesel range (TPHd) (C13 – C22); benzene, toluene, ethylbenzene, xylenes (BTEX); methyl tertiary butyl ether (MTBE); di-isopropyl ether (DIPE); ethyl tertiary butyl ether (ETBE); tertiary amyl methyl ether (TAME); tertiary butyl alcohol (TBA). If the gasoline tanks historically or currently contain methanol or ethanol, these compounds are also to be tested.

3. Analytical Test Methods and Detection Limits
Conform to Table 1 below. Report any concentration detected between the method detection limit (MDL) and estimated quantitation limit (EQL) (or reporting limit (RL)) in a numerical value with a "J" flag indicator. All "Non-Detect" (ND) shall be reported in the format with "< (numerical MDL)." Integrate all fuel oxygenate additive concentrations into total petroleum hydrocarbons (TPH) and report it as TPH. EPA Method 8021B may be used to substitute EPA Method 8260B at the sites where all fuel oxygenates have not been identified by EPA Method 8260B in soil and/or groundwater.

Table 1: Analytical Requirements

		Required MDL (Method detection limit)	
Analyte	Analytical Method	Soil (µg/kg)	Water (µg/L)
BTEX	EPA Method 8260B(8021B)	1	0.5
MTBE	EPA Method 8260B	2	1
DIPE	EPA Method 8260B	2	1
ETBE	EPA Method 8260B	2	1
TAME	EPA Method 8260B	2	1
TBA	EPA Method 8260B	20	10
TPHg	Cal-LUFT GC/FID or GC/MS	100-200	50-100
TPHd	Cal-LUFT GC/FID	1000	500
Methanol	Cal-LUFT GC/FID	1000	500
Ethanol	Cal-LUFT GC/FID(EPA8260B)	500	250

4. Use of EPA Method 5035 for Soil Samples

Apply EPA Method 5035A specified in the USEPA SW-846, (7/2002) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 14 days for soil samples stored under frozen conditions.

5. Natural Attenuation Parameters

Natural attenuation processes include dispersion, dilution, sorption, volatilization, biodegradation, and chemical or biological transformation. A carefully controlled monitoring program for the natural attenuation can be used to confirm site-specific mass reduction and achieve remedial objectives. In order to test parameters to confirm the occurrence of natural attenuation, site characterization must be complete first.

5.1 Primary Natural Attenuation Criteria

Meet the following conditions prior to testing for the secondary natural attenuation parameters:

a) Groundwater contaminant plume must be fully defined.

b) Groundwater monitoring program on a quarterly basis must be completed for at least two years including data of MTBE and other oxygenates.

c) Groundwater concentration has consistently decreased or been stable.

d) Determination of site-specific hydraulic conductivity must be conducted: Refer the ASTM D4044-91 for the slug test procedures. Other field methods (e.g., pumping test) are also acceptable to determine hydraulic conductivity.

e) Characterization of MTBE and other oxygenates plume vertical extent must be completed with discrete multi-depth groundwater sampling at all groundwater vulnerable areas designated by the Board.

5.2 Secondary Natural Attenuation Parameters

Analyze the secondary natural attenuation parameters only after the primary natural attenuation criteria are met. Analyze the secondary natural attenuation parameters at all groundwater monitoring wells inside and outside of the plume. Conform to Table 2 below for parameters and testing methods.

Table 2: Analytical Requirements for Secondary Natural Attenuation Parameters

Parameters	Test Method	Required MDL
pH	EPA Method 150.2 or Field instrument	n/a
Dissolved oxygen (DO)	EPA Method 360.1 or Field instrument	n/a
Redox potential (ORP)	Field instrument	n/a
Sulfate (SO_4)	EPA Method 300	5 mg/L
Nitrate (NO_3)	EPA Method 300	0.1 mg/L
Ferrous iron (Fe^{2+})	EPA Method 200	0.1 mg/L
Methane (CH_4)	EPA Method 8015(M)	5 µg/L

6. Electronic Submittal of Data Reporting

All analytical results shall be uploaded in an electronic format to the State GeoTracker Database.

ATTENTION CONTRACTOR

NOTIFICATION/PERMIT REQUIREMENTS

The Closure Authorization is issued subject to compliance with all applicable laws and regulations relating to the performance of work including, but not limited to, business license requirements, Building Codes, Fire Codes, Air Quality regulations, Health and Safety Codes, Water Codes, and Transportation regulations.

Pursuant to Los Angeles County Code, Section 11.78.045, and the Conditions and Limitations of the attached Hazardous Materials Underground Storage Closure Authorization, you are required to complete **ALL** of the following agency notifications indicated below within the time period specified prior to commencement of work on this closure.

[X] 72 HOURS – DEPARTMENT OF PUBLIC WORKS WASTE CONTROL ENGINEERING INSPECTOR:

>>>Unless otherwise noted, Public Works' inspectors are available at the following offices, Monday through Friday, between 8 a.m. and 9:30 a.m. **ONLY**.<<<

[ ] WHITTIER DISTRICT – (562) 906-8426
13523 East Telegraph Road, Whittier, CA 90605-3437

ADDITIONAL CONDITIONS FOR UST CLOSURE/SITE ASSESSMENT

TITLE 23: CALIFORNIA CODE OF REGULATIONS - WATERS
DIVISION 3: STATE WATER RESOURCES CONTROL BOARD (SWRCB)
CHAPTER 30: ELECTRONIC SUBMITTAL OF INFORMATION

Article 1 – GENERAL PROVISIONS

Section 3890. General Intent, Content, and Applicability of Regulations

(a) The regulations in this Chapter are intended to provide electronic access to reports, including soil, vapor, and water data, prepared for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code, (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15, of Title 23 of the California Code of Regulations (CCR).

(b) The regulations in this Chapter require persons responsible for submitting certain reports to the State Board, a regional board, or a local agency to submit these reports electronically over the Internet to the State Board's Geotracker system.

(c) The requirements of this Chapter are in addition to, and not superseded by, any other applicable reporting requirements.

(d) Except as provided in Section 3895(b), the electronic reporting requirements of this Chapter are intended to replace requirements for the submittal of paper copies of reports, beginning July 1, 2005.

Authority cited: Sections 13196 and 13198(c), Water Code.

Reference: Sections 13196 and 13198, Water Code.

Article 2. - ELECTRONIC SUBMITTAL OF INFORMATION

Section 3891. Definition of Terms

"COELT" is the United States Army Corps of Engineers Loading Tool program. It is a relational database application that is designed to run with the Microsoft Windows operating system. COELT places laboratory data into the standardized Electronic Deliverable Format (EDF). The program can accept data from Laboratory Information Management System (LIMS) or manually entered data. COELT is an optional software application that is intended to help laboratories that require new software to produce the EDF data deliverable. COELT includes a report utility that allows hard copy laboratory reports to be printed that match the actual electronic data. For purposes of the requirements of this chapter, version 1.2a of COELT may be used. The program (coelt12i.exe) and documents (coelt 1.2i manual.zip) for version 1.2i of COELT are available through links provided at http://www.waterboards.ca.gov/ust "CSRS-H" is the California Spatial Reference System-Horizontal, which includes the High Precision Geodetic Network (HPGN), the High Precision Geodetic Network–Densification (HPGN-D) and other geodetic control positions. These control positions have been determined by Global Positioning System survey methods in accordance with first order or better standards and specifications from the Federal Geodetic Control Subcommittee (FGCS) of the Federal Geographic Data Committee. These control positions are published by the National Geodetic Survey, California Spatial Reference Center or its successor.

"EDCC" is the Electronic Deliverable Consistency Checker program, which was developed for the EDF1.2i format, described below. The EDCC program is run upon completion of an EDF report and produces an error report. This error report identifies problems within the given data set based upon the EDF database structure, guidelines, restrictions, and valid values. The error report also indicates the nature of each problem, so that the submitter can correct them. For purposes of the requirements of this chapter, the interactive web-version 1.2i or personal computer version 1.2i of EDCC shall be used. Programs (edcc.zip and edccservicepac1.zip) for version 1.2i of EDCC are available through links provided at http://www.waterboards.ca.gov/ust.

"EDF" is the Electronic Deliverable Format, originally developed for the United States Army Corps of Engineers. It is a data standard designed to facilitate transfer of electronic data files from analytical laboratories to end-users. It is a relational database whose files are related to one another through key fields. Laboratories can produce electronic EDF files by using their own LIMS or COELT software. The data components include chain-of custody information, laboratory results, and quality assurance information. For purposes of the requirements of this chapter, version 1.2i of EDF shall be used. Specifications for version 1.2i of EDF (The Electronic Deliverable Format [EDF] Version 1.2i data dictionary are available in Title 27, Division 3, Subdivision 2, Chapter 1 (Laboratory Results) CCR, through links provided at http://www.waterboards.ca.gov/ust.

"Geotracker" is the State Board's Internet-accessible database system used by the State Board, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. This system consists of a relational database, on-line compliance reporting features, a geographical information system (GIS) interface and other features that are utilized by the State Board, regional boards, local agencies, regulated industry and the public to input, manage, or access compliance and regulatory tracking data. Geotracker, initially known as the Geographical Environmental Information Management System (GEIMS) database, is available at http://geotracker.swrcb.ca.gov/.

"PDF" means Portable Document Format. "PDF" files are self-contained and cross-platform documents. A PDF file will look the same on the screen and in print, regardless of what type of computer or printer a person uses or which software package originally created the file. Although PDF files contain the complete formatting of the original document, including fonts and images, they are highly compressed, allowing efficient transfer of complex information.

"Permanent monitoring well" means any artificial excavation by any method made for the purpose of monitoring fluctuations in groundwater levels, the quality of groundwater, or the concentration of contaminants in groundwater and which is used for at least thirty days.

"Report" means any document or item that is required for submittal in order for a person to comply with a regulation, directive, or order issued by the State Board, a regional board, or a local agency, including but not limited to, any analysis of material by a laboratory that has accreditation or certification pursuant to Article 3 (commencing with Section 100825) of Chapter 4 of Part 1 of Division 101 of the Health and Safety Code.
Authority cited: Sections 13196 and 13198 (c), Water Code.
Reference: Sections 13195 (b) and 13196, Water Code.

Section 3892. Reports

The following reports are subject to the requirements of this Chapter, when those reports are required for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code, (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the California Code of Regulations (CCR).

(a) Reports submitted pursuant to Division 3, Chapter 16, Article 11 of Title 23 of the CCR.

(b) Reports submitted pursuant to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the CCR.

(c) Reports submitted pursuant to section 13304 of the Water Code.

(d) Reports submitted pursuant to section 13267 of the Water Code.

(e) Reports submitted pursuant to any order or directive of the State Board, a regional board or a local agency.

(f) Reports submitted pursuant to the Two-year Joint Cooperative Agreement Execution Plans under the Defense / State Memorandum of Agreement and Navy Cost Recovery Cooperative Agreement, for the State of California.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code.

Section 3893. Electronic Submittal of Reports

(a) Persons responsible for submitting reports pursuant to this Chapter shall submit the following information described in subdivision (b) electronically over the Internet to the State Board's Geotracker system in conformance with data dictionaries found in Title 27, Division 3, Subdivision 2 (Monitoring and Release Information) and specifications contained in the State Water Resources Control Board EDF Guidelines and Restrictions (version 1.2i) and Survey XYZ Guidelines and Restrictions (Version 6). These data dictionaries and documents are available through links provided at http://www.waterboards.ca.gov/ust.

(b) Data generated after the effective date of the regulations by chemical analysis of soil, vapor, or water samples (including surface water, groundwater and influent/effluent water samples from remediation systems), shall be submitted in EDF format. All data submitted in EDF format shall be checked for errors prior to and during submittal using the EDCC software consistency-checking tool. All data submitted in EDF format must pass this error-checking tool as well as meet normal regulatory requirements in order to be considered valid data. In addition, when required for reports subject to this Chapter, the following shall also be submitted electronically:

(1) The latitude and longitude of any permanent monitoring well for which data is reported in EDF format, accurate to within 1 meter and referenced to a minimum of two reference points from the California Spatial Reference System (CSRS-H), if available.

(2) The surveyed elevation relative to a geodetic datum of any permanent monitoring well.

(3) The elevation of groundwater in any permanent monitoring well relative to the surveyed elevation.

(4) A site map or maps showing the location of all sampling points referred to in the report.

(5) The depth to the screened interval and the length of screened interval for any permanent monitoring well.

(6) Boring logs, in PDF format.

(7) A complete copy of the report, in PDF format, which includes the signed transmittal letter and professional certification.

(c) All deadlines and timeframes for submittals of reports are applicable to the information submitted electronically pursuant to this Chapter.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 and13198 (c), Water Code.

Section 3894. Timing of Electronic Reporting Requirements

(a) Electronic submittals of information for sites subject to the requirements of Title 23, Division 3, Chapter 16, Article 11 of the California Code of Regulations, shall begin on December 16, 2004.

(b) Unless otherwise specifically noted, all other electronic submittals required pursuant to this Chapter shall begin January 1, 2005.

(c) Until July 1, 2005, the electronic reporting requirements of this Chapter are in addition to any existing paper or other reporting requirements.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code.

Section 3895. Submittal of Alternate Forms of Reports

(a) Beginning July 1, 2005, the successful submittal of electronic information in accordance with this Chapter shall replace the requirement for the submittal of a paper copy, except as provided in subdivision (b).

(b) In addition to the electronic submittal of reports required pursuant to this Chapter, a regulatory agency may require the submittal of a report, or portions thereof, in diskette, compact disc or other form if the agency determines that the alternative form is necessary. The burden, including cost, of these alternative forms shall bear a reasonable relationship to the need for alternative form and benefits to be obtained from the alternative form.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code

NOTICE: Original paper reports with wet ink signature and seal must continue to be submitted to this office pursuant to CCR Title 23, Division 3, Chapter 30, Article 2, Section 3895 (b), regardless if such report is required by regulation to be electronically uploaded to Geotracker.

CLOSURE APPLICATION SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

PART 1 OF 3

DPW USE ONLY:
SITE-FILE NO. 3755 - 3882
APPLICATION NO. 591016

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2'-4' below tank invert	TPHg	~~8015M~~ 8015M
		BTEX, MTBE fuel oxygenates	8260B
		Ethanol	8260B
(pipe)	sample along the piperun at every 20' interval, 2'-4' below pipes. start @ dispensers	same as above	same as above
(dispensers)	2'-4' below each dispenser	same as above	same as above

~~X~~ Apply EPA Method 5035 for all soil sample collection, preparation, and preservation in order to minimize VOC losses.

Continued on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date/time of sampling shall be included in the final report.

4. Conform to the analytical requirements table below for petroleum hydrocarbon sites. Apply EPA Method 5035 specified in the USEPA SW-846, version III (12/1996) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 10 days for soil samples stored under frozen conditions.

UST CONTENTS	Analyte	Analytical Method	Required MDL	
			Soil (ug/kg)	Water (ug/L)
GASOLINE OR DIESEL	Totoal Petroleum Hydrocarbons(TPH) - Gasoline	EPA Method 8015 (M)	100-200	50-100
	Total Petroleum Hydrocarbons (TPH) - Diesel	EPA Method 8015 (M)	1000	500
	Benzene	EPA Method 8260B (8021B)	1	0.5
	Toluene	EPA Method 8260B (8021B)	1	0.5
	Ethylbenzene	EPA Method 8260B (8021B)	1	0.5
	Xylenes (Total)	EPA Method 8260B (8021B)	1	0.5
	Methyl Tertiary Butyl Ether (MTBE)	EPA Method 8260B	2	1
	Di-isopropyl ether (DIPE)	EPA Method 8260B	2	1
	Ethyl tertiary butyl ether (ETBE)	EPA Method 8260B	2	1
	Tertiary amyl methyl ether (TAME)	EPA Method 8260B	2	1
	Tertiary butyl alcohol (TBA)	EPA Method 8260B	20	10
	Ethanol	EPA Method 8260B	500	250
	Methanol	EPA Method 8015 (M)	1000	500
WASTE OIL	Total Recoverable Petroleum Hydrocarbons (TRPH) - Waste Oil	EPA Method 418 + EPA Method 8260B	1000	500
OTHER, UNKNOWN	UST Permitted Contents, all VOC's (EPA Method 8260) + To Be Determined			

Continued on Page 3

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month form the sampling date or 180 days from the date of this permit, whichever is earlier.

11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

CLOSURE – UNDERGROUND STORAGE TANKS

CONDITIONS A – GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer – Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3)-business day advance notification.
   b. Permanent closure of a tank in place or a temporary closure shall require a 30-written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 – 81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
   b. The personnel shall be sufficiently skilled to safely carry out such operation.
   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B – TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, "Abandonment or Removal of Underground Tanks, "Part A and any other applicable Parts.

2. A temporary closure shall not exceed 180 days.

CONDITION C – PERMANENT TANK (S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tank shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and re-compacted to a relative compaction of 90%.

CONDITIONS D – PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test boring may be drilled vertically and the reason stated in the report in 2.h. below.
   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
   c. For multiple tanks, as a minimum, boring shall be placed at 20-foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.
   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.
   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
   f. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
   g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials – Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

NOTICE TO CLOSURE PERMIT APPLICANTS

The South Coast Air Quality Management District (SCAQMD) has adopted Rule 1166 regulating emissions of Volatile Organic Compounds (VOC) from decontamination of soil effective **August 5, 1988**.

In addition to the requirements of your Closure Permit, persons excavating any underground storage tank that previously contained VOCs must:

- Notify the SCAQMD by telephone at (909) 396-2326 or by fax at (909) 396-3342 using the SCAQMD notification form 24 hours prior to tank excavation. 1166(c)(1)(A)
- Monitor the excavated material during the excavation for VOC contamination. 1166(c)(1)(B)
- When VOC contamination is detected:
  - Cease excavation.
  - Cover the contaminated soil until implementation of approved mitigation measures. 1166(c)(1)(C)
  - Notify the SCAQMD at (909) 396-2326 within 24 hours of detection of VOC contaminated soil. 1166(c)(2)(A)
- A person shall not engage in or allow any on- or off-site spreading of VOC contaminated soil which results in uncontrolled evaporation of VOC to the atmosphere. 1166(c)(3)

Exemptions

- Treatment of less than one (1) cubic yard of contaminated soil. 1166(d)(1)(A)
- Decontamination of soil containing organic compounds that have an initial boiling point of 302EF or greater, Reid Vapor Pressure less than 80 mm Hg or Absolute Vapor Pressure less than 36 mm Hg at 20EC. 1166(d)(1)(B),(F)
- Removal of soil for sampling purposes pursuant to Environmental Protection Agency methods. 1166(d)(1)(C)
- Accidental spillage of five (5) gallons or less of VOC. 1166(d)(1)(D)
- Documentation of soil which is contaminated through natural seepage of VOC from oil and gas wells or other natural sources. 1166(d)(1)(E)

SPECIFIC QUESTIONS ON RULE 1166 SHOULD BE REFERRED TO THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (909) 396-2326

UNIFIED PROGRAM CONSOLIDATED FORM
UNDERGROUND STORAGE TANK
OPERATING PERMIT APPLICATION – TANK INFORMATION (One form per UST)

TYPE OF ACTION *(Check one item only. For a UST closure or removal, complete only this section and Sections I, II, III, IV, and IX below)* 430.

☐ 1. NEW PERMIT ☐ 3. RENEWAL PERMIT ☒ 5. CHANGE OF INFORMATION
☐ 6. TEMPORARY UST CLOSURE ☐ 7. UST PERMANENT CLOSURE ON SITE ☐ 8. UST REMOVAL

DATE UST PERMANENTLY CLOSED: 430a. DATE EXISTING UST DISCOVERED: 430b.

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)* 1.

BUSINESS NAME *(Same as Facility Name or DBA – Doing Business As)* 3.
Verizon California Inc. (Verizon) Irwindale PY

BUSINESS SITE ADDRESS 103.: 5010 N. Azusa Canyon Road
CITY 104.: Irwindale

II. TANK DESCRIPTION

TANK ID # 432.: 01
TANK MANUFACTURER 433.: Joor
TANK CONFIGURATION: THIS TANK IS 434.: ☒ 1. A STAND-ALONE TANK ☐ 2. ONE IN A COMPARTMENTED UNIT (Complete one page for each compartment in the unit.)
DATE UST SYSTEM INSTALLED 435.: 07/1996
TANK CAPACITY IN GALLONS 436.: 12,000
NUMBER OF COMPARTMENTS IN THE UNIT 437.: 1

III. TANK USE AND CONTENTS

TANK USE 439.: ☒ 1a. MOTOR VEHICLE FUELING ☐ 1b. MARINA FUELING ☐ 1c. AVIATION FUELING ☐ 3. CHEMICAL PRODUCT STORAGE ☐ 4. HAZARDOUS WASTE (Includes Used Oil) ☐ 5. EMERGENCY GENERATOR FUEL [HSC §25281.5(c)] ☐ 6. OTHER GENERATOR FUEL ☐ 95. UNKNOWN ☐ 99. OTHER (Specify): 439a.

CONTENTS 440.: PETROLEUM: ☒ 1a. REGULAR UNLEADED ☐ 1c. MIDGRADE UNLEADED ☐ 1b. PREMIUM UNLEADED ☐ 3. DIESEL ☐ 5. JET FUEL ☐ 6. AVIATION GAS ☐ 8. PETROLEUM BLEND FUEL ☐ 9. OTHER PETROLEUM (Specify): 440a.
NON-PETROLEUM: ☐ 7. USED OIL ☐ 10. ETHANOL ☐ 11. OTHER NON-PETROLEUM (Specify): 440b.

IV. TANK CONSTRUCTION

TYPE OF TANK 443.: ☐ 1. SINGLE WALL ☒ 2. DOUBLE WALL ☐ 95. UNKNOWN

PRIMARY CONTAINMENT 444.: ☒ 1. STEEL ☐ 3. FIBERGLASS ☐ 6. INTERNAL BLADDER ☐ 7. STEEL + INTERNAL LINING ☐ 95. UNKNOWN ☐ 99. OTHER (Specify): 444a.

SECONDARY CONTAINMENT 445.: ☒ 1. STEEL ☐ 3. FIBERGLASS ☐ 6. EXTERIOR MEMBRANE LINER ☒ 7. JACKETED ☐ 90. NONE ☐ 95. UNKNOWN ☐ 99. OTHER (Specify): 445a.

OVERFILL PREVENTION 452.: ☒ 1. AUDIBLE & VISUAL ALARMS ☐ 2. BALL FLOAT ☐ 3. FILL TUBE SHUT-OFF VALVE ☐ 4. TANK MEETS REQUIREMENTS FOR EXEMPTION FROM OVERFILL PREVENTION EQUIPMENT

V. PRODUCT / WASTE PIPING CONSTRUCTION

PIPING CONSTRUCTION 460.: ☐ 1. SINGLE WALL ☒ 2. DOUBLE WALL ☐ 99. OTHER

SYSTEM TYPE 458.: ☐ 1. PRESSURE ☐ 2. GRAVITY ☒ 3. CONVENTIONAL SUCTION ☐ 4. SAFE SUCTION [23 CCR §2636(a)(3)]

PRIMARY CONTAINMENT 464.: ☐ 1. STEEL ☐ 4. FIBERGLASS ☒ 8. FLEXIBLE ☐ 10. RIGID PLASTIC ☐ 90. NONE ☐ 95. UNKNOWN ☐ 99. OTHER (Specify): 464a.

SECONDARY CONTAINMENT 464b.: ☐ 1. STEEL ☐ 4. FIBERGLASS ☒ 8. FLEXIBLE ☐ 10. RIGID PLASTIC ☐ 90. NONE ☐ 95. UNKNOWN ☐ 99. OTHER (Specify): 464c.

PIPING/TURBINE CONTAINMENT SUMP TYPE 464d.: ☒ 1. SINGLE WALL ☐ 2. DOUBLE WALL ☐ 90. NONE

UNDERGROUND STORAGE TANK
MONITORING PLAN – (Page 2 of 2)

3755 - 3882

VI. UNDER DISPENSER CONTAINMENT (UDC) MONITORING

(Check all that apply)

UDC MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S)

☒ 1. CONTINUOUS ELECTRONIC MONITORING ☐ 2. FLOAT AND CHAIN ASSEMBLY ☐ 3. ELECTRONIC STAND-ALONE 490-54a.

☐ 4. NO DISPENSERS ☐ 99. OTHER (Specify) 490-54b.

LEAK MONITOR MANUFACTURER: VeederRoot 490-55. MODEL #: TLS-350 490-56.

LEAK SENSOR MANUFACTURER: VeederRoot 490-57. MODEL #(S): 794380-320 490-58.

DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS. ☒ a. YES ☐ b. NO 490-59.

UDC LEAK ALARM TRIGGERS AUTOMATIC PUMP SHUTDOWN. ☒ a. YES ☐ b. NO 490-60.

FAILURE/DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN. ☒ a. YES ☐ b. NO 490-61.

UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER. ☒ a. YES ☐ b. NO 490-62.

UDC CONSTRUCTION IS: ☒ 1. SINGLE WALL ☐ 2. DOUBLE WALL 490-63.

IF DOUBLE WALL: 490-64a.

UDC INTERSTITIAL SPACE IS MONITORED BY: ☐ a. LIQUID ☐ b. PRESSURE ☐ c. VACUUM

A LEAK WITHIN THE SECONDARY CONTAINMENT OF THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS. ☐ a. YES ☐ b. NO 490-64b.

VII. PERIODIC SYSTEM TESTING

☐ 1. ELD TESTING: THIS FACILITY HAS BEEN NOTIFIED BY THE STATE WATER RESOURCES CONTROL BOARD THAT ENHANCED LEAK DETECTION (ELD) MUST BE PERFORMED. PERIODIC ELD IS PERFORMED EVERY 36 MONTHS AS REQUIRED. [23 CCR §2644.1] 490-65.

☒ 2. SECONDARY CONTAINMENT COMPONENTS ARE TESTED EVERY 36 MONTHS. 490-66.

☒ 3. SPILL BUCKETS ARE TESTED ANNUALLY. 490-67.

VIII. RECORD KEEPING

The following monitoring/maintenance records are kept for this facility: 490-68.

☒ a. ALARM LOGS ☐ b. VISUAL INSPECTION RECORDS ☐ c. TANK INTEGRITY TESTING RESULTS

☐ d. SIR TESTING RESULTS (and supporting documentation records) ☐ e. TANK GAUGING RESULTS (and supporting documentation records)

☐ f. ATG TESTING RESULTS (and supporting documentation records) ☐ g. CORROSION PROTECTION 60-DAY LOGS

☒ h. EQUIPMENT MAINTENANCE AND CALIBRATION RECORDS

IX. TRAINING

☒ Personnel with UST monitoring responsibilities are familiar with all of the following documents relevant to their job duties: 490-69a.

REFERENCE DOCUMENTS MAINTAINED AT FACILITY *(Check all that apply)*

☒ THIS UNDERGROUND STORAGE TANK MONITORING PLAN **(Required)** 490-69b.

☒ OPERATING MANUALS FOR ELECTRONIC MONITORING EQUIPMENT **(Required)** 490-69c.

☐ CALIFORNIA UNDERGROUND STORAGE TANK REGULATIONS 490-69d.

☐ CALIFORNIA UNDERGROUND STORAGE TANK LAW 490-69e.

☐ SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS" 490-69g.

☐ OTHER (Specify): _____ 490-69h. 490-69i.

☒ This facility has a "Designated UST Operator" who has passed the California UST System Operator Exam administered by the International Code Council (ICC). The "Designated UST Operator" will train facility employees in the proper operation and maintenance of the UST systems annually, and within 30 days of hire. This training will include, but is not limited to, the following: 490-70.

- Operation of the UST systems in a manner consistent with the facility's best management practices.
- The facility employee's role with regard to the monitoring equipment as specified in this UST Monitoring Plan.
- The facility employee's role with regard to spills and overfills as specified in the facility's UST Response Plan.
- Name(s) of contact person(s) for emergencies and monitoring alarms.

X. COMMENTS/ADDITIONAL INFORMATION

Provide additional comments here or indicate how many pages with additional information on specific monitoring procedures are attached to this plan. 490-71.

Additional routine monitoring procedures attached.

XI. PERSONNEL RESPONSIBILITIES

The UST Owner/Operator is responsible for ensuring that: 1.) the daily/routine UST monitoring activities and maintenance of UST leak detection equipment covered by this plan occurs; 2.) all conditions that indicate a possible release are investigated; and 3.) all monitoring records are maintained properly.

THE FOLLOWING PERSON(S) ARE RESPONSIBLE FOR PERFORMING THE MONITORING AND EQUIPMENT MAINTENANCE:

NAME: Mark Fellbaum 490-72. TITLE: Fleet Supervisor 490-73.

NAME: 490-74. TITLE: 490-75.

The Designated UST Operator shall perform a monthly visual inspection of the facility, provide a report to the owner/operator, and inform the owner/operator of any conditions that need follow-up action.

XII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

APPLICANT SIGNATURE

DATE: 9/9/2008 490-77.

REPRESENTING: ☒ 1. Tank Owner/Operator ☐ 2. Facility Owner/Operator ☐ 3. Authorized Representative of Owner 490-76.

APPLICANT NAME (print): Zach Feingold as agenct for Verizon 490-78.

APPLICANT TITLE: Environmental Manager 490-79.

UPCF UST Monitoring Plan – Page 2 Instructions

Complete a separate UST Monitoring Plan for each UST monitoring system at the facility. This form must be submitted with your initial UST Operating Permit Application and within 30 days of changes in the information it contains. Please note that your local agency may require you to obtain approval prior to installing or modifying monitoring equipment. (Note: Numbering of these instructions follows the data element numbers on the form.)

490-54a. MONITORING OF THE UNDER DISPENSER CONTAINMENT – Indicate the method used for UDC monitoring.
490-54b. SPECIFY – If 99 "Other" is checked, describe other method used.
If VI-1-1, VI-1-2 or VI-1-3 or VI-1-99 is checked, complete 490-55 to 490-64b.
490-55. PANEL MANUFACTURER – Enter the name of the manufacturer of the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this space blank.
490-56. MODEL # – Enter the model number for the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this space blank.
490-57. LEAK SENSOR MANUFACTURER – Enter the name of the manufacturer of the sensor(s).
490-58. MODEL #(S) – Enter the model number of the sensor(s) installed. If additional space is needed, use Section X.
490-59. DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS. Indicate Yes or No.
490-60. UDC LEAK ALARM TRIGGERS PUMP SHUTDOWN – Indicate Yes or No.
490-61. FAILURE/DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN – Indicate Yes or No.
490-62. UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER – Indicate Yes or No.
490-63. UDC CONSTRUCTION – Indicate if the construction of the UDC is single-walled, or double-walled.
490-64a. DOUBLE-WALLED INTERSTITIAL SPACE MONITORING – Indicate what is used to monitor the interstitial space.
490-64b. LEAK WITHIN THE SECONDARY CONTAINMENT OF UDC TRIGGERS AUDIBLE AND VISUAL ALARMS – Indicate Yes or No.
490-65. VII-1 ELD TESTING – Check the box if you have been notified by the State Water Resources Control Board (SWRCB) that the UST(s) covered by this plan is/are subject to Enhanced Leak Detection Requirements (i.e., UST has any single-wall component and is located within 1,000 feet of a public drinking water well).
490-66. TESTING OF SECONDARY CONTAINMENT COMPONENTS EVERY 36 MONTHS – Check the box if you have secondary containment that requires testing.
490-67. SPILL BUCKET TESTING – Check the box if you have spill buckets.
490-68. VIII RECORDKEEPING – Indicate which monitoring and equipment maintenance records are maintained for this facility.
490-69a. IX TRAINING STATEMENT – Check the box to verify that the statement is true.
REFERENCE DOCUMENTS MAINTAINED AT FACILITY – Check the appropriate boxes to describe reference documents maintained at the facility. Note that the first two items on the list must be kept at the facility.
490-69b. MONITORING PLAN: Indicate that this plan is kept as a reference document.
490-69c. OPERATING MANUALS FOR ELECTRONIC EQUIPMENT: Indicate that this plan is kept as a reference document.
490-69d. CA UST REGULATIONS – Indicate that this is kept as a reference document.
490-69e. CA UST LAW – Indicate that this is kept as a reference document.
490-69f. STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION – "HANDBOOK FOR TANK OWNERS – MANUAL AND STATISTICAL INVENTORY RECONCILIATION": Indicate that this is kept as a reference document.
490-69g. SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS": Indicate that this is kept as a reference document.
490-69h. OTHER – Indicate that other reference documents are kept.
490-69i. SPECIFY – If "OTHER" is checked, enter a brief description of the other document(s) maintained at the facility. If additional space is needed, see Section X.
490-70. DESIGNATED OPERATOR TRAINING – Check this box to verify that this statement is true.
490-71. COMMENTS/ADDITIONAL INFORMATION – Make additional comments or you may attach and identify the number of additional pages of information to describe any additional UST system monitoring-related information (e.g., additional information required by your local agency). Attach any monitoring logs that you will be using for the monitoring of your tank system
490-72. NAME – Enter the name of the person who routinely conducts the monitoring and equipment maintenance under this plan.
490-73. TITLE – Enter the title of the person.
490-74. NAME – Enter the name of the second person, if applicable, who routinely conducts the monitoring and equipment maintenance under this plan.
490-75. TITLE – Enter the title of the second person.
OWNER/OPERATOR SIGNATURE – The tank owner/operator, facility owner/operator, or an authorized representative of the owner shall sign in the space provided. This signature certifies that the signer believes that all information submitted is true, accurate, and complete, and that the training program specified in Section IX has been implemented.
490-76. REPRESENTING – Check the appropriate box to indicate whether the signer is the UST owner/operator, the UST facility owner/operator, or an authorized representative of the owner.
490-77. DATE – Enter the date the plan was signed.
490-78. APPLICANT NAME – Print or type the name of the person signing the plan.
490-79. APPLICANT TITLE – Enter the title of the person signing the plan.

RESPONSE PLAN – PAGE 1

(One form per facility)

TYPE OF ACTION ☐ 1. NEW PLAN ☐ 2. CHANGE OF INFORMATION R01.

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)* | | | — | | | | — | | | | | | | | 1.

BUSINESS NAME (Same as FACILITY NAME) 3.

Verizon California Inc. (Verizon) Irwindale PY

BUSINESS SITE ADDRESS 103.	BUSINESS SITE CITY 104.
5010 N. Azusa Canyon Road	**Irwindale**

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan (HMBP).

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed of appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a hazardous waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: *(Complete only if applicable)*

EQUIPMENT	LOCATION	AVAILABILITY
R10.	R20.	R30.
R11.	R21.	R31.
R12.	R22.	R32.
R13.	R23.	R33.
R14.	R24.	R34.
R15.	R25.	R35.

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
R40. **Zachary Feingold**	R50. **Environmental Manager (909-620-5498)**
R41. **Verizon - Environment Management**	R51. **Emergency Contact Number (1-800-386-9639, option2)**
R42.	R52.
R43.	R53.

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS:

☐ 1. ADDITIONAL SYSTEM TESTING OR DATA COLLECTION ☒ 2. INSPECTION BY QUALIFIED PERSONS ☐ 3. RECALIBRATION OF EQUIPMENT R60.

☐ 99. OTHER (Specify): R61.

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 2

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

Complete Certification of Compliance with Los Angeles County Lobbyist Ordinance on the back of this form IWDP-DPW Rev. 04/2016 1 of 2

* PAID $114 CK# 70494311

Items to consider when applying for Industrial Waste Disposal Permit in Los Angeles County:

Application Form:

- The Permit application must be completely filled out and signed by the person responsible for the waste discharge. Since this is an operating permit application, the signature of the consultant is **NOT** acceptable
- Alternatively, the responsible party can give their consent through a letter of authorization to another person such as a contractor or an architect. The authorization letter needs to be provided to us and must contain contact information of person responsible for the permit.
- Any proposed permit application may be subject to joint permit with County Sanitation District.

Plan Requirements:

- Two (2) sets of plans for Domestic Waste Clearance (i e sanitary waste only)
- Four (4) sets of plans for Public Works Industrial Waste:
  - All plans shall be to scale with minimum size of 11" x 17" and preferably 24" x 36"
  - Site plan shows location of existing buildings on the property with the proposed pre-treatment system(s) indicated, address, property line, sanitary sewer and sewer connections where applies, parking spaces, occupancies of all adjoining suites, the direction North, etc.
  - Architectural floor plan identifying each area in the building by its use, i.e., food preparation, car wash, plating, laboratory, storage, office, restrooms, etc.
  - Plumbing plan showing all drains including floor drains, floor sinks, trench drains, service sinks, and supply/waste lines and facilities handling industrial wastewater from the point of origin to the connection to the point of disposal, i.e public sewer, private disposal system, and/or holding facility for offsite disposal. All equipment or facilities generating industrial wastewater must be identified on the plans
  - Detail drawings of all pretreatment systems with dimensions and manufacturer's specifications

Rain Diversion System Guidelines:

- To obtain guidelines for the discharge of rainwater, please refer to County Sanitation District's website
  - http://www.lacsd.org/wastewater/industrialwaste/iwpolicies/waterdischarges.asp

Fees

- A permit processing fee and a plan check fee will be determined based on the type of industry and the facility location. Please contact this office for further information

INDUSTRIAL WASTE DISPOSAL PERMIT CONDITIONS AND LIMITATIONS

PART A: ON-SITE DISPOSAL – PUBLIC SEWER

1. Disposal of industrial wastewater to the public sanitary sewer shall be limited to the flow indicated on the industrial waste disposal permit.

2. Pretreatment, monitoring and control facilities required under this permit shall consist of the system(s) indicated on the approved plans.

3. Industrial Wastewater shall at all times meet the effluent quality, indicated on the attached Part D, if applicable prior to discharge to the sanitary sewer system.

4. If applicable, the permittee shall submit periodic compliance reports, as indicated on the attached Part E and/or any self-monitoring or industrial wastewater treatment surcharge reports which may be required by the County Sanitation Districts of Los Angeles County. **Note: Self-monitoring reports required by the Sanitation Districts are to be submitted directly to the Sanitation Districts.**

5. All required industrial wastewater collection, pretreatment, monitoring, disposal and sampling facilities must be installed in accordance with approved plans prior to initiating any discharge to the sewer.

6. Dilution prohibited as substitute for treatment. Except where expressly authorized to do so by an applicable Pretreatment Standard or Requirement, no Industrial User shall ever increase the use of process water, or in any other way attempt to dilute a Discharge as a partial or complete substitute for adequate treatment to achieve compliance with a Pretreatment Standard or Requirement. The Control Authority may impose mass limitations on Industrial Users which are using dilution to meet applicable Pretreatment Standards or Requirements, or in other cases where the imposition of mass limitations is appropriate. 40 CFR 403.6(d)

PART A: ON-SITE DISPOSAL – PUBLIC SEWER (CONTINUED)

6. Discharge of any toxic, flammable, explosive, corrosive, radioactive or non-biodegradable substance to the sanitary sewer is prohibited except as provided in **Part A.3** above.

7. Discharge of uncontaminated cooling water, groundwater, storm water or surface drainage water to the sanitary sewer is prohibited except as specifically authorized by this permit.

8. Discharge of industrial wastewater to the sanitary sewer with temperatures exceeding 140° F is prohibited.

9. This permit is subjected to additional Conditions and Limitations attached:
Part B – Wastes Not Authorized for Discharge or Deposits in **Part A**
Part C – General Conditions and Limitations
Part D – Effluent Quality Limitations
Part E -- Self-monitoring and Reporting (if applicable)

10. Other:

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
INDUSTRIAL WASTE DISPOSAL PERMIT

B1

PART B: WASTES NOT AUTHORIZED FOR DISCHARGE OR DEPOSIT IN PART A

1. Industrial wastes not specifically authorized for on-site pretretement, storage, deposit, discharge, or disposal in Part A of this permit shall be stored in leak-proof containers within an area designated on plans approved by the Department of Public Works pending transport to a legal point of disposal.

2. The Permittee shall determine if industrial wastes stored pursuant to Part B.1 above are hazardous wastes as defined in the California Health and Safety Code, Chapter 6.5 and as determined by the California Administrative Code, Title 22, Division 4, Chapter 30 and shall manage such wastes as prescribed therein.

3. Hazardous wastes shall only be removed from the premises under a Uniform Hazardous Waste Manifest unless a variance from such documentation has been granted by the California Environmental Protection Agency (EPA) Department of Toxic Substances Control (Cal EPA). Generator copies of the Uniform Hazardous Waste Manifest shall be maintained by the Permittee for not less than three years or as directed by Cal EPA.

4. The Permittee shall maintain records of the sources, quantity, name and address of hauler, date hauled, and point of legal disposal for nonhazardous industrial wastes and wastes granted a Cal EPA variance as described in Part B.3 above. Such records shall be kept a minimum of three years. A legal point of disposal is defined as one for which waste discharge requirements have been prescribed by a California Regional Water Quality Control Board and which is in full compliance therewith or a facility authorized to receive such wastes by the jurisdiction(s) regulating the facility and is in full compliance with all permits, regulations, and requirements.

5. Discharge of industrial wastewater to a channel, stormdrain, stream, river, lake, ocean or other surface waters is prohibited unless authorized by a National Pollutant Discharge Elimination System (NPDES) permit issued by a California Regional Water Quality Control Board or the U.S. Environmental Protection Agency (EPA).

6. The Permittee shall immediately notify the County of Los Angeles Department of Public Works (LACDPW) at (626) 458-3517 and the Publicly Owned Treatment Works (POTW) of all discharges that could cause problems to the POTW including slug loading, spills, bypasses, upsets, etc. A follow-up written notification describing the discharge is required to be submitted within 5 days of the incident.

7. The Permittee shall conform to the discharge prohibitions outlined in 40CFR 403.5(a)(1) and 40CFR 403.5(b).

8. Bypass is prohibited unless it meets 40CFR 403.17. If Permitee knows in advance of the need for a bypass, Permitee shall submit prior notice to the LACDPW and the POTW, at least ten days before date of bypass 40CFR 403.17(c)(1). The Permitee shall notify the LACDPW and the POTW of an unauthorized bypass within 24 hours from the time the Permitee becomes aware of the bypass 40CFR 403.17(c)(2)

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
INDUSTRIAL WASTE DISPOSAL PERMIT

C1

PART C GENERAL CONDITIONS AND LIMITATIONS

1. A copy of this permit shall be maintained on the premises where it will be available at all times to operating personnel

2. Industrial waste pretreatment, storage and disposal operations shall be conducted in such a manner that no nuisances are created

3. The permittee shall allow representatives of interested governmental agencies concerned with the disposal of industrial waste access at any reasonable time to take samples, inspect operations and review any records required by this permit

4. The permittee shall secure written approval from this Department before making any additions or modifications which may affect the quantity, quality, or method of disposal of industrial waste materials. Requests or plans for additions or modifications to industrial waste treatment facilities or method of disposal of disposal shall be submitted for approval to the Department of Public Works, Environmental Programs Division, PO Box 1460, Alhambra, CA 91802-1460.

5. This permit is subject to suspension or revocation if conditions exist which would justify denial of a permit, if permittee fails to correct unsatisfactory conditions, if any of the Conditions and Limitations of this permit have been violated or if Annual Industrial Waste Inspection Fees where required are not paid within 90 days from date of notification.

6. The Director of Public Works may modify this permit by addition, revision, or elimination of conditions and limitations as may be necessary to accomplish the purpose of ordinances and laws covering disposal of waste materials.

7. The permit is valid only for the facility and location named thereon and is not transferable. In the event of any change of ownership, name or control of the industrial waste facilities subject to this permit, the permittee shall notify the Director of Public Works prior to the effective date of such change. Permittee shall also notify the succeeding owner or operator of this permit by providing a copy of this permit by letter, as well as carbon copy (cc) the Director of Public Works. A new owner shall make application for an Industrial Waste Disposal Permit within 30 days from the date of assuming control of any facility subject to this permit.

8. Facilities subject to this permit shall not be abandoned. Cancellation of this permit may only be authorized pursuant to Los Angeles County Code Section 20.36.220.

Subject: *Underground Storage Tank Removal Report*
Verizon Plant Yard – Irwindale Facility
~~*41207B*~~ A591016
5010 Azusa Canyon Road
Irwindale, California 91706

Dear Mr. Regalado:

Please find enclosed a copy of the Underground Storage Tank Removal Report prepared by Shaw Environmental, Inc. (Shaw) on behalf of Verizon at their above-referenced facility. Field activities performed by Shaw include arranging for the rinsing, transportation, and destruction of one 12,000-gallon gasoline UST and associated steel piping, and collection and analysis of soil and stockpile samples from the UST excavation.

The UST was removed on May 20, 2009. Following removal, the UST was observed to be in good condition, with no evidence of a gasoline release noted. Nine excavation soil samples and four discrete soil stockpile samples were collected. All of the soil samples were analyzed for the regulatory required analytical parameters, including total petroleum hydrocarbons as gasoline (TPH-G); total petroleum hydrocarbons as diesel (TPH-D); benzene, toluene, ethylbenzene and xylenes (BTEX); the fuel oxygenates methyl tertiary butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tertiary-butyl ether (ETBE), tertiary butyl alcohol (TBA), and tertiary-amyl methyl ether (TAME); and methanol and ethanol.

Based on the data contained in this report, the following are concluded:

A 0005 91016

The results of the laboratory analytical testing show that no VOCs, TPH- G, TPH-D, BTEX or MTBE were detected in the soil samples obtained from beneath the former UST and product pipe lines, or from the stockpiles.

Based on the information contained herein, Verizon hereby respectfully request that site closure be granted for the UST removal by the County of Los Angeles Department of Public Works.

If you have any questions regarding the information presented in the attached report, please contact either Masood Choudhury at 909.620.5962 or Jim Cirillo at 949.660.5317.

1.0 Introduction

On behalf of Verizon – Environment Management, Shaw Environmental, Inc. (Shaw) was contracted to provide environmental consulting services during the removal of one 12,000-gallon gasoline underground storage tank (UST), associated piping and fuel pump from the Verizon – Irwindale Fleet Yard (Site) located at 5010 Azusa Canyon Road, Irwindale, California (Figure 1). UST removal work discussed in this report was completed in compliance with local and state regulatory requirements on May 20, 2009.

1.1 Site Description

The Site is located in a well developed setting of Irwindale, California, primarily comprised of industrial buildings mixed with multi-family residential properties. A single-story building housing a Verizon fleet fueling operations facility, a canopy covered fuel pump island and Verizon fleet vehicle parking lot occupy the majority of the site (Figure 2).

One 12,000-gallon double-wall steel unleaded gasoline UST used to fuel fleet vehicles was located to the south of the Verizon building. As Verizon decided to discontinue maintaining a UST at the site, the UST was scheduled for removal.

1.2 Permits

Prior to initiation of UST removal activities, Tait Environmental Services, Inc. (Tait), of Santa Ana, California completed a UST Application for Closure (issued on November 6, 2008) from the Los Angeles County Department of Public Works (DPW) Environmental Programs Division and was granted a permit, which authorized removal of the UST. The DPW Site File number is 3755-3882 and the closure permit number is 591016.

Before commencing with the tank removal activities, Shaw submitted a Rule 1166 Notification Form under Mitigation Plan Number 498435 and South Coast Air Quality Management District (SCAQMD) Identification Number 159709. Additionally, in advance of the removal activities, a representative of the Los Angeles County Fire Department (LACFD) was scheduled to observe UST removal activities. Copies of the permit application/removal permit, regulatory notification documentation, and State forms are included in Appendix A.

2.0 Tank Removal Field Activities

2.1 UST Removal

The Site is located within the SCAQMD and therefore was required to have in place an approved Various Locations Rule 1166 Contaminated Soil Mitigated Plan (Mitigation Plan). Prior to commencing work, Shaw applied for and received an approved Mitigation Plan from SCAQMD, number 498435. A copy of the Mitigation Plan is included in Appendix F.

As required by the Mitigation Plan, Shaw performed organic vapor monitoring during all excavation activities in accordance with applicable Rule 1166 monitoring requirements. Vapor monitoring logs are included in Appendix F.

On May 18, 2009, prior to removal of the UST, Tait removed the system's fuel pump and associated components. (While the dispensing hoses were completely flushed and removed, the fuel dispenser was left intact and will be removed at a later date by Tait.) Upon completion of these activities, Tait commenced with jack hammering the concrete overlying the UST, associated piping, and vent line trench, and excavating the soil fill material surrounding the UST. Digging and trenching activities continued through May 19, 2009. The removed fill material was placed on a plastic liner adjacent to the excavation. Photographic documentation of the UST removal activities is included in Appendix B.

On May 20, 2009, prior to removal, the UST was triple-rinsed by Nieto & Sons (Nieto) personnel using a fresh water/detergent mixture and a hot water pressure washer. Following rinsing, visual inspection of the UST revealed no residual sludge or liquid on the visible portions of the interior of the tank. Approximately 200 gallons of fuel and rinsate were removed from the UST using a vacuum truck. The rinsate and fuel were then transported for disposal, under manifest number 002152481-FLE to DeMenno Kerdoon in Compton, California. A copy of the hazardous waste manifest for the rinseate is included in Appendix C.

On May 20, 2009, under the oversight of LACFD Certified Industrial Hygienist (CIH) Ms. Nancy Carraway, Nieto secured the tank hoist straps and prepared the UST for removal. Ms. Carraway subsequently granted Nieto permission to remove the UST after they used a combustible gas indicator to measure the concentrations of flammable vapor and percent oxygen within the UST which were measured at below 1 percent and at 20.9 percent,

respectively. Additionally, Mr. Frank Garcia of LACFD was present to provide safety oversight.

The UST was removed using a crane. Following removal, the UST was inspected for signs of deterioration, holes, or leakage. The excavated tank was observed to be in good condition, without holes or cracks. According to the Hazardous Waste Tank Closure Certification completed by Ms. Carraway, no product, sludge, scale, rinsate or debris was observed within the UST. Subsequent to Ms. Carraway's visual inspection, the UST and associated piping were then transported by Nieto to Ecology Auto Parts in Santa Fe Springs, California. A copy of the manifest and certificate of destruction for the UST and piping are presented in Appendix D.

Mr. Garcia left the site after observing the successful removal of the UST from the excavation and it being secured to a flatbed truck for off-site transportation.

2.2 Soil Sampling Activities

Confirmation soil samples and soil stockpile samples were collected on May 20, 2009 in accordance with LACFD, DPW and California Regional Water Quality Control Board – Los Angeles Region (RWQCB-LA) soil sampling requirements. All soil samples were collected in clean, unused two-inch diameter stainless steel sleeves, capped, labeled, placed on ice in a cooler, and transported to the contract laboratory by Shaw personnel under appropriate chain-of-custody.

After collection, the soil samples were transported under strict chain-of-custody and submitted to Chemical & Environmental Laboratories, Inc. (C&E Laboratory), an Environmental Laboratory Accreditation Program (ELAP)-certified laboratory (ELAP number 2268) located in Santa Fe Springs, California. The excavation and stockpile soil samples were analyzed for the following analytes:

- Benzene, toluene, ethylbenzene and xylenes (BTEX), plus the fuel oxygenates methyl tertiary butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tertiary-butyl ether (ETBE), tertiary butyl alcohol (TBA), and tertiary-amyl methyl ether (TAME) using EPA Method 8260B
- Total petroleum hydrocarbons as diesel (TPH-D) using EPA Method 8015B Modified (carbon chain range C10 to C24)
- Total petroleum hydrocarbons as gasoline (TPH-G) using EPA Method 8015B Modified (carbon chain range C6 to C12)

- Methanol and ethanol using EPA Method 8015B Modified

Confirmation Sample Collection

The location of the former UST is identified on Figures 2 and 3. The location description of the confirmation samples collected following removal of the UST system are as follows:

- SS-01-2'; vent side floor, collected at 11:40
- SS-02-4', vent side floor, collected at 12:10
- SS-03-2'; fill side floor, collected at 12:47
- SS-04-4'; fill side floor, collected at 13:14
- SS-05-4'; east vent line trench floor, collected at 13:40
- SS-06-6'; east vent line trench floor, collected at 14:00
- SS-07-4'; west vent line trench floor, collected at 14:29
- SS-08-6'; west vent line trench floor, collected at 14:45
- SS-09-4'; adjacent to dispenser, collected at 15:00

All samples were collected on May 20, 2009. Two floor samples were collected from each end of the tank pit at approximately 2-feet and 4-feet below the surface of the excavation bottom. Additionally, two samples were collected from each end of the former vent line trench at approximately 4-feet and 6-feet below the floor of the excavated trench. Finally, a sample was obtained immediately adjacent and north of the dispenser at approximately 4-feet below surface grade (bsg).

Excavation samples SS-01-2', SS-02-4', SS-03-2', SS-04-4', SS-05-4', SS-06-6', SS-07-4', and SS-08-6' were collected by hand in stainless steel sleeves, directly from the excavation bucket. Excavation sample SS-09-4' was collected by pushing a stainless steel sleeve into soil exposed using a hand shovel. The locations and results for the excavation samples are shown on Figure 3.

Stockpile Sample Collection

The stockpiled soil was planned for use as excavation backfill, pending the review of analytical data and physical testing results. To characterize the stockpile, four discrete soil samples were collected and submitted for analysis on May 20, 2009. These samples were collected by pushing a stainless steel sleeve into soil from four locations along the stockpile perimeter. The locations and results for the stockpile soil samples, identified as SP-01

(collected at 15:20), SP-02 (collected at 15:30), SP-03 (collected at 15:40), and SP-04 (collected at 15:50) are shown on Figure 3.

2.3 Confirmation Soil Sample Results

No BTEX, TPH-G, TPH-D or fuel oxygenates were detected in the UST system confirmation soil samples. Soil sample analytical results are summarized in Table 1 and depicted on Figure 3. Copies of the laboratory reports are included in Appendix E.

2.4 Stockpile Soil Sample Results

No BTEX, TPH-G, TPH-D or fuel oxygenates were detected in the stockpile soil samples. Stockpile soil sample analytical results are summarized in Table 1 and depicted on Figure 3. Copies of the laboratory reports are included in Appendix E

3.0 Site Restoration

Review of the laboratory analytical results for the excavation and soil stockpile samples indicated that the stockpiled material was appropriate for use as backfill. Backfilling activities commenced on May 22, 2009; additional, site restoration activities were performed independent of Shaw oversight.

The fuel dispenser is securely stored on site and will be removed by Tait at a later date.

4.0 Conclusions

Based on the field observations and laboratory analytical data presented in this report, Shaw concludes the following:

- On May 20, 2009, one 12,000-gallon unleaded gasoline UST and associated steel piping were removed from the site.
- Groundwater was not encountered during tank removal activities.
- No sheen or other evidence of petroleum impact was noted on the in-situ soils or removed fill material.
- No BTEX, TPH-G, TPH-D or fuel oxygenates were detected in the excavation confirmation soil samples.
- No BTEX, TPH-D, TPH-G or fuel oxygenates were detected in the stockpile soil samples.
- Results of the laboratory analyses did not indicate a release of petroleum had occurred.
- The tank excavation was subsequently backfilled using the stockpiled soil and clean imported fill gravel.
- No further action is recommended for this site.

4.1 Reporting Requirements

One copy of this report will be forwarded to the following regulatory agency:

County of Los Angeles Department of Public Works
Environmental Programs Division

Tank Removal Permit and Forms

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.
3. Description of methods for obtaining, handling, and transporting samples.
4. Time and date samples were obtained.
5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for UST closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.
6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date; methods of extraction, and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.
11. Evidence of legal disposal of soils designated as nonhazardous.
12. Any observations of site contamination.
13. Remedial action plan to mitigate contamination.
14. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.

Print Name Christina Meza

Signature Christina Meza Date 11/6/08

STATE OF CALIFORNIA
California Regional Water Quality Control Board
Los Angeles Region
(Underground Storage Tank Program)

General Laboratory Testing Requirements for Petroleum Hydrocarbon Impacted Sites

The purpose of this document is to supplement the Regional Board's Laboratory Report Form (6/00) in order to update obsolete testing requirements and set forth the new requirements for fuel oxygenates and natural attenuation testing. Each analytical method used must be certified by the California Environmental Accreditation Laboratory Program (ELAP).

1. General Laboratory QA/QC Requirements
Conform to the Regional Board's Laboratory Report Form (6/00) in general, except for items specified below.

2. Compounds to be Tested
Total petroleum hydrocarbons in gasoline range (TPHg) (C4 – C12); Total petroleum hydrocarbons in diesel range (TPHd) (C13 – C22); benzene, toluene, ethylbenzene, xylenes (BTEX); methyl tertiary butyl ether (MTBE); di-isopropyl ether (DIPE); ethyl tertiary butyl ether (ETBE); tertiary amyl methyl ether (TAME); tertiary butyl alcohol (TBA). If the gasoline tanks historically or currently contain methanol or ethanol, these compounds are also to be tested.

3. Analytical Test Methods and Detection Limits
Conform to Table 1 below. Report any concentration detected between the method detection limit (MDL) and estimated quantitation limit (EQL) (or reporting limit (RL)) in a numerical value with a "J" flag indicator. All "Non-Detect" (ND) shall be reported in the format with "< (numerical MDL)." Integrate all fuel oxygenate additive concentrations into total petroleum hydrocarbons (TPH) and report it as TPH. EPA Method 8021B may be used to substitute EPA Method 8260B at the sites where all fuel oxygenates have not been identified by EPA Method 8260B in soil and/or groundwater.

Table 1: Analytical Requirements

		Required MDL (Method detection limit)	
Analyte	Analytical Method	Soil (µg/kg)	Water (µg/L)
BTEX	EPA Method 8260B(8021B)	1	0.5
MTBE	EPA Method 8260B	2	1
DIPE	EPA Method 8260B	2	1
ETBE	EPA Method 8260B	2	1
TAME	EPA Method 8260B	2	1
TBA	EPA Method 8260B	20	10
TPHg	Cal-LUFT GC/FID or GC/MS	100-200	50-100
TPHd	Cal-LUFT GC/FID	1000	500
Methanol	Cal-LUFT GC/FID	1000	500
Ethanol	Cal-LUFT GC/FID(EPA8260B)	500	250

ATTENTION CONTRACTOR

NOTIFICATION/PERMIT REQUIREMENTS

The Closure Authorization is issued subject to compliance with all applicable laws and regulations relating to the performance of work including, but not limited to, business license requirements, Building Codes, Fire Codes, Air Quality regulations, Health and Safety Codes, Water Codes, and Transportation regulations.

Pursuant to Los Angeles County Code, Section 11.78.045, and the Conditions and Limitations of the attached Hazardous Materials Underground Storage Closure Authorization, you are required to complete **ALL** of the following agency notifications indicated below within the time period specified prior to commencement of work on this closure.

[X] 72 HOURS – DEPARTMENT OF PUBLIC WORKS WASTE CONTROL ENGINEERING INSPECTOR:

ADDITIONAL CONDITIONS FOR UST CLOSURE/SITE ASSESSMENT

TITLE 23: CALIFORNIA CODE OF REGULATIONS - WATERS
DIVISION 3: STATE WATER RESOURCES CONTROL BOARD (SWRCB)
CHAPTER 30: ELECTRONIC SUBMITTAL OF INFORMATION

Article 1 – GENERAL PROVISIONS

Section 3890. General Intent, Content, and Applicability of Regulations

(a) The regulations in this Chapter are intended to provide electronic access to reports, including soil, vapor, and water data, prepared for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code, (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15, of Title 23 of the California Code of Regulations (CCR).

(b) The regulations in this Chapter require persons responsible for submitting certain reports to the State Board, a regional board, or a local agency to submit these reports electronically over the Internet to the State Board's Geotracker system.

(c) The requirements of this Chapter are in addition to, and not superseded by, any other applicable reporting requirements.

(d) Except as provided in Section 3895(b), the electronic reporting requirements of this Chapter are intended to replace requirements for the submittal of paper copies of reports, beginning July 1, 2005.

Authority cited: Sections 13196 and 13198(c), Water Code.
Reference: Sections 13196 and 13198, Water Code.

Article 2. - ELECTRONIC SUBMITTAL OF INFORMATION

Section 3891. Definition of Terms

"COELT" is the United States Army Corps of Engineers Loading Tool program. It is a relational database application that is designed to run with the Microsoft Windows operating system. COELT places laboratory data into the standardized Electronic Deliverable Format (EDF). The program can accept data from Laboratory Information Management System (LIMS) or manually entered data. COELT is an optional software application that is intended to help laboratories that require new software to produce the EDF data deliverable. COELT includes a report utility that allows hard copy laboratory reports to be printed that match the actual electronic data. For purposes of the requirements of this chapter, version 1.2a of COELT may be used. The program (coelt12i.exe) and documents (coelt 1.2i manual.zip) for version 1.2i of COELT are available through links provided at http://www.waterboards.ca.gov/ust "CSRS-H" is the California Spatial Reference System-Horizontal, which includes the High Precision Geodetic Network (HPGN), the High Precision Geodetic Network–Densification (HPGN-D) and other geodetic control positions. These control positions have been determined by Global Positioning System survey methods in accordance with first order or better standards and specifications from the Federal Geodetic Control Subcommittee (FGCS) of the Federal Geographic Data Committee. These control positions are published by the National Geodetic Survey, California Spatial Reference Center or its successor.

Section 3892. Reports

The following reports are subject to the requirements of this Chapter, when those reports are required for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code, (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the California Code of Regulations (CCR).

(a) Reports submitted pursuant to Division 3, Chapter 16, Article 11 of Title 23 of the CCR.

(b) Reports submitted pursuant to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the CCR.

(c) Reports submitted pursuant to section 13304 of the Water Code.

(d) Reports submitted pursuant to section 13267 of the Water Code.

(e) Reports submitted pursuant to any order or directive of the State Board, a regional board or a local agency.

(f) Reports submitted pursuant to the Two-year Joint Cooperative Agreement Execution Plans under the Defense / State Memorandum of Agreement and Navy Cost Recovery Cooperative Agreement, for the State of California.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code.

Section 3893. Electronic Submittal of Reports

(a) Persons responsible for submitting reports pursuant to this Chapter shall submit the following information described in subdivision (b) electronically over the Internet to the State Board's Geotracker system in conformance with data dictionaries found in Title 27, Division 3, Subdivision 2 (Monitoring and Release Information) and specifications contained in the State Water Resources Control Board EDF Guidelines and Restrictions (version 1.2i) and Survey XYZ Guidelines and Restrictions (Version 6). These data dictionaries and documents are available through links provided at http://www.waterboards.ca.gov/ust.

(b) Data generated after the effective date of the regulations by chemical analysis of soil, vapor, or water samples (including surface water, groundwater and influent/effluent water samples from remediation systems), shall be submitted in EDF format. All data submitted in EDF format shall be checked for errors prior to and during submittal using the EDCC software consistency-checking tool. All data submitted in EDF format must pass this error-checking tool as well as meet normal regulatory requirements in order to be considered valid data. In addition, when required for reports subject to this Chapter, the following shall also be submitted electronically:

(1) The latitude and longitude of any permanent monitoring well for which data is reported in EDF format, accurate to within 1 meter and referenced to a minimum of two reference points from the California Spatial Reference System (CSRS-H), if available.

(2) The surveyed elevation relative to a geodetic datum of any permanent monitoring well.

(3) The elevation of groundwater in any permanent monitoring well relative to the surveyed elevation.

(4) A site map or maps showing the location of all sampling points referred to in the report.

(5) The depth to the screened interval and the length of screened interval for any permanent monitoring well.

(6) Boring logs, in PDF format.

(7) A complete copy of the report, in PDF format, which includes the signed transmittal letter and professional certification.

(c) All deadlines and timeframes for submittals of reports are applicable to the information submitted electronically pursuant to this Chapter.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 and13198 (c), Water Code.

CLOSURE APPLICATION SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

PART 1 OF 3

DPW USE ONLY:
SITE-FILE NO. 3755 - 3882
APPLICATION NO. 591016

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2'-4' below tank invert	TPHg	~~SITE CLOSE~~ 8015M
		BTEX, MTBE, fuel oxygenates	8260B
		Ethanol	8260B
(pipe)	Sample along the pipe run at every 50' interval, 2'-4' below pipes, start @ dispensers	same as above	same as above
(dispensers)	2'-4' below each dispenser	same as above	same as above

Apply EPA Method 5035 for all soil sample collection, preparation, and preservation in order to minimize VOC losses.

Continued on Page 2

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month form the sampling date or 180 days from the date of this permit, whichever is earlier.

11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

CLOSURE – UNDERGROUND STORAGE TANKS

CONDITIONS A – GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer – Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3)-business day advance notification.
   b. Permanent closure of a tank in place or a temporary closure shall require a 30-written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 – 81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
   b. The personnel shall be sufficiently skilled to safely carry out such operation.
   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B – TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, "Abandonment or Removal of Underground Tanks, "Part A and any other applicable Parts.

2. A temporary closure shall not exceed 180 days.

CONDITION C – PERMANENT TANK (S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tank shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and re-compacted to a relative compaction of 90%.

CONDITIONS D – PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test boring may be drilled vertically and the reason stated in the report in 2.h. below.
   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
   c. For multiple tanks, as a minimum, boring shall be placed at 20-foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.
   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.
   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
   f. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
   g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials – Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

NOTICE TO CLOSURE PERMIT APPLICANTS

The South Coast Air Quality Management District (SCAQMD) has adopted Rule 1166 regulating emissions of Volatile Organic Compounds (VOC) from decontamination of soil effective **August 5, 1988.**

In addition to the requirements of your Closure Permit, persons excavating any underground storage tank that previously contained VOCs must:

- Notify the SCAQMD by telephone at (909) 396-2326 or by fax at (909) 396-3342 using the SCAQMD notification form 24 hours prior to tank excavation. 1166(c)(1)(A)
- Monitor the excavated material during the excavation for VOC contamination. 1166(c)(1)(B)
- When VOC contamination is detected:
  - Cease excavation.
  - Cover the contaminated soil until implementation of approved mitigation measures. 1166(c)(1)(C)
  - Notify the SCAQMD at (909) 396-2326 within 24 hours of detection of VOC contaminated soil. 1166(c)(2)(A)
- A person shall not engage in or allow any on- or off-site spreading of VOC contaminated soil which results in uncontrolled evaporation of VOC to the atmosphere. 1166(c)(3)

Exemptions

- Treatment of less than one (1) cubic yard of contaminated soil. 1166(d)(1)(A)
- Decontamination of soil containing organic compounds that have an initial boiling point of 302EF or greater, Reid Vapor Pressure less than 80 mm Hg or Absolute Vapor Pressure less than 36 mm Hg at 20EC. 1166(d)(1)(B),(F)
- Removal of soil for sampling purposes pursuant to Environmental Protection Agency methods. 1166(d)(1)(C)
- Accidental spillage of five (5) gallons or less of VOC. 1166(d)(1)(D)
- Documentation of soil which is contaminated through natural seepage of VOC from oil and gas wells or other natural sources. 1166(d)(1)(E)

SPECIFIC QUESTIONS ON RULE 1166 SHOULD BE REFERRED TO THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (909) 396-2326

COUNTY of LOS ANGELES FIRE DEPARTMENT

UNDERGROUND STORAGE TANK
CLOSURE INFORMATION

1. This application is for authorization to temporarily or permanently close an underground storage tank (UST) pursuant to Los Angeles County Code, Title 11, Division 4 and California Code of Regulations, Title 23, Division 3, Chapter 16. This application may also be used for product piping removal associated with an existing or removed USTs.

2. This application will not be approved unless a valid Hazardous Material Underground Storage Permit (HMUSP) or Unified Program (UP) Permit application is on file with the Department of Public Works (DPW).

3. Additional fees may be imposed for closure of USTs that were not in compliance with December 22, 1998, standards for upgrade or temporary closure.

4. USTs closed on site by removal or cleaning and filling with an inert solid material prior to January 1, 1984, need not comply with current closure requirements, however, contamination related to these USTs must be reported and cleaned up.

5. This application must be accompanied by a UP UST FACILITY INFORMATION form for each site and UP UST TANK INFORMATION form for each UST to be removed or closed.

6. All work shall be carried out in full compliance with all applicable Federal, State and local laws, ordinances, rules and regulations.

7. All fees due to DPW and/or to the Certified Unified Program Agency (CUPA) for the operation and/or maintenance of the facility subject to closure through the date of closure shall be paid in full.

8. All inspection notification(s) shall be made as directed by the attached conditions of this approval.

9. Within 30 days after closure, the applicant shall furnish to the DPW a closure report per the DPW Closure Report Requirements and Supplements, describing all work completed, results of any required sampling, disposition of any contaminated soils or materials found and any other requirements made part of the closure application.

10. In all cases, closure permits expire 180 days from the date of issue unless otherwise specified. It is the responsibility of the owner or operator to make sure that the final report contains the required information and is submitted to the DPW within 30 days from the sampling date or 180 days from the date of the permit issuance, whichever is earlier. The total number of tanks listed on the HMUSP or UP Permit and the yearly annual permit maintenance billing will remain unchanged until the closure report is received by the DPW. Only one copy of the closure report needs to be submitted unless otherwise directed.

11. All closure applications are site specific and may be subject to additional sampling and site characterization requirements as necessary to protect the public health and safety, underground and surface water supplies, and may include requirements, requested by Federal, State or other regulatory agencies.

12. All correspondence related to this closure authorization shall include the SITE-FILE number listed on the front of this document, found in the upper right box and be addressed to the following location:

III. CERTIFICATION

On examination of the tank, I certify the tank is visually free from product, sludge, scale (thin, flaky residual of tank contents), rinseate and debris. I further certify that the information provided herein is true and accurate to the best of my knowledge.

SIGNATURE OF CERTIFIER: Nancy Carraway

NAME OF CERTIFIER (Print) 754: Nancy Carraway

TITLE OF CERTIFIER 755: Certified Industrial Hygienist

ADDRESS 756: 991 East California Boulevard

CITY 757: Pasadena, California 91106

PHONE 758: 626 676 7681

DATE 759: 05/20/2009

CERTIFICATION TIME: 9:32 am - 9:36 am

STATUS OR AFFILIATION OF CERTIFYING PERSON

Certifier is a representative of the CUPA, authorized agency, or LIA: 760

☐ Yes ☒ No

Name of CUPA, authorized agency, or LIA: 761: LOS ANGELES COUNTY FIRE DEPARTMENT

If certifier is other than CUPA / LIA check appropriate box below: 762

- ☒ a. Certified Industrial Hygienist (CIH)
- ☐ b. Certified Safety Professional (CSP)
- ☐ c. Certified Marine Chemist (CMC)
- ☐ d. Registered Environmental Health Specialist (REHS)
- ☐ e. Professional Engineer (PE)
- ☐ f. Class II Registered Environmental Assessor
- ☐ g. Contractors' State License Board licensed contractor (with hazardous substance removal certification)

TANK PREVIOUSLY HELD FLAMMABLE OR COMBUSTIBLE MATERIALS: GASOLINE 763

(If yes, the tank interior atmosphere shall be re-checked with a combustible gas indicator prior to work being conducted on the tank.) ☒ Yes ☐ No

CERTIFIER'S TANK MANAGEMENT INSTRUCTIONS FOR SCRAP DEALER, DISPOSAL FACILITY, ETC: 764

Inert tank interior before torch cutting or using sparking tools on or near tank. Tank is not suitable for potable water storage, for personnel entry, or for hot work. Tank is suitable for cold work.

A copy of this certificate shall accompany the tank to the recycling / disposal facility and be provided to the CUPA. If there is no CUPA, copies shall be submitted to the LIA and authorized agency, owner / operator of the tank system, removal contractor, and the recycling / disposal facility.

May 22, 2009 ELAP Certificate No: 2268

Mr. Jim Cirillo
Shaw Environmental and Infrastructure Inc
3347 Michelson Drive, #200
Irvine, CA 92612

Project: Verizon
C&E ID: 90520C

Dear Mr.Cirillo,

Enclosed is an analytical report for the sample(s) received by Chemical & Environmental Laboratories, Inc. on May 20, 2009, and analyzed as indicated in the attached chain-of-custody.

Unless otherwise noted, no problems were encountered during receiving, preparation and analysis of these samples.

Please contact me at (562) 921-8123 if you have any questions regarding this report.

Sincerely,

Larry Zhang, Ph.D.
Laboratory Director

VARIOUS LOCATIONS
RULE 1166 CONTAMINATED SOIL MITIGATION PLAN

Reference is made to your application (A/N 498435) for the excavation and handling of VOC-contaminated soil at **various locations** within the South Coast Air Quality Management District.

In accordance with Rule 1166 (c), this approved plan is required prior to commencing excavation of any areas, sites, or locations which has previously been used to store or transfer volatile organic compounds (VOC) or during the excavation, handling, or storage of VOC-contaminated soils.

The rights and privileges granted through the issuance of this plan are restricted exclusively to the plan holder to whom it was issued, and are non-transferable, even with the written or expressed consent of the plan holder listed above.

A VARIOUS LOCATIONS PLAN can be used at a site to excavate and remove a maximum of 2000 cubic yards of VOC contaminated soil at the site. Any treatment or additional excavation of VOC contaminated soil at the site will require the issuance of a SITE SPECIFIC plan by the AQMD. Multiple use of VARIOUS LOCATIONS PLANS to excavate over 2000 cubic yards of contaminated soil for the same site is prohibited per Rule 1166.

This excavation and mitigation plan has been approved under the provisions of Rule 1166 of the Rules and Regulations of the AQMD and is subject to the following conditions.

THIS PLAN WILL EXPIRE ONE YEAR FROM THE ISSUE DATE AND THERE IS NO AUTOMATIC RENEWAL PROCESS.

TO MAINTAIN A CURRENT PLAN AFTER THE EXPIRATION DATE, FILE AN APPLICATION FOR A NEW PLAN AT LEAST ONE MONTH PRIOR ITS EXPIRATION. CALL 909 396- 2682 OR E-MAIL rvishwanath@aqmd.gov FOR AN APPLICATION PACKAGE AND CURRENT FEE INFORMATION.

PLAN CONDITIONS

SECTION I – GENERAL REQUIREMENTS

1. A SIGNED COPY OF THIS PLAN SHALL BE PRESENT AT EACH EXCAVATION SITE AT ALL TIMES AND SHALL BE MADE AVAILABLE TO AQMD PERSONNEL UPON REQUEST.

2. THIS PLAN IS NOT VALID FOR THE EXCAVATION OF VOC CONTAMINATED SOILS AT LANDFILLS OR SITES USED FOR DISPOSAL OF REFUSE OR OTHER TYPES OF WASTE.

3. THIS PLAN DOES NOT ALLOW THE TREATMENT OF VOC-CONTAMINATED SOIL BY THERMAL, CHEMICAL, OR MECHANICAL PROCESSES. ANY OF THE ABOVE TREATMENT PROCESSES REQUIRES A PERMIT TO OPERATE FROM THE AQMD AND A SITE-SPECIFIC RULE 1166 PLAN.

4. THIS PLAN DOES NOT ALLOW BACK-FILLING OF TREATED VOC CONTAMINATED SOIL. BACK-FILLING OF TREATED VOC CONTAMINATED SOIL MAY BE ALLOWED UNDER A SITE SPECIFIC RULE 1166 PLAN.

5. A). THE TOTAL QUANTITY OF VOC CONTAMINATED SOIL EXCAVATED AND HANDLED AT EACH SITE SHALL NOT EXCEED **2,000 CUBIC YARDS.** THIS TOTAL INCLUDES ANY VOC CONTAMINATED SOILS EXCAVATED FROM THIS LOCATION UNDER A VARIOUS LOCATION PLAN WITHIN THE LAST TWELVE (12) CALENDAR MONTHS. EXCAVATIONS INVOLVING QUANTITIES IN EXCESS OF 2000 CUBIC YARDS OF VOC CONTAMINATED SOIL REQUIRES THE APPLICATION SUBMITTAL FOR A SITE SPECIFIC RULE 1166 EXCAVATION PLAN.

6. THE AQMD SHALL BE IMMEDIATELY NOTIFIED OF ANY COMPLAINTS RECEIVED AS A RESULT OF ACTIVITIES CONDUCTED UNDER THIS PLAN. SUCH NOTIFICATION SHALL INCLUDE THE NATURE OF THE COMPLAINT, NUMBER OF COMPLAINANTS AND THE ACTION TAKEN BY THE PLAN HOLDER TO MITIGATE THE SOURCE OF THE COMPLAINT.

7. DURING EACH STEP OF THE PROCESS UP TO AND INCLUDING THE REMOVAL AND DISPOSAL PROCESS, ALL PRECAUTIONS AND MEASURES SHALL BE TAKEN TO MINIMIZE THE RELEASE OF VOC, ODOR AND DUST. THIS INCLUDES BUT IS NOT LIMITED TO: THE USE OF ADDITIONAL PLASTIC SHEETING ON STOCKPILES, USE OF SUPPRESSANTS ON EXPOSED SOIL SURFACES & WORK AREAS AND MAINTAINING PAVED PUBLIC STREETS FREE OF SOIL DEPOSITS.

8. FOR THE PURPOSES OF RULE 1166 AND THIS PLAN, SOIL MEASURED PURSUANT TO RULE 1166 AS VOC CONTAMINATED SOIL, IS CONSIDERED AS VOC CONTAMINATED SOIL FROM THE TIME OF MEASUREMENT ONWARD, UNTIL THE SOIL IS TREATED PURSUANT TO AN APPROVED AQMD TREATMENT PROCESS.

SECTION II – PRIOR TO EXCAVATION

9. AT LEAST 24 **HOURS** PRIOR TO COMMENCING EXCAVATION OR GRADING OF SOIL AT THE SITE, THE EXECUTIVE OFFICER OR DESIGNEE SHALL BE NOTIFIED OF THE EXCAVATION BY FAX USING A FORM APPROVED BY THE EXECUTIVE OFFICER WHICH IS FULLY COMPLETED AND INCLUDING, THE NAME OF THE COMPANY PERFORMING THE EXCAVATION, AND THE APPLICATION NUMBER LISTED ON THIS MITIGATION PLAN. THE NOTIFICATION SHALL BE MADE BY FAXING THE NOTIFICATION FORM AT (909) 396-3342. FAX NOTIFICATIONS WILL RECEIVE A REFERENCE NUMBER BY RETURN FAX OR CAN BE OBTAINED REFERENCING THE FAX NOTIFICATION BY PHONE TUESDAY THROUGH FRIDAY DURING BUSINESS HOURS AT 909 396-2326. THE REFERENCE NUMBER SHALL BE RETAINED AS PROOF OF COMPLIANCE WITH THIS REQUIREMENT.

REFERENCE NO: 216019 NOTIFICATION DATE: 5-13-09

10. COMPLETE VERIFICATION INFORMATION IN CONDITION NO. 30 AND OBTAIN REQUIRED SIGNATURES, PRIOR TO COMMENCING EXCAVATION.

SECTION III – MONITORING

11. DURING THE EXCAVATION PROCESS, AN ORGANIC VAPOR ANALYZER (OVA) SHALL BE ON SITE AT ALL TIMES. THE OVA SHALL BE MAINTAINED IN GOOD WORKING ORDER AT ALL TIMES AND SHALL BE CALIBRATED BY THE MANUFACTURER AT LEAST ONCE EVERY THREE MONTHS. THE CALIBRATION OF THE OVA SHALL BE VERIFIED USING CERTIFIED CALIBRATION GAS AT THE BEGINNING OF EACH WORKING DAY WITH THE PROCEDURES SPECIFIED BY THE MANUFACTURER. IF A CALIBRATION GAS OTHER THAN HEXANE IS USED, EACH MEASURED READING SHALL BE CORRELATED TO AND EXPRESSED AS HEXANE, USING EQUIVALENCY FACTORS PROVIDED BY THE MANUFACTURER.

12. ALL MONITORING SHALL BE CONDUCTED AT A DISTANCE NO MORE THAN 3 INCHES ABOVE THE SOIL SURFACE USING AN OVA DESCRIBED IN CONDITION NO. 11 ABOVE. **MONITORING SHALL BE CONDUCTED AT A MINIMUM FREQUENCY OF ONE READING FOR EVERY TWO CUBIC YARDS OF SOIL EXCAVATED, NOT TO EXCEED FIFTEEN MINUTES BETWEEN READINGS. ALL READINGS SHALL BE TAKEN NO LATER THAN THREE (3) MINUTES AFTER EACH LOAD OF SOIL IS EXCAVATED.**

13. ALL MONITORING SHALL BE CONDUCTED BY TRAINED PERSONNEL WHO ARE PROFICIENT IN THE USE OF THE HYDROCARBON MONITOR SELECTED FOR USE AT THIS SITE.

14. WRITTEN RECORDS OF OVA MONITORING AND CALIBRATIONS REQUIRED ABOVE SHALL BE KEPT IN A FORMAT APPROVED BY THE AQMD. THE APPROVED FORMAT IS INCLUDED ON PAGE 7 OF THIS PLAN. THE CERTIFICATION ON ALL RECORDS SHALL BE SIGNED AND DATED ON THE DAY THE MEASUREMENTS ARE OBSERVED.

15. UPON DETECTION OF VOC CONTAMINATED SOIL (READINGS 50 PPM OR GREATER), THE EXECUTIVE OFFICER OR DESIGNEE SHALL BE NOTIFIED **WITHIN 24 HOURS** OF THE FIRST DETECTION OF VOC CONTAMINATION. THE NOTIFICATION SHALL BE MADE BY FAXING THE NOTIFICATION FORM TO (909) 396-3342 OR CALLING (909) 396-2326. A REFERENCE NUMBER WILL BE FAXED BACK OR WILL BE ISSUED WHEN THE PHONE NOTIFICATION IS RECEIVED. ALL PHONE NOTIFICATIONS SHALL BE FOLLOWED BY MAILING THE NOTIFICATION FORM TO THE DISTRICT POSTMARKED **WITHIN 48 HOURS**. THE REFERENCE NUMBER WILL BE RETAINED AS PROOF OF COMPLIANCE WITH THIS REQUIREMENT.

REFERENCE NO:_____NOTIFICATION DATE:_____

SECTION IV – HANDLING AND STORAGE

16. ALL VOC-CONTAMINATED SOIL BELOW 1000 PPM SHALL BE STOCKPILED, COVERED WITH PLASTIC SHEETING AND STORED SEPARATELY FROM NON-VOC-CONTAMINATED SOIL, OR IMMEDIATELY TRANSPORTED TO A TREATMENT FACILITY.

17. A STOCKPILE SHALL NOT CONTAIN MORE THAN 400 CUBIC YARDS OF SOIL.

18. IF THE OVA MEASUREMENT IS GREATER THAN 50 PPMV BUT LESS THAN 1000 PPMV

    A) THE AFFECTED WORK AREA AND LOAD OF SOIL SHALL BE SPRAYED WITH WATER AND/OR APPROVED VAPOR SUPPRESSANT.

    B) CONTAMINATED SOIL IN STOCKPILES SHALL BE COVERED WITH PLASTIC SHEETING WHICH OVERLAP A MINIMUM OF TWENTY-FOUR INCHES AND ARE SECURED SO THAT NO PORTION OF THE CONTAMINATED SOIL IS EXPOSED TO THE ATMOSPHERE. IN THE COURSE OF HANDLING THE STOCKPILE, ONLY THE WORKING FACE OF THE STOCKPILE MAY BE UNCOVERED.

19. IF THE OVA MEASUREMENT EQUALS OR IS GREATER THAN 1000 PPM, STOP EXCAVATION TO NOTIFY THE DISTRICT IMMEDIATELY OR WITHIN ONE HOUR OF DETECTION AND,

    A) THE AFFECTED SOIL AND WORKING AREA SHALL BE IMMEDIATELY SPRAYED WITH WATER OR AN APPROVED VAPOR SUPPRESSANT, AND EITHER:

    B) THE CONTAMINATED SOIL EXCAVATED SHALL BE IMMEDIATELY PLACED IN AQMD APPROVED SEALED CONTAINERS, OR,

    C) DIRECTLY LOADED IN TRUCKS, SPRAYED WITH ADDITIONAL WATER OR APPROVED VAPOR SUPRESSANT, COVERED, AND TRANSPORTED IMMEDIATELY OFF SITE AS PER CONDITION #25 OF THIS PLAN, OR,

    D) OTHER ALTERNATIVE STORAGE METHODS WITH PRIOR WRITTEN APPROVAL FROM THE AQMD.

20. DURING EXCAVATION, THE ONLY EXPOSED VOC CONTAMINATED SOIL SHALL BE RESTRICTED TO THE IMMEDIATE WORKING AREA OF THE SITE OR STOCKPILE. ALL OTHER PORTIONS OF THE STOCKPILE SHALL BE COVERED WITH PLASTIC SHEETING, WITH SEAMS, WHICH OVERLAP A MINIMUM OF TWENTY-FOUR INCHES AND ARE SECURED WITH DUCT TAPE. ANY EXPOSED VOC-CONTAMINATED SOIL SURFACES (WORK FACE) SHALL BE KEPT MOIST WITH WATER OR OTHER APPROVED SUPPRESSANTS AT ALL TIMES, AND SHALL BE RE-COVERED DURING PERIODS OF INACTIVITY LONGER THAN ONE (1) HOUR. AT THE END OF EACH WORKING DAY, ALL STOCKPILES SHALL BE COMPLETELY COVERED AND SECURELY ANCHORED TO PREVENT ANY EXPOSURE OF SOIL TO THE ATMOSPHERE.

21. ONCE COVERED WITH PLASTIC SHEETING, STOCKPILES SHALL REMAIN UNDISTURBED UNTIL REMOVED FROM SITE.

22. DAILY INSPECTIONS SHALL BE CONDUCTED OF ALL COVERED VOC-CONTAMINATED STOCKPILES TO ENSURE THE INTEGRITY OF THE PLASTIC COVER. SUCH INSPECTIONS SHALL INCLUDE A VISUAL INSPECTION OF ALL SEAMS AND PLASTIC COVER SURFACES. ANY HOLES, TEARS OR ANY OTHER POTENTIAL SOURCES OF FUGITIVE VOC EMISSIONS SHALL BE REPAIRED IMMEDIATELY. DAILY RECORDS SHALL BE MAINTAINED TO ENSURE COMPLIANCE WITH THIS CONDITION.

23. VOC CONTAMINATED SOIL SHALL NOT BE SPREAD ON-SITE OR OFF-SITE. THIS INCLUDES ANY UNNECESSARY MOVEMENT OR AGITATION OF SOIL THAT MAY CAUSE THE UNCONTROLLED EVAPORATION OF VOC'S INTO THE ATMOSPHERE, INCLUDING THE RESHAPING OR RELOCATION OF STOCKPILES.

SECTION V – SOIL REMOVAL AND DISPOSAL

24. ALL EXCAVATED VOC-CONTAMINATED SOIL SHALL BE REMOVED FROM THE SITE WITHIN **THIRTY (30) DAYS** OF ITS EXCAVATION.

25. ALL VOC-CONTAMINATED SOIL REMOVED FROM THE SITE SHALL COMPLY WITH THE FOLLOWING:

    A). BE TRANSPORTED TO AN APPROVED TREATMENT/DISPOSAL FACILITY. IT SHALL BE THE RESPONSIBILITY OF THE PLAN HOLDER TO ENSURE THAT THE RECEIVING TREATMENT/DISPOSAL FACILITY HAS RECEIVED APPROVAL FROM THE APPROPRIATE ENVIRONMENTAL OVERSIGHT AGENCIES TO HANDLE AND TREAT VOC CONTAMINATED SOILS.

    B). WHEN LOADING IS COMPLETED AND DURING TRANSPORTATION, NO EXCAVATED MATERIAL SHALL EXTEND ABOVE THE SIDES OR REAR OF THE TRUCK OR TRAILER.

    C). PRIOR TO COVERING/TARPING, LOADED CONTAMINATED SOIL SHALL BE WETTED BY SPRAYING WITH MIST INHIBITORS.

    D). THE TRUCK OR TRAILER SHALL BE COMPLETELY COVERED/TARPED PRIOR TO LEAVING THE SITE TO PREVENT PARICULATE EMISSIONS TO THE ATMOSPHERE.

    E). THE EXTERIOR OF THE TRUCKS (INCLUDING THE TIRES) SHALL BE CLEANED OFF PRIOR TO THR TRUCKS LEAVING THE EXCAVATION SITE.

SECTION VI - RECORDS AND REPORTING

26. A WRITTEN REPORT SHALL BE PROVIDED TO THE AQMD WITHIN 30 DAYS OF INITIAL DETECTION OF CONTAMINATED SOIL, WHICH INCLUDES THE FOLLOWING INFORMATION.

    A) THE STATUS OF THE EXCAVATION PIT, AND ANY VOC CONTAMINATED SOIL REMAINING ON SITE.

    C) A BRIEF SUMMARY INDICATING IF ADDITIONAL CLEAN UP EFFORTS ARE NECESSARY, THE ADDITIONAL QUANTITY OF VOC CONTAMINATED SOILS TO BE EXCAVATED AND THE PROJECTED SCHEDULE OF THE EXCAVATION.

27. RECORDS OF DISPOSAL SHALL BE MAINTAINED FOR ALL VOC-CONTAMINATED SOIL REMOVED FROM THIS SITE. SUCH RECORDS SHALL BE CLEARLY LABELED "**SCAQMD RULE 1166-VOC CONTAMINATED SOIL**" AND SHALL INCLUDE THE IDENTIFICATION AND THE LOCATION OF, 1) THE GENERATOR, 2) TRANSPORTER AND 3) RECEIVING FACILITY. IN ADDITION, SUCH RECORDS SHALL BE SIGNED AND DATED BY EACH OF THE ABOVE PARTIES INDICATING RECEIPT OR RELINQUISHMENT OF THE VOC-CONTAMINATED SOIL AT THE TIME CUSTODY IS TRANSFERRED.

28. RECORDS OF DISPOSAL OF VOC-CONTAMINATED SOIL SHALL BE MAINTAINED ON SITE DURING THE EXCAVATION AND LATER MAINTAINED FOR A PERIOD OF TWO (2) YEARS. THE RECORDS SHALL BE MADE AVAILABLE TO AQMD PERSONNEL UPON REQUEST.

29. WITHIN **THIRTY (30) DAYS** AFTER THE EXCAVATION AT THE SITE IS COMPLETED, THE WRITTEN RECORDS UNDER CONDITIONS NO. 14, 22, AND 27 SHALL BE SUBMITTED TO THE AQMD AT THE FOLLOWING ADDRESS.

DEFINITIONS

Excavation	Is the process of digging out and removing materials including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil.
Organic Vapor Analyzer (OVA)	For the purposes of this plan, an OVA is an hydrocarbon monitor utilizing flame ionization, photo ionization or other analytical methods complying with 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3, "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS, MONITORING INSTRUMENT SPECIFICATIONS. The monitor shall be capable of being calibrated using hexane at a range of 0 parts per million by volume (PPMV) to 50 PPMV, and at a detection range of at least 30 PPMV to 1100 PPMV
Responsible Party	For the purposes of this plan, Responsible Party is the party financially responsible for initiating the excavation. This may include the property owner or the tank operator. This excludes contractors working for the property owner or operator, and any other party that lacks the direct authority to immediately treat all VOC contaminated soils generated at the excavation site.
VOC Contaminated Soil	Is soil that registers a concentration of 50 PPM or greater of volatile organic compounds as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane.
Volatile Organic Compound (VOC)	Is any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonate, and exempt compounds. Exempt compounds areas defined in Rule 102 – Definitions of Terms.

Once issued, this plan is subject to further review by the AQMD and may be revoked if excavation activities are found in violation of plan conditions or AQMD's Rules and Regulations. Failure to comply with one or more of the conditions contained within this plan constitutes a violation of Rules 221 and 1166.

Other governmental agencies may require approval before any excavation begins. It shall be the responsibility of the applicant to obtain that approval. The South Coast Air Quality Management District shall not be responsible or liable for any losses because of measures required or taken pursuant to the requirements of this approved Rule 1166 Contaminated Soil Mitigation Plan.

Questions regarding this plan should be directed to Ranjit Vishwanath at (909) 396-2682.

Notes:
1 - see Figure 3 for UST location
2 - results for TBA are reported as ND to the laboratory's method detection limit
bsg - below surface grade
DIPE - diisopropyl ether
ETBE - ethyl tertiary-butyl ether
MTBE - methyl tertiary butyl ether
J - result less than reporting limit but greater than method detection limit and is therefore estimated
NA - not applicable
ND_x - not detected above "x" laboratory detection limits
TAME - tertiary amyl-methyl ether
TBA - tertiary butyl alcohol
TPH-D - total petroleum hydrocarbons as diesel (carbon chain range C10 to C24)
TPH-G - total petroleum hydrocarbons as gasoline (carbon chain range C6 to C12)
UST - underground storage tank

INDUSTRIAL WASTE PERMIT REQUIRED

It has come to the attention of this office that you are utilizing or are presently responsible for the maintenance of Industrial Waste Treatment or Disposal Facilities at the subject site. Industrial Waste Disposal Permits (IWDP) are not transferable from owner to owner, or from one location to another and as the successor in interest or title, you are required to obtain a new IWDP. Section 20.36.120, Section 20.36.130

[ ] You are required to apply for a revised IWDP due to change in method and point of disposal, volume discharged, or change in character of the waste discharged. Section 20.36.060
[ ] You are required to obtain a Closure Permit. Section 20.36.220
[ ] You are hereby directed to correct the following violation(s) of: [ ] Los Angeles County Code, Title 20 and/or conditions and limitations of Industrial Waste Disposal Permit No. _____
[ ] City of _____ Municipal Code/Ordinance _____.
[ ] Your attention is directed to your noncompliance with the Notice(s) issued on: _____
Violation No(s). V_____.

You are required to submit the items checked below within 15 days from the date of this Notice, to continue use of your facility:

[✓] Complete and sign the enclosed application for Industrial Waste Disposal permit. to be emailed Section 20.36.110, Section 20.36.120, Section 20.36.130, Section 20.36.310, Section 20.36.320, Section 20.36.490
[ ] Submit _____ sets of industrial waste plans. Section 20.36.350, Section 20.36.380, Section 20.36.500
[✓] An Industrial Waste Application Fee of $ TBD Plan Check Fee of $ —, Total of $ TBD payable to the [ ] County of Los Angeles Department of Public Works, [ ] City of _____. Section 20.36.230, Section 20.36.240, Section 20.36.245
[✓] Other: Call Engineering Department 626-458-3517 to confirm permit revision fee due to change of ownership.

An annual Industrial Waste Inspection Fee may be required upon permit issuance. Should you have any questions regarding this matter, please contact Donna Germann Monday through Friday, 8 a.m. to 9:30 a.m. at (626) 574-0962, FAX email) dgermann@dpw.lacounty.gov

Return requested items to the office below:

APPENDIX G

RESUMES

RESUME OF HEIDI HEGGENESS
Staff Geologist

EDUCATION

Bachelor of Science, Geology, 2015, California State University, Dominguez Hills

EMPLOYMENT HISTORY

2007-2010 – CRG Marine Laboratories, Inc. (analytical chemistry)
2013-2015 – California Regional Water Quality Control Board, Los Angeles (regulatory enforcement)
2015-2016 – Physis Environmental Laboratories (analytical chemistry)
2016-present – Ardent Environmental Group, Inc. (environmental consulting)

PROFESSIONAL EXPERIENCE AND RESPONSIBILITIES

Ms. Heggeness has a strong background in geology, chemistry and regulatory enforcement which provides support in completing a variety of field and office tasks during environmental assessments, site characterization, and remediation projects. Tasks include development of work plans, drilling and sampling soil borings, vapor well installation and sampling, research and review of regulatory records and historical land use records, directing subcontractors, data evaluation, technical report preparation, and drafting. Ms. Heggeness' project experience includes:

- **Phase I Environmental Site Assessment:** Staff Geologist for Phase I Environmental Site Assessment reports throughout Southern California. Report preparation includes site reconnaissance activities involving visual site inspection, research and review of regulatory records and historical land use records, and identification of potential environmental concerns and/or impacts to the site.

- **Phase II Site Characterization:** Staff Geologist for projects involving the advancement of soil borings by a variety of drilling methods to assess the nature, magnitude, and extent of soil contamination. These duties also include conducting soil gas surveys to assess vapor concentrations of volatile organic compounds for human health risks.

The South Coast Geological Society

RESUME OF PAUL A. ROBERTS
Principal Geologist

EDUCATION

Bachelor of Science, Geology, 1987, California State University, Fullerton, California

REGISTRATION AND CERTIFICATIONS

Professional Geologist, California PG 6897
Registered Geologist, Arizona RG 42445
Ventura County Well Inspector
OSHA 40-Hour Health and Safety Training (with annual updates)
OSHA 8-Hour Health and Safety Supervisor Training

EMPLOYMENT HISTORY

1986-1996 – Applied Geosciences Inc. (environmental consulting)
1996-1998 – ATC Associates (environmental consulting)
1998-2007 – Ninyo & Moore (environmental consulting)
2007-present – Ardent Environmental Group, Inc. (environmental consulting)

PROFESSIONAL EXPERIENCE AND RESPONSIBILITIES

As a Principal Geologist for Ardent Environmental Group, Inc., Mr. Roberts coordinates geotechnical and geologic field evaluations and supervises field technicians and staff- and project-level geologists and engineers, reviews historical stereoscopic aerial photographs, fire insurance maps, and other historical documentation to assess the location and possible environmental affects of former features on subject properties, interacts with clients, attorneys, and agency representatives. Mr. Roberts also performs geologic and hydrogeological research and performs detailed logging and sampling of trenches, and large- and small-diameter borings. Mr. Roberts is very familiar with mud- and air-rotary, sonic, direct-push, and hollow stem auger drilling technics. Mr. Roberts interprets geophysical data to evaluate the possible presence of covered underground features such as underground storage tanks, clarifiers, sumps, and wells which may have had an environmental impact on subject properties, writes and reviews geologic reports work plans, Phase I Environmental Site Assessments, risk assessments, subsurface investigation reports, monitoring reports, feasibility studies, and remediation reports.

- **Former Chemical Plant, Santa Fe Springs:** Principal Geologist retained to log and sample deep borings for the installation of groundwater wells used to characterize the vertical and lateral extent of volatile organic compound (VOC) impacted groundwater. Sonic, mud-rotary, and hollow stem auger drilling methods were used to drill borings to depths of up to 400 feet below the ground surface (bgs).

- **Port of Los Angeles:** Project Geologist managing several environmental projects for the Port of Los Angeles (POLA) under an on-call contract. Project Geologist interacting with POLA personnel regarding environmental issues associated with land purchases, tenant

audits, and on-call remediation. Projects have involved removal of underground storage tanks at the Yang Ming Terminal and continued groundwater monitoring, and the implementation of a corrosion study at a potential automobile storage yard in the Port of Los Angeles.

- **Alameda Corridor Transportation Authority:** Project Geologist managing numerous environmental projects under an on-call remediation services contract. Projects have involved remediation of petroleum pipelines and impacted soil discovered during construction activities of the Alameda Corridor. One project involved dredging metal-impacted soil from the Port of Los Angeles, where Mr. Roberts acted as the liaison between POLA and ACTA representatives.

- **Riverside County Transportation Commission (RCTC):** Project manager for several projects for RCTC including a Phase I Environmental Site Assessment (ESAs) of the AT&SF ROW from mile post 26.93 to MP 38.2 along the San Jacinto subdivision in Riverside County, California; and Phase I ESAs and assessment and remediation of contaminated soil at proposed Metrolink station in the cities of Corona and Riverside.

- **Los Angeles Unified School District (LAUSD):** Project manager for the completion of Phase I Environmental Site Assessments at several proposed elementary school sites throughout Los Angeles county. Mr. Roberts also managed on-going monitoring of lithological pressure readings of an oil well located on the Belmont High School property. This work was completed under the direction and oversight of the Division of Oil, Gas, and Geothermal Resources.

- **Jack in the Box and Qdoba Restaurants:** Project Geologist managing numerous Phase I Environmental Site Assessments regarding real estate transactions for two major fast food restaurants. Since most of the properties are corner parcels which contained historical gasoline stations, Mr. Roberts would subsequently manage and conduct Phase II Subsurface Investigations to assess whether impacted soil and/or groundwater exists at the site and, if present, characterize the extent of the contaminants. In June 2012, Jack in the Box Inc. and Qdoba awarded Ardent Environmental Group, Inc. an on-call environmental management contract for all Jack in the Box and Qdoba properties throughout the United States. Mr. Roberts is the Project Manager for this contract which includes completing Preliminary Environmental Reviews of possible property acquisitions, completing and managing Phase I and Phase II Environmental Site Assessments and asbestos surveys, and on-call consultation regarding environmental issues and concerns.

- **Environmental Site Assessment:** Project Geologist managing environmental assessment, site characterization, and site remediation for a property located in the city of Santa Fe Springs, California. Historical aerial photographs, information obtained from the Division of Oil, Gas, and Geothermal Resources, and other data were used to assess the possible location of historical oil field activities and to design a site characterization plan. Following assessment of the volume of impacted soil, bid specifications were developed and site remediation was conducted.

- **Industrial Site Located in Riverside, California:** Project Geologist managing the subsurface investigation and characterization of an industrial site in Riverside, California. Groundwater monitoring wells and vapor extraction wells were installed in soil borings

during site characterization. Utilizing equipment supplied by the client, a vapor extraction system was designed and installed at the site.

- **Remediation at Sites in Rancho Dominguez, Commerce, La Mirada, and Riverside, California.** Project Geologist managing the design and installation of many vapor extraction pilot wells for use in feasibility studies. The feasibility studies defined different soil parameters so that a vapor extraction system, including vapor extraction wells, could be designed. Services included management, design, and installation of vapor extraction wells for use in remediation at sites in Rancho Dominguez, Commerce, La Mirada, and Riverside, California.

Subject: **Subsurface Investigation Report**
5010 Azusa Canyon Road
Irwindale, California

Dear Messrs. Hines and Feibusch:

This report presents the results of a subsurface investigation completed at the above-referenced property. Work was completed in general accordance with the proposal dated February 16, 2017 between Overton Moore Properties and Ardent Environmental Group, Inc. (Ardent) and the Master Agreement dated November 3, 2015 between LaSalle Investment Management, Inc. and Ardent. The attached report presents our methodology, findings, opinions, and conclusions regarding the environmental conditions at the site. We appreciate the opportunity to be of service to you on this project. If there are any questions, please feel free to call the undersigned at your convenience.

Sincerely,
Ardent Environmental Group, Inc.

Heidi Heggeness

EXECUTIVE SUMMARY

Frontier Communications (Frontier) currently owns the property and operates a telecommunication maintenance yard, which includes offices, fleet vehicle maintenance, and car washing operations. Historically, the site was used by GTE and Verizon for similar operations. Frontier is considering selling the site, at which time Frontier will lease the property back for approximately 2 years. Following termination of its lease, the site will be redeveloped for commercial purposes. Based on the results of a Phase I Environmental Site Assessment (ESA), Ardent Environmental Group, Inc. (Ardent) presented a list of potential environmental concerns at the site. Soil samples were collected in the vicinity of inactive features and soil gas samples were collected to assess whether a possible vapor intrusion issue was present. Frontier has agreed to sample beneath selected features with possible environmental issues prior to termination of its lease. Based on the results of the subsurface investigations, the following conclusions were drawn.

- **Inactive Hydraulic Lifts** - Based on laboratory results, there is a low likelihood that elevated concentrations of petroleum hydrocarbons, volatile organic compounds (VOCs), and polychlorinated biphenyls (PCBs) are present in soil in the vicinity of the inactive hydraulic lifts that would pose a threat to groundwater.
- **Former Hazardous Waste Storage Area** – Based on laboratory results, there is a low likelihood that elevated concentrations of VOCs are present in soil gas in the vicinity of the former hazardous waste storage area that would present a possible risk to human health through vapor intrusion. Based on the lack of VOCs detected, there is a low likelihood that a significant release has occurred that would impact soil beneath the former hazardous waste storage area.
- **Possible Vapor Intrusion Issue** - Based on laboratory results, there is a low likelihood that elevated concentrations of VOCs are present in soil gas in the vicinity of the Truck Wash Tunnel Area, consisting of the Truck Wash Tunnel, a former septic system, two former cesspools, an active clarifier, and an active steam cleaning pad; in the vicinity of the Vehicle Service Building and inactive steam cleaning area with former clarifiers; and in the Large Storage Building and possible dry wells. The residual concentrations would not pose a possible risk to human health through vapor intrusion.

Based on the findings of this investigation, Ardent recommends no further investigations or remediation at this time.

1. INTRODUCTION

Ardent Environmental Group, Inc. (Ardent) was retained by Overton Moore Properties and LaSalle Investment Management, Inc. (collectively referred to as the "OMP/LaSalle") to complete a subsurface investigation at the property located at 5010 Azusa Canyon Road in the city of Irwindale, California (site; Figure 1). Work was completed in general accordance with the proposal dated February 16, 2017 between OMP and Ardent and the Master Agreement dated November 3, 2015 between LaSalle and Ardent. Frontier Communications (Frontier) currently owns the property and operates a telecommunication maintenance yard. Historically, the site was used by GTE and Verizon for similar operations. Frontier is considering selling the site to OMP/LaSalle, who will lease the site back to Frontier for approximately 2 years, after which, the site will be redeveloped for commercial purposes.

Ardent has recently completed a draft Phase I Environmental Site Assessment (ESA) as part of the real estate due diligence process (Ardent, 2017). Based on the results, a number of potential environmental concerns were noted. Since the property is planned to be leased back to Frontier for continued use as a telecommunication maintenance yard, it was agreed upon that any potential environmental feature that will continue to be used by Frontier as part of its operation (i.e. active equipment or features) will be removed and sampled by Frontier following completion of its lease. Any environmental concern that is no longer used (i.e. inactive equipment or features), Ardent would sample before OMP/LaSalle closes the real estate transaction.

1.1. Potential Environmental Concerns Discovered at the Site

Based on the results of the Phase I ESA, the following potential environmental concerns were identified. The location of the potential environmental concerns are presented on Figure 2.

- Four inactive hydraulic lifts
- Three active hydraulic lifts
- Former steam cleaning area with two inactive clarifiers located within the Vehicle Service Building
- Active aboveground storage tanks (ASTs)

- Former Truck Wash Tunnel Area with a clarifier, active steam cleaning pad, inactive septic tank, two former cesspools, waste drum storage enclosure, and former hazardous waste storage area
- Three hydraulic oil reservoirs
- Former dry well associated with the former truck scale (currently beneath the Large Storage Building) and possible dry well beneath a circular steel plate in close proximity to the Large Storage Building
- Miscellaneous containers of waste, liquids, or hazardous substances
- Possible vapor intrusion issues associated with solvent uses in the Vehicle Service Building, former steam cleaning area, Larger Storage Building Area (i.e. solvent storage and two former dry wells), and Truck Wash Tunnel Area (i.e. the active Truck Wash Tunnel, clarifier, the former septic system, two former cesspools, and active steam cleaning pad).
- Asbestos containing building materials (ACMs) and lead-based paint (LBP).

1.2. OMP/LaSalle's Responsibilities

The following presents the potential environmental concerns that OMP/LaSalle will be responsible to sample.

- Inactive hydraulic lifts
- Former hazardous waste storage area
- Possible vapor intrusion due to solvent uses (Truck Wash Tunnel Area, consisting of the Truck Wash Tunnel, the former septic system, two former cesspools, an active clarifier, and an active steam cleaning pad; in the vicinity of the Vehicle Service Building and inactive steam cleaning area with former clarifiers; and in the Large Storage Building and possible dry wells).
- In addition, and after Frontier vacates the property, OMP/LaSalle will need to completed a comprehensive asbestos and LBP survey. For purposes of this report, Ardent has provided an estimated cost to remove ACMs and stabilize LBP.

1.3. Frontier's Responsibilities

Prior to the expiration of the lease, Frontier will be responsible to remove and sample the following areas of environmental concern.

- Active hydraulic lifts
- All ASTs
- Hydraulic fluid reservoirs
- Floor drain associated with the active steam cleaning pad
- Floor drains associated with the active Truck Wash Tunnel

- All active clarifiers
- Waste drum storage enclosure
- All miscellaneous containers of waste, liquids, or hazardous substances
- In addition, all permits will be closed

2. OBJECTIVES

The objectives of the work presented herein were to assess whether elevated concentrations of volatile organic compounds (VOCs) were present in soil gas in selected areas of the site that might pose a possible human health risk through vapor intrusion and to assess whether elevated concentrations of petroleum hydrocarbons and VOCs were present in the vicinity of the inactive hydraulic lifts and former hazardous waste storage area.

3. PHYSICAL SETTING

The following sections include discussions of topographic, geologic, and hydrogeologic conditions in the vicinity of the site, based upon our document review and our visual reconnaissance of the site and adjacent areas.

3.1. Site Topography

Based on the review of the United States Geological Survey (USGS) 7.5 Minute Series, Baldwin Park, California, Topographic Quadrangle Map dated 2012, the site has an elevation of approximately 449 feet above mean sea level (msl) and slopes to the southwest.

3.2. Geology

The site is located in the northern area of the Peninsular Ranges geomorphic province. The active Sierra Madre Fault which separates the Peninsular Range from the Transverse Range is located approximately 2 miles north of the site. According to the 2010 Geologic map of California the underlying geology of the site consists of older Quaternary alluvium associated with lake, playa and terrace deposits. This alluvium consists of a pebble to boulder gravel with a course grained sand matrix. Irwindale is a rock quarry area; therefore soil lithology is mostly sand, gravel, and large cobbles.

3.3. Site Hydrology

The following sections discuss the site hydrology in terms of both surface waters and groundwater.

3.3.1. Surface Waters

No natural surface water bodies, including ponds, streams, or other bodies of water, are present on the site. The Santa Fe Damn, an earthen dam, is located approximately 0.90-mile northwest of the site.

3.3.2. Groundwater

Groundwater has been measured in the site vicinity at depths of approximately 250 feet below the ground surface (bgs) and flows in a southwesterly direction. The site is located within the San Gabriel Valley Groundwater Basin. Portions of the San Gabriel Valley Groundwater Basin have been listed on the National Priority List (NPL), or Superfund Site. The site is located within the Baldwin Park Operable Unit of the San Gabriel Valley Groundwater Basin which has been impacted with VOCs, namely the chlorinated solvents trichloroethene (TCE) and tetrachloroethylene (PCE), which were historically used by the commercial and industrial facilities located in this area. Based on our review of groundwater plume maps provided by the United States Environmental Protection Agency (EPA or USEPA), the site is located within a VOC plume and groundwater beneath the site has been impacted with chlorinated solvents. On behalf of the EPA, the Regional Water Quality Control Board, Los Angeles Region (RWQCB) has investigated the site as part of its Well Investigation Program (WIP). Two investigations were completed at the site which indicated concentrations of VOCs in soil gas, including chlorinated solvents. These concentrations did not identify a significant release source that would pose a threat to groundwater. Based on these results, a no further action (NFA) letter was issued dated September 3, 1992, following the initial investigation, and an additional investigation completed in 1995 resulted in another NFA letter dated June 5, 1998. The regional VOC-impacted groundwater would be considered a recognized environmental condition (REC). However, based on the former concentrations, Ardent concurs with the RWQCB that there is a low likelihood that the site has contributed to these regional groundwater issues.

In mid-2000, the Department of Toxic Substances Control (DTSC) began reviewing soil gas data with respect to human health risks through possible vapor intrusion. Based on very conservative screening levels set-forth by the DTSC, the former concentrations of VOCs in soil gas at the site might be considered a possible human health risk through vapor intrusion. Due to the amount of time which has passed since the initial sampling (approximately 20 years), and the new screening levels imposed by the DTSC, Ardent recommended completing a soil gas survey in selected areas of the site where solvent uses were likely completed.

4. CLEANUP GUIDELINES

The subsurface investigation included the collection and analyses of soil and soil gas samples. Soil samples were analyzed by SunStar Laboratories of Lake Forest, California. Soil samples were analyzed for total petroleum hydrocarbon carbon chain C_6-C_{32} (TPHcc), volatile organic compounds (VOCs), and/or polychlorinated biphenols (PCBs) in general accordance with EPA Method Nos. 8015 (modified), 8260B, and 8082. Soil gas samples were analyzed by Jones Environmental of Santa Fe Springs, California, using a mobile laboratory. Soil gas samples were analyzed for VOCs in general accordance with EPA Method No. 8260B. Ardent evaluated the laboratory data based on an environmental risk for the protection of groundwater and a human health risk based on dermal contact and possible vapor intrusion. Ardent completed these evaluations based on an industrial/commercial land use criteria.

To determine the potential environmental risk, concentrations of petroleum hydrocarbons in the soil were assessed based on the Regional Water Quality Control Board, Los Angeles Region (RWQCB), Interim Site Assessment and Cleanup Guidebook dated May 1996 (referred to herein as the “RWQCB guidelines”). The RWQCB guidelines are based on the protection of groundwater and take into account a number of variables including soil lithology and groundwater depth. Based on the depth to groundwater beneath the site, total petroleum hydrocarbons as gasoline in the C_4-C_{12} carbon range (TPHg) would be considered elevated with concentrations exceeding 500 milligrams per kilogram (mg/kg). Diesel range hydrocarbons in the carbon range C_{13}-C_{22} (TPHd) would be considered elevated with concentrations exceeding 1,000 mg/kg. Heavy oils in the carbon chain C_{23}-C_{36} (TPHo) would be considered elevated with concentrations exceeding 10,000 mg/kg. Volatile organic compounds were generally compared

to the RWQCB guidelines, Department of Toxic Substances Control (DTSC), Human and Ecological Risk Office (HERO), Note 3, soil screening levels for industrial/commercial land use (DTSC-SLi), and Environmental Protection Agency (EPA) Region 9, Regional Screening Levels for industrial/commercial land use (EPA-RSLi). The DTSC-SLi and EPA-RSLi values are human health based criteria.

The DTSC-SLi and EPA-RSLi provides screening levels for soil and ambient air at industrial/commercial properties. These are very conservative guidelines and are based on the protection of human health through dermal contact (soil) and possible vapor intrusion (soil gas). The DTSC-SLi and EPA-RSLi presented on attached Table 2 were calculated by modifying the ambient air concentrations using a DTSC-provided attenuation factor of 0.05 for sub-slab samples for an industrial/commercial development.

5. SUBSURFACE INVESTIGATION

The subsurface investigation was completed on March 6 and March 8, 2017 and consisted of collecting soil and soil vapor samples in the areas of the potential environmental concerns that OMP/LaSalle is responsible to sample. Due to extremely hard drilling conditions (i.e. gravel and cobbles), soil borings were drilled using hollow stem ager drilling equipment. An attempt was made to collect a soil sample beneath the former hazardous waste storage area, although due to extreme drilling conditions, a soil sample could not be obtained. Selected soil samples collected from the borings were screened in the field for stains, odors, and elevated photoionization detector (PID) readings.

Soil gas samples were collected using sub-slab sampling points. The concrete slab/asphalt associated with the sub-slab sample points was drilled using a pneumatic drill and a Vapor Pin provided by Cox-Colvin & Associates, Inc. was installed. At least 2 hours following installation, each sub-slab sampling point was purged of three volumes of air and sampled using a mobile laboratory. Laboratory results are summarized on Tables 1 and 2, boring and well logs are provided in Attachment A, and copies of the laboratory reports are provided in Attachment B. The following presents the results of the subsurface investigations.

5.1. Inactive Hydraulic Lifts

Four inactive underground hydraulic lifts are located within the Vehicle Service Building (Figure 4). The lifts were dual lifts that had been removed from the site. According to site personnel, the lifts used to lose pressure and would not hold a vehicle in the air. Therefore, the lifts were removed. No sampling was completed during the removal activities.

Borings I1 through I4 were drilled in the vicinity of the four former hydraulic lifts to a depth of approximately 15 feet bgs (Figure 4). Soil samples were collected at depths of approximately 5, 10, and 15 feet within each boring. No stained or odorous soil, or elevated PID readings were noted throughout the borings. Soil samples collected at approximately 10 feet bgs from each boring were chemically analyzed. Laboratory results indicated no detectable concentrations of TPHcc, VOCs, and/or PCBs.

5.2. Former Hazardous Waste Storage Area

The former hazardous waste storage area is located adjacent to the Truck Wash Tunnel and was reportedly used to store 55-galon drums of waste oil, filters, antifreeze, and other miscellaneous liquid wastes generated from the fleet vehicle maintenance activities (Figure 3).

As noted above, an attempt was made to collect a soil sample from beneath the concrete pad associated with the former hazardous waste storage area. Due to extremely hard drilling conditions (gravels and cobles), no sample was collected. To further asses this feature, Ardent installed a sub-slab soil gas sample point through the concrete pad. Laboratory results indicated no detectable concentrations of VOCs.

5.3. Possible Vapor Intrusion Due to Solvent Uses

Based on the results of the Phase I ESA, the site was listed as a small quantity generator of hazardous waste, including chlorinated solvents. As noted above, the site is located within the Baldwin Park Operable Unit of the San Gabriel Valley Groundwater Basin Superfund Site. Groundwater beneath the site, although very deep at approximately 250 feet bgs, is impacted with VOCs due to industrial land use. In 1992 and 1995, two extensive soil gas surveys were completed at the site (in and around the Vehicle Service Building and Truck Wash Tunnel Area) under the direction and oversight of the RWQCB WIP to assess whether the site may have contributed to the regional groundwater issues.

The results of the sampling were reported in "total VOCs" and did not specify which chemicals were detected. The results indicated concentrations of total VOCs up to approximately 200 micrograms per liter (ug/l). Although detectable concentrations of VOCs were reported, the RWQCB concluded that there was a low likelihood that a significant release was present that would threaten groundwater. Ardent concurs with this conclusion.

In the mid-2000s the DTSC set-forth much more stringent screening values for VOCs remaining at an industrial/commercial property based on the risk of human exposure through possible vapor intrusion. Based on this information, Ardent recommended screening the site in areas of possible solvent uses to assess whether a human health risk was present. The locations investigated included three main areas, (1) the Truck Wash Tunnel Area (Figure 3), (2) the Vehicle Service Building (Figure 4), and (3) the Large Storage Building (Figure 5). Each area contained a number of features where solvents may have been used. The following presents these features and the results of the investigations.

Truck Wash Tunnel Area

The Truck Wash Tunnel Area is located in the northwestern portion of the site and consists of the Truck Wash Tunnel, the former septic system, two former cesspools, an active clarifier, and an active steam cleaning pad. The Truck Wash Tunnel is an active car wash with floor drains that is used by Frontier to wash fleet vehicles. Two cesspools were formerly located in this area and were possibly connected to the Truck Wash Tunnel. An active clarifier is currently located north of the Truck Wash Tunnel and is connected to this feature. An active steam cleaning pad is also located immediately northeast of the Truck Wash Tunnel and may also be connected to the active clarifier (Figure 3).

Sub-slab sample points I9 through I14 were drilled in the vicinity of these features. With the exception of sample point I10, laboratory results indicated no detectable to low concentrations of VOCs, well below the State and federal screening levels (Table 2). Laboratory results of sample I10 indicated concentrations of tetrachloroethylene (PCE) at 0.048 ug/l, slightly exceeding the very conservative sub-slab screening level of 0.042 ug/l. As noted on Figure 3, other sub-slab sample points, such as I9 and I11, were located within close proximity to sample I10. Laboratory results of these sample points indicated no

detectable concentrations of PCE. Based on the isolated concentration of PCE noted in I10, this appears to be an anomaly and would not be considered a possible human health risk.

Vehicle Service Building

The Vehicle Service Building is currently used to maintain vehicles. Part of the maintenance activities included washing automobile parts with solvents. A former steam cleaning area with two former clarifiers was reportedly located in the mid-portion of the building (Figure 4). The clarifiers were either removed or abandoned in-place (accurate documentation was not available). The steam cleaning area has been converted into an office.

Four sub-slab sample points (designated I5 through I8) were placed immediately south of the Former Vehicle Service Building and within the location of the former steam cleaning area/clarifiers. The location of these features was obtained from previous reports. Laboratory results indicated no detectable to low concentrations of VOCs, well below the very conservative State and Federal screening levels (Table 2).

Large Storage Building

In 1956, a site plan referenced the installation of a dry well located in the northeastern portion of the site (Ardent, 2017). The dry well was connected to a former truck scale, that has since been removed from the site. Based on a review of the site plan, the dry well would now be located beneath the existing Large Storage Building. A circular steel plate was noted in this general area (Figure 5). Rainwater accumulated within the subsurface compartment holding the truck scale would drain to the dry well. Since rainwater would likely contain oil and grease from the truck scale, this feature would be considered an environmental concern to the site. A circular steel plate was also located near the Large Storage Building, which may also be a dry well. In additional, solvent storage was noted by Ardent in the Large Storage Building.

Due to limited access within the Large Storage Building and hard drilling conditions, Ardent installed three sub-slab sample points including two within the Large Storage Building (sample point I15 and I16) and next to the possible dry well associated with the former truck scale (sample point I16) and one next to the circular steel plate and possible dry well

(sample point I17). Laboratory results indicated no detectable to low concentrations of VOCs, well below the conservative State and Federal screening levels (Table 2).

6. SUSPECT ASBESTOS-CONTAINING BUILDING MATERIALS AND LEAD-BASED PAINT

Based on the age of the buildings, ACMs and LBP are likely present. Due to the destructive nature of the sampling activities, comprehensive demolition asbestos surveys are typically completed after occupants have vacated the buildings and as not to void material warranties (e.g. roofing warranties). Based on this information and after Frontier vacates the site, OMP/LaSalle should complete a comprehensive asbestos and LBP survey to assess quantities of ACMs that will need to be removed and LBP that will need to be stabilized prior to demolition activities. For budgetary purposes and based on our experience, Ardent has estimated the ACM removal and LBP stabilization costs at between $81,000 to $128,000.

7. CONCLUSIONS AND RECOMMENDATIONS

Frontier currently owns the property and operates a telecommunication maintenance yard, which includes offices, fleet vehicle maintenance, and car washing operations. Historically, the site was used by GTE and Verizon for similar operations. Frontier is considering selling the site, at which time Frontier will lease the property back for approximately 2 years. Following termination of its lease, the site will be redeveloped for commercial purposes. Based on the results of a Phase I ESA, Ardent presented a list of potential environmental concerns at the site. Soil samples were collected in the vicinity of inactive features and soil gas samples were collected to assess whether a possible vapor intrusion issue was present. Frontier has agreed to sample beneath selected features with possible environmental issues prior to termination of its lease. Based on the results of the subsurface investigations, the following conclusions were drawn.

- **Inactive Hydraulic Lifts** - Based on laboratory results, there is a low likelihood that elevated concentrations of petroleum hydrocarbons, VOCs, and PCBs are present in soil in the vicinity of the inactive hydraulic lifts that would pose a threat to groundwater.
- **Former Hazardous Waste Storage Area** – Based on laboratory results, there is a low likelihood that elevated concentrations of VOCs are present in soil gas in the vicinity of the former hazardous waste storage area that would present a possible risk to human health through vapor intrusion. Based on the lack of VOCs detected, there is a low likelihood that a significant release has occurred that would impact soil beneath the former hazardous waste storage area.

- **Possible Vapor Intrusion Issue** - Based on laboratory results, there is a low likelihood that elevated concentrations of VOCs are present in soil gas in the vicinity of the Truck Wash Tunnel Area, consisting of the Truck Wash Tunnel, the former septic system, two former cesspools, an active clarifier, and an active steam cleaning pad; in the vicinity of the Vehicle Service Building and inactive steam cleaning area with former clarifiers; and in the Large Storage Building and possible dry wells. The residual concentrations would not pose a possible risk to human health through vapor intrusion.

Based on the findings of this investigation, Ardent recommends no further investigations or remediation at this time.

Regulatory Guidelines (ug/l)									
DTSC-SLi					NA	NA	106	0.04	Various
EPA RSLi					8.8	2,600	NA	0.94	Various

Notes:

Sample ID - soil gas sample identification
feet bgs - feet below ground surface
ND - no detectable concentration above the laboratory reporting limit
NA - not available
NF- no flow
ug/l - micrograms per liter
Freon 12 - dichlorodifluoromethane
Freon 113 - 1,1,2-trichloro-1,2,2-trifluoroethane
Freon 11 - trichlorofluoromethane
PCE - tetrachloroethylene
VOCs - volatile organic compounds analyzed in general accordance with EPA Method No. 8260B
DTSC-SLi - Department of Toxic Substances Control Note 3 (Note 7 for PCE), modified screening levels for ambient air calculated for soil gas using the attenuation factor for an existing commercial building with subslab samples (i.e. 0.05), dated June 2016 for Note 3 and September 2016 for Note 7
EPA-RSLi - EPA Region 9 Regional Screening Level, modified screening levels for ambient air calculated for soil gas using the attenuation factor for an existing commercial building with subslab samples (i.e. 0.05), dated May 2016
Highlighted cell exceeds regulatory screening level

U.S.C.S. METHOD OF SOIL CLASSIFICATION

MAJOR DIVISIONS		SYMBOL		TYPICAL NAMES
COARSE-GRAINED SOILS (More than 1/2 of soil > No. 200 sieve size)	**GRAVELS** (More than 1/2 of coarse fraction > No. 4 sieve size)		GW	Well graded gravels or gravel-sand mixtures, little or no fines
			GP	Poorly graded gravels or gravel-sand mixtures, little or no fines
			GM	Silty gravels, gravel-sand-silt mixtures
			GC	Clayey gravels, gravel-sand-clay mixtures
	SANDS (More than 1/2 of coarse fraction < No. 4 sieve size)		SW	Well graded sands or gravelly sands, little or no fines
			SP	Poorly graded sands or gravelly sands, little or no fines
			SM	Silty sands, sand-silt mixtures
			SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS (More than 1/2 of soil < No. 200 sieve size)	**SILTS & CLAYS Liquid limit < 50**		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fined sands or clayey silts
			CL	Inorganic clays of low to medium plasticity gravelly clays, sandy clays, silty clays, lean
			OL	Organic silts and organic silty clays of low plasticity
	SILTS & CLAYS Liquid limit > 50		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
			CH	Inorganic clays of high plasticity, fat clays
			OH	Organic clays of medium to high plasticity, organic silty clays, organic silts
HIGHLY ORGANIC SOILS			PT	Peat and other highly organic soils

GRAIN SIZE CHART

CLASSIFICATION	RANGE OF GRAIN SIZE	
	U.S. Standard Sieve Size	Grain Size in Millimeters
BOULDERS	Above 12"	Above 305
COBBLES	12" to 3"	305 to 76.2
GRAVEL Coarse Fine	3" to No. 4 3" to 3/4" 3/4" to No. 4	76.2 to 4.76 73.2 to 19.1 19.1 to 4.76

JONES ENVIRONMENTAL
LABORATORY RESULTS

Client:	Ardent Environmental Group, Inc.	**Report date:**	3/8/2017
Client Address:	1827 Capital Street, Suite 103 Corona, CA 92880	**JEL Ref. No.:** **Client Ref. No.:**	D-1270 100854001
Attn:	Heidi Heggeness	**Date Sampled:** **Date Received:**	3/8/2017 3/8/2017
Project Name:	OMP - Irwindale	**Date Analyzed:**	3/8/2017
Project Address:	5010 Azusa Canyon Road Irwindale, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B - Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

Carolyn Carroll

INTRODUCTION

A: PROJECT LOCATION

The project site is located on the easterly side of Azusa Canyon Road south of Arrow Highway in the City of Irwindale. Please see next page for vicinity map.

B: STUDY PURPOSE

The purpose of this study is to determine the 50-year peak flow rate from the site that will ultimately drain to an existing storm drain in Azusa Canyon Road.

C: PROJECT STAFF:

Thienes Engineering staff involved in this study include:

Reinhard Stenzel
Brian Weil

"VICINITY MAP"

FOR

5010 AZUSA CANYON ROAD, IRWINDALE

DISCUSSION

The project site encompasses approximately 10.70 acres. Proposed improvements consist of two warehouse type buildings, Buildings 1 and 2, with approximately 181,844 square feet and 44,430 square feet, respectively. There is a truck yard located on the easterly side of Building 1 and on the westerly side of Building 2.Vehicle parking is located around each building with landscaped areas throughout the site. There is additional landscaping adjacent to the street. An existing commercial development to the east appears to ultimately drain to the proposed Building 2 site.

County Hydrology

The project site is tabled to an existing storm drain system in Azusa Canyon Road (Project No. 445, Irwindale Line "A"). From correspondence with Los Angeles County Department of Public Works, the allocated peak flow rate for the site is 1.29 cfs/acre.

See Appendix "A" for reference storm drain plans and hydrology calculations provided by the County.

Existing Condition

The site is currently an existing commercial/industrial development. In general, the project site drains westerly to Azusa Canyon Road via existing valley gutters. Once in the street, existing catch basins and storm drain laterals convey runoff to the existing County storm drain system.

Proposed Hydrology

Runoff from a portion of Building 1 roof, the northerly vehicle parking, Building 1 truckyard, and a portion of the Building 2 roof all drain to the aforementioned truck yard. The 50-year peak flow rate for this area is approximately 18.1 cfs. The westerly portion of Building 1 (Area 2A) will be collected and conveyed to the truckyard via an onsite storm drain. The 50-year peak flow rate is approximately 5.8 cfs.

Runoff from the southerly portion of Building 2, the Building 2 truckyard, and the southerly adjacent vehicle parking drains to the aforementioned truckyard. The 50-year peak flow rate for this area is approximately 5.8 cfs.

Runoff from the vehicle parking southerly adjacent of Building 1 and the drive aisle (Area 3A) will be collected and continue in the storm drain towards Azusa Canyon Road. The 50-year peak flow rate for this area is approximately 1.7 cfs.

Runoff from the westerly landscape area and a small portion of the north drive way (Area 6C) will be sheet flow into Azusa Canyon Road. The 50-year peak flow rate for this area is approximately 1.7 cfs.

See Appendix "B" for hydrology calculations and Appendix "D" for hydrology map.

Detention

The site is tabled to the existing storm drain in Azusa Canyon Road. As previously mentioned, runoff from the site must be limited to no more than 1.29 cfs/acre. Including the offsite area, the allowable peak flow rate is 16.4 cfs (12.70 acres x 1.29 cfs/acre). It is unclear how much of the offsite (Area 6B) runoff enters the site. Conservatively, it is assumed that the entire 50-year peak flow rate (5.8 cfs) will enter the site undetained. Also runoff from the southerly parking lot (Area 3A, 1.7 cfs) does not have the ability to be stored onsite and will also discharge undetained.

The remaining peak flow discharge from Areas 1A, 2A, and 4A is about 8.9 cfs (16.4 cfs – 5.8 cfs – 1.7 cfs). These areas have the ability to store runoff in the truck yard areas. The following table summarizes the required volumes in each of the areas associated with the hydrology map:

Subarea	Required Volume (cubic feet)	Maximum Depth (feet)
1A-2A	9,815	1.0
4A	1,172	0.65

Hydrograph volumes were determined from the Hydro-Calc Excel spreadsheet. Cumulative volumes are shown up to the allowable peak flow rate before and after the peak occur. The difference in the volume before and after the peak (along with the volume of the allowable peak flow rate) is the volume to be temporarily detained.

With onsite detention, runoff from the project site can be reduced to the allocated peak flow rate from the County calculations.

See Appendix "C" for detention calculations.

Methodology

Hydrology calculations were calculated using Los Angeles County Hydro-Calc spreadsheet. The site is composed of soil type "8" and rainfall zone 7.0 per the Los Angeles County Hydrology Manual (see reference in Appendix "A").

1958 STORM DRAIN BOND ISSUE

CITY OF IRWINDALE
APPROVED May 29 1961
CITY MANAGER

WILSEY, HAM & BLAIR ENGINEERS
CHIEF ENGINEER

REVISIONS			LOS ANGELES COUNTY FLOOD CONTROL DISTRICT
MARK	DATE	DESCRIPTION	
●	8-4-61	"As Built"	PROJECT NO 445 IRWINDALE LINE A

STA. 29+00 TO STA. 39+00
PLAN AND PROFILE

DRAWN BY K.R.W.INDALE | DESIGNED BY IRWINDALE | APPROVED BY
TRACED BY K.R.W.INDALE | CHECKED BY | CHIEF ENGINEER
CHECKED BY | SUBMITTED BY C.H.H. | SCALE AS SHOWN | DATE NOV., 1961 | NO. 275-445-D2.5
RECOMMENDED BY | SHEET 5 OF 18
CHIEF DIVISION ENGINEER

APPENDIX B

HYDROLOGY CALCULATIONS

Peak Flow Hydrologic Analysis

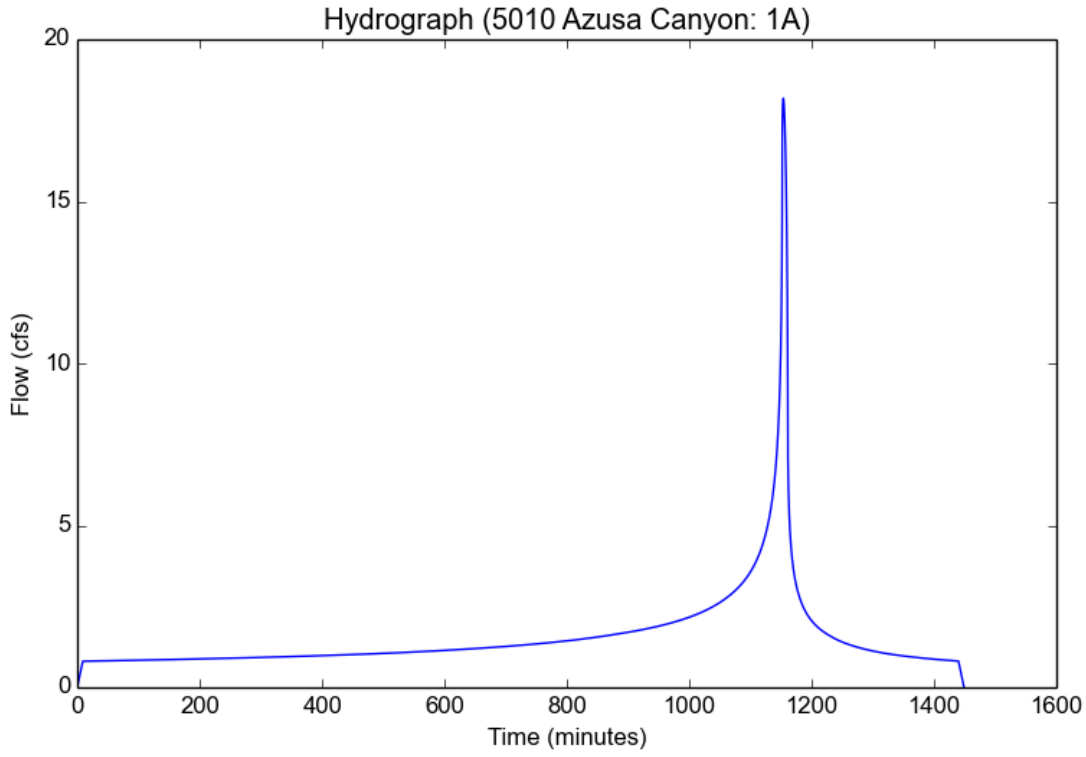
File location: O:/3500-3599/3521/hydrocalc/5010 Azusa Canyon Report.pdf
Version: HydroCalc 1.0.2

Input Parameters

Project Name	5010 Azusa Canyon
Subarea ID	1A
Area (ac)	6.35
Flow Path Length (ft)	840.0
Flow Path Slope (vft/hft)	0.0072
50-yr Rainfall Depth (in)	7.0
Percent Impervious	0.9
Soil Type	8
Design Storm Frequency	50-yr
Fire Factor	0
LID	False

Output Results

Modeled (50-yr) Rainfall Depth (in)	7.0
Peak Intensity (in/hr)	3.1683
Undeveloped Runoff Coefficient (Cu)	0.9369
Developed Runoff Coefficient (Cd)	0.9
Time of Concentration (min)	9.0
Clear Peak Flow Rate (cfs)	18.1067
Burned Peak Flow Rate (cfs)	18.1067
24-Hr Clear Runoff Volume (ac-ft)	3.1263
24-Hr Clear Runoff Volume (cu-ft)	136181.4565



Peak Flow Hydrologic Analysis

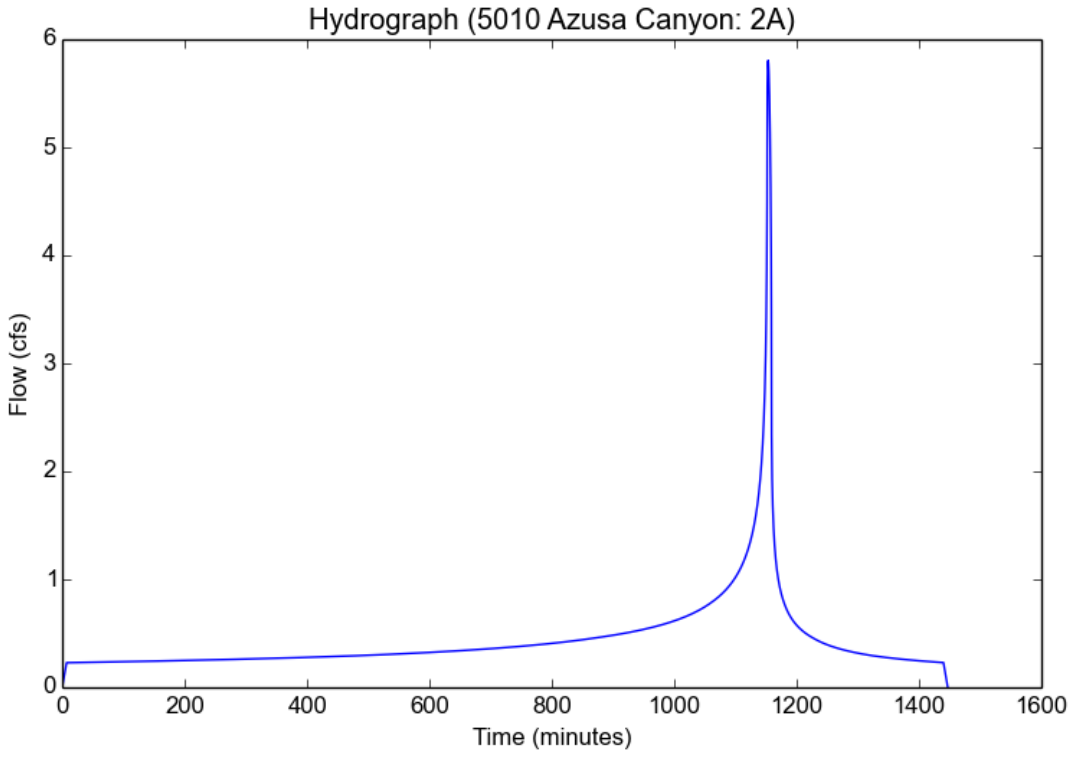
File location: O:/3500-3599/3521/hydrocalc/5010 Azusa Canyon Report.pdf
Version: HydroCalc 1.0.2

Input Parameters

Project Name	5010 Azusa Canyon
Subarea ID	2A
Area (ac)	1.8
Flow Path Length (ft)	535.0
Flow Path Slope (vft/hft)	0.005
50-yr Rainfall Depth (in)	7.0
Percent Impervious	0.9
Soil Type	8
Design Storm Frequency	50-yr
Fire Factor	0
LID	False

Output Results

Modeled (50-yr) Rainfall Depth (in)	7.0
Peak Intensity (in/hr)	3.5655
Undeveloped Runoff Coefficient (Cu)	0.9441
Developed Runoff Coefficient (Cd)	0.9
Time of Concentration (min)	7.0
Clear Peak Flow Rate (cfs)	5.7761
Burned Peak Flow Rate (cfs)	5.7761
24-Hr Clear Runoff Volume (ac-ft)	0.8862
24-Hr Clear Runoff Volume (cu-ft)	38602.6806



Peak Flow Hydrologic Analysis

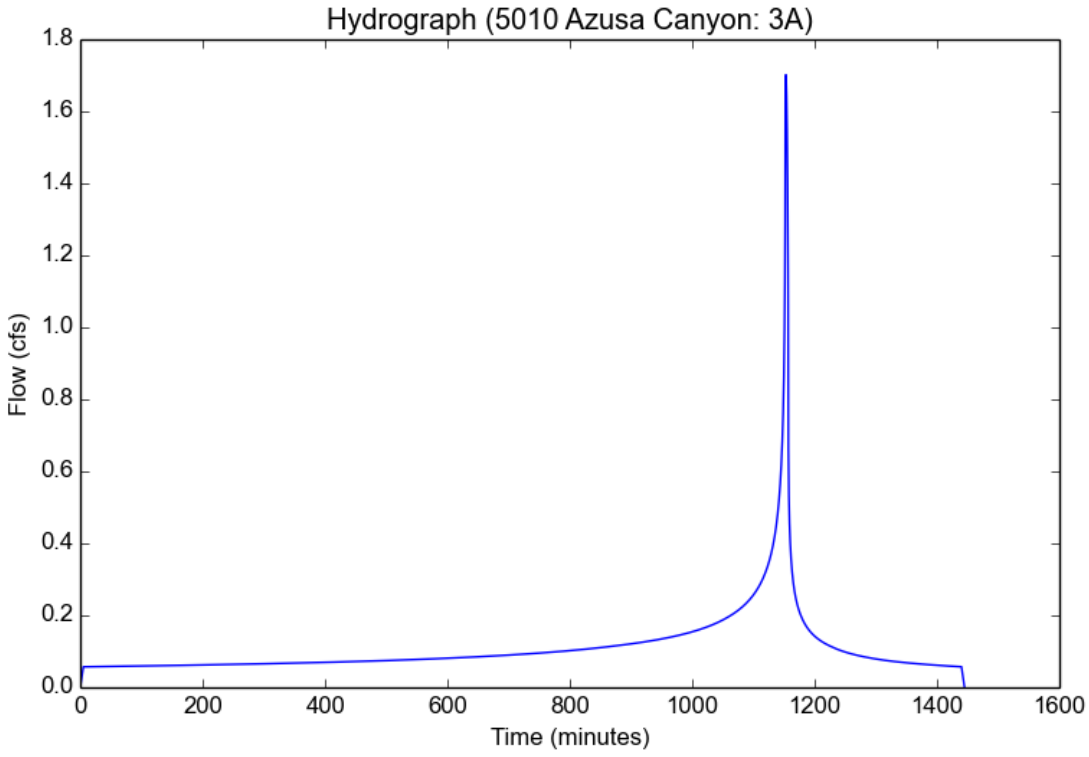
File location: O:/3500-3599/3521/hydrocalc/5010 Azusa Canyon Report.pdf
Version: HydroCalc 1.0.2

Input Parameters

Project Name	5010 Azusa Canyon
Subarea ID	3A
Area (ac)	0.45
Flow Path Length (ft)	220.0
Flow Path Slope (vft/hft)	0.0162
50-yr Rainfall Depth (in)	7.0
Percent Impervious	0.9
Soil Type	8
Design Storm Frequency	50-yr
Fire Factor	0
LID	False

Output Results

Modeled (50-yr) Rainfall Depth (in)	7.0
Peak Intensity (in/hr)	4.1764
Undeveloped Runoff Coefficient (Cu)	0.9539
Developed Runoff Coefficient (Cd)	0.9
Time of Concentration (min)	5.0
Clear Peak Flow Rate (cfs)	1.6914
Burned Peak Flow Rate (cfs)	1.6914
24-Hr Clear Runoff Volume (ac-ft)	0.2216
24-Hr Clear Runoff Volume (cu-ft)	9650.7367



Peak Flow Hydrologic Analysis

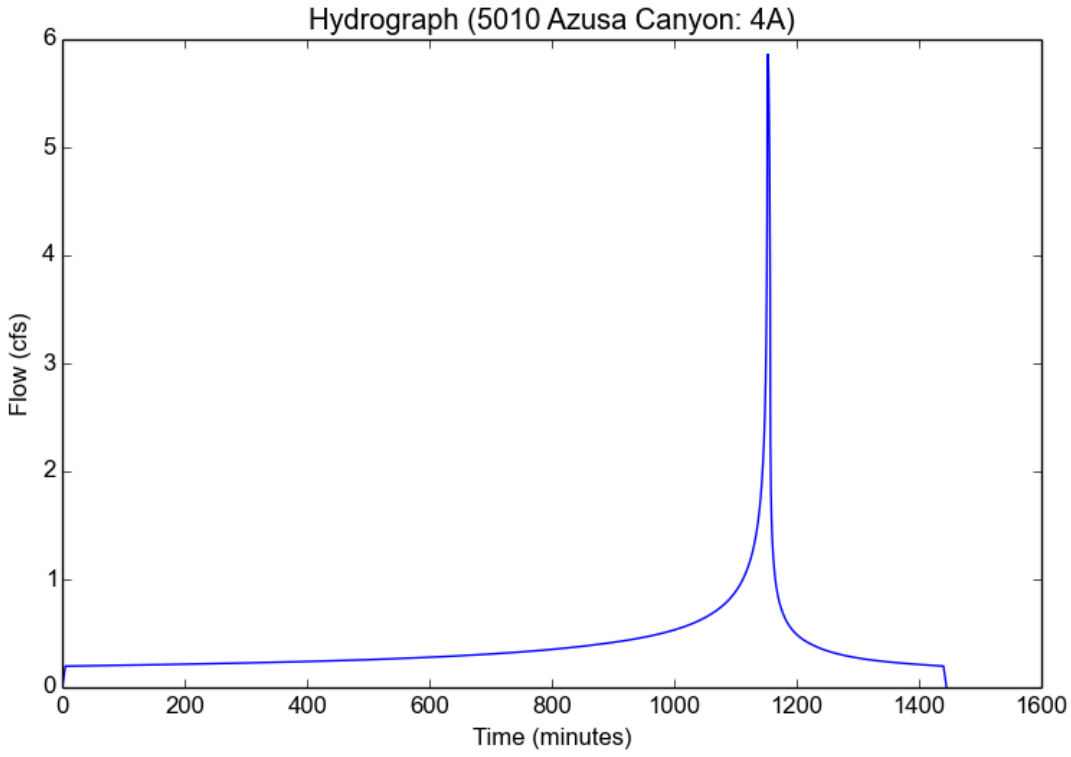
File location: O:/3500-3599/3521/hydrocalc/5010 Azusa Canyon Report.pdf
Version: HydroCalc 1.0.2

Input Parameters

Project Name	5010 Azusa Canyon
Subarea ID	4A
Area (ac)	1.55
Flow Path Length (ft)	340.0
Flow Path Slope (vft/hft)	0.0078
50-yr Rainfall Depth (in)	7.0
Percent Impervious	0.9
Soil Type	8
Design Storm Frequency	50-yr
Fire Factor	0
LID	False

Output Results

Modeled (50-yr) Rainfall Depth (in)	7.0
Peak Intensity (in/hr)	4.1764
Undeveloped Runoff Coefficient (Cu)	0.9539
Developed Runoff Coefficient (Cd)	0.9
Time of Concentration (min)	5.0
Clear Peak Flow Rate (cfs)	5.8261
Burned Peak Flow Rate (cfs)	5.8261
24-Hr Clear Runoff Volume (ac-ft)	0.7631
24-Hr Clear Runoff Volume (cu-ft)	33241.4266



Peak Flow Hydrologic Analysis

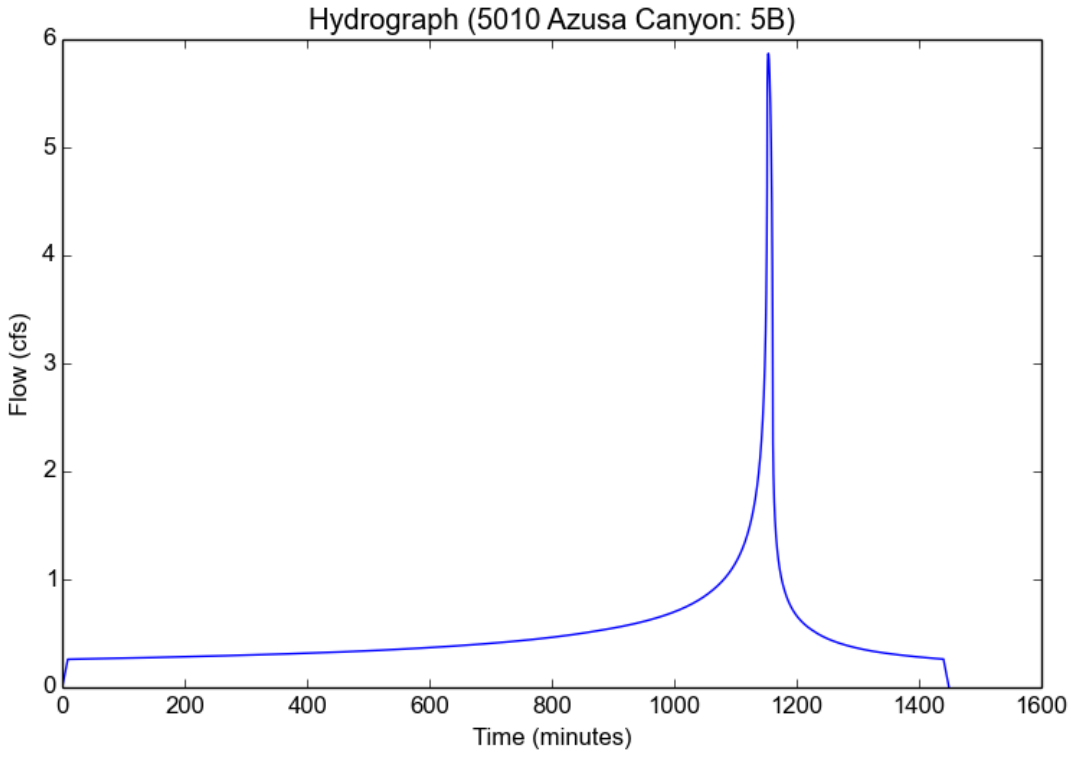
File location: O:/3500-3599/3521/hydrocalc/5010 Azusa Canyon Report.pdf
Version: HydroCalc 1.0.2

Input Parameters

Project Name	5010 Azusa Canyon
Subarea ID	5B
Area (ac)	2.05
Flow Path Length (ft)	850.0
Flow Path Slope (vft/hft)	0.0088
50-yr Rainfall Depth (in)	7.0
Percent Impervious	0.9
Soil Type	8
Design Storm Frequency	50-yr
Fire Factor	0
LID	False

Output Results

Modeled (50-yr) Rainfall Depth (in)	7.0
Peak Intensity (in/hr)	3.1683
Undeveloped Runoff Coefficient (Cu)	0.9369
Developed Runoff Coefficient (Cd)	0.9
Time of Concentration (min)	9.0
Clear Peak Flow Rate (cfs)	5.8455
Burned Peak Flow Rate (cfs)	5.8455
24-Hr Clear Runoff Volume (ac-ft)	1.0093
24-Hr Clear Runoff Volume (cu-ft)	43964.0923



Peak Flow Hydrologic Analysis

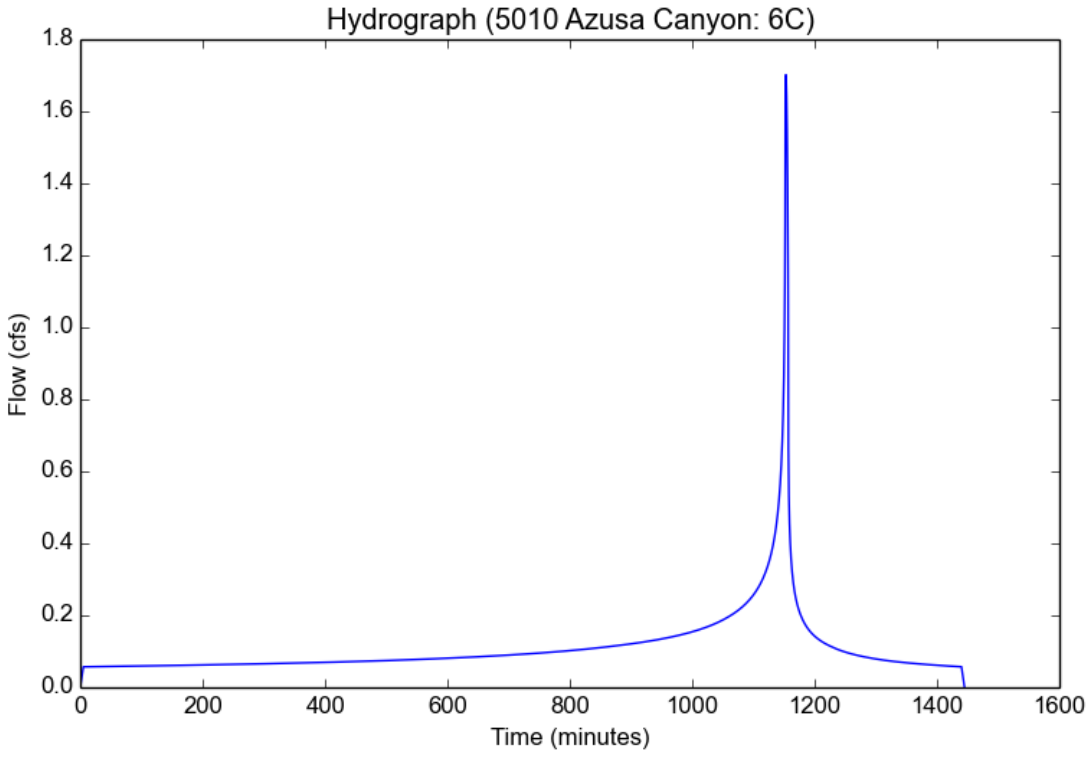
File location: O:/3500-3599/3521/hydrocalc/5010 Azusa Canyon Report.pdf
Version: HydroCalc 1.0.2

Input Parameters

Project Name	5010 Azusa Canyon
Subarea ID	6C
Area (ac)	0.45
Flow Path Length (ft)	75.0
Flow Path Slope (vft/hft)	0.028
50-yr Rainfall Depth (in)	7.0
Percent Impervious	0.9
Soil Type	8
Design Storm Frequency	50-yr
Fire Factor	0
LID	False

Output Results

Modeled (50-yr) Rainfall Depth (in)	7.0
Peak Intensity (in/hr)	4.1764
Undeveloped Runoff Coefficient (Cu)	0.9539
Developed Runoff Coefficient (Cd)	0.9
Time of Concentration (min)	5.0
Clear Peak Flow Rate (cfs)	1.6914
Burned Peak Flow Rate (cfs)	1.6914
24-Hr Clear Runoff Volume (ac-ft)	0.2216
24-Hr Clear Runoff Volume (cu-ft)	9650.7367



Peak Flow Hydrologic Analysis

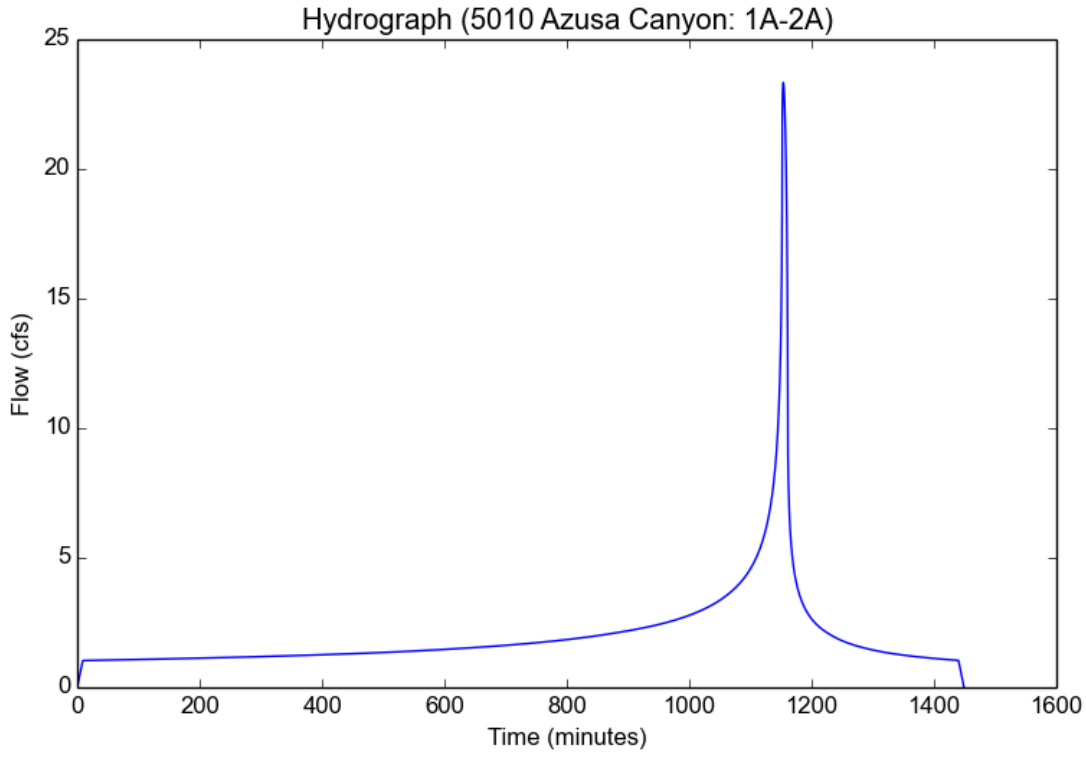
File location: O:/3500-3599/3521/hydrocalc/5010 Azusa Canyon Report.pdf
Version: HydroCalc 1.0.2

Input Parameters

Project Name	5010 Azusa Canyon
Subarea ID	1A-2A
Area (ac)	8.15
Flow Path Length (ft)	840.0
Flow Path Slope (vft/hft)	0.0072
50-yr Rainfall Depth (in)	7.0
Percent Impervious	0.9
Soil Type	8
Design Storm Frequency	50-yr
Fire Factor	0
LID	False

Output Results

Modeled (50-yr) Rainfall Depth (in)	7.0
Peak Intensity (in/hr)	3.1683
Undeveloped Runoff Coefficient (Cu)	0.9369
Developed Runoff Coefficient (Cd)	0.9
Time of Concentration (min)	9.0
Clear Peak Flow Rate (cfs)	23.2393
Burned Peak Flow Rate (cfs)	23.2393
24-Hr Clear Runoff Volume (ac-ft)	4.0125
24-Hr Clear Runoff Volume (cu-ft)	174784.0741



APPENDIX C

DETENTION CALCULATIONS

Volume at Area 1A-2A
Building 1 Truck Yard

Elevation	Depth (feet)	Area (sq. ft.)	Volume (c.f.)	∑ Volume (c.f.)	∑ Volume (ac-ft)

Peak Flow Hydrologic Analysis

File location: O:/3500-3599/3521/hydrocalc/5010 Azusa Canyon Report.pdf
Version: HydroCalc 1.0.2

Input Parameters

Project Name	5010 Azusa Canyon
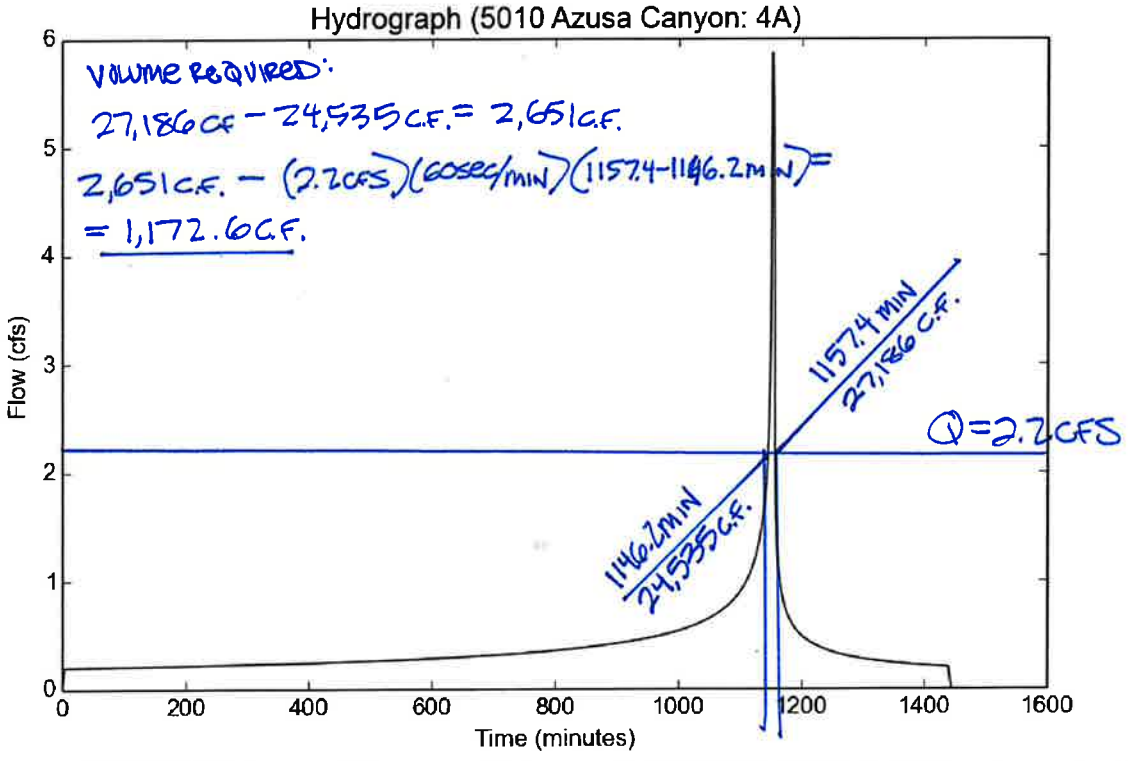
Subarea ID	4A
Area (ac)	1.55
Flow Path Length (ft)	340.0
Flow Path Slope (vft/hft)	0.0078
50-yr Rainfall Depth (in)	7.0
Percent Impervious	0.9
Soil Type	8
Design Storm Frequency	50-yr
Fire Factor	0
LID	False

Output Results

Modeled (50-yr) Rainfall Depth (in)	7.0
Peak Intensity (in/hr)	4.1764
Undeveloped Runoff Coefficient (Cu)	0.9539
Developed Runoff Coefficient (Cd)	0.9
Time of Concentration (min)	5.0
Clear Peak Flow Rate (cfs)	5.8261
Burned Peak Flow Rate (cfs)	5.8261
24-Hr Clear Runoff Volume (ac-ft)	0.7631
24-Hr Clear Runoff Volume (cu-ft)	33241.4266



Inputs: 5010 Azusa Canyon

EXECUTIVE SUMMARY

The purpose of this traffic impact analysis is to provide an assessment of traffic operations resulting from development of the proposed 5010 Azusa Canyon Road project and to identify measures necessary to mitigate potentially significant traffic impacts. This report analyzes traffic impacts for the anticipated project opening year in Year 2021.

Although this is a technical report, effort has been made to write the report clearly and concisely. A glossary is provided in Appendix A to assist the reader with terms related to transportation engineering.

PROJECT DESCRIPTION

The 10.69-acre project site is generally located west of the Azusa Canyon Road between Sandstone Street and Nubia Street in the City of Irwindale. The project site is currently developed with a telecommunications service yard to be displaced by the proposed project. The proposed project involves the construction of two warehouse buildings totaling 233,987 square feet. One building is proposed to be 184,882 square feet and the other building is proposed to be 49,105 square feet. The proposed project will maintain the two existing full access driveways at Azusa Canyon Road roughly opposite the intersections of Sandstone Street and Nubia Street. The proposed project is anticipated to be constructed and fully operational by year 2021.

EXISTING OPERATIONS

The study intersections currently operate at Levels of Service C or better during the PM peak hour for Existing conditions, with the exception of the following intersections (see Table 1):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Live Oak Lane (NS) at Live Oak Avenue (EW) - #4 (AM/PM Peak Hours)
- Rivergrade Road (NS) at Live Oak Avenue (EW) - #5 (PM Peak Hour)
- Stewart Avenue (NS) at Live Oak Avenue (EW) - #6 (PM Peak Hour)
- Arrow Highway (NS) at Live Oak Avenue (EW) - #8 (PM Peak Hour)
- Maine Avenue (NS) at Arrow Highway (EW) - #9 (PM Peak Hour)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (PM Peak Hour)

PROJECT TRIPS

The proposed project is forecast to result in a net increase of 1,121 additional daily Passenger Car Equivalent (PCE) trips, including 132 additional PCE trips during the AM peak hour and 131 additional PCE trips during the PM peak hour (see Table 4).

FORECAST OPERATIONS (IRWINDALE/BALDWIN PARK)

Existing Plus Project Conditions: The proposed project is forecast to result in a significant traffic impact at the following study intersections for Existing Plus Project conditions without improvements (see Table 7):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (PM Peak Hour)
- Irwindale Avenue (NS) at Arrow Highway (EW) - #14 (AM Peak Hour)

The proposed project is forecast to result in no significant traffic impacts for Existing Plus Project conditions with implementation of the identified intersection improvements (see Table 7).

Future Baseline With Project: The proposed project is forecast to result in a significant traffic impact at the following study intersections for Future Baseline With Project conditions without improvements (see Table 10):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (PM Peak Hour)
- Irwindale Avenue (NS) at Arrow Highway (EW) - #14 (AM Peak Hour)

The proposed project is forecast to result in no significant traffic impacts for Future Baseline With Project conditions with implementation of the identified intersection improvements (see Table 10).

Future Baseline Plus Cumulative Projects With Project: The proposed project is forecast to result in a significant traffic impact at the following study intersections for Future Baseline Plus Cumulative Projects With Project conditions without improvements (see Table 13):

- I-605 SB On-Ramp (NS) at Live Oak Avenue (EW) - #1 (AM Peak Hour)
- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (PM Peak Hour)

The proposed project is forecast to result in no significant traffic impacts for Future Baseline With Project conditions with implementation of the identified intersection improvements (see Table 13).

FORECAST OPERATIONS (STATE HIGHWAY)

Existing Plus Project: The proposed project is forecast to result in a significant traffic impact at the following study intersections for Existing Plus Project conditions without improvements (see Table 14):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2

The proposed project is forecast to result in no significant traffic impacts for Existing Plus Project conditions with improvements (see Table 14).

Future Baseline Plus Cumulative Plus Project: The proposed project is forecast to result in a significant traffic impact at the following study intersections for Future Baseline Plus Cumulative Plus Project conditions without improvements (see Table 14):

- I-605 SB On-Ramp (SB) at Live Oak Ave (EW) - #1
- I-605 NB Off-Ramps (NS) at Live Oak Ave (EW) - #2
- I-605 SB Off-Ramp (SB) at Arrow Highway (EW) - #15

The proposed project is forecast to result in no significant traffic impacts for Future Baseline Plus Cumulative Plus Project conditions with improvements (see Table 14).

Off-Ramp Queuing Analysis: The proposed project is forecast to result in no significant traffic impacts at the State Highway study intersection off-ramps for Existing Plus Project and Future Baseline Plus Cumulative Plus Project conditions with improvements (Table 15).

PROJECT IMPROVEMENTS

The proposed project shall remove and reconstruct the existing project site driveways in accordance with applicable engineering standards to the satisfaction of the City of Irwindale Public Works Department.

Azusa Canyon Road shall be constructed/repaired at its ultimate half-section width, including landscaping and parkway improvements in conjunction with development, or as otherwise required by the City of Irwindale Public Works Department.

MITIGATION MEASURES

The following intersection improvements are recommended for Existing Plus Project and Future Baseline With Project conditions:

- **I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2**
  - Install a traffic signal.
  - Construct a second right turn lane at the northbound approach.
  - Construct a second right turn lane at the southbound approach.

- **Azusa Canyon Road (NS) at Arrow Highway (EW) - #10**
  - Restripe the eastbound approach to provide a third through lane (with shared right turns).

- **Irwindale Avenue (NS) at Arrow Highway (EW) - #14**
  - Restripe the westbound approach to provide a dedicated right turn lane

The following additional intersection improvements are recommended for Future Baseline Plus Cumulative Projects With Project conditions:

- **I-605 SB On-Ramp (NS) at Live Oak Avenue (EW) - #1**
  - Construct a second left turn lane at the westbound approach.*
    *Note: requires westbound approach widening and ramp widening to accommodate an additional receiving lane.

- **I-605 SB Off-Ramp (SB) at Arrow Highway (EW) - #15**
  - Construct a second left turn lane at the southbound approach.
    *Note: requires southbound off-ramp widening to accommodate a second left turn lane.

The proposed project is forecast to result in no significant traffic impacts for the evaluated scenarios with implementation of the identified intersection improvements.

1. INTRODUCTION

This section describes the purpose of this traffic impact analysis, project location, proposed development, and study area. Figure 1 shows the project location map and Figure 2 illustrates the project site plan.

PURPOSE AND OBJECTIVES

The purpose of this traffic impact analysis is to provide an assessment of roadway operations resulting from development of the proposed 5010 Azusa Canyon Road project and to identify measures necessary to mitigate potentially significant traffic impacts. This report analyzes traffic impacts for the anticipated project opening in Year 2021.

Although this is a technical report, effort has been made to write the report clearly and concisely. A glossary is provided in Appendix A to assist the reader with terms related to transportation engineering.

PROJECT DESCRIPTION

The 10.69-acre project site is generally located west of the Azusa Canyon Road between Sandstone Street and Nubia Street in the City of Irwindale. The project site is currently developed with a telecommunications service yard to be displaced by the proposed project. The proposed project involves the construction of two warehouse buildings totaling 233,987 square feet. One building is proposed to be 184,882 square feet and the other building is proposed to be 49,105 square feet. The proposed project will maintain the two existing full access driveways at Azusa Canyon Road roughly opposite the intersections of Sandstone Street and Nubia Street. The proposed project is anticipated to be constructed and fully operational by year 2021.

STUDY AREA

Based on the study intersections identified in the approved scoping agreement (Appendix B), the study area consists of the following study intersections within the City of Irwindale, City of Baldwin Park, and California Department of Transportation (Caltrans) jurisdictions:

Study Intersections[1]	Jurisdiction
1. I-605 SB On-Ramp (NS) at Live Oak Ave (EW)	City of Irwindale/Caltrans[2]
2. I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	City of Irwindale/Caltrans
3. Graham Access Rd (NS) at Live Oak Ave (EW)	City of Irwindale
4. Live Oak Ln (NS) at Live Oak Ave (EW)	City of Irwindale
5. Rivergrade Rd (NS) at Live Oak Ave (EW)	Cities of Irwindale/Baldwin Park
6. Stewart Ave (NS) at Live Oak Ave (EW)	Cities of Irwindale/Baldwin Park
7. Baldwin Park Blvd (NS) at Live Oak Ave (EW)	Cities of Irwindale/Baldwin Park
8. Arrow Hwy (NS) at Live Oak Ave (EW)	City of Irwindale
9. Maine Ave (NS) at Arrow Hwy (EW)	Cities of Irwindale/Baldwin Park
10. Azusa Canyon Rd (NS) at Arrow Hwy (EW)	City of Irwindale
11. Azusa Canyon Rd (NS) at Sandstone St (EW)	Cities of Irwindale/Baldwin Park
12. Azusa Canyon Rd (NS) at Nubia St (EW)	Cities of Irwindale/Baldwin Park
13. 4th St (NS) at Arrow Hwy (EW)	City of Irwindale

[1] (NS) = north-south roadway; (EW) = east-west roadway; SB = Southbound; NB = Northbound; WB = Westbound
[2] Caltrans study intersections are also analyzed using the Highway Capacity Manual delay methodology for intersection Level of Service and off-ramp queueing analysis (see Section 8 – State Highway Analysis).

Study Intersections[1]	Jurisdiction
14. Irwindale Ave (NS) at Arrow Hwy (EW)	City of Irwindale
15. I-605 SB Off-Ramp (SB) at Arrow Highway (EW)	City of Irwindale/Caltrans
16. Irwindale Avenue (NS) at I-210 WB Off-Ramp (WB)	City of Irwindale/Caltrans

ANALYSIS SCENARIOS

The following scenarios are analyzed during typical weekday AM and PM peak hour conditions:

- Existing Conditions
- Existing Plus Project Conditions
- Future Baseline Conditions
- Future Baseline With Project Conditions
- Future Baseline Plus Cumulative Projects Conditions
- Future Baseline Plus Cumulative Projects With Project Conditions

Legend

(#) Study Intersection

Project Location Map

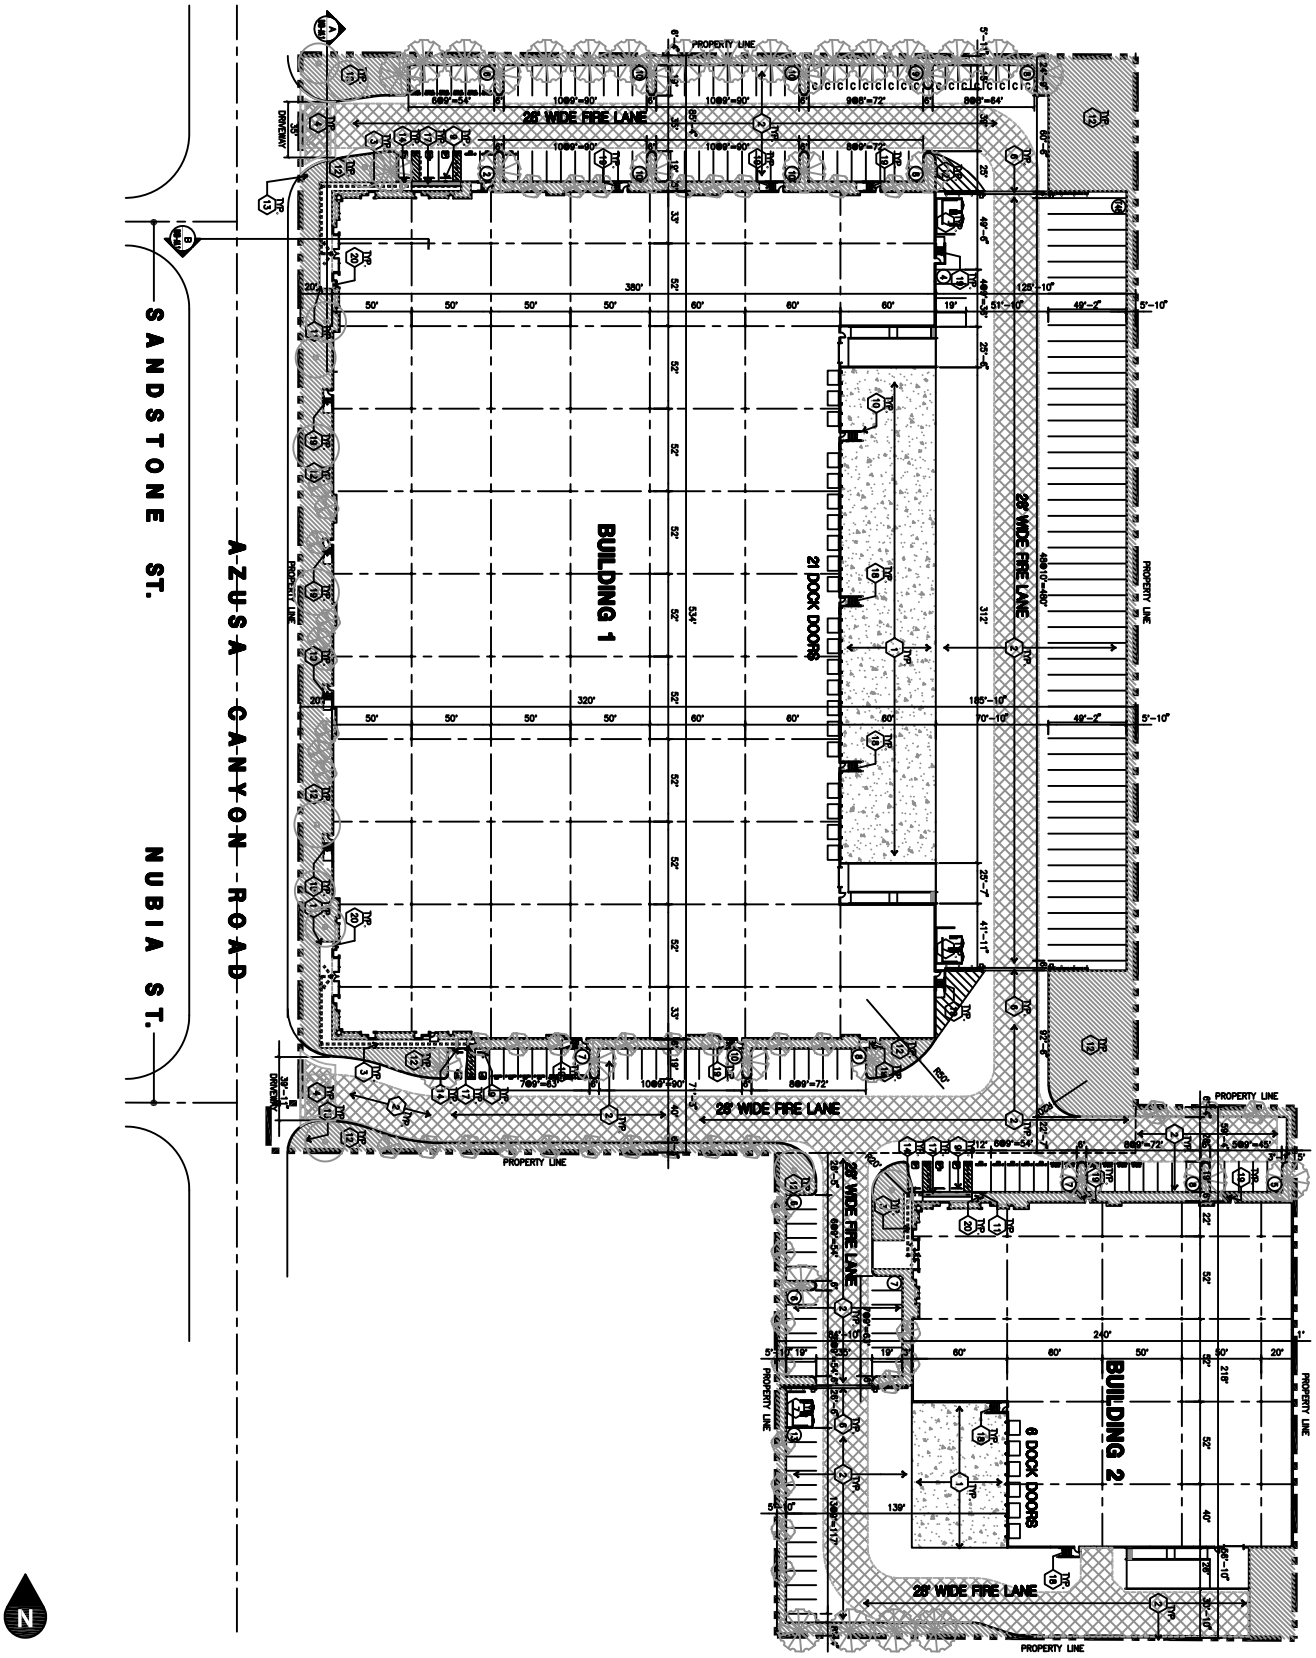

Figure 2
Site Plan

2. METHODOLOGY

This traffic impact analysis has been prepared in accordance with the guidance provided in the City of Irwindale Policy Guidelines for Traffic Impact Reports (December 2014).

INTERSECTION CAPACITY UTILIZATION METHODOLOGY

Analysis of signalized intersections is based on the Intersection Capacity Utilization methodology. The Intersection Capacity Utilization methodology compares the traffic volumes using the intersection to the capacity of the intersection. The resulting Intersection Capacity Utilization value represents that portion of the hour required to provide sufficient capacity to accommodate all intersection traffic volumes if all approaches operate at capacity. Level of Service is used to qualitatively describe the performance of a roadway facility, ranging from Level of Service A (free-flow conditions) to Level of Service F (extreme congestion and system failure). The volume to capacity ratio is then correlated to a performance measure known as Level of Service based on the following thresholds:

Level of Service	Volume to Capacity (V/C)
A	≤ 0.600
B	0.601 to 0.700
C	0.701 to 0.800
D	0.801 to 0.900
E	0.901 to 1.000
F	> 1.000

Source: Highway Capacity Manual, Special Report 209, Transportation Research Board, Washington, D.C., 1985 and Interim Materials on Highway Capacity, NCHRP Circular 212, 1982

Intersection capacity utilization analysis was performed using the Vistro (Version 6.00-00) software. In accordance with the City of Irwindale and City of Baldwin Park requirements, the Intersection Capacity Utilization analysis uses the following parameters: 1,600 vehicles per hour per lane for through and turn lanes, 2,880 vehicles per hour for dual left-turn lanes, and a total yellow clearance time of 10 percent.

INTERSECTION DELAY METHODOLOGY

The methodology used to assess the performance of unsignalized intersections is known as the intersection delay methodology based on the procedures contained in the Highway Capacity Manual (Transportation Research Board, 6th Edition). The methodology considers the traffic volume and distribution of movements, traffic composition, geometric characteristics, and signalization details to calculate the average control delay per vehicle and corresponding Level of Service. Control delay is defined as the portion of delay attributed to the intersection traffic control (such as a traffic signal or stop sign) and includes initial deceleration, queue move-up time, stopped delay, and final acceleration delay. The intersection control delay is then correlated to Level of Service based on the following thresholds:

Level of Service	Intersection Control Delay (Seconds / Vehicle)	
	Signalized Intersection	Unsignalized Intersection
A	≤ 10.0	≤ 10.0
B	> 10.0 to ≤ 20.0	> 10.0 to ≤ 15.0
C	> 20.0 to ≤ 35.0	> 15.0 to ≤ 25.0
D	> 35.0 to ≤ 55.0	> 25.0 to ≤ 35.0
E	> 55.0 to ≤ 80.0	> 35.0 to ≤ 50.0
F	> 80.0	> 50.0

Source: Transportation Research Board, Highway Capacity Manual (6th Edition).

Level of Service is used to qualitatively describe the performance of a roadway facility, ranging from Level of Service A (free-flow conditions) to Level of Service F (extreme congestion and system failure). At intersections with traffic signal or all way stop control, Level of Service is determined by the average control delay for the overall intersection. At intersections with cross street stop control (i.e., one- or two-way stop control), Level of Service is determined by the average control delay for the worst individual movement (or movements sharing a single lane).

Intersection delay analysis was performed using the Vistro (Version 6.00-00) software. Default values recommended in the Highway Capacity Manual were used for any values not specifically identified in the City guidelines.

PERFORMANCE STANDARDS

City of Irwindale. The City of Irwindale guidelines outline the following Level of Service policy statements from the City of Irwindale's General Plan:

1. The City shall ensure that traffic Levels of Service will not exceed Level of Service D at all signalized intersections on arterial and collector streets.

2. For signalized intersections on State Highway facilities, the threshold level is Level of Service E, consistent with the criteria used by the Los Angeles County Congestion Management Program for freeway mainline sections and freeway ramps.

3. The City shall ensure that all new development and redevelopment will meet adopted service levels for transportation facilities unless findings are made that achieving other specific public goals found in the General Plan outweigh this requirement.

4. The City shall focus on signalized intersections when evaluating the street system Level of Service.

5. When reviewing projects, the City shall also monitor stop-controlled intersections using LOS and the Highway Capacity Manual as a guideline, and applying the current California MUTCD signal warrants evaluation.

The above General Plan policy statements are supplemented by the following LOS criteria for un-signalized or stop-controlled intersections:

6. For unsignalized intersections, the minimum acceptable Level of Service recommended by the General Plan is Level of Service D.

7. For unsignalized intersections, a low-volume movement may have delays that yield in excess of Level of Service D, but may still be considered as having acceptable operation by considering both total delay and Level of Service (defined in terms of average control delay). An intersection traffic movement at a stop-controlled approach can be deemed to have acceptable operation under the following conditions:

    a. Total delay less than 4.0 seconds per vehicle for single lane movement with low volume;
    b. Total delay less than 5.0 seconds per vehicle for multilane movements with low volume.

City of Baldwin Park. The City of Baldwin Park General Plan Policy 1.4 establishes Level of Service D as the minimum acceptable Level of Service for intersections during the AM and PM peak hours.

THRESHOLDS OF SIGNIFICANCE

Shared study intersections between the City of Irwindale and City of Baldwin Park are analyzed in accordance with the thresholds established by both agencies.

City of Irwindale. The City of Irwindale has established the following guidelines for determination of significant impacts.

Signalized Intersections:

- When a signalized intersection operates at Level of Service D or better under existing or future baseline conditions and the addition of the project trips degrades the intersection operations to Level of Service E or F. The project mitigation should bring the facility to operate at Level of Service D at minimum.

- When a signalized intersection operates at Level of Service E or better under existing or future baseline conditions and the addition of project trips degrades the intersection operations to Level of Service F or increases the V/C by 0.02 or greater. The project mitigation should bring the facility to operate at Level of Service E at minimum.

- When a signalized intersection operates at Level of Service F under existing or future baseline conditions and the addition of more than 50 peak hour project trips contributes to the continuing operational failure at the intersection or increases the V/C by 0.02 or greater. The project mitigation should bring the facility to pre-project conditions, which typically are defined as existing conditions.

Unsignalized Intersections:

- At an unsignalized intersection, when the minor stop-controlled approach operates at Level of Service F and does not have acceptable operation in terms of total control delay, and the addition of project trips increases the total control delay to more than 4.0 seconds per vehicle for a single lane approach or 5.0 seconds per vehicle for a multilane approach. The project mitigation should bring the facility to operate at Level of Service E minimum or to bring the total control delay to less than 4.0 seconds per vehicle for a single lane approach or 5.0 seconds per vehicle for a multilane approach at a minimum.

- At an unsignalized intersection, when the minor stop-controlled approach operates at Level of Service F and does not have an acceptable operation in terms of total control delay, and the addition of more than 50 peak hour project trips contributes to the continuing operational failure at the minor approach. The project mitigation should bring the facility to pre-project or existing conditions.

City of Baldwin Park. The City of Baldwin Park has established the following guidelines for determination of significant impacts.

Signalized Intersections:

- For signalized study intersections within City of Baldwin Park jurisdiction, a project traffic impact is considered significant if the proposed project increases traffic demand by one percent (1%) or more of capacity (V/C ≥ 0.01), causing or worsening Level of Service E or F (V/C > 0.900).

Unsignalized Intersections:

- The City of Baldwin Park does not have established significant impact thresholds for unsignalized intersections. Since the unsignalized intersections within City of Baldwin Park are shared jurisdiction with City of Irwindale, the significance thresholds for the City of Irwindale were used.

MITIGATION REQUIREMENTS

If a project is forecast to cause a significant transportation impact, feasible mitigation measures shall be identified that will reduce the impact to a less than significant level based on the established thresholds. Mitigation measures can be in many forms, including the addition of lanes, traffic control modification, or demand management measures. If no feasible mitigation measures can be identified to reduce the impact to a less than significant level, the impact will remain significant and unavoidable. If the Lead Agency determines that the benefits of a proposed project outweigh any significant and unavoidable impacts, a statement of overriding considerations must be adopted for project approval.

3. EXISTING CONDITIONS

EXISTING ROADWAY SYSTEM

Figure 3 identifies the lane geometry and intersection traffic controls for Existing conditions based on a field survey of the study area. Regional access to the project area is provided by Interstate 605, Interstate 210, and Interstate 10 freeways. The north-south roadways of Baldwin Park Boulevard, Azusa Canyon Road, and Irwindale Avenue and the east-west roadways of Live Oak Avenue and Arrow Highway Boulevard provide local circulation.

PEDESTRIAN FACILITIES

Existing pedestrian facilities in the project vicinity are shown on Figure 4. As shown on Figure 4, pedestrian sidewalks are currently provided along the roadways adjacent to the project site.

BICYCLE ROUTES

The City of Irwindale Bicycle Route Map is depicted on Figure 5.

TRANSIT FACILITIES

Figure 6 shows the existing transit routes available in the project vicinity. As shown on Figure 6, Foothill Transit Routes 185/272/492 and the Baldwin Park Teal Line provide transit service along parts of Live Oak Avenue, Baldwin Park Boulevard, Arrow Highway, and Irwindale Avenue. The nearest transit stop is for Foothill Transit Route 492 located at the intersection of Azusa Canyon Road/Arrow Highway approximately 750 feet from the project site.

TRUCK ROUTES

The City of Irwindale Truck Route Map is depicted on Figure 7.

GENERAL PLAN CONTEXT

Figure 8 shows the City of Irwindale General Plan Roadway Classification map. This figure shows the nature and extent of arterial and collector highways that are needed to adequately serve the ultimate development depicted by the Land Use Element of the General Plan. The City of Irwindale standard roadway cross-sections are illustrated on Figure 9.

EXISTING INTERSECTION VOLUMES

Existing peak hour intersection volumes are based upon AM and PM peak period intersection turning movement counts obtained in November 2018 during typical weekday conditions. The AM peak period was counted between 7:00 AM and 9:00 PM and the PM peak period was counted between 4:00 PM and 6:00 PM. The actual peak hour within the peak period is the four consecutive 15 minute periods with the highest total volume when all movements are added together. Thus, the weekday PM peak hour at one intersection may be 4:45 PM to 5:45 PM if those four consecutive 15 minute periods have the highest combined volume. Intersection turning movement count worksheets are provided in Appendix C.

To provide a conservative analysis, the peak hour intersection turning movement volumes were converted into Passenger Car Equivalent (PCE) volumes in accordance with recommendations obtained from the San Bernardino County Congestion Management Program (1.5 PCE for 2-axle trucks, 2.0 PCE for 3-axle trucks, and 3.0 PCE for trucks with 4 or more axles) since the majority of the study intersections are located along

the heavily utilized truck corridor of Arrow Highway/Live Oak Avenue. All intersection turning movement volumes shown in the this report are based on PCE volumes.

Figure 10 and Figure 11 show the Existing AM and PM peak hour intersection turning movement volumes (in PCE).

EXISTING INTERSECTION LEVEL OF SERVICE

The intersection Levels of Service for Existing traffic conditions have been calculated and are shown in Table 1. Existing intersection Level of Service worksheets are provided in Appendix D.

As shown in Table 1, the study intersections currently operate within acceptable Levels of Service during the peak hours for Existing traffic conditions, with the exception of the following intersections (see Table 1):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Live Oak Lane (NS) at Live Oak Avenue (EW) - #4 (AM/PM Peak Hours)
- Rivergrade Road (NS) at Live Oak Avenue (EW) - #5 (PM Peak Hour)
- Stewart Avenue (NS) at Live Oak Avenue (EW) - #6 (PM Peak Hour)
- Arrow Highway (NS) at Live Oak Avenue (EW) - #8 (PM Peak Hour)
- Maine Avenue (NS) at Arrow Highway (EW) - #9 (PM Peak Hour)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (PM Peak Hour)

AVERAGE DAILY TRAFFIC VOLUMES

As a reference for other technical studies, existing and projected average daily traffic volumes are provided in Appendix E. The existing average daily traffic volumes have been factored from PM peak hour intersection turning movement volumes using a factor of 12.2 times the two-way peak hour volume at each intersection leg. The peak hour to daily factor (12.2) is based on the ratio determined from measured daily traffic volume counts at two sample locations in the project vicinity.

TRAFFIC SIGNAL WARRANT ANALYSIS

The potential need for installation of a traffic signal at existing unsignalized intersections was evaluated based on the California Manual on Uniform Traffic Control Devices ("California MUTCD", November 2014), peak hour volume warrant (Warrant 3). Part 4C – Traffic Control Signal Needs Studies of the California MUTCD contains a series of warrants, or criteria, which serve to determine whether installation of a traffic signal is justified at a particular location. The California MUTCD states that a traffic control signal should not be installed unless one or more warrants are satisfied. Application of the traffic signal warrants should be based on engineering judgement and satisfaction of one or more traffic signal warrants shall not in itself require the installation of a traffic signal. Peak hour traffic signal warrant worksheets are provided in Appendix F.

The California MUTCD peak hour traffic signal warrant is currently satisfied at the following unsignalized study intersection:

- I-605 NB Off-Ramps / Live Oak Avenue - #2

Based on scoping discussions with City of Irwindale staff, Warrants 1 through 3 (eight-hour, four-hour, and peak hour volume warrants) and Warrant 7 (crash experience warrant) were evaluated at the intersection of Azusa Canyon Road/Nubia Street (#12). The additional signal warrant worksheets for the intersection of Azusa Canyon Road/Nubia Street are provided in Appendix F.

Installation of a traffic signal at the intersection of Azusa Canyon Road/Nubia Street (#12) is not currently warranted based on the volume and crash experience criteria established in Warrants 1, 2, 3, and 7.

16.	Irwindale Ave at I-210 WB Off-Ramp	TS	0.507	A	0.558	A

Notes:

(1) TS = Traffic Signal; CSS = Cross Street Stop

(2) V/C = Volume/Capacity

(3) Delay is shown in [seconds/vehicle] for unsignalized study intersections. For intersections with cross street stop control, Level of Service is based on average delay of the worst individual lane (or movements sharing a lane).

(4) LOS = Level of Service

4. PROJECT FORECASTS

This section describes how project trip generation, trip distribution, and trip assignment forecasts were developed. The forecast project volumes are illustrated on figures contained in this section.

PROJECT TRIP GENERATION

As previously noted, the intersection operational analysis is based on Passenger Car Equivalent (PCE) volumes; therefore, the project trip generation forecasts have been calculated in terms of vehicle trips generated as well as PCE trips generated.

The project site is currently occupied by a telecommunications service yard. Table 2 shows the trip generation of the existing land use based on manual project site driveway counts conducted in November 2018. As shown in Table 2, the existing land use currently generates 352 daily PCE trips, including 80 PCE trips during the AM peak hour and 57 PCE trips during the evening peak hour.

Table 3 shows the project trip generation based upon trip generation rates for the General Light Industrial land use (Land Use Code 110) obtained from the Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, 2017. The project trip generation forecast is determined by multiplying the trip generation rates by the land use quantity. The project trip generation has been converted into Passenger PCE trips in accordance with the truck percentages documented in the City of Fontana Truck Trip Generation Study (August 2003) and PCE factors recommended by the County of San Bernardino Congestion Management Program.

As shown in Table 3, the proposed project is forecast to generate a total of approximately 1,473 daily PCE trips, including 212 PCE trips during the AM peak hour and 188 PCE trips during the PM peak hour.

Table 4 shows the net number of trips resulting from displacement of the existing use and development of the proposed project. The proposed project is forecast to result in a net increase of 1,121 additional daily PCE trips, including 132 additional PCE trips during the AM peak hour and 131 additional PCE trips during the PM peak hour (see Table 4).

PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

Figure 12 and Figure 13 show the forecast directional distribution patterns for the project generated car and truck trips, respectively. The project trip distribution patterns were determined in consultation with City of Irwindale staff and are based on review of existing volume data, surrounding land uses, and the local and regional roadway facilities in the project vicinity.

Peak hour intersection turning movement volumes expected from the project are depicted on Figure 14 and Figure 15.

5. FUTURE VOLUME FORECASTS

This section describes how future volume forecasts for each analysis scenario were developed. Forecast study area volumes are illustrated on figures contained in this section. Forecast average daily traffic volumes (non PCE-adjusted) are provided in Appendix E for informational purposes.

CUMULATIVE TRIPS

Ambient Growth Rate

To account for ambient growth on roadways, existing volumes were increased by a growth rate of 0.5 percent (0.5%) per year over a three-year period for Future Baseline conditions. This equates to a total growth factor of approximately 1.02 for Opening Year conditions and is substantially more conservative than the annual growth rate of approximately 0.4 percent derived from traffic growth factors contained in the Los Angeles County 2010 Congestion Management Program (Exhibit D-1, RSA 26). The ambient growth rate was conservatively applied to all movements at the study intersections.

Other Development

To account for trips generated by future development, trips generated by pending or approved other development projects in the Cities of Irwindale, Baldwin Park, and Azusa were added to the study intersections. Table 5 shows the trip generation summary for other development projects. Figure 16 shows the other development location map. The previously discussed ambient growth is assumed to account for any additional background volume growth generated by other developments outside the project vicinity and not specifically listed in this report.

Figure 17 and Figure 18 show the forecast peak hour intersection turning movement volumes for trips generated by other developments.

ANALYSIS SCENARIO VOLUME FORECASTS

Existing Plus Project

Existing Plus Project volume forecasts were derived by adding the project generated trips to Existing volumes. Existing Plus Project peak hour intersection turning movement volumes are shown on Figure 19 and Figure 20.

Future Baseline

To develop Future Baseline volume forecasts, Existing volumes were combined with ambient growth. Future Baseline peak hour intersection turning movement volumes are shown on Figure 21 and Figure 22.

Future Baseline With Project

Future Baseline With Project volume forecasts were developed by adding project generated trips to the Future Baseline forecast. Future Baseline With Project peak hour intersection turning movement volumes are shown on Figure 23 and Figure 24.

Future Baseline Plus Cumulative Projects Without Project

Future Baseline Plus Cumulative Projects volume forecasts were developed by adding other development trips to the Future Baseline forecast. Future Baseline Plus Cumulative Projects Without Project peak hour intersection turning movement volumes are shown on Figure 25 and Figure 26.

Future Baseline Plus Cumulative Projects With Project

Future Baseline Plus Cumulative Projects With Project volume forecasts were developed by adding other development trips and project generated trips to the Future Baseline forecast. Future Baseline Plus Cumulative Projects With Project peak hour intersection turning movement volumes are shown on Figure 27 and Figure 28.

6. FUTURE OPERATIONAL ANALYSIS

Detailed intersection Level of Service calculation worksheets for each of the following analysis scenarios are provided in Appendix D.

EXISTING PLUS PROJECT

Intersection Levels of Service

The intersection Levels of Service for Existing Plus Project conditions are shown in Table 6. The study intersections are forecast to operate within acceptable Levels of Service during the peak hours for Existing Plus Project traffic conditions, with the exception of the following intersections (see Table 6):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Live Oak Lane (NS) at Live Oak Avenue (EW) - #4 (AM/PM Peak Hours)
- Rivergrade Road (NS) at Live Oak Avenue (EW) - #5 (PM Peak Hour)
- Stewart Avenue (NS) at Live Oak Avenue (EW) - #6 (PM Peak Hour)
- Arrow Highway (NS) at Live Oak Avenue (EW) - #8 (PM Peak Hour)
- Maine Avenue (NS) at Arrow Highway (EW) - #9 (PM Peak Hour)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (PM Peak Hour)
- Irwindale Avenue (NS) at Arrow Highway (EW) - #14 (AM Peak Hour)

Significant Impact Evaluation

Table 7 shows the impact evaluation at the study intersections for Existing Plus Project conditions. The proposed project is forecast to result in a significant traffic impact at the following study intersections for Existing Plus Project conditions without improvements (see Table 7):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (PM Peak Hour)
- Irwindale Avenue (NS) at Arrow Highway (EW) - #14 (AM Peak Hour)

Mitigation

The following intersection improvements are recommended for Existing Plus Project conditions:

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2
  - Install a traffic signal.
  - Construct a second right turn lane at the northbound approach.
  - Construct a second right turn lane at the southbound approach.

- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10
  - Restripe the eastbound approach to provide a third through lane (with shared right turns).

- Irwindale Avenue (NS) at Arrow Highway (EW) - #14
  - Restripe the westbound approach to provide a dedicated right turn lane

The proposed project is forecast to result in no significant traffic impacts for Existing Plus Project conditions with implementation of the identified intersection improvements (see Table 7).

FUTURE BASELINE

Intersection Levels of Service

The intersection Levels of Service for Future Baseline conditions are shown in Table 8. The study intersections are forecast to operate within acceptable Levels of Service during the peak hours for Future Baseline conditions, with the exception of the following intersections (see Table 8):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Live Oak Lane (NS) at Live Oak Avenue (EW) - #4 (AM/PM Peak Hours)
- Rivergrade Road (NS) at Live Oak Avenue (EW) - #5 (PM Peak Hour)
- Stewart Avenue (NS) at Live Oak Avenue (EW) - #6 (PM Peak Hour)
- Arrow Highway (NS) at Live Oak Avenue (EW) - #8 (PM Peak Hour)
- Maine Avenue (NS) at Arrow Highway (EW) - #9 (PM Peak Hour)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (AM/PM Peak Hour)
- Irwindale Avenue (NS) at Arrow Highway (EW) - #14 (AM Peak Hour)

FUTURE BASELINE WITH PROJECT

Intersection Levels of Service

The intersection Levels of Service for Future Baseline With Project conditions are shown in Table 9. The study intersections are projected to operate within acceptable Levels of Service during the peak hours for Future Baseline With Project conditions, with the exception of the following intersections (see Table 9):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Live Oak Lane (NS) at Live Oak Avenue (EW) - #4 (AM/PM Peak Hours)
- Rivergrade Road (NS) at Live Oak Avenue (EW) - #5 (PM Peak Hour)
- Stewart Avenue (NS) at Live Oak Avenue (EW) - #6 (PM Peak Hour)
- Arrow Highway (NS) at Live Oak Avenue (EW) - #8 (PM Peak Hour)
- Maine Avenue (NS) at Arrow Highway (EW) - #9 (PM Peak Hour)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (AM/PM Peak Hour)
- Irwindale Avenue (NS) at Arrow Highway (EW) - #14 (AM Peak Hour)

Significant Impact Evaluation

Table 10 shows the impact evaluation at the study intersections for Future Baseline With Project conditions. The proposed project is forecast to result in a significant traffic impact at the following study intersections for Future Baseline With Project conditions without improvements (see Table 10):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (PM Peak Hour)
- Irwindale Avenue (NS) at Arrow Highway (EW) - #14 (AM Peak Hour)

Mitigation

No additional improvements are required for Future Baseline With Project conditions (compared to Existing Plus Project conditions).

The proposed project is forecast to result in no significant traffic impacts for Future Baseline With Project conditions with implementation of the identified intersection improvements (see Table 10).

FUTURE BASELINE PLUS CUMULATIVE PROJECTS

Intersection Levels of Service

The intersection Levels of Service for Future Baseline Plus Cumulative Projects conditions are shown in Table 11. The study intersections are projected to operate within acceptable Levels of Service during the peak hours for Future Baseline Plus Cumulative Projects conditions, with the exception of the following intersections (see Table 11):

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Live Oak Lane (NS) at Live Oak Avenue (EW) - #4 (AM/PM Peak Hours)
- Rivergrade Road (NS) at Live Oak Avenue (EW) - #5 (PM Peak Hour)
- Stewart Avenue (NS) at Live Oak Avenue (EW) - #6 (PM Peak Hour)
- Arrow Highway (NS) at Live Oak Avenue (EW) - #8 (PM Peak Hour)
- Maine Avenue (NS) at Arrow Highway (EW) - #9 (PM Peak Hour)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (AM/PM Peak Hour)
- Irwindale Avenue (NS) at Arrow Highway (EW) - #14 (AM Peak Hour)

FUTURE BASELINE PLUS CUMULATIVE PROJECTS WITH PROJECT

Intersection Levels of Service

The intersection Levels of Service for Future Baseline Plus Cumulative Projects With Project conditions are shown in Table 12. The study intersections are projected to operate within acceptable Levels of Service during the peak hours for Future Baseline Plus Cumulative Projects With Project conditions, with the exception of the following intersections (see Table 12):

- I-605 SB On-Ramp (NS) at Live Oak Avenue (EW) - #1 (PM Peak Hour)
- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Live Oak Lane (NS) at Live Oak Avenue (EW) - #4 (AM/PM Peak Hours)
- Rivergrade Road (NS) at Live Oak Avenue (EW) - #5 (PM Peak Hour)
- Stewart Avenue (NS) at Live Oak Avenue (EW) - #6 (PM Peak Hour)
- Baldwin Park Boulevard (NS) at Live Oak Avenue (EW) - #7 (PM Peak Hour)
- Arrow Highway (NS) at Live Oak Avenue (EW) - #8 (PM Peak Hour)
- Maine Avenue (NS) at Arrow Highway (EW) - #9 (PM Peak Hour)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (AM/PM Peak Hour)
- Irwindale Avenue (NS) at Arrow Highway (EW) - #14 (AM/PM Peak Hour)
- I-605 SB Off-Ramp (NS) at Arrow Highway (EW) - #15 (AM Peak Hour)

Significant Impact Evaluation

Table 13 shows the impact evaluation at the study intersections for Future Baseline Plus Cumulative Projects With Project conditions. The proposed project is forecast to result in a significant traffic impact at the following study intersections for Future Baseline Plus Cumulative Projects With Project conditions without improvements (see Table 13):

- I-605 SB On-Ramp (NS) at Live Oak Avenue (EW) - #1 (AM Peak Hour)
- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2 (AM/PM Peak Hours)
- Azusa Canyon Road (NS) at Arrow Highway (EW) - #10 (PM Peak Hour)
- I-605 SB Off-Ramp (NS) at Arrow Highway (EW) - #15 (AM Peak Hour)

Mitigation

The following additional intersection improvements are recommended for Future Baseline Plus Cumulative Projects With Project conditions:

- I-605 SB On-Ramp (NS) at Live Oak Avenue (EW) - #1
  - Construct a second left turn lane at the westbound approach.*
    *Note: requires westbound approach widening and ramp widening to accommodate an additional receiving lane.

- I-605 SB Off-Ramp (SB) at Arrow Highway (EW) - #15
  - Construct a second left turn lane at the southbound approach.
    *Note: requires southbound off-ramp widening to accommodate a second left turn lane.

The proposed project is forecast to result in no significant traffic impacts for Future Baseline With Project conditions with implementation of the identified intersection improvements (see Table 13).

(3) An unsignalized intersection maybe considered to operate acceptably if the delay per vehicle is 4.0 seconds or less when the minor street has a single lane approach and 5.0 seconds or less for a multilane approach.

(4) IR = significant Impact per City of Irwindale thresholds; BP = significant impact per City of Baldwin Park thresholds

7. CONGESTION MANAGEMENT PROGRAM

The County of Los Angeles Congestion Management Program (CMP) uses the following criteria to determine if a proposed development requires analysis of Congestion Management Program monitored facilities:

- All CMP arterial monitoring intersections, including monitored freeway on- or off-ramp intersections, where the proposed project will add 50 or more trips during either the morning or evening weekday peak hours;

- Mainline freeway monitoring locations where the project will add 150 or more trips, in either direction, during either the morning or evening weekday peak hours.

Based on the project AM and PM peak hour volumes shown on Figure 14 and Figure 15, the proposed project is not forecast to add 50 peak hour trips or more to a CMP-monitored intersection nor is the project forecast to add 150 peak hour trips or more to a CMP-monitored freeway location.

8. STATE HIGHWAY ANALYSIS

This section presents the analysis of the following State Highway facilities which were selected in consultation with California Department of Transportation (Caltrans) staff:

- I-605 SB On-Ramp (SB) at Live Oak Ave (EW) - #1
- I-605 NB Off-Ramps (NS) at Live Oak Ave (EW) - #2
- I-605 SB Off-Ramp (SB) at Arrow Highway (EW) - #15
- Irwindale Avenue (NS) at I-210 WB Off-Ramp (WB) - #16

METHODOLOGY

Intersection Delay Methodology

In accordance with the California Department of Transportation Guide for the Preparation of Traffic Impact Studies (December 2002), the technique used to assess the performance of an intersection is known as the intersection delay method based on the procedures contained in the Highway Capacity Manual (Transportation Research Board). The methodology considers the traffic volume and distribution of movements, traffic composition, geometric characteristics, and signalization details to calculate the average control delay per vehicle and corresponding Level of Service. Control delay is defined as the portion of delay attributed to the intersection traffic control (such as a traffic signal or stop sign) and includes initial deceleration, queue move-up time, stopped delay, and final acceleration delay. The intersection control delay is then correlated to Level of Service based on the following thresholds:

Level of Service	Intersection Control Delay (Seconds / Vehicle)	
	Signalized Intersection	Unsignalized Intersection
A	≤ 10.0	≤ 10.0
B	> 10.0 to ≤ 20.0	> 10.0 to ≤ 15.0
C	> 20.0 to ≤ 35.0	> 15.0 to ≤ 25.0
D	> 35.0 to ≤ 55.0	> 25.0 to ≤ 35.0
E	> 55.0 to ≤ 80.0	> 35.0 to ≤ 50.0
F	> 80.0	> 50.0

Source: Transportation Research Board, Highway Capacity Manual (6th Edition).

Level of Service is used to qualitatively describe the performance of a roadway facility, ranging from Level of Service A (free-flow conditions) to Level of Service F (extreme congestion and system failure). At intersections with traffic signal or all way stop control, Level of Service is determined by the average control delay for the overall intersection. At intersections with cross street stop control (i.e., one- or two-way stop control), Level of Service is determined by the average control delay for the worst individual movement (or movements sharing a single lane).

Off-Ramp Queuing Methodology

Off-ramp queues are calculated based on the 95th-percentile back-of-queue methodology as reported in the delay calculation worksheets (see Appendix G). In accordance with Caltrans District 7 standards, the 95th-percentile queue length is compared to 85 percent of the distance between the intersection and the gore point to determine if adequate off-ramp storage capacity is provided.

Thresholds of Significance

The California Department of Transportation endeavors to maintain a target LOS [Level of Service] at the transition between LOS "C" and LOS "D" on State highway facilities. For consistency with local requirements, this analysis defines Level of Service D as the minimum acceptable Level of Service for State highway facilities.

For purposes of the State Highway impact analysis, a significant transportation impact is defined to occur if:

- The addition of project-generated trips causes or worsens unacceptable Level of Service (i.e., increases delay under Level of Service E or F conditions); or

- The addition of project-generated trips is forecast to causes or worsens the freeway off-ramp queue length to exceed the available storage capacity.

INTERSECTION ANALYSIS

Existing and Existing Plus Project

Table 14 shows the delay and Levels of Service for the State Highway study intersections for existing and cumulative conditions. As shown in Table 14, the proposed project is forecast to result in a significant traffic impact at the following study intersections for Existing Plus Project conditions without improvements:

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2

The following intersection improvements were previously identified based on the City of Irwindale methodology for Existing Plus Project conditions:

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2
  - Install a traffic signal.
  - Construct a second right turn lane at the northbound approach.
  - Construct a second right turn lane at the southbound approach.

As shown in Table 14, the proposed project is forecast to result in no significant traffic impacts for Existing Plus Project conditions with improvements.

Cumulative Without and With Project

As also shown in Table 14, the proposed project is forecast to result in a significant traffic impact at the following study intersections for Future Baseline Plus Cumulative Plus Project conditions without improvements:

- I-605 SB On-Ramp (SB) at Live Oak Ave (EW) - #1
- I-605 NB Off-Ramps (NS) at Live Oak Ave (EW) - #2
- I-605 SB Off-Ramp (SB) at Arrow Highway (EW) - #15

The following intersection improvements were previously identified based on the City of Irwindale methodology for Future Baseline Plus Cumulative Plus Project conditions:

- I-605 SB On-Ramp (NS) at Live Oak Avenue (EW) - #1
  - Construct a second left turn lane at the westbound approach.*
    *Note: requires westbound approach widening and ramp widening to accommodate an additional receiving lane.

- I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2
  - Install a traffic signal.
  - Construct a second right turn lane at the northbound approach.
  - Construct a second right turn lane at the southbound approach.

The following additional intersection improvements are recommended based on the Highway Capacity Manual methodology for Future Baseline Plus Cumulative Plus Project conditions:

- I-605 SB Off-Ramp (SB) at Arrow Highway (EW) - #15
  - Construct a second left turn lane at the southbound approach.
    *Note: requires southbound off-ramp widening to accommodate a second left turn lane.

As shown in Table 14, the proposed project is forecast to result in no significant traffic impacts for Future Baseline Plus Cumulative Plus Project conditions with improvements.

OFF-RAMP QUEUING ANALYSIS

Table 15 summarizes the State Highway off-ramp queuing analysis based on the forecast queue lengths reported in the delay calculation worksheets (see Appendix G). The queue lengths shown in Table 15 include the recommended improvements identified to mitigate

As shown in Table 15, adequate storage length is provided at the State Highway study intersection off-ramps for the evaluated scenarios (with improvements). Therefore, the proposed project is forecast to result in no significant traffic impacts at the State Highway study intersection off-ramps for Existing Plus Project and Future Baseline Plus Cumulative Plus Project conditions with improvements.

Table 14
State Highway Intersection Levels of Service

ID	Study Intersection	Traffic Control[1]	Existing				Existing Plus Project				Net Change in Delay		Significant Impact?

Notes:

(1) Based on improvements identified for Level of Service analysis.

(2) NB = Northbound; SB = Southbound; L = Left; R = Right; (F) = Free Right Turn

(3) Based on Highway Capacity Manual methodology; see Appendix G.

(4) Based on 25 feet of queue length per vehicle; rounded up to nearest 25 feet.

9. IMPROVEMENT SUMMARY

PROJECT IMPROVEMENTS

The proposed project shall remove and reconstruct the existing project site driveways in accordance with applicable engineering standards to the satisfaction of the City of Irwindale Public Works Department.

Azusa Canyon Road shall be constructed/repaired at its ultimate half-section width, including landscaping and parkway improvements in conjunction with development, or as otherwise required by the City of Irwindale Public Works Department.

MITIGATION MEASURES

The following intersection improvements are recommended for Existing Plus Project and Future Baseline With Project conditions:

- **I-605 NB Off-Ramps (NS) at Live Oak Avenue (EW) - #2**
  - Install a traffic signal.
  - Construct a second right turn lane at the northbound approach.
  - Construct a second right turn lane at the southbound approach.
  - Widen bridge/roadway to provide a third through lane at the westbound approach.

- **Azusa Canyon Road (NS) at Arrow Highway (EW) - #10**
  - Restripe the eastbound approach to provide a third through lane (with shared right turns).

- **Irwindale Avenue (NS) at Arrow Highway (EW) - #14**
  - Restripe the westbound approach to provide a dedicated right turn lane

The following additional intersection improvements are recommended for Future Baseline Plus Cumulative Projects With Project conditions:

- **I-605 SB On-Ramp (NS) at Live Oak Avenue (EW) - #1**
  - Construct a second left turn lane at the westbound approach.*
    *Note: requires westbound approach widening and ramp widening to accommodate an additional receiving lane.

- **I-605 SB Off-Ramp (SB) at Arrow Highway (EW) - #15**
  - Construct a second left turn lane at the southbound approach.
    *Note: requires southbound off-ramp widening to accommodate a second left turn lane.

FAIR SHARE CONTRIBUTION

Table 16 shows the project fair share percentage of new traffic at the significantly impacted intersections for which mitigation measure improvements have been identified. The project fair share is based on the proportion of project peak hour traffic contributed to the improvement location relative to the total new peak hour traffic volume.

Table 16
Project Fair Share Contribution

ID	Study Intersection	Peak Hour	Peak Hour Volumes				Project Share	Significant Impact?
			Existing	Future Baseline Plus Cumulative Projects With Project	Total New Trips	Project Trips		
1.	I-605 SB On-Ramp at Live Oak Ave	AM	2,713	3,703	990	0	0.0%	No
		PM	3,839	5,132	1,293	52	4.0%	Yes
2.	I-605 NB Off-Ramps at Live Oak Ave	AM	2,695	4,012	1,317	63	4.8%	Yes
		PM	3,204	4,235	1,031	54	5.2%	Yes
10.	Azusa Canyon Rd at Arrow Hwy	AM	3,677	4,362	685	145	21.2%	No
		PM	3,908	4,595	687	119	17.3%	Yes
14.	Irwindale Ave at Arrow Hwy	AM	4,198	4,882	684	44	6.4%	Yes
		PM	4,889	5,539	650	36	5.5%	No
15.	I-605 SB Off-Ramp at Arrow Hwy	AM	2,695	3,833	1,138	33	2.9%	Yes
		PM	2,064	3,184	1,120	0	0.0%	No

10. CONCLUSIONS

The proposed project is forecast to result in no significant traffic/transportation impacts with implementation of the identified mitigation measures.

GENERAL RECOMMENDATIONS

All roadway design, traffic signing and striping, and traffic control improvements relating to the proposed project should be constructed in accordance with applicable engineering standards and to the satisfaction of the City of Irwindale Public Works Department.

On-site traffic signing and striping plans should be submitted for City of Irwindale approval in conjunction with detailed construction plans for the project.

Off-street parking should be provided to meet City of Irwindale Municipal Code requirements.

The final grading, landscaping, and street improvement plans should demonstrate that sight distance standards are met in accordance with applicable City of Irwindale/California Department of Transportation sight distance standards.

As is the case for any roadway design, the City of Irwindale should periodically review traffic operations in the vicinity of the project once the project is constructed to assure that the traffic operations are satisfactory.

APPENDIX A

GLOSSARY

GLOSSARY OF TERMS

ACRONYMS

AC	Acres
ADT	Average Daily Traffic
Caltrans	California Department of Transportation
DU	Dwelling Unit
ICU	Intersection Capacity Utilization
LOS	Level of Service
TSF	Thousand Square Feet
V/C	Volume/Capacity
VMT	Vehicle Miles Traveled

TERMS

AVERAGE DAILY TRAFFIC: The average 24-hour volume for a stated period divided by the number of days in that period. For example, Annual Average Daily Traffic is the total volume during a year divided by 365 days.

BANDWIDTH: The number of seconds of green time available for through traffic in a signal progression.

BOTTLENECK: A point of constriction along a roadway that limits the amount of traffic that can proceed downstream from its location.

CAPACITY: The maximum number of vehicles that can be reasonably expected to pass over a given section of a lane or a roadway in a given time period.

CHANNELIZATION: The separation or regulation of conflicting traffic movements into definite paths of travel by the use of pavement markings, raised islands, or other suitable means to facilitate the safe and orderly movements of both vehicles and pedestrians.

CLEARANCE INTERVAL: Nearly same as yellow time. If there is an all red interval after the end of a yellow, then that is also added into the clearance interval.

CONTROL DELAY: The component of delay, typically expressed in seconds per vehicle, resulting from the type of traffic control at an intersection. Control delay is measured by comparison with the uncontrolled condition; it includes delay incurred by slowing down, stopping/waiting, and speeding up.

CORDON: An imaginary line around an area across which vehicles, persons, or other items are counted (in and out).

CORNER SIGHT DISTANCE: The minimum sight distance required by the driver of a vehicle to cross or enter the lanes of the major roadway without requiring approaching traffic travelling at a given speed to radically alter their speed or trajectory. Corner sight distance is measured from the driver's eye at 42 inches above the pavement to an object height of 36 inches above the pavement in the center of the nearest approach lane.

CYCLE LENGTH: The time period in seconds required for a traffic signal to complete one full cycle of indications.

CUL-DE-SAC: A local street open at one end only and with special provisions for turning around.

DAILY CAPACITY: A theoretical value representing the daily traffic volume that will typically result in a peak hour volume equal to the capacity of the roadway.

DELAY: The time consumed while traffic is impeded in its movement by some element over which it has no control, usually expressed in seconds per vehicle.

DEMAND RESPONSIVE SIGNAL: Same as traffic-actuated signal.

DENSITY: The number of vehicles occupying in a unit length of the through traffic lanes of a roadway at any given instant. Usually expressed in vehicles per mile.

DETECTOR: A device that responds to a physical stimulus and transmits a resulting impulse to the signal controller.

DESIGN SPEED: A speed selected for purposes of design. Features of a highway, such as curvature, superelevation, and sight distance (upon which the safe operation of vehicles is dependent) are correlated to design speed.

DIRECTIONAL SPLIT: The percent of traffic in the peak direction at any point in time.

DIVERSION: The rerouting of peak hour traffic to avoid congestion.

FORCED FLOW: Opposite of free flow.

FREE FLOW: Volumes are well below capacity. Vehicles can maneuver freely and travel is unimpeded by other traffic.

GAP: Time or distance between successive vehicles in a traffic stream, rear bumper to front bumper.

HEADWAY: Time or distance spacing between successive vehicles in a traffic stream, front bumper to front bumper.

INTERCONNECTED SIGNAL SYSTEM: A number of intersections that are connected to achieve signal progression.

LEVEL OF SERVICE: A qualitative measure of a number of factors, which include speed and travel time, traffic interruptions, freedom to maneuver, safety, driving comfort and convenience, and operating costs.

LOOP DETECTOR: A vehicle detector consisting of a loop of wire embedded in the roadway, energized by alternating current and producing an output circuit closure when passed over by a vehicle.

MINIMUM ACCEPTABLE GAP: Smallest time headway between successive vehicles in a traffic stream into which another vehicle is willing and able to cross or merge.

MULTI-MODAL: More than one mode; such as automobile, bus transit, rail rapid transit, and bicycle transportation modes.

OFFSET: The time interval in seconds between the beginning of green at one intersection and the beginning of green at an adjacent intersection.

PLATOON: A closely grouped component of traffic that is composed of several vehicles moving, or standing ready to move, with clear spaces ahead and behind.

PASSENGER CAR EQUIVALENT (PCE): A metric used to assess the impact of larger vehicles, such as trucks, recreational vehicles, and buses, by converting the traffic volume of larger vehicles to an equivalent number of passenger cars.

PEAK HOUR: The 60 consecutive minutes with the highest number of vehicles.

PRETIMED SIGNAL: A type of traffic signal that directs traffic to stop and go on a predetermined time schedule without regard to traffic conditions. Also, fixed time signal.

PROGRESSION: A term used to describe the progressive movement of traffic through several signalized intersections.

QUEUE: The number of vehicles waiting at a service area such as a traffic signal, stop sign, or access gate.

QUEUE LENGTH: The length of vehicle queue, typically expressed in feet, waiting at a service area such as a traffic signal, stop sign, or access gate.

SCREEN-LINE: An imaginary line or physical feature across which all trips are counted, normally to verify the validity of mathematical traffic models.

SHARED/RECIPROCAL PARKING AGREEMENT: A written binding document executed between property owners to provide a designated number of off-street parking stalls within a designated area to be available for specified businesses or land uses.

SIGHT DISTANCE: The continuous length of roadway visible to a driver or roadway user.

SIGNAL CYCLE: The time period in seconds required for one complete sequence of signal indications.

SIGNAL PHASE: The part of the signal cycle allocated to one or more traffic movements.

STACKING DISTANCE: The length of area available behind a service area, such as a traffic signal or gate, for vehicle queueing to occur.

STARTING DELAY: The delay experienced in initiating the movement of queued traffic from a stop to an average running speed through an intersection.

STOPPING SIGHT DISTANCE: The minimum distance required by the driver of a vehicle on the major roadway travelling at a given speed to bring the vehicle to a stop after an object on the road becomes visible. Stopping sight distance is measured from the driver's eye at 42 inches above the pavement to an object height of 6 inches above the pavement.

TRAFFIC-ACTUATED SIGNAL: A type of traffic signal that directs traffic to stop and go in accordance with the demands of traffic, as registered by the actuation of detectors.

TRIP: The movement of a person or vehicle from one location (origin) to another (destination). For example, from home to store to home is two trips, not one.

TRIP-END: One end of a trip at either the origin or destination (i.e., each trip has two trip-ends). A trip-end occurs when a person, object, or message is transferred to or from a vehicle.

TRIP GENERATION RATE: The quantity of trips produced and/or attracted by a specific land use stated in terms of units such as per dwelling, per acre, and per 1,000 square feet of floor space.

TRUCK: A vehicle having dual tires on one or more axles, or having more than two axles.

TURNING RADIUS: The circular arc formed by the smallest turning path radius of the front outside tire of a vehicle, such as that performed by a U-turn maneuver. This is based on the length and width of the wheel base as well as the steering mechanism of the vehicle.

UNBALANCED FLOW: Heavier traffic flow in one direction than the other. On a daily basis, most facilities have balanced flow. During the peak hours, flow is seldom balanced in an urban area.

VEHICLE MILES OF TRAVEL: A measure of the amount of usage of a section of highway, obtained by multiplying the average daily traffic by length of facility in miles.

SUBJECT: 5010 Azusa Canyon Road Traffic Study Scope of Work
18-0152

INTRODUCTION

The purpose of this traffic study scope of work is to outline the proposed traffic analysis parameters and assumptions for the 5010 Azusa Canyon Road project for review/concurrence by City of Irwindale staff.

PROJECT DESCRIPTION

Figure 1 shows the project location map. The project site is located at 5010 Azusa Canyon Road in the City of Irwindale. The project site is currently developed and occupied by a communications service yard that will be displaced by the proposed project.

The proposed project involves the construction of two industrial buildings totaling approximately 233,987 square feet. Two existing full access driveways will be maintained at Azusa Canyon Road. The proposed site plan is illustrated on Figure 2.

PROJECT TRIP GENERATION & DISTRIBUTION

Table 1 shows the project trip generation based upon rates obtained from the Institute of Transportation Engineers (ITE), Trip Generation Manual, 10th Edition, 2017 and vehicle mix percentages obtained from the City of Fontana, Truck Trip Generation Study, August 2003. Truck trips were converted into Passenger Car Equivalent (PCE) trips based on factors recommended by the County of San Bernardino Congestion Management Program.

As shown in 1, the proposed project is forecast to generate approximately 1,473 daily PCE trips, including 212 PCE trips during the AM peak hour and 188 PCE trips during the PM peak hour, prior to accounting for existing site-generated trips that will be displaced. As shown in Table 2, trips generated by the existing site will be measured by conducting 24-hour counts at the existing project site driveways. The final project trip generation will be based on the net difference in trips generated between the existing use and the proposed project.

Figures 3 and 4 illustrate the forecast directional distribution patterns of project-generated cars and trucks. The forecast project trip distributions were determined based on review of existing traffic volume data, surrounding land uses, and the local and regional roadway facilities in the project vicinity. Figure 5 shows the project two-way peak hour trip contribution.

STUDY AREA

The study area is proposed to consist of the following 13 study intersections based on those intersections at which the project is forecast to contribute 50 trips during either the AM or PM peak hours:

Study Intersections	Jurisdiction
1. I-605 Southbound Ramps (NS) at Live Oak Avenue (EW)	Caltrans
2. Graham Access Road (NS) at Live Oak Avenue (EW)	Irwindale
3. Live Oak Lane (NS) at Live Oak Avenue (EW)	Irwindale
4. Rivergrade Road (NS) at Live Oak Avenue (EW)	Irwindale /Baldwin Park
5. Stewart Avenue (NS) at Live Oak Avenue (EW)	Irwindale/Baldwin Park
6. Baldwin Park Boulevard (NS) at Live Oak Avenue (EW)	Irwindale/Baldwin Park
7. Arrow Highway (NS) at Live Oak Avenue (EW)	Irwindale/~~Baldwin Park~~
8. Maine Avenue (NS) at Arrow Highway (EW)	Irwindale/Baldwin Park
9. Azusa Canyon Road (NS) at Arrow Highway (EW)	Irwindale/~~Baldwin Park~~
10. Azusa Canyon Road (NS) at Sandstone Street (EW)	Irwindale/Baldwin Park
11. Azusa Canyon Road (NS) at Nubia Street (EW)	Irwindale/Baldwin Park
12. 4th Street (NS) at Arrow Highway (EW)	Irwindale
13. Irwindale Avenue (NS) at Arrow Highway (EW)	Irwindale
14. I-605 Northbound Offramp at Live Oak Ave (Eastbound)	Caltrans

The unsignalized I-605 Northbound Off-Ramp to westbound Live Oak Avenue is omitted since the proposed project will not contribute trips to the off-ramp; instead, project trips are forecast to use the I-605 Northbound Off-Ramp to eastbound Live Oak Avenue only.

ANALYSIS SCENARIOS

The traffic study shall evaluate the following analysis scenarios for typical weekday AM and PM peak hour conditions:

- Existing
- Existing Plus Project
- Future Baseline
- Future Baseline Plus Project
- Future Baseline Plus Cumulative
- Future Baseline Plus Cumulative Plus Project

Any of the above "Plus Project" scenarios will also be analyzed with mitigation measure improvements, as needed.

TRAFFIC COUNTS

New intersection turning movement counts will be collected at the study intersections during the morning peak period (7:00 AM – 9:00 AM) and evening peak period (4:00 PM – 6:00 PM) on a typical weekday (Tuesday, Wednesday, or Thursday) while local schools are in session. The intersection turning movement counts will separate cars vs. trucks by axle and will be converted to PCE trips.

Additional 24-hour approach counts will be conducted at the intersection of Azusa Canyon Road/Nubia Street for signal warrant analysis.

ANALYSIS METHODOLOGY

The signalized study intersections shall by analyzed using the Intersection Capacity Utilization methodology in accordance with the parameters and impact thresholds prescribed in the City of Irwindale Policy Guidelines for Traffic Impact Reports (December 30, 2014). Shared intersections between the City of Irwindale and the City of Baldwin Park shall be be analyzed in accordance with the guidelines of both agencies.
The unsignalized study intersections and intersections under the jurisdiction of California Department of Transportation (Caltrans) shall be analyzed using the Highway Capacity Manual intersection delay methodology (6th Edition, Transportation Research Board).

Thresholds of Significance

The following thresholds shall be used when evaluating study intersections under the jurisdiction of City of Irwindale:

- When a signalized intersection operates at Level of Service D or better under existing or future baseline conditions and the addition of the project trips degrades the intersection operations to Level of Service E or F. The project mitigation should bring the facility to operate at Level of Service D at minimum.

- When a signalized intersection operates at Level of Service E or better under existing or future baseline conditions and the addition of project trips degrades the intersection operations to Level of Service F or increases the V/C by 0.02 or greater. The project mitigation should bring the facility to operate at Level of Service E at minimum.

- When a signalized intersection operates at Level of Service F under existing or future baseline conditions and the addition of more than 50 peak hour project trips contributes to the continuing operational failure at the intersection or increases the V/C by 0.02 or greater. The project mitigation should bring the facility to pre-project conditions, which typically are defined as existing conditions.

- At an unsignalized intersection, when the minor stop-controlled approach operates at Level of Service F and does not have acceptable operation in terms of total control delay, and the addition of project trips increases the total control delay to more than 4.0 vehicle hours for a single lane approach or 5.0 vehicle hours for a multilane approach. The project mitigation should bring the facility to operate at Level of Service E minimum or to bring the total control delay to less than 4.0 vehicle hours for a single lane approach or 5.0 vehicle hours for a multilane approach at a minimum.

- At an unsignalized intersection, when the minor stop-controlled approach operates at Level of Service F and does not have an acceptable operation in terms of total control delay, and the addition of more than 50 peak hour project trips contributes to the continuing operational failure at the minor approach. The project mitigation should bring the facility to pre-project or existing conditions.

Caltrans Threshold

As stated in the Guide for the Preparation of Traffic Impact Studies (State of California, 2002), "Caltrans endeavors to maintain a target LOS [Level of Service] at the transition between LOS "C" and LOS "D" on State

highway facilities". The California Department of Transportation acknowledges this may not always be feasible and recommends consultation with the California Department of Transportation to determine the appropriate target Level of Service. For consistency with the County of Los Angeles Congestion Management Plan criteria used for freeway mainline sections and freeway ramps local requirements, Level of Service E shall be the minimum acceptable Level of Service for State Highway facilities. An impact is considered significant if the project causes or worsens Level of Service F.

SIGNAL WARRANT

A signal warrant analysis will be conducted at the intersection of Azusa Canyon Road/Nubia Street. The signal warrant analysis shall evaluate Warrants 1-3 (8-hour, 4-hour, and Peak Hour volume warrants) and Warrant 5 (crash experience warrant) in accordance with the California Manual on Uniform Traffic Control devices.

CONCLUSION

We appreciate the opportunity to provide this proposed scope of work for your review. Should you have any questions or comments regarding the proposed scope, please contact me at (714) 795-3100 x 101.

Table 1
Project Trip Generation

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 Fwy SB Onramp at Live Oak Ave	Signalized	ICU 1	WB Thru	0.567	-	A
2	I-605 Fwy NB Ramps at Live Oak Ave	Two-way stop	HCM 6th Edition	SB Right	1.253	164.7	F
3	Graham Access Rd at Live Oak Ave	Signalized	ICU 1	WB Thru	0.643	-	B
4	Live Oak Ln at Live Oak Ave	Two-way stop	HCM 6th Edition	SB Left	0.013	53.9	F
5	Rivergrade Rd at Live Oak Ave	Signalized	ICU 1	WB Thru	0.644	-	B
6	Stewart Ave at Live Oak Ave	Signalized	ICU 1	WB Thru	0.820	-	D
7	Baldwin Park Blvd at Live Oak Ave	Signalized	ICU 1	WB Thru	0.613	-	B
8	Arrow Hwy at Live Oak Ave	Signalized	ICU 1	WB Thru	0.667	-	B
9	Maine Ave at Arrow Hwy	Signalized	ICU 1	WB Thru	0.755	-	C
10	Azusa Canyon Rd at Arrow Hwy	Signalized	ICU 1	WB Thru	0.899	-	D
11	Azusa Canyon Rd at Sandstone St	Two-way stop	HCM 6th Edition	EB Left	0.032	13.4	B
12	Azusa Canyon Rd at Nubia St	Two-way stop	HCM 6th Edition	WB Left	0.012	25.9	D
13	4th St at Arrow Hwy	Signalized	ICU 1	WB Thru	0.693	-	B
14	Irwindale Ave at Arrow Hwy	Signalized	ICU 1	WB Thru	0.896	-	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-605 Fwy SB Onramp at Live Oak Ave

Control Type:	Signalized	Delay (sec / veh):	-
Analysis Method:	ICU 1	Level Of Service:	A
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.567

Intersection Setup

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	ICU 1	WB Thru	0.696	-	B
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	ICU 1	SB Thru	0.507	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 Fwy SB Onramp at Live Oak Ave	Signalized	ICU 1	EB Thru	0.813	-	D
2	I-605 Fwy NB Ramps at Live Oak Ave	Two-way stop	HCM 6th Edition	NB Right	1.262	161.1	F
3	Graham Access Rd at Live Oak Ave	Signalized	ICU 1	EB Thru	0.666	-	B
4	Live Oak Ln at Live Oak Ave	Two-way stop	HCM 6th Edition	SB Left	0.062	64.0	F
5	Rivergrade Rd at Live Oak Ave	Signalized	ICU 1	EB Thru	1.018	-	F
6	Stewart Ave at Live Oak Ave	Signalized	ICU 1	EB Thru	0.909	-	E
7	Baldwin Park Blvd at Live Oak Ave	Signalized	ICU 1	EB Thru	0.836	-	D
8	Arrow Hwy at Live Oak Ave	Signalized	ICU 1	EB Thru	0.990	-	E
9	Maine Ave at Arrow Hwy	Signalized	ICU 1	EB Thru	0.972	-	E
10	Azusa Canyon Rd at Arrow Hwy	Signalized	ICU 1	EB Thru	0.994	-	E
11	Azusa Canyon Rd at Sandstone St	Two-way stop	HCM 6th Edition	EB Left	0.025	14.3	B
12	Azusa Canyon Rd at Nubia St	Two-way stop	HCM 6th Edition	EB Thru	0.000	20.6	C
13	4th St at Arrow Hwy	Signalized	ICU 1	EB Thru	0.667	-	B
14	Irwindale Ave at Arrow Hwy	Signalized	ICU 1	EB Thru	0.850	-	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	ICU 1	EB Thru	0.514	-	A
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	ICU 1	SB Thru	0.558	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	ICU 1	WB Thru	0.717	-	C
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	ICU 1	SB Thru	0.518	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 115: I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	ICU 1	EB Thru	0.514	-	A
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	ICU 1	SB Thru	0.559	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	ICU 1	EB Thru	0.521	-	A
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	ICU 1	SB Thru	0.567	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 115: I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)

Control Type:	Signalized	Delay (sec / veh):	-
Analysis Method:	ICU 1	Level Of Service:	A
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.521

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	ICU 1	EB Thru	0.521	-	A
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	ICU 1	SB Thru	0.568	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 115: I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)

Control Type:	Signalized	Delay (sec / veh):	-

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
2	I-605 Fwy NB Ramps at Live Oak Ave	Signalized	ICU 1	EB Thru	0.543	-	A
10	Azusa Canyon Rd at Arrow Hwy	Signalized	ICU 1	EB Thru	0.885	-	D
14	Irwindale Ave at Arrow Hwy	Signalized	ICU 1	EB Thru	0.866	-	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	ICU 1	SB Left	0.898	-	D
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	ICU 1	SB Thru	0.572	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	ICU 1	EB Thru	0.788	-	C
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	ICU 1	SB Thru	0.592	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 Fwy SB Onramp at Live Oak Ave	Signalized	ICU 1	WB Thru	0.724	-	C
2	I-605 Fwy NB Ramps at Live Oak Ave	Two-way stop	HCM 6th Edition	SB Right	3.204	1,025.8	F
3	Graham Access Rd at Live Oak Ave	Signalized	ICU 1	WB Thru	0.730	-	C
4	Live Oak Ln at Live Oak Ave	Two-way stop	HCM 6th Edition	SB Left	0.033	126.3	F
5	Rivergrade Rd at Live Oak Ave	Signalized	ICU 1	WB Thru	0.827	-	D
6	Stewart Ave at Live Oak Ave	Signalized	ICU 1	WB Thru	0.883	-	D
7	Baldwin Park Blvd at Live Oak Ave	Signalized	ICU 1	WB Thru	0.738	-	C
8	Arrow Hwy at Live Oak Ave	Signalized	ICU 1	WB Thru	0.794	-	C
9	Maine Ave at Arrow Hwy	Signalized	ICU 1	WB Thru	0.801	-	D
10	Azusa Canyon Rd at Arrow Hwy	Signalized	ICU 1	WB Thru	0.958	-	E
11	Azusa Canyon Rd at Sandstone St	Two-way stop	HCM 6th Edition	WB Left	0.009	36.5	E
12	Azusa Canyon Rd at Nubia St	Two-way stop	HCM 6th Edition	WB Left	0.017	35.7	E
13	4th St at Arrow Hwy	Signalized	ICU 1	WB Thru	0.755	-	C
14	Irwindale Ave at Arrow Hwy	Signalized	ICU 1	WB Thru	1.007	-	F

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-605 Fwy SB Onramp at Live Oak Ave

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	ICU 1	SB Left	0.919	-	E
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	ICU 1	SB Thru	0.583	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	ICU 1	EB Thru	0.788	-	C
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	ICU 1	SB Thru	0.592	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

APPENDIX F

TRAFFIC SIGNAL WARRANT WORKSHEETS

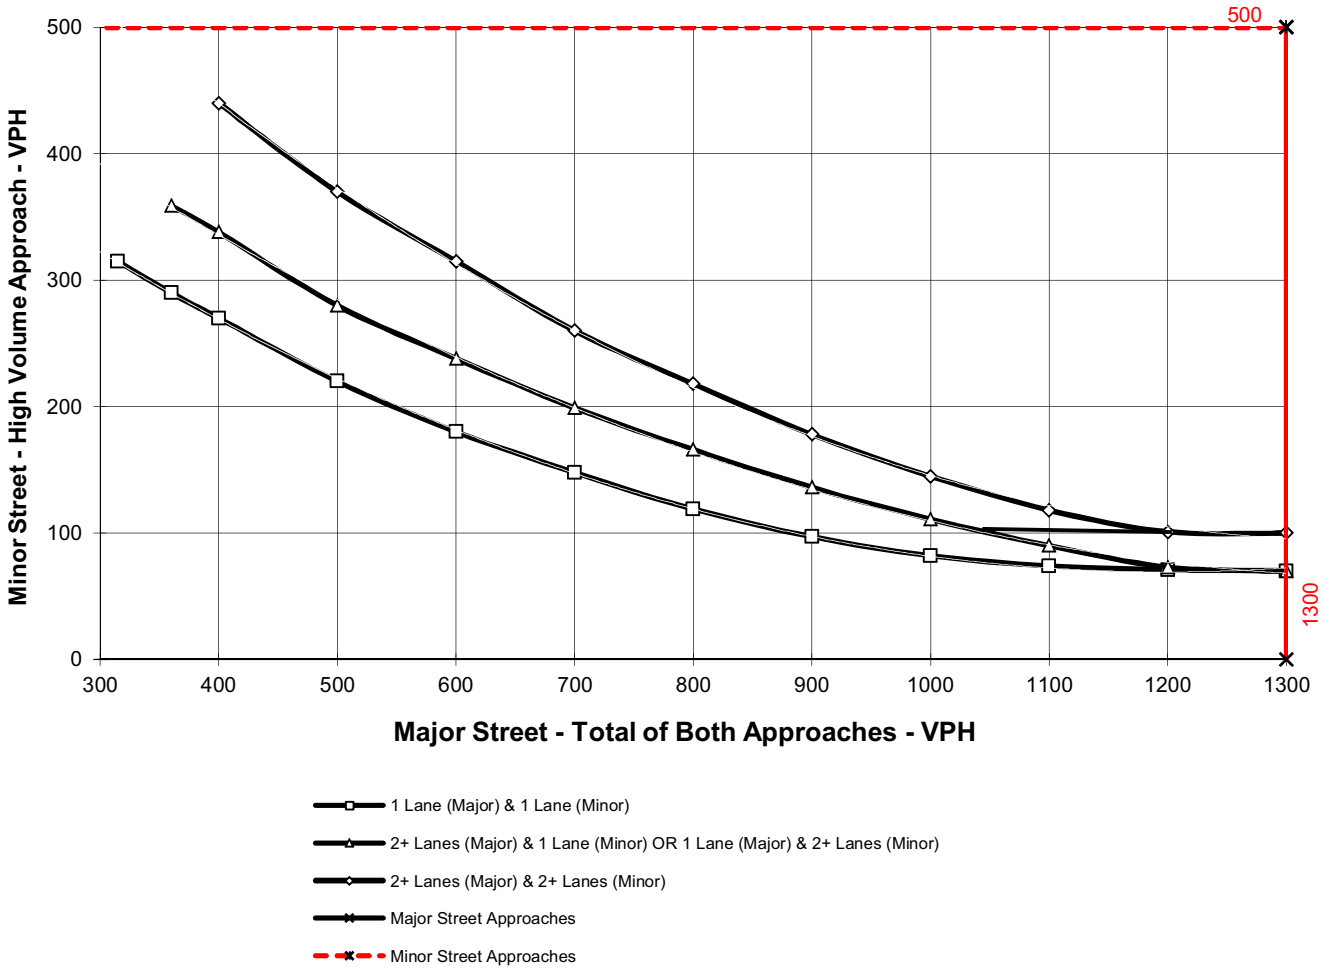
PEAK HOUR VOLUME WARRANT
(Rural Areas)

Existing

Major Street Name = **Live Oak Avenue**
Total of Both Approaches (VPH) = **2109**
Number of Approach Lanes Major Street = **2**

Minor Street Name = **I-605 Fwy NB Ramps**
High Volume Approach (VPH) = **521**
Number of Approach Lanes Minor Street = **1**

WARRANTED FOR A SIGNAL



** NOTE:
100 VPH APPLIES AS THE LOWER THRESHOLD VOLUME FOR A MINOR STREET APPROACH WITH TWO OR MORE LANES AND 75 VPH APPLIES AS THE LOWER THRESHOLD VOLUME FOR A MINOR STREET APPROACHING WITH ONE LANE.

Based on California MUTCD, 2012 Edition
(FHWA's MUTCD 2009 Edition, as amended for use in California)

Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 1 of 5)

Count Date: 11/1/2018

Highest Approach Minor Street	150 (120)	105 (84)	200 (160)	140 (112)	147	142	113	107	75	67	61	56	

Condition B - Interruption of Continuous Traffic

100% SATISFIED ☐ YES ☑ NO
80% SATISFIED ☐ YES ☑ NO

	MINIMUM REQUIREMENTS (80% SHOWN IN BRACKETS)												
	Urban	Rural	Urban	Rural	5:00 PM	4:00 PM	3:00 PM	2:00 PM	6:00 PM	7:00 AM	8:00 AM	1:00 PM	Hour
APPROACH LANES	1		2 or More										
Both Approaches Major Street	750 (600)	525 (420)	900 (720)	630 (504)	796	792	773	642	626	989	625	475	
Highest Approach Minor Street	75 (60)	53 (42)	100 (80)	70 (56)	147	142	113	107	75	67	61	56	

Combination of Conditions A & B

SATISFIED ☐ YES ☑ NO

REQUIREMENT	CONDITION	X	FULFILLED
TWO CONDITIONS SATISFIED 80%	A. Minimum Vehicular Volume		☐ YES ☑ NO
	AND, B. Interruption of Continuous Traffic		
AND, an adequate trial of other alternatives that could cause less delay and inconvenience to traffic has failed to solve the traffic problems			☐ YES ☑ NO

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 2 of 5)

WARRANT 2 - Four Hour Vehicular Volume

SATISFIED* ☐ YES ☑ NO

Record hourly vehicular volumes for any four hours of an average day.

APPROACH LANES	One	2 or More	5:00 PM	4:00 PM	3:00 PM	2:00 PM	Hour
Both Approaches - Major Street		X	796	792	773	642	
Higher Approach - Minor Street	X		147	142	113	107	

*All plotted points fall above the applicable curve in Figure 4C-1. (URBAN AREAS)	☐ YES	☑ NO
OR, All plotted points fall above the applicable curve in Figure 4C-2. (RURAL AREAS)	☐ YES	☑ NO

WARRANT 3 - Peak Hour

SATISFIED ☐ YES ☑ NO

(Part A or Part B must be satisfied)

PART A **SATISFIED** ☐ YES ☑ NO

(All parts 1, 2, and 3 below must be satisfied for the same one hour, for any four consecutive 15-minute periods)

1. The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach, or five vehicle-hours for a two-lane approach; AND	☐ YES	☑ NO
2. The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; AND	☑ YES	☐ NO
3. The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more approaches or 650 vph for intersections with three approaches	☑ YES	☐ NO

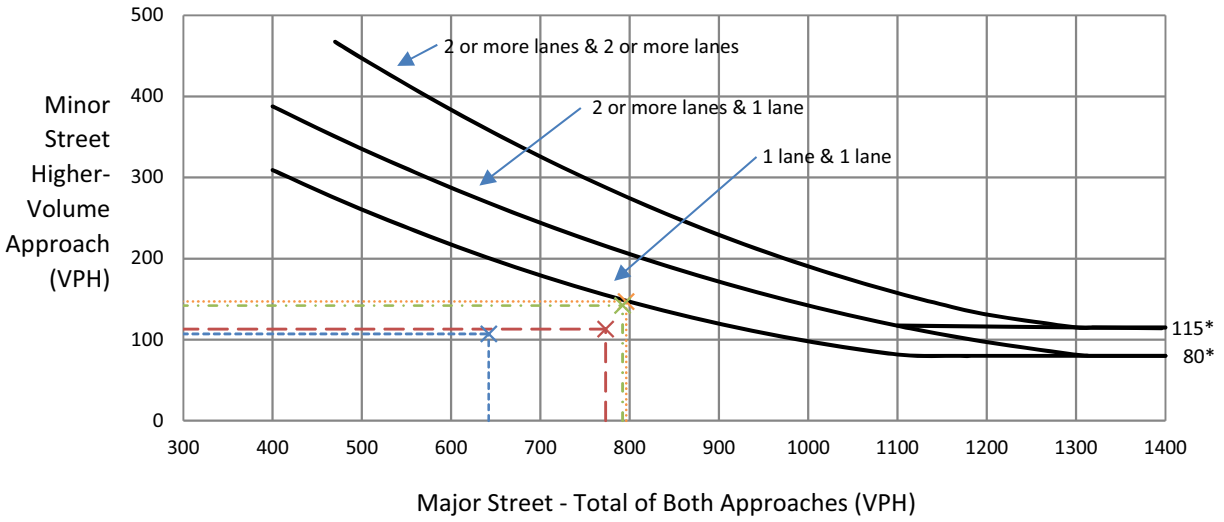
PART B **SATISFIED** ☐ YES ☑ NO

APPROACH LANES	One	2 or More	5:00 PM
Both Approaches - Major Street		X	796
Higher Approach - Minor Street	X		147

The plotted point falls above the applicable curve in Figure 4C-3. (URBAN AREAS)	☐ YES	☑ NO
OR, The plotted point falls above the applicable curve in Figure 4C-4. (RURAL AREAS)	☐ YES	☑ NO

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

Figure 4C-1. Warrant 2, Four-Hour Vehicular Volume

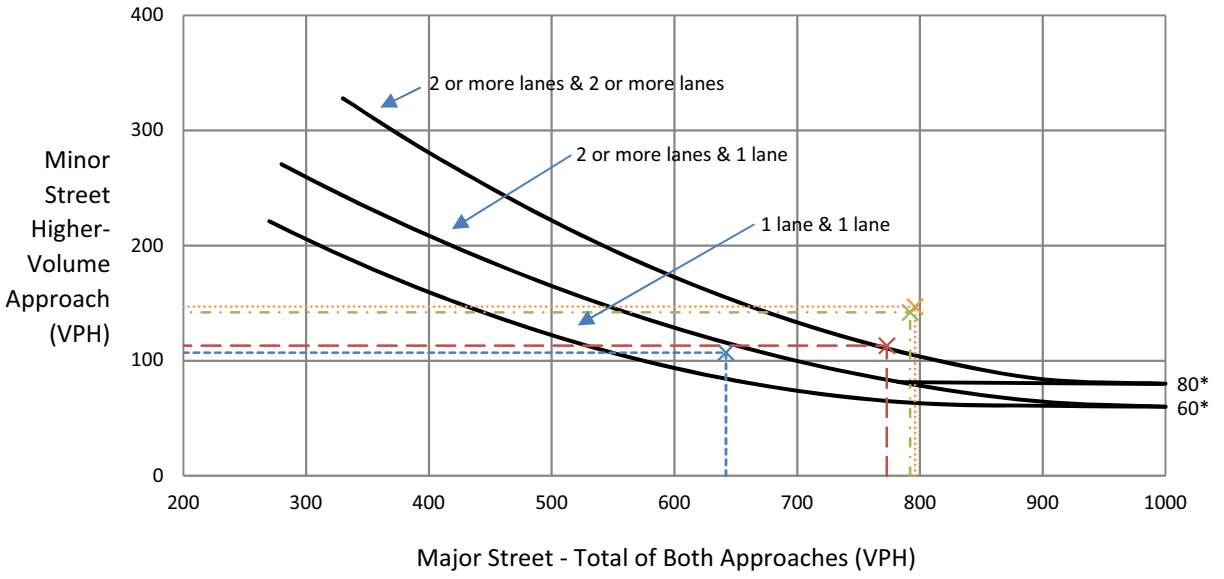


Traffic Signal Warrant Is NOT Satisfied

*Note: 115 vph applies as the lower threshold volume for a minor street approach with two or more lanes and 80 vph applies as the lower threshold volume for a minor street approach with one lane.

Figure 4C-2. Warrant 2, Four-Hour Vehicular Volume (70% Factor)

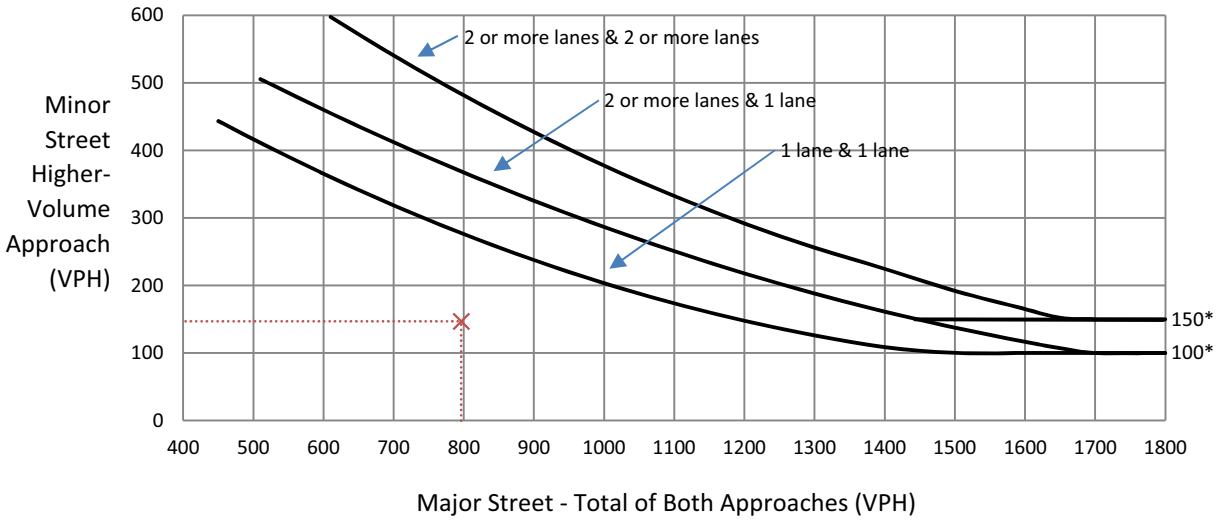
(Community less than 10,000 population or above 40 mph on the major street)



This figure is not applicable; see Figure 4C-1 above.

*Note: 80 vph applies as the lower threshold volume for a minor street approach with two or more lanes and 60 vph applies as the lower threshold volume for a minor street approach with one lane.

Figure 4C-3. Warrant 3, Peak Hour Vehicular Volume

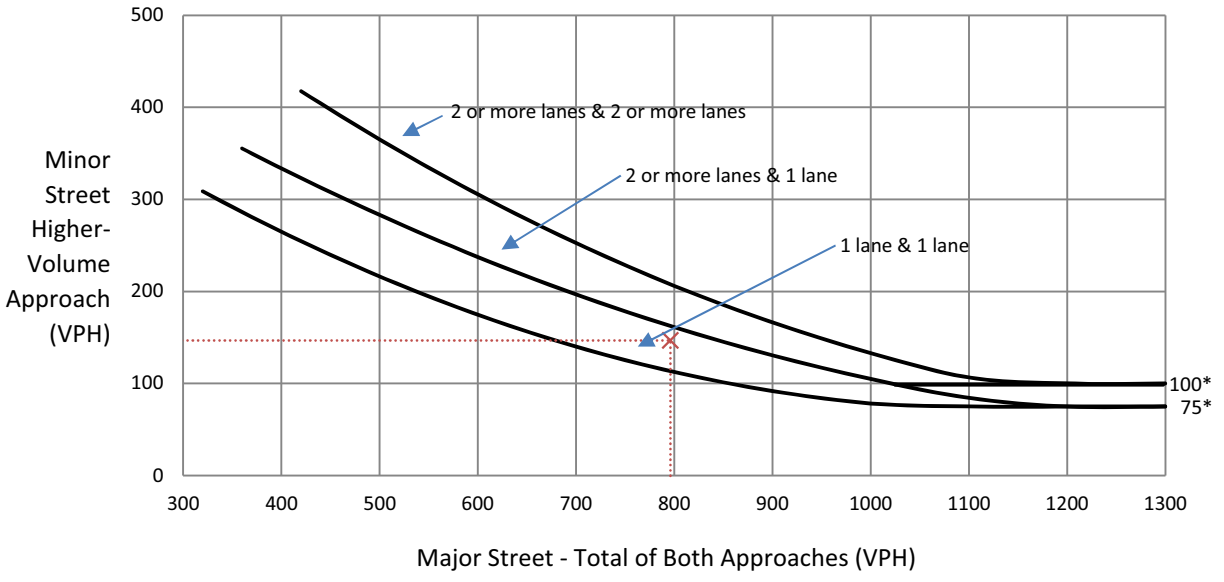


Traffic Signal Warrant Is NOT Satisfied

*Note: 150 vph applies as the lower threshold volume for a minor street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor street approach with one lane.

Figure 4C-4. Warrant 3, Peak Hour Vehicular Volume (70% Factor)

(Community less than 10,000 population or above 40 mph on the major street)



This figure is not applicable; see Figure 4C-3 above.

*Note: 100 vph applies as the lower threshold volume for a minor street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor street approach with one lane.

Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 4 of 5)

WARRANT 7 - Crash Experience Warrant **SATISFIED** ☐ YES ☑ NO
(All Parts Must Be Satisfied)

Adequate trial of alternatives with satisfactory observance and enforcement has failed to reduce the crash frequency.			☐ YES ☑ NO
REQUIREMENTS	Number of crashes reported within a 12 month period susceptible to correction by a traffic signal, and involving injury or damage exceeding the requirements for a reportable crash.		☐ YES ☑ NO
5 OR MORE	**4**		
REQUIREMENTS	CONDITIONS	✓	
ONE CONDITION SATISFIED 80%	Warrant 1, Condition A - Minimum Vehicular Volume		☐ YES ☑ NO
	OR, Warrant 1, Condition B - Interruption of Continuous Traffic		
	OR. Warrant 4, Pedestrian Volume Condition - Ped Vol ≥ 152 for any hour OR, Ped Vol ≥ 80 for any 4 hours		

Table F-1
5-Year Collision Summary at Azusa Canyon Road/Nubia Street[1]

Date	Intersection	Collision Type	Primary Collision Factor	Pre-collision Movement[2]		Susceptible to Correction by Traffic Signal?
				Vehicle 1	Vehicle 2	
08/01/2013	Azusa Canyon Road/Nubia Street	Head-On	R-O-W Auto	EBL	SBT	Yes
12/22/2013	Azusa Canyon Road/Nubia Street	Rear End	Lane Change	SBT	Parked	No
12/14/2015	Azusa Canyon Road/Nubia Street	Broadside	R-O-W Auto	EBL	SBT	Yes
05/04/2016	Azusa Canyon Road/Nubia Street	Broadside	R-O-W Auto	EBL	SBT	Yes
05/19/2016	Azusa Canyon Road/Nubia Street	Head-On	R-O-W Auto	NBL	SBT	Unlikely[3]
06/09/2016	Azusa Canyon Road/Nubia Street	Broadside	R-O-W Auto	EBL	NBT or SBT	Yes
10/06/2016	Azusa Canyon Road/Nubia Street	Broadside	Unsafe Speed	EBL	SBT	Yes
02/02/2017	Azusa Canyon Road/Nubia Street	Unknown	Improper Turn	EBU	SBT	No
10/13/2017	Azusa Canyon Road/Nubia Street	Rear End	Unsafe Speed	EBT	EB Stopped	No
11/25/2017	Azusa Canyon Road/Nubia Street	Rear End	Unsafe Speed	SBT	SBT	No

Notes:

(1) Source: California Highway Patrol, Statewide Integrated Traffic Records System (May 1, 2013 through April 30, 2018).

(2) EB = Eastbound; SB = Southbound; NB = Northbound; L = Left; T = Through; U = U-Turn

(3) Traffic volume forecasts do not appear to require protected phasing for NBL; therefore, a traffic signal with permitted phasing is unlikely to correct this error since the NBL movement would still be required to yield to the SBT movement.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 SB On-Ramp (SB) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.806	19.4	B
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Two-way stop	HCM 6th Edition	NB Right	1.262	161.1	F
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	HCM 6th Edition	SB Left	0.465	12.8	B
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	HCM 6th Edition	SB Thru	0.536	16.8	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-605 SB On-Ramp (SB) at Live Oak Ave (EW)

Control Type:	Signalized	Delay (sec / veh):	19.4
Analysis Method:	HCM 6th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.806

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 SB On-Ramp (SB) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.867	29.7	C
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Two-way stop	HCM 6th Edition	SB Right	1.253	164.7	F
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	HCM 6th Edition	SB Left	0.674	20.2	C
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	HCM 6th Edition	WB Right	0.484	15.9	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	NB Right	0.678	17.0	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 2: I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)

Control Type:	Signalized	Delay (sec / veh):	17.0
Analysis Method:	HCM 6th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.678

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 SB On-Ramp (SB) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.760	24.1	C
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Two-way stop	HCM 6th Edition	NB Right	1.266	162.9	F
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	HCM 6th Edition	SB Left	0.465	12.8	B
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	HCM 6th Edition	SB Thru	0.536	16.8	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-605 SB On-Ramp (SB) at Live Oak Ave (EW)

Control Type:	Signalized	Delay (sec / veh):	24.1
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.760

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	NB Right	0.587	14.7	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 SB On-Ramp (SB) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	WB Left	1.200	114.4	F
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Two-way stop	HCM 6th Edition	SB Right	3.204	1,025.8	F
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	HCM 6th Edition	SB Left	0.871	58.8	E
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	HCM 6th Edition	WB Right	0.545	16.6	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-605 SB On-Ramp (SB) at Live Oak Ave (EW)

Control Type:	Signalized	Delay (sec / veh):	114.4
Analysis Method:	HCM 6th Edition	Level Of Service:	F
Analysis Period:	15 minutes	Volume to Capacity (v/c):	1.200

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 SB On-Ramp (SB) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	WB Left	1.032	48.1	D
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Two-way stop	HCM 6th Edition	NB Right	1.863	421.6	F
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	HCM 6th Edition	SB Left	0.771	22.1	C
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	HCM 6th Edition	SB Thru	0.568	17.3	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-605 SB On-Ramp (SB) at Live Oak Ave (EW)

Control Type:	Signalized	Delay (sec / veh):	48.1
Analysis Method:	HCM 6th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	1.032

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 SB On-Ramp (SB) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	WB Left	1.200	114.4	F
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Two-way stop	HCM 6th Edition	SB Right	3.204	1,025.8	F
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	HCM 6th Edition	SB Left	0.894	68.0	E
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	HCM 6th Edition	WB Right	0.558	16.8	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-605 SB On-Ramp (SB) at Live Oak Ave (EW)

1	I-605 SB On-Ramp (SB) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.943	29.5	C
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	SB Right	0.906	44.0	D
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	HCM 6th Edition	WB Thru	0.686	16.6	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-605 SB On-Ramp (SB) at Live Oak Ave (EW)

Control Type:	Signalized	Delay (sec / veh):	29.5
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.943

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 SB On-Ramp (SB) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	WB Left	1.053	56.1	E
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Two-way stop	HCM 6th Edition	SB Right	1.873	425.8	F
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	HCM 6th Edition	SB Left	0.771	22.1	C
116	Irwindale Ave (NS) at I-210 WB Off-Ramp (WB)	Signalized	HCM 6th Edition	SB Thru	0.568	17.3	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-605 SB On-Ramp (SB) at Live Oak Ave (EW)

Control Type:	Signalized	Delay (sec / veh):	56.1
Analysis Method:	HCM 6th Edition	Level Of Service:	E
Analysis Period:	15 minutes	Volume to Capacity (v/c):	1.053

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-605 SB On-Ramp (SB) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.783	17.0	B
2	I-605 NB Off-Ramps (NS) at Live Oak Ave (EW)	Signalized	HCM 6th Edition	SB Right	0.713	19.9	B
115	I-605 SB Off-Ramp (SB) at Arrrow Hwy (EW)	Signalized	HCM 6th Edition	SB Left	0.610	15.2	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.
