Amendments**

April 2017

Summary of General Plan Amendments

General Plan Land Use Map Amendments

Concurrent with the adoption of the 2017 General Plan, the City amended the land use map designations in several areas. Due to limited resources, available for preparation of the General Plan, the City was not able to conduct a comprehensive analysis of land use designations throughout the City. However, the Planning Commission did recommend, and the City Council approved, changes or “amendments” to the Land Use Map in 21 areas to immediately address special opportunities, problems or constraints. Over the course of several meetings, the Commission, property owners and residents have discussed the proposed amendments. Figure 1 below identifies the location of the 21 amendment areas and Table 1 below summarizes the land use amendments, areas of discussion and the final staff recommendation. Figures 1-21 show the map amendment areas in more detail.

Figure 1
Land Use Amendment Areas – Vicinity Map

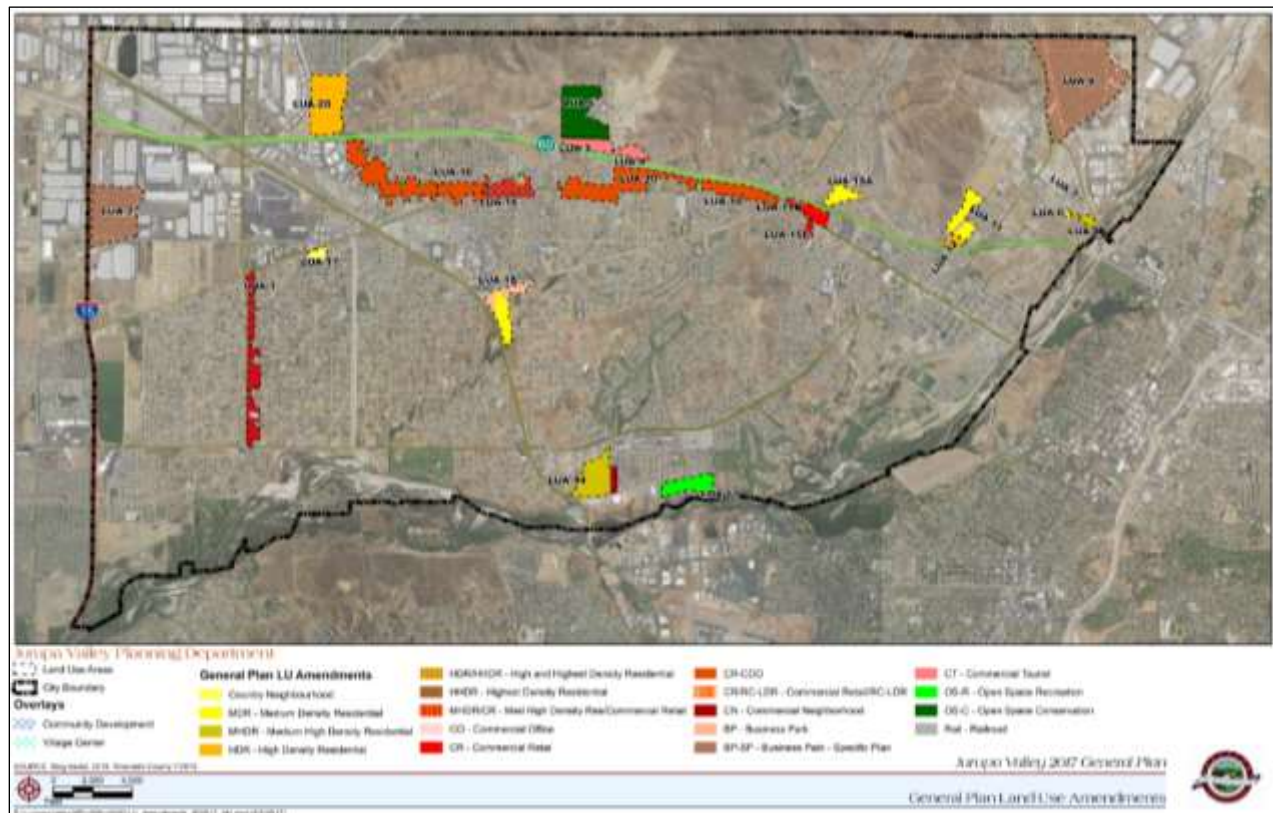

Table 1
Summary of Land Use Map Amendments (LUAs)

| LUA No./ Name | Description |
|--|---|
| LUA-1: Etiwanda Residential Infill Corridor | Apply the Community Development Overlay (CDO) designation to the CR designated parcels on the east side of Etiwanda between Limonite and Bellegrave Avenues to encourage lot consolidation and rezoning of 5-acre minimum mid-block sites to Medium Density Residential (MDR) (up to 5 du/ac) consistent with the General Plan until a comprehensive rezoning program can be implemented. |
| LUA-2: Business Park and Historic Galliano Winery | Change approximately 150 acres northeast of I-15 and Cantu-Galleano Ranch Road from Business Park (BP) to Business Park-Specific Plan (BP-SP) to require more detailed land use planning for this large and prominent 'opportunity site' and preserve a historic winery. At least 35 acres must be devoted to visitor-serving commercial uses. |
| LUA-3: Pyrite-Granite Hill Commercial/ Tourist Area | Change approximately 35 acres of Light Industrial (LI) and Retail Commercial (CR) to Commercial Tourist (CT) at the northwest corner of CA-60 and Pyrite to provide visitor-serving uses, minimize the potential for warehousing and preserve open space. |
| LUA-4: Pyrite-Granite Hill Commercial/ Tourist Area | Change approximately 19 acres of Light Industrial (LI) and Retail Commercial (CR) to Commercial Tourist (CT) at the northeast corner of CA-60 and Pyrite to provide visitor-serving uses, minimize the potential for warehousing and preserve open space. |
| LUA-5: 3760 Pyrite Street, Hillside Portion of Industrial Site | Change approximately 110 acres of Heavy and Light Industrial (HI and LI) to Open Space, Conservation Habitat (OS-CH) to extend open space protection to the uphill portions of the site, and to Commercial Tourist (CT) at the southeastern corner of the site below the 910-foot contour elevation. |
| LUA-6: 5302 El Rio Avenue | Change 1.85 acres of Heavy Industrial (HI) to Medium Density Residential (MDR) (2-5 du/ac) to preserve and protect residential uses. |
| LUA-7: 5288 Bell Avenue | Change 30,000 square feet of Heavy Industrial (HI) to Medium Density Residential (MDR) (2-5 du/ac) to preserve and protect residential uses. |
| LUA-8: 5286 Bell Avenue | Redesignate approximately 8 acres of Heavy Industrial (HI) to Commercial Tourist (CT) to protect a community recreation resource (race track) and provide a buffer between industrial and residential uses. |
| LUA-9: 1500 Rubidoux Blvd., Riverside Cement | Redesignate approximately 370 acres of Heavy Industrial (HI) to Business Park-Specific Plan Overlay (BP-SP) to require detailed land uses planning of this key opportunity site. |
| LUA-10: Mission Blvd. East Residential Infill Corridor | Apply the Community Development Overlay (CDO) designation to parcels designated Commercial Retail (CR) on both sides of Mission Blvd. between Country Village Road, except for the Glen Avon Village Center area (LUA-16), to allow the rezoning of 5-acre minimum sites to Medium Density Residential (MDR) (2 to 5 du/ac) consistent with the General Plan until a comprehensive rezoning program can be implemented. |
| LUA-11: Avalon Housing Expansion Area | Redesignate approximately 45 acres of Light Industrial (LI) to Medium Density Residential (MDR) (2-5 du/ac) to address the suitability of the site for residential development and reflect the Emerald Ridge Project. |
| LUA-12: High Density Housing at CA-60 and Avalon | Redesignate approximately 10 acres of Light Industrial (LI) to High Density Residential (HDR) (8-14 du/ac) to reflect the site's proximity to residential and open space uses. |
| LUA-13: Hidden Valley Open Space Area | Redesignate approximately 44 acres of Light Industrial (LI) to Open Space, Recreation (OS-R) to protect environmentally-sensitive habitat and adjacent residential areas. |
| LUA-14: Clay Street Oppor-tunity Area | Redesignate approximately 80 acres from Light Industrial (LI) and Business Park (BP) to Medium-High Density Residential (MHDR) (5-8 du/ac) and Commercial Neighborhood (CN). |
| LUA-15a/b/c: Change Light Industrial to Medium-Density Residential | 15a: Redesignate approximately 28 acres from Light Industrial (LI) to Medium Density Residential (MDR) north of CA-60 by Florine. 15b: Redesignate approximately 25 acres from Light Industrial (LI) to Commercial Retail (CR) south of CA-70 between Jurupa and Opal. 15c: Redesignate approximately 5 acres from Light Industrial (LI) to Commercial Retail CR south of Mission between Golden West and Stobbs Way. |

| LUA No./ Name | Description |
|---|--|
| LUA-16: Mission Blvd. West – Glen Avon Village Center | Apply the Village Center Overlay (VCO) to approximately 45 acres of Retail Commercial (CR) and High Density Residential (HDR). |
| LUA-17: Bellegrave Low Density Residential Infill | Redesignate approximately 10 acres of Light Industrial (I) to Low Density Residential (LDR) because the area's location makes it more suitable for large lot residential than for industrial development. |
| LUA-18: Pedley Medium Density Residential Infill | Maintain the Business Park designation for properties fronting on Jurupa Road, between Van Buren Boulevard and Pedley Road, and apply the Business Park zone to these properties. Redesignate interior parcels to Medium Density Residential, and to Agriculture/Open Space - Conservation to properties within the FIRM 100-year flood zone. t. |
| LUA-20: Country Village Senior Apartments | Redesignate Medium High Density Residential (MHDR) and Commercial Retail (CR) to Highest Density Residential (HHDR) and Commercial Retail (CR) to reflect the property owner's intent to add units to Country Village Estates and to help meet the City's RHNA requirements. |
| LUA-21: Residential Infill | Redesignate site from Light Industrial, Community Development Overlay to Medium Density Residential (MDR) to be compatible with existing and proposed adjacent residential uses. |

Land Use Amendment Maps

LUA-1

Change the General Plan Land Use Map Designation from Commercial Retail (CR) to Commercial Retail – Community Development Overlay (CR-CDO).

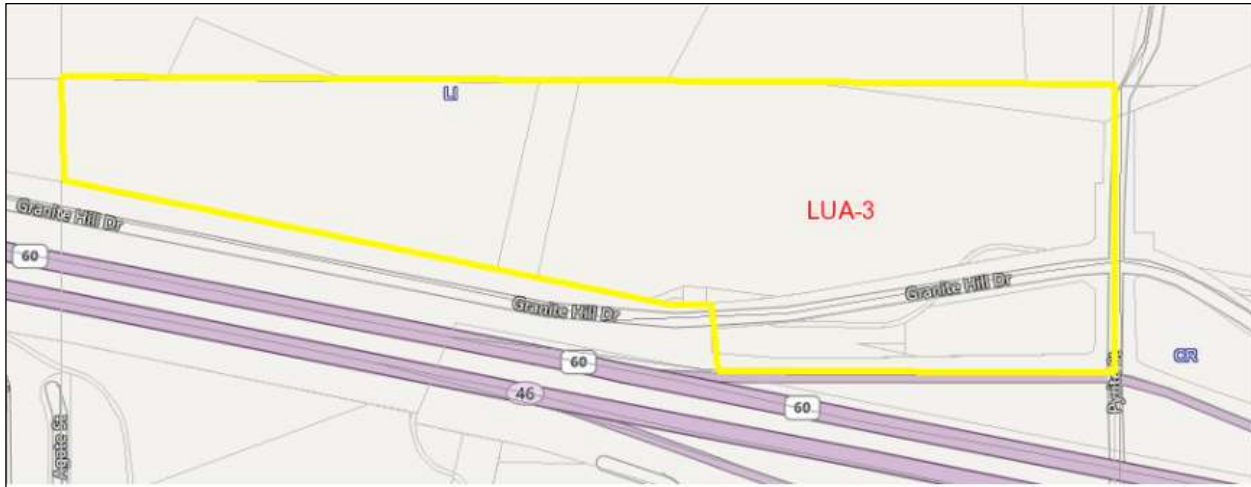

LUA-2

Change from Business Park (BP) to Business Park – Specific Plan (BP-SP).

LUA-3

Change Light Industrial (LI) and Commercial Retail (CR) to Commercial Tourist (CT).

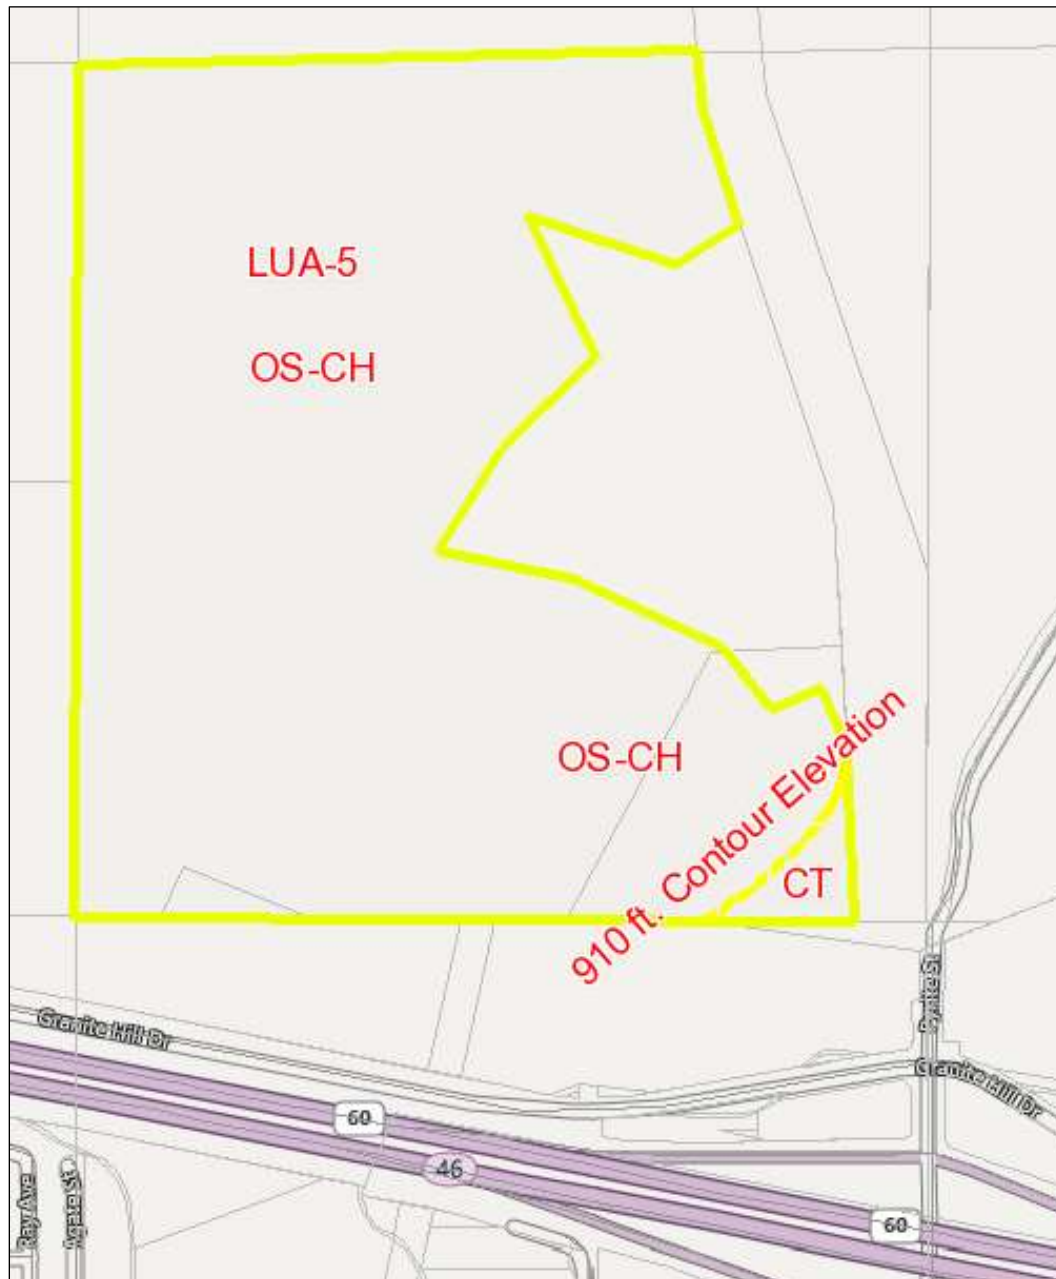

LUA-4

Change Light Industrial (LI) and Commercial Retail (CR) to Commercial Tourist (CT)

LUA-5

Change General Plan Land Use Map from Light Industrial (LI) designation to Open Space – Conservation Habitat (OS-CH), with the southeastern portion of site below 910-foot contour elevation designated as Commercial Tourist (CT).

LUA-6

Change 1.85 acres of Heavy Industrial (HI) to Medium Density Residential (MDR), at 5301 El Rio Avenida.

LUA-7

Change Heavy Industrial (HI) to Medium Density Residential (MDR)

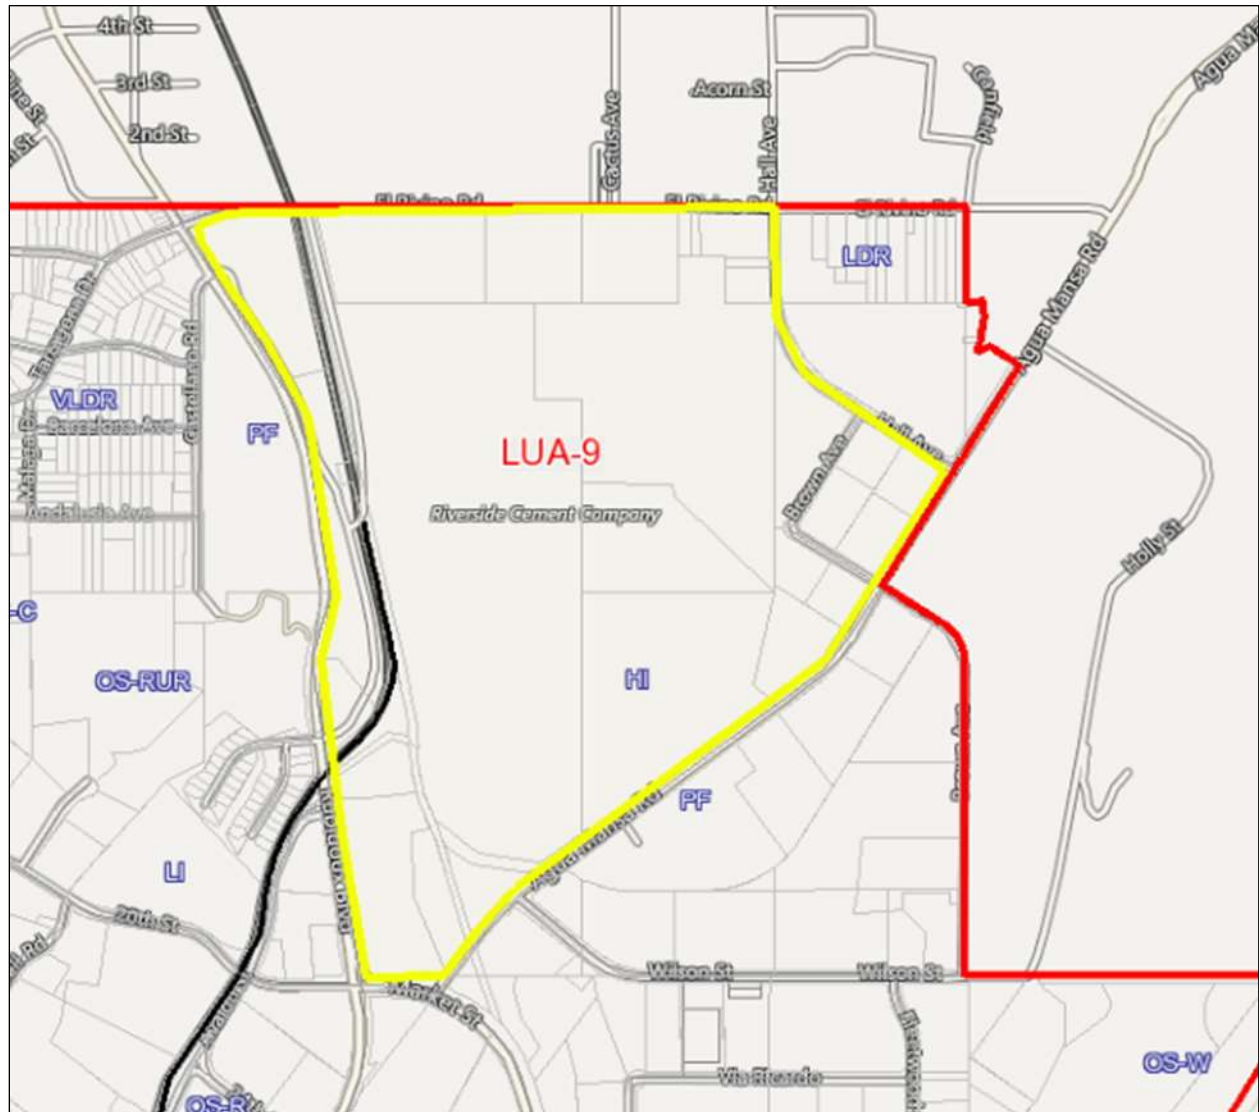

LUA-8

Change Heavy Industrial (HI) to Commercial Tourist (CT).

LUA-9

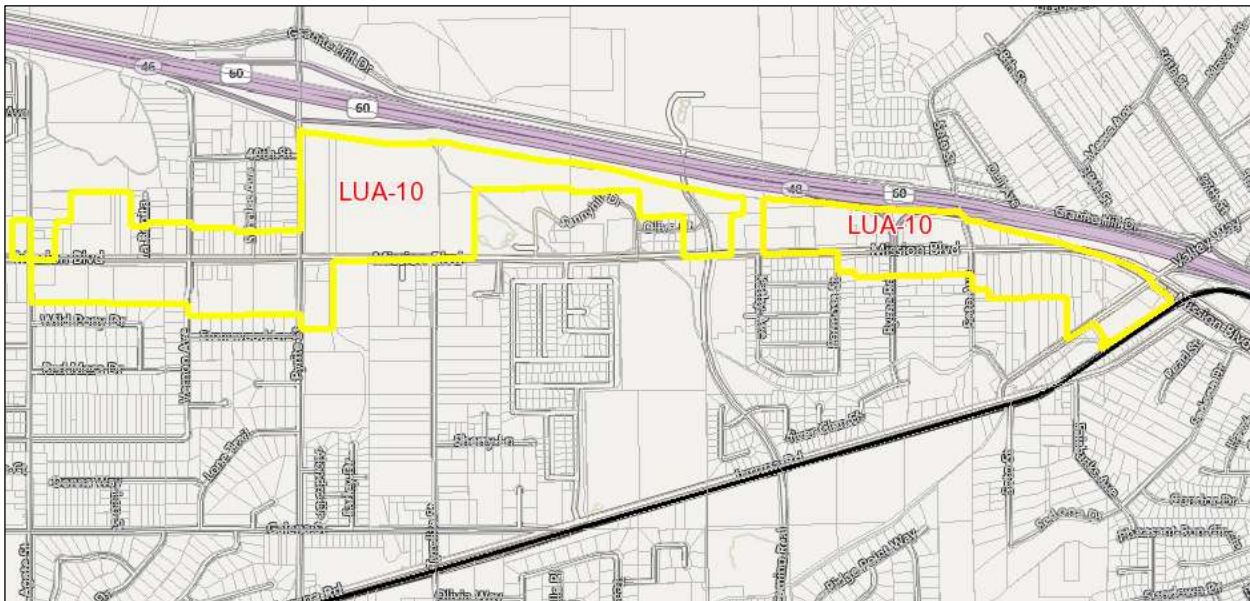

Change Heavy Industrial (HI) to Business Park – Specific Plan Overlay (BP-SPO).

LUA-10

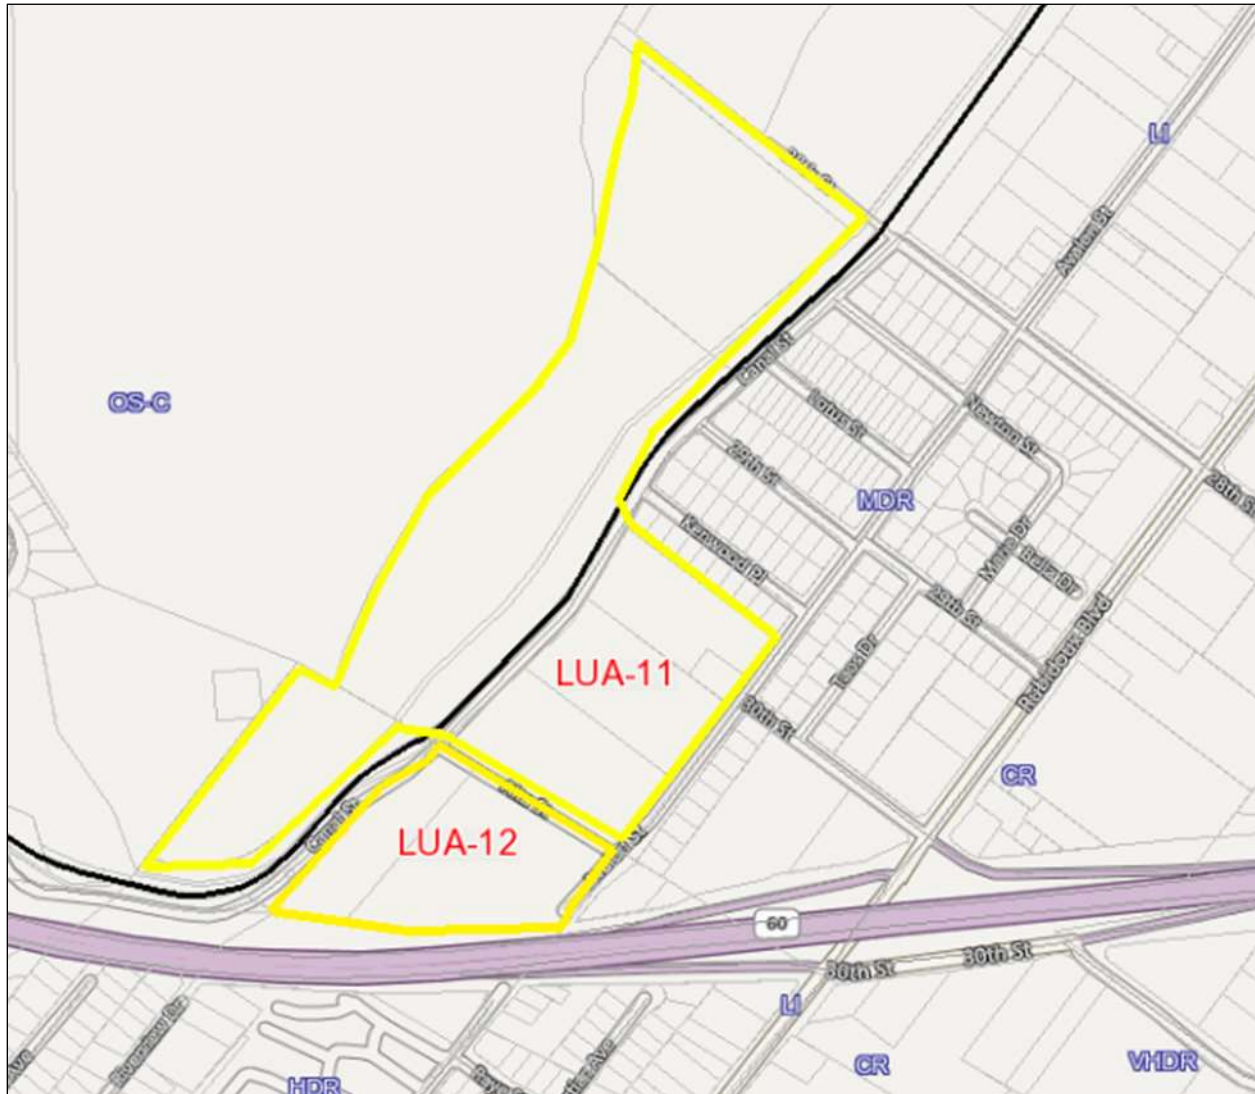

Change Commercial Retail (CR) to Retail Commercial, Community Development Overlay (CR-CDO).

Location: Parcels on both sides of Mission Boulevard between Valley Way and Country Village that are designated Commercial Retail (CR) in the General Plan Land Use Map, except for the area designated as Village Center Overlay (VCO).

LUA-11 and 12

Change Light Industrial (LI) to Medium Density Residential (MDR) on LUA-11; Change Light Industrial (LI) to High Density Residential (HDR) on LUA-12.

LUA-13

Change Light Industrial (LI) to Open Space, Conservation (OS-C).

LUA-14

Change Light Industrial (LI) to Medium High Density Residential (MHDR); change Business Park (BP) to Commercial-Neighborhood (CN).

LUA-15

Change Light Industrial (LI) to Medium Density Residential (MDR).

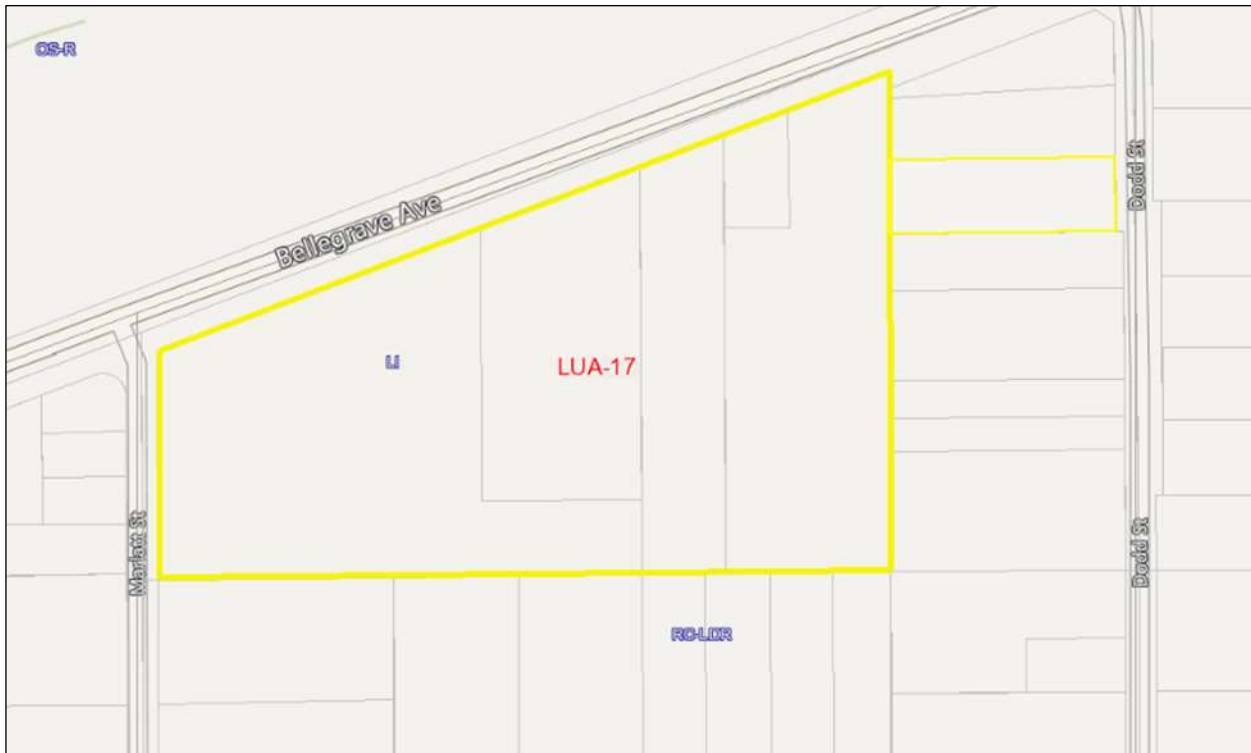

LUA-16

Change Commercial Retail (CR), Highest Density Residential (HHDR) and High Density Residential (HDR) to Commercial Retail, Village Center Overlay (CR-VCO).

LUA-17

Change Light Industrial (LI) to Low Density Residential (LDR).

LUA-18

Change interior parcels from Business Park (BP) to Medium Density Residential (MDR), and to Agriculture/Open Space - Conservation on parcels within the 100-year flood zone on FIRM map, shown in blue boundary below.

LUA-20

Change Medium High Density Residential (MHDR) and Commercial Retail (CR) to Highest Density Residential (HHDR) and Commercial Retail (CR)

LUA-21

Change Light Industrial, Community Development Overlay (LI-CDO) to Medium Density Residential (MDR).

CHAPTER 1 – INTRODUCTION

The City of Jurupa Valley (City) is located in Riverside County and is generally bounded by Interstate 15 (I-15) to the west, Philadelphia Street/El Rivino Road to the north, and the Santa Ana River to the east and south. Figure 1.1 illustrates the regional location of the City of Jurupa Valley.

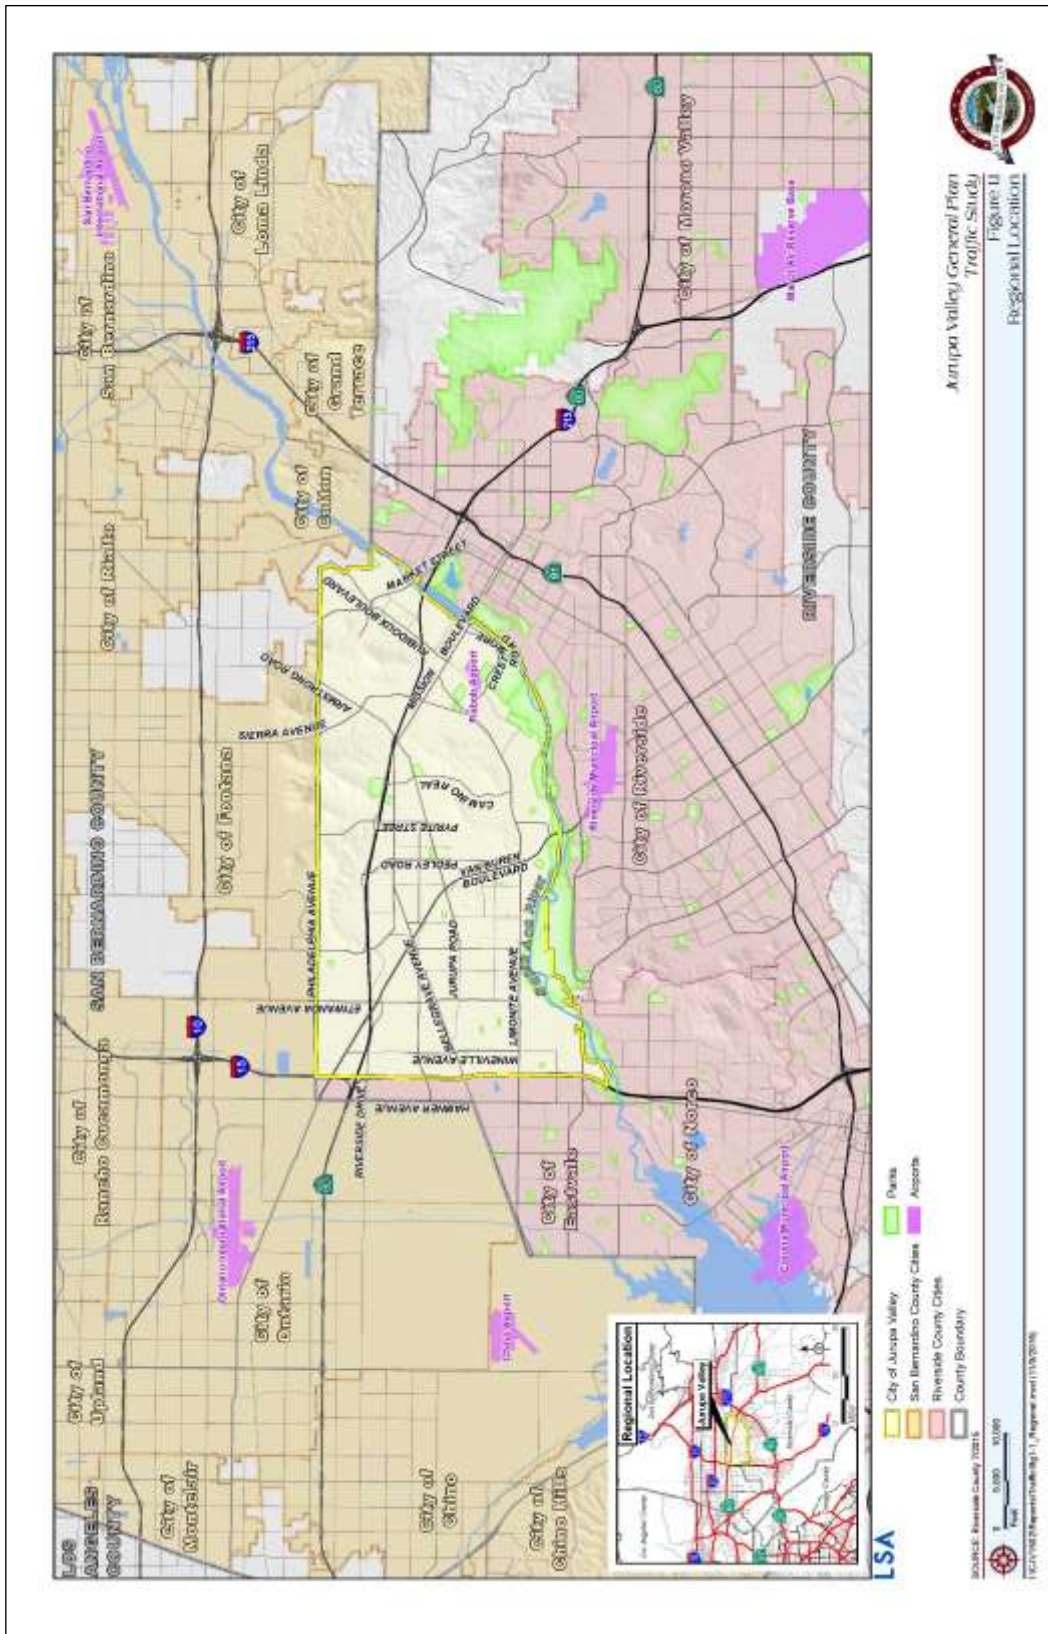

The ability to move people and goods throughout Jurupa Valley and beyond is important to residents and businesses. Local roadways are the most important element for mobility in Jurupa Valley, but transit, the trail system, and bicycle facilities provide opportunities for alternative modes of travel that could relieve pressure on roadways; furthermore, alternative modes, such as bicycles and pedestrians, have valuable secondary benefits that enhance the overall setting of Jurupa Valley. These benefits include traffic calming, walkability, health gains, air quality improvement and community cohesion. The Circulation Element governs the long-term mobility system of the City. The goals and policies in the Circulation Element are closely correlated with the Land Use Element and are intended to provide the best possible balance between the City's future growth and land use development, roadway size, traffic service levels, bicycle and pedestrian amenities, transit opportunities and community character.

This Traffic Study will aid in determining existing circulation deficiencies within the City of Jurupa Valley and act as a benchmark for future improvements to the City's circulation network. The Traffic Study includes a level of service analysis at study area intersections and roadway segments, and a summary of existing transit service, truck routes, and bicycle and pedestrian facilities and trails within the City of Jurupa Valley.

CHAPTER 1 – INTRODUCTION

THIS PAGE INTENTIONALLY LEFT BLANK.

CHAPTER 1 – INTRODUCTION

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

The transportation system in the City of Jurupa Valley includes motorized and non-motorized travel modes. This circulation system is considered multi-modal, which provides alternatives to the automobile such as bicycle facilities, pedestrian facilities, rail, trails, and transit. These systems, along with streets and highways, all provide for the movement of people and goods throughout the City and region. How these systems complement one another and interact with each other represents the complete transportation system.

This chapter presents the existing setting for vehicles, as well as bicycle, transit, and pedestrian facilities in the City of Jurupa Valley.

Street Network

A well laid-out and well-designed roadway network is essential for safe and efficient surface transportation. Such a network can cut down travel times, reduce accidents on certain facilities, assist in emergency operations, and help in allocating roadway funding. These facilities also serve as the primary thoroughfares for freight and goods movement that supply the local and regional economies.

- Airports

The functionality of a street is related to traffic mobility and land access. Higher level facilities, such as freeways and expressways, have lower access, which allows for higher speeds and capacities. Conversely, lower level facilities, such as local streets and minor arterials, allow for greater access, but have reduced mobility due to lower speeds and capacities. The relationship can be seen in Figure 2.1.

FIGURE 2.1: RELATIONSHIP BETWEEN MOBILITY AND ACCESS ON ROADWAYS

Source: Federal Highway Administration

Functional Classification

Functional classification groups roadways into classes according to the type of service they are intended to provide. The eight basic roadway classifications are briefly described below:

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

Freeway

A highway upon which the abutter's rights of access are controlled and that provides separated grades at intersecting streets. The minimum right-of-way width and number of lanes is determined by the California Department of Transportation (Caltrans). Figure 2.2 illustrates the existing functional classification of roadways. Roadway cross-sections are illustrated in Figure 2.3.

Expressway

An Expressway is a multimodal roadway corridor for through traffic. Access from abutting property is restricted. Intersections with other streets or roadways are limited to approximately one-half mile intervals. The minimum right-of-way is 184 feet to 220 feet. The number of lanes is 6 or 8 and additional right-of-way may be needed at intersections. Figure 2.3, Exhibit 1 illustrates the cross-section for an Expressway. Segments of Van Buren Boulevard are currently designated as an Expressway.

Urban Arterial

An Urban Arterial is a roadway primarily for through traffic where access from other streets or roadways is limited to approximately one-quarter mile intervals. The minimum right-of-way is 152 feet. The number of lanes is 6 or 8 and additional right-of-way may be needed at intersections. Figure 2.3, Exhibit 2 illustrates the cross-section for an Urban Arterial roadway. Segments of Limonite Avenue are currently designated as an Urban Arterial roadway.

Arterial

An Arterial is a divided roadway primarily for through traffic to which access from abutting property is kept at a minimum. Intersections with other streets or roadways are limited to approximately one-quarter mile intervals. The minimum right-of-way is 128 feet. The number of lanes is 4 or 6 and additional right-of-way may be needed at intersections. Figure 2.3, Exhibit 3 shows the cross-section for an Arterial roadway.

Segments of Etiwanda Avenue are currently designated as an Arterial roadway.

Major

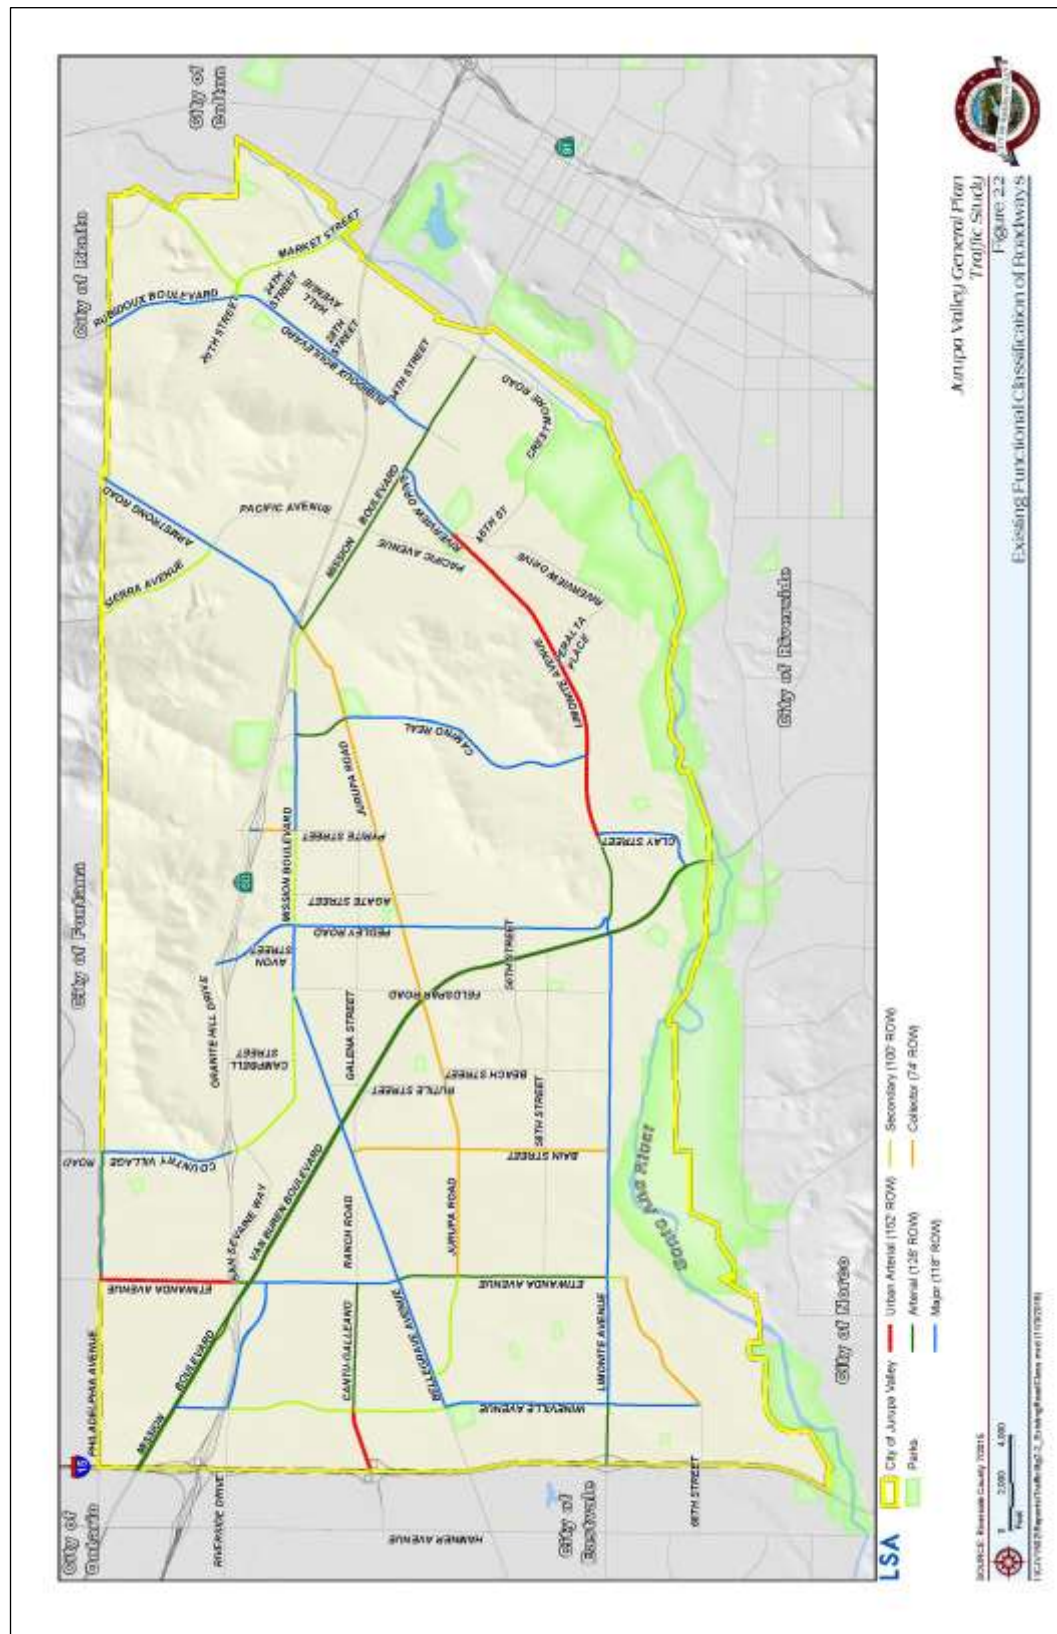

A Major roadway serves property zoned for major industrial and commercial uses or serves through traffic. Intersections with other streets or roadways may be limited to approximately 660-foot intervals. The minimum right-of-way is 138 feet. The number of lanes is 4 and additional right-of-way may be needed at intersections. Figure 2.3, Exhibit 4 illustrates the cross-section for a Major roadway. Segments on Pedley Road are currently designated as a Major roadway.

Secondary

A Secondary roadway serves through traffic along longer routes between major traffic-generating areas or serves property zoned for multiple residential, secondary industrial, or commercial uses. Intersections with other streets and roadways may be limited to 350-foot intervals. The minimum right-of-way is 100 feet. The number of lanes is 4 with no turn lanes and additional right-of-way may be needed at intersections. Figure 2.3, Exhibit 5 shows the cross-section for a Secondary roadway. Segments on Pacific Avenue are currently designated as a secondary roadway.

Collector Street

Collector streets are intended to serve intensive residential land uses, multiple-family dwellings, or to convey traffic through an area to roads of equal or similar classification or higher. A Collector street may also serve as a cul-de-sac in industrial or commercial use areas but shall not exceed 660 feet in length when so used. The minimum right-of-way is 74 feet and the number of lanes is 2. Figure 2.3, Exhibit 6 shows the cross-section for a Collector roadway. Segments on 58th Street are currently designated as a Collector roadway.

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

Industrial Collector

An Industrial Collector is a circulatory street with a continuous left-turn lane with at least one end connecting to a road of equal or greater classification. The minimum right-of-way is 78 feet and the number of lanes is 2. Figure 2-3, Exhibit 7 shows the cross-section for an Industrial Collector roadway.

Study Area Intersections

The study area includes all roadway segments and intersections that would be necessary to analyze the impacts of the City's future Land Use plan and was defined through collaboration between LSA and City staff. As Figure 2-4 shows, the study area includes the following intersections:

Intersections

1. Interstate 15 (I-15) Southbound Ramps/Cantu-Galleano Ranch Road;
2. I-15 Northbound Ramps/Cantu-Galleano Ranch Road;
3. I-15 Southbound Ramps/Limonite Avenue;
4. I-15 Northbound Ramps/Limonite Avenue;
5. Wineville Road/E. Mission Boulevard;
6. Wineville Road/Riverside Drive;
7. Wineville Avenue/Wineville Road/Cantu-Galleano Ranch Road;
8. Wineville Avenue/Bellegrave Avenue;
9. Wineville Avenue/Limonite Avenue;
10. Wineville Avenue/66th Street;
11. E. Mission Boulevard/State Route 90 (SR-90) Westbound On-Ramp;
12. E. Mission Boulevard/SR-60 Eastbound Off-Ramp;
13. Etiwanda Avenue/Philadelphia Avenue;
14. Etiwanda Avenue/SR-60 Westbound Off-Ramp;
15. Etiwanda Avenue/SR-60 Eastbound On-Ramp;
16. Etiwanda Avenue/Van Buren Boulevard;
17. Etiwanda Avenue/Riverside Drive;
18. Etiwanda Avenue/Cantu-Galleano Ranch Road;
19. Etiwanda Avenue/Bellegrave Avenue;
20. Etiwanda Avenue/Jurupa Road;

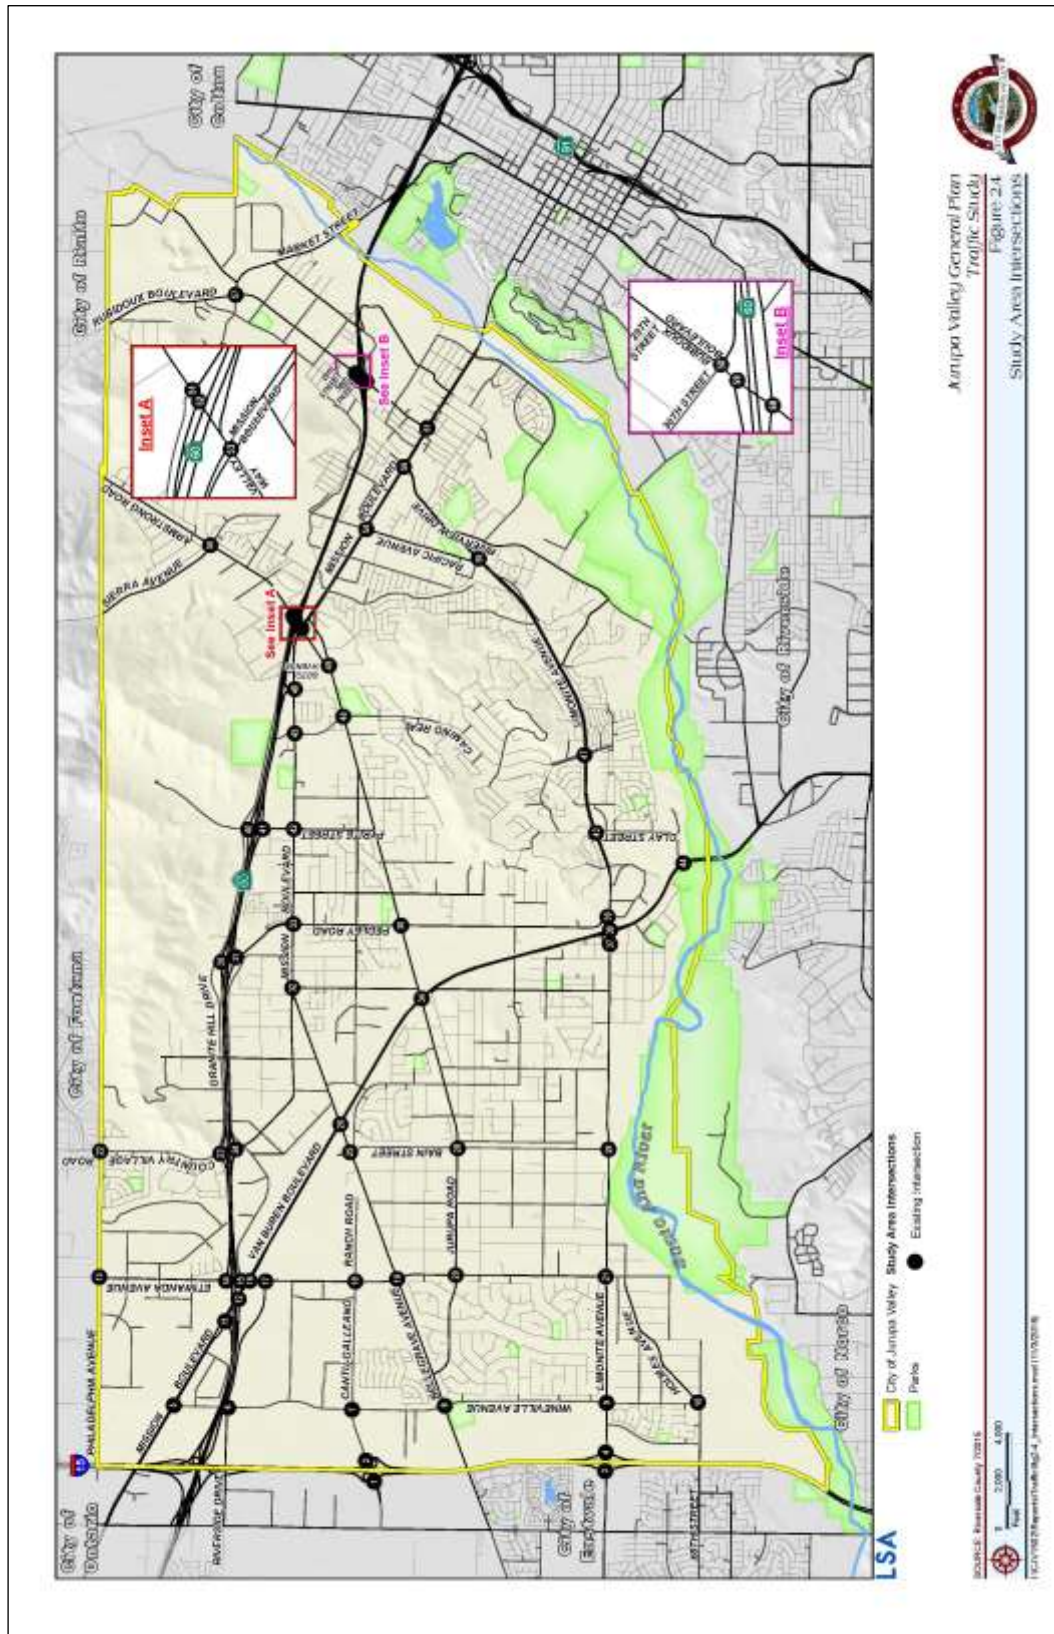

21. Etiwanda Avenue/Limonite Avenue;
22. Country Village Road/Philadelphia Avenue;
23. Country Village Road/SR-60 Westbound Ramps;
24. Mission Boulevard/SR-60 Eastbound Ramps;
25. Bain Street/Bellegrave Avenue;
26. Van Buren Boulevard/Bellegrave Avenue;
27. Van Buren Boulevard/Van Buren-Bellegrave Connector;
28. Bain Street/Jurupa Road;
29. Bain Street/Limonite Avenue;
30. Pedley Road/SR-60 Westbound Ramps;
31. Pedley Road/SR-60 Eastbound Ramps;
32. Bellegrave Avenue/Mission Boulevard;
33. Pedley Road/Mission Boulevard;
34. Van Buren Boulevard/Jurupa Road;
35. Van Buren Boulevard/Van Buren-Jurupa Connector;
36. Pedley Road/Jurupa Road;
37. Collins Street/Limonite Avenue;
38. Van Buren Boulevard/Limonite Avenue;
39. Pedley Road-Morton Avenue/Limonite Avenue;
40. Pyrite Street/SR-60 Westbound Ramps;
41. Pyrite Street/SR-60 Eastbound Ramps;
42. Pyrite Street/Mission Boulevard;
43. Gay Street/Limonite Avenue;
44. Van Buren Boulevard/Clay Street;
45. Camino Real/Mission Boulevard;
46. Camino Real/Jurupa Road;
47. Camino Real/Limonite Avenue;
48. Byrne Road-SR-60 Eastbound Ramps/Mission Boulevard;
49. Valley Way/Jurupa Road;
50. Armstrong Road/Sierra Avenue;
51. Valley Way/SR-60 Westbound Off-Ramp-Granite Hill Drive;
52. Valley Way/SR-60 Westbound On-Ramp;
53. Valley Way/Mission Boulevard;
54. Pacific Avenue/Mission Boulevard;
55. Pacific Avenue/Limonite Avenue;

61. Rubidoux Boulevard/Mission Boulevard.

Study Area Roadways

The major roadways within the City of Jurupa Valley are described below:

Wineville Avenue is oriented in a north-south direction and from Mission Boulevard to Riverside Drive is a four-lane Major, from Riverside Drive to Cantu-Galeano Ranch Road is a four-lane Secondary, from Cantu-Galeano Ranch Road to Bellegrave Avenue is a three-lane Secondary, from Bellegrave Avenue to Elba Drive is a four-lane Major, from Elba Drive to Boca Place is a two-lane Collector, from Boca Place to Limonite Avenue is a four-lane Major, and from Limonite Avenue to 68th Street is a three-lane Major. The speed limit on Wineville Avenue varies from 45–50 miles per hour.

Etiwanda Avenue is oriented in a north-south direction and is a six-lane Urban Arterial from the northern City limits to State Route 60 (SR-60) and transitions to a four-lane Arterial from SR-60 to Van Buren Boulevard. The segment from Van Buren Boulevard to Cantu-Galeano Ranch Road is a four-lane Major, from Cantu-Galeano to Bellegrave Avenue is a three-lane Major, from Bellegrave Avenue to Limonite Avenue is a four-lane Major, and from Limonite Avenue to Holmes Avenue is a two-lane Secondary. Etiwanda Avenue has a speed limit of 45–55 miles per hour.

Bain Street is oriented in a north-south direction and is a two-lane Collector. Additional right-of-way is available for a four-lane Major. The speed limit on Bain Street is 45 miles per hour.

Country Village Road is oriented in a north-south direction and is a three-lane Major from Philadelphia Avenue to Country Club Drive. The

segment from Country Club Drive to Ben Nevis Boulevard is a four-lane Major. The speed limit on Country Village Road is 45 miles per hour.

Pedley Road is oriented in a north-south direction and is a two-lane Major from Granite Hill Drive to Francisco Junior Avenue. The segment from Francisco Junior Avenue to Mission Boulevard is a four-lane Major, from Mission Boulevard to Jurupa Road is a three-lane Major, from Jurupa Road to 50th Street is a two-lane Collector, and from 60th Street to Limonite Avenue is a two-lane Major. The speed limit on Pedley Road is 45 miles per hour.

Pyrite Street is oriented in a north-south direction and is a two-lane Collector north of Granite Hill Drive. The segment from Granite Hill Drive to SR-60 EB Ramps is a two-lane Secondary, from SR-60 WB Ramps to Mission Boulevard is a two-lane Collector, from Mission Boulevard to Galena Street is a two-lane Major, and from Galena Street to Jurupa Road is a two-lane Collector. The speed limit on Pyrite Street is 40 miles per hour.

Clay Street is oriented in a north-south direction from Limonite Avenue to General Road and transitions to an east-west direction from General Road to Van Buren Boulevard. Clay Street is a four-lane Major with a speed limit of 35 miles per hour.

Camino Real is oriented in a north-south direction and is a two-lane Secondary from Granite Hill Drive to Mission Boulevard. The segment from Mission Boulevard to Jurupa Road is a four-lane Arterial, from Jurupa Road to Whitney Drive is a two-lane Collector, from Whitney Drive to Limonite Avenue is a four-lane Major. The speed limit on Camino Real is 25–40 miles per hour.

Philadelphia Avenue is oriented in an east-west direction from the western City limits to Rochester Avenue, from Rochester Avenue to Wineville Avenue is a two-lane Major, from Wineville Avenue to Etiwanda Avenue is a three-lane Major, and from Etiwanda Avenue to Country Village Road is a two-lane Major. The speed limit on Philadelphia Avenue is 45 miles per hour.

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

Van Buren Boulevard is oriented in a north-south direction and is a four-lane Arterial from the western City limits to the southern City limits. The speed limit on Van Buren Boulevard is generally 55 miles per hour.

Riverside Drive is oriented in an east-west direction and is a three-lane Major. The speed limit on Riverside Drive is 50 miles per hour.

Canta-Galleano Ranch Road is oriented in an east-west direction and is a six-lane Urban Arterial from the I-15 northbound ramps to Wineville Avenue/Road. The segment from Wineville Avenue/Road to Etiwanda Avenue is a two-lane Arterial, and from Etiwanda Avenue to west of Dodd Street is a four-lane Major. The speed limit on Canta-Galleano Ranch Road is 45 miles per hour.

Mission Boulevard is oriented in an east-west direction and is a four-lane Secondary from SR-60 EB Ramps to Bellegrave Avenue, from Bellegrave Avenue to Pedley Road is a four-lane Major, from Pedley Road to Pyrite Street is a four-lane Secondary, from Pyrite Street to SR-60 EB Ramps is a four-lane Major, from SR-60 EB Ramps to Valley Way is a four-lane Secondary, and from Valley Way to east of Rubidoux Boulevard is a four-lane Arterial. The speed limit on Mission Boulevard is generally 35–45 miles per hour.

Bellegrave Avenue is oriented in an east-west direction and is a three to four-lane Major from Wineville Avenue to Bain Street, and transitions to a two-lane Major east of Bain Street. Bellegrave Avenue has a speed limit of 25–45 miles per hour.

Jurupa Road is oriented in an east-west direction and is a two-lane Secondary roadway from Bellegrave Avenue to Etiwanda Avenue and from Etiwanda Avenue to Valley is a two-lane Collector. The speed limit on Jurupa Road is 40–45 miles per hour.

Valley Way is oriented in a north-south direction and is a two-lane Collector from Jurupa Road to Mission Boulevard, from Mission Boulevard to SR-60 is a four-lane Arterial, from SR-60 to Sierra Avenue is a four-lane Major, and north of Sierra Avenue is a two-lane Major. The speed limit on Valley Way is 30–45 miles per hour.

Limonite Avenue is oriented in an east-west direction and is a four-lane Major from I-15 SB Ramps to I-15 NB Ramps, from I-15 NB Ramps to Wineville Avenue is a four-lane Arterial, from Wineville Avenue to Etiwanda Avenue is a four-lane Major, from Etiwanda Avenue to Collins Street is a two-lane Major, from Collins Street to Pedley Road is a four-lane Major, from Pedley Road to Clay Street is a four-lane Arterial, from Clay Street to Riverview Drive is a five-lane Urban Arterial, and from Riverview Drive to Mission Boulevard is a four-lane Major. The speed limit on Limonite Avenue is generally 45–50 miles per hour.

Rubidoux Boulevard is oriented in a north-south direction and is a two-lane Collector from Tilton Avenue to Mission Boulevard, a four-lane Major from Mission Boulevard to 20th Street, a four-lane Arterial from 20th Street to Production Circle, and a four-lane Major from Production Circle to the northern City limits. The speed limit on Rubidoux Boulevard is 40–50 miles per hour.

Congestion

Congestion results when traffic demand approaches or exceeds the available capacity of the system. While this is a simple concept, it is not constant. Traffic demands vary significantly depending on the season of the year, the day of the week, and even the time of day. Also, the capacity can change because of weather, work zones, traffic incidents, or special events.

Congestion can be classified as either recurring or non-recurring. Recurring congestion most often occurs when the volume of traffic on a facility becomes more than that facility can handle. Non-recurring congestion is usually short in duration and is caused by such things as weather, construction, or special events. One way to gauge the level of congestion is grading a facility on its level of service.

2-12

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

Level of Service Definitions

Roadway operations and the relationship between capacity and traffic volumes are generally expressed in terms of levels of service (which are defined using the letter grades A through F). These levels recognize that, while an absolute limit exists as to the amount of traffic traveling through a given intersection (the absolute capacity), the conditions that motorists experience rapidly deteriorate as traffic approaches the absolute capacity. Under such conditions, congestion is experienced. There is general instability in the traffic flow, which means that relatively small incidents (e.g., momentary engine stall) can cause considerable fluctuations in speeds and delays. This near-capacity situation is labeled Level of Service (LOS) E. Beyond LOS E, capacity has been exceeded, and arriving traffic will exceed the ability of the intersection to accommodate it. An upstream queue will then form and continue to expand in length until the demand volume again declines.

A complete description of the meaning of level of service can be found in the Transportation Research Board Special Report 209, Highway Capacity Manual/2010 (HCM 2010). For both roadway segments and intersections, the HCM establishes levels of service A through F as shown in Table 2.A and Figure 2.5.

Table 2.A: Level of Service Definitions

| LOS | Description |
|-----|---|
| A | No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily and nearly all drivers find freedom of operation. |
| B | This service level represents stable operation, where an occasional approach phase is fully utilized and a substantial number are approaching full use. Many drivers begin to feel restricted within platoons of vehicles. |
| C | This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted, but not objectionably so. |

Table 2.A: Level of Service Definitions

| LOS | Description |
|-----|--|
| D | This level encompasses a zone of increasing restriction approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups. |
| E | Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand. |
| F | This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero. |

FIGURE 2.5: LEVEL OF SERVICE

Source: FHWA

The LOS criteria used to evaluate signalized and unsignalized intersections are based on HCM 2010 methodologies and are shown in

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

2-13

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

Table 2.B. All levels of service were calculated using Synchro 9 software, which uses HCM 2010 methodologies.

Table 2.B: Level of Service Criteria for Unsignalized and Signalized Intersections

| Level of Service | Unsignalized Intersection Average Delay per Vehicle (seconds) | Signalized Intersection Average Delay per Vehicle (seconds) |
|------------------|---|---|
| A | ≤ 10 | ≤ 10 |
| B | > 10 and ≤ 15 | > 10 and ≤ 20 |
| C | > 15 and ≤ 25 | > 20 and ≤ 35 |
| D | > 25 and ≤ 35 | > 35 and ≤ 55 |
| E | > 35 and ≤ 50 | > 55 and ≤ 80 |
| F | > 50 | > 80 |

Source: Highway Capacity Manual, 2010.

The level of service criteria used to evaluate roadway segments is based on the daily capacity for each functional classification and is shown in Table 2.C. The daily traffic volume represents the total vehicles (both directions) traveling on a roadway segment within 24 hours.

Table 2.C: Roadway Segment Capacity and Levels of Service

| Functional Classification | Number of Lanes | Maximum Two-Way Daily Traffic Volume | | |
|---------------------------|-----------------|--------------------------------------|--------------------|--------------------|
| | | Level of Service C | Level of Service D | Level of Service E |
| Collector Street | 2 | 10,400 | 11,700 | 13,000 |
| Secondary | 4 | 20,700 | 23,300 | 25,900 |
| Major | 4 | 27,300 | 30,700 | 34,100 |
| Arterial | 4 | 28,700 | 32,300 | 35,900 |
| Urban Arterial | 4 | 28,700 | 32,300 | 35,900 |
| Urban Arterial | 6 | 43,100 | 48,500 | 53,900 |
| Urban Arterial | 8 | 57,400 | 64,800 | 71,200 |
| Expressway | 6 | 48,000 | 55,200 | 61,300 |

Level of Service Standard

With the development of this General Plan Circulation Element, the City of Jurupa Valley will establish an LOS standard for intersections and roadways. This set of standards will balance the need for safe and efficient mobility with key quality of life and community standards. Many cities within the County maintain LOS D as their minimum threshold for their roadway systems. The County of Riverside maintains an LOS standard of D; therefore, for this particular analysis, LOS D was used for the intersection and roadway segment LOS analysis. Intersections or roadway segments operating at LOS E or F exceed the minimum LOS standard D. This threshold may be revisited and modified based on a balancing of overall community objectives.

Caltrans endeavors to maintain levels of service between C and D at all intersections under its jurisdiction; this has been interpreted to mean that a maximum average delay at a Caltrans intersection exceeding 45 seconds is considered to exceed the minimum LOS standard.

Existing Intersection Traffic Volumes

Existing Intersection traffic volumes are based on a.m. and p.m. peak hour intersection turn movement counts within the City collected by Counts Unlimited in June 2015 and National Data and Surveying Services in September 2015. For several intersections, counts were conducted between 2012 and 2014. For these intersections, a growth rate of 1

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

percent per year was applied to develop 2015 volumes at these locations. Count sheets are contained in Appendix A. Classification counts separate vehicle types into passenger cars, two-axle trucks, three-axle trucks, and trucks with four or more axles. The concept of passenger car equivalents (PCEs), accounts for the larger impact of trucks on traffic operations. It does so by assigning each type of truck a PCE factor that represents the number of passenger vehicles that could travel through an intersection in the same time that a particular type of truck could. For example, trucks with four or more axles have been assigned a PCE factor of 3.0, indicating that three passenger vehicles could travel through an intersection in the same amount of time required for a single truck with four or more axles. PCE volumes for study area locations with classification counts were computed using a PCE factor of 1.5 for two-axle trucks, 2.0 for three-axle trucks, and 3.0 for trucks with four or more axles. The percentage of trucks at the remaining study intersections without classification counts was determined from classification counts at nearby intersections. PCE volumes for these intersections were computed using a PCE factor of 2.0 for all trucks. Detailed volume development worksheets are included in Appendix B. Figures 2.6-1 and 2.6-2 illustrate the existing intersection geometrics and stop control at the study intersections. The existing a.m. and p.m. peak hour traffic volumes for the study intersections are illustrated in Figures 2.7-1 and 2.7-2.

Existing Roadway Segment Traffic Volumes

The existing daily traffic volumes at study area roadway segments are based on traffic counts conducted by the City of Jurupa Valley between 2012 and 2014. A growth rate of one percent per year was then applied to the counts. Table 2.D shows the existing daily traffic volumes at study area roadway segments.

Existing Intersection Levels of Service

A site survey was conducted at the study area intersections to observe the intersection geometrics, turn pocket lengths, and existing signal

cycle lengths. The results of the survey were included as input parameters into the Synchro 9 software. A level of service analysis was conducted at study area intersections to determine current intersection performance and is shown in Table 2.E, which shows all intersections are currently operating at satisfactory levels of service, with the exception of the following 12 intersections:

- Wineville Road/Mission Boulevard (p.m. peak hour);
- Mission Boulevard/SR-60 EB Off-Ramp (a.m. and p.m. peak hours);
- Elswanda Avenue/Limonite Avenue (a.m. and p.m. peak hours);
- Country Village Road/SR-60 WB Ramps (a.m. peak hour);
- Pedley Road/SR-60 WB Ramps (a.m. and p.m. peak hours);
- Van Buren Boulevard/Jurupa Road (a.m. and p.m. peak hours);
- Pedley Road/Jurupa Road (a.m. and p.m. peak hours);
- Van Buren Boulevard/Clay Street (p.m. peak hour);
- Camino Real/Jurupa Road (a.m. peak hour);
- Armstrong Road/Sierra Avenue (a.m. and p.m. peak hours);
- Riverview Drive/Mission Boulevard (p.m. peak hour);
- Rubidoux Boulevard/Market Street (p.m. peak hour); and
- Rubidoux Boulevard/Mission Boulevard (p.m. peak hour).

Figures 2.8-1 and 2.8-2 illustrate the locations of the study area intersections and corresponding a.m. and p.m. levels of service.

Existing Roadway Segment Levels of Service

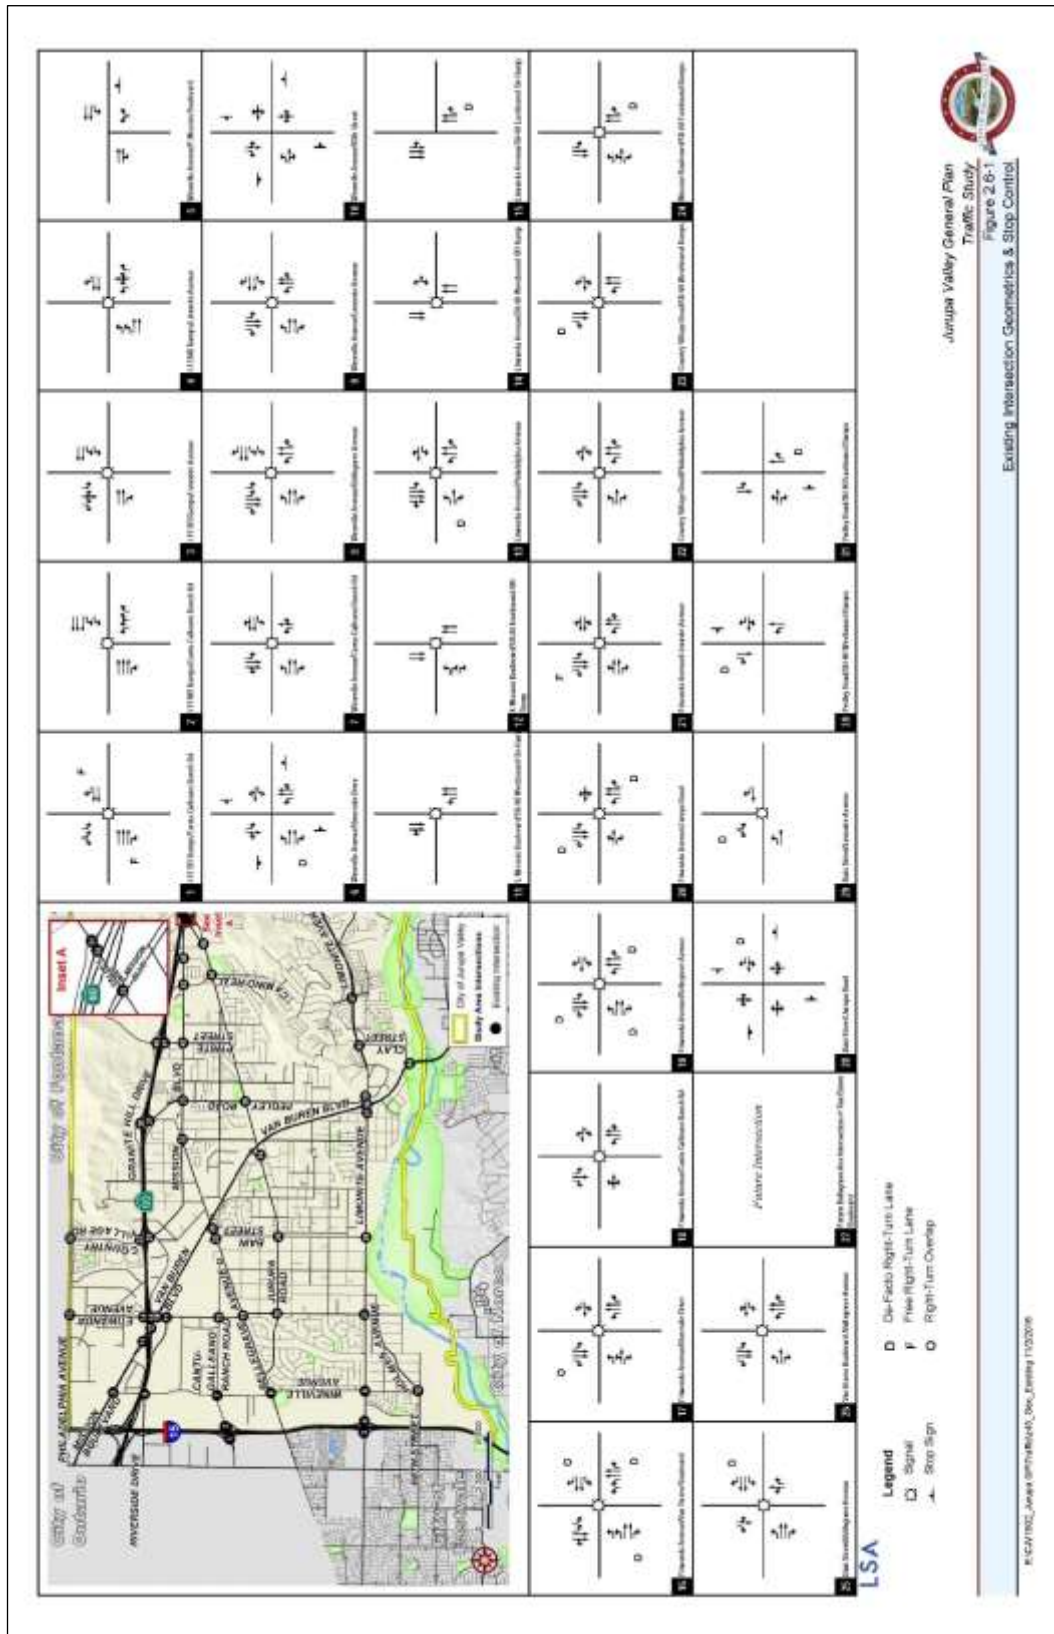

A level of service analysis was conducted at study area roadway segments to determine current roadway segment performance. As shown in Table 2.D, all roadway segments are currently operating at

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

satisfactory levels of service, with the exception of the following nine roadway segments:

- Country Village Road from Philadelphia Avenue to SR-60 Westbound Ramps;
- Country Village Road from SR-60 Westbound Ramps to SR-60 Eastbound Ramps;
- Van Buren Boulevard from Etiwanda Avenue to Bellegrave Avenue;
- Van Buren Boulevard from Bellegrave Avenue to Jurupa Road;
- Van Buren Boulevard from Jurupa Road to Umonite Avenue;
- Van Buren Boulevard from Umonite Avenue to Clay Street;
- Umonite Avenue from I-15 Southbound Ramps to I-15 Northbound Ramps;
- Umonite Avenue from Etiwanda Avenue to Bain Street;
- Umonite Avenue from Bain Street to Collins Streets; and
- Market Street east of Rubidoux Boulevard.

Figure 2.9 illustrates the locations of the roadway segments and corresponding existing levels of service.

Truck Restrictions

Due to its location relative to major highways and urban centers, Jurupa Valley serves as a major logistics shipping and receiving center for Southern California. Along with that regional role comes significant commercial truck traffic using highway off-ramps and City streets. Connectivity with truck routes within the City to regional truck routes and access to freeways provides for an efficient, safe movement of goods.

Most commercial truck traffic is concentrated in the northern and eastern areas of the City, near the SR-60 corridor. The City does not

currently have designated truck routes, per se; however, based on information received from the City's Engineering Staff, there are truck restrictions on some of the roadways within the City. Figure 2.10 illustrates truck restrictions and shows the following roadway segments restrict truck access:

- Etiwanda Avenue from Riverside Drive to Cantu-Galleano Ranch Road;
- Etiwanda Avenue from Cantu-Galleano Ranch Road to Bellegrave Avenue;
- Jurupa Road from Camino Real to Valley Way;
- Valley Way-Armstrong Road from Jurupa Road to Mission Boulevard;
- Holmes Avenue from Wineville Avenue to Etiwanda Avenue, Etiwanda Avenue between Riverside Drive to Cantu-Galleano Ranch Road; and
- Between Riverside Drive and Cantu-Galleano Ranch Road

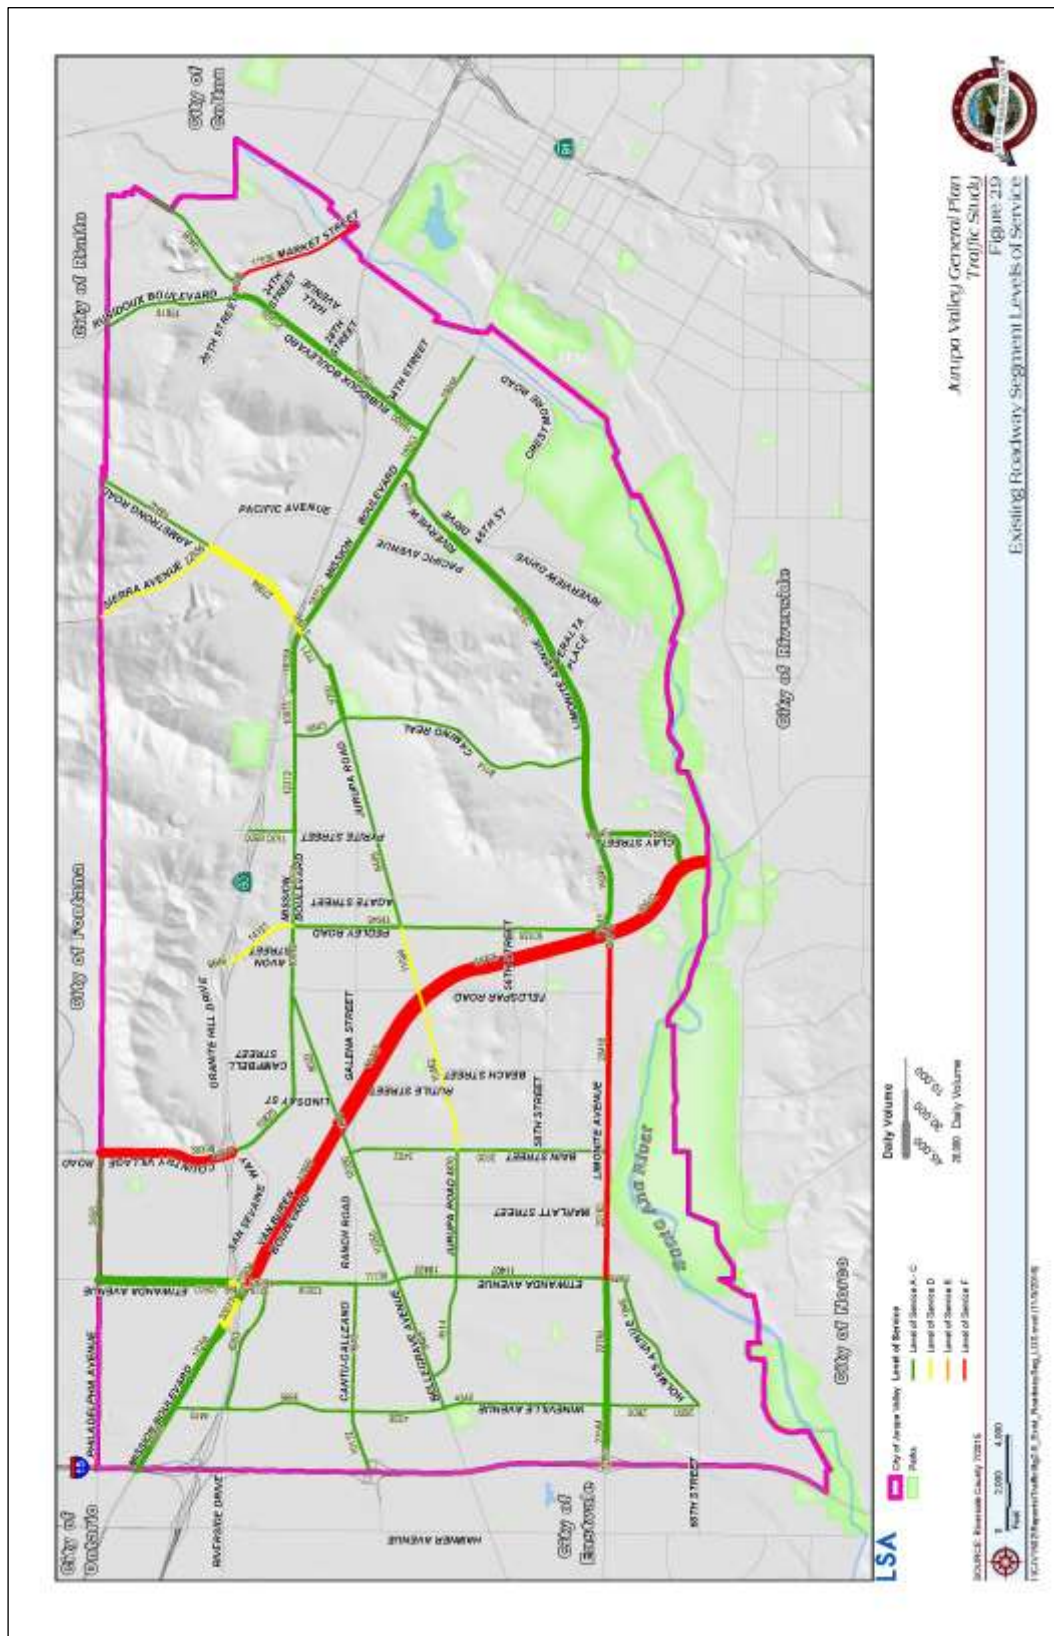

Bicycle Facilities

The City of Jurupa Valley has expressed a vision that encourages choice in travel modes and accommodates those without automobiles for safe mobility and healthy outcomes. A planned bicycle route system within the City of Jurupa Valley provides an important alternative to driving an automobile. A planned system guides the City and development on the orderly and planned implementation of the City's multi-modal transportation system.

The key to successful bicycle mobility is connectivity. Bicyclists need to be able to travel seamlessly on the bicycle network and get to where they need to go. They also need to feel secure and safe when using the facilities by having sufficient separation from vehicles. The "Three Feet for Safety Act," which was incorporated into the California Vehicle Code

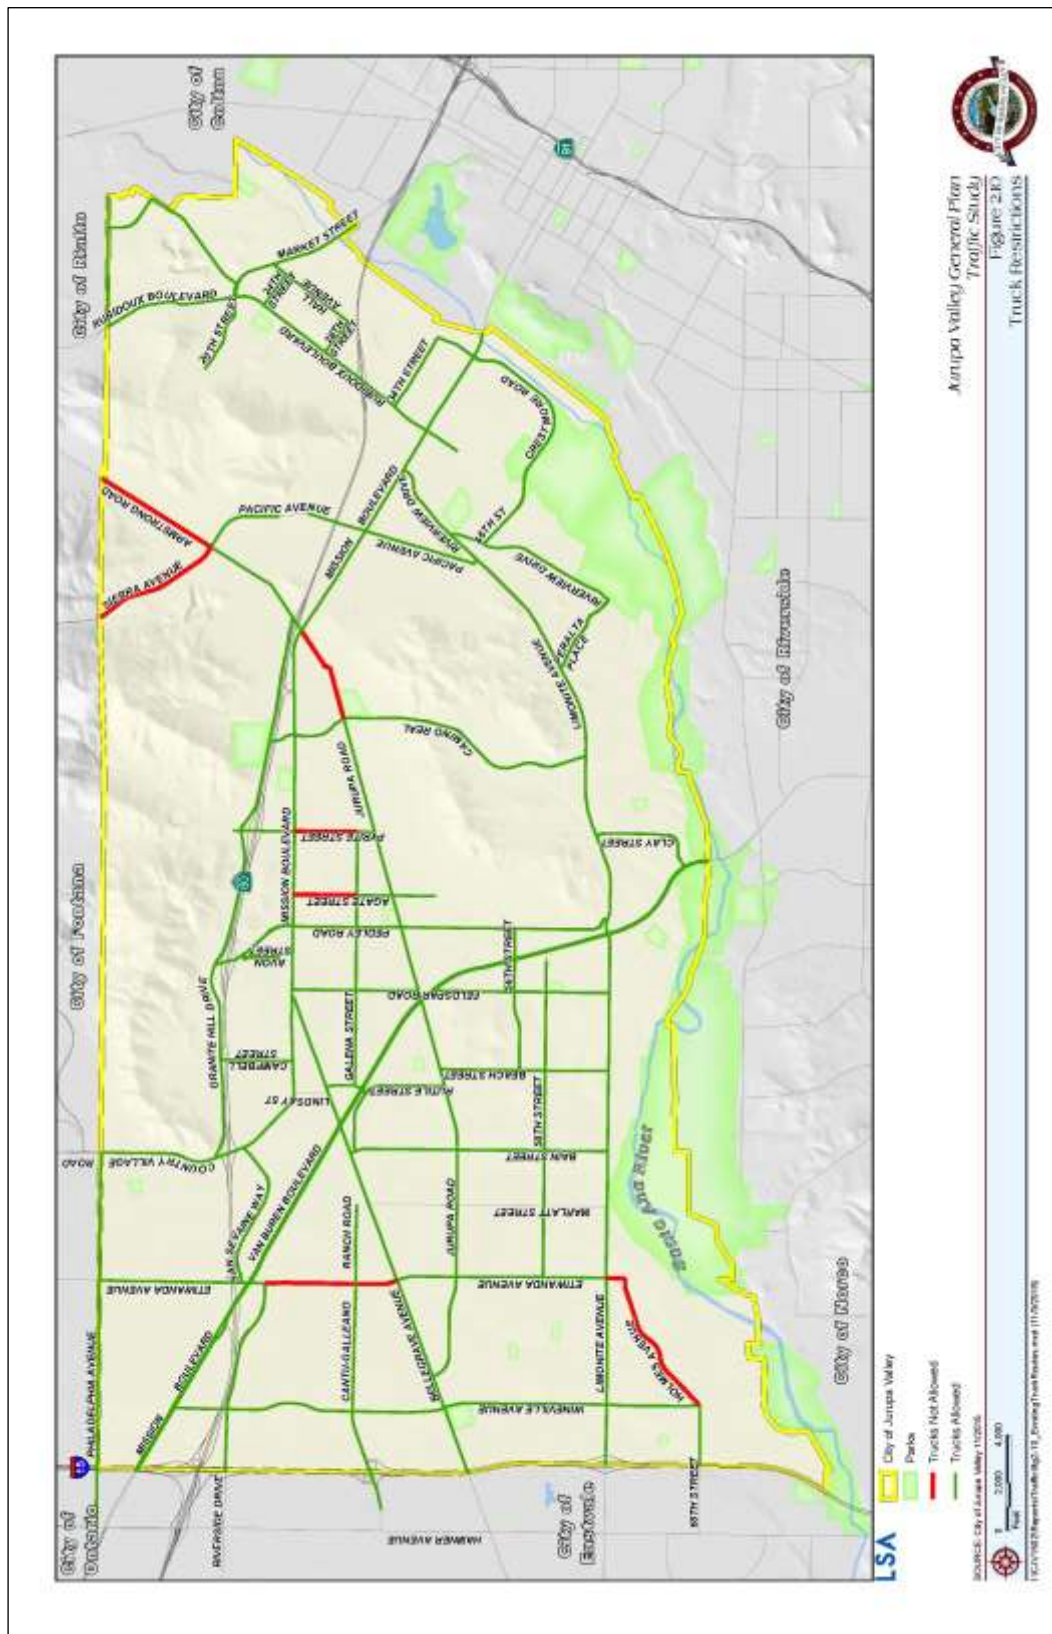

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

In September 2014, requires motorists overtaking or passing a bicycle in the same direction to leave a minimum distance of three feet between the motor vehicle and bicyclist.

Bicycle classifications include Class 1 bike paths, Class 2 bike paths, and Combination Trails (Regional/Class 1 bike paths). These facilities are described below. Each type of facility has certain characteristics and offers varying levels of safety, perceived or otherwise.

- **Class 1:** Provides a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross-flow minimized. The right-of-way for Class 1 bikeways may be substantial, separated from roadways by landscaped strips or other barriers. They may also be designed and signed to also permit golf carts.
- **Class 2:** Intended for preferential use by bicycles and are provided for within the paved areas of roadways. Bike lane pavement striping and other markings and bikeway signs are intended to promote an orderly flow of traffic by establishing demarcations between lanes designated for bicycles and lanes designated for motor vehicles.
- **Combination Class 1 Bikeway/Regional Trails:** Regional collectors linking the urban and rural communities and major water bodies and regional parks in the County and provide opportunities for long-distance users to take advantage of this system for long one-way or loop-type trips. These facilities may also include pedestrian and equestrian uses.

Based on a survey of major City streets, no designated bicycle facilities currently exist within the City. This existing deficiency of bicycle facilities poses a safety concern for bicyclists because they share the road with motor vehicles without the proper separation to feel secure. Bicyclists also use sidewalks, which can increase the risk of accidents with pedestrians. The County of Riverside General Plan has a proposed network of bicycle facilities. As part of this General Plan, a comprehensive bicycle network will be proposed that promotes a safe and efficient network that provides connectivity within the City and to

the networks of adjacent jurisdictions. This connectivity may be developed with nodes connected by paths. These nodes may include bike stations, water facilities, and other desirable amenities for bicyclists. Safety can also be considered in the General Plan context based on design of facilities that may include 3-foot buffers in the striping plan. Safety will also be a consideration of this General Plan in the development of policies related to education and enforcement. The purpose of this development via addition of intermediate rest points and destinations is to encourage commuter travel by bicycle. Development of General Plan policies may consider following the 5 E's as described by The League of American Bicyclists (Engineering, Education, Enforcement, Encouragement, and Evaluation) as a guide to the City's successful implementation of a bicycle plan.

Trails

The City of Jurupa Valley has a strong equestrian heritage that dates back hundreds of years. In 1742, the Anza Party traveled on trails through Jurupa Valley on its historic journey to Alta California, prior to the development of California's 25 missions. Trails continue to be an important part of both the heritage and the transportation system of Jurupa Valley. They are part of what gives the City its unique character and help promote its casual, healthy equestrian lifestyle.

Jurupa Valley offers pedestrian, bicycle, equestrian and multi-purpose trails that link urban, rural, and natural areas. These trails accommodate hikers, bicyclists, equestrians and others as an integral part of the County's circulation system. These trails serve both as a means of connecting the unique communities and activity centers within the City to adjacent communities, and as an effective alternate mode of transportation. In addition to transportation, the trail system also serves as a community amenity by providing recreation and leisure opportunities.

The City's trail network is currently planned and implemented through the City's development review process by the Jurupa Valley Community

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

Recreation and Parks District. Jurupa Valley can be found in the following locations:

- On the east side of Bain Street, between Bellegrave Avenue and Limonite Avenue.
- On the west side of Etiwanda Avenue between Bellegrave Avenue and Limonite Avenue.
- On the north and south sides of Bellegrave Avenue, from Etiwanda Avenue to Wineville Avenue.
- On the east side of Wineville Avenue, between Limonite Avenue and 68th Street.
- On the east side of Wineville Avenue between Bellegrave Avenue and Redbud Street.
- On the south side of Canto-Galleano Ranch Road between Calle Del Sol and Etiwanda.
- On the north side of Limonite Avenue, between Wineville Street and Etiwanda Avenue.
- On the south side of 68th Street between I-15 and Lucetta Street.
- On the east side of Lucetta Street between 66th and 68th Streets.
- On the south side of 66th Street between Lucetta Street and Etiwanda Avenue.

The City currently has one developed trail that it maintains, the Santa Ana River Trail. The Santa Ana River Trail is part of a planned regional trail extending across multiple jurisdictions from the Pacific Ocean in Orange County to the San Bernardino Mountains in San Bernardino County. Some communities have trails built and maintained by another entity such as a homeowners' association, a community service area, or a local park and recreation district. These trails lack connectivity to other parts of the County trail system, resulting in a fragmented system. Providing connectivity between City trails and between County trails

and state and federal trails, historic trails, and trails in other jurisdictions will be instrumental in creating a usable trail system. The City has four general types of multi-use, recreational trails:

- **Parkway Trails** are located in, along, or adjacent to a stream's floodplain. Ordinarily it extends the length of the stream but may be broken into segments. Road and trailside parks are part of a parkway.
- **Regional Trails** are the main trails within the County, generally maintained and operated by the County of Riverside's Parks and Open Space District. They are designed to eventually provide linkages between areas that could be quite distant from each other. They are also designed to connect with state and federal trails as well as trails within Jurupa Valley, other cities, and unincorporated areas. Regional trails will have an easement of 34 to 20 feet wide and a trail width of 10 feet.
- **Community Trails** are designed to link areas of a community to the regional trail system and to link areas of a community with each other, as further described below. Such trails are typically maintained and operated by a local parks and recreation district. Typically, community trails have an easement width of 10 to 34 feet wide and a trail width of 4 to 8 feet.
- **Historic Trails** are designated historic routes that recognize the rich history of Jurupa Valley and Riverside County. In Jurupa Valley, the Juan Bautista de Anza National Historic Trail is one segment of a planned 1,200-mile trail connecting historic, cultural, and recreation sites from Nogales, Arizona to the San Francisco Bay Area. Historic trail route designations are graphical representations of the general locations of these historic routes and do not necessarily represent a planned regional or community trail. In some case, the trails have more detailed planning documents that describe interpretive routes for autos and/or non-motorized modes of transportation. These generally are regional or community trail designations that either follow or parallel these routes, thus providing opportunities to

2-44

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

recognize the historic significance of these routes and allowing the possibility of developing interpretive signage and visitor facilities.

Freight

Commercial rail operations, while not as prevalent as they once were, are still common in Jurupa Valley. The Union Pacific (UP) and the Burlington Northern Santa Fe (BNSF) Railroads provide freight service in Riverside County, connecting the County with major markets within California and other destinations north and east. A railroad spur track traverses several large areas of Jurupa Valley and still provides valuable railroad access for a wide variety of commercial and industrial uses, thereby reducing dependence on trucking and air transport. With the increase in residential development in Jurupa Valley, railroad compatibility with adjacent uses is a key land use issue. Stack and rail noise, vibration, and the potential for derailling calls for special planning and design considerations where development is proposed adjacent to or near railroads.

Pedestrian Facilities

Walking is a form of non-motorized transportation that provides health benefits, enhances air quality, reduces traffic congestion, and increases community cohesion by keeping a pedestrian level of activity. Walking is often a primary form of transportation for children, the elderly, and those who cannot afford other transportation modes.

Sidewalks provide safe passage for pedestrians by creating a right-of-way that is separate from vehicular traffic. They are particularly important in, to, and from activity areas around the City, such as shopping districts, schools, recreation centers, and government buildings. Sidewalks encourage pedestrian activity, which is a defining element of community and neighborhood identity. In addition, good pedestrian connections are imperative for transit service because most transit trips begin and end with a pedestrian trip. Lack of sidewalks discourages pedestrian transportation.

The typical pedestrian system could be described as a grid system of streets with sidewalks on both sides that provide easy and direct connections between the trip origin and destination. It should also provide for convenient and safe street crossings and include sidewalks separated from streets and provide shade from trees.

The existing pedestrian facilities were evaluated using five pedestrian measurements described below.

- **Directness:** The directness measure represents the actual pedestrian distance from trip origin to destination. Since pedestrian trips are highly dependent on trip length, the pedestrian infrastructure's ability to provide the shortest and most direct route is critical. The ideal pedestrian network is the grid system, since curved street patterns add distance to the potential trip. Barriers can also affect pedestrian travel. Freeways, rivers, and railroads can divide a community and restrict direct connections between one another except at a limited number of street over/under crossings.
- **Continuity:** Continuity measures the completeness of the pedestrian system. A continuous sidewalk system not only allows the pedestrian to make an uninterrupted trip, it may also be required for a stroller or wheelchair user to utilize the sidewalks. Gaps in continuity can come in the form of missing segments, broken or overgrown vegetation, or physical barriers such as discontinuous streets or fences. Continuity is measured by the completeness of the sidewalk/walkway system and by identifying whether or not gaps exist. Other aspects of continuity are whether there are sidewalks along one or both sides of the street and whether there exists an overall continuity of sidewalk that provides a line of sight from block to block.
- **Street Crossings:** The Achilles heel of pedestrian and equestrian systems is the intersections where they must cross streets. Intersections are where the pedestrian and equestrian must interface with automobiles, which can be especially dangerous for equestrians, since response times may be slower, which can result

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

2-45

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

in safety concerns. As streets get wider and carry higher volumes of traffic, potential uses by pedestrians are avoided as safety becomes a concern. There are many factors that affect the pedestrian's real and perceived comfort and safety in crossing the street ranging from traffic control, crosswalks, number and width of travel lanes, travel speeds, and traffic volumes. Major arterial roadways can significantly affect a pedestrian's safety in crossing a street.

- Visual Interest and Amenity:** This measure of the pedestrian system's attractiveness and appeal is the most difficult to quantify and compare, and the most likely to change as an area matures. Some aspects of this measure are related to facilities that enhance the comfort of the user. These include elements such as shade trees, street lighting, benches, distance from sidewalk or trail to traffic lanes, relationship to buildings and street furniture, existence of curbside parking, and speed of traffic. The latter may be particularly important to pedestrians with mobility or visual impairments. Other elements are important to the visual appeal such as landscaping, planter boxes, trash receptacles, and public art.
- Pedestrian Security:** The pedestrian environment must feel like a safe place for people to walk. The key pedestrian security facility element is whether the pedestrian is clearly visible to other pedestrians or activities. Whereas this measurement is more appropriate at a site level, one can begin to identify areas where security might be an issue at the neighborhood level. Pedestrians require a sense of security, both through visual line of sight with others and separation from vehicles. Pedestrians feel safer if there is adequate distance from adjacent travel lanes, curbside parking, and minimal conflicts with vehicles exiting driveways. They also require well-lit pathways and sidewalks for night use.

Figure 2.11 illustrates the existing sidewalks within the City of Jurupa Valley and Table 2.8 lists the roadway segments without and with pedestrian facilities. As shown in Figure 2.11, there are many gaps in continuity of sidewalks that would prevent pedestrians from making

uninterrupted trips within the City. Also, Van Buren Boulevard, Jurupa Road, Camino Real, Limonite Avenue, and Mission Boulevard have curves that add distance to potential pedestrian trips. Amenities such as shade trees, street lighting, and benches, occur on few segments and have many gaps in continuity. Therefore, the City lacks a comprehensive pedestrian network that connects all areas of the City to parks, libraries, schools, and other local destinations.

Transit

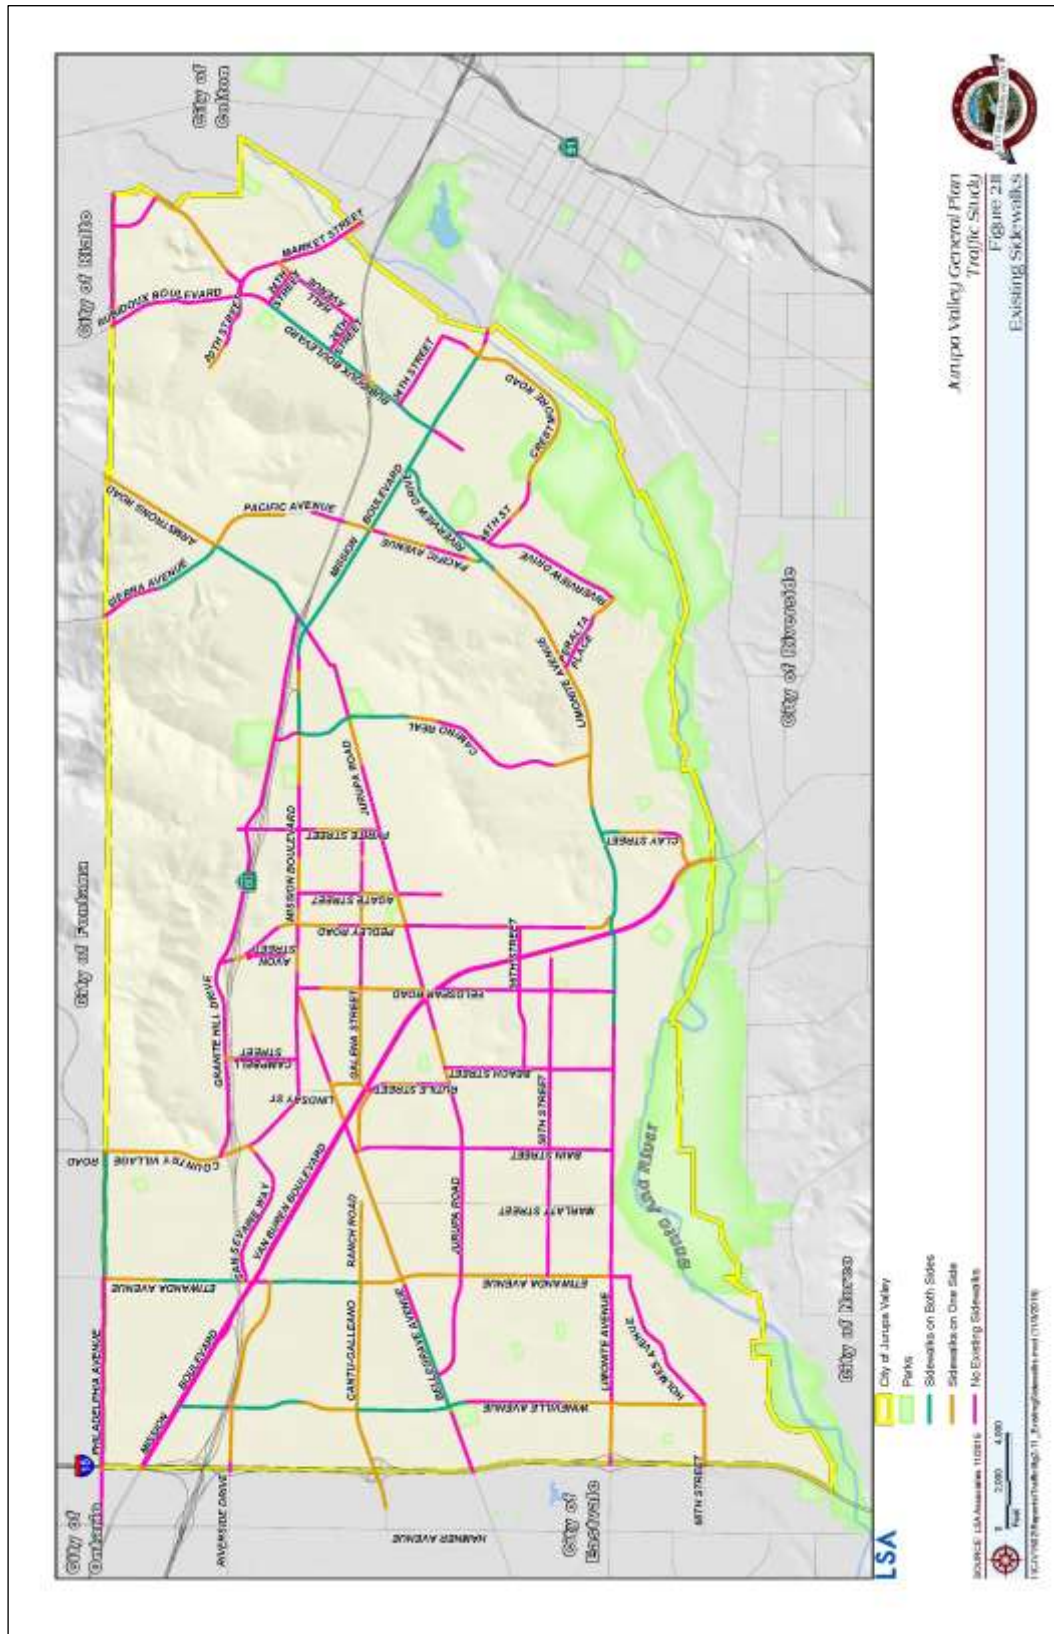

The Riverside Transit Agency (RTA) provides numerous public transportation opportunities for residents and visitors in Jurupa Valley. These public transportation opportunities include fixed-route transit, intercity transit, paratransit, senior transit, rural transit, and private transit services.

Fixed-Route and Demand-Response Services

Transit, paratransit, and private provider services are characterized as being either a fixed-route or demand-response systems. The Community Transit Association of America (CTAA) defines fixed-route service to include any transit service in which vehicles run along an established path at preset times. Demand-response service is any non-fixed-route system of transporting individuals that requires advanced scheduling by the customer including services provided by public entities, non-profits, and private providers.

RTA operates fixed routes providing public transit service throughout western Riverside County and coordinates transit services throughout a 2,500-square mile service area. RTA provides local and regional services throughout the region with 35 fixed routes, eight CommuterLink routes, and Dial-A-Ride services.

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

CHAPTER 2 – EXISTING TRANSPORTATION SYSTEM

CommuterLink routes provide express bus routes to Riverside, Orange, San Diego, and San Bernardino Counties and include RTA's newest generation of express buses.

Dial-A-Ride is an origin to destination reservation transportation service for seniors and persons with disabilities. Dial-A-Ride vehicles travel to areas within three-quarters of a mile of an RTA local fixed-route.

Figure 2.12 illustrates the fixed-route transit services and previously referenced Table 2.F lists the roadway segments without and with transit services in the City. As shown in Figure 2.12, RTA currently provides five fixed routes that operate within and through the City on most major roadways. Adequate connectivity exists on most major roadways; however, there are existing deficiencies on Van Buren Boulevard from Limonite Avenue to the northwestern City limits, Belgrave Avenue from the western City limits to Mission Boulevard, Jurupa Road from Van Buren Boulevard to Mission Boulevard, Camino Real from Mission Boulevard to Limonite Avenue, and Edwanda Avenue from Jurupa Road to the northern City limits.

The composition of the existing transit facilities will require change over time due to existing deficiencies and changes in demographics, land use, and population. Because transit facilities within the City are currently operated by RTA, the City should develop goals and policies in the General Plan that encourages more coordination and collaboration with RTA to provide residents with additional mode choices including an expanded transit system.

Commuter Rail

Although railroads are independent operations, the interaction between rail and other modes of transportation does affect the transportation system. Motorized vehicles, pedestrians, and freight movement are all

affected by delay caused by trains at at-grade crossings.

Commuter rail service through the City of Jurupa Valley is provided by Metrolink and is illustrated in Figure 2.13. The Pedley Metrolink Station is located on Pedley Road in Jurupa Valley and connects to the Riverside-Downtown station to the east and the East Ontario station to the west. RTA fixed route 29 provides a transit connection to the Pedley Metrolink station.

The Pedley Metrolink Station is served by Metrolink's Riverside Line, which provides rail service from Riverside to Downtown Los Angeles. The Riverside line includes stops at Downtown Riverside, Pedley, East Ontario, Downtown Pomona, City of Industry, Montebello, and Downtown Los Angeles. Figure 2.13 illustrates Metrolink's Riverside Line.

Airports

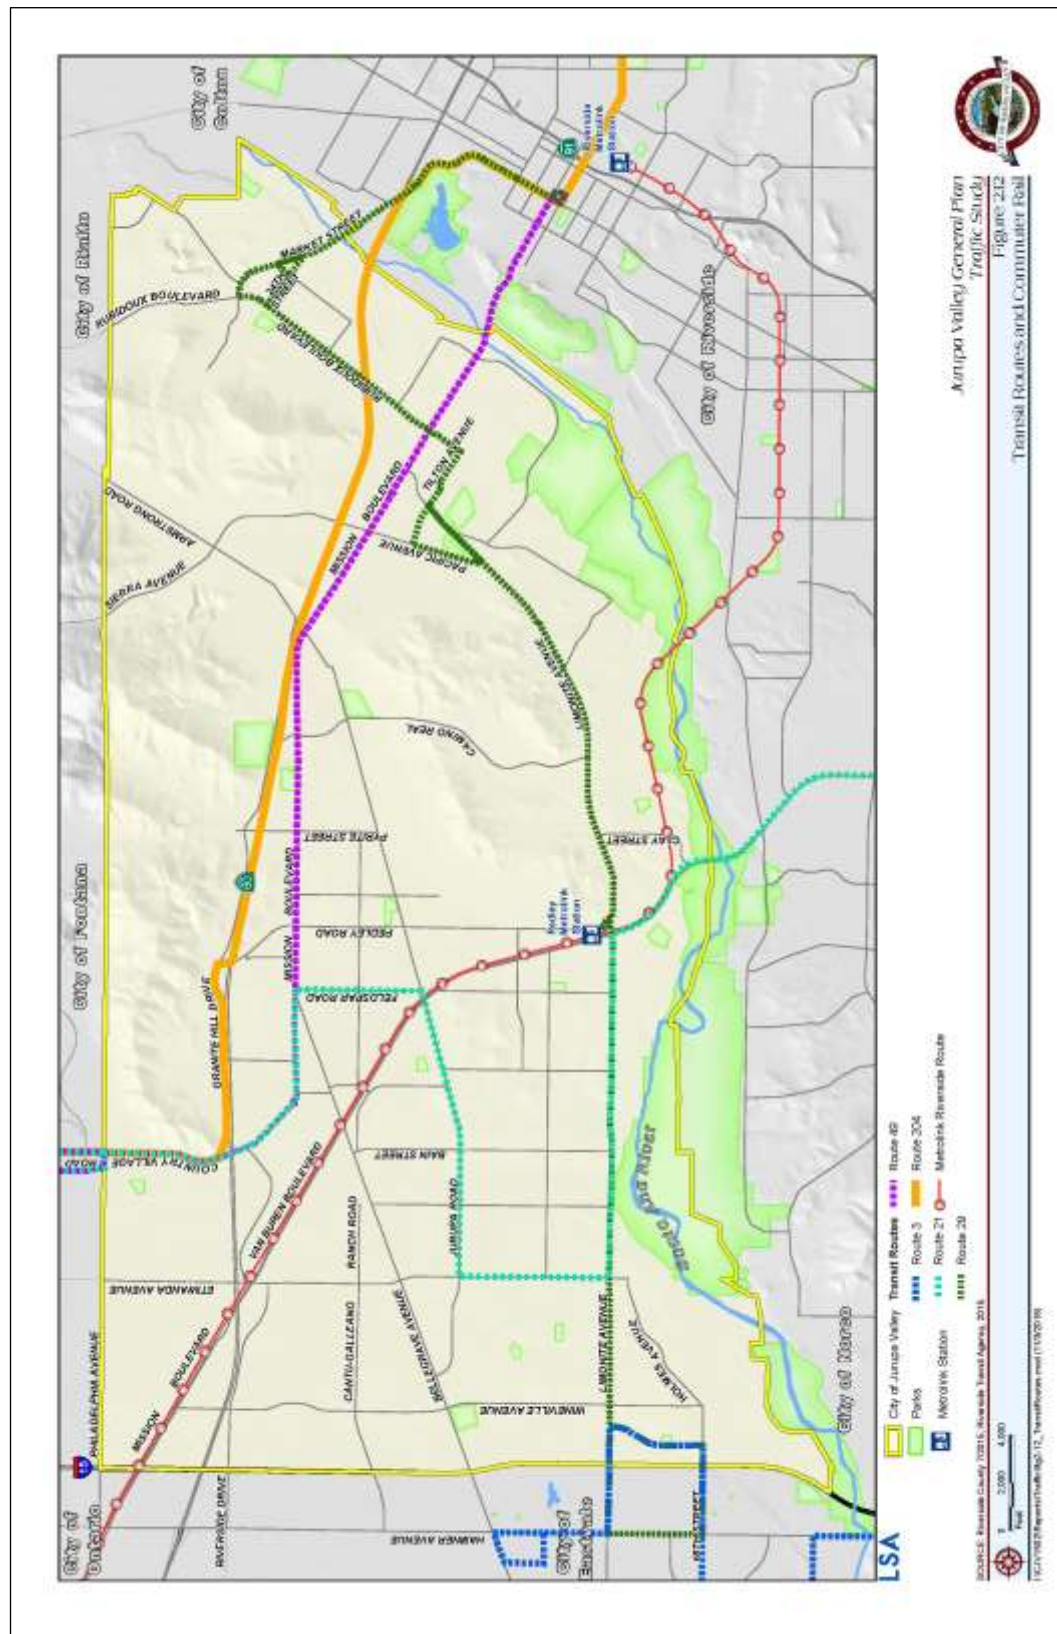

There is one airport located within the City of Jurupa Valley and six regional airports in the vicinity. Previously referenced Figure 2.1 illustrates the airports. Flabob Airport and Riverside Municipal Airport offer general aviation facilities and Ontario International Airport provides scheduled commercial service.

CHAPTER 3 – GENERAL PLAN BUILD-OUT TRAFFIC

The City of Jurupa Valley's long-term mobility system goals and policies are closely correlated to the Land Use Element. These goals and policies are intended to provide a balance between the City's future growth and land use development, roadway size, and traffic levels of service. This chapter describes the roadway network traffic volumes under forecast build-out conditions.

CHAPTER CONTENTS

- Analysis Scenarios
- Future No Project Conditions
- General Plan Build-out Conditions

Analysis Scenarios

To provide the transportation infrastructure and describe the future transportation conditions, two General Plan scenarios were evaluated: Future No Project and General Plan Build-out conditions. The Future No Project scenario includes land use data and the roadway network from the County of Riverside's Circulation Element adopted in 2003 through the Riverside County Integrated Project (RCIP). The General Plan Build-out includes the land use data and roadway network from the City of Jurupa Valley Land Use Element. For both scenarios, build-out conditions are assumed for year 2035.

Future No Project

To forecast future traffic volumes within the City of Jurupa Valley, a travel demand model (TDM) was applied. The Riverside County Transportation Analysis Model (RivTAM) is a focused model developed using the Southern California Association of Governments (SCAG) Regional Model and refined to include updates such as additional zones, roadways, and transit networks. RivTAM was used to forecast the Future No Project traffic volumes using data including population, households, school enrollments, household income, employment, and the roadway network adopted in the County of Riverside's Circulation Element. This data were then converted to socioeconomic data and input into the model prior to running the four-step modeling process

(trip generation, trip distribution, mode choice, and trip assignment) to develop future no project traffic volumes.

General Plan Build-out

The General Plan Build-out was conducted using future traffic projections from RivTAM. In consultation with City staff, RivTAM was refined to include data from the City of Jurupa Valley Land Use Element, which was converted into socioeconomic data and input to the RivTAM General Plan Build-out conditions. The Traffic Analysis Zone (TAZ) structure within the City of Jurupa Valley was refined to include updated zone boundaries based on current and future land uses, and existing and future roadways. The refined forecasts were used to conduct a citywide analysis to determine areas of congestion, and levels of service.

Future No Project Conditions

Roadway Network

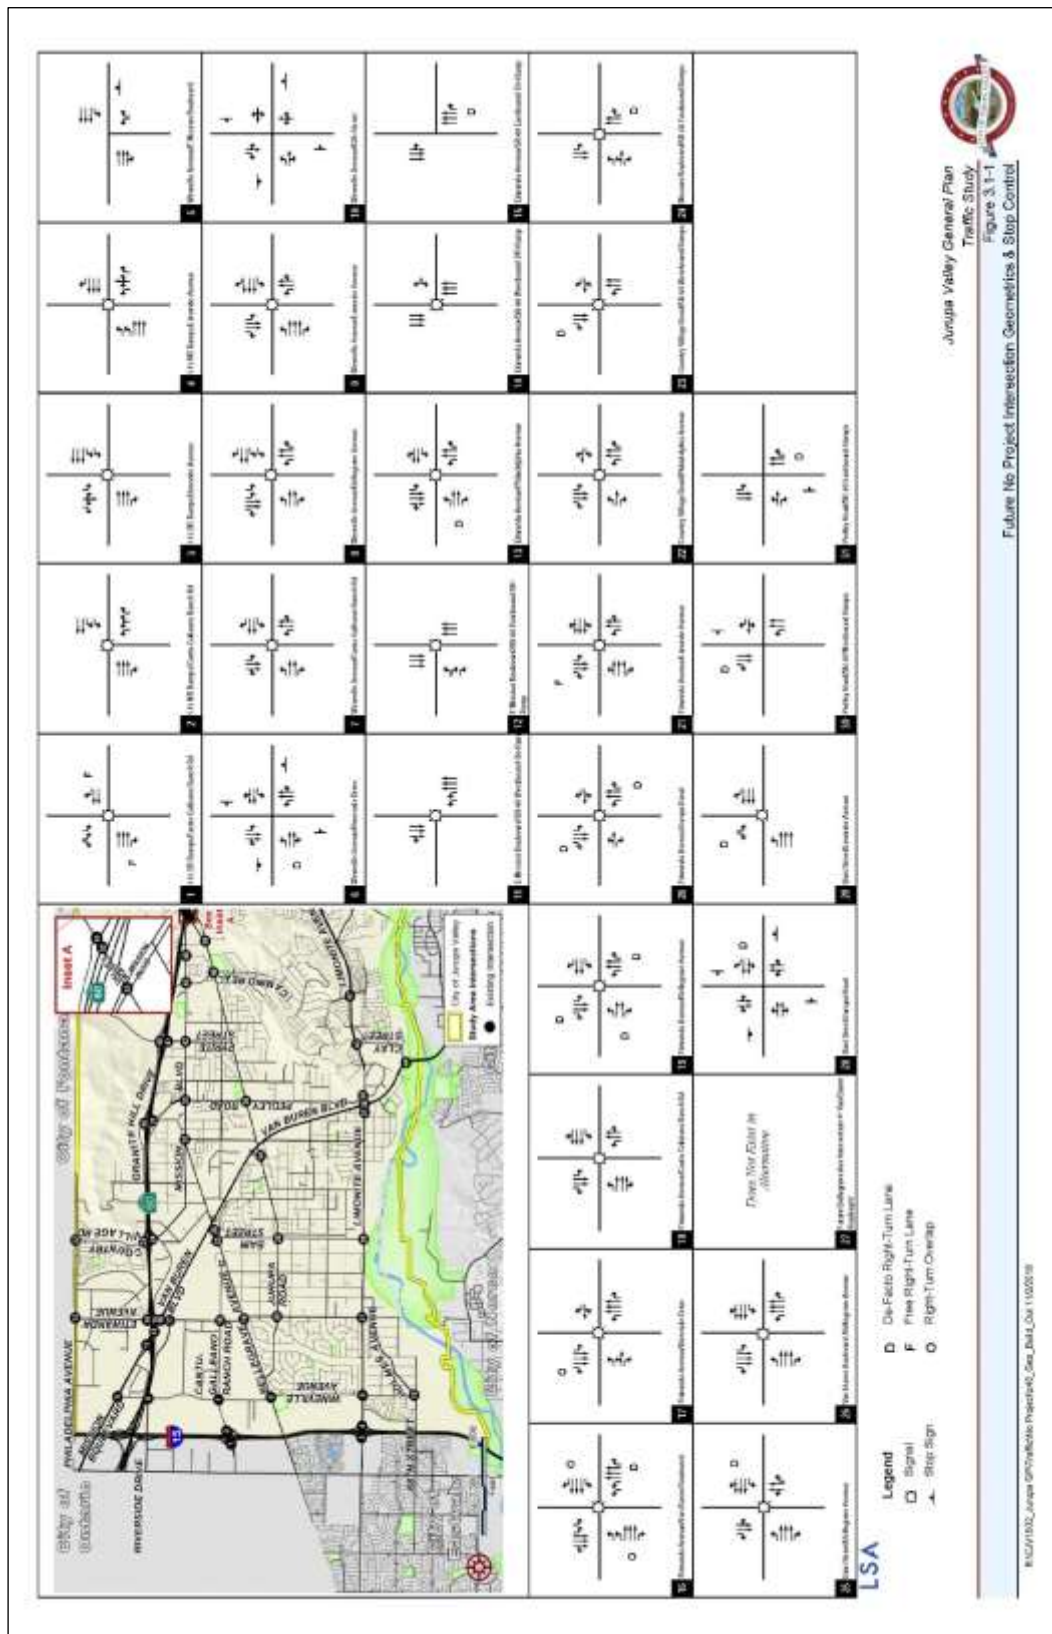

The Future No Project scenario roadway network incorporates all roadways shown in the Riverside County Circulation Element and included in the RivTAM network. Figures 3.1-1 and 3.1-2 illustrate the Future No Project intersection geometrics and stop control.

Intersection Traffic Volumes

The intersection traffic volumes for Future no Project conditions were developed using the RivTAM base year and future year model networks. Raw traffic model data from RivTAM base and future year model runs were post-processed using National Cooperative Highway Research Program (NCHRP) 355 methodologies to develop peak-hour turning movement volumes at each study area intersection and roadway segments. The following describes the methodology used to post-process model volumes to develop peak hour intersection volumes for Future No Project conditions:

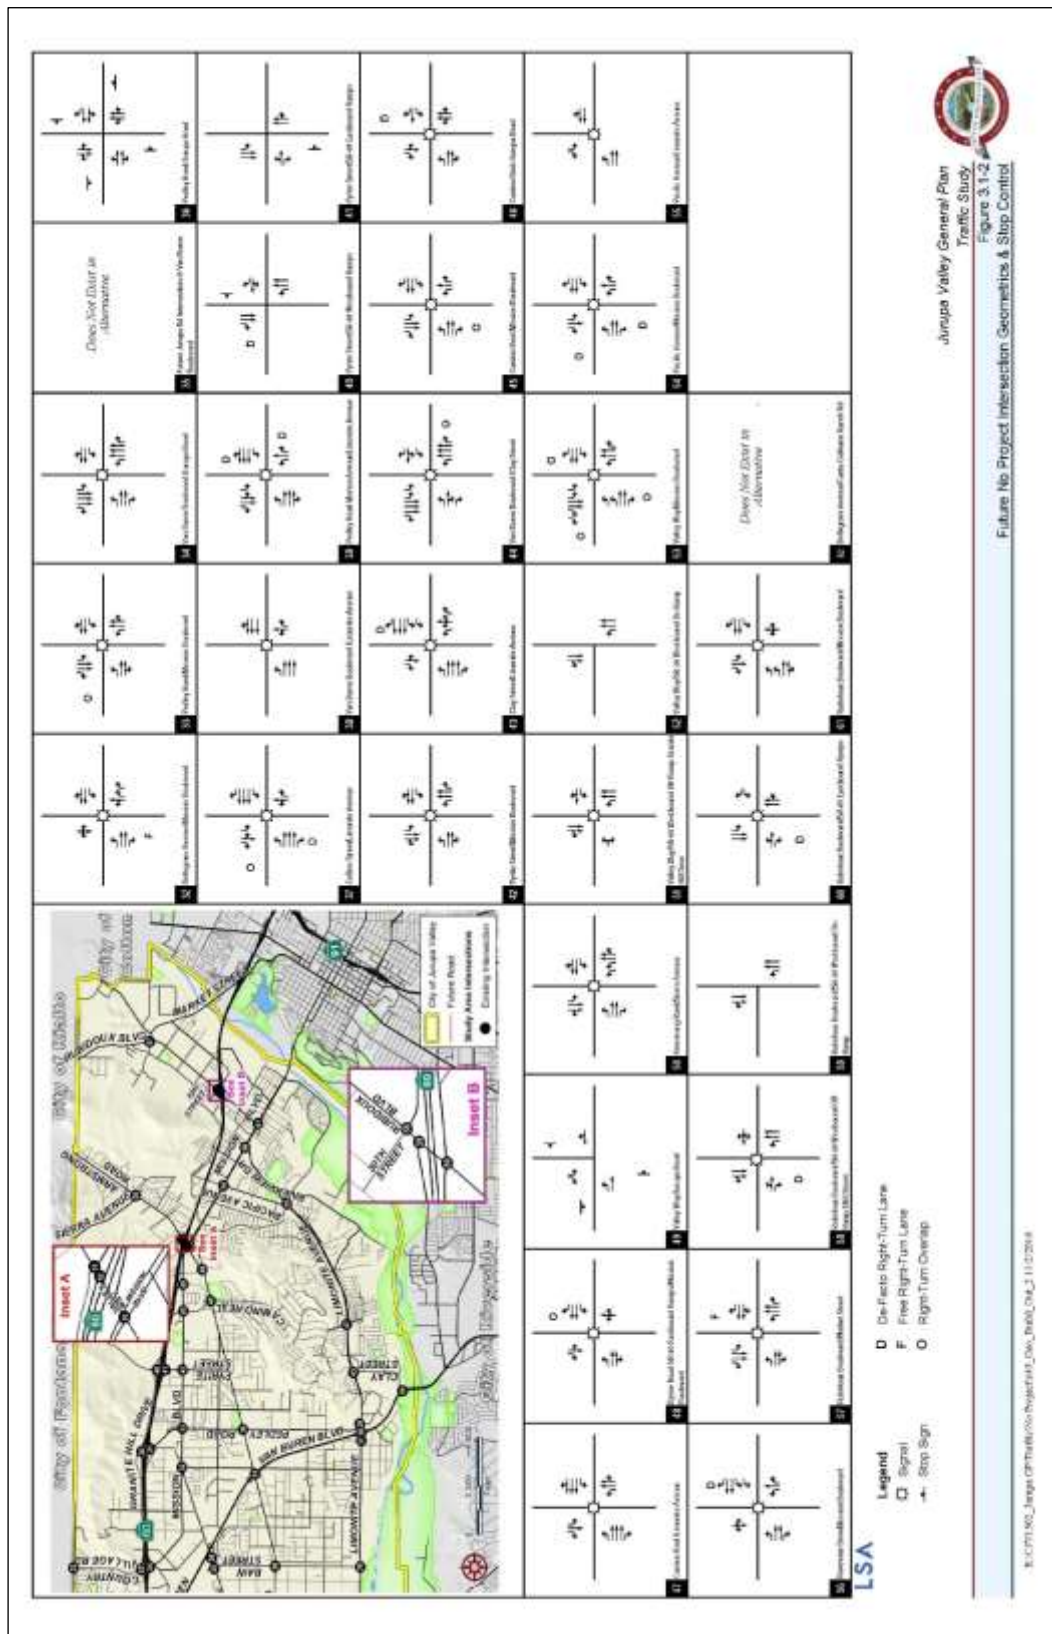

CHAPTER 3 – GENERAL PLAN BUILD-OUT TRAFFIC

THIS PAGE INTENTIONALLY LEFT BLANK.

CHAPTER 3 – GENERAL PLAN BUILD-OUT TRAFFIC

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 3 – GENERAL PLAN BUILD-OUT TRAFFIC

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 3 – GENERAL PLAN BUILD-OUT TRAFFIC

1. The difference between the modeled 2007 and 2035 peak period directional arterial traffic volumes in PCIs (for each intersection approach and departure) was identified from loaded network plots. This difference defines growth in traffic over the 28-year period.
2. The incremental growth in peak period approach and departure volumes between 2007 and 2035 was factored to develop the incremental change in peak-hour volumes. RvTAM uses a three-hour a.m. peak period and a four-hour p.m. peak period. The Southern California Association of Governments (SCAG) has established that the a.m. peak hour comprises 36 percent of the peak period and the p.m. peak hour comprises 28 percent of the peak period. Therefore, the incremental changes in peak period volumes were multiplied by the appropriate factors to develop incremental changes in peak-hour volumes.
3. The incremental growth in approach and departure volumes between 2007 and 2035 was factored to reflect the forecast growth between the year of the ground counts (2015) and 2035. For this purpose, linear growth between the 2007 base condition and the forecast 2035 condition was assumed. As the increment between existing (2015) and build-out (2035) is 20 years of the 38-year time span, a factor of 0.71 (i.e., 20/28) was used.
4. The forecast growth in approach and departure volumes through build-out year (2035) conditions was added to the 2015 ground counts, resulting in "post-processed" build-out year (2035) link volumes.
5. Forecast year 2035 turn volumes were developed using existing (2015) turn volumes and the future approach and departure volumes, based on the methodologies contained in *National Cooperative Highway Research Program Report (NCHRP) 255: Highway Traffic Data for Urbanized Area Project Planning and Design* (Transportation Research Board, December 1983).

Detailed volume development worksheets are contained in Appendix B. The Future No Project a.m. and p.m. peak hour intersection traffic volumes are illustrated in Figures 3.2-1 and 3.2-2.

Roadway Segment Traffic Volumes

The roadway segment volumes for Future No Project were developed using the same methodology described under "Intersection Traffic Volumes." Table 3.A illustrates the Future No Project daily traffic volumes at study area roadway segments. Volume development worksheets are contained in Appendix B.

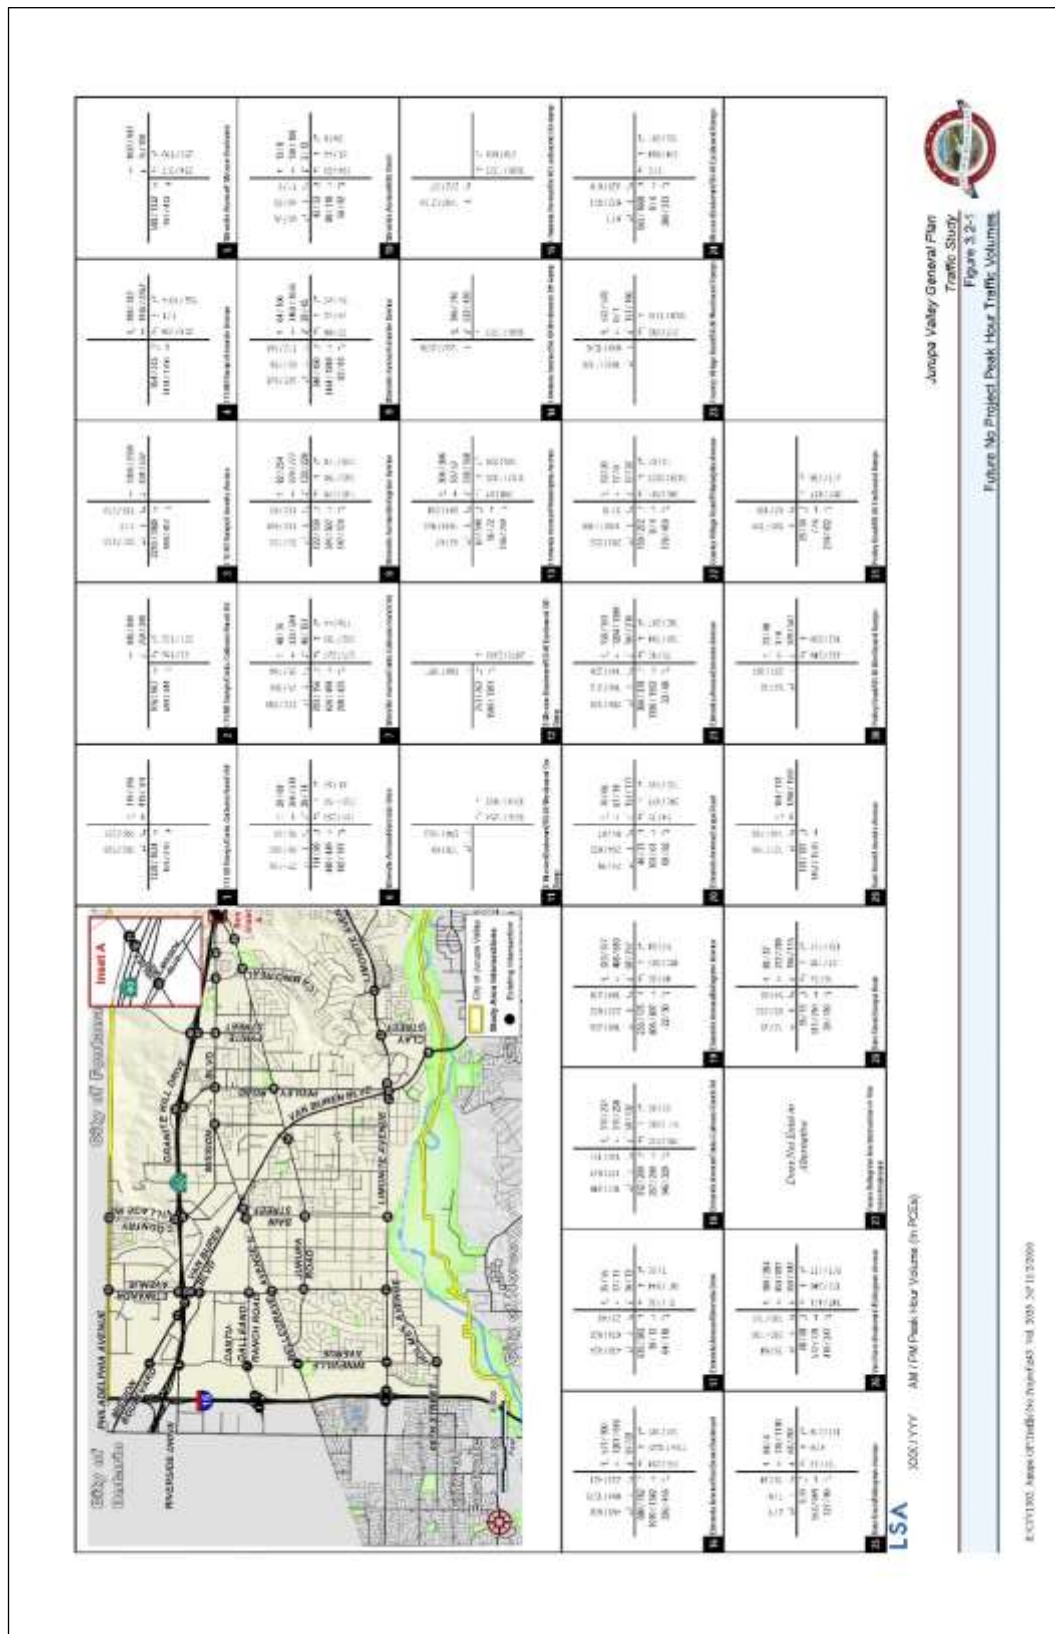

Intersections Levels of Service

A level of service analysis for Future No Project was conducted at study area intersections to determine the projected intersection performance. Table 3.B illustrates the results of this analysis and shows that all intersections are projected to operate at satisfactory levels of service (D or better), with the exception of the following intersections:

- I-15 Northbound Ramps/Limonite Avenue (p.m. peak hour);
- Wineville Avenue/Mission Boulevard (a.m. and p.m. peak hours);
- Wineville Avenue/Riverside Drive (p.m. peak hour);
- Wineville Avenue/Road/Cantu-Galleano Ranch Road (p.m. peak hour);
- Wineville Avenue/Limonite Avenue (p.m. peak hour);
- Mission Boulevard/SR-60 Eastbound Off-Ramp (a.m. and p.m. peak hours);
- Etiwanda Avenue/SR-60 Eastbound On-Ramp (a.m. and p.m. peak hours);
- Etiwanda Avenue/Van Buren Boulevard (a.m. and p.m. peak hours);
- Etiwanda Avenue/Bellevue Avenue (a.m. and p.m. peak hours);

- Camino Real/Limonite Avenue (p.m. peak hour);
- Byrne Road/SR-60 Eastbound Ramps/Mission Boulevard (p.m. peak hour);
- Valley Way/Jurupa Road (a.m. and p.m. peak hours);
- Armstrong Road/Sierra Avenue (a.m. and p.m. peak hours);

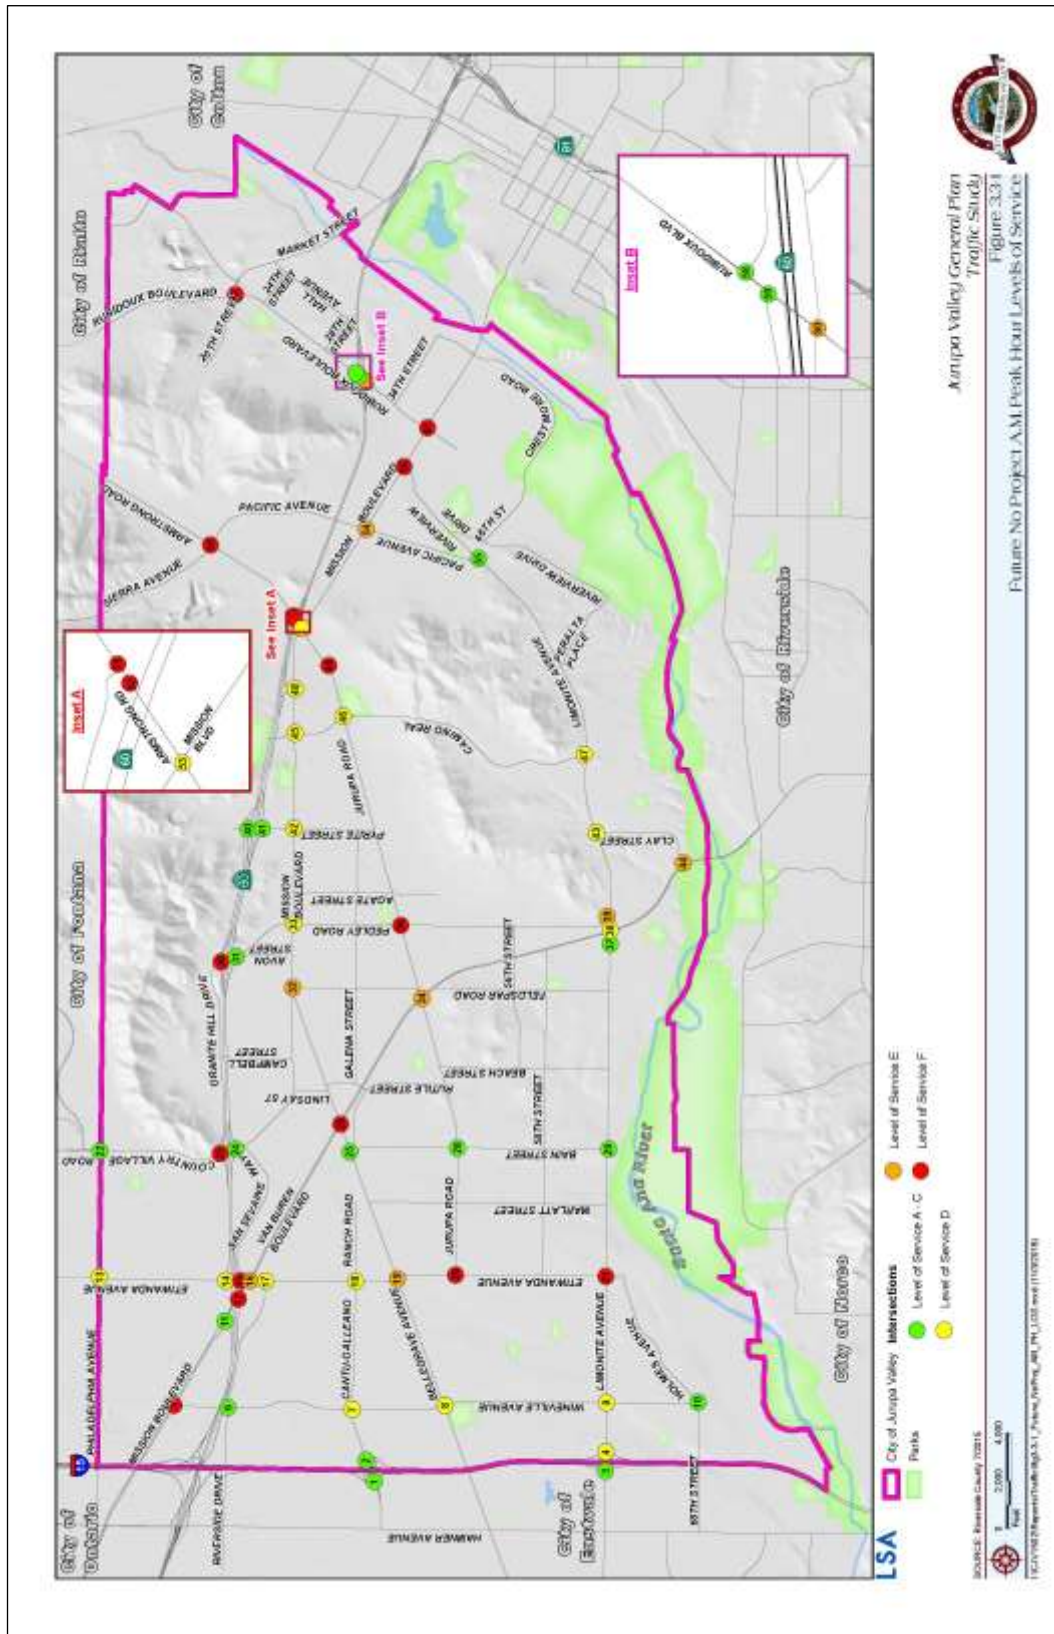

- Valley Way/SR-60 Westbound Off-Ramp-Granite Hill Drive (a.m. and p.m. peak hours);
- Valley Way/SR-60 Westbound On-Ramp (a.m. and p.m. peak hours);
- Pacific Avenue/Mission Boulevard (a.m. and p.m. peak hours);
- Pacific Avenue/Limonite Avenue (p.m. peak hour);
- Rhenview Drive/Mission Boulevard (a.m. and p.m. peak hours);
- Rubidoux Boulevard/Market Street (a.m. and p.m. peak hours);
- Rubidoux Boulevard/SR-60 Eastbound Ramps (a.m. and p.m. peak hours); and
- Rubidoux Boulevard/Mission Boulevard (a.m. and p.m. peak hours).

Figures 3.3-1 and 3.3-2 illustrate the locations of the study area intersections and corresponding a.m. and p.m. levels of service under Future No Project conditions. LOS worksheets are included in Appendix C.

Roadway Segment Levels of Service

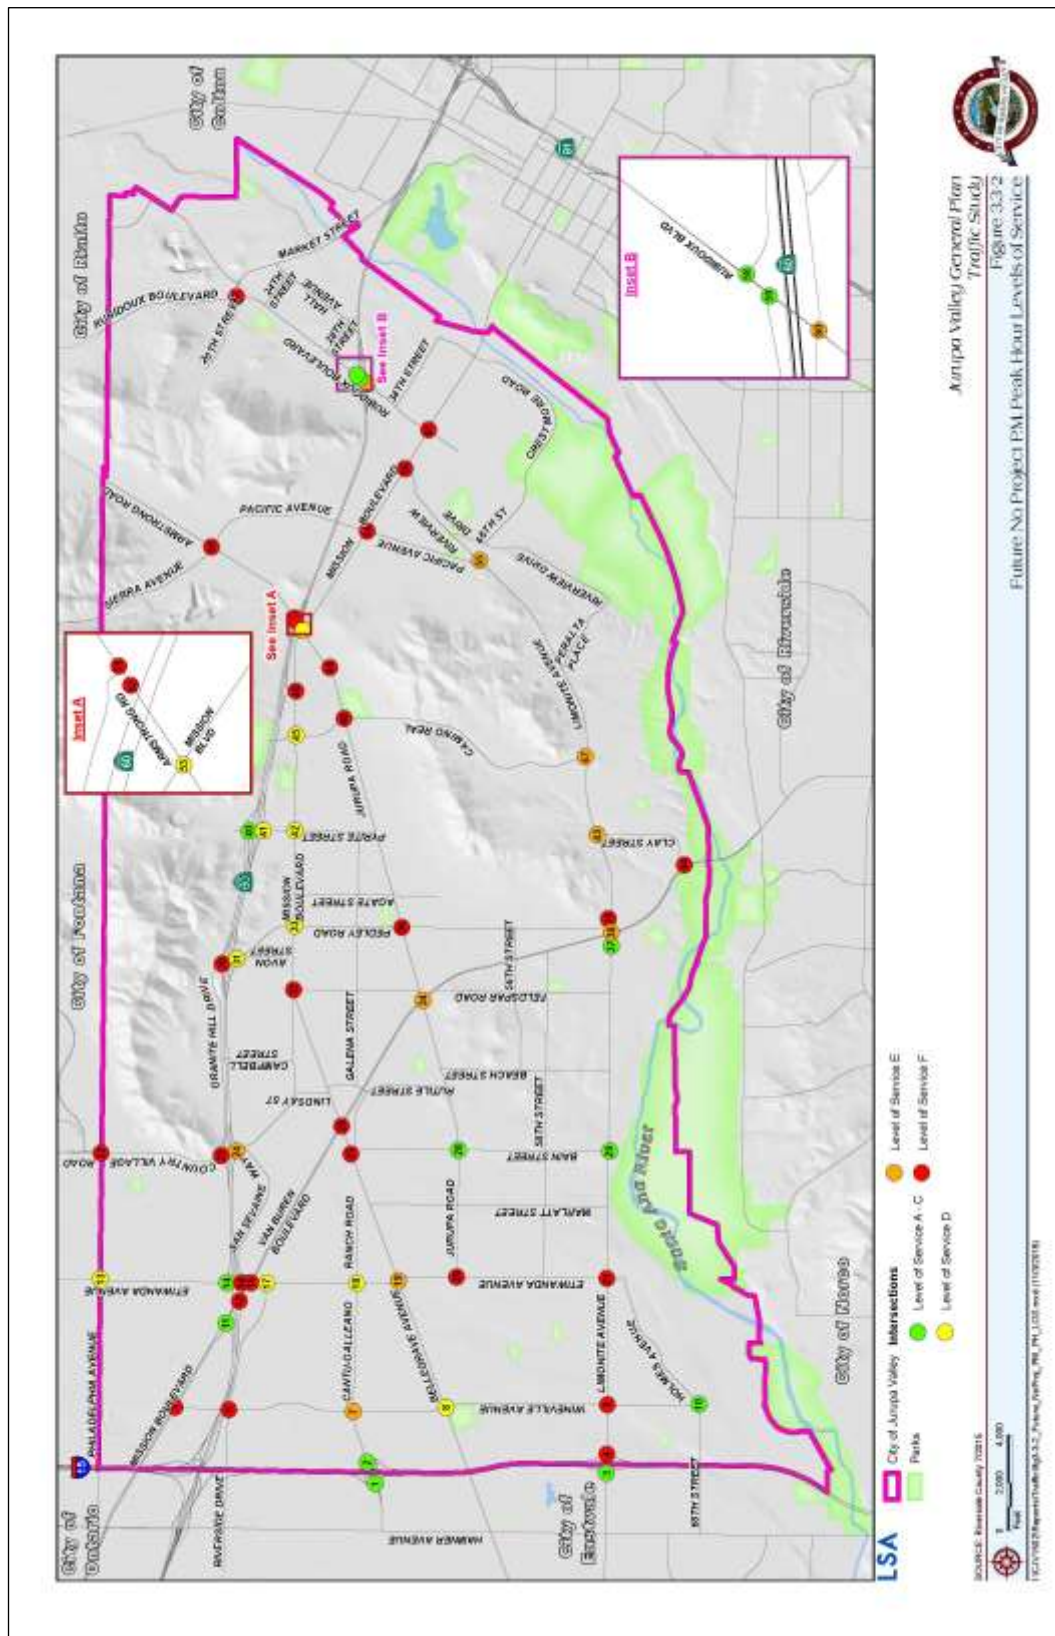

A level of service analysis was conducted at study area roadway segments to determine the projected roadway segment performance under Future No Project conditions. As shown in previously referenced Table 3.A, all roadway segments are projected to operate at satisfactory levels of service (D or better), with the exception of the following roadway segments:

- Country Village Road from Philadelphia Avenue to SR-60 Westbound Ramps;
- Country Village Road from SR-60 Westbound Ramps to SR-60 Eastbound Ramps;
- Clay Street from Limonite Avenue to Van Buren Boulevard;
- Van Buren Boulevard from Etiwanda Avenue to Bellegrave Avenue;

CHAPTER 3 – GENERAL PLAN BUILD-OUT TRAFFIC

- Clay Street from Limonite Avenue to Van Buren Boulevard;
- Van Buren Boulevard from Etiwanda Avenue to Bellegrove Avenue;
- Van Buren Boulevard from Bellegrove Avenue to Jurupa Road;
- Van Buren Boulevard from Jurupa Road to Limonite Avenue;
- Van Buren Boulevard from Limonite Avenue to Clay Street;
- Mission Boulevard from SR-60 Eastbound Ramps to Valley Way;
- Mission Boulevard east of Rubidoux Boulevard;
- Bellegrove Avenue from Etiwanda Avenue to Cantu-Galleano Ranch Road;
- Bellegrove Avenue from Cantu-Galleano Ranch Road to Van Buren Boulevard;
- Valley Way from SR-60 Eastbound On-Ramp to SR-60 Westbound Ramps;
- Valley Way from SR-60 Westbound Ramps to Sierra Avenue;
- Limonite Avenue from I-15 Southbound Ramps to I-15 Northbound Ramps;
- Limonite Avenue from I-15 Northbound Ramps to Wineville Avenue; and
- Sierra Avenue west of Armstrong Road.

Figure 3.4 illustrates the locations of the roadway segments and corresponding levels of service under Future No Project conditions.

General Plan Build-out Conditions

Roadway Network

The General Plan Build-out scenario includes modifications to the existing roadway network based on input from the City of Jurupa Valley

to reflect the Jurupa Valley Mobility goals. Following are recommended improvements to the City's roadway network:

Etiwanda Avenue: The roadway segment south of Limonite Avenue is proposed to include a two-lane Secondary roadway bridge extension from 66th Street over the Santa Ana River to Arlington Avenue.

Van Buren Boulevard: The roadway segments from Etiwanda Avenue to Clay Street are proposed to be widened from a four-lane Urban Arterial to an eight-lane Expressway. The intersection of Van Buren Boulevard/Bellegrove Avenue is proposed to realign to the south with a new connector at Van Buren Boulevard/Van Buren Connector. Also, the intersection of Van Buren Boulevard/Jurupa Road is proposed to realign to the north with a new connector at Van Buren Boulevard/Van Buren Connector.

Cantu-Galleano Ranch Road: The roadway segments between Etiwanda Avenue and Van Buren Boulevard are proposed to be widened from four-lane Major roadways to six-lane Urban Arterials. The roadway segment east of Etiwanda Avenue is proposed to align with Bellegrove Avenue and create a new intersection at Bellegrove Avenue/Cantu-Galleano Ranch Road.

Bellegrove Avenue: The roadway segment between Marlatt Street and Dodd Street is proposed to realign with Cantu-Galleano Ranch Road and end at the new intersection of Bellegrove Avenue/Cantu-Galleano Ranch Road. A new intersection west of Bain Street is proposed to connect at Van Buren Connector/Bellegrove Avenue.

Market Street: The roadway segment east of Rubidoux Boulevard is proposed to be widened from a two-lane Arterial to a three-lane Major Roadway.

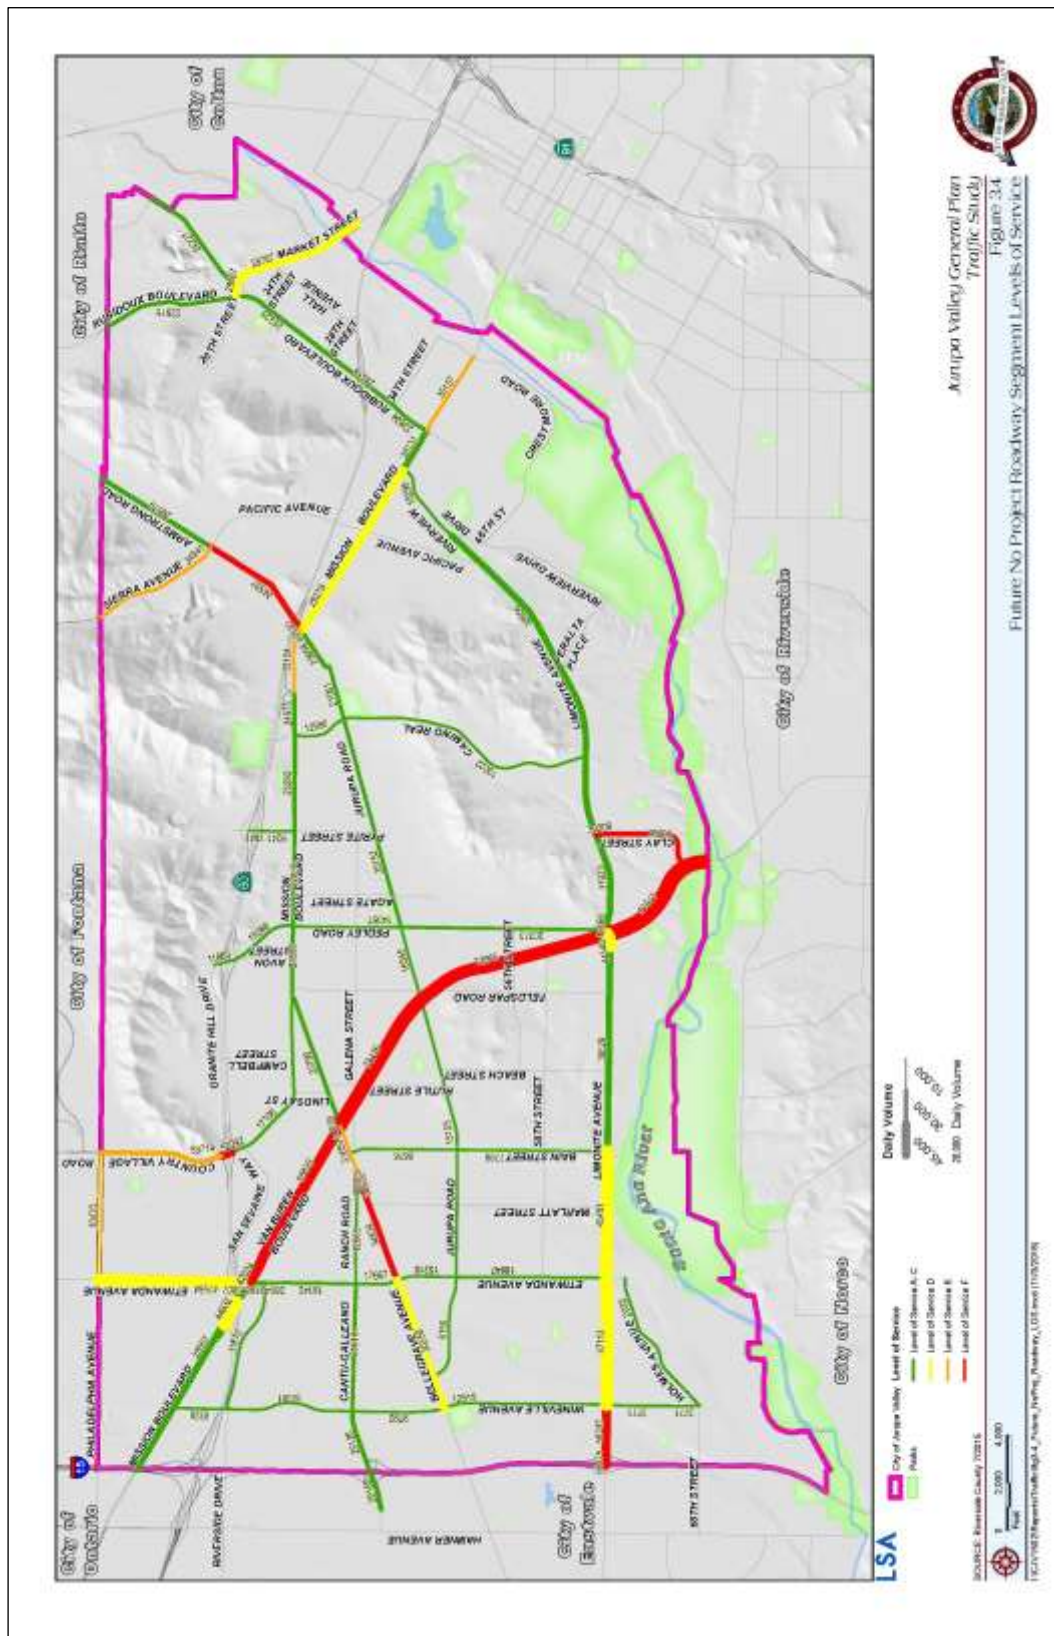

Figures 3.5-1 and 3.5-2 illustrate the General Plan Build-out intersection geometrics and stop control with the proposed roadway modifications.

CHAPTER 3 – GENERAL PLAN BUILD-OUT TRAFFIC

Intersection Traffic Volumes

The development of future intersection traffic volumes for General Plan Build-out conditions is similar to the Future No Project conditions with the exception of the roadway network modifications that were described previously for General Plan Build-out. These modifications are not considered significant enough to divert or reroute traffic in large volume. Therefore, the same volume development methodology used for Future No Project conditions was used for General Plan Build-out.

Detailed volume development worksheets are contained in Appendix B. The General Plan Build-out a.m. and p.m. peak hour intersection traffic volumes are illustrated in Figures 3.6-1 and 3.6-2.

Roadway Segment Traffic Volumes

The roadway segment volumes were developed using the same methodology described under "Intersection Traffic Volumes." Table 3.C illustrates the General Plan Build-out daily traffic volumes at study area roadway segments.

Intersection Levels of Service

A level of service analysis for General Plan Build-out was conducted at study area intersections to determine the projected intersection performance. Table 3.D illustrates the results of this analysis, and shows that all intersections are projected to operate at satisfactory levels of service D or better, with the exception of the following intersections:

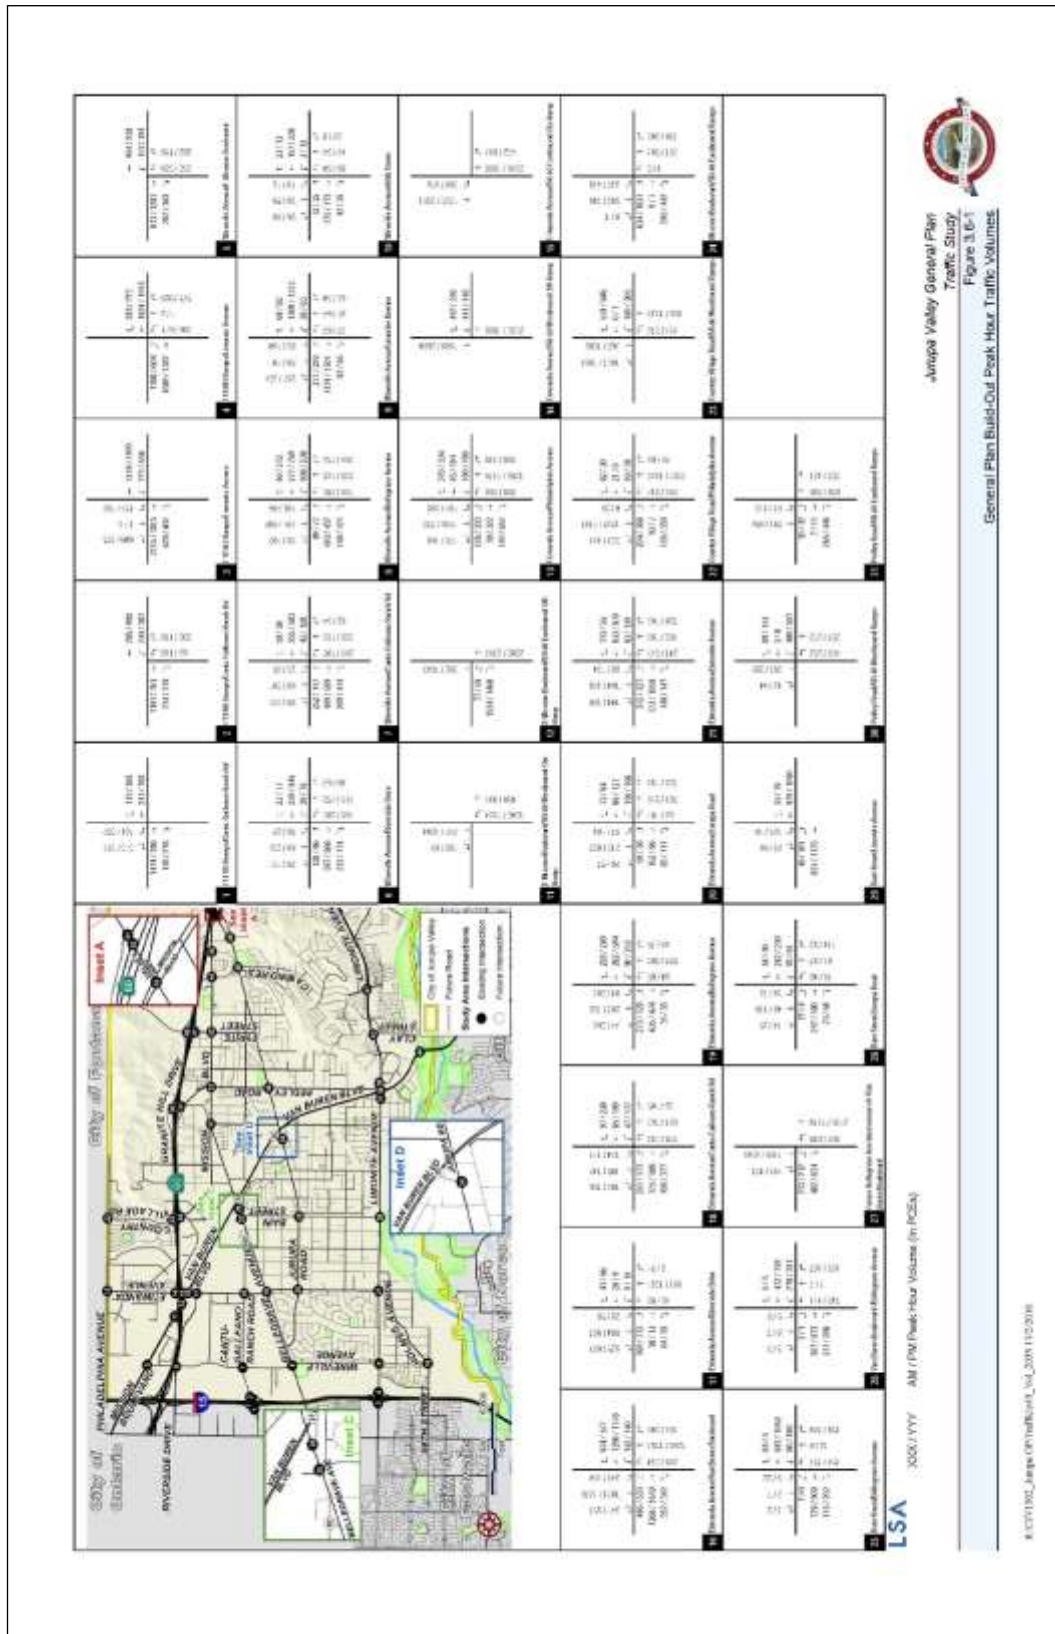

- I-15 Southbound Ramps/Uimonite Avenue (p.m. peak hour);
- I-15 Northbound Ramps/Uimonite Avenue (p.m. peak hour);
- Wineville Road/Mission Boulevard (a.m. and p.m. peak hours);
- Wineville Road/Riverside Drive (p.m. peak hour);
- Wineville Avenue/Road/Cantu-Galleano Ranch Road (p.m. peak hour);
- Mission Boulevard/SR-60 Eastbound Off-Ramp (a.m. and p.m. peak hours);
- Etiwanda Avenue/Philadelphia Avenue (a.m. and p.m. peak hours);
- Etiwanda Avenue/SR-60 Eastbound On-Ramp (a.m. and p.m. peak hours);
- Etiwanda Avenue/Van Buren Boulevard (a.m. and p.m. peak hours);
- Etiwanda Avenue/Bellegrave Avenue (a.m. peak hour);
- Etiwanda Avenue/Uimonite Avenue (a.m. and p.m. peak hours);
- Country Village Road/Philadelphia Avenue (p.m. peak hour);
- Country Village Road/SR-60 Westbound Ramps (a.m. and p.m. peak hours);
- Van Buren-Bellegrave Connector/Bellegrave Avenue (a.m. and p.m. peak hours);
- Van Buren Boulevard/Van Buren-Bellegrave Connector (a.m. and p.m. peak hours);
- Pedley Road/SR-60 Westbound Ramps (a.m. and p.m. peak hours);
- Jurupa Road/Van Buren-Jurupa Connector (a.m. and p.m. peak hours);
- Van Buren Boulevard/Van Buren-Jurupa Connector (a.m. and p.m. peak hours);
- Pedley Road/Jurupa Road (a.m. and p.m. peak hours);
- Pedley Road-Morton Avenue/Uimonite Avenue (a.m. and p.m. peak hours);
- Pyrite Street/SR-60 Westbound Ramps (p.m. peak hour);
- Pyrite Street/SR-60 Eastbound Ramps (p.m. peak hour);
- Clay Street/Uimonite Avenue (a.m. and p.m. peak hours);

- Rubidoux Boulevard/Market Street (a.m. and p.m. peak hours);
- Rubidoux Boulevard/SR-60 Eastbound Ramps (a.m. and p.m. peak hours);
- Rubidoux Boulevard/Mission Boulevard (a.m. and p.m. peak hours); and
- Bellegrove Avenue/Cantu-Galeano Ranch Road (a.m. and p.m. peak hours).

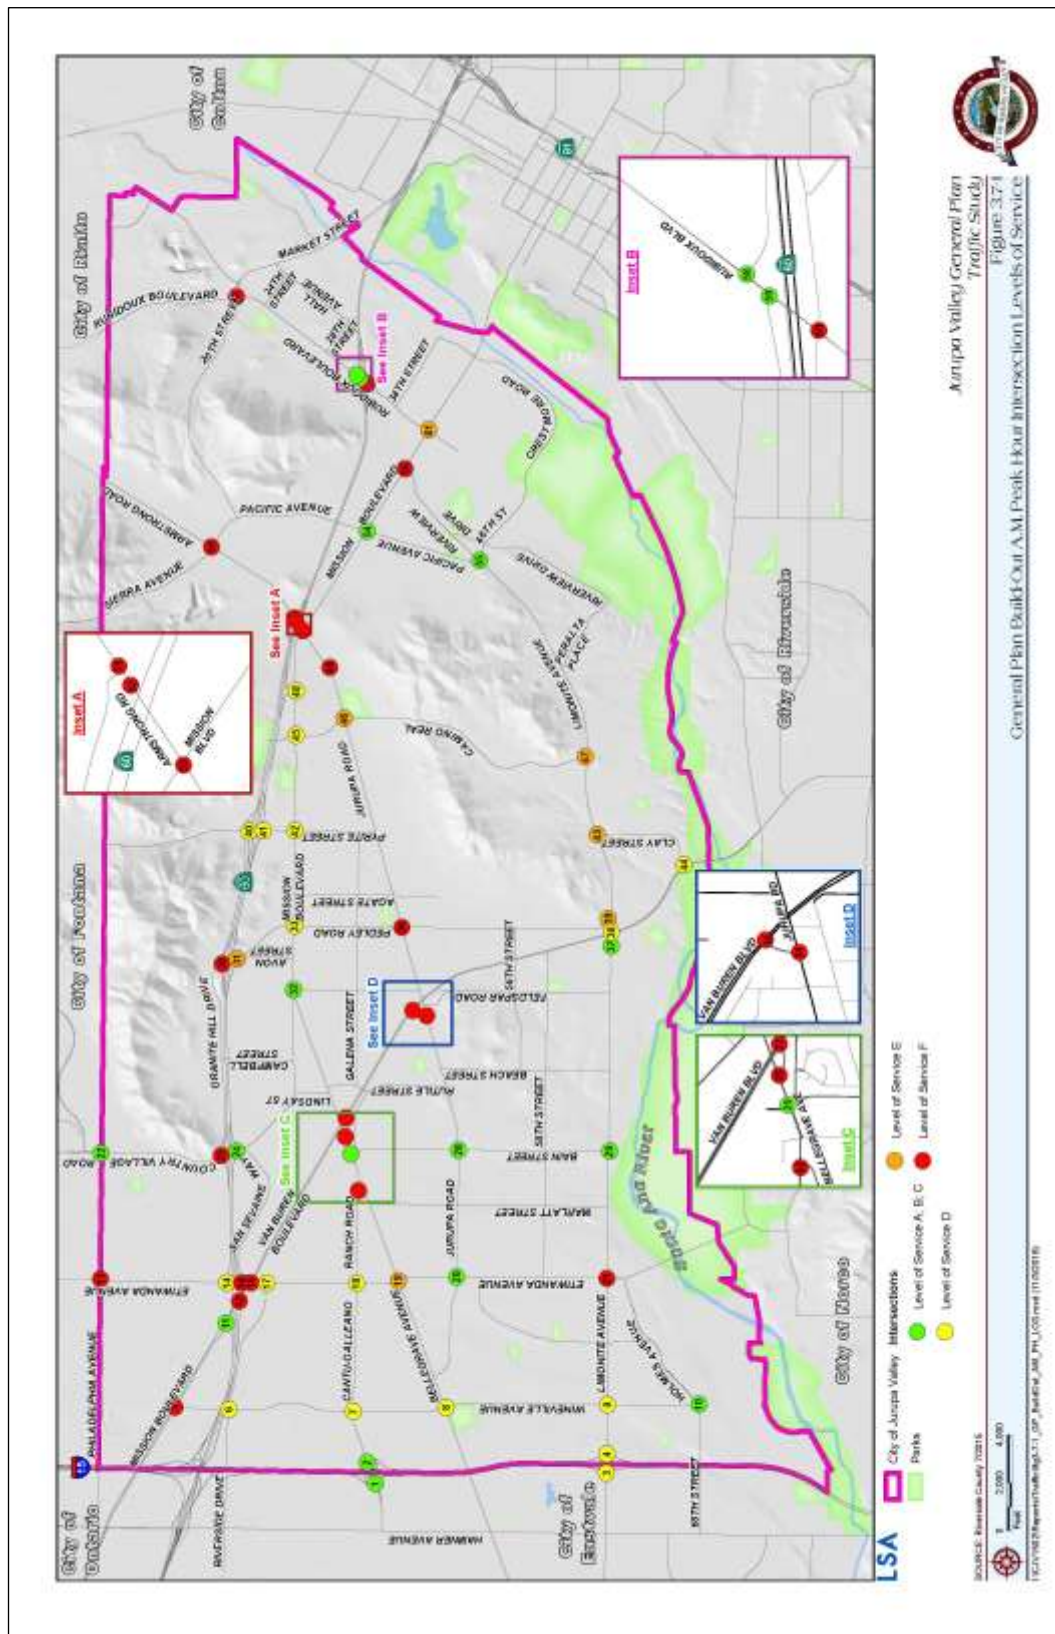

Figures 3.7-1 and 3.7-2 illustrate the locations of the study area intersections and corresponding a.m. and p.m. levels of service under General Plan Build-out conditions. LOS worksheets are in Appendix C.

Roadway Segment Levels of Service

A level of service analysis was conducted at study area roadway segments to determine the projected roadway segment performance under General Plan Build-out conditions. As shown in previously referenced Table 3.C, all roadway segments are projected to operate at

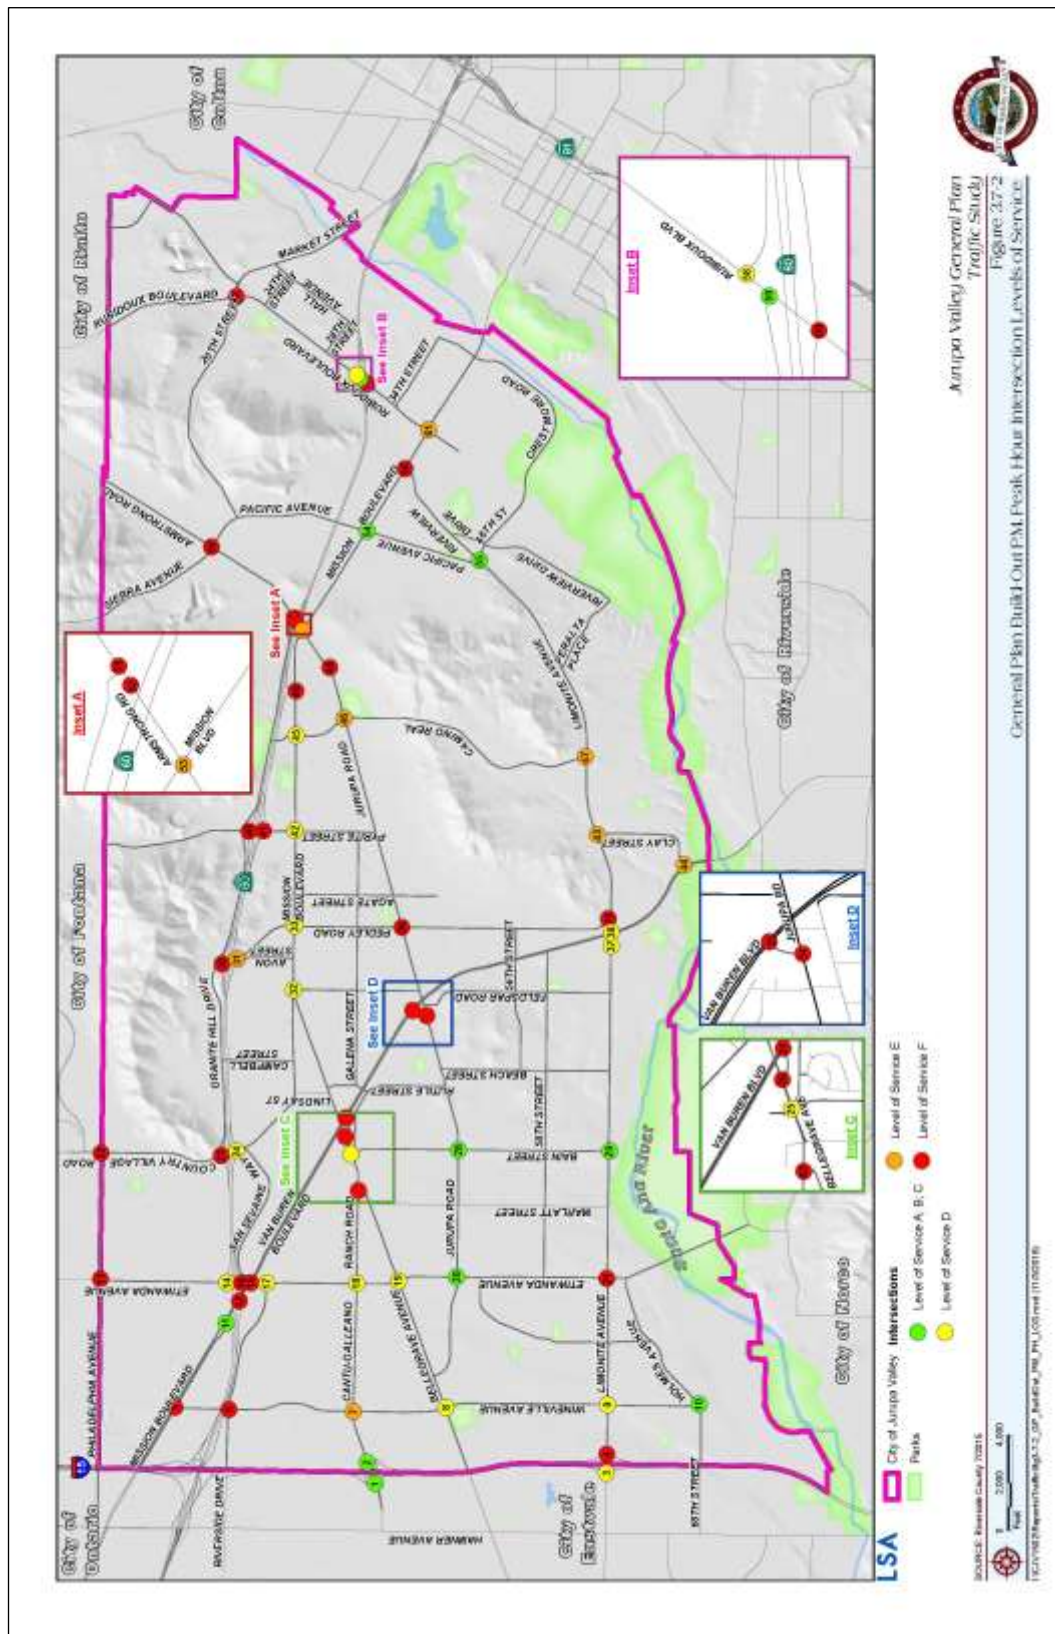

satisfactory levels of service (D or better), with the exception of the following roadway segments:

- Etiwanda Avenue from Philadelphia Avenue to SR-60 Westbound Off-Ramp;
- Etiwanda Avenue from SR-60 Westbound Off-Ramp to SR-60 Eastbound On-Ramp;
- Etiwanda Avenue from SR-60 Eastbound On-Ramp to Van Buren Boulevard;
- Etiwanda Avenue from Van Buren Boulevard to Riverside Drive;
- Etiwanda Avenue from Limonite Avenue to Holmes Avenue;
- Etiwanda Avenue south of Holmes Avenue;
- Country Village Road from Philadelphia Avenue to SR-60 Westbound Ramps;
- Country Village Road from SR-60 Westbound Ramps to SR-60 Eastbound Ramps;
- Van Buren Boulevard from SR-60 Westbound On-Ramp to SR-60 Eastbound Off-Ramp;
- Van Buren Boulevard from Eastbound Off-Ramp to Etiwanda Avenue;
- Van Buren Boulevard from Bellegrove Avenue to Jurupa Road;
- Van Buren Boulevard from Jurupa Road to Limonite Avenue;
- Van Buren Boulevard from Limonite Avenue to Clay Street;
- Mission Boulevard from SR-60 Eastbound Ramps to Valley Way;
- Jurupa Road from Bain Street to Van Buren Boulevard;
- Jurupa Road from Van Buren Boulevard to Pedley Road;
- Jurupa Road from Pedley Road to Camino Real;

THIS PAGE INTENTIONALLY LEFT BLANK.

CHAPTER 3 – GENERAL PLAN BUILD-OUT TRAFFIC

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

One of the City of Jurupa Valley's primary mobility goals is "To create a multi-modal mobility network which is attractive and provides all users with safe connections to homes, jobs, schools, commercial areas, public facilities and recreation areas, and which protects Jurupa Valley's semi-rural character and lifestyle, and reduces dependence on the use of single-occupant automobiles." To achieve this goal, it is important to design and implement a multi-modal transportation system that will serve projected future travel demand, minimize congestion, maintain the rural character of the City, and address future growth and development. Therefore, this section describes the proposed circulation network improvements and explores strategies that could help reduce the anticipated congestion while attempting to minimize cut-through traffic on main corridors throughout the City. It is recognized that these two objectives may mutually exclusive.

Cut-Through Traffic Analysis

A significant portion of Jurupa Valley's motor vehicle traffic is "cut-through" traffic; that is, trips where the origin and destination are both outside of the City limits. The City of Jurupa Valley would like to minimize cut-through traffic on main corridors such as Van Buren Boulevard and Centu-Gallegos Ranch Road as much as feasible possible. Table 4.A shows the percentage of the total traffic volume on selected

CHAPTER CONTENTS

- Equestrian/Multi-Purpose Trails
- Truck Traffic

local street segments with projected levels of service of D, E, or F under General Plan Build-out preferred alternative conditions. As shown in Table 4.A, 49 percent of traffic on major thoroughfares is cut-through, bypassing the main highways I-15, SR-60, and the Van Buren expressway.

Generally, strategies to reduce cut-through traffic involve capital improvements to slow, divert, or dissuade motorists from traveling along particular corridors. This has the initial effect of creating greater congestion until a new equilibrium is established. That new equilibrium may in fact create congestion on new routes. Road diets, chokers, speed tables, and other devices/strategies will affect vehicular traffic flow, decreasing speed and increasing congestion. Therefore, strategies to address cut-through traffic may be mutually exclusive and contradictory to a goal of mobility congestion relief. However, the objective of congestion relief and achieving LOS D conditions is sought in the subsequent analysis. If solely charged with LOS improvement, it may result in conflicts with cut-through traffic reduction or implementation of complete streets and multi-modal mobility systems.

Potential Transportation System Improvements to Reduce Congestion

As new land uses build out locally and regionally, additional traffic will be added to the local circulation network, resulting in more congestion and more roadways and intersections exceeding City LOS standards. As noted earlier, much of the existing and projected future congestion is the result of cut-through traffic from regional (i.e., non-City) sources, which will also increase in the future. The following improvements will reduce the anticipated traffic congestion.

Intersection Improvements

Based on the threshold of acceptability for levels of service within the City of Jurupa Valley, 38 intersections will not meet the minimum level

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

Table 4.A: Select Link Analysis for High Volume Roadway Corridors under General Plan Build-Out Conditions

| Roadway Segment | Functional Classification | % of Traffic Internal to the City | % of Traffic External to the City (Cut-through Traffic) |
|---|---------------------------|-----------------------------------|---|
| Segments on Etiwanda Avenue | | | |
| 5 Philadelphia Avenue to SR-60 WB Off-Ramp | 5-Lane Urban Arterial | 57% | 43% |
| Segments on Country Village Road | | | |
| 16 Philadelphia Avenue to SR-60 WB Ramps | 4-Lane Major | 46% | 54% |
| Segments on Van Buren Boulevard-East Mission Boulevard | | | |
| 32 Bellegrove Avenue to Jurupa Road | 8-Lane Expressway | 21% | 79% |
| Segments on Mission Boulevard | | | |
| 48 Valley Way to Riverview Drive | 4-Lane Arterial | 81% | 19% |
| Segments on Bellegrove Avenue | | | |
| 50 Wineville Avenue to Etiwanda Avenue | 4-Lane Major | 60% | 40% |
| Segments on Valley Way-Armstrong Road | | | |
| 63 SR-60 WB Ramps to Sierra Avenue | 4-Lane Major | 66% | 34% |
| Segments on Limonite Avenue | | | |
| 67 Wineville Avenue to Etiwanda Avenue | 4-Lane Major | 58% | 42% |
| Segments on Rubidoux Boulevard | | | |
| 77 SR-60 WB Ramps to Market Street | 4-Lane Major | 80% | 20% |
| Segments on Sierra Avenue | | | |
| 80 West of Armstrong Road | 4-Lane Secondary | 42% | 58% |
| Segments on Market Street | | | |
| 81 East of Rubidoux Boulevard | 2-Lane Major | 50% | 50% |

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

of service standard. To support the current Land Use Element, the following improvements to the intersections are recommended:

- **I-15 Southbound Ramps/Limonite Avenue:** Optimize the signal timing.
- **I-15 Northbound Ramps/Limonite Avenue:** Optimize the signal timing.
- **Wineville Road/Mission Boulevard:** Install a traffic signal.
- **Wineville Road/Riverside Drive:** Install a traffic signal.
- **Wineville Avenue/Road/Cantu-Galleano Ranch Road:** Optimize the signal timing.
- **Mission Boulevard/SR-60 Eastbound Off-Ramp:** Optimization of the signal timing improves operations. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient LOS in the a.m. and p.m. peak hours.
- **Etiwanda Avenue/Philadelphia Avenue:** Strip eastbound right-turn lane and add overlap phasing. Add westbound right-turn lane with overlap phasing. Add second northbound left-turn lane. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient LOS in the p.m. peak hour.
- **Etiwanda Avenue/SR-60 Eastbound On-Ramp:** Install a traffic signal. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient LOS in the p.m. peak hour.
- **Etiwanda Avenue/Van Buren Boulevard:** Southbound right-turn lane with overlap phasing and optimization of signal timing improves operations. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection

is forecast to continue operating at a deficient LOS in the a.m. and p.m. peak hours.

- **Etiwanda Avenue/Bellegrove Avenue:** Optimize the signal timing.
- **Etiwanda Avenue/Limonite Avenue:** Add an eastbound left-turn lane and westbound left-turn lane. Add protected phasing to the eastbound/westbound approaches.
- **Country Village Road/Philadelphia Avenue:** Optimize the signal timing.
- **Country Village Road/SR-60 Westbound Ramps:** Add a second westbound right-turn lane; this will require modification of the westbound off-ramp. Strip a southbound right-turn lane, and restripe the southbound through lane to a through/right-turn lane.
- **Van Buren Boulevard-Bellegrove Connector/Bellegrove Avenue:** Install a traffic signal. Add a westbound left-turn lane and restripe the southbound approach to include a southbound left-turn lane and through/right-turn lane. Restripe the northbound approach to include a northbound left-turn lane and a through/right-turn lane.
- **Van Buren Boulevard/Van Buren-Bellegrove Connector:** Install a traffic signal, add two northbound left-turn lanes, a second eastbound right-turn lane, and a southbound right-turn lane.
- **Pedley Road/SR-60 Westbound Ramps:** Install a traffic signal.
- **Pedley Road/SR-60 Eastbound Ramps:** Install a traffic signal. Although this intersection operates satisfactorily, a signal has been added due to the addition of a signal at Pedley Road/SR-60 Westbound Ramps.
- **Jurupa Road/Van Buren-Jurupa Connector:** Install a traffic signal. Add an eastbound left-turn lane.
- **Van Buren Boulevard/Van Buren-Jurupa Connector:** Install a traffic signal. Add two northbound left-turn lanes.
- **Pedley Road/Jurupa Road:** Install a traffic signal.

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

- **Pedley Road/Morton Avenue/Limonite Avenue:** Optimize the signal timing.
- **Pyrite Street/SR-60 Westbound Ramps:** Install a traffic signal.
- **Pyrite Street/SR-60 Eastbound Ramps:** Install a traffic signal.
- **Clay Street/Limonite Avenue:** Add overlap phasing to the northbound right-turn lane.
- **Van Buren Boulevard/Clay Street:** Optimize the signal timing.
- **Camino Real/Jurupa Road:** Add a northbound right-turn lane with overlap phasing.
- **Camino Real/Limonite Avenue:** Add overlap phasing to the southbound right-turn lane.
- **Byrne Road/SR-60 Eastbound Ramps/Mission Boulevard:** Add a southbound left-turn lane. This improvement will require modification to the off-ramp.
- **Valley Way/Jurupa Road:** Install a traffic signal. Add an eastbound left-turn lane.
- **Armstrong Road/Sierra Avenue:** Add overlap phasing to the eastbound right-turn lane. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient LOS in the a.m. and p.m. peak hours.
- **Valley Way/SR-60 Westbound Off-Ramp-Granite Hill Drive:** Restripe the north leg to separate the southbound left-turn lane and right-turn lane. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient LOS in the a.m. and p.m. peak hours.
- **Valley Way/SR-60 Westbound On-Ramp:** This intersection may be combined with Valley Way/SR-60 Westbound Off-Ramp-Granite Hill Drive as a five-legged intersection with one signal controller. This will require Caltrans review. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient LOS in the a.m. and p.m. peak hours.
- **Valley Way/Mission Boulevard:** Optimize the signal timing. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient LOS in the a.m. and p.m. peak hours.
- **Riverview Drive/Mission Boulevard:** Add a second northbound right-turn lane and add overlap phasing to the northbound right-turn lane and eastbound right-turn lane. Restripe the north leg approach to the southbound left-turn lane and through/right-turn lane. Change the northbound/southbound signal phasing from split phasing to protected phasing. No other improvements are feasible due to right-of-way constraints.
- **Rubidoux Boulevard/Market Street:** Add overlap phasing to the northbound right-turn lane, reduce the median on the east leg to accommodate a separate westbound left-turn lane. Restripe the westbound through/left-turn lane to a through lane. Change the eastbound/westbound signal phasing from split phase to protected phasing. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient LOS in the p.m. peak hour.
- **Rubidoux Boulevard/SR-60 Eastbound Ramps:** Add a northbound right-turn lane and an eastbound left-turn lane. The eastbound left-turn lane will require widening of the eastbound off-ramp and will require Caltrans review.
- **Rubidoux Boulevard/Mission Boulevard:** Restripe the south leg to accommodate separate northbound left-turn lane and through/right-turn lane. Change the northbound/southbound signal phasing from split phase to protected phasing. Add overlap phasing to the southbound and westbound right-turn lane.

4-4

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

- **Bellevue Avenue/Cantu-Galleano Ranch Road:** Install a traffic signal. Add a westbound left-turn lane and overlap phasing to the northbound right-turn lane.
- Safety Education Programs;
- High-Visibility Crosswalks;
- Pavement Striping;
- Gateways;
- High-Visibility Signs; and
- Bulbouts.

Table 4.8 illustrates the General Plan Build-out conditions with the recommended intersection improvements. Level of service worksheets are included in Appendix C. Figures 4.1-1 and 4.1-2 illustrate the resulting intersection geometrics. With implementation of the above improvements, 9 intersections will continue to operate at deficient LOS.

Roadway Segment Improvements

Based on the threshold of acceptability for levels of service within the City of Jurupa Valley, nine roadway segments will not meet the minimum level of service standard. Based on discussion with City staff, no additional improvements are recommended other than the ones listed in chapter 3 under General Plan Build-out conditions. This is due to right-of-way constraints and the City's endeavor to maintain its rural character as well as to discourage cut-through traffic on local streets.

Traffic Calming Measures

The City has expressed a goal of reducing cut-through volume and calming traffic on many corridors throughout the City. Traffic calming is defined as a "combination of mainly physical measures that reduce the negative effects of motor vehicle use, alter driver behavior, and improve conditions for non-motorized street users." The goals of traffic calming may include creating safe and attractive streets, helping to reduce the negative effects of motor vehicles on the environment, incorporating the preferences and requirements of the people using the streets/intersections, and promoting pedestrian, bicycle, and transit use. Traffic calming can slow speeds for motor vehicles, reduce collision frequency, reduce cut-through motor vehicle traffic, and increase access for all modes of transportation. These traffic calming measures can be physical, such as bulbouts or speed bumps, or can they can be programs to warn, guide, or inform. Some basic measures include:

It is noted that implementation of these strategies and devices can slow speeds and increase congestion. Therefore, a balance needs to be determined by corridor on the primary objective, congestion reduction versus traffic calming.

Safety Education Programs

Safety education programs are an important component of a traffic calming program because they include efforts to make the public more aware of its own driving behavior and the impact it has on others. Pedestrian and bicycle safety programs alert and educate pedestrians and bicyclists on road safety. Driver safety information and education can help improve driver behavior.

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

High Visibility Crosswalks

High Visibility Crosswalks include striped patterns, pavement lights, improved signing, and/or advance flashing beacons to improve the visibility of the crosswalk. These crosswalks are applicable on local streets where speed control and pedestrian crossing designation is desired. The benefits can include discouraging out-through traffic since they may slow traffic and increase driver awareness of crosswalks; they also require minimal maintenance.

Pavement Striping

Pavement Striping is used to create narrow lanes, which gives the impression of a narrow street. This makes motorists feel restricted, which helps reduce speeds. Striping can be at curb end or in the middle of the street to create a median. It is most applicable to long, wide residential streets where speeding traffic could occur. Pavement striping is easy to install and modify with relatively low cost implementation.

Gateways

Gateways are special entrances that reduce the width of the travel way through the use of islands and are usually placed on roadways to narrow each direction of travel and interrupt the path along the center of the roadway. Gateways tend to be highly visible to motorists to notify a change in the roadway, may discourage out-through traffic, and can help slow traffic.

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

High Visibility Signs

High visibility signs may include larger speed limit signs on the streets to ensure visibility to motorists. This measure is a basic method aimed at slowing traffic through visual reminders of the speed limits or other regulations. They can be applied to most streets that may have speeding issues and provide context for enforcement efforts.

Bulbouts

Bulbouts can reduce traffic speed and improve pedestrian safety. Bulbouts are simply intersection curb extensions that extend past the parking lanes, but not into the bicycle or through lanes. Bulbouts provide an entry or gateway statement into activity areas or where high volumes of pedestrians are present. Entering an area where a bulbout is present provides a clear difference between the arterial function and a local pedestrian activity area.

4-14

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

Bulbouts also enhance the visibility of the pedestrian because they physically permit the pedestrian closer to the travel lanes, especially where parking is permitted, and allow the pedestrian to be seen more easily by the driver. They also constrict traffic flow through reduced lateral clearance. This reduction affects travel speed along the corridors and improves safety for both pedestrians and vehicles.

Bulbouts change the turning radius at the intersection, which reduces turning speed and vehicle and pedestrian conflicts. They also reduce the time it takes pedestrians to cross from curb to curb. This reduction in pedestrian crossing time consequently reduces the time the pedestrian is exposed to moving vehicles.

Bulbouts can be an extremely positive visual and aesthetic enhancement. Features such as pedestrian lighting, planters, and benches create a focal point for pedestrian activity and change the character of the intersection from automobile to pedestrian. It should be noted that care must be taken when aesthetically enhancing bulbouts so that the enhancements do not block sight distances and create accident problems.

Speed Reduction Measures

Speed Reduction measures are traffic control devices and roadway design features primarily designed to slow traffic. They are employed when the use of basic measures cannot effectively address speeding issues. Speed reduction measures are often used in conjunction with basic measures, and may have a limited effect on traffic volume as well.

Some speed reduction measures include:

- Speed Humps;
- Raised Crosswalks;
- Raised Intersections;

- Roundabouts;
- Mid-Block Chokers;
- Medians;
- Major Bulbouts; and
- Chicanes.

Speed Humps

Speed Humps are areas of pavement raised 3–4 inches in height over a minimum of 12 feet in length. The combination of different heights, lengths, and approach ramps will affect the speed a vehicle can comfortably go over the hump. Speed humps are marked with signs and pavement markings. Speed humps are applicable on local streets where speed control is desired or where cut-through traffic is to be discouraged and can help slow traffic. Speed humps are not recommended for use on streets designated as primary response routes for emergency vehicles.

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

4-15

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

Raised Crosswalks

Raised crosswalks are flat-topped speed humps, built as pedestrian crosswalks, with vehicle ramps on the approaches. This type of crosswalk is applicable to local streets where speed control and pedestrian crossing designation are desired. It can be an effective safety tool near schools and recreation facilities and can also be used to discourage cut-through traffic. Raised crosswalks are well-marked and may contain special paving or textures.

Raised Intersections

Raised intersections are flat-topped speed humps built over the entire area of intersecting streets at curb height, creating a flat surface over the entire intersection area. Raised intersections are constructed with ramps on all vehicle approaches. They are often constructed with textured materials on the flat sections and approach ramps are commonly used in area-wide traffic calming installations. Raised intersections can be applicable to arterial and collector streets where speed control and pedestrian crossing designation are desired. They can be an effective safety tool near schools and recreation facilities and can also be used to discourage cut-through traffic.

Roundabouts

The use of roundabouts as an alternative to conventional stop and signal control intersections is becoming increasingly popular in the United States. Studies conducted by the insurance industry have determined that these types of intersections result not only in a significant decrease in automobile traffic at an intersection, but also a reduction in pedestrian accidents as well.

At a conventional intersection, the pedestrian faces four potential vehicle conflicts:

- Crossing movements on red (typically high-speed, illegal);
- Right turns on green (legal);
- Left turns on green (legal for protected-permitted or permitted left-turn phasing); and
- Right turns on red (typically legal).

Pedestrians at roundabouts, on the other hand, face two conflicting movements on each approach:

- Conflict with entering vehicle; and
- Conflict with exiting vehicle.

4-16

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

The crossing of the roundabout is relatively simple. The pedestrian waits for a gap in traffic and crosses from the curb to the splitter island that provides protection, and then crosses from the splitter island to the far curb when another gap in traffic occurs. Crossing in two steps halves the vehicle exposure for each segment. In addition, safety is improved because the vehicles are forced to go slower through the roundabout than at a conventional intersection. The modern roundabout pedestrian crosswalk treatment consists of:

- ADA Compliant Ramps;
- Conventional Crosswalk Striping;
- Raised Splitter Island Pedestrian Pass Through and Refuge;
- Pedestrian Crossing Sign;
- Yield Street Markings; and
- Yield Signs.

Typically, the crosswalk is placed approximately one car length from the yield bar to permit the pedestrian to safely walk behind a vehicle that is awaiting a merge into the roundabout when traffic permits.

Mid-Block Chokers

Chokers are raised islands in the parking zone that can be detached from the curb line to allow for drainage. Mid-block chokers narrow the roadway and are most applicable on wide streets with speeding and cut-through traffic concerns.

Medians

Medians are raised islands in the center of the roadway that separate traffic directions. Medians are used on wide streets to narrow the travel lanes and slow vehicle speeds, interrupt sight distances down the center of the roadway, and ease pedestrian crossings.

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

4-17

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

Chicanes

Chicanes are curb extensions that alternate from one side of the street to the other, forming S-shaped curves. To prevent drivers from taking a straight line through the feature, it is recommended to shift the alignment of at least one lane width and to have deflection angles of at least 45 degrees. This type of alignment can be applied to any street where speed control is desired, provided the street is wide enough to accommodate the curvilinear design.

Volume Control Measures

Volume Control Measures are traffic control devices and roadway design features primarily designed to discourage residential street cut-through traffic. They are used when it has been found that traffic volumes exceed established thresholds. Volume reduction devices can be used by themselves or in conjunction with basic and/or speed measures. Some common volume reduction measures include:

- Diverters;
- Partial Closures; and
- Full Street Closures.

Diverters

Diverters are raised barriers placed diagonally across an intersection blocking through movement. They are usually staggered to create circuitous routes through neighborhoods. Diverters are most applicable to local streets where cut-through traffic is a major concern.

Partial Closures

Partial closures are barriers that block travel in one direction for a short distance on otherwise two-way streets. They are used in sets to make

4-18

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

travel through neighborhoods with gridded streets circuitous rather than direct. That is, they are not lined up along a border that would preclude through movement, but instead are staggered, which leaves through movement possible but less attractive than alternative routes.

Full Street Closures

Full street closures are barriers to close the street completely to through traffic, with access limited to pedestrians and bicyclists. They are usually called cul-de-sacs or dead ends and can consist of landscaped islands, walls, gates, or other obstructions that leave an opening smaller than the width of a car. Street closures are most commonly used for eliminating cut-through traffic, but can have an adverse effect on emergency response.

Intelligent Transportation Systems (ITS)

ITS are technology improvements that improve traffic flow and minimize disruptions to travel. ITS type projects can include sophisticated traffic signal systems designed to manage speed, dynamic message signs, incident management cameras, weather stations, highway advisory radio, transit automatic vehicle location, and video surveillance.

Adaptive Traffic Control Systems (ATCS)

Improving traffic operations on major thoroughfares within the City of Jurupa Valley through implementation of ITS could help alleviate traffic congestion. ATCS attempts to modify the coordination of many traffic signals to prevailing traffic conditions in real-time. All techniques rely on traffic-detection equipment and a central computer monitoring station that uses the collected data to optimize traffic signal coordination and timings to provide more efficient cycle-lengths and green-times.

Several jurisdictions nationwide have implemented their own ATCS in recent years. The most notable implementation in Southern California is the system developed by Los Angeles Department of Transportation (LADOT) for the City of Los Angeles. The ATCS automatically adjusts traffic signal timing at 375 intersections within the City of Los Angeles in

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

4-19

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

response to real-time traffic demands. The evaluation results published by IADOT show that the ATCS reduced travel time by 12.7 percent, decreased average stops by 31 percent, and lowered average delay by 21.4 percent (*Preliminary Evaluation Study of Adaptive Traffic Control System*, Bowerlee, Frances T, City of Los Angeles Department of Transportation, July 2001). ATCS can be used by the City of Jurupa Valley for improvement of traffic congestion along major thoroughfares within the City.

Transportation Demand Management

Transportation Demand Management (TDM) is a strategy to increase the efficiency of a transportation system by encouraging a shift from single-occupant vehicle (SOV) trips to non-SOV modes, or shifting auto trips out of peak periods. The goal of TDM is to reduce auto trips by increasing travel options through incentives to encourage individuals to modify their travel behavior. The cumulative impact of TDM strategies can have an impact on travel behavior, system efficiency, and SOV rates. TDM programs can be implemented by employers or public agencies. Employer based TDM strategies can reduce vehicle trips by providing employees with incentives, information, and additional transportation options to commute through other modes than SOV, to commute during off-peak times of day, or eliminate certain work trips altogether. Employer based strategies may include:

- Instituting parking charges;
- Unbundling free or subsidized parking from employee benefits;
- Providing free days of parking for employees who carpool/vanpool;
- Transit Subsidies: Provision of subsidized transit passes/vanpool fares, or shuttle services;
- Bike/Walk Facilities: Secure workplace parking for bikes, and shower and locker facilities;

- Preferred Parking for Carpools: Provision of preferred parking spaces for Carpool/Vanpool vehicles;
- Vanpools, Shuttles, and Car-sharing: Provision of free vanpool vehicles, shuttle services, or car sharing programs for employees to reduce private vehicles;
- Telecommuting: Allow employees to work from home or a non-office location one or more days a week;
- Compressed Workweek: Enabling employees to compress regularly scheduled hours into fewer work days per week; and
- Flexible Schedule: Allowing employees to offset work hours from the typical 9-5 standard and shift commute travel to off-peak hours.

Establishment of a trip reduction ordinance by the City could encourage non-SOV modes such as public transit, vanpools, carpools, and bicycles, rather than SOV. Also, a trip reduction ordinance could encourage alternate work hours that serve to reduce the typical peak demand upon the street network, parking facilities, and transit systems. The trip reduction ordinance could apply to non-residential development projects, which would be required to reserve and designate preferential parking spaces for carpool vehicles, provide employees with commuter-matching services and trip reduction information, and provide bicycle parking facilities and other non-automobile enhancements.

Transit Pass Programs

A growing number of transit agencies have been teaming with employers, universities, developers, and residential neighborhoods to provide universal transit passes. These passes provide unlimited rides on local or regional transit providers for low monthly fees, often absorbed by employers, schools, or developers. This strategy could increase the number of transit ridership and reduce SOV and congestion.

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

Safe Routes to School

The Safe Routes to School program focuses the development of safe, convenient, and fun opportunities for children to bicycle and walk to and from schools, thereby reducing vehicle traffic during the peak pick-up/drop-off times throughout the City. The City can work with local school districts to identify potential safe routes to schools and establish safe drop-off/pick-up zones. The City could also inform and involve local residents to aid in researching the most viable routes and inventorying existing facilities to identify deficiencies and safety problems. The result is the identification of public improvements to enhance safe and effective walking and bicycling activity to and from each school and can include the maps for each school that shows the preferred routes.

Complete Streets

A complete street is one that works for all travel modes, including motorists, transit, bicyclists, and pedestrians. A complete street policy ensures that the entire right-of-way is routinely designed and operated to enable safe access for all users. While the definition of a complete street is universally applicable, the design of complete streets is variable. Each street has unique characteristics that make it distinctive from another. Therefore, a complete street in a rural area will look quite different from a complete street in a highly urban area. However, both streets are designed to balance safety and convenience for everyone using the road.

Elements that may be found on a complete street include sidewalks, bike lanes, crosswalks, wide shoulders, medians, bus pullouts, special bus lanes, raised crosswalks, audible pedestrian signals, sidewalk bulbouts, and more. The following outlines the characteristics of "typical" complete streets in an urban and rural setting:

- **Rural.** Rural roadways provide unique design challenges to develop complete streets. Rural streets typically have low traffic volume and the traffic lanes serve as multi-modal pathways often

accommodating pedestrians, bicyclists, and motorists. These types of streets typically lack sidewalks and few pedestrians use these routes. Streets may be striped in order to provide the best use of the right-of-way and not limit mobility. Rural complete streets provide adequate shoulders (at least 5 feet) for use by bicyclists. Ideally, the shoulder should be 8 feet wide to allow a vehicle to pull off the roadway in an emergency.

- **Urban.** Urban streets are utilized to access mixed use and commercial areas. These streets typically carry a higher volume of traffic and have more pedestrians and bicyclists present. Transit is an active component of these areas and intermodal connections are prioritized.

There are many different types of streets found in urban settings. Recommended standards for different types of urban streets are outlined below. These standards include provisions for narrow street widths where low speeds are appropriate, detached sidewalks, bicycle facilities, and shorter block lengths.

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

Local Streets

- The maximum width of local residential streets is 30–32 feet (two 7-foot parking lanes and two 8-9 foot travel lanes) depending on the expected travel volume.
- Landscape strips, separating curb from the sidewalk, are required on local residential streets.
- Maximum block length is 600 feet for low-volume residential streets and 800 feet for medium-volume residential streets.
- Six-inch vertical curbs are required.

Collector Streets

- Landscape strips, separating curb from the sidewalk, would be required on most new streets.
- Maximum block length is 1,000 feet for collector streets.
- On streets with on-street parking, bulbouts are encouraged at intersections to reduce the crossing distance for pedestrians and discourage speeding through intersections.
- Roundabouts should be considered where residential streets intersect and ultimate combined volume will exceed 1,000 vehicles daily or where the unimpeded distance on any of the approaches not subject to stop control exceeds 600 feet.
- Bicycle lanes should be provided on all collector streets.

Arterial Streets

- Bulbouts would be encouraged at some intersections to reduce the crossing distance for pedestrians and discourage speeding through intersections.
- Maximum block length is 1,320 feet (four intersections per mile). This could be lengthened if bike/pedestrian paths shorten the effective block length for non-auto users.
- Raised medians with turn pockets should be provided.
- Bicycle lanes should be provided on all arterial streets.

Street designs should also take into account the context of the street, that is, the adjacent land uses. Some basic designations include:

- **Commercial Streets:** These streets are typically dominated by autos maneuvering into and out of parking lot driveways in conflict with other flows. The design goal should be to keep these movements orderly by separating the flows using detached sidewalks and marked crosswalks, bicycle lanes and medians with turn pockets.
- **Mixed-Use Streets:** These slower streets have wider sidewalks and parking lanes.
- **Main Streets:** The design goal of these streets is to make pedestrians comfortable so as to encourage them to make use of adjacent land uses.
- **Residential Streets:** The design goal is to allow people to feel comfortable in their neighborhoods. This means keeping speeds low while allowing motorists to get to and from their houses without undue delay.
- **Industrial Streets:** These streets are designed for the movement of trucks and so require wider travel lanes than residential or other roads.

4-22

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

Transit Strategies

One of the City of Jurupa Valley's goals is to provide an integrated land use and multi-modal transportation system that meets sustainable regional growth expectations, supports economic vitality, and improves quality of life. To achieve this goal, transit must play a much greater role in providing travel choice within the City. It is recognized that transit service per capita must increase as the region's population increases. Future transit goals within the City should address needs such as increased service frequency and expanded coverage.

The frequency of transit service (the time between buses) is often referred to as headway. The headway for most current transit service in the City is approximately 45 minutes to one hour. With one-hour headways, there are very few options for those people who choose to take transit over driving a car. Instead, current transit service primarily serves only the transit dependent, those who do not have any other means of travel. To capture choice riders, the frequency of service must increase to a minimum of half hour headways during peak periods, and preferably 15 minute headways for high demand corridors. If service is direct and available every 15 minutes, then shifts in mode from automobile to transit are likely to occur.

Extended Service Hours

Currently, transit service is available from 6:30 a.m. to 8:00 p.m. on Route 21 and from 5:30 a.m. to 8:30 p.m. on Route 29 during weekdays. Many jobs in the region begin at 6:00 a.m. or earlier. These workers do not have the option to take transit on specific routes. Furthermore, transit-dependent workers may not be able to accept jobs that start early in the morning. Conversely, there are many who work and need transit service after 8:00 p.m. A person may be asked to stay late and not be able to because of the transit schedule. Based on transit service in other cities, extended hours of service from 5:00 a.m. to 10:00 p.m. would be desirable for weekdays. Extending hours to midnight on Friday would also be desirable.

Equestrian/Multi-Purpose Trails

Due to need for a citywide, regionally-integrated trails system, the City intends to prepare a Master Trails Plan following General Plan adoption. This effort will involve a broad cross-section of the community, including other key agencies, such as Riverside County, Jurupa Area Recreation and Parks District (JARP), Riverside County Flood Control, and the National Park Service. It will build upon an existing vision for a citywide trails system.

A vision has been developed for a Jurupa Valley Multi-Purpose Community Trails System. The system is anticipated to be a network of pedestrian, equestrian and bicycle trails that link Jurupa Valley's eight distinct communities and its many neighborhoods with open space areas, schools, recreation facilities, regional trail connections and local landmarks (e.g., The Discovery Center, Mt. Rubidoux). This vision has been shaped by many community groups and individuals, including the GPAC, Jurupa Valley residents and property owners, the City of Jurupa Valley decision-makers and staff, JARP, Riverside County Regional Park and Open-Space District, Riverside County Flood Control and Water Conservation District, Inland Empire Resource Conservation District, and others. This vision was initially described by the JARP, as shown in Appendix 16.0 and includes the following general goals as identified by the JARP:

- Review, maintain, and expand community multi-purpose trails system;
- Develop a safe and interconnected area-wide network of trails that link together destinations and people both locally and regionally;
- Develop a trails network that provides facilities and programs designed to expand and encourage active recreation and alternative transportation;
- Enhance, protect, and preserve the environmental quality of open space, waterways, and wildlife habitats;

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

4-23

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

- g. Conserve and tell the story of local culture, history, and heritage through interpretive signage;
- f. Stimulate economic growth through increased tourism and real property value by developing a region-wide trails network;
- g. Promote agency coordination among JARPD and the Cities of Juniper Valley and Eastvale;
- h. Identify street intersections where vehicular traffic and trail user (equestrian/hiking/trail biking) conflicts are present;
- i. Coordinate safety solutions for trail street crossings with City of Juniper Valley Traffic Engineering and Planning Department;
- j. Create an "equestrian friendly" environment the maintains Juniper Valley's "equestrian lifestyle;"
- k. Identify residential neighborhoods where streets are narrow with equestrian trails, and designate them as "equestrian routes" where horses have priority and utilize the street as a trail;
- l. Designate trails as two types: Recreational Use trails owned by public agencies and Equestrian Routes that are not developed trails, but have been historically used as such;
- m. Establish public trail designation through on-site signage program that identifies trail alignments throughout the community by posting signs for all multi-purpose trails, as appropriate;
- n. Establish natural trails interpretive signage program;
- o. Adopt a Community Multi-Purpose Trails Development Ordinance;
- p. Create a trail maintenance and operations program; and
- q. Establish a separate funding account for Multi-Purpose Community Trails development.

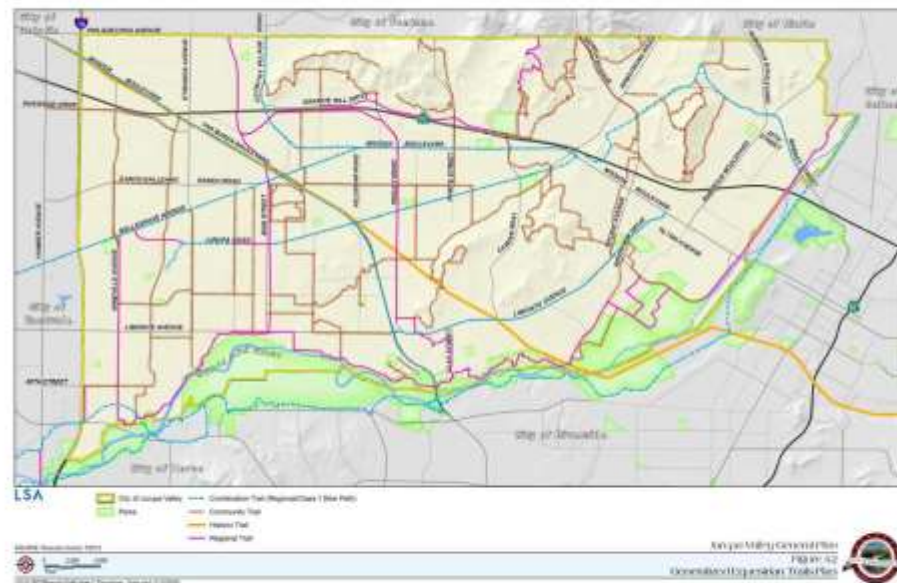

Figure 4.2 illustrates the Equestrian Trails Plan.

Truck Traffic

Due to its location relative to major highways and urban centers, Jurupa Valley serves as a major logistics shipping and receiving center for Southern California. Along with that regional role comes significant commercial truck traffic using highway off-ramps and City streets.

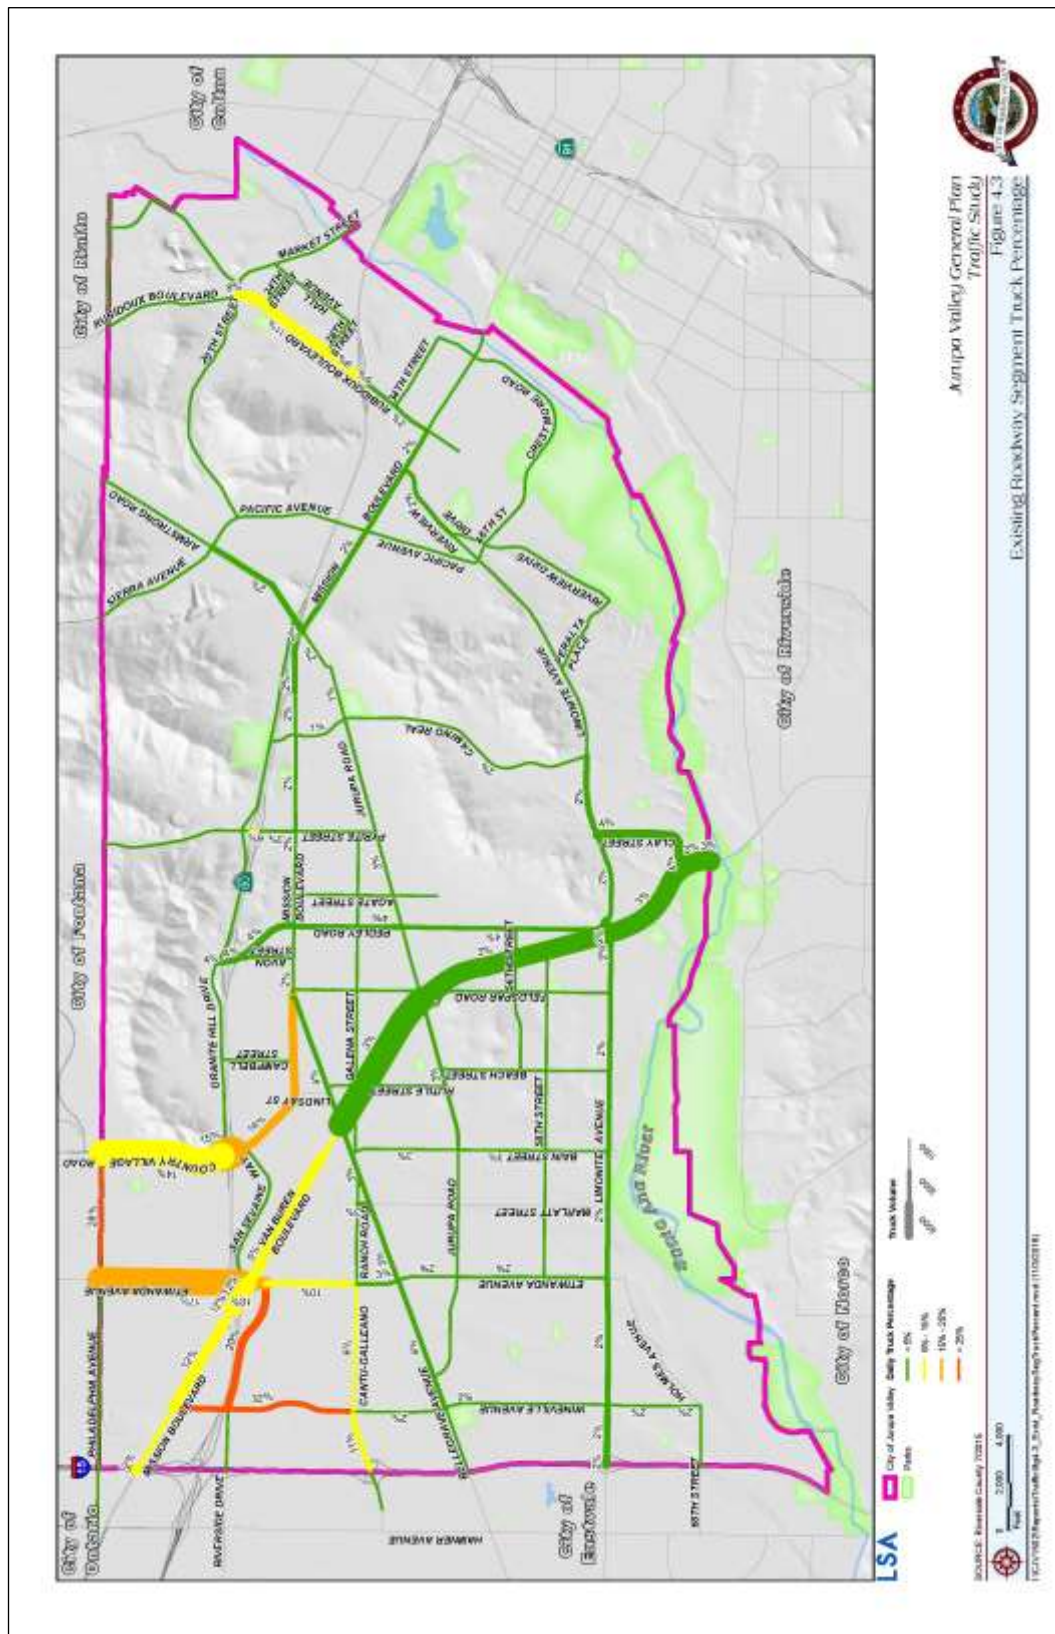

Figure 4.3 illustrates the existing daily truck traffic on major corridors within the City and shows most of the truck traffic within the City is located in the northern and eastern areas of the City, near the SR-60 corridor. It is anticipated that this trend will likely continue into General Plan Build-out conditions due to the Land Use Element's continued support of heavy industrial areas in the northwestern part of the City. The City is responsible for maintaining an extensive network of low-volume streets and roads in industrial and semi-rural areas to accommodate the transport and delivery of goods.

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 4 – FUTURE CIRCULATION NETWORK STRATEGIES

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 5 – CIRCULATION SYSTEM STRATEGIES

The proposed Jurupa Valley General Plan Build-out roadway network includes the infrastructure that is feasible to accommodate the vision of the Land Use Element. Figure 5.1 illustrates the City's

recommended General Plan Build-out Circulation System based on the General Plan Build-out Traffic Study. Due to constraints that have been identified earlier in this report, improvement to the roadway network has been limited to five major roads as described below.

General Plan Build-out Recommended Roadway Improvements

The General Plan Build-out scenario includes roadway modifications to the existing roadway network based on input from the City of Jurupa Valley to reflect the Jurupa Valley Mobility goals. Following are recommended improvements to the City's roadway network:

- **Etiwanda Avenue:** The roadway segment south of Limonite Avenue is proposed to include a two-lane Secondary roadway bridge extension from 66th Street over the Santa Ana River to Arlington Avenue.
- **Van Buren Boulevard:** The roadway segments from Etiwanda Avenue to Clay Street are proposed to be widened from a four-lane Urban Arterial to an eight-lane Expressway. The intersection of Van Buren Boulevard/Bellegrave Avenue is proposed to realign to the south with a new connector at Van Buren Boulevard/Van Buren Connector. Also, the intersection of Van Buren Boulevard/Jurupa Road is proposed to realign to the north with a new connector at Van Buren Boulevard/Van Buren Connector.
- **Cantu-Galleano Ranch Road:** The roadway segments between Etiwanda Avenue and Van Buren Boulevard are proposed to be widened from four-lane Major roadways to six-lane Urban Arterials.

CHAPTER CONTENTS

- General Plan Build-out Roadway Recommended Improvements
- Recommended General Plan Build-Out Circulation

The roadway segment east of Etiwanda Avenue is proposed to align with Bellegrave Avenue and create a new intersection at Bellegrave Avenue/Cantu-Galleano Ranch Road.

- **Bellegrave Avenue:** The roadway segment between Mariett Street and Dodd Street is proposed to realign with Cantu-Galleano Road and end at the new intersection of Bellegrave Avenue/Cantu-Galleano Ranch Road. A new intersection west of Bain Street is proposed to connect at Van Buren Connector/Bellegrave Avenue.
- **Market Street:** The roadway segment east of Rubidoux Boulevard is proposed to be widened from a two-lane Arterial to a three-lane Major Roadway.

Based on discussion with City staff, no additional improvements are recommended other than the ones listed in Chapter 3 under General Plan Build-out conditions. This is due to right-of-way constraints and the City's endeavor to maintain its rural character as well as to discourage cut-through traffic on local streets.

Recommended General Plan Build-Out Circulation

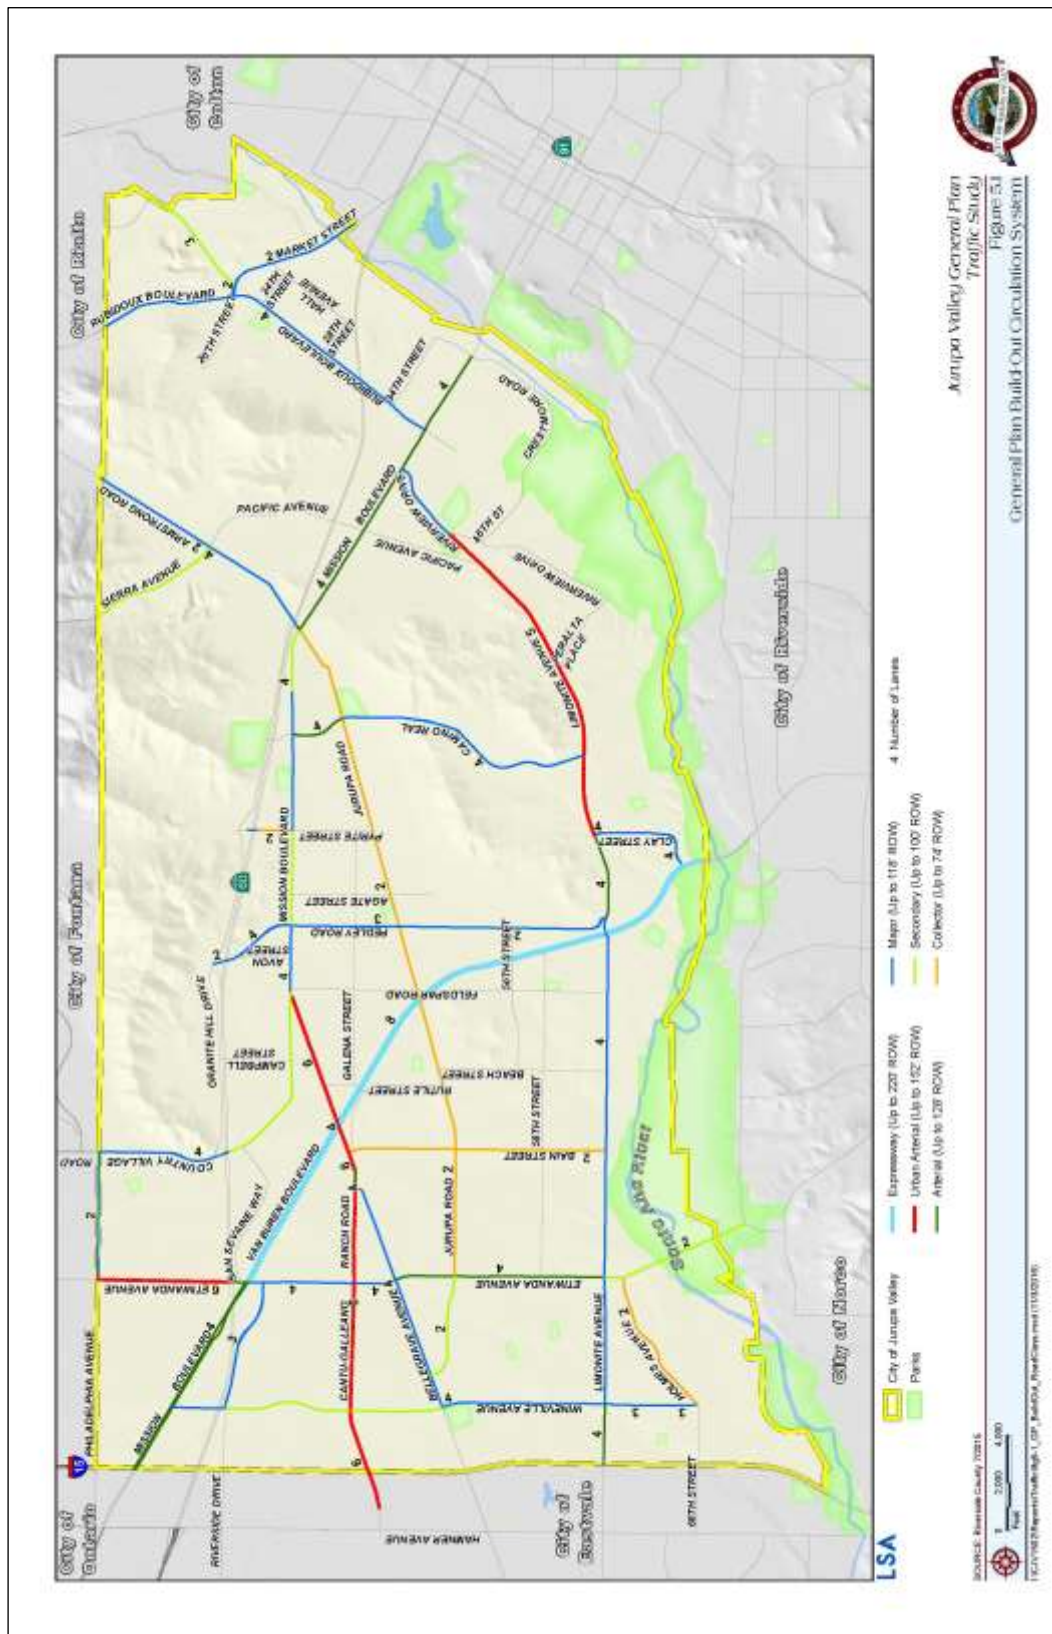

Roadway Segments

Figure 5.1 illustrates the City's recommended General Plan Build-out Circulation System based on the General Plan Build-out Traffic Study. Following is a description of recommended roadway configuration under General Plan Build-out conditions for all major roadways within the City:

Wineville Avenue/Road is oriented in a north-south direction. Wineville Road from Mission Boulevard to Riverside Drive is a four-lane Major roadway and from Riverside Drive to Bellegrave Avenue is a four-lane Secondary roadway. From Bellegrave to Limonite Avenue, Wineville Avenue is a four-lane Major roadway and from Limonite Avenue to 66th Street it is a three-lane Major roadway.

CHAPTER 5 – CIRCULATION SYSTEM STRATEGIES

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 5 – CIRCULATION SYSTEM STRATEGIES

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 5 – CIRCULATION SYSTEM STRATEGIES

Etiwanda Avenue is oriented in a north-south direction and is a six-lane Urban Arterial from the northern City limits to SR-60, from SR-60 to Van Buren Boulevard is a four-lane Arterial roadway, from Van Buren Boulevard to Bellegrave Avenue is a four-lane Major roadway, from Bellegrave Avenue to Umonite Avenue is a four-lane Arterial roadway, and from Umonite Avenue to Holmes Avenue is a two-lane Secondary roadway.

Bain Street is oriented in a north-south direction and is a two-lane Collector roadway from Bellegrave Avenue to Umonite Avenue.

Country Village Road is oriented in a north-south direction and is a four-lane Major roadway from Philadelphia Avenue to SR-60.

Pedley Road is oriented in a north-south direction and is a two-lane Major roadway from SR-60 Westbound Ramps to SR-60 Eastbound Ramps, from SR-60 Eastbound Ramps to Mission Boulevard is a four-lane Major roadway, from Mission Boulevard to Jurupa Road is a three-lane Major roadway, and from Jurupa Road to Umonite Avenue is a two-lane Major roadway.

Pyrite Street is oriented in a north-south direction and is a two-lane Major roadway from SR-60 Westbound Ramps to SR-60 Eastbound Ramps, from SR-60 Eastbound Ramps to Mission Boulevard is a four-lane Major roadway, from Mission Boulevard to Jurupa Road is a three-lane Major roadway, and from Jurupa Road to Umonite Avenue is a two-lane Major roadway.

Clay Street is oriented in a north-south direction from Umonite Avenue to General Road and transitions to an east-west direction from General Road to Van Buren Boulevard. Clay Street is a four-lane Major roadway.

Camino Real is oriented in a north-south direction and is a four-lane Arterial roadway from Mission Boulevard to Jurupa Road, and from Jurupa Road to Umonite Avenue is a four-lane Major roadway.

Philadelphia Avenue is oriented in an east-west roadway and is a two-lane Major roadway from Etiwanda Avenue to Country Village Road.

Van Buren Boulevard is oriented in a north-south direction and is a four-lane Arterial roadway from Wineville Avenue to Etiwanda Avenue, and from Etiwanda Avenue to Clay Street is an eight-lane Expressway.

Riverside Drive is oriented in an east-west direction and is a three-lane Major roadway from Wineville Road to Etiwanda Avenue.

Cantu-Galleano Ranch Road is oriented in an east-west direction and is a six-lane Urban Arterial from the I-15 Northbound Ramps to Bellegrave Avenue.

Mission Boulevard is oriented in an east-west direction and is a four-lane Secondary roadway from SR-60 Eastbound Ramps to Bellegrave Avenue, from Bellegrave Avenue to Pedley Road is a four-lane Major roadway, from Pedley Road to Pyrite Street is a four-lane Secondary roadway, from Pyrite Street to SR-60 Eastbound Ramps is a four-lane Major roadway, from SR-60 Eastbound Ramps to Valley Way is a four-lane Secondary roadway, and from Valley Way to Rubidoux Boulevard is a four-lane Arterial roadway.

Bellegrave Avenue is oriented in an east-west direction and is a four-lane Major roadway from west of Wineville Avenue to Cantu-Galleano Ranch Road, and from Cantu-Galleano Ranch Road to Mission Boulevard is a six-lane Urban Arterial roadway.

Jurupa Road is oriented in an east-west direction and is two-lane Secondary roadway from Bellegrave Avenue to Etiwanda Avenue, and from Etiwanda Avenue to Valley Way is a two-lane Collector roadway.

Valley Way is oriented in a north-south direction and is two-lane Collector roadway from Jurupa Road to Mission Boulevard, from Mission Boulevard to SR-60 is a four-lane Arterial roadway, from SR-60

CHAPTER 5 – CIRCULATION SYSTEM STRATEGIES

Westbound Ramps to Sierra Avenue is a four-lane Major roadway, and north of Sierra Avenue is a two-lane Major roadway.

Limonite Avenue is oriented in an east-west direction and is a four-lane Major roadway from I-15 Southbound Ramps to I-15 Northbound Ramps, from I-15 Northbound Ramps to Wineville Avenue is a four-lane Arterial roadway, from Wineville Avenue to Etiwanda Avenue is a four-lane Major roadway, from Etiwanda Avenue to Bain Street is a two-lane Major roadway, from Bain Street to Pedley Road is a four-lane Major roadway, from Pedley Road to Clay Street is a four-lane Arterial roadway, from Clay Street to Riverview Drive is a five-lane Urban Arterial roadway, and from Riverview Drive to Mission Boulevard is a four-lane Major roadway.

Rubidoux Boulevard is oriented in a north-south direction and is a four-lane Major roadway from Mission Boulevard to Market Street.

Intersections

As discussed in Chapter 4, the following improvements to the intersections are recommended to support the City's General Plan Land Use Element:

- **I-15 Southbound Ramps/Limonite Avenue:** Optimize the signal timing.
- **I-15 Northbound Ramps/Limonite Avenue:** Optimize the signal timing.
- **Wineville Road/Mission Boulevard:** Install a traffic signal.
- **Wineville Road/Riverside Drive:** Install a traffic signal.
- **Wineville Road/Cantu-Galleano Ranch Road:** Optimize the signal timing.
- **Mission Boulevard/SR-60 Eastbound Off-Ramp:** Optimization of the signal timing improves operations. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Etiwanda Avenue/Philadelphia Avenue:** Stripe eastbound right-turn lane and add overlap phasing. Add westbound right-turn lane with overlap phasing. Add a second northbound left-turn lane. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the p.m. peak hour.
- **Etiwanda Avenue/SR-60 Eastbound On-Ramp:** Install a traffic signal. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the p.m. peak hour.
- **Etiwanda Avenue/Van Buren Boulevard:** Southbound right-turn lane with overlap phasing and optimization of signal timing improvements operations. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Etiwanda Avenue/Bellegrave Avenue:** Optimize the signal timing.
- **Etiwanda Avenue/Limonite Avenue:** Add an eastbound left-turn lane and westbound left-turn lane. Add protected phasing to the eastbound/westbound approaches.
- **Country Village Road/Philadelphia Avenue:** Optimize the signal timing.
- **Country Village Road/SR-60 Westbound Ramps:** Add a second westbound right-turn lane; this will require modification of the westbound off-ramp. Stripe a southbound right-turn lane, and restripe the southbound through lane to a through/right-turn lane.
- **Van Buren Boulevard-Bellegrave Connector/Bellegrave Avenue:** Install a traffic signal. Add a westbound left-turn lane and restripe the southbound approach to include a southbound left-turn lane.

S-6

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

CHAPTER 5 – CIRCULATION SYSTEM STRATEGIES

and through/right-turn lane. Restripe the northbound approach to include a northbound left-turn lane and a through/right-turn lane.

- **Van Buren Boulevard/Van Buren-Bellegrave Connector:** Install a traffic signal, add two northbound left-turn lanes, a second eastbound right-turn lane, and a southbound right-turn lane.
- **Pedley Road/SR-60 Westbound Ramps:** Install a traffic signal.
- **Pedley Road/SR-60 Eastbound Ramps:** Install a traffic signal. Although this intersection operates satisfactorily, a signal has been added due to the addition of a signal at Pedley Road/SR-60 Westbound Ramps.
- **Jurupa Road/Van Buren-Jurupa Connector:** Install a traffic signal. Add an eastbound left-turn lane.
- **Van Buren Boulevard/Van Buren-Jurupa Connector:** Install a traffic signal. Add two northbound left-turn lanes.
- **Pedley Road/Jurupa Road:** Install a traffic signal.
- **Pedley Road-Morton Avenue/Limonite Avenue:** Optimize the signal timing.
- **Pyrite Street/SR-60 Westbound Ramps:** Install a traffic signal.
- **Pyrite Street/SR-60 Eastbound Ramps:** Install a traffic signal.
- **Clay Street/Limonite Avenue:** Add overlap phasing to the northbound right-turn lane.
- **Van Buren Boulevard/Clay Street:** Optimize the signal timing.
- **Camino Real/Jurupa Road:** Add a northbound right-turn lane with overlap phasing.
- **Camino Real/Limonite Avenue:** Add overlap phasing to the southbound right-turn lane.
- **Byrne Road/SR-60 Eastbound Ramps/Mission Boulevard:** Add a southbound left-turn lane. This improvement will require modification to the off-ramp.
- **Valley Way/Jurupa Road:** Install a traffic signal. Add an eastbound left-turn lane.
- **Armstrong Road/Sierra Avenue:** Add overlap phasing to the eastbound right-turn lane. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Valley Way/SR-60 Westbound Off-Ramp-Granite Hill Drive:** Restripe the north leg to separate the southbound left-turn lane and right-turn lane. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Valley Way/SR-60 Westbound On-Ramp:** This intersection may be combined with Valley Way/SR-60 Westbound Off-Ramp-Granite Hill Drive as a five-legged intersection with one signal controller. This will require Caltrans review. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Valley Way/Mission Boulevard:** Optimize the signal timing. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Riverview Drive/Mission Boulevard:** Add a second northbound right-turn lane and add overlap phasing to the northbound right-turn lane and eastbound right-turn lane. Restripe the north leg approach to the southbound left-turn lane and through/right-turn lane. Change the northbound/southbound signal phasing from split-

City of Jurupa Valley General Plan Traffic Study ♦ November 2016

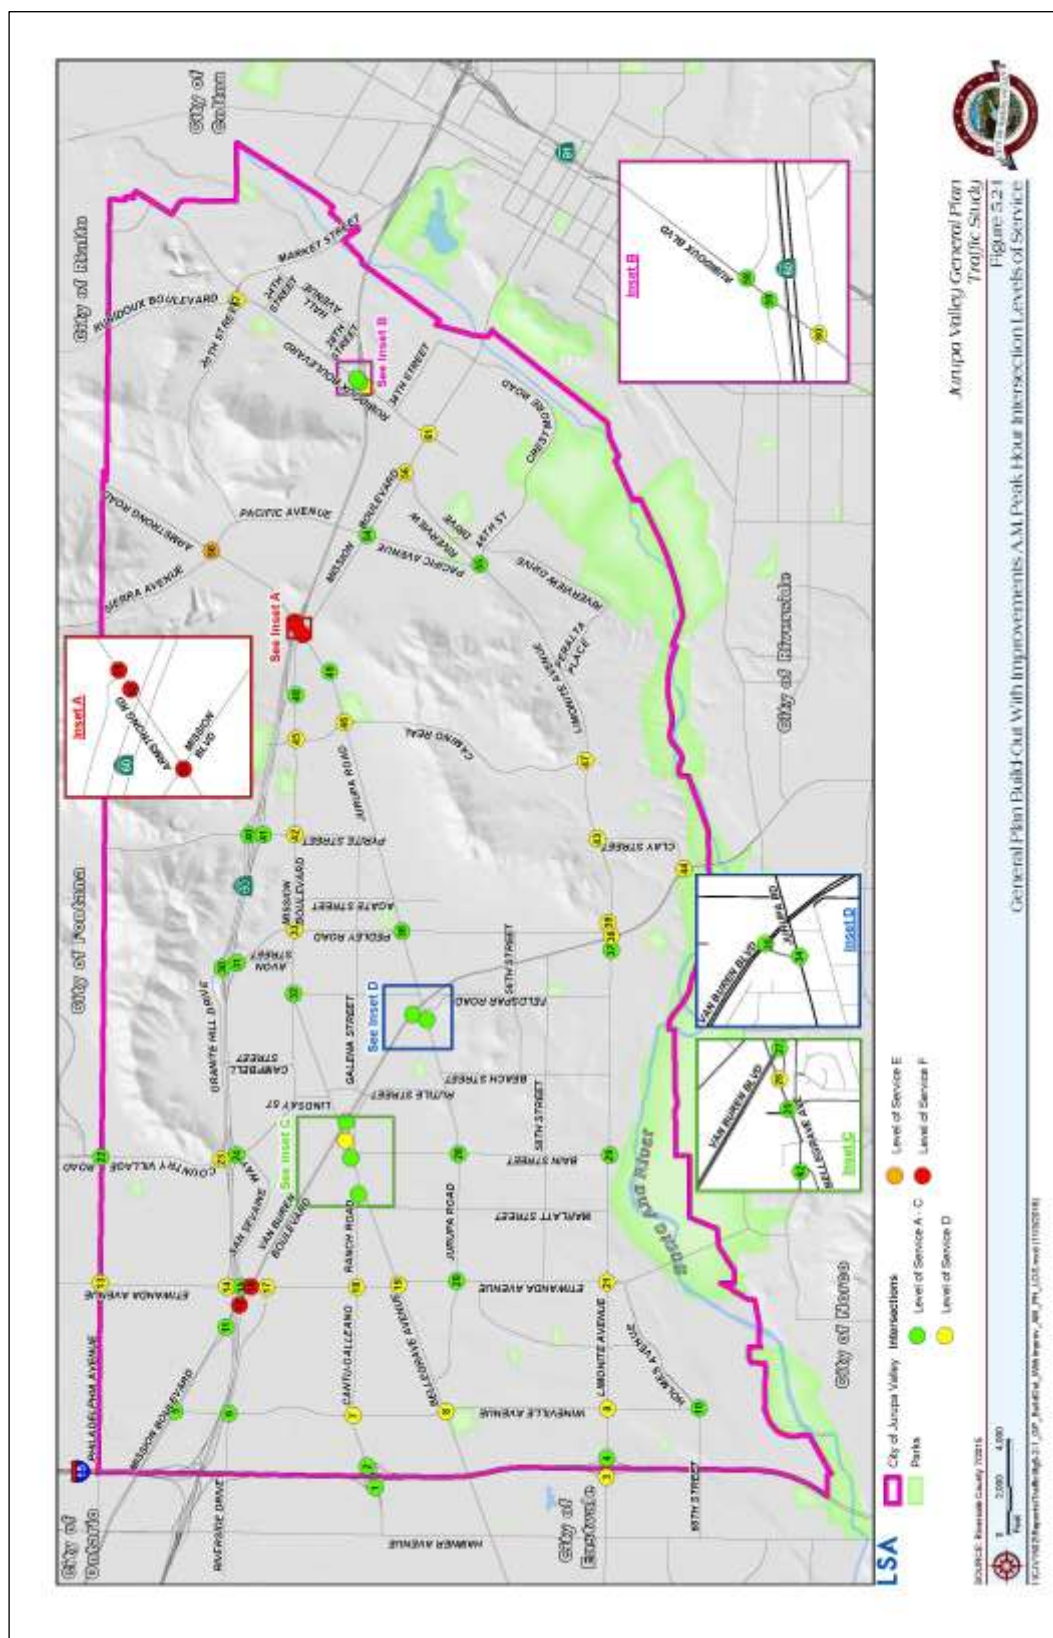

S-7

CHAPTER 5 – CIRCULATION SYSTEM STRATEGIES

phasing to protected phasing. No other improvements are feasible due to right-of-way constraints.

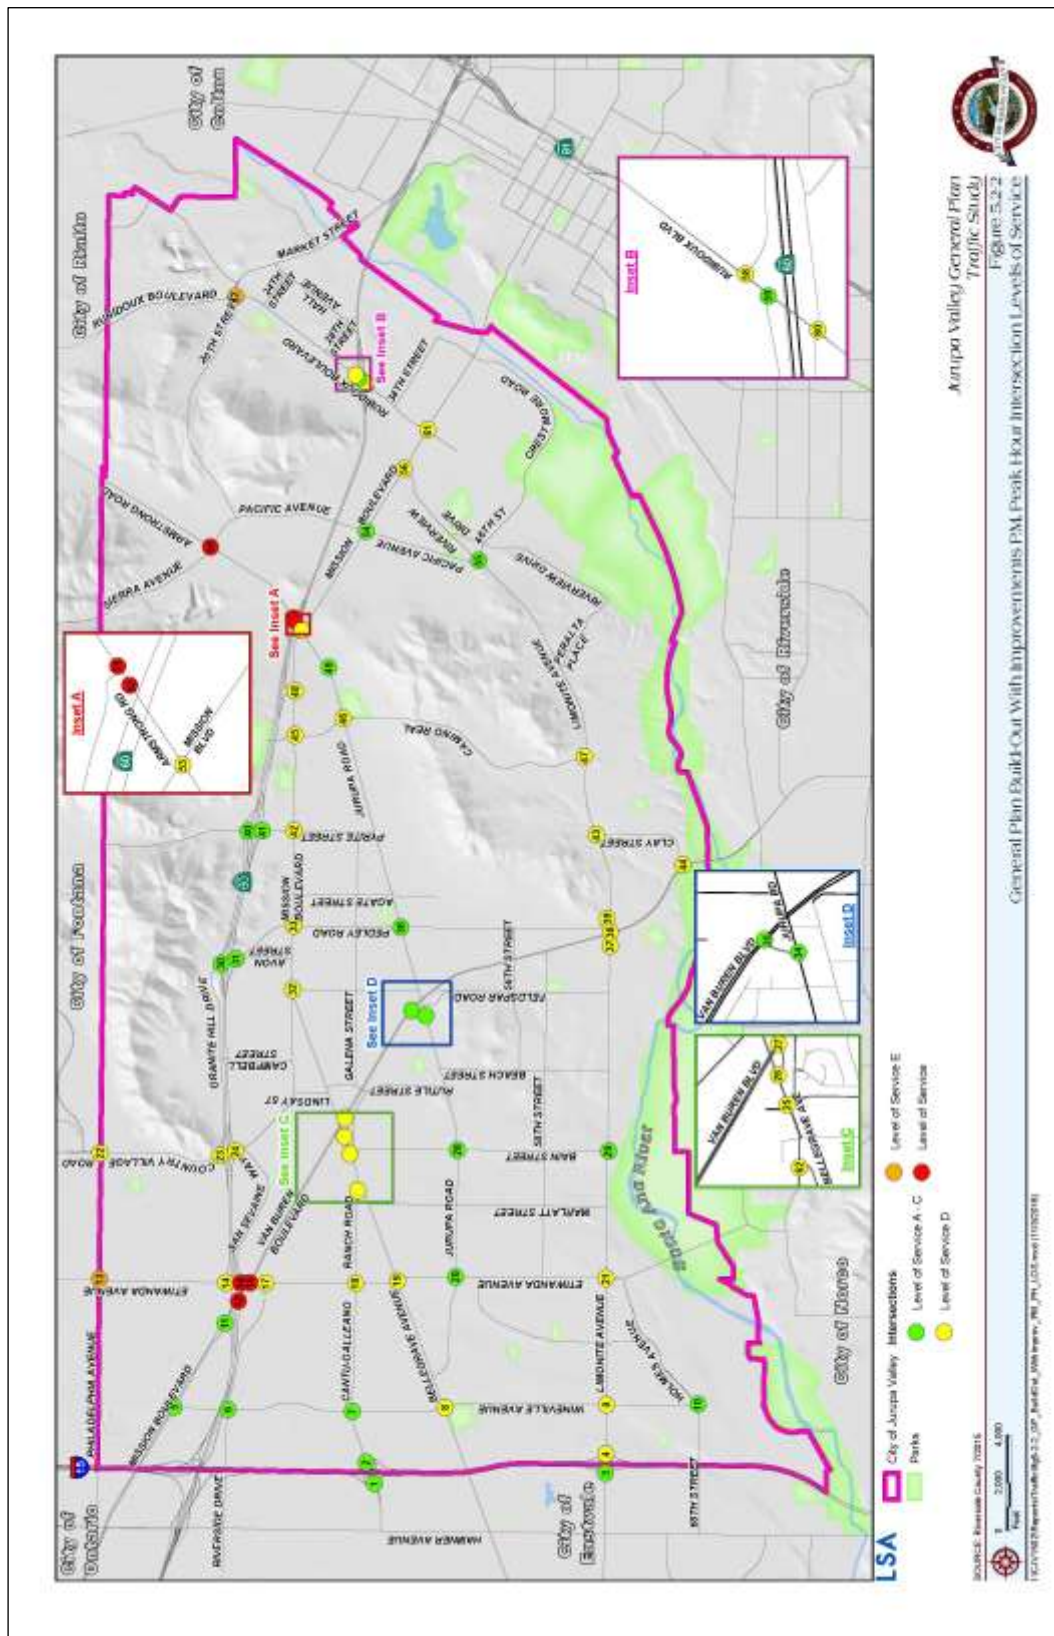

- **Rubidoux Boulevard/Market Street:** Add overlap phasing to the northbound right-turn lane and reduce the median on the east leg to accommodate a separate westbound left-turn lane. Restripe the westbound through/left-turn lane to a through lane. Change the eastbound/westbound signal phasing from split phase to protected phasing. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the p.m. peak hour.
- **Rubidoux Boulevard/SR-60 Eastbound Ramps:** Add a northbound right-turn lane and an eastbound left-turn lane. The eastbound left-turn lane will require widening of the eastbound off-ramp and will require Caltrans review.
- **Rubidoux Boulevard/Mission Boulevard:** Restripe the south leg to accommodate separate northbound left-turn lane and through-right-turn lane. Change the northbound/southbound signal phasing from split phase to protected phasing. Add overlap phasing to the southbound and westbound right-turn lane.
- **Bellevue Avenue/Cantu-Galleano Ranch Road:** Install a traffic signal. Add a westbound left-turn lane and overlap phasing to the northbound right-turn lane.

Previously referenced Table 4.B illustrates the General Plan Build-Out conditions with the recommended intersection improvements. Previously referenced Figures 4.1-1 and 4.1-2 illustrate the resulting intersection geometrics. Figure 5.2-1 and 5.2-2 illustrate the resulting intersection levels of service with the addition of the above listed improvements at study intersections. With implementation of the above improvements, 9 intersections will continue to operate at deficient LOS.

NOISE AND VIBRATION STUDY
CITY OF JURUPA VALLEY GENERAL PLAN
CITY OF JURUPA VALLEY, RIVERSIDE COUNTY, CALIFORNIA

L&A ASSOCIATES, INC.
SEPTEMBER 2014

This page intentionally left blank

INTRODUCTION

This noise and vibration study has been prepared to evaluate the potential noise and vibration impacts and mitigation measures associated with the implementation of the proposed General Plan for the City of Jurupa Valley (City). This report discusses the fundamentals of sound; examines federal, state, and local noise guidelines, policies, and standards; reviews noise levels under existing conditions; evaluates potential noise impacts associated with the implementation of City's General Plan; and provides mitigation where necessary to reduce noise impacts. This report evaluates the potential for implementation of the General Plan to result in noise impacts in the City and surrounding areas adjacent to the City.

Project Location and Description

The City's 2016 General Plan area constitutes the boundaries of the City of Jurupa Valley, as shown in Figure 1. The City is adjacent to the cities of Eastvale on the west, Norco and Riverside on the south and east in Riverside County, and Ontario and Fontana on the north and east, and the city of Colton on the northeast in San Bernardino County. The western portion of Jurupa Valley is primarily flat, with gentle rolling foothills scattered throughout the Glen Avon and Mira Loma areas. North of State Route 60 (SR-60) lies the dramatic sloping terrain of the Jurupa Mountains, that provide a natural backdrop for the communities of Sunnyslope and Belltown. The Pedley Hills provide a picturesque setting for the community of Pedley as well as a pleasing backdrop for communities adjacent to the hills. The Santa Ana River, with its lush riparian habitat, provides a natural contrast along the southern boundary of Jurupa Valley. Over the years, the Jurupa Valley has consisted of many unincorporated communities.

The City of Jurupa Valley was incorporated in July 2011. The City of Jurupa Valley Ordinance Nos. 2011-01 and 2011-10 adopted all ordinances and resolutions of the County of Riverside in effect as of July 1, 2011 (including land use ordinances and resolutions), to remain in full force and effect as City Ordinances. As such, development activities that occur in the City of Jurupa Valley are regulated by the City's current General Plan, which follows Riverside County's General Plan in effect in 2011, as since amended, and Riverside County Zoning Ordinance (Ordinance No. 348) and Subdivision Ordinance (Ordinance No. 460) that were in effect on July 1, 2011, unless otherwise superseded by a City ordinance or resolution.

The City's 2016 General Plan is consistent with and derives its authority from California State law. Once adopted, it becomes the basis for land use and other important municipal decisions; however, the Plan itself is not a regulation. The General Plan is implemented through Zoning Regulations, adopted standards and other City laws. As required by State law, capital improvement programs, zoning regulations and related land use policies must be consistent with the General Plan.

CHARACTERISTICS OF SOUND

Sound is increasing to such disagreeable levels in the environment that it can threaten quality of life. Noise is usually defined as unwanted sound. Noise consists of any sound that may produce physiological or psychological damage and/or interfere with communication, work, rest, recreation, and sleep.

This page intentionally left blank

To the human ear, sound is technically described in terms of its loudness (amplitude) and pitch (frequency). Pitch is generally an annoyance, while loudness can affect our ability to hear. Pitch is the number of complete vibrations, or cycles per second, of a wave resulting in the tone's range from high to low. Loudness is the strength of a sound that describes a noisy or quiet environment and is measured by the amplitude of the sound wave. Loudness is determined by the intensity of the sound waves combined with the reception characteristics of the human ear. Sound intensity refers to how hard the sound wave strikes an object, which in turn produces the sound's effect. This characteristic of sound can be precisely measured with instruments. The analysis of a project defines the noise environment of the project area in terms of sound intensity and its effect on adjacent sensitive land uses.

Measurement of Sound

Sound intensity is measured through the A-weighted scale to correct for the relative frequency response of the human ear. That is, an A-weighted noise level de-emphasizes low and very high frequencies of sound similar to the human ear's de-emphasis of these frequencies. Unlike linear units (e.g., inches or pounds), decibels are measured on a logarithmic scale representing points on a sharply rising curve.

For example, 10 decibels (dB) is 10 times more intense than 1 dB, 20 dB is 100 times more intense than 1 dB, and 30 dB is 1,000 times more intense than 1 dB. Thirty decibels (30 dB) represents 1,000 times as much acoustic energy as 1 dB. The decibel scale increases as the square of the change, representing the sound pressure energy. A sound as soft as human breathing is about 10 times greater than 0 dB. The decibel system of measuring sound gives a rough connection between the physical intensity of sound and its perceived loudness to the human ear. A 10 dB increase in sound level is perceived by the human ear as only a doubling of the loudness of the sound. Ambient sounds generally range from 30 dB (very quiet) to 100 dB (very loud).

Sound levels are generated from a source, and their decibel level decreases as the distance from that source increases. Sound dissipates exponentially with distance from the noise source. For a single point source, sound levels decrease approximately 6 dB for each doubling of distance from the source. This drop-off rate is appropriate for noise generated by stationary equipment. If noise is produced by a line source (e.g., highway traffic or railroad operations) the sound decreases 3 dB for each doubling of distance in a hard site environment. Line source (noise in a relatively flat environment with absorptive vegetation) decreases 4.5 dB for each doubling of distance.

There are many ways to rate noise for various time periods, but an appropriate rating of ambient noise affecting humans also accounts for the annoying effects of sound. The equivalent continuous sound level (L_{eq}) is the total sound energy of time-varying noise over a sample period. However, the predominant rating scales for human communities in the State of California are the L_{eq} and Community Noise Equivalent Level (CNEL) or the day-night average noise level (L_{dn}) based on A-weighted decibels (dBA). CNEL is the time-varying noise over a 24-hour period, with a 5 dBA weighting factor applied to the hourly L_{eq} for noises occurring from 7:00 p.m. to 10:00 p.m. (defined as relaxation hours), and a 10 dBA weighting factor applied to noises occurring from 10:00 p.m. to 7:00 a.m. (defined as sleeping hours). L_{dn} is similar to the CNEL scale but without the adjustment for events occurring during the evening hours. CNEL and L_{dn} are within 1 dBA of each other and are normally interchangeable. The City uses both CNEL and L_{dn} noise scales for long-term noise impact assessment.

Other noise rating scales of importance when assessing the annoyance factor include the maximum instantaneous noise level (L_{max}), which is the highest exponential time-averaged sound level that occurs during a stated time period. The noise environments discussed in this analysis for short-term noise impacts are specified in terms of maximum levels denoted by L_{max} , which reflects peak operating conditions and addresses the annoying aspects of intermittent noise. It is often used together with another noise scale, or noise standards in terms of percentile noise levels, in noise ordinances for enforcement purposes. For example, the L_{10} noise level represents the noise level exceeded 10 percent of the time during a stated period. The L_{50} noise level represents the median noise level. Half the time the noise level exceeds this level, and half the time it is less than this level. The L_{90} noise level represents the noise level exceeded 90 percent of the time and is considered the background noise level during a monitoring period. For a relatively constant noise source, the L_{eq} and L_{50} are approximately the same.

Noise impacts can be described in three categories. The first category includes audible impacts that refer to increases in noise levels noticeable to humans. Audible increases in noise levels generally refer to a change of 3 dB or greater because this level has been found to be barely perceptible in exterior environments. The second category, potentially audible, refers to a change in the noise level between 1 dB and 3 dB. This range of noise levels has been found to be noticeable only in laboratory environments. The last category includes changes in noise levels of less than 1 dB, which are inaudible to the human ear. Only audible changes in existing ambient or background noise levels are considered potentially significant.

Physiological Effects of Noise

Physical damage to human hearing begins at prolonged exposure to noise levels higher than 85 dBA. Exposure to high noise levels affects the entire system, with prolonged noise exposure in excess of 75 dBA increasing body tensions, thereby affecting blood pressure and functions of the heart and the nervous system. In comparison, extended periods of noise exposure above 90 dBA would result in permanent cell damage. When the noise level reaches 120 dBA, a tickling sensation occurs in the human ear, even with short-term exposure. This level of noise is called the threshold of feeling. As the sound reaches 140 dBA, the tickling sensation is replaced by the feeling of pain in the ear (the threshold of pain). A sound level of 160–165 dBA will result in dizziness or loss of equilibrium. The ambient or background noise problem is widespread and generally more concentrated in urban areas than in outlying, less developed areas.

Table A lists definitions of acoustical terms, and Table B shows common sound levels and their sources.

Table A: Definitions of Acoustical Terms

| Term | Definitions |
|-----------------------------|---|
| Decibel, dB | A unit of measurement that denotes the ratio between two quantities that are proportional to power; the number of decibels is 10 times the logarithm (to the base 10) of this ratio. |
| Frequency, Hz | Of a function periodic in time, the number of times that the quantity repeats itself in 1 second (i.e., number of cycles per second). |
| A-Weighted Sound Level, dBA | The sound level obtained by use of A-weighting. The A-weighting filter deemphasizes the very low- and very high-frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise. (All sound levels in this report are A-weighted, unless reported otherwise.) |

CITY OF JURUPA VALLEY GENERAL PLAN
CITY OF JURUPA VALLEY, RIVERSIDE COUNTY, CALIFORNIA

Table A: Definitions of Acoustical Terms

| Term | Definitions |
|---|---|
| $L_{01}, L_{10}, L_{50}, L_{90}$ | The fast A-weighted noise levels that are equaled or exceeded by a fluctuating sound level 1%, 10%, 50%, and 90% of a stated time period. |
| Equivalent Continuous Noise Level, L_{eq} | The level of a steady sound that, in a stated time period and at a stated location, has the same A-weighted sound energy as the time-varying sound. |
| Community Noise Equivalent Level, CNEL | The 24-hour A-weighted average sound level from midnight to midnight, obtained after the addition of 5 dBA to sound levels occurring in the evening from 7:00 PM to 10:00 PM and after the addition of 10 dBA to sound levels occurring in the night between 10:00 PM and 7:00 AM. |
| Day/Night Noise Level, L_{dn} | The 24-hour A-weighted average sound level from midnight to midnight, obtained after the addition of 10 dBA to sound levels occurring in the night between 10:00 PM and 7:00 AM. |
| L_{max}, L_{min} | The maximum and minimum A-weighted sound levels measured on a sound level meter, during a designated time interval, using fast time averaging. |
| Ambient Noise Level | The all-encompassing noise associated with a given environment at a specified time; usually a composite of sound from many sources at many directions, near and far; no particular sound is dominant. |
| Intrusive | The noise that intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, and time of occurrence and tonal or informational content, as well as the prevailing ambient noise level. |

Vibration

Vibration refers to groundborne noise and perceptible motion of the earth. Similar to airborne noise, vibration is transmitted in noise-like waves through the earth and solid objects. There are several ways to categorize vibration sources. One way is to divide vibration into natural sources (e.g., earthquakes, volcanic eruptions, sea waves, and landslides) and human sources (e.g., explosions, machinery, traffic, trains, and construction equipment). Similar to noise sources, vibration sources can also be described as continuous (e.g., operating factory machinery) or transient (e.g., explosions).

As with noise, ground vibrations can be described by amplitude and frequency. Vibration amplitude is characterized by its displacement, velocity, and acceleration. Displacement is the distance that soil particles travel from their original location as a result of vibration, as measured in inches or millimeters. Velocity is the speed of the soil particles measured in inches per second or millimeters per second. Acceleration of the soil particles is measured in inches per second or millimeters per second. Particle velocity is the most commonly used vibration attribute used to describe vibration. Table C presents the human reaction to various levels of peak particle velocity. Vibrations also vary in frequency. Traffic vibrations generally range in frequencies from 10 to 30 hertz (Hz), and tend to average around 15 Hz. As a point of reference, city buses often generate frequencies around 3 Hz at high vehicle speeds, due to their suspension systems.

Table C: Human Reaction to Typical Vibration Levels

| Vibration Level Peak Particle Velocity (inches/second) | Human Reaction |
|--|---|
| 0.0059–0.0188 | Threshold of perception, possibility of intrusion. |
| 0.0787 | Vibrations readily perceptible. |
| 0.0984 | Level at which continuous vibrations begin to annoy people. |
| 0.1968 | Vibrations annoying to people in buildings. |
| 0.3937–0.5905 | Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges. |

Source: Caltrans 1992.

Groundborne vibration is almost exclusively a concern inside buildings and is rarely perceived as a problem outdoors, where the motion may be discernable. However, without the effects associated with the shaking of a building, there is less adverse reaction. Building vibration may be perceived by the occupants as motion of building surfaces, rattling of items on shelves or hanging on walls, or as a low-frequency rumbling noise. Building damage is not a factor for normal projects, with the occasional exception of blasting and pile driving during construction or mining. Annoyance from vibration often occurs when the vibration exceeds the threshold of perception by up to 10 decibels. This is an order of magnitude below the damage threshold for normal buildings.

Typical sources of groundborne vibration are construction activities (e.g., blasting, pile driving, and operating heavy-duty earthmoving equipment), steel-wheeled trains, and occasional traffic on rough roads. Problems with groundborne vibration and noise from these sources are usually localized to within about 100 feet of the vibration source, although there are examples of groundborne vibration causing interference out to distances greater than 200 feet. When roadways are smooth, vibration from traffic, even heavy trucks, is rarely perceptible.

LSA ASSOCIATES, INC.
SEPTEMBER 2016NOISE AND VIBRATION STUDY
CITY OF JURUPA VALLEY GENERAL PLAN
CITY OF JURUPA VALLEY, RIVERSIDE COUNTY, CALIFORNIA

Factors that influence groundborne vibration and noise include the following:

- **Vibration Source:** Vehicle suspension, wheel types and condition, railroad track/roadway surface, railroad track support system, speed, transit structure, and depth of vibration source
- **Vibration Path:** Soil type, rock layers, soil layering, depth to water table, and frost depth
- **Vibration Receiver:** Foundation type, building construction, and acoustical absorption

Among the factors listed above, there are significant differences in the vibration characteristics when the source is underground versus at ground surface. In addition, soil conditions are known to have a strong influence on the levels of groundborne vibration. Among the most important factors are the stiffness and internal damping of the soil and the depth to bedrock. Vibration propagation is more efficient in stiff clay soils than in loose sandy soils, and shallow rock seems to concentrate the vibration energy close to the surface and can result in groundborne vibration problems at a great distance from the track. Factors such as layering of the soil and depth to water table can have significant effects on the propagation of groundborne vibration. Soft, loose, sandy soils tend to attenuate more vibration energy than hard, rocky materials. Vibration propagation through groundwater is more efficient than through sandy soils.

Table D shows the various land use compatibility classifications based on exterior noise levels, and these categories are described as follows:

- **Noise Range I—Normally Acceptable:** Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.
- **Noise Range II—Conditionally Acceptable:** New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made, and needed noise insulation features are included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning, will normally suffice.
- **Noise Range III—Normally Unacceptable:** New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.
- **Noise Range IV—Clearly Unacceptable:** New construction or development should generally not be undertaken.

Table D: Land Use Compatibility for Exterior Community Noise

| Land Use Category | Noise Range (L_{dn} or CNEL), dB | | | |
|--|-------------------------------------|-------|-------|-----|
| | I | II | III | IV |
| Passively used open spaces | 50 | 50-55 | 55-70 | 70+ |
| Auditoriums, concert halls, amphitheaters | 45-50 | 50-65 | 65-70 | 70+ |
| Residential, low-density single-family, duplex, mobile homes | 50-55 | 55-70 | 70-75 | 75+ |
| Residential multifamily | 50-60 | 60-70 | 70-75 | 75+ |
| Transient lodging, motels, hotels | 50-60 | 60-70 | 70-80 | 80+ |
| Schools, libraries, churches, hospitals, nursing homes | 50-60 | 60-70 | 70-80 | 80+ |

Table D: Land Use Compatibility for Exterior Community Noise

| Land Use Category | Noise Range (L_{dn} or CNEL), dB | | | |
|--|-------------------------------------|-------|-------|-----|
| | I | II | III | IV |
| Actively used open spaces, playgrounds, neighborhood parks | 50-67 | — | 67-73 | 73+ |
| Golf courses, riding stables, water recreation, cemeteries | 50-70 | — | 70-80 | 80+ |
| Office buildings, business commercial and professional | 50-67 | 67-75 | 75+ | — |
| Industrial, manufacturing, utilities, agriculture | 50-70 | 70-75 | 75+ | — |

Source: California Department of Health, Office of Noise Control (1976).

CNEL = Community Noise Equivalent Level

dB = decibel(s)

 L_{dn} = day-night average noise level

REGULATORY FRAMEWORK

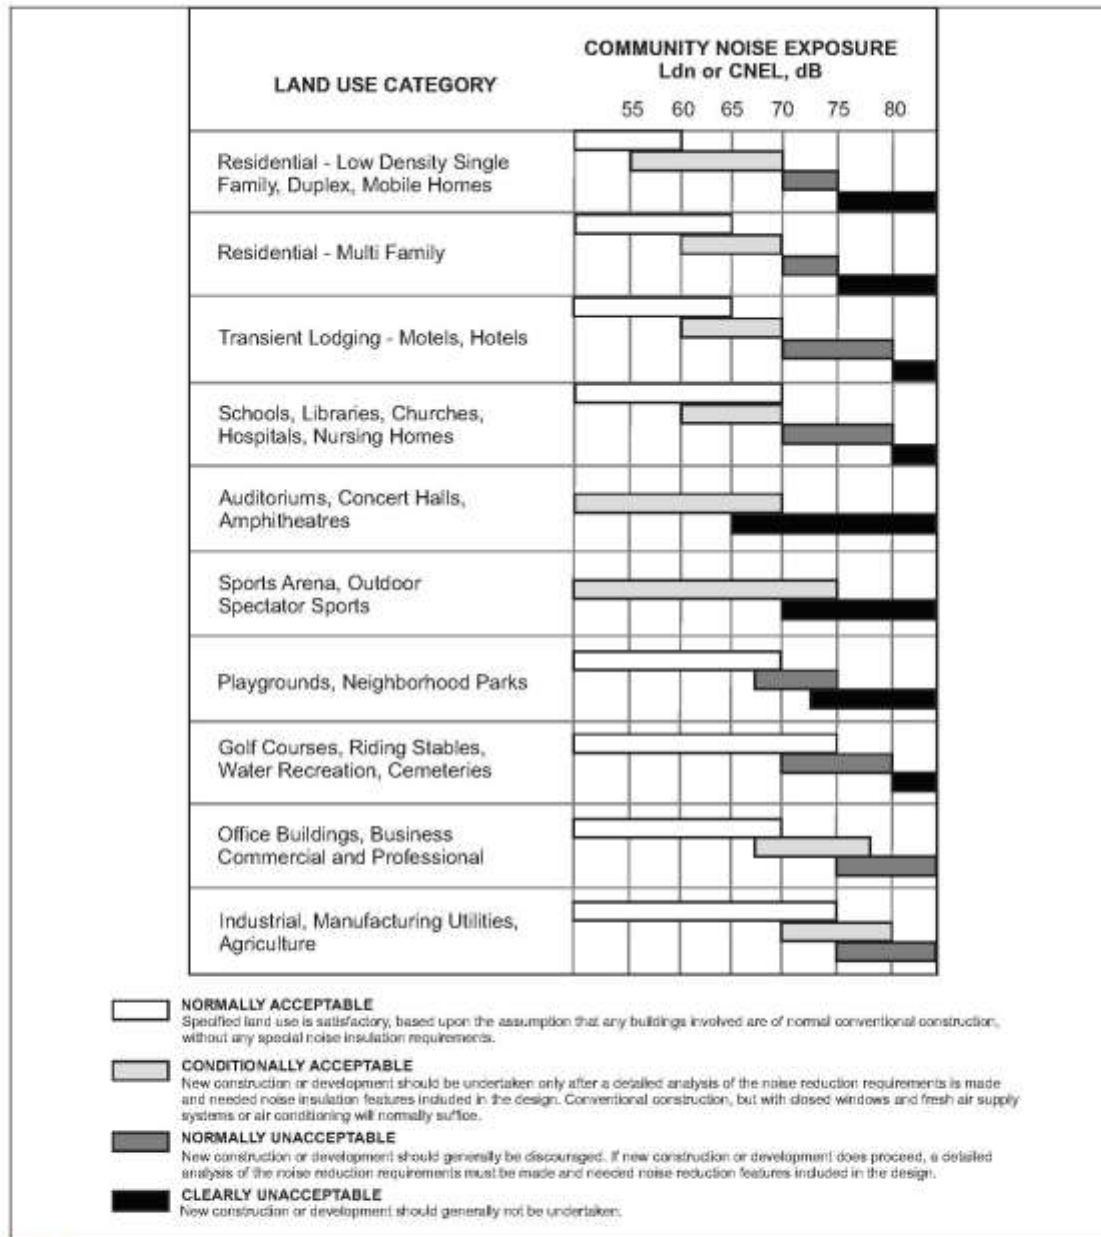

Federal Guidelines

For train vibration, the typical criteria are those in the Transit Noise and Vibration Impact Assessment (FTA 2006) by the Federal Transit Administration. The criterion presented in Table 8-1 of that report for infrequent events (defined as fewer than 30 per day) in residences is that the vibration levels not exceed 80 VdB. (VDdB is a measurement of ground velocity relative to 10^{-6} inches per second.) Note that the threshold of perception is usually taken to be approximately 65 VdB. Therefore, even if the requirements are met, vibration from train pass-bys will be felt.

State Regulations

Noise Compatibility Guidelines. The State of California Noise Compatibility Guidelines, published by the Department of Health, Services provides guidance for use when siting land uses. Figure 2 shows the compatibility guidelines, which are used to evaluate the compatibility of the proposed land uses with the noise environment. The guidelines show compatibility of various land uses with different noise environments and demonstrate that residential uses are normally acceptable in noise environments up to 60 dBA CNEL for low-density single-family uses and 65 dBA CNEL for multifamily residential uses.

State of California Building Code. The State of California's noise insulation standards are codified in the California Code of Regulations (CCR), Title 24, Building Standards Administrative Code, Part 2, California Building Code (CBC). These noise standards are applied to new construction in California for the purpose of ensuring that the level of exterior noise transmitted to and received within the interior living spaces of buildings is compatible with their comfortable use. For new residential dwellings, hotels, motels, dormitories, and school classrooms, the acceptable interior noise limit for habitable rooms in new construction is 45 dBA CNEL or L_{dn} . Title 24 requires acoustical studies for residential development in areas exposed to more than 60 dBA CNEL to demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. Where exterior noise levels are projected to exceed 60 dBA CNEL or L_{dn} at the façade of a building, a report must be submitted with the building plans that describe the noise control measures that have been incorporated into the design of the project to meet the 45 dBA CNEL or L_{dn} noise limit.

State Land Use Compatibility Criteria. The State of California adopts suggested land use noise compatibility levels as part of its General Plan Update Guidelines. These suggested guidelines provide urban planners with an integral tool to gauge the compatibility of land uses relative to existing and future noise levels. The guidelines identify normally acceptable, conditionally acceptable, and clearly unacceptable noise levels for various land uses. A conditionally acceptable designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated into the design. By comparison, a normally acceptable designation indicates that standard construction can occur with no special noise reduction requirements. Previously referenced Figure 2 shows the Land Use Compatibility Guidelines.

State and federal agencies regulate vehicle noise emissions from the source, but local governments have little direct control of transportation noise at the source. The most effective methods available to the City for mitigating transportation noise are the locating of sensitive uses away from noise sources, establishing commercial truck routes, constructing and maintaining adequate setbacks between land uses and noise sources, constructing noise barriers, and by requiring development project site design review. The State's Land Use Compatibility Matrix (Figure 2) may be used to assess the compatibility of the proposed land uses with the noise environment. These criteria are the basis for specific Noise Standards.

Riverside County

Riverside County Airport Land Use Commission. The California Public Resources Code requires that the adoption or approval of any amendment to a general or specific plan affecting the property within an airport influence area (AIA), as defined by an airport land use compatibility plan, shall require review from the Airport Land Use Commission (ALUC) for determination of consistency with the Commission's Plan prior to its approval by the local jurisdiction. In general, consistency with the Commission's Plan is determined based on noise and safety compatibility issues.

The locations of CNEL contours are among the factors used to define compatibility zone boundaries and criteria. According to guidelines included in the Riverside County Airport Land Use Compatibility Plan (ALUCP), areas exposed to aircraft noise levels above 65 dBA CNEL are considered clearly unacceptable for new residential land uses, schools, libraries, and hospitals. For churches, auditoriums, concert halls, and amphitheaters, noise levels above 70 dBA CNEL are clearly unacceptable. These standards shall be based upon projected noise contours calculated based upon forecasted aircraft activity as indicated in an airport master plan, or that is considered by the Riverside County ALUC to be plausible.

The maximum aircraft-related interior noise level that shall be considered acceptable for land uses near airports is 45 dBA CNEL in: (a) any habitable room of single-family or multifamily residences; (b) hotels and motels; (c) hospitals and nursing homes; (d) churches, meeting halls, theaters, and mortuaries; (e) office buildings; and (f) schools, libraries, and museums. According to the Riverside County ALUC, when reviewed as part of a general plan or zoning ordinance amendment or as a major land use action, evidence that proposed structures will be designed to comply with the above criteria shall be submitted to the ALUC under the following circumstances:

- Any mobile home situated within an airport's 55 dBA CNEL contour. (A typical mobile home has an average exterior-to-interior noise level reduction (NLR) of approximately 15 dBA with windows closed);
- Any single-family or multifamily residence situated within an airport's 60 dBA CNEL contour. (Wood frame buildings constructed to meet 1990s standards for energy efficiency typically have an average NLR of approximately 20 dBA with windows closed.); and
- Any hotel or motel, hospital or nursing home, church, meeting hall, office building, mortuary, school, library, or museum situated with an airport's 65 dBA CNEL contour.

City of Jurupa Valley General Plan

Noise Element. The Noise Element of the proposed 2016 General Plan contains the following goals, policies, and programs to help monitor, regulate, and mitigate excessive noise levels (i.e., potential noise impacts) within the City as development occurs:

Goal

- NE 1.1 Ensure adjacent land uses are compatible and protect sensitive receptors from outside sources of noise and vibration.

Policies

- NE 1.1.1 **Land Use/Noise Compatibility.** Utilize the Land Use/Noise Compatibility Matrix, Table NE-2, to determine the compatibility of proposed general plan amendments and rezones with existing noise-sensitive land uses and/or noise exposure due to transportation sources.
- NE 1.1.2 **New Development and Stationary Noise Sources.** New development of noise-sensitive land uses near existing stationary noise sources may be permitted only where their location or design allow the development to meet the standards of Table NE-1.
- NE 1.1.3 **New or Modified Stationary Noise Sources.** Noise created by new, stationary noise sources, or by existing stationary noise sources that undergo modifications that may increase noise levels, shall be mitigated to not exceed the noise level standards of Table NE-1, for noise-sensitive uses. This policy does not apply to noise levels associated with agricultural operations existing in 2016.
- NE 1.1.4 **Acoustical Assessment.** Require an acoustical assessment for proposed general plan amendments and rezones that exceed the "Normally Acceptable" thresholds of the Land Use/Noise Compatibility Matrix.
- NE 1.1.5 **Noise-Sensitive Uses.** Consider the following uses noise-sensitive and discourage these uses in areas in excess of 65 dBA CNEL: schools, hospitals, assisted living facilities, mental care facilities, residential uses, libraries, passive recreational uses, and places of worship.
- NE 1.1.6 **Protection of Noise-Sensitive Uses.** Protect noise-sensitive land uses from high levels of noise by restricting noise-producing land uses from these areas. If the noise-producing land uses cannot be relocated, then measures such as building techniques, setbacks, landscaping and noise walls should be considered.

LSA ASSOCIATES, INC.
SEPTEMBER 2016

NOISE AND VIBRATION STUDY
CITY OF JURUPA VALLEY GENERAL PLAN
CITY OF JURUPA VALLEY, RIVERSIDE COUNTY, CALIFORNIA

- NE 1.1.7 **Noise-Tolerant Uses.** Guide new or relocated noise-tolerant land uses into areas irrevocably committed to land uses that are noise producing, such as along major transportation corridors or within the projected noise contours of area airports.
- NE 1.1.8 **Airport Noise Compatibility.** Ensure that new land use development within Airport Influence Areas complies with airport land use noise compatibility criteria contained in the applicable Airport Land Use Compatibility (ALUC) plan for the area.
- NE 1.1.9 **Acoustic Site Planning and Design.** Incorporate acoustic site planning into the design and placement of new development, particularly large scale, mixed-use, or master-planned development, including building orientation, berming, special noise-resistant walls, window and door assemblies, and other appropriate measures.
- NE 1.1.10 **Mixed Uses.** Require that mixed commercial and residential development minimizes the transfer or transmission of noise from the commercial land use to the residential land use.

Programs

- NE 1.1.1.1 **Municipal Code:** Amend the Municipal Code to require that development entitlements (tract maps, site development plans, conditional use permits, etc.) comply with the Land Use/Noise Compatibility Matrix (Table NE-2) and other requirements of the General Plan.
- NE 1.1.1.2 **Noise Guide.** The Planning Department shall prepare and maintain a Noise Guide containing "Good Neighbor" guidelines and rules for neighborhood noise reduction and procedures for mitigating noise, and make the Guide available to the public, property owners, and developers.
- NE 1.1.1.3 **Homeowner Assistance.** Assist homeowners living in high noise areas to reduce noise levels in their homes through funding assistance and retrofitting program development, as City resources allow.

Goal

- NE 2.1 Minimize excessive noise levels and community health risks due to mobile noise sources.

Policies

- NE 2.1.1 **Roadway Projects.** Include noise mitigation measures in the design and construction of new roadway projects in the City. Noise mitigation may include speed reduction, roadway design, noise-reducing materials or surfaces, edge treatments and parkways with berms and landscaping, and other measures.
- NE 2.1.2 **Commercial Truck Deliveries.** Require commercial or industrial truck delivery hours be limited to least-sensitive times of the day when adjacent to noise-sensitive land uses, unless there is no feasible alternative or there are overriding transportation benefits, as determined by the Planning Director.
- NE 2.1.3 **Off-Road Vehicles.** Restrict the use of motorized trail bikes, mini-bikes, and other off-road vehicles except where designated for that purpose. Enforce strict operating hours for these vehicles where they are located to minimize noise impacts on sensitive land uses adjacent to public trails and parks.

- NE 2.1.4 **Rail Noise.** Minimize the noise effect of rail transit (freight and passenger) on residential uses and other sensitive land uses through the land use planning and discretionary approval process.
- NE 2.1.5 **Rail Noise Mitigation.** Encourage, and where possible, require the rail service provider to install noise mitigation features where rail operations impact existing adjacent residential or other noise-sensitive uses.
- NE 2.1.6 **Noise Contours.** Check all proposed development projects for possible location within roadway, railroad, and airport noise contours.
- NE 2.1.7 **Airport Compatibility.** Comply with applicable noise mitigation policies contained in the Airport Land Use Compatibility (ALUC) Plans for Flabob Airport, Riverside Municipal Airport, and the LA/Ontario International Airport.
- NE 2.1.8 **Preferred Noise Mitigation Methods.** When approving new development of noise-sensitive uses or noise-generating uses, the City will require noise mitigation in the order of preference, as listed below, with "1" being most preferred. For example, when mitigating outdoor noise exposure, providing distance between source and recipient is preferred to providing berms and walls. Before approving a less desirable approach, the City approval body must make a finding that more desirable approaches are not effective or that it is not practical to use the preferred approaches consistent with other design criteria based on the General Plan.
- A. Mitigating Noise Generation
1. Design the site of the noise-producing project so that buildings or other solid structures shield neighboring noise-sensitive uses;
 2. Limit the operating times of noise-producing activities;
 3. Provide features, such as walls, with a primary purpose of blocking noise.
- B. Mitigating Outdoor Noise Exposure
1. Provide distance between noise source and recipient;
 2. Provide distance plus planted earthen berms;
 3. Provide distance and planted earthen berms, combined with sound walls;
 4. Provide earthen berms combined with sound walls;
 5. Provide sound walls only;
 6. Integrate buildings and sound walls to create a continuous noise barrier.
- NE 2.1.9 **Noise Walls.** Noise mitigation walls (sound walls) should be used only when it is shown that preferred approaches are not effective or that it is not practical to use the preferred approaches consistent with other design criteria based on the General Plan. Where noise walls are used, they should be designed to enhance community character, protect significant views, discourage graffiti, and help create an attractive pedestrian, residential setting through features such as setbacks, changes in vertical and horizontal alignment, detail and texture, public art, walkways or trails, and landscaping. The height of such walls should be minimized, and where sound attenuation requires that a buffer that exceeds ten feet in height, the sound buffer

LSA ASSOCIATES, INC.
SEPTEMBER 2016

NOISE AND VIBRATION STUDY
CITY OF JURUPA VALLEY GENERAL PLAN
CITY OF JURUPA VALLEY, RIVERSIDE COUNTY, CALIFORNIA

should consist of a combination of berms and a wall, or two or more retaining walls stepped back to allow intervening landscaping.

Programs

- NE 2.1.1.1 **Truck Routes.** Prepare and adopt truck routes to direct commercial trucks away from sensitive noise receptors.
- NE 2.1.1.2 **City Actions.** The City will consider implementing one or more of the following measures where existing or cumulative increases in noise levels from new development significantly affect noise-sensitive land uses or residential neighborhoods:
- A. Rerouting traffic onto streets that can maintain desired levels of service, consistent with the Mobility Element, and which do not adjoin noise-sensitive land uses.
 - B. Rerouting commercial trucks onto streets that do not adjoin noise-sensitive land uses.
 - C. Constructing noise barriers.
 - D. Reducing traffic speeds through street or intersection design methods (also refer to the Mobility Element).
 - E. Retrofitting buildings with noise-reducing features.
 - F. Establishing financial programs, such as low cost loans to owners of noise-impacted property, or requiring noise mitigation or trip reduction programs as a condition of development approval.
 - G. Encourage and support stepped up enforcement of traffic laws and the California Vehicle Code.
- NE 2.1.1.3 **City Operations and Purchasing.** City will pursue alternatives to the use of noisy equipment and vehicles, and will purchase equipment and vehicles only if they incorporate the best available noise reduction technology.

Goal

- NE 3.1 Minimize excessive noise levels and community health risks due to stationary noise sources.

Policies

- NE 3.1.1 **Noise Analysis.** Require that a noise analysis be conducted by an acoustical specialist for all proposed development projects that have the potential to generate significant noise near a noise-sensitive land use, or on or near land designated for noise-sensitive land uses, and ensure that recommended mitigation measures are implemented.
- NE 3.1.2 **Truck Loading, Shipping, and Parking.** Require that the loading, shipping or parking facilities of commercial and industrial land uses, which abut residential parcels, be located and designed to minimize potential noise impacts upon residents. Overnight Commercial Truck parking areas shall be regulated in the Zoning Ordinance as a commercial use.

NOISE AND VIBRATION STUDY
CITY OF JURUPA VALLEY GENERAL PLAN
CITY OF JURUPA VALLEY, RIVERSIDE COUNTY, CALIFORNIA

LSA ASSOCIATES, INC.
SEPTEMBER 2016

- NE 3.1.3 **Noise Buffers.** Require major stationary noise-generating sources to install noise buffering or reduction mechanisms within their facilities to reduce noise generation levels to the lowest level practical as a condition of the approval or renewal of project entitlements.
- NE 3.1.4 **Construction Equipment.** Require that all construction equipment utilize noise reduction features (i.e., mufflers and engine shrouds) that are at least as effective as those originally installed by the manufacturer.
- NE 3.1.5 **Construction Noise.** Limit commercial construction activities near residential uses to weekdays, between 7:00 a.m. and 6:00 p.m., and limit high-noise generating construction activities (e.g. grading, demolition, pile driving) near sensitive receptors to weekdays between 9:00 a.m. and 3:00 p.m.
- NE 3.1.6 **Commercial Truck Idling.** Restrict truck idling near noise sensitive receptors.
- NE 3.1.7 **Automobile-Oriented Uses.** Require that parking structures, terminals, drive-through restaurants, automobile sales, and repair, fueling stations, mini-marts, car washes and similar automobile-oriented uses be sited and designed to minimize potential noise impacts on adjacent land uses.
- NE 3.1.8 **Entertainment Uses.** Minimize the generation of excessive noise from entertainment and restaurant/bar establishments into adjacent residential or noise-sensitive uses.
- NE 3.1.9 **Neighborhood Noise.** Support efforts of the Sheriff's Department, Animal Control, and Code Enforcement to curb nuisance noise from private parties, barking dogs and illegal firework use.

Program

- NE 3.1.1.1 **Ensuring Compliance.** Ensure that required noise mitigation measures are carried out as a project is built, and in place and/or fully implemented prior to release of occupancy, including enforcement of the State Building Codes regarding Chapter 35, "Sound Transmission Control," as amended, and "Noise Insulation Standards" (California Code of Regulations, Title 24).

Goal

- NE 4.1 Minimize excessive noise levels and community health risks due to groundborne vibration.

Policies

- NE 4.1.1 **Sensitive Land Uses.** Avoid the placement of sensitive land uses in proximity to vibration-producing land uses.
- NE 4.1.2 **Vibration Producing Land Uses.** Avoid the placement of vibration-producing land uses near sensitive receptors.
- NE 4.1.3 **Truck Idling.** Restrict truck idling near sensitive vibration receptors.
- NE 4.1.4 **Passing Trains.** Prohibit exposure of residential dwellings to perceptible ground vibration from passing trains as perceived at the ground or second floor. Perceptible motion shall be presumed to be a motion velocity of 0.01 inches/second over a range of 1 to 100 Hz.

LSA ASSOCIATES, INC.
SEPTEMBER 2016NOISE AND VIBRATION STUDY
CITY OF JURUPA VALLEY GENERAL PLAN
CITY OF JURUPA VALLEY, RIVERSIDE COUNTY, CALIFORNIA

- NE 4.1.5 **Mining Operations.** Require measures to protect properties adjacent to mining or construction sites that will entail blasting as part of the operation when considering land use entitlement applications.

Programs

- NE 4.1.1.1 **Rail-related Noise.** Minimize the noise impact of passenger (Metrolink) and freight rail service on sensitive land uses by coordinating with rail authorities to effectively manage train noise and by establishing and enforcing noise mitigation measures that apply to rail uses.
- NE 4.1.1.2 **Quiet Zone Crossings.** Require new development in the vicinity of railroad crossings that are within 1,000 feet of existing residential neighborhoods to design and construct Quiet Zone railroad crossing improvements and seek to qualify for a Quiet Zone designation.

The applicable noise standards governing activities in the City are in the City General Plan and the City's Municipal Code, Noise Ordinance. The General Plan noise policies cite to applicable state standards including the California Administrative Code, Section 1092 of Title 25, Chapter 1, Subchapter 1, Article 4 and Section 5014 of Title 21, Subchapter 6, Article 2.

City General Plan Stationary Source Noise Standards. The City of Jurupa Valley Noise Element in the General Plan considers the impacts of stationary noise producers. Stationary noise producers are entities with a fixed location that emit noise. The General Plan requires that sensitive land uses not be subjected to excessive stationary noise, either by mitigation at the source or through planning measures that reduce sound exposure. Table E summarizes the criteria for sensitive receivers.

Table E: Jurupa Valley General Plan Noise Standards

| Land Use | Stationary Source Land Use Noise Standards | |
|---------------------------------|--|-------------------------|
| | Interior Standards | Exterior Standards |
| Residential 10:00 pm to 7:00 am | 40 L_{eq} (10 minute) | 45 L_{eq} (10 minute) |
| Residential 7:00 am to 10:00 pm | 55 L_{eq} (10 minute) | 65 L_{eq} (10 minute) |

Source: City of Jurupa Valley General Plan Table N-22
 L_{eq} = equivalent continuous sound level

City of Jurupa Valley Municipal Code

The City of Jurupa Valley's Municipal Code (Section 11.10.040 – General sound level standards) has established maximum exterior sound levels standards. Standards vary depending on land use. Therefore, future development will be subject to different standards depending on the proposed land uses of a particular project. Table F outlines examples of these criteria.

Table F: Maximum Local Noise Criteria

| General Plan Land Designation | Maximum Noise Criteria (dB L _{max}) | |
|-------------------------------|---|----------------|
| | 7 a.m.–10 p.m. | 10 p.m.–7 a.m. |
| Low Density (LDR) | 55 | 45 |
| Medium Density (MDR) | 55 | 45 |
| Medium High Density (MHDR) | 55 | 45 |
| Very High Density (VHDR) | 55 | 45 |
| Retail Commercial (CR) | 65 | 55 |
| Open Space (OS) | 45 | 45 |

Source: City of Jurupa Valley Municipal Code Section 11.10.040

L_{max} = maximum instantaneous noise level

The criteria in Table F represent some but not all the noise limits that persons shall not exceed through sound they create or allow to be created. Private construction projects are exempt under the City's Noise Ordinance.

Thresholds of Significance

A project is considered to have a significant effect on the environment related to noise if it would substantially increase the ambient noise levels for adjoining areas or if it would conflict with adopted environmental plans and goals of the community in which it is located.

The applicable noise standards and guidelines governing the project are those specified above. In summary, these criteria are contained within the City's Noise Element of the General Plan, the City Municipal Code, the California Vehicle Code, and the State Noise Compatibility Guidelines.

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. The following thresholds of significance regarding potential impacts to noise and are based on Appendix G of the *CEQA Guidelines*. A project would have a significant impact if it would:

- Expose persons to or generate noise levels in excess of standards established in the *City General Plan*, *Municipal Code*, or applicable standards of other agencies;
- Expose persons to or generate excessive groundborne vibration or groundborne noise levels;
- Cause a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project;
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels; and/or
- For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.

The standards within the *City General Plan* and *City Municipal Code* determine the acceptable noise environment for future proposed development and the areas surrounding that development. The standards are as follows:

- Ensure through the design review process that exterior noise levels at residential areas do not exceed 60 dBA CNEL for low density housing and 65 dBA CNEL for multifamily.
- Prohibit facility-related noise, received by any sensitive use, from exceeding the following worst-case noise levels:
 - a) 45 dBA-10-minute L_{eq} between 10 p.m. and 7 a.m.
 - b) 65 dBA-10-minute L_{eq} between 7 a.m. and 10 p.m.
- Consider the following uses noise-sensitive and discourage them in areas where exterior noise levels exceed 65 dBA CNEL unless measures are implemented that reduce the noise exposure below this level: single-family and multiple-family residential uses, group homes, hospitals, schools and other learning institutions, and parks and open space areas where quiet is a basis for use.

Sensitive Land Uses

People that reside in certain land uses are considered more sensitive to noise than others of the general public. Examples include residential areas, educational facilities, hospitals, childcare facilities, and senior housing. These local land uses would be considered to have "sensitive receptors" and careful planning is required to ensure future land uses and transportation routes do not create significant noise impacts on these uses.

EXISTING SETTING

Overview of the Existing Noise Environment

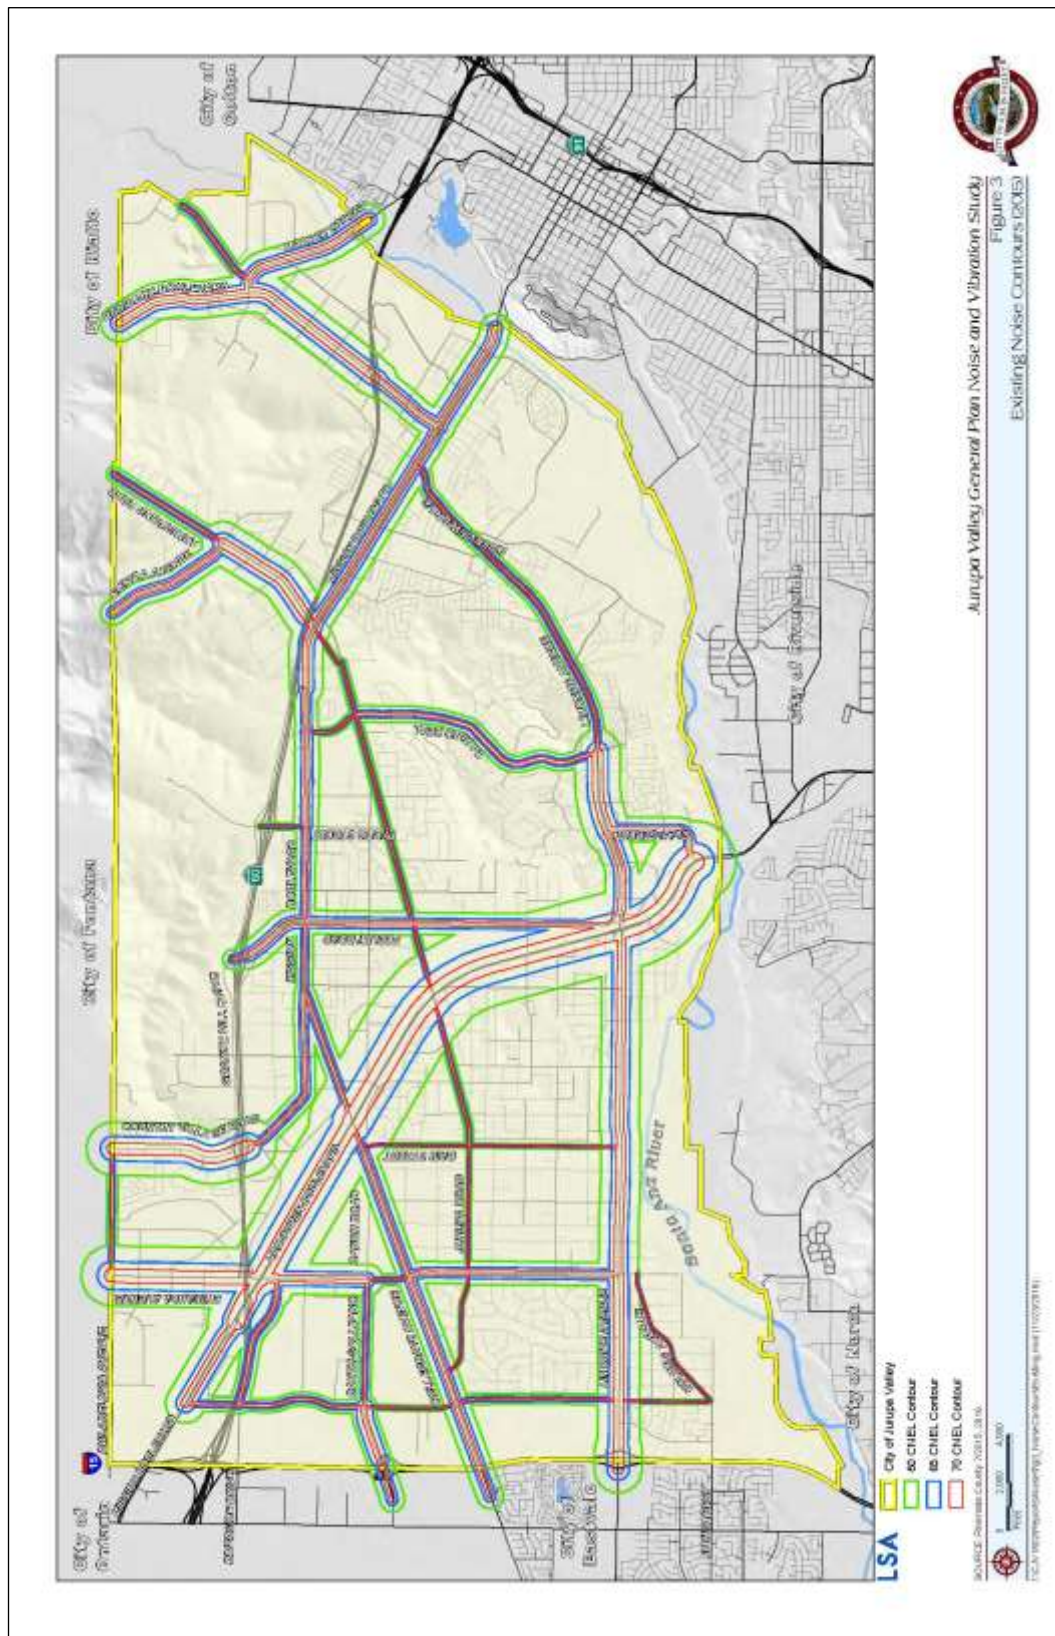

Vehicular Noise. The primary source of noise in the City is vehicular traffic on the two local freeways (Interstate 15 [I-15] and SR-60), Van Buren Boulevard as a regional highway, and over a dozen roadways considered to be urban highways or arterials in the roadway classification used for the traffic study (see Table 4.16.D and Figure 4.16.2 in the Environmental Impact Report Traffic Section for more details on roadway classifications). Noise levels vary depending on distance from the centerline of a particular roadway, time of day, and traffic speeds and activities. The General Plan noise study modeled noise contours using the Federal Highway Administration (FHWA) Traffic Noise Prediction Model. Figure 3 illustrates the existing (Year 2015) noise contours from major roads and highways in and near the City.

Automobiles, buses, trucks, and trains dominate transportation noise in the City. Bus service is provided on major streets, collectors, and local streets within the City's circulation system. For purposes of assessing vehicular noise, three general weight classifications are considered (light, medium, and heavy). Buses do not fit exactly into either the medium truck or heavy truck category, and their measured noise emission characteristics are equally intermediate. At 35 miles per hour (mph), 1 medium duty truck is as loud as 10 cars, and 1 heavy truck is as loud as 30 cars. A bus is approximately equivalent to 20 cars. In addition, bus noise may be worsened by grade or by the

condition of the pavement. Major transportation noise sources in the City include traffic on I-15, SR-60, Mission Boulevard, Van Buren Boulevard, Bellegrave Avenue, Jurupa Road, Etiwanda Avenue, Limonite Avenue, Armstrong Road, Rubidoux Boulevard, Pedley Road, and Market Street.

The City is currently served by Riverside Transit Agency, a public transit agency serving Riverside County, with bus service along Limonite Avenue, Mission Boulevard and other small segments within the City through various routes (i.e., Routes 3, 21, 29, 49 and 204).

Rail Noise. The noise impacts associated with rail activities depend heavily on a number of factors, including the type of train, the length of train, the physical track conditions, the geometry and intervening structures between the rail line and its receptor, the number of trains operating during the daytime, the number of trains operating during the nighttime, and the speed of the train. Additionally, if the horn is required to sound a warning (typically at at-grade crossings), the noise level impact will be greater to those uses nearest the intersection.

Currently, one main rail line passes through the City operated by Union Pacific Railroad Company. The rail line generally runs from the northwest corner of the City to the southeastern corner of the City. The rail line also has a spur, which starts at the intersection of Van Buren Boulevard and Jurupa Road and continues northeast generally along the eastern side of Jurupa Road ending in the northeast corner of the City.

Based on the Federal Railroad Administration (FRA) crossing inventory completed on January 1, 2011, at various crossings within the City, typical operations along the main rail line included approximately 10 daytime trains and 8 nighttime freight trains ranging in speed from 45 to 80 mph. Typical operations on the spur include approximately 2 daytime trains ranging in speed from 5 to 10 mph. In addition to freight train operations on the main line, Metrolink operates a commuter train line, the Riverside Line that is scheduled to have 6 trains pass through in each direction, Monday through Friday.

For all future developments within the City that fall within the required noise screening distances as specified in the Federal Transit Authority (FTA) *Noise and Vibration Manual*, a detailed noise analysis would be required. The screening distances for commuter and freight rail are 750 feet with no obstruction between the rail line and receptor and 375 feet with intervening buildings. Figures 4A, 4B, and 4C show typical railroad 65 dBA CNEL, 70 dBA CNEL, and 75 dBA CNEL noise contours and their distances from railroad centerline of commuter trains and freight trains of various sizes.

Aircraft Noise. The City of Jurupa Valley has the potential to be influenced by operations at two different airports: Flabob Airport located within the Jurupa Valley city limits and Riverside Municipal Airport to the south.

The Flabob Airport is a source of noise, primarily from takeoffs and landings. Average inbound and outbound flights from this airport are approximately 75 per day currently and may reach up to approximately 120 per day in the future (Riverside County ALUCP 2004). Aircraft at this airport include single-engine airplanes, twin-engine piston and turboprop airplanes, and sail planes. Noise from the aircraft generates a relatively minor contribution to the overall noise environment.

Based on the noise contour map shown in Figure 5A, the 65 dBA CNEL contour appears to overlap with very few single-family homes located near the intersections of 42nd Street and Wallace Street and Carol Way and Wallace Street, otherwise, the 65 dBA CNEL contour remains within the Flabob Airport property limits.

Figure 5B shows the noise contours the Riverside Municipal Airport. The Riverside Municipal Airport's 65 dBA CNEL and 60 dBA CNEL contours are within the Riverside city limits.

Stationary Noise. A stationary noise source is a land use, building, or activity in a relatively fixed location that emits noise. They may be temporary, intermittent, or continuous. Stationary noise sources are common in many noise-sensitive areas. Motors, appliances, air conditioners, lawn and garden equipment, power tools, and generators, and amplified sounds are often found in residential neighborhoods, as well as on or near the properties of schools, hospitals, and parks. Industrial, commercial, and manufacturing facilities can also generate stationary noise that may affect sensitive land uses. Another local source of nuisance noise reported during public meetings on the General Plan is diesel trucks idling in residential neighborhoods, especially late at night or in the early morning, and to a lesser degree diesel truck noise from commercial and industrial areas that are close to residential areas. The emitted noise can usually be reduced to acceptable levels either at the source or on the adjacent property through the use of proper planning, setbacks, block walls, acoustic-rated windows, dense landscaping, or by changing the location of the noise producer. In Jurupa Valley, some of the stationary noise producers include truck transfer stations, construction activities, idling trucks, and a go-kart racetrack. Maximum noise exposure levels from stationary sources for noise-sensitive uses are regulated by the Municipal Code.

Nuisance Noise. Many infrequent sources of noise, such as amplified music from bars and private parties, dogs barking, and illegal firework use, is another type of stationary source noise that has been identified by area residents as creating a problem within the City. The effects or significance of nuisance noise can be compounded by the time of day, volume, and proximity to sensitive receptors. For instance, a loud party might be tolerated by neighbors in the early evening hours but be considered a nuisance after 10:00 p.m. The City's Noise Ordinance contains regulations limiting the allowable noise generated by private parties and other events.

Commercial-industrial and light-industrial land uses in the City have the potential to generate high noise levels and impact surrounding land uses with their equipment operation. Noise sources from these land uses include air conditioning or refrigeration units, power tools, lawn equipment, generators, and other powered mechanical equipment. Chapter 11.10, Sections 010–090, of the City's Municipal Code has established noise level requirements for operations involving stationary noise sources.

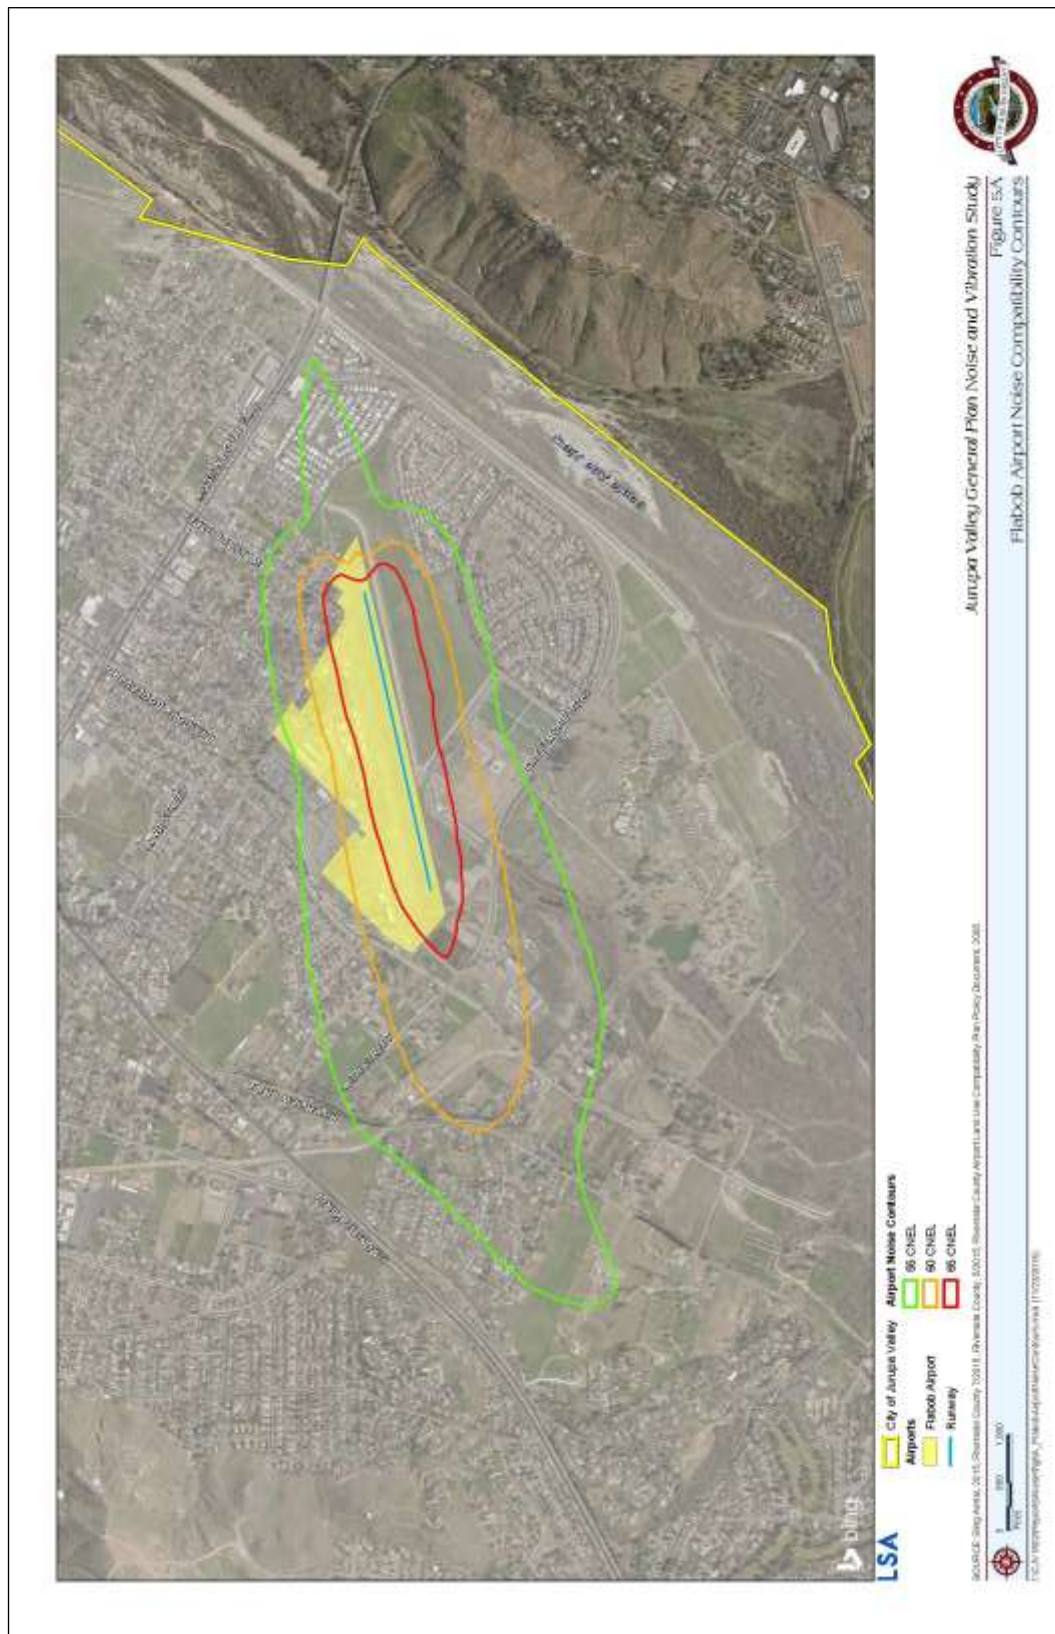

Existing Noise Measurements

Existing noise levels in the vicinity of the proposed project are used to establish baseline noise levels in key areas. The noise study conducted by LSA included 19 short-term and 12 long-term noise measurement locations distributed throughout the City based on potential areas of concern regarding noise impacts. Several criteria were used in the site selection process including, but not limited to, the

proximity of a measurement site to sensitive land uses as well as its proximity to significant noise generators. Significant noise generators within the City are SR-60, I-15, Van Buren Boulevard, and Etiwanda Avenue. This was due to the very high volume of automobile and truck traffic on these freeways and roadways. In addition, many houses in the City are adjacent to railroad lines, which generate infrequent but substantial noise as trains pass houses or idle on stacked tracks to allow other trains to pass.

To provide noise measurement coverage of the area, measurement sites were chosen within the confines of the City. After the site selection process was over, a series of long-term 24-hour and short-term noise 15-minute measurements was taken at the chosen sites. The measurement site locations are described in Table G, and their locations are shown in Figure 6, *Noise Measurement Locations*. Previously referenced Figure 3 shows the existing (ambient) noise levels along major roadways in and adjacent to the City, which are summarized in Table H. Many residences (and residents) experience ongoing noise from I-15 but especially from SR-60, which passes through the northern portion of the City in an east/west direction. There are also isolated locations in the City (e.g., in the northwest and northeast portions) where industrial land uses and truck activity raise ambient noise levels in adjacent or surrounding residential neighborhoods. In addition, many residences in the southeastern and eastern portions of the City experience infrequent noise from aircraft overflights from the Flabob and Riverside Municipal Airports.

IMPACTS AND MITIGATION MEASURES

Long-Term Noise Impacts

Vehicular Noise. Future development in the City adds traffic and increased human activity as growth occurs. Table I and Figure 7 show future noise levels and areas of noise impacts based on Year 2035 conditions. The City of Jurupa Valley will experience significant noise impacts if noise generated by traffic or other activities exceeds the City's established noise standards. For example, if exterior noise levels exceed 65 dBA in residential areas where sensitive receptors that would conduct outdoor activity.

The future traffic noise levels along City arterials were calculated using the FHWA Highway Traffic Noise Prediction Model. Table I lists the calculated Year 2035 traffic noise levels along roadway links within the City. Similar to the existing condition, these traffic noise levels represent the worst-case scenario, which assumes that no shielding is provided between the roadway traffic and where the contours are drawn.

This programmatic analysis is different than project-level determinations. For example, if a specific project's contribution to increases in the ambient noise environment equals 3.0 dBA or more, then it is considered a significant noise impact at a project level. For context, a change of 3.0 dBA is considered "barely perceptible" by the human ear and changes of less than 3.0 dBA generally cannot be perceived except in carefully controlled laboratory environments. Based on available information, it appears future development in the City will generate significant noise impacts along certain major transportation routes.

LSA ASSOCIATES, INC.
SEPTEMBER 2016NOISE AND VIBRATION STUDY
CITY OF JURUPA VALLEY GENERAL PLAN
CITY OF JURUPA VALLEY, RIVERSIDE COUNTY, CALIFORNIA

Table I shows that increased traffic would add up to 7.9 dBA to area roadway links. Twenty-five of the 82 roadway sections modeled have a projected increase in noise greater than or equal to the 3 dBA threshold of significance. Previously referenced Figure 7 shows the 60, 65, and 70 dBA CNEL contours along all modeled roadways. As can be seen, nearly all of the roadway links analyzed have the 65 dBA CNEL extending outside the roadway right-of-way. The 65 dBA CNEL extends up to 1,085 feet from the centerline of the road. Noise-sensitive uses along the roadway links where the 65 dBA CNEL extends beyond the roadway right-of-way may be exposed to traffic noise exceeding the City's exterior noise standards.

Rail Noise. Although the proposed General Plan would not result in potential measureable project-related increases in railroad noise, there could be new proposed sensitive land uses along and adjacent to the railroads that would be affected by high noise levels from railroad operations. New development, particularly residential uses adjacent to railroad corridors, could be exposed to excessive train-related noise levels. Future increases in rail usage are anticipated as the result of establishment and expansion of commuter rail service. However, it is not possible to quantify impacts as specific plans for commuter operations (e.g., number and size of trains) are not available.

Stationary Noise. New development associated with implementation of the proposed General Plan could expose existing and/or new sensitive uses to stationary noise sources, such as industrial and/or commercial uses. The development of new commercial and industrial uses pursuant to the proposed General Plan may increase noise levels in their vicinity due to the establishment of new stationary noise sources. Although vehicular noise is exempt from local regulation when operating on public streets, cities and counties can regulate vehicular noise operating on private property. The use of heavy trucks on private properties (e.g., making deliveries to commercial and industrial uses) will result in noise levels of 73 dBA at 50 feet from the source of the noise (e.g., truck's engine, idling trucks). The use of multiple trucks on a site, such as might occur at a warehouse, could generate noise levels of about 80 dBA L_{eq} as measured at a distance of 50 feet. Industrial processing equipment and conducting outdoor industrial activities could also generate increased noise levels. New projects developed under the proposed General Plan would be subject to the City's noise ordinance and the provisions of the proposed General Plan.

Evaluation of General Plan Goals and Policies. While all of the following goals, policies, and programs of the Noise Element of the 2016 General Plan are intended to help reduce noise impacts to City residents and sensitive receptors, the following summarized goals, policies, and programs are examples of the degree to which the 2016 General Plan goes in that effort:

Goal

NE 1.1 Ensure adjacent land uses are compatible and protect sensitive receptors from outside sources of noise and vibration.

Policies

NE 1.1.1 Use the Land Use/Noise Compatibility Matrix to determine the compatibility of projects and noise exposure due to transportation sources.

- NE 1.1.2 Allow new noise-sensitive land uses near existing stationary noise sources only when the project can be designed to prevent significant noise impacts.
- NE 1.1.3 Stationary source projects must mitigate impacts on noise-sensitive uses.
- NE 1.1.4 Require acoustical studies for projects that exceed the "Normally Acceptable" thresholds of the Land Use/Noise Compatibility Matrix.
- NE 1.1.5 Discourage noise-sensitive land uses in areas in excess of 65 dBA CNEL.
- NE 1.1.6 Protect noise-sensitive land uses from high levels of noise.
- NE 1.1.7 Place noise-tolerant land uses in areas with elevated noise levels if possible.
- NE 1.1.8 New uses within Airport Influence Areas must comply with airport land use noise compatibility criteria contained in the ALUC plan.
- NE 1.1.9 Use acoustic site planning techniques.
- NE 1.1.10 Mixed commercial/residential development shall minimize internal noise impacts.

Programs

- NE 1.1.1.1 Amend the Municipal Code to require that development comply with the Land Use/Noise Compatibility Matrix and other requirements of the General Plan.
- NE 1.1.1.2 Maintain a Noise Guide containing "Good Neighbor" guidelines and rules for neighborhood noise reduction and procedures for mitigating noise.
- NE 1.1.1.3 Assist homeowners living in high noise areas to reduce noise levels in their homes.

Goal

- NE 2.1 Minimize excessive noise levels and health risks due to mobile noise sources.

Policies

- NE 2.1.1 Design and construct new roads to minimize noise impacts on adjacent land uses.
- NE 2.1.2 Restrict truck deliveries to the least-sensitive times of the day.
- NE 2.1.3 Restrict use of off-road vehicles to allowed areas to minimize noise impacts.
- NE 2.1.4 Carefully plan land uses to minimize rail-related noise impacts.
- NE 2.1.5 Encourage rail service providers to install noise mitigation features when possible.
- NE 2.1.6 Check project location within roadway, railroad, and airport noise contours.
- NE 2.1.7 Comply with applicable noise mitigation policies contained in the Airport Land Use Compatibility (ALUC) Plans for Flabob Airport, Riverside Municipal Airport, and the LA/Ontario International Airport.
- NE 2.1.8 Require noise mitigation for new development in prioritized order.
- NE 2.1.9 Limit installation of noise mitigation walls (sound walls) where possible.

Programs

- NE 2.1.1.1 Prepare truck route map to direct trucks away from sensitive noise receptors.
- NE 2.1.1.2 Implement strategies to reduce significant noise impacts in the community.

LSA ASSOCIATES, INC.
SEPTEMBER 2016NOISE AND VIBRATION STUDY
CITY OF JURUPA VALLEY GENERAL PLAN
CITY OF JURUPA VALLEY, RIVERSIDE COUNTY, CALIFORNIA**Goal**

- NE 3.1 Minimize excessive noise levels and health risks due to stationary noise sources.

Policies

- NE 3.1.1 Require a noise analysis for projects near sensitive receptors.
- NE 3.1.2 Design truck loading areas to minimize noise impacts on nearby residential areas.
- NE 3.1.3 Stationary noise sources to install noise buffering or reduction mechanisms.
- NE 3.1.4 Require all construction equipment use mufflers and engine shrouds.
- NE 3.1.5 Limit commercial construction activities near residential uses.
- NE 3.1.6 Restrict truck idling near noise sensitive receptors.
- NE 3.1.7 Design automobile-oriented uses to minimize potential noise on adjacent land uses.
- NE 3.1.8 Minimize excessive noise from entertainment and restaurant/bar establishments.
- NE 3.1.9 Support efforts to curb noise from parties, barking dogs, and illegal firework use.

Program

- NE 3.1.1.1 Ensure required noise mitigation measures are built and in place.

Level of Programmatic Impact Before Mitigation. Implementation of the 2016 General Plan goals, policies, and programs would help reduce vehicular noise levels in the City as future land uses build out; however, due to the level of growth and location of major roadways, there will be significant impacts and no additional feasible mitigation is available to reduce these impacts.

Implementation of the 2016 General Plan goals, policies, and programs would reduce the effect of rail noise on sensitive land uses and include mechanisms to ensure appropriate review and placement of noise reduction requirements into new development. As a result, impacts of railroad noise will be reduced to less than significant levels.

Implementation of the 2016 General Plan goals, policies, and programs would reduce the impacts of stationary noise sources on sensitive land uses, and include mechanisms to ensure appropriate review and placement of noise reduction requirements on new development. As a result, impacts from stationary noise sources will be reduced to less than significant levels.

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. Implementation of the goals, policies, and programs of the 2016 General Plan would help reduce overall noise levels and impacts in the City, but some areas with identified traffic congestion will result in significant noise impacts over the long term and no additional feasible mitigation is available.

Long-Term Airport Noise Impacts

The noise contours of two public airports affect the City of Jurupa Valley. The Flabob Airport is located in the eastern portion of the City and its noise contours overlap both developed uses and vacant land within the City. To minimize land use conflicts with adjacent uses, much of the remaining undeveloped area adjacent to the airport is designated as Estate Density Residential, with most of the developed land designated and used for Medium-Density Residential. The Riverside Municipal Airport (RMA) is south of the eastern portion of the City across the Santa Ana River. Portions of the City are within RMA's Airport Land Use Compatibility (ALUC) Plan Zone E and also within its 65 dBA CNEL noise contour. If future residential land uses were to be located where airport activities exceeded the applicable residential noise standards, which is within 65 dBA CNEL noise contour of either airport, the General Plan might contribute to significant noise impacts in the future.

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and programs of the Noise and Land Use Elements of the 2016 General Plan address airport-related noise impacts:

Noise Element

Goal

- NE 1.1 Ensure adjacent land uses are compatible and protect sensitive receptors from outside sources of noise and vibration.

Policies

- NE 1.1.8 **Airport Noise Compatibility.** Ensure that new land use development within Airport Influence Areas complies with airport land use noise compatibility criteria contained in the applicable Airport Land Use Compatibility (ALUC) plan for the area.
- NE 1.1.7 **Noise-Tolerant Uses.** Guide new or relocated noise-tolerant land uses into areas irrevocably committed to land uses that are noise producing, such as along major transportation corridors or within the projected noise contours of area airports.

Goal

- NE 2.1 Minimize excessive noise levels and community health risks due to mobile noise sources.

Policies

- NE 2.1.6 **Noise Contours.** Check all proposed development projects for possible location within roadway, railroad, and airport noise contours.
- NE 2.1.7 **Airport Compatibility.** Comply with applicable noise mitigation policies contained in the Airport Land Use Compatibility (ALUC) Plans for Flabob Airport, Riverside Municipal Airport, and the LA/Ontario International Airport.

Land Use Element

Policies

- LUE 5.53 **ALUP Compliance.** To provide for the orderly operation and development of Flabob and Riverside Municipal Airports and the surrounding area, the City will comply

with the Airport Land Use Compatibility Plan as fully set forth in Appendix 4.0 and as summarized in Table-34, as well as any applicable policies related to airports in the Land Use, Circulation, Safety and Noise Elements of the 2016 General Plan, unless the City Council overrides the Plan as provided for in State law.

- LUE 5.54 **Development Review.** Until such time as 1) the Commission finds the City's General Plan to be consistent with the ALUP, or 2) the City Council has overruled the Commission's determination of inconsistency, or 3) the Commission elects not to review a particular action, the City will refer all major land use actions to the Airport Land Use Commission for review, pursuant to Policy 1.5.3 of the ALUP.
- LUE 5.55 **Continued Airport Operation.** Support the continued operation of Flabob and Riverside Municipal Airports to help meet airport services needs within the land-use compatibility criteria with respect to potential noise and safety impacts.
- LUE 5.56 **Consistency Requirement.** Review all proposed projects and require consistency with any applicable provisions of the Riverside County Airport Land Use Plan as set forth in Appendix A-4.0, and require General Plan and/or Zoning Ordinance amendments to achieve compliance, as appropriate.
- LUE 5.57 **ALUP Amendments.** Review all subsequent amendments to any airport land-use compatibility plan and either adopt the plan as amended or overrule the Airport Land Use Commission as provided by law (Government Code Section 65302.3).
- LUE 5.58 **General Plan Adoption or Amendment.** Prior to the adoption or amendment of this General Plan or any specific plan, or the adoption or amendment of a zoning ordinance or building regulation within the planning boundary of any airport land use compatibility plan, the City will refer such proposed actions for determination and processing as provided by the Airport Land Use Law.
- LUE 5.59 **Cluster Development.** Allow the use of development clustering and/or density transfers to meet airport compatibility requirements as set forth in the applicable airport land-use compatibility plan.
- LUE 5.62 **Voluntary Review.** The City, from time to time, may elect to submit proposed actions or projects voluntarily that are not otherwise required to be submitted to the ALUC under the Airport Land Use Law in the following circumstances:
- a. Clarification: If there is a question as to the purpose, intent or interpretation of an airport land use compatibility plan (LUCP) or its provisions; or
 - b. Advisory: If assistance is needed concerning a proposed action or project relating to Airport Land Use matters.
- LUE 5.63 **Airport Referrals.** All development proposals located within an Airport Influence Area will be submitted to the affected airport.
- LUE 9.1 **Land Use Compatibility.** Require land to be developed and used in accordance with the General Plan, specific plans and community and village plans to ensure compatibility and minimize impacts.

Level of Programmatic Impact Before Mitigation. Implementation of the 2016 General Plan goals and policies of the 2016 General Plan will help protect City residents from future noise impacts related to airport activities. Impacts on this regard will be less than significant.

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. Implementation of the goals and policies of the 2016 General Plan will prevent existing and future land uses from experiencing significant noise impacts from airport operations and no mitigation is required.

Groundborne Vibration Impacts

Future development under the General Plan could generate substantial noise and vibration near construction sites. If sensitive receptors or land uses are adjacent to these sites, there could be significant impacts from noise or vibration. Construction activities can produce vibration that may be felt by adjacent land uses. As long as construction of a particular development does not require the use of equipment known to generate substantial construction vibration levels, such as pile drivers, the primary source of vibration during construction would likely be from bulldozer operation. A small bulldozer has a vibration impact of 0.003 inches per second peak particle velocity (PPV) at 25 feet and 0.035 inches per second PPV is considered barely perceptible. It is possible that future development could result in significant vibration impacts if large construction projects are located adjacent to residential or other sensitive uses.

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and programs of the Noise Element of the 2016 General Plan addresses vibration-related noise impacts:

Noise Element

Goal

NE 1.1 Ensure adjacent land uses are compatible and protect sensitive receptors from outside sources of noise and vibration.

NE 4 Groundborne Vibration

Goal

NE 4.1 Minimize excessive noise levels and community health risks due to groundborne vibration.

Policies

NE 4.1.1 **Sensitive Land Uses.** Avoid the placement of sensitive land uses in proximity to vibration-producing land uses.

NE 4.1.2 **Vibration Producing Land Uses.** Avoid the placement of vibration-producing land uses near sensitive receptors.

NE 4.1.3 **Truck Idling.** Restrict truck idling near sensitive vibration receptors.

LSA ASSOCIATES, INC.
SEPTEMBER 2016

NOISE AND VIBRATION STUDY
CITY OF JURUPA VALLEY GENERAL PLAN
CITY OF JURUPA VALLEY, RIVERSIDE COUNTY, CALIFORNIA

NE 4.1.4 **Passing Trains.** Prohibit exposure of residential dwellings to perceptible ground vibration from passing trains as perceived at the ground or second floor. Perceptible motion shall be presumed to be a motion velocity of 0.01 inches/second over a range of 1 to 100 Hz.

NE 4.1.5 **Mining Operations.** Require measures to protect properties adjacent to mining or construction sites that will entail blasting as part of the operation when considering land use entitlement applications.

Programs

NE 4.1.1.1 **Rail-related Noise.** Minimize the noise impact of passenger (Metrolink) and freight rail service on sensitive land uses by coordinating with rail authorities to effectively manage train noise and by establishing and enforcing noise mitigation measures that apply to rail uses.

NE 4.1.1.2 **Quiet Zone Crossings.** Require new development in the vicinity of railroad crossings that are within 1,000 feet of existing residential neighborhoods to design and construct Quiet Zone railroad crossing improvements and see to qualify for a Quiet Zone designation.

Level of Programmatic Impact Before Mitigation. Implementation of the 2016 General Plan goals, policies, and programs will help the City reduce potential noise and vibration impacts, especially to sensitive receptors, to less than significant levels (i.e., within City standards).

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. Implementation of the goals, policies, and programs of the 2016 General Plan will reduce potential vibration impacts to less than significant levels and no mitigation is required.

Short-Term Construction Noise Impacts

Short-term noise would occur during the construction of future development projects under the proposed 2016 General Plan. First, construction crew commuting and the transport of construction equipment and materials to a project site in the future would incrementally increase noise levels on access roads in the particular project area. In addition, noise would be generated during excavation, grading, and building construction on various portions of a specific development site.

Each step of the construction process has its own mix of equipment, and consequently, its own noise characteristics. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. The site preparation phase, which includes excavation and grading of a site, tends to generate the highest noise levels, because the noisiest construction equipment is earthmoving equipment, which includes excavating machinery such as backfillers, bulldozers, draglines, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers,

and graders. Typical operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at lower power settings.

Figure 8 presents general construction noise levels measured at 50 feet, which are based on FHWA data from typical equipment. The peak noise level for the majority of the equipment that will be used during construction of typical development projects will range from 68 to 105 dBA. Noise levels would diminish rapidly with distance from a particular construction site at a rate of 6 dBA per doubling of distance. For example, a noise level of 86 dBA measured 50 feet from the source would reduce to 80 dBA at 100 feet. At 200 feet from the source, the noise level would reduce to 74 dBA, and then reduce to 68 dBA at 400 feet. Typical construction noise measurements for urban type development projects demonstrate that the noise levels generated by commonly used grading equipment (e.g., loaders, graders, and trucks) generate noise levels that typically do not exceed the middle of the range shown in Figure 8.

It should be noted the City has an exemption for noise levels created during construction, but limits times of construction activity. Future development projects will be required to provide site-specific noise impact studies when residential land uses are adjacent to demonstrate there will be no project-specific significant noise impacts.

Evaluation of General Plan Goals and Policies. While all of the following goals, policies, and programs of the Noise Element of the 2016 General Plan are intended to help reduce noise impacts to City residents and sensitive receptors, the following summarized goals, policies, and programs are examples of the degree to which the General Plan goes in that effort:

Noise Element

Goal

- NE 1.1 Ensure adjacent land uses are compatible and protect sensitive receptors from outside sources of noise and vibration.

Policies

- NE 1.1.2 Allow new noise-sensitive land uses near existing stationary noise sources only when the project can be designed to prevent significant noise impacts.
- NE 1.1.3 Stationary source projects must mitigate impacts on noise-sensitive uses.
- NE 1.1.4 Require acoustical studies for projects that exceed the "Normally Acceptable" thresholds of the Land Use/Noise Compatibility Matrix.
- NE 1.1.9 Use acoustic site planning techniques.
- NE 1.1.10 Mixed commercial/residential development shall minimize internal noise impacts.

Programs

- NE 1.1.1.1 Amend the Municipal Code to require that development comply with the Land Use/Noise Compatibility Matrix and other requirements of the General Plan.
- NE 1.1.1.2 Maintain a Noise Guide containing "Good Neighbor" guidelines and rules for neighborhood noise reduction and procedures for mitigating noise.

NE 1.1.1.3 Assist homeowners living in high noise areas to reduce noise levels in their homes.

Goal

NE 2.1 Minimize excessive noise levels and health risks due to mobile noise sources.

Policies

NE 2.1.2 Restrict truck deliveries to the least-sensitive times of the day.

NE 2.1.3 Restrict use of off-road vehicles to allowed areas to minimize noise impacts.

NE 2.1.8 Require noise mitigation for new development in prioritized order.

NE 2.1.9 Limit installation of noise mitigation walls (sound walls) where possible.

Programs

NE 2.1.1.2 Implement strategies to reduce significant noise impacts in the community.

Goal

NE 3.1 Minimize excessive noise levels and health risks due to stationary noise sources.

Policies

NE 3.1.1 Require a noise analysis for projects near sensitive receptors.

NE 3.1.2 Design truck loading areas to minimize noise impacts on nearby residential areas.

NE 3.1.3 Stationary noise sources to install noise buffering or reduction mechanisms.

NE 3.1.4 Require all construction equipment use mufflers and engine shrouds.

NE 3.1.5 Limit commercial construction activities near residential uses.

NE 3.1.6 Restrict truck idling near noise-sensitive receptors.

Program

NE 3.1.1.1 Ensure required noise mitigation measures are built and in place.

Level of Programmatic Impact Before Mitigation. Implementation of the 2016 General Plan goals, policies, and programs will help prevent significant noise impacts from construction on adjacent sensitive uses.

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. Implementation of the goals, policies, and programs of the 2016 General Plan will effectively reduce potential noise impacts during future construction; therefore, noise impacts will be less than significant and no mitigation is required.

Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2016 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a list of cumulative projects or a plan summary of long-term development impacts. In this case, the growth projections of the 2016 General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,258 acres of vacant land with a mixture of rural and suburban land uses which is 15.3 percent of the total City area. If development occurs at a regular pace, that would equal roughly 224 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 13,140 new residential units and maximum of 33 million square feet of new non-residential building. (See Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*.)

The cumulative "universe" for noise impacts is the City of Jurupa Valley and adjacent surrounding communities. As growth occurs, vehicular traffic (passenger cars and various sizes of trucks) will incrementally increase depending on the size, type, and location of future development. Major roadways are expected to experience considerable traffic increases, which will substantially increase noise levels adjacent to these roadways. It should be noted that a significant percentage of the expected traffic increases on local roads and freeways will come from regional sources (i.e., land uses in other jurisdictions). The *Long-term Noise Impacts* section determined there would be significant noise impacts in the City from future traffic along selected roadways; therefore, the 2016 General Plan will make an incremental but significant contribution to cumulatively considerable regional noise impacts in the future.

It is also possible that future residents will experience noise impacts from increased rail and airport activities in the future, as well as stationary noise impacts from new commercial and industrial development, but these are not expected to be significant on a local level, so any contributions of noise by local land uses under the 2016 General Plan would not represent a significant contribution to a cumulatively considerable regional noise impacts related to airport or railroad sources.

Introduction

OVERVIEW OF THE PLAN

The basic function of airport land use compatibility plans is to promote compatibility between airports and the land uses that surround them. Compatibility plans serve as a tool for use by airport land use commissions in fulfilling their duty to review proposed development plans for airports and surrounding land uses. Additionally, compatibility plans set compatibility criteria applicable to local agencies in their preparation or amendment of land use plans and ordinances and to landowners (including special district and other local government entities as well as private parties) in their design of new development.

General Applicability

As adopted by the Riverside County Airport Land Use Commission (ALUC), this *Riverside County Airport Land Use Compatibility Plan Policy Document* establishes policies applicable to land use compatibility planning in the vicinity of airports throughout Riverside County. Included are compatibility criteria and maps for the influence areas of individual airports. Also spelled out in the plan are the procedural requirements associated with the compatibility review of development proposals.

This plan replaces compatibility plans for individual airports adopted by the ALUC at various times from 1974 through 1998. The specific airports covered by this document and the date when the present plan was adopted with respect to each airport are listed in Table 1A. If a new adoption date is not indicated in the table, the earlier compatibility plan remains in effect for that airport. As required by state law, either this plan or an earlier one has been adopted for all of the public-use and military airports in the county. Preparation of compatibility plans for private-use airports is at the option of the ALUC. Note that Chino Airport situated in San Bernardino County is among the airports included in Table 1A. This *Compatibility Plan* pertains only to the portion of that airport's influence area which extends into Riverside County.

Along with the airport names and plan adoption dates, Table 1A lists the names of the local government entities—the County of Riverside and/or cities within the county—whose jurisdictions extend into the adopted or potential influence area of the respective airport. The parts of each jurisdiction affected by the plan are depicted in the compatibility maps included in Chapter 3.

CHAPTER 1 INTRODUCTION

| AIRPORT / OWNERSHIP | ADOPTION DATE | JURISDICTIONS AFFECTED* | |
|--|------------------|--|---|
| Public-Use Airports in Riverside County | | | |
| Banning Municipal City of Banning | October 14, 2004 | City of Banning | County of Riverside |
| Bermuda Dunes Private | December 9, 2004 | City of Indio City of La Quinta | City of Palm Desert County of Riverside |
| Blythe City/County of Riverside | October 14, 2004 | City of Blythe | County of Riverside |
| Chiriaco Summit County of Riverside | October 14, 2004 | County of Riverside | |
| Corona Municipal City of Corona | October 14, 2004 | City of Corona City of Norco | County of Riverside |

| March Air Reserve Base U.S. Air Force | | City of Moreno Valley City of Perris | City of Riverside County of Riverside March JPA |
| Private-Use Airports Riverside County | | | |
| Perris Valley Private | | City of Perris | County of Riverside |
| Skylark Private | | City of Lake Elsinore | County of Riverside |
| Public-Use Airports in Nearby Areas of Adjacent Counties | | | |
| Chino County of San Bernardino | | County of Riverside | |
| * Riverside County jurisdictions within adopted airport influence area (approximately 2 miles of small general aviation airports or 3 miles of major general aviation, airline, and military airports); not listed, but also subject to this <i>Compatibility Plan</i> , are any special districts or school districts within an airport influence area. | | | |

Table 1A

Compatibility Plan Adoption Status

Additional details regarding the purpose, scope, and applicability of the *Compatibility Plan* are set forth in the countywide policies chapter that follows.

Statutory Requirements

Powers and Duties

Requirements for creation of airport land use commissions (ALUCs) were first established under the California State Aeronautics Act (Public Utility Code Sections 21670 et seq.) in 1967. (See Appendix A herem for a copy of the statutes). Although the law has been amended numerous times since then, the fundamental purpose of ALUCs to promote land use compatibility around airports has remained unchanged. As expressed in the present statutes, this purpose is:

“...to protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public’s exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses.”

The statutes give ALUCs two principal powers by which to accomplish this objective. First, ALUCs must prepare and adopt an airport land use compatibility plan. Secondly, they must review the plans, regulations, and other actions of local agencies and airport operators for consistency with that plan.

Limitations

This fundamental objective notwithstanding, airport land use commissions are limited in their powers to achieve it. Two limitations are explicitly written into the law: ALUCs have no authority over either existing land uses (Section 21674(a)) or the operation of airports (Section 21674(e)). Neither of these terms is defined within the statutes, but the interpretation of their meaning is fairly standard throughout the state.

- **Existing Land Uses**—The precise wording of the Aeronautics Act is that the authority of ALUCs extends only to land in the vicinity of airports that is “not already devoted to incompatible uses.” The working interpretation of this language is that ALUCs have no state-empowered authority over existing land uses. The question then becomes one of determining what conditions qualify a land use as existing.

For airport land use planning purposes, a land use can generally be considered existing once the local agency has completed all discretionary actions on the project and only ministerial approvals remain. A vacant property thus can be considered “devoted to” a particular use, even if the activity has not begun, once local government commitments along with substantial construction investments by the property owner make it infeasible for the property to be used for anything other than its proposed use. Local government commitment to a proposal can usually be considered firm once a vesting tentative map, development agreement, or other land use entitlement has been approved. (See Chapter 2 for the definition of *existing land use* as adopted by the Riverside County Airport Land Use Commission).

- **Operation of Airports**—Any actions pertaining to how and where aircraft operate on the ground or in the air around an airport are clearly not within the jurisdiction of ALUCs to regulate. ALUC involvement with aircraft operations is limited to taking the operational characteristics into account in the development of land use compatibility plans. This limitation on the jurisdiction of ALUCs can-

CHAPTER 1 INTRODUCTION

not, however, be taken to mean that they have no authority with respect to new development on airport property. For example, the law specifically requires ALUCs to review proposed airport master plans for consistency with the commission's plans. ALUCs also have authority to review proposals for nonaviation development on airport property.

A third, less absolute, limitation concerns the types of land use actions that are subject to ALUC review. The law emphasizes local general plans as the primary mechanism for implementing the compatibility policies set forth in an ALUC's plan. Thus, Riverside County and each city affected by an airport land use compatibility plan is required to make its general plan consistent with the ALUC plan (or to overrule the commission). Once a local agency has taken this action to the satisfaction of the Airport Land Use Commission, the ALUC's authority to review projects within that jurisdiction is narrowly limited. The only actions for which review remains mandatory are proposed adoption or amendment of general plans, specific plans, zoning ordinances, and building regulations affecting land within an airport influence area. For an ALUC to review individual projects, the local agency must agree to submit them.

One final limitation worth noting is that ALUCs have no jurisdiction over federal lands such as lands controlled by the U.S. Forest Service, Bureau of Land Management, or Indian tribes. ALUCs can merely inform these agencies about the ALUC policies and seek their cooperation.

Riverside County Airport Land Use Commission

State law provides two basic options regarding the structure of airport land use commissions: a standard format or designation of an existing body to serve as the ALUC. Among California's 58 counties, these two formats are used in roughly equal proportions.

Membership on ALUCs structured in the standard manner is specified to be as follows:

- › Two members appointed by the county board of supervisors;
- › Two members appointed by a selection committee of mayors of the county's cities;
- › Two members appointed by airport managers; and
- › A seventh member, representing the general public, appointed by the other six.

The designated body format has several possibilities. Most common is for a single- or multi-county council of governments or similar entity to be designated as the ALUC. Other types of bodies that serve as ALUCs in some counties include the county planning commission, the county airport commission, or the county board of supervisors.

The Riverside County Airport Land Use Commission first met in 1971 with the Riverside County Airport Commission designated to serve the ALUC function. Two city representatives were later added, then, beginning in 1998, the Commission assumed the standard format that continues today. The county agency assigned to provide support staff to the ALUC has also varied over the years. Since 1998, this responsibility has rested with the Riverside County Economic Development Agency (EDA). This agency also functions as management for the county-owned airports. A member of the EDA staff serves as the ALUC Executive Director.

Relationship of the ALUC to County and City Governments

The fundamental relationship between the Riverside County Airport Land Use Commission and the governments of Riverside County and the affected cities in the county is set by the State Aeronautics Act. The ALUC is not simply an advisory body for the Riverside County Board of Supervisors or city councils in the manner that their respective planning commissions are. Rather, it is more equivalent to a Local Agency Formation Commission (LAFCo). Within the bounds defined by state law, the decisions of the ALUC are final and are independent of the Board or city councils. The ALUC does not need county or city approval in order to adopt this *Compatibility Plan* or to carry out ALUC land use project review responsibilities.

Another aspect of the relationship between the ALUC and county and city governments concerns implementation of the *Compatibility Plan*. As noted earlier, although the ALUC has the sole authority to adopt this plan and to conduct compatibility reviews, the authority and responsibility for implementing the compatibility policies rests with the local governments. Actions that Riverside County and the affected cities can take to implement the *Compatibility Plan* are outlined later in this chapter.

POLICY FRAMEWORK

The policies in Chapter 2 and 3 of this *Compatibility Plan Policies Document* are based upon two primary sources: state laws and guidelines; and master plans for the respective airports.

State Laws and Guidelines

Many of the procedures that govern how ALUCs operate are defined by state law. Statutory provisions in the Public Utilities Code establish the requirements for ALUC adoption of compatibility plans, including which airports should or can be included and some of the steps involved in the plan adoption. The law also dictates the requirements for airport land use compatibility reviews by the ALUC. The types of actions that local jurisdictions must submit for review are specified, for example.

With respect to airport land use compatibility criteria, the statutes say little, however. Instead, a section of the law enacted in 1994 refers to another document, the *Airport Land Use Planning Handbook* published by the California Division of Aeronautics. Specifically, the statutes say that, when preparing compatibility plans for individual airports, ALUCs shall “be guided by” the information contained in the *Handbook*. The *Handbook* is not regulatory in nature, however, and it does not constitute formal state policy except to the extent that it explicitly refers to state laws. Rather, its guidance is intended to serve as the starting point for compatibility planning around individual airports. The policies in this *Compatibility Plan*, including the individual airport compatibility maps, take into account the guidance provided by the current edition of the *Airport Land Use Planning Handbook*, dated January 2002.

An additional function of the *Airport Land Use Planning Handbook* is established elsewhere in California state law. The Public Resources Code creates a tie between the *Handbook* and California Environmental Quality Act (CEQA) documents. Specifically, Section 21096 requires that lead agencies must use the *Handbook* as “a technical resource” when assessing airport-related noise and safety impacts of projects located in the vicinity of airports.

The most recent edition of the *Handbook* was completed in January 2002 and is available for downloading from the Division of Aeronautics web site (www.dot.ca.gov/hq/planning/aeronaut).

CHAPTER 1 INTRODUCTION

Relationship to Airport Master Plans

Airport land use compatibility plans are distinct from airport master plans in function and content. In simple terms, the issues addressed by airport master plans are primarily on-airport whereas those of concern in a compatibility plan are mostly off-airport. The purpose of airport master plans is to assess the demand for airport facilities and to guide the development necessary to meet those demands. An airport master plan is prepared for and adopted by the agency that owns and/or operates the airport. In contrast, the major purpose of a compatibility plan is to ensure that incompatible development does not occur on lands surrounding the airports. The responsibility for preparation and adoption of compatibility plans lies with each county's airport land use commission.

This distinction notwithstanding, the relationship between the two types of plans is close. Specifically, Public Utilities Code Section 21675(a) requires that ALUC plans be based upon a long-range airport master plan adopted by the airport owner/proprietor. If such a plan does not exist for a particular airport, an airport layout plan may be used subject to approval by the California Division of Aeronautics.

The compatibility plan for each of the airports within the jurisdiction of the Riverside County Airport Land Use Commission is based upon the respective airport master plan or, as allowed by the statutes, a state-approved airport layout plan. The status of the master plan and layout plan for each airport is indicated in the background data volumes of this *Compatibility Plan*.

PLAN IMPLEMENTATION**General Plan Consistency**

As noted above, state law requires each local agency having jurisdiction over land uses within an ALUC's planning area to modify its general plan and any affected specific plans to be consistent with the compatibility plan. The law says that the local agency must take this action within 180 days of when the ALUC adopts or amends its plan. The only other course of action available to local agencies is to overrule the ALUC by a two-thirds vote of its governing body after making findings that the agency's plans are consistent with the intent of state airport land use planning statutes. Additionally, the local agency must notify both the ALUC and the California Division of Aeronautics at least 45 days in advance of its decision to overrule and must hold a public hearing on the proposed overruling (Public Utilities Code Section 21676(a) and (b)). Note that similar requirements apply to local agency overruling of ALUC actions concerning individual development proposals for which ALUC review is mandatory (Section 21676.5(a)) and airport master plans (Section 21676(c)).

A general plan does not need to be identical with the ALUC plan in order to be consistent with it. To meet the consistency test, a general plan must do two things:

- › It must specifically address compatibility planning issues, either directly or through reference to a zoning ordinance or other policy document; and
- › It must avoid direct conflicts with compatibility planning criteria.

Many community general plans pay little attention to the noise and safety factors associated with airport land use compatibility. Also, some of the designated land uses of property near an airport frequently are contrary to good compatibility planning. It is anticipated that each of the land use jurisdictions

affected by this *Compatibility Plan* will need to make some modification to its general plan and/or other land use policy documents in order to meet the plan consistency requirements.

[An initial assessment of the consistency between the current local general plans and the compatibility criteria and other policies set forth in this ALUC *Compatibility Plan* is contained in the background data chapter for each airport.]

Compatibility planning issues can be reflected in a general plan in several ways:

- ▶ **Incorporate Policies into Existing General Plan Elements**—One method of achieving the necessary planning consistency is to modify existing general plan elements. For example, airport land use noise policies could be inserted into the noise element, safety policies could be placed into a safety element, and the primary compatibility criteria and associated maps plus the procedural policies might fit into the land use element. With this approach, direct conflicts would be eliminated and the majority of the mechanisms and procedures necessary to ensure compliance with compatibility criteria could be fully incorporated into a local jurisdiction's general plan.
- ▶ **Adopt a General Plan Airport Element**—Another approach is to prepare a separate airport element of the general plan. Such a format may be advantageous when a community's general plan also needs to address on-airport development and operational issues. Modification of other plan elements to provide cross-referencing and eliminate conflicts would still be necessary.
- ▶ **Adopt Compatibility Plan as Stand-Alone Document**—Jurisdictions selecting this option would simply adopt as a local policy document the relevant portions of the *Compatibility Plan Policy Document*—specifically, Chapter 2 plus the policies and maps for the relevant airports from Chapter 3. Applicable background information from Volumes 2 and 3 could be included as well if desired. Changes to the community's existing general plan would be minimal. Policy reference to the ALUC plan would need to be added and any direct land use or other conflicts with compatibility planning criteria would have to be removed. Limited discussion of compatibility planning issues could be included in the general plan, but the substance of most compatibility policies would appear only in the stand-alone document.
- ▶ **Adopt Airport Combining District or Overlay Zoning Ordinance**—This approach is similar to the stand-alone document except that the local jurisdiction would not explicitly adopt the *Compatibility Plan* as policy. Instead, the compatibility policies would be restructured as an airport combining or overlay zoning ordinance. A combining zone serves as an overlay of standard community-wide land use zones and modifies or limits the uses permitted by the underlying zone. Flood hazard combining zoning is a common example. An airport combining zone ordinance can serve as a convenient means of bringing various airport compatibility criteria into one place. The airport-related height-limit zoning that many jurisdictions have adopted as a means of protecting airport airspace is a form of combining district zoning. Noise and safety compatibility criteria, together with procedural policies, would need to be added to create a complete airport compatibility zoning ordinance. Other than where direct conflicts need to be eliminated from the local plans, implementation of the compatibility policies would be accomplished solely through the zoning ordinance. Policy reference to airport compatibility in the general plan could be as simple as mentioning support for the airport land use commission and stating that policy implementation is by means of the combining zone. (An outline of topics which could be addressed in an airport combining zone is included in Appendix G.)

CHAPTER 1 INTRODUCTION

Project Referrals

In addition to the types of land use actions for which referral to the ALUC is mandatory in accordance with state law, the *Compatibility Plan* specifies other land use projects that either must or should be submitted for review. These *major land use actions* are defined in Chapter 2. Beginning with when this plan, as it pertains to each specific airport, is adopted by the Airport Land Use Commission and continuing until such time as local jurisdictions have made the necessary modifications to their general plans, all of these major land use actions are to be submitted to the commission for review. After local agencies have made their general plans consistent with the *Compatibility Plan*, the ALUC requests that these major actions continue to be submitted on a voluntary basis.

PLAN CONTENTS

The *Riverside County Airport Land Use Compatibility Plan* is organized into three volumes.

This first volume contains the policies by which the ALUC operates and conducts compatibility reviews of proposed land use and airport development actions. The present introductory chapter serves to set the overall context of airport land use compatibility planning in general and for airports in Riverside County in particular. The most important components of the plan are found in Chapters 2 and 3. Chapter 2 outlines the policies, including airport land use compatibility criteria, applicable around all airports in the county. Additionally, the policies define the types of actions to be submitted for ALUC review and the procedures that the ALUC will follow in making compatibility determinations. Chapter 3 presents the compatibility maps for each airport together with any policies applicable only to that airport. Also included in this volume are a set of appendices containing a copy of state statutes concerning airport land use commissions and other general information pertaining to airport land use compatibility planning.

Volumes 2 and 3 present various background data regarding each airport and its environs. Data for airports in western Riverside County is included in Volume 2; data regarding eastern county airports is found in Volume 3. In addition to serving as a convenient information reference for each airport, the material in Volumes 2 and 3 serves to document the data and assumptions upon which the compatibility map for each airport was based.

2

Countywide Policies

1. GENERAL APPLICABILITY

1.1. Purpose

The purpose of this *Riverside County Airport Land Use Compatibility Plan* is to articulate procedures and criteria, established in accordance with the California State Aeronautics Act (Public Utilities Code Section 21670 et seq.), that:

1.1.1. *Riverside County Airport Land Use Commission (ALUC):* The ALUC:

- (a) Shall utilize when reviewing proposed land use development in Riverside County for compatibility with airport activity.
- (b) Shall utilize when evaluating certain types of airport development proposals that also are subject to ALUC review and are addressed by the *Compatibility Plan*.

1.1.2. *County of Riverside and Affected Cities in the County:* The county and cities:

- (a) Shall each apply when modifying their respective general plans and zoning ordinances to be consistent with the Commission's *Compatibility Plan*.
- (b) Shall consider when making other planning decisions regarding the proposed development of lands impacted by airport operations.
- (c) Shall use as the basis for referring specified land use proposals to the Riverside County ALUC for review.

1.1.3. *Special Districts and School Districts:* Special districts and school districts:

- (a) Shall apply when creating plans and making other planning decisions regarding proposed facilities and other development affecting or affected by airport operations.
- (b) Shall use as the basis for referring specified land use proposals to the Riverside County ALUC for review.

CHAPTER 2 COUNTYWIDE POLICIES

- 1.1.4. *County of San Bernardino*: The county of San Bernardino should recognize as the basis for coordination with the Riverside County ALUC and the county of Riverside regarding airport impacts, specifically with regard to Chino Airport, that overlap the common boundary between the counties.

1.2. Definitions

The following definitions apply for the purposes of the policies set forth in this document (additional terms are defined in the *Glossary*):

- 1.2.1. *Aeronautics Act*: Except as indicated otherwise, the article of the California Public Utilities Code (Sections 21670 et seq.) pertaining to airport land use commissions.
- 1.2.2. *Airport*: Each of the public-use or military airports, as listed in Policy 1.3.1(a), situated within or affecting lands within Riverside County, or any other new public-use airport which might be created within the boundaries of Riverside County.
- 1.2.3. *Airport Influence Area*: An area, as delineated in Chapter 3 herein, in which current or future airport-related noise, overflight, safety, or airspace protection factors may significantly affect land uses or necessitate restrictions on those uses. The *airport influence area* constitutes the area within which certain land use actions are subject to ALUC review. The term *airport influence area* is synonymous with the term *airport referral area* as well as to the term *planning area* as referred to in Public Utilities Code Section 21675.
- 1.2.4. *Airport Land Use Commission (ALUC)*: The Riverside County Airport Land Use Commission.
- 1.2.5. *Aviation-Related Use*: Any facility or activity directly associated with the air transportation of persons or cargo or the operation, storage, or maintenance of aircraft at an airport or heliport. Such uses specifically include runways, taxiways, and their associated protection areas defined by the Federal Aviation Administration, together with aircraft aprons, hangars, fixed base operations facilities, terminal buildings, etc.
- 1.2.6. *Aviation Easement*: An easement that conveys rights associated with aircraft overflight of a property, including creation of noise, limits on the height of structures and trees, etc. (see *Glossary*)
- 1.2.7. *Community Noise Equivalent Level (CNEL)*: The noise metric adopted by the state of California for describing airport noise impacts. The noise impacts are typically depicted by a set of contours, each of which represents points having the same CNEL value.
- 1.2.8. *Compatibility Plan*: This document, the *Riverside County Airport Land Use Compatibility Plan*.
- 1.2.9. *Compatibility Zone*: Any of the zones set forth herein for the purposes of assessing land use compatibility within the airport influence area.
- 1.2.10. *Existing Land Use*: A land use that either physically exists or for which local government commitments to the proposal have been obtained; that is, no further discretionary approvals are necessary. Local government commitment to a proposal can usually be considered firm once one or more of the following have occurred:

- (a) A tentative parcel or subdivision map has been approved and not expired;
 - (b) A vesting tentative parcel or subdivision map has been approved;
 - (c) A development agreement has been approved and remains in effect;
 - (d) A final subdivision map has been recorded;
 - (e) A use permit or other discretionary entitlement has been approved and not yet expired; or
 - (f) A valid building permit has been issued.
- 1.2.11. *Federal Aviation Regulations (FAR) Part 77*: The part of Federal Aviation Regulations which deals with objects affecting navigable airspace in the vicinity of airports. Objects which exceed the Part 77 height limits constitute airspace obstructions.
- 1.2.12. *Gross Acreage*: Gross acreage includes the property at issue plus a share of adjacent roads and any adjacent, permanently dedicated, open lands.
- 1.2.13. *Height Review Overlay Zone*: Areas of land in the vicinity of an airport where the ground lies above an FAR 77 surface or less than 35 feet beneath such surface.
- 1.2.14. *Helipoint*: A helicopter landing facility for which a Helipoint Permit is required from the California Department of Transportation. Public-use and special-use heliports (including those at hospitals) are included within this definition, but helipads located on an airport are excluded. Personal-use heliports may or may not require a state permit depending upon their location and other factors.
- 1.2.15. *Infill*: Development of vacant or underutilized land within areas that are already largely developed or used more intensively. See Policy 3.3.1(a) for criteria used to identify infill areas for compatibility planning purposes.
- 1.2.16. *Local Jurisdiction*: The County of Riverside or any city or other government agency (except state or federal government agencies or Indian tribes) having jurisdiction over land uses within their boundaries.
- 1.2.17. *Major Land Use Action*: Actions related to proposed land uses for which compatibility with airport activity is a particular concern, but for which ALUC review is not always mandatory under state law. These types of actions are listed in Policy 1.5.3.
- 1.2.18. *Nonconforming Use*: In general, a land use, parcel, or building which does not comply with a current land use plan or zoning ordinance, but which was legally permitted at the time the plan or ordinance was adopted. For the purposes of this *Compatibility Plan*, a nonconforming land use is one which exists (see definition of "existing land use" in Policy 1.2.10) as of the plan's adoption date, but which does not conform with the compatibility criteria set forth herein.
- 1.2.19. *Project; Land Use Action; Development Proposal*: Terms similar in meaning and all referring to the types of land use matters, either publicly or privately sponsored, which are subject to the provisions of this *Compatibility Plan*.

CHAPTER 2 COUNTYWIDE POLICIES

1.3. Geographic Scope

As established by the Riverside County Airport Land Use Commission, the geographic scope of the *Riverside County Airport Land Use Compatibility Plan* encompasses:

1.3.1. Airport Influence Area

- (a) All lands on which the uses could be negatively affected by present or future aircraft operations at any of the airports listed in Table 1A for which the ALUC has specifically adopted these procedures; also those lands on which the uses could negatively affect any of the same airports.
- (b) All lands within Riverside County that could be negatively affected by present or future aircraft operations at Chino Airport situated in San Bernardino County as well as lands in Riverside County on which the uses could negatively affect usage of that airport.
- (c) The specific limits of the influence area for each of the above airports are depicted on the respective *Compatibility Map* for that airport as presented in Chapter 3.

1.3.2. Countywide Impacts on Flight Safety: Other lands, regardless of their location in the county, on which certain land use characteristics could adversely affect the safety of aircraft flight in Riverside County. The specific uses of concern are identified in Policy 1.5.2(c).**1.3.3. New Airports:** The site and environs of any new airport that may be proposed anywhere in the county, including within incorporated cities, and that requires an Airport Permit from the California Department of Transportation (agricultural airports, personal-use airports, and seaplane landing sites are generally exempt from state permit requirements).**1.3.4. Heliports:** The site and environs of any public-use or special-use heliport (as defined by the California Department of Transportation) that may exist or be proposed anywhere within Riverside County, including within incorporated cities.**1.4. Types of Airport Impacts****1.4.1. Principal Compatibility Concerns:** The Commission is concerned only with the potential impacts related to:

- (a) Exposure to aircraft noise;
- (b) Land use safety with respect both to people on the ground and the occupants of aircraft;
- (c) Protection of airport airspace; and
- (d) General concerns related to aircraft overflights.

1.4.2. Airport Impacts Not Considered: Other impacts sometimes created by airports (e.g., air pollution, automobile traffic, etc.) are not addressed by these compatibility policies and are not subject to review by the Airport Land Use Commission. Also, in accordance with state law (Public Utilities Code Section 21674(e)), neither this *Plan* nor the

ALUC have authority over the operation of any airport (including where and when aircraft fly, airport security, and other such matters).

1.5. Types of Actions Reviewed

- 1.5.1. *Actions Which Always Require ALUC Review:* As required by state law, the following types of actions shall be referred to the Airport Land Use Commission for determination of consistency with the Commission's *Plan* prior to their approval by the local jurisdiction:
- (a) The adoption or approval of any amendment to a general or specific plan affecting the property within an airport influence area (Public Utilities Code Section 21676(b)).
 - (b) The adoption or approval of a zoning ordinance or building regulation which (1) affects property within an airport influence area, and (2) involves the types of airport impact concerns listed in Section 1.4 (Public Utilities Code Section 21676(b)).
 - (c) Adoption or modification of the master plan for an existing public-use airport (Public Utilities Code Section 21676(c)).
 - (d) Any proposal for expansion of an existing airport or heliport if such expansion will require an amended airport permit from the state of California (Public Utilities Code Section 21664.5).
 - (e) Any proposal for a new airport or heliport whether for public use or private use (Public Utilities Code Section 21661.5) if the facility requires a state airport permit.
- 1.5.2. *Other Land Use Actions Subject to ALUC Review:* In addition to the above types of land use actions for which ALUC review is mandatory, other types of land use actions are subject to review under the following circumstances:
- (a) Until such time as (1) the Commission finds that a local agency's general plan or specific plan is consistent with the *Airport Land Use Compatibility Plan*, or (2) the local agency has overruled the Commission's determination of inconsistency, state law provides that the ALUC may require the local agency to refer all actions, regulations, and permits involving land within an airport influence area to the Commission for review (Public Utilities Code Section 21676.5(a)). Only those actions that the ALUC elects not to review are exempt from this requirement. Commission policy is that only the *major land use actions* listed in Policy 1.5.3 shall be submitted for review.
 - (b) After a local agency has revised its general plan or specific plan (see Section 3.2) or has overruled the Commission, the Commission no longer has authority under state law to require that all actions, regulations, and permits be referred for review. However, the Commission and the local agency can agree that the Commission should continue to review individual projects in an advisory capacity.
 - (1) The Commission requests local agencies to continue to submit *major land use actions* as listed in Policy 1.5.3. ALUC review of these types of projects can serve to enhance their compatibility with airport activity.

CHAPTER 2 COUNTYWIDE POLICIES

- (2) Review of these actions is requested only if a review has not previously been conducted as part of a general plan, specific plan, or zoning ordinance action or if sufficient project-level detail to enable a full assessment of compatibility was not available at the time of a previous review.
 - (3) Because the ALUC acts in an advisory capacity when reviewing projects under these circumstances, local jurisdictions are not required to adhere to the overruling process if they elect to approve a project without incorporating design changes or conditions suggested by the Commission.
 - (c) Proposed redevelopment of a property for which the existing use is consistent with the general plan and/or specific plan, but nonconforming with the compatibility criteria set forth in this plan, shall be subject to ALUC review. This policy is intended to address circumstances that arise when a general or specific plan land use designation does not conform to ALUC compatibility criteria, but is deemed consistent with the compatibility plan because the designation reflects an existing land use. Proposed redevelopment of such lands voids the consistency status and is to be treated as new development subject to ALUC review even if the proposed use is consistent with the local general plan or specific plan. (Also see Policies 3.3.2 and 3.3.3.)
 - (d) Proposed land use actions covered by Paragraphs (a), (b), and (c) above shall initially be reviewed by the ALUC Executive Director. If the Executive Director determines that significant compatibility issues are evident, the proposal shall be forwarded to the Commission for review and decision. The Commission authorizes the Executive Director to approve proposed actions having no apparent compatibility issues of significance.
- 1.5.3. *Major Land Use Actions:* The scope or character of certain *major land use actions*, as listed below, is such that their compatibility with airport activity is a potential concern. Even though these actions may be basically consistent with the local general plan or specific plan, sufficient detail may not be known to enable a full airport compatibility evaluation at the time that the general plan or specific plan is reviewed. To enable better assessment of compliance with the compatibility criteria set forth herein, ALUC review of these actions may be warranted. The circumstances under which ALUC review of these actions is to be conducted are indicated in Policy 1.5.2 above.
- (a) Actions affecting land uses within any compatibility zone.
 - (1) Any proposed expansion of the sphere of influence of a city or special district.
 - (2) Proposed pre-zoning associated with future annexation of land to a city.
 - (3) Proposed development agreements or amendments to such agreements.
 - (4) Proposed residential development, including land divisions, consisting of five or more dwelling units or lots.
 - (5) Any discretionary development proposal for projects having a building floor area of 20,000 square feet or greater unless only ministerial approval (e.g., a building permit) is required.

- (6) Major capital improvements (e.g., water, sewer, or roads) which would promote urban uses in undeveloped or agricultural areas to the extent that such uses are not reflected in a previously reviewed general plan or specific plan.
 - (7) Proposed land acquisition by a government entity for any facility accommodating a congregation of people (for example, a school or hospital).
 - (8) Any off-airport, nonaviation use of land within *Compatibility Zone A* of any airport.
 - (9) Proposals for new development (including buildings, antennas, and other structures) having a height of more than:
 - ▶ 35 feet within *Compatibility Zone B1, B2, or a Height Review Overlay Zone*;
 - ▶ 70 feet within *Compatibility Zone C*; or
 - ▶ 150 feet within *Compatibility Zone D or E*.
 - (10) Any obstruction reviewed by the Federal Aviation Administration in accordance with Part 77 of the Federal Aviation Regulations that receives a finding of anything other than “not a hazard to air navigation.”
 - (11) Any project having the potential to create electrical or visual hazards to aircraft in flight, including:
 - ▶ Electrical interference with radio communications or navigational signals;
 - ▶ Lighting which could be mistaken for airport lighting;
 - ▶ Glare in the eyes of pilots of aircraft using the airport; and
 - ▶ Impaired visibility near the airport.
 - (12) Projects having the potential to cause attraction of birds or other wildlife that can be hazardous to aircraft operations to be increased within the vicinity of an airport.
- (b) Proposed nonaviation development of airport property if such development has not previously been included in an airport master plan or community general plan reviewed by the Commission. (See Policy 1.2.5 for definition of *aviation-related use*.)
 - (c) Regardless of location within Riverside County, any proposal for construction or alteration of a structure (including antennas) taller than 200 feet above the ground level at the site. (Such structures also require notification to the Federal Aviation Administration in accordance with Federal Aviation Regulations, Part 77, Paragraph 77.13(a)(1).)
 - (d) Any other proposed land use action, as determined by the local planning agency, involving a question of compatibility with airport activities.
- 1.5.4. *Intercounty Coordination:* Where an airport influence area crosses the Riverside County line, affected jurisdictions outside Riverside County are asked to maintain coordination with the Riverside County ALUC on airport land use compatibility issues. In particular:
- (a) The County of San Bernardino should inform the Riverside County ALUC regarding proposed plans for development of Chino Airport that may change the character or magnitude of impacts within the Riverside County portion of the airport influence area. (See map in Chapter 3).

CHAPTER 2 COUNTYWIDE POLICIES

- (b) Any other county adjacent to Riverside County or any city or other agency within such counties that may be considering proposed establishment or expansion of an airport within three miles (or heliport within one mile) of the Riverside County boundary should inform the Riverside County ALUC of such proposal.
- (c) Riverside County ALUC review of such actions is advisory only. The ALUC has no jurisdiction over development outside Riverside County boundaries.

2. REVIEW PROCESS

2.1. General

- 2.1.1. *Timing of Project Submittal:* Proposed actions listed in Section 1.5 *should* be submitted to the Commission at the earliest reasonable point in time so that the Commission's (or ALUC Executive Director's) review can be duly considered by the local jurisdiction prior to formalizing its actions. The timing may vary depending upon the nature of the specific project. However, all projects *must* be submitted to the Commission for review prior to final approval by the local government entity.
- 2.1.2. *Public Input:* Where applicable, the Commission shall provide public notice and obtain public input in accordance with Public Utilities Code Section 21675.2(d) before acting on any plan, regulation, or other land use proposal under consideration.

2.2. Review Process for Community Land Use Plans and Ordinances

- 2.2.1. *Initial ALUC Review of General Plan Consistency:* In conjunction with adoption or amendment of this *Airport Land Use Compatibility Plan*, the Commission shall review the general plans and specific plans of affected local jurisdictions to determine their consistency with the Commission's policies.
 - (a) Within 180 days of the Commission's adoption or amendment of the *Airport Land Use Compatibility Plan*, each local agency must amend its general plan and any applicable specific plan to be consistent with the Commission's *Plan* or, alternatively, adopt findings and overrule the Commission in accordance with Public Utilities Code Section 21676(b) (Government Code Section 65302.3).
 - (b) Prior to taking action on a proposed amendment, the local agency must submit a draft of the proposal to the Commission for review and approval.
 - (c) In conjunction with its submittal of a general plan or specific plan amendment to the ALUC, a local agency may request that the Commission modify the areas defined as "infill" in accordance with Policy 3.3.1. The Commission will include a determination on the infill as part of its action on the consistency of the general plan and specific plans.
- 2.2.2. *Subsequent Reviews of Related Land Use Development Proposals:* As indicated in Policies 1.5.1(a) and 1.5.1(b), prior to taking action on an amendment of a general plan or specific plan or the addition or approval of a zoning ordinance or building regulation affecting an airport influence area as defined herein, local agencies must submit the proposed plan, ordinance, or regulation to the Commission for review. Subsequent land use development actions that are consistent with applicable, previously re-

viewed, local plans, ordinances, and regulations are subject to Commission review only under the conditions indicated in Policies 1.5.2 and 2.3.5.

2.2.3. *Commission Action Choices:* When reviewing a general plan, specific plan, zoning ordinance, or building regulation for consistency with the *Compatibility Plan*, the Airport Land Use Commission has three choices of action:

- (a) Find the plan, ordinance, or regulation consistent with the *Compatibility Plan*. To make such a finding with regard to a general plan, the conditions identified in Section 3.2 must be met.
- (b) Find the plan, ordinance, or regulation consistent with the *Compatibility Plan*, subject to conditions and/or modifications that the Commission may require. Any such conditions should be limited in scope and described in a manner that allows compliance to be clearly assessed.
- (c) Find the plan, ordinance, or regulation inconsistent with the *Compatibility Plan*. In making a finding of inconsistency, the Commission shall note the specific conflicts or shortcomings upon which its determination is based.

2.2.4. *Response Time:* The Airport Land Use Commission must respond to a local agency's request for a consistency determination on a general plan, specific plan, zoning ordinance, or building regulation within 60 days from the date of referral (Public Utilities Code Section 21676(d)).

- (a) The 60-day review period may be extended if agreed upon in writing by the submitting agency or project applicant.
- (b) The date of referral is deemed to be the date on which all applicable project submittal information is received by the Commission Executive Director.
- (c) If the Commission fails to make a determination within that period, the proposed action shall be deemed consistent with the *Compatibility Plan*.
- (d) Regardless of Commission action or failure to act, the proposed action must comply with other applicable local, state, and federal regulations and laws.
- (e) The referring agency shall be notified of the Commission's action in writing.

2.2.5. *ALUC Response to Notification of Proposed Overruling:* If a local agency proposes to overrule an ALUC action regarding a community land use plan or ordinance, it must provide 45 days notice to both the ALUC and the California Division of Aeronautics and these agencies then have 30 days in which to respond (Public Utilities Code Sections 21676(a) and (b)). The ALUC authorizes the Executive Director to respond as appropriate.

2.3. Review Process for Major Land Use Actions

2.3.1. *Project Submittal Information:* A proposed major land use action submitted to the Commission (or to the ALUC Executive Director) for review shall include:

- (a) The following information:
 - (1) Property location data (assessor's parcel number, street address, subdivision lot number).

CHAPTER 2 COUNTYWIDE POLICIES

- (2) An accurately scaled map showing the relationship of the project site to the airport boundary and runways.
 - (3) A description of the existing and proposed uses of the land in question.
 - (4) The type of land use action being sought from the local jurisdiction (e.g., zoning change, building permit, etc.).
 - (5) For residential uses, an indication of the potential or proposed number of dwelling units per acre (including any secondary units on a parcel); or, for nonresidential uses, the number of people potentially occupying the total site or portions thereof at any one time.
 - (6) If applicable, a detailed site plan showing ground elevations, the location of structures, open spaces, and water bodies, and the heights of structures and trees.
 - (7) Identification of any characteristics which could create electrical interference, confusing lights, glare, smoke, or other electrical or visual hazards to aircraft flight.
 - (8) Any environmental document (initial study, draft environmental impact report, etc.) that may have been prepared for the project.
 - (9) Any staff reports regarding the project that may have been presented to local agency decision makers.
 - (10) Other relevant information which the Commission or its staff determine to be necessary to enable a comprehensive review of the proposal.
 - (b) Any applicable review fees as established by the Riverside County Airport Land Use Commission.
- 2.3.2. *ALUC Executive Director's Choices:* When reviewing major land use actions in accordance with Policy 1.5.2(d), the ALUC Executive Director has two choices of action:
- (a) Find that the proposed project does not contain characteristics likely to result in inconsistencies with the compatibility criteria set forth in this plan. Upon said finding, the Executive Director is authorized to approve such projects on behalf of the Commission
 - (b) Find that the proposed project may be inconsistent with the *Compatibility Plan*. The Executive Director shall forward any such project to the Commission for a consistency determination.
- 2.3.3. *Commission Action Choices:* When reviewing a major land use project proposal, the Airport Land Use Commission has three choices of action:
- (a) Find the project consistent with the *Compatibility Plan*.
 - (b) Find the project consistent with the *Compatibility Plan*, subject to compliance with such conditions as the Commission may specify. Any such conditions should be limited in scope and described in a manner that allows compliance to be clearly assessed (e.g., the height of a structure).
 - (c) Find the project inconsistent with the *Compatibility Plan*. In making a finding of inconsistency, the Commission shall note the specific conflicts upon which the determination is based.

- 2.3.4. *Response Time:* In responding to major land use actions submitted for review, the policy of the Riverside County Airport Land Use Commission is that:
- (a) When a major land use action is submitted for review on a mandatory basis as required by Policy 1.5.2(a):
 - (1) Reviews by the ALUC Executive Director shall be completed within 30 days of when a complete application is submitted.
 - (2) Reviews of projects forwarded to the Commission for a consistency determination shall be completed within 60 days of the date of project referral.
 - (3) The date of referral is deemed to be the date on which all applicable project submittal information as listed in Policy 2.3.1 is received by the Commission Executive Director.
 - (4) If the ALUC Executive Director or the Commission fail to make a determination within the above time periods, the proposed action shall be deemed consistent with the compatibility plan.
 - (b) When a major land use action is submitted on an optional basis in accordance with Policy 1.5.2(b), review by the ALUC Executive Director and/or the Commission should be completed in a timely manner enabling the comments to be considered by decision-making bodies of the submitting agency.
 - (c) Regardless of action or failure to act on the part of the ALUC Executive Director or the Commission, the proposed action still must comply with other applicable local, state, and federal laws and regulations.
 - (d) The referring agency shall be notified of the ALUC Executive Director's and/or the Commission's action in writing.
- 2.3.5. *ALUC Response to Notification of Proposed Overruling:* If a local agency proposes to overrule an ALUC action regarding a major land use action for which ALUC review is mandatory, it must provide 45 days notice to both the ALUC and the California Division of Aeronautics and these agencies then have 30 days in which to respond (Public Utilities Code Section 21676.5(a)). The ALUC authorizes the Executive Director to respond as appropriate.
- 2.3.6. *Subsequent Review:* Once a project has been found consistent with the *Compatibility Plan*, it need not be referred for review at subsequent stages of the planning process (e.g., for a use permit after a zoning change has been reviewed) unless:
- (a) Insufficient information was available at the time of the ALUC's original review of the project to assess whether the proposal would be fully in compliance with compatibility criteria (e.g., the site layout and structure height might not be known at the time a general plan change or zoning amendment is requested).
 - (b) The design of the project subsequently changes in a manner that reopens previously considered compatibility issues and could raise questions as to the validity of the earlier finding of compatibility. Proposed changes warranting a new review include, but are not limited to, the following:
 - (1) An increase in the number of dwelling units, intensity of use (more people on the site), or other usage characteristics to levels exceeding the criteria set forth in this plan;

CHAPTER 2 COUNTYWIDE POLICIES

- (2) An increase in the height of structures or other design features such that the height limits established herein would be exceeded or exceeded by a greater amount;
 - (3) Major site design changes (such as incorporation of clustering or modifications to the configuration of open land areas proposed for the site) to the extent that site design was an issue in the initial project review; and/or
 - (4) Any significant change to a proposed project for which a special exception was granted in accordance with Policy 3.3.6.
- (c) The local jurisdiction concludes that further review is warranted.

2.4. Review Process for Airport Master Plans and Development Plans

- 2.4.1. *Project Submittal Information:* An airport master plan or development plan submitted to the Commission for review shall contain sufficient information to enable the Commission to adequately assess the noise, safety, airspace protection, and overflight impacts of airport activity upon surrounding land uses. A master plan report should be submitted, if available.
- (a) At a minimum, information to be submitted shall include:
- (1) A layout plan drawing of the proposed facility showing the location of:
 - › Property boundaries;
 - › Runways or helicopter takeoff and landing areas;
 - › Runway or helipad protection zones;
 - › Aircraft or helicopter approach/departure flight routes.
 - (2) Airspace surfaces in accordance with Federal Aviation Regulations, Part 77.
 - (3) Activity forecasts, including the number of operations by each type of aircraft proposed to use the facility, the percentage of day versus night operations, and the distribution of takeoffs and landings for each runway direction.
 - (4) Existing and proposed flight track locations, current and projected noise contours, and other supplementary noise impact data that may be relevant.
 - (5) A map showing existing and planned land uses in the areas affected by aircraft activity associated with implementation of the proposed master plan or development plan.
 - (6) Any environmental document (initial study, draft environmental impact report, etc.) that may have been prepared for the project.
 - (7) Identification and proposed mitigation of impacts on surrounding land uses.
- (b) Any applicable review fees as established by the Riverside County Airport Land Use Commission shall accompany the application.
- 2.4.2. *Commission Action Choices for Plans of Existing Airports:* When reviewing airport master plans or expansion plans for existing public-use airports, the Commission has three action choices:
- (a) Find the airport plan consistent with the *Airport Land Use Compatibility Plan*.
 - (b) Find the airport plan inconsistent with the Commission's *Plan*.

- (c) Modify the *Airport Land Use Compatibility Plan* (after duly noticed public hearing) to reflect the assumptions and proposals in the airport plan.
- 2.4.3. *Commission Action Choices for Reviews of New Airports or Heliports:* When reviewing proposals for new airports or heliports, the Commission's choices of action are:
 - (a) Approve the proposal as being consistent with the specific review policies listed in Section 5.2 below.
 - (b) Approve the proposal and adopt a *Compatibility Plan* for that facility. State law requires adoption of such a plan if the airport or heliport will be a public-use facility (Public Utilities Code Section 21675(a)).
 - (c) Disapprove the proposal on the basis that the noise, safety, airspace protection, and overflight impacts it would have on surrounding land uses are not adequately mitigated.
- 2.4.4. *Response Time:* The Airport Land Use Commission must respond to a local agency's submittal of an airport master plan or development plan within 60 days from the date of referral (Public Utilities Code Section 21676(d)).
 - (a) If the Commission fails to make a determination within that period, the proposed action shall be deemed consistent with the *Compatibility Plan*.
 - (b) Regardless of Commission action or failure to act, the proposed action must comply with other applicable local, state, and federal regulations and laws.
 - (c) The referring agency shall be notified of the Commission's action in writing.
- 2.4.5. *ALUC Response to Notification of Proposed Overruling:* If a local agency proposes to overrule an ALUC action regarding an airport master plan or development plan, it must provide 45 days notice to both the ALUC and the California Division of Aeronautics and these agencies then have 30 days in which to respond (Public Utilities Code Section 21676(c)). The ALUC authorizes the Executive Director to respond as appropriate.

3. COMPATIBILITY CRITERIA FOR LAND USE ACTIONS

3.1. Basic Criteria

- 3.1.1. *Basic Land Use Compatibility Criteria:* The basic criteria for assessing whether a land use plan, ordinance, or development proposal is to be judged compatible with a nearby airport are set forth in the Basic Compatibility Criteria matrix, Table 2A. These criteria are to be used in conjunction with the compatibility map and policies for each airport as presented in Chapter 3.
- 3.1.2. *Function of Supporting Criteria:* The Compatibility Criteria matrix represents a compilation of compatibility criteria associated with each of the four types of airport impacts listed in Section 1.4. For the purposes of reviewing proposed amendments to community land use plans and zoning ordinances, as well as in the review of most individual development proposals, the criteria in the matrix are anticipated to suffice.

CHAPTER 2 COUNTYWIDE POLICIES

| Zone | Locations | Maximum Densities / Intensities | | | | Req'd Open Land ⁸ | Additional Criteria | |
|---|---|--|------------------------|--------------------------|-------------------------|------------------------------|--|---|
| | | Residential (d.u./ac) ¹ | Average ⁴ | Single Acre ⁷ | with Bonus ⁵ | | Prohibited Uses ⁶ | Other Development Conditions ⁹ |
| A | Runway Protection Zone and within Building Restriction Line | 0 | 0 | 0 | 0 | All Remaining | <ul style="list-style-type: none"> › All structures except ones with location set by aeronautical function › Assemblages of people › Objects exceeding FAR Part 77 height limits › Storage of hazardous materials › Hazards to flight ⁶ | <ul style="list-style-type: none"> › Aviation easement dedication |
| B1 | Inner Approach/Departure Zone | 0.05 (average parcel size ≥20.0 ac.) | 25 | 50 | 65 | 30% | <ul style="list-style-type: none"> › Children's schools, day care centers, libraries › Hospitals, nursing homes › Places of worship › Bldgs with >2 aboveground habitable floors › Highly noise-sensitive outdoor nonresidential uses ¹⁰ › Aboveground bulk storage of hazardous materials ¹¹ › Critical community infrastructure facilities ¹² › Hazards to flight ⁶ | <ul style="list-style-type: none"> › Locate structures maximum distance from extended runway centerline › Minimum NLR of 25 dB in residences (including mobile homes) and office buildings ¹³ › Airspace review required for objects >35 feet tall ¹⁴ › Aviation easement dedication |
| B2 | Adjacent to Runway | 0.1 (average parcel size ≥10.0 ac.) | 100 | 200 | 260 | No Req't | Same as Zone B1 | <ul style="list-style-type: none"> › Locate structures maximum distance from runway › Minimum NLR of 25 dB in residences (including mobile homes) and office buildings ¹³ › Airspace review required for objects >35 feet tall ¹⁴ › Aviation easement dedication |
| C | Extended Approach/Departure Zone | 0.2 (average parcel size ≥5.0 ac.) | 75 | 150 | 195 | 20% | <ul style="list-style-type: none"> › Children's schools, day care centers, libraries › Hospitals, nursing homes › Bldgs with >3 aboveground habitable floors › Highly noise-sensitive outdoor nonresidential uses ¹⁰ › Hazards to flight ⁶ | <ul style="list-style-type: none"> › Minimum NLR of 20 dB in residences (including mobile homes) and office buildings ¹³ › Airspace review required for objects >70 feet tall ¹⁵ › Deed notice required |
| D | Primary Traffic Patterns and Runway Buffer Area | (1) ≤0.2 (average parcel size ≥5.0 ac.) or ¹⁶ (2) ≥5.0 (average parcel size ≤0.2 ac.) | 100 | 300 | 390 | 10% | <ul style="list-style-type: none"> › Highly noise-sensitive outdoor nonresidential uses ¹⁰ › Hazards to flight ⁶ | <ul style="list-style-type: none"> › Airspace review required for objects >70 feet tall ¹³ › Children's schools, hospitals, nursing homes discouraged ¹⁷ › Deed notice required |
| E | Other Airport Environs | No Limit | No Limit ¹⁸ | | No Req't | | <ul style="list-style-type: none"> › Hazards to flight ⁶ | <ul style="list-style-type: none"> › Airspace review required for objects >100 feet tall ¹⁵ › Major spectator-oriented sports stadiums, amphitheaters, concert halls discouraged beneath principal flight tracks ¹⁵ |
|  | Height Review Overlay | Same as Underlying Compatibility Zone | | Not Applicable | | | Same as Underlying Compatibility Zone | <ul style="list-style-type: none"> › Airspace review required for objects >35 feet tall ¹⁴ › Aviation easement dedication |

See Chapter 3 for airport-specific additions or exceptions to these policies

Table 2A

Basic Compatibility Criteria

COUNTYWIDE POLICIES CHAPTER 2

NOTES:

- ¹ Residential development must not contain more than the indicated number of dwelling units (excluding secondary units) per gross acre. Clustering of units is encouraged. See Policy 4.2.5 for limitations. Gross acreage includes the property at issue plus a share of adjacent roads and any adjacent, permanently dedicated, open lands. Mixed-use development in which residential uses are proposed to be located in conjunction with nonresidential uses in the same or adjoining buildings on the same site shall be treated as nonresidential development. See Policy 3.1.3(d).
- ² Usage intensity calculations shall include all people (e.g., employees, customers/visitors, etc.) who may be on the property at a single point in time, whether indoors or outside.
- ³ Open land requirements are intended to be applied with respect to an entire zone. This is typically accomplished as part of a community general plan or a specific plan, but may also apply to large (10 acres or more) development projects. See Policy 4.2.4 for definition of open land.
- ⁴ The uses listed here are ones that are explicitly prohibited regardless of whether they meet the intensity criteria. In addition to these explicitly prohibited uses, other uses will normally not be permitted in the respective compatibility zones because they do not meet the usage intensity criteria.
- ⁵ As part of certain real estate transactions involving residential property within any compatibility zone (that is, anywhere within an airport influence area), information regarding airport proximity and the existence of aircraft overflights must be disclosed. This requirement is set by state law. See Policy 4.4.2 for details. Easement dedication and deed notice requirements indicated for specific compatibility zones apply only to new development and to reuse if discretionary approval is required.
- ⁶ The total number of people permitted on a project site at any time, except rare special events, must not exceed the indicated usage intensity times the gross acreage of the site. Rare special events are ones (such as an air show at the airport) for which a facility is not designed and normally not used and for which extra safety precautions can be taken as appropriate.
- ⁷ Clustering of nonresidential development is permitted. However, no single acre of a project site shall exceed the indicated number of people per acre. See Policy 4.2.5 for details.
- ⁸ An intensity bonus may be allowed if the building design includes features intended to reduce risks to occupants in the event of an aircraft collision with the building. See Policy 4.2.6 for details.
- ⁹ Hazards to flight include physical (e.g., tall objects), visual, and electronic forms of interference with the safety of aircraft operations. Land use development that may cause the attraction of birds to increase is also prohibited. See Policy 4.3.7.
- ¹⁰ Examples of highly noise-sensitive outdoor nonresidential uses that should be prohibited include amphitheaters and drive-in theaters. Caution should be exercised with respect to uses such as poultry farms and nature preserves.
- ¹¹ Storage of aviation fuel and other aviation-related flammable materials on the airport is exempted from this criterion. Storage of up to 6,000 gallons of nonaviation flammable materials is also exempted. See Policy 4.2.3(c) for details.
- ¹² Critical community facilities include power plants, electrical substations, and public communications facilities. See Policy 4.2.3(d) for details.
- ¹³ NLR = Noise Level Reduction, the outside-to-inside sound level attenuation that the structure provides. See Policy 4.1.6.
- ¹⁴ Objects up to 35 feet in height are permitted. However, the Federal Aviation Administration may require marking and lighting of certain objects. See Policy 4.3.6 for details.
- ¹⁵ This height criterion is for general guidance. Shorter objects normally will not be airspace obstructions unless situated at a ground elevation well above that of the airport. Taller objects may be acceptable if determined not to be obstructions. See Policies 4.3.3 and 4.3.4.
- ¹⁶ Two options are provided for residential densities in *Compatibility Zone D*. Option (1) has a density limit of 0.2 dwelling units per acre (i.e., an average parcel size of at least 5.0 gross acres). Option (2) requires that the density be greater than 5.0 dwelling units per acre (i.e., an average parcel size less than 0.2 gross acres). The choice between these two options is at the discretion of the local land use jurisdiction. See Table 2B for explanation of rationale. All other criteria for *Zone D* apply to both options.
- ¹⁷ Discouraged uses should generally not be permitted unless no feasible alternative is available.
- ¹⁸ Although no explicit upper limit on usage intensity is defined for *Zone E*, land uses of the types listed—uses that attract very high concentrations of people in confined areas—are discouraged in locations below or near the principal arrival and departure flight tracks. This limitation notwithstanding, no use shall be prohibited in *Zone E* if its usage intensity is such that it would be permitted in *Zone D*.

Table 2A, continued

However, certain complex land use actions may require more intensive review. The Commission may refer to the supporting criteria, as listed in Section 4, to clarify or supplement its review of such actions.

- 3.1.3. *Residential Development:* The following criteria shall be applied to evaluation of the compatibility of proposed residential development.
- (a) Any subdivision of land for residential uses within *Compatibility Zones A, B1, B2, and C* shall not result in a density greater than that indicated in the Compatibility Criteria matrix, Table 2A.
 - (1) Secondary units, as defined by state law, shall be excluded from density calculations.
 - (2) Clustering of development shall be limited in accordance with Policy 4.2.5(a)(2).
 - (b) Within *Compatibility Zone D*, local land use jurisdictions have two options. The basic option is to limit densities to no more than 0.2 dwelling units per acre. Additionally, a high-density option is provided. This option requires that densities be *greater than* 5.0 dwelling units per acre (i.e., an average parcel size *less than* 0.2 gross acres). See Table 3A for an explanation of the rationale behind these options.
 - (c) Other development conditions as also listed in Table 2A apply to sites within certain compatibility zones.
 - (d) Mixed use development in which residential uses are proposed to be located in conjunction with nonresidential uses in the same or adjoining buildings on the same site shall be treated as nonresidential development. The occupancy of the residential portion shall be added to that of the nonresidential portion and evaluated with respect to the nonresidential usage intensity criteria below.
 - (1) This mixed-use development policy is intended for dense, urban-type developments where the resultant ambient noise levels are relatively high. The policy is not intended to apply to projects in which the residential component is isolated from the nonresidential uses of the site.
 - (2) Noise attenuation and other requirements that may be specifically relevant to residential uses shall still apply.
- 3.1.4. *Nonresidential Development:* The compatibility of nonresidential development shall be assessed primarily with respect to its usage intensity (the number of people per acre) and the noise-sensitivity of the use. Additional criteria listed in Table 2A shall also apply.
- (a) The total number of people permitted on a project site at any time, except for rare special events, must not exceed the indicated usage intensity times the gross acreage of the site.
 - (1) Usage intensity calculations shall include all people (e.g., employees, customers/visitors, etc.) who may be on the property at any single point in time, whether indoors or outside.
 - (2) Rare special events are ones (such as an air show at an airport) for which a facility is not designed and normally not used and for which extra safety precautions can be taken as appropriate.

- (b) No single acre of a project site shall exceed the number of people per acre indicated in Policy 4.2.5(b) and listed in Table 2A unless special risk reduction building design measures are taken as described in Policy 4.2.6.
 - (c) The noise exposure limitations cited in Policy 4.1.4 and listed in Table 2B shall be the basis for assessing the acceptability of proposed nonresidential land uses relative to noise impacts. The ability of buildings to satisfy the interior noise level criteria noted in Policy 4.1.6 shall also be considered.
- 3.1.5. *Prohibited Uses:* Regardless of usage intensity, certain types of uses are deemed unacceptable within portions of an airport influence area. See Policy 4.2.3 and Table 2A. In addition to these explicitly prohibited uses, other uses will normally not be permitted in the respective compatibility zones because they do not meet the usage intensity criteria.
- 3.1.6. *Other Development Conditions:* All types of proposed development shall be required to meet the additional conditions listed in Table 2A for the respective compatibility zone where the development is to be located. Among these conditions are the following:
- (a) Avigation Easement Dedication: See Policy 4.3.5.
 - (b) Deed Notice: See Policy 4.4.3.
 - (c) Real Estate Disclosure: See Policy 4.4.2.
 - (d) Noise Level Reduction: See Policy 4.1.6.
 - (e) Airspace Review: See Policy 4.3.3.

3.2. General Plan Consistency with Compatibility Plan

In order for a general plan to be considered consistent with the *Compatibility Plan*, both of the following must be accomplished (see Appendix F for additional guidance):

- 3.2.1. *Elimination of Conflicts:* No direct conflicts can exist between the two plans.
- (a) Direct conflicts primarily involve general plan land use designations that do not meet the density or intensity criteria specified in the *Compatibility Plan* although conflicts with regard to other policies also may exist.
 - (b) Note, however, that a general plan cannot be found inconsistent with the *Compatibility Plan* because of land use designations that reflect existing land uses even if those designations conflict with the ALUC's compatibility criteria. Because ALUCs have no authority over existing land uses, general plan land use designations that merely reflect the existing uses for such parcels are, in effect, excluded from requirements for general plan consistency with the ALUC plan. This exception is applicable only if the general plan includes policies setting limitations on expansion and reconstruction of nonconforming uses consistent with Policies 3.3.2 and 3.3.3.
 - (c) To be consistent with the *Compatibility Plan*, a general plan and/or implementing ordinance also must include provisions ensuring long-term compliance with the compatibility criteria. For example, future reuse of a building must not result in a usage intensity that exceeds the applicable standard or other approved limit.

CHAPTER 2 COUNTYWIDE POLICIES

3.2.2. *Establishment of Review Process:* Provisions must be made for evaluation of proposed land use development situated within an airport influence area relative to the compatibility criteria set forth in the *Compatibility Plan*.

- (a) Even if the land use designations in a general plan have been deemed consistent with the *Compatibility Plan*, evaluation of the proposed development relative to the land use designations alone is usually insufficient. General plans typically do not contain the detailed airport land use compatibility criteria necessary for a complete compatibility evaluation of proposed development.
- (b) Local jurisdictions have the following choices for satisfying this evaluation requirement:
 - (1) Sufficient detail can be included in the general plan and/or referenced implementing ordinances and regulations to enable the local jurisdiction to assess whether a proposed development fully meets the compatibility criteria specified in the applicable compatibility plan (this requires both that the compatibility criteria be identified and that project review procedures be described);
 - (2) The ALUC's compatibility plan can be adopted by reference (in this case, the project review procedure must be described in a separate instrument presented to and approved by the ALUC); and/or
 - (3) The general plan can indicate that all major land use actions, as listed in Policy 1.5.3 or otherwise agreed to by the ALUC, shall be referred to the Commission for review in accordance with the policies of Section 2.3.

3.3. Special Conditions

3.3.1. *Infill:* Where development not in conformance with the criteria set forth in this *Compatibility Plan* already exists, additional infill development of similar land uses may be allowed to occur even if such land uses are to be prohibited elsewhere in the zone. This exception does not apply within *Compatibility Zones A or B1*.

- (a) A parcel can be considered for *infill* development if it meets *all* of the following criteria plus the applicable provisions of either Sub-policy (b) or (c) below:
 - (1) The parcel size is no larger than 20.0 acres.
 - (2) At least 65% of the site's perimeter is bounded (disregarding roads) by existing uses similar to, or more intensive than, those proposed.
 - (3) The proposed project would not extend the perimeter of the area defined by the surrounding, already developed, incompatible uses.
 - (4) Further increases in the residential density, nonresidential usage intensity, and/or other incompatible design or usage characteristics (e.g., through use permits, density transfers, addition of second units on the same parcel, height variances, or other strategy) are prohibited.
 - (5) The area to be developed cannot previously have been set aside as open land in accordance with policies contained in this *Plan* unless replacement open land is provided within the same compatibility zone.
- (b) For residential development, the average development density (dwelling units per gross acre) of the site shall not exceed the lesser of:

- (1) The average density represented by all existing lots that lie fully or partially within a distance of 300 feet from the boundary of the parcel to be divided; or
 - (2) Double the density permitted in accordance with the criteria for that location as indicated in the Compatibility Criteria matrix, Table 2A.
 - (c) For nonresidential development, the average usage intensity (the number of people per gross acre) of the site's proposed use shall not exceed the lesser of:
 - (1) The average intensity of all existing uses that lie fully or partially within a distance of 300 feet from the boundary of the proposed development; or
 - (2) Double the intensity permitted in accordance with the criteria for that location as indicated in the Compatibility Criteria matrix, Table 2A.
 - (d) The single-acre and risk-reduction design density and intensity multipliers described in Policies 4.2.5 and 4.2.6 and listed in Table 2A are applicable to infill development.
 - (e) Infill development on some parcels should not enable additional parcels to then meet the qualifications for infill. The ALUC's intent is that parcels eligible for infill be determined just once. Thus, in order for the ALUC to consider proposed development under these infill criteria, the entity having land use authority (Riverside County or affected cities) must first identify the qualifying locations in its general plan or other adopted planning document approved by the ALUC. This action may take place in conjunction with the process of amending a general plan for consistency with the ALUC plan or may be submitted by the local agency for consideration by the ALUC at the time of initial adoption of this *Compatibility Plan*. In either case, the burden for demonstrating that a proposed development qualifies as infill rests with the affected land use jurisdiction and/or project proponent.
- 3.3.2. *Nonconforming Uses:* Existing uses (including a parcel or building) not in conformance with this *Compatibility Plan* may only be expanded as follows:
- (a) Nonconforming residential uses may be expanded in building size provided that the expansion does not result in more dwelling units than currently exist on the parcel (a bedroom could be added, for example, but a separate dwelling unit could not be built). No ALUC review of such improvements is required.
 - (b) A nonconforming nonresidential development may be continued, leased, or sold and the facilities may be maintained or altered (including potentially enlarged), provided that the portion of the site devoted to the nonconforming use is not expanded and the usage intensity (the number of people per acre) is not increased above the levels existing at the time of adoption of this *Compatibility Plan*. No ALUC review of such changes is required.
 - (c) ALUC review is required for any proposed expansion of a nonconforming use (in terms of the site size or the number of dwelling units or people on the site). Factors to be considered in such reviews include whether the development qualifies as infill (Policy 3.3.1) or warrants approval because of other special conditions (Policy 3.3.6).

CHAPTER 2 COUNTYWIDE POLICIES

- 3.3.3. *Reconstruction:* An existing nonconforming development that has been fully or partially destroyed as the result of a calamity may be rebuilt only under the following conditions:
- (a) Nonconforming residential uses may be rebuilt provided that the expansion does not result in more dwelling units than existed on the parcel at the time of the damage.
 - (b) A nonconforming nonresidential development may be rebuilt provided that it has been only partially destroyed and that the reconstruction does not increase the floor area of the previous structure or result in an increased intensity of use (i.e., more people per acre). Partial destruction shall be considered to mean damage that can be repaired at a cost of no more than 75% of the assessor's full cash value of the structure at the time of the damage.
 - (c) Any nonresidential use that has been more than 75% destroyed must comply with all applicable standards herein when reconstructed.
 - (d) Reconstruction under Paragraphs (1) or (2) above must begin within 24 months of the date the damage occurred.
 - (e) The above exceptions do not apply within *Zone A* or where such reconstruction would be in conflict with a county or city general plan or zoning ordinance.
 - (f) Nothing in the above policies is intended to preclude work required for normal maintenance and repair.
- 3.3.4. *Development by Right:* Nothing in these policies prohibits:
- (a) Construction of a single-family home, including a second unit as defined by state law, on a legal lot of record if such use is permitted by local land use regulations.
 - (b) Construction of other types of uses if local government approvals qualify the development as effectively existing (see Policy 1.2.10 for definition).
 - (c) Lot line adjustments provided that new developable parcels would not be created and the resulting gross density or intensity of the affected property would not exceed the applicable criteria indicated in the Compatibility Criteria matrix, Table 2A.
- 3.3.5. *Parcels Lying within Two or More Compatibility Zones:* For the purposes of evaluating consistency with the compatibility criteria set forth herein, any parcel that is split by compatibility zone boundaries shall be considered as if it were multiple parcels divided at the compatibility zone boundary line. However, the density or intensity of development allowed within the more restricted portion of the parcel can (and is encouraged to) be transferred to the less restricted portion. This transfer of development is permitted even if the resulting density or intensity in the less restricted area would then exceed the limits which would otherwise apply within that compatibility zone.
- 3.3.6. *Other Special Conditions:* The compatibility criteria set forth in this *Plan* are intended to be applicable to all locations within each airport's influence area. However, it is recognized that there may be specific situations where a normally incompatible use can be considered compatible because of terrain, specific location, or other extraordinary factors or circumstances related to the site.

- (a) After due consideration of all the factors involved in such situations, the Commission may find a normally incompatible use to be acceptable.
- (b) In reaching such a decision, the Commission shall make specific findings as to why the exception is being made and that the land use will not create a safety hazard to people on the ground or aircraft in flight nor result in excessive noise exposure for the proposed use. Findings also shall be made as to the nature of the extraordinary circumstances that warrant the policy exception.
- (c) The burden for demonstrating that special conditions apply to a particular development proposal rests with the project proponent and/or the referring agency, not with the ALUC.
- (d) The granting of a special conditions exception shall be considered site specific and shall not be generalized to include other sites.
- (e) Special conditions that warrant general application in all or part of the influence area of one airport, but not at other airports, are set forth in Chapter 3 of this *Compatibility Plan*.

4. SUPPORTING COMPATIBILITY CRITERIA

4.1. Noise

- 4.1.1. *Policy Objective:* The purpose of noise compatibility policies is to avoid establishment of noise-sensitive land uses in the portions of airport environs that are exposed to significant levels of aircraft noise.
- 4.1.2. *Noise Contours:* The evaluation of airport/land use noise compatibility shall consider both the current and future Community Noise Equivalent Level (CNEL) contours of each airport as depicted in Chapter 3 of this *Plan*.
 - (a) At most airports in the county, anticipated growth in aircraft operations results in projected future noise contours being larger than current ones. However, in some instances, factors such as introduction of a quieter aircraft fleet mix, planned changes to the configuration of airport runways, or expected modifications to flight procedures can result in current contours being larger than the future contours in some or all of the airport environs. In these cases, a composite of the contours for the two time frames shall be considered in compatibility analyses.
 - (b) For airport at which aircraft activity has substantial seasonal or weekly characteristics, noise contours associated with the peak operating season or days of the week shall be taken into account in assessing land use compatibility.
 - (c) Projected noise contours included in Chapter 3 are calculated based upon forecasted aircraft activity as indicated in an airport master plan or that is considered by the Riverside County Airport Land Use Commission to be plausible (refer to activity data in the Background Data volumes). The Airport Land Use Commission or the entities that operate airports in Riverside County should periodically review these projected noise level contours and update them if appropriate.

CHAPTER 2 COUNTYWIDE POLICIES

- 4.1.3. *Application of Noise Contours:* The locations of CNEL contours are among the factors used to define compatibility zone boundaries and criteria. Because of the inherent variability of flight paths and other factors that influence noise emissions, the depicted contour boundaries are not absolute determinants of the compatibility or incompatibility of a given land use on a specific site or a portion thereof. Noise contours can only quantify noise impacts in a general manner. Except on large parcels or blocks of land (sites large enough to have 3 dB or more of variation in CNELs), they should *not* be used as site design criteria. (Note, though, that the airport noise contours set forth in this *Plan* are to be used as the basis for determining compliance with interior noise level criteria as listed in Policy 4.1.6.)
- 4.1.4. *Noise Exposure in Residential Areas:* Unless otherwise indicated in the airport-specific policies listed in Chapter 3, the maximum CNEL considered normally acceptable for new residential land uses in the vicinity of the airports covered by this *Plan* is 60 dB for all airports except low-activity outlying airports (Chiriaco Summit and Desert Center) for which the criterion is 55 dB. These standards shall be based upon noise contours calculated as described above.
- 4.1.5. *Noise Exposure for Other Land Uses:* Noise level compatibility standards for other types of land uses shall be applied in the same manner as the above residential noise level criteria. The extent of outdoor activity associated with a particular land use is an important factor to be considered in evaluating its compatibility with airport noise. Examples of acceptable noise levels for other land uses in an airport's vicinity are presented in Table 2B.
- 4.1.6. *Interior Noise Levels:* Land uses for which interior activities may be easily disrupted by noise shall be required to comply with the following interior noise level criteria.
- (a) The maximum, aircraft-related, interior noise level that shall be considered acceptable for land uses near airports is 45 dB CNEL in:
 - › Any habitable room of single- or multi-family residences;
 - › Hotels and motels;
 - › Hospitals and nursing homes;
 - › Churches, meeting halls, theaters, and mortuaries;
 - › Office buildings; and
 - › Schools, libraries, and museums.
 - (b) The noise contours depicted in Chapter 3 of this *Plan* shall be used in calculating compliance with these criteria. The calculations should assume that windows are closed.
 - (c) When reviewed as part of a general plan or zoning ordinance amendment or as a major land use action, evidence that proposed structures will be designed to comply with the above criteria shall be submitted to the ALUC under the following circumstances:
 - (1) Any mobile home situated within an airport's 55-dB CNEL contour. [A typical mobile home has an average exterior-to-interior noise level reduction (NLR) of approximately 15 dB with windows closed.]

COUNTYWIDE POLICIES CHAPTER 2

| Land Use Category | CNEL (dB) | | | | |
|--|--|-------|-------|-------|-------|
| | 50-55 | 55-60 | 60-65 | 65-70 | 70-75 |
| Residential * | | | | | |
| single-family, nursing homes, mobile homes | ++ | o | - | -- | -- |
| multi-family, apartments, condominiums | ++ | + | o | -- | -- |
| Public | | | | | |
| schools, libraries, hospitals | + | o | - | -- | -- |
| churches, auditoriums, concert halls | + | o | o | - | -- |
| transportation, parking, cemeteries | ++ | ++ | ++ | + | o |
| Commercial and Industrial | | | | | |
| offices, retail trade | ++ | + | o | o | - |
| service commercial, wholesale trade, warehousing, light industrial | ++ | ++ | + | o | o |
| general manufacturing, utilities, extractive industry | ++ | ++ | ++ | + | + |
| Agricultural and Recreational | | | | | |
| cropland | ++ | ++ | ++ | ++ | + |
| livestock breeding | ++ | + | o | o | - |
| parks, playgrounds, zoos | ++ | + | + | o | - |
| golf courses, riding stables, water recreation | ++ | ++ | + | o | o |
| outdoor spectator sports | ++ | + | + | o | - |
| amphitheaters | + | o | - | -- | -- |
| <hr/> | | | | | |
| Land Use Acceptability | Interpretation/Comments | | | | |
| ++ <i>Clearly Acceptable</i> | The activities associated with the specified land use can be carried out with essentially no interference from the noise exposure. | | | | |
| + <i>Normally Acceptable</i> | Noise is a factor to be considered in that slight interference with outdoor activities may occur. Conventional construction methods will eliminate most noise intrusions upon indoor activities. | | | | |
| o <i>Marginally Acceptable</i> | The indicated noise exposure will cause moderate interference with outdoor activities and with indoor activities when windows are open. The land use is acceptable on the conditions that outdoor activities are minimal and construction features which provide sufficient noise attenuation are used (e.g., installation of air conditioning so that windows can be kept closed). Under other circumstances, the land use should be discouraged. | | | | |
| - <i>Normally Unacceptable</i> | Noise will create substantial interference with both outdoor and indoor activities. Noise intrusion upon indoor activities can be mitigated by requiring special noise insulation construction. Land uses which have conventionally constructed structures and/or involve outdoor activities which would be disrupted by noise should generally be avoided. | | | | |
| -- <i>Clearly Unacceptable</i> | Unacceptable noise intrusion upon land use activities will occur. Adequate structural noise insulation is not practical under most circumstances. The indicated land use should be avoided unless strong overriding factors prevail and it should be prohibited if outdoor activities are involved. | | | | |
| <hr/> | | | | | |
| * Subtract 5 dB for low-activity outlying airports (Chiriaco Summit and Desert Center) | | | | | |

Table 2B

Supporting Compatibility Criteria: Noise

CHAPTER 2 COUNTYWIDE POLICIES

- (2) Any single- or multi-family residence situated within an airport's 60-dB CNEL contour. [Wood frame buildings constructed to meet 1990s standards for energy efficiency typically have an average NLR of approximately 20 dB with windows closed.]
 - (3) Any hotel or motel, hospital or nursing home, church, meeting hall, office building, mortuary, school, library, or museum situated within an airport's 65-dB CNEL contour.
- 4.1.7. *Engine Run-Up and Testing Noise:* ALUC consideration of noise from aircraft engine run-ups and testing activities shall be limited as follows:
 - (a) Aircraft noise associated with pre-flight engine run-ups, taxiing of aircraft to and from runways, and other operation of aircraft on the ground is considered part of airport operations and therefore is not subject to ALUC authority.
 - (1) Noise from these sources can be, but normally is not, represented in airport noise contours. It is not included in the noise contours prepared for this *Compatibility Plan*. Nevertheless, when reviewing the compatibility of proposed land uses in locations near the airport where such noise may be significant, the Commission may seek additional data and may take into account noise from these ground-based sources.
 - (2) Noise from aircraft ground operations also should be considered by the Commission when reviewing airport master plans or development plans in accordance with Section 2.4 herein.
 - (b) Noise from the testing of aircraft engines on airport property is not deemed an activity inherent in the operation of an airport and thus it is not an airport-related impact addressed by this *Compatibility Plan*. Noise from these sources should be addressed by the noise policies of local agencies in the same manner as noise from other industrial sources. (Engine testing noise is not normally included in the noise contours prepared for an airport. However, aircraft noise modeling programs have the capability of including noise from this source. At airports where engine testing takes place or is proposed, the ALUC may need to ascertain whether the noise was or was not included in the noise contour calculations.)
- 4.1.8. *Construction of New or Expanded Airports or Heliports:* Any proposed construction of a new airport or heliport or expansion of facilities at an existing airport or heliport which would result in a significant increase in cumulative noise exposure (measured in terms of CNEL) shall include measures to reduce the exposure to a less-than-significant level. For the purposes of this plan, a noise increase shall be considered significant if:
 - (a) In locations having an existing ambient noise level of less than 60 dB CNEL, the project would increase the noise level by 5.0 dB or more.
 - (b) In locations having an existing ambient noise level of between 60 and 65 dB CNEL, the project would increase the noise level by 3.0 dB or more.
 - (c) In locations having an existing ambient noise level of more than 65 dB CNEL, the project would increase the noise level by 1.5 dB or more.

4.2. Safety

- 4.2.1. *Policy Objective:* The intent of land use safety compatibility criteria is to minimize the risks associated with an off-airport aircraft accident or emergency landing.
- (a) Risks both to people and property in the vicinity of an airport and to people on board the aircraft shall be considered.
 - (b) The most stringent land use controls shall be applied to the areas with the greatest potential risks.
- 4.2.2. *Risks to People on the Ground:* The principal means of reducing risks to people on the ground is to restrict land uses so as to limit the number of people who might gather in areas most susceptible to aircraft accidents. The usage intensity criteria cited in Table 2A reflect the risks associated with various locations in the environs of the airports in the county. (Methods for determining the concentration of people for various land uses are provided in Appendix C.)
- 4.2.3. *Land Uses of Special Concern:* Certain types of land uses represent special safety concerns irrespective of the number of people associated with those uses. Land uses of particular concern include:
- (a) *Uses Having Vulnerable Occupants:* Uses in which the occupants have reduced effective mobility or are unable to respond to emergency situations shall be prohibited within all *Compatibility Zones* except *Zone E*. These uses include children's schools and day care centers (with 7 or more children), hospitals, nursing homes, and other uses in which the majority of occupants are children, elderly, and/or handicapped.
 - (1) This general policy may be superseded by airport specific policies (see Chapter 3).
 - (2) Hospitals are medical facilities which include provision for overnight stays by patients. Medical clinics are permitted in *Compatibility Zones C* and *D* provided that these facilities meet the maximum intensity standards listed in the Compatibility Criteria matrix, Table 2A.
 - (b) *Multi-story Buildings:* In the event of an emergency resulting from an aircraft accident, low-rise buildings can be more readily evacuated than those with more floors. On this basis, the following limitations are established:
 - (1) Within *Compatibility Zone A*, new occupied structures are not permitted.
 - (2) Within *Compatibility Zones B1* and *B2*, new buildings shall be limited to no more than two occupied floors above ground.
 - (3) Within *Compatibility Zone C*, new buildings shall be limited to no more than three occupied floors above ground.
 - (c) *Hazardous Materials Storage:* Construction of facilities for the manufacture or storage of fuel, explosives, and other hazardous materials within the airport environs is restricted as follows:
 - (1) Within *Compatibility Zone A*, manufacture or storage of any such substance is prohibited.
 - (2) Within *Compatibility Zones B1* and *B2*, only the following is permitted:
 - Fuel or hazardous substances stored in underground tanks.

CHAPTER 2 COUNTYWIDE POLICIES

- On-airport storage of aviation fuel and other aviation-related flammable materials.
- Aboveground storage of less than 6,000 gallons of nonaviation flammable materials (this limit coincides with a break-point used in the Uniform Fire Code to distinguish between different classes of tanks).
- (3) Within *Compatibility Zone C*, manufacture or storage of hazardous materials other than the types listed in Sub-policy (2) above is prohibited unless no other feasible alternative site exists and the facility is designed in a manner that minimizes its susceptibility to damage from an aircraft accident.
- (d) Critical Community Infrastructure: Construction of power plants, electrical substations, public communications facilities, and other critical community infrastructure shall be restricted as follows:
 - (1) Within *Compatibility Zone A*, all such uses are prohibited.
 - (2) Within *Compatibility Zones B1* and *B2*, such uses are prohibited unless no other feasible alternative site exists and the facility is designed in a manner that minimizes its susceptibility to damage from an aircraft accident.
- 4.2.4. *Open Land*: In the event that a light aircraft is forced to land away from an airport, the risks to the people on board can best be minimized by providing as much open land area as possible within the airport vicinity. This concept is based upon the fact that the majority of light aircraft accidents and incidents occurring away from an airport runway are controlled emergency landings in which the pilot has reasonable opportunity to select the landing site.
 - (a) To qualify as open land, an area should be:
 - (1) Free of most structures and other major obstacles such as walls, large trees or poles (greater than 4 inches in diameter, measured 4 feet above the ground), and overhead wires.
 - (2) Have minimum dimensions of approximately 75 feet by 300 feet.
 - (b) Roads and automobile parking lots are acceptable as open land areas if they meet the above criteria.
 - (c) Open land requirements for each compatibility zone are to be applied with respect to the entire zone. Individual parcels may be too small to accommodate the minimum-size open area requirement. Consequently, the identification of open land areas must initially be accomplished at the general plan or specific plan level or as part of large (10 acres or more) development projects.
 - (d) Clustering of development, subject to the limitations noted below, and providing contiguous landscaped and parking areas is encouraged as a means of increasing the size of open land areas.
 - (e) Building envelopes and the airport compatibility zones should be indicated on all development plans and tentative maps for projects located within the influence area of airports covered by this *Compatibility Plan*. Portraying this information is intended to assure that individual development projects provide the open land areas identified in the applicable general plan, specific plan, or other large-scale plan.

- 4.2.5. *Limitations on Clustering:* Policy 4.2.4(d) notwithstanding, limitations shall be set on the maximum degree of clustering or usage intensity acceptable within a portion of a large project site. These criteria are intended to limit the number of people at risk in a concentrated area.
- (a) Clustering of new residential development shall be limited as follows:
 - (1) Within *Compatibility Zone A*, clustering is not applicable.
 - (2) Within *Compatibility Zones B1, B2, and C*, no more than 4 dwelling units shall be allowed in any individual acre. Buildings shall be located as far as practical from the extended runway centerline and normal aircraft flight paths.
 - (b) Unless special design measures as listed in Policy 4.2.6 are utilized, usage intensity of new nonresidential development shall be limited as follows:
 - (1) Within *Compatibility Zone A*, clustering is not applicable.
 - (2) Within *Compatibility Zone B1*, uses shall be limited to a maximum of 50 people per any individual acre (i.e., a maximum of double the average intensity criterion set in Table 2A). Theaters, restaurants, most shopping centers, motels, intensive manufacturing or office uses, and other similar uses typically do not comply with this criterion.
 - (3) Within *Compatibility Zone B2*, uses shall be limited to a maximum of 200 people per any individual acre (i.e., a maximum of double the average intensity criterion set in Table 2A). Theaters, major shopping centers (500,000 or more square feet), large motels and hotels with conference facilities, and similar uses typically do not comply with this criterion.
 - (4) Within *Compatibility Zone C*, uses shall be limited to a maximum of 150 people per any individual acre (i.e., a maximum of double the average intensity criterion set in Table 2A). Theaters, fast-food establishments, high-intensity retail stores or shopping centers, motels and hotels with conference facilities, and similar uses typically do not comply with this criterion.
 - (5) Within *Compatibility Zone D*, uses shall be limited to a maximum of 300 people per any individual acre (i.e., a maximum of triple the average intensity criterion set in Table 2A).
 - (c) For the purposes of the above policies, the one-acre areas to be evaluated shall be rectangular (reasonably close to square, not elongated or irregular) in shape.
 - (d) In no case shall a proposed development be designed to accommodate more than the total number of dwelling units per acre (for residential uses) or people per acre (for nonresidential uses) indicated in Table 2A times the gross acreage of the project site. A project site may include multiple parcels. Appendix D lists examples of the types of land uses which are potentially compatible under these criteria and the types of land uses which are considered incompatible.
- 4.2.6. *Risk Reduction Through Building Design:* The number of people permitted to occupy a single nonresidential building may be increased by a factor of up to 1.3 times the limitations set by the preceding policy on clustering if special measures are taken to reduce the risks to building occupants in the event that the building is struck by an aircraft.

CHAPTER 2 COUNTYWIDE POLICIES

- (a) This intensity bonus is not applicable within *Compatibility Zone A* (no buildings are permitted) or *E* (densities and intensities are not limited) and shall not be applied to buildings situated within *Compatibility Zones B1, B2, or C* for runways routinely used by large aircraft (aircraft having a maximum certificated takeoff weight of more than 12,500 pounds).
- (b) Building design features which would enable application of an intensity bonus include, but are not limited to, the following:
 - › Using concrete walls;
 - › Limiting the number and size of windows;
 - › Upgrading the strength of the building roof;
 - › Avoiding skylights;
 - › Enhancing the fire sprinkler system;
 - › Limiting buildings to a single story; and
 - › Increasing the number of emergency exits.
- (c) Project proponents who wish to request an intensity bonus must include appropriate details of the building design along with their project review application.
- (d) Intensity bonuses shall be considered and approved by affected local jurisdictions on a case-by-case basis. The criteria to be used by each jurisdiction when considering intensity bonus requests shall be reviewed and approved by the ALUC as part of the general plan consistency process or subsequent action.

4.3. Aerospace Protection

- 4.3.1. *Policy Objective:* Tall structures, trees, and other objects, particularly when located near airports or on high terrain, may constitute hazards to aircraft in flight. Federal regulations establish the criteria for evaluating potential obstructions. These regulations also require that the Federal Aviation Administration be notified of proposals for creation of certain such objects. The FAA conducts “aeronautical studies” of these objects and determines whether they would be hazards, but it does not have the authority to prevent their creation. The purpose of ALUC airspace protection policies, together with regulations established by local land use jurisdictions and the state government, is to ensure that hazardous obstructions to the navigable airspace do not occur.
- 4.3.2. *Basis for Height Limits:* The criteria for limiting the height of structures, trees, and other objects in the vicinity of an airport shall be based upon: Part 77, Subpart C, of the Federal Aviation Regulations (FAR); the United States Standard for Terminal Instrument Procedures (TERPS); and applicable airport design standards published by the Federal Aviation Administration. Airspace plans depicting the critical areas for airspace protection around each of the airports covered by this *Compatibility Plan* are depicted in Chapter 3.
- 4.3.3. *ALUC Review of Height of Proposed Objects:* Based upon FAA criteria, proposed objects that would exceed the heights indicated below for the respective compatibility zones potentially represent airspace obstructions issues. Development proposals that include any such objects shall be reviewed by the ALUC. Objects of lesser height normally would not have a potential for being airspace obstructions and therefore do

not require ALUC review with respect to airspace protection criteria (noise, safety, and overflight concerns may still be present). Caution should be exercised, however, with regard to any object more than 50 feet high proposed to be located on a site that is substantially higher than surrounding terrain.

- (a) Within *Compatibility Zone A*, the height of any proposed development, including vegetation, requires review.
- (b) Within *Compatibility Zone B1*, ALUC review is required for any proposed object taller than 35 feet unless the airport controls an easement on the land on which the object is to be located and grants a waiver to height restrictions.
- (c) Within *Compatibility Zone B2*, ALUC review is required for any proposed object taller than 35 feet.
- (d) Within *Compatibility Zones C and D*, ALUC review is required for any proposed object taller than 70 feet.
- (e) Within *Compatibility Zone E*, ALUC review is required for any proposed object taller than 100 feet.
- (f) Within the *Height Review Overlay Zone*, ALUC review is required for any proposed object taller than 35 feet above the ground. The approximate extent of the *Height Review Overlay Zone* is indicated on the respective *Compatibility Map* included for each airport in Chapter 3.

4.3.4. *Height Restriction Criteria:* The height of objects within the influence area of each airport shall be reviewed, and restricted if necessary, according to the following criteria. The locations of these zones are depicted on the respective *Compatibility Map* for each airport.

- (a) Within *Compatibility Zone A*, the height of all objects shall be limited in accordance with applicable Federal Aviation Administration criteria including FAR Part 77, TERPS, and/or airport design standards.
- (b) Within *Compatibility Zones B1, B2, or Height Review Overlay Zone*.
 - (1) Objects up to 35 feet tall are acceptable and do not require ALUC review for the purposes of height factors.
 - (2) ALUC review is required for any proposed object taller than 35 feet.
 - (3) Federal Aviation Administration review may be necessary for proposed objects adjacent to the runway edges and the FAA may require marking and lighting of certain objects (the affected areas are generally on airport property).
- (c) Within *Compatibility Zones C and D*, generally, there is no concern with regard to any object up to 70 feet tall unless it is located on high ground or it is a solitary object (e.g., an antenna) more than 35 feet taller than other nearby objects.
- (d) Within *Compatibility Zone E*, generally, there is no concern with regard to any object up to 100 feet tall unless it is located on high ground or it is a solitary object (e.g., an antenna) more than 35 feet above the ground.

4.3.5. *Aviation Easement Dedication:* As a condition for development approval, the owner of any property proposed for development within *Compatibility Zones A, B1, or B2* or a

CHAPTER 2 COUNTYWIDE POLICIES

Height Review Overlay Zone shall be required to dedicate an aviation easement to the entity owning the affected airport. The aviation easement shall:

- (a) Provide the right of flight in the airspace above the property;
- (b) Allow the generation of noise and other impacts associated with aircraft over-flight;
- (c) Restrict the height of structures, trees and other objects;
- (d) Permit access to the property for the removal or aeronautical marking of objects exceeding the established height limit; and
- (e) Prohibit electrical interference, glare, and other potential hazards to flight from being created on the property. An example of an aviation easement is provided in Appendix G.

- 4.3.6. *FAA Notification:* Proponents of a project involving objects that may exceed a Part 77 surface must notify the Federal Aviation Administration as required by FAR Part 77, Subpart B, and by the Public Utilities Code, Sections 21658 and 21659. (Notification to the Federal Aviation Administration under FAR Part 77, Subpart B, is required even for certain proposed construction that does not exceed the height limits allowed by Subpart C of the regulations. Refer to Appendix B for the specific Federal Aviation Administration notification requirements.)

- (a) Local jurisdictions shall inform project proponents of the requirements for notification to the Federal Aviation Administration.
- (b) The requirement for notification to the Federal Aviation Administration shall not necessarily trigger an airport compatibility review of an individual project by the Airport Land Use Commission if the project is otherwise in conformance with the compatibility criteria established herein.
- (c) FAA review is required for any proposed structure more than 200 feet above the surface level of its site. All such proposals also shall be submitted to the ALUC for review regardless of where in the county they would be located.
- (d) Any project submitted to the ALUC for airport land use compatibility review for reason of height-limit issues shall include a copy of FAR Part 77 notification to the Federal Aviation Administration and the FAA findings if available.

- 4.3.7. *Other Flight Hazards:* New land uses that may cause visual, electronic, or increased bird strike hazards to aircraft in flight shall not be permitted within any airport's influence area. Specific characteristics to be avoided include:

- (a) Glare or distracting lights which could be mistaken for airport lights;
- (b) Sources of dust, steam, or smoke which may impair pilot visibility;
- (c) Sources of electrical interference with aircraft communications or navigation; and
- (d) Any proposed use, especially landfills and certain agricultural uses, that creates an increased attraction for large flocks of birds. (Refer to FAA Order 5200.5A, *Waste Disposal Sites on or Near Airports* and Advisory Circular 150/5200-33A, *Hazardous Wildlife Attractants On or Near Airports*.)

4.4. Overflight

- 4.4.1. *Policy Objective:* Noise from individual operations, especially by comparatively loud aircraft, can be intrusive and annoying in locations beyond the limits of the mapped noise contours. Sensitivity to aircraft overflights varies from one person to another. The purpose of overflight compatibility policies is to help notify people about the presence of overflights near airports so that they can make more informed decisions regarding acquisition or lease of property in the affected areas. Overflight compatibility is particularly important with regard to residential land uses.
- 4.4.2. *State Law Requirements Regarding Real Estate Transfer Disclosure:* Effective January 1, 2004, California state statutes (Business and Professional Code Section 11010 and Civil Code Sections 1102.6, 1103.4, and 1353) require as part of residential real estate transactions that information be disclosed regarding whether the property is situated within an airport influence area.
- (a) With certain exceptions, these state requirements apply both to the sale or lease of newly subdivided lands and to the sale of existing residential property.
 - (b) The statutes define an *airport influence area* as “the area in which current or future airport-related noise, overflight, safety, or airspace protection factors may significantly affect land uses or necessitate restrictions on those uses as determined by an airport land use commission.” The *airport influence area* for each of the airports in Riverside County subject to this *Compatibility Plan* is indicated on that airport’s *compatibility map* contained in Chapter 3 herein.
 - (c) Where disclosure is required, the following statement shall be provided:

NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.
 - (d) For the purposes of this *Compatibility Plan*, the above real estate disclosure provisions of state law shall continue in effect as Airport Land Use Commission policy with respect to new development even if the law is rescinded. Furthermore, each land use jurisdiction affected by this *Compatibility Plan* should adopt a policy designating the airport influence area as the area wherein disclosure of airport influences is required in conjunction with the transfer of residential real estate. Such local jurisdiction policies also should be applied to lease or rental agreements for existing residential property.
- 4.4.3. *Deed Notices:* In addition to the preceding real estate transfer disclosure requirements, a *deed notice* shall be recorded for each parcel associated with any discretionary land use action affecting property within an airport influence area. (Note that the *aviation easement* required by Policy 4.3.5 to be dedicated in conjunction with development in Zones A, B1, B2, and the *Height Review Overlay Zone* serves as a deed notice in those locations.) The notice shall include the language indicated above with respect to real estate transfer disclosures.

CHAPTER 2 COUNTYWIDE POLICIES

- 4.4.4. *Land Use Conversion:* The compatibility of uses in the airport influence areas shall be preserved to the maximum feasible extent. Particular emphasis should be placed on preservation of existing agricultural and open space uses.
- (a) The conversion of land from existing or planned agricultural, open space, industrial, or commercial use to residential uses within *Compatibility Zones A, B1, B2, and C* is strongly discouraged.
 - (b) In *Compatibility Zone D*, general plan amendments (as well as other discretionary actions such as rezoning, subdivision approvals, use permits, etc.) that would convert land to residential use or increase the density of residential uses should be subject to careful consideration of overflight impacts.

5. COMPATIBILITY CRITERIA FOR AIRPORT DEVELOPMENT ACTIONS

5.1. Criteria for Master or Development Plans of Existing Airports

- 5.1.1. *Substance of Review:* When reviewing airport master plans or development plans for existing airports, the Commission shall determine whether activity forecasts or proposed facility development identified in the plan differ from the forecasts and development assumed for that airport in this *Airport Land Use Compatibility Plan*. Attention should specifically focus on:
- (a) Activity forecasts that are: (1) significantly higher than those in the *Airport Land Use Compatibility Plan*, or that (2) include a higher proportion of larger or noisier aircraft.
 - (b) Proposals to: (1) construct a new runway or helicopter takeoff and landing area; (2) change the length, width, or landing threshold location of an existing runway; or (3) establish an instrument approach procedure.
- 5.1.2. *Noise Impacts of New or Expanded Airports or Heliports:* Any proposed construction of a new airport or heliport or expansion of facilities at an existing airport or heliport that would result in a significant increase in cumulative noise exposure (measured in terms of CNEL) shall include measures to reduce the exposure to a less-than-significant level. For the purposes of this plan, a noise increase shall be considered significant if:
- (a) In locations having an existing ambient noise level of less than 55 dB CNEL, the project would increase the noise level by 5.0 dB or more.
 - (b) In locations having an existing ambient noise level of between 55 and 60 dB CNEL, the project would increase the noise level by 3.0 dB or more.
 - (c) In locations having an existing ambient noise level of more than 60 dB CNEL, the project would increase the noise level by 1.5 dB or more.
- 5.1.3. *Consistency Determination:* The Commission shall determine whether the proposed airport plan or development plan is consistent with the *Airport Land Use Compatibility Plan*. The Commission shall base its determination of consistency on;

- (a) Findings that the forecasts and development identified in the airport plan would not result in greater noise, overflight, and safety impacts or height restrictions on surrounding land uses than are assumed in the *Airport Land Use Compatibility Plan*.
- (b) A determination that any nonaviation development proposed for locations within the airport boundary (excluding federal- or state-owned property) will be consistent with the compatibility criteria and policies indicated in this *Compatibility Plan* with respect to that airport (see Policy 1.2.5 for definition of aviation-related use).

5.2. Criteria for Proposed New Airports or Heliports

- 5.2.1. *Substance of Review:* In reviewing proposals for new airports and heliports, the Commission shall focus on the noise, safety, airspace protection, and overflight impacts upon surrounding land uses.
 - (a) Other types of environmental impacts (e.g., air quality, water quality, natural habitats, vehicle traffic, etc.) are not within the scope of Commission review.
 - (b) The Commission shall evaluate the adequacy of the proposed facility design (in terms of federal and state standards) only to the extent that the design affects surrounding land use.
 - (c) The Commission must base its review on the proposed airfield design. The Commission does not have the authority to require alterations to the airfield design.
- 5.2.2. *Airport/Land Use Relationships:* The review shall examine the relationships between existing and planned land uses in the vicinity of the proposed airport or heliport and the impacts that the proposed facility would have upon these land uses.
 - (a) Questions to be considered should include:
 - (1) Would the existing or planned land uses be considered incompatible with the airport or heliport if the latter were already in existence?
 - (2) What measures are included in the airport or heliport proposal to mitigate the noise, safety, airspace protection, and overflight impacts on surrounding land uses? Such measures might include:
 - › Location of flight tracks so as to minimize the impacts;
 - › Other operational procedures to minimize impacts;
 - › Installation of noise barriers or structural noise insulation;
 - › Acquisition of property interests (fee title or easements) on the impacted land.
 - (b) The noise impact assessment criteria listed in Policy 5.1.2 with respect to airport expansion projects shall also be considered with regard to the review of new airport development.

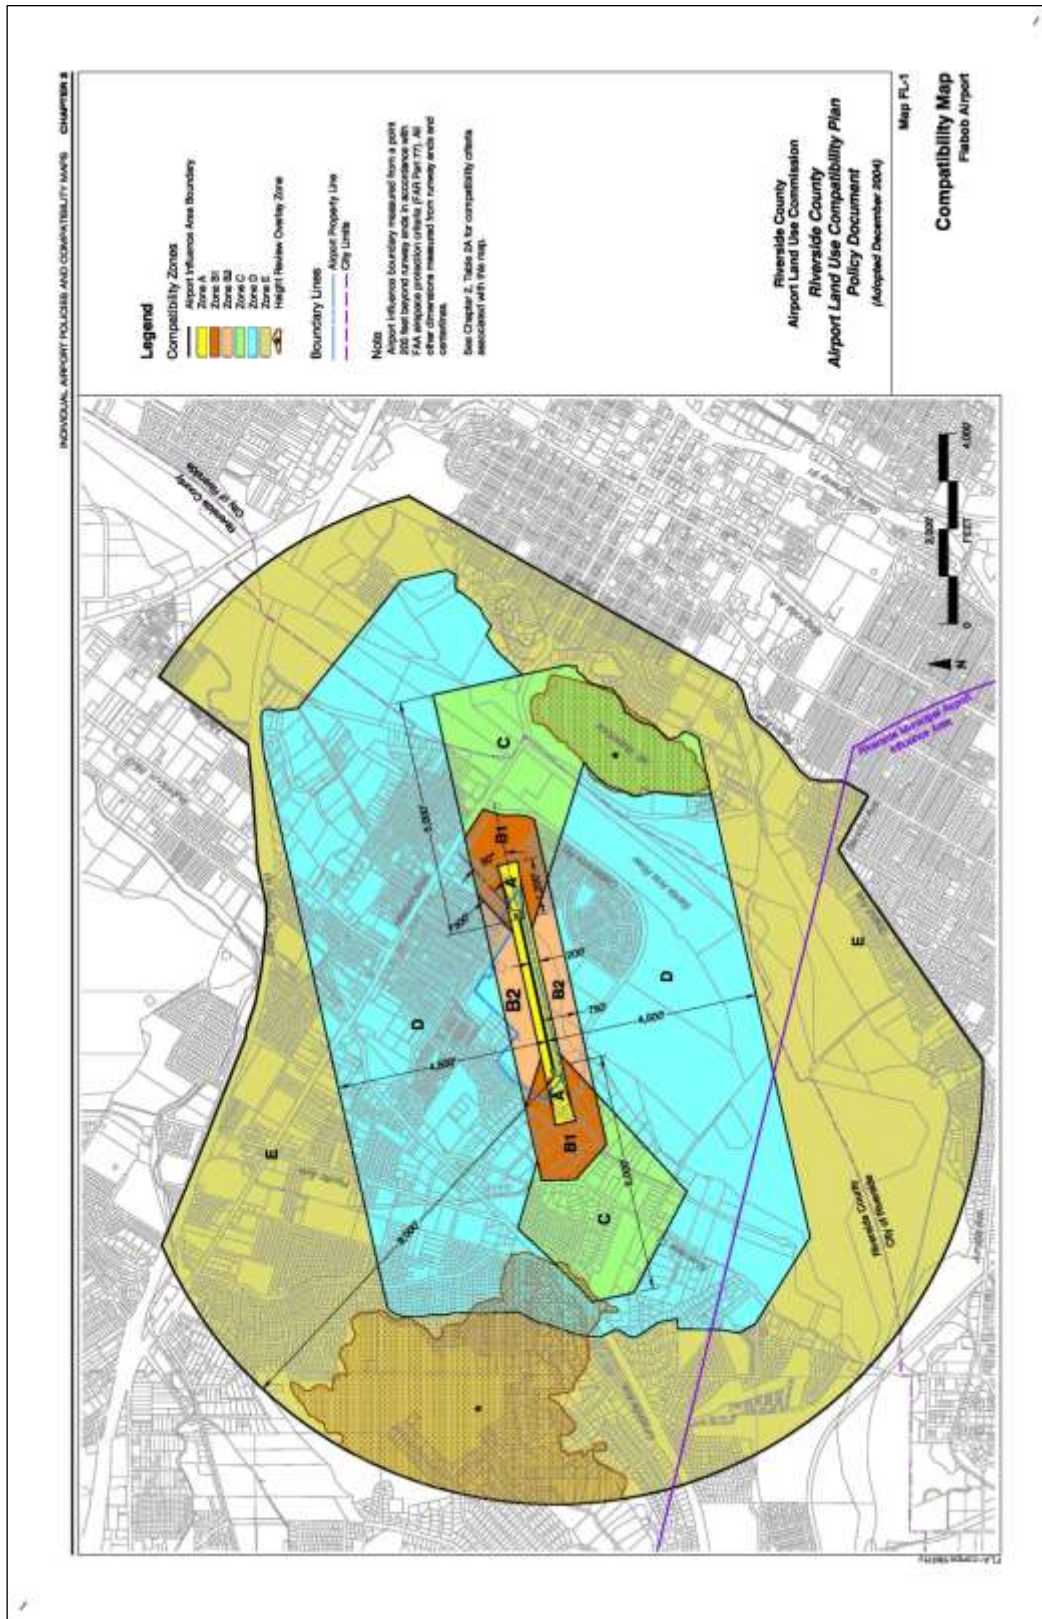

CHAPTER 3 INDIVIDUAL AIRPORT POLICIES AND COMPATIBILITY MAPS

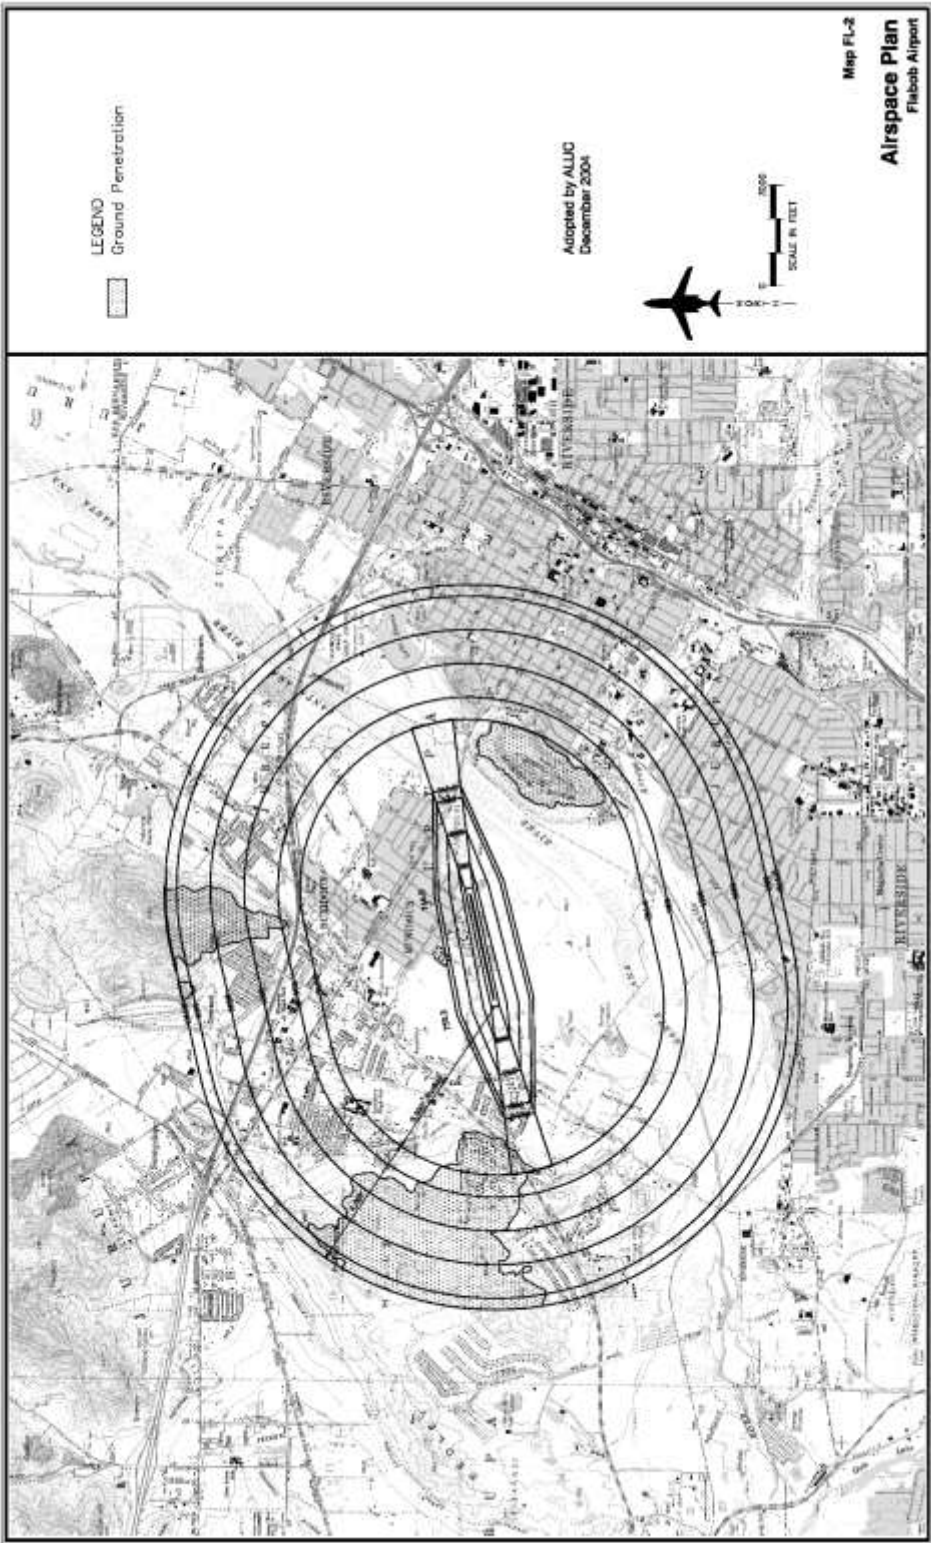

FL. FLABOB AIRPORT**FL.1 Compatibility Map Delineation**

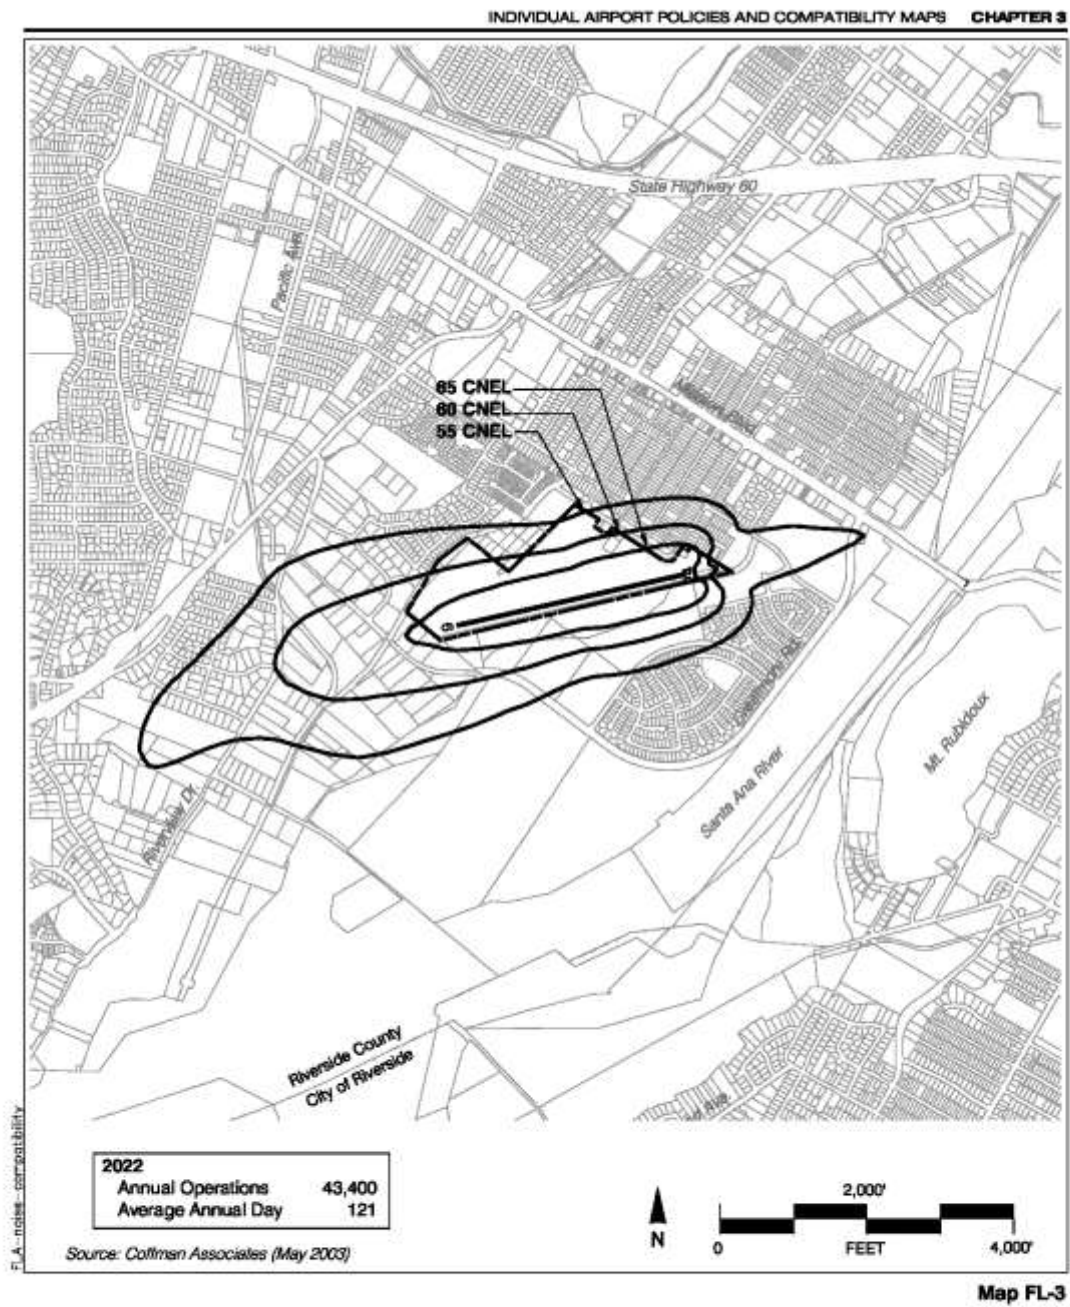

- 1.1 *Airport Master Plan Status:* No master plan has been prepared for this privately owned airport. The airport layout plan prepared by the airport proprietor in 2003 serves as the basis for the *Compatibility Plan*.
- 1.2 *Airfield Configuration:* No modifications to the runway length or approach types are anticipated for Flabob Airport.
- 1.3 *Airport Activity:* The basic character of the airport's usage and the small size of the facility will limit future activity levels. For compatibility planning purpose, aircraft operations are assumed to reach no more than 43,400 per year, a 60% increase from the estimated 27,000 annual operations at present.
- 1.4 *Airport Influence Area:* The outer edge of the FAR Part 77 conical surface defines the airport influence area boundaries on the west and northeast. To the north, south, and southeast, the airport's impacts are less extensive and roads are therefore used to delineate the limits of the airport influence area.

FL.2 Additional Compatibility Policies

- 2.1 None.

Noise Compatibility Contours

Flabob Airport

Riverside County Airport Land Use Compatibility Plan Policy Document (Adopted December 2004)

3-21

CHAPTER 3 INDIVIDUAL AIRPORT POLICIES AND COMPATIBILITY MAPS

RI. RIVERSIDE MUNICIPAL AIRPORT**RI.1 Compatibility Map Delineation**

- 1.1 *Airport Master Plan Status:* The most recent airport master plan was adopted by the City of Riverside in November 1999. The airport layout plan drawing was subsequently updated in January 2001.
- 1.2 *Airfield Configuration:* The *Airport Master Plan* proposes an easterly 750-foot extension of Runway 9-27. Establishment of a straight-in nonprecision instrument approach to Runway 27 also is contemplated. The compatibility map for Riverside Municipal Airport takes into account the traffic patterns associated with both the existing and future runway ends and approach types.
- 1.3 *Airport Activity:* For the purposes of the *Compatibility Plan*, the *Master Plan* forecasts have been extended to a level anticipated to have a time horizon of 20+ years. Specifically, a projection of 220,000 annual operations, almost double the current level, is assumed. Essentially all of this growth is expected to be in operations by turboprop aircraft, business jets, and helicopters; single-engine airplane activity is projected to remain roughly constant.
- 1.4 *Airport Influence Area:* The instrument approach route and typical extent of the airport traffic pattern define the of the airport influence area boundary for Riverside Municipal Airport. To the east and west, this boundary mostly coincides with the outer edge of the airport's FAR Part 77 conical surface. A westward extension encompasses locations where aircraft on a precision instrument approach are lower than 1,000 feet above the airport elevation.

RI.2 Additional Compatibility Policies

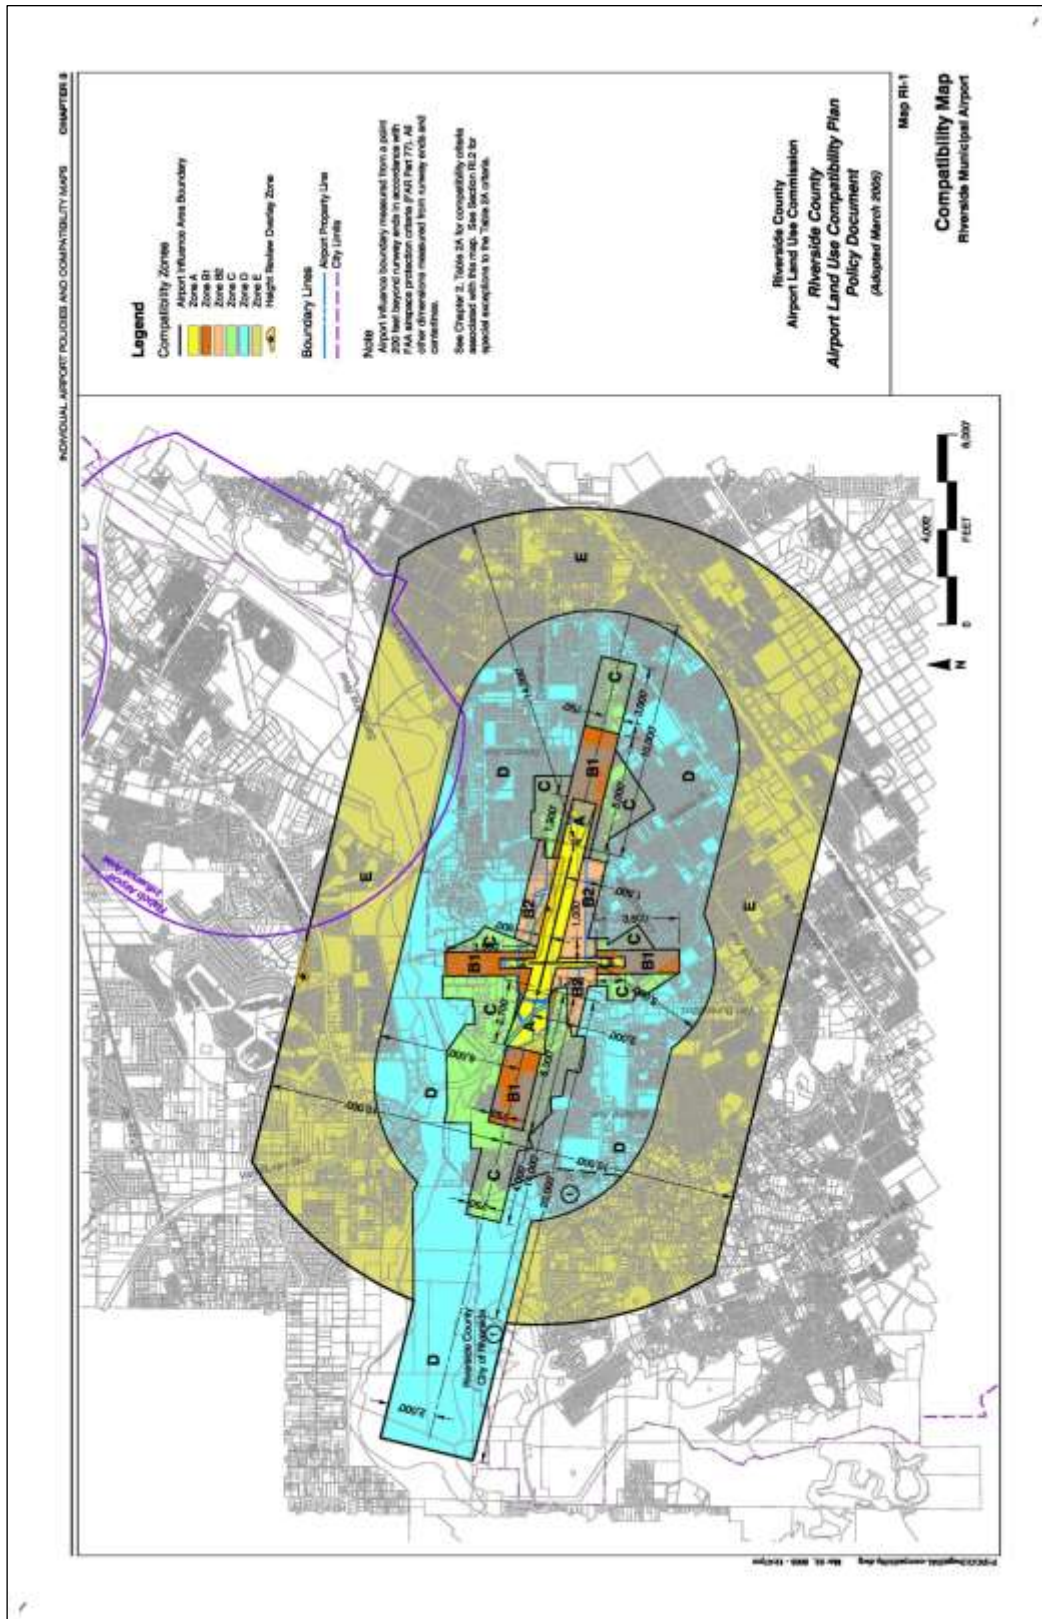

- 2.1 *Noise Exposure in Residential Areas:* The limit of 60 dB CNEL set by Countywide Policy 4.1.4 as the maximum noise exposure considered normally acceptable for new residential land uses shall not be applied to the environs of Riverside Municipal Airport. For this airport, the criterion shall instead be 65 dB CNEL. This higher threshold recognizes that ambient noise conditions in the area are relatively high because of other major noise sources, particularly railroads and freeways. Dwellings may require incorporation of special noise level reduction measures into their design to ensure that the interior noise limit of 45 dB CNEL (Countywide Policy 4.1.6) is not exceeded.
- 2.2 *Zone B2 Building Height:* Notwithstanding the limitation of two aboveground habitable floors indicated in Table 2A of Chapter 2, any nonresidential building in Compatibility Zone B2 at Riverside Municipal Airport may have up to three aboveground habitable floors provided that no such building or attachments thereto shall penetrate the airspace protection surfaces defined for the airport in accordance with Federal Aviation Regulations Part 77.
- 2.3 *Zone D Residential Densities:* The criteria set forth in Countywide Policy 3.1.3(b) and the Basic Compatibility Criteria matrix (Table 2A) notwithstanding, the residential

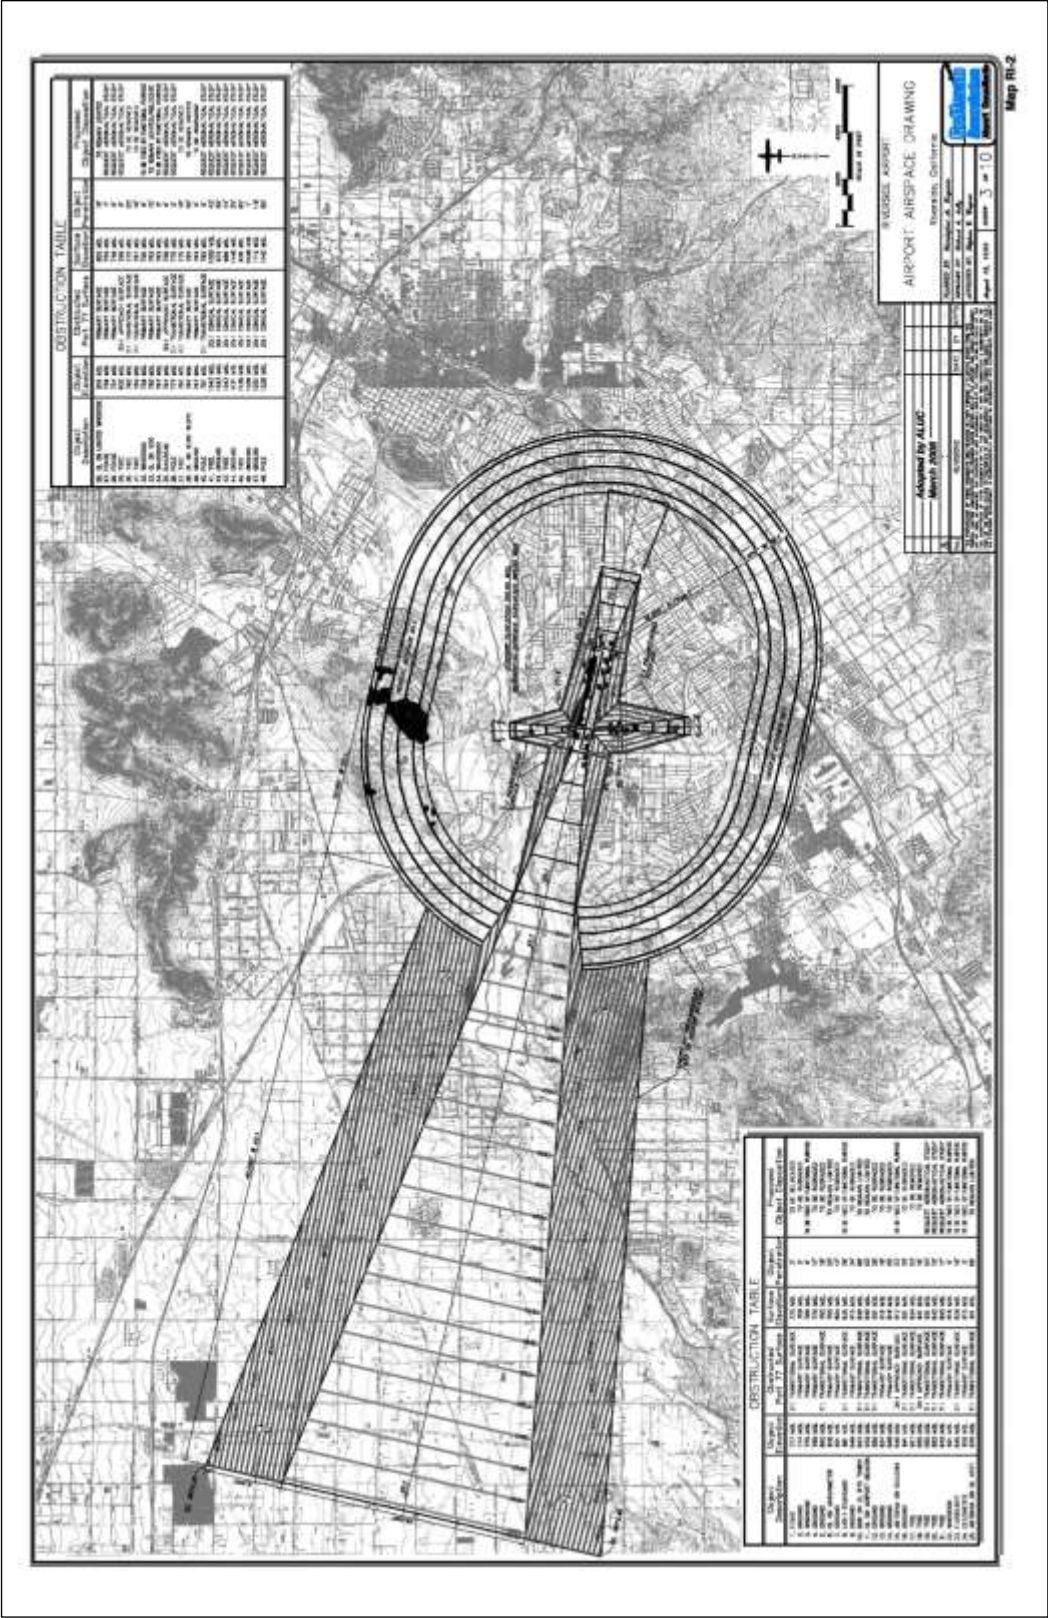

density criteria for that portion of *Compatibility Zone D* at Riverside Municipal Airport lying within the boundary of the City of Riverside shall be as follows:

- (a) For all of the zone within the City of Riverside except west of Tyler Street, allow residential densities as low as 4.0 dwelling units per gross acre to the extent that such densities are typical of existing (as of the adoption date of this plan) residential development in nearby areas of the community. It is further noted that the intent of this policy and the high-density option for *Zone D* is not to encourage residential development densities higher than currently planned for the airport environs, only to enable the density of future development to be similar to what now is common in the area.
 - (b) For the area within the City of Riverside west of Tyler Street—designated with a (1) on Map RI-1—no restrictions on residential densities shall apply.
- 2.4 *Expanded Buyer Awareness Measures:* In addition to the requirements for aviation easement dedication or deed notification as indicated in Table 2A, any new single-family or multi-family residential development proposed for construction anywhere within the Riverside Municipal Airport influence area, except for *Compatibility Zone E*, shall include the following measures intended to ensure that prospective buyers or renters are informed about the presence of aircraft overflights of the property.
- (a) During initial sales of properties within newly created subdivisions, large airport-related informational signs shall be installed and maintained by the developer. These signs shall be installed in conspicuous locations and shall clearly depict the proximity of the property to the airport and aircraft traffic patterns.
 - (b) An informational brochure shall be provided to prospective buyers or renters showing the locations of aircraft flight patterns. The frequency of overflights, the typical altitudes of the aircraft, and the range of noise levels that can be expected from individual aircraft overflights shall be described (a large-scale illustration of Exhibit RI-7, Compatibility Factors, will suffice).

CHAPTER 3 INDIVIDUAL AIRPORT POLICIES AND COMPATIBILITY MAPS

APPENDIX C

Methods for Determining Concentrations of People

One criterion used in the *Riverside County Airport Land Use Compatibility Plan* is the maximum number of people per acre that can be present in a given area at any one time. If a proposed use exceeds the maximum density, it is considered inconsistent with compatibility planning policies. This appendix provides some guidance on how the people-per-acre determination can be made.

The most difficult part about making a people-per-acre determination is estimating the number of people likely to use a particular facility. There are several methods which can be utilized, depending upon the nature of the proposed use:

- ▶ **Parking Ordinance**—The number of people present in a given area can be calculated based upon the number of parking spaces provided. Some assumption regarding the number of people per vehicle needs to be developed to calculate the number of people on-site. The number of people per acre can then be calculated by dividing the number of people on-site by the size of the parcel in acres. This approach is appropriate where the use is expected to be dependent upon access by vehicles. Depending upon the specific assumptions utilized, this methodology typically results in a number in the low end of the likely intensity for a given land use.
- ▶ **Maximum Occupancy**—The Uniform or California Building Code can be used as a standard for determining the maximum occupancy of certain uses. The chart provided as Table C1 indicates the required number of square feet per occupant. The number of people on the site can be calculated by dividing the total floor area of a proposed use by the minimum square feet per occupant requirement listed in the table. The maximum occupancy can then be divided by the size of the parcel in acres to determine the people per acre. Surveys of actual occupancy levels conducted by various agencies have indicated that many retail and office uses are generally occupied at no more than 50% of their maximum occupancy levels, even at the busiest times of day. Therefore, the number of people calculated for office and retail uses should usually be adjusted (50%) to reflect the actual occupancy levels before making the final people per acre determination. Even with this adjustment, the UBC-based methodology typically produces intensities at the high end of the likely range.
- ▶ **Survey of Similar Uses**—Certain uses may require an estimate based upon a survey of similar uses. This approach is more difficult, but is appropriate for uses which because of the nature of the use, cannot be reasonably estimated based upon parking or square footage.

Table C2 shows sample calculations.

APPENDIX C METHODS FOR DETERMINING CONCENTRATIONS OF PEOPLE

| Use | | Minimum Square Feet per Occupant |
|------------|---|---|
| 1. | Aircraft Hangars (no repair) | 500 |
| 2. | Auction Rooms | 7 |
| 3. | Assembly Areas, Concentrated Use (without fixed seats) | 7 |
| | Auditoriums | |
| | Churches and Chapels | |
| | Dance Floors | |
| | Lobby Accessory to Assembly Occupancy | |
| | Lodge Rooms | |
| | Reviewing Stands | |
| | Stadiums | |
| | Waiting Areas | 3 |
| 4. | Assembly Areas, Less Concentrated Use | 15 |
| | Conference Rooms | |
| | Dining Rooms | |
| | Drinking Establishments | |
| | Exhibit Rooms | |
| | Gymnasiums | |
| | Lounges | |
| | Stages | |
| | Gaming | 11 |
| 5. | Bowling Alley (assume no occupant load for bowling lanes) | 4 |
| 6. | Children's Homes and Homes for the Aged | 80 |
| 7. | Classrooms | 20 |
| 8. | Congregate Residences | 200 |
| 9. | Courtrooms | 40 |
| 10. | Dormitories | 50 |
| 11. | Dwellings | 300 |
| 12. | Exercising Rooms | 50 |
| 13. | Garage, Parking | 200 |
| 14. | Health-Care Facilities | 80 |
| | Sleeping Rooms | 120 |
| | Treatment Rooms | 240 |
| 15. | Hotels and Apartments | 200 |
| 16. | Kitchen - Commercial | 200 |
| 17. | Library Reading Room | 50 |
| | Stack Areas | 100 |
| 18. | Locker Rooms | 50 |
| 19. | Malls | Varies |
| 20. | Manufacturing Areas | 200 |
| 21. | Mechanical Equipment Room | 300 |
| 22. | Nurseries for Children (Daycare) | 35 |
| 23. | Offices | 100 |
| 24. | School Shops and Vocational Rooms | 50 |
| 25. | Skating Rinks | 50 on the skating area; 15 on the deck |
| 26. | Storage and Stock Rooms | 300 |
| 27. | Stores - Retail Sales Rooms | |
| | Basements and Ground Floors | 30 |
| | Upper Floors | 60 |
| 28. | Swimming Pools | 50 for the pool area; 15 on the deck |
| 29. | Warehouses | 500 |
| 30. | All Others | 100 |

Source: California Building Code (1998), Table 10-A

Table C1
Occupancy Levels—California Building Code

METHODS FOR DETERMINING CONCENTRATIONS OF PEOPLE APPENDIX C

Example 1

Proposed Development: Two office buildings, each two stories and containing 20,000 square feet of floor area per building. Site size is 3.0 net acres. Counting a portion of the adjacent road, the gross area of the site is 3.5± acres.

A. Calculation Based on Parking Space Requirements

For office uses, assume that a county or city parking ordinance requires 1 parking space for every 300 square feet of floor area. Data for the traffic studies or other sources can be used to estimate the average vehicle occupancy. For the purposes of this example, the number of people on the property is assumed to equal 1.5 times the number of parking spaces.

The average usage intensity would therefore be calculated as follows:

- 1) 40,000 sq. ft. floor area x 1.0 parking space per 300 sq. ft. = 134 required parking spaces
- 2) 134 parking spaces x 1.5 people per space = 200 people maximum on site
- 3) 200 people ÷ 3.5 acres gross site size = 57 people per acre average for the site

Assuming that occupancy of each building is relatively equal throughout, but that there is some separation between the buildings and outdoor uses are minimal, the usage intensity for a single acre would be estimated to be:

- 1) 20,000 sq. ft. bldg. ÷ 2 stories = 10,000 sq. ft. bldg. footprint
- 2) 10,000 sq. ft. building footprint ÷ 43,560 sq. ft. per acre = 0.23 acre bldg. footprint
- 3) Building footprint < 1.0 acre; therefore maximum people in 1 acre = bldg. occupancy = 100 people per single acre

B. Calculation Based on California Building Code

Using the CBC (Appendix C1) as the basis for estimating building occupancy yields the following results for the above example:

- 1) 40,000 sq. ft. bldg. ÷ 100 sq. ft./occupant = 400 people max. building occupancy (under CBC)
- 2) 400 people max. building occupancy x 50% adjustment = 200 people maximum on site
- 3) 200 people ÷ 3.5 acres gross site size = 57 people per acre average for the site

Conclusions: In this instance, both methodologies give the same results. For different uses and/or different assumptions, the two methodologies are likely to produce different numbers. In most such cases, the CBC methodology will indicate a higher intensity.

Table C2

Sample People-Per-Acre Calculations

APPENDIX C METHODS FOR DETERMINING CONCENTRATIONS OF PEOPLE**Example 2**

Proposed Development: Single-floor furniture store containing 24,000 square feet of floor area on a site of 1.7 net acres. Counting a portion of the adjacent road, the gross area of the site is 2.0 acres.

A. Calculation Based on Parking Space Requirements

Assume that local codes require 1 parking space per 1,500 square feet of use area for a furniture store. Next, assume 1.5 people per automobile for this type of use.

The average usage intensity would be:

- 1) 24,000 sq. ft. bldg. x 1.0 parking space per 1,500 sq. ft. = 16 required parking spaces
- 2) 16 parking spaces x 1.5 people per space = 24 people maximum on site
- 3) 24 people ÷ 2.0 acres gross site size = 12 people per acre average for the site

Again assuming a relatively balanced occupancy throughout the building and that outdoor uses are minimal, the usage intensity for a single acre would be estimated to be:

- 1) 24,000 sq. ft. bldg. footprint ÷ 43,560 sq. ft. per acre = 0.55 acre bldg. footprint
- 2) Building footprint < 1.0 acre; therefore maximum people in 1 acre = bldg. occupancy = 24 people per single acre

B. Calculation Based on California Building Code

For the purposes of the CBC-based methodology, the furniture store is assumed to consist of 50% retail sales floor (at 30 square feet per occupant) and 50% warehouse (at 500 square feet per occupant). Usage intensities would therefore be estimated as follows:

- 1) 12,000 sq. ft. retail floor area ÷ 30 sq. ft./occupant = 400 people max. occupancy in retail area
- 2) 12,000 sq. ft. warehouse floor area ÷ 500 sq. ft./occupant = 24 people max. occupancy in warehouse area
- 3) Maximum occupancy under CBC assumptions = 400 + 24 = 424 people
- 4) Assuming typical peak occupancy is 50% of CBC numbers = 212 people maximum expected at any one time
- 5) 212 people ÷ 2.0 acres = 106 people per acre average for the site

With respect to the single-acre intensity criteria, the entire building occupancy would again be within less than 1.0 acre, thus yielding the same intensity of 106 people per single acre.

Conclusions: In this instance, the two methods produce very different results. The occupancy area estimate of 30 square feet per person is undoubtedly low for a furniture store even after the 50% adjustment. On the other hand, the 12 people-per-acre estimate using the parking requirement methodology appears low, but is probably closer to being realistic. Unless better data is available from surveys of similar uses, this proposal should be considered compatible within Zone B2 (100 people per average acre and 200 people per single acre) and potentially also compatible within Zone B1 (25 people per average acre and 50 people per single acre).

APPENDIX D**Compatibility Guidelines for Specific Land Uses**

The compatibility evaluations listed below for specific types of land uses can be used by affected jurisdictions as guidelines in implementation of the general compatibility criteria listed in Table 2A. These evaluations are not regarded as adopted ALUC policies or criteria. In case of any conflicts between these evaluations of specific land uses and the policies and criteria in Chapter 2 of this document, the contents of Chapter 2 shall prevail.

| Land Use | Compatibility Zones | | | | | |

**MINUTES
PLANNING COMMISSION
CITY OF JURUPA VALLEY
REGULAR MEETING
February 11, 2015**

1. Call to Order and Roll Call

The regular meeting of the Jurupa Valley Planning Commission was called to order at 7:00 p.m., on February 11, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley, California 92509.

Matthew Burris presiding as Chair.

Members present:

- Matthew Burris, Chair
- George Ruiz, Chair Pro Tem
- Rachel Lopez, Commission Member
- John West, Planning Commission Member
- Robert Zavala, Commission Member

Members absent: None

2. Pledge of Allegiance was led by Commissioner West

3. Oath of Office

Ms. Rachel Lopez took oath of office as Planning Commissioner

Public Appearance/Comments:

Mr. Kevin Hoggard, resident spoke regarding article in The Record News regarding Pedley Shopping Center and truck traffic issues with the proposed project.

4. Approval of the Agenda

Commissioner Ruiz moved and Commissioner West seconded the motion to approve agenda. The motion was approved 5:0.

Ayes: Burris, Ruiz, Lopez, Zavala, West

Noes: None

Abstained: None

Absent: None

5. Approval of Minutes

5.1 Commissioner West moved and Commissioner Ruiz seconded the motion to approve the:

December 10, 2014 minutes

December 24, 2014 minutes

January 14, 2015 minutes

January 28, 2015 minutes

The motion was approved 4:1.

Ayes: Burris, Ruiz, Zavala, West

Noes: None

Abstained: Lopez

Absent: None

6. Public Hearings - None

7. DISCUSSION ITEM: JOINT COUNCIL/COMMISSION STUDY SESSION REGARDING GENERAL PLAN ISSUES AND OPPORTUNITIES

STAFF PRESENTATION

Ms. Mary Wright, Civic Solutions, presented to the Commissioners an overview of planning issues and opportunities in the City to be discussed at the joint session with the City Council on February 12th. The issues presented have been categorized into six categories including Land Use, Transportation, Public Services and Facilities, Environmental Resources / Hazards, Visual Resources and Community Character and Economic Sustainability. Ms. Wright provided handouts to the Commissioners for discussion on the General Plan Issues.

PLANNING COMMISSIONERS QUESTIONS

Commissioner Lopez

Commissioner Lopez requested keeping a Rural Lifestyle element in the plan as well as making use of vacant warehouse facilities.

Chair Burris

Chair Burris requested summary of the notes from the GPAC workshops and if notes reflected the community input and noted economic sustainability element be strongly encouraged in the General Plan.

Commissioner Zavala

Commissioner Zavala requested a matrix of the comments reflecting the community and if they would be available to the GPAC Committee. Ms. Wright notified the Commissioner that a matrix is currently being developed and would be available soon.

8. Public Appearance/Comments

Ms. Robin Kilcoyne, resident of Jurupa Valley, requested key public facilities and developments include Corona-Norco Unified School District and requested they be included in the General Plan consideration.

9. STAFF PRESENTATION: 2015 PENDING ENTITLEMENT APPLICATIONS

Mr. Tom Merrell, Planning Director, made a PowerPoint presentation of the various projects under review for Planning Commission Hearings or Directors Hearing to be considered in the next six months.

10. Public Appearance/Comments

Ms. Betty Anderson, resident of Jurupa Valley, requested status on Emerald Meadows and when it would be scheduled for public hearing.

Ms. Robin Kilcoyne, stated she was not in favor of the Vernola project and the high density planned for the area.

Ms. Josie Gaytan, resident, of Jurupa Valley requested advance notification of meetings scheduled for GPAC.

11. REPORT BY COMMISSIONERS ZAVALA AND WEST REGARDING GENERAL PLAN ADVISORY COMMITTEE ACTIVITIES

Commissioner West gave a brief update of the General Plan Advisory Committee. He stated the Committee was sworn in and Frank Johnson was Chair and Ms. Penny Newman was selected as Vice Chair. Commissioner West noted the staff presented the composition, role and procedures for the GPAC. He noted the next meeting was scheduled for February 23, 2015 and the tour with the GPAC is scheduled for March 7, 2015. He noted Riverside Transit had offered their buses and would accommodate the GPAC bus for the entire group for the tour and thanked Councilman Frank Johnston for arranging it. Commissioner Zavala noted there is an opening for Residential / Commercial member which has not been filled. Commissioner Zavala also noted the last of the outreach workshops was held the past Saturday.

12. ANNUAL REORGANIZATION OF THE PLANNING COMMISSION

Commissioner Burris relinquished the Chair to Mr. Merrell to chair this portion of the meeting. Mr. Merrell called for nominations for Chair. Commissioner West nominated Commissioner Zavala for Chair. Chair Burris nominated Commissioner Ruiz for the position of Chair. Commissioner Lopez seconded the nomination of Commissioner Ruiz for Chair. Nominations were closed.

The motion was approved 5:0 for Commissioner George Ruiz elected as Chair.

Commissioner Ruiz assumed the position of Planning Commission Chair and called for nominations for Chair Pro Tem.

Commissioner West nominated Commissioner Robert Zavala as Chair Pro Tem

The motion was approved 5:0 for Commissioner Robert Zavala as Chair Pro Tem

13. **Public Appearance/Comments**

None

14. **Planning Commissioners Report**

Commissioner Zavala welcomed newly appointed Commissioner Rachel Lopez. He also thanked Mr. Merrell for the 2014 Summary of Planning Commission Actions and would like to include the report to the City Council. Commissioner Zavala also thanked Mr. Merrell for the document "Project at a Glance" and found it very informative.

Commissioner West welcomed newly appointed Commissioner Rachel Lopez and agreed with Commissioner Zavala of the documents provided by Mr. Merrell.

Commissioner Rachel Lopez thanked the Commissioners for their support.

Commissioner George Ruiz thanked the Commissioners for the support and looks forward to 2015.

There being no further business before the Jurupa Valley Planning Commission, Chair Ruiz adjourned the meeting at 9:18 pm to the February 25, 2015 at 7:00 pm at the Jurupa Valley City Council Chambers, 3930 Limonite Ave., Jurupa Valley, California

Respectfully submitted,

Thomas G. Merrell, Planning Director/Secretary

City of Jurupa Valley

**MINUTES
PLANNING COMMISSION
CITY OF JURUPA VALLEY
WORK SESSION - REGULAR MEETING
June 24, 2015**

1. Call to Order and Roll Call

The Work Session meeting of the Jurupa Valley Planning Commission was called to order at 6:00 p.m., on June 24, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley, California 92509.

George Ruiz, presiding as Chair,

Members present:

- Robert Zavala, Chair Pro Tem
- Rachel Lopez, Commission Member
- John West, Commission Member
- Matt Burris, Commission Member

Chair Ruiz

Chair Ruiz announced Agenda Item 6. 1 Zoning Code Amendment for temporary signs has been pulled from the agenda and additional information would be given at the Regular Session commencing at 7:00 pm.

2. Public Appearance/Comments - None

3. Commission Business

3.1 MA14155 Work Session: Paradise Knolls Specific Plan

Principal Planner Ms. Tamara Campbell presented a brief summary of the background, project description and uses and announced that the project consultants would be presenting additional detailed information. She explained that the Commission would be provided Development Review Considerations as well as details of the Environmental Impact Report.

Mr. Ernest Perea, CEQA consultant discussed the Paradise Knolls early stages of the work done to date and noted the firm of LSA had analyzed the technical studies and significant impacts of this project.

Mr. Kent Norton, LSA Consultant, presented a slide presentation of the CEQA and Draft EIR process for public review. Mr. Kent Norton discussed each of the significant impacts related to Paradise Knolls.

PLANNING COMMISSIONERS COMMENTS

Commissioner Burris

Commissioner Burris commented that the EIR was well written and was impressed with the quality of the document. He asked for clarification relating to project design features and the energy performance of building requirements. Mr. Ken Norton replied the project exceeds the Title 24 guidelines by 25% and would verify the percentage calculations. Commissioner Burris also requested additional information on landscaping sequestration and recycling measures. Mr. Ken Norton addressed the inquiries on landscaping sequestration and Mr. Mike Myers, City Engineer provided information of the recycling program tracking.

Commissioner West

Commissioner West requested clarification on Assembly Bill 32 and Senate Bill 375 and how it relates to this project. Mr. Kent Norton replied AQMD has developed guidelines and the project will be meeting the intent and compliance of the legislation.

Commissioner Lopez

Commissioner Lopez inquired of the verification and monitoring schedule for the Tier 4 construction equipment. Mr. Norton replied an identification process is developed for the equipment and logged for city inspection and monitoring purposes. Mr. Mike Myers noted it is AQMD who is the monitoring agency and also would be the enforcement agency.

STUDY SESSION HEARING OPEN

Mr. Jim Kozak, Partner for Paradise Knolls presented a history of the project and significant issues for the 107 acre property. Mr. Kozak discussed in detail the proposed project and the land use benefits projected for the community.

Mr. Matthew Fagan, Consultant for Paradise Knolls presented a slide presentation of the community benefits, equestrian friendly amenities and the proposed design guidelines and noted the project had been revised to date. Mr. Fagan stated there are current discussions with the County of Riverside on the surplus parcel adjacent to the proposed project and hopeful for equestrian facilities to be considered.

REGULAR SESSION

1. Call to Order and Roll Call

The regular meeting of the Jurupa Valley Planning Commission was called to order at 7:00 p.m., on June 24, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley, California 92509.

George Ruiz, presiding as Chair.

Members present:

- Robert Zavala, Chair Pro Tem
- Rachel Lopez, Commission Member
- John West, Commission Member
- Matt Burris, Commission Member

2. **Pledge of Allegiance** was led by Commissioner Burris

3. **Public Appearance/Comments - None**

4. **Approval of the Agenda**

Commissioner Zavala moved and Commissioner Burris seconded the motion to approve the agenda with the modification to remove Item 6.1. The motion was approved 5:0

Ayes: Ruiz, Lopez, Zavala, Burris, West

Noes: None

Abstained: None

Absent: None

STUDY SESSION HEARING RECONVENED

Commissioner Zavala

Commissioner Zavala requested an update on the JATC property and what options are available. Mr. Jim Kozak replied attempts to work with the Board were unsuccessful.

Commissioner Burris

Commissioner Burris requested clarification on the fiscal benefits of the project. Mr. Fagan noted at build out the benefit would be approximately \$83,000.00 a year as currently proposed.

Commissioner Zavala

Commissioner Zavala requested clarification on the phasing plan schedule. Mr. Fagan noted each phase would be developed concurrently.

Resident, Mr. Henry Escalera stated he is opposed to the project and feels there is no connectivity with the project and is opposed to the HOA access to the public and lack of trails.

Resident, Ms. Kim Jarrell Johnson stated the EIR and CEQA report were inadequate and she presented a letter with her analysis and her resume noting her background information. Ms. Johnson asked if there had been a Cultural Resource Peer Review. Mr. Ernest Perea stated there was a Cultural Resource Peer Review conducted and reviewed by LSA. Ms. Johnson noted there were several items and issues that were not properly addressed in the EIR.

Resident, Ms. Sheila Ehrlich stated she is opposed to the high density of the proposed project and stated she would like the area to remain rural.

Resident, Ms. Carina Mares, representing Hispanic Western Heritage stated she is in support of the project and noted as an equestrian, she is pleased the project proposes equestrian friendly uses that would be an economic benefit to the community.

Resident, Mr. David Zimmerman, representing Jurupa Valley Horseman's Association stated he is in support of the proposed project specifically for the variety of density design as well as the equestrian and development of trail friendly uses.

Resident, Stephen Anderson stated his main concern had to do with regional trail accessibility.

Resident, Betty Anderson stated the EIR submitted was inadequate and she expressed concern for water supply issues, high density and the traffic issues.

Resident and Business Owner Mr. Roberto Ramirez stated he is opposed to the proposed project and disagrees with high density and felt the horse community is not adequately represented.

Resident Mr. Noel Olsen stated he is opposed to the proposed project due to the density and proximity to the river.

Resident, Ms. Josie Gaytan stated she is opposed to the proposed project specifically due to the lack of walkability in the community.

Resident, Randy Young representing the Jurupa Valley Horsemen's Association stated he is in support of the proposed project as it addresses what the residents have desired in an equestrian-friendly community.

PLANNING COMMISSIONERS COMMENTS

Commissioner Zavala

Commissioner Zavala stated for the record and disclosure that he met with the Developer, Mr. Kozak and Mr. Fagan on December 2, 2013 prior to his appointment to the Commission and was contacted after his appointment to the Commission. After his appointment, he stated he would not be available to meet with parties and referred him to Mr. David Zimmerman.

Commissioner Lopez

Commissioner Lopez is concerned with density, flooding, sewage and traffic issues and would recommend a modified site plan.

Commissioner Burris

Commissioner Burris stated he is favor with low density that would preserve the vegetation and topography sight, the parameter design and would prefer to see a recreational-oriented use for the area specifically due to the river's proximity.

Commissioner Zavala

Commissioner Zavala stated the area is within the Pedley Village Design Guidelines and felt there is an opportunity for a mixed density.

Commissioner West

Commissioner West stated he was also concerned with flooding issues and is supportive of the project however, he is concerned with the density and noted the area is beautiful and should be preserved.

Resident, Ms. Carina Mares, representing Hispanic Western Heritage stated she is in support of the project and noted as an equestrian, she is pleased the project proposes equestrian friendly uses that would be an economic benefit to the community.

Resident, Mr. David Zimmerman, representing Jurupa Valley Horseman's Association stated he is in support of the proposed project specifically for the variety of density design as well as the equestrian and development of trail friendly uses.

Resident, Stephen Anderson stated his main concern had to do with regional trail accessibility.

Resident, Betty Anderson stated the EIR submitted was inadequate and she expressed concern for water supply issues, high density and the traffic issues.

Resident and Business Owner Mr. Roberto Ramirez stated he is opposed to the proposed project and disagrees with high density and felt the horse community is not adequately represented.

Resident Mr. Noel Olsen stated he is opposed to the proposed project due to the density and proximity to the river.

Resident, Ms. Josie Gaytan stated she is opposed to the proposed project specifically due to the lack of walkability in the community.

Resident, Randy Young representing the Jurupa Valley Horsemen's Association stated he is in support of the proposed project as it addresses what the residents have desired in an equestrian-friendly community.

PLANNING COMMISSIONERS COMMENTS

Commissioner Zavala

Commissioner Zavala stated for the record and disclosure that he met with the Developer, Mr. Kozak and Mr. Fagan on December 2, 2013 prior to his appointment to the Commission and was contacted after his appointment to the Commission. After his appointment, he stated he would not be available to meet with parties and referred him to Mr. David Zimmerman.

Commissioner Lopez

Commissioner Lopez is concerned with density, flooding, sewage and traffic issues and would recommend a modified site plan.

Commissioner Burris

Commissioner Burris stated he is favor with low density that would preserve the vegetation and topography sight, the parameter design and would prefer to see a recreational-oriented use for the area specifically due to the river's proximity.

Commissioner Zavala

Commissioner Zavala stated the area is within the Pedley Village Design Guidelines and felt there is an opportunity for a mixed density.

Commissioner West

Commissioner West stated he was also concerned with flooding issues and is supportive of the project however, he is concerned with the density and noted the area is beautiful and should be preserved.

Chair Ruiz

Chair Ruiz stated his concern is flooding and the density issues and feels the area is beautiful and would prefer to see larger lots. He is in agreement for a Homeowners Association. Chair Ruiz suggested to the consultant to work with staff for additional feedback received this evening from the Commissioners and the public.

Mr. Jim Kosak stated he would meet with staff for input.

STUDY SESSION HEARING CLOSED

5. Approval of Minutes

5.1 Commissioner Burris moved and Commissioner West seconded the May 13, 2015 Planning Commission Minutes be approved with corrections. The motion was approved with corrections. The motion was approved 5:0

Ayes: Ruiz, Lopez, Zavala, Burris, West

Noes: None

Abstained: None

Absent: None

Commissioner Lopez moved and Commissioner Zavala seconded the motion to approve the June 10, 2015 Planning Commission Minutes be approved with corrections. The motion was approved 5:0

Ayes: Ruiz, Lopez, Zavala, Burris, West

Noes: None

Abstained: None

Absent: None

Assistant City Attorney Serita Young

Assistant City Attorney Serita Young briefly explained the details for taking Item 6.1 off tonight's agenda. She noted that a Supreme Court ruling on June 18 regarding signage was significant and felt the City Attorney needed to review the proposed Ordinance again to be consistent with the current ruling.

6. Commission Business

6.2 Zoning Code Amendment

Planning Director, Mr. Tom Merrell presented a brief background on the current discretionary case approval process. Mr. Merrell explained a need for certain items which are currently delegated to the Planning Director to be referred to the Planning Commission for review and decision. Mr. Merrell noted there is currently no mechanism in the code by which the Planning Director may refer these entitlements to the Commission for review and noted that the City Council initiated a code amendment authorizing the Planning Director to refer certain discretionary entitlements to the Planning Commission by a unanimous vote.

PUBLIC HEARING

Chair Ruiz opened the public hearing. Upon noting no one wished to speak on the item, he closed the public hearing.

PLANNING COMMISSIONERS COMMENTS

Chair Pro Tem Zavala

Chair Pro Tem Zavala stated he is in support of the zoning code amendment.

Assistant City Attorney Serita Young

Assistant City Attorney Sertia Young clarified the zoning ordinance included approval of Site Development Permits.

Commissioner Burris moved and Commissioner West seconded the motion to approve Resolution No. 2015-06-24-03 Zoning Code Amendment. The motion was approved 5:0

Ayes: Ruiz, Lopez, Zavala, Burris, West

Noes: None

Abstained: None

Absent: None

7. Commission Business

7.1 Work Session – General Plan Policy Review No. 1 Land Use Element Policy Review

Ms. Mary Wright, General Plan Program Manager presented detailed information of work done to date by the GPAC Committee. Ms. Wright provided draft materials for the Commissioners for discussion and input. Ms. Wright reminded the Commissioners the Work Sessions would be scheduled at future Planning Commission Meetings.

Commission Deliberation

The Commissioners discussed and reviewed the Value Statements, the existing General Plan and Land Use Element Issues in detail. The Commissioners will review the Interim General Plan and will utilize existing goals and policies of the Riverside County General Plan and the Jurupa Area Plan and offer suggestions to update and reflect the character and values of the new City of Jurupa Valley.

8. General Plan Advisory Committee Status Report from Commissioners Zavala and West

Commissioner Zavala noted a summary of items discussed for Item 7.1 were reviewed in depth and noted the upcoming GPAC meetings would provide additional information at the June 29th workshop.

9. Public Appearance/Comments - None

10. Planning Commissioner's Reports and Comments

Commissioner Lopez announced she attended the Air Quality Forum at Mission Middle School regarding Air Quality in Mira Loma sponsored by AQMD and noted the report's findings that some of Mira Loma's air quality is below standards. Commissioner Lopez stated AQMD is offering to do presentations for City Council and/or Planning Commission.

11. Planning Department Report - None

There being no further business before the Jurupa Valley Planning Commission, Chair George Ruiz then adjourned the meeting at 10:13 pm to July 8, 2015 at 6:00 pm at the Jurupa Valley City Council Chambers, 8930 Limonite Ave., Jurupa Valley, California.

Respectfully submitted, 
Thomas G. Merrell, Planning Director/Secretary

City of Jurupa Valley

**MINUTES
PLANNING COMMISSION
CITY OF JURUPA VALLEY
WORK SESSION - REGULAR MEETING
July 8, 2015**

1. Call to Order and Roll Call

The meeting of the Jurupa Valley Planning Commission was called to order at 6:00 p.m., on June 24, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley, California 92509.

George Ruiz, presiding as Chair.

Members present:

- Robert Zavala, Chair Pro Tem

3.1 Work Session: General Plan Policy Review No.2- Conservation/Open Space

Mr. Jeff Hook, Principal Planner presented notes from past GPAC meetings and also presented several matrices for the Commissioners to review. Mr. Hook noted the information had been collected from the GPAC at past meetings for review and recommendation. In the matrices Mr. Hook identified each policy by number, title and category and identified their implementation status and noted staff had identified whether each policy should be included in the new General Plan "as is," included with changes or removed. Mr. Hook noted when discussing these matrices that many of the policies, programs or issues no longer apply and therefore the Commission's feedback would be valuable.

COMMISSION DISCUSSION

Commissioners discussed and reviewed materials and made recommendations for the Conservation and Open Space Element Matrix on the following topics:

1. Water Conservation
2. Water Quality, Ground Water Recharge
3. Floodplain and Riparian Area Management
4. Farmlands, Forest Resources, Vegetation, Wind Energy, Solar Energy
5. Geothermal Resources, Biomass Resources, Mineral Resources
6. Petroleum Resources, Energy Conservation, Multi-Species Habitat Conservation Plans
7. Environmentally Sensitive Lands, Cultural and Paleontological Resources
8. Open Space, Parks and Recreation, Scenic Resources, Scenic Corridors

Mr. Jeff Hook announced the next workshop will focus on circulation and mobility and is scheduled for the next Planning Commission meeting on July 22, 2015.

Resident Ms. Ellen Porter and member of the Trails Committee gave a brief update on current equestrian trails and open space plans.

REGULAR SESSION

1. Call to Order and Roll Call

The regular meeting of the Jurupa Valley Planning Commission was called to order at 7:00 p.m. on July 8, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley, California 92509.

George Ruiz, presiding as Chair.

Members present:

- Robert Zavala, Chair Pro Tem
- Rachel Lopez, Commission Member
- John West, Commission Member
- Matt Burris, Commission Member

2. Pledge of Allegiance was led by Commissioner Zavala

3. Public Appearance/Comments

Resident, Ms. Kim Jarrell Johnson requested that a copy of the Planning Commission Agenda be placed at the counter for the public to view.

4. Approval of the Agenda

Commissioner West moved and Commissioner Zavala seconded the motion to approve the agenda with the modification to continue with the work session item 3.1 following approval of the agenda. take item 6.1 off calendar. The motion was approved 5:0

Ayes: Ruiz, Lopez, Zavala, Burris, West

Noes: None

Abstained: None

Absent: None

3.1 STUDY SESSION HEARING (CONTINUED)

The Commissioners continued their discussion and recommendations and suggested recommendations to the General Plan Policy/Implementation Program text.

STUDY SESSION HEARING CLOSED

5. Approval of Minutes

5.1 Commissioner Burris moved and Commissioner West seconded the June 24, 2015 Planning Commission Minutes be approved with corrections. The motion was approved with corrections. The motion was approved 5:0

Ayes: Ruiz, Lopez, Zavala, Burris, West

Noes: None

Abstained: None

Absent: None

Absent: None

6. Public Hearings

6.1 MA14117 PROPOSED INDUSTRIAL BUILDING AT SOUTHEAST CORNER OF HALL AND EL REVINO ROAD

Ms. Rocio Lopez, Associate Planner, presented a brief project description, a view of the site plan and emphasized the project is for a "shell" industrial building with no end user identified at this time and would be operated as an industrial use pursuant to the permitted and conditionally permitted uses allowed. Ms. Lopez presented detailed development plan exhibits for the Commissioners to review and announced neighbor resident and homeowner, Mr. Romo was in the audience and also had submitted a letter expressing his concerns for the proposed project and requested consideration for specific items to be addressed by the Commissioners.

PLANNING COMMISSIONERS QUESTIONS

Commissioner Burris

Commissioner Burris asked about residentially owned property in the vicinity. Ms. Lopez replied the area is not clearly defined as businesses and arials identified construction storage, pallet storage, truck parking and large accessory structures and other mixed uses.

Commissioner Lopez

Commissioner Lopez asked about the term "truck restrictions." Mr. Ernest Perea, CEQA Consultant, explained that it refers to various truck operations such as running motors, the loading and unloading of materials. Truck restrictions prohibit such activities from occurring between 10:00 p.m. and 7:00 a.m. Commissioner Lopez also requested truck route designation restrictions. Ms. Rocio Lopez detailed restrictions for truck traffic on El Rivino Rd.

Commissioner West

Commissioner West asked about dust mitigation measures and requested that they comply with South Coast Air Quality Management District Rule 403. Mr. Perea replied that while grading the contractor is required to water three times a day to stabilize stock pile materials, grading, and equipment travel on unpaved roads per mitigation measures.

Commissioner Zavala

Commissioner Zavala questioned if the soil had been tested for contaminants. Mr. Ernest Perea replied the grounds were tested and no contaminants were found.

Commissioner Burris

Commissioner Burris questioned what uses fall under Heavy Industrial. Ms. Lopez replied the zoning dictates uses such as manufacturing, some assembly, contractor's storage yard. Certain uses would require a conditional use permit. Assistant City Attorney Serita Young indicated there are more than twenty-six uses and noted most require a CUP. Commissioner Burris referred to the letter from the resident on his request to change the zone to Light Industrial. Ms. Lopez replied that this item was not a change of zone but rather a request for a General Plan Amendment to make the land use consistent with the Agua Mansa Specific Plan land use designation of Heavy Industrial.

PUBLIC HEARING OPENED

Mr. John Wheatly, Applicant/Representative described the proposed project in detail and noted they took into consideration the surrounding area. He presented the proposed building and landscaping plans. Mr. Wheatly noted traffic and noise mitigation has been included. Mr. Wheatly added that the proposed project takes into consideration the concerns outlined in the letter Mr. Romo submitted and would work with Mr. Romo to resolve any issues.

PUBLIC HEARING CLOSED**Commissioner Zavala**

Commissioner Zavala stated he liked the project however was concerned with the future use. Planning Director, Mr. Tom Merrell, clarified the detailed process in which a new tenant would occupy a building subject to a site development permit and a thorough review process.

Commissioner Burris

Commissioner Burris stated he had three concerns; truck traffic, buffering between the site and the residents, and the resident's zoning request. Commissioner Burris stated he felt more comfortable if walls were higher and different type of trees (not African Sumac) were planted. He felt other species would be better at clarifying the air and suggested using the trees that were approved for the Riverbend project. Commissioner Burris stated an eight-foot fence is not sufficient to protect the residents from industrial uses and felt a ten-foot high fence would be more appropriate to mitigate industrial uses.

Mike Myers, City Engineer indicated that truck traffic is limited so no trucks over 5 ton would be allowed along El Rivino Rd. between Hall Ave. and Agua Mansa Blvd. He also explained that a standard commercial drive-way is currently designed to facilitate truck traffic. He does not recommend a one way design due to future potential development. He also does not recommend restricting right turns to the site. He would recommend posting a "no right turn" sign on-site for trucks over 5 tons. Mr. Myers noted enforcement for truck traffic issues has improved and will continue to improve in the future.

COMMISSIONERS DELIBERATIONS

Commissioners discussed landscaping, zoning and wall height concerns and Chair Ruiz concluded with requesting resident Mr. Romo if a ten-foot wall would be adequate. Mr. Romo stated that he would prefer an eight-foot wall. The Commissioners deliberated on the specific trees for landscaping and noted if the African Sumac trees were adequate for the site. Chair Ruiz asked Mr. Romo if the trees suggested were adequate. Mr. Romo replied he had no issues with the tree selection. Deliberations continued for the type of trees selected for the Riverbend project and the recommended selection for the proposed project. The trees selected for the project should be drought tolerant, improve air quality and provide buffering. Commissioners directed staff to refer to the Riverbend project for the list of trees selected and requested staff to incorporate and substitute one or more along the industrial and residential side along the eastern property line. They also requested such trees be planted along the other perimeters and that the substitution trees comply with the landscaping guidelines.

Commissioner Burris moved and Commissioner West seconded the motion to approve Resolution No. 2015-07-08-01 with the following additional conditions:

1. Within 30 days of City Council Adoption of the Resolution on this entitlement, MA14117 (SDP31435 & GPA1409), Applicant shall install a minimum 6-foot high chainlink fence around the entire perimeter of the site. Applicant shall obtain any required building permit prior to installation.
2. Prior to the issuance of any building permit, repair any damage caused by removal of on-site weeds/trees to adjacent property owner's sprinkler system, along the easterly property line. Applicant shall notify adjacent property owner (to the east) prior to any work.
3. Upon installation of the temporary fencing in Condition No. 1, Applicant shall install signs located in prominent locations stating: "private property – no trespassing". Such signs shall be in both English and Spanish.
4. Prior to the issuance of grading permit, Applicant shall have the subject property surveyed by a licensed surveyor and provide a copy of such survey to the Planning Director.
5. Remove the word "Meandering" from Condition No. 14. F.II and omit item 3.7.3 Traffic Signal Improvement plans per County Standards.
6. Change the tree type and planting along the industrial/residential side to reflect best practices for air quality.

The motion was approved 5:0

Ayes: Ruiz, Lopez, Zavala, Burris, West

Noes: None

Abstained: None

Absent: None

6.2 ZONING CODE AMENDMENT – PLANNED UNIT DEVELOPMENT ORDINANCE

Ms. Maryann Marks, Senior Planner presented a brief background of the zoning proposed and noted at a previous work session the Commissioners identified the need for a "Planned Unit Development" in order to provide for projects that have a more progressive approach to project design and promote high quality development for the best use of the remaining undeveloped land. Ms. Marks presented examples of current projects and discussed the proposed Draft Ordinance Regulations and Standards.

PUBLIC HEARING OPENED- No Public Comment

PUBLIC HEARING CLOSED

COMMISSIONERS QUESTIONS

Commissioner Burris

Commissioner Burris commented he was pleased with the PUD Zone Code proposal.

Commissioner Zavala moved and Commissioner West seconded the motion to adopt Resolution No. 2015-07-8-02 recommending the City Council approve a code amendment to the City of Jurupa Valley Zoning Ordinance for the creation of a Planned Unit Development (PUD) zone.

The motion was approved 5:0

7.1 GENERAL PLAN CONFORMANCE DETERMINATION- 5-YEAR "MEASURE A" LOCAL STREETS AND ROADS CAPITAL IMPROVEMENT PROGRAM FOR FISCAL YEAR 2015-2016 THROUGH FISCAL YEAR 2019-2020 AND CAPITAL IMPROVEMENT PROGRAM FOR FISCAL YEAR 2015-2016

Mr. Steve Loriso, Deputy City Engineer presented a brief summary of the City responsibility for recommending, preparing plans for, or constructing, major public works. The City of Jurupa Valley has a list of the proposed public works projects recommended for planning, initiation or construction during the ensuing fiscal year. The list and a coordinated program is required to be submitted to the Planning Agency for review. The Planning Agency is required to review the program and determine if it is in conformance with the adopted general plan. Mr. Loriso stated staff has reviewed the draft CIP and has concluded that is consistent with the existing Land Use and Circulation Element as well as related goals and policies of the City of Jurupa Valley's Interim General Plan. The Plan will not conflict with the new General Plan upon its adoption.

COMMISSIONERS QUESTIONS

Commissioner Burris

Commissioner Burris requested clarification on projects on the list and grant funding. Mr. Loriso clarified the projects described and identified remaining projects.

Commissioner West

Commissioner West asked about the General Drive re-pavement schedule and wanted to know the cause for delay in re-pavement. Mr. Loriso replied he would research the situation. Mr. Mike Myers noted the funds are programed and prioritized and noted it would be at the end of the year to begin scheduling.

Chair Ruiz

Chair Ruiz asked about 46th Street and Riverview Drive near the Parks Headquarters. He wanted to know if this was on the schedule for repair and widening. Mr. Myers replied there is a list of unfunded projects and would confirm if 46th and Riverview is planned or if it would be included for consideration.

Commissioner Burris moved and Commissioner West seconded the motion to adopt Resolution No. 2015-07-8-03 finding the City of Jurupa Valley's Five-Year Measure "A" Capital Improvement Program (CIP) for Fiscal Year 2015-2016 through Fiscal Year 2019-2020 is consistent with the City of Jurupa Valley's General Plan; and Resolution No. 2015-07-08-04 finding that the City of Jurupa Valley's Capital Improvement Program (CIP) for Fiscal Year 2015-2016 is consistent with the City of Jurupa Valley's General Plan.

The motion was approved 5:0

8. General Plan Advisory Committee Status Report from Commissioners Zavala and West

Commissioner West noted items discussed at the last GPAC were Circulation and mobility. Issues that arose were connectivity throughout the city and improvements were suggested. The next meeting is July 27 and the topic is Safety, Noise, Assets and Needs.

9. Public Appearance/Comments - None

10. Planning Commissioner's Reports and Comments

Commissioner West thanked the staff for the information at tonight's meeting. Chair Ruiz also thanked the staff for the thorough information presented at this evening's Planning Commission meeting.

11. Planning Department Report

Mr. Merrell announced the upcoming items for City Council and also upcoming Planning Commission meetings. Mr. Merrell also announced that on July 16th the City Council would consider a code amendment for setting standards for second units. Mr. Merrell also announced the Planning Commission schedule for the following meetings.

Commissioner Zavala noted the Bar None had done some Landscaping improvements and asked staff for updates at the next meeting.

There being no further business before the Jurupa Valley Planning Commission, Chair George Ruiz then adjourned the meeting at 10:33 p.m. to July 22, 2015 at 7:00 p.m. at the Jurupa Valley City Council Chambers, 8930 Limonite Ave., Jurupa Valley, California.

Respectfully submitted,

Thomas G. Merrell, Planning Director/Secretary

City of Jurupa Valley

**MINUTES
PLANNING COMMISSION
CITY OF JURUPA VALLEY
REGULAR MEETING
July 22, 2015**

1. Call to Order and Roll Call

The meeting of the Jurupa Valley Planning Commission was called to order at 7:00 p.m., on July 22, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley, California 92509.

George Ruiz, presiding as Chair.

Members present:

- Robert Zavala, Chair Pro Tem
- Rachel Lopez, Commission Member
- John West, Commission Member
- Matt Burris, Commission Member

2. Pledge of Allegiance

Pledge of Allegiance was led by members of Boy Scout Troop #921 Zackery and Robert. Ms. Leslie Selle, Chapter Representative announced the Troop was there as part of their Merit Badge requirements and to learn about city government.

3. Public Appearance/Comments

Resident Ms. Sheila Ehrlich discussed the Paradise Knolls development and felt the minutes were incomplete and asked that additional details be reflected in the minutes.

Chair Ruiz noted the Planning Commission minutes are action minutes and provide an essence of what is said and offered copies of recordings of any meetings and further suggested that copies may be obtained from the Planning Secretary.

4. Approval of the Agenda

Commissioner Lopez moved and Commissioner West seconded the motion to approve the agenda. The motion was approved 5:0

Ayes: Ruiz, Lopez, Zavala, Burris, West
 Noes: None
 Abstained: None
 Absent: None

5. Approval of Minutes

5.1 Commissioner Zavala moved and Commissioner Lopez seconded the July 8, 2015 Planning Commission Minutes be approved with corrections. The motion was approved with corrections. The motion was approved 5:0

Ayes: Ruiz, Lopez, Zavala, Burris, West
 Noes: None
 Abstained: None
 Absent: None
 Absent: None

Ms. Tamara Campbell, Principal Planner introduced Planning Department's new staff member Mr. Rick Fisher, Associate Planner.

6. Public Hearings

6.1 MA15021 (CONDITIONAL USE PERMIT 1403) APPROVAL OF A CONDITIONAL USE PERMIT TO ALLOW THE CONTINUANCE OF AN EXISTING CLASS IV CATTERY AT 8354 63RD ST. (ROOM 8 MEMORIAL CAT FOUNDATION)

Assistant Planner, Mr. Eddie Guerrero noted that the Room 8 Memorial Cat Foundation is a 501 (3), (c), a non-profit organization that currently provides shelter and care for approximately 90 cats. Its primary mission is to care for cats that were owned by the elderly or disabled who could no longer care for their pets due to relocation or other issues. The Foundation also shelters found cats, feral cats and cats that may be euthanized at the County of Riverside Animal Services Facility. Representatives of the Foundation indicate that the cattery has been in operation at the 8354 63rd Street facility since 1987. Mr. Guerrero noted the Foundation's license to open and operate the facility was issued by the County of Riverside Animal Services in 1987 however, in 2008 Animal Services denied the license indicating a Conditional Use Permit would be required. The Foundation has been operating without a license and the required CUP since 2008. When the City of Jurupa Valley incorporated, the County of Riverside Zoning Code was adopted and required a CUP for all Class IV Catteries (41 or more cats). The Foundation desires to obtain full licensing from the Riverside County Department of Animal Services and approval of the required CUP.

Mr. Guerrero noted that on January 2015 the City Council adopted a policy that waived planning fees under certain circumstances for applications requested by non-profit organizations and set a maximum fee of \$7,500.00. As a result of that waiver, the Room 8 Memorial Cat Foundation applied for the necessary application to continue their operations. Mr. Guerrero further provided a project description for the Commissioners.

PLANNING COMMISSIONERS QUESTIONS

Commissioner Zavala

Commissioner Zavala asked if the site has experienced flooding. Mr. Guerrero replied and stated the project was routed to Flood Control and noted there were no comments or concerns with flooding Expressed.

The applicant, Ms. Gale Shelton thanked the commissioners, the City of Jurupa Valley and the Planning Department.

Commissioner Lopez

Commissioner Lopez noted on Conditions of Approval 3, 5 and 8 that the license, property and number of cats are regulated by Riverside County Department of Animal Services and asked if the agreement would be permanent and suggested adding to the conditions to state "according to the requirements of the Riverside County Department of Animal Services as "designated by the City of Jurupa Valley." Commissioner Lopez furthermore suggested adding to Condition No. 10, "and no other commercial operations unrelated to cats without proper permits by the City of Jurupa Valley."

PUBLIC HEARING CLOSED

Commissioner Zavala

Commissioner Zavala thanked the applicant for her perseverance during the process.

Commissioner Zavala moved and Commissioner Lopez seconded the motion to approve Resolution No. 2015-07-22-01 granting the issuance of Conditional Use Permit (CUP) No. 1403 with the following recommended added conditions:

1. Add language to Conditions of Approval 3, 5 and 8 that specify "as required by the Riverside County Department of Animal Services and as designated by the City of Jurupa Valley."
2. Add to Condition No. 10 "and no other commercial operations unrelated to cats without proper permits by the City of Jurupa Valley."

The motion was approved 5:0

Ayes: Ruiz, Lopez, Zavala, Burris, West

Noes: None

Abstained: None

Absent: None

7. Commission Business

7.1 WORK SESSION: EXISTING GENERAL PLAN AND JURUPA AREA PLAN CIRCULATION/MOBILITY POLICY REVIEW

Ms. Mary Wright, General Plan Project Manager presented to the Commissioners items from the GPAC June 29th meeting discussing Circulation/Mobility and identified key assets, issues and needs to be addressed in the Interim General Plan (IGP). Furthermore, outlining the June 24, and July 8th Planning Commission Meetings, Planning staff has begun reviewing policies in the Riverside County General Plan and Jurupa Area Plan and identified policies that should be: 1) included in the IGP, 2)

included with changes, or 3) not included at all. Ms. Wright presented the detailed matrixes presented in the power-point presentation.

COMMISSION DISCUSSION

Commissioners discussed and reviewed materials and made recommendations for the Circulation/Mobility Issues and Needs Matrix on the following topics:

1. GPAC Notes: Circulation/Mobility Assets, Issues and Needs
2. Summary: Recommended General Plan Circulation/Mobility Space Policies to Remain
3. Existing General Plan Circulation/Mobility Policy Evaluation Matrix
4. Existing Jurupa Area Plan Circulation/Mobility Policy Evaluation Matrix
5. Additional discussion regarding Truck Traffic and routes

Ms. Wright announced the next workshop will focus on Safety, Noise, Assets and Needs and is scheduled for the next Planning Commission meeting on August 12, 2015

8. General Plan Advisory Committee Status Report from Commissioners Zavala and West

Commissioner West thanked staff GPAC staff and noted the past six months have been very informative. Commissioner Zavala also thanked staff. The next meeting for the GPAC is schedule for July 27th and the topic is Safety, Noise, Assets and Needs.

9. Public Appearance/Comments - None

10. Planning Commissioner's Reports and Comments

Commissioner West thanked the staff for the information at tonight's meeting. Chair Ruiz also thanked the staff for the thorough information presented at this evening's Planning Commission meeting.

11. Planning Department Report

Mr. Merrell announced the upcoming items for City Council and also upcoming Planning Commission meetings. Mr. Merrell recommended that Commissioners use the city assigned email address for Planning Commission business and suggested if they needed assistance, the Planning Secretary would provide assistance.

There being no further business before the Jurupa Valley Planning Commission, Chair George Ruiz adjourned the meeting at 9:55 p.m. to August 12, 2015 at 7:00 p.m. at the Jurupa Valley City Council Chambers, 8930 Limonite Ave., Jurupa Valley, California.

Respectfully submitted,

Thomas G. Merrell, Planning Director / Secretary of the Planning Commission

City of Jurupa Valley

Absent: None

6. Public Hearings - None**7. Commission Business****7.1 WORK SESSION: EXISTING GENERAL PLAN AND JURUPA AREA PLAN CIRCULATION/MOBILITY POLICY REVIEW – “GENERAL PLAN SAFETY AND NOISE POLICIES”**

Ms. Mary Wright, General Plan Project Manager, presented to the Commissioners items from the July 27th GPAC meeting regarding Safety and Noise Assets, Issues and Needs, and concerns to be addressed in the Interim General Plan (IGP). Planning staff has continued reviewing policies in the Riverside County General Plan and Jurupa Area Plan and identified policies that should either be: 1) included in the IGP, 2) included with changes, or 3) not included at all. Ms. Wright presented the detailed matrices presented in the power-point for discussion and comments.

COMMISSION DISCUSSION

Commissioners discussed and reviewed materials and made recommendations for the Circulation/Mobility Issues and Needs Matrix relating to the following topics:

1. GPAC Notes: Safety/Noise Assets, Issues and Needs
2. Summary: Recommended General Plan Safety/Noise Policies to Review, Recommend and Remain
3. Existing General Plan Safety/Noise Policy Evaluation Matrix
4. Existing Jurupa Area Plan Safety/Noise Policy Evaluation Matrix

Ms. Wright announced the next GPAC meeting topic is Community Services and Facilities and the following topic would be Housing and Economic Policies. The Planning Commission work session on these two topics would be scheduled in September.

7.2 STUDY SESSION: PEDLEY VILLAGE CENTER DESIGN GUIDELINES

Mr. Tom Merrell, Planning Director, presented a summary of the June 10th Planning Commission work session discussion and materials of the proposed Pedley Village Center Design Guidelines for the Commissioners review and recommendations. At the June 10th work session, staff received comments from the Commissioners and the public and has since revised the draft guidelines. Mr. Merrell presented a map of the proposed area and discussed the various lot sizes throughout the proposed area. The

guidelines, as suggested are for encouraging developers to design projects that incorporate as many of the principles as possible.

PUBLIC COMMENT DISCUSSION

Resident, Ms. Kim Jarrell Johnson stated residential density versus lot size should be compatible with lot size and building height.

COMMISSION DISCUSSION

Commissioners suggested some edits and clarifications to several of the items described under Land Use, Transportation, General Development and Residential Design Guidelines sections. Consensus from the Commissioners recommended the following edits:

Land use:

- Residential density should be concentrated around activity centers such as transit stops and retail center, to promote and encourage walkability
- Should be a strong emphasis on creating a sense of place through cohesive development throughout the policy area.

Commissioner Burris moved and Commissioner Zavala seconded approval and recommendation to City Council, Resolution 2015-08-12-01 with edits and clarifications to the Land Use section. The motion was approved 4:0

Ayes: Ruiz, Lopez, Zavala, Burris

8. General Plan Advisory Committee Status Report from Commissioners Zavala

Commissioner West thanked staff GPAC staff and noted the past six months have been very informative. Commissioner Zavala also thanked staff. The next meeting for the GPAC is scheduled for August 24th 2015.

9. Public Appearance/Comments - None

10. Planning Commissioner's Reports and Comments

Commissioner Zavala noted his attendance at a Caltrans Public Outreach for the Limonite Avenue Interchange project in Eastvale and noted the next Outreach Meeting is on Wednesday, August 19th from 6:00 p.m. to 8:00 p.m. and notice of meeting was scheduled to be in the local newspaper and fliers are available at the City Hall. Commissioner Zavala asked if the formula was derived for density area by population versus residential area units and population. Planning Director Mr. Merrell replied the General Plan in California measures dwelling units to address the impacts of development. Chair Ruiz noted the Interagency meeting was held at Riverside County Flood Control Headquarters which features various low impact development and sustainable features and invited the Commissioners to tour the facility.

11. Planning Department Report

Planning Secretary Ms. Grizelda Reed announced step by step directions for each Commissioner to log on to their Jurupa Valley email accounts.

There being no further business before the Jurupa Valley Planning Commission, Chair George Ruiz adjourned the meeting at 8:42 p.m. to August 26, 2015 at 7:00 p.m. at the Jurupa Valley City Council Chambers, 8930 Limonite Ave., Jurupa Valley, California.

Respectfully submitted,

Thomas G. Merrell, AICP, Planning Director/Secretary of the Planning Commission

City of Jurupa Valley

**MINUTES
PLANNING COMMISSION
CITY OF JURUPA VALLEY
REGULAR MEETING
October 21, 2015**

1. Call to Order and Roll Call

The Regular meeting of the Jurupa Valley Planning Commission was called to order at 7:00 p.m. on October 21, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley.

George Ruiz presiding as Chair.

Members present:

- Robert Zavala, Chair pro Tem
- Rachel Lopez, Commission Member
- Matt Burris, Commission Member
- John West, Commission Member

2. Pledge of Allegiance

Pledge of Allegiance was led by Commissioner Zavala

3. Public Appearance/Comments - None

4. Approval of the Agenda

Commissioner West moved and Commissioner Burris seconded the motion to approve the agenda. The motion was approved 5:0.

Ayes: Ruiz, Lopez, Zavala, Burris, West

Noes: None

Abstained: None

Absent: None

5. Approval of Minutes

5.1 Commissioners agreed to continue the October 7, 2015 Planning Commission Minutes to add additional comments for the Paradise Knolls Item and to review them at the November 10, Planning Commission Meeting .

6. Public Hearings:**6.1 PUBLIC HEARING FOR ZONING CODE AMENDMENT NO. 1505****ZONING CODE AMENDMENT TO ADD THE R-VC ZONE TO SECTION 18.48
"ALCOHOLIC BEVERAGE SALES" ALLOWING THE SALE OF ALCOHOLIC
BEVERAGES FOR OFF-PREMISES CONSUMPTION SUBJECT TO A CONDITIONAL
USE PERMIT****APPLICANT: LA FAMOSA MARKET**

Ms. Annette Tam, Associate Planner presented a brief history of the Zoning Code Amendment proposed affecting the applicant. Ms. Tam stated prior to the city's incorporation, the applicant, La Famosa Market submitted a Conditional Use Permit (CUP) application to the County of Riverside to allow a vacant hardware store with the sales of alcoholic beverages for off-premises consumption. In 2011, the City Council reviewed the request and denied the application. In 2015, the applicant, La Famosa Market submitted a CUP to request the sales of alcohol beverages for off-premises consumption, but the use was not permitted in the R-VC zone. Since the use was not allowed in the zone, the applicant submitted a request to amend the zoning code to allow the use in the R-VC zone. Ms. Tam noted that staff presented the applicant's request to amend the zoning code to allow the use to the City Council on September 17, 2015. The City Council initiated the code amendment and staff prepared the draft code amendment for the Planning Commission's consideration and recommendation.

PLANNING COMMISSIONERS QUESTIONS**Commissioner Zavala**

Commissioner Zavala asked if the census tract allowance is for two licenses and would that be considered an oversaturation for the area. Ms. Tam replied if there were more than three, then it would be considered oversaturation. In addition, the ABC has a formula to determine saturation based on population on census tract maps. Commissioner Zavala inquired of details of the different types of licenses. Ms. Tam explained some of the details for the various licenses; type 86 on site tasting and type 21 for spirits. In addition, Commissioner Zavala asked if the Rubidoux Village Revitalization Program fell under the General Plan or the Rubidoux Village Plan. Ms. Tam replied the Revitalization Plan fell under the General Plan. Commissioner Zavala also asked if Emerald Meadows was located in the Rubidoux Village Plan. Ms. Tam replied it was not located in the Rubidoux Village Plan area.

PUBLIC COMMENTS OPENED

Mr. Bill Rahman, applicant, spoke in favor of the proposal and noted it would add an economic boost to the area to have this amendment consideration.

Mr. Dick Evitt, the applicant's representative, spoke in favor of the proposal and gave a brief history of the ABC License process.

Mr. Tom Merrell, Planning Director, clarified several issues for the Conditional Use Permit (CUP) process.

PUBLIC COMMENT PERIOD CLOSED**Commissioner Burris**

Commissioner Burris thanked the Planning Director for the explanation of the process and was in favor of the Code Amendment.

Commissioner Lopez

Commissioner Lopez stated as long as any applications for licenses would be heard by the Planning Commission, she would be in favor of the Zoning Code Amendment.

Commissioner Zavala

Commissioner Zavala expressed his support for the Zoning Code Amendment.

Commissioner Burris moved and Commissioner Zavala seconded the motion, to make the recommendation to City Council to adopt the Zoning Code Amendment as proposed by staff. The motion was approved 5:0.

Ayes: Ruiz, Lopez, Zavala, Burris, West

Noes: None

Abstained: None

Absent: None

7. Commission Business

7.1 GENERAL PLAN ADVISORY COMMITTEE – WORK SESSION: EXISTING GENERAL PLAN HOUSING ELEMENT POLICIES

Ms. Mary Wright, General Plan Program Manager presented detailed information of work done to date by the GPAC Committee. Ms. Wright provided draft materials for the Commissioners for discussion and input on the topic of Existing General Plan Housing Policy Review.

PLANNING COMMISSIONERS DISCUSSION

The Commissioners discussed and reviewed the Existing General Plan Housing Policy Issues, Assets and Needs in detail and deliberated on policies to be retained as is or be retained with changes. The Commissioners and Ms. Wright reviewed the recommended revisions and offered suggestions to update goals and objectives to reflect the character and values of the new City of Jurupa Valley.

8. General Plan Advisory Committee Status Report

Commissioner Zavala briefed the Commissioners on the upcoming meeting on Monday and that the topic would be Air Quality and Healthy Communities; Issues and Needs.

9. Public Appearance/Comments – None

10. Planning Commissioner's Reports and Comments

Commissioner Lopez commented on the construction issues of the Riverbend project and stated the streets have pot holes and are dangerous to travel. Chair Ruiz announced the upcoming Town Hall Meeting at 6:00 pm Tuesday, October 27 at Patriot High School.

11. Planning Department Report

Planning Director Tom Merrell explained that the Paradise Knolls Specific Plan is scheduled for a public hearing on December 9th and that he is working with staff to address the recommendations by the Planning Commission. Mr. Merrell updated the Commissioners on the upcoming schedule for the next meeting as well as the holiday meeting schedule.

There being no further business before the Jurupa Valley Planning Commission, Chair Ruiz adjourned the meeting at 7:59 to the November 10, 2015 Planning Commission Meeting at 7:00 pm at the Jurupa Valley City Council Chamber, 8930 Limonite Ave., Jurupa Valley

Respectfully submitted,

Thomas G. Merrell, AICP, Planning Director
Secretary of the Planning Commission

City of Jurupa Valley

**MINUTES
PLANNING COMMISSION
CITY OF JURUPA VALLEY
November 10, 2015**

1. Call to Order and Roll Call

The Work Session of the Jurupa Valley Planning Commission was called to order at 6:30 p.m. on November 10, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley.

George Ruiz presided as Chair.

Members present:

- Robert Zavala, Chair pro Tem
- Matt Burris, Commission Member

Members absent:

- Rachel Lopez, Commission Member
- John West, Commission Member

2. Public Appearance/Comments - None

3. Commission Business

3.1 MA1212 – WORK SESSION

RICHLAND-HIGHLAND – 398 LOT SUBDIVISION – NE OF PACIFIC AND SIERRA (EXTENSION)

APPLICANT: JOHN SCHAEFER

Ms. Annette Tam, Associate Planner presented 1) a revised project design and 2) a draft Environmental Impact Report for the proposed project. Ms. Tam stated in 2013 staff introduced "Highland Park," a residential subdivision to the Planning Commission and had provided comments on the project's design and potential impacts. The project has been redesigned to address the Commission's comments and other agency comments. Ms. Tam presented a detailed slide presentation of the project's current revisions for the Commissioners' review and highlighted several discussion items for their consideration. Ms. Tam continued her presentation at the Regular meeting.

1. Call to Order and Roll Call

The Regular meeting of the Jurupa Valley Planning Commission was called to order at 7:00 p.m. on November 10, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley.

George Ruiz presided as Chair.

Members present:

- Robert Zavala, Chair pro Tem
- Matt Burris, Commission Member

Members absent:

- Rachel Lopez, Commission Member
- John West, Commission Member

2. Pledge of Allegiance

Pledge of Allegiance was led by Commissioner Robert Zavala.

3. Public Appearance/Comments - None

4. Approval of the Agenda

Commissioner Zavala moved and Commissioner Burris seconded the motion to approve the agenda. The motion was approved 3:2

Ayes: Ruiz, Zavala, Burris

Noes: None

Abstained: None

Absent: West, Lopez

5. Approval of Minutes

5.1 Commissioner Burris moved, and Commissioner Zavala seconded to approve the October 7, 2015 Planning Commission Minutes. Commissioner Zavala moved and Commissioner Burris seconded to approve the October 21, 2015 Planning Commission Minutes. The motion was approved. The motion was approved 3:0

Ayes: Ruiz, Zavala, Burris

Noes: None

Abstained: None

Absent: West, Lopez

Item 3.1 MA1212 – WORK SESSION - Continued

Mr. Ernest Perea, CEQA Administrator, presented a brief overview of the Draft Environmental Impact Report prepared by Michael Baker International Consulting firm under the direction of city staff.

Mr. Kevin Thomas, Michael Baker International, presented a brief summary of the Draft Environmental Impact Report and included a PowerPoint presentation. Mr. Thomas presented an overview of the CEQA process and important points of the Draft Environmental Impact Report. He also noted the public review period ends on November 30th.

Commissioner Zavala

Commissioner Zavala asked about the EIR report for the year 2035 and if the project were not built versus project being built would there be significant reduction in traffic impacts. Mr. Ernest Perea, CEQA Administrator, stated there would not be unavoidable significant impact for the project. Commissioner Zavala asked staff what the growth study was based on and if affordable housing was included in the project. Staff replied

the report was compiled by Southern California Association of Governments and affordable housing is not part of the project. The affordable housing part was derived from comments received from the initial scoping meeting and not part of the proposed project. Commissioner Zavala also asked about the signal at the Valley Way and 37th Street intersection. Staff replied that there will be a signal located at the intersection and that it will be synchronized.

Mr. John Schafer, Richland Communities Representative, discussed a brief history of the project and noted the initial comments received from the Commissioners had been considered and have been implemented into the revised plan.

Commissioner Zavala

Commissioner Zavala noted from previous minutes the project had not included equestrian trail discussions. Commissioner Zavala inquired if the project would consider an equestrian staging area at the end of Paramount. Mr. Schafer stated they would review options. Commissioner Zavala also asked about the determination of water districts to serve the project. Mr. Schafer replied the majority of the project lies within the Jurupa Community Services District.

Commissioner Burris

Commissioner Burris asked about the public right-of-way for La Canada Street and if it would be vacated and developed. Mike Myers, City Engineer, replied that the City would consider it, however, the determination would be up to City Council. Mr. Myers noted 20th and Sierra would have four lanes of travel and trails on the side. Commissioner Burris asked about the number of daily trips and the Consultant replied the total accumulative trips per day on Sierra Ave. is approximately 24,700 trips as the Traffic Study specifies. Commissioner Burris inquired why staff recommended granting a Variance. Ms. Tam replied that lot irregularities due to circulation and existing developments that about the project provide justification. Commissioner Burris requested clarification on the collector streets. Mr. Myers replied that they are typically one lane in each direction.

Commissioner Zavala

Commissioner Zavala asked about the Green Belt area between lots and the purpose for the area. Staff replied there is a difference in elevation between the lots. Commissioner Zavala asked for clarification on the at-grade rail crossing safety. City Engineer, Mike Myers, stated there will be signalization and a median north and south from tracks. In addition, there will be pedestrian gates.

PUBLIC COMMENTS

Ms. Betty Anderson, resident, stated the density is high for the location and would like to see it reduced by 100 units. Another concern is the truck traffic from Sierra Ave.

COMMISSIONERS DISCUSSION

Commissioners discussed the following:

1. Equestrian - Consider staging area for equestrian
2. Street- Prefer narrower streets by a few feet (from curb to curb) and street median
3. Weight Limit Restriction for Trucks – Prefer to extend weight limit restriction for trucks on Sierra Avenue through the tract.
4. Bike Lane – Requested a more detailed cross-section
5. Fencing – (1) Not in favor of vinyl fencing; (2) request for graffiti protection on perimeter walls
6. Landscaping – (1) Prefer other species of trees with larger canopies; (2) prefer wider parkways for landscaping and trails;

7. Speed Limit near Park. Request for a 20 mile per hour speed limit around the Community Park.
8. Street Lighting –(1) Prefer street lighting at pedestrian scale; (2) shielded light fixtures for the parks
9. Sierra Avenue & 20th Street – Prefer wider sidewalks (6' wide)

Commissioners addressed the items for consideration and were pleased with the revised plans.

Chair Ruiz

Chair Ruiz noted representing the Assistant City Attorney, Ms. Serita Young, was Ms. Maricela Marroquin.

6. Public Hearings:

6.1 MASTER APPLICATION (MA) NO. 14160 (CONDITIONAL USE PERMIT (CUP) NO. 1402/SITE DEVELOPMENT PERMIT (SDP) NO. 31462/PUBLIC CONVENIENCE OR NECESSITY (PCN) NO. 15003)

REQUEST TO CONSTRUCT AN ARCO GAS STATION, A DRIVE-THRU CAR WASH AND AN AM/PM CONVENIENCE STORE WITH BEER AND WINE SALES FOR OFF-SITE CONSUMPTION. A DETERMINATION OF PUBLIC CONVENIENCE OR NECESSITY IS REQUIRED FOR ALCOHOL SALES.

APPLICANT: PANKAJ PATEL

Ms. Rocio Lopez, Associate Planner presented a brief presentation of the proposed request to construct an Arco Gas Station that includes a Drive-thru car wash, and an AM/PM convenience store with Beer and Wine Sales. The applicant proposes to demolish an existing 1,735 square-foot auto repair building and construct a new Arco gas station consisting of a 3,258 square-foot facility.

The site is located along the south side of Limonite Avenue with the De Anza Plaza Shopping Center at the northeast corner of the Kmart site. Ms. Lopez presented a slide presentation of the site plan that included an elevation map, architectural design and street improvements proposed for the area.

Mr. Fred Cohen, Applicant representative, thanked the Commissioners and staff and noted they had met with staff to discuss to finalize the design proposed project. Mr. Cohen noted the project was designed as an example of a one-stop service to meet the needs of the community.

PLANNING COMMISSIONERS QUESTIONS

Commissioner Zavala

Commissioner Zavala asked if the station would be providing diesel fuel and if this was the first franchise for the owner. The applicant replied diesel fuel will be provided and noted this was the first franchise for the applicant. Mr. Cohen noted the average sales for the car wash projected would be approximately 10 to 12 thousand dollars a month in gross sales.

Chair Ruiz

Chair Ruiz requested clarification on the landscape plan and specifically if trees would be planted in the center median. Mr. Cohen replied the trees will be added to the landscape plan.

Commissioner Zavala

Commissioner Zavala asked if the pumps would have the new automated video advertising. Mr. Cohen noted that would be an option available to the Franchisee.

Maricela Marroquin, Assistant City Attorney noted staff would be amending the Conditions of Approval to add that the project comply with the color board site/amenity package contained in the staff report.

PUBLIC COMMENT PERIOD CLOSED

Commissioner Burris

Commissioner Burris stated he was pleased with the architectural design and the location of the proposed project.

Commissioner Zavala

Commissioner Zavala stated he too was in favor and indicated that the project fits well with the community. Commissioner Zavala noted the proposed project is an upgrade for the community.

Commissioner Burris moved and Commissioner Zavala seconded the motion to adopt Planning Commission Resolution No. 2015-11-10-01 granting the issuance of CUP No. 1402, Site Development Permit (SDP) No. 31462 and Public Convenience or Necessity (PCN) No. 15003 subject to the Conditions of Approval. The motion was approved 3:0.

Ayes: Ruiz, Zavala, Burris
Noes: None
Abstained: None
Absent: West, Lopez

6.2 PUBLIC HEARING ON A DRAFT MUNICIPAL CODE AMENDMENT (ZCA 1506) ADDING SECTION 9.10.110, MARIJUANA CULTIVATION PROHIBITED, TO CHAPTER 9.10, AMENDMENTS TO THE COUNTY ZONING ORDINANCE, OF TITLE 9, PLANNING AND ZONING, OF THE JURUPA VALLEY MUNICIPAL CODE TO AMEND AND SUPERSEDE CERTAIN PROVISIONS OF THE RIVERSIDE COUNTY CODE AND RIVERSIDE COUNTY ORDINANCE NO. 348 AND ADDING CHAPTER 11.25, MARIJUANA CULTIVATION, TO TITLE 11, PEACE, MORALS AND SAFETY, OF THE JURUPA VALLEY MUNICIPAL CODE TO PROHIBIT MARIJUANA CULTIVATION, AND FINDING AN EXEMPTION FROM CEQA UNDER SECTION 15061(B)(3) OF THE CEQA GUIDELINES

Ms. Maryann Marks, Senior Planner, presented the staff report and asked the Commission to adopt Resolution No. 2015-11-10-02 that forwards a recommendation of City Council approval of Municipal Code Amendment ZCA No. 1506, a proposed ordinance that would amend the Jurupa Valley Municipal Code and Zoning Ordinance to prohibit marijuana cultivation.

Ms. Marks briefed the Commissioners of the recently signed law called the Medical Marijuana Regulation and Safety Act, which is comprised of three related bills, AB 243, AB266 and SB643. The Act establishes licensing requirements for the cultivation, distribution and transportation of medical marijuana, safety and testing standards for medical marijuana and medical marijuana products and it also regulates the physicians who recommend or prescribe medical marijuana to patients. Ms. Marks further explained the Act allows cities to maintain local control over medical marijuana and does not require a city to allow medical marijuana dispensaries within its border.

The City adopted Section 17.12.040 on July 1, 2011 which prohibits medical marijuana dispensaries in any zone classification in the City however, the City's land use regulations neither prohibit nor regulate marijuana cultivation and noted if the City wishes to ban the cultivation of marijuana, the City Council must take immediate action to adopt a land use ordinance that bans the cultivation of marijuana. This ordinance must be in effect by March 1, 2016. The proposed amendment ZCA No. 1506 specifically addresses cultivation of marijuana in the City. This prohibition would apply to both indoor and outdoor cultivation in all zones within the City with certain exceptions. If the City prohibits the cultivation of medical marijuana by ordinance then the State Department of Food and Agriculture may not issue a state license to entities desiring to cultivate medical marijuana within Jurupa Valley's jurisdiction. Ms. Marks presented details of 11 different criteria for limited exemptions for the Commissioners review.

PLANNING COMMISSIONERS QUESTIONS

Commissioner Burris

Commissioner Burris requested clarification for the criteria mentioned. Assistant City Attorney Ms. Marroquin explained the criteria are State Law and gave additional details.

Commissioner Zavala

Commissioner Zavala asked if the Ordinance is to be considered an emergency one. Staff replied it was not an emergency Ordinance, however, the Ordinance must be in effect by March 1, 2016. Commissioner Zavala asked if local law takes precedent over federal law regulations. The Assistant City Attorney replied that federal law has left enforcement to local city jurisdictions but that the Act also includes an appeal process.

Commissioner Burris

Commissioner Burris inquired if any funding would be affected if the Ordinance was not approved. Staff confirmed funding may be affected. Assistant City Attorney also briefed the Commissioners of additional details pertaining to the legal aspects of enforcement and permit criteria.

PUBLIC COMMENT

There were no speakers from the public

PLANNING COMMISSIONER COMMENTS

Commissioner Zavala

Commissioner Zavala stated he was in favor of the proposed Ordinance

Commissioner Burris

Commissioner Burris stated he was in agreement and supports the Ordinance proposal.

Chair Ruiz

Chair Ruiz stated he was in agreement and supports the Ordinance proposal.

Commissioner Burris moved and Commissioner Zavala seconded the motion to adopt Planning Commission Resolution No. 2015-11-10-02 recommending that the City Council approve Municipal Code Amendment (ZCA No.1506), a proposed ordinance that would amend the Jurupa Valley Municipal Code and Zoning Ordinance to prohibit marijuana cultivation. The motion was approved 3:0.

Ayes: Ruiz, Zavala, Burris
 Noes: None
 Abstained: None
 Absent: West, Lopez

7. Commission Business

7.1 WORK SESSION: EXISTING GENERAL PLAN AIR QUALITY POLICY REVIEW

Ms. Maryann Marks, Senior Planner presented the most recent input from the October 26th meeting of the General Plan Advisory Committee on Air Quality Assets, Issues and Needs. Ms. Marks indicated there are no air quality policies in the Jurupa Area Plan and in addition, Healthy Community policies are not included as there was not a Healthy Communities Element of the Riverside County General Plan when the City of Jurupa Valley incorporated in 2011 and adopted the General Plan as its own.

Ms. Marks noted that at the City Council's direction, staff will be developing a new Healthy Communities Element for the Interim General Plan and stated the input from the Commission will assist the Planning Department in its preparation of the Draft IGP. At a later date, the Commission will be asked to provide direction on new policies, based on technical data, public comment and further policy refinement by staff. The presentation outlined, contains the existing General Plan and several policies, program and issues no longer apply and some are relevant but need changes to reflect the new City's values, goals and needs.

PUBLIC COMMENT

Resident Ms. Betty Anderson stated AQMD has criteria for sensitive receptors for development and should consider including similar documentation for the revised plan.

COMMISSION DISCUSSION

Commissioners discussed and reviewed materials and made recommendations for the Air Quality Policy Review Element Matrix on the following topics:

1. Multi-Jurisdictional Cooperation and policy language revision
2. Sensitive Receptors policy language
3. Mobile Pollution Sources and Stationary Pollution Sources
4. Energy Efficiency and Conservation
5. Housing Ratio Element
6. Education and Job Training – Business Development
7. Particulate Matter – Monitoring-Control Measures

8. General Plan Advisory Committee Status Report

Commissioner Zavala briefed the Commissioners on the upcoming meeting December 14th for the Review of the Final Summary Report and the upcoming Study Session with

both City Council and Planning Commissioners on Land Use Changes scheduled for December 1 at 6:00 p.m.

9. Public Appearance/Comments – None

10. Planning Commissioner's Reports and Comments

Chair Ruiz commented that both Commissioners West and Lopez were absent due to family illness and Commissioner Lopez was recovering from illness and wished them both support and well wishes.

11. Planning Department Report

Planning Director Mr. Tom Merrell updated the Commissioners on the upcoming joint meeting scheduled for December 1st, with City Council and Planning Commissioners. In addition, the next scheduled meeting for the Commissioners on December 9th would include several projects as well as the reorganization of the Commissioners would be scheduled. Mr. Merrell responded to Commissioner Zavala question regarding the warehouse policy area and stated it would be considered. Mr. Merrell reminded the Planning Commission of the holiday meeting schedule.

There being no further business before the Jurupa Valley Planning Commission, Chair Ruiz adjourned the meeting at 10:36.

Respectfully submitted,

Thomas G. Merrell, AICP, Planning Director
Secretary of the Planning Commission

City of Jurupa Valley

**MINUTES
PLANNING COMMISSION
CITY OF JURUPA VALLEY
December 9, 2015**

1. Call to Order and Roll Call

The Work Session of the Jurupa Valley Planning Commission was called to order at 6:00 p.m. on December 9, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley.

George Ruiz presided as Chair.

Members present:

- Robert Zavala, Chair Pro Tem
- Matt Burris, Commission Member
- Rachel Lopez, Commission Member
- John West, Commission Member

2. Public Appearance/Comments – None

3. Commission Business

**3.1 WORK SESSION -PROPOSED CHANGES TO THE INTERIM GENERAL PLAN
LAND USE MAP AND LAND USE DESIGNATIONS**

Mr. Jeff Hook presented a brief summary of the most recent proposed changes to the Interim General Plan Land Use Map and Land Use designations. Mr. Hook briefed the Commissioners on the recent Joint City Council/Planning Commission Study Session where 19 properties within the City were the subject of possible land use changes as part of the Interim General Plan. Mr. Hook explained that the 19 areas represent the areas staff believes are most critical to address major issues identified by residents, other stakeholders and the GPAC. Staff is proposing two types of proposed land use changes; 1) the basic or integrated land use changes would be adopted with the Interim General Plan and would go into effect immediately following approval, and 2) the Program land use changes would be implemented following General Plan adoption after additional outreach and involvement of affected property owners. The Program changes are identified by a (CDO) "Community Development Overlay" and in these cases, the CDO would be applied to the underlying designation and would indicate the City's intent to study the area further and property owners would then be able to request zoning changes consistent with those changes. Mr. Hook presented a slide presentation of each of the areas and further explained each of the proposed Interim General Plan Land Use Map changes.

PUBLIC COMMENTS OPENED

Mr. John Noian, property representative, stated he was opposed to the proposed land use changes.

Ms. Janice Loomis, property owner, opposed the land use proposed for her property.

Mr. Richard Ortiz, property owner representative, is concerned with the proposed land use changes for future use of their businesses.

Mr. Tom Searles, property owner representative, stated the owners' objection to the proposed land use changes and prefer a commercial use designation.

Mr. Jerry Jackles, property owner, stated he would like to meet with staff to discuss the proposed land use designation.

Mr. Troy Adams, property owner, stated he would like to work with staff on proposed land use designations.

Ms. Betty Anderson, resident, stated she is concerned with the proposed land use designations, specifically on Etiwanda Ave. She is also concerned with sewer connectivity as well as heavy truck traffic in the area.

Ms. Kim Jarrell Johnson, resident, asked the Commissioners to clarify the agenda details specifically for the Land Use Designation items and stated the legal, non-conforming issue should be clarified to the property owners.

Mr. Stephen Anderson, resident, discussed Land Use Area 5 and asked the area remain open space.

PUBLIC COMMENTS CLOSED

Commissioner Burris

Commissioner Burris asked if a workshop would be scheduled for Land Use Areas 1-5. Mr. Hook replied workshop for Land Use Areas will be scheduled and property owners would be notified.

REGULAR SESSION AT 7:00

1. Call to Order and Roll Call

The regular meeting of the Jurupa Valley Planning Commission was called to order at 7:00 p.m. on December 9, 2015 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley.

George Ruiz presided as Chair.

Members present:

- Robert Zavala, Chair pro Tem
- Matt Burris, Commission Member
- Rachel Lopez, Commission Member
- John West, Commission Member

2. Pledge of Allegiance

Pledge of Allegiance was led by Commissioner Robert Zavala. He then asked for a moment of silence for the tragedy in San Bernardino.

3. Public Appearance/Comments - None

4. Approval of the Agenda

Commissioner Burris moved and Commissioner West seconded the motion to approve the agenda. The motion was approved 5:0

Ayes: Ruiz, Zavala, Burris, West, Lopez

Noes: None

Abstained: None

Absent: None

5. Approval of Minutes

5.1 Commissioner Zavala moved, and Commissioner Burris seconded to approve the November 10, 2015 Planning Commission Minutes. The motion was approved 3:2 with 2 abstentions.

Ayes: Ruiz, Zavaia, Burris

Noes: None

Abstained: West, Lopez

Absent: None

6. Public Hearings:

6.1 MASTER APPLICATION MA15110 (TPM36976)-CONDOMINIUM MAP FOR APPROVED BUSINESS PARK

WESTERLY OF DE FOREST CIRCLE; SOUTH OF HOPKINS STREET; NORTH OF NOBEL COURT

APPLICANT: BOATMEN DEVELOPMENT

Ms. Annette Tam presented the proposed project for approval of a tentative parcel map for condominium purposes subject to conditions. Ms. Tam stated the applicant is proposing to subdivide the airspace for a previously approved Business Park as an industrial condominium, and explained that an individual or an entity can own the building or unit within the airspace. The common areas such as landscaping and parking areas will be owned and maintained by a property owner's association as required by a recommended condition. Ms. Tam gave a brief history of the project dating back to 2011 and the County's approval within the Mira Loma Commerce Center and culminating with the lawsuit against the project by Center for Community Action and Environmental Justice (CCAJE). To resolve CCAJE's claims, a Consent Judgement was executed on February 14, 2013 noting the approved plans are subject to the conditions of the Consent Judgement. Ms. Tam briefed the Commissioners on the detailed list of conditions required.

PLANNING COMMISSIONERS QUESTIONS

Commissioner Lopez

Commissioner Lopez stated the residential area has for many years been locked in with only one way in and one way out and inquired if there is an emergency exit as a matter of safety. Ms. Tam replied the Fire Department has designated a secondary option in the case of an emergency. Lansford Street would be unlocked.

Mr. Brad Boatman, Project Representative stated he had no comments and thanked the Commissioners.

PUBLIC COMMENTS OPENED – NONE

PUBLIC COMMENTS CLOSED**Commissioner Burris**

Commissioner Burris asked about the approval for the tentative parcel map and conditions of approval. Ms. Tam replied the approval would be for the tentative parcel map only.

Commissioner Zavala moved and Commissioner West seconded the motion to adopt Planning Commission Resolution No. 2015-12-09-01 approving a tentative parcel map for condominium purposes subject to the attached conditions. The motion was approved 5:0.

Ayes: Ruiz, Zavala, Burris, West, Lopez

Noes: None

Abstained: None

Absent: None

6.2 MASTER APPLICATION (MA15088) (EXTENTION OF TIME FOR TTM33428) – REQUEST FOR ONE (1) YEAR EXTENSION OF TIME FOR TENTATIVE TRACT MAP NO.33428**HARVEST VILLAGES – LENNAR RESIDENTIAL DEVELOPMENT NORTH SIDE OF LIMONITE AVE. BETWEEN WINEVILLE AVENUE AND PATS RANCH ROAD**

Ms. Rocio Lopez, Associate Planner, presented a brief overview of Tentative Tract Map 33428. The applicant is requesting a one (1) year Extension of Time subject to Conditions of Approval. Ms. Lopez gave a brief description of the project area and noted the General Plan Land Use Designation is Medium Density Residential (MDR). Ms. Lopez also gave a brief history of the project site and previous entitlements dating back from approval from Riverside County Planning in 2009. The project was originally designed to be constructed in six phases however, due to market conditions; the 6 phases were consolidated into 3 phases. Ms. Lopez summarized the proposed Extension of Time for TTM33428 and noted the map to be in conformance with City's Zoning Ordinance and General Plan. She stated that the site is suitable for the type of development and proposed land use.

PLANNING COMMISSIONERS QUESTIONS**Commissioner Zavala**

Commissioner Zavala asked if County Ordinance 460 for subdivision had been adopted by the City of Jurupa Valley. Ms. Lopez confirmed the Ordinance was adopted by the City and that the project is in conformance.

PUBLIC COMMENTS OPENED – NONE**PUBLIC COMMENTS CLOSED**

Commissioner Burris moved and Commissioner West seconded the motion to adopt Planning Commission Resolution No. 2015-12-09-02 granting the issuance of a one (1) year Extension of Time for Tentative Tract Map (TTM) No. 33428, subject to the Conditions of Approval. The motion was approved 5:0

Ayes: Ruiz, Zavala, Burris, West, Lopez

6.3 MASTER APPLICATION (MA14115) 1) SPECIFIC PLAN 1402-PARADISE KNOLLS MATER PLANNED COMMUNITY, 2) GENERAL PLAN AMENDMENT (GPA1406), 3) CHANGE OF ZONE (CZ1496); 4) TENTATIVE TRACT MAP 36822, 5) TENTATIVE TRACT MAP 36823 (TTM36823); 6) ENVIRONMENTAL IMPACT REPORT AND 7) DEVELOPMENT AGREEMENT

LOCATION: SOUTH OF LIMONITE AVENUE, WEST OF DOWNEY STREET, NORTH OF THE SANTA ANA RIVER.

APPLICANT: JAMES KOZAK – LANSING COMPANIES

Ms. Tamara Campbell, Principal Planner, presented a description of the project. She explained that the proposed site consists of approximately 107.2 acres and that a Pre Application Review application was submitted in 2013 to solicit input for the creation of a 1,000 residential unit master planned community with a commercial component at the Paradise Knolls Country Club. To date, the Planning Commission has conducted three study sessions, reviewed two revised Specific Plans and attended a site tour of the property.

At the most recent study session (October 7, 2015), the Commission expressed concerns with the following issues: a) compatibility with the existing Pedley area b) master plan site design and configuration, c) project edges, street rights –of-way (parkway) improvements, and trail design, and d) connectivity within the project and between surrounding neighborhoods. Since the October 7th study session, City Planning, Engineering and Management staff have worked closely with the applicant to develop options and resolve concerns. As a result of these meetings, the applicant submitted a revised Plan that provided stronger design standards and increased the level of subsequent Planning Commission review. Ms. Campbell discussed the highlighted areas in the slide presentation.

Mr. Ken Norton, EIR Consultant discussed the Environmental Impact Report and noted the report had been prepared in accordance with all the legal mandates set by the California Environmental Quality Act. Mr. Norton presented an overview of the impacts to the project.

PLANNING COMMISSIONERS QUESTIONS

Commissioner Burris

Commissioner Burris requested clarification if the specific plan for the proposed community be a gated community and crime prevention design. Ms. Tamara clarified it does not specify a gated community and consultant would clarify crime prevention design.

Commissioner Zavala

Commissioner Zavala requested clarification from the EIR Consultant for provisions for equestrian runoff in the larger lots to the Pyrite Creek. Mr. Ken Norton stated there are provisions in the EIR for drainage concerns and runoff would drain directly onto the storm drain system.

Commissioner West

Commissioner West requested clarification of existing levee and any concerns. Mr. Ken Norton, EIR Consultant clarified that the new levee would tie in with existing one and is one of the conditions of approval.

Commissioner Lopez

Commissioner Lopez stated she is concerned with flooding and density.

Commissioner Burris

Commissioner Burris inquired why the building on site was not considered of historical significance. Mr. Ken Norton replied building was evaluated by historians and determined it did not have historical context, however recommended a historical marker for community awareness.

PUBLIC COMMENTS OPENED

Mr. Jim Kosak, applicant/representative, briefed the Commissioners of the project and introduced the development team.

Mr. Matthew Fagen, consultant to representative, briefed the Commissioners of the current architectural and design revisions and noted the design follows the Pedley Village Design Guidelines.

PLANNING COMMISSIONERS QUESTIONS

Commissioner Zavala

Commissioner Zavala requested clarification of the wells on the property and if they would be capped. Mr. Kozak stated that plans had not been finalized with Jurupa Community Services District to date and would recommend continuing their use for irrigation purposes. Commissioner Zavala also asked about wildlife provisions in the area and the potential for a community garden designation.

Mr. Morales, Wildlife Consultant, had replied to the Fish and Wildlife agency and noted that a Habitat Conservation Plan is in place for this project. Mr. Fagen noted the location of the community garden location.

Chair Ruiz

Chair Ruiz asked about the ½ acre lots and trail connectivity to the river. Mr. Kosak replied that the future tentative tract map would illustrate connectivity through that specific area.

PUBLIC COMMENTS OPENED

Ms. Kim Jarrell Johnson, resident, stated she was opposed to the project due to various concerns such as traffic, density, no facility for Home Owners Association, parking and was concerned that the staff report lacked information related to the project.

Ms. Betty Anderson, resident, stated she was concerned with density issues and architectural design.

Mr. Stephen Anderson, resident, stated he was concerned with density and trails standardization and is opposed to the project.

Mr. Edward Lee, resident, stated he is concerned with plumes from Stringfellow and also the additional traffic and density that the project would create along Limonite.

Mr. Robert Ramirez, resident, stated he is in support of the project.

Mr. Richard Koosa, representative from Community Works Design Group, stated he represents communities with transit orientated centers and discussed land use density and regional needs.

Mr. Ron Anderson, resident, stated he opposed to the project.

Mr. Matthew Fagan, applicant's representative, replied to the various issues addressed by the residents in the Public Comment period.

Mr. Ken Norton, EIR consultant, replied to the question about the Stringfellow plumes and stated that EIR examines the issue and noted that the project will not be using ground water for potable supply use. He indicated that he will add additional language for conditions that require further precautions. Mr. Norton also addressed the traffic issue concerns.

PUBLIC COMMENTS CLOSED**Commissioner Burris**

Commissioner Burris stated he was in support of the project with current revisions and refinement of design and connectivity.

Commissioner West

Commissioner West stated he is in support of the project and agreed with Mr. Kozak's revisions to the proposal.

Commissioner Lopez

Commissioner Lopez stated she is concerned with density and traffic issues.

Commissioner Zavala

Commissioner Zavala stated he was in support of the project and the Neighborhood Development Plan addresses concern with the design for future uses. He also suggested CC&R's for consideration.

Commissioner Burris

Commissioner Burris suggested additional planning concepts for consideration and refinement for the project and included the following recommendations; a) to include conditions to change the specific plan language so as to require smaller blocks 400-800 feet long with a perimeter of 600 feet; b) provide better pedestrian connectivity between single-family residences and future retail; c) include a requirement for a "Tree Removal Permit" as part of the HOA, CC&R's; d) the internal streets should be revised to have narrower lanes and lanes wider than 10 feet should be striped to delineate a 10 foot carriageway; e) prohibit homes from backing up to a collector street, collector street frontage or side yards allowed; f) multifamily units on Limonite should face and have direct pedestrian access to Limonite Ave., walkway; g) ensure that any homes on Downey and 63rd front the street; h) the housing types should be refined to include more traditional types also be refined so as to be less automobile oriented; i) the Specific Plan should have language to provide direction on appropriate CEPTED strategies for future development; j) require the use of mid-block pedestrian pathways for blocks greater than 800 feet long; k) provide examples of ally loaded homes that show dimensions and details.

Chair Ruiz

Chair Ruiz requested clarification for provisions of maintaining undeveloped property while under construction. Ms. Tamara Campbell replied that in the supplemental staff report, she included a condition of approval requiring a phasing plan for preservation and maintenance of the undeveloped properties during construction.

Mr. Tom Merrell discussed the Neighborhood Development Plan requirement in detail and the map with additional conditions for remaining architect and landscaping.

Commissioner Burris moved and Commissioner Ruiz seconded the motion to reopen the hearing for Tentative Tract Map No. 36823 and the Development Agreement Hearing and to continue the request to January 13th 2016. The motion carried 5-0.

Ayes: Ruiz, Zavala, Burris, West, Lopez
Noes: None
Abstained: None
Absent: None

Commissioner Zavala moved and Commissioner Ruiz seconded a motion recommending that the City Council approve the Specific Plan 1402, to address concerns that relate to the following: a) change the configuration of the tract to comply with the Specific Plan provisions for length of blocks, b) provide better pedestrian connectivity between single-family residences and future retail, c) include a requirement for a "Tree Removal Permit" as part of the HOA CC&R's, d) revise the internal street widths to be narrower, e) ensure that homes on collector streets face the street, f) ensure that multifamily units have access to the Limonite Ave. walkway, g) ensure that any homes on Downey and 63rd front the street, h) the housing types should be refined to include more traditional types, i) ensure that future tracts include CEPTED strategies, j) provide pedestrian pass-thru's, k) provide examples of ally loaded homes that show dimensions and details.

The motion also included the recommendation that the City Council approve General Plan Amendment 1406 and Change of Zone 1496 and Tentative Tract Map 36822 and to certify and adopt the Environmental Impact Report. The motion was approved 4:1

Ayes: Ruiz, Zavala, Burris, West

Noes: Lopez

**3.1 STUDY SESSION –GENERAL PLAN LAND USE STUDY SESSION NO. 1:
PROPOSED GENERAL PLAN LAND USE ELEMENT TEXT AMENDMENTS
AND LAND USE MAP AMENDMENTS IN WEST CITY AREA: LUA-1,LUA-2
LUA-17 AND LUA-19**

Mr. Jeff Hook, Principal Planner, presented a brief history of recent Joint City Council/Planning Commission Study Sessions and highlighted the proposed land use designations and amendments and how to organize discussion of the proposals. It was determined that the land use designations for this session be merged through the subsequent study session on the various General Plan elements and in order to organize for in-depth discussion of the proposed land use changes, they will be divided into west, central, and east areas. Mr. Hook presented Land Use Changes for LUA-1, LUA-2, LUA-17 and LUA19 areas and began with LUA-1, the Etiwanda Residential Infill Corridor. Mr. Hook noted there are 113 parcels and recommended change for land use designation for approximately 100 acres from Retail Commercial (C-R) to Retail Commercial – Community Development Overlay (CR-CDO) to implement General Plan program to preserve and expand residential uses along Etiwanda.

COMMISSION COMMENTS

Discussions of the following topics were discussed:

1. Community Development Overlay for the area and details how it would affect the area.
2. Notification to property owners
3. Lot sizes

4. Density
5. Discussion of Legal, Non-Conforming Uses
6. Land Use Designation to be removed and added
7. Policy Areas
8. Equestrian Lifestyle Overlay
9. Historical Overlay
10. Flabob Airport Influence Policy Area

PUBLIC COMMENTS OPENED

Mr. John Nolan, representing Riverside Cement, stated he is opposed to the proposed Land Use Designation, LUA-9 recommendation from industrial use to business park use.

REGULAR SESSION AT 7:00

1. Call to Order and Roll Call

The regular meeting of the Jurupa Valley Planning Commission was called to order at 7:00 p.m. on January 13 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley.

Robert Zavala presided as Chair.

Members present:

- John West, Chair pro Tem
- Matt Burris, Commission Member
- Rachel Lopez, Commission Member
- George Ruiz, Commission Member

2. Pledge of Allegiance

Pledge of Allegiance was led by Chair Pro Tem John West.

3. Public Appearance/Comments – Continuation from item 3.1

Ms. Kim Jarrell Johnson, resident stated she would like copy a of the staff report and maps for reference during discussion.

CONTINUED COMMISSION COMMENTS

1. Additional Equestrian Lifestyle to the Etiwanda / Mira Loma Corridor
2. Land Use Designation Definition for LUA-1
3. Definition and Coordination for LUA-19
4. Additional land use changes for the western area to be considered

4. Approval of the Agenda

Commissioner Burris moved and Commissioner West seconded the motion to approve the agenda. The motion was approved 5:0

Ayes: Ruiz, Zavala, Burris, West, Lopez

Noes: None

Abstained: None

Absent: None

5. Approval of Minutes

5.1 Commissioner Burris moved, and Commissioner Lopez seconded to continue the December 9, 2015 Planning Commission Minutes for further information on Item 6.3 and to provide a copy of CD of Hearing. The motion was approved 5:0

Ayes: Ruiz, Zavala, Burris

7. Commission Business

7.1 STUDY SESSION: ZONING CODE AMENDMENT ZCA1503 TO ADD A PROVISION FOR "INTEGRATED LIVING SUITE" TO ALLOW A SEPARATE INDEPENDENT LIVING AREA WITHIN A SINGLE-FAMILY HOME ON LOTS LESS THAN 7,200 SQUARE FEET.

Ms. Annette Tam, Associate Planner, presented a history of the zoning code amendment initiated by City Council on July 16, 2015 to allow some residents of a single-family dwelling to live independently of others within the home on lots less than one acre. On September 23, 2015 the Planning Commission held a study session and staff discussed the current issue and the intent and benefits of the code amendment. Ms. Tam discussed the difference between Integrated Living Suite and Principal Living Area. The Integrated Living Suite is a subordinate living area and the remaining area is considered Principal Living Area. Ms. Tam noted several sample development standards such as architectural design requirements, minimum lot size, required interior connection, size restriction, owner-occupancy restriction, and parking requirements.

PUBLIC COMMENTS OPENED

Mr. Geoff Smith, Lennar Homes representative, stated Lennar provided a letter for the commissioners regarding the design considerations and deed restrictions and lot size and twenty percent for new tracts.

Mr. Dan Boyd, DR Horton representative, requested thirty or no less than twenty-five percent for new tracts and parking constraints consideration and deed restrictions and offered the suggestion of deed restriction for the second unit which can only be occupied by a family member.

Ms. Kim Jarrell Johnson, resident stated integrated living unit should only be 1 bedroom and stated the parking is a concern and was concerned with lot size as well. Ms. Johnson also requested clarification of the planning approval process for second units permit.

Ms. Betty Anderson, resident stated she is opposed to the lot size less than 7,200 square foot lots for these units.

Mr. Stephen Anderson, resident stated he is opposed to the lot size less than 7,200 square foot lots.

PUBLIC COMMENT CLOSED

COMMISSION COMMENTS

Commissioners discussed the following concerns and issues:

1. Lot size should remain no less than 7,200 sq. ft.
2. Maximum of 1,000 sf.
3. Direct access from street
4. Design standards be consistent
5. Covered parking requirements standards/restrictions
6. Add additional language for Deed restrictions
7. New Tract requirements not to exceed 30% and only 1 bedroom

8. Public Appearance/Comments – None

9. Planning Commissioner's Reports and Comments

Commissioner Lopez thanked staff and commissioners for their support during her illness. Commissioner Ruiz briefed the commissioners of the upcoming events for annual APA conference to be held in Pasadena. Commissioner Burris briefed the commissioners of the recent Healthy Jurupa and the topic new development. Chair Zavala thanked the Commissioners and looked forward to the coming year and reminded Commissioners and staff of his vacation schedule and will miss the January 27th Commission Meeting.

10. Planning Department Report

Mr. Merrell stated updates for the for the next meeting on January 27th and discussed the topics to be on the agenda as well as the GPAC presentation at the next City Council meeting.

There being no further business before the Jurupa Valley Planning Commission, Chair Zavala adjourned the meeting at 9:18

Respectfully submitted,

Thomas G. Merrell, AICP, Planning Director
Secretary of the Planning Commission

Noes: None

Abstained: Zavala, Lopez

Absent: None

6. Public Hearings:

6.1 MASTER APPLICATION 14115: TENTATIVE TRACT MAP 36823, NEIGHBORHOOD DEVELOPMENT PLAN 1601 (NDP1601) AND DEVELOPMENT AGREEMENT 1403 (DA1403) FOR PROPERTY WITHIN THE PARADISE KNOLL'S SPECIFIC PLAN (CONTINUED FROM JANUARY 27,2016)

Ms. Tamara Campbell, Principal Planner, provided the Commissioners a Power Point presentation and a detailed review of recent items requested by the Commissioners for consideration.

Mr. Matthew Fagen, Representative for the Lansing Companies, presented an overview of the revisions to date as requested by staff.

Mr. Ken Norton, EIR Consultant, presented a brief summary of the EIR.

PUBLIC COMMENT OPENED

Mr. David Zimmerman, resident, spoke in favor of the project.

Mr. Edward Lee, resident, spoke in opposition of the project.

Ms. Kate Hall, resident, spoke in favor of the project.

Mr. Robert Ramirez, resident, spoke in favor of the project.

Ms. Betty Anderson, resident, spoke in opposition of the project.

Ms. Kim Jarrell-Johnson, resident, spoke in opposition of the project.

Mr. Don Porter, resident, spoke in opposition of the project.

Mr. Stephen Anderson, resident, spoke in opposition of the project.

PUBLIC COMMENT CLOSED

The Planning Commission discussed the proposed Tentative Tract Map, Neighborhood Development Plan and Development Agreement.

Commissioner Lopez shared her experience as the Equestrian Center Manager in Pico Rivera and noted operational challenges.

Some of the Commissioner's expressed concern with the future operation of the Equestrian Center. It was requested that staff conduct research on the management and size of equestrian centers and present such research to the City Council.

Commissioner Burris asked if the City consider increasing the minimum number of stalls at the equestrian center. A discussion of the economic viability of the equestrian center ensued. It was agreed that staff should work with the developer to investigate the number of horses needed to support the cost of operating the equestrian center.

Commissioner Ruiz expressed concerns with the levee not being certified.

Commissioner West expressed concerns with the levee and the flood plain.

Chair Zavala indicated his support of the project and commended the project applicant and consultants for addressing the Planning Commission's concerns and expressed support of the requested entitlements.

Commissioner Ruiz moved and Commissioner West seconded the motion to approve MA14115. The motion was approved 4:1

Ayes: Ruiz, Zavala, Burris, West

Noes: Lopez

Abstained: None

Absent: None

6. Public Hearings:

6.2 ZONING CODE AMENDMENT (ZCA) NO.1503 – AMEND ZONING CODE TO ADD "INTEGRATED LIVING SUITE" TO ALLOW SEPARATE INDEPENDENT LIVING AREA WITHIN SINGLE-FAMILY HOMES ON LOTS WITH A MINIMUM OF 7,200 SQUARE-FEET

Ms. Annette Tam, Associate Planner, provided a Power Point presentation of items requested by the Commissioners at a previous work session.

Mr. Geoff Smith, Representative for Lennar Homes, provided a summary of the recent recommendations suggested by staff and the Planning Commission.

PUBLIC COMMENTS OPENED

Ms. Betty Anderson, Resident, spoke in opposition of the amendment

Mr. Stephen Anderson, resident spoke in opposition of the amendment

PUBLIC COMMENT CLOSED

Commissioner Ruiz moved and Commissioner Burris seconded the motion to approve ZCA No. 1503. The motion was approved 5:0.

7. Commission Business

7.1 STUDY SESSION: MA15105/PROS1517 68-UNIT MULTI-FAMILY AFFORDABLE HOUSING PROJECT WITH 16,019 SQ.-FT. COMMERCIAL BUILDING LOCATED AT 5171 MISSION BLVD.

Principal Planner Tamara Campbell provided a power point presentation of the proposal to be considered for Planning Commission review and discussion.

Mr. Curtis Dahle, Representative for Northtown Housing presented a power point presentation of the proposed project.

COMMISSIONERS DELIBERATION

Commissioner Lopez expressed her support of the project, but indicated that the density was too high and building too plain. She felt that this site is particularly important as a "Gateway" to the community. She also stated that it doesn't conform with the rest of the Rubidoux area.

Commissioner West asked about the proposed commercial uses and tenant screening and income qualifications.

Commissioner Ruiz expressed concerns with a potential conflict of interest. Assistant City Attorney, Serita Young, explained the process for determining "conflict of interests."

Commissioner Burris would like to see the commercial building front on Crestmore and asked that configuration of the project be revised. He indicated that the design needs work and that he supports the program but the configuration is not right. He wants special consideration given to this site as an important edge and anchor to the Rubidoux Village. He would like to see the City really build that corner of town as a Village and Town Center.

The Commissioners overall were supportive of the proposal and encouraged the applicant to consider their comments and submit a revised project as a formal application.

8. Public Appearance/Comments – None

9. Planning Commissioner's Reports and Comments - None

10. Planning Department Report -None

There being no further business before the Jurupa Valley Planning Commission, Chair Zavala adjourned to the February 24, Planning Commission Meeting at 11:28 pm

7.1 STUDY SESSION – GENERAL PLAN AMENDMENT 1406 (GPA 1406) 1) DISCUSSION OF PLANNING COMMISSION REVIEW STRATEGY, 2) INTRODUCTION TO THE DRAFT 2017 GENERAL PLAN, AND 3) REVIEW GOALS, POLICIES AND

PROGRAMS IN THE DRAFT LAND USE, HOUSING, CONSERVATION AND OPEN SPACE, AIR QUALITY AND NOISE ELEMENTS.

Mr. Tom Merrell, Planning Director, and Ms. Mary Wright, General Plan Program Manager, gave an introduction to the Draft 2017 General Plan. Mr. Jeff Hook, Principal Planner, provided a PowerPoint presentation describing the purpose of the Study Session and recommending an approach for reviewing the Draft 2017 General Plan. He then gave an overview of the General Plan and described the process to date and the overall organization and approach to the General Plan. Mr. Hook then provided an overview of the following elements: Land Use, Housing, Conservation and Open Space, Air Quality and Noise. For each element, he described new initiatives and major concepts as well as key policies and programs.

COMMISSION COMMENTS

Commission comments on the Draft 2017 General Plan included the following:

Land Use Element

1. Support for the Equestrian Lifestyle Protection Overlay
2. Making policy statements stronger
3. Adding an 'intent' discussion to summary sections
4. Addressing what we want to preserve, not just what we want to discourage
5. The Community Development Overlay and how to incentivize what we want
6. The Village Center Overlay and density transfers
7. Adding language discouraging 'business as usual'
8. Whether to refer to secondary policy documents

Housing Element

1. Connecting density with unit size
2. Encouraging smaller units

Conservation and Open Space Element

Requiring Health Risk Assessments for larger projects

Air Quality Element

Adding Greenhouse Gas thresholds

Noise Element

Ensuring that noise policies don't restrict the development of Village Centers

Overall

Moderate the amount of information for future General Plan Study Sessions based on the time available.

PUBLIC COMMENTS OPENED

Ms. Kim Jarrell Johnson, resident, requested that the Planning Commission consider adding an archaeological overlay to the General Plan on and around the Stater Bros. store in Rubidoux as it was the site of the Louis Rubidoux home and may contain important cultural resources.

7.2 ANNUAL REORGANIZATION OF THE PLANNING COMMISSION

Commissioner Hofferber nominated Matt Burris as Chair and Commissioner Phannenstiel moved to close nominations and elect Commissioner Burris to the office of Planning Commission Chair for 2017. Commissioner Ruiz seconded the motion and it was approved 5:0

Ayes: Burris, Hofferber, Johnston, Phannenstiel, Ruiz

7.1 STUDY SESSION – GENERAL PLAN AMENDMENT 1406 (GPA 1406): REVIEW MAJOR GENERAL PLAN LAND USE AND MOBILITY ELEMENT INITIATIVES AND RELATED POLICIES AND PROGRAMS

Ms. Mary Wright, General Plan Program Manager, and Mr. Jeff Hook, Principal Planner, gave an introduction to the second study session on the Draft 2017 General Plan. Ms. Wright provided an overview on major Land Use and Mobility Element Initiatives and related policies and programs. Mr. Jeff Hook, provided a PowerPoint presentation which highlighted the Draft Land Use Element and the Draft Mobility Element. For each element, he described new initiatives and major concepts as well as key policies and programs for evaluation.

COMMISSION COMMENTS

Commission comments on the Draft 2017 General Plan Mobility and Land Use Elements included the following:

Multi-Purpose/Equestrian Trail System

- Chair Burris suggested clarifying what the vision of the multi-purpose trails system is
- It was suggested that the City partner with the Jurupa Area Parks and Recreation District to update existing trails
- The PC asked staff to analyze Primary Trails, Secondary Trails and Equestrian Streets and add a program to develop a funding and maintenance plan
- Overall, the Planning Commission indicated support of the Multi-Purpose and Equestrian Trails System Policies and Plan

Mobility Corridors

- The PC generally liked the Mobility Corridor concept
- There was some clarification needed about how mobility corridors relate to roadway classifications
- Overall the PC directed staff to include protection for the semi-rural character and discourage the construction of large urban arterial streets
- There was concern about collector streets going through neighborhoods

Limited Street Widening

- The PC generally liked the idea of limiting street widening to preserve the semi-rural character of the City

Scenic Corridors

- Requested that staff add a policy to provide standards for Scenic Corridors

Overall

- Chair Burris provided staff with a number of detailed comments on the Land Use Element
- Chair Burris and Commissioner Pfannenstiel stated that the large size of the Draft General Plan makes it difficult to find the important information. They recommended moving much of the background information into an Appendix or other document to streamline the Plan.

8. Public Appearance/Comments – None

9. Planning Commissioner's Reports and Comments - None

10. Planning Department Report

Ms. Tamara Campbell reported Mr. Merrell would be returning next week.

There being no further business before the Jurupa Valley Planning Commission, Chair Burris noted that the February 8th meeting has been rescheduled to February 13, 2017. The meeting adjourned to the February 13, 2017 Planning Commission Meeting at 10:35 P.M.

Respectfully submitted,

Thomas G. Merrell, AICP, Planning Director
Secretary of the Planning Commission

City of Jurupa Valley

February 22, 2017**

1. Call to Order and Roll Call

The Study Session of the Jurupa Valley Planning Commission meeting was called to order at 6:00 p.m. on February 22, 2017 at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley.

Matt Burris presided as Chair

Members present:

- William Hofferber, Chair Pro Tem
- Aaron Pfannenstiel, Commission Member
- George Ruiz, Commission Member

Members absent:

- Frank Johnston, Commission Member

2. Public Appearance/Comments - None

3. Commission Business

STUDY SESSION – MA16205 (CUP16012)- GAS STATION AND CONVENIENCE STORE WITH BEER AND WINE SALES FOR OFF-SITE CONSUMPTION AND A DRIVE-THRU CAR WASH AT 9306 JURUPA ROAD (APN:167-231-002 & 167-231-003)

Ms. Rocio Lopez, Senior Planner provided a PowerPoint presentation on the proposed Gas Station and Convenience Store located at 9306 Jurupa Rd. Ms. Lopez provided a detailed project description along with various views from the area noting the proximity to residential land uses, schools and adjacent commercial businesses. The project proposes to merge two parcels to create a .85 net acre site and develop a "76" gas station with 12 fueling positions and a 3,360 square foot fueling canopy; a 3,886 square foot "Circle K" convenience store with beer and wine sales for off-site consumption; and a 1,050 square foot drive-thru automated car wash. Also proposed is a 500 gallon propane tank that is 4 ½ feet wide by 15 ½ feet long and five feet high.

Applicant Mr. Joseph Karaki provided ownership history and provided photos of the previous gas station prior to demolition.

Tom Merrell, Planning Director, explained that the focus of this study session is to give feedback to the applicant in regard to the alcohol sales and CUP related issues, since this project has similarities with the 7-11 project that was recently denied by the Planning Commission and City Council. Other concerns listed in the staff report can be addressed during the entitlement process.

COMMISSION COMMENTS

Commission comments on the proposed project included the following:

1. Proximity and potential impacts to area residents
2. Concern that use may be incompatible with residential area
3. Concern for 24 hour operations
4. Concerns with alcohol sales in close proximity to 2 schools
5. Traffic concerns – ingress/egress – projected grade separation concerns
6. Would prefer other commercial land use options
7. Commission expressed their desire to hear from area residents
8. Site development, as proposed, is too overdeveloped for the parcel size
9. Not in favor of 20 foot pole sign

Applicant encouraged to work with staff to modify or scale down site proposed and return to Planning Commission for consideration.

REGULAR SESSION AT 7:00 PM

1. Call to Order and Roll Call

The regular meeting of the Jurupa Valley Planning Commission was called to order at 7:00 p.m. on February 22, 2017, at the City Council Chambers, 8930 Limonite Ave., Jurupa Valley.

Matt Burris presided as Chair

Members present:

- William Hofferber, Chair Pro Tem
- Aaron Pfannenstiel, Commission Member
- George Ruiz, Commission Member

Members absent:

- Frank Johnston, Commission Member

2. Pledge of Allegiance

Pledge of Allegiance was led by Commissioner Ruiz

3. Public Appearance/Comments- NONE

4. Approval of Agenda

Commissioner Pfannenstiel moved and Commissioner Ruiz seconded the motion to approve the agenda. The motion was approved 4:0

Ayes: Burris, Hofferber, Pfannenstiel, Ruiz

Noes: None
 Abstained: None
 Absent: Johnston

5. Approval of Minutes

Commissioner Pfannenstiel moved and Commissioner Ruiz seconded the motion to approve the February 13, 2017 Planning Commission Minutes. The motion was approved 4:0

Ayes: Burris, Hofferber, Pfannenstiel, Ruiz
 Noes: None
 Abstained: None
 Absent: Johnston

6. PUBLIC HEARINGS

6.1 GENERAL PLAN AMENDMENT 1406 (GPA 1406) PUBLIC HEARING NO. 1 TO CONSIDER THE DRAFT 2017 GENERAL PLAN, ZONING ORDINANCE AND MAP AMENDMENTS AND DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR).

Ms. Mary Wright, General Plan Program Manager provided a PowerPoint presentation summarizing the recent Draft 2017 General Plan study sessions and introducing the first public hearing and a presentation on the remaining Draft General Plan Elements which include Air Quality, Noise, and Community Safety, Services and Facilities.

Mr. Jeff Hook, Principal Planner continued with the presentation summarizing the Draft Environmental Justice, Healthy Communities and Economic Sustainability Elements.

Mr. Kent Norton provided an overview of the Draft Environmental Impact Report (DEIR) for the Commissioners review and discussion.

PUBLIC COMMENTS OPENED

Resident Kim Jarrell Johnson requested various clarifications of Cultural Resources Report language and also provided a compiled list of historical sites for the Commissioners review.

Mr. Phil Jones, representative for The Garrett Group requested that the majority of LUA-4 be designated Business Park. Mr. Jones provided maps for the Commissioners.

Ms. Pamela Steele, representative for Team Truck requested the General Plan map for the LUA-5 area be revised.

Ms. Sheila Ehrlich, resident is opposed to the R-1 zone on Jurupa Rd. area under consideration for zone change.

Ms. Sybl Acree, resident is opposed to the R-1 zone on Jurupa Rd. area under consideration for zone change.

Ms. Betty Anderson, resident would like to see stronger language for Commercial Truck Emissions restrictions.

Mr. Stephen Anderson, resident would like to restrict Commercial Truck routes in residential areas.

Ms. Diana Fox, Reach Out representative, thanked the Commissioners and City Council for providing in the General Plan a Healthy Communities Element.

COMMISSION COMMENTS

Commission comments on the Draft 2017 General Plan, Zoning Ordinance and Map Amendments, and DEIR included the following:

Air Quality

- *Add Greenhouse Gas expectations or standards
- *Include policies to retrofit negative air quality effects on existing sensitive receptors
- *Encourage electric vehicle charging stations

Noise

- *Consider adding a policy to evaluate existing noise impacts on a parcel-by-parcel basis
- *Add a policy that different noise standards are appropriate in certain areas, such as Village Centers

Community Safety, Services and Facilities

- *Add incentives, such as density transfers, for development in areas facing significant natural hazards to preserve risky areas

Healthy Communities

- *Look at WRCOG's draft Healthy Communities Element again to see if any areas can be strengthened
- *Make sure senior needs for social interaction and social services are addressed

Economic Sustainability

- *Consider revising the bullet list on Page 11-6 to put City in a more positive light

Other Comments

- *Regarding the potential grade separation at Jurupa and Van Buren – address in General Plan so the City has something to rely on when asking for future improvements
- *Address the potential for High Speed Rail and include a map – to help get needed right of way in the future
- *Regarding street resurfacing and other street improvements, consider adding a policy that if a project is tearing up a part of the street, the repairs must benefit the community

Chair Burris moved and Commissioner Hofferber seconded the motion to continue the hearing to the March 8th Planning Commission Meeting. The motion was approved 4:0

Ayes: Burris, Hofferber, Pfannenstiel, Ruiz

Noes: None

Abstained: None

6.2 GENERAL PLAN AMENDMENT NO. 1406 (GPA1406) PUBLIC HEARING NO.2: RECEIVE PUBLIC COMMENT AND CONSIDER THE DRAFT 2017 GENERAL PLAN, DRAFT LAND USE MAP AMENDMENTS, ZONING ORDINANCE AND MAP AMENDMENTS AND DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR).

Mr. Merrell introduced the item and provided a brief background on recent Commission hearings and study sessions. He then introduced Principal Planner Jeff Hook, who gave a PowerPoint presentation and briefed the Commissioners on 21 proposed General Plan Land Use Map amendments. He explained that notices of the proposed changes were sent to over 600 residents and agencies. He recommended the Commission hear public testimony on the proposed amendments and explained that staff responses to Commission and Public comments would be summarized at the March 22nd Planning Commission public hearing.

PUBLIC COMMENTS OPENED

Ms. Kim Jarrell Johnson requested clarification of LUA-18 comments that was reviewed by the Planning Commission and asked how the City Council was being informed of public and Planning Commission comments on the General Plan.

Mr. Robert Jimenez, owner of property adjacent to LUA-10, expressed concerns about possible development of commercial uses and possible increases in storm water runoff on to his property.

Ms. Pamela Steele, representative for Team Trucking, requested that LUA-5 be expanded to include Team Trucking and that the Heavy Industrial LUD be applied. .

Mr. Tom Searles, applicant representative for LUA-3, felt that with a street frontage over ½ mile long, it might be difficult to fill up the parcels with Tourist Commercial (C-T) uses. He

asked for Commission support to meet with City staff to discuss a possible mix of uses that included C-T and other commercial use opportunities.

Mr. Jerry Jaeckles, owner of Team Truck regarding LUA-5 requested the General Plan map for LUA5 area be revised to allow an expansion of the auto recycle business.

Mr. Matt Englihard, representative for Proficiency Capital, requested LUA-11, adjacent to his property, be denied and that it be kept industrial.

Mr. Russ Woodson, resident, requested that LUA-10 remain residential. He requested a meeting with staff regarding the General Plan changes.

COMMISSION COMMENTS

Commission comments on the Draft 2017 General Plan, Remaining Draft General Plan Elements Initiatives, Zoning Ordinance and Map Amendments were discussed. Commissioners requested clarification on comments heard in tonight's public hearing.

Mr. Merrell stated that staff will prepare responses to public comments and Commission discussion items, including options where appropriate, will be provided in the staff report for the March 22nd Planning Commission meeting for discussion.

Chair Burris moved and Commissioner Hofferber seconded the motion to continue the hearing to the March 22, 2017 Planning Commission Meeting. The motion was approved 5:0

6. Public Hearings

6.1 GENERAL PLAN AMENDMENT NO 1406 (GPA1406) – 3RD PUBLIC HEARING TO CONSIDER THE DRAFT 2017 GENERAL PLAN, DRAFT LAND USE MAP AMENDMENTS, ZONING ORDINANCE AND MAP AMENDMENTS AND DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR)

General Plan Program Manager Ms. Mary Wright and Principal Planner Mr. Jeff Hook provided a PowerPoint Presentation on the Draft 2017 General Plan. Their focus was on Planning Commission and public comments discussed at the January 11th and 25th, February 13th and 22nd and March 8th Planning Commission meetings. Ms. Wright referred to the summary of comments contained in Attachment A of the staff report and indicated that most of the comments were straightforward and can be easily addressed by staff in the revised documents. Of the twenty-four remaining comments needing clarification, nine related to various comments on the General Plan and fifteen related to the Land Use Amendment areas. Ms. Wright and Mr. Hook summarized each of the remaining comments.

PUBLIC COMMENTS OPENED

Resident and Business Owner Mr. Marwan Alabbasi stated he is opposed to changing LUA-3 to Commercial-Tourist. He would also like the City to address the homeless problem in the area.

Ms. Pamela Steele, representative for Team Trucking, requested that LUA-5 be expanded to include Team Trucking and that the Heavy Industrial land use designation be applied.

Mr. Matt Englard, representative for Proficiency Capital, requested that LUA-11 maintain his property as industrial and that staff explore how to buffer planned residential and industrial uses.

Mr. Tom Searles, applicant representative for LUA-3, asked for Commission support to meet with City staff to discuss a possible mix of uses that includes C-T and other commercial-retail use opportunities.

Mr. Jerami Schoeman, resident, opposes the proposed change from light industrial to residential on LUA-19.

Ms. Kim Jarrell Johnson, resident, suggested that LUA-3 be considered for an overlay. In addition, Ms. Johnson believes that LUA-18 is not compatible with the proposed designation.

Mr. Jorge Arriaga, resident, requested information on the proposed LUA-1 and would like to meet with staff regarding the General Plan changes.

COMMISSION COMMENTS

Comment No. 21 – The Commission clarified that Jurupa west of Etiwanda should be green (not west of Van Buren). They would also like to know the right-of-way width of Jurupa in that area.

Comment No. 22 – Regarding two distinct roadway categories, Commissioner Burris stated he explicitly wants a tool that safely allows residential driveways on a collector streets to avoid the problem encountered during the Paradise Knolls hearings.

Comment No. 25 – Commissioner Hofferber clarified that he's looking for language that addresses how to retrofit very wide roads like Camino Real through road diets or other means.

Comment No. 37 – Commission Burris stressed the desire to rename the four lowest density residential designations to disassociate from the County designations and reflect what we want the roadways to be.

Comment No. 39 – On whether to keep the tables of contents at the beginning of each element to retain the hyperlinks, the Commission is willing to wait and see how it works in the revised draft plan.

Comment No. 52 – Commissioner Pfannenstiel clarified that the potential 'source' of transferred density could be areas like the wetland/floodplain in LUA-18. He suggested adding a policy as well as a program to develop a transfer of density ordinance.

Comment No. 90 – The Commission was fine not adding an archaeological overlay but wants a program to develop an archaeological preservation program.

LUA-3 – The Commission is comfortable with the staff recommendation.

LUA-4 – The Commission is comfortable with the staff recommendation.

LUA-5 – The Commission agrees the issue should be addressed through the development application, not the General Plan.

LUA-10 – The Commission is comfortable with the staff recommendation.

LUA-11 – The Commission agrees with the need to provide buffering between residential and commercial uses. On whether to expand the residential designation to the north, they will withhold judgement until after the Emerald Ridge public hearing.

LUA-15a – The Commission is comfortable with the suggested change to retail.

LUA-15c – Commissioner Burris is uncomfortable with the proposed land use change but will support it if the property owners agree to it.

LUA-18 – The Commission supports the Business Park designation on Jurupa Road. On the remaining area, they want the ideas fleshed out a little more potentially with a low density base zone and a PUD or Specific Plan overlay that could achieve higher densities if sensitively designed.

Commissioner Johnston moved and Commissioner Hofferber seconded the motion to continue the hearing to the April 26, 2017 Planning Commission Meeting. The motion was approved 5:0.

Ayes: Burris, Hofferber, Pfannenstiel, Ruiz, Johnston

Noes: None

|----------------|---|
| Ayes: | Berkson, Burris, Hancock, Johnston, Lauritzen, Lopez, Roughton, Ruiz, West, Zavala |
| Noes: | None |
| Absent: | None |

4. JOINT GENERAL PLAN STUDY SESSION: PRESENTATION TO INTRODUCE AND REFER PROPOSED INTERIM GENERAL PLAN LAND USE CHANGES TO THE PLANNING COMMISSION

Thomas Merrell, Planning Director, reported that the purpose of this meeting is to introduce to the City Council and Planning Commission the proposed land use changes

that have been recommended by the Planning Department staff and the General Plan project team that will be brought to the Planning Commission at their December 9, 2015 meeting. Mr. Merrell gave a brief PowerPoint presentation and clarified that the proposed land use changes are based on the General Plan outreach program and previous comments from the Planning Commission and City Council.

Mr. Merrell clarified that the zoning has to be consistent with the General Plan. He advised that if the City Council adopts changes in the land use element and changes properties from one land use designation to another it will need to be followed by a change of zoning on those properties to make them consistent with the new land use designation. He explained that non-conforming uses may result from the changes in land uses to make them consistent with the General Plan.

Mr. Merrell outlined additional issues that will be focused on such as industrial land uses near homes, locations where there is too much strict commercial, and the protection of the city's equestrian lifestyle.

Mary Wright, General Plan Program Manager, gave a PowerPoint presentation highlighting the proposed land use changes related to the Interim General Plan. She facilitated various discussion items and asked for input.

5. PUBLIC APPEARANCE/COMMENTS

Sheila Ehrlich voiced the following comments: 1) Jurupa Road between Pedley Road and Van Buren should remain commercial/light industrial as the current businesses in this location are well established and should not be jeopardized. 2) Clay Street should be considered for a hospital/medical center. 3) The east side of Etiwanda should remain commercial/retail. 4) Medium density residential should not exceed four houses per acre. 5) She clarified that the Discovery Center is considered the Glen Avon community, not Sunnyslope.

Barbara Evans stated that she voted for cityhood as she wanted the equestrian lifestyle preserved. She is opposed to building any more high density homes as these developments will just add traffic to streets that are already overburdened.

Gary Scott stated that he owns 51 acres labeled as LUA-18 (Pedley Low-Density Residential Infill) as referenced on the Draft Proposed General Plan Land Use Amendments. He voiced concern that developing this property has been a challenge and he has been unsuccessful in bringing a project to fruition. He asked for guidance in resolving this issue.

Sybil Aeree voiced a concern regarding the property labeled LUA-18 (Pedley Low-Density Residential Infill), stating that she is opposed to the proposed zone change to low-density residential. She discussed the proposed rezoning along Jurupa Road and how it will negatively affect the existing businesses. She provided examples of why she believes Jurupa Road is not a good location for residential development.

Betty Anderson voiced the following concerns: 1) the LUA-1 - Etiwanda Residential Infill Corridor recommends a change in the land use designation from retail commercial to retail commercial – community development, however, more should be done to control the incompatible uses and the marijuana dispensaries along Etiwanda Avenue. 2) She noted that future low-density residential development would be hindered by the fact that the Santa Ana River Water Company does not provide sewer to this area. 3) The wording for PA 8.13 should be revised to discourage utility lines within the City's river corridor.

Tom Searles advised that he is involved with the property labeled as LUA-3 (Pyrite-Granite Hill Commercial-Tourist Area) as referenced on the Draft Proposed General Plan Land Use Amendments. He provided a brief history of the property that was formally an appliance recycling center. He is supportive of this designation and is excited to work with the City to develop this property as a future sit-down restaurant/hotel project.

Mike Goodland referred to the property labeled as LAU-13 (Hidden Valley Open Space Area). He encouraged the preservation of equestrian uses and horse trails. He specifically would like to see the development of ½ acre lots in the area that is bordered by the Santa Ana River.

Ellen Porter referred to the property labeled as LAU-13 (Hidden Valley Open Space Area), stating that she would like to see this area preserved as open space. She spoke on behalf of the Jurupa Area Recreation and Park District Trails Committee, stating that their vision is to have a trail all along the Santa Ana River with designated points of interest.

Derek Carrington, representing Recycling Centers stated that his business on Mission Boulevard has been in operation for more than 42 years. He referred to the property labeled as LUA-15B, stating that he has serious concerns about public safety, gang activity, and graffiti. He would like to see those issues addressed before any land use decisions are made.

Danielle Carrington, representing Recycling Services Centers, spoke regarding the property labeled as LUA-15B. She voiced concern that the recommended zone change will defeat the entrepreneurship of the already established businesses. She recommended that the area remain light industrial as it is economically depressed with high crime and would not make a good business district.

Kim Jarrell Johnson voiced a concern that there are areas where staff is proposing to change zoning which would create a grandfather clause to allow a business to continue operating under the previous laws. She noted that grandfathered status or a "non-conforming use" will prevent existing businesses to expand or get a loan to improve their business which is not beneficial for the community.

Wendy Mello voiced concern about the growth of the city and high-density housing. She would like to see the community kept rural with open space and horse trails. She is concerned that new development will negatively impact her quality of life.

Beatriz Canales referred to LUA-6 located at 5302 El Rio Avenue which is proposed to be changed from Heavy Industrial to Medium Density Residential. She advised that the main issue for this area is public safety and traffic.

5. COUNCIL COMMENTS

Following discussion, the City Council and Planning Commission provided feedback and gave direction to City staff.

6. ADJOURNMENT

There being no further business before the City Council, Mayor Hancock adjourned the meeting at 8:37 p.m.

The next meeting of the Jurupa Valley City Council will be held December 3, 2015 at 7:00 p.m. at the City Council Chamber, 8930 Limonite Avenue, Jurupa Valley, CA 92509.

Respectfully submitted,

Victoria Wasko, CMC
City Clerk

**MINUTES
OF THE REGULAR MEETING
OF THE JURUPA VALLEY CITY COUNCIL
February 18, 2016**

The meeting was held at the Jurupa Valley City Council Chamber, 8930 Limonite Avenue,
Jurupa Valley, CA 92509

1. 6:00 P.M. - JOINT STUDY SESSION WITH THE PLANNING COMMISSION

CALL TO ORDER – CITY COUNCIL:

- Laura Roughton, Mayor
- Verne Lauritzen, Mayor Pro-Tem
- Brian Berkson, Council Member
- Brad Hancock, Council Member
- Frank Johnston, Council Member

CALL TO ORDER – PLANNING COMMISSION:

- Robert Zavala, Chair
- John West, Chair Pro Tem
- Matthew Burris, Planning Commissioner
- Rachel Lopez, Planning Commissioner
- George Ruiz, Planning Commissioner

Mayor Roughton called the study session to order at 6:05 p.m.

2. JOINT STUDY SESSION: PRESENTATION TO INTRODUCE AND REFER THE PROPOSED HOUSING ELEMENT TO THE CITY COUNCIL AND PLANNING COMMISSION

Jeff Hook, Principal Planner, introduced the proposed Housing Element. He provided a brief PowerPoint presentation and responded to questions from the City Council and Planning Commission.

3. PUBLIC APPEARANCE/COMMENTS

Ellen Porter discussed the homelessness issue and suggested that the Council consider working with Path of Life Ministries, a local non-profit which provides housing and shelter services. She suggested that a quality condominium project is a nice alternative for entry level homebuyers.

Betty Anderson suggested that apartments should not be concentrated in one area of town and should be equally distributed. She believes the community needs more entry-level homes that would attract first time home buyers; however, there should be a minimum lot size to discourage stacked-flats and high density homes.

CITY COUNCIL AND PLANNING COMMISSION COMMENTS

Following discussion, the City Council and Planning Commission members provided input and referred the proposed Housing Element to the Planning Commission for further review.

Mayor Roughton thanked the Planning Commission for participating in tonight's meeting. She recessed the meeting at 7:29 p.m.

4. 7:00 P.M. - RECONVENE IN REGULAR SESSION

5. CALL TO ORDER AND ROLL CALL FOR REGULAR SESSION

- Laura Roughton, Mayor
- Verne Lauritzen, Mayor Pro Tem
- Brian Berkson, Council Member
- Brad Hancock, Council Member
- Frank Johnston, Council Member

Mayor Roughton called the regular meeting to order at 7:40 p.m.

6. INVOCATION was given by Abbot Hongratana, from the Suddhavasa Buddhist Meditation Center.

7. PLEDGE OF ALLEGIANCE was led by Mayor Laura Roughton.

8. APPROVAL OF AGENDA

A motion was made by Mayor Pro Tem Lauritzen, seconded by Council Member Johnston, to approve the Agenda.

9. PRESENTATIONS

A. PROCLAMATION HONORING RIVERSIDE CITY COLLEGE'S 100TH ANNIVERSARY AND MORENO VALLEY AND NORCO COLLEGES' 25TH ANNIVERSARIES

The City Council presented a Proclamation honoring Riverside City College's 100th Anniversary and Moreno Valley and Norco College's 25th Anniversaries.

Janet Green, representing the Riverside Community College District Board of Trustees accepted the Proclamation and presented a Certificate of Recognition to the Council.

B. PRESENTATION OF 2015-16 FY MID-YEAR BUDGET

Alan Kreimeier, Administrative Services Director, presented the staff report.

City Manager Gary Thompson provided additional information and responded to Council's questions.

Following discussion, a motion was made by Council Member Hancock, seconded by Council Member Johnston, to approve Fiscal Year 2015-16 amendments to the City's Budget as presented in the staff report.

Ayes: Berkson, Hancock, Johnston, Lauritzen, Roughton
Noes: None
Absent: None

10. PUBLIC APPEARANCE/COMMENTS

Ellen Porter voiced a concern that the Special Joint Council meeting on February 25, 2016 conflicts with the Jurupa Area Recreation and Park District's board meeting. This creates a missed opportunity for the JARPD board members to provide feedback.

Don Porter voiced opposition to the Paradise Knolls residential project and the housing density that is being proposed. He outlined his concerns that the proposed equestrian facility will not be used as it is intended because high-density housing does not mix well with horse owners.

Diana Leja announced that the Jurupa Valley Arts Council is gearing up for their next fundraising event: "An Evening in Tokyo." The event will take place on Saturday, February 27, 2016 at Country Village. Tickets are available by visiting their website: www.jurupavalleyartscouncil.org

Betty Anderson voiced a concern that the posted staff report for the Paradise Knolls Agenda Report did not include all the attachments.

11. INTRODUCTIONS, ACKNOWLEDGEMENTS, COUNCIL COMMENTS AND ANNOUNCEMENTS

Council Member Johnston announced that the YMCA will hold a fundraiser chili cook-off on Saturday, February 27 which benefits their programs and services. Tickets are available by contacting him at City Hall. He was pleased to attend the Eagle Scout Court of Honor last week under the leadership of Council Member Hancock. He complimented the two Eagle Scout recipients, stating that it was a very impressive ceremony. He encouraged the Jurupa Area Recreation and Park District staff to post their staff reports and financial data on their website.

Council Member Hancock offered his condolences to Mayor Roughton on the loss of her father.

Council Member Berkson announced that the next Town Hall meeting will be held Tuesday, February 23, 2016 at Rubidoux High School.

Mayor Pro Tem Lauritzen commended Council Member Hancock for his dedication to the scouting program. He expressed how he and his wife encouraged all seven of their sons to earn their Eagle Scout awards. He asked that tonight's meeting be adjourned in memory of Mayor Roughton's father.

Mayor Roughton thanked everyone for their outpouring of support over the last few weeks. She announced that Senator Richard Roth will host a small business summit at the Board of Supervisor's Chamber in the City of Riverside on Friday, February 19, 2016 at 8:00 am. Later that morning at 10:00 a.m., Assemblyman Eric Linder will host a "Senior Scam" fraud prevention program at Country Village.

12. CITY MANAGER'S UPDATE

City Manager Gary Thompson announced that the next Town Hall meeting will be held Tuesday, February 23 at Rubidoux High School. The Joint meeting with the City of Riverside will be held Thursday, February 25, 2016 at Crestmore Manor at 6:00 p.m. A public "meet and greet" reception will be held prior to the Joint Meeting.

13. APPROVAL OF MINUTES

A. FEBRUARY 4, 2016 REGULAR MEETING

A motion was made by Mayor Pro Tem Lauritzen, seconded by Council Member Berkson, to approve the Minutes of the February 4, 2016 meeting.

Ayes: Berkson, Hancock, Johnston, Roughton
Noes: None
Abstained: Lauritzen

14. CONSENT CALENDAR

A. COUNCIL APPROVAL OF A MOTION TO WAIVE THE READING OF THE TEXT OF ALL ORDINANCES AND RESOLUTIONS INCLUDED IN THE AGENDA

Requested Action: That the City Council waive the reading of the text of all ordinances and resolutions included in the agenda.

B. CONSIDERATION OF CHECK REGISTER IN THE AMOUNT OF \$2,005,610.70

Requested Action: That the City Council ratify the check registers dated January 28 and February 4, 2016 as well as the payroll register dated February 3, 2016.

C. APPROVAL OF RIGHT-OF-WAY ACQUISITION AGREEMENT FOR THE ACQUISITION OF CERTAIN PROPERTY FROM THE RIVERSIDE COUNTY REGIONAL PARK AND OPEN-SPACE DISTRICT FOR THE WIDENING OF LIMONITE AVENUE BETWEEN ETIWANDA AVENUE AND BAIN STREET

1. Requested Action: That the City Council approve the Right-of-Way Acquisition Agreement for conveyance of real property from the Riverside County Regional Park and Open-Space District to the City of Jurupa Valley and authorize the Mayor to sign the Agreement in the final form as approved by the City Attorney; and
2. That the City Council appropriate \$6,500 from the unencumbered Gas Tax funds to fund the Agreement; and
3. That the City Council authorize the City Manager to execute related documents as necessary to fulfill the terms of the Agreement.

D. UPDATING TRANSPORTATION FACILITIES TO BE FUNDED BY DEVELOPMENT IMPACT FEES BY ADDING LIMONITE AVENUE WIDENING, ETIWANDA AVENUE TO BAIN STREET, AND DELETING BAIN STREET, LIMONITE TO BELLEGRAVE

Requested Action: That the City Council pass and adopt Resolution No. 2016-02, entitled:

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF JURUPA VALLEY, CALIFORNIA, UPDATING THE FACILITIES TO BE FUNDED WITH DEVELOPMENT IMPACT FEES BY ADDING LIMONITE AVENUE FROM ETIWANDA AVENUE TO BAIN STREET AND DELETING BAIN STREET FROM LIMONITE TO BELLEGRAVE

E. AGREEMENT FOR SERVICES BETWEEN THE COUNTY OF RIVERSIDE AND CITY OF JURUPA VALLEY FOR THE VAN BUREN BOULEVARD - PHASE 1A PAVEMENT REHABILITATION PROJECT, LIMONITE AVENUE TO 56TH STREET – REMOVED FROM THE CONSENT CALENDAR FOR FURTHER DISCUSSION

1. Requested Action: That the City Council approve the Service Agreement by and between the County of Riverside and City of Jurupa Valley for the Van Buren Boulevard Pavement Rehabilitation Project - Phase 1A, Limonite Avenue to 56th Street in an amount not to exceed

\$38,000 and authorize the Mayor to execute the Agreement in the final form as approved by the City Attorney; and

2. That the City Council appropriate \$38,000 from unencumbered Measure A proceeds to fund the Agreement for the initial Environmental Clearance and Bidding Phase services.

F. ACCEPTANCE OF IMPROVEMENTS CONSTRUCTED FOR THE 28TH STREET PAVEMENT REHABILITATION PROJECT

1. Requested Action: That the City Council accept the improvements constructed by All American Asphalt, Inc. in accordance with the agreement for the 28th Street Pavement Rehabilitation Project, and authorize the City Manager to execute the Notice of Completion; and
2. Direct the City Clerk to file the Notice of Completion with the Riverside County Recorder.

G. ACCEPTANCE OF IMPROVEMENTS CONSTRUCTED FOR THE LOCAL PONDING AREAS PROJECT

1. Requested Action: That the City Council accept the improvements constructed by Gentry Brothers, Inc. in accordance with the agreement for the Local Ponding Areas Project, and authorize the City Manager to execute the Notice of Completion; and
2. Direct the City Clerk to file the Notice of Completion with the Riverside County Recorder.

H. APPROVAL OF SERVICE AGREEMENT BETWEEN THE CITY OF JURUPA VALLEY AND THE COUNTY OF RIVERSIDE FOR THE RUBIDOUX BOULEVARD AT STATE ROUTE 60 INTERCHANGE PROJECT DEVELOPMENT ACTIVITIES – REMOVED FROM THE CONSENT CALENDAR FOR FURTHER DISCUSSION

Requested Action: That the City Council approve the Service Agreement for project development activities between the City of Jurupa Valley and the County of Riverside for the Rubidoux Boulevard at State Route 60 interchange project and authorize the Mayor to sign the Agreement in the final form as approved by the City Attorney.

I. ADOPTION OF CONSTRUCTION PLANS, SPECIFICATIONS AND WORKING DETAILS, AND AUTHORIZATION FOR THE COUNTY OF RIVERSIDE TO SOLICIT BIDS FOR THE PYRITE STREET SAFE ROUTES TO SCHOOL PROJECT

1. Requested Action: That the City Council adopt the plans, specifications and working details for the Pyrite Street Safe Routes to School (SRTS) Project; and
2. Authorize the County of Riverside to solicit formal bids in accordance with applicable laws for construction of the Project subject to the California Transportation Commission (CTC) authorizing the grant funding expenditure; and
3. Approve an amendment to the Service Agreement for the Troth Street and Pyrite Street SRTS Improvements between the City of Jurupa Valley and the County of Riverside, subject to final form and format approved by the City Attorney; and
4. Direct the Administrative Services Director to amend the FY 2015/16 Capital Improvement Plan (CIP) to reflect construction costs as outlined in the financial impact section of the staff report.

J. CONSIDERATION OF A CONTRACT EXTENSION FOR PROVISION OF GEOGRAPHIC INFORMATION SYSTEM (GIS) SERVICES

Requested Action: That the City Council authorize the City Manager to enter into an agreement with Digital Map Products, Inc. for the provision of Geographic Information System (GIS) services subject to final contract review by the City Attorney.

A motion was made by Council Member Johnston, seconded by Mayor Pro Tem Lauritzen, to approve the Consent Calendar with the exception of Items 14.E and 14.H which were removed for further discussion.

Ayes: Berkson, Hancock, Johnston, Lauritzen, Roughton
 Noes: None
 Absent: None

15. CONSIDERATION OF ANY ITEMS REMOVED FROM THE CONSENT CALENDAR

14.E. AGREEMENT FOR SERVICES BETWEEN THE COUNTY OF RIVERSIDE AND CITY OF JURUPA VALLEY FOR THE VAN BUREN BOULEVARD - PHASE 1A PAVEMENT REHABILITATION PROJECT, LIMONITE AVENUE TO 56TH STREET

Mayor Roughton requested that this item be removed from the Consent Calendar for further discussion. She asked City Manager Thompson to provide a status on the City's efforts to obtain a Local Agency Code, or "Locode" which is needed for processing agreements with Caltrans.

City Manager Thompson provided additional information and responded to Council's questions.

A motion was made by Mayor Roughton, seconded by Mayor Pro Tem Lauritzen, to approve the Service Agreement by and between the County of Riverside and City of Jurupa Valley for the Van Buren Boulevard Pavement Rehabilitation Project - Phase 1A, Limonite Avenue to 56th Street in an amount not to exceed \$38,000 and authorize the Mayor to execute the Agreement in the final form as approved by the City Attorney; and appropriate \$38,000 from unencumbered Measure A proceeds to fund the Agreement for the initial Environmental Clearance and Bidding Phase services.

Jurupa Valley
California

Draft 2017 General Plan

**Appendix 7.0
Summary:
General Plan Workshops**

April 2017

DATE: APRIL 9, 2015

TO: MARY WRIGHT, CITY OF JURUPA VALLEY

FROM: BARBARA J. THOMAS, THOMAS COMMUNICATIONS GROUP, LLC

SUBJECT: INTERIM GENERAL PLAN – PUBLIC OUTREACH WORKSHOPS SUMMARY REPORT

PROJECT OVERVIEW

Thomas Communications Group, LLC was retained by the City of Jurupa Valley to provide public outreach services for the City's Interim General Plan. Specifically, our focus was to plan, organize, conduct, and summarize eight (8) neighborhood meetings under the direction of City staff. The purpose of the initial outreach was to gather public input on their vision, values and goals for Jurupa Valley and to identify positive and negative community features. According to the August 7, 2014 City Council staff report for the Interim General Plan Work Program, an initial list of communities were identified as key areas for public workshops and/or neighborhood meetings: Mira Loma, Pedley, Glen Avon, Sunnyslope, Rubidoux, Belltown, Indian Hills and Sky Country. As a result of this six-month effort, TCG prepared this Summary Report and attachments to describe the results of the public outreach.

PUBLIC OUTREACH EFFORT

Thomas Communications Group developed a public outreach plan that was reviewed by City staff and approved by the City Council at its December 4, 2014 meeting. Outreach efforts were put into motion immediately following the meeting. The outreach plan was designed to: a) inform the Community about the Interim General Plan Process and b) solicit public input on Community issues, needs and opportunities to help inform and guide the general plan effort. To solicit a broad range of community interests and perspectives, the outreach effort was also designed to reach out to diverse groups and areas within the City, including, but not limited to: Spanish-speaking residents, seniors, families, businesses, Healthy Jurupa Valley, Center for Action and Environmental Justice, Chamber of Commerce, Rotary, Environmental groups, Houses of Worship, Homeowner Associations, Youth Sports leagues, and School Districts. A distribution list for public notices and publicity is included as *Attachment 1*. A workshop flyer was prepared and widely distributed, included here as *Attachment 2*.

The Workshop promotion and publicity strategy was extensive. Workshop publicity and notices were provided in both English and Spanish and included the following:

- Thomas Communications Group represented the City at the annual Jurupa Area Recreation and Parks District's Winter Carnival held on December 13, 2014. We made contact with over 200 families from Jurupa Valley and began creating a database of individuals for the City's use regarding interim general plan communications.
- Advertising in the Riverside County Record and Press-Enterprise
- Media releases and articles in the Riverside County Record and Press-Enterprise
- One-on-one meetings with community leaders
- One-on-one meetings with business leaders

City of Jurupa Valley Interim General Plan

Public Workshops Summary Report

- Presentations at community group meetings
- Flyer distribution to 20,000 students (k-8) through Jurupa Unified School District
- Flyer distribution at a weekend Swap Meet
- Flyer distribution to community organizations
- Notice included in Burrtec's monthly invoice
- Facebook Ads
- Canvassing the business community with flyer invites and posters
- Display posters on easels at key locations such as Rubidoux and Glen Avon Libraries
- Information was posted on the City's Website
- Worked with Supervisor Tavaglione's office; Workshop announcement was included in a weekly Enewsletter
- Several E-blast notices were sent to various groups such as the Jurupa Valley Chamber of Commerce, Jurupa Valley Rotary, and a list of engaged community members who attended the Winter Carnival.

PUBLIC WORKSHOP OVERVIEW

Thomas Communications Group conducted public workshops in each of the above listed communities between January 10 and February 7, 2015, rotating days of the week and times of day for meetings to provide ample opportunity for community attendance. A total of 128 community members participated in the workshops, including five individuals attending multiple workshops. Although the total number of workshop participants was small, attendees provided many wide-ranging and valuable comments on various Community issues, needs and opportunities.

The dates and locations of workshop were:

1. Saturday, January 10, 2015 from 9:30 a.m. – 11:30 a.m.
Jurupa Community Center, 4810 Pedley Road, Jurupa Valley, CA 92509
2. Monday, January 12, 2015 from 6:30 p.m. – 8:30 p.m.
Patriot High School, 4355 Camino Real, Jurupa Valley, CA 92509
3. Tuesday, January 20, 2015 from 6:30 p.m. – 8:30 p.m.
Rubidoux High School, 4250 Opal Street, Jurupa Valley, CA 92509
4. Saturday, January 24, 2015 from 3:00 p.m. – 5:00 p.m.
Indian Hills Elementary School, 7750 Linares Avenue, Jurupa Valley, CA 92509
5. Monday, January 26, 2015 from 6:30 p.m. – 8:30 p.m.
Sky County Elementary School, 5520 Lucretia Avenue, Jurupa Valley, CA 92509
6. Saturday, January 31, 2015 from 3:00 p.m. – 5:00 p.m.
Rubidoux Library, 5840 Mission Boulevard, Jurupa Valley, CA 92509
7. Monday, February 2, 2015 from 6:30 p.m. – 8:30 p.m.
Jurupa Valley High School, 10551 Bellegrave, Jurupa Valley, CA 92509

8. Saturday, February 7, 2015 from 9:30 a.m. – 11:30 a.m.
Country Village Apartments, 10250 Country Club Drive, Jurupa Valley, CA 91752

Each workshop included Spanish translation services, Spanish speaking small group tables and facilitators, and children's area with activities for various age groups. All workshops included refreshments and snacks for participants. Attendees were greeted at a registration table so they could sign in and complete a name tag. A map of the community was available for attendees to place a star representing their place of residence. This helped to capture what specific areas the workshops were drawing from. Residents were made to feel welcome. *Attachment 3* shows a map with stars marking the communities where many of the workshop participants lived.

Thomas Communications Group worked with City staff in developing a workshop agenda and PowerPoint presentation which were used consistently throughout the meetings. The workshops were conducted with a general session opening which provided attendees with an overview of the meeting format as well as an introduction to the Interim General Plan process. Barbara Thomas of Thomas Communications Group facilitated the workshops along with City staff.

Attendees then worked in small group settings. Each group was assigned a table leader/facilitator. Groups were provided a city land-use map which helped with identifying issues and for recording comments. The facilitator's roles were to ensure that relevant questions were presented in a timely manner, to respond to questions about the Interim General Plan process, and to discuss and help record attendees ideas and comments throughout the meeting. At the conclusion of each workshop, attendees would write their comments on a post-it note and post their notes on the appropriate Interim General Plan Element flip charts. Table leaders served as scribes and attendees at each table selected a spokesperson to report out to the whole workshop as to their table's top three to five issues.

At the conclusion of the meetings, the post-it(s) were collected. Brief summary reports outlined by Interim General Plan topics were then prepared, with the comments collected and sent to City staff for distribution to the City Manager, City Council, Planning Commission and members of the Interim General Plan Advisory Committee. A detailed matrix listing all of the individual comments by General Plan topic is included as *Attachment 5*.

FINAL REPORT SUMMARY

Of the 784 comments recorded during workshops one through eight, Thomas Communications Group identified recurring themes and concerns among attendees. To help gauge the frequency (and hence, importance) of the public's comments, it was decided to aggregate the data into 20 broad categories:

1. Parks and Recreation Services and Facilities
2. Open Space, Wildlife and Natural Resource Conservation
3. Equestrian Facilities and Trails
4. Historic Preservation, Cultural Facilities and Programs
5. Desired Land Uses and Land-Use Changes
6. Housing and Homeless
7. Social Programs, Facilities and Equity
8. Street and Circulation changes and Improvements
9. Street Lighting and Overhead Utilities

*City of Jurupa Valley Interim General Plan**Public Workshops Summary Report*

10. Zoning Code Enforcement
11. Public Transportation
12. Trucking and Warehousing
13. Traffic Safety and Safe Routes to Schools
14. Utilities and Growth
15. Visual Quality and Views
16. Law Enforcement and Traffic Safety
17. Cost of Living
18. Air Quality, Noise and Environmental Quality
19. Animals in the Community, Community Character and Rural Lifestyle
20. Other

The top-three categories with the most comments were:

- Desired Land-Use and Land-Use Changes (20%)
- Street Circulation Changes and Improvements (13%)
- Parks and Recreation Services and Facilities (11%)

Attachment 4 is a graph showing the frequency of public comments as a percentage of total comments received. For example, the analysis indicated that of all 784 individual comments, 20 percent or approximately 156 comments were associated with the Desired Land Uses and Land Use Changes category. Many attendees expressed interest in seeing various big-name grocery stores such as Costco, WinCo, Sam's Club, Cardenas Market, Superior Markets, and Ralphs come to Jurupa Valley. Workshop participants would also like to see additional restaurants built, particularly sit-down, dining establishments. Retail outlets such as Target, Kohl's, Walmart, and Home Depot were also requested by the residents and some attendees suggested specific locations for these uses, with an eye toward maintaining the City's rural and semi-rural character. There were also a number of requests for a hospital and/or emergency medical facility to be constructed.

The Public's comments in the Street Circulation Changes and Improvements notably expressed a need for sidewalks. Equestrian trails, bike trails and bike lanes were also stand-outs in the data, as well as concerns over street sweeping necessity and effectiveness. The comments received about parks and recreation services and facilities show that City dwellers take great pride in the Santa Ana River and would like to expand its recreational amenities with more equestrian and hiking trails and other recreational activities. Jurupa Valley locals would also like to see more parks and walking trails built to encourage exercise and wellness. Minutes from the eight workshops are included as *Attachment 6*.

During the eight public workshops, Jurupa Valley residents expressed their city-wide concerns, ideas and praise about and for the Community. Through proper guidance from workshop facilitators and a non-threatening environment for participants, residents' ideas and comments were expressed and recorded in a manner that offers Jurupa Valley Interim General Plan decision-makers a valuable tool to help guide their course of action. Thomas Communications Group appreciates the opportunity to have worked with and served the citizens of Jurupa Valley.

Thank you.

The City of Jurupa Valley
INTERIM
GENERAL
PLAN
WORKSHOPS

Help shape the future of Jurupa Valley for years to come.

Tell us what you like about Jurupa Valley, what you feel are the Community's most important needs and issues, and what changes you would like to see.

We'd like to hear your ideas and comments on land use, shopping, streets, housing, parks, open space, trails and other aspects of our Community.

Workshops will be casual and fun. Refreshments and children's activities provided.

Workshops are free and open to residents, business and property owners and anyone else interested in Jurupa Valley's future, and will be held on the following dates and times:

| DATE | TIME | LOCATION |
|-----------------------------|------------------------|---|
| Sunday, January 13, 2014 | 9:30 a.m. - 11:30 a.m. | Jurupa Community Center, 4010 Phelan Blvd, Jurupa Valley, CA 91750 |
| Monday, January 14, 2014 | 9:30 a.m. - 6:30 p.m. | Palmer High School, 4350 Cramer Road, Jurupa Valley, CA 91750 |
| Tuesday, January 15, 2014 | 9:30 a.m. - 6:30 p.m. | Whitman High School, 4350 Cramer Road, Jurupa Valley, CA 91750 |
| Wednesday, January 16, 2014 | 9:30 a.m. - 6:30 p.m. | Indian Hills Elementary School, 7700 Lincoln Ave, Jurupa Valley, CA 91750 |
| Thursday, January 17, 2014 | 9:30 a.m. - 6:30 p.m. | Day Country Elementary School, 3550 Lincoln Ave, Jurupa Valley, CA 91750 |
| Friday, January 18, 2014 | 9:30 a.m. - 6:30 p.m. | Whitman Library, 8440 Lincoln Blvd., Jurupa Valley, CA 91750 |

"We'll Take Care Of It"

The City of Jurupa Valley INTERIM GENERAL PLAN WORKSHOPS

The City of Jurupa Valley is holding a series of workshops in order to seek input from residents as part of the Interim General Plan. The city would like to hear your ideas and comments on land use, shopping, streets, housing, parks, open space, trails and other aspects of our Community. Please tell us what you like about Jurupa Valley, what you feel are the Community's most important needs and issues, and what changes you would like to see.

Your input will help to shape the future of the city for years to come.

Workshops will be casual and fun. Refreshments and children's activities provided.

Workshops are free and open to residents, business and property owners and anyone else interested in Jurupa Valley's future.

For workshop information including dates, times and locations, please visit <http://bit.ly/jvgenplan> or call 951-850-3579.

Household Hazardous Waste Collection

Materials such as abrasive cleaners, asbestos, cell phones, car and household batteries, paint, small propane tanks, and used motor oil and filters can be disposed of at the Riverside County Regional Household Hazardous Waste Facility located at 1780 Agua Mansa Road in Jurupa Valley on Saturdays from 9am to 2pm.

Contact Information

Burrtec Waste Industries
951-786-0639

1850 Agua Mansa Road
Riverside, CA 92509

Hours of Operation
Mon-Fri 8:00 am to 5:00 pm

Residential Christmas Tree Collection

Burrtec will collect and recycle Christmas trees from single-family residences. Please place your tree at curbside during the period after Christmas (December 26, 2014 through January 9, 2015) on your collection day. Trees 6' and over need to be cut in half. Please take all ornaments, lights, and metal stands off of the tree. Flocked trees will not be recycled, they will be collected as trash. Flocked trees 6' and over need to be cut in half.

Extra Holiday Trash

Approximately 80% of your holiday trash is recyclable. All gift boxes, wrapping paper, greeting cards, and cardboard packaging are items that may be placed in your recycling barrel. Burrtec will collect your excess holiday trash and recyclables beginning December 26, 2014 through January 3, 2015. Place excess holiday trash/recyclables in bags alongside your containers on your collection day.

Bulky Item Pick-Up

Are you replacing an old sofa, water heater or refrigerator and don't know what to do with it? We'll take care of it. Residents can request up to two curbside collections of large or bulky items during a 12 month period. Limit of five items per collection. This program also includes electronic waste. This program is no additional charge and designed for your convenience. Please call our Customer Service Department one week prior to your scheduled collection day to arrange pick-up.

Automated Bill Pay

For your convenience, you can make a payment any day, anytime, using our free automated payment service.

Simply dial, (866) 306-8584, enter the last 6 digits of your account number and billing zip code, along with your credit card or check information. It's that easy!

Holiday Schedule

- Christmas Day - Thursday, December 25, 2014
- New Years Day - Thursday, January 1, 2015

When the holiday falls on a weekday, collections for the remainder of the week will be delayed by one day. There is no service interruption or delay when the holiday falls on a Saturday or Sunday.

Jurupa Valley officials will host eight workshops to discuss the city's interim general plan and gather public input for Jurupa Valley's first general plan.

A general plan is a document that guides a city's growth. It includes quality of life standards and policies that outline a program for development.

Dates and locations for the workshops are: Jan. 10, 9:30 a.m. to 11:30 a.m., Jurupa Community Center, 4810 Pedley Road; Jan. 12, 6:30 p.m. to 8:30 p.m., Patriot High School, 4355 Camino Real; Jan. 20, 6:30 p.m. to 8:30 p.m., Rubidoux High School, 4250 Opal St.; Jan. 24, 3 p.m. to 5 p.m., Indian Hills Elementary School, 7750 Linares Ave.; Jan. 26, 6:30 to 8:30 p.m. Sky Country Elementary School, 5520 Lucretia Ave.; Jan. 31, 3 p.m. to 5 p.m., Louis Robidoux Library, 5840 Mission Blvd.; Feb. 2, 6:30 p.m. to 8:30 p.m., Jurupa Valley High School, 10551 Bellegrave Ave.; Feb. 7, 9:30 a.m. to 11:30 a.m., Country Village Apartments, 10250 Country Club Dr.

Jurupa Valley residents Saturday gathered at tables in the Jurupa Community Center to tell planners what their dreams for a complete city are.

Tell 'Em What You Want

JURUPA VALLEY — Three City of Jurupa Valley general plan workshops have been held and five remain between Saturday and February 7.

About 50 to 60 citizens appeared at the first general plan workshop at the Jurupa Community Center on Pedley Road in Glen Avon.

The attendance included everyone from Indian Hills developer Chuck Cox to former planning commissioner Kim Jarrell Johnson and back.

Pedley's Freda Fox and Lt. Colonel Dave Zimmerman were on hand as well as long-time community member Ron Anderson, who is also an elected member of the Jurupa Area Recreation and Park District board (JAKPD).

The workshops are managed by city planning staff and outside organizations Civic Solutions and Thomas Communications Group.

Citizens separated into six individual groups, meeting at tables with copies of the general plan taped to the center.

"Myself, frankly, I'm here to represent the equestrian interest," Ron Anderson began. "I've lived here for more than 40 years and have had as many as 20 horses, although I'm down to six now."

Chuck Cox, who has been developing Indian Hills since the early 1970s, agreed with Anderson there should be an equestrian element in Jurupa Valley — but he wants it on the west side of Van Buren Boulevard.

"That's always where the horses have been," Cox said. "But in Indian Hills we've got easements for horse trails that have never been used, rarely, maybe one horse once in a while."

Cox would like to see the horse trail designation removed in Indian Hills, and allowed to flourish on properties west of Van Buren Boulevard.

Jim Chism, who said he's been a resident here for several years, said he's become very concerned about properties on Pedley Road, nearby his home and property.

"We've got one particular property that's awful," Chism noted. "They've started moving small trailers onto the place and renting spaces."

Chism expressed concern about traffic circulation and big rigs in residential areas. He didn't disagree with big rigs being kept on larger properties.

A lot of discussion surrounded properties in Jurupa Valley with modified shacks and accumulations to trash.

Irene Salazar, a resident of the Arabella Ranch west of Van Buren Boulevard and south of Bellegrave avenue, said the city general plan and city planners need to designate and develop more commercial properties on the land running adjacent to the Pomona 60 freeway.

"How about a nice restaurant and a nice hotel," she said. "There's nothing alongside the 60 freeway and its the most traveled route through our community."

The goal of the eight workshops is to gather community input for the refinement of the existing Jurupa

General Plan.

In a flyer the city asks citizens attending to "tell us what you think about Jurupa Valley."

The effort, city fathers say, is to engage the community in helping to envision the city's future.

Citizen opinions, gathered from the workshops, will be used to "create a vision and guide the city plans to improve and grow."

After an hour or so of discussions at the six workshop tables, community members were asked to write issues on a Post-it and attach them to paper on tripods lining the community center wall.

The comments included just about everything, from complaints about a lack of open space to noise. Citizens asked for more sidewalks, equestrians for more horse trails.

There were comments about preventing any more mega warehouses and developing better traffic circulation. Everyone noted the lack of high quality restaurants and shopping facilities.

"I'm asked to shop in Jurupa Valley, but where," asked Ron Anderson?

Some citizens said they wanted to maintain the enclaves of the Jurupa Valley, making sure communities were still Glen Avon, Mira Loma, Rubidoux, Sunnyslope and Pedley.

The next five workshops are scheduled as follows:

- Saturday, January 24, 3 to 5 p.m., Indian Hills School, 7750 Llanes.

- Monday, January 26, 6:30 to 8:30 p.m., Sky Country School, 5520 Lucretia.

- Saturday, January 31, 3 to 5 p.m., Louis Robidoux Library, 5840 Mission Boulevard.

- Monday, February 2, 6:30 to 8:30 p.m., Jurupa Valley High School, 10551 Bellegrave.

- Saturday, February 7, 9:30 to 11:30 a.m., Country Village, 10250 Country Club Drive.

For workshop information call 850-3579. To call the city, dial 332-6464.

Citizens may also pick up a form at the workshops and list their concerns about the city.

The form can be filled out and mailed to Martin McIntosh, c/o City of Jurupa Valley, 20532 El Toro Road, Suite 210-A, Mission Viejo, CA 92692.

The form can also be sent by FAX to 949-455-4630.

New Look City Chambers

The newly renovated city council chamber is about complete. City officials expect the \$250,000 renovation of the former San's Western Wear building to be completed in time for a February 19 grand opening celebration. Festivities will begin at 5:30 p.m. at the new city hall at 8930 Lurline Avenue in Poley. City officials will give tours and provide refreshments. City hall is a former western wear store and before that the original Poley School building. "There are still some artifacts from the old school," Councilman Vince Lantieri notes. The grand opening will be followed by the regularly scheduled 7 p.m. city council meeting. Register at city council meetings will get an early look tonight at a 7 p.m. council meeting.

National Signing Day at JVHS

Frank Martinez accepted a scholarship to play football at Western New Mexico University Tuesday afternoon, signing his letter of intent on "National Signing Day." Martinez played football at Jurupa Valley High School where he enjoyed academic and athletic success in the football program of Coach Joe Giers. In the picture above, just about everyone joined the celebration Tuesday including the head coach on the far right. Coach Giers and his football team have been honored by CIF-SIS, Riverside County Schools, and the Jurupa Unified School District for achieving the highest grade point average of all high school football teams in the county.

Takano Appointed to Early Childhood Education and HELP Subcommittees

WASHINGTON DC - Earlier today, Rep. Mark Takano (D-CA) was appointed to the Early Childhood, Elementary and Secondary Education and the Health, Employment, Labor and Pension (HELP) Subcommittees during the House Committee on Education and the Workforce organizational meeting.

Prior to being elected to Congress in 2012, Takano spent more than twenty years as a classroom teacher in Riverside County, California and on the Riverside Community College Board of Trustees. Since taking office, Takano has used his experience as a teacher to advocate for improv-

Sewer Rate Hikes Contemplated At Rubidoux CSD This Afternoon

RUBIDOUX - Elected directors of the Rubidoux Community Services District today at 4 p.m. vote whether to raise the monthly sewer rates for its 20,000+ customers.

Directors meet at 4 p.m. at 2500 Rubidoux Boulevard, Rubidoux.

The rate increase, if approved, affects residential, commercial and

of 2015. Users with a 34" meter are now paying \$21.78 and move to \$25.33 under the new plan. For more information call 684-7582.

Last Hurrah For City Workshops

MIRA LOMA - Speak now or forever hold your peace - the City of Jurupa Valley will hold its final public workshop for the interim general plan process Saturday, February 7 at the Country Village Ballroom, 10250 Country Club Drive, from 9:30 to 11:30 a.m.

Barbara Thomas, of Thomas Communications Group, said the city has completed seven of the workshops seeking input from citizens about the city's general plan.

"The city will host the last of eight public workshops to discuss the general plan and inform the public about potential land use and policy changes," she said.

The General Plan is a map and policy document required by state law that serves as the community's long range plan for guiding the use of private and public lands.

"It includes quality of life standards, goals and policies outlining a comprehensive program for growth and development," Thomas said.

Citizens attending the workshops have emphasized desires of issues they want addressed.

Some of the concerns center on land use and housing, but others include traffic circulation, safety, noise, conservation, bike paths, waterfront development, parks, dog runs, horse trails, animal keeping, retail outlets, restaurants, and community clean up - to name but a few.

The input from citizens will be used in developing the final Jurupa Valley General Plan, a requirement of the State of California.

The general plan is used as a guide to build the community. While the plan can be amended in the future, it by and large is where commercial, industrial, residential and farming will exist, continue to be built in the future.

Check Before You Ignite Your Fireplace

JURUPA VALLEY - Since wood smoke can be a significant source of fine particulate pollution and toxic air contaminants, SCAQMD is asking residents from now until the end of February to "check before you burn" wood in a fireplace or wood stove.

Jurupa Valley residents are encouraged to sign up at AirAlerts.org to receive an email when a mandatory no-burn alert has been issued, or visit www.scaqmd.gov to see if an alert has been issued in this city's two zip codes.

In addition, SCAQMD is now offering incentives to replace wood burning devices for residents, renters, or landlords of a rental property in the areas surrounding the city of Riverside.

Visit www.scaqmd.gov to learn whether you qualify for the incentive.

Health studies link fine particulate matter to serious health problems. The most vulnerable groups include seniors, children and those with existing heart and lung disease.

City Wants Two Citizens for Traffic Safety Committee

The City of Jurupa Valley PUBLIC WORKSHOPS FOR A NEW GENERAL PLAN

- ▶ Help shape the future of Jurupa Valley for years to come.
- ▶ Tell us what you like about Jurupa Valley, what you feel are the Community's most important needs and issues, and what changes you would like to see.
- ▶ We'd like to hear your ideas and comments on land use, shopping, streets, housing, parks, open space, trails and other aspects of our Community.
- ▶ Workshops will be casual and fun. Refreshments and children's activities provided.
- ▶ Workshops are free and open to residents, business and property owners and anyone else interested in Jurupa Valley's future, and will be held on the following dates and times:

General Plan Workshops – Attendee's Residence Locations

As part of the General Plan public workshops, attendees were asked to place gold stars on a map of the City, showing what community they lived in. Not everyone chose to show their residence and some attendees placed one star to represent multiple family members. A photograph of the resulting map is shown below.

Jurupa Valley Interim General Plan

Workshop 1 – January 10, 2015

35 Attendees:

Ben Alaniz, Linda Alaniz, Ron Anderson, Cathy Barnes, David Barnes, Karen Bradford, Janet Chavez, Rene Chavez, Jim Chism, Roy Collins, Chuck Cox, Don Davies, Maria Delia Ortiz, Wayne Emery, Sandy Emery, RayFine, Deborah Fine, Betty Folsom, Fredda Fox, Jolene Hancock, KimJohnson, Mark Johnson, Donna Johnston, Victoria Kirilman, Edward Lee, Josie Pelayo, Gloria Roman, Fruank Ruiz, Irene Salazar, Mario Silverio, Colleen Smethers, John Todd, Betsy Wenk, William Winans, Dave Zimmerman

Land Use

- Emerald Meadows – Is it happening?
- Future development on the side of the 60 FWY along the Santa Ana River
- More hiking trails
- Encourage existing horse boarding facilities for area
- Keep it rural
- Develop equestrian park at Horseshoe Park – put in permanent arena and parking
- Develop areas near freeway off-ramps for shopping
- Offer residents options for shopping “traffic” from Eastvale down Bellegrave to Van Buren – build shopping and food area with a drugstore
- Areas exist for youth centers
- Improve Park on Wineville
- Build field of dreams
- Improve Community Center on Pedley
- Add retail in more urban areas
- Build a tax-collecting resort
- The main plan was to keep interiors “open” and to bring development along freeways
- Control or limit certain businesses like pot shops
- Add more equestrian trails
- Build visitor center and improve commercial along 60 freeway for people traveling through Jurupa Valley
- Turn the Jurupa Mountains Discovery Center into a tourist stop like Hadley’s area
- Sales tax generators need to be attracted
- Better shopping options
- Need shopping on the west side of the city
- Attract public to Jurupa Discovery Center – maybe build a food court?
- Robertson land is where to build a college
- Bellegrave between Etiwanda and Van Buren – bring in more businesses like restaurants, drugstores, customers going to Field of Dreams, new home owners; shopping

Land Use

- Build a soccer park
- Improve Mariett Park
- Attract sports leagues
- Build better infrastructure
- Build more golf courses
- Regulate number of animals per lot/space
- More horse trails, walking trails and sidewalks
- Limit high density housing – no lots under 7,200 sq ft
- Monitor and notify public of any development
- Solicit commercial services for neighborhoods that don't have it
- Build off 60 FWY corridor – commercial, restaurants and anchor Discovery Mountain with restaurants and a hotel/motel
- Attract more industry/manufacturing versus warehousing
- Keep historic buildings
- Provide for better recreation areas throughout the city
- Provide notification and transparency regarding land use and open to public input
- Build an indoor recreation center
- Solicit more shopping opportunities
- Install a street light at 58th and Pedley
- Balance urban and rural
- Clean up properties
- Repair 58th Street off Pedley
- Provide more vocational training in schools or build private schools
- Eliminate land use conflicts – such as industrial land next to residential
- Keep the denser projects along the freeway “ring” and less dense projects in the middle of the city
- Designate “Big Rig” streets
- Develop retail along Bellegrave and Van Buren
- Develop equestrian trails along river and provide connectivity to them from the city

Circulation

- More community centers or “pockets” to provide for programs, exercises, arts and crafts – senior and youth centers
- Islands cause delay in emergency response
- Keep equestrian neighborhoods without sidewalks – streets are narrow and need dirt sidings for horse traffic
- Build or designate places for truckers to park their Rigs to include reasonable rates and security
- Need to facilitate to tie together the city permit actions with people who can provide truck rig/trailer parking space

Circulation

- Create bike lanes
- Provide trolley across town transportation
- Consolidate special districts and establish a city-wide landscape and lighting district so that it reduces the cost of utilities city-wide
- Work on I-5 on-ramps – maybe Bellegrave and 65th or 68th streets
- Maintain rural lifestyle in certain areas, enforce codes, and do something about traffic safety on Mission Blvd
- Control warehouse development and add truck services and storage
- Provide for mass transportation to increase access and improve economic development
- Build bus shelters
- Build sidewalks – use split rails
- No Big Rigs in R-1
- Improve school traffic
- Use split rail fencing (i.e. Norco looks appealing and not run down)
- Encourage carpooling by cleaning up rideshare area
- Encourage bus riding – bus shelters should have posted schedules at stops

Housing

- Create a public planning process to solicit input
- Limonite Ave and Pedley Rd area – Keep equestrian with 1/2 acre minimum for housing development
- Update existing apartments and maybe build a few upscale ones along the I-5 near existing condos
- Code enforcement on existing housing
- Develop self-contained housing development that includes stores, shopping inside the development
- Provide affordable housing opportunities for young adults just out of school
- Build mixed use – live/work housing with retail
- Keep housing mixed use
- No high density housing
- Limit high density housing
- Limit high density housing
- Keep housing in the interior and be sure there is access to parks with recreation facilities

Conservation

- Maintain existing equestrian areas
- Get rid of chickens and fighting cocks
- Traffic signals in appropriate places
- Maintain parks and new improvements
- Air quality
- What happened to the soccer field on Camino Real?
- Preserve bike trails, horse trails, sidewalks
- Install drought tolerant landscaping
- Where are the power lines going?
- Edison lines the substation?
- Maintain outsiders perception of our city from main streets
- More water conservation programs

Open Space

- Bear Valley Golf Course – is there a replacement?
- Developed housing of De Anza Golf Course (Paradise Knolls)
- Keep the hillside pristine – build walking trails
- Build bike trails, equestrian trails
- Install sidewalks in school areas
- Can the streets support new growth?
- Walking trails and parking in our own hills
- Add youth center area on west end
- More walking trails, horse trails on side of Santa Ana River
- Maintain current open space
- Keep open spaces in interior – put development along the freeways as indicated when we voted on cityhood
- Maintain our open areas and upgrade access to trails and river bottom
- Preserve the river bottom area
- Preserve Horseshoe Lake Park
- Preserve open spaces
- Develop open space for park and recreation usage – horses, hiking, biking
- Preserve hills as open space and for visual beauty

Noise

- Stop the noise
- Code enforcement a must!
- Improve quality of life
- Enforce NOISE regulations – increase fines to whatever they were in the county a few years ago
- Noise from blocks away plagues Sky Country – Let's get this under control by making it very expensive to be a repeat noise offender

Safety

- Minimize trucking
- People do not stop for stop signs – kids nor vehicles
- Improve air quality – reduce asthma in community
- More traffic lights
- City needs to own fire station and rent back to county
- Not enough law and code enforcement
- Relocate Mira Loma Village
- Belltown homeless issues and social services
- Jurupa/Pyrite street recently renovated, but storm drain is not working – it's flooding
- Jurupa/Pyrite – cars driving too fast on route to first
- Transportation artery development – cross town roads: Pedley, Pyrite, Opal
- Need bike trails/lanes
- Need cross walks
- Better traffic control at El Camino Elementary School
- Need crossing guard for Rustic Lane School
- Safety at Rustic Lane School – traffic goes too fast; parents don't respect traffic
- Stop endangering horses by riding them at night
- More sidewalks
- Traffic safety at schools
- More sidewalks
- More sidewalks
- Work on sidewalks and flooding
- More and safer pass-overs for horses across Limonite
- No sidewalks – need sidewalks
- Would like to see more street sweeping with set dates so cars are not on streets
- Homeless everywhere – looks bad, unsafe on riverbed on Mt. Roubidoux
- Graffiti issues
- More youth programs to prevent delinquency
- Develop homeless programs
- Homeless doggie gangs

Safety

- Private rodeos
- Control marijuana shops
- More law enforcement
- Eliminate shanty towns – use code enforcement
- Loose dogs – enforce microchip policy
- “I don’t want Jurupa Valley to be known as a town of marijuana and “vape” shops.”

Other

- Give Belltown a big uplift – sidewalks, beautification
- Allow zoning changes to be voted on
- Sales tax
- Build a Walmart at Pyrite and Mission
- Safety in Belltown – build sidewalks
- Beautification – lighting on Mission Blvd and Mission and Riverview
- City needs better efficiency and consolidation of services
- Power transmission lines (Riverside) West Commercial Zone
- Use Jurupa Community Plan as starting point
- To plan for the future, you need to understand the past – See Jurupa Community Plan Amended Effective Dec. 22, 1987
- Hold community cleanup events
- Improve School District Test Scores
- Do something about the stigma of Rubidoux – afraid to go to that area
- Overall financial rejuvenation to allow for community services
- One water district
- More bike trails and sidewalks
- More youth and senior services/programs – craft classes
- Opal-Rathke Dr storm drain gets blocked all the time – would like to see it cleaned more
- Perform a utility review
- What is the status of the Riverside Sewage Treatment Plant Lawsuit?
- Address poverty within the city
- Build a park with a water feature without costs to the residents – lake or pond
- Limit warehouse development – environmental concerns, traffic, and noise
- Do something about the homeless community
- Offer tax free incentives for a limited time for new industry jobs
- More redevelopment opportunities
- Cityhood – Is the city viable?
- More children’s activities – Boys/Girls Clubs, park department
- Maintain separate community identities and representation
- Better outreach/involvement/representation for Spanish community

Workshop 2 – January 12, 2015

26 Attendees:

Manuel Albarrah, Tono Albaarah, Mary Anderson, Mary Billimele, Angie Channual, Ernie Corral, Andy Degrood, Wayne Emery, Susan Fierro, Pat French, Wendy Hart, Kim Johnson, Mona Lara, Jackie Lee, Jeff Moroukian, Sharon Paisley, Vickie Ridgley, Winnie Salazar, Heather Salazar, Marjie Scott, Colleen Smethers, Judy Strickland, Richard Strickland, Dana Villerreal, Leon White, Morris Younathan

Land Use

- Create or build up "Main Streets"
- Develop area for special events/entertainment venues
- Build amphitheater
- Build sports complex
- Build hotels north of Hwy 60
- Provide venue for Farmer's Market
- Create/zone multiple "Downtowns"
- Solicit sit-down family restaurants
- Solicit "classy bar" venues with live music
- Solicit Government Jobs, Medical Jobs, R&D industries
- Build more movie theaters
- Retain rural atmosphere/sense of place
- Address needs for homeless community
- Solicit bringing new businesses to the city
- Preserve mix of urban and rural
- Explore expansion and best use of Metrolink Station
- Create venues to attract/bring entertainment to city
- Maintain large lots
- Build restaurants near Metrolink Station
- Solicit Target
- Solicit a drive-thru Starbucks
- Expand economic development
- Preserve/keep existing businesses open
- No more warehouses: they cause traffic/air pollution
- Build more recreation areas for youth/more soccer fields
- Strategically locate housing. It's starting to feel dense.
- Why hasn't Riverside Plaza been developed? We need more jobs.
- Preserve hiking trails (top of Lakeside)
- Solicit businesses like Cardenas, El Super, Superior markets
- Support small businesses by placing big boxes away from small business areas
- Build community college or satellite campuses
- Need an Urgent Care!
- Solicit Chinese restaurants
- Build hotels or bed and breakfasts
- Solicit a Winco grocery store and/or Walmart Super Store
- We need a Chipotle and Chinese food

Land Use

- Build a youth center
- Build a medical facility or medical offices
- Build a youth center on west-side of town
- No high density housing – at least 1/4 to 1/3 acre size lots
- Maintain rural area with 1/2 acre lot minimums
- Solicit “big box” stores to build at Rubidoux and 34th – great area to bring stores
- Develop empty lots into commercial developments
- Hold a 4th of July Party at area near Flabob
- Put denser development near freeways and less dense development in rest of the city.
Less dense = 8,000 sq ft lots
- Need more medical services
- Solicit a Kohls
- Solicit more retail
- Solicit a Farmer’s Market
- No buildings over five stories
- Normal parking stall widths
- Solicit a Costco or Walmart – more trendy family places – keep money local
- We need a community center like the one at Harrison and Schleissman in Eastvale – something nice, big, and modern

Circulation

- Build underpass on Limonite for horses so they don’t have to cross busy street
- Redo traffic flow at Limonite at Walmart
- Widen street from Downey to Etiwanda to accommodate traffic
- Add more speed bumps in residential neighborhoods
- Build bridge over the river
- Complete existing streets
- Build/preserve equestrian trails
- Build/preserve hiking trails
- Build/preserve off road bicycle trails
- Create bike lanes
- Reduce/do something about truck traffic
- Increase number of bus stops
- Landscape the medians on major roads
- Provide more public transportation
- Improve air quality
- Reduce truck traffic
- Appearance of our city from the freeways doesn’t look inviting or like a place someone would want to stop for gas
- Build sidewalks to provide safe route to schools

Housing

- No small lot housing
- Increase code enforcement
- Pride of ownership
- Keep rural life style
- Homeless programs
- Homeless programs to help get them off the streets
- Provide for mixed use
- Build senior housing communities
- Develop empty lots into housing

Conservation

- Preserve the cross at hillside (it's a city landmark)
- Conserve our natural resources
- Increase water supply for development
- Preserve and highlight our historic sites
- Preserve regional parks and cultural centers

Open Space

- Preserve openness/open space
- Develop multiple regional parks
- Provide city incentives for blighted properties
- Keep the hills as open space
- Maintain large lots
- Maintain open space
- Add bike/walkways like those in Fontana
- Preserve open and rural space
- Parks with walking trails (i.e. regional park like Yorba Linda Regional Park)
- Beautification and landscaping
- City has too few amenities
- Build amphitheater on hillside
- Keep hillsides rural
- More open space for animal keeping
- Keep the hills undeveloped
- Split streets to have horse trail on one side and sidewalks on the other
- Develop recreation trails
- Develop mountain bike trails
- Retain ridgelines
- Protect mountain tops
- More dog parks

Noise

- City should provide more information regarding ordinances (i.e. noise)
- Do something about cars with loud music

Safety

- Reconfigure traffic going in and out of Walmart
- Cars driving too fast
- More speed limit signs
- Horses and riders in the dark are dangerous
- Need more speed bumps
- Need more lighting in parks (lighting with park extended hours will reduce obesity in children)
- The need for more medical offices and an Urgent Care
- Street islands slow emergency response
- Widening Limonite by old Waste Water
- No more warehouse trucks on local roads
- We need more traffic signals; especially at schools
- Kudos to the city for installing signals near Granite Elementary School
- Camino Real/Limonite curb needs light or reflectors – numerous vehicles hit curb and blind area
- Need an Urgent Care
- More sidewalks with lighting like the ones on Limonite
- Decrease violence
- Decrease city blight
- Neighborhood Market parking lot should be one-way or have yield to safely drive
- Need trash cans on walking trails and bus stops off Limonite, Ave Juan Bautista to Clay

Other

- Need trash receptacles on street corners
- Need a Farmer's Market
- Hold fairs and more community events
- Proud of city crime rates
- Law enforcement is good
- Safe city
- We have great pride in our schools
- Mail info to households to promote more citizen participation
- Bring the parks department under the city
- Consolidation of water districts
- Consolidation of services
- More special events to bring in local business: rodeo, concerts, festivals, art
- Sense of community could be improved with more citizens participating
- Create a "Preserving our Rural Lifestyle" committee for Jurupa Valley (Have a good person running it, clean, civil, etc.)

Other

- Adopt "Shop Local" campaigns to support city business and jobs
- Provide incentives for businesses to come and stay in shopping centers
- More communication in Spanish is needed from city
- Do something about the graffiti
- Build a youth center on the west end of town
- Increase the number of businesses
- Designate/build a rodeo area
- More parks
- Community center
- Increase businesses by offering tax incentives
- Develop our education to cover high end jobs coming to Jurupa Valley
- This is not a very involved community
- Keeping businesses open
- Art classes for adults and children
- Community Theater
- More affordability to visit Jurupa Regional Cultural Center - \$8 per person is too much

Jurupa Valley Interim General Plan

Workshop 3 Rubidoux High School– January 20, 2015

14 Attendees:

Betty Anderson; Stephen Andersen; Cristina Flores; Anna Gamble; Melissa Gamble; Angel Hernandez; Estaban Hernandez; Karina Hernandez; Monica Hernandez; Ross Leja; Maria Montolfo; Diego Nunez; Linda Rither; Mona Vasquez

Land Use

- Need a hospital.
- Need more community centers.
- Need nice office buildings to attract white collar jobs.
- Don't cover every square inch with small lot development.
- More single family housing/no apartments.
- More stores like Target; Walmart.
- Build more shopping centers.
- Consistent zoning.
- Mix of residential and industrial.
- More sidewalks.
- More infrastructure improvements.
- More businesses, office space, and manufacturing.
- Create parking at 30th and Avalon in Rubidoux near AM/PM.
- Fence empty lots.
- More dining restaurants.
- Affordable housing to get people off the street.
- Fence empty lots.
- More recreational activity area; improve Memorial Park.
- Keep agriculture.
- More parks and recreation areas.
- More parks.
- More sit-down dining; fewer fast food chains.

Circulation

- Build bike trails.
- Stop semi-truck parking on small streets.
- Build bike trails.
- Build better roads.
- Need safe bike routes and bike lanes.
- Build bike trails.
- Improve traffic.
- Improve street sweeping.
- Improve street lighting.
- Improve sidewalks.

- Improve traffic!!
- Build more sidewalks.
- Street safety!!
- More street sweeping.
- Eliminate truck traffic on residential streets.
- Better park maintenance.
- Add left turn arrow on 30th street.
- Traffic at entrance/exit at Roubidoux has lots of queuing.

Housing

- 7,200 sq ft minimum for housing lots for medium density.

Conservation

- Preserve Jurupa Cultural Discovery Center.
- Preserve Rancho Jurupa Park.
- Preserve Santa Ana River camping site.
- Preserve hills from development.
- Protect our historical sites and structures.
- Keep the river wild, but put in more trails.

Open Space

- Better walking trails.
- Better horse trails.
- Better parks.
- Build baseball parks.
- More parks.
- Build waterparks.
- We need more parks for our residents.
- We need more multi-use trails.
- We need more use of the parks and trails during the evening.
- More parks; especially in the older areas.

Noise

- Homeless making noise at night.
- Fines for loud music.

Safety

- More street lighting.
- Public safety – more lights.
- No way to get to Riverside by bike.
- Safety.
- Street lighting.
- Clean up the city.
- More streetlights.
- No police response to homeless.

Other

- City needs the ability to attract new businesses that will provide good jobs for the residents.
- Golf.
- Preserve the Santa Ana River and hills.
- Separate residential from pollutions.
- Ticket abandoned vehicles.
- Build housing developments that speak to the recreation and exercise needs of the various ages.
- Minimum 7,200 sq ft. lots.

Jurupa Valley Interim General Plan

Workshop 4 Indian Hills Elementary– January 24, 2015

Attendees:

Lucinda Skinner, Mark Skinner, Ed McManus, Teresa McManus

Land Use

- Additional Shopping outlets
- Neighbor is horse breeder – 10 horses on property – unsanitary, unhealthy and law needs to be enforced.
- Rules should remain the same moving forward with two horses max per property
- Don't allow new developments to be built and then change the rules on horse allowance
- Enforcement on no commercial business in areas zoned residential
- City fines homeowner and homeowner continue to pay fines; city generates and collects revenue on the fines, but surrounding homeowners are not being helped and served.
- Consider large shopping center 1-15 Fwy. On the JV city side where there is vacant land.
- Grocery shopping is good
- Downtown Rubidoux should be addressed – very run-down; needs improving
- No matter what type of developments (residential and commercial) is built, let rural communities stand – let rural be rural.
- Keep industrial where it is located today
- Can agriculture serve a purpose?
- Residents don't want to be like an "Eastvale or Irvine
- Don't build on hillsides – leave them pristine and open
- They like what Norco did – it was established as "horse country" and has remained that way
- All new developments should be required to install xeriscape and/or drought tolerant landscape
- All new development should be required to use recycled water for irrigation
- Land uses must work together
- Keep higher-density developments closer to the Fwy.
- Determine what to do w/United Concrete Pipe property where homeless are located – determine if grounds are contaminated.
- Attempt to recruit an anchor such as Costco or Winco – it would bring good jobs
- Nodes – good access points

Circulation

- Improve traffic flow
- More development and housing equals more traffic

- Residents want truck-route closer to 60 Fwy.
- Expand Limonite in both directions
- Freeway system does not flow..always congested
- Access in and out of the City is too congested
- Van Buren should be three lanes
- Build a bridge on Van Buren and Mission
- Owners of big rigs (trucks) can park on their own property but not street parking

Housing

- Neighbor is horse breeder – 10 horses on property – unsanitary, unhealthy and a fire hazard; people need to follow the rules and the city needs to be enforce the law
- Enforcement on no commercial business in areas zoned residential
- Homeless issues is both an environmental damaging issue as well as a social issue
- Indian Hills and Jurupa Hills – many people own their home – not a lot of rental properties
- Mira Loma has a lot of rental properties

Conservation

-

Open Space

- Don't build on hills...leave them open

Noise

-

Safety

-

Other

- Not enough jobs
- Work on lowering water bills
- Loss of rural character
- Enjoy the various ethnicities
- Likes the current restaurant line-up
- Likes Jurupa Discovery Center

- Folks are proud of the weather, the hills, it's pretty, it's NOT Riverside, sunsets, people are friendly, small town and small town feeling...keep it that way
- Look into satellite campuses from UCR or RCC

Jurupa Valley Interim General Plan

Workshop 5 Sky County Elementary– January 26, 2015

Attendance:

Stephen Anderson, Guadalupe Belmonte, Jeff Blakely, Keith Hughes, Suzanne Hughes, Kim Johnson, David Lin (faxed form), Martha Martinez, Susan Sims

Land Use

- Need for a senior center
- More parks
- Nature Center is an asset
- Separation of industrial vs. residential
- Better restaurants (larger family sit-down)
- More Tech schools
- More office buildings equals job creation
- Need a skate parks
- Need more doctors and medical facilities
- Need an Amphitheater
- Need Retail: Kohl's, Penney's, Costco/Sam's Club
- Wedding Facilities, banquet halls
- Need horse industries
- Maintain ½ acre at Armstrong & Sierra Ave.
- Need equestrian centers
- Education institutes (public, private, vocational, schools, etc.)
- Performing arts theater, music hall
- Need more churches
- Prohibit high-density housing
- Free indoor gym for residents

Circulation

- Too much traffic
- Get rid of truck traffic which will make the air cleaner
- Safety "law" enforcement on horses after hours
- Need sidewalks
- Proud of horse trails as it equals peace
- Trail connectivity must be looked at citywide
- Better traffic control measures
- Link animals and plants to river and ecosystem
- Increase trails
- Keep the underpass trail at Bain for River trail access
- Safe passing of wildlife

- Add bike lanes to roadways
- Make bridges pedestrian friendly
- Increase connectivity of trails and bike trails along streets
- Fix pot-holes

Housing

- More housing with large yards
- More agricultural opportunities
- Add more housing where housing exists today
- Keep housing separate from non-compatible condition uses

Conservation

- Figure out what are our historic buildings and preserve them

Open Space

- Plan for open space for children
- Wildlife corridors
- Preserve hills – don't allow development on them
- Encourage open space or at least half acre lots at Paradise Knolls
- Proud of open space

Noise

-

Safety

- No lights
- No sidewalks
- Clean up our City – more code enforcement in commercial and industrial areas
- More police security
- Speed enforcement
- Need speed bumps
-

Other

- Small city – opportunity for growth
- City should promote itself – advertise the water park, drive-in, regional parks, etc.
- More training opportunities for young people

- Sense of community – Nature, wildlife, hills, mountains
- Programs for children – respect nature
- Quality of life – don't sell the city out for money
- Lack of senior services
- Bad economy has driven away business
- Hang City flags on light poles
- Zero tolerance for graffiti
- Horse industry is being driven out by City and County
- Sense of community – keep out too much industrial
- We enjoy the dark sky to enable to see the stars

Jurupa Valley Interim General Plan

Workshop 6 Rubidoux Library – January 31, 2015

Attendees: 12

Wes Andree, Ron Jones, Chriss Jones, Lynn LaMonk, Laura Mae Leach, Cathy Livoni, Chris Miller, Bob Miller, Betty Newsom, Irene Rose Rael, Christine Rich, Frank Rich,

Land Use

- More trails – walking and horse
- Need senior center on west side of town
- More trails and horse trails
- Preserve and improve Flabob Airport – make it a destination
- No billboards
- Shopping opportunities – help increase revenue to the city
- A regional park w/multi-purpose use
- No more warehouses
- Plan for aged infrastructure
- We voted to make Jurupa Valley as a City – Keep it RURAL!! This was promised.
- Continue to allow land use for horses, agriculture and farm animals
- Need medical center
- More stores and casual restaurants
- Need mixed use shopping
- Need financial institutions
- Shopping Centers (Target, Walmart, etc.)
- A destination shopping center
- Amenities for new development (tract)
- Designate a down town
- Warehouses badly reduce the amiability of the entire City – try to find other businesses outside of warehouses to move in
- Sewage treatment needs improving
- More money for water services

Circulation

- Exercise trails
- Bike paths
- All walking trails should lead to at least one library
-

Housing

- Homeless housing and shelters
- Need housing w/amenities

- No condos or apartments
- Need disabled housing
- Affordable housing for workforce for 20's age group
- Need more apartment complexes and include play areas
- Housing away from freeways
- Need senior housing
- Homeless "camp" at Alta & Avalon by 60 Fwy.= need homeless shelter
- Reduce high density housing
- Amenities for new housing communities

Conservation

- Maintain and defend agriculture use
- Preserve hillsides
- Delhi Sands flower-loving fly-endangered – still in open fields east of Muriel Drive and near Kit Fox also

Open Space

- More parks and developed outdoor use
- Clean up of abandoned
- Leave current open space and hills open as animals are being increasingly restricted to smaller and smaller areas due to overbuilding

Noise

- Off-road vehicles practicing motocross in the hills and showing no courtesy to hikers
- All night parties
- Animal noise

Safety

- Traffic
- More code enforcement
- Speed bumps on our streets and sidewalks
- Have Sheriffs be more proactive in information about establishing CERT training and teams
- Need disaster preparedness
- More animal control services
- Safe route for school kids
- Security
- Allocate more money for police and fire
- Traffic on Limonite will increase the more the City develops – need to plan for the increased traffic.
- Sidewalks

- Invite major hospital
- More community response teams
- Safety = emergency preparedness for senior safety

Other

- Water-wise landscaping
- Voting booths
- Need jobs
- Control City growth
- Address homeless problem
- Consider making City business-friendly so public services can be funded by city business taxes
- Economic disparity of families
- Address vacant land and homeless community
- Build pride as a community
- Address old infrastructure
- Address economic disparity and divide

Jurupa Valley Interim General Plan

Workshop 7 Jurupa Valley High – January 31, 2015

7 Attendees:

Betty Anderson, Stephen Anderson, Javier Garcia, Gricelda Sanchez, Nancy Rasner, Michele Rodriguez, Irene Whitney

Land Use

- Need a hospital
- Keep warehouses away from schools and homes
- Less warehousing and more shopping
- Big box retail (Home Depot, Walmart, Sam's, Winco, Costco, Target, Ralphs)
- Industrial uses should focus more on manufacturing vs. warehouses
- Trails and parks for recreation, transportation and exercise
- More trails
- More banks needed

Circulation

-

Housing

- Keep our yards ¼ acre or more
- 7,200 sq. ft. lot size minimums (more than ½ acre)
- Affordable housing for families
- Keep industrial zoning away from residential areas

Conservation

- Water conservation should be a priority
- Develop a City Green program

Open Space

- More parks or community centers especially in Mira Loma and Pedley
- Emerald Meadows needs to be mall or other area
- More land conservation for mountains and rivers
- More trails

- More banks

Noise

- Noise from recreational vehicles on mountainside is problematic

Safety

- More street lights
- Need police patrols of the city to stop trash dumping (Canal Ave.)
- Need help cleaning trash and bulky items from my community (Canal Ave.)
- Need sidewalks (Canal Ave.)
- Need to control homeless encampments in my neighborhood (Canal Ave.)
- Need horse rider safety precautions – more lighted horse trails
- Need police or rangers to patrol area parks
- Flooded streets in Pedley and Mira Loma – not good

Other

- Representatives of City Council should represent various communities and should better understand our community
- We need Spanish translators
- City should promote and organize community clean-up days
- Horse arena with family amenities
- Community center with basketball courts, inside gym, swimming pool, etc.
- Clean-up loitering, public drinking at Jurupa Dairy
- Close up pot shops
- Homeless encampments in our area are terrible
- Need afterschool program to increase academic development and character

Jurupa Valley Interim General Plan

Workshop 8 Country Village Apartments – February 7, 2015

Attendance:

Hector Abarca, Oliva Abarca, Betty Anderson, Stephen Anderson, Phil Baniel, Pallas Broy, Carol Crouch, Greg Crouch, Yvonne Cureaux, Fredda Fox, Carolyn Hoggard, Kevin Hoggard, Blanca LaCeballo, Susan Little, Ann McCoy, Jim McCoy, Maria Mercado, Lydia Ocasio, Jorge Quintero, Ruben Quintero, Collen Smethers

Land Use

- Variety of grocery stores, drug stores, better restaurants
- Overnight campgrounds for community
- Campgrounds
- Preserve Santa Ana River
- Rural animal keeping
- More grocery stores in Rubidoux, target, pharmacies
- Rubidoux community needs to be revitalized
- Retail wants: Walmart, Sams, Costco, Cardenas, Home Depot
- Rubidoux community should be zoned w/commercial uses vs. industrial
- Limit growth for preserving rural character of city
- Hospital
- Preserve Santa Ana River
- Keep retail already here – put more into that than building new buildings, etc.
- Complete horse arena and Horseshoe Lake Park
- Allow animals on property – horses, dogs, chickens, goats all OK!
- Variety grocery stores, retail stores and restaurants
- Establish an equestrian facility at Horseshoe Lake Park – arena – parking- restrooms (even porta-potties)
- Fabric stores, crafts, art
- Place to go shopping
- Rural way of life
- Sit-down restaurants
- Keeping retail here
- Homeowners must be allowed to have more animals on a homeowner's property
- Land must not be developed. The rural setting of the City of Jurupa Valley must not be modified
- Sportsman shooting range – skeet/trap
- Transformers going through our City for the benefit of City of Riverside
- Grocery stores besides Stater Bros.
- Cowboy restaurant w/corral to tie up your horses
- Truck air pollution due to warehouse issues
- Bring Costco, Walmart, Sams to Rubidoux
- Expand the mini community center in Rubidoux
- More development of housing and businesses

Circulation

- Improve Limonite
- Pedestrians, horses, bikes
- Not enough street lighting and sidewalks on Avalos Street
- No speed limit signs semi-trucks going down Avalon Street to avoid Mission Road
- No sidewalks on Avalon St. by 60 Fwy.
- Traffic logistics
- No street lights on Avalon Street by 60 Fwy.
- Enforce “no truck parking” this is a problem
- Keep underpass under Limonite West of Bein for safe horse crossing (near Wholesale Feed)
- Limit truck route use
- No speed limits sign on Avalon by 60 Fwy.
- Speed limits
- Make sure that underpasses, road expansions maintain mobility for horses, bikes and walkers
- Curbs, gutters, sidewalks for flood control
- Trail system: Multi-interest in nature
 1. Preserve rural nature of existing community
 2. Offers exercising
 3. Offer alternative means of transportation
 4. Sidewalks that goes from point a to point b not meandering all over the place
- Fix roads on Avalon Street
- Curbs, gutters for flood control
- Traffic on Limonite
- Grade separation for railroad crossings at Bellgrave and Van Buren
- Enforce 40 mph speed limits near Rubidoux and West Riverside school
- Street repairs especially near 60 Fwy. In Rubidoux
- Better circulation – bridges needed to cross Santa Ana River
- Better transportation to and from schools
- Keep dirt on sides of roads in horse travel areas – NO SIDEWALKS!
- The City of Jurupa Valley must construct 2 additional bridges across the Santa Ana River in order to add alternate routes between the City of Jurupa Valley and the City of Riverside. One bridge be placed between the Mission Blvd. bridge and the Van Buren Blvd. bridge; another bridge must be placed between I-15 and the Van Buren Blvd. bridge.
- The City of Jurupa Valley must construct additional underpasses at railroad crossings. One underpass at Bellgrave Ave. and Van Buren. Another underpass at Jurupa Road and Van Buren. A third underpass at Clay Street.
- Potholes caused by big rigs that have existed for 10 years
- The city should build another bridge between Riverside and Jurupa Valley over the Santa Ana River
- Enforce laws relating to trucks

Housing

- Housing ½ acre lots ONLY
- Large lots
- Affordable housing needed in Jurupa Valley
- Senior housing
- Mix of big lots and apartments on issue
- Keep new housing near freeways
- Keep large lots in new housing – ½ acre ONLY and Keep Off the HILLS!
- Ruralness: the opposite of the high density housing you are approving
- Mix of large lots vs. apartments
- ½ acre lots
- Build more senior housing
- Loans for home improvement

Conservation

- Small town feel
- Don't make us a Cerritos
- Promote Santa Ana River
- Preserve cultural center
- Rural way of life
- Preserve Santa Ana River area and trails – access to river area
- Santa Ana River is an asset! Keep it rural – keep new housing away from Riverside areas
- Santa Ana River is world class riding (must preserve)
- Better air quality (pollution)
- Protect wildlife
- Great bird watching and hiking
- Promote Santa Ana River – Bike trail to ocean riding and hiking trails!
- Rural equestrian life style
- Preserve rural lifestyle and animals!
- Most proud of our RURAL WAY OF LIFE! RIVER RIDING AREA!
-

Open Space

- Expand community center in Rubidoux at Mission Road
- More horse access to river
- Wildlife and birds
- Open space for recreation
- Horse Shoe Lake and parks a good place for equestrian arena and parking
- Open space for wildlife and horses
- Sports arena
- Shooting range in community

- Maintain hills and Santa Ana river open space
- Nice equestrian arena for horses
- Hillside interference to public radio and television. (She claims cannot get a tv or radio signal for non- cable stations because of the hillsides) she cannot afford cable.

Noise

- Separation of residential areas from trucking, warehouses and industrial areas; through zoning and routing
- Noise – No parties; enforcement of noise
- ENFORCE NOISE! ORDINANCE! Make hefty fines
- Noise – none after 10 p.m.

Safety

- More police presence
- More police presence
- Contract out to CHP for street patrol vs. Riverside Sheriff
- Concerns about possible air contamination coming out of Riverside Cement Company
- More police presence
- Better bus transportation for students (students get picked up closer to their houses for dark morning reasons)
- Bike lanes lighting on city streets – road improvements
- More sidewalks (Canal St. on the snake-like path of Canal St.)
- Better street lighting
- City must contract the CHP to patrol streets of Jurupa Valley. The CHP does a better job in patrolling the city streets that the Riverside County Sheriff's Department
- Disaster preparedness plans
- Need more law enforcement
- Jurupa Valley community hospital needed
- No sidewalks in horse neighborhoods need safe dirt
- Sidewalks needed
- Better street lights so you can walk to Roubidoux high school
- Put a pedestrian crossing signal on 39th Street and Roubidoux
- Reduce speed to 30 miles ph on Rubidoux Blvd.
- More patrol on City Streets

Other

- Illegal dumping
- No City of Riverside transmission project
- Better communication for City events (newsletter)
- More professional careers available in Jurupa Valley
- Did not know about this except the mayor's wife made an announcement at church

- Having our own water company
- Community centers
- Waste of taxpayer money on street cleaning vehicles which do not pick up trash that accumulates on unpaved walkways
- Stadium
- Disaster preparedness plan
- Better communication to community (Newsletter)
- City of Jurupa Valley must provide essential services such as potable water and sewer services at low rates rather than have the Jurupa Community Services District charge excessive rates to homeowners of the City
- Hospital
- Air quality
- Jurupa should promote "business friendly" atmosphere to attract businesses
- Antenna tower needed for people without cable or satellite
- Bring in medical facilities for jobs
- Street sweepers don't clean roads
- Mail information and correspondence such as workshops, events and town hall meetings to residents' addresses of the city so that residents are aware of what the city government plans to do with the city. Information must also be mailed to peoples PO Boxes so that everyone is informed about the actions of city government.
- That you reduce the number of businesses that sell Marijuana
- That we have restaurants that sell quality and nutritious food
- My Street, Lindsay does not need the street sweeper but they need to clean the area that has dirt and trash not the street (I think she said it was a vacant lot)
- Reduce the cost of water
- Have police maintain the anonymity of people who call to report homes where drugs are sold or there are other illegal activities

- Better communication with the community regarding events that are currently taking place re: General Plan.
- Quality potable water at low prices for low-income residents
- A modern air purification system for the cement factory and mine on the hill

City of
Jurupa Valley
California

Draft 2017 General Plan

Appendix 8.0 Community Values Statement

April 2017

Community Values Statement

Jurupa Valley's Scenic Backdrop: San Bernardino Mountains and Jurupa Mountains in Foreground

1. Community Values Statement

Endorsed by the GPAC, April 27, 2015

Jurupa Valley's Interim General Plan is guided by values that describe what is most important to City residents. These values are at the core of what people enjoy most about living, working and recreating in Jurupa Valley—the scenic views, Santa Ana River, small-town feel, equestrian lifestyle, natural environment, vibrant economy, friendly residents, healthy and safe neighborhoods and respect for our history and diverse cultures. These values will enhance and sustain this young City's health and prosperity for generations to come. Proclaiming our values is essential if we are to create a new General Plan that truly reflects the goals and needs of Jurupa Valley residents. GPAC recommends that the Planning Commission and City Council affirm and adopt these Community Values as the foundation and heart of the Interim General Plan.

2. Guiding Values

- 1. Small-Town Feel.** Maintain Jurupa Valley's small-town feel, where neighbors know neighbors and merchants, the built environment reflects and is compatible with the area's character, and where residents can grow gardens, raise and keep livestock, and choose from diverse lifestyles in a semi-rural town setting.
- 2. Community of Communities.** Jurupa Valley consists of many distinctive communities and neighborhoods in a valley surrounded by stunning natural scenery and views. As a "community of communities", we will preserve and enhance those positive qualities that make our communities unique, enhance our "gateways" to welcome residents and visitors and embrace a unifying community theme and spirit. Our ability to offer the choice of a semi-rural, equestrian lifestyle is an essential part of who we are as a community and of our quality of life.

3. **Open Space and Visual Quality.** We value and protect the Santa Ana River and river plain, ridgelines, and hillsides for their exceptional value for recreation, watershed, wildlife habitat, environmental health, and as scenic backdrops for the City. As part of our values, we support prevention and removal of visual blight, protection of public vistas, and community awareness and beautification activities. Jurupa Valley's special places will be protected, maintained and promoted to preserve our unique character, instill local pride and encourage tourism.
4. **Active Outdoor Life.** Many Jurupa Valley residents were drawn here because of its unique outdoor setting and the recreation opportunities it offers. Our parks and recreation facilities are essential to maintain and improve our health and quality of life. We place high value on our public parks, sports fields, pedestrian and equestrian trails and support facilities, golf courses, outdoor use areas, historic sites and nature centers, campgrounds, airport, and joint use school facilities.
5. **Public Safety.** Support for public safety, law enforcement and emergency medical services is a value that's widely held by Jurupa Valley residents. We honor and respect the safety professionals who faithfully serve Jurupa Valley. We support strong, collaborative efforts to prevent crime and homelessness, enforce planning and building codes, and to improve the safety of neighborhoods, homes, public facilities, streets, trails and other transportation facilities. We take proactive measures to cope with and recover from emergencies and natural and manmade disasters.
6. **Education, Culture and Technology.** We place high priority on maintaining and improving our educational, cultural and technical opportunities, including programs and events at schools, libraries, museums, performing arts facilities and other community venues. We support the establishment of new community centers as well as college-level, life-enrichment, and career training opportunities in Jurupa Valley
7. **Mobility.** We support the creation and maintenance of transportation networks (e.g., multi-use equestrian, pedestrian and bicycle trails, complete streets, sidewalks, airport, rail, and public transit) that are safe, attractive, and efficient and provide connectivity to meet the diverse needs for the movement of people and goods.
8. **Diversity.** We value Jurupa Valley's cultural and social diversity and celebrate our cultural richness through arts and culture, community festivals, educational programs and exhibits, seasonal and equestrian-themed events, preservation of historic landmarks, youth and adult sports.
9. **Environmental Justice.** We value the health, well-being, safety and livability of all our communities and strive to equitably distribute public benefits and resources. We endeavor to enhance underserved communities so that all residents can thrive and share in a high quality of life.

- 10. Healthy Communities.** We have a comprehensive view of health. We enhance existing opportunities for healthy living and create new ones by helping residents to make the healthy choice the easy choice. The health and well-being of all individuals, families, neighborhoods and businesses is our shared value and concern. We take positive steps to maintain a clean, visually attractive City, to improve Jurupa Valley's physical, social and environmental health and to share and teach these values to achieve and sustain a healthy, clean and safe environment for current and future generations.
- 11. Economic and Fiscal Health.** We support high quality economic growth and development that is environmentally sustainable and that fosters housing, living wage jobs, retail goods and services, public facilities and services, environmental benefits, destination tourism, and medical and educational facilities. We seek ways to be good stewards of our local assets, to make wise land use and fiscal decisions, to conduct open and accessible government, and to preserve and enhance the City's prosperity and quality of life.

Draft 2017 General Plan

Appendix 9.0 Implementation Programs

April 2017

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|--|-------------------------------------|-------------------------|
| Land Use Element | | | |
| Agriculture/Open Space-Conservation, Open Space-Recreation, Open Space-Rural, Open Space-Conservation Habitat, or Open Space-Water Land Use Designations | | | |
| LUE 1.1.1 | Parkland Requirements. In coordination with community service districts, schools, residents, and the development community, consider amending the City's parkland requirements, including park area dedication and in-lieu fee requirements, to help address underserved parkland needs. | | |
| LUE 1.1.2 | Incentives. Provide programs and incentives that encourage Open Space-Rural areas to be maintained in a manner that enhances their existing and desired visual character. | | |
| LUE 1.1.3 | Mineral Extraction Controls. Establish a zoning overlay zone to designate open space areas in the OS-RUR designation that are appropriate for mineral extraction such that scenic resources such as prominent ridgelines, rivers, and forests are not adversely affected. | | |
| Residential Land Use Designations | | | |
| LUE 2.1.1 | Regional Housing Needs. Within 1 year of adoption of the 2017 General Plan, amend the General Plan Land Use Map and Zoning Ordinance density standards for the R-6 zone to allow a base density up to 25 dwelling units per acre, and amend the Zoning Map to show the locations of at least 34 acres of additional R-6 zoning to help meet Regional Housing Needs Assessment (RHNA). | | |
| Commercial Land Use Designations | | | |
| LUE 3.1.1 | Broaden and Refine Commercial Zones. During the next 3 years, amend the Zoning Ordinance to allow office parks, large-scale shopping centers, specialized commercial such as medical clusters, tourist commercial, and entertainment complexes. | | |
| Equestrian Lifestyle Protection Overlay | | | |
| LUE 5.1.1 | Zoning Update. Update the Zoning Ordinance to protect and encourage equestrian uses and facilities within the ELO and to remove obstacles and disincentives. | | |
| LUE 5.1.2 | Density Transfer. Consider adopting a density transfer program to provide incentives for open space | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|---|---|-------------------------------------|-------------------------|
| | preservation and equestrian uses. | | |
| LUE 5.1.3 | Public Awareness. Work with community service districts, equestrian groups, and non-profit agencies to improve public awareness of equestrian uses, rules, responsibilities, routes, and activities and to help improve public safety, enjoyment, and sense of community. | | |
| LUE 5.1.4 | Funding. Consider an assessment district, joint-powers agreement with the Jurupa Area Recreation and Park District (JARPD) or the County, or other funding mechanism for the acquisition of rights of way and the construction and maintenance of multi-purpose trails within the Overlay Area. | | |
| LUE 5.1.5 | Acquire Easements. Work with other agencies, utility providers and private landowners to acquire access easements for equestrian trail use where appropriate, such as along utility easements or along flood control channels. | | |
| LUE 5.1.6 | Hitching Posts. Require that within the Overlay, new development shall install hitching posts and related facilities to allow safe short-term equestrian “parking” and to create a design statement that the area encourages equestrian uses. | | |
| Village Center Overlay – General | | | |
| LUE 5.1.7 | Village Center Area Plans. The City will prepare an area plan for each of its three village centers to establish a consensus and a vision that is shared by the stakeholders and the City Council. The master plans will be prepared in the following order of priority: <ol style="list-style-type: none"> 1. Pedley Village Center 2. Glen Avon Village Center 3. Rubidoux Village Center | | |
| LUE 5.1.8 | Village Center Standards. The City will prepare Village Center Standards and update the Zoning Ordinance to include them and to integrate the Rubidoux Design Standards with the new Standards. | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|---|---|-------------------------------------|-------------------------|
| LUE 5.1.9 | Transfer of Development Credits. Consider establishing a Zoning Ordinance provision to allow the transfer of development credits – i.e., residential density – from environmentally sensitive sites to Village Center sites, where appropriate. | | |
| Mixed Use Overlay | | | |
| LUE 5.1.11 | Zoning Ordinance Update. Update the Zoning Ordinance, the Zoning Map, and specific plans to ensure consistency with the Mixed Use Overlay and to establish flexible development standards. | | |
| Historic and Cultural Resource Overlay (HRO) | | | |
| LUE 5.1.12 | Historic Resource Criteria. Prepare eligibility criteria and procedures for the designation of potential historic resources (e.g., Galleano Winery; Jensen-Alvarado Ranch) and potential historic districts (e.g., Downtown Rubidoux). | | |
| LUE 5.1.13 | Historic Survey. Conduct a historic and cultural resources survey to identify historic buildings, sites, and other important cultural landmarks to be preserved. | | |
| LUE 5.1.14 | Zoning Ordinance Amendment. Amend the Zoning Ordinance to require an assessment of potential impacts to on-site and nearby historic resources as part of planning applications for general plan amendments, rezoning, and conditional use permits. | | |
| LUE 5.1.15 | Demolition. Amend the Zoning Regulations to include Historic Resource demolition procedures. | | |
| General Plan Land Use Implementation | | | |
| LUE 7.1.1 | Land Use Intensification. Amend Section 9.10.050(D) of the Zoning Ordinance to require that applications to change the General Plan Land use designation to intensify land use on properties within a 100-year floodplain or on slopes of 4:1 or greater require initiation of a General Plan amendment by the City Council. | | |
| Community Design and Aesthetics | | | |
| LUE 10.1.1 | Distinctive Communities Map. Prepare a Distinctive Communities Map that reflects the intent of the General Plan and its residents that the unique qualities and characteristics of each of the City's distinctive | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|---------------------------|---|-------------------------------------|-------------------------|
| | communities will be maintained and not be absorbed into continuous suburban development. The map should be a “bubble” diagram rather than attempting to delineate precise community boundaries. Topographic features such as hills, watercourses, floodplains, and manmade features, such as streets and landmarks, should constitute the community definers or approximate boundaries. | | |
| Project Design | | | |
| LUE 11.1.1 | Architectural Guidelines. Within 18 months of adopting the 2017 General Plan, adopt Architectural Guidelines addressing site planning, building and landscape design, and signage. The Guidelines shall update and, where appropriate, merge and integrate community design standards developed by the County of Riverside and applied to various areas within Jurupa Valley. | | |
| Mobility Element | | | |
| Mobility Corridors | | | |
| ME 1.1.1 | Mobility Corridor Master Plan. Consider establishing a Mobility Corridor Master Plan and Design Guidelines to provide more detailed guidance on the design, operational and maintenance of mobility corridors. | | |
| Roadway Network | | | |
| ME 2.1.1 | Mitigation Measures. As necessary to mitigate potential impacts, the City will implement improvements identified as mitigation measures in the Final Environmental Impact Report for the 2017 General Plan. | | |
| ME 2.1.2 | School Planning. Provide assistance to school districts in facility planning and transportation operations to ensure safety for users of all modes during school pick-up, drop-off and other special events. | | |
| ME 2.1.3 | Sidewalks. Prepare and maintain an inventory of sidewalk facilities to determine where pedestrian improvements are most needed to provide a continuous safe route for pedestrians. | | |
| ME 2.1.4 | Barrier-free Access. Retrofit streets and require developments to install public improvements that provide disabled access and mobility on public streets, as | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|------------------------------------|---|-------------------------------------|-------------------------|
| | required by state or federal law. | | |
| ME 2.1.5 | Master Plan of Streets and Trails. Within 2 years of adopting the 2017 General Plan, prepare a Master Plan of Streets and Trails, including specific plans for future major capital projects such as the Cantu-Galleano/Bellegrave connection, cross sections for unimproved linkages to be developed through land development, and design standards for mobility corridors to address all transportation needs, including rural and local streets and industrial collector streets. Phase 1 of the Plan shall address mobility corridors and major roadways and shall be prepared within 1 year of 2017 General Plan adoption. Phase two shall include Local Streets, Collectors and the trails network as described in Policy and Program Sections 3.0 and 4.0. The Plan shall be consistent with this Mobility Element. | | |
| ME 2.1.6 | Camino Real. Consider modifying design of Camino Real in residential areas to slow traffic, improve sight distance and facilitate residential driveway use (i.e., cars backing into traffic lanes). | | |
| ME 2.1.7 | Transportation Technology. Consider emerging transportation technologies in reviewing new development, preparing and implementing City policies and programs, and in City transportation planning and design, including autonomous vehicles, signal synchronization, ped-actuated signals, and transportation network performance monitoring. | | |
| Planned Circulation Systems | | | |
| ME 2.1.8 | Traffic Study Guidelines. City will prepare and adopt Traffic Study Guidelines to aid in the evaluation of transportation-related impacts to circulation facilities, residential neighborhoods, environmental conditions and open space, and to identify the appropriate mitigation for such impacts. | | |
| ME 2.1.9 | Planned Network Improvements. City will evaluate and where appropriate, include the planned intersection and roadway segment improvements as described in the 2017 General Plan Mobility Element in its Capital Improvement Program. City will implement the | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|---|---|-------------------------------------|-------------------------|
| | improvements as resources allow. | | |
| Pedestrian and Bicycle Facilities – General Provisions | | | |
| ME 3.1.1 | Pedestrian and Bikeway Plan. Prepare a comprehensive Master Pedestrian and Bikeway Plan within 2 years of adoption of this General Plan Update. | | |
| Pedestrian and Bicycle Facilities – Bicycle Facilities | | | |
| ME 3.1.2 | Zoning Ordinance Update. Update the Zoning Ordinance to require end of trip bicycle facilities, as appropriate to the scale and use of the project, such as bicycle parking, lockers, and showers in new or major remodels of multi-family residential and non-residential uses. | | |
| ME 3.1.3 | Class II Bike Lanes. Identify and designate Class II bike lanes where considered appropriate and there is sufficient curb-to-curb street pave-out width. | | |
| ME 3.1.4 | Education. Promote Bicycle and Walking Safety lessons in local recreation programs and collaborate with local schools and law enforcement to offer bicycle and pedestrian skills and safety education programs. | | |
| ME 3.1.5 | Safe Routes to Schools. Expand the Safe Routes to School program, including City sponsorship of bicycle safety training, International Walk/Bike to School events, cyclovias and similar events and encourage all Jurupa Valley schools to get involved. | | |
| ME 3.1.6 | Bicycle-Friendly Businesses. Establish a bicycle-friendly business program to incentivize and facilitate use of alternative modes of transportation by employees and customers. | | |
| Equestrian and Multi-Purpose Trail Facilities | | | |
| ME 4.1.1 | Equestrian and Multipurpose Trails Implementation. Implement the Equestrian Trails Plan as shown in <i>Figure 3-17</i> (page 3-50) and implement the City Multi-Purpose Trail System Plan, to be developed. | | |
| ME 4.1.2 | Trail Linkages. Locate and design trails to provide access to or link scenic corridors, schools, parks, and other natural areas. | | |
| ME 4.1.3 | Trail Access. Require that all development proposals located along a planned trail or trails provide access to the trails system. | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|----------|---|-------------------------------------|-------------------------|
| ME 4.1.4 | Gated Communities. Ensure that existing and proposed gated communities with dedicated trails and new gated communities do not preclude trails from traversing their properties. | | |
| ME 4.1.5 | Trail Siting and Design. Adhere to the following guidelines when siting or designing a trail: <ol style="list-style-type: none"> 1. Permit urban trails to be located in or along transportation rights-of-way in fee, utility corridors, and along irrigation and flood control waterways so as to take advantage of existing rights-of-way, separate traffic and noise, and provide more services at less cost in one corridor. 2. Secure separate rights-of-way for non-motorized trails when physically, financially and legally feasible. 3. Where a separate right-of-way is not feasible, maintain recreation trails within the City right-of-way. 4. Use trail design standards which will minimize maintenance due to erosion or vandalism. 5. When a trail is to be reserved through the development approval process, base the precise trail alignments on the physical characteristics of the property, assuring connectivity through adjoining properties. 6. Place all recreation trails a safe distance from the edge of active aggregate mining operations and separate them by physical barriers. 7. Install warning signs indicating the presence of a trail at locations where regional or community trails cross public streets with high amounts of traffic and advising where equestrians share right-of-way with motor vehicles. 8. Take into consideration such issues as sensitive habitat areas, flood potentials, access to neighborhoods and open space, safety, alternate land uses, and usefulness for both transportation and alternate land uses when designing and constructing trails. 9. Coordinate with other agencies and/or organizations (such as the U.S. Fish and Wildlife Service | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|---|-------------------------------------|-------------------------|
| | and the Department of Transportation) to encourage the development of multi-purpose trails. Potential joint uses may include historic and environmental interpretation, access to fishing areas and other recreational uses, opportunities for education, and access for the disabled. 10. Work with landowners to address concerns about privacy, liability, security, and trail maintenance. | | |
| ,ME 4.1.6 | Rail Fencing. Install, or require the installation where appropriate, of a rail type fence separating road rights-of-way from adjacent trail easements and designed with two to three rails constructed of white PVM material. | | |
| Trail Acquisition, Maintenance, and Funding | | | |
| ME 4.1.7 | Grants. Working with other agencies, the City will seek grants to help develop, operate and maintain a comprehensive trail system through Jurupa Valley's designated open spaces, trails is a priority of the City. Trails also provide connections to activity centers within the City and to adjacent communities and provide recreation and leisure opportunities for residents. | | |
| ME 4.1.8 | Trail Maintenance Fund. Consider establishing a Trails Maintenance Fund. | | |
| Public Transit | | | |
| ME 5.1.1 | Transit Shelters. Work with RTA to identify shelter options to ensure adequate safety and comfort for transit users and encourage RTA to provide bus shelters at all bus stops along Limonite, Mission, and Jurupa Road. | | |
| ME 5.1.2 | Public Transit Plan. Work with RTA and other transit agencies to prepare a Public Transit Plan for Jurupa Valley. The Plan shall address existing and future public transit needs, opportunities and constraints, and shall integrate the following transit planning principles: 1. Public transit shall have high priority on major and secondary City streets. Where appropriate, transit vehicles should have higher priority than | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--------------------------------------|---|-------------------------------------|-------------------------|
| | <p>private vehicles.</p> <ol style="list-style-type: none"> Technology should be applied to increase average speeds of transit vehicles, where appropriate. Transit stops should be easily accessible, with safe and convenient crossing opportunities. Transit stops should be active and attractive public spaces that attract people on a regular basis, at various times of day, and all days of the week. Transit stops function as community destinations. The largest stops and stations should be designed to facilitate programming for a range of community activities and events. Transit stops should include amenities for passengers waiting to board. Transit stops should provide space for a variety of amenities in commercial areas, to serve residents, shoppers, and commuters alike. Transit stops should be attractive and visible from a distance. Transit stop placement and design influences accessibility to transit and network operations, and influences travel behavior/mode choice. Zoning codes, local land use ordinances, and design guidelines around transit stations should encourage walking and a mix of land uses. Streets that connect neighborhoods to transit facilities should be especially attractive, comfortable, and safe and inviting for pedestrians and bicyclists. | | |
| Freight Movement and Airports | | | |
| ME 6.1.1 | Identify Street Improvements. Identify and where feasible, help Implement street and highway improvements and maintenance projects to provide convenient and economical goods movement, particularly where heavy commercial truck traffic or congestion exists. | | |
| ME 6.1.2 | Establish Truck Routes. Study commercial truck movements and operations in the City and establish weight-restricted truck routes away from noise-sensitive | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|--|-------------------------------------|-------------------------|
| | areas, where feasible. | | |
| ME 6.1.3 | Implement Truck Routes. Limit truck traffic in residential and commercial areas to designated truck routes; limit construction and commercial truck through- traffic to designated routes; and include truck routes on City's Master Plan of Streets and Trails. | | |
| Transportation Systems Management | | | |
| ME 8.1.1 | New Interchanges on State Route 60. Construct new interchanges on SR 60 at Camino Real and Sierra Avenue/Pacific Avenue. | | |
| ME 8.1.2 | Regional Transportation Facilities and Services. Support the development of regional transportation facilities and services (such as high-occupancy vehicle lanes, express bus service, and fixed transit facilities), which will encourage the use of public transportation and ridesharing for longer distance trips. | | |
| ME 8.1.3 | New Interchanges on Van Buren Boulevard. Construct new interchanges on Van Buren Boulevard at Jurupa Road and Galena/Bellegrave Avenue. | | |
| Conservation and Open Space Element | | | |
| Biological Resources | | | |
| COS 1.1.1 | Riparian Corridors. Identify and protect riparian corridors through zoning, easements, or other measures that ensure effective, long-term conservation. | | |
| COS 1.1.2 | Public Information. Provide public information materials regarding the City's sensitive habitats, the values of watershed, biological resources, and sensitive habitats, and how to protect them. | | |
| COS 1.1.3 | Nature Trail Signage. Working with Community Services Districts and other agencies, help create minimal and appropriate signage along major trails (e.g., Santa Ana River and Jurupa Mountains) for educational outreach about critical habitats and native plant and animal species. | | |
| COS 1.1.4 | Urban Encroachment. Amend the Municipal Code to regulate the establishment or encroachment of non-compatible land uses or activities in habitat areas and passive open space, such as commercial uses, off-road | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--------------------------|--|-------------------------------------|-------------------------|
| | motorized vehicle use, off-trail, non-motorized vehicle use, hang gliding, grading, or other activities that conflict with biological resource conservation goals or policies. | | |
| COS 1.1.5 | Volunteer Conservation Programs. Working with community volunteers, conservation clubs, youth groups, and recreation and conservation agencies, help plan and support conservation activities such as habitat restoration, interpretive signage and tours, trail building, erosion control, and litter removal. | | |
| COS 1.1.6 | Tree Protection Ordinance. Develop a Tree Protection Ordinance. | | |
| Wildlife Habitats | | | |
| COS 2.1.1 | Preservation Incentives. Develop and provide incentives to private landowners that will encourage the protection of significant wildlife habitat resources, such as density averaging, transfer of development credits, tax incentives, and grants. | | |
| COS 2.1.2 | Regulation and Prevention of Destructive Practices. Develop and adopt regulations that effectively regulate dumping, camping, off-road vehicle use, illegal entry, and polluting within protected conservation areas such as the Santa Ana River corridor and the Jurupa Hills along the north City boundary. | | |
| Water Resources | | | |
| COS 3.1.1 | Public Information. Promote and support educational outreach programs that provide information services to the public about water conservation techniques, benefits, and water-saving technologies in conjunction with water providers, Riverside County, community services districts, and other entities. | | |
| COS 3.1.2 | Regional Cooperation. Monitor and participate in regional activities addressing water resources, ground-water, and water quality to help ensure adequate and safe water supplies for existing and future residents and businesses. | | |
| Water Quality | | | |
| COS 3.1.3 | Aquifer Recharge. Participate in the development, implementation, and maintenance of a program to | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|---|-------------------------------------|-------------------------|
| | recharge the aquifers underlying the City and Western Riverside County, where feasible and appropriate. The program shall make use of flood and other waters to offset existing and future groundwater pumping, except where: <ol style="list-style-type: none"> 1. Groundwater quality would be reduced; 2. Available groundwater aquifers are full; or 3. Rising water tables threaten the stability of existing structures. | | |
| Floodplain and Riparian Area Management | | | |
| COS 3.1.4 | Floodway Protection and Enhancement. Working with other responsible agencies, help implement the following actions: <ol style="list-style-type: none"> 1. Prepare an inventory of natural areas that have been degraded and list sites in priority order, for restoration efforts. 2. Revegetate disturbed areas using native plants. 3. Eliminate sources of water pollutants and improper water diversions. 4. Remove invasive, non-native plant species in natural habitat areas, and prevent the introduction or spread of invasive, non-native species. 5. Strongly discourage the placement of and, where possible, remove man-made elements such as buildings, paving, structural elements, concrete lining of waterways, signs, streets, and utilities within floodways or floodplains, unless they are needed for public health or safety, or for implementation of City plans. 6. Require that suitably sized access corridors be provided and/or maintained through or under new and previously established, man-made obstacles to wildlife movement (such as appropriately sized culverts under arterial streets, highways, and other major roads). 7. Prohibit camping, off-road vehicles, hunting and other activities that are not compatible with floodplain health and preservation. 8. Remove trash, debris, and contaminants, using | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|-------------------------------|---|-------------------------------------|-------------------------|
| | <p>methods that minimally disrupt the open-space resources.</p> <p>9. Provide continuing community education and outreach for all citizens, youth, and youth groups, and property owners on open space and natural resource values, programs, and responsibilities.</p> <p>10. Enlist the help of volunteers, youth and service groups, and academic programs in restoring and monitoring habitat health.</p> | | |
| Agricultural Resources | | | |
| COS 4.1.1 | Farmland Conservation. Encourage individuals, non-profit agencies, and the County to seek out grants and programs that promote farmland conservation. Such measures may include land trusts, conservation easements, Williamson Act designation, Land Conservation Contracts, Farmland Security Act contracts, the Agricultural Land Stewardship Program Fund; agricultural education programs, density averaging and development standards, and/or incentives (e.g., clustering and density bonuses) to encourage conservation of productive agricultural land. | | |
| COS 4.1.2 | Sustainable Agriculture. Encourage sustainable agricultural practices to protect the health of human and natural communities and to minimize conflicts between agriculture and urban neighbors. | | |
| Energy Conservation | | | |
| COS 5.1.1 | Energy-Efficient Operations. Budget for and manage City operations, capital improvements, and facilities for energy efficiency, including purchase and use of fleet vehicles, equipment, and materials. | | |
| COS 5.1.2 | Sustainable Design. Incorporate sustainable design and sustainable energy sources and features in existing and new City facilities. | | |
| COS 5.1.3 | Zoning Ordinance Update. Update the Zoning Ordinance to further the energy conservation goals, policies, and implementations actions, and reduce impediments or disincentives to it. | | |
| COS 5.1.4 | Encourage Public Information Programs. Encourage utilities to provide public information programs and | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|---|--|-------------------------------------|-------------------------|
| | energy audits to promote energy conservation and to protect solar access. | | |
| COS 5.1.5 | Energy Grants. Solicit state and federal grants to implement the City's energy conservation programs as such funding becomes available. | | |
| COS 5.1.6 | Community Choice Aggregation. Consider working with communities, community service districts, and public utilities to establish community choice aggregation programs. These programs allow cities and special districts to aggregate the buying power of individual customers within a defined area to secure alternative energy supply contracts on a community-wide basis, but allowing consumers not wishing to participate to opt out. | | |
| Solar Energy | | | |
| COS 5.1.7 | Update City Regulations. Update development and subdivision standards to include clear, specific standards to ensure that desirable solar access is provided for all new development. Standards shall address design priorities for providing and maintaining solar access, such as lot/building orientation, architectural design, collector placement and design, landscaping, and legal requirements to maintain solar access. | | |
| Mineral Resources | | | |
| COS 6.1.1 | Minerals Inventory. Maintain up-to-date information regarding the location of mineral resource zones in the City. | | |
| COS 6.1.2 | City Review. Update City ordinances to require that all proposals for mineral extraction and reclamation be reviewed by the Planning Commission and City Council. | | |
| Cultural and Paleontological Resources | | | |
| COS 7.1.1 | Historic Survey of Resources, Districts, and Neighborhoods. Conduct a survey to identify historic resources, districts and neighborhoods, such as the historic city areas or Rubidoux, Glen Avon, and Pedley with the Historic Resources Overlay and protect and, where possible, enhance their historic character through appropriate district signage, public improvements, and development incentives. | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|--|-------------------------------------|-------------------------|
| COS 7.1.2 | Historical Preservation Incentives. Consider offering preservation incentives, such as the Mills Act Tax Reduction program to encourage maintenance and restoration of historic properties. | | |
| COS 7.1.3 | Construction in Historic Districts. Prepare (or update, where guidelines already exist) architectural design guidelines to provide specific guidance on the construction of new buildings and public improvements within areas designated in the General Plan with the Historic Resource Overlay, such as village centers, historic districts, and historic neighborhoods. | | |
| COS 7.1.4 | Public Information Programs. Foster public awareness and appreciation of cultural resources by sponsoring educational programs or by collaborating with agencies, nonprofit organizations, and citizens groups to provide public information on cultural resources and display artifacts that illuminate the City's history. The City will encourage private development to include historical and archaeological displays where feasible and appropriate. | | |
| COS 7.1.5 | Cultural Resource Program. Develop a cultural resource program, describing eligible cultural resources, listing criteria, "sensitive and effective" listing procedures, noticing requirements, benefits of listing (e.g., Mills Act, flexible development standards) and historic plaques and district signage. | | |
| Open Space and Recreation Resources | | | |
| COS 8.1.1 | Protect Open Space Resources. Take the following actions to protect open space, and encourage individuals, organizations, and other agencies to take the same actions within their areas of responsibility and jurisdiction: <ol style="list-style-type: none"> Open Space Designation. Apply Open Space or Agriculture zoning to private property where equitable development potential is granted to the property owner for the remainder of the land, as appropriate and consistent with General Plan goals and policies. Open Space and Trails Dedication. Preserve or enhance open space and trails resources through application of conditions of subdivision and | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|-------------------------|--|-------------------------------------|-------------------------|
| | <p>development approvals, consistent with General Plan goals and policies, including dedications of fee ownership or easements where necessary and appropriate.</p> <p>3. Donations and Grants. Seek and use grants, donations, other revenue sources, and long-term financing mechanisms to purchase fee ownership or easements. The City will consider allocating funding for open space acquisition and protection, and will explore all potential funding sources and other creative incentive programs, including general obligation bonds, sales tax increase, property transfer tax, assessment districts, tax incentives, and state and federal loans and grants.</p> <p>4. Interagency Cooperation. Promote interagency cooperation for open space acquisition, greenbelt, creeks, wetlands, and wildlife habitat protection in open space areas by coordinating with other government agencies and organizations having interest or expertise in resource protection.</p> <p>5. Taxes and Fees. Avoid imposing taxes or fees that discourage dedication, improvement and retention of open space, trails, or agricultural uses.</p> | | |
| Scenic Resources | | | |
| COS 9.1.1 | Visual assessments. Require evaluations and/or visual simulations for development projects that could affect scenic resources and scenic vistas. | | |
| COS 9.1.2 | Scenic Highway Designation. Advocate state and county scenic highway designations and protective programs for highways and other roads connecting Jurupa Valley with other communities. | | |
| COS 9.1.3 | Undergrounding Utilities. Place existing overhead utilities underground, with highest priority for scenic roadways and entries to the City, and require utilities, community services districts, and other responsible agencies to do likewise. | | |
| COS 9.1.4 | Billboards. Amend the Municipal Code as needed to | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|-------------------|---|-------------------------------------|-------------------------|
| | prohibit the installation of new billboard signs along scenic corridors and roadways and to provide for the eventual removal of existing billboards through amortization, conditions of development approval, and grants for enhancing open space and transportation corridors. The highest priority for billboard limitations removal shall be along scenic roadways and at City gateways. | | |
| COS 9.1.5 | New Development. Ensure that new development within designated scenic highway corridors are designed with adequate site planning, setbacks, non-structural noise buffers, and construction assemblies to avoid the need for sound attenuation walls, while balancing the objectives of maintaining scenic resources with accommodating compatible land uses. | | |
| COS 9.1.6 | Grading. Utilize contour grading and slope rounding to gradually transition graded roads slopes, utilities, and development sites within and adjacent to scenic highway corridors to create natural landscape forms that follow the area's natural topography. | | |
| Dark Skies | | | |
| COS 10.1.1 | Lighting Standards. Develop lighting standards based on the International Dark-Sky Association's (IDA's) Model Lighting Ordinance, with emphasis on preserving the City's equestrian, semi-rural character. | | |
| COS 10.1.2 | Retrofit Plan. Establish a retrofitting plan for outdoor lighting on City streets and at City facilities, and encourage community service districts to do the same. | | |
| COS 10.1.3 | Grant Funding. Seek grant funding for City lighting upgrades, incentive programs, and new fixtures. | | |
| COS 10.1.4 | Public Awareness. Develop a dark sky public awareness campaign (e.g., April is Dark Sky Month, dark sky page on City's website, City Council proclamation). | | |
| COS 10.1.5 | Regional Collaboration. Collaborate with neighboring jurisdictions to identify the appropriate location and night lighting standards for a dark sky park. | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|--|-------------------------------------|-------------------------|
| COS 10.1.6 | Engineering Standards. Review City engineering standards for possible changes to public street lighting locations, design and spacing to reduce light pollution, improve energy efficiency and maintain safety. | | |
| Housing Element | | | |
| Encourage Development of Quality Housing That Meets the City's Affordable Housing Needs | | | |
| HE 1.1.1 | General Plan and Zoning Amendments. Amend General Plan and Zoning Ordinance and Map to designate at least 32.4 acres for residential use at HHDR density (up to 25 du/acre) to help meet Lower Income RHNA needs. The Land Use Map will be amended concurrently with the 2016 General Plan update. Zoning Ordinance amendments shall be initiated within 1 year of adopting the new General Plan. | | |
| HE 1.1.2 | Housing Authority Coordination. Coordinate with the Riverside County Housing Authority to pursue grant funding and other incentives to promote and assist the non-profit and/or private production of housing affordable to lower income households. Utilize public financing tools when available, including revenue bonds, Community Development Block Grant (CDBG), HOME, and Low-Income Housing Tax Credit (LIHTC) program funds. | | |
| HE 1.1.3 | Tax Exempt Bonds. Consider using tax-exempt revenue bonds to help finance new multi-family construction. | | |
| HE 1.1.4 | Mobile Homeowner Assistance. As resources allow, use federal and state grant funds, when available, to assist seniors, veterans and other lower income households purchase and/or improve mobile homes. | | |
| HE 1.1.5 | Affordable Housing Incentives. Consider establishing incentives for developers of new housing that is affordable to lower income households and special needs groups, such as: fast track/priority application and permit processing, density bonuses and/or fee waivers, assist affordable housing developers with right-of-way acquisition, off-site infrastructure improvements and other development costs, and assist in securing federal or state housing financing resources. Incentives should be considered for new housing developments of 100 or | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|-----------|---|-------------------------------------|-------------------------|
| | more units in which at least 15% of total units are sold or rented at prices affordable to households with incomes below 80% of the Riverside County Area Median Income (AMI). | | |
| HE 1.1.6 | Density Provisions. Update the Jurupa Valley Municipal Code and General Plan density provisions to ensure consistency with State law and apply density bonuses where necessary to encourage production of smaller, affordable housing, particularly in Village Centers and in higher density, mixed-use and other areas where appropriate and compatible with adjacent development. | | |
| HE 1.1.7 | City Development Fees. Develop a sliding scale Fee Assistance program where the amount and type of City development fees may be waived by the City Council based on the number of affordable units proposed (i.e., as the number of affordable units increases, the amount of fee waiver increases). | | |
| HE 1.1.8 | CDBG and HOME Funds. When available, use CDBG; HOME and other grant or housing trust funds to write down costs of acquiring sites and to offset infrastructure and construction costs for residential developments in which at least 15% of total units are sold or rented at prices affordable to households with incomes below 80% of the Riverside County Area Median Income (AMI). | | |
| HE 1.1.9 | Site Identification. Work with public, private and non-profit housing entities to identify candidate sites for new construction of rental housing for seniors and other special housing needs, and take all actions necessary to expedite processing and approval of such projects. | | |
| HE 1.1.10 | Residential Incentive Zone (R-6). Update and continue to encourage development of affordable housing in the R-6 zone, and other multi-family residential zones, where appropriate. Utilize incentives for development as established in Ordinance 348, or in the 2017 General Plan and subsequent Zoning Ordinance amendments. | | |
| HE 1.1.11 | Updated Land Use Inventory and Map. Establish and maintain a Land Use Inventory and a map that provide a mechanism to monitor a) acreage and location by General Plan designation, b) vacant and underutilized | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|-----------|--|-------------------------------------|-------------------------|
| | land, and c) build-out of approved projects utilizing the City's GIS system and supported by mapping. Maintain the Land Use Inventory on a regular basis, as frequently as budget allows. | | |
| HE 1.1.12 | Candidate Sites. Encourage developers to identify vacant and underutilized properties as candidate sites for affordable or mixed market rate/affordable housing development and identify them in the Land Use Inventory. | | |
| HE 1.1.13 | Homeless Shelter. In cooperation with non-profit organizations, adjacent cities, and with Riverside County, encourage the development of a homeless shelter to meet Jurupa Valley's and adjacent communities' homeless shelter needs. Consider tax incentives and other financial incentives to encourage homeless shelter development. | | |
| HE 1.1.14 | Homelessness Strategy. Until a permanent shelter or shelters can be established, the City shall work with Riverside County and local housing agencies to help prepare a homelessness strategy to address immediate needs dealing with safety, health and sanitation, environmental health, temporary housing, and access to homeless services. | | |
| HE 1.1.15 | Creative Housing Solutions. Provide incentives to encourage development of a range of creative and affordable housing types to accommodate homeless persons, seniors, disabled persons, and other low and extremely low-income populations, such as single room occupancy dwellings (SROs), pre-fabricated housing, so-called "tiny houses," and other emerging housing products. Potential incentives include priority permit processing, fee waivers or deferrals, flexible development standards, supporting or assisting with funding applications, and coordinating with housing developers. | | |
| HE 1.1.16 | Coordination with Non-Profit Housing Providers. Continue to work with non-profit organizations, such as National Community Renaissance, Mary Erickson Housing, and Habitat for Humanity, in the production of affordable and self-help housing for moderate and lower | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|-----------|--|-------------------------------------|-------------------------|
| | income households. | | |
| HE 1.1.17 | Flexible Standards. Continue to provide for flexibility in the design of residential development through the processing of planned unit developments (PUDs), area and specific plans, and village plans, and through the application of Zoning Ordinance provisions allowing flexible lot sizes and development standards. | | |
| HE 1.1.18 | Accessory or Second Dwelling Units. Update the Municipal Code to allow “Accessory Dwelling Units” in compliance with state law within 1 year of Housing Element adoption. | | |
| HE 1.1.19 | Mobile and Manufactured Homes. Continue to allow mobile homes, modular and manufactured homes in single-family residential zones “by right,” and mobile home parks subject to a CUP, and encourage construction of new mobile home parks and manufactured housing to increase the supply of affordable dwelling units, where appropriate. | | |
| HE 1.1.20 | Mixed Housing Types and Densities. Encourage residential development proposals to provide a range of housing types and densities for all income levels, including market rate housing, using creative planning concepts such as traditional neighborhood design, planned unit developments, area and specific plans, and mixed-use development. | | |
| HE 1.1.21 | Accessible Housing for Disabled Persons. Encourage single- and multi-family housing developers to designate accessible and/or adaptable units already required by law to be affordable to persons with disabilities or persons with special needs. | | |
| HE 1.1.22 | Universal Design. Encourage “universal design” features in new dwellings, such as level entries, wider paths of travel, larger bathrooms, and lower kitchen countertops to accommodate persons with disabilities. | | |
| HE 1.1.23 | Affordable Housing for Disabled Persons. Encourage, and as budget allows, help support programs providing increased opportunities for disabled persons in affordable residential units rehabilitated or constructed through City or County programs. | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|---|--|-------------------------------------|-------------------------|
| Conserve and Improve the Housing Stock, Particularly Housing Affordable to Lower Income and Special Housing Needs Households | | | |
| HE 2.1.1 | Infrastructure. As budget allows, City shall include sufficient resources for adequate maintenance of public facilities such as streets, sidewalks, and drainage in the City's capital improvement program and encourage community services districts to do likewise. | | |
| HE 2.1.2 | Adaptive Housing Strategies. Support creative strategies for the rehabilitation and adaptive reuse of residential, commercial, and industrial structures for housing, if appropriate. | | |
| HE 2.1.3 | Code Enforcement. Ensure that housing is maintained through code enforcement activities. Continue to administer the Code Enforcement Program to eliminate unsafe, illegal, and substandard conditions in residential neighborhoods and residential properties. | | |
| HE 2.1.4 | Affordable Mobile Homes Conservation. Conserve affordable mobile home housing stock and help bring such housing up to code through mobile home loan and improvement grants funded by CDBG and other funds, as available. | | |
| HE 2.1.5 | Bilingual Outreach. As resources allow, provide bilingual outreach materials and activities to educate and inform the community about available housing rehabilitation programs and resources. | | |
| HE 2.1.6 | Monitor Assisted Units. Help ensure that affordable housing assisted with public funds remains affordable for the required time through maintenance of an inventory of assisted units which is monitored for expiration of assisted housing. | | |
| HE 2.1.7 | Preserve At-Risk Housing Units. Preserve grant-assisted, bond-financed, density bonus or other types of affordable units at risk of conversion to market rate during the planning period by 1) working with the Riverside County Housing Authority or other nonprofit housing entities to 1) purchase the units using state, federal or local financing and/or subsidies, 2) assist with low or no interest loans for rehabilitation, as budget allows, 3) support bond refinancing, and 4) refer the | | |

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|---|-------------------------------------|-------------------------|
| | project sponsor to other federal or local sources of below-market financing. | | |
| HE 2.1.8 | Affordability Covenants. As a condition of project approval, require new affordable housing projects to remain affordable for a specific time, consistent with and as required by the funding program(s) in which they participate, through covenants with the project proponent, Housing Authority or other housing agency. | | |
| HE 2.1.9 | Remove Government Constraints. Evaluate the zoning ordinance, subdivision requirements, and other City regulations to remove governmental constraints to the maintenance, improvement, and development of housing, where appropriate and legally possible. | | |
| Promote Equal Housing Opportunities for All Persons | | | |
| HE 3.1.1 | Fair Housing Council. Utilize the services of the Fair Housing Council of Riverside County to implement a number of programs, including: 1) audits of lending institutions and rental establishments, 2) education and training of City staff, and 3) fair housing outreach and education regarding fair housing laws and resources. | | |
| HE 3.1.2 | Education and Outreach. Continue to use the services of the Fair Housing Council to provide education and outreach services to the public in both Spanish and English (<i>also see HE 3.1.1 above</i>). | | |
| HE 3.1.3 | Public Housing and Rental Assistance. Encourage Riverside County to continue to maintain 300+ public housing units and continue to assist very low-income recipients in Jurupa Valley with Section 8 rental assistance vouchers. | | |
| HE 3.1.4 | First-Time Homebuyers Assistance. Explore the feasibility of developing a new First Time Home Buyer Down Payment Assistance Program, utilizing tax-exempt mortgage revenue bonds to finance mortgages and down payment assistance for single-family homes for very low and low income first time homebuyers. | | |
| HE 3.1.5 | Lease/Purchase Home Ownership Program. Encourage the Housing Authority to continue the Lease/Purchase Home Ownership Assistance Program, which assists potential homeowners in leasing a property while | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|---|--|-------------------------------------|-------------------------|
| | moving towards ownership at the end of 3 years. | | |
| HE 3.1.6 | Housing Variety. Facilitate new market rate residential projects that provide a variety of housing types and densities. | | |
| HE 3.1.7 | Neighborhood Connectivity. Require new residential neighborhoods to interconnect with existing neighborhoods to provide for social interaction, assure pedestrian-friendly connectivity and minimize vehicle trips. | | |
| HE 3.1.8 | Multi-Family Dwellings Standards. Establish standards for multiple-family dwellings that will achieve comparable recreation and open space opportunities, protection from sources of noise and degraded air quality, adequate access to public services and facilities and parking that apply to single-family housing. | | |
| HE 3.1.9 | Amend the Zoning Ordinance. Amend the Zoning Ordinance to expand housing opportunities, including but not limited to: amending the definition of “family” to comply with state and federal law, removing the minimum distance requirement between emergency shelters, providing reasonable accommodation for persons with disabilities, and encouraging development of a variety of housing for all income levels, such as manufactured housing, rental housing, mobile homes, single-room occupancy housing, employee housing and transitional and supportive housing. | | |
| Maintain and Enhance Residential Neighborhoods and Remove Blight | | | |
| HE 4.1.1 | Neighborhood Participation. Implement varied strategies to ensure residents are aware of and able to participate in planning decisions affecting their neighborhoods early in the planning process, such as neighborhood meetings, City Council member visits, and town hall meetings. | | |
| HE 4.1.2 | Neighborhood Needs. Identify specific neighborhood needs, problems, trends, and opportunities for improvements. Work directly with neighborhood groups and individuals to address concerns. | | |
| HE 4.1.3 | Neighborhood Improvements. As budget allows, help fund neighborhood improvements, such as street paving | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|--|-------------------------------------|-------------------------|
| | or repairs, sidewalks, pedestrian and equestrian trails, crosswalks, parkways, street trees and other public facilities to improve aesthetics, safety, and accessibility. | | |
| HE 4.1.4 | Neighborhood Pride. Working with Riverside County, CSDs and non-profit housing entities, develop and promote a Neighborhood Pride Program including cooperative projects with Code Enforcement staff, and Public Works projects in target areas, as funding allows. | | |
| Reduce Residential Energy and Water Use | | | |
| HE 5.1.1 | Incentives. Consider establishing incentives for energy conservation above and beyond the requirements of Title 24, such as priority permit processing or reduced permit fees on a sliding scale Fee Assistance Program, as budget allows. | | |
| HE 5.1.2 | Energy Programs for Lower Income Households. Encourage and participate in Riverside County's and utility providers' programs to reduce maintenance and energy costs for households with low incomes, and increase efforts to inform the public about available cost-saving, energy conservation programs. | | |
| HE 5.1.3 | Energy Conservation Grants. Pursue grant funds for energy rehab costs and consumer education. | | |
| HE 5.1.4 | City Requests for Proposals. City RFPs, contracts, and bidding procedures capital projects and programs shall incorporate energy conservation and sustainability measures. | | |
| HE 5.1.5 | City Facilities. Utilize energy/water saving measures in City-owned buildings and facilities, including landscaping, to meet industry sustainable design standards. | | |
| HE 5.1.6 | Sustainable Design. Adopt sustainable design policies, standards and codes that result in attractive, energy efficient, neighborhoods. | | |
| Air Quality Element | | | |
| Multi-Jurisdictional Cooperation | | | |
| AQ 1.1.1 | Regional Committees. Actively participate on regional committees that can influence regulations affecting air quality. | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|---|--|-------------------------------------|-------------------------|
| Sensitive Receptors | | | |
| AQ 2.1.1 | Best Practices. Establish a program to monitor adherence to best practices in distance and setbacks as recommended by CARB and SCAQMD. | | |
| Particulate Matter | | | |
| AQ 4.1.1 | Truck Parking in Residential Areas. Prohibit the parking of large commercial trucks, trailers, and truck cabs in residential areas, except for loading or unloading, through Municipal Code amendments, signage, enforcement, and other measures. | | |
| AQ 4.1.2 | Diesel Fumes. Collaborate with the US EPA, SCAQMD, and warehouse owners and operators to create regulations and programs to reduce the amount of diesel fumes released due to warehousing operations. | | |
| AQ 4.1.3 | Commercial Truck Parking Lots. Research funding and establish a program to provide incentives and opportunities for commercial truck parking lots to prevent the need for parking trucks, trailers, and truck cabs in residential and other restricted areas. | | |
| AQ 4.1.4 | Electric Charging Stations. Establish incentives for developers to plan for and install electric vehicle charging station in new developments. | | |
| Energy Efficiency and Conservation | | | |
| AQ 5.1.1 | Waste Management. Establish incentives and programs to encourage the use of recycling and waste management. | | |
| Jobs and Housing | | | |
| AQ 6.1.1 | Job-Skill Training Opportunities. Actively seek and incentivize educational opportunities and institutions such as community colleges and trade schools to locate within Jurupa Valley to provide local job-skill training opportunities. | | |
| AQ 6.1.2 | Funding Programs. Actively seek funding programs to incentivize businesses that meet community needs. | | |
| Transportation | | | |
| AQ 7.1.1 | Trip Reduction Programs. Pursue grant funding to establish an incentive program to encourage the use of trip reduction programs to decrease automotive vehicle | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|-------------------------------|---|-------------------------------------|-------------------------|
| | miles traveled. | | |
| AQ 7.1.2 | Traffic Signal Improvements. Construct and improve traffic signals with channelization and Automated Traffic Monitoring and Control systems at appropriate intersections. | | |
| AQ 7.1.3 | Transportation Management. Consider measures such as Transportation Demand Management, Transportation Systems Management, or jobs/housing balance strategies when developing capital facilities improvement plans. | | |
| AQ 7.1.4 | Congestion Monitoring. Develop a program to monitor traffic and congestion to determine when and where the City needs new transportation facilities to achieve increased mobility efficiency. | | |
| Climate Change | | | |
| AQ 9.1.1 | <p>Climate Action Plan. Within 2 years of General Plan adoption, prepare and adopt a Climate Action Plan (CAP) for the City, including a 2030 and 2035 reduction target and local emissions inventory. The CAP will be consistent with the WRCOG Subregional CAP but will identify specific additional measures for the reduction of future GHG emissions. The CAP shall demonstrate how the City will reduce its GHG emissions to 50% below 1990 levels by 2030 and 80% below 1990 levels by 2050, consistent with state law and current guidance on GHG reduction planning.</p> <p>Specific actions that may be included in the City CAP to help keep Citywide emissions below the SCAQMD service population significance threshold include, but are not limited to, requiring the installation of electric and conduit improvements to support the installation of future roof-mounted photovoltaic solar systems and electric vehicle charging stations for individual homes and businesses.</p> | | |
| Noise Element | | | |
| Land Use Compatibility | | | |
| NE 1.1.1 | Municipal Code: Amend the Municipal Code to require that development entitlements (e.g., tract maps, site development plans, conditional use permits) comply with | | |

- 1 First Department listed initiates and administers program or project; support departments provide assistance as required.
- 2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|-----------------------------|---|-------------------------------------|-------------------------|
| | the Land Use/Noise Compatibility Matrix, <i>Figure 7-3</i> , and with other noise requirements of the General Plan. | | |
| NE 1.1.2 | Noise Guide. The Planning Department shall prepare and maintain a Noise Guide containing “Good Neighbor” guidelines and rules for neighborhood noise reduction and procedures for mitigating noise, and make the Guide available to the public, property owners, and developers. | | |
| NE 1.1.3 | Homeowner Assistance. Assist homeowners living in high noise areas to reduce noise levels in their homes through funding assistance and retrofitting program development, as City resources allow. | | |
| NE 1.1.4 | Noise Compatibility Assessment. Conduct a noise compatibility assessment of sensitive land uses throughout the City. | | |
| Mobile Noise Sources | | | |
| NE 2.1.1 | Truck Routes. Prepare and adopt truck routes to direct commercial trucks away from sensitive noise receptors. | | |
| NE 2.1.2 | <p>City Actions. The City will consider implementing one or more of the following measures where existing or cumulative increases in noise levels from new development significantly affect noise-sensitive land uses or residential neighborhoods:</p> <ol style="list-style-type: none"> 1. Rerouting traffic onto streets that can maintain desired levels of service, consistent with the Mobility Element, and that do not adjoin noise-sensitive land uses. 2. Rerouting commercial trucks onto streets that do not adjoin noise-sensitive land uses. 3. Constructing noise barriers. 4. Reducing traffic speeds through street or intersection design methods (also refer to the Mobility Element). 5. Retrofitting buildings with noise-reducing features. 6. Establishing financial programs, such as low cost loans to owners of noise-impacted property, or requiring noise mitigation or trip reduction programs as a condition of development | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|---|---|-------------------------------------|-------------------------|
| | approval. 7. Encourage and support stepped up enforcement of traffic laws and the <i>California Vehicle Code</i> . | | |
| NE 2.1.3 | City Operations and Purchasing. The City will pursue alternatives to the use of noisy equipment and vehicles, and will purchase equipment and vehicles only if they incorporate the best available noise reduction technology. | | |
| Stationary Noise Sources | | | |
| NE 3.1.1 | Ensuring Compliance. Ensure that required noise mitigation measures are enforced as a project is built, and in place and/or fully implemented prior to release of occupancy, including enforcement of the State Building Codes regarding Chapter 35, "Sound Transmission Control," as amended, and "Noise Insulation Standards" (<i>California Code of Regulations</i> , Title 24). | | |
| Ground-Borne Vibration | | | |
| NE 4.1.1 | Rail-Related Noise. Minimize the noise impact of passenger (Metrolink) and freight rail service on sensitive land uses by coordinating with rail authorities to effectively manage train noise and by establishing and enforcing noise mitigation measures that apply to rail uses. | | |
| NE 4.1.2 | Quiet Zone Crossings. Require new development in the vicinity of railroad crossings that are within 1,000 feet of existing residential neighborhoods to design and construct Quiet Zone railroad crossing improvements and seek to qualify for a Quiet Zone designation. | | |
| Community Safety, Services, and Facilities Element | | | |
| Geologic Hazards | | | |
| CSSF 1.1.1 | Hazard Mitigation. Mitigate potential seismic hazards through adoption and strict enforcement of current building codes, which will be amended as necessary when local deficiencies are identified. | | |
| CSSF 1.1.2 | Liaison Program. Develop a liaison program with all water purveyors to prevent water extraction-induced subsidence. | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|-------------------------------------|---|-------------------------------------|-------------------------|
| CSSF 1.1.3 | Density Transfer. Develop a program to allow the transfer of allowable density from high-risk areas to low-risk areas. | | |
| Flood Hazards and Inundation | | | |
| CSSF 1.1.4 | Property Acquisition. As resources allow, acquire property in high-risk flood zones and designate the land as open space for public use or wildlife habitat. | | |
| CSSF 1.1.5 | Giant Cane and Other Invasive Plant Species. Encourage and, as resources allow, support the efforts of SAWPA, the County of Riverside, and other agencies to remove Giant Cane and other invasive, non-native plant species from the Santa Ana River corridor and restore native riparian habitat. | | |
| Fire Hazards | | | |
| CSSF 1.1.6 | Fire Safety Planning. Conduct and implement long-range fire safety planning, including updating building, fire, subdivision, and municipal code standards, improved infrastructure, and improved mutual aid agreements with the private and public sectors. | | |
| CSSF 1.1.7 | Fire Response Agreements. Review inter-jurisdictional fire response agreements, and improve firefighting resources as recommended in the County Fire Protection Master Plan, to keep pace with development and to ensure that: <ol style="list-style-type: none"> 1. Fire reporting and response times do not exceed those listed in the County Fire Protection Master Plan identified for each of the development densities described; 2. Fire flow requirements (water for fire protection) are consistent with Insurance Service Office (ISO) recommendations; and 3. The planned deployment and height of aerial ladders and other specialized equipment and apparatus are sufficient for the intensity of development anticipated. | | |
| Disaster Preparedness | | | |
| CSSF 1.1.8 | Post-Disaster Recovery. Develop plans for short-term and long-term post-disaster recovery. | | |
| CSSF 1.1.9 | Safeguard Infrastructure. Coordinate with the Public | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|------------------------|---|-------------------------------------|-------------------------|
| | Utilities Commission (PUC) and/or utilize the Capital Improvement Program, to strengthen, relocate, or take other appropriate measures to safeguard high-voltage lines, water, sewer, natural gas and petroleum pipelines, and trunk electrical and telephone conduits that: <ol style="list-style-type: none"> 1. Extend through areas of high liquefaction potential; 2. Cross active faults; or 3. Traverse earth cracks or landslides. | | |
| CSSF 1.1.10 | Earthquake Drills. Conduct City earthquake drills and, where appropriate: <ol style="list-style-type: none"> 1. Develop internal scenarios for City emergency response, including emergency drills; and 2. Test back-up power generators in public facilities and other critical facilities taking part in emergency drills. | | |
| CSSF 1.1.11 | Information Dissemination. Improve management and emergency dissemination of information using portable computers with geographic information systems and disaster-resistant Internet access, to obtain: <ol style="list-style-type: none"> 1. Hazardous Materials Disclosure Business Plans regarding the location and types of hazardous materials; 2. Real-time information on seismic, geologic, or flood hazards; and 3. The locations of high-occupancy, immobile populations, potentially hazardous building structures, utilities, and other lifelines. | | |
| City Governance | | | |
| CSSF 2.1.1 | Evaluate Municipal Services. Allocate municipal resources to evaluate the need, cost, and feasibility of the City assuming responsibility for providing facilities or services currently provided by other agencies. | | |
| Police Services | | | |
| CSSF 2.1.2 | Planning Applications. Route new Planning applications to the Sheriff's Department to increase public safety and maintain close coordination with the Sheriff's Department and law enforcement programs. | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|--|-------------------------------------|-------------------------|
| Educational Facilities | | | |
| CSSF 2.1.4 | Incentivize Advanced Educational Opportunities. Review the Zoning Ordinance to identify potential zones, locations, development incentives, and requirements for advanced educational and occupational training schools and similar facilities. Make this information available to potential applicants, real estate and development professionals, marketing and construction firms, and local school districts. | | |
| Parks and Recreation | | | |
| CSSF 2.1.5 | Master Plan. In cooperation with JARPD, County of Riverside, JCSD, and other responsible agencies, prepare and adopt a Joint Recreational Opportunities and Open Space Master Plan that identifies priorities for park expansion, acquisition, improvement, and funding. The Plan will be adopted within 2 years of General Plan adoption and updated at least every 10 years. | | |
| Water | | | |
| CSSF 2.1.6 | Urban Water Management Plan. Work with local water purveyors to prepare a unified Urban Water Management Plan for Jurupa Valley and to ensure that the Plan is updated as needed. | | |
| CSSF 2.1.7 | Alternative Water Resources. Explore the feasibility of desalinization and other regional projects as additional sources of local water. | | |
| Storm Water | | | |
| CSSF 2.1.8 | Multi-Modal Trails. Develop a multi-agency program with the Riverside County Flood Control and Water Conservation District, the Jurupa Area Recreation and Park District, and the City for the use of flood control channels and associated maintenance and accessways for pedestrian, bicycle, and equestrian trails. | | |
| Environmental Justice Element | | | |
| Meaningful Public Input and Capacity Building | | | |
| EJ 1.1.1 | Alternative Funding Strategies. Pursue alternate funding strategies to maintain the financial stability of Jurupa Valley so as to enable the City to implement the principles of environmental justice described in this | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|--|-------------------------------------|-------------------------|
| | Element. | | |
| Land Use and the Environment | | | |
| EJ 2.1.1 | Truck Routes. Designate truck routes to avoid residential areas including low-income and minority neighborhoods. | | |
| EJ 2.1.2 | Training. Provide staff and City officials training on the principles and methods of comprehensive public participation. Guidelines for how to conduct staff/official training are contained in the Cal/EPA Environmental Justice Advisory Committee Recommendations. | | |
| Healthy Communities Element | | | |
| Overall Health | | | |
| HC 1.1.1 | Health Events. Sponsor special City health events, Mayor's Walks, and similar activities to raise resident awareness of health programs and to promote healthy neighborhood activities, such as cleanup days and bike rodeos. | | |
| HC 1.1.2 | Public Health Information. Collaborate with local health providers to provide public health information, programs and events at local community centers, parks, food markets, and other public places. | | |
| Access to Healthy Foods and Nutrition | | | |
| HC 2.1.1 | Zoning for Local Food Outlets. Encourage the development of healthy food outlets, small neighborhood markets, farmers' markets, and food cooperatives in residential zones by adopting flexible zoning standards to allow such uses where appropriate. | | |
| HC 2.1.2 | Community Gardens. Identify and inventory potential community garden/urban farm sites on existing parks, utility easements and rights of way, and prioritize site use as community gardens in appropriate locations. | | |
| HC 2.1.3 | Grant Funding. Seek grant funding and innovative public-private partnerships, where feasible, to increase residents' access to healthy foods and opportunities for physical activity, especially in underserved areas. | | |
| Land Use Planning | | | |
| HC 4.1.1 | Neighborhood Markets. Amend the Zoning Ordinance to allow small, neighborhood-serving markets within easy walking and biking distance from most residential areas, | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|------------------------|---|-------------------------------------|-------------------------|
| | and encourage such markets to include fruits, vegetables, and other healthy foods. | | |
| HC 4.1.2 | Bicycle and Pedestrian Master Plan. Implement the Bicycle and Pedestrian Master Plan and allocate a portion of the annual City budget, as resources allow, to complete bike and sidewalk projects that infill public sidewalk gaps and provide connectivity. | | |
| HC 4.1.3 | Community Gardens. Amend the Zoning Ordinance to allow the development of community gardens throughout the City. | | |
| HC 4.1.4 | Compatible Agriculture. Amend the Zoning Ordinance to allow compatible agriculture uses in Residential, Commercial, and Public zones. | | |
| Traffic Calming | | | |
| HC 4.1.5 | Risk Reduction. Pursue grants and other funding for projects that reduce the risk of pedestrian/vehicle collisions and equestrian/vehicle interactions, particularly in areas where there are frequent incidents. | | |
| HC 4.1.6 | Traffic Calming. Implement traffic calming and traffic-slowing measures on roads with a high level of pedestrian and non-motorized vehicle activity. | | |
| HC 4.1.7 | Safety Features. Incorporate safety features for non-motorized travel within road improvement projects, as resources allow. | | |
| HC 4.1.8 | Equestrian Crossings. Provide special accommodations for equestrians at crossings where trails and roads intersect. | | |
| Urban Forestry | | | |
| HC 6.1.1 | Street Tree Master Plan. Prepare a Street Tree Master Plan to address tree preservation, planting, and maintenance. | | |
| HC 6.1.2 | Pilot “Edible Landscape” Program. Establish a pilot Community Living Gardens program in cooperation with volunteer groups and other agencies; identify viable community garden sites, and consider the feasibility of planting fruit trees in local parks, parkways, and on publicly controlled parties. | | |

| Program | Description | Responsible Department ¹ | Time Frame ² |
|--|---|-------------------------------------|-------------------------|
| Economic Sustainability Element | | | |
| Economic Development and Fiscal Sustainability | | | |
| ES 1.1.1 | Economic Development Strategy. Prepare and adopt an Economic Development Strategy to achieve the goals of this General Plan and to capitalize on economic development opportunities. | | |
| ES 1.1.2 | Cost of Services Study/Impact Fees. Conduct a cost of municipal services study and, if warranted, consider establishing impact fees to defray costs of maintaining and improving municipal services and facilities. | | |
| ES 1.1.3 | Regional Economic Influence. Build Jurupa Valley's role as a regional economic leader through active participation in local and regional business forums, regional economic and transportation planning, and business recruitment activities, as resources allow. | | |
| Industrial Base | | | |
| ES 2.1.1 | Industrial Development Profiles. Prepare development profiles for specific industrial opportunity sites, including information on site attributes, allowed land use and development standards, relevant County or City approvals, and potential development incentives. | | |
| Retail Commercial Base | | | |
| ES 3.1.1 | Business Retention Strategy. Adopt a Business Retention and Expansion (BRE) Program to address outreach strategies, business improvement and marketing in village centers, feasibility of business improvement districts, and potential business incentives. | | |
| ES 3.1.2 | Branding and Business Attraction. Prepare and adopt an Economic Development Strategy, including: 1) branding and business attraction strategy to establish a unified identity for Jurupa Valley based on its unique character, quality of life, and business attributes, and 2) a communications program to publicize the Jurupa Valley brand for residents, visitors, and potential visitors. | | |
| ES 3.1.3 | Commercial Corridors. Work with property owners along the principal commercial corridors, including Mission Boulevard, Rubidoux Boulevard, Limonite Avenue, and Jurupa Road to explore General Plan and zoning | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Program | Description | Responsible Department ¹ | Time Frame ² |
|---|---|-------------------------------------|-------------------------|
| | strategies to consolidate commercial uses into vibrant nodes and allow residential development along the corridors. | | |
| ES 3.1.4 | Business Visitation Program. Establish and operate a City business visitation program to improve communication and understanding of business needs, opportunities, and issues. | | |
| ES 3.1.5 | Mayor's Business Awards Program. Consider initiating an annual Mayor's Business Award to recognize Jurupa Valley's outstanding business citizens and businesses. | | |
| Tourism Base | | | |
| ES 4.1.1 | Commercial Recreation and Visitor Attraction Plan. Prepare and adopt a commercial recreation and visitor attraction plan in cooperation with the Chamber of Commerce and other interested parties, which identifies the City's recreational, equestrian, cultural and tourism assets, potential resources and funding sources, potential land use and zoning incentives, target uses, businesses and/or attractions, and marketing strategies. | | |
| Workforce Development | | | |
| ES 5.1.1 | Business Incubator. Explore opportunities to collaborate with a business "incubator" in Jurupa Valley, such as a research and technology development campus, a regional occupation center, or a technology training institute. | | |
| Special Economic Opportunity Areas | | | |
| ES 6.1.1 | Fulfillment Center and Logistics. Give a high priority to attracting a new point-of-sale fulfillment center and logistics industrial projects based on low market vacancies and growth in those sectors. | | |
| ES 6.1.2 | Economic Development Strategy. Ensure that the City's Economic Development Strategy includes specific implementation measures to address the Kosmont findings and recommendations, and include a monitoring and evaluation program to evaluate the effectiveness of City economic development actions. | | |

1 First Department listed initiates and administers program or project; support departments provide assistance as required.

2 Target completion dates, unless otherwise noted.

| Appendix C | Supporting Materials |

1. INTRODUCTION

The Final Programmatic Environmental Impact Report (FEIR) for the proposed 2017 General Plan for the City of Jurupa Valley ("Proposed Plan" or "Plan") is composed of the following documents:

- Draft EIR State Clearinghouse No. 2016021025 and Appendices dated February 14, 2017;
- Final EIR and Response to Comments EIR including modifications or errata to the DEIR;
- Mitigation Monitoring and Reporting Program (MMRP); and
- Findings, Statement of Overriding Considerations, Staff Reports, and Resolutions.

The purpose of this document is to respond to all comments received by the City of Jurupa Valley (City) regarding the environmental information and analyses contained in the Draft EIR. Additionally, any corrections to the text and figures of the Draft EIR, generated either from responses to comments or independently by the City, are stated in this volume of the Final EIR. The Draft EIR text has not been modified to reflect these clarifications.

1.1 CONTENT AND FORMAT

Subsequent to this introductory section, Section 2.0 contains copies of each comment letter received on the Draft EIR, along with annotated responses to each comment contained within the letters. Section 3.0 of this document contains corrections and errata to the Draft EIR. Section 4.0 contains the MMRP.

1.2 PUBLIC REVIEW OF THE DRAFT EIR

As required by the California Environmental Quality Act (CEQA) Guidelines Section 15087, a Notice of Completion (NOC) of the Draft Programmatic EIR State Clearinghouse No. 2016021025 for the 2017 General Plan for the City of Jurupa Valley was filed with the State Clearinghouse on February 17, 2017 and the Notice of Availability (NOA) of the Draft EIR was filed with the Riverside County Clerk at the same time. The Draft EIR was circulated for public review for a period of 45 days, from February 17, 2017 to April 3, 2017. Copies of the Draft EIR were distributed to all Responsible Agencies and to the State Clearinghouse in addition to various public agencies, citizen groups, and interested individuals. Copies of the Draft EIR were also made available for public review at the City Planning Department, at two area libraries, and on the internet.

A total of eleven (11) comment letters were received commenting on the DEIR. Nine (9) of the comment letters received were from federal, State, regional, or local agencies, one letter was received from a conservation group, and one letter was received from a private organization/individual. All letters have been responded to within this document. In particular, comments that address environmental issues are responded to in Section 2.0.

1.3 POINT OF CONTACT

The Lead Agency for this Project is the City of Jurupa. Any questions or comments regarding the preparation of this document, its assumptions, or its conclusions, should be referred to:

Mary Wright, Project Manager
City of Jurupa Valley, Planning Department
8930 Limonite Avenue
Jurupa Valley, California 91776
Phone: (951) 332-6464
Email: mwright@jurupavalley.org

1.4 PROJECT SUMMARY

The following information is summarized from the “General Plan Components” description in the Draft EIR. For additional detail in regard to Plan characteristics, along with analyses of the Plan’s potential environmental impacts, please refer to Draft EIR Sections 3.0 and 4.0, respectively.

1.4.1 Location

The City of Jurupa Valley is located in western Riverside County, and the Proposed Plan area constitutes the boundaries of the City of Jurupa Valley. The City is adjacent to the cities of Eastvale on the west, Norco and Riverside on the south and east, and Ontario and Fontana in the County of San Bernardino on the north and east, and the City of Colton on the northeast. The western portion of Jurupa Valley is primarily flat, with gentle rolling foothills scattered throughout the Glen Avon and Mira Loma areas. North of SR 60 lies the dramatic sloping terrain of the Jurupa Mountains, that provide a natural backdrop for the communities of Sunnyslope and Belltown. The Pedley Hills provide a picturesque setting for the community of Pedley as well as a pleasing backdrop for communities adjacent to the hills. The Santa Ana River, with its attendant riparian habitat, provides a natural contrast along the southern boundary of Jurupa Valley. Over the years, the Jurupa Valley has consisted of many unincorporated communities.

1.4.2 General Plan Components

The City’s 2017 General Plan is consistent with and derives its authority from California State law. Once adopted, it becomes the basis for land use and other important municipal decisions; however, the Plan itself is not a regulation. The General Plan is implemented through Zoning Regulations, adopted standards and other City laws. As required by State law, capital improvement programs, zoning regulations and related land use policies must be consistent with the General Plan.

The *Land Use Element* represents a generalized “blueprint” for the future of the City and is the core of the General Plan. It sets forth a pattern for the use, development, and preservation of land within the City’s planning area. The pattern is based on Community needs and preferences and describes the expected level of population growth resulting from housing construction anticipated by the plan. It also shows the type, location, and intensity of new commercial and industrial uses to meet the City’s economic sustainability needs. The General Plan consists of the seven mandatory elements, including the Land Use Element, plus three optional elements. The following elements relate to the Land Use Element as described below.

- 1) The *Mobility Element* recognizes implications of land use policy on all modes of movement and establishes policies, standards, and implementation measures that work with the Land Use Element update and address both existing and potential circulation opportunities and deficiencies.
- 2) The *Housing Element* goals, policies, and programs reflect the land use policies as they relate to residential development.
- 3) The *Noise Element* contains policies that protect residents and land uses from noise and vibration impacts while allowing development and a mix of compatible land uses.
- 4) The *Community Safety, Services and Facilities Element* identifies hazards that influence the locations and types of proposed land uses and describes the services and facilities necessary to serve those land uses. In addition, the Land Use and Safety Elements share several safety topics. For example, the Land Use Element includes airport safety policies and programs that relate to compatible land use and design.
- 5) The *Conservation and Open Space Element* contains policies and programs to protect natural resources and open spaces, including natural habitat areas, environmentally sensitive areas, watersheds, recreation areas, agricultural land, and other open space amenities. The

Land Use Element works with this element and incorporates concepts such as clustering and buffering open space areas in order to enhance their protection.

- 6) The *Air Quality Element* contains policies and programs that address land use, design, and transportation measures intended to help maintain healthy air quality in Jurupa Valley. The pattern of land use and communities' transportation systems can help reduce motor vehicle emissions and have positive, healthy effects on residents and visitors' quality of life.
- 7) The *Environmental Justice Element* contains policies and programs that seek to ensure that all members of the Community have meaningful input into the decision-making process. In addition, the Element protects low-income persons and communities from land use actions that adversely affect the health, safety, and welfare of these groups.
- 8) The *Economic Sustainability Element* contains policies and programs that focus on the City's financial health to achieve other key Community goals and to provide essential services. Economic-sustainability strategies typically involve land-use and transportation decisions, and are guided by long-term consideration of City assets, opportunities, needs, and costs.
- 9) The *Healthy Communities Element* includes policies and programs to support the overall health of Jurupa Valley's residents. It focuses on providing healthy choices for food, recreation, and health care, and seeks to improve everyone's access to information on healthy living.

1.4.3 Plan Objectives

A clear statement of project objectives allows for the analysis of reasonable alternatives to the proposed project once significant impacts of the project have been identified. The City has outlined the following objectives for the proposed project relative to the CEQA process and the analysis of alternatives in the Draft EIR (Section 6.0) are outlined below.

The purpose of the proposed 2017 General Plan is to provide a framework for growth and change (e.g., new residential and non-residential development). General plans are necessarily considered at a program level under CEQA, which means its objectives, as outlined in its goals, policies, and programs, are more broad than objectives for typical private development projects or even public works projects. The Community Values Statement of the 2017 General Plan states its "guiding values" (considered to be "objectives" under CEQA) are to:

1. **Small-Town Feel.** Maintain Jurupa Valley's small-town feel, where neighbors know neighbors and merchants, the built environment reflects and is compatible with the area's character, and where residents can grow gardens, raise and keep livestock, and choose from diverse lifestyles in a semi-rural town setting.
2. **Community of Communities.** Jurupa Valley consists of many distinctive communities and neighborhoods in a valley surrounded by stunning natural scenery and views. As a "community of communities", we will preserve and enhance those positive qualities that make our communities unique, enhance our "gateways" to welcome residents and visitors and embrace a unifying community theme and spirit. Our ability to offer the choice of a semi-rural, equestrian lifestyle is an essential part of who we are as a community and of our quality of life.
3. **Open Space and Visual Quality.** We value and protect the Santa Ana River and river plain, ridgelines, and hillsides for their exceptional value for recreation, watershed, wildlife habitat, environmental health, and as scenic backdrops for the City. As part of our values, we support prevention and removal of visual blight, protection of public vistas, and community awareness and beautification activities. Jurupa Valley's special places will be protected, maintained and promoted to preserve our unique character, instill local pride and encourage tourism.
4. **Active Outdoor Life.** Many Jurupa Valley residents were drawn here because of its unique outdoor setting and the recreation opportunities it offers. Our parks and recreation facilities are

essential to maintain and improve our health and quality of life. We place high value on our public parks, sports fields, pedestrian and equestrian trails and support facilities, golf courses, outdoor use areas, historic sites and nature centers, campgrounds, airport, and joint use school facilities.

5. **Public Safety.** Support for public safety, law enforcement and emergency medical services is a value that's widely held by Jurupa Valley residents. We honor and respect the safety professionals who faithfully serve Jurupa Valley. We support strong, collaborative efforts to prevent crime and homelessness, enforce planning and building codes, and to improve the safety of neighborhoods, homes, public facilities, streets, trails and other transportation facilities. We take proactive measures to cope with and recover from emergencies and natural and manmade disasters.
6. **Education, Culture and Technology.** We place high priority on maintaining and improving our educational, cultural and technical opportunities, including programs and events at schools, libraries, museums, performing arts facilities and other community venues. We support the establishment of new community centers as well as college-level, life-enrichment, and career training opportunities in Jurupa Valley.
7. **Mobility.** We support the creation and maintenance of transportation networks (e.g., multi-use equestrian, pedestrian and bicycle trails, complete streets, sidewalks, airport, rail, and public transit) that are safe, attractive, and efficient and provide connectivity to meet the diverse needs for the movement of people and goods.
8. **Diversity.** We value Jurupa Valley's cultural and social diversity and celebrate our cultural richness through arts and culture, community festivals, educational programs and exhibits, seasonal and equestrian-themed events, preservation of historic landmarks, youth and adult sports.
9. **Environmental Justice.** We value the health, well-being, safety and livability of all our communities and strive to equitably distribute public benefits and resources. We endeavor to enhance underserved communities so that all residents can thrive and share in a high quality of life.
10. **Healthy Communities.** We have a comprehensive view of health. We enhance existing opportunities for healthy living and create new ones by helping residents to make the healthy choice the easy choice. The health and well-being of all individuals, families, neighborhoods and businesses is our shared value and concern. We take positive steps to maintain a clean, visually attractive City, to improve Jurupa Valley's physical, social and environmental health and to share and teach these values to achieve and sustain a healthy, clean and safe environment for current and future generations.
11. **Economic and Fiscal Health.** We support high quality economic growth and development that is environmentally sustainable and that fosters housing, living wage jobs, retail goods and services, public facilities and services, environmental benefits, destination tourism, and medical and educational facilities. We seek ways to be good stewards of our local assets, to make wise land use and fiscal decisions, to conduct open and accessible government, and to preserve and enhance the City's prosperity and quality of life.

2. RESPONSE TO COMMENTS

A total of eleven (11) comment letters on the Draft EIR were received with nine (9) letters from federal, state, regional, or local agencies, one letter from a conservation organization, and one letter from a private individual. All letters have been responded to within this document. Comments that address environmental concerns have been specifically addressed. Section 15088 of the State CEQA Guidelines, *Evaluation of and Response to Comments*, states:

- a) The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall respond to comments received during the noticed comment period and any extensions and may respond to late comments.
- b) The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed Plan to mitigate anticipated impacts or objections). In particular, major environmental issues raised when the lead agency's position is at variance with recommendations and objections raised in the comments must be addressed in detail, giving the reasons that specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice.
- c) The response to comments may take the form of a revision to the draft EIR or may be a separate section in the final EIR. Where the response to comments makes important changes in the information contained in the text of the draft EIR, the lead agency should either:
 - 1. Revise the text in the body of the EIR; or
 - 2. Include marginal notes showing that the information is revised in the responses to comments.

Information provided in this volume of the Final EIR clarifies, amplifies, or makes minor modifications to the Draft EIR. No significant changes have been made to the information contained in the Draft EIR as a result of the responses to comments, and no significant new information has been added that would require recirculation of the document.

An Errata section to the EIR (Section 3.0) has been prepared to indicate if or what minor corrections and clarifications to the Draft EIR were needed as a result of City review and comments received during the public review period.

This Response to Comments document, along with the Errata is included as part of the Final EIR for consideration/recommendation by the Planning Commission and then to the City Council prior to a vote to certify the Final EIR.

2.1 LIST OF PERSONS, ORGANIZATIONS, AND PUBLIC AGENCIES COMMENTING ON THE DRAFT EIR

The persons, organizations, and public agencies that submitted comments regarding the Draft EIR from February 17, 2017 through April 3, 2017, are listed below. A total of eleven (11) comment letters were received. Nine of the comment letters were from federal, state, regional, or local agencies, while two letters were from private conservation organizations or individuals. Each comment letter received is indexed with a letter below:

(A) FEDERAL/STATE AGENCIES

- A-1 California Office of Planning and Research, State Clearinghouse (April 4, 2017)**
Scott Morgan, Director, State Clearinghouse
- A-2 Federal Emergency Management Agency (February 23, 2017)**
Gregor Blackburn, DFM Branch Chief
- A-3 Native American Heritage Commission (February 28, 2017)**
Katy Sanchez, Associate Environmental Planner
- A-4 CalFire and Riverside County Fire Department (April 11, 2017)***
Jason Neuman, Division Chief, Strategic Planning Division

(B) REGIONAL/COUNTY AGENCIES

- B-1 Riverside County Airport Land Use Commission (March 28, 2017)**
Edward Cooper, ALUC Director
- B-2 Southern California Edison (April 3, 2017)**
Heather Neely, Environmental Services

(C) LOCAL AGENCIES

- C-1 City of Eastvale (March 3, 2017)**
No Commenter Specified
- C-2 City of Fontana (March 8, 2017)**
Zai AbuBakar, Director of Community Development
- C-3 City of Eastvale (April 12, 2017)***
Cathy Perring, Assistant Planning Director

(D) PRIVATE ORGANIZATIONS/INDIVIDUALS

- D-1 Golden State Environmental Justice Alliance (March 11, 2017)**
Joe Bourgeois, Chairman of the Board
- D-2 RTE 60, LLC (private party)(March 20, 2017)**
Jim Stockhausen (Emerald Ridge representative)

* received after the close of the public review period

2.2 FORMAT OF RESPONSES TO COMMENTS

The first section provides responses to the comments made at a public hearing at the Planning Commission on February 22, 2017 to introduce the DEIR to the Commission and the public. Following that are comment letters and responses to the comments in those letters.

Aside from the courtesy statements, introductions, and closings, individual comments within the body of each letter have been identified and numbered. A copy of each comment letter and the City's responses are included in this section. Brackets delineating the individual comments and an alphanumeric identifier have been added to the right margin of the letter. Responses to each comment identified are included on the page(s) following each comment letter. Responses to comments were sent to the agencies that provided comments.

In the process of responding to the comments, there were minor revisions to the Draft Environmental Impact Report. None of the comments or responses constitutes "significant new information" (*CEQA Guidelines* Section 15073.5) that would require recirculation of the Draft Environmental Impact Report.

Planning Commission Public Hearing on February 22, 2017

Please excuse any misspellings of names of summary of issues by speaker listed from the hearing, the author used notes taken during the hearing as the basis for the following material. Also note most of the comments are directed to various elements of the General Plan but any relationship of comments to the General Plan EIR are noted below.

Public Comments

1. Kim Johnson. Provided some detailed comments regarding cultural and historical resources for the Conservation and Open Space Element which may affect the General Plan EIR. Provided a written list of "possible historic buildings" in Jurupa Valley (see FEIR Appendix C). She recommended incorporating a more detailed list or multiple lists into the General Plan, and indicated she would be submitting a more detailed letter later during the EIR public review period.

Response. Draft EIR includes more extensive discussion of historical resources and recommends mitigation to address potential resources that may be outside of designated historical zone.

2. Phil Jones. Representing Garrett Group for the "Land Use Area (LUA) 4" property in Glen Avon. Would like land use designation changed from Commercial Tourist/Light Industrial (CT/LI) to Business Park (BP) for more flexibility.

Response: Land use comment (no direct relation to EIR).

3. Pam Steele. Representing Jerry Jaekels in "Land Use Area (LUA) 5" (LUA-5). Would like land use designation(s) to match a project being proposed for that area.

Response: Land use comment (no direct relation to EIR).

4. Shiela Ehrlich. Represents owners on property at 58th Street to Jurupa Road along railroad tracks. A-1 designation in between the R-1 designation (see No. 5 below).

Response: Land use comment (no direct relation to EIR).

5. Sybil Acheree. Lives on property at 58th Street to Jurupa Road along the railroad lines. Property has always been commercial so is requesting Business Park (BP) rather than a residential designation.

Response: Land use comment (no direct relation to EIR).

6. Betty Anderson. Expressed concern about air quality policies and asked the City to prohibit truck parking in residential areas. She said there was a lot of that activity in Sky Country and truckers were being attracted to that area by being told it was allowed there. Said Mira Loma area has bad enough air quality, and did not want Jurupa Valley to become like Fontana relative to trucks parking in residential areas.

Response: The Planning Commission discussed regarding Air Quality Element below. EIR did address air quality and health risks on a City-wide basis including trucks and diesel emissions in areas that are designated for light industrial and other truck-related uses.

7. Steven Anderson. Said the General Plan map for trails is good on paper but in reality there are few trails in the City. Supported comments from No. 6 and encouraged the City to get truck parking out of residential areas. Truck routes should be designated to keep truck activity away from high school and residences.

Response: Truck routes are addressed in both General Plan and EIR although the actual designated routes will probably not be incorporated into the General Plan document. The Planning Commission discussed regarding Air Quality Element below.

8. Diana Fox. Concerned about health and wellness in the City (works with “Healthy Jurupa Valley”). Suggested some language could be added to the General Plan from the WRCOG Healthy Element template or model.

Response: The General Plan addresses goals and policies of the General Plan relative to healthy communities which are also addressed in appropriate sections of the EIR.

Summary of Public Comments. Four of the 8 comments were about specific changes to land use designations on specific properties, one of the 8 comments was about “healthy communities” policies, and three of the 8 comments addressed potential EIR issues.

Planning Commission Comments

Note: the following comments are summarized by General Plan Element rather than individual speaker as the discussion went back and forth among the Planning Commissioners so identifying specific comments from specific speakers was not possible.

1. Air Quality Element. More specific data was needed about Greenhouse Gas (GHG) emissions, (maybe an assessment of truck emission impacts to residential areas, ways to reduce particulate matter including diesel emissions). The General Plan may need to add mitigation measures to better control GHG emissions from new development, especially with current and pending legislation for 2030 GHG targets (SB 32). It may be possible to easily add restrictions to the Municipal Code rather than General Plan restricting trucks in residential areas.

Response: Staff pointed out the General Plan Land Use Element does discourage truck parking, but the City “inherited” poorly organized land uses in some areas and it will take time to resolve some ongoing issues. The General Plan is supposed to provide options for new development to help reduce or eliminate such issues over time.

2. Community Safety Element. The City is challenged by a number of existing hazards, maybe the concept of Transfer of Development Rights (TRD) can be used to set aside hazardous areas, sites with former hazmat contamination, steep slopes, flood zones, etc.

Response: Staff indicated the General Plan has a number of policies to deal with properties that contain hazards, as well as General Plan goals and policies regarding community-wide hazards.

3. Environmental Justice Element. Element has been in place for two years, no need yet for any major revisions. Is Element consistent with SB 1000 requirements for 2018?

Response: Staff indicated the Environmental Justice Element complies with SB 1000.

4. Healthy Communities. Planning Commissioners echoed public comments on healthy communities and expressed concern about health care for seniors, especially if federal programs and requirements change in the coming years.

Response: Staff indicated the General Plan has policies to address these concerns.

5. Economic Sustainability. Planning Commissioners asked if there were local business profiles for prospective companies wanting to relocate to Jurupa Valley. Page ESE page 11-6 refers to “lower income, largely Hispanic” market but does the City want that kind of specific targeting for future businesses?

Response: Staff indicated the General Plan and supporting Kosmont study indicate retail sales per household is low in the City due to a lack of shopping opportunities that are unfortunately met by businesses in other jurisdictions. However, the Kosmont study did not identify specific attraction goals.

6. Draft EIR. No specific comments, no one had time to review it since it was only distributed on February 17.

LETTER A-1

Ernest Perea
City of Jurupa Valley
8930 Limonite Avenue
Jurupa Valley, CA 92509

Subject: Jurupa Valley 2017 General Plan Programmatic Environmental Impact Report
SCH#: 2016021025

Dear Ernest Perea:

The State Clearinghouse submitted the above named Draft EIR to selected state agencies for review. On the enclosed Document Details Report please note that the Clearinghouse has listed the state agencies that reviewed your document. The review period closed on April 3, 2017, and the comments from the responding agency (ies) is (are) enclosed. If this comment package is not in order, please notify the State Clearinghouse immediately. Please refer to the project's ten-digit State Clearinghouse number in future correspondence so that we may respond promptly.

Please note that Section 21104(c) of the California Public Resources Code states that:

"A responsible or other public agency shall only make substantive comments regarding those activities involved in a project which are within an area of expertise of the agency or which are required to be carried out or approved by the agency. Those comments shall be supported by specific documentation."

These comments are forwarded for use in preparing your final environmental document. Should you need more information or clarification of the enclosed comments, we recommend that you contact the commenting agency directly.

This letter acknowledges that you have complied with the State Clearinghouse review requirements for draft environmental documents, pursuant to the California Environmental Quality Act. Please contact the State Clearinghouse at (916) 445-0613 if you have any questions regarding the environmental review process.

Sincerely,

Scott Morgan
Director, State Clearinghouse

City of Jurupa Valley
8930 Limonite Avenue
Jurupa Valley, California 92509-5183

LETTER A-2

Dear Mr. Perea:

This is in response to your request for comments regarding the Jurupa Valley General Plan Environmental Impact Report, Project # CJV1502.

Please review the current effective countywide Flood Insurance Rate Maps (FIRMs) for the County of Riverside (Community Number 060245) and City of Jurupa Valley (Community Number 060286), Maps revised August 18, 2014. Please note that the City of Jurupa Valley, Riverside County, California is a participant in the National Flood Insurance Program (NFIP). The minimum, basic NFIP floodplain management building requirements are described in Vol. 44 Code of Federal Regulations (44 CFR), Sections 59 through 65.

1

A summary of these NFIP floodplain management building requirements are as follows:

- All buildings constructed within a riverine floodplain, (i.e., Flood Zones A, AO, AH, AE, and A1 through A30 as delineated on the FIRM), must be elevated so that the lowest floor is at or above the Base Flood Elevation level in accordance with the effective Flood Insurance Rate Map.
- If the area of construction is located within a Regulatory Floodway as delineated on the FIRM, any *development* must not increase base flood elevation levels. **The term *development* means any man-made change to improved or unimproved real estate, including but not limited to buildings, other structures, mining, dredging, filling, grading, paving, excavation or drilling operations, and storage of equipment or materials.** A hydrologic and hydraulic analysis must be performed *prior* to the start of development, and must demonstrate that the development would not cause any rise in base flood levels. No rise is permitted within regulatory floodways.

2

3

Ernest Perea, CEQA Administrator
Page 2
February 23, 2017

- Upon completion of any development that changes existing Special Flood Hazard Areas, the NFIP directs all participating communities to submit the appropriate hydrologic and hydraulic data to FEMA for a FIRM revision. In accordance with 44 CFR, Section 65.3, as soon as practicable, but not later than six months after such data becomes available, a community shall notify FEMA of the changes by submitting technical data for a flood map revision. To obtain copies of FEMA's Flood Map Revision Application Packages, please refer to the FEMA website at <http://www.fema.gov/business/nfip/forms.shtm>.

4

Please Note:

Many NFIP participating communities have adopted floodplain management building requirements which are more restrictive than the minimum federal standards described in 44 CFR. Please contact the local community's floodplain manager for more information on local floodplain management building requirements. The Jurupa Valley floodplain manager can be reached by calling Don Allison, P.E., Associate Engineer, at (951) 790-1331. The Riverside County floodplain manager can be reached by calling Deborah de Chambeau, at (951) 955-1265.

5

If you have any questions or concerns, please do not hesitate to call Frank Mansell of the Mitigation staff at (510) 627-7191.

Sincerely,

Gregor Blackburn, CFM, Branch Chief
Floodplain Management and Insurance Branch

Alessandro Amaglio, Environmental Officer, DHS/FEMA Region IX

RESPONSES TO LETTER A-2

Federal Emergency Management Agency

Response to Comment 1. The information in the Draft EIR (DEIR) on flooding was based in part on data obtained from the FEMA website regarding Flood Insurance Rate Maps (FIRMs) for the Jurupa Valley area, as cited in the DEIR. The General Plan goals and policies related to flood control and flood protection are consistent with the FIRM program and the National Flood Insurance Program (NFIP). DEIR pages 4.9-2 through 4.9-6 describe flooding conditions in the City and refer to these federal flood protection programs.

Response to Comment 2. The City acknowledges that new development and improvements must be kept out of established or identified flood zones as outlined in FEMA's FIRM program and the National Flood Insurance Program (NFIP). General Plan Policy CSSF 1.6 addresses flood risk by requiring the review of new construction and substantial improvements within the 100-year floodplain. It also requires projects to minimize its flood risks to acceptable levels in areas mapped by FEMA or as determined by site-specific hydrologic studies for areas not mapped by FEMA (i.e., the 100-year flood zone). In addition, Policy CSSF 1.12 requires that flood control improvements must be in place to protect not only existing development but future development in the City (DEIR pages 4.9-26 and 4.9-27).

Response to Comment 3. The Community Safety, Services, and Facilities Element of the General Plan includes the following goals and policies which require hydraulic studies for new development to protect improvements and occupants from anticipated flooding, consistent with federal laws and regulations. General Plan Policies CSSF 1.6 and CSSF 1.21 address flood risk by requiring the review of new construction and substantial improvements within the 100-year floodplain. It also requires projects to minimize its flood risks to acceptable levels in areas mapped by FEMA or as determined by site-specific hydrologic studies for areas not mapped by FEMA (i.e., areas outside of the 100-year flood zone). In addition, Policy CSSF 1.12 requires that flood control improvements must be in place to protect not only existing development but future development in the City (DEIR pages 4.9-36).

Response to Comment 4. The Community Safety, Services, and Facilities Element of the General Plan includes the following policy regarding flood map revisions:

CSSF 1.21 Flood Hazard Zones. Encourage periodic reevaluation of the 500-year, 100-year and 10-year flood hazard zones by State, federal, County, and other sources and use such studies to improve existing protection, review flood protection standards for new development and redevelopment, and update emergency response plans.

In addition, the City's development review procedures require a Letter of Map Revision (LOMR) or Conditional Letter of Map Revision (CLOMR) when development will change identified 100-year flood zone limits.

Response to Comment 5. The City will continue to coordinate with federal and county floodplain managers to provide flood protection for current and future City residents and businesses. The Community Safety, Services, and Facilities Element of the General Plan includes the following policies regarding regional coordination: CSSF 1.15 requires new development to integrate into local and regional storm drain systems; and CSSF 1.16 which requires the City and future development to coordinate with neighboring jurisdictions regarding flood protection.

LETTER A-3

Ernest Perea
City of Jurupa Valley
8930 Limonite Avenue
Jurupa Valley, CA 92509

Re: SCH# 2016021025 Jurupa Valley 2017 General Plan Programmatic Environmental Impact Report, Riverside County.

Dear Mr. Perea:

The Native American Heritage Commission (NAHC) has reviewed the Draft Environmental Impact Report prepared for the project referenced above.

The California Environmental Quality Act (CEQA)¹, specifically Public Resources Code section 21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment.² If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an environmental impact report (EIR) shall be prepared.³ In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources with the area of project effect (APE).

CEQA was amended in 2014 by Assembly Bill 52. (AB 52).⁴ **AB 52 applies to any project for which a notice of preparation or a notice of negative declaration or mitigated negative declaration is filed on or after July 1, 2015.** AB 52 created a separate category for "tribal cultural resources", that now includes "a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment."⁵ Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.⁶ Your project may also be subject to **Senate Bill 18 (SB 18)** (Burton, Chapter 905, Statutes of 2004), Government Code 65352.3, if it also involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space. **Both SB 18 and AB 52 have tribal consultation requirements.** Additionally, if your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966⁸ may also apply.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

Agencies should be aware that AB 52 does not preclude agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52. For that reason, we urge you to continue to request Native American Tribal Consultation Lists and Sacred Lands File searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>. Additional information regarding AB 52 can be found online at http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf, entitled "Tribal Consultation Under AB 52: Requirements and Best Practices".

The NAHC recommends lead agencies consult with all California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources.

A brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments is also attached.

Please contact me at katy.sanchez@nahc.ca.gov or call (916) 373-3712, if you have any questions.

Sincerely,

Katy Sanchez

³ Pub. Resources Code § 21080 (d); Cal. Code Regs., tit. 14, § 15064 subd.(a)(1); CEQA Guidelines § 15064 (a)(1)

⁴ Government Code 65352.3

⁵ Pub. Resources Code § 21074

⁶ Pub. Resources Code § 21074

Pertinent Statutory Information:

Under AB 52:

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a **lead agency** shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice.

A **lead agency** shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project,⁹ and **prior to the release of a negative declaration, mitigated negative declaration or environmental impact report.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18).¹⁰

The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- a. Alternatives to the project.
- b. Recommended mitigation measures.
- c. Significant effects.

1. The following topics are discretionary topics of consultation:

- a. Type of environmental review necessary.
- b. Significance of the tribal cultural resources.
- c. Significance of the project's impacts on tribal cultural resources.

If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency.¹²

With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process **shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10.** Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public.¹³

If a project may have a significant impact on a tribal cultural resource, **the lead agency's environmental document shall discuss both of the following:**

- a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
- b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource.¹⁴

Consultation with a tribe shall be considered concluded when either of the following occurs:

- a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
- b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached.¹⁵

Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 **shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program**, if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable.¹⁶

If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, **the lead agency shall consider feasible mitigation** pursuant to Public Resources Code section 21084.3 (b).¹⁷

An environmental impact report **may not be certified**, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

- a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
- b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
- c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days.¹⁸

This process should be documented in the Tribal Cultural Resources section of your environmental document.

Under SB 18:

Government Code § 65352.3 (a) (1) requires consultation with Native Americans on general plan proposals for the purposes of "preserving or mitigating impacts to places, features, and objects described § 5097.9 and § 5091.993 of the Public Resources Code that are located within the city or county's jurisdiction. Government Code § 65560 (a), (b), and (c) provides for consultation with Native American tribes on the open-space element of a county or city general plan for the purposes of protecting places, features, and objects described in Sections 5097.9 and 5097.993 of the Public Resources Code.

⁹ Pub. Resources Code § 21080.3.1, subds. (d) and (e)

¹⁰ Pub. Resources Code § 21080.3.1 (b)

¹¹ Pub. Resources Code § 21080.3.2 (a)

¹² Pub. Resources Code § 21080.3.2 (a)

¹³ Pub. Resources Code § 21082.3 (c)(1)

¹⁴ Pub. Resources Code § 21082.3 (b)

¹⁵ Pub. Resources Code § 21080.3.2 (b)

¹⁶ Pub. Resources Code § 21082.3 (a)

¹⁷ Pub. Resources Code § 21082.3 (e)

- SB 18 applies to **local governments** and requires them to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf
- **Tribal Consultation:** If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.**¹⁹
- **There is no Statutory Time Limit on Tribal Consultation under the law.**
- **Confidentiality:** Consistent with the guidelines developed and adopted by the Office of Planning and Research,²⁰ the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code sections 5097.9 and 5097.993 that are within the city's or county's jurisdiction.²¹
- **Conclusion Tribal Consultation:** Consultation should be concluded at the point in which:
 - The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
 - Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation.²²

NAHC Recommendations for Cultural Resources Assessments:

- Contact the NAHC for:
 - A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
 - A Native American Tribal Contact List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
 - The request form can be found at <http://nahc.ca.gov/resources/forms/>.
- Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
 - If part or the entire APE has been previously surveyed for cultural resources.
 - If any known cultural resources have been already been recorded on or adjacent to the APE.
 - If the probability is low, moderate, or high that cultural resources are located in the APE.
 - If a survey is required to determine whether previously unrecorded cultural resources are present.
- If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
 - The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
 - The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

Examples of Mitigation Measures That May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

- Avoidance and preservation of the resources in place, including, but not limited to:
 - Planning and construction to avoid the resources and protect the cultural and natural context.
 - Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
- Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
 - Protecting the cultural character and integrity of the resource.
 - Protecting the traditional use of the resource.
 - Protecting the confidentiality of the resource.
- Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
- Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed.²³
- Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated.²⁴

The lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

¹⁹ (Gov. Code § 65352.3 (a)(2)).

²⁰ pursuant to Gov. Code section 65040.2,

²¹ (Gov. Code § 65352.3 (b)).

²² (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18)

²³

- Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources.²⁵ In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
- Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
- Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code section 7050.5, Public Resources Code section 5097.98, and Cal. Code Regs., tit. 14, section 15064.5, subdivisions (d) and (e) (CEQA Guidelines section 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

RESPONSES TO LETTER A-3

Native American Heritage Commission

Response to Comment 1. As outlined in the DEIR, three Native American tribal groups were contacted to request if they wanted to consult with the City on this project, per the requirements of Senate Bill (SB) 18 and Assembly Bill (AB) 52. DEIR page 4.5-17 states that..."A General Plan requires consultation with local Native American tribal groups under both SB 18 and AB 52 regarding Tribal Cultural Resources (TCR). The State Native American Heritage Commission has indicated there are 23 Native American groups or individuals in the region who may have an interest in the Jurupa Valley General Plan. Of these groups/individuals contacted by the City, representatives from the following three Native American Groups expressed interest in the City's General Plan process in terms of Native American monitoring of any and all ground disturbing activities as well as formal government to government consultation, but did not indicate the need for additional consultation regarding the General Plan itself as long as project-level concerns were met:

1. Mr. Andrew Salas, Gabrieleño Band of Mission Indians-Kizh Nation
2. Mr. Ray Huaute, Morongo Band of Mission Indians
3. Mr. Anthony Ontiveros, Soboba Band Luiseño Indians

In addition, Ms. Croft, THPO, with the Agua Caliente Band of Mission Indians indicated the City is outside the boundaries of the Agua Caliente traditional use area and no further consultation was necessary.

This demonstrates the City's commitment to meaningful consultation with local Native American tribal groups, and the City will continue to consult with the tribes on development proposals in the future, as required under SB 18 and AB 52.

Jurupa Valley, CA 92509

**RE: City of Jurupa Valley 2017 General Plan Draft Environmental Impact Report (SCH
No. 2016021025)**

Dear Mr. Perea,

Thank you for providing the Riverside County Fire Department the opportunity to review the Draft 2017 Environmental Impact Report for the City of Jurupa Valley.

At this point the Riverside County Fire Department has no further comments. The cumulative impacts to the fire departments level of service have been adequately addressed. Mitigation measures in the form of agency goals and policies will reduce these impacts to a level of significance.

If I can be of further assistance, please feel free to contact me at (951) 940-6372 or e-mail at jason.neuman@fire.ca.gov.

Sincerely,
Jason Neuman
Division Chief
Strategic Planning Division

Jurupa Valley CA 92509

**RE: Jurupa Valley 2017 General Plan Programmatic Environmental Impact Report –
SCH#2016021025**

Dear Mr. Perea:

Thank you for providing Riverside County Airport Land Use Commission (ALUC) staff with a CD copy of the Draft Program Environmental Impact Report analyzing the impacts that would result from the adoption of the proposed new General Plan for the City of Jurupa Valley.

ALUC's role, as stated in Section 21670(a) (2) of the California Public Utilities Code, is "to protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses." (Our Commissioners often summarize this as "protecting people from airports and airports from people.")

In order to achieve this purpose, ALUCs are tasked with identifying areas in the vicinity of airports that are affected by aircraft noise and overflight and are subject to risk in the event of an aircraft accident, known as Airport Influence Areas (AIAs), and with preparation of Airport Land Use Compatibility Plans regulating land use in these areas subsequent to Plan adoption. The City of Jurupa Valley includes Flabob Airport (in the community of Rubidoux) and most of its Airport Influence Area. Additionally, the Airport Influence Area of Riverside Municipal Airport extends into the City of Jurupa Valley. (Some areas of the City are also subject to overflight from aircraft heading to or from Ontario International Airport.)

ALUC adopted Airport Land Use Compatibility Plans (ALUCPs) for the Flabob Airport Influence Area in 2004 and for the Riverside Municipal Airport Influence Area in 2005. (These ALUCPs are available for viewing on our website, www.rcaluc.org (click Plans)). Unfortunately, the adoption of these ALUCPs occurred after Riverside County's adoption of its RCIP (Riverside County Integrated Project) General Plan, including the Jurupa Area Plan, on October 7, 2003. The RCIP General Plan had considered, and was consistent with, the then-current Plans, but, with the adoption of the new Plans, the RCIP General Plan (including the Jurupa Area Plan) was no longer consistent.

While the proposed land use designation changes incorporated in the City's proposed new General

1

2

3

Plan do not increase the divergence from consistency, there remain hundreds of parcels whose General Plan designations are inconsistent with the criteria included in the Countywide Policies of the 2004 Riverside County Airport Land Use Compatibility Plan, which are applicable within these AIAs in the absence of Additional Compatibility Policies modifying those criteria for the specific airport, in that the designations would allow for division of these properties at a density that would be inconsistent with density restrictions for lands in Compatibility Zones B1, C, and D. Elimination of these direct conflicts is a requirement in order for the City to be eligible for a finding of consistency for its General Plan, unless the City were to include a policy prohibiting division of parcels for residential purposes in Compatibility Zones B1 and C (except projects that have already received tentative map approval) and requiring that division of parcels in Compatibility Zone D meet the compatibility criteria specified in the applicable ALUCP at that time.

These pre-existing land use designations constitute the major concern with the proposed General Plan. As a result of these existing direct conflicts that will remain unresolved, ALUC will not be able to find the City's new General Plan to be consistent with the applicable Airport Land Use Compatibility Plans.

However, we understand that the City recognizes a need to provide for a more comprehensive update to this proposed General Plan in the future.

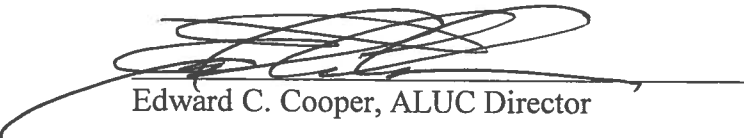

If we were to evaluate this project specifically as a General Plan Amendment (i.e., review only the changes being made to the presently applicable General Plan), there is a possibility that, with some text modifications, a consistency finding could be made for this project. However, the amendment would at a minimum have to include text specifically acknowledging that the City would continue to submit all non-ministerial projects within the Flabob and Riverside Municipal AIAs to ALUC for review on a case-by-case basis. This text would need to remain in effect until such future time as the direct conflicts have been eliminated.

Pursuant to Section 21676(b) of the California Public Utilities Code, prior to "the amendment of a general plan..., the local agency shall first refer the proposed action to the commission." This is a mandatory step in the general plan adoption/amendment process for jurisdictions that include land within AIAs.

If you have any questions, please contact John Guerin, ALUC Principal Planner, at (951) 955-0982.

Sincerely,

RIVERSIDE COUNTY AIRPORT LAND USE COMMISSION

Edward C. Cooper, ALUC Director

THIS PAGE INTENTIONALLY LEFT BLANK

RESPONSES TO LETTER B-1

Riverside County Airport Land Use Commission

Response to Comment 1. The City understands and acknowledges Airport Land Use Commission's (ALUC's) role in reviewing regional land uses to help assure there will be no significant impacts to local airport operations. Excerpts from the California Public Utilities Code are provided following the ALUC comment letter which outline ALUC's responsibilities in this regard.

Response to Comment 2. The City also understands there may be inconsistencies with existing or currently planned land uses within the City relative to the adopted land use plans of the Flabob Airport and the Riverside Municipal Airport. The General Plan addresses these inconsistencies by identifying a number of goals and policies in the Land Use Element of the General Plan that future discretionary land use approvals will have to follow regarding consistency with airport land use plans. Section 4.8.5.3 of the Draft EIR addressed impacts of land uses within two miles of an airport or within an airport land use plan. The following policies were cited in that analysis. These policies are consistent with the comments made by ALUC staff and demonstrate that future land uses will not have significant impacts on local airports.

- LUE 5.54 **Airport Land Use Compatibility Plan (ALUP) Compliance.** Provide for the orderly operation and development of Flabob and Riverside Municipal Airports and the surrounding area by complying with the Airport Land Use Compatibility Plan as fully set forth in Appendix 4.0¹ and as summarized in Table 4.8.B², as well as any applicable policies related to airports in the Land Use, Circulation, Safety and Noise Elements of the 2017 General Plan, unless the City Council overrides the Plan as provided for in State law.
- LUE 5.55 **Development Review.** Refer all major land use actions to the Airport Land Use Commission for review, pursuant to Policy 1.5.3 of the ALUP until 1) the Commission finds the City's General Plan to be consistent with the ALUP, or 2) the City Council has overruled the Commission's determination of inconsistency, or 3) the Commission elects not to review a particular action.
- LUE 5.56 **Continued Airport Operation.** Support the continued operation of Flabob and Riverside Municipal Airports to help meet airport services needs within the land-use compatibility criteria with respect to potential noise and safety impacts.
- LUE 5.57 **Consistency Requirement.** Review all proposed projects and require consistency with any applicable provisions of the Riverside County Airport Land Use Plan as set forth in Appendix A-4.0³, and require General Plan and/or Zoning Ordinance amendments to achieve compliance, as appropriate.
- LUE 5.58 **ALUP Amendments.** Review all subsequent amendments to any airport land-use compatibility plan and either adopt the plan as amended or overrule the Airport Land Use Commission as provided by law (Government Code Section 65302.3).
- LUE 5.59 **General Plan Adoption or Amendment.** Prior to the amendment of this General Plan or any specific plan, or the adoption or amendment of a zoning ordinance or building regulation within the planning boundary of any airport land use compatibility plan, the City will refer such proposed actions for determination and processing as provided by the Airport Land Use Law.

¹ Appendix 4.0 of the draft 2017 Jurupa Valley General Plan

² Table 4.8.B in this EIR corresponds to Figure 2-32 in the draft 2017 Jurupa Valley General Plan Land Use Element.

³ Appendix A-4.0 of the draft 2017 Jurupa Valley General Plan.

- LUE 5.60 **Cluster Development.** Allow the use of development clustering and/or density transfers to meet airport compatibility requirements as set forth in the applicable Airport Land Use Compatibility Plan.
- LUE 5.63 **Voluntary Review.** The City, from time to time, may elect to submit proposed actions or projects voluntarily that are not otherwise required to be submitted to the ALUC under the Airport Land Use Law in the following circumstances:
- a. Clarification: If there is a question as to the purpose, intent or interpretation of an Airport Land Use Compatibility Plan (ALUCP) or its provisions; or
 - b. Advisory: If assistance is needed concerning a proposed action or project relating to Airport Land Use matters.
- LUE 5.64 **Airport Referrals.** Submit all development proposals located within an Airport Influence Area to the affected airport for review.

Response to Comment 3. As outlined in Response 2 above, the analysis in the DEIR determined there would not be significant impacts relative to airport operations if the cited General Plan goals and policies were implemented on future development applications.

Response to Comment 4. The cited General Plan goals and policies are consistent with ALUC staff comments regarding the need for future land uses within airport land use plans to be processed through ALUC for consistency. The City would welcome specific text changes or additions to these goals and policies from ALUC staff to improve their implementation.

City of Jurupa Valley Planning Department
8930 Limonite Ave
Jurupa Valley CA 92509-5183

RE: City of Jurupa Valley 2017 General Plan Draft Environmental Impact Report

Dear Mr. Perea

Southern California Edison (SCE) is pleased to submit the following comments on the Notice of Availability of the Draft Environmental Impact Report for the City of Jurupa Valley 2017 General Plan (SCH No. 20160212025) to adopt the General Plan Elements of Land Use, Mobility (Circulation), Conservation and Open Space, Housing, Air Quality, Noise, Community, Safety, Facilities and Services, Environmental Justice, Healthy Communities, and Economic Sustainability.

SCE's Electrical Facilities

SCE provides electric service to the City of Jurupa Valley and maintains electrical transmission and distribution facilities, as well as substations and supporting appurtenances within the City.

The design of SCE's generating stations, substations, and transmission lines are regulated by Order of the California Public Utilities Commission (CPUC). SCE is concerned that within the Aesthetics and Transportation and Traffic Elements of the proposed 2017 General Plan that ME 7.4 Public Equipment and Facilities "should locate and design utility and circulation-related equipment and facilities to avoid blocking or cluttering views of scenic resources from scenic roadways, consistent with the following standards: 2. Public utilities along scenic highways should be installed underground (pages 4.1-15 and 4.16-54)."

1

The undergrounding of SCE's transmission lines is governed under SCE Tariff Rule 20. A Tariff Rule is a rule of service that is approved by the CPUC. See *City of Anaheim v. Pacific Bell Co.*, 119 Cal. App. 4th, 838 (Cal. App. 4th 2004) (undergrounding tariff rule constituted CPUC's entry into field of regulation for utility undergrounding). SCE respectfully requests that the language be revised to prevent expressly or implicitly conflicting with the CPUC's jurisdiction.

In addition, SCE's Riverside Transmission Line Reliability Project (RTLRP) is currently under regulatory review with the California Public Utilities Commission (CPUC) for a Certificate of Public Convenience and Necessity to construct and operate the 230-kV transmission line and 230-kV substation components needed to provide energy to the Riverside Public Utilities (RPU) local electrical distribution system. Construction is anticipated to begin second quarter 2020 and completed by third quarter 2023.

SCE's Right-of-Way and Access Roads

The proposed project has identified the "installation and use of electric service at truck stops and distribution centers for heating and cooling truck cabs, and particularly for powering refrigeration trucks, in lieu of idling of engines for power (p. 4.3-9)," and that specific actions "to help keep City-wide emissions below the SCAQMD service population significance threshold include but are not limited to requiring the installation of electrical and conduit improvements to support the

2

installation of future roof-mounted photovoltaic solar systems and electrical vehicle charging stations for individual homes and businesses (p. 4.7-35)."

As these actions have the potential to impact SCE's utility corridors in the area, please note that these proposed actions shall not cause General Order 95 non-compliances and should not unreasonably interfere with SCE's ability to access, maintain, and operate its current and future facilities. Any proposed temporary or permanent development (including grading activities, landscaping, bike and/or pedestrian pathways, parkways, sidewalks, etc.) within the SCE Right-of-Way requires a written consent agreement signed between the developer and SCE.

SCE's rights-of-way and fee-owned properties are used by SCE to operate and maintain its present and future facilities. SCE will review any proposed use on a case-by-case basis. Approvals or denials will be in writing based upon review of the maps provided by the developer and compatibility with SCE right-of-way constraints and rights. Please forward five (5) sets of plans depicting SCE's facilities and associated land rights to the following location:

Real Properties Department
Southern California Edison Company
2 Innovation Way
Pomona, CA 91768

General Order 95

SCE is concerned that the General Plan's actions may conflict with SCE's transmission line designs. SCE must comply with General Order (GO) 95, which establishes rules and regulations for the overhead line design, construction, and maintenance. GO 95 also includes vertical clearance requirements from thoroughfares, ground, and railroads, as well as specific minimum clearances from tree branches and vegetation around overhead wires. Any proposed landscaping should not conflict with SCE's existing and proposed transmission line designs.

Any parkways or pathways (either by foot, bicycles, equestrians or other means) that invite the public onto SCE's right-of-way will require the installation of Anti-Climbing Devices on each transmission line tower at the customer's expense.

Electrical Service Evaluation and Method of Service

To evaluate the electric service requirements for the proposed project's actions, the project proponent and/or future developers will need to initiate an electrical service evaluation to begin the process for identification of on-and off-site electrical facilities required for service. The developer must submit a signed Method of Service agreement to SCE and pay engineering fees for an electric service study to be completed. Infrastructure necessary to support this project is subject to licensing and permitting authority of the CPUC.

Cumulative Impacts

SCE recommends that the City consider inclusion of the Riverside Transmission Line Reliability Project in the cumulative analysis of the proposed 2017 City of Jurupa Valley General Plan. Specifically, unanticipated cumulative impacts could result if SCE's construction impacts to environmental resources, where overlapping, are not similarly mitigated. Environmental documents for the Riverside Transmission Line Reliability Project may be accessed by following the links below:

<http://www.cpuc.ca.gov/Environment/info/panoramaenv/RTRP/index.html>

General Order 131-D

Please be advised that the construction, modification, and relocation of transmission lines, or electrical facilities that are designed to operate at or above 50 kilovolts (kV) may be subject to the California Public Utilities Commission's (CPUC) General Order 131-D¹. If the construction, modification, or relocation of transmission lines results in significant environmental impacts, they should be identified and discussed in the MND. If not, SCE may be required to pursue a separate, mandatory CEQA review through the CPUC, which could delay approval of the SCE transmission line portion of the project for two years or longer.

6

SCE appreciates the opportunity to comment on the City of Jurupa Valley's 2017 General Plan DEIR. SCE looks forward to working and collaborating with the City. If you have any questions regarding this letter, please contact me at heather.neely@sce.com or 626.476.7839.

Regards,

Heather Neely

THIS PAGE INTENTIONALLY LEFT BLANK

RESPONSES TO LETTER B-2

Southern California Edison

Response to Comment 1. The City acknowledges the role Edison has in providing electrical services and facilities in the Jurupa Valley area. The 2017 General Plan goals and policies regarding the undergrounding of utilities, including electrical lines, applies to utilities that can be relocated underground consistent with state laws and regulations. It is not the City's intent nor the effect of the General Plan to usurp the California Public Utilities Commission's ("CPUC") jurisdiction regarding the location and undergrounding of transmission lines. ME 7.4 Public Equipment and Facilities is read with the City's objectives and policies in mind, while maintaining the CPUC's jurisdiction. The City would consider specific text changes to these cited General Plan goals and policies if Edison can provide the appropriate wording.

The City also understands the SCE Riverside Transmission Line Reliability Project (RTLRP) is currently being reviewed by the state Public Utilities Commission.

Response to Comment 2. The City understands that its goals and policies that require additional (i.e., new, expanded, or modified) electrical services or facilities may have a demonstrable effect on Edison and any such potential changes would have to be coordinated through Edison prior to installation or operation. It is not the City's intent for future development or improvements to interfere with Edison facilities or access or operation of any of those facilities. The City's development review process requires new projects to contact utility providers, including Edison, to determine physical improvements or equipment needed to serve the development prior to receiving entitlements from the City.

Response to Comment 3. The goals and policies of the 2017 General Plan would not allow landscaping or other site improvements to conflict with Edison facilities or equipment. In fact they require new projects to contact utility providers, including Edison, to identify limitations or locations for improvements/equipment to prevent conflicts with Edison equipment. In addition to the Mobility Element Policy 7.4 cited by the commenter, the Land Use Element contains the following goal and policy related to potential conflicts with utility corridors:

Goal

LUE 5 Supports diverse and well-funded public and institutional uses that provide essential utilities and public services, lifelong learning opportunities, and improved access to recreational, cultural, historic, and social amenities and resources.

Policies

LUE 4.6 **Public Utilities, Easements, and Rights-of-Way.** New development and conservation land uses shall not infringe upon existing public utility corridors, including fee owned rights-of-way and permanent easements whose true land use is that of public facilities.

Response to Comment 4. The City's development review process requires new projects to contact utility providers, including Edison, to determine physical improvements or equipment needed to serve the development prior to receiving entitlements from the City, consistent with the commenter's concern.

Response to Comment 5. The 2017 General Plan EIR is a programmatic CEQA document so the inclusion of one specific utility project within its boundaries may not provide useful information regarding mitigation for cumulative impacts since the goals and policies of the General Plan are in large part its programmatic mitigation. On January 25, 2017 the California Public Utilities Commission (CPUC) issued a Notice of Preparation (NOP) for a subsequent Environmental Impact Report (EIR)

for the SCE Riverside Transmission Line Reliability Project (RTLRLP)(see FEIR Appendix C). The SEIR prepared by the CPUC for the RTLRLP will address potential project-level environmental impacts of the RTLRLP including its own list of cumulative projects. Therefore, it would be more appropriate and accurate to evaluate potential direct and cumulative impacts of the RTLRLP in the SEIR being prepared for the CPUC rather than the City's General Plan EIR.

Response to Comment 6. The City understands the potential need for subsequent CEQA analysis for relocation of electrical transmission lines (+50 kV) in the future.

Comments on Jurupa Valley Draft General Plan

LETTER C-1

All Elements of the General Plan were reviewed for consistency with Eastvale’s plans and policies with specific attention to the interface area between Jurupa Valley and Eastvale at the I-15.

Land Use Element – no comment.

Mobility Element

1. Comment: As shown in the Figure 4-6 from the adopted 2011 General Plan for Jurupa Valley (below), a proposed interchange was planned at Schleisman Road and I-15 Freeway. This interchange is critical to regional circulation for the cities of Chino, Eastvale, Jurupa Valley, Norco and Riverside and both Riverside and San Bernardino Counties.

This proposed interchange is identified on the Eastvale and Riverside County General Plans, Caltrans state transportation system and within the WRCOG regional roadway network. . Although the interchange itself would be primarily located in Norco and Jurupa Valley, roadways in Eastvale have been sized and built to handle the flow of traffic to the future interchange. It would appear that this future interchange was not included in the traffic analysis for the Jurupa Valley Draft General Plan which would lead to significant impacts to traffic in the area. (This is being reviewed in detail by our traffic engineers as part of the Jurupa Valley Draft General Plan DEIR which we received last week.)

Recommendation: Include the future Schleisman Road/I-15 interchange on the Jurupa Valley General Plan and evaluate it in the traffic analysis.

Adopted 2011 Jurupa Valley General Plan

2. Comment: As shown in the comparison table below, the roadway designations at the interface between Eastvale and Jurupa Valley do not match in several key locations. The continuation of Schleisman Road in Jurupa Valley is missing and the difference in roadway widths at the cities' boundary on Riverside Drive may be too great to easily transition. Riverside Drive has built-out, full-width roadway along much of its length in Eastvale.

Recommendation: Include the future Schleisman Road and its interchange with I-15 on the Jurupa Valley General Plan and evaluate it in the traffic analysis. Reevaluate the constraints as Riverside Drive crosses from Jurupa Valley to Eastvale at I-15 and downsize accordingly.

2

General Plan Designated Roadways

| | Eastvale (in feet) | Jurupa Valley (in feet)-Mobility Corridor Widths |
|---------------------------|--------------------|--|
| Schleiman Road | 152 | Removed from General Plan |
| 68 th Street | 118 | 100 |
| Limonite Avenue | 152 | 153 |
| Bellegrave Avenue | 118 | Local? (no width given) |
| Cantu-Galleano Ranch Road | 152 | 153 |
| Riverside Drive | 100 | 153 |
| Mission Blvd. | No width given | 153 |

3. Comment: No truck routes officially exist in Jurupa Valley. Policies within the Draft General Plan require the preparation and adoption of truck routes in the future. However, Figure 3-2, Commercial Truck Restrictions, 2016, shows the following routes allow trucks unrestricted access at this time: 68th Street, Limonite Avenue, Bellegrave Avenue, Cantu-Galleano Ranch Road, Riverside Drive and Mission Boulevard. Eastvale is in the process of preparing a truck route plan. The following streets in Eastvale are proposed to allow truck traffic: Limonite Avenue, Cantu-Galleano Ranch Road, Riverside Drive and Mission Boulevard.

Recommendation: Plan future truck routes in Jurupa Valley to coordinate with Eastvale's truck route plan. Restrict truck traffic from 68th Street since that area is fully residential on the Eastvale side of I-15.

3

4. Comment: The Draft General Plan states that "As of 2017, preparation of the City's first Comprehensive Master Plan for Bicycles and Pedestrians is underway." Eastvale adopted a Bicycle Master Plan in 2016.

Recommendation: Provide connectivity between Eastvale and Jurupa Valley for cyclists. Eastvale's Bicycle Master Plan can be found at the following link. It may take a few moments to load. <http://portal.eastvaleca.gov/WebLink/0/edoc/9302/Bicycle%20Master%20Plan.pdf>

4

Conservation and Open Space Element

5. Comment: Figure 4-5, Biological Resources of Jurupa Valley includes designations within the City of Eastvale. In at least one case, the designation is inaccurate as a developed site is shown as a biological resource of some sort (the figure is nearly illegible on-screen).

5

Recommendation: Remove all biological designations from land within the City of Eastvale.

6. Comment: Figure 4-8, Water Resources, Riverside County, includes “water resources” in Eastvale that are either no longer existing, water features within residential communities or detention basins which are dry most of the year.

6

Recommendation: Remove all “waterbodies” within Eastvale except the Santa Ana River.

7. Comment: Figure 4-10, Existing Floodways and Drainage Facilities, includes outdated information within Eastvale.

7

Recommendation: Remove all facilities shown within Eastvale.

Housing Element – No Comment

Air Quality Element – No Comment

Noise Element – No Comment

Community Safety, Services and Facilities Element

8. Comment: Figure 8-9, Existing Floodways and Drainage Facilities in Jurupa Valley, includes outdated information within Eastvale.

8

Recommendation: Remove all facilities shown within Eastvale.

Environmental Justice Element – No Comment

Healthy Communities Element – No Comment

Economic Sustainability Element – No Comment

THIS PAGE INTENTIONALLY LEFT BLANK

RESPONSES TO LETTER C-1

City of Eastvale

Response to Comment 1. The Schleisman Road/I-15 interchange has been removed from the latest Western Riverside Council of Governments (WRCOG) Traffic Uniform Mitigation Fee (TUMF) report (dated 2015) stating that it is no longer a viable build option. The TUMF document recommends improving the I-15/Limonite Avenue interchange instead. Therefore, because the interchange at Schleisman Road/I-15 is not a viable build option, it is unnecessary to modify the network of the City-wide traffic model to accommodate the interchange at Schleisman Road.

Response to Comment 2. The City offers the following considerations relative to the roadway widths indicated by Eastvale:

| Roadway | Eastvale | Jurupa Valley | Comments |
|---------------------------|----------|---------------|--|
| Schleisman Road | 152' | RGP | As outlined in Response 1 above, the Schleisman Road interchange in the I-15 Freeway is no longer considered a viable build option by WRCOG and so was left out of the City's traffic model. If extended east of the I-15 Freeway Schleisman Road would pass through the floodway of the Santa Ana River so the City has no plans at this time to construct an eastern extension of Schleisman Road. |
| 68 th Street | 118' | 100' | This roadway would have a similar number of travel lanes despite the slight differences in roadway widths so the traffic impacts would be minimal from these differences. |
| Limonite Ave. | 152' | 153' | Essentially the same width and the same number of travel lanes planned for each city. |
| Bellegrave Ave. | 118' | Local-NWG | Data was inadvertently left out of the Mobility Element maps, it will be corrected in the Final Element. The roadway is a Major Street at 118' wide with 4 travel lanes. |
| Cantu-Galleano Ranch Road | 152' | 153' | Essentially the same width and the same number of travel lanes planned for each city. |
| Riverside Drive | 100' | 153' | Despite the numerical difference, the traffic impacts are minimal because the road has a long transition under the I-15/SR-60 interchange ramps which will be able to accommodate the change in number of travel lanes. |
| Mission Blvd. | NWG | 153' | This roadway has an existing width within Eastvale that is sufficient to carry traffic at levels similar to that in Jurupa Valley to the east as it travels beneath the I-15 Freeway. There does not appear to be any conflict at this time. |

NWG = no width given

RGP = removed from the General Plan

Jurupa Valley will continue to work with Eastvale to assure smooth transitions in roadway widths at their mutual boundaries to the degree practical or necessary.

Response to Comment 3. The City appreciates the information on truck routes within Eastvale, and is currently working on a truck routes plan for Jurupa Valley that is referenced in the General Plan but will not be an integral part of the General Plan. The City will review the truck route information for Eastvale and integrate it to the extent possible and practical with that for Jurupa Valley. It is likely that all of the routes recommended in the Eastvale letter will be incorporated into the Jurupa Valley route plan as well (e.g., Limonite Avenue, Cantu-Galleano Ranch Road, etc.).

Response to Comment 4. The City will continue to work with Eastvale regarding connections to its Bicycle Master Plan adopted in 2016 (see FEIR Appendix C). That plan shows the following potential connection points into the City of Jurupa Valley:

| Priority of Potential Improvements City of Eastvale Bicycle Master Plan | Recommended Connections to the City of Jurupa Valley |
|--|---|
| Figure 3-7, Recommended Bicycle Boulevards | No connections across the I-15 Freeway |
| Figure 4-1, Tier 1 Bicycle Projects | Limonite Avenue and Riverside Drive |
| Figure 4-2, Tier 2 Bicycle Projects | 68 th Street and Schleisman Road |
| Figure 4-3, Tier 3 Bicycle Projects | None |
| Figure 4-4, Future Opportunities | Limonite Ave., Riverside Drive, 68 th Street, Bellegrave Ave., Schleisman Road, and Santa Ana River (regional) |

Jurupa Valley will continue to coordinate with Eastvale as it develops its Comprehensive Master Plan for Bicycles and Pedestrians.

Response to Comment 5. Figure 4-5 in the Conservation and Open Space Element referenced by the commenter is based on data obtained from the County and/or other regional sources. The commenter should note that the data and graphics in the General Plan and DEIR were intended to accurately apply to properties only within the City of Jurupa Valley. Any data or graphical depictions of areas outside the City are incidental and should be considered for general information purposes only. Therefore, there is no need to revise the referenced graphic at this time.

Response to Comment 6. Similar to Response 5 above, the regional hydrology Figure 4-8 in the Conservation and Open Space Element referenced by the commenter is only meant to apply to properties within the City of Jurupa Valley. Any data or graphical depictions of areas outside the City are incidental and should be considered for general information purposes only. Therefore, there is no need to revise the referenced graphic at this time.

Response to Comment 7. Similar to Responses 5 and 6 above, Figure 4-10 in the General Plan was meant to apply to properties only within the City of Jurupa Valley. Any drainage data or graphical depictions of areas outside the City are incidental and should be considered for general information purposes only. Therefore, there is no need to revise the referenced graphic at this time.

Response to Comment 8. Similar to Responses 5-7 above, Figure 8-9 in the Community Safety, Services, and Facilities Element applies only to properties within the City of Jurupa Valley. Any drainage data or graphical depictions of areas outside the City are incidental and should be considered for general information purposes only. Therefore, there is no need to revise the referenced graphic at this time.

City of Fontana CALIFORNIA

March 8, 2017

Mr. Thomas Merrell
Community Development Director
City of Jurupa Valley
8930 Limonite Avenue
Jurupa Valley, CA 92509-5183

LETTER C-2

RE: Public Hearing on Draft 2017 General Plan on March 8 and March 22, 2017

Dear Mr. Merrell:

Thank you for sending us the information on the Draft 2017 General Plan and the information related to the public hearing on your General Plan. The City of Fontana is requesting that this letter be made a part of the Administrative Record for the City of Jurupa Valley General Plan and its Environmental Impact Report.

1

Since Jurupa Valley borders the City of Fontana, future development within the proposed Light Industrial Land use area in and around Etiwanda Avenue may require additional analysis for potential traffic impacts to Etiwanda Avenue and Philadelphia Avenue within the City of Fontana jurisdiction. Etiwanda Avenue is a modified major highway and truck route connecting the 60 freeway to the 10 freeway. Philadelphia Avenue is a modified secondary highway and has been proposed to be opened to through traffic between Mulberry Avenue and Etiwanda Avenue at the San Sevaine Channel. Additional truck traffic on these arterials may require mitigation when developed.

2

In addition, any future commercial development in the southeast corner of Country Village Road and Philadelphia Avenue shall mitigate its traffic impact to that intersection or any intersections in the City of Fontana.

3

Thank you for sending the City of Fontana information about the public hearing on General Plan. Please let me know if you have any questions. My telephone number is (909) 350-7625.

Sincerely,

Zai AbuBakar
Director of Community Development

cc: Debbie Brazill, Deputy City Manager
Ricardo Sandoval, Director of Engineering/City Engineer
Kathy Raasch, Senior Engineer

THIS PAGE INTENTIONALLY LEFT BLANK

RESPONSES TO LETTER C-2

City of Fontana

Response to Comment 1. The City's letter is part of the Final EIR – Response to Comments and therefore is part of the Administrative Record for the 2017 General Plan EIR for the City of Jurupa Valley.

Response to Comment 2. The City agrees that future development in the northwest industrial portion of the City may need to provide fair share compensation to the City of Fontana for roadway and intersection impacts within Fontana from truck and vehicular traffic generated by development projects in Jurupa Valley. For example, the following Mobility Element policies encourage cooperation with neighboring jurisdictions to alleviate traffic impacts:

- ME 1.3. **Development project impacts.** Require development projects to analyze potential off-site traffic impacts and related environmental impacts through the CEQA process and to mitigate adverse impacts to less-than-significant levels.
- ME 1.8 **Interagency Cooperation.** Cooperate with local, regional, state, and federal agencies to establish an efficient circulation system.

In addition, the City of Fontana should note that the Draft EIR for the Space Center Industrial Project, a warehouse project in the Mira Loma area, was issued by the City of Jurupa Valley on March 22, 2017 for public comment until May 5, 2017. That EIR included project-specific mitigation for its fair share of project-related traffic impacts to intersections in Fontana. It also recommended the two cities establish mutual agreements to provide a mechanism for fair share compensation outside of each jurisdiction. The Space Center EIR included the following mitigation measures:

4.16.6.1A The project shall make a fair share contribution to the City of Fontana and the City of Ontario to help fund the following improvements at the intersection of Etiwanda Avenue and Slover Avenue. These improvements will reduce the project's proportionate increase in delay to pre-project levels:

- A 2nd northbound left turn lane, 3rd northbound through lane, northbound right turn lane, 2nd southbound left turn lane, southbound right turn lane, 2nd eastbound left turn lane, eastbound right turn lane, 2nd westbound left turn lane, and 2nd westbound through lane.

These improvements are consistent with the planned improvement project between the City of Fontana and the City of Ontario for the intersection of Etiwanda Avenue and Slover Avenue.

4.16.6.2B The project shall make an additional fair share contribution to the City of Fontana and the City of Ontario (in addition to the contribution outlined in Mitigation Measure 4.16.6.1A) to help fund the following additional improvement at the intersection of Etiwanda Avenue and Slover Avenue. This improvement will reduce the project's proportionate increase in delay to pre-project levels:

- Implement overlap phasing on the westbound right turn lane.

This improvement is consistent with the planned improvement project between the City of Fontana and the City of Ontario for the intersection of Etiwanda Avenue and Slover Avenue.

4.16.6.3B TIA Table 1-7 identifies three (34) intersections that either shares a mutual border with the City of Fontana or are wholly located within the City of Fontana's jurisdiction

and have recommended improvements which are not covered by payment of fees. The City of Jurupa Valley shall participate in a multi-jurisdictional effort with the City of Fontana to develop a study to identify fair share contribution funding sources attributable to and paid from private and public development to supplement other regional and State funding sources necessary to implement the improvements identified in Table 1-8, that are located in the City of Fontana's jurisdiction. The Developer's fair-share amount for the 3 intersections that either shares a mutual border with the City of Fontana or are wholly located within the City of Fontana's jurisdiction that have recommended improvements which are not covered by payment of fees equals \$7,048. Developer shall be required to pay this \$7,048 amount to the City of Jurupa Valley prior to the issuance of the Project's final certificate of occupancy.

Response to Comment 3. As outlined in Response 2 above, the City of Jurupa Valley does evaluate and recommend fair share compensation for other jurisdictions when traffic impact analyses for private projects indicates such impacts (e.g., Space Center Industrial Project EIR).

April 12, 2017

LETTER C-3

Mr. Ernest Perea, CEQA Administrator
City of Jurupa Valley
8930 Limonite Avenue
Jurupa Valley, CA 92509-5183

RE: Comments on the City of Jurupa Valley General Plan Draft Environmental Impact Report

Dear Mr. Perea,

The following are the City of Eastvale's comments on the Draft Environmental Impact Report (EIR) on the City of Jurupa Valley General Plan. We look forward to seeing a Final EIR which properly addresses the issues noted below.

Traffic Analysis Needs to Examine All Shared Roadways

Although several roadways connect Eastvale and Jurupa Valley, the only two roads analyzed in the City of Jurupa Valley General Plan Traffic Study, by LSA Associates, inc. (traffic analysis) are Cantu-Galleano Ranch Road and Limonite Avenue. Missing from the analysis at their interface with Eastvale are the other roadways which provide connections:

- Mission Boulevard
- Riverside Drive
- Bellegrave Avenue (bridge over I-15 not addressed)
- 68th Street
- Schleisman Avenue (planned connection with the future Schleisman/I-15 interchange)

The EIR needs to address traffic impacts on all of these roadways.

Future Schleisman Road Interchange

As stated in Eastvale's comments regarding the Draft General Plan last month (attached), the future interchange at Schleisman Road and the I-15 is not included in the General Plan even though it is included in the Riverside County and the City of Eastvale General Plans, is included

1

2

in regional transportation plans prepared by the Southern California Association of Governments, and is on the official list of projects to be funded by WRCOG's TUMF fee program.

At General Plan Buildout, Limonite Avenue at the I-15 interchange is projected to carry more than 61,000 vehicles per day. Based on the projected traffic volume, another connection to Interstate 15 is needed to meet the future travel demands. Schleisman Road is needed to relieve the traffic from Limonite Avenue.

We suggest that the City of Jurupa Valley revise its planned circulation system to include the future Schleisman Road interchange, and include this connection in the traffic analysis for the General Plan.

If the City of Jurupa Valley decides to ignore this important interchange and the regional and local plans that rely on this interchange and remove the Schleisman Road interchange from its planned transportation system, the EIR's traffic model should analyze the effects of this change on the regional roadway system, including the diversion of future traffic to Limonite Avenue and other alternatives to Schleisman Road.

Cantu-Galleano Ranch Road

Interstate 15 northbound and southbound ramps at Cantu-Galleano Ranch Road were analyzed. It was determined that currently, the intersection southbound and northbound ramps operate at LOS B and C, respectively, during the PM peak hour. At General Plan Buildout the intersection of Cantu-Galleano Ranch Road at Interstate 15 southbound ramp and northbound ramps will operate at LOS C and B, respectively, during the PM peak hour. Therefore, no additional analysis is needed.

Likewise, the segment of Cantu-Galleano Rancho Road between Interstate 15 southbound and northbound ramps has a current LOS of C. At General Plan Buildout, Cantu-Galleano Ranch Road between the southbound and northbound ramps, based on a six lane roadway, will operate at a LOS C.

While Cantu-Galleano Ranch Road is projected to operate at a satisfactory level of service, it may be negatively impacted if the Bellegrave Avenue bridge remains undersized or the Schleisman Road Interchange is not built. **Limonite Avenue**

Currently, the intersections of Limonite Avenue at Interstate 15 southbound and northbound ramps operate at LOS C for both intersections during the PM peak hour.

2

3

4

At General Plan Buildout, the intersections of Limonite Avenue at Interstate 15 southbound and northbound ramps will operate at LOS D and F, respectively, during the PM peak hour. This is calculated with no additional lanes assumed.

The roadway segment of Limonite Ave between Interstate 15 southbound and northbound ramps has a current LOS of E, which means it operates at an unsatisfactory level of service today.

At General Plan Buildout, the projected level of service for Limonite Avenue between the southbound and northbound ramps is LOS F. The projected traffic volume is 61,665 vehicles per day. The roadway capacity for a four lane major highway (the current bridge width) is 30,700 vehicles per day for LOS D. To provide a satisfactory level of service (LOS D) based on the General Plan Buildout, Limonite Avenue would need to have eight lanes.

In reviewing the list of intersection improvements in the City of Jurupa Valley, the improvements are limited to traffic signal installations, optimized signal timing, adding turn lanes, and restriping. No major widenings are planned to accommodate future travel demands.

The City of Jurupa Valley's proposed improvement to support the current Land Use Element for a projected LOS F based General Plan Buildout (2035) is to optimize the signal timing at the Interstate 15 southbound and northbound ramps on Limonite. This is not compatible with the City of Eastvale and the County of Riverside plan to widen Limonite Avenue and to construct new ramps to eliminate the left turn movements.

The traffic analysis does not recognize or discuss the planned Interstate 15/Limonite interchange improvements that are under final design and will be ready for construction when funding becomes available. Limonite Avenue must have additional lane capacity to meet the future travel demands.

Optimizing the traffic signal timing on Limonite Avenue at the I-15 southbound and northbound ramps is not an acceptable improvement to meet the projected traffic volume of more than 61,000 vehicles per day at General Plan Buildout. Without the planned interchange improvement at Interstate 15/Limonite Avenue, the level of service will deteriorate to LOS F at General Buildout. Simply adjusting the traffic signal timing will not reduce congestion and travel time. At best, signal timing optimization only adds 3 to 5 % roadway capacity. Adding lanes and constructing new ramps to eliminate left turn movements, as planned, will improve the LOS to reduce impacts to less than significant levels.

The EIR must address the planned interchange improvements at Limonite Avenue/I-15, including an eight-lane bridge and the elimination of left-turn movements.

Thank you for this opportunity to comment. If you would like to meet to discuss these comments, please let me know.

5

Sincerely,

RESPONSES TO LETTER C-3

City of Eastvale (2nd Letter)

Response to Comment 1. The following information is similar to the Response to Comment 2 in the City of Eastvale's first comment letter on the EIR:

| Roadway | Eastvale | Jurupa Valley | Comments |
|--------------------------------------|----------|---------------|--|
| Mission Blvd. | NWG | 153' | This roadway has an existing width within Eastvale that is sufficient to carry traffic at levels similar to that in Jurupa Valley to the east as it travels beneath the I-15 Freeway. There does not appear to be any conflict at this time. |
| Riverside Drive | 100' | 153' | Despite the numerical difference, the traffic impacts are minimal because the road has a long transition under the I-15/SR-60 interchange ramps which will be able to accommodate the change in number of travel lanes. Widening this roadway would not be consistent with the General Plan's overall policy of maintaining its rural character. In his regard the City is not planning on expanding every major road to accommodate future traffic. |
| Bellegrave Ave. | 118' | Local-NWG | Data on this roadway was inadvertently left out of the Mobility Element maps, but it will be corrected in the Final Element. The roadway is a Major Street at 118' wide with 4 travel lanes. Regarding the bridge over the I-15 Freeway, it currently has 2 lanes over the freeway and 2 travel lanes on the east side (Jurupa Valley) and width for 4 lanes on the west side (Eastvale) although at present only 2 travel lanes are constructed and striped to the west. At some point in the future, this bridge could be expanded to 4 lanes and connected to 4 travel lanes to the west in Eastvale. At this time east of the freeway Jurupa Valley is not planning on widening this roadway to be consistent with the General Plan's overall policy of maintaining its rural character and not simply expanding every major road to accommodate future traffic. |
| 68 th Street | 118' | 100' | This roadway would have a similar number of travel lanes despite the slight differences in roadway widths so the traffic impacts would be minimal from these differences. |
| Schleisman Road/Ave. and Interchange | 152' | RGP | See Response to Comment 2 for more specific information regarding roadway and interchange. |

NWG = no width given

RGP = removed from the General Plan

Jurupa Valley will continue to work with the City of Eastvale to assure smooth transitions in roadway widths at their mutual boundaries to the degree practical or necessary. At this time there appears to be no substantial justification for re-running the City-wide traffic model based on comments by the City of Eastvale.

Response to Comment 2. The Schleisman Road interchange in the I-15 Freeway is no longer considered a viable build option by WRCOG which is why it was left out of the City's traffic model. If extended east of the I-15 Freeway Schleisman Road would pass through the floodway of the Santa Ana River so the City has no plans at this time to construct an eastern extension of Schleisman Road/Avenue. The City-wide traffic model and traffic projected for Limonite Ave. already take into account having no future I-15 interchange at Schleisman.

Response to Comment 3. Cantu-Galleano Ranch Road has essentially the same width and the same number of travel lanes planned for each city (i.e., Eastvale = 152 feet wide and Jurupa Valley = 153 feet wide). There was no empirical data presented that would indicate expansion of the Bellegrove Ave. bridge is needed to prevent Level of Service impacts in excess of identified standards, and the City-wide traffic model already take into account having no future I-15 interchange at Schleisman Road and future traffic impacts on Limonite Avenue.

Response to Comment 4. Limonite Ave. would have essentially the same width and the same number of travel lanes planned for each city (i.e., Eastvale = 152 feet wide and Jurupa Valley = 153 feet wide). The planned interchange improvements were not included in the City traffic network or model runs at present because the improvements are not yet funded, which means it is speculative as to if or when they would actually be made. However, the City is willing to discuss incorporating the interchange improvements into the buildout roadway network and a future run of the City-wide traffic model at some point after any other planned changes to the roadway and intersection network have been agreed upon by the City of Jurupa Valley.

Response to Comment 5. The City of Jurupa Valley looks forward to continued communication and coordination with the City of Eastvale regarding roadway planning. The City may make minor modifications to the City-wide traffic network based on comments by the Planning Commission and City Council. At that time, full improvements to the I-15/Limonite Ave. Interchange could be added to the traffic network and model run if specific timing and funding information was available at that time. At this time, none of the information on other roadways provided in the City of Eastvale's two EIR comment letters appears to require changes to the City-wide traffic network and thus would not need to be included in a subsequent run of the City-wide traffic model.

SUBJECT: COMMENTS ON JURUPA VALLEY GENERAL PLAN EIR

To whom it may concern:

Thank you for the opportunity to comment on the Environmental Impact Report (EIR) for the proposed Jurupa Valley General Plan. Please accept and consider these comments on behalf of Golden State Environmental Justice Alliance. Also, Golden State Environmental Justice Alliance formally requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

1

1.0 Summary

As we understand it, the proposed General Plan will replace the City's current General Plan which follows the Riverside County General Plan. The proposed Genral Plan is the City's first locally prepared General Plan. The proposed General Plan amends a portion of the 2008 Riverside County General Plan and supplements it with additional information, policies and programs as needed. The City of Jurupa Valley intends to complete a more extensive update of the General Plan in 5–10 years.

2

4.2 - Agriculture and Forestry Resources

4.2.5.1 Existing Zoning and Williamson Act

The EIR states that County records show two properties in the southwest portion of Jurupa Valley (275 acres total) have Williamson Act contracts but the contracts were recently canceled as part of two proposed projects - CV Communities and Stratham Homes. However, the County records for either the former Williamson Act contracts or their cancellation is not included for public review. The records are also not listed in Section 8.0 References either. The EIR does not indicate if the proposed projects were approved, denied, or developed which may have an impact on the cancellation or activation of the Williamson Act contracts. CEQA § 15150 (f) states that incorporation by reference is most appropriate for including long, descriptive, or technical materials that provide general background but do not contribute directly to the analysis of the problem at hand. The County records mentioned contribute directly to the analysis of the problem at hand and should be included for public review and confirmation that the contracts are cancelled, especially when the EIR does not disclose the status of the proposed projects at the their respective properties. Not including the County records for public review is in violation of CEQA § 15150 (f).

3

Figure 4.2.1 Farmland in Jurupa Valley is provided to show the location of farmland in the City. However, the EIR does not provide a map showing each farmland area with the new designation of Open Space, Rural or a map showing the new designation and the surrounding area which may also have new General Plan land use designations. The compatibility of agricultural uses and their surrounding uses is vital to analyze the adequacy of the new Open Space, Rural designation for preserving and encouraging agricultural uses to remain.

4

Further, the EIR states that the 2017 General Plan will include agricultural lands under the Open Space, Rural category. The EIR continues by stating that "once the General Plan is adopted, it will no longer conflict with the County agricultural zoning because the City will no longer have

5

any agricultural zones”. It is clear that the agricultural zoning designation will be removed. However, the EIR continues by stating that the proposed removal of the agricultural zones is consistent with the following 2017 General Plan Policy:

LUE 1.3 Encourage conservation of Prime Farmland and productive agricultural lands.

The new Open Space, Rural designation describes itself as “applied to remote, privately owned open space areas with limited access and a lack of public services”. This does not describe or mention prime farmlands, conserving agricultural lands, or the agriculture productivity of the Jurupa Valley soils. There is no explanation demonstrating the correlation between the removal of the agricultural designation and encouraging the conservation of agricultural lands. The EIR should be revised to provide information regarding the consistency between changing the designation from exclusively Agricultural Use to Open Space, Rural and encouraging farm land.

Figure 2-8 Land Use Changes in 2017 General Plan included in the Draft General Plan does not show the proposed changes to existing agricultural land. The Draft General Plan and its EIR are inadequate as informational documents in violation of CEQA’s requirements for meaningful disclosure to the public and decision makers.

4.3 - Air Quality

4.3.5.1 - Operational Emissions

Table 4.3.G: VMT Estimates for Existing and Future Land Uses in the City estimates that General Heavy Industry uses will increase by 30.9% by 2035 and General Light Industry uses will increase by 19.9%. The EIR states that overall VMT will not increase as fast as ADT even though Industrial/Warehousing uses will increase. The EIR makes the assumption that since residents will possibly live closer to work and shopping centers, fewer VMT will result. However, the EIR is silent regarding the increased VMT from industrial truck shipping traffic from the Ports of Los Angeles and Long Beach as well as other major shipping centers. Table 4.10(A) of the Land Use section also indicates that 25.9% of the industrial land area is vacant while only 22.2% of the Residential land is vacant. It is clear that the City will experience high levels of industrial growth. The Air Quality Analysis of the EIR is misleading to the public and decision-makers by not discussing the increased VMT from industrial traffic and should be revised to include such discussion.

Further, the ADT estimate only assumes weekday trips. Industrial and commercial business operate 24/7 and accept deliveries and send out new shipments on the weekend as well. Residents of the City that happen to work in the City as well are likely to make trips to grocery stores, dry cleaners, hair salons, restaurants, etc on the weekends. The ADT must be updated to include weekend trips for residential and non-residential uses.

8

4.10 - Land Use and Planning

4.10.5.2 - Conflict with Applicable Land Use Plans, Policies, or Regulations (Local)

The EIR states that “no warehouses, distribution centers, intermodal transfer facilities (railroad to truck), trucking terminals, or cross dock facilities shall be allowed outside the Mira Loma Warehouse and Distribution Center Overlay” area. However, Figures 2-7 and 2-8 of the draft General Plan identify two sites that will be changed to the Business Park - Specific Plan designation. It is not stated which two specific plans these sites are under (if any currently exists) but it is apparent that the Thoroughbred Farms Specific Plan is located south of one of the sites - east of the 15 freeway, south of Cantu-Galleano Ranch Road and north of Bellegrave Avenue - but is not proposed to be changed to BP-SP. Thoroughbred Farms Specific Plan is an adopted Business Park Specific Plan but the project site is not identified on Figure 2-7 of the General Plan as a BP-SP designation even though there is a specific plan. The EIR should be revised to include analysis regarding not changing the General Plan designation for this site in addition to whether or not specific plans are in place or proposed at the two sites identified.

9

Further, the Thoroughbred Farms SP permits warehousing and distribution centers with a CUP. The proposed General Plan requirement for no warehousing or distribution centers outside of the Mira Loma Warehouse and Distribution Overlay conflicts with the existing Thoroughbred Farms SP, which will result in nonconforming uses. The EIR does not discuss this information or provide any analysis of the potential impacts this may cause. Further, all existing warehouses, distribution centers, intermodal transfer facilities (railroad to truck), trucking terminals, or cross dock facilities outside the Mira Loma Warehouse and Distribution Center Overlay would be considered nonconforming uses and this is not addressed in the EIR either. The EIR also does not discuss the possibilities of increased traffic to the potentially nonconforming sites. It's likely that restricting warehousing in the City would increase traffic to the existing facilities because they are the only ones available.

10

4.16 - Transportation and Traffic

4.16.7 - Cumulative Impacts

The EIR determines that significant and unavoidable impacts will occur with respect to transportation and traffic. However, not all potential impacts were addressed in the analysis. The EIR does not discuss the potential for the existing nonconforming warehousing facilities to have increased traffic to their locations. The traffic would be focused at the intersections/highways surrounding the existing facilities and could predictably increase truck traffic to these facilities as a destination. The EIR should address the possibility of increased traffic at these locations as part of the traffic analysis.

11

6.0 - Alternatives

6.2 - Alternatives Considered but Not Analyzed Further

The EIR states that none of the potential “all non-residential growth” alternatives was studied further because it would create incompatible uses adjacent to each other. However, the policies of the General Plan Land Use chapter provide for mitigation measures when industrial/commercial development is proposed near residential uses. This includes (but is not limited to):

EJ 2.2 Sensitive Land Use Buffers. Require that proposals for new sensitive land uses incorporate adequate setbacks, barriers, landscaping or other measures as necessary to minimize air quality impacts.

EJ 2.3 School Buffers. Provide adequate buffers between schools and industrial facilities and transportation corridors.

12

EJ 2.5 Residential Buffers. Require that zoning regulations provide adequate separation and buffering of residential and industrial uses.

EJ 2.8 Separation of Uses. Build new sensitive land uses with sufficient buffering from industrial facilities and uses that pose a significant hazard to human health and safety.

LUE 2.6 Buffering. Require setbacks and other design elements to buffer residential units from the impacts of abutting agricultural, roadway, commercial, and industrial uses to the maximum extent possible.

LUE 5.19 Open Space. Provide open space areas within village centers, such as plazas or parklets, to provide visual relief from the urban environment, to form linkages to other portions of the City, and to serve as buffers from incompatible uses.

12

The EIR should have analyzed the potential impacts or reduction to impacts that the all non-residential growth alternative would generate because policies of the General Plan provide mitigation measures through project design. Further, an alternative with increased residential uses and reduced industrial/commercial uses should have been analyzed in order to determine the potential impacts or reduction to impacts of such an alternative.

Conclusion

For the foregoing reasons, GSEJA believes the EIR is flawed and an amended EIR must be prepared for the proposed General Plan and recirculated for public review. Golden State Environmental Justice Alliance requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

13

Sincerely,

Joe Bourgeois
Chairman of the Board
Golden State Environmental Justice Alliance

RESPONSES TO LETTER D-1

Golden State Environmental Justice Alliance

Response to Comment 1. As a note for future correspondence, it would be helpful if in the beginning of the letter the commenter provided some background information on its charter or mission, general membership and relationship to the City of Jurupa Valley, etc. As written, there is no context within which the comments are made. However, the City will include this organization on its public notification list for this project.

Response to Comment 2. The commenter is correct that the 2017 General Plan replaces the City's current General Plan which is based on the Riverside County General Plan. Although originally considered an "Interim Plan" it has since evolved into a comprehensive first General Plan for the City of Jurupa Valley for the foreseeable future.

Response to Comment 3. The information on the status of the two properties recently under Williamson Act contracts came from the Riverside County Farm Bureau and the Riverside County Geographic Information Services (GIS) department. Since the cancellation of these contracts has already occurred, the City determined that further information regarding the cancellation of these contracts was not needed as "backup" for the DEIR appendices or references. The commenter is incorrect that providing County data/documentation on Williamson Act Contract cancellations is required to comply with CEQA. The EIR already provides information at a programmatic level as is required by CEQA for General Plan EIRs, and data from the County indicated the Williamson Act contracts on both these projects had already been cancelled or were in the process of being cancelled to allow for future development, consistent with State law. Further reference to the cancelled Williamson Act contracts is not necessary under CEQA Guidelines § 15150(f) as the fact of their cancellation already has been established. The commenter has not presented any data or evidence that would contradict or conflict with that conclusion. If the commenter's arguments were correct, then information on all previous County actions on development plans within the City (i.e., prior to City General Plan approval) would have to be provided to fully document their current status as well, which is not required under State General Plan law or CEQA.

Response to Comment 4. Figure 4.2.1 of the General Plan EIR clearly identifies the various categories of state-designated farmland within the City but does not make any specific commitment or statement that lands previously identified as agriculture under the County General Plan, or that were currently in agricultural use, would in any way be preserved or formally protected as agriculture in the future. State law does not require the City to preserve the agricultural land use or zoning designations of the current County General Plan. As a result of the City's extensive public input process and discussion of community-wide issues, the City's General Plan opts not to preserve existing agricultural uses or land underlain by prime agricultural soils by designating such lands with an open space or agricultural land use or zoning designation. Rather, the policies of the General Plan encourage agricultural uses to continue as long as they are economically feasible for landowners. The General Plan also firmly establishes the right of property owners to farm even if surrounding land owners or occupants object to farming activities (i.e., "right to farm")(see also Response 5 below).

The City is part of an area that was once rural (i.e., western Riverside County) with extensive farming, but is transitioning to more urbanized/suburbanized uses. In such areas, agricultural uses eventually become impractical or economically infeasible as land prices, water costs, land use conflicts, etc. naturally increase over time as development occurs and eventually surrounds active farmland. The City General Plan allows for this process to occur, but does not permanently preserve agricultural uses or preclude land from transitioning to more urbanized uses when so desired by the landowner. Therefore, it is not accurate or appropriate to provide a map showing existing agricultural uses as actually designated as or zoned for Open Space Rural.

To clarify this issue, the following correction will be indicated in Section 3, *EIR Errata and Additions*:

(DEIR page 4.2-8) The 2017 General Plan includes agricultural lands that were classified in the County General Plan under the “Open Space, Rural” land use category. Most residents and land owners have expressed a strong desire for land in the City to be designated for suburban-type uses, but ongoing agricultural activities should be encouraged to continue as long as the land owner desires it and if they are economically feasible. Once the General Plan is adopted, it will no longer conflict with the County agricultural zoning because the City will no longer have any agricultural zones.

The EIR clearly identifies the eventual loss of prime agricultural land as a significant environmental impact under CEQA, which cannot be feasibly mitigated at the local level. The City will have to adopt a Statement of Overriding Considerations for this impact if it approves the 2017 General Plan. For additional information, the reader should also refer to Response 5 below regarding specific General Plan goals, policies, and programs related to agricultural land uses. These General Plan goals, policies, and programs are intended to help prevent conflicts between agriculture and adjacent non-agricultural uses wherever they may occur in the City, so no specific mapping of existing properties used for agriculture is needed for this analysis.

Response to Comment 5. City General Plan policy LUE 1.3 does encourage conservation of prime farmland but does not state the City will establish specific land use or zoning designations for farmland, nor does it state such lands will be preserved in perpetuity, as shown in the various General Plan goals, policies, and programs shown below (DEIR page 4.2-9):

Conservation and Open Space Element

Goal

COS 4 Accommodate and encourage expansion of agricultural activities.

Policies

- COS 4.1 Use agricultural land conservation programs to improve the viability of farms.
- COS 4.2 Discourage the conversion of productive agricultural land.
- COS 4.3 Encourage placement of uses compatible with agriculture on adjacent land.

Programs

- COS 4.1.1 Encourage landowners to use farmland preservation and protection programs.
- COS 4.1.2 Encourage sustainable agricultural activities to minimize land use conflicts.

Land Use Element

Policies

- LUE 1.3 Encourage conservation of Prime Farmland and productive agricultural lands.
- LUE 1.4 Adhere to the Riverside County Right-To-Farm Ordinance.

The statement in the DEIR merely meant the acreages previously assumed for agriculture under the County General Plan and zoning would be incorporated into the Open Space Rural designation in terms of recordkeeping. It appears the commenter was misinterpreting the General Plan and DEIR statements in this regard. Additional related discussion is provided in Responses 4 above and 6 below.

Response to Comment 6. Figure 2-8 of the General Plan does in fact show that the existing lands used for agriculture will be designated and eventually developed for various suburban land uses as outlined in the Land Use Element and the City’s Land Use Plan. The Plan is not required to show specific changes from existing to future agricultural uses (i.e., the General Plan and zoning do not contain any specific agricultural designations or zones). The DEIR is adequate and does not violate

CEQA because the DEIR explains the existing conditions regarding agricultural land and uses and indicates how those lands will eventually transition to suburban land uses in the future.

Response to Comment 7. The Vehicle Miles Traveled (VMT) information provided in Table 4.3.G does include trip generation for warehousing including logistics facilities that will access the regional ports (including the Ports of Los Angeles and Long Beach), and the regional traffic model (RIVTAM) that was used to develop the City-wide traffic model takes these types of trips and appropriate trip lengths into account when estimating future roadway, intersection, and freeway impacts. DEIR pages 4.3-18 and 19 state the following:

“The State Office of Planning and Research (OPR) has not yet issued final guidance on how VMT is to be calculated in reference to significance determinations in CEQA documents, and SCAG has not issued baseline community-level VMT information upon which to prepare a VMT analysis under SB 375. However, the following information will provide a baseline against which future VMT assessments can be measured.”

The commenter is correct that the General Plan anticipates the City will experience substantial growth in industrial and other non-residential uses which will in turn provide substantial growth in jobs in the future along with additional traffic. However, the City is currently considered to be “housing rich” and “jobs poor”, which means that increases in jobs in excess of increases in housing in the future will help improve the City’s jobs/housing balance. Within Jurupa Valley this would eventually lead to reductions in trip lengths by workers who live in the City as more jobs are added to the City and some portion of local workers find employment within the City, thereby reducing their regional commuting. This is a major regional goal of the SCAG regional planning documents outlined in the DEIR (e.g., Regional Mobility Plan) because it will also reduce regional VMT by providing more jobs in housing rich areas. That is not to say every new job created in the City will be held by City residents, but the overall long-term goals of SCAG, as outlined in its adopted plans, are based on this regional strategy (i.e., improving jobs/housing balance in housing rich areas and vice versa) which will ultimately benefit the region as a whole, including the City of Jurupa Valley. The 2017 General Plan is consistent with this regional planning goal.

Response to Comment 8. The City-wide traffic model assumes average daily trips although the peak hour impacts are assumed to be weekday periods because that is when the greatest impacts are felt on local roadways and intersections. The commenter is conflating project-level data with programmatic-level data. The General Plan DEIR is a programmatic document that evaluates the impacts of General Plan goals and policies and the general effects to development in the future (i.e., consistent with those goals and policies). CEQA will require more specific project-level data when specific development is proposed on specific properties in the future, including industrial projects in proximity to residential uses. The commenter is incorrect in stating that the traffic model must be updated to include weekend trips. The model already looks at daily (weekday) and peak hour traffic impacts as those are the “worst case” times when traffic will be greatest (i.e., weekday when workers are commuting to and from work and students are being taken to and from school). An analysis of weekend traffic would only be required in the future for a project that specifically generates weekend traffic rather than typical worst case weekday traffic. The traffic data and analysis in the City-wide traffic model is appropriate for the programmatic nature of the General Plan DEIR.

Response to Comment 9. The commenter is conflating project-level data with programmatic-level data. The General Plan DEIR is a programmatic document that evaluates the impacts of General Plan goals and policies and the general effects to development in the future (i.e., consistent with those goals and policies). CEQA will require more specific project-level data when specific development is proposed on specific properties in the future, including the two Business Park Specific Plans identified by the commenter. It should also be noted that the types of approved land uses such as Specific Plans referred to by the commenter were incorporated into the appropriate Traffic Analysis Zones (TAZs) of the City-wide traffic study prepared for the General Plan (see DEIR Appendix K).

Response to Comment 10. The DEIR text cited by the commenter was actually a small part of a more extensive policy in the Land Use Element that attempts to deal with existing and future warehousing in the City. The following text provides the full citation from the DEIR (pages 4.10-24 and 25) which itself is a direct quote from the General Plan Land Use Element:

Mira Loma Warehouse and Distribution Center Overlay

The Mira Loma Warehouse and Distribution Overlay is located in the northwest section of the City and consists primarily of large logistics warehouses with storage, loading, and shipping facilities and industrial/manufacturing properties. The area has a high concentration of commercial and industrial truck traffic, and includes some small-scale retail commercial and services adjacent to a small residential neighborhood.

This overlay is designed to limit the locations of logistics and other similar supply-chain uses to the Mira Loma Warehouse and Distribution Center Overlay area. Its boundaries are shown in *Figure 2-9*.¹ These uses generate a greater concentration of industrial truck traffic than other typical manufacturing uses, and thus generate significant environmental impacts on air quality, noise, and traffic.

Policies

LUE 5.42 Permitted Uses. Permit warehousing and distribution uses, logistics, and other goods storage facilities in the Business Park, Light Industrial, and Heavy Industrial land use designations only in the following area:

The area in Mira Loma defined and enclosed by these boundaries: San Sevaine Channel from Philadelphia Street southerly to Galena Street on the east, Galena Street from the San Sevaine Channel westerly to Wineville Road on the south, Wineville Road northerly to Riverside Drive, then Riverside Drive westerly to Milliken Avenue, then Milliken Avenue north to Philadelphia Street on the west, and Philadelphia Street easterly to the San Sevaine Channel on the north.

This policy shall not apply to firms that only store goods that are manufactured or assembled on-site. In such a case, the use shall be evaluated based on the underlying general plan land use designation, and any potential impacts on the community from diesel and other hazardous emissions, traffic generation, local existing land use compatibility, and other environmental and socioeconomic concerns. Any manufacturing project proposal outside the aforementioned area that is in excess of 200,000 square feet in size shall be required to obtain a Conditional Use Permit from the City. No warehouses, distribution centers, intermodal transfer facilities (railroad to truck), trucking terminals, or cross dock facilities shall be allowed outside the aforementioned area.

Policy LUE 5.42 addresses future land uses and refers to new Business Park, Light Industrial, and Heavy Industrial land uses. Land uses that have already been approved, such as the projects referred to by the commenter, are allowed and were taken into account when preparing the City-wide traffic study. For example, the Thoroughbred Farms Specific Plan is a legal zoning document and land use plan that has already been taken into account in the City-wide traffic model completed for the 2017 General Plan. The statement quoted by the commenter was not intended to limit approved land uses, and any future uses that have not been evaluated under CEQA for air quality and other impacts related to trucking will be evaluated when specific development is proposed. The

¹ Figure 2-9 of the draft 2017 Jurupa Valley General Plan Land Use Element

programmatic nature of the General Plan DEIR allows for the evaluation of project-specific impacts at the appropriate time (i.e., in the future when specific development is proposed on a specific property) as required under CEQA. Again, the City-wide traffic model took into account approved uses that may allow warehousing, but future development will require more specific analysis under CEQA.

Response to Comment 11. Response 10 above in part addresses the commenter's concern about future warehousing that may be built outside of the Mira Loma area. If warehousing were part of a previously approved project, then it would not be non-conforming as suggested by the commenter. Instead, such development would have more focused traffic, air quality, and other environmental studies prepared as part of its project-specific CEQA process. It is not possible for a programmatic General Plan DEIR to evaluate potential future project-level impacts such as those suggested by the commenter.

Response to Comment 12. CEQA requires the development and evaluation of reasonable alternatives, not all possible alternatives. The City currently has 2,866 acres of vacant land designated for residential land uses under the County General Plan, and 1,628 acres of vacant land designated for non-residential uses (DEIR Table 3.A). It would be unreasonable to assume the City would re-designate all currently vacant land that is designated for residential uses for all non-residential uses. The commenter is correct that the General Plan does establish or suggest a variety of buffers or other methods of separating potentially incompatible land uses. While such a change could generate substantially more jobs depending demand for non-residential development, it would substantially reduce any anticipated future population or housing growth that may occur within the City, reducing potential future tax revenues specifically related to new residences and new residents that would not be generated by new businesses or new employees. The commenter has offered no reasons why a shift to all non-residential land uses on vacant land represents a reasonable land use alternative or would meet the goals and objectives of the General Plan.

The commenter's suggestion about increasing residential uses relative to non-residential uses would work against the regional planning goal of increasing jobs/housing ratio in areas that are housing rich (i.e., like Jurupa Valley). Community input during the early phases of General Plan development indicated residents wanted less future growth of residential uses and at lower densities than might be desired under state housing goals, so such a land plan may not necessarily represent a reasonable alternative for analysis in this DEIR. The City believes it has evaluated a reasonable range of alternatives in this DEIR.

Response to Comment 13. The organization will be provided with notice of future hearings or opportunities to comment as part of the CEQA process. However, the commenter is also listed as the President of the Social Environmental Justice Alliance so the commenter may want to clarify if there is any overlap with that organization so as not to cause confusion with future notices.

LETTER D-2

DUDEK

Attn: Carey Fernandez, Project Manager

605 Third Street

Encinitas, California 92024

RE: DRAFT Emerald Ridge Environmental Impact Report

Dear Ladies and Gentlemen,

I am writing regarding the above referenced Draft Emerald Ridge Environmental Impact Report. The Sections copied below list nearby approved projects that must be considered within the cumulative impact analysis. You seem to have missed a large approved project that is within about ½ mile from your project and has direct impacts on the Rubidoux Blvd intersection with the I-60 Freeway. This is an approved Specific Plan with a certified EIR. It consists of approximately 1,000 residential lots, 200,000 square feet of retail space and a 25 acre Church site. Attached are copies of the EIR certification information.

3.6.2 Methodology

According to Section 15130(b) of the CEQA Guidelines, cumulative impact analysis may be conducted and presented by either of two methods: (1) a list of past, present, and probable activities producing related or cumulative impacts; or (2) a summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document that has been adopted or certified, which described or evaluated regional or area-wide conditions contributing to the cumulative impact. With the exception of the impact analyses of air quality and greenhouse gas emissions, the cumulative list approach has been utilized in the cumulative analysis presented for each environmental topic area analyzed in Chapter 4. Air quality and greenhouse gas emissions cumulative impacts have been evaluated using the summary of projections method because impacts can only be analyzed on a broad, area-wide scope, and in a cumulative context.

3.6.3 Cumulative Projects List

Pursuant to CEQA Guidelines Section 15130(b)(1)(A) this EIR uses “a list of past, present, and probable future projects producing related or cumulative impacts.” The list of cumulative projects under consideration for this analysis is presented in Table 3-1. The cumulative projects are also shown in relation to the project site in Figure 3-7.

I believe that the CEQA Guidelines that you cite would require you to include this information in your study. I am one of the owners within the Emerald Meadows Specific Plan so if you need detailed information about the project, I will be happy to provide that to you.

1

Sincerely,
RTE 60, LLC

Jim Stockhausen

SUBMITTAL TO THE BOARD OF SUPERVISORS
COUNTY OF RIVERSIDE, STATE OF CALIFORNIA

713B

FROM: TLMA - Planning Department

SUBMITTAL DATE:

August 25, 2005

SUBJECT: GENERAL PLAN AMENDMENT NO. 679 / CHANGE OF ZONE NO. 6893 / SPECIFIC PLAN NO. 337 - EIR NO. 473 - Applicant: EMR Residential Properties, LLC., County of Riverside EDA - Engineer / Representative: JHA Consulting Inc. - Second Supervisorial District - Rubidoux Zoning District - Jurupa Area Plan - Location: North of 34th Street, south of the I-60 Freeway, east of Rubidoux Boulevard, and west of Santa Ana River - 278.45 Acres - Zoning: Light Agriculture (A-1), Limited Multiple-Family Dwellings (R-2A), Multiple Family Dwellings (R-2), One-Family Dwellings (R-1), Watercourse, and Watershed and Conservation Areas (W-1) - REQUEST: To amend the General Plan Land Use Designation of the subject site from Light Industrial, Medium High Density Residential, Recreation, Commercial Retail, water, and Very High Density Residential within the Jurupa Area Plan, to Medium, Medium-High, High, Very High Density Residential, and Commercial Retail. Change the zone of the subject property from Light Agriculture (A-1), Limited Multiple Family Dwellings (R-2A), One-Family Dwellings (R-1), Multiple Family Dwellings (R-2), Manufacturing Service Commercial (M-SC), General Commercial (C-1/C-P), and General Residential (R-3) to Specific Plan (SP). To master plan 278.45 acres in the Jurupa Redevelopment Area. The proposal includes 1,196 residential units, with housing types varying from clustered developments to 5,000 minimum square foot lots. The plan includes 17.5 acres of park, 20.4 acres of commercial property, 12 acres of school facilities and 25 acres for religious facilities.

RECOMMENDED MOTION:

The Planning Department recommended Approval; and,
THE PLANNING COMMISSION BY A VOTE OF 3-0, (Commissioner Petty and Commissioner Porras absent) RECOMMENDS:

CERTIFICATION of **ENVIRONMENTAL IMPACT REPORT NO. 473**, which has been completed in compliance with the EIR guidelines and the riverside County Rules to Implement

Michael Johnson
Robert C. Johnson
Planning Director

RCJ:sn

MINUTES OF THE BOARD OF SUPERVISORS

On motion of Supervisor Tavaglione, seconded by Supervisor Stone and duly carried,
IT WAS ORDERED that the above matter is tentatively approved as recommended with a condition that when it comes back for the first tract, the developer make every effort to acquire two properties by friendly acquisition, and try to eliminate going by eminent domain, and that staff is directed to prepare the necessary documents for final action.

Ayes: Tavaglione, Stone, Wilson and Ashley

General Plan Amendment No. 679 / Specific Plan No. 337 / Change of Zone Case No.

SCH Number: 2004031007

Type: NOD

Project Description

To amend the General Plan Land Use Designation of the subject site from Light Industrial, Medium High Density Residential, Recreational, Retail, water, and Very High Density Residential within the Jurupa Area Plan, to Medium, Medium-High, High, Very High Density Residential, Commercial Retail. Change the zone of the subject property from Light Agriculture (A-1), Limited Multiple Family Dwellings (R-2A), or Dwellings (R-1), Multiple Family Dwellings (R-2), Manufacturing Service Commercial (M-SC), General Commercial (C-1/C-P), and General Office (R-3) to Specific Plan (SP). To master plan 278.45 acres in the Jurupa Redevelopment Area. The proposal includes 1,196 residential housing types varying from clustered developments to 5,000 minimum square foot lots. The plan includes 17.5 acres of park, 20.4 acres of commercial property, 12 acres of school facilities and 25 acres for religious facilities.

Determinations

This is to advise that the ☒ Lead Agency ☐ Responsible Agency Riverside County Board of Supervisors has approved the project above on 10/4/2005 and has made the following determinations regarding the project described above.

1. The project ☒ will ☐ will not have a significant effect on the environment.
2. ☒ An Environmental Impact Report was prepared for this project pursuant to the provisions of CEQA.
☐ A Negative Declaration was prepared for this project pursuant to the provisions of CEQA.
3. Mitigation measures ☒ were ☐ were not made a condition of the approval of the project.
4. A Statement of Overriding Considerations ☒ was ☐ was not adopted for this project.
5. Findings ☒ were ☐ were not made pursuant to the provisions of CEQA.

Final EIR Available at: Riverside County Planning Department 4080 Lemon Street, 9th Floor Riverside, CA 92501

RESPONSES TO LETTER D-2

RTE 60, LLC (Emerald Meadows Representatives)

Response to Comment 1. The project land use information referred to by the commenter was incorporated into the City-wide traffic model runs prepared by LSA Associates in support of the Mobility Element. It should be noted the comment letter referred to both the “Emerald Ridge Environmental Impact Report” and the “Emerald Meadows Specific Plan” however staff believes this comment is in relation to the Emerald Meadows project.

THIS PAGE INTENTIONALLY LEFT BLANK

3. EIR ERRATA AND ADDITIONS

Specific changes in DEIR text are shown in either strikeout (~~strikeout~~) where text has been removed or in double underline (underline) where text has been added. The applicable page numbers from the Draft EIR are also provided for easy reference. The following correction to the Draft EIR should be noted:

DRAFT EIR (GLOBAL CHANGES)

(1) Any reference to “less intense” or “lower intensity development” in the DEIR refers to 30 percent (not 20 percent) less development than under the proposed 2017 General Plan in terms of housing density (number of units or units per acre) or acres or square footage of new non-residential development. This is a global change that does not change the significance of any impacts identified in the DEIR.

(2) Any reference to SCAG’s Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) should be to the updated 2016 version not the older 2012 version.

Section 1: Executive Summary

Section 1.4 (page 1-4) “...Lower Intensity Alternative that looks at ~~20~~ 30 percent less intensive...”

Section 4.2.5.4 (page 1-5) “...based on market conditions, and impacts of this conversion process will be ~~less than~~ significant and unavoidable due to no feasible mitigation available.”

Section 4.2.5.5 (page 1-5) “...remove 2,077 acres of land classified as farmland of local importance (i.e., not prime farmland) which is ~~not~~ considered a significant and unavoidable impact of General Plan implementation due to no feasible mitigation available.”

Table 1.A – Summary of Impacts and Mitigation

(page 1-9) Remove Section 4.7.5.3 Impact to the Proposed Plan from Global Climate Change...” from the Executive Summary because there is no Section 4.7.5.3 in the DEIR Section 4.7, *Greenhouse Gas Emissions...*

(page 1-13) “...4.14.3.5 Schools...” should be 4.14.5.3 Schools

(page 1-13) Missing Section 4.14.5.4 Libraries.

4.14.5.4 Libraries: Project developers would be required to pay Development Impact Fees to offset project-related demand on existing library services. Fair share payment of infrastructure costs by project developers would ensure that newly proposed projects would not have an adverse impact on the availability of library services. These impact fees could also be used to fund construction or expansion of library facilities, if necessary, to reduce impacts. With implementation of the 2017 General Plan, anticipated impacts on library services would be less than significant.

Section 2: Introduction

Section 2.7.1 Notice of Preparation

The text of the footnote on the bottom of page 2-7 should be changed as following (typographical error):

The City’s Notice of Preparation 30-day public review period was from ~~May 13, 2014 to June 11, 2014~~ February 5 to March 6, 2016.

Section 3: Plan Description

See global changes regarding lower intensity uses being 30 percent less intense than the proposed General Plan not 20 percent less intense.

Section 4: Environmental Analysis

Section 4.1 Aesthetics

4.1.8 Cumulative Impacts (page 4.1-20). Change numbering to Section 4.1.6.

Section 4.2 Agricultural and Forest Resources

4.2.5 Programmatic Impact Evaluation

4.2.5.1 Existing Zoning and Williamson Act

To clarify the current classification of agricultural land in the City, the following changes will be made to the DEIR text:

(page 4.2-8) The 2017 General Plan includes agricultural lands that were classified in the County General Plan under the “Open Space, Rural” land use category. Most residents and land owners have expressed a strong desire for land in the City to be designated for suburban-type used, but ongoing agricultural activities should be encouraged to continue as long as the land owner desires it and if they are economically feasible. Once the General Plan is adopted, it will no longer conflict with the County agricultural zoning because the City will no longer have any agricultural zones.

Section 4.2.5.5 (page 4.2-13) “The conversion of farmland to non-agricultural uses was analyzed in Section 4.2.5.4 and ~~was determined to be a less than~~ impacts were determined to be significant and unavoidable there is no feasible mitigation to reduce impacts to less than significant levels.”

Section 4.2.5.5 (page 4.2-14) “The previous Section 4.2.5.4 concluded this was a fundamental land use change for the area ~~but was not~~ considered a significant environmental impact. At a programmatic level, there are no mitigation measures needed for this transitional process other than implementation of the outlined General Plan goals, policies, and programs. That section concluded the conversion of farmland to non-agricultural use was a ~~less than~~ significant and unavoidable impact ~~and no mitigation is required since there is no feasible mitigation to reduce impacts to less than significant levels. Conversely, Likewise,~~ this section concludes...”

Section 4.5 Cultural Resources

Section 4.5.5.3 (page 4.5-19). Change numbering to Section 4.5.5.4.

Section 4.6 Geology and Soils

Sections 4.6.5.3 and 4.6.5.6 (pages 4.6-28 and 4.6-33) in reference to “COS 1.4”

Add “COS 1.4 Prevent soil erosion, minimize landform modifications to avoid habitat disturbance and conserve and reuse on-site soils” to list of policies in discussion under Sections 4.6.5.3 and 4.6.5.6.

Section 4.6 (page 4.6-35). Change numbering to Section 4.6.6.

4.7 Greenhouse Gas Emissions and Climate Change

Section 4.7.5.2 (page 4.7-30) “Table 4.13.C in Section 4.10 4.13, *Population, Housing, and Employment*, indicates the City is projected to have a population of ~~426,000~~ 130,537 residents and ~~49,558~~ 50,089 employees by 2035. If the projected Buildout service population of the City (residents and workers) is multiplied by the efficiency target (~~175,538~~ 180,626 times 4.1), the City’s efficiency goal would be ~~749,706~~ 740,567 MT CO₂e/yr.”

In addition, Tables 4.7.H and 4.7.J should be updated to incorporate the Service Population projections as indicated in Table 4.13.C in Section 4.13.

4.8 Hazards and Hazardous Materials

Section 4.8.7 (page 4.8-34). Change numbering to Section 4.8.6.

4.9 Hydrology and Water Quality

Section 4.9.5.1 (page 4.9-27) “CSSF 1.1.20...CSSF 1.1.21...CSSF 1.1.22...CSSF 1.1.1.3...CSSF 1.1.1.4” Change policy numbering to “CSSF 1.20...CSSF 1.21...CSSF 1.22...CSSF 1.1.3...CSSF 1.1.4”

Section 4.9.5.2 (pages 4.9-27 and 4.9-28) “...not located downstream of or near any enclosed body of water and ~~could~~ would not be subject to a seiche during a seismic event.”

Section 4.9.5.2 (page 4.9-28) “CSSF 1.5: Require projects to ~~mitigation~~ mitigate onsite geologic and related hazards.”

Section 4.9.5.3 (page 4.9-30) “...on March 22, 2010, concluded export restriction could...”

Section 4.9.5.6 (page 4.9-41) “...Open Space Element address ~~construction~~ operational-related water quality issues...”

4.10 Land Use and Planning

Global this section: Any references to the 2012 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) should be to the newer 2016 RTP/SCS.

Section 4.10.1.1 (page 4.10-8) “...~~4,258~~ 4,494 acres or approximately ~~15.3~~ 16.1 percent of the City...”

Section 4.10.7 (page 4.10-52). Change numbering to Section 4.10.6.

4.11 Mineral Resources

Section 4.11.7 (page 4.11-8). Change numbering to Section 4.11.6.

4.12 Noise

Section 4.12.5.2 (page 4.12-54) “Implementation of the ~~2017 General Plan~~ goals and policies of the 2017 General Plan will help...”

4.13 Population, Housing, and Employment

It should be noted the SCAG figures are based on regional trends, and the City projections are based on new housing, population, and employment added to existing figures which were calculated totally independent of SCAG regional projections (DEIR page 4.13-11).

Global this section: Any references to the 2012 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) should be to the newer 2016 RTP/SCS. The population, households, and employment projections in this section do not rely on SCAG's RTP/SCS; rather, they rely on the Riverside County Transportation and Land Management Agency (RCTLA) and California Department of Finance (DOF), so the projected numbers do not necessarily need to be updated. However, any reference to SCAG's 2012 RTP/SCS should be updated to the 2016 RTP/SCS.

Section 4.13.1.1 (page 4.13-1) "...The SCAG projects the City's population will grow to ~~403,700~~ 130,714 persons by the year 2020 and ~~426,000~~ 130,537 persons by the year 2035 (Table 4.13.A)."

Section 4.13.5.1 (page 4.13-10) "In the coming years, the City is expected to add from ~~9,498~~ 10,032 to ~~43,140~~ 14,332 new residential units..." in order to maintain consistency with the rest of the DEIR.

4.14 Public Services

Section 4.14.5.2 (page 4.14-10) "The ~~2016~~ 2017 General Plan..."

4.15 Recreation and Parks

Section 4.15.5.1 (page 4.15-13) "The City currently has 126 acres of parkland, so the City has a deficit of ~~462~~ 364 acres of parkland."

Section 4.15.6 (page 4.15-15) "For these reasons, implementation of the City's 2017 General Plan will not make a significant contribution to cumulatively adverse impacts to ~~cultural resources (with the recommended mitigation)~~ recreation and parks."

4.16 Transportation and Traffic

Global this section: The width for Bellegrave Avenue was missing from the Mobility Element maps – it will be corrected in the final Element. It will be a Major Street with a width of 118' and 4 travel lanes.

Section 4.16.6.2 (pages 4-16-71 and 4.16-72) "Projected growth by 2035 will result from conversion of a total of ~~4,258~~ 4,494 acres of now vacant land which is ~~15.3~~ 16.1 percent of the total City area. If development occurs at a regular pace, it would equal roughly ~~243 acres or 0.8 percent~~ 236.5 acres or 5 percent per year for approximately ~~20~~ 19 years (~~2015~~ 2016 to 2035). Future growth is expected to add a maximum of ~~43,140~~ 14,332 new residential units and maximum of ~~33~~ 36.3 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*). The additional residential units alone could contribute approximately 131,400 total vehicular trips each day with over 13,000 trips during peak hours. The non-residential uses would add thousands more of daily and peak hour trips, although adding local jobs will help improve the City's job/housing balance on a regional scale and will reduce long regional commutes by providing more local jobs for local residents."

5.0 Additional Topics Required by CEQA

Table 5.A (page 5-1) Remove "...Cumulative Air Quality Impacts..." from the Other CEQA Topics Section because Section 4.3, *Air Quality* does not identify any significant contributions to cumulatively adverse regional air quality impacts.

Sections 5.2 and 5.3 (pages 5-2 to 5-4) "...The City currently contains ~~4,258~~ 4,494 acres..."

Section 5.3 (page 5-3) "...2017 General Plan buildout would ~~result in a maximum population of 146,241 people, 61,855 additional jobs, and 38,141 additional housing units~~ add between 37,622 and 53,745 new residents and up to 14,332 new residential units to the City, resulting in a maximum of 152,587 people, 65,881 jobs, and 39,333 households (Table 4.13.C)."

6.0 Alternatives

Section 6.1.3 (page 6-4) Remove “...Cumulative emission impacts...” from the Alternatives Section because Section 4.3, *Air Quality* does not identify any significant contributions to cumulatively adverse regional air quality impacts.

Section 6.2 (page 6-4) “...(i.e., air pollutant and ~~GHG~~ emissions, traffic, and noise) are already...”

Section 6.4.1.3 (page 6-7) “...slightly ~~more~~ less residential units and slightly ~~more~~ less non-residential development...” Section 6.4.1 states, “...resulting in slightly lower population projections at buildout (148,314 vs. 150,741 persons) from fewer housing units at buildout (38,686 vs. 39,333 units). The additional non-residential development at buildout would also be lower at 33.8 million square feet added vs. 36.6 million square feet.

Sections 6.4.1.3 and 6.4.1.18 and 6.4.2.3 and 6.4.2.18 and Table 6.F (pages 6-7 and 6-11 and 6-12 and 6-15 and 6-17) “...would be considered to make a significant contribution to cumulatively considerable air quality impacts...significant for daily emissions and cumulative impacts.” Remove all references to “...Cumulative ...air quality impacts...” from the Alternatives Section because Section 4.3, *Air Quality* does not identify any significant contributions to cumulatively adverse regional air quality impacts.

Sections 6.4.1.7 and 6.4.2.7 (pages 6-8 and 6-13) “...~~717,018~~ 717,779 MT CO₂e compared to an adjusted...”

Sections 6.4.1.7 and 6.4.2.7 (pages 6-8 and 6-13) “...Tables 4.7.I and ~~4.7.K~~...”

Section 6.4.1.7 (page 6-9) “...GHG emissions and less than significant cumulative impacts contributions to regional GHG emissions.”

Section 6.6 (page 6-19) “...incrementally reduce significant impacts for 3 of the 6 ~~4~~ significant impacts environmental factors for which significant impacts were identified...”

SECTION 3 SUMMARY

The information provided in the Response to Comments and the corrections outlined above do not constitute substantial new information that requires recirculation of the Draft EIR. The California Environmental Quality Act (CEQA) Guidelines, Section 15088.5, states:

- (a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term “information” can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not “significant” unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project’s proponents have declined to implement. “Significant new information” requiring recirculation includes, for example, a disclosure showing that:
 - (1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
 - (2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
 - (3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project’s proponents decline to adopt it.
 - (4) The Draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.
- (b) Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.

The editorial changes to the Draft EIR described above do not constitute “significant” new information because:

- No new significant environmental impact would result from the project or from a new mitigation measure;
- There is no substantial increase in the severity of an environmental impact that would result unless mitigation measures are adopted that reduce the identified significant impacts to a level of insignificance;
- No feasible project alternative or mitigation measure considerably different from others previously analyzed has been proposed or identified that would clearly lessen the significant environmental impacts of the project; and
- The Draft EIR is not fundamentally or basically inadequate or conclusory in nature such that meaningful public review and comment were precluded.

Therefore, recirculation of the Draft EIR is not required because the information provided in the Response to Comments does not result in any substantial changes or additions to the Draft EIR. The responses merely clarify or amplify information already provided, or make insignificant modifications to the already adequate Draft EIR.

4. MITIGATION MONITORING AND REPORTING PROGRAM

4.1 INTRODUCTION

This Mitigation Monitoring and Reporting Program has been prepared for use in implementing mitigation for the:

2017 City of Jurupa Valley General Plan

The program has been prepared in compliance with State law and the Environmental Impact Report (EIR) (State Clearinghouse No. 2016021025) prepared for the project by the City of Jurupa Valley.

The California Environmental Quality Act (CEQA) requires adoption of a reporting or monitoring program for those measures placed on a project to mitigate or avoid adverse effects on the environment (Public Resource Code Section 21081.6). The law states that the reporting or monitoring program shall be designed to ensure compliance during project implementation.

The monitoring program contains the following elements:

- 1) The mitigation measures are recorded with the action and procedure necessary to ensure compliance. In some instances, one action may be used to verify implementation of several mitigation measures.
- 2) A procedure for compliance and verification has been outlined for each action necessary. This procedure designates who will take action, what action will be taken and when, and to whom and when compliance will be reported.
- 3) The program has been designed to be flexible. As monitoring progresses, changes to compliance procedures may be necessary based upon recommendations by those responsible for the program. As changes are made, new monitoring compliance procedures and records will be developed and incorporated into the program.

This Mitigation Monitoring and Reporting Program includes mitigation measures identified in the Final EIR.

4.2 MITIGATION MONITORING AND RESPONSIBILITIES

As the Lead Agency, the City of Jurupa Valley is responsible for ensuring full compliance with the mitigation measures adopted for the 2017 General Plan. The City will monitor and report on all mitigation activities. Mitigation measures will be implemented at different stages of General Plan implementation, mainly for private development and public works projects in the future.

In this regard, the responsibilities for verification of implementation of the mitigation measures have been assigned to the City of Jurupa Valley. . If during the course of Plan implementation, any of the mitigation measures identified herein cannot be successfully implemented, the City Council shall be informed and the City will then inform any affected responsible agencies. The City, in conjunction with any affected responsible agencies, will then determine if modification to the Plan is required and/or whether alternative mitigation is appropriate.

THIS PAGE INTENTIONALLY LEFT BLANK

4.3 MITIGATION MONITORING AND REPORTING PROGRAM

Project File Name: 2017 General Plan
(includes any FEIR corrections and additions)

Applicant:
Date:

City of Jurupa Valley
April 2017

| DEIR Section/Mitigation Measure/ Implementing Actions | Responsible for Monitoring | Monitoring Frequency | Timing of Verification | Method of Verification | Verified Date/ Initials | Sanctions for Non- Compliance |
|--|----------------------------------|---|--|---|-------------------------------|-------------------------------------|
| Section 4.1 Aesthetics | | | | | | |
| None | | | | | | |
| 4.2 Agriculture and Forestry Resources | | | | | | |
| None | | | | | | |
| 4.3 Air Quality | | | | | | |
| None | | | | | | |
| 4.4 Biological Resources | | | | | | |
| None | | | | | | |
| 4.5 Cultural Resources | | | | | | |
| <p>4.5.5.1A Prior to issuance of a demolition permit for any structure older than 45 years at the time of application and according to City building records or other official documentation, a project applicant shall provide an historical assessment of the structure prepared by a qualified professional (i.e., certified historian or architectural historian) with a determination whether the structure represents a significant historical resource according to Section 15064.5 of the State CEQA Guidelines. The assessment shall include contact with a local historical society regarding the structure's potential local significance.</p> <p>If the structure is determined to not be historic or potentially historic, either at a state or local level, the structure may be demolished without further documentation. If the structure is not historic on a state level but has local historical significance, the structure may be demolished with City Council approval, provide that the property is photo-recorded and archived prior to demolition. If the structure has state historical significance, the project historian shall prepare a</p> | City Planning Department | Once for each required document submittal | Prior to issuance of demolition permit | City verifies evidence of a historical assessment and, if required, photo documentation and archival report and, if required, a preservation plan | | Withhold demolition permit |

| DEIR Section/Mitigation Measure/ Implementing Actions | Responsible for Monitoring | Monitoring Frequency | Timing of Verification | Method of Verification | Verified Date/ Initials | Sanctions for Non- Compliance |
|--|--|---|---|--|-------------------------------|--|
| preservation plan which shall address in-place or onsite preservation, relocation to an appropriate offsite location, or demolition only if it can be clearly demonstrated that preservation in place is not physically, or structurally feasible. This measure shall be implemented to the satisfaction of the City Planning Department. | | | | | | |
| 4.5.5.3A Prior to issuance of a grading permit, a project applicant must demonstrate if the proposed project grading will impact underlying soil units or geologic formations that have a moderate to high potential to yield fossiliferous materials. If the potential for fossil discovery is low, no pre-grading monitoring needs to be established. If the potential for fossil discovery is moderate to high, the applicant must provide a paleontological monitor during rough grading of the project. If a paleontologist is not onsite and possible fossil materials are found, work shall be halted in that area until the material can be assessed by a qualified professional. If materials are found onsite during grading, a qualified professional shall evaluate the find and determine if it represents a significant paleontological resource. If the resource is determined to be significant, the paleontologist shall supervise removal of the material and determine the most appropriate archival storage of the material. This measure shall be implemented to the satisfaction of the City Planning Department. | City Planning Department | Once prior to issuance of grading permit and anytime during grading | Prior to issuance of grading permit and at time of discovery of paleontological resources | City verifies evidence of paleontological sensitivity; City verifies evidence developer has retained qualified paleontologist for monitoring; City verifies grading plans require City to be notified if any fossils are found during grading. | | Withhold grading permit and/or Issue "Stop Work" Order until compliance verified |
| 4.6 Geology and Soils | | | | | | |
| 4.6.5.1A Before a project is approved or otherwise permitted within an A-P Zone or within 150 feet of any other active or potentially active fault mapped in a published United States Geologic Survey (USGS) or CGS reports, or within other potential earthquake hazard area (as determined by the City), a site-specific geologic investigation shall be prepared to assess potential seismic hazards resulting from development of the project site. Where and when required, the geotechnical investigation shall address the issue(s), hazard(s), and geographic area(s) determined by the City of Jurupa Valley Planning and Building Departments to be relevant to each development. The site-specific geotechnical investigation shall incorporate up-to-date | City Engineering Department City Building and Safety Department | Twice for each site-specific geotechnical investigation | Prior to issuance of grading permit Prior to issuance of building permit | City verifies geotechnical investigation is undertaken; City verifies recommendations of geotechnical investigation are included in grading plans. | | Withhold grading permit and/or building permit |

| DEIR Section/Mitigation Measure/ Implementing Actions | Responsible for Monitoring | Monitoring Frequency | Timing of Verification | Method of Verification | Verified Date/ Initials | Sanctions for Non- Compliance |
|---|--|---------------------------------|--------------------------------------|--|--|--|
| <p>data from government and non-government sources.</p> <p>Based on the site-specific geotechnical investigation, no structures intended for human occupancy shall be constructed across active faults. This site-specific evaluation and written report shall be prepared by a licensed geologist and shall be submitted to City of Jurupa Valley Planning and Building Departments for review and approval as part of the environmental and entitlement process and prior to the issuance of building permits. If an active fault is discovered, any structure intended for human occupancy shall be set back at least 50 feet from the fault. A larger or smaller setback may be established if such a setback is supported by adequate evidence as presented to and accepted by the City.</p> | | | | | | |
| <p>4.6.5.2A As determined by the City, a site-specific assessment shall be prepared prior to grading to ascertain potential ground shaking impacts on development. The site-specific ground shaking assessment shall incorporate up-to-date data from government and non-government sources and may be included as part of any site-specific geotechnical investigation. The site-specific ground shaking assessment shall include specific measures to reduce the significance of potential ground shaking hazards to protect public health and safety.</p> <p>This site-specific ground shaking assessment shall be prepared by a licensed geologist and shall be submitted to the City of Jurupa Valley Planning and Building Departments for review and approval as part of the environmental and entitlement process and prior to the issuance of building permits.</p> | <p>City Building and Safety Department</p> <p>City Public Works and Engineering Department</p> | Once | Prior to issuance of building permit | City verifies recommendations of geotechnical investigation are included in grading plans | | Withhold building permit |
| <p>4.6.5.7A As determined by the City, a site-specific soil assessment shall be prepared prior to grading to ascertain potential soil expansion on development within the Monserate sandy loam, shallow, 5-15% slopes identified on Figure 4.6.2. The site-specific soil assessment shall incorporate up-to-date data from government and non-government sources and may be included as part of any site-specific</p> | <p>City Building and Safety Department</p> <p>City Public Works and Engineering</p> | Once | Prior to issuance of building permit | City verifies recommendations of site-specific soil assessment are included in grading plans | | Withhold building permit |

|---|---|---------------------------------|---|---|--|--|
| <p>geotechnical investigation. The site-specific soils assessment shall include specific measures to reduce the significance of potential soil swell/shrink potential sufficient to protect public health and safety.</p> <p>This site-specific soils assessment shall be prepared by a licensed soils engineer or geologist and shall be submitted to the City of Jurupa Valley Planning and Building Departments for review and approval as part of the environmental and entitlement process and prior to the issuance of building permits.</p> | Department | | | | | |
| 4.7 Greenhouse Gas Emissions and Climate Change | | | | | | |
| <p>4.7.5.2A Within two years of General Plan approval, the City will prepare and adopt a Climate Action Plan (CAP) specifically for the City of Jurupa Valley, including a 2030 reduction target and local emission inventory. The City CAP will be consistent with the WRCOG Subregional CAP but will identify specific additional measures in addition to those outlined in various elements of the General Plan for the reduction of future GHG emissions. The City CAP shall demonstrate how the City will reduce its greenhouse gas emissions to 50 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050, consistent with State law and current guidance on GHG reduction planning.</p> <p>Specific actions that may be included in the City CAP to help keep City-wide emissions below the SCAQMD service population significance threshold include but are not limited to requiring the installation of electrical and conduit improvements to support the installation of future roof-mounted photovoltaic solar systems and electrical vehicle charging stations for individual homes and businesses.</p> | City Planning Department | Once | Within two years of General Plan approval | City verifies CAP is prepared and adopted | | Use SCAQMD thresholds until CAP adopted |
| 4.8 Hazards and Hazardous Materials | | | | | | |
| None | | | | | | |

| DEIR Section/Mitigation Measure/ Implementing Actions | Responsible for Monitoring | Monitoring Frequency | Timing of Verification | Method of Verification | Verified Date/ Initials | Sanctions for Non- Compliance |
|--|---|---------------------------------|--|---|--|---|
| 4.9 Hydrology and Water Quality | | | | | | |
| 4.9.5.6A Upon issuance of an occupancy permit, all non-residential development shall be required to mechanically sweep its truck and vehicular parking areas at least once every two weeks to reduce particulate materials that can contribute to degradation of local surface and groundwater quality. This measure may also be applied to institutional uses on a discretionary basis depending on the amount of parking area required. | City Public Works and Engineering Departments | Every two weeks | Every two weeks | City inspector evaluates condition of truck and vehicular parking areas | | Suspension of discretionary permits |
| 4.10 Land Use and Planning | | | | | | |
| None | | | | | | |
| 4.11 Mineral Resources | | | | | | |
| None | | | | | | |
| 4.12 Noise | | | | | | |
| None | | | | | | |
| 4.13 Population, Housing, and Employment | | | | | | |
| None | | | | | | |
| 4.14 Public Services and Facilities | | | | | | |
| None | | | | | | |
| 4.15 Recreation and Parks | | | | | | |
| None | | | | | | |
| 4.16 Transportation and Traffic | | | | | | |
| 4.16.5.2A Within two years of adopting the 2017 General Plan, the City will develop a Strategic Traffic Congestion Management Plan that will identify the type and timing of roadway and intersection improvements as well as other solutions that may not involve road widenings or standard intersection improvements. The goal of this plan will be to identify those specific improvements or actions that will achieve the City's Level of Service standards to the greatest degree practical, including potential funding and the critical timing of improvements. Future development will be required to be consistent | City Public Works and Engineering Department | Once | Within two years of adopting the 2017 General Plan | City verifies Strategic Traffic Congestion Management Plan is developed and adopted | | Use General Plan circulation system improvements and programs until Strategic Traffic Congestion Management Plan is adopted |

| DEIR Section/Mitigation Measure/ Implementing Actions | Responsible for Monitoring | Monitoring Frequency | Timing of Verification | Method of Verification | Verified Date/ Initials | Sanctions for Non- Compliance |
|---|---|---|--|--|--|--|
| with this plan. | | | | | | |
| 4.16.5.2B The City shall seek to enter into a cooperative agreement with each of the surrounding jurisdictions regarding reciprocal fair share contributions for intersection and/or roadway improvements of mutual benefit to the City of Jurupa Valley and each cooperative jurisdiction. The City would then require future development to make the identified fair share payment, if any, under this agreement. This agreement would apply to any private or public development project that contributed 50 or more peak hour trips to a particular street or intersection, based on a project-specific traffic study that met the traffic study requirements of the City at the time the project was proposed. | City Public Works and Engineering Departments | Once for each cooperative agreement and once for each subsequent development under applicable agreement | Prior to issuance of occupancy permit for each subsequent development under applicable agreement | City verifies cooperative agreements are established and subsequent developments comply with applicable agreements | | Withhold occupancy permit |
| 4.16.5.2C The City of Jurupa Valley shall seek to participate in a multi-jurisdictional study with Caltrans to identify fair share contribution funding sources attributable to and paid from future private and public development, to supplement other regional and State funding sources, to implement necessary improvements to local freeways and freeway ramps to meet Caltrans Level of Service Standards. Once the study identifies appropriate improvements, costs, and fair share fee amounts, the City shall enter into a cooperative agreement with Caltrans to collect such fees from developers of future projects in the City to help fund the identified improvements. The City would then require future development to make the identified fair share payments under this agreement. | City Public Works and Engineering Departments | Once for participation in multi-jurisdictional study, once for entry into cooperative agreement, and once for each subsequent development under the agreement | Prior to issuance of occupancy permit for each subsequent development under the agreement | City verifies multi-jurisdictional study is undertaken, cooperative agreement is established, and subsequent developments under the agreement comply | | Withhold occupancy permit |
| 4.17 Utilities and Service Systems | | | | | | |
| None | | | | | | |

1.0 EXECUTIVE SUMMARY

1.1 INTRODUCTION

This Draft Environmental Impact Report (DEIR) (State of California Clearinghouse No. 2016021025) for the “City of Jurupa Valley 2017 General Plan” (GP or Proposed Plan) has been prepared by LSA Associates, Inc. and Civic Solutions Inc. on behalf of the City of Jurupa Valley (City) to accomplish the following: 1) identify the Proposed 2017 General Plan’s impacts on the environment; 2) to evaluate the various goals, policies, and programs in the Plan that will mitigate potential environmental impacts (i.e., activities that will offset, minimize or otherwise avoid significant environmental impacts; and 3) to discuss alternatives to the Proposed Plan. This EIR has been prepared in accordance with the California Environmental Quality Act¹ (CEQA) and Sections 15120 through 15131 and 15161 of the *Guidelines for California Environmental Quality Act*,² both of which regulate the preparation of EIRs. Based on the potential impacts of the Proposed Plan, including cumulative impacts, the City determined that an EIR should be prepared to analyze potential impacts of the Plan with respect to the following environmental issues:

- Aesthetics;
- Agriculture and Forestry Resources;
- Air Quality;
- Biological Resources;
- Cultural Resources;
- Geology and Soils;
- Greenhouse Gas Emissions and Global Climate Change;
- Hazards and Hazardous Materials;
- Hydrology and Water Quality;
- Land Use and Planning;
- Mineral Resources;
- Noise;
- Population and Housing;
- Public Services;
- Recreation
- Traffic and Circulation; and
- Utilities and Service Systems.

These seventeen environmental issues are individually addressed in Sections 4.1 through 4.17 (Environmental Analysis) in this EIR. All impacts of the project were found to be less than significant with the implementation of the recommended mitigation measures except for the following:

- Agriculture (loss of prime soils and cumulative)
- Air Quality (long-term emissions and cumulative)
- Noise (long-term levels along major roads and cumulative)
- Traffic (future Level of Service and cumulative impacts)

¹ *California Environmental Quality Act*, as of January 1, 2011, §§21000–21178, Public Resources Code, State of California.
² *Guidelines for California Environmental Quality Act*, as amended January 1, 2008, §§15000–15387, California Code of Regulations, Title 14, Chapter 3, State of California.

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

Per CEQA Guidelines Section 15168, this EIR has been prepared at a programmatic level since the proposed action or project is the City's 2017 General Plan rather than a site specific development project.

1.2 PROPOSED PLAN AND TECHNICAL STUDIES

The proposed Program Environmental Impact Report (PEIR) will be prepared to support adoption of the City's 2017 General Plan (the "Proposed Plan" or "proposed project") pursuant to the California Environmental Quality Act (CEQA). City procedures for CEQA implementation, as well as integration of the latest changes to the Appendix G Checklist questions in the latest *State CEQA Guidelines*, will be used as thresholds for significance in the EIR. The City is preparing the following General Plan Elements:

- Land Use
- Mobility (Circulation)
- Conservation and Open Space
- Housing
- Air Quality
- Noise
- Community Safety, Services and Facilities
- Environmental Justice
- Healthy Communities
- Economic Sustainability

The following technical studies/analyses have been prepared to support the GP:

- Traffic and Street Classification Study for the Circulation Element;
- Demographic and Housing Data Report for the Housing Element;
- Noise and Vibration Study for the Noise Element;
- Land Use Mapping for the Land Use Element; and
- Air Pollutant and GHG Emission Calculations per CalEEMod and consistent with the WRCOG CAP.

1.3 AREAS OF CONTROVERSY AND ISSUES TO BE RESOLVED

The EIR discusses environmental impacts that would occur as a result of implementing the Proposed Plan. This EIR also includes proposed mitigation measures that have been identified to reduce or avoid significant effects that would result from the construction and operation of the proposed on-site uses. *CEQA Guidelines* Section 15123(b)(2) requires that areas of controversy known to the Lead Agency (City of Jurupa Valley) be stated in the EIR summary. The following discussion identifies issues raised by other agencies and the public during the 30-day public comment period of the Notice of Preparation (NOP).

The following issues of community concern are examined in the cited sections of the EIR:

- Short-term and long-term air pollutant emissions including dust and diesel particulates as well as greenhouse gas emissions from development of future land uses that could negatively affect area residents. Odors from potential horse boarding and activities are also analyzed.

These issues are discussed in Section 4.3, *Air Quality*, and Section 4.7, *Greenhouse Gas Emissions*, of this EIR;

- Potential discovery of buried cultural (archaeological) resources by grading and development of land within the City, and suggestions to consult with local Native American tribes per SB 18 and AB 52. These issues are discussed in Section 4.5, *Cultural Resources*, of this EIR;
- Potential water-related impacts (flooding, drainage, water quality of runoff from future development) are addressed in Section 4.9, *Hydrology and Water Quality*, in the EIR;
- Changes in use from existing activities and designations are discussed in Section 4.10, *Land Use*, of this EIR;
- Potential population, housing, and employment increases due to future development. These issues are discussed in Section 4.13, *Population and Housing*, of this EIR; and
- Traffic impacts such as congestion on local roads and intersections, plus impacts to vehicular, horse, bicycle, and pedestrian safety. These issues are discussed in Section 4.15, *Transportation and Traffic*, of this EIR.

1.3.1 Notice of Preparation

The objective of distributing a Notice of Preparation (NOP) is to solicit public comment in order to identify and determine the full range and scope of issues of concern so that these issues might be fully examined in the EIR. The NOP was distributed to the California Office of Planning and Research, State Clearinghouse, as well as to the organizations and persons considered likely to be interested in the project and its potential impacts. Comments received regarding the NOP were used to help identify impacts that could result from implementation of the Proposed Plan. An NOP for the Draft EIR was distributed to state, regional, and local agencies on February 2, 2016 for a 30-day review period ending on March 4, 2016. During the NOP review period, the following seven agencies commented on the City's EIR process for the GP:

- State Office of Planning and Research (OPR);
- California Native American Heritage Commission (NAHC);
- South Coast Air Quality Management District (SCAQMD);
- Riverside County Transportation and Land Management Agency (RCTLMA);
- Riverside County Airport Land Use Commission (ALUC);
- City of Fontana; and
- Jurupa Community Services District (JCSD).

The NOP, NOP distribution list, Notice of Public Scoping Meeting, and response letters are included in Appendix A of the Draft EIR. At the close of the 30-day NOP public review period, seven responses to the NOP had been received. Table 2.A in the Introduction section summarizes the comments received regarding the NOP. In addition, three Native American tribal groups were contacted to request if they wanted to consult with the City on this project per the requirements of SB 18. To date, all three Native American tribes have responded to the City's inquiries and two requested a government-to-government consultation meeting and recommended mitigation be included in the EIR regarding protection of cultural resources.

1.3.2 Public Scoping Meeting

In compliance with *State CEQA Guidelines*, the City of Jurupa Valley has taken steps to maximize opportunities for individuals, parties, and agencies to participate in the environmental process. During circulation of the NOP, various federal, state, regional, and local government agencies, and other

interested parties were contacted to solicit comments and to inform the public of the Proposed Plan. A publicly-noticed scoping meeting was held to solicit public comment on the direction and scope of the analysis necessary for the Draft EIR. The public scoping meeting was held on March 1, 2016 at 7:00 p.m. at City Hall. Copies of the NOP and other information were available to the public for review. City staff and the EIR consultant (LSA Associates, Inc.) were present to provide information regarding the General Plan, however, no members of the public or representatives of any agencies attended the scoping meeting. Input from the NOP comment letters and general comments made during the General Plan Advisory Committee meetings and other City meetings on the Proposed Plan have been used to prepare the analysis in the Draft EIR.

1.4 ALTERNATIVES TO THE PROPOSED PLAN

In compliance with *CEQA Guidelines* (Section 15126.6), an EIR must describe a range of reasonable alternatives to the Proposed Plan which would feasibly attain most of the project objectives, and would avoid or substantially lessen significant effects of the Plan. The EIR need not consider every conceivable alternative; rather it must consider a reasonable range of potentially feasible alternatives. This EIR evaluates a “No Project” Alternative (buildout under the County General Plan) as well as a Lower Intensity Alternative that looks at 20 percent less intensive level of development in the future. The goal of alternatives is to reduce or eliminate one or more significant adverse impacts of the project (i.e. 2017 General Plan) as identified in the EIR, or to address significant issues raised during the environmental scoping process. A more detailed description and analysis of each alternative is provided in Section 6.0.

1.5 SUMMARY OF IMPACTS, MITIGATION, AND LEVEL OF IMPACTS

Table 1.B provides a summary of the 2017 General Plan impacts, summary of proposed mitigation measures, and the level of significance of each impact following the application of identified mitigation measures. The full text of the General Plan goals, policies, and programs can be found in Appendix C of the EIR.

THIS PAGE INTENTIONALLY LEFT BLANK

2017 General Plan - City of Jurupa Valley
Draft Environmental Impact Report

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures¹ | Significant After Mitigation? |
|--|---------------------------------------|---|--------------------------------------|
| 4.1 Aesthetics | | | |
| 4.1.5.1 Visual Character: Future development would eventually convert 4,182 acres of vacant land into various rural and suburban land uses which would generally resemble existing developed areas. Implementation of the 2017 General Plan (GP) is not expected to significantly change the visual character of the City over the long-term. | No | COSE No mitigation needed | No |
| 4.1.5.2 Light and Glare: Future development will incrementally increase the level of ambient night lighting in the City, which will be more apparent in areas with vacant land. New development will resemble existing land uses and the GP policies will help protect “dark sky” conditions. | No | COSE No mitigation needed | No |
| 4.1.6 Cumulative Aesthetic Impacts: Future development will not significantly impacts scenic vistas or resources, and views from major roadways would not be obstructed. Overall views within and out of the City would not be substantially affected by development, although lighting levels will incrementally increase in the future. | No | COSE No mitigation needed | No |
| 4.2 Agriculture and Forestry Resources | | | |
| 4.2.5.1 Existing Zoning and Williamson Act: The small amount of land under Williamson Act contracts is being removed and the 2017 General Plan does not propose any agricultural zones. | No | COSE, LEU No mitigation needed | No |
| 4.2.5.2 Forest Land Zoning: According to the California Department of Forestry and Fire Protection, there are no areas designated as forest land or timberland in the City. | No | COSE, LUE No mitigation needed | No |
| 4.2.5.3 Loss or Conversion of Forest Land: There are no areas of forest lands in the City. | No | COSE, LUE No mitigation needed | No |
| 4.2.5.4 Farmland Conversion: The City is underlain by approximately 2,000 acres of Class I-III soils which can support agricultural or farmland activities according to the federal Natural Resources Conservation Service (NRCS). Future development will eventually cover over these soils with rural and suburban development. The goals and policies of the 2017 General Plan establish a process for the eventual transition of land from agriculture to development based on market conditions, and impacts of this conversion process will be less than significant. | No | COSE, LUE No mitigation needed | No |
| 4.2.5.5 Loss of Prime Farmland: The State Department of Conservation (SDOC) designates 612 acres of land in the City as prime farmlands and their loss is considered a significant impact because the SDOC believes these soils are a significant regional or state-wide resource. Future development will also remove 2,077 acres of land classified as farmland of local importance (i.e., not prime farmland) which is not considered a significant impact of General Plan implementation. | Yes | COSE, LUE No feasible mitigation available | YES |

¹ The full text of the Mitigation Measures is included in Table 1.C.

The full text of the Goals, Policies, and Programs of the General Plan that act to reduce impacts before mitigation measures are included in DEIR Appendix C
LUE = Land Use Element, **ME** = Mobility Element, **COSE** = Conservation and Open Space Element, **HE** = Housing Element, **AQE** = Air Quality Element, **NE** = Noise Element, **CSSF** = Community Safety, Services, and Facilities Element, **EJE** = Environmental Justice Element, **HCE** = Healthy Communities Element, and **ESE** = Economic Sustainability Element

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures¹ | Significant After Mitigation? |
|---|---------------------------------------|---|--------------------------------------|
| 4.2.6 Cumulative Agricultural and Forestry Resources: Implementation of the 2017 General Plan will smooth the transitional loss of agriculture in the region, but development in the City will eventually cover over 612 acres of prime agricultural soils of statewide significance,, contributing to the regional loss. | Yes | COSE, LUE No feasible mitigation available | YES |
| 4.3 Air Quality | | | |
| 4.3.5.1 Violate Air Quality Standards: Future development will emit air pollutants in amounts far in excess of SCAQMD regional thresholds for ROG, NOx, CO, PM ₁₀ , and PM _{2.5} . Implementation of the 2017 General Plan will help reduce future emissions to the greatest extent feasible at a programmatic level, but will not be able to reduce them below SCAQMD thresholds for criterial pollutants. | Yes | AQE, LUE No other actions feasible | YES |
| 4.3.5.2 Sensitive Receptors: Air pollutant emissions from future development, including trucks from warehouse projects, may cause short- or long-term impacts on sensitive land uses that may be adjacent to construction sites. Sensitive land uses along major roadways may also experience air quality impacts as traffic increases from local growth. The goals and policies of the 2017 General Plan will help protect sensitive receptors along major roadways, so impacts will be less than significant in this regard. | No | AQE, LUE No mitigation needed | No |
| 4.3.5.3 Odors: Future development may add uses in the City that produce short-term odors, but no significant long-term sources are expected. The 2017 General Plan policies restrict or regulate potential future uses to minimize impacts like odors. | No | AQE, LUE No mitigation needed | No |
| 4.3.5.4 Short-Term Construction Related Emissions: During construction associated with future growth, there may be short-term construction-related air pollutant emissions that may impact adjacent sensitive uses. The goals of the General Plan will help minimize potential impacts by regulating construction equipment and providing buffers between adjacent land uses where necessary. | No | AQE, LUE No mitigation needed | No |
| 4.3.5.5 Air Quality Management Plan Consistency: The proposed land uses are generally consistent with existing uses which were used to prepare the AQMP, and the goals, policies, and programs of the 2017 General Plan will substantially improve the jobs/housing balance in the City consistent with the SCAG RCP Guidelines and the goals of the SCAQMD AQMP. | No | AQE, LUE No mitigation needed | No |
| 4.3.6 Cumulative Air Quality Impacts: The project's long-term daily operational VOC emissions would exceed the SCAQMD's thresholds; therefore, the Proposed Plan would contribute to significant long-term cumulative air quality impacts. | Yes | AQE, LUE No other actions feasible | YES |
| 4.4 Biological Resources | | | |
| 4.4.5.1 Endangered and Threatened Species: The City contains habitat for several listed species and additional sensitive species, especially associated with the Santa Ana River and the Jurupa Hills. Future development will have to evaluate site-specific impacts and provide mitigation. The General Plan land use plan is sensitive to the biological constraints of the resource agencies and the County's MSHCP. | No | COSE, LUE No mitigation needed | No |

2017 General Plan - City of Jurupa Valley
Draft Environmental Impact Report

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures¹ | Significant After Mitigation? |
|---|---------------------------------------|---|--------------------------------------|
| 4.4.5.2 Candidate, Non-listed Sensitive, or Special-Status Species: Future development may impact sensitive species, but the policies in the General Plan require developers to provide studies evaluating impacts on these species and recommending appropriate project-level mitigation. | No | COSE, LUE No mitigation needed | No |
| 4.4.5.3 Riparian Habitat or Other Sensitive Natural Communities: The City contains riparian and other sensitive habitat, mainly along the Santa Ana River and its tributaries. General Plan policies require protection Proposed Plan would affect riparian habitat through the discharge of water from drainage facilities into adjacent waters | No | COSE, LUE No mitigation needed | No |
| 4.4.5.4 Jurisdictional Waters/Wetlands: The City does contain jurisdictional drainages and is within the jurisdiction of the Santa Ana RWQCB. Under Section 401 of the Clean Water Act, the RWQCB must certify that the discharge of dredged or fill material into Waters of the United States does not violate Federal, State, and local water quality standards. | No | COSE, LUE No mitigation needed | No |
| 4.4.5.5 Habitat Fragmentation/Wildlife Movement: Wildlife moves along the Santa Ana River and the Jurupa Hills, but future development would not be expected to fragment habitat or restrict wildlife movement as long as the policies of the General Plan in this regard are implemented. | No | COSE, LUE No mitigation needed | No |
| 4.4.5.6 Adopted Policies and/or Ordinances: The City's 2017 General Plan policies relative to biological resources are consistent with the County General Plan, Jurupa Area Plan, and the Multi-Species Habitat Conservation Plan (MSHCP) for western Riverside County. | No | COSE, LUE No mitigation needed | No |
| 4.4.5.7 Adopted Habitat Conservation Plans: The City's 2017 General Plan policies relative to biological resources are consistent with the County's Multi-Species Habitat Conservation Plan (MSHCP) for western Riverside County. | No | COSE, LUE No mitigation needed | No |
| 4.4.6 Cumulative Biological Resources Impacts: Future development in the City and surrounding communities is expected to be consistent with the County's Multi-Species Habitat Conservation Plan (MSHCP) for western Riverside County. | No | COSE, LUE No mitigation needed | No |
| 4.5 Cultural Resources | | | |
| 4.5.5.1 Historic Resources: The City contains a number of historic and potentially historic facilities that will be protected as development occurs, including surveys of buildings older than 45 years. | Yes | COSE, LUE 4.5.5.1A - Historical Surveys | No |
| 4.5.5.2 Archaeological Resources: The City overlaps the ranges of three Native American tribal groups and may contain archaeological artifacts which will be protected by the various policies of the General Plan relative to Native American resources. | No | COSE, LUE No mitigation needed | No |
| 4.5.5.3 Paleontological Resources: The City is underlain by younger Holocene alluvium and older Pleistocene alluvial sediments – these older materials may yield paleontological resources which will be protected by the policies established in the General Plan. | Yes | COSE, LUE 4.5.5.3A - Paleo Surveys | No |
| 4.5.5.1 Human Remains: If human remains are discovered during grading for future development, the developer will comply with State law (Health and Safety Code § 7050.5) (HSC § 7050.5). | No | COSE, LUE No mitigation needed | No |

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures¹ | Significant After Mitigation? |
|---|---------------------------------------|---|--------------------------------------|
| 4.5.6 Cumulative Cultural and Paleontological Resources: Implementation of the goals, policies, and program of the 2017 General Plan will protect undiscovered cultural and paleontological resources within the City as future development occurs. | No | COSE, LUE No other mitigation needed | No |
| 4.6 Geological Resources | | | |
| 4.6.5.1 Fault Rupture: There are no major regional faults or Earthquake Fault Zones as defined by the State of California in the Alquist-Priolo Earthquake Fault Zone Act in the City, and the goals, policies, and programs of the 2017 General Plan must still address fault-related issues that will face future development within the City. | Yes | CSSFE 4.6.5.1A – site specific fault studies where needed | No |
| 4.6.5.2 Ground Shaking: Similar to the entire Southern California region, the City will be subject to moderate to severe ground shaking as a result of numerous regional faults. The 2017 General Plan addresses potential impacts to future residents and development that will be built in the City. | Yes | CSSFE 4.5.6.2A – site specific seismic studies where needed | No |
| 4.6.5.3 Landslides, Rockfalls, and Debris Flows: The City contains a number of upland areas associated with the Jurupa Hills in the central and northern portions of the City. The 2017 General Plan contains goals, policies, and programs to address these potential hazards on future development. | No | CSSFE No mitigation needed | No |
| 4.6.5.4 Soil Erosion or Loss of Topsoil: Grading for future development could result in erosion on unprotected slopes and cleared areas. The 2017 General Plan outlines requirements of other regulatory agencies (i.e., SWPPP, WQMP) to protect the City from erosion in the future as development occurs. | No | CSSFE No mitigation needed | No |
| 4.6.5.5 Septic Tanks: Use of septic facilities would be very limited or precluded under the 2017 General Plan, so new development in the future would have less than significant impacts in this regard. | No | CSSFE No mitigation needed | No |
| 4.6.5.6 Seismic-Related Ground Failure: Land in the City has low to moderate susceptibility to lateral displacement or is susceptible to differential settlement from liquefaction. The 2017 General Plan goals, policies, and programs will provide adequate protection for future development (buildings, residents, etc.) as growth occurs. | No | CSSFE No mitigation needed | No |
| 4.6.5.7 Expansive Soils: The City contains limited areas with expansive soils, and the 2017 General Plan provides goals, policies, and programs for future development to follow that will reduce potential risks in this regard to less than significant levels. | No | CSSFE No mitigation needed | No |
| 4.6.6 Cumulative Geological and Soil Impacts: As development occurs within the City and surrounding areas, compliance with established state regulations, the state building code, etc. and the 2017 General Plan will help minimize potential impacts in the region related to seismicity, ground shaking, and soil constraints. | No | CSSFE No mitigation needed | No |
| 4.7 Greenhouse Gas Emissions and Climate Change | | | |
| 4.7.5.1 Greenhouse Gas Plan, Policy, and Regulation Consistency: The goals, policies, and programs of the 2017 General Plan relative to GHG are consistent and will not in conflict with GHG reduction goals under AB 32 or other State regulations. | No | AQE, LUE No mitigation needed | No |

2017 General Plan - City of Jurupa Valley
Draft Environmental Impact Report

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures¹ | Significant After Mitigation? |
|---|---------------------------------------|--|--------------------------------------|
| 4.7.5.2 Greenhouse Gas Emissions: Future development in the City will result in substantial increases in GHG emissions from additional vehicular trips and more residents and businesses. These emissions are projected to be 717,018 MT CO ₂ e compared to adjusted “Business As Usual” emissions of 744,674 MT CO ₂ e so City-wide GHG emissions will not exceed the SCAMD’s service area significance threshold and impacts will be less than significant. | No | AQE, LUE 4.7.5.2A – Prepare City CAP with City regulatory actions | No |
| 4.7.5.3 Impact to the Proposed Plan from Global Climate Change: Based on its location, the City is not expected to experience significant impacts related to global climate change as a result of implementing the 2017 General Plan. | No | AQE, LUE No mitigation needed | No |
| 4.7.6 Cumulative Greenhouse Gas and Climate Change Emissions: Future development will result in less than significant cumulative GHG emissions for the region that do not exceed the SCAMD’s service area thresholds or the adjusted “Business As Usual” scenario. | No | AQE, LUE See 4.7.5.2A | No |
| 4.8 Hazards and Hazardous Materials | | | |
| 4.8.5.1 Routine Transport, Use, or Disposal of Hazardous Materials and Reasonable Foreseeable Upset and Accident Conditions: Future land uses in the City, especially industrial development in the northwest and northeast portions, would store, manufacture, or handle hazardous materials. However, implementation of the 2017 General Plan, along with federal, state, and local regulations, will help assure potential impacts from hazardous materials in the City are reduced to less than significant levels. | No | CSSF, LUE No mitigation needed | No |
| 4.8.5.2 Located on a List of Hazardous Materials Sites: The former Stringfellow Pits are on the federal Superfund list for ongoing remediation. The Jurupa Valley also contains a number of facilities that handle hazardous materials that are included on several regulatory databases. | No | CSSF, LUE No mitigation needed | No |
| 4.8.5.3 Within Two Miles of a Private Airport or Within an Airport Land Use Plan or Within Two Miles of a Public Airport: The Flabob Airport is located in the eastern portion of the City, and the Riverside Municipal Airport is located immediately south of the City across the Santa Ana River. The safety zones of both facilities overlap portions of the City. For example, the RMA Land Use Compatibility (ALUC) Plan Zone E does include the southeast portion of the City, although this zone does not include any residential, other land uses, or open space land restrictions. | No | CSSF, LUE No mitigation needed | No |
| 4.8.5.4 Existing or Proposed School: There are a number of schools within the City, some in proximity to vacant land, so future development may result in hazmat facilities near schools. The 2017 General Plan contains goals, policies, and programs that will provide adequate buffers between such uses and schools. In addition, state law restricts the location of new schools near facilities that contain hazardous materials. | No | CSSF, LUE No mitigation needed | No |
| 4.8.5.5 Conflict with Emergency Response Plans: The 2017 General Plan will be consistent and coordinate with local and regional disaster and emergency plans, so there will be safe access for emergency responders as future development occurs and congestion increases on local roads. | No | CSSF, ME No mitigation needed | No |

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures ¹ | Significant After Mitigation? |
|--|--------------------------------|---|-------------------------------|
| 4.8.5.6 Wildland Fire Risks: The City contains moderate and high fire risk zones, and future development (i.e., residents and businesses) may be subject to increased fire risks. The 2017 General Plan goals, policies, and programs will help provide for proper planning of new development to reduce potential risks to less than significant levels. | No | CSSF, LUE No mitigation needed | No |
| 4.8.6 Cumulative Hazards and Hazardous Materials Impact: There are many federal, state, and local regulations regarding hazardous materials control and safety. In addition, future development will have increased risks from airport activities and wildfires. However, the goals, policies, and programs of the 2017 General Plan will help assure that potential cumulative risks to existing and future residents of the City and surrounding communities will be reduced to less than significant levels. | No | CSSF, LUE No mitigation needed | No |
| 4.9 Hydrology and Water Quality | | | |
| 4.9.5.1 Dam Inundation Impacts: The City is adjacent to the Santa Ana River but is not located within an identified or mapped dam inundation area after construction of the Seven Oaks Dam upstream of the City. Future development under the 2017 General Plan will not have any significant impacts related to inundation by dam failure. | No | CSSF, COE, LUE No mitigation needed | No |
| 4.9.5.2 Seismic-Related Impacts: Like all of Southern California, the City would be subject to moderate to severe ground shaking in the event of a major seismic event. The City is not at risk of inundation by a tsunami as it is located approximately 33 miles east of the Pacific Ocean. The City also does not contain any major enclosed bodies of water and therefore, is not subject to a seiche during a seismic event (although there are some smaller reservoir tanks present). The northern and east-central portions of the site (Jurupa Hills) contain some steep slopes and rock outcrops that could potentially become unstable during a seismic event. The goals, policies, and programs of the 2017 General Plan identifies procedures for new development to follow to help ensure potential risks from such hazards will not be significant. | No | CSSF, LUE No mitigation needed | No |
| 4.9.5.3 Groundwater: Existing and future activities in the City, including new development, will not result in significant impacts on local groundwater supplies according to the Urban Water Management Plans for the serving agencies. The goals, policies, and programs of the 2017 General Plan will support the long-range planning of the local serving agencies in this regard, both directly or through the use of imported water. | No | CSSF, LUE No mitigation needed | No |
| 4.9.5.4 100-Year Flooding-Related Impacts: The City contains a number of flood zones identified by FEMA and Riverside County. As growth occurs, some areas of future development may be subject to flooding-related impacts. The 2017 General Plan contains goals, policies, and programs which will help assure existing and future land uses are not subject to significant 100-year flooding impacts. | No | CSSF, LUE No mitigation needed | No |
| 4.9.5.5 Construction-Related Water Quality Impacts: Short-term storm water pollutant discharges from each development site in the future will be mitigated through compliance with the required NPDES permits, resulting in less than significant impacts. This is supported by the goals, policies, and programs of the 2017 General Plan. | No | CSSF, LUE No mitigation needed | No |

2017 General Plan - City of Jurupa Valley
Draft Environmental Impact Report

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures¹ | Significant After Mitigation? |
|--|---------------------------------------|---|--------------------------------------|
| 4.9.5.6 Operational-Related Water Quality Impacts: As future development occurs, the major source of pollution in storm water runoff from operational activities will be contaminants that have accumulated on the land surfaces over which runoff passes. The 2017 General Plan will help implement federal, state, and local water quality procedures and help reduce potential impacts to less than significant levels. | Yes | CSSF, LUE 4.9.5.6A – sweeping of non-residential parking lots | No |
| 4.9.5.7 Drainage Pattern and Capacity-Related Impacts: As future development occurs, some local drainages and existing drainage patterns may be altered and exceed capacity of designed storm drain systems, or result in water pollution. Implementing the goals, policies, and programs of the 2017 General Plan will help protect local drainages and preserve water quality. | No | CSSF, LUE No mitigation needed | No |
| 4.9.6 Cumulative Hydrology and Water Quality Impacts: Continued growth is anticipated to occur in the City and surrounding areas and all new development will be required to minimize its individual impacts to water quality and pollutant transport through implementation of BMPs. The 2017 General Plan requires all new development to mitigate project-specific impacts to water quality, resulting in a less than significant cumulative impact to drainage and water quality. | No | CSSF, LUE No mitigation needed | No |
| 4.10 Land Use and Planning | | | |
| 4.10.5.1 Physically Divide an Established Community: The goals, policies, and programs of the 2017 General Plan encourage connectivity and maintaining local communities, so it will have less than significant impacts in this regard. | No | LUE No mitigation needed | No |
| 4.10.5.2 Conflict with Applicable Land Use Plans, Policies, or Regulations (Local): The project if approved will become the applicable land use plan to the proposed 2017 General Plan has no significant impacts in this regard. | No | LUE No mitigation needed | No |
| 4.10.5.3 Conflict with Any Applicable Habitat or Natural Community Conservation Plan: The goals, policies, and programs of the 2017 General Plan require all future development and future land use activities to comply with the requirements of the County's Multiple Species Habitat Conservation Plan (MSHCP), so there are no significant impacts in this regard. | No | LUE No mitigation needed | No |
| 4.10.5.4 Conflict with Applicable Land Use Plans, Policies, or Regulations (Regional): The proposed 2017 General Plan is consistent with SCAG's jobs/housing balance goals and the various goals and policies of SCAG's regional plans (e.g., RTP, Compass Plan, etc.). Therefore it will have less than significant impacts in this regard. | No | L:UE No mitigation needed | No |
| 4.10.6 Cumulative Land Use and Planning Impacts: Future development will have less than significant cumulative impacts regarding regional land use as it will help reduce the current imbalance of jobs to housing in this area as growth occurs. | No | LUE No mitigation needed | No |
| 4.11 Mineral Resources | | | |
| 4.11.5.1 Loss of Statewide, Regional, or Locally Important Mineral Resources: Mining has occurred in the northern portions of the City in the past, and there are two areas with identified Mineral Resource Zones (MRZ-2) in the City: in the southeastern portion of the City, along the Santa Ana River, and in a small area in the northwest portion of the City, while the rest of the City has unidentified or potential mineral resources (MRZ-2). The areas along the Santa Ana | No | LUE No mitigation needed | No |

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures ¹ | Significant After Mitigation? |
|---|--------------------------------|---|-------------------------------|
| River are considered public/quasi-public and so are not available for mining. Implementation of the 2017 General Plan will not result in the removal of any available significant mineral resources. | | | |
| 4.11.6 Cumulative Mineral Resources Impacts: Implementation of the 2017 General Plan, in conjunction with future development in and around the City, will not result in the loss of any available, identified and significant mineral resource areas, so the General Plan will have a less than significant cumulative impact in this regard. | No | LUE No mitigation needed | No |
| 4.12 Noise | | | |
| 4.12.5.1 Long-Term Noise Impacts: Future development within the City may result in noise levels along major roadways that result in significant noise impacts in the future as growth occurs. The goals, policies, and programs of the General Plan are intended to reduce these impacts to the greatest degree practical, but it may not reduce them to less than significant levels due to physical limitations of roadways, intersections, or adjacent properties. | Yes | NE, LUE No feasible mitigation available | YES |
| 4.12.5.2 Airport Noise Impacts: The Flabob Airport is located in the eastern portion of the City while the Riverside Municipal Airport (RMA) is located south of the eastern portion of the City. Existing and future land uses in the City may be affected by noise from operations at these airports. However, the goals, policies, and programs of the 2017 General Plan require new development or redevelopment of existing uses to consider potential airport-related noise impacts in project design. | No | NE, LUE No mitigation needed | No |
| 4.12.5.3 Ground borne Vibration Impacts: Construction of future development may result in significant vibration impacts if work is adjacent to sensitive receptors. The goals, policies, and programs of the 2017 General Plan will help protect sensitive adjacent uses from significant vibration impacts during construction, so there will be less than significant impacts in this regard. | No | NE, LUE No mitigation needed | No |
| 4.12.5.4 Short-Term Construction Noise Impacts: Construction of future development may result in significant noise impacts if work is adjacent to sensitive receptors. The goals, policies, and programs of the 2017 General Plan will help protect sensitive adjacent uses from significant noise impacts during construction, so there will be less than significant impacts in this regard. | No | NE, LUE No mitigation needed | No |
| 4.12.6 Cumulative Noise Impacts: Future noise impacts from local traffic as growth occurs may contribute to regional incremental noise impacts in combination with growth and traffic increases in other nearby communities. | Yes | NE, LUE No feasible mitigation available | Yes |
| 4.13 Population and Housing: | | | |
| 4.13.5.1 Displace Substantial Housing/People: Future development will add up to 13,140 new residential units and up to 49,275 additional residents to the City over the next 20 years. Development will occur primarily on vacant land or underutilized properties, so the 2017 General Plan will not result in substantial displacement of existing housing or residents is expected in the future as growth occurs. This will result in less than significant impacts in this regard. | No | HE, LUE No mitigation needed | No |
| 4.13.5.2 Consistent with General Plan Growth Policies: The 2017 General Plan is consistent with the growth assumptions and projections of regional planning agencies (SCAG, WRCOG), | No | HE, LUE No mitigation needed | No |

2017 General Plan - City of Jurupa Valley
Draft Environmental Impact Report

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures¹ | Significant After Mitigation? |
|--|---------------------------------------|---|--------------------------------------|
| and will improve the jobs/housing balance in the City as growth occurs, so it will not have any significant impacts relative to regional growth policies. | | | |
| 4.13.5.3 Population Growth: Future development would add up to 49,275 new residents to the City as growth occurs over the next 20 years, and this level of growth is consistent with that projected by SCAG for the region over the same period. Therefore the 2017 General Plan will not have significant impacts regarding population growth. | No | HE, LUE No mitigation needed | No |
| 4.13.6 Cumulative Population and Housing Impacts: Future growth of housing, population, and employment in the City is expected to be consistent with that anticipated by SCAG in its regional planning documents, and the jobs/housing balance in this area is expected to improve for this housing rich area. Therefore, the City will not make a significant contribution to cumulatively considerable regional housing or population impacts in the coming years. | No | HE, LUE No mitigation needed | No |
| 4.14 Public Services and Facilities | | | |
| 4.14.5.1 Fire Protection: Future development under the 2017 General Plan would be required to be designed, constructed, and operated per applicable fire prevention/protection standards established by the City. Also, all new development would be required to pay DIFs to the City, so there will be no significant impacts related to fire protection from implementation of the 2017 General Plan. | No | CSSFE, LUE No mitigation needed | No |
| 4.14.5.2 Police Services: New development will increase property tax and DIF revenues to the City which will help fund expanded police services in the future. Therefore, there will be no significant impacts related to police protection from implementation of the 2017 General Plan. | No | CSSFE, LUE No mitigation needed | No |
| 4.14.3.5 Schools: New development will generate additional students at all grade levels that will need to be housed and served by local school districts. New development will pay school impact fees, and the goals, policies, and programs of the 2017 General Plan support coordination with the local school districts to assure adequate facilities for future students. Therefore, the 2017 General Plan will have less than significant impacts on schools. | No | CSSFE, LUE No mitigation needed | No |
| 4.14.6 Cumulative Public Services and Facilities Impacts: New development in the City will placed increase demand on the services provided by the Jurupa Unified School District, Riverside County Police Department Jurupa Valley Station and Riverside County Fire Department Pedley Station 16, in addition to Cal Fire during wildland fires. Future development would be required to adhere to conditions established by fire and police service providers, and pay applicable DIFs, and thus would not result in any significant cumulative impacts to public services. | No | CSSFE, LUE No mitigation needed | No |
| 4.15 Recreation and Parks | | | |
| 4.15.5.1 Increased Use of Existing Recreational Facilities: Future residential development in the City will increase the City's population which will increase demand on parks and recreational facilities. Future projects will pay DIF and the goals, policies, and programs of the General Plan require coordination regarding the future provision of parks, trails, etc. to serve the future | No | CSSFE, LUE No mitigation needed | No |

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures¹ | Significant After Mitigation? |
|---|---------------------------------------|---|--------------------------------------|
| population. | | | |
| 4.15.6 Cumulative Recreation and Parks Impacts: As future residential development occurs, the City will experience increased demand on parks and recreational facilities in the City as well as in surrounding areas, the County, and state facilities. Proper planning and implementation of the 2017 General Plan will help assure cumulative impacts in this regard are less than significant. | No | CSSFE, LUE No mitigation needed | No |
| 4.16 Transportation and Traffic | | | |
| 4.16.5.1 Conflict with Applicable Circulation Plan and Traffic and Level of Service: The 2017 General Plan and its Mobility Element will become the applicable circulation plan for the City upon adoption. There will then be no significant impacts in this regard. | No | ME No mitigation needed | No |
| 4.16.5.2 Level of Service Impacts: Future development in the City will eventually result in a number of local road segments and intersections exceeding the City's LOS standards. Due to physical limitations, this impact will be significant even after mitigation. | Yes | ME, LUE 4.16.5.2A – Strategic Traffic Congestion Management Plan 4.16.5.2B – Cooperative fair share agreement with surrounding cities and counties 4.16.5.2C – Cooperative fair share agreement with Caltrans for freeway improvements | Yes |
| 4.16.5.3 Inadequate Emergency Access: Under the 2017 General Plan, future development will be required to design, construct, and maintain structures, roadways, and facilities to provide for adequate emergency access and evacuation for City residents. Therefore, there will be no significant impacts in this regard. | No | ME No mitigation needed | No |
| 4.16.5.4 Alternative Transportation: The 2017 General Plan fully supports extensive non-vehicular circulation such as equestrian trails, sidewalks, public transit, bicycle lanes, etc. The City is also served by various bus routes and has a Metrolink Station located in Pedley, near the center of the City. Therefore, the 2017 General Plan will help implement various regional goals regarding alternative transportation, and there will be no significant impacts in that regard. | No | ME No mitigation needed | No |
| 4.16.5.5 Air Traffic Patterns: The Flabob Airport is in the eastern part of the City, and the southern portion of the City is the Riverside Municipal Airport Land Use Compatibility (ALUC) Plan Zone E which does not include any residential, other land uses, or open space land restrictions. The 2017 General Plan requires full cooperation of future development planning with local airports, therefore there will be no significant impacts in this regard. | No | ME No mitigation needed | No |
| 4.16.5.6 Features or Incompatible Uses: Future development will be required to provide roadway improvements in and around each development to satisfy all City requirements for street widths, corner radii, and intersection control as well as incorporate design standards | No | ME No mitigation needed | No |

2017 General Plan - City of Jurupa Valley
Draft Environmental Impact Report

Table 1.B: General Plan - Environmental Impacts and Mitigation Summary

| Environmental Issues and Programmatic Impacts | Significant Before Mitigation? | GP Elements and Summary of Mitigation Measures¹ | Significant After Mitigation? |
|--|---------------------------------------|---|--------------------------------------|
| tailored specifically to site access requirements. Therefore, implementation of the 2017 General Plan will not have significant impacts in this regard. | | | |
| 4.16.6 Cumulative Traffic Impacts: Potential short-term and long-term cumulative traffic-related impacts cannot be reduced to less than significant levels because of physical limitations and the City does not have authority or control over all of the affected transportation facilities. Specifically, the City does not have control over freeway ramps or mainline improvements. | Yes | ME See 4.16.5.2A-C, no other feasible measures available | YES |
| 4.17 Utilities and Service Systems: | | | |
| 4.17.5.1 Water Supply and Construction or Expansion of Water Treatment Facilities: The 2017 General Plan calls for coordination with local water suppliers to assure there are sufficient supplies for future residents and businesses. Therefore, the 2017 General Plan will not result in significant impacts regarding water supply or services. | No | CSSF, COSE No mitigation needed | No |
| 4.17.5.2 Wastewater Treatment Capacity, New or Expanded Wastewater Treatment Facilities, and/or Wastewater Conveyance Facilities: Future development will generate additional wastewater which can be accommodated by the treatment capacity of the Riverside Water Quality Control Plant. Therefore, the 2017 General Plan will not result in significant impacts regarding wastewater treatment. | No | CSSF, COSE No mitigation needed | No |
| 4.17.5.3 Solid Waste Facilities: Adequate daily surplus capacity exists at the receiving regional landfills, and future development under the 2017 General Plan would not significantly affect current operations or the expected lifetime of the landfills serving the City. | No | CSSF No mitigation needed | No |
| 4.17.5.4 Storm Water Drainage Requirements: Future development will increase local runoff and individual projects will be required to construct new drainage system to convey onsite runoff to existing storm drains or local drainages after water quality treatment. Implementation of the 2017 General Plan will facilitate these requirements so there will be no significant impacts regarding storm water drainage. | No | CSSF, COSE No mitigation needed | No |
| 4.17.6 Cumulative Impacts to Utilities and Service Systems: The 2017 General Plan requires coordination with neighboring and regional serving agencies to help assure there will be no significant cumulative impacts regarding utilities and service systems as the City grows. | No | CSSF, COSE No mitigation needed | No |

This Page Intentionally Left Blank

Table 1.C List Of General Plan EIR Mitigation Measures

| | |
|---|--|
| Section 4.1 Aesthetics | |
| None | |
| 4.2 Agriculture and Forestry Resources | |
| None | |
| 4.3 Air Quality | |
| None | |
| 4.4 Biological Resources | |
| None | |
| 4.5 Cultural Resources | |
| 4.5.5.1A | <p>Prior to issuance of a demolition permit for any structure older than 45 years at the time of application and according to City building records or other official documentation, a project applicant shall provide an historical assessment of the structure prepared by a qualified professional (i.e., certified historian or architectural historian) with a determination whether the structure represents a significant historical resource according to Section 15064.5 of the State CEQA Guidelines. The assessment shall include contact with a local historical society regarding the structure's potential local significance.</p> <p>If the structure is determined to not be historic or potentially historic, either at a state or local level, the structure may be demolished without further documentation. If the structure is not historic on a state level but has local historical significance, the structure may be demolished with City Council approval, provide that the property is photo-recorded and archived prior to demolition. If the structure has state historical significance, the project historian shall prepare a preservation plan which shall address in-place or onsite preservation, relocation to an appropriate offsite location, or demolition only if it can be clearly demonstrated that preservation in place is not physically, or structurally feasible. This measure shall be implemented to the satisfaction of the City Planning Department.</p> |
| 4.5.5.3A | <p>Prior to issuance of a grading permit, a project applicant must demonstrate if the proposed project grading will impact underlying soil units or geologic formations that have a moderate to high potential to yield fossiliferous materials. If the potential for fossil discovery is low, no pre-grading monitoring needs to be established. If the potential for fossil discovery is moderate to high, the applicant must provide a paleontological monitor during rough grading of the project. If a paleontologist is not onsite and possible fossil materials are found, work shall be halted in that area until the material can be assessed by a qualified professional. If materials are found onsite during grading, a qualified professional shall evaluate the find and determine if it represents a significant paleontological resource. If the resource is determined to be significant, the paleontologist shall supervise removal of the material and determine the most appropriate archival storage of the material. This measure shall be implemented to the satisfaction of the City Planning Department.</p> |
| 4.6 Geology and Soils | |
| 4.6.5.1A | <p>Before a project is approved or otherwise permitted within an A-P Zone or within 150 feet of any other active or potentially active fault mapped in a published United States Geologic Survey (USGS) or CGS reports, or within other potential earthquake hazard area (as determined by the City), a site-specific geologic investigation shall be prepared to assess potential seismic hazards resulting from development of the project site. Where and when required, the geotechnical investigation shall address the issue(s), hazard(s), and geographic area(s) determined by the City of Jurupa Valley Planning and Building Departments to be relevant to each development. The site-specific geotechnical investigation shall incorporate up-to-date data from government and non-government sources.</p> |

Based on the site-specific geotechnical investigation, no structures intended for human occupancy shall be constructed across active faults. This site-specific evaluation and written report shall be prepared by a licensed geologist and shall be submitted to City of Jurupa Valley Planning and Building Departments for review and approval as part of the environmental and entitlement process and prior to the issuance of building permits. If an active fault is discovered, any structure intended for human occupancy shall be set back at least 50 feet from the fault. A larger or smaller setback may be established if such a setback is supported by adequate evidence as presented to and accepted by the City.

-
- 4.6.5.2A** As determined by the City, a site-specific assessment shall be prepared to ascertain potential ground shaking impacts on development. The site-specific ground shaking assessment shall incorporate up-to-date data from government and non-government sources and may be included as part of any site-specific geotechnical investigation. The site-specific ground shaking assessment shall include specific measures to reduce the significance of potential ground shaking hazards.

This site-specific ground shaking assessment shall be prepared by a licensed geologist and shall be submitted to the City of Jurupa Valley Planning and Building Departments for review and approval as part of the environmental and entitlement process and prior to the issuance of building permits.

-
- 4.6.5.7A** As determined by the City, a site-specific soil assessment shall be prepared to ascertain potential soil expansion on development within the Monserate sandy loam, shallow, 5-15% slopes identified on Figure 4.6.2. The site-specific soil assessment shall incorporate up-to-date data from government and non-government sources and may be included as part of any site-specific geotechnical investigation. The site-specific soils assessment shall include specific measures to reduce the significance of potential soil swell/shrink potential.

This site-specific soils assessment shall be prepared by a licensed soils engineer or geologist and shall be submitted to the City of Jurupa Valley Planning and Building Departments for review and approval as part of the environmental and entitlement process and prior to the issuance of building permits.

4.7 Greenhouse Gas Emissions and Climate Change

- 4.7.5.2A** Within two years of General Plan approval, the City will prepare and adopt a Climate Action Plan (CAP) specifically for the City of Jurupa Valley, including a 2030 reduction target and local emission inventory. The City CAP will be consistent with the WRCOG Subregional CAP but will identify specific additional measures in addition to those outlined in various elements of the General Plan for the reduction of future GHG emissions. The City CAP shall demonstrate how the City will reduce its greenhouse gas emissions to 50 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050, consistent with State law and current guidance on GHG reduction planning.

Specific actions that may be included in the City CAP to help keep City-wide emissions below the SCAQMD service population significance threshold include but are not limited to requiring the installation of electrical and conduit improvements to support the installation of future roof-mounted photovoltaic solar systems and electrical vehicle charging stations for individual homes and businesses.

4.8 Hazards and Hazardous Materials

None

4.9 Hydrology and Water Quality

- 4.9.5.6A** Upon issuance of an occupancy permit, all non-residential development shall be required to mechanically sweep its truck and vehicular parking areas at least once every two weeks to reduce particulate materials that can contribute to degradation of
-

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

local surface and groundwater quality. This measure may also be applied to institutional uses on a discretionary basis depending on the amount of parking area required.

4.10 Land Use and Planning

None

4.11 Mineral Resources

None

4.12 Noise

None

4.13 Population, Housing, and Employment

None

4.14 Public Services and Facilities

None

4.15 Recreation and Parks

None

4.16 Transportation and Traffic

4.16.5.2A Within two years of adopting the 2017 General Plan, the City will develop a Strategic Traffic Congestion Management Plan that will identify the type and timing of roadway and intersection improvements as well as other solutions that may not involve road widenings or standard intersection improvements. The goal of this plan will be to identify those specific improvements or actions that will achieve the City's Level of Service standards to the greatest degree practical, including potential funding and the critical timing of improvements.

4.16.5.2B The City shall seek to enter into a cooperative agreement with each of the surrounding jurisdictions regarding reciprocal fair share contributions for intersection and/or roadway improvements of mutual benefit to the City of Jurupa Valley and each cooperative jurisdiction. The City would then require future development to make the identified fair share payment, if any, under this agreement. This agreement would apply to any private or public development project that contributed 50 or more peak hour trips to a particular street or intersection, based on a project-specific traffic study that met the traffic study requirements of the City at the time the project was proposed.

4.16.5.2C The City of Jurupa Valley shall seek to participate in a multi-jurisdictional study with Caltrans to identify fair share contribution funding sources attributable to and paid from future private and public development, to supplement other regional and State funding sources, to implement necessary improvements to local freeways and freeway ramps to meet Caltrans Level of Service Standards. Once the study identifies appropriate improvements, costs, and fair share fee amounts, the City shall enter into a cooperative agreement with Caltrans to collect such fees from developers of future projects in the City to help fund the identified improvements. The City would then require future development to make the identified fair share payments under this agreement.

4.17 Utilities and Service Systems

None

2.0 INTRODUCTION AND PURPOSE

Preparation of a General Plan is defined as a “project” under CEQA and requires environmental review. This program-level Environmental Impact Report (EIR) has been prepared to evaluate the environmental impacts associated with the proposed 2017 General Plan (“Proposed Project” or “Plan”) for the City of Jurupa Valley (“City”), and to identify General Plan policies that will function as mitigation measures to avoid or minimize significant environmental impacts. The City is the “public agency which has the principal responsibility for carrying out or approving the Plan” and, as such, is the “Lead Agency” for this project under the California Environmental Quality Act (CEQA) of 1970 (*CEQA Guidelines* Section 15367). CEQA requires the Lead Agency to consider the information contained in the EIR prior to taking any discretionary action. The EIR is also a public disclosure document available to agencies and the public for review and comment prior to the consideration of the Proposed Plan by the City, and is intended to serve as an informational document to be considered by the City, Responsible Agencies, and Trustee Agencies during deliberations on the Proposed Plan. The project approvals associated with the Proposed Plan are described in Section 3.0.

The City of Jurupa Valley was incorporated in July 2011. The City of Jurupa Valley Ordinance Nos. 2011-01 and 2011-10 adopted all ordinances and resolutions of the County of Riverside in effect as of July 1, 2011 (including land use ordinances and resolutions), to remain in full force and effect as City Ordinances. As such, development activities that occur in the City of Jurupa Valley are regulated by the City’s current General Plan which follows Riverside County’s General Plan in effect in 2011, as since amended, and Riverside County Zoning Ordinance (Ordinance No. 348) and Subdivision Ordinance (Ordinance No. 460) that were in effect on July 1, 2011, unless otherwise superseded by a City ordinance or resolution.

The EIR environmental analysis will describe the existing conditions of the City as well as the surrounding area and region as applicable. All relevant federal, state, regional, and local adopted laws and regulations will be summarized. Upon incorporation in July 2011, the City of Jurupa Valley adopted the 2008 Riverside County General Plan, the Jurupa Valley Area Plan, and Riverside County Ordinance No. 348 (Zoning) that were in effect at the time. These documents currently constitute *The City of Jurupa Valley General Plan and Zoning Ordinance* respectively. The proposed EIR will support the General Plan effort to create the City’s first locally prepared General plan by amending a portion of the 2008 Riverside County General Plan and adding additional information, policies and programs as needed. The City intends to do a more comprehensive update of the General Plan in 5–10 years, as budget and staff time allow.

This section of the EIR outlines the document’s format; describes the purpose of the EIR; summarizes public review of the EIR; describes the Mitigation Monitoring and Reporting Program (MMRP); identifies the environmental issues discussed in the EIR; and defines the parameters and data to be used in the analysis of cumulative impacts.

2.1 DOCUMENT FORMAT

To assist the reader’s review of the document, the following describes the format of this EIR.

Section 1.0 *Executive Summary* provides a summary of the EIR document and (in Table 1.B) identifies potentially significant impacts, mitigation measures, and the level of significance of each impact following mitigation.

Section 2.0 *Introduction and Purpose* outlines the EIR document’s format including technical appendices; describes the purpose of the EIR including the legal purpose of CEQA, the intended use of EIR, and the EIR’s incorporated documents and referenced technical reports; summarizes the public review of the EIR to date; describes the role

of the Mitigation Monitoring and Reporting Program (MMRP) to be provided in the Final EIR; identifies the seventeen environmental issues that are discussed; and defines the cumulative analysis provided in the EIR.

Section 3.0 *Project Description* provides a detailed description of the geographical setting, project location, project setting, City of Jurupa Valley 2017 General Plan designations, zoning designations, plan characteristics and objectives, and discretionary actions required to implement the 2017 General Plan.

Section 4.0 *Existing Setting, Impacts, and Mitigation Measures* evaluates the impacts associated with the Proposed Plan. This section is organized by seventeen issue areas with each following the framework:

- *Existing Setting.* Information in the existing setting contains a discussion of the local and regional environment conditions (environmental and man-made) in existence at the time this EIR was prepared. Existing setting information provides the reader with the “baseline” from which future impacts are analyzed, and provides a standard against which to measure these impacts.
- *Regulatory Framework.* Regulatory requirements and policies (federal, state, and local) applicable to the issue area are summarized.
- *Methodology.* A brief summary of the methods and resources utilized in the preparation of the environmental analysis.
- *Thresholds of Significance.* Determinations regarding the significance of potential impacts resulting from implementation of the Proposed Plan are provided. These thresholds represent the criteria used in this EIR to determine whether identified impacts are significant.
- *Programmatic Impact Evaluation.* Potential impacts from implementation of the Proposed Plan are identified, including specific General Plan goals, policies, and programs that apply to the specific environmental issue being evaluated. Each of these sections contains an impact analysis, mitigation measures if necessary, significance after mitigation discussion, and cumulative impacts.
 - *Programmatic Impacts.* An analysis of potential programmatic impacts of the Proposed Plan is presented in this section. This discussion focuses on the impacts of implementation of the Proposed Plan, and includes potential short-term/long-term and direct/indirect project impacts, and consistency with applicable planning documents or regulations.
 - *Mitigation Measures.* The measures proposed to mitigate any potential impacts of the Proposed Plan are identified.
 - *Level of Significance after Mitigation* provides a conclusion as to whether implementation of the Proposed Plan with the recommended mitigation will reduce the project-related and cumulative impacts to less than significant levels.
 - *Cumulative Impacts.* This discussion focuses on the potential environmental effect of the Proposed Plan combined with the effects of reasonably foreseeable cumulative¹ projects within the project study area.

Section 5.0 *Other CEQA Topics* contains discussions of additional topics required by CEQA, including effects found not to be significant, unavoidable effects of the Proposed Plan, and significant irreversible environmental changes. The Proposed Plan’s

¹ Potential environmental effect of the Proposed Plan (2017 General Plan) combined with the effects of reasonably foreseeable cumulative projects within the project study area.

| | |
|--------------------|---|
| | consistency with regional plans (discussed in Section 4.10) and potential to induce growth (discussed in Sections 4.13) are summarized in this section. |
| <i>Section 6.0</i> | <i>Alternatives</i> contains discussion of alternatives to development of the Proposed Plan. As allowed by CEQA, the impacts of these alternatives are evaluated at a more general level than the analyses of the Proposed Plan that is contained in Section 4.0. This section also evaluates the proposed effects of the No Project Alternative and identifies the environmentally superior alternative. |
| <i>Section 7.0</i> | <i>References and Acronyms.</i> This section contains all the references cited in the EIR, acronyms and abbreviations used in the document, and definitions of terms used, including those specific to the Proposed Plan. |
| <i>Section 8.0</i> | <i>EIR Preparers.</i> This section lists the organizations and persons consulted in preparation of the EIR. |
| <i>Appendices</i> | The Appendices contain a copy of the Notice of Preparation (NOP), NOP mailing list, NOP comment letters and responses, public scoping meeting information, all of the various technical studies that support the EIR analysis, referenced materials, and other relevant correspondence received during the course of the analysis of the Proposed Plan. |

2.2 PURPOSE OF CEQA AND THE EIR

According to Section 15002 of *CEQA Guidelines*, the basic purposes of CEQA are to:

- Inform government decision-makers and the public about the potential significant environmental effects of proposed activities;
- Identify ways that environmental damage can be avoided or significantly reduced;
- Prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures when the governing agency finds the changes to be feasible; and
- Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

CEQA requires that a project be reviewed to determine the environmental effects that would result if the project were approved and implemented. The City has the responsibility for preparing, processing, and determining whether to approve the Proposed Plan and certify this EIR. As Lead Agency, the City has the authority to make decisions regarding discretionary actions relating to implementation of the Proposed Plan.

As previously noted, CEQA requires the Lead Agency consider the information contained in the EIR prior to taking any discretionary action on a project. This EIR provides information to the Lead Agency and other public agencies, the general public, and decision-makers regarding the potential environmental impacts from the construction and operation of the Proposed Plan. The purpose of the public review of the EIR is to evaluate the adequacy of the environmental analysis in terms of compliance with CEQA. Section 15151 of the *CEQA Guidelines* states the following regarding standards from which adequacy is judged:

“An EIR should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among experts. The courts have not looked for perfection but for adequacy, completeness, and a good faith effort at full disclosure.”

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

An EIR is the most comprehensive form of environmental documentation identified in CEQA and the *CEQA Guidelines*, and provides the information needed to assess the environmental consequences of a Proposed Plan. EIRs are intended to provide an objective, factually supported, full-disclosure analysis of the environmental consequences associated with a Proposed Plan that has the potential to result in significant, adverse environmental impacts.

Under CEQA (Public Resources Code Section 21002.1[a]):

“The purpose of an environmental impact report is to identify the significant effects on the environment of a project, to identify alternatives to the Proposed Plan, and to indicate the manner in which those significant effects can be mitigated or avoided.”

As permitted under the *CEQA Guidelines* (Section 15084[d-e]), LSA Associates, Inc. (LSA) has prepared the EIR under the direction of professional City planning staff. However, prior to certification, the Planning Commission and the City Council must independently review the methodologies used, and conclusions reached in the EIR. The City is undertaking an independent review of this EIR by having City planning staff work with LSA on the EIR. If certified by the City, the information included in and the conclusions reached in the EIR will therefore represent the City’s independent judgment.

This EIR has been prepared utilizing information from City planning and environmental documents, technical studies, and other publicly-available data. Alternatives to the Proposed Plan are also discussed and mitigation measures that would offset, minimize, or otherwise avoid significant environmental impacts from the Proposed Plan have been identified. This EIR has been prepared in accordance with CEQA, California Public Resources Code §21000 *et seq.*; and the *Guidelines for California Environmental Quality Act* (California Code of Regulations, Title 14, Chapter 3). The objective of the EIR is to inform City decision-makers, representatives of other affected/responsible agencies, the public, and other interested parties of the potential environmental consequences that may be associated with the approval and implementation of the Proposed Plan.

2.3 REGIONALLY SIGNIFICANT PROJECT

When an EIR is prepared for any project that is considered to be of statewide, regional, or area-wide significance, as defined by *CEQA Guidelines* Section 15206, then the Draft EIR must be submitted to the State Clearinghouse and the appropriate metropolitan area council of governments for review and comment. Criteria No. 1 for when a project is considered to be of statewide, regional, or area-wide significance is...“A proposed local general plan, element, or amendment thereof for which an EIR was prepared.” Therefore, the Proposed Plan (2017 General Plan) would be considered a project of statewide, regional or area-wide significance per CEQA Guidelines Section 15206 (b) (1). The NOP, Draft EIR, and Notice of Completion (NOC) will be transmitted to the State Clearinghouse and the appropriate metropolitan area council of governments, which in this case is the Southern California Association of Governments (SCAG), for review and comment.

2.4 PROGRAM EIR

This EIR will serve as a Program EIR pursuant to the *State CEQA Guidelines* Section 15168, which states that a Program EIR is appropriate for a project that involves “... a series of actions that can be characterized as one large project and are related either:

- (1) Geographically;
- (2) A logical parts in the chain of contemplated action;
- (3) In connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or
- (4) As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.”

Section 15168 of the *CEQA Guidelines* explains how a Program EIR relates to future activities within the General Plan area:

- “(c) Use with Later Activities. Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared.
 - (1) If a later activity would have effects that were not examined in the program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration.
 - (2) If the agency finds that pursuant to Section 15162, no new effects could occur or no new mitigation measures would be required, the agency can approve the activity as being within the scope of the project covered by the program EIR, and no new environmental document would be required.
 - (3) An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions in the program.
 - (4) Where the subsequent activities involve site-specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.
 - (5) A program EIR will be most helpful in dealing with subsequent activities if it deals with the effects of the program as specifically and comprehensively as possible. With a good and detailed analysis of the program, many subsequent activities could be found to be within the scope of the project described in the program EIR, and no further environmental documents would be required.
- (d) Use with Subsequent EIRs and Negative Declarations. A program EIR can be used to simplify the task of preparing environmental documents on later parts of the program. The program EIR can:
 - (1) Provide the basis in an Initial Study for determining whether the later activity may have any significant effects.
 - (2) Be incorporated by reference to deal with regional influences, secondary effects, cumulative impacts, broad alternatives, and other factors that apply to the program as a whole.
 - (3) Focus an EIR on a subsequent project to permit discussion solely of new effects which had not been considered before.
- (e) Notice with Later Activities. When a law other than CEQA requires public notice when the agency later proposes to carry out or approve an activity within the program and to rely on the program EIR for CEQA compliance, the notice for the activity shall include a statement that:
 - (1) This activity is within the scope of the program approved earlier, and
 - (2) The program EIR adequately describes the activity for the purposes of CEQA.”

2.5 INCORPORATION BY REFERENCE

The City of Jurupa Valley is an incorporated city of Riverside County, California. Prior to its incorporation, the area was governed by Riverside County. On March 8, 2011, voters approved a ballot measure designated “Measure A” to incorporate the area into its own city. As a result, the City of Jurupa Valley became an incorporated city on July 1, 2011.

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

City of Jurupa Valley Ordinance Nos. 2011-01 and 2011-10 adopted all ordinances and resolutions of the County of Riverside in effect as of July 1, 2011 (including land use ordinances and resolutions), to remain in full force and effect as City Ordinances. As such, development activities that occur in the City of Jurupa Valley are regulated by the City of Jurupa Valley Plan, including the Jurupa Area Plan and applicable portions of the Eastvale Area Plan, and Riverside County Zoning Ordinance (Ordinance No. 348) and Subdivision Ordinance (Ordinance No. 460) that were in effect on July 1, 2011, unless otherwise superseded by a City ordinance or resolution.

CEQA (Section 15150) permits the incorporation by reference of all or portions of other documents that are generally available to the public. Any document incorporated by reference shall be made available to the public for inspection at a public place or public building and requires that the EIR state where the incorporated documents will be made available for public inspection. The following documents have been incorporated by reference:

- *The City of Jurupa Valley General Plan, various elements*, adopted by the City Council on July 1, 2011 (i.e., the existing General Plan).
- City of Jurupa Valley Zoning Map, as amended through August 2016.
- City of Jurupa Valley Municipal Code (various chapters), approved through Ordinance 2011-2 and as amended through August 2015.

2.6 TECHNICAL REPORTS

The following technical studies/analyses have been prepared to support the 2017 General Plan:

- Traffic and Street Classification Study for the Circulation Element;
- Demographic and Housing Data Report for the Housing Element;
- Noise and Vibration Study for the Noise Element;
- Land Use Mapping for the Land Use Element; and
- Air Pollutant and GHG Emission Calculations per CalEEMod and consistent with the WRCOG CAP.

The Traffic and Street Classification Study evaluates the existing circulation setting and identifies improvements to help improve vehicular circulation and multimodal transportation facilities within the City of Jurupa Valley. Its goal is to create a circulation network that increases the use of alternative modes of transportation, promotes safe travel for pedestrians, equestrians and bicyclists and maintains safe and efficient facilities for all travel modes.

The Demographic and Housing Data Report includes a housing needs assessment, demographic analysis, constraints analysis, site inventory, special needs assessment, and transitional and assisted housing assessment in support of the Housing Element to evaluate impacts from full build-out of the General Plan.

The Noise and Vibration Study is consistent with applicable procedures and requirements to evaluate the potential noise impacts of proposed land uses in the 2017 General Plan. The Noise and Vibration Study includes local noise standards, vibration standards, an ambient noise survey, noise contours maps, evaluation of mobile and stationary noise and vibration sources, and land use compatibility recommendations based on anticipated noise and vibration levels from 2017 General Plan implementation.

Land Use Maps have been prepared for the various technical studies and for the 2017 General Plan Land Use Element based on input from City staff, the General Plan Advisory Committee, and the public to reflect the City's preferred land use strategy. Additionally, existing mapping resources such as GIS layers from the Southern California Association of Governments (SCAG) and/or Riverside County will be utilized to the extent practical in support of the 2017 General Plan and Program EIR.

Note that the Climate Action Plan (CAP) prepared by the Western Regional Council of Governments (WRCOG) is being incorporated by reference into the City's Air Quality Element and will be an appendix of the EIR.

These documents are included in the appendices of this EIR. In addition, these documents are available for review at the following location:

Jurupa Valley City Hall
Planning Department
8930 Limonite Avenue
Jurupa Valley, California 92509
Phone: (951) 332-6464
Monday–Friday 8:00 a.m.–5:00 p.m.

2.7 PUBLIC REVIEW OF THE DRAFT EIR

This EIR was distributed to responsible and trustee agencies, other affected agencies, and interested parties. Additionally, in accordance with Public Resources Code Section 21092(b)(3), the EIR has been made available to all parties who have previously requested copies. The Notice of Completion (NOC) and Notice of Availability (NOA) of the EIR have been distributed as required by CEQA. During the 45-day public review period, the EIR and technical appendices have been made available for review. During the review period, written comments regarding this EIR should be addressed to:

Mary Wright, Project Manager
Planning Department
8930 Limonite Avenue
Jurupa Valley, California 91776
Phone: (951) 332-6464
Email: mwright@jurupavalley.org

After the 45-day public review period, written responses to all significant environmental issues raised will be prepared. These responses will be available for review for a minimum of 10 days prior to the public hearings before the City of Jurupa Valley Planning Commission and City Council, at which time the certification of the Final EIR will be considered. The Final EIR (which includes the Draft EIR, the public comments and responses to the Draft EIR, and findings) will be included as part of the environmental record for consideration by the City decision-makers. The City will respond as appropriate to comments made at public hearings on the Proposed Plan and its EIR.

2.7.1 Notice of Preparation

The City initiated the environmental process without completion of an Initial Study. The City determined that, due to the nature and size of the Proposed Plan, all environmental topics warranted further environmental review in an EIR. The City circulated the NOP for the EIR to state, regional, and local agencies on February 2, 2016, for a 30-day review period.¹ The NOP was distributed to the State Clearinghouse, as well as agencies and organizations that may provide comment on the Proposed Plan as well as the potential environmental impacts that may result from the implementation of the Proposed Plan. The NOP, NOP distribution list, Notice of Public Scoping Meeting, and response letters are included in Appendix A of the Draft EIR. At the close of the 30-day NOP public review period, seven (7) responses to the NOP had been received. Table 2.A summarizes the comments received regarding the NOP.

¹ The City's Notice of Preparation 30-day public review period was from May 13, 2014 to June 11, 2014.

2017 General Plan - City of Jurupa Valley
Draft Environmental Impact Report

Table 2.A: Notice of Preparation Comment Letters Received

| Agency/Organization/Individual | Date | Comments |
|---|---------|--|
| Scott Morgan with the State Office of Planning and Research (OPR) | 2/4/16 | OPR notified the City that it received the NOP and circulated it to state agencies per CEQA requirements. |
| Gayle Totton with the California Native American Heritage Commission (NAHC) | 2/9/16 | NAHC outlined City's consultation requirements with Native American tribes under SB 18 and AB 52 and included recommended mitigation for potential impacts. |
| Jillian Wong with the South Coast Air Quality Management District (SCAQMD) | 2/12/16 | Even a programmatic air quality study needs to provide actual CalEEMod files, and evaluate potential construction as well as land use buildout impacts for criteria pollutants, local significance thresholds, health risks from certain land uses and dust (PM ₁₀ and PM _{2.5}). |
| Russell Williams with the Riverside County Transportation and Land Management Agency (RCTLMA) | 3/2/16 | Requested the EIR examine traffic impacts on County roadways and recommend appropriate mitigation to address impacts. |
| Edward Cooper with the Riverside County Airport Land Use Commission (ALUC) | 3/7/16 | Portions of the City are located in airport compatibility zones and future development would be subject to review by ALUC. |
| James Troyer with the City of Fontana | 2/29/16 | The City wants to review the Draft EIR when it is available. |
| Cheryl DeGano with Webb Assoc. on behalf of the Jurupa Community Services District (JCSD) | 3/3/16 | The District wishes to review any data on water or sewer services for the portion of the City within the District. |

Note: All NOP response letters are included in Appendix A of the Draft EIR.

Native American Consultation. Three Native American tribal groups were contacted to request if they wanted to consult with the City on this project, per the requirements of SB 18 and AB 52: The Soboba Band of Luiseno Indians Tribe, the Gabrieleno Band of Mission Indians Tribe and the Agua Caliente Band of Cahuilla Indians Tribe. To date, all three tribes have responded to the City's inquiries but only the Soboba and Gabrieleno tribes formally requested a government-to-government consultation meeting, or have recommended mitigation be included in the EIR regarding monitoring of grading by tribal representatives.

2.7.2 Public Scoping Meeting

In compliance with *State CEQA Guidelines*, the City of Jurupa Valley has taken steps to maximize opportunities for individuals, parties, and agencies to participate in the environmental process. During circulation of the NOP, various federal, state, regional, and local government agencies, and other interested parties were contacted to solicit comments and to inform the public of the Proposed Plan. A public scoping meeting was held to solicit public comment on direction and scope of the analysis necessary for the Draft EIR. The public scoping meeting was held on March 1, 2016 at 7:00 p.m. at City Hall. Copies of the NOP and other information were available to the public for review. City staff and the EIR consultant (LSA Associates, Inc.) were present to provide information regarding the General Plan, however, only one member of the public was present and no representatives of any agencies attended the scoping meeting. The individual submitted information regarding a specific development project at the meeting but it was not directly related to the scope of the 2017 General Plan EIR. Input from the NOP comment letters and general comments made during the General Plan Advisory Committee meetings and other City meetings on the Proposed Plan have been used to prepare the analysis in the Draft EIR. Copies of the written scoping materials are included in Appendix A.

2.7.3 Final EIR Certification

This Draft EIR is being circulated for public review for a period of 45 days, pursuant to CEQA requirements. Interested agencies and members of the public are invited to provide written comments on the Draft EIR to the City address shown on the title page of this document. Upon completion of the 45-day review period, the City of Jurupa Valley will review all written comments received and prepare written responses for each comment. A Final EIR (FEIR) will be prepared incorporating all of the comments received, responses to the comments, and any changes to the Draft EIR that result from the comments received. This FEIR will be presented to the City of Jurupa Valley for potential certification as the environmental document for the project. All persons who commented on the Draft EIR will be notified of the availability of the FEIR and the date of the public hearing before the City.

2.8 POTENTIAL ENVIRONMENTAL ISSUES

An Initial Study has not been prepared for the 2017 General Plan, in accordance with State CEQA Guidelines Section 15060(d), because the EIR will address all Initial Study environmental topics in appropriate detail in order to ensure comprehensive coverage of every environmental topic pursuant to CEQA. Each environmental topic will include an assessment of the direct and indirect short-term and long-term environmental impacts that will be created by the 2017 General Plan based on established thresholds of significance. In addition, a discussion of implementable mitigation measures that can be monitored effectively during development and operations of the 2017 General Plan will be included for each issue. The 2017 General Plan is intended to be self-mitigating, meaning the goals and policies contained within the 2017 General Plan will be crafted to avoid, reduce and/or mitigate environmental impacts.

The EIR will incorporate relevant data gleaned from City planning and environmental documents, technical studies, and publicly available data. The EIR will address relevant comments received and will respond to the specific areas of concern identified in responses to this Notice of Preparation. Since an Initial Study was not prepared for the project, this will be a “full scope” EIR which will describe the existing environmental conditions in the Plan Area and will identify the significant environmental impacts anticipated to result from implementation of the 2017 General Plan. Where potentially significant environmental impacts are identified, the EIR will also discuss mitigation measures that may make it possible to avoid or reduce significant land use impacts. The analysis in the EIR will include the following specific categories of environmental impacts and concerns related to the proposed project.

Aesthetics: The EIR addresses the potential effects on scenic vistas, scenic corridors, visual character, and light and glare.

Agriculture and Forestry Resources: The EIR addresses the potential effects on farmland, forest land and timberland and the loss of land zoned for agricultural use.

Air Quality: The EIR describes the existing air quality conditions in the City and will evaluate the potential air quality impacts of the proposed 2017 General Plan land uses and policies consistent with SCAQMD methodology. The EIR also discusses the measures included in the 2017 General Plan to minimize impacts of criteria air pollutant emissions.

Biological Resources: The EIR describes the existing biological conditions within the City, and potential impacts of the 2017 General Plan on vegetation and wildlife, including special status species. The EIR will evaluate the likelihood of any significant impacts, including consistency with the Western Riverside County Multiple Species Habitat Conservation Plan.

Cultural Resources: The EIR addresses potential impacts to historic structures, archaeological resources, tribal cultural resources, and paleontological resources.

Geology and Soils: The EIR assesses soil and geologic conditions of the City and addresses seismic hazards, including the potential for liquefaction, subsidence, landslides, ground-shaking, and soil erosion.

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

Greenhouse Gas Emissions: The EIR examines the potential impacts of implementing the 2017 General Plan relative to greenhouse gas (GHG) emissions and global climate change. The EIR discusses the measures included in the 2017 General Plan to minimize impacts of GHG emissions. The Climate Action Plan (CAP) prepared by the Western Regional Council of Governments (WRCOG) will also be incorporated by reference into the City's Air Quality Element and evaluated in the EIR.

Hazards and Hazardous Materials: The EIR includes a description of the potential hazards in the City and the health and safety effects based on implementation of the 2017 General Plan.

Hydrology and Water Quality: The EIR discusses the drainage conditions throughout the City and the potential for flooding. Water quality impacts and conformance with the Santa Ana Regional Water Quality Control Board requirements are also addressed.

Land Use and Planning: The EIR identifies the land uses in the City and evaluates potential land use constraints created by existing conditions. The 2017 General Plan's compatibility with existing and proposed land uses in the City and consistency with the City's land use, planning, and environmental justice policies and plans has also been evaluated.

Mineral Resources: The EIR discusses impacts to mineral resources from implementation of the 2017 General Plan.

Noise: The EIR discusses noise impacts from implementation of the 2017 General Plan, including impacts from area noise sources (e.g., railroads, airports, I-15 and SR-60 freeways, etc.). A noise analysis identifies existing settings and noise level scenarios associated with implementation of the 2017 General Plan. The EIR addresses potential noise impacts associated with implementation of the 2017 General Plan on residential land uses as well as noise impacts on future residences from nearby land uses. Conformance to the City's noise guidelines is also provided, along with potential impacts resulting from construction noise.

Population and Housing: The EIR evaluates the potential for the proposed land uses of the 2017 General Plan to result in population or housing growth, and also discusses the potential displacement of housing and people as development occurs.

Public Services: The EIR identifies existing police, fire, schools, parks, and other public services and facilities serving the City, and quantifies the increase in service demands resulting from implementation of the 2017 General Plan and whether or not any increase in demand results in the need for new or altered governmental facilities which could cause significant environmental impacts. The availability and adequacy of existing services is also generally analyzed.

Recreation: The EIR discusses the potential to result in the increase in the use of existing recreational facilities that may result in an accelerated physical deterioration of such facilities.

Traffic and Circulation: The traffic analysis prepared for the 2017 General Plan and EIR describes the existing roadway conditions, circulation patterns, and other elements of the transportation system in the City, including the local streets and intersections and regional facilities (e.g., I-15 and SR-60 freeways). A transportation modeling analysis has also been prepared in order to evaluate full build-out of the 2017 General Plan on the overall transportation network. The 2017 General Plan's compliance with adopted policies, plans, and programs supporting alternative modes of transportation is also discussed.

Utilities and Service Systems: The EIR discusses the ability of existing infrastructure in the City, such as sanitary sewer, storm drains, water supply, and solid waste, to serve full buildout of the 2017 General Plan. The EIR also discusses the availability of the existing water supply to provide for full buildout of the 2017 General Plan.

Alternatives to the Project: Identification of feasible alternatives to the 2017 General Plan Preferred Land Use Plan are provided. Analysis of a “No Project” alternative is required by law. In addition, three alternatives including a “No Project–No Build” Alternative, have been evaluated. The evaluation of alternatives provides a comparative analysis of alternatives to the 2017 General Plan.

The EIR identifies the degree to which each alternative might reduce one or more of the impacts associated with implementation of the 2017 General Plan, whether or not the alternative could result in other or increased impacts, the viability of the alternative, and the degree to which the alternative is consistent with the City’s goals and objectives.

Cumulative Impacts: The EIR includes a discussion of the potentially significant cumulative impacts of the 2017 General Plan when considered with other past, present, and reasonably foreseeable future projects in the area.

2.9 POTENTIAL IMPACTS DISCUSSED IN THE EIR

This EIR focuses on the areas of concern identified in the NOP and comments submitted regarding the NOP. The following seventeen environmental topics are addressed in this EIR:

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality, including Human Health
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions, Energy Conservation, and Global Climate Change
- Hazards and Hazardous Materials
- Hydrology, and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population, Housing, and Employment
- Public Services and Facilities
- Transportation and Traffic
- Recreation
- Utilities and Service Systems

2.10 EFFECTS FOUND NOT TO BE SIGNIFICANT

As required under CEQA (Section 15128), an EIR is to contain a statement supporting the Lead Agency’s determination that some of the possible effects of a project are not significant and, therefore, are not discussed in detail in the EIR. Due to the scope and location of the project, the City determined that all potential environmental issues outlined above were evaluated in this EIR.

2.11 EFFECTS FOUND TO BE SIGNIFICANT

This Draft EIR identifies four significant and unavoidable adverse impacts, as defined by CEQA that would result from implementation of the 2017 General Plan. Unavoidable adverse impacts may be considered significant on a project-specific basis, cumulatively significant, and/or potentially significant. If the City of Jurupa Valley, as the lead agency, determines that unavoidable significant adverse impacts would result from the project, the City must prepare a “Statement of Overriding Considerations” before it can approve the project. A Statement of Overriding Considerations states that the decision-making body has balanced the benefits of the proposed project against its unavoidable significant environmental effects and has determined that the benefits of the project outweigh the adverse effects and, therefore, the adverse effects are considered to be acceptable. The impacts that were found in the Draft EIR to be significant and unavoidable are:

- Agricultural Resources
- Air Quality
- Noise
- Transportation and Traffic

2.12 CUMULATIVE IMPACTS

CEQA defines cumulative effects as “two or more individual affects that, when considered together, are considerable or which compound or increase other environmental impacts.” (*State CEQA Guidelines* Section 15130) The *Guidelines* further state that the individual effects can be the various changes related to a single project or the changes involved in a number of other closely related past, present, and reasonably foreseeable future projects (Section 15335). Incremental land use changes are anticipated to occur as the result of the Proposed Plan, as well as growth in population, housing, and employment from development of other projects in the City of Jurupa Valley and the surrounding region. Section 15130 of the *State CEQA Guidelines* requires that an EIR include a discussion of the potential cumulative impacts of a Proposed Plan.

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the adoption and implementation of the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years. CEQA typically requires a cumulative analysis using a “list” of cumulative projects or a plan summary of long-term development impacts. In this case, the growth projections of the 2017 General Plan represent the “plan summary” for the purposes of characterizing cumulative impacts related to General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.6 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building. For more information on cumulative growth in the City, see Section 3.6, Growth Projections and Cumulative Impacts, which includes Tables 3.A through 3.C for numerical projections of housing units and non-residential square footage for new buildings.

The cumulative analysis for each environmental issue will each identify its own specific “universe” for cumulative impacts which may be a different universe from that selected for another environmental issue. For example, the cumulative universe for air quality impacts is reasonably assumed to be the entire South Coast Air Basin, which is much larger than the cumulative universe for public service impacts (i.e., the service area of the various service providers.) The individual cumulative areas for the issues addressed in this EIR are provided within the cumulative impacts discussion in the respective impact sections, but range from the City of Jurupa Valley to the County to the entire SCAG region when necessary. For many of the issues, the universe for cumulative impacts will be western Riverside County.

The cumulative impact from several projects is the change in the environment that results from the incremental impact of the development when added to the impacts of other closely related past, present, and reasonably foreseeable or probable future developments. Cumulative impacts can result from individually minor, but collectively significant, developments taking place over a period of time. With respect to the analysis of cumulative impacts, CEQA generally requires the following:

- (a) Cumulative impacts shall be discussed when the project's incremental effect is cumulatively considerable.*
- (b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided of*

the effects attributable to the project. The discussion should be guided by the standards of practicality and reasonableness.

It is expected that the cumulative impact analysis set forth in this EIR will be conservative and would tend to overstate (rather than understate) cumulative impacts. The significance of a cumulative impact may be greater than the effects resulting from the individual actions if the effects of more than one action are additive. Criteria for evaluating the significance of adverse effects are identified for each environmental issue in Section 4.0. These criteria, which are based on resource sensitivity, quality, and quantity, are also instructive when evaluating whether the environmental effect resulting from implementation of a particular project is cumulatively considerable. The timing and duration of each activity is also an important consideration for evaluating the potential cumulative effects of activities that may occur only for a limited period. In such cases, a cumulative effect may occur only when two or more of the activities are occurring simultaneously.

2.13 MITIGATION MONITORING AND REPORTING PROGRAM

A Mitigation Monitoring and Reporting Program (MMRP) will be prepared for this EIR to comply with the requirements of State law (Public Resources Code Section 21081.6). When mitigation measures are required to avoid or reduce the severity of significant impacts, State law requires the adoption of an MMRP by the Lead Agency. The monitoring program is intended to ensure compliance during implementation of the program. An MMRP will be adopted by the City Council concurrent with certification of the Final EIR for the 2017 General Plan.

2.14 OTHER REQUIRED SECTIONS

The EIR also includes other information typically required for an EIR. These other sections include the following: 1) Growth-Inducing Impacts; 2) Significant, Unavoidable Impacts; 3) Significant Irreversible Environmental Changes; 4) Consistency with Regional Plans; 5) Energy Use and Conservation per State CEQA Guidelines Appendix F; 6) References; and 7) EIR Authors. Relevant technical reports will be provided as EIR appendices.

THIS PAGE INTENTIONALLY LEFT BLANK

3.0 GENERAL PLAN COMPONENTS

The proposed Program Environmental Impact Report (EIR) will be prepared to support adoption of the City's 2017 General Plan (the "Proposed Plan" or "GP"), pursuant to the California Environmental Quality Act (CEQA). City procedures for CEQA implementation, as well as integration of the latest changes to the Appendix G Checklist questions in the latest *State CEQA Guidelines*, will be used as thresholds for significance in the EIR.

3.1 LOCATION

The Proposed Plan area constitutes the boundaries of the City of Jurupa Valley, as shown in Figure 3.1. The City is adjacent to the cities of Eastvale on the west, Norco and Riverside on the south and east, and Ontario and Fontana in the County of San Bernardino on the north and east, and the City of Colton on the northeast. The western portion of Jurupa Valley is primarily flat, with gentle rolling foothills scattered throughout the Glen Avon and Mira Loma areas. North of SR 60 lies the dramatic sloping terrain of the Jurupa Mountains, that provide a natural backdrop for the communities of Sunnyslope and Belltown. The Pedley Hills provide a picturesque setting for the community of Pedley as well as a pleasing backdrop for communities adjacent to the hills. The Santa Ana River, with its lush riparian habitat, provides a natural contrast along the southern boundary of Jurupa Valley. Over the years, the Jurupa Valley has consisted of many unincorporated communities. However, Figure 3.2 shows the general locations of the nine local unincorporated communities that will be referred to in this EIR.

3.2 HISTORY

The following publications helped contribute to the understanding of the local history in the Jurupa Valley: "*Jurupa (Images of America)*" and "*Wicked Jurupa Valley*" by Kim Jarrell Johnson, a local resident and historian. The City of Jurupa Valley encompasses 43.5 square miles including the neighborhoods of Mira Loma, Glen Avon, Sky Country, Indian Hills, Pedley, Rubidoux, Belltown, Jurupa, Jurupa Hills, and Sunnyslope. The area was proposed to be incorporated in 1992; however, at that time local residents voted against the incorporation of the City.¹ Historically, the Jurupa Valley area has been mostly comprised of wineries and dairies.² The Galleano Winery was founded in 1927 after Domenico Galleano purchased the 160-acre Cantu Ranch, however, production did not begin until 1933 after the repeal of the 18th amendment ending Prohibition. Today, Galleano remains a multi-generation run and active historical landmark.³

Another cultural attraction of the City is the Flabob Airport that was founded in 1925. The Flabob Airport is the seventh oldest surviving airport in California and was Riverside's first civil airport. Historic Flabob Airport is also home to the Tom Wathen Center, a nonprofit corporation dedicated to education through aviation.⁴ In addition to the Galleano Winery and Flabob Airport, the Rubidoux Drive-In is also of historical significance to the City of Jurupa Valley. The Rubidoux Drive-In was founded in 1948 by Roy C. Hunt, Riverside's prewar motion picture showman. The drive-in was originally a single screen venue with a maximum capacity of 690 cars. Today the Rubidoux Drive-In maintains its character and has grown to house a total of four screens, including the original screen tower from 1948.⁵

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 3.2

City of Jurupa Valley Communities

THIS PAGE INTENTIONALLY LEFT BLANK

The City of Jurupa Valley was incorporated on July 1, 2011, and at that time adopted the County of Riverside General Plan as the City's General Plan (i.e., the City's current General Plan document).

3.3 PURPOSE AND OBJECTIVES

The City's 2017 General Plan is consistent with and derives its authority from California State law. Once adopted, it becomes the basis for land use and other important municipal decisions; however, the Plan itself is not a regulation. The General Plan is implemented through Zoning Regulations, adopted standards and other City laws. As required by State law, capital improvement programs, zoning regulations and related land use policies must be consistent with the General Plan.

The Land Use Element represents a generalized "blueprint" for the future of the City and is the core of the General Plan. It sets forth a pattern for the use, development, and preservation of land within the City's planning area. The pattern is based on Community needs and preferences and describes the expected level of population growth resulting from housing construction anticipated by the plan. It also shows the type, location, and intensity of new commercial and industrial uses to meet the City's economic sustainability needs. The General Plan consists of the seven mandatory elements, including the Land Use Element, plus three optional elements. The following elements relate to the Land Use Element as described below.

- 1) The *Mobility Element* recognizes implications of land use policy on all modes of movement and establishes policies, standards, and implementation measures that work with the Land Use Element update and address both existing and potential circulation opportunities and deficiencies.
- 2) The *Housing Element* goals, policies, and programs reflect the land use policies as they relate to residential development.
- 3) The *Noise Element* contains policies that protect residents and land uses from noise and vibration impacts while allowing development and a mix of compatible land uses.
- 4) The *Community Safety, Services and Facilities Element* identifies hazards that influence the locations and types of proposed land uses and describes the services and facilities necessary to serve those land uses. In addition, the Land Use and Safety Elements share several safety topics. For example, the Land Use Element includes airport safety policies and programs that relate to compatible land use and design.
- 5) The *Conservation and Open Space Element* contains policies and programs to protect natural resources and open spaces, including natural habitat areas, environmentally sensitive areas, watersheds, recreation areas, agricultural land, and other open space amenities. The Land Use Element works with this element and incorporates concepts such as clustering and buffering open space areas in order to enhance their protection.
- 6) The *Air Quality Element* contains policies and programs that address land use, design, and transportation measures intended to help maintain healthy air quality in Jurupa Valley. The pattern of land use and communities' transportation systems can help reduce motor vehicle emissions and have positive, healthy effects on residents and visitors' quality of life.
- 7) The *Environmental Justice Element* contains policies and programs that seek to ensure that all members of the Community have meaningful input into the decision-making process. In addition, the Element protects low-income persons and communities from land use actions that adversely affect the health, safety, and welfare of these groups.
- 8) The *Economic Sustainability Element's* policies and programs focus on the City's financial health to achieve other key Community goals and to provide essential services. Economic-sustainability strategies typically involve land-use and transportation decisions, and are guided by long-term consideration of City assets, opportunities, needs, and costs.

- 9) The *Healthy Communities Element* includes policies and programs to support the overall health of Jurupa Valley's residents. It focuses on providing healthy choices for food, recreation, and health care, and seeks to improve everyone's access to information on healthy living.

Community Values Statement¹

"Jurupa Valley's General Plan is guided by values that describe what is most important to City residents. These values are at the core of what people enjoy most about living, working and recreating in Jurupa Valley—the scenic views, Santa Ana River, small-town feel, equestrian lifestyle, natural environment, vibrant economy, friendly residents, healthy and safe neighborhoods and respect for our history and diverse cultures. These values will enhance and sustain this young City's health and prosperity for generations to come. Proclaiming City values is essential to create a new General Plan that truly reflects the goals and needs of Jurupa Valley residents. The City's General Plan Advisory Committee (GPAC) recommended that the Planning Commission and City Council affirm and adopt these Community Values as the foundation and heart of the General Plan."

Guiding Values

1. **Small-Town Feel.** Maintain Jurupa Valley's small-town feel, where neighbors know neighbors and merchants, the built environment reflects and is compatible with the area's character, and where residents can grow gardens, raise and keep livestock, and choose from diverse lifestyles in a semi-rural town setting.
2. **Community of Communities.** Jurupa Valley consists of many distinctive communities and neighborhoods in a valley surrounded by stunning natural scenery and views. As a "community of communities", we will preserve and enhance those positive qualities that make our communities unique, enhance our "gateways" to welcome residents and visitors and embrace a unifying community theme and spirit. Our ability to offer the choice of a semi-rural, equestrian lifestyle is an essential part of who we are as a community and of our quality of life.
3. **Open Space and Visual Quality.** We value and protect the Santa Ana River and river plain, ridgelines, and hillsides for their exceptional value for recreation, watershed, wildlife habitat, environmental health, and as scenic backdrops for the City. As part of our values, we support prevention and removal of visual blight, protection of public vistas, and community awareness and beautification activities. Jurupa Valley's special places will be protected, maintained and promoted to preserve our unique character, instill local pride and encourage tourism.
4. **Active Outdoor Life.** Many Jurupa Valley residents were drawn here because of its unique outdoor setting and the recreation opportunities it offers. Our parks and recreation facilities are essential to maintain and improve our health and quality of life. We place high value on our public parks, sports fields, pedestrian and equestrian trails and support facilities, golf courses, outdoor use areas, historic sites and nature centers, campgrounds, airport, and joint use school facilities.
5. **Public Safety.** Support for public safety, law enforcement and emergency medical services is a value that's widely held by Jurupa Valley residents. We honor and respect the safety professionals who faithfully serve Jurupa Valley. We support strong, collaborative efforts to prevent crime and homelessness, enforce planning and building codes, and to improve the safety of neighborhoods, homes, public facilities, streets, trails and other transportation facilities. We take proactive measures to cope with and recover from emergencies and natural and manmade disasters.

¹ Endorsed by the General Plan Advisory Committee on April 27, 2015.

- 6. Education, Culture and Technology.** We place high priority on maintaining and improving our educational, cultural and technical opportunities, including programs and events at schools, libraries, museums, performing arts facilities and other community venues. We support the establishment of new community centers as well as college-level, life-enrichment, and career training opportunities in Jurupa Valley
- 7. Mobility.** We support the creation and maintenance of transportation networks (e.g., multi- use equestrian, pedestrian and bicycle trails, complete streets, sidewalks, airport, rail, and public transit) that are safe, attractive, and efficient and provide connectivity to meet the diverse needs for the movement of people and goods.
- 8. Diversity.** We value Jurupa Valley's cultural and social diversity and celebrate our cultural richness through arts and culture, community festivals, educational programs and exhibits, seasonal and equestrian-themed events, preservation of historic landmarks, youth and adult sports.
- 9. Environmental Justice.** We value the health, well-being, safety and livability of all our communities and strive to equitably distribute public benefits and resources. We endeavor to enhance underserved communities so that all residents can thrive and share in a high quality of life.
- 10. Healthy Communities.** We have a comprehensive view of health. We enhance existing opportunities for healthy living and create new ones by helping residents to make the healthy choice the easy choice. The health and well-being of all individuals, families, neighborhoods and businesses is our shared value and concern. We take positive steps to maintain a clean, visually attractive City, to improve Jurupa Valley's physical, social and environmental health and to share and teach these values to achieve and sustain a healthy, clean and safe environment for current and future generations.
- 11. Economic and Fiscal Health.** We support high quality economic growth and development that is environmentally sustainable and that fosters housing, living wage jobs, retail goods and services, public facilities and services, environmental benefits, destination tourism, and medical and educational facilities. We seek ways to be good stewards of our local assets, to make wise land use and fiscal decisions, to conduct open and accessible government, and to preserve and enhance the City's prosperity and quality of life.

3.4 PLAN ELEMENTS

The City has prepared the following Elements which are evaluated in this EIR with the corresponding 2017 General Plan chapter shown in parentheses after element title:

- Land Use (2)
- Mobility (3)
- Conservation and Open Space (4)
- Housing (5)
- Air Quality (6)
- Noise (7)
- Community Safety, Facilities, and Services (8)
- Environmental Justice (9)
- Healthy Communities (10)
- Economic Sustainability (11)

3.5 TECHNICAL STUDIES

The following technical studies/analyses have been prepared to support the 2017 General Plan:

- Traffic and Street Classification Study for the Circulation Element;
- Demographic and Housing Data Report for the Housing Element;
- Noise and Vibration Study for the Noise Element;
- Land Use Mapping for the Land Use Element; and
- Air Pollutant and GHG Emission Calculations per CalEEMod and consistent with the WRCOG CAP.

The Traffic and Street Classification Study evaluates the existing circulation setting and identify improvements to help improve vehicular circulation and multimodal transportation facilities within the City of Jurupa Valley. Its goal will be to create a circulation network that increases the use of alternative modes of transportation, promotes safe travel for pedestrians, equestrians and bicyclists and maintains safe and efficient facilities for all travel modes.

The Demographic and Housing Data Report includes a housing needs assessment, demographic analysis, constraints analysis, site inventory, special needs assessment, and transitional and assisted housing assessment in support of the Housing Element to evaluate impacts from full build-out of the GP.

The Noise and Vibration Study is consistent with applicable procedures and requirements to evaluate the potential noise impacts of proposed land uses in the GP. The Noise and Vibration Study will include local noise standards, vibration standards, an ambient noise survey, noise contours maps, evaluation of mobile and stationary noise and vibration sources, and land use compatibility recommendations based on anticipated noise and vibration levels from GP implementation.

Land Use Maps have been prepared for the various technical studies and for the GP Land Use Element based on input from City staff, the General Plan Advisory Committee, and the public to reflect the City's preferred land use strategy. Additionally, existing mapping resources such as GIS layers from the Southern California Association of Governments (SCAG) and/or Riverside County will be utilized to the extent practical in support of the GP and EIR. For comparison, Table 3.A provides a summary of acreages between existing land use designations under the County General Plan and the new land use designations of the City of Jurupa General Plan. Existing land uses and vacant land are shown in Exhibit 3.3, *Existing General Plan Land Uses*.

Note that the Climate Action Plan (CAP) prepared by the Western Regional Council of Governments (WRCOG) has been incorporated by reference into the City's Air Quality Element and is an appendix of the EIR.

For the purposes of analysis in this EIR, the existing and potential buildout land uses under the GP are shown in Table 3.B, Residential Land Use Buildout Projections, and Table 3.C, Non-Residential Land Use Projections. The locations of these uses are shown in Figure 3.4, *Proposed General Plan Land Uses*.

3.6 GROWTH PROJECTIONS AND CUMULATIVE IMPACTS

The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land to a mixture of rural and suburban uses which is 16.1 percent of the City's total land area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C)

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years. CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a "plan summary" of long-term development impacts. In this case, the growth projections of the General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation.

Existing land uses in the City are shown in Figure 3.3 and the proposed future land uses are shown in Figure 3.4.

Table 3.A: County vs. City Land Use Designations

| Land Use* (Category/Designation) | Total Acres | | Existing Land Uses (acres) | | |
|--|-------------|----------|----------------------------|---------|---------|
| | County | City | Developed | Vacant | %Vacant |
| Residential Uses | | | | | |
| Rural Residential (RR) | 103.6 | 103.6 | 73.5 | 30.1 | 29.1% |
| Estate Residential (EDR) | 338.5 | 338.5 | 259.5 | 79.0 | 23.3% |
| Rural Community-Low Density Residential** (RC-LDR) | 5,492.0 | -- | -- | -- | -- |
| Very Low Density Residential (VLDR) | 71.0 | 97.4 | 93.1 | 4.3 | 4.4% |
| Low Density Residential (LDR) | 1,694.2 | 7,062.2 | 6,331.7 | 730.5 | 10.3% |
| Medium Density Residential (MDR) | 3,465.7 | 3,901.1 | 2,224.1 | 1,677.0 | 43.0% |
| Medium High Density Residential (MHDR) | 732.0 | 793.0 | 619.3 | 173.7 | 21.9% |
| High Density Residential (HDR) | 285.0 | 292.9 | 219.5 | 73.4 | 25.1% |
| Very High Density Residential (VHDR) | 85.6 | 88.8 | 31.6 | 57.2 | 64.4% |
| Highest Density Residential (HHDR) | 19.8 | 212.0 | 171.3 | 40.7 | 19.2% |
| Sub-Total Residential Uses | 12,287.4 | 12,889.5 | 10,023.6 | 2,865.9 | 22.2% |
| Non-Residential Uses | | | | | |
| Commercial Retail (CR) | 1,070.3 | 1,105.7 | 733.6 | 372.1 | 33.7% |
| Commercial Tourist (CT) | -- | 122.6 | 1.9 | 120.7 | 98.5% |
| Commercial Neighborhood (CN) | -- | 43.3 | 39.1 | 4.2 | 9.7% |
| Commercial Office (CO) | 14.9 | 14.9 | 12.0 | 2.9 | 19.5% |
| Business Park (BP) | 910.5 | 673.8 | 478.7 | 195.1 | 29.0% |
| Business Park-Specific Plan (BP-SP) | -- | 514.4 | 297.9 | 216.5 | 42.1% |
| Light Industrial (LI) | 3,334.6 | 3,076.8 | 2,503.1 | 568.4 | 18.5% |

3.7 RELATED DISCRETIONARY ACTIONS

3.7.1 City of Jurupa Valley

This program-level EIR is intended to inform the City of Jurupa Valley decision-makers and the general public of the environmental consequences of implementing the 2017 General Plan. Discretionary actions being analyzed in this EIR and that may be necessary from the City or from other agencies in the future, consistent with the approved 2017 General Plan, include but are not limited to:

- Approval of the 2017 General Plan;
- Subsequent discretionary approvals for private development projects and public works projects within the Plan area; and
- Public or private infrastructure projects by the City or other public or private agencies that support the anticipated level of growth in the City.

The City of Jurupa Valley is the Lead Agency for the 2017 General Plan, but discretionary actions may also be required by other agencies (see Section 3.7.2).

3.7.2 Actions by Others

Although the City of Jurupa Valley is the Lead Agency for the Proposed Plan, a number of other federal, state, or special purpose agencies may consult this EIR for their own decision-making and actions now or in the future. The following is a list of anticipated discretionary or non-discretionary

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

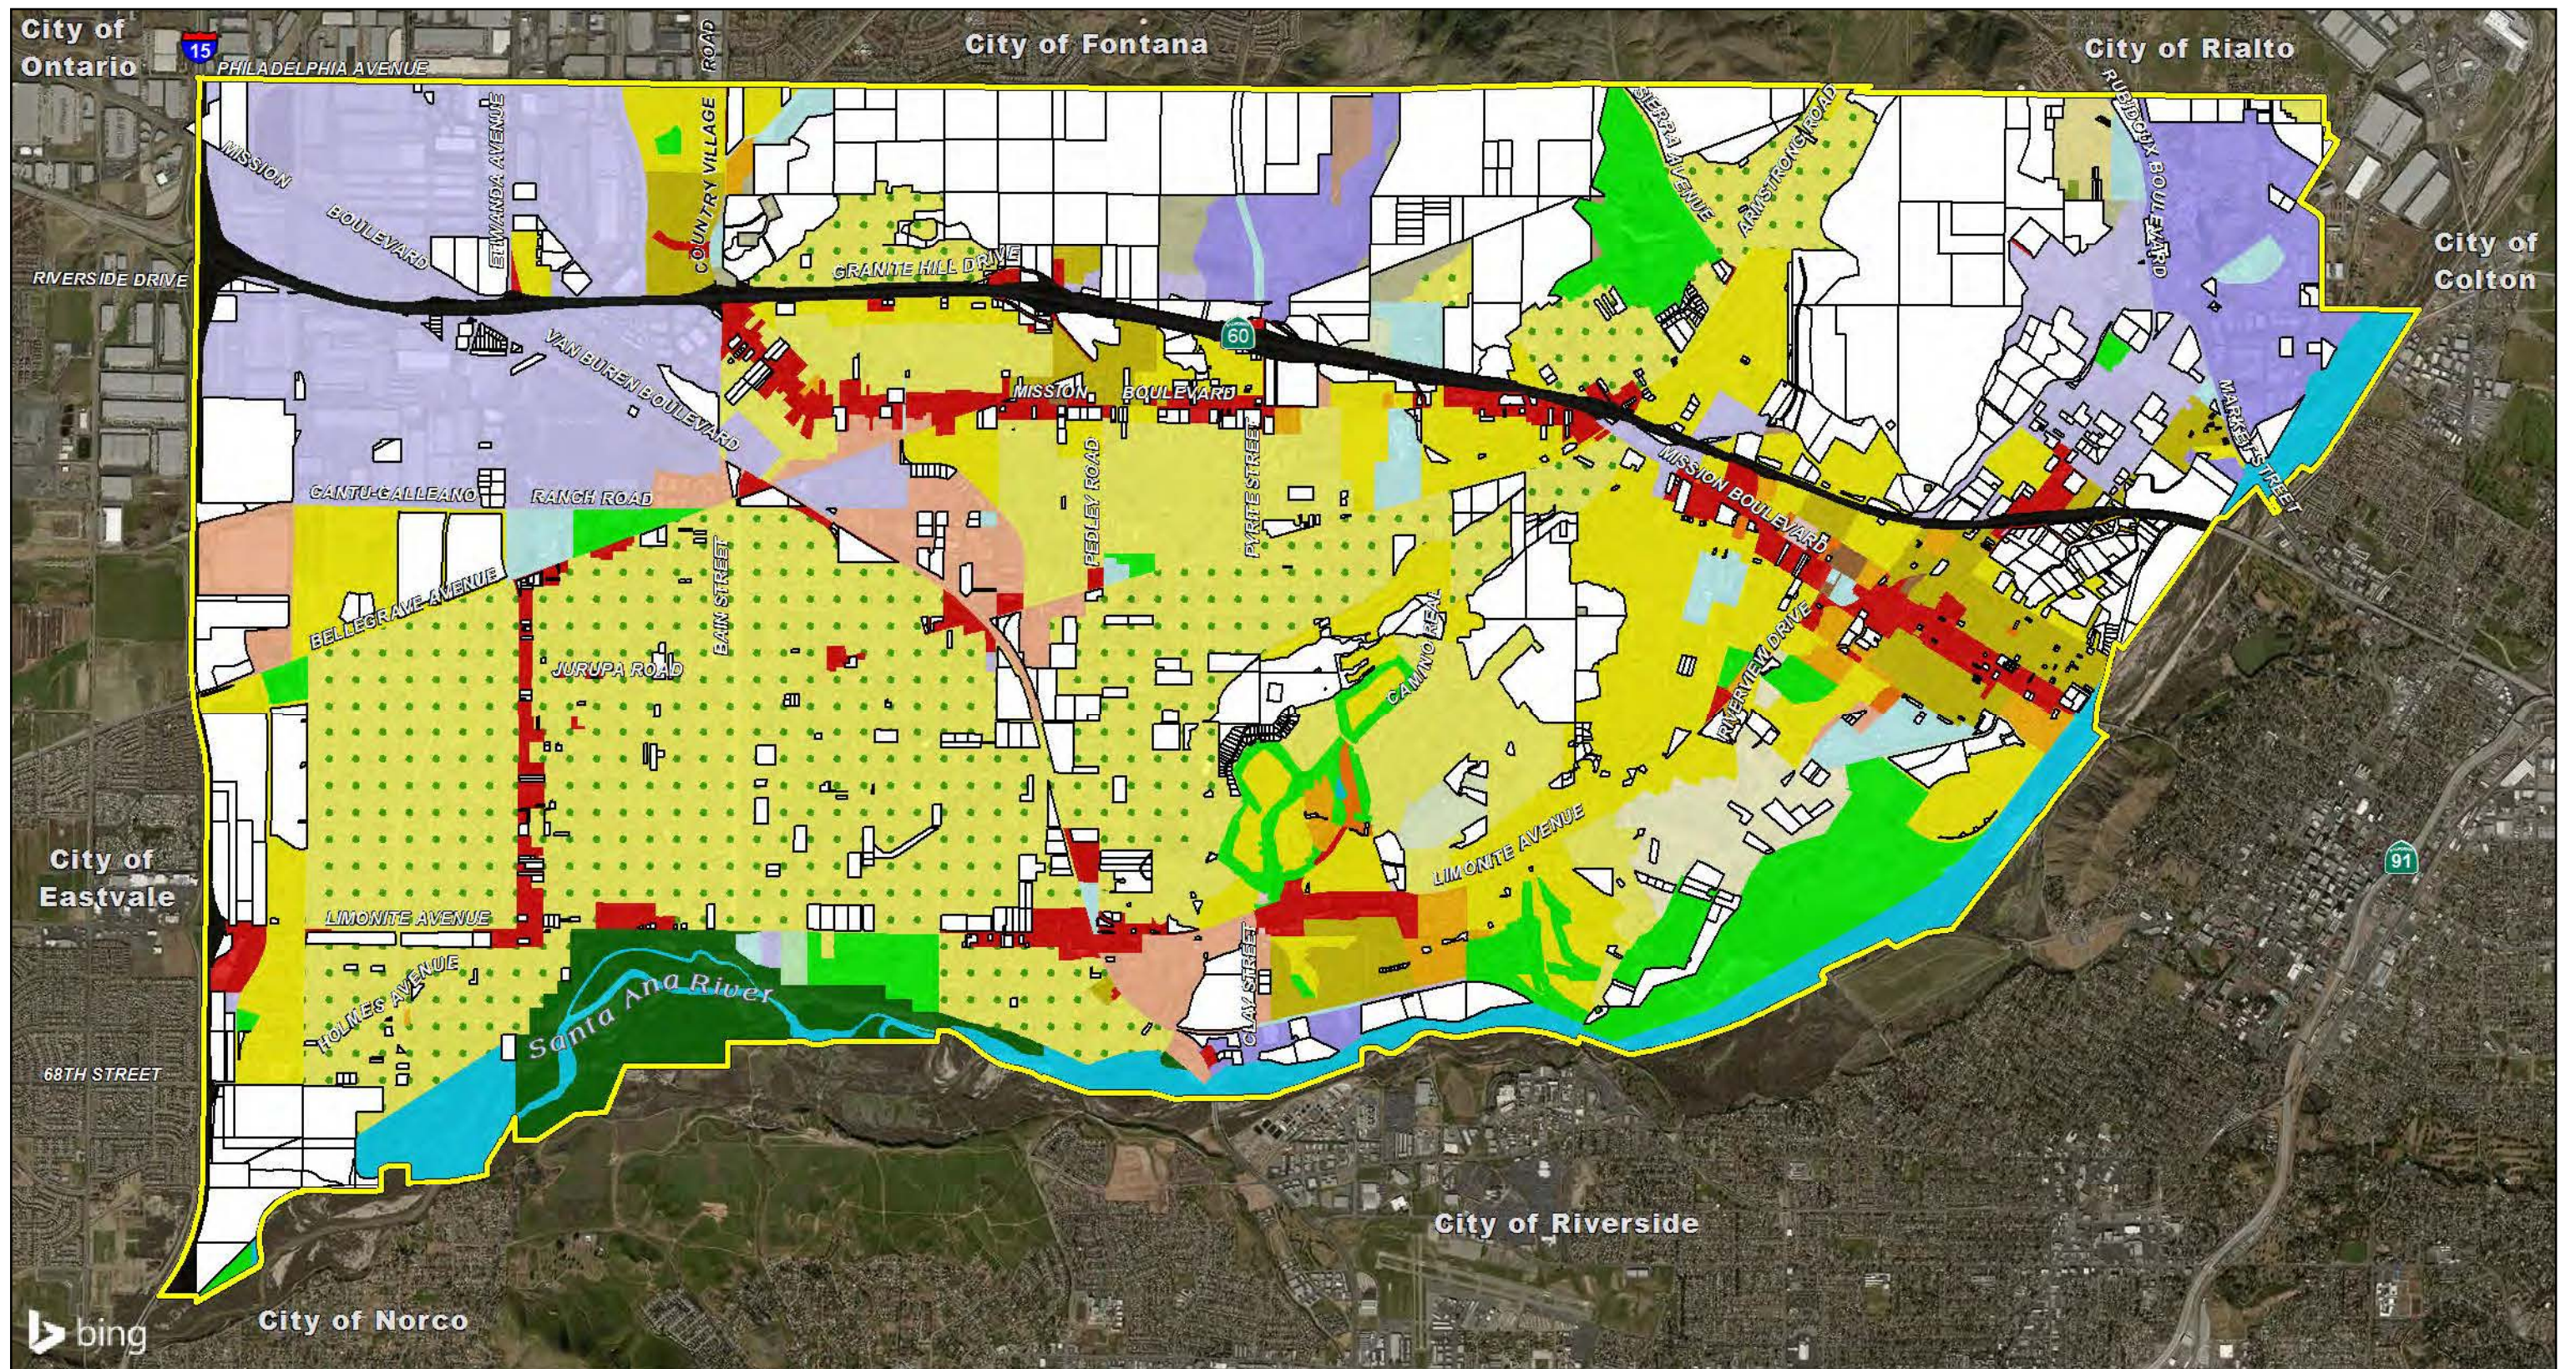

actions by other agencies; however, it is not exhaustive and may include other agencies and processes in the future as appropriate:

- ***State of California***

- Regional Water Quality Control Board: Water Quality Permitting for subsequent discretionary private development and public works improvements within the Plan area;
- Department of Fish and Wildlife permitting for future development and infrastructure (as needed)

- ***County/Local***

- Riverside County Flood Control and Water Conservation District approval of flood control and drainage improvements as necessary for private development and public works improvements;
- Water Supply Assessments for private development within the Plan area as appropriate;
- Approval by the Riverside County Airport Land Use Commission for private development and public works improvements as appropriate within airport land use plan areas;
- Annexation of some portions of the City into the Jurupa Community Services District;
- Rubidoux Community Services District;
- Cal Fire;

Jurupa Valley 2017 General Plan

THIS PAGE INTENTIONALLY LEFT BLANK

4.0 **PROGRAMMATIC ENVIRONMENTAL IMPACT EVALUATION**

As stated previously, there are seventeen environmental issue areas that are analyzed in this EIR with respect to the Proposed Plan. These issues are:

- | | |
|--|------------------------------------|
| 4.1 Aesthetics | 4.10 Land Use and Planning |
| 4.2 Agriculture and Forestry Resources | 4.11 Mineral Resources |
| 4.3 Air Quality | 4.12 Noise |
| 4.4 Biological Resources | 4.13 Population and Housing |
| 4.5 Cultural Resources | 4.14 Public Services |
| 4.6 Geology and Soils | 4.15 Recreation |
| 4.7 Greenhouse Gas Emissions | 4.16 Transportation and Traffic |
| 4.8 Hazards and Hazardous Materials | 4.17 Utilities and Service Systems |
| 4.9 Hydrology and Water Quality | |

Within each subsection described in Section 4.0, the following information is presented relative to each environmental issue described:

- *Existing Setting:* Description of the existing setting as it relates to the specific environmental issue;
- *Regulatory Framework:* A summary of the regulatory framework relevant to the specific environmental issue, including the 2017 General Plan goals, policies, and programs that relate to that specific issue;
- *Thresholds of Significance:* Identification of the thresholds of significance;
- *Methodology:* A description of the methods used to conduct the impact analysis.
- *Programmatic Impact Analysis:* An analysis of Plan-specific impacts and a determination of significance based on each identified threshold level for that issue;
 - *Programmatic Mitigation Measures:* Identification of General Plan goals, policies, and programs that will reduce potential programmatic impacts of future development, then identifying any mitigation measures over and above the General Plan goals and policies that are needed to reduce potential environmental impacts to less than significant levels;
 - *Level of Programmatic Impact After Mitigation:* A determination of the level of significance after mitigation measures are implemented; and
- *Cumulative Impacts.* An examination of whether the General Plan makes a significant contribution to broader impacts on a larger regional scale.

CEQA Guidelines §15125 establishes requirements for defining the environmental setting to which the environmental effects of a proposed project must be compared (in this case, the proposed “project” is the 2017 General Plan). The environmental setting is defined as “...the physical environmental conditions in the vicinity of the project, as they exist at the time the Notice of Preparation is published, or if no Notice of Preparation is published, at the time the environmental analysis is commenced...” (CEQA Guidelines §15125[a]).

The environmental analysis provided in Sections 4.1 through 4.17 focuses on changes in the existing physical environment at the time the NOP was issued (February 2, 2016) and identifies direct and indirect significant impacts associated with the proposed project (i.e., the 2017 General Plan). The cumulative impacts for each of the environmental issues identified in Sections 4.1 through 4.17.

4.1 AESTHETICS

This section describes the existing aesthetic condition of the 2017 General Plan area and analyzes potential impacts of implementation of the GP relative to views, and light and glare. For the purposes of the following analyses, two general aesthetic terms are defined: scenic vistas and viewsheds.

1. **Scenic Vistas.** A scenic vista can be categorized as either containing a panoramic view or a focal view. Panoramic views are typically associated with publicly-accessible vantage points that provide a sweeping geographic orientation not commonly available (e.g., skylines, valleys, mountain ranges, or large bodies of water). Focal views are typically associated with views of natural landforms, public art/signs, and visually important structures, such as historic buildings. Aesthetic components of a scenic vista include three components: scenic quality, sensitivity level, and view access.
2. **Viewsheds.** A viewshed is typically defined as the natural environment that is visible from one or more viewing points. CEQA documents most often define viewshed as what portions of the project viewers can see from surrounding areas. A viewshed can be divided into three distinct components: the foreground, midground, and background.

4.1.1 Existing Setting

According to the Conservation and Open Space Element:

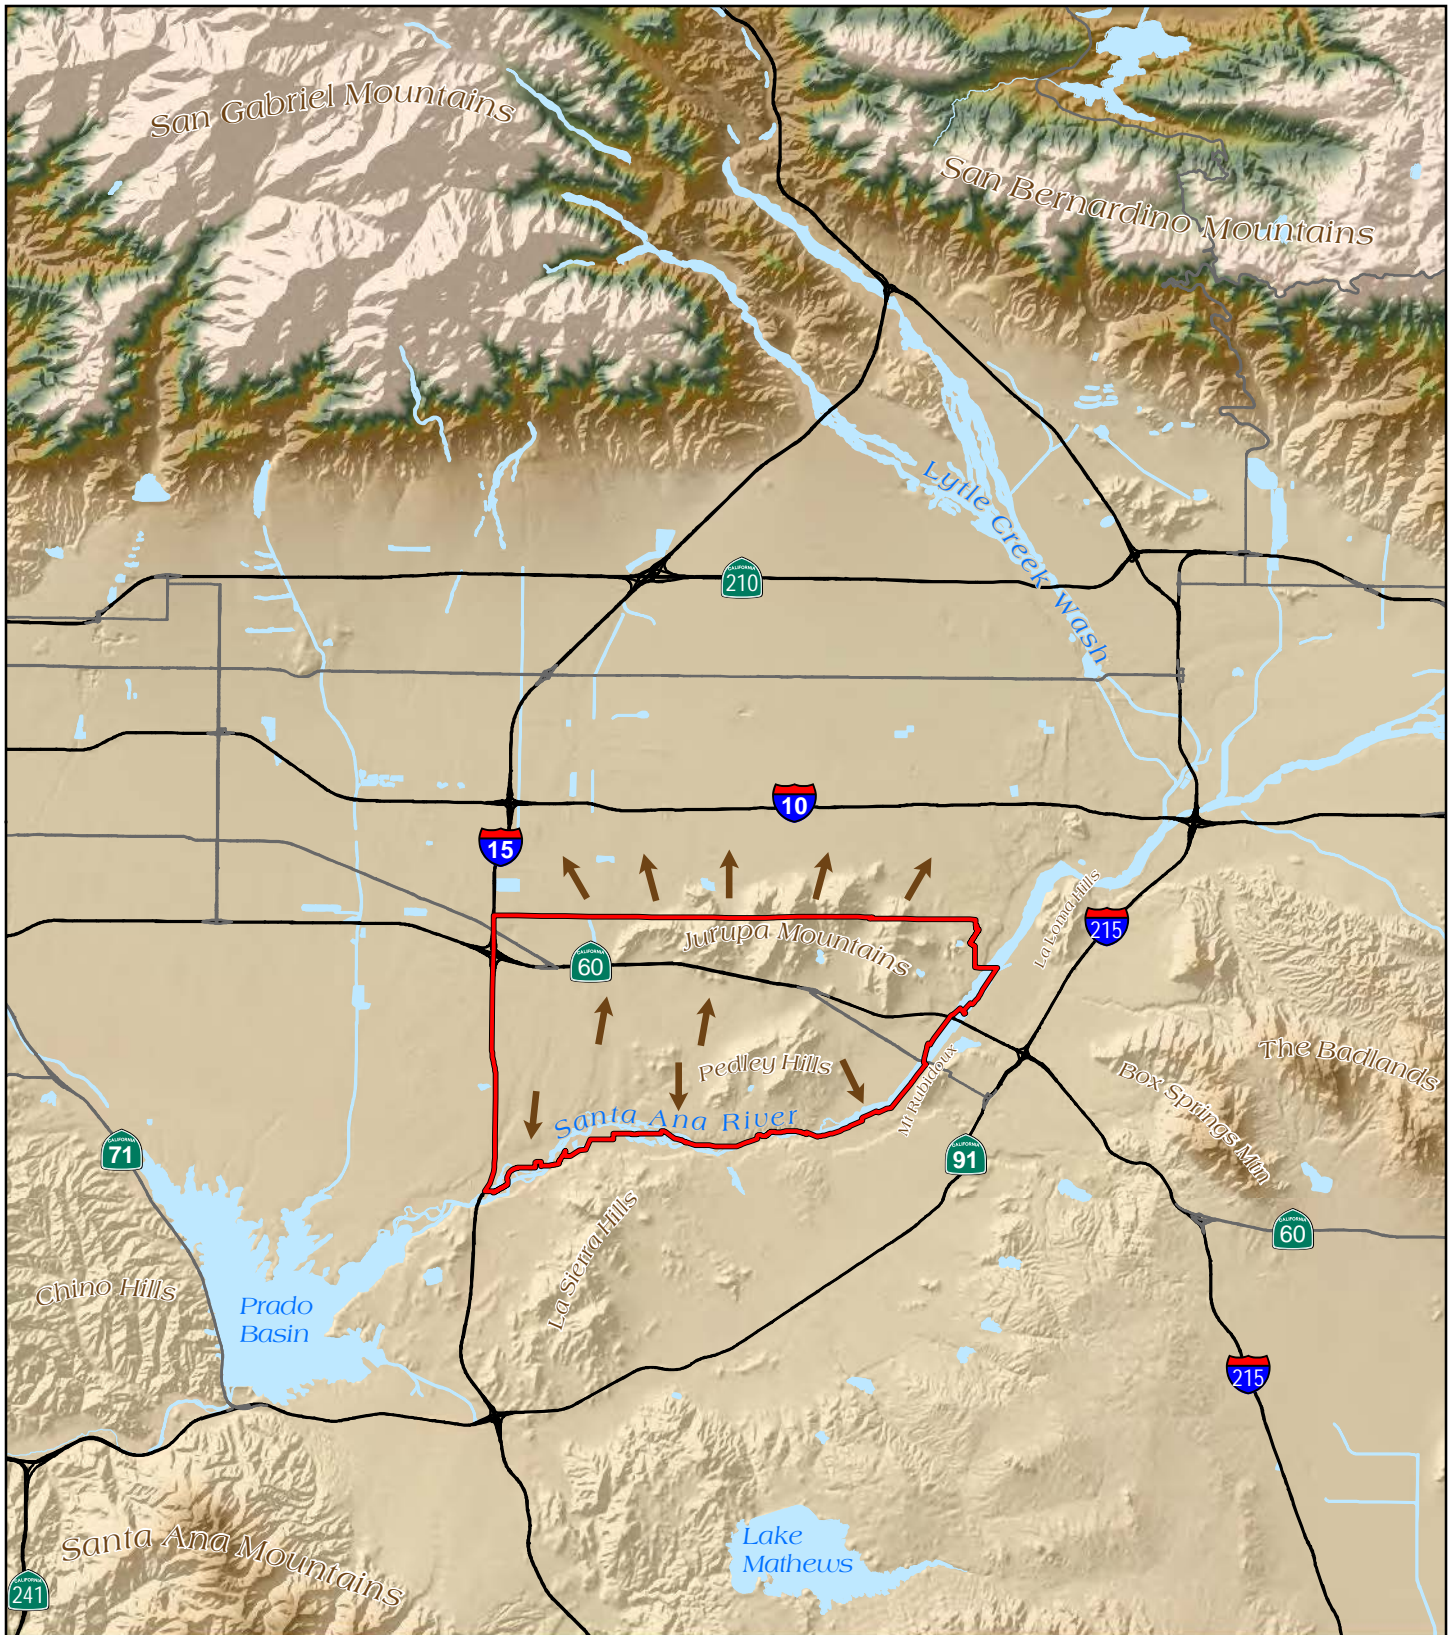

“The City contains outstanding scenic resources [that] give the City its distinctive character and appeal, and contribute to its residents’ quality of life. In general, scenic resources include natural areas that are visible to the public and include natural landmarks, hills, and mountain peaks, ridgelines, floodplains and stream channels, agricultural fields, mature trees and agricultural windbreaks, riparian woodlands and other prominent or unusual landscape features. Scenic backdrops include hillsides and ridges that rise above or adjacent to urban or rural areas or highways. Scenic vistas are points or corridors that are accessible to the public and that provide a view of scenic areas and/or landscapes.”

The General Plan indicates the City contains the following important visual and aesthetic resources:

- Santa Ana River and adjacent riparian corridors with natural banks and vegetation;
- Natural and manmade creeks, lakes and other water bodies;
- Wetlands and vernal pools;
- Jurupa Mountains and Pedley Hills;
- Undeveloped land within the City’s limits not intended for urban uses; and
- Hills, ridgelines, box canyons, scenic rock outcroppings, and other significant land features.

In addition, travelers along the I-15 Freeway (northbound) and certain vantage points within the City have views of the San Gabriel Mountains to the north and the San Bernardino Mountains to the northeast during much of the year. In general, there are many aesthetically pleasing views within the City, although specific views are largely dependent on the location and vantage point of a particular viewer and/or property. Typical views within the City are provided in Figure 4.1.1 shows major view sheds in the City, while Figure 4.1.2 shows the various “protected” open space lands within the City that would contribute to aesthetically pleasing views for City residents. Finally Figure 4.1.3 shows the designated roads and other travel corridors designated as scenic within the City.

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.13

Scenic Corridors and Roadways

THIS PAGE INTENTIONALLY LEFT BLANK

The General Plan makes it clear that open space is a critical part of what gives the City of Jurupa Valley its unique visual character. In 2016, approximately 6,500 acres or 11 percent of the City is undeveloped, including parkland, dedicated open space, and agricultural uses. The GP also indicates that open space and related land uses can play a key role in maintaining distinct community boundaries or “edges” (e.g., between Sunnyslope and Belltown), and by buffering more urbanized areas to the north, south and east.

“Several roadways in Jurupa Valley provide outstanding views of surrounding scenic resources. Enhancing aesthetic experiences for residents and visitors to the City and County is essential to preserving the aesthetic qualities and character of Jurupa Valley. It may also help to promote tourism, a small but potentially significant contributor to the City's economic health. Enhancement and preservation of these scenic requires careful application of scenic highway standards along officially designated scenic routes.”

4.1.1.4 Lighting and Glare

According to the Conservation and Open Space Element

“A dark sky is the night sky with minimal light impact from urban land uses or structures. Light intrusion into the night sky obstructs views of astrological features, has been shown to disrupt animal behavior and natural plant cycles, and negatively impact human health. Focusing lights where they are needed reduces light glare and light pollution, allowing the sky to be observed and enjoyed in a more natural state. Furthermore, strategies to reduce light impacts can also help conserve energy, lower energy costs and improve safety.”

At present, rural, vacant, and open space areas (e.g., Santa Ana River) within the City are relatively dark due to a lack of artificial lighting. Such areas may be at or near zero foot-candles per square foot which is the unit of measurement used by professionals when referring to sky glow and nighttime light levels. However, much of the City experiences general spillover of lighting from suburban development in the surrounding region, including freeways, roadways, shopping centers, moderate to higher density residential development, etc. While there may be areas of the City that are relatively dark at present (e.g. Paradise Knolls Golf Course, along the Santa Ana River), the City in general has ambient lighting levels that could be considered semi-rural to suburban depending on location. Glare typically results from: unsafe or irritating daytime reflections of sunlight from shiny surfaces (e.g., afternoon sunlight from windows impairing a driver's vision); or direct views of unshielded, exterior bright lighting elements (i.e., “hotspots”) at night. Both of these conditions exist to varying degrees at times within the City.

The International Dark Sky Association (IDA) is a non-profit, 501c3 organization with chapters forming in many parts of the world. It is one of many such organizations dedicated to reducing the environmental and health effects of unwanted light. Its mission is to preserve and protect the nighttime environment and our heritage of dark skies through environmentally responsible outdoor lighting. Many cities throughout California and the U.S. have become International Dark Sky Communities which is a town, city, municipality or other legally organized community that has shown exceptional dedication to the preservation of the night sky through the implementation and enforcement of a quality outdoor lighting ordinance, dark sky education and citizen support of dark skies. Dark Sky Communities excel in their efforts to promote responsible lighting and dark sky stewardship, and set good examples for surrounding communities.

4.1.1.5 NOP/Scoping Comments

While no members of the public commented during the public scoping process on aesthetics (i.e., visual or lighting conditions), there were numerous comments from the public during the General Plan Advisory Committee (GPAC) and General Plan preparation process on protecting visual resources and preventing lighting impacts from new development.

4.1.2 Regulatory Framework

There are no federal laws or regulations regarding visual resources applicable to the GP, and the only state law or regulation regarding visual resources is the State scenic highway program.

4.1.2.1 State Scenic Highway Program

The California Department of Transportation (Caltrans) does not identify any State-designated scenic highways¹ or Eligible Scenic Highway-Not Officially Designated within or adjacent to the City.² This includes the I-15 Freeway along the western boundary of the City, the SR-60 Freeway through the northern portion of the City, or the SR-91 Freeway near the eastern boundary of the City.

4.1.2.2 City of Jurupa Valley General Plan

The City's proposed Conservation and Open Space Element incorporates two state-mandated general plan elements to help protect local natural resources, including viewsheds and other aesthetic resources. This Element addresses...

...the conservation, development, and use of energy and natural resources, and the preservation of open space for protection of natural resources such as wildlife habitat, wetlands, recreation trails, and facilities, cultural and historic resources. From the input received at many general plan meetings, it is clear that preserving open spaces and protecting Jurupa Valley's semi-rural, equestrian lifestyle are very important to residents. These environmental qualities attract residents and visitors, and enhance Jurupa Valley's quality of life. The importance of open space is reflected in the City's Community Values Statement:

"Open Space and Visual Quality. We value and protect the Santa Ana River and river plain, ridgelines, and hillsides for their exceptional value for recreation, watershed, wildlife habitat, environmental health, and as scenic backdrops for the City. As part of our values, we support prevention and removal of visual blight, protection of public vistas, and community awareness and beautification activities. Jurupa Valley's special places will be protected, maintained, and promoted to preserve our unique character, instill local pride, and encourage tourism."

The Conservation and Open Space Element also promotes public health and safety by redirecting development away from areas subject to geologic hazards, flooding, and fires. Jurupa Valley contains a variety of open spaces that serve many functions, hence the often used label of "multi-purpose." The City's quilted pattern of hills, valleys, and slopes provide a variety of habitats including riparian corridors, oak woodlands, and chaparral habitats. Examples include the Jurupa Mountains, the Santa Ana River, and the Pedley Hills. In particular, the Santa Ana River borders the City on its eastern and southern flanks and includes many native plant species, some, which grown only in the habitat this river provides.

The following goals, policies, and programs of the Conservation and Open Space Element of the 2017 General Plan address open space, views, aesthetics, and lighting conditions in the City:

1 A State Scenic Highway is defined as any freeway, highway, road, or other public right-of-way, that traverses an area of exceptional scenic quality.

2 *Eligible and Officially Designated Routes*, California Department of Transportation Scenic Highway Program, website accessed April 13, 2016. <http://www.dot.ca.gov/dist3/departments/mtce/scenic.htm>

Conservation and Open Space Element

COS 8. Open Space and Recreation Resources

Goals

- COS 8.1 Secure and maintain a diverse network of open lands including valuable natural and recreational resources, including:
- A. Santa Ana River floodway and riparian areas
 - B. Jurupa Mountains
 - C. Wetlands and vernal pools
 - D. Wildlife habitat and corridors, particularly for species of local concern or for species that are officially listed as threatened or endangered.
 - E. Parks and natural areas with significant recreational opportunities
- COS 8.2 Encourage public access to open space without harming the resource and without exposing the public or property owners to unacceptable risk.
- COS 8.3 Preserve open space and wildlife habitat and help provide trails and other recreation opportunities where they will not harm the environment.
- COS 8.4 Avoid actions that will result in the loss of designated open space resources and when feasible, require mitigation for their loss.

Policies

- COS 8.1.1 **Environmental Resource Protection.** Preserve and maintain open space that protects environmental resources and protects public health and safety.
- COS 8.1.9 **Open Space Enhancement and Restoration.** Encourage, and as budget resources allow, support the enhancement and restoration of permanently dedicated open space and trail easements. Enhancements may include trail clearing, erosion protection, drainage, fencing, revegetation, trash clean up, directional and interpretative signage, and other improvements the City Council determines necessary for public health and safety.

COS 9. Scenic Resources

Goals

- COS 9.1 Preserve the City's scenic resources, including mountains, hills, ridgelines, rock outcroppings, canyons, mature trees, Santa Ana River and floodplain, riparian corridors, agricultural fields and other landscape features deemed significant by the City Council.
- COS 9.2 Preserve views of scenic resources from vista points or along scenic street or highway corridors.

Policies

- COS 9.1.1 Protect scenic resources, especially the skylines, undeveloped ridgelines, rocky hillsides, river view corridors, and outstanding scenic vistas not designated for urban uses from development and maintain it in their current patterns of use.
- COS 9.1.2 Ensure that development in areas with scenic values, including natural or agricultural landscapes, is visually subordinate to and compatible with the dominant landscape features, colors and textures. Development includes, but is not limited to buildings, signs (including billboard signs), roads, utility and telecommunication lines and structures. Such development shall:

1. Avoid visually prominent locations such as ridgelines, and slopes exceeding 20 percent.
2. Avoid unnecessary grading, vegetation removal, and site lighting.
3. Incorporate building forms, architectural materials, and landscaping, that respect the setting, including the historical pattern of development in similar settings, and avoid stark contrasts with its setting.
4. Preserve scenic or unique landforms, significant trees in terms of size, age, species or rarity, historical features, and rock outcroppings.

COS 9.1.3 Urban development. Implement the following aesthetic principles and will encourage other agencies with jurisdiction to do so:

- A. **Design Context.** Urban development should be designed to reflect its architectural, environmental, and historical context. This does not necessarily prescribe a specific style, but requires deliberate design choices that acknowledge human scale, natural site features, and neighboring urban development, and that are compatible with historical and architectural resources. Plans for sub-areas of the city and within the three village centers may require certain distinctive architectural styles.
- B. **Utilities and Signs.** In and near public streets, public spaces and parks, and important scenic resources, features that clutter, degrade, intrude on, or obstruct views should be avoided. Necessary features, such as utility and communication equipment, and traffic equipment and signs should be designed and placed to not impinge upon or degrade scenic views, consistent with the primary objective of safety. New billboard signs within scenic corridors should be avoided and existing billboard signs should be removed when possible.
- C. **Streetscapes and Major Roadways.** In the acquisition, design, construction or significant modification of major roadways (highways/regional routes and arterial streets), the City will promote the creation of “streetscapes” and linear scenic parkways or corridors that promote the City’s visual quality and character, enhance adjacent uses, and integrate roadways with surrounding districts. To accomplish this, the City will:
 1. Establish streetscape design standards for major roadways.
 2. Encourage the creation and maintenance of planted medians and widened parkway landscaping.
 3. Retain mature trees in the public right-of-way.
 4. Emphasize the planting and maintenance of California Native tree species of sufficient height, spread, form and horticultural characteristics to create the desired streetscape canopy, shade, buffering from adjacent uses, and other desired streetscape characteristics.
 5. Encourage the use of water-conserving landscaping, street furniture, decorative lighting and paving, arcaded walkways, public art, and other pedestrian-oriented features to enhance streetscape appearance, comfort, and safety.
 6. Encourage and where possible, require undergrounding of overhead utility lines and structures.

- COS 9.1.4 **View protection in new development.** The City will include in all environmental review and carefully consider effects of new development, streets and road construction, grading and earthwork, and utilities on views and visual quality.
- COS 9.1.5 **Views to and from public places, including scenic roadways.** The City will preserve and improve views of important scenic resources from public places, and encourage other agencies with jurisdiction to do so. Public places include parks, plazas, the grounds of civic buildings, streets and roads, and publicly accessible open space. In particular, the route segments shown in Figure COS-25 are designated as local scenic roadways.
- COS 9.1.6 **Scenic Corridors and Roadways.** Development projects along and within scenic corridors, including State highway projects, noise walls, and new private or public construction shall not wall off scenic roadways and block views of scenic resources. The following measures shall be implemented:
1. Utilities, traffic signals, and public and private signs and lights shall not intrude on or clutter views, consistent with safety needs.
 2. Where important vistas of distant landscape features occur along local streets, street trees shall be clustered to facilitate viewing.

Programs

- COS 9.1.1.1 **Visual assessments.** Require evaluations and/or visual simulations for development projects that could affect scenic resources and scenic vistas.
- COS 9.1.1.2 **Scenic Highway Designation.** Advocate State and County scenic highway designations and protective programs for highways and other roads connecting Jurupa Valley with other communities.
- COS 9.1.1.3 **Undergrounding Utilities.** Place existing overhead utilities underground, with highest priority for scenic roadways, entries to the City and require utilities, community service districts and other responsible agencies to do likewise.
- COS 9.1.1.4 **Billboards.** Amend the Municipal Code as needed to discourage and where necessary and appropriate, prohibit the installation of new billboard signs along scenic corridors and roadways and to provide for the eventual removal of existing billboards through amortization, conditions of development approval, and grants for enhancing open-space and transportation corridors. The highest priority for billboard limitations and removal shall be along scenic roadways and at City gateways.
- COS 9.1.1.5 **New Development.** Ensure that new development within designated scenic highway corridors are designed with adequate site planning, setbacks, non-structural noise buffers and construction assemblies to avoid the need for sound attenuation, while balancing the objectives of maintaining scenic resources with accommodating compatible land uses.
- COS 9.1.1.6 **Grading.** Utilize contour grading and slope rounding to gradually transition graded roads slopes, utilities and development sites within and adjacent to scenic highway corridors to create natural landscape forms that follow the area's natural topography.

COS 10. Dark Skies

Goal

- COS 13.1 Minimize light trespass and pollution caused by public and private structures, new development, and public facilities to ensure safety, protection of the natural environment, and preservation of dark nighttime skies.

Policies

- COS 13.1.1 **Outdoor Lighting.** Avoid outdoor lighting that:
1. Operates at unnecessary locations, levels, and times
 2. Spills onto areas offsite or to areas not needing or wanting illumination
 3. Produces glare (intense line-of-site contrast)
 4. Includes lighting frequencies (colors) that interfere with astronomical viewing
- COS 13.1.2 **New Residential Development and Remodeling Projects.** Require development projects and major remodel projects to minimize light pollution and trespass while enhancing safety and aesthetics.
- COS 13.1.3 **Public Facilities, Buildings and Streets.** Use outdoor light shielding measures to minimize light trespass and glare while enhancing safety and aesthetics.
- COS 13.1.4 **Commercial and Industrial Buildings.** Require that site lighting for commercial and industrial uses is unobtrusive and constructed or located so that only the intended area is illuminated, off-site glare is prevented and adequate safety is provided.
- COS 13.1.5 **Public Education and Outreach.** Support programs that provide public education on the importance of dark skies and how to protect them. Collaborate with non-profit and other public agencies to help achieve our goals.

Programs

- COS 13.1.1.1 **Lighting Standards.** Develop lighting standards based on the International Dark-Sky Association's (IDA's) Model Lighting Ordinance, with emphasis on preserving the City's equestrian, semi-rural character.
- COS 13.1.1.2 **Retrofit Plan.** Establish a retrofitting plan for outdoor lighting on City streets and at City facilities, and encourage community service districts to do the same.
- COS 13.1.1.3 **Grant Funding.** Seek grant funding for City lighting upgrades, incentive programs, and new fixtures.
- COS 13.1.1.4 **Public Awareness.** Develop a dark sky public awareness campaign (e.g., April is Dark Sky Month, dark sky page on city's website, City Council proclamation, etc.).
- COS 13.1.1.5 **Regional Collaboration.** Collaborate with neighboring jurisdictions to identify the appropriate location and night lighting standards for a dark sky park.
- COS 13.1.1.6 **Engineering Standards.** Review City engineering standards for possible changes to public street lighting locations, design and spacing to reduce light pollution, improve energy efficiency and maintain safety.

In addition, the Mobility Element of the 2017 General Plan contains the following goals regarding scenic highways:

Goal

ME-9 Scenic Corridors, Street Character and Design Goals, Policies and Programs

ME 7.1 Scenic Corridors Designated. The route segments shown in *Figure 3-62* designated as local scenic corridors.

ME 7.2 Scenic Corridor Preservation. Protect and where possible, enhance views of important scenic resources from highways, streets, and roads designated as local scenic corridors, in accordance with City policies.

ME 7.3 Development Along Scenic Corridors. Public and Private development along and within local scenic corridors shall comply with the following:

- a. Public and private development projects, including noise walls, shall not wall off scenic roadways or block views of scenic resources, such as Santa Ana River or the Jurupa Mountains.
- b. Development projects, including signs, visible from and located 500 feet of a scenic roadway shall be considered “sensitive” and require architectural review.
- c. As part of the city's environmental review process, blocking of views along scenic roadways should be considered a significant environmental impact.
- d. Signs along scenic roadways should not obstruct or detract from scenic vistas or views.
- e. Street lights should be low scale and focus light at intersections where it is needed most. Tall light standards should be avoided. Street lighting should be integrated with other street furniture at locations where views are least disturbed.

ME 7.4 Public Equipment and Facilities. The City and other agencies should locate and design utility and circulation-related equipment and facilities to avoid blocking or cluttering views of scenic resources from scenic roadways, consistent with the following standards:

- a. Whenever possible, signs in the public right-of-way should be consolidated onto a single low-profile standard.
- b. Public utilities along scenic highways should be installed underground.
- c. The placement and design of fencing, walls, landscaping, and street trees should not block views of scenic resources from Scenic Routes. Clustering of street trees along scenic roadways should be considered as an alternative to uniform spacing.
- d. Traffic signals with long mast arms should be discouraged along scenic roadways.

ME 7.5 Creation of Scenic Highways. The City will encourage the creation of State-designated (Caltrans) Scenic Highways within Jurupa Valley and adjoining Riverside, San Bernardino, and Orange County areas when:

- a. Reviewing draft county general plan elements or major revisions to them.

- b. Reviewing changes to the Regional Transportation Plan (RTP) as a member agency of the Southern California Association of Governments (SCAG).
- c. Reviewing development projects that are referred to the City by State or County agencies and that are located along locally designated scenic routes.

4.1.3 Methodology

Any evaluation of visual impacts is necessarily subjective; however, community aesthetic values can be used to evaluate overall as well as site-specific changes in views within a particular community. These values are found in General Plan policies, zoning ordinances, and, where specific policies are absent, general design theory and visual analysis methods can be incorporated to evaluate aesthetic impacts. For the purposes of CEQA compliance, this analysis of potential visual impacts will focus on changes in the visual character that could result from the future private development or public works improvements within the Plan area. Due to the importance of visual resources in and to the City, loss of any important or specifically identified visual resources would be considered a significant impact in the context of this EIR.

While the Plan itself will not result in direct visual changes in the City, future development may result in direct or indirect impacts to various visual resources. For future development, the Plan must outline how impacts to the existing environment of the Plan Area are to be determined (i.e., by the contrast between the site's visual setting before and after a proposed development) in order to determine whether a particular visual impact is significant. In these future analyses, it must be remembered that the Plan outlines strategies as to how the City and its land uses will transform from their present condition to the future envisioned condition (i.e., to a suburban community that emphasizes rural and equestrian-oriented uses and important visual resources). Although few standards exist to singularly define perceptions of aesthetic value, the degree of visual change will have to be measured and described in terms of visibility and visual contrast, dominance, and magnitude on a project by project basis.

4.1.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. Appendix G of the State *CEQA Guidelines* recognizes the following significance thresholds related to aesthetics. Based on these significance thresholds, an action would have a significant impact on aesthetic resources if it would result in:

1. A substantial adverse effect on a scenic vista;
2. Substantial damage to scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway;
3. Substantial degradation of the existing visual character or quality of the site and its surroundings; and/or
4. A new source of substantial light or glare that would adversely affect daytime or nighttime views in the area.

4.1.5 Programmatic Environmental Evaluation

4.1.5.1 Visual Character

| | |
|-----------|---|
| Threshold | Would the proposed project have a substantial adverse effect on a scenic vista? |
| Threshold | Would the proposed project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway and/or local scenic road? |
| Threshold | Would the proposed project substantially degrade the existing visual character or quality of the site and its surroundings? |

Programmatic Impacts. The City provides a variety of scenic vistas to residents and travelers including the La Sierra Hills, the Santa Ana River, the Jurupa Mountains, the Pedley Hills, and the San Gabriel Mountains. Due to the importance local residents place on these visual resources, any substantial loss of public¹ views of these resources would be considered a significant impact. The Conservation and Open Space Element² of the General Plan identifies specific local scenic roadways along which views must be protected (see previous Figure 4.1.3).

It is possible that future private development or public infrastructure may negatively affect existing views of visual resources, although it should be noted the City has adopted design guidelines for certain areas of the City which will also help implement process-oriented measures to protect aesthetic views in the City. There are no state-designated scenic highways or state-eligible scenic routes within or adjacent to the City at this time.

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and programs of the Conservation and Open Space Element of the 2017 General Plan are specifically related to visual character (i.e., scenic vistas, scenic resources, etc.)(for complete text, see Section 4.1.2.2):

Conservation and Open Space Element

Goals

- COS 8.1 Provide a network of open lands including Santa Ana River floodway, riparian areas, Jurupa Mountains, wetlands and vernal pools, wildlife habitat and corridors, parks, and natural areas with significant recreational opportunities
- COS 8.2 Encourage public access to open space areas without increasing risk.
- COS 8.3 Preserve open space, wildlife habitat, trails and other recreation opportunities.
- COS 8.4 Avoid loss of designated open space or require mitigation for its loss.

Policies

- COS 8.1.1 Preserve open space that protects environmental resources.
- COS 8.1.9 Enhance and restore permanent open space and trail easements.

1 CEQA requires the evaluation of impacts to **public views**, not private views, to determine significance. While the discussion of views from individual residences or neighborhoods provides useful programmatic planning information regarding the change in views, the actual determination of the significance of visual impacts of future development has to be made on a project level based on specific views from **public** areas and roadways and not changes in views from individual houses or yards.

2 See Figure COS-24, Jurupa Valley Scenic Roadways Map, Conservation and Open Space Element

Goals

- COS 9.1 Preserve all the City's designated scenic resources including mountains, hills, ridgelines, rock outcroppings, canyons, mature trees, Santa Ana River and floodplain, riparian corridors, agricultural fields and other landscape features.
- COS 9.2 Preserve views of scenic resources from vista points or along scenic streets.

Policies

- COS 9.1.1 Protect scenic resources (skylines/ridgelines, rocky hillsides, river view corridors, and outstanding scenic vistas not designated for urban uses.
- COS 9.1.2 Ensure that development in areas with scenic values, including natural or agricultural landscapes, is visually compatible with the dominant landscape.
- COS 9.1.3 Develop and implement aesthetic principles for development within the City.
- COS 9.1.4 Consider visual quality when reviewing new development or public works plans.
- COS 9.1.5 Preserve and improve views of important scenic resources from public places.
- COS 9.1.6 Development should not block views along scenic corridors and roadways.

Programs

- COS 9.1.1.1 Require visual simulations for development that could affect scenic vistas.
- COS 9.1.1.2 Advocate for scenic highway designations and protective programs.
- COS 9.1.1.3 Place existing overhead utilities underground along scenic roadways.
- COS 9.1.1.4 Discourage inappropriate placement of billboards along scenic corridors.
- COS 9.1.1.5 New development must take scenic resources into account with its design.
- COS 9.1.1.6 Utilize contour grading and slope rounding to gradually transition graded slopes.

These goals and policies emphasize that the design and planning for new development must take visual or scenic resources into consideration. Several of them direct new development along scenic corridors or roadways to carefully consider major views or other resources. In addition, Mobility Element Goal ME-9 and Policies ME 7.1 through 7.5 address the need and planning for scenic highways. The various measures appear to address major areas of potential concern, so future impacts of development on visual resources will be reduced to less than significant levels.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs regarding visual and scenic resources will not result in significant aesthetic impacts regarding visual resources, and no mitigation is required.

4.1.5.2 Light and Glare

| | |
|-----------|--|
| Threshold | Would the proposed project create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area? |
|-----------|--|

Programmatic Impacts. Future private development and public improvements within the City would introduce a substantial new source of light and glare in the form of street lighting, parking lots, and security lighting, nighttime traffic, and landscape lighting. This new lighting will incrementally increase overall nighttime conditions in the City and contribute to less “dark sky” conditions. The community has indicated it values rural and semi-rural living conditions, and a major contribution to such conditions is lighting levels that are lower than typical urban or even suburban areas.

As new development is planned and occurs, care must be exercised to make sure the potential spillage of light from a particular building or site is minimized through the use of fixtures, cut-off shielding, etc. With the proper goals and policies, it will be possible to protect dark sky conditions in the City to the extent possible or practical, but understanding Jurupa Valley is slowly transitioning from a rural/agricultural community to a more suburban/rural community. As that transition occurs, overall ambient lighting levels will increase as vacant or agricultural land with no lighting is converted to some form of development (e.g., even rural equestrian residential development has some type of night lighting impacts).

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and programs of the 2017 General Plan Conservation and Open Space Element are specifically related to light, glare, and “dark sky” conditions (for complete wording, see Section 4.1.2.2):

Conservation and Open Space Element

Goal

COS 13.1 Minimize light trespass and preserve dark nighttime skies.

Policies

- COS 13.1.1 Implement outdoor lighting and glare restrictions.
- COS 13.1.2 Restrict lighting and glare from new residential development and remodeling.
- COS 13.1.3 Restrict lighting and glare from public works and roadway improvements.
- COS 13.1.4 Restrict lighting and glare from commercial and industrial development.
- COS 13.1.5 Support education/programs to minimize lighting impacts and preserve dark skies.

Programs

- COS 13.1.1.1 Develop standards based on the International Dark Skies Model Lighting Ordinance
- COS 13.1.1.2 Establish lighting retrofit program for City streets and facilities.
- COS 13.1.1.3 Seek grants for City lighting upgrades and incentive programs.
- COS 13.1.1.4 Develop a dark sky public awareness program.
- COS 13.1.1.5 Collaborate with neighboring jurisdictions to identify a dark sky park location.
- COS 13.1.1.6 Revise City engineering standards if necessary to reduce light pollution.

With implementation of the indicated 2017 General Plan goals, policies, and programs as mitigation, potential impacts of future development under the 2017 General Plan can be reduced to less than significant levels and no programmatic mitigation is needed. However, each future development or public improvement must be evaluated individually to determine if or to what degree it affects a specific view or views within the City.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs regarding lighting and glare will not result in significant aesthetic impacts, and no mitigation is required.

4.1.8 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

For context, the cumulative “universe” for impacts to aesthetic (visual or lighting) resources relative to the City's General Plan would be western Riverside County which includes views of the San Gabriel and San Bernardino Mountains, a number of agricultural areas, localized hills, and the Santa Ana River as a visual backdrop to future development.

CEQA typically requires a cumulative analysis using a “list” of cumulative projects or a “plan summary” of long-term development impacts. In this case, the growth projections of the General Plan represent the “plan summary” for the purposes of characterizing cumulative impacts related to General Plan implementation.

The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land to a mixture of rural and suburban uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

The worst case growth projections assumed no new open space or conservation areas would be added which could help protect or enhance visual resources or reduce overall lighting increases. However, it is likely new development, especially larger developments and those in the Jurupa Hills north of the SR-60 Freeway will be required to dedicate open space to protect biological resources, which could also protect associated visual resources as well.

The goals, policies and programs of the Conservation and Open Space Element of the 2017 General Plan cited in Sections 4.1.5.1 and 4.1.5.2 related to visual resources and lighting strongly direct protection and enhancement of these resources will be an important consideration in the evaluation of future development.

It should be noted that the General Plan growth projections also provide “scaled back” or “environmentally superior” growth estimates which would be more likely to occur than the listed maximum development potential, since some amount of new development would be dedicated as open space as part of the City's development review process, and these areas may provide additional or enhanced scenic resources.

By its very nature, the 2017 General Plan establishes overall guiding principles or programmatic direction against which to review new development to ensure it does not result in significant impacts to scenic resources, or results in a substantial increase in lighting or glare as development occurs. These programmatic actions will help reduce impacts of individual development projects within the City to less than significant levels. For these reasons, implementation of the City's 2017 General Plan will not make a significant contribution to cumulatively adverse impacts to aesthetic resources.

The cumulative effect on scenic vistas and visual resources from implementation of the 2017 General Plan would be less than significant because the proposed goals, policies, and programs of the Plan will protect and preserve identified public scenic vistas as future development occurs within the City. As a result, the project would create a less than significant cumulative impact on local scenic vistas, scenic resources, and visual character.

Cumulatively, more lighting would be introduced into the area by proposed, existing, and future development both in the City and from surrounding communities. The City cannot control lighting impacts from development or activities outside of its jurisdiction, but the incremental contribution to cumulative lighting-related impacts from development within the City can be reduced to less than significant levels by implementing the indicated goals, policies, and programs of the General Plan as outlined in Sections 4.1.2.2. Therefore, the 2017 General Plan would make a less than significant contribution to cumulatively considerable aesthetic impacts from regional growth in western Riverside County, and no programmatic mitigation is recommended.

THIS PAGE INTENTIONALLY LEFT BLANK

4.2 AGRICULTURE AND FORESTRY RESOURCES

This section discusses possible agriculture and forestry resource impacts attributable to the Proposed Plan. It describes existing agricultural resources and state farmland classifications within the Plan Area. This section focuses on applicable state, regional, and local policies regarding agricultural resources and the conversion of farmland to non-agricultural uses. The analysis contained in this section is based on the following reference documents:

- *Conservation and Open Space Element, City of Jurupa Valley General Plan*, December 2016, (draft).
- *California Land Cover Mapping and Monitoring Program and the Fire and Resource Assessment Program*, California Department of Forestry and Fire Protection (CalFire). April 2016.
- *A Guide to the Farmland Mapping and Monitoring Program*, California Department of Conservation, Division of Land Resources Protection, 2004 Edition.
- *California Land Evaluation and Site Assessment Model, Instruction Manual*, California Department of Conservation, Office of Land Conservation, 1997.

4.2.1 Existing Setting

4.2.1.1 Agriculture

According to the Conservation and Open Space Element¹...

“Agriculture was once the dominant land use and economic activity in Jurupa Valley. Over time, land use and economic changes have largely displaced farming, grazing, vineyards, dairy, orchards, and other agricultural activities to less urbanized areas. Reflecting this change, the last dairy in Jurupa Valley closed in 2015. However, the City continues to have areas in agricultural use, particularly along the I-15 corridor and near the Santa Ana River. Countywide, agriculture continues to contribute significantly to the overall economy. In Jurupa Valley, agriculture continues to be important as a contributor to the local economy, a key open space resource, and a defining feature of the communities’ overall visual character and rural heritage. Moreover, agriculture is fundamental to the notion of “sustainability” -- it helps preserve productive soils and Jurupa Valley’s capacity to grow food locally for local use.”

The land within the City is underlain by a variety of soils that are suitable for many types of agriculture, especially in the flatter portions of the City adjacent to the Santa Ana River and just east of the I-15 Freeway north of the river. Most of the local soils are relatively sandy and/or loamy which comprise a deep alluvial flood plain caused by repeated flooding along Santa Ana River to the south. The more northern upland areas do not contain agricultural soils (i.e., USDA Soil Class I or II). At present the only large active agricultural activities are in the far western portion of the City adjacent to the I-15 Freeway and north of Limonite Avenue.

Utilizing data from the U.S. Department of Agriculture (USDA) Natural Resource Conservation Service (NRCS) soil survey and current land use information, the California Department of Conservation (DOC), the Farmland Mapping and Monitoring Program (FMMP)² compiles important farmland maps for each county within the State. According to available FMMP data and mapping, the proposed General Plan area contains a total of 2,819 acres of designated farmland in the classifications shown in Table 4.2.A.

¹ Conservation and Open Space Element, introduction to Policy COS 4, Agricultural Resources.

² A Guide to the Farmland Mapping and Monitoring Program, California Department of Conservation, Division of Land Resources Protection, 2004 Edition.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Table 4.2.A: Designated Farmland in Jurupa Valley

| Designation | Acres | Percent |
|--|---------------|--------------|
| Prime Farmland | 612 | 21.7 |
| Farmland of Statewide Importance | 39 | 1.4 |
| Unique Farmland | 91 | 3.2 |
| Farmland of Local Importance | 2,077 | 73.7 |
| <i>Sub-Total</i> | 2,819 | 100.0 |
| Total All Farmland Designations | 2,819 | 10.1 |
| Urban, Built-Up, and Other Land (i.e., non-farmland designation) | 25,027 | 89.9 |
| Total | 27,846 | 100.0 |

Source: FMMP mapping database, website accessed July 2016

The prime farmland is mainly located in the western portion of the City (just east of the I-15 Freeway north of Limonite Avenue) and the land designated as farmland of local importance located in the west, southeast, and northeast portions of the City. The FMMP data shows 130 acres designated as farmland of statewide importance or unique farmland. The FMMP mapping designates approximately 90 percent of the City land as Urban, Built-up, and Other Land which has no agricultural use or value. Figure 4.2.1 shows the location of FMMP mapped farmland soils within the City.

4.2.1.2 California Land Conservation Act (Williamson Act)

The California Land Conservation Act of 1965, also referred to as the Williamson Act, is a non-mandated State program administered by counties and cities for the preservation of agricultural land. This program enables local governments to enter into contracts with private landowners to restrict specific parcels of land to agricultural or related open space use. In return, landowners receive much lower property tax assessments than normal because the assessments are based upon farming and open space uses rather than full market value. According to the Riverside County Farm Bureau and the County Department of Regional Planning, until recently there were two Williamson Act contracts in the City covering a total of 275 acres. They were both located just east of the I-15 Freeway and just north of the Santa Ana River but records show they were recently cancelled as part of two proposed development projects; CV Communities and Stratham Homes.

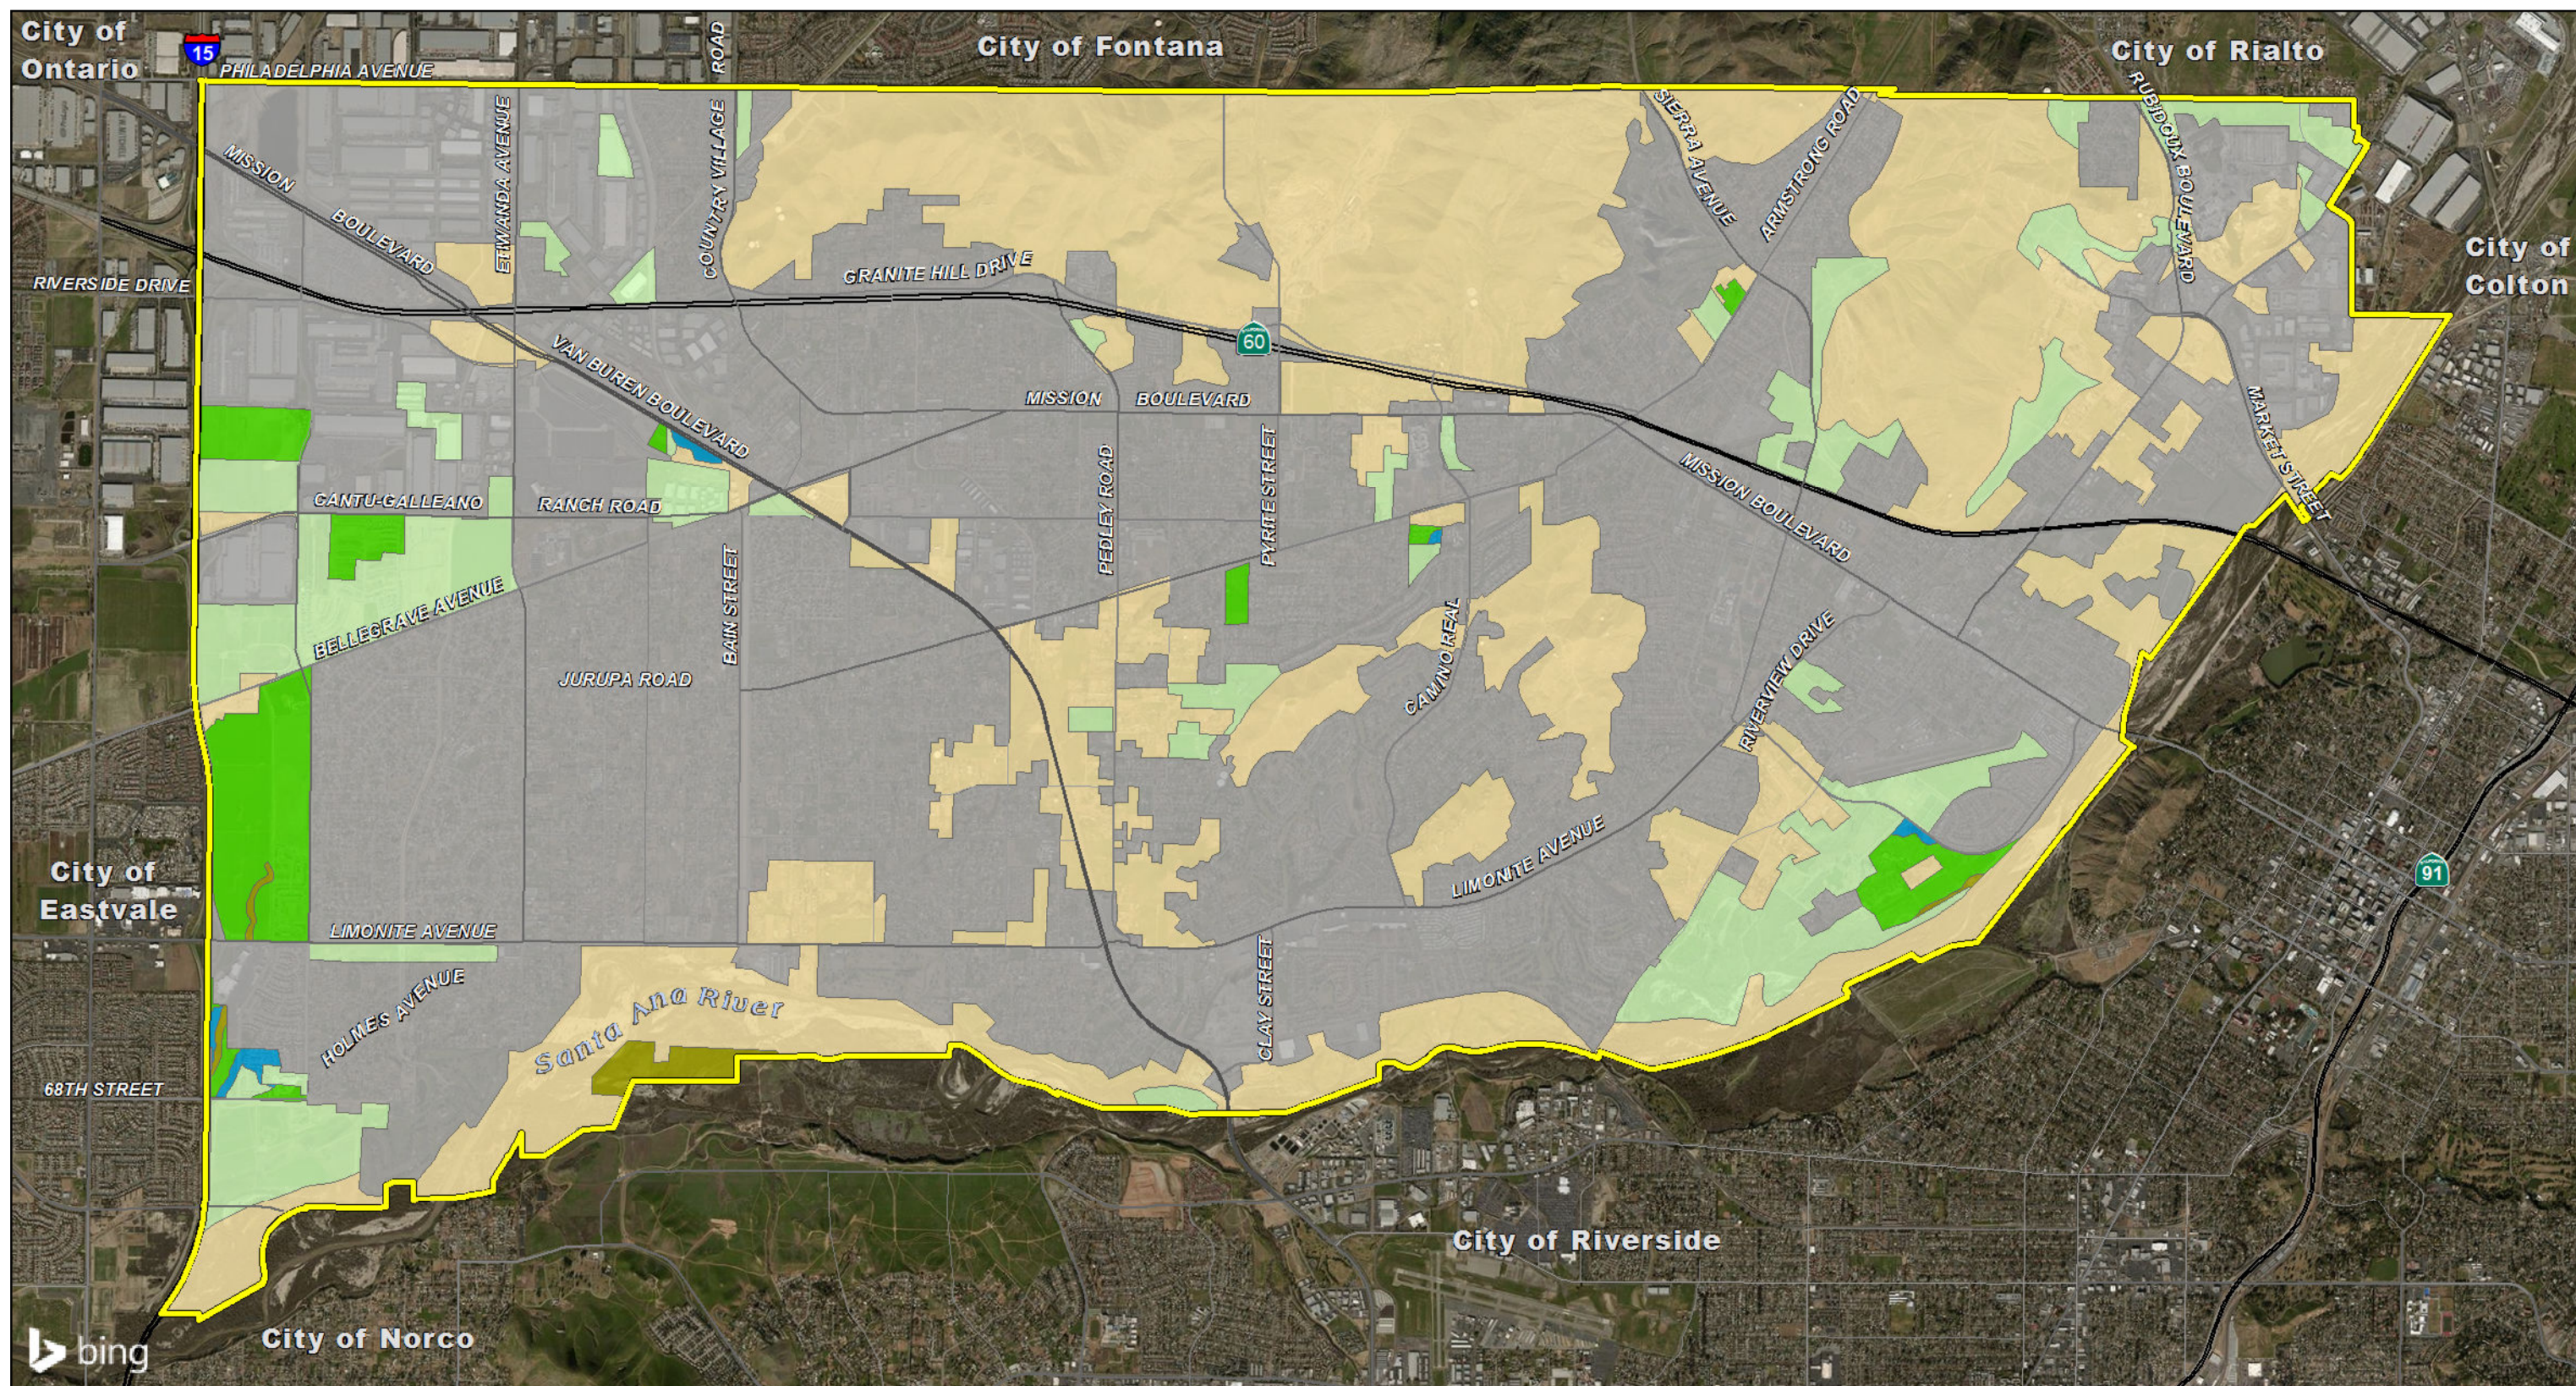

4.2.1.3 Forest Resources

The California Department of Forestry and Fire Protection (CalFire) and the U. S. Forest Service conduct land cover mapping and monitoring to enhance fire protection and natural resource management on public and private lands in California. According to the California Land Cover Mapping and Monitoring Program¹ and the Fire and Resource Assessment Program (FRAP) under CalFire, the City contains no identified forest resources, including the vegetation along the Santa Ana River. However, it should be noted that the vegetation along the northern river bank, within the City, contains a substantial number of large native and non-native trees, including eucalyptus, oak, California Pepper, cottonwood, willow, California sycamore, etc. and large assemblages of these trees are classified as “woodlands” of various types by biologists and the resource agencies (see Section 4.4.1, Vegetation).

4.2.1.4 NOP/Scoping Comments

There were no public comments during the public scoping process regarding agriculture or forest resources. However, during the General Plan preparation process, a number of residents expressed concern about the loss of agricultural land/activities.

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.2.1
Farmland in Jurupa Valley

THIS PAGE INTENTIONALLY LEFT BLANK

4.2.2 Regulatory Framework

4.2.2.1 State of California

The California Government Code (Section 65570) requires the collection and reporting of agricultural land use acreage and conversion by June 30 of each even-numbered year. Utilizing data from the U.S. Department of Agriculture (USDA) Natural Resource Conservation Service (NRCS) soil survey and current land use information, the California Department of Conservation (DOC), the Farmland Mapping and Monitoring Program (FMMP)¹ compiles important farmland maps for each county within the State. Maps and statistics are produced biannually using a process that integrates aerial photo interpretation, field mapping, a computerized mapping system, and public review. These maps delineate land use in eight mapping categories (and one overlay category) and represent an inventory of agricultural soil resources within Riverside County.

California Land Conservation Act (Williamson Act). The California Land Conservation Act of 1965, also referred to as the Williamson Act, is a non-mandated State program administered by counties and cities for the preservation of agricultural land. This program enables local governments to enter into contracts with private landowners to restrict specific parcels of land to agricultural or related open space use. In return, landowners receive much lower property tax assessments than normal because the assessments are based upon farming and open space uses rather than full market value.

4.2.2.2 City of Jurupa Valley General Plan

It is the City's intent to preserve productive agricultural land wherever possible and to discourage the conversion of productive agricultural land unless there are overarching community-wide benefits from conversion of agricultural land to urban uses. The Conservation and Open Space Element contains the following goals, policies, and programs to help preserve agricultural activities within the City which are designed to provide for a smooth transition to rural or suburban uses when agricultural land is converted to non-agricultural use:

Conservation and Open Space Element

COS 1. Biological Resources

Goal

COS 1.1 Protect, preserve, and create the conditions that will promote the preservation of significant trees and other vegetation, particularly native California species.

Policies

COS 1.1.3 **Other Significant Vegetation.** Maintain and conserve superior examples of agricultural windrows, street trees, stands of mature native and non-native trees, and other features of ecological, aesthetic, and conservation value.

COS 4. Agricultural Resources

Goal

COS 4.1 To continue to accommodate agricultural uses and encourage its expansion, where appropriate.

Policies

COS 4.1.1 **Support Agricultural Uses.** Employ a variety of agricultural land conservation programs to improve the viability of farms and ranches and thereby ensure the long-term

¹ A Guide to the Farmland Mapping and Monitoring Program, California Department of Conservation, Division of Land Resources Protection, 2004 Edition.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

conservation of viable agricultural uses in cooperation with individual farmers, farming organizations, farmland conservation organizations and the County.

COS 4.1.2 **Agricultural Land Conversion.** Discourage the conversion of productive agricultural lands to urban uses unless the property owner can demonstrate overarching Community-wide benefits or need for conversion.

COS 4.1.3 **Compatible Uses.** Encourage the combination of agriculture with other compatible uses to help provide an economic advantage to agriculture. In areas designated for agricultural uses, allow activities related to the production of food, fiber, and support uses incidental to the on-site agricultural operation, such as farm stores, retail sales of produce or wares, and related, accessory uses.

Programs

COS 4.1.1.1 **Farmland Conservation.** Encourage individuals, non-profit agencies and the County to seek out grants and programs that promote farmland conservation, such as land trusts, conservation easements, Williamson Act designation, Land Conservation Contracts, Farmland Security Act contracts, the Agricultural Land Stewardship Program Fund; agricultural education programs, density averaging and development standards, and/or incentives (e.g., clustering and density bonuses) to encourage conservation of productive agricultural land.

COS 4.1.1.2 **Sustainable Agriculture.** Encourage sustainable agricultural practices to protect the health of human and natural communities and to minimize conflicts between agriculture and urban neighbors.

In addition, the Environmental Justice Element of the General Plan contains the following goals, policies, and programs relative to agriculture in the City:

Environmental Justice Element

EJ 4 Healthy and Affordable Housing

Goal

EJ 4.9 Ensure that regulations allow community and private gardens where residents can grow healthy fruits and vegetables.

The Land Use Element of the 2017 General Plan also contains the following policies related to agriculture:

Land Use Element

Policies

LUE 1.3 **Prime Farmland.** Encourage conservation of designated Prime Farmland and productive agricultural lands.

LUE 1.4 **Right-To-Farm.** Adhere to the Riverside County Right-To-Farm Ordinance and any subsequent ordinance assuring the ability of farmers to continue with legally-established agricultural activities.

4.2.3 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. Appendix G of the *CEQA Guidelines* recognizes the following significance thresholds related to agricultural resources. Based on these significance thresholds, potential impacts to agricultural resources could be considered significant if the proposed project would:

- (A) Conflict with existing zoning for agricultural use, or a Williamson Act contract;
- (B) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220[g]), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104[g]);
- (C) Result in the loss of forest land or conversion of forest land to non-forest use;
- (D) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of farmland to non-agricultural use or conversion of forest land to non-forest use; and/or
- (E) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program (FMMP) of the California Resources Agency, to non-agricultural use.

4.2.4 Methodology

The methodological analysis underlying this section of the EIR consists of the following:

- First, determine if the City contains any forest or forest-related resources. If so, identify their location and potential impacts if they were to be removed/lost over time as development occurs within the City.
- Next, analyze the FMMP data to determine if portions of the City are designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.
- Third, evaluate the current versus proposed General Plan land use designations and zoning applicable to agricultural land or activities within the City to determine if any conflicts exist between agriculture and zoning within the City.
- If necessary, use information from the California Land Evaluation and Site Assessment (LESA) model, developed by the State Department of Conservation, as a guide to quantify any potential impacts the Proposed Plan may have on agricultural resources. Note that the LESA model is currently considered to be the most reliable method by which to determine the potential impacts of an individual project on agricultural resources.

4.2.5 Programmatic Impact Evaluation

4.2.5.1 Existing Zoning and Williamson Act

| | |
|-----------|--|
| Threshold | Would the project conflict with existing zoning for agricultural use or a Williamson Act contract? |
|-----------|--|

Programmatic Impacts. Prior to incorporation, data from the Southern California Association of Governments (SCAG) and Riverside County indicate approximately 5,178.2 acres within Jurupa Valley were zoned for various kinds of agricultural uses, including Light Agriculture (A-1, A-1-4, and A-2.5 zones) and Residential Agriculture (R-A zone) as shown below:

| County Zone | Acres |
|-------------|----------|
| A-1 | 3,962.26 |
| A-1-1 | 106.67 |
| A-1-1/2 | 186.73 |
| A-1-10 | 83.15 |
| A-1-2 | 8.12 |
| A-1-4 | 297.01 |

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

| County Zone | Acres |
|--------------|-----------------|
| A-1-5 | 294.98 |
| A-2 | 7.12 |
| A-2-10 | 142.33 |
| A-2-20 | 30.78 |
| A-2-5 | 50.63 |
| A-P | 8.44 |
| Total | 5,178.22 |

The 2017 General Plan includes agricultural lands under the “Open Space, Rural” land use category. Most residents and land owners have expressed a strong desire for land in the City to be designated for suburban-type used but that ongoing agricultural activities are encouraged to continue as long as the land owner desires and it they are economically feasible. Once the General Plan is adopted, it will no longer conflict with the County agricultural zoning because the City will no longer have any agricultural zones.

According to County records until recently there were two properties in the southwest portion of the City that have Williamson Act contracts on them, totaling approximately 275 acres. However, records show they were recently cancelled as part of two proposed development projects; CV Communities and Stratham Homes. The Williamson Act requires a ten year phase out of its agricultural preserve status and there are severe tax penalties for early withdrawal from the Act program. Due to the small amount of property covered by the Act in the City, and the existing state regulatory process and restrictions regarding this specific land use designation, potential impacts regarding the Williamson Act will be less than significant, and no mitigation is required.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the 2017 General Plan are specifically related to agriculture and related resources:

Conservation and Open Space Element

Goal

COS 1.1 Preserve significant trees and other vegetation, particularly native California species.

Policy

COS 1.1.3 Maintain and conserve superior examples of agricultural windrows.

Goal

COS 4.1 Accommodate and encourage expansion of agricultural activities.

Policies

COS 4.1.1 Use agricultural land conservation programs to improve the viability of farms.

COS 4.1.2 Discourage the conversion of productive agricultural land.

COS 4.1.3 Encourage placement of uses compatible with agriculture on adjacent land.

Programs

COS 4.1.1.1 Encourage landowners to use farmland preservation and protection programs.

COS 4.1.1.2 Encourage sustainable agricultural activities to minimize land use conflicts.

Environmental Justice Element

Goal

EJ 4 Provide healthy and affordable housing.

Policy

EJ 4.9 Allow community/private gardens so residents can grow their own food.

Land Use Element

Policies

LUE 1.3 Encourage conservation of Prime Farmland and productive agricultural lands.

LUE 1.4 Adhere to the Riverside County Right-To-Farm Ordinance.

Implementation of the above General Plan goals, policies, and programs as future development occurs will help ensure that potential impacts to agricultural zoning and the Williamson Act within the City will be less than significant. The most important goal in this regard will accommodate and encourage expansion of agriculture where practical and desired by the landowner (Goal COS 4.1) supported by Policy 4.1.3 which discourages land uses that are incompatible with existing agriculture, and Programs 4.1.1.1 and 4.1.1.2 to help local landowners protect agriculture when they wish. Finally, Land Use Element Policies LUE 1.3 and 1.4 clearly indicate prime farmland and the right-to-farm should be protected in the City. It should be noted that the term “development” in this policy applies to building improvements on both private and public actions involving vacant land.

Level of Programmatic Impact Before Mitigation. The General Plan goals, policies, and programs outlined above will provide sufficient transition of agricultural land to rural and suburban land uses, and potential impacts to agricultural zoning and the Williamson Act will be less than significant.

Programmatic Mitigation Measures. No mitigation needed or feasible (see Section 4.3.5.4, *Potential Project-Level Mitigation*).

Level of Programmatic Impact After Mitigation. With implementation of the identified General Plan goals, policies, programs, potential impacts to agricultural resources from development within the City will be less than significant and no mitigation is feasible.

4.2.5.2 Forest Land Zoning

| | |
|-----------|---|
| Threshold | Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))? |
|-----------|---|

Programmatic Impacts. Public Resource Code Section 12220(g) defines forest land as:

“land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits.”

According to the California Department of Forestry and Fire Protection (CalFire), there are no areas designated as forest land or timberland within the City limits, including land associated with the Santa Ana River. The river and adjacent lands do contain riparian (stream-related) vegetation, but the riparian species present in these areas are not considered forestland even though they do support a number of native trees (e.g., willow, cottonwood, etc.). These lands are more accurately characterized as “woodlands” by biologists and the resource agencies, but its many trees do not necessarily constitute actual forest resources. In addition, the land along the river is classified as Public/Quasi-Public and cannot be logged or its trees harvested as part of any forest activity in any case.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Evaluation of General Plan Goals and Policies. The General Plan does not contain any specific goals, policies, or programs regarding forestland because that resource is not present in the City.

Level of Programmatic Impact Before Mitigation. Since there are no forest resources identified within the City, no significant impacts would occur to forest zoned land from the implementation of the proposed General Plan, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. There are no forest resources within the City, so there will be no significant impacts would occur to forest zoned land from the implementation of the proposed General Plan, and no mitigation is required.

4.2.5.3 Loss or Conversion of Forest Land

| | |
|-----------|---|
| Threshold | Would the project result in the loss of forest land or conversion of forest land to non-forest use? |
|-----------|---|

As discussed above in Section 4.2.5.2 above, there are no areas designated as “forest lands” within the City limits. Therefore, no significant impacts would occur from the implementation of the 2017 General Plan in this regard, and no mitigation is required.

4.2.5.4 Conversion of Farmland to Non-Agricultural Uses

| | |
|-----------|---|
| Threshold | Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of farmland to non-agricultural use, or conversion of forest land to non-forest use? |
|-----------|---|

Programmatic Impacts. Land within the City does currently supports approximately 3500 acres of active agriculture and also contains over 2,000 acres of land that is underlain by soils suitable for farming (i.e. Soil Conservation Service Class I through III soils), mainly in the western and southwestern portions of the City. It is likely that at some point in time, some or all of these areas will covert to some type of suburban land use (e.g., residential, commercial, etc.) consistent with the goals and policies of the City General Plan. The eventual regional conversion of agricultural land to non-agricultural uses is a result of regional economic processes, although conversion of individual properties is a policy decision of the City based on community needs and benefits. While this impact is not considered a significant environmental impact, the City nonetheless has included goals, policies, and programs in its General Plan to help ease the transition of land use from agriculture to non-agricultural uses as local conditions warrant (see Section 4.2..6).

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the 2017 General Plan are specifically related to agriculture and related resources:

Conservation and Open Space Element

Goal

COS 1.1 Preserve significant trees and other vegetation, particularly native California species.

Policy

COS 1.1.3 Maintain and conserve superior examples of agricultural windrows.

Goal

COS 4.1 Accommodate and encourage expansion of agricultural activities.

Policies

- COS 4.1.1 Use agricultural land conservation programs to improve the viability of farms.
- COS 4.1.2 Discourage the conversion of productive agricultural land.
- COS 4.1.3 Encourage placement of uses compatible with agriculture on adjacent land.

Programs

- COS 4.1.1.1 Encourage landowners to use farmland preservation and protection programs.
- COS 4.1.1.2 Encourage sustainable agricultural activities to minimize land use conflicts.

Land Use Element

Policies

- LUE 1.3 Encourage conservation of Prime Farmland and productive agricultural lands.
- LUE 1.4 Adhere to the Riverside County Right-To-Farm Ordinance.

Land Use Element Policies LUE 1.3 and 1.4 clearly indicate prime farmland and the right-to-farm should be protected in the City. The goals, policies, and programs in the other cited Elements implement the community desire to provide a smooth transition from agriculture to rural and suburban land uses if landowners choose to convert their agricultural land to other uses (i.e., “highest and best use”) depending on their individual and regional market conditions. Jurupa Valley was at one time largely an agricultural area with land uses that supported and were consistent with farming. However, this area and the surrounding communities (e.g., Eastvale, Riverside, Fontana, Ontario, etc.) have been slowly transitioning away from agriculture as their populations change and desire different types of communities. While this may represent a fundamental land use change over the years, it is not necessarily an adverse environmental impact, especially at a programmatic level, as long as the involved jurisdiction provides support to existing agricultural uses while establishing a process for orderly transition to other uses as community-wide needs and individual and market conditions dictate.

Level of Programmatic Impact Before Mitigation. Conversion of agricultural land to non-agricultural uses will be an eventual result of implementation of the General Plan. As land that currently supports or could support agriculture is developed, there will be less and less agricultural activity in the City. The City’s General Plan reflects the community’s desire that agriculture remain viable and active as long as it is economically practical and local landowners wish to farm. The General Plan clearly states one of its goals is to provide a transitional process away from agriculture toward rural and suburban land uses. While this will eventually result in fundamental land use change for the area, this is not considered a significant environmental impact. At a programmatic level, there are no mitigation measures needed for this transitional process other than implementation of the outlined General Plan goals, policies, and programs. This represents a less than significant impact relative to conversion of farmland to non-agricultural uses (i.e. yes it will occur but no it is not significant), and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed or feasible (see below).

Potential Project-Level Mitigation. The following information provides context for the programmatic nature of the General Plan versus project-level mitigation that is typically suggested by conservation groups when evaluating environmental impacts of a General Plan.

Consideration has been given to the formation or contribution to an agricultural mitigation bank as potential mitigation for the eventual loss of agriculture in Jurupa Valley. The County of Riverside considered the establishment of an Agricultural Mitigation Bank to mitigate the loss of farmland during the adoption process of the Riverside County General Plan in 2003; however, purchase of credits in such a bank to mitigate the loss of agricultural lands as part of the Draft EIR for the County General

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Plan (refer to Mitigation Measures 4.2.2A, B, and C in the Draft EIR of the Riverside County Integrated Project) were specifically removed from the General Plan during the public hearings on the General Plan.¹ Since potential mitigation for regional loss of agriculture has already been considered and rejected by the County, such mitigation would be even less feasible on a city-wide only basis.

In 2009, a regional agricultural conversion report was prepared by CBRE Consultants² for a private development project in the City of Perris. The CBRE report concluded that the agriculture industry will continue to decline in the Inland Empire and identified three main reasons for the decline: 1) the more affordable housing market in the region compared to Los Angeles and Orange Counties, 2) the competition for cheaper farm labor from areas like the South Central Valley, and 3) lower water allocations to agriculture because of the growing urban population that receives priority for the water. The reports also noted that the agriculture industry within the Inland Empire is very small, making up only 4.1 percent of California's total agricultural industry and only 1 percent of the regional economy in 2010. There is a clear pattern of agricultural decline from 2006 to 2010. Over these four years, 24,000 acres of farmland were removed in the Inland Empire to make way for of urban land uses. Agricultural production levels were 28 percent lower in 2010 than they were in 2004. The combination of the small size of the Inland Empire's agricultural industry and the three key economic constraints caused this study to conclude that the agriculture industry in the Inland Empire is in decline. Under these circumstances, no mitigation that would artificially preserve or prolong agricultural activities (i.e., other than current market forces) in the Plan Area would be feasible or necessary.

Therefore, there are no feasible mitigation measures to preserve agriculture on a permanent basis within the City as a regional benefit, however, the Conservation and Open Space Element does have goals, policies, and programs to help support agricultural activities in the City as long as feasible, and to help acknowledge the importance of local farming tradition in the Jurupa Valley community for future generations by encouraging the preservation of the City's agricultural history, such as historic agricultural buildings, hedgerows, farms, and ranches.

Level of Programmatic Impact After Mitigation. With implementation of the General Plan goals, policies, and programs regarding agriculture, environmental impacts of the General Plan in relation to conversion of farmland will be less than significant, and no mitigation is needed.

4.2.5.5 Loss of Prime Farmland

| | |
|-------------|--|
| Threshold E | Would the project result in the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program (FMMP) of the California Resources Agency, to non-agricultural land use? |
|-------------|--|

Programmatic Impacts. According to available FMMP data and mapping, the proposed General Plan area contains approximately 612 acres of land designated "prime farmland" and 2,077 acres designated farmland of local importance. In addition, the City contains 91 acres of unique farmland and 29 acres of farmland of statewide importance. The prime farmland is mainly in the western portion of the City (just east of the I-15 Freeway north of Limonite Avenue) and the land designated at farmland of local importance is located in the west, southeast, and northeast portions of the City. The FMMP mapping designates 90 percent of the City land as Urban, Built-up, and Other Land which has no agricultural use or value. This land will eventually be converted to non-agricultural uses as development occurs.

In addition, data from the federal Natural Resource Conservation Service (NRCS, previously the U.S. Soil Conservation Service or SCS) Web Soil Survey indicates that approximately 14,159 acres of land

¹ Riverside County Integrated Project website, <http://www.rcip.org/>, accessed December 5, 2014.

² Economic Viability of Agriculture in the East Inland Empire. CBRE Consulting. 2009.

within the City contain soils that are considered “prime” farmland (SCS Classes I through III). The conversion of farmland to non-agricultural uses was analyzed in Section 4.3.5.4 and was determined to be a less than significant environmental impact. Future development in the City will eventually cover over thousands of acres of land underlain by prime SCS agricultural soils and 612 acres of land designated as “prime farmland” with various types of rural and suburban land uses. Once these lands are covered over, they would be considered “lost” or unavailable for farming for the foreseeable future. This transition or loss is anticipated in the City’s General Plan, and is an inevitable result of achieving other General Plan goals for Jurupa Valley. Nonetheless, this loss of prime farmland represents a significant environmental impact under CEQA.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the of the 2017 General Plan are specifically related to agriculture and related resources:

Conservation and Open Space Element

Goal

COS 4.1 Accommodate and encourage expansion of agricultural activities

Policies

COS 4.1.1 Use agricultural land conservation programs to improve the viability of farms

COS 4.1.2 Discourage the conversion of productive agricultural land

COS 4.1.3 Encourage placement of uses compatible with agriculture on adjacent land

Programs

COS 4.1.1.1 Encourage landowners to use farmland preservation and protection programs

COS 4.1.1.2 Encourage sustainable agricultural activities to minimize land use conflicts

Land Use Element

Policies

LUE 1.3 Encourage conservation of Prime Farmland and productive agricultural lands.

LUE 1.4 Adhere to the Riverside County Right-To-Farm Ordinance.

Level of Programmatic Impact Before Mitigation. Land Use Element Policies LUE 1.3 and 1.4 clearly indicate prime farmland and the right-to-farm should be protected in the City. It should be noted that the term “development” in this policy applies to building improvements on both private and public actions involving vacant land. However, eventual conversion or loss of agricultural land will be an eventual result of implementation of the 2017 General Plan. As land that currently supports or could support agriculture is developed, there will be less and less agricultural activity in the City. The City’s 2017 General Plan reflects the community’s desire that agriculture remain viable and active as long as it is economically practical and local landowners wish to farm. The 2017 General Plan clearly states one of its goals is to provide a transitional process away from agriculture toward rural and suburban land uses.

The previous Section 4.2.5.4 concluded this was a fundamental land use change for the area but was not considered a significant environmental impact. At a programmatic level, there are no mitigation measures needed for this transitional process other than implementation of the outlined General Plan goals, policies, and programs. That section concluded the conversion of farmland to non-agricultural use was a less than significant impact and no mitigation is required.

Conversely, this section concludes that the physical loss of prime agricultural soil (i.e., covering then over with non-agricultural uses) represents a significant environmental impact that cannot be mitigated under the proposed General Plan, mainly because the State Department of Conservation considers these soils to be important state-wide resources and has indicated they believe their loss to be a significant impact under CEQA.

Programmatic Mitigation Measures. No feasible mitigation available (see previous Section 4.3.5.4, *Potential Project-Level Mitigation*).

Level of Programmatic Impact After Mitigation. Implementation of the General Plan goals, policies, and programs regarding agriculture will not reduce environmental impacts related to loss of prime agricultural soils to less than significant levels, and there is no feasible mitigation for this eventual loss (e.g. no long-term preservation programs for agriculture).

4.2.6 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years. CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a "plan summary" of long-term development impacts. In this case, the growth projections of the General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation.

The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land to various rural and suburban uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*). It should be noted that the General Plan growth projections assumed eventual buildout or conversion of vacant land (including agricultural land) within the City to non-agricultural uses. However, this transition is expected to occur over many years, and may not even be completed within the 19-year horizon of the current General Plan (2017 to 2035). The General Plan anticipates a gradual transition or loss of agriculture, but such a transition will eventually occur.

The universe for cumulative agricultural and forest resource impacts is western Riverside County. The western portion of the County is generally transitioning away from agriculture, while the eastern portion of the County (e.g., Coachella Valley) is more largely rural and still supports extensive agriculture. The State Department of Conservation, Office of Land Conservation, publishes a Farmland Conversion Report every two years as part of its Farmland Mapping and Monitoring Program. These reports document land use conversion by acreage for each California county. The most recent data are for the 2008–2010 period, during which Riverside County experienced a net loss of 3,300 acres of Prime Farmland, 567 acres of Farmland of Statewide Importance, 1,742 acres of Unique Farmland, and gained 721 acres of Farmland of Local Importance (total loss equals 4,888 acres). The loss of hundreds of acres of land designated as "prime farmland" represents an incremental but significant loss of prime agricultural soils in Riverside County. Therefore, the proposed General Plan will result in a **significant cumulative impact** due to its contribution to regional losses of agriculture and farmland. It will not make a similar contribution to any loss of forestland within the County because the City does not have any designated forest resources.

4.3 AIR QUALITY

This section provides a discussion of the various impacts to local and regional air quality associated with the proposed 2017 General Plan. This analysis examines the long-term criteria pollutant emissions and evaluates the effectiveness of goals, policies, and programs incorporated into the Air Quality Element of the 2017 General Plan. This section analyzes the potential air quality impacts of the proposed General Plan based on the following technical information:

- *CalEEMod Criteria Pollutant Data*, DEIR Appendix D, 2016.

The analysis provides a discussion of the proposed 2017 General Plan, the physical setting of the City, future development changes, and the air quality regulatory framework. The evaluation was prepared in accordance with appropriate standards, utilizing procedures and methodologies in the South Coast Air Quality Management District (SCAQMD) *CEQA Air Quality Handbook* (SCAQMD 1993) using the latest CalEEMod computer program developed and maintained by SCAQMD. Air quality data from the California Air Resources Board (CARB) and the U.S. Environmental Protection Agency (EPA) Web sites was used to characterize the local air quality environment.

4.3.1 Existing Setting

The City of Jurupa Valley is located in western Riverside County, Southern California. The City is located in the South Coast Air Basin (Basin"), a geographic area that encompasses the coastal plain and connecting broad inland valleys and low hills. The Pacific Ocean forms the southwestern border of the Basin, with mountain ranges forming the remainder of the border. The Basin includes Orange County and the non-desert portions of Los Angeles County, Riverside County, and San Bernardino County. The Basin is under the jurisdiction of the SCAQMD.

4.3.1.1 Climate and Meteorology

Air quality in the Jurupa Valley is not only affected by various emission sources (mobile, industry, etc.), but also by atmospheric conditions such as wind speed, wind direction, temperature, rainfall, and amount of sunshine. The combination of topography, low mixing height, abundant sunshine, and emissions from the second largest urban area in the United States combine to give the Basin the worst air pollution problem in the nation. The Basin experiences a persistent temperature inversion (increasing temperature with increasing altitude) as a result of the Pacific High, a large subtropical high pressure system which holds air contaminants relatively near the ground.

Winds in the Basin are predominantly of relatively low velocities, averaging about 4.0 miles per hour (mph). These low average wind speeds, together with a persistent temperature inversion, limit the vertical dispersion of air pollutants throughout the Basin. Strong, dry, north or northeasterly winds, known as Santa Ana winds, occur during the fall and winter months, dispersing air contaminants, and these conditions tend to last for several days at a time. Local winds at the project site blow predominantly from the south and southwest with an average annual wind speed of about 10 miles per hour. Summer average wind speeds average slightly higher than winter wind speeds.

The closest climatological station to the City is a National Weather Service Cooperative weather station located at Riverside Fire Station 3, approximately 2.5 miles southeast of the City. Based on data collected from 1893 to 2013, the station's annual average temperature of 64.1° F. January, the coldest month, has a mean minimum daily temperature of 39.1° F. and August, the warmest month, has a mean daily maximum temperature of 94.4° F.

The majority of annual rainfall in the Basin occurs between November and April; 89 percent of annual rainfall occurs during this period in the City area. Summer rainfall usually consists of widely scattered thunderstorms near the coast and slightly heavier shower activity in the eastern portion of the Basin with frequency being higher near the coast. The climatological data from the Riverside Fire Station 3 station indicate an annual average precipitation of 10.2 inches. February has the highest monthly average rainfall.

During periods of low inversions and low wind speeds, air pollutants generated in urbanized areas are transported predominantly into eastern Los Angeles, Riverside, and San Bernardino counties. In the winter, the greatest pollution problems are due to atmospheric concentrations of carbon monoxide (CO) and oxides of nitrogen (NO_x), because of extremely low inversions and air stagnation during the night and early morning hours. In the summer, the longer daylight hours and the brighter sunshine combine to cause a reaction between hydrocarbons and NO_x to form photochemical smog.

4.3.1.2 Regional Air Quality

Both the State of California and the Federal government have established health-based ambient air quality standards (AAQS) for six air pollutants. As identified in Table 4.3.A, these pollutants include ozone (O₃), CO, nitrogen dioxide (NO₂), sulfur dioxide (SO₂), particulate matter with a diameter of 10 microns or less (PM₁₀), and lead (Pb). In July 1997, the EPA adopted standards for eight-hour ozone and for fine particulate matter less than 2.5 microns in diameter (PM_{2.5}). In addition, the State has set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety.

Table 4.3.B lists the health effects of criteria pollutants and their potential sources. These health effects would not occur unless the standards are exceeded by a large margin or for a prolonged period of time. The State AAQS are more stringent than the Federal AAQS. Indirect sources of pollution comprise minor sources that together emit substantial amounts of pollution. Examples of this would be the motor vehicles at intersections, malls, and on highways. The California Clean Air Act (CCAA) provides the SCAQMD with the authority to manage transportation activities at indirect sources. The SCAQMD also regulates stationary sources of pollution throughout its jurisdictional area. Direct emissions from motor vehicles are regulated by the CARB.

4.3.1.3 Local Air Quality

The SCAQMD, together with the CARB, maintains ambient air quality monitoring stations in the Basin. The air quality monitoring stations closest to the site are the Riverside Rubidoux-Mission Boulevard station and the Mira Loma-Van Buren station. For evaluation purposes, SCAQMD has divided the Basin into 36 South Receptor Areas (SRA) that operate monitoring stations. SRAs are designated to provide a general representation of the local meteorological, terrain, and air quality conditions within the particular geographical area. The City is within SRA 23, Metropolitan Riverside County 1. The criteria pollutants monitored at this station¹ are identified in Table 4.3.C. The data from this SRA show that during the past few years, the area included within SRA 23 has exceeded the ozone, PM₁₀, and PM_{2.5} standards.

¹ California Air Resources Board and U.S. EPA, 2008.

Table 4.3.A: Ambient Air Quality Standards

| Pollutant | Averaging Time | California Standards ¹ | | Federal Standards ² | | | Notes |
|---|-------------------------|--|---|------------------------------------|-----------------------------------|--|--|
| | | Concentration ³ | Method ⁴ | Primary ^{2,5} | Secondary ^{2,6} | Method ⁷ | |
| Ozone (O ₃) | 1-Hour | 0.09 ppm (180 µg/m ³) | Ultraviolet Photometry | — | Same as Primary Standard | Ultraviolet Photometry | <div>1 California standards for ozone; carbon monoxide (except Lake Tahoe); sulfur dioxide (1 and 24 hour); nitrogen dioxide; suspended particulate matter, PM₁₀; and visibility reducing particles are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.</div> <div>2 National standards (other than ozone, particulate matter, and those based on annual averages or annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth-highest 8-hour concentration in a year, averaged over 3 years, is equal to or less than the standard. For PM₁₀, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m³ is equal to or less than 1. For PM_{2.5}, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over 3 years, are equal to or less than the standard. Contact U.S. EPA for further clarification and current federal policies.</div> <div>3 Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.</div> <div>4 Any equivalent procedure that can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.</div> <div>5 National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.</div> <div>6 National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.</div> <div>7 Reference method as described by the EPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the EPA.</div> <div>8 The CARB has identified lead and vinyl chloride as ‘toxic air contaminants’ with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.</div> <div>AAM = Annual Arithmetic Mean</div> |
| | 8-Hour | 0.07 ppm (137 µg/m ³) | | 0.075 ppm (147 µg/m ³) | | | |

— = data not available from SCAQMD or EPA

ARB = California Air Resources Board

EPA = United States Environmental Protection Agency

hr = hour

µg/m³ = micrograms per cubic meter

ND = no data available

PM₁₀ = particulate matter less than 10 microns in size

PM_{2.5} = particulate matter less than 2.5 microns in size

ppm = parts per million

4.3.1.4 Air Pollution Constituents and Attainment Status

The CARB coordinates and oversees both state and federal air pollution control programs in California. The CARB oversees activities of local air quality management agencies and maintains air quality monitoring stations throughout the state in conjunction with the EPA and local air districts. The CARB has divided the State into 15 air basins based on meteorological and topographical factors of air pollution. The CARB and EPA use the data collected at monitoring stations to classify air basins as attainment, nonattainment, nonattainment transitional, or unclassified, based on air quality data for

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

the most recent three calendar years compared with the AAQS. Nonattainment areas are imposed with additional restrictions, as required by the EPA. The air quality data are also used to monitor progress in attaining air quality standards. Table 4.3.D identifies the attainment status¹ for the criteria pollutants in the Basin.

Table 4.3.D: Attainment Status of Criteria Pollutants in the South Coast Air Basin

| Pollutant | State | Federal |
|--------------------------|-------------------------|-------------------------|
| O ₃ | Nonattainment | Nonattainment |
| PM ₁₀ | Nonattainment | Nonattainment |
| PM _{2.5} | Nonattainment | Nonattainment |
| CO | Attainment | Attainment |
| NO ₂ (annual) | Nonattainment | Attainment |
| NO ₂ (1-hour) | Attainment | Unclassified |
| SO ₂ | Attainment | Attainment |
| Lead | Attainment | Attainment |
| All others | Attainment/Unclassified | Attainment/Unclassified |

CO = carbon monoxide

NO₂ = nitrogen dioxide

O₃ = ozone (smog)

PM₁₀ = particulate matter less than 10 microns in size

PM_{2.5} = particulate matter less than 2.5 microns in size

SO₂ = sulfur dioxide

4.3.1.5 Sensitive Land Uses

Sensitive receptors include residences, schools, medical offices, convalescent facilities, and similar uses with occupants that are likely to be sensitive to air pollutants. There are hundreds of such sensitive receptors throughout the City, some of which is close to vacant land and might be adversely affected by future development.

4.3.1.6 NOP and Scoping Responses

No public comments expressing concern about air quality or air pollution were received at the scoping meeting. The SCAQMD sent a letter outlining its recommendations for the air quality study to be prepared for the General Plan. This letter is included in Appendix B to this EIR.

4.3.2 Regulatory Framework

4.3.2.1 Federal Regulations

Clean Air Act. Pursuant to the Federal Clean Air Act (CAA) of 1970, the EPA established national ambient air quality standards (NAAQS). The NAAQS were established for six major pollutants, termed "criteria" pollutants. Criteria pollutants are defined as those pollutants for which the Federal and State governments have established ambient air quality standards, or criteria, for outdoor concentrations in order to protect public health. In April 2003, the EPA was cleared by the White House Office of Management and Budget (OMB) to implement the eight-hour ground-level O₃ standard. The EPA issued the proposed rule implementing the eight-hour O₃ standard in April 2003.

¹ Unclassified designation: a pollutant that is designated unclassified if the data are incomplete and do not support a designation of attainment or nonattainment; Attainment designation: a pollutant is designated attainment if the State standard for that pollutant was not violated at any site in the area during a 3-year period. Nonattainment: a pollutant is designated nonattainment if there was at least one violation at any site in the area during a 3-year period.

The EPA completed final eight-hour nonattainment status on April 15, 2004. The EPA issued the final PM_{2.5} implementation rule in fall 2004. The EPA issued final designations on December 15, 2004.

4.3.2.2 State Regulations

Mulford-Carrell Act. The State first set California Ambient Air Quality Standards (CAAQS) in 1969 under the mandate of the Mulford-Carrell Act. The CAAQS are generally more stringent than the NAAQS. In addition to the six criteria pollutants covered by the NAAQS, there are CAAQS for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. Originally, there were no attainment deadlines for CAAQS; however, the CCAA of 1988 provided a time frame and a planning structure to promote their attainment. The CCAA required nonattainment areas in the state to prepare attainment plans and proposed to classify each such area on the basis of the submitted plan, as follows: moderate, if CAAQS attainment could not occur before December 31, 1994; serious, if CAAQS attainment could not occur before December 31, 1997; and severe, if CAAQS attainment could not be conclusively demonstrated at all. The attainment plans are required to achieve a minimum 5 percent annual reduction in the emissions of nonattainment pollutants unless all feasible measures have been implemented. The EPA has designated the Southern California Association of Governments (SCAG) as the Metropolitan Planning Organization (MPO) responsible for ensuring compliance with the requirements of the CAA for the Basin.

California Code of Regulations Title 24, Part 6. Enacted in 1978, this part of the California Code established energy efficiency standards for residential and nonresidential buildings in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and incorporation of new energy efficiency technologies and methods. The latest amendments were enacted in 2011 as part of the new California "Green" Building Code.

4.3.2.3 Regional Regulations

Lewis Air Quality Management Act. The 1976 Lewis Air Quality Management Act established the SCAQMD and other air districts throughout the State. The Federal Clean Air Act Amendments of 1977 required that each state adopt an implementation plan outlining pollution control measures to attain the federal standards in nonattainment areas of the state. The CARB is responsible for incorporating air quality management plans for local air basins into a State Implementation Plan (SIP) for EPA approval. Significant authority for air quality control within them has been given to local air districts that regulate stationary source emissions and develop local nonattainment plans.

Regional Air Quality Management Plan (AQMP). The SCAQMD and the SCAG are responsible for formulating and implementing the AQMP, which has a 20-year horizon for the Basin. The SCAQMD and SCAG must update the AQMP every three years. The current regional air quality plan is the Final 2012 AQMP adopted by the SCAQMD in February 2013.

The Final 2012 AQMP proposes attainment demonstration of the federal PM_{2.5} standards through a more focused control of sulfur oxides (SO_x), directly-emitted PM_{2.5}, and nitrogen oxides (NO_x) supplemented with volatile organic compounds (VOC) by 2015. The 8-hour ozone control strategy builds upon the PM_{2.5} strategy, augmented with additional NO_x and VOC reductions to meet the standard by 2024 assuming a bump-up¹ is obtained.

The Final 2012 AQMP proposes policies and measures currently contemplated by responsible agencies to achieve federal standards for healthful air quality in the Basin and those portions of the Salton Sea Air Basin that are under SCAQMD jurisdiction. This Final Plan also addresses several Federal planning requirements and incorporates significant new scientific data, primarily in the form of updated emissions inventories, ambient measurements, new meteorological episodes, and new air quality modeling tools. This Final Plan builds upon the approaches taken in the 2007 AQMP for the

¹ A "bump-up" is a voluntary reclassification of a nonattainment area to a higher classification allowing for an extension of an attainment deadline.

Basin for the attainment of the federal ozone air quality standard.¹ The Basin is currently a federal and state nonattainment area for PM₁₀, PM_{2.5}, and ozone.

4.3.2.4 City General Plan Policies

Local jurisdictions have the authority and responsibility to reduce air pollution through its police power and decision-making authority. Specifically, the City is responsible for the assessment and mitigation of air emissions resulting from its land use decisions. The City is also responsible for the implementation of transportation control measures as outlined in the AQMP. Examples of such measures include bus turnouts, energy-efficient streetlights, and synchronized traffic signals. In accordance with CEQA requirements and the CEQA review process, the City assesses the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits and monitors and enforces implementation of such mitigation. In accordance with CEQA requirements, the City does not, however, have the expertise to develop plans, programs, procedures, and methodologies to ensure that air quality within the City and region will meet Federal and State standards. Instead, the City relies on the expertise of the SCAQMD and utilizes the CEQA *Air Quality Handbook* as the guidance document for the environmental review of plans and development proposals within its jurisdiction. The City's Air Quality Element of the 2017 General Plan contains the following goals, policies, and programs dealing with air quality:

Air Quality Element

Goals

- AQ 1 A city that works with regional, sub-regional, and state agencies to protect and improve air quality and reduce greenhouse gas emissions.
- AQ 2 A city that protects its and other sensitive receptors from toxic air pollution.
- AQ 3 A city that actively works to reduce emissions from stationary and mobile sources.
- AQ 4 A city that employs measures to improve the jobs/housing balance and reduce commuting time.

AQ 1 Multi-jurisdictional Cooperation

Policies

- AQ 1.1.1 **Regional Participation.** Promote and participate with regional, subregional and state agencies, both public and private, in all areas to protect and improve air quality, including enforcement of all regulations.
- AQ 1.1.2 **Air Quality Measures.** Establish and implement air quality, land use and mobility measures that improve not only the City's environment but also that of the entire region.

Program

- AQ 1.1.1.1 **Regional Committees.** Actively participate on regional committees, which can influence regulations affecting air quality.

AQ 2 Sensitive Receptors

Policies

- AQ 2.1.1 **Site Plan Designs.** Require City land use planning efforts and site plan designs to protect people and land uses sensitive to air pollution, using barriers and/or distance from emissions sources, and protect sensitive receptors from polluting sources, wherever possible.

¹ Final 2013 Air Quality Management Plan, South Coast Air Quality Management District, February 2014.

AQ 2.1.2 **Pollution Control Measures.** Strongly encourage the use of pollution control measures such as landscaping, vegetation and other materials, which trap particulate matter or control pollution.

AQ 2.1.3 **Tree Planting.** Consider creating a Citywide program to plant trees that help to filter pollutants from the air, provide shade, and add oxygen to the atmosphere.

Program

AQ 2.1.1.1 **Best Practices.** Establish a program to monitor adherence to best practices in distance and setbacks as recommended by CARB and SCAQMD.

AQ 3 Stationary Source Pollution

Policies

AQ 3.1.1 **Efficient Building Materials/Equipment.** Encourage the use of building materials/methods and heating equipment that are efficient and reduce emissions.

AQ 3.1.2 **Centrally-Heated Facilities.** Encourage centrally-heated facilities to utilize automated time clocks or occupant sensors to control heating.

AQ 3.1.3 **Stationary Pollution Reduction.** Require stationary pollution sources to minimize the release of toxic pollutants through the following:

- a. Design features;
- b. Operating procedures;
- c. Preventive maintenance;
- d. Operator training; and
- e. Emergency response planning

AQ 3.1.4 **Emissions Mitigation.** Require every project to mitigate any of its anticipated emissions which exceed allowable levels as established by the SCAQMD, the US EPA, and CARB, to the greatest extent possible.

AQ 3.1.5 **Fugitive Dust Reduction Measures.** Apply, as appropriate, measures contained in the County's Fugitive Dust Reduction to the entire City.

AQ 3.1.6 **Grading in High Winds.** Suspend all grading when wind speeds exceed 25 miles per hour.

AQ 4 Particulate Matter

Policies

AQ 4.1.1 **State and Federal Legislation.** Encourage stricter state and federal legislation on bias belted tires, smoking vehicles, and vehicles that spill debris on streets and highways, to better control particulate matter.

AQ 4.1.2 **Particulate Matter.** Reduce particulate matter from agriculture, construction, demolition, debris hauling, street cleaning, utility maintenance, railroad rights-of-way, and off-road vehicles to the maximum extent possible.

AQ 4.1.3 **Electric Service Units.** Require the installation and use of electric service units at truck stops and distribution centers for heating and cooling truck cabs, and particularly for powering refrigeration trucks, in lieu of idling of engines for power.

AQ 4.1.4 **Natural Gas/Electric Vehicles.** Support efforts to encourage the use of natural gas and electric vehicles in distribution centers.

Programs

- AQ 4.1.1.1 **Truck Parking in Residential Areas.** Amend the Municipal Code to prohibit the parking of commercial trucks, trailers, and truck cabs in residential areas, except for loading or unloading.
- AQ 4.1.1.2 **Diesel Fumes.** Collaborate with the US EPA, SCAQMD, and warehouse owners and operators to create regulations and programs to reduce the amount of diesel fumes released due to warehousing operations.
- AQ 4.1.1.3 **Commercial Truck Parking Lots.** Research funding and establish a program to provide incentives and opportunities for commercial truck parking lots to prevent the need for parking trucks, trailers, and truck cabs in residential and other restricted areas.

AQ 5 **Energy Efficiency and Conservation**

Policies

- AQ 5.1.1 **Reduce Solid Waste.** Utilize source reduction, recycling and other appropriate measures to reduce the amount of solid waste disposed of in landfills.
- AQ 5.1.2 **Energy Conservation.** Encourage advanced energy conservation techniques and the incorporation of energy-efficient design elements for private and public developments, including appropriate site orientation and the use of shade and windbreak trees to reduce fuel consumption for heating and cooling and offer incentives, as appropriate.

Program

- AQ 5.1.1.1 **Waste Management.** Establish incentives and programs to encourage the use of recycling and waste management.

AQ 6 **Jobs and Housing**

Policies

- AQ 6.1.1 **Small Business Assistance.** Assist small businesses by supporting organizations that develop education and job training programs.
- AQ 6.1.2 **Educational Programs.** Collaborate with local colleges and universities to develop appropriate educational programs to assist residents in obtaining job skills to meet market demands.
- AQ 6.1.3 **Business Incentives.** Provide incentives to encourage new firms to locate within the City and existing firms to expand operations.
- AQ 6.1.4 **Small Business Loan Programs.** Encourage loan programs to induce small businesses to locate or expand within the City.
- AQ 6.1.5 **Small Business Emissions Control.** Offer incentives to businesses to control emissions and implement the Air Quality Management Plan.
- AQ 6.1.6 **Regulation Relief.** Reduce regulations on small businesses wherever possible and thereby encourage small business development and job creation. The City shall set performance standards as well as design standards, thus giving small business owners as many options as possible to comply with City regulations.
- AQ 6.1.7 **Job Creation.** Emphasize job creation and reductions in vehicle miles traveled to improve air quality over other less efficient methods.
- AQ 6.1.8 **Public Facilities/Services.** Time and locate public facilities and services so that they help create new jobs.

- AQ 6.1.9 **Mixed-Use Land Use.** Support new mixed-use land use patterns with employment centers and community centers, which encourage community self-sufficiency and containment, promote efficient modes of travel, and help reduce automobile dependency.
- AQ 6.1.10 **Community Centers/Telecommuting/Home-Based Businesses.** Implement zoning code provisions, which encourage community centers, telecommuting and home-based businesses.
- AQ 6.1.11 **Non-Polluting Transportation.** Encourage and promote the use of non-polluting alternative modes of transportation such as natural gas and electric vehicles and bicycles.
- AQ 6.1.12 **Housing Types.** Provide for a variety of housing types that support a local market for a skilled, professional and management labor pool when approving new residential developments.

Programs

- AQ 6.1.1.1 **Job-Skill Training Opportunities.** Actively seek and incentivize educational opportunities and institutions such as community colleges and trade schools to locate within Jurupa Valley to provide local job-skill training opportunities.
- AQ 6.1.1.2 **Funding Programs.** Actively seek funding programs to incentivize businesses that meet community needs.

AQ 7 Transportation

Policies

- AQ 7.1.1 **Cooperative Relationships.** Seek new cooperative relationships between employers and employees to reduce vehicle miles traveled such as creating Transportation Management Associations.
- AQ 7.1.2 **Transit Incentives.** Encourage employee rideshare and transit incentives for employers with more than 25 employees at a single location and coordination with city incentives programs.
- AQ 7.1.3 **Trip-Reduction Programs.** Encourage workplace trip-reduction programs and cooperate with surrounding jurisdictions to reduce vehicle trips.
- AQ 7.1.4 **Traffic Flow Management.** Manage traffic flow through signal synchronization, while coordinating with and permitting the free flow of mass transit vehicles, when possible.
- AQ 7.1.5 **Traffic Hazards/Delays.** Eliminate traffic hazards and delays through street maintenance, rapid emergency response, debris removal, and elimination of at-grade railroad crossings, as City resources allow.
- AQ 7.1.6 **City Transportation Fleet.** Manage the City's transportation fleet to achieve energy savings.
- AQ 7.1.7 **Pedestrian and Bicycle Facilities.** Emphasize the use and improvement of pedestrian and bicycle facilities when funding transportation improvements.
- AQ 7.1.8 **Transportation Corridor Expansion.** Preserve transportation corridors with the potential of high demand or of regional significance for future expansion to meet project demand.

Programs

- AQ 7.1.1.1 **Trip Reduction Programs.** Pursue grant funding to establish an incentive program to encourage the use of trip reduction programs in order to decrease automotive vehicle miles traveled.

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

- AQ 7.1.1.2 **Traffic Signal Improvements.** Construct and improve traffic signals with channelization and Automated Traffic Monitoring and Control systems at appropriate intersections.
- AQ 7.1.1.3 **Transportation Management.** Consider measures such as Transportation Demand Management, Transportation Systems Management, or job/housing balance strategies when developing capital facility improvement plans.
- AQ 7.1.1.4 **Congestion Monitoring.** Develop a program to monitor traffic and congestion to determine when and where the City needs new transportation facilities to achieve increased mobility efficiency.

AQ 8 **Special Events**

Policies

- AQ 8.1.1 **Parking/Park-N-Ride.** Establish requirements for special event centers to provide off-site parking and park-n-ride facilities at remote locations. Remote parking should be as close to practicable to the event site and the operator should supply shuttle services.
- AQ 8.1.2 **Transit/Carpooling.** Encourage special event center operators to advertise and offer discounted transit passes and discount parking incentives to carpooling patrons with event tickets.

AQ 9 **Climate Change**

Policies

- AQ 9.1.1 **State and Regional Plans and Programs.** Monitor federal, state and regional plans and programs to stay abreast on emerging information, practices and strategies to address climate change.
- AQ 9.1.2 **Critical Infrastructure.** Locate critical infrastructure in areas not subject to severe climate change impacts, such as flooding.
- AQ 9.1.3 **Climate Action Plan.** Work with WRCOG to periodically monitor and update the Subregional Climate Action Plan.
- AQ 9.1.4 **Vulnerability.** Develop strategies to reduce the City's vulnerability to climate change impacts.

In addition, the City's Environmental Justice Element contains the following goals and policies regarding public health impacts from local air pollution:

Environmental Justice Element

Goal

- EJ 3 A reduction in disproportionate environmental burdens affecting low-income and minority populations.

Policies

- EJ 2.1.8 **Separation of Uses.** Build new sensitive land uses with sufficient buffering from industrial facilities and uses that pose a significant hazard to human health and safety. The California ARB recommends that sensitive land uses be located at least 1,000 feet from hazardous industrial facilities.
- EJ 2.1.2 **Sensitive Land Use Buffers.** Require that proposals for new sensitive land uses incorporate adequate setbacks, barriers, landscaping or other measures as necessary to minimize air quality impacts.

- EJ 2.1.3 **School Buffers.** Provide adequate buffers between schools and industrial facilities and transportation corridors.
- EJ 2.1.4 **Stationary Source Emissions.** Require, wherever possible, existing sources of stationary emissions near sensitive land uses to relocate and/or incorporate measures to minimize emissions.
- EJ 2.1.5 **Residential Buffers.** Require that zoning regulations provide adequate separation and buffering of residential and industrial uses.
- EJ 2.1.6 **Mitigate Air Quality.** Identify resources for the existing sensitive receptors experiencing adverse air quality issues to incorporate measures to improve air quality such as separation/setbacks, landscaping, barriers, ventilation systems, air filters/cleaners and other measures.
- EJ 2.1.7 **Latest Technologies.** Give preference in approving commercial and industrial development to those projects that incorporate the latest technologies to reduce diesel emissions.
- EJ 2.1.8 **Separation of Uses.** Build new sensitive land uses with sufficient buffering from industrial facilities and uses that pose a significant hazard to human health and safety. The California ARB recommends that sensitive land uses be located at least 1,000 feet from hazardous industrial facilities.
- EJ 2.1.11 **Toxic Emissions.** Ensure that low-income and minority populations understand the effect of projects that may use or generate toxic materials or emissions.
- EJ 2.1.14 **Truck Idling.** Seek the necessary funding and resources to enforce the statewide idling limit of five minutes for heavy-duty diesel vehicles with a Gross Vehicle Weight Rating (GVWR) of 10,000 lbs. or more.
- EJ 2.1.17 **Brownfield Sites.** Promote the remediation and reuse of contaminated brownfield sites within the City, with priority given to those near environmental justice populations.

4.3.3 Methodology

Evaluation of air quality impacts associated with the proposed 2017 General Plan includes the following:

- Examine the potential for short-term construction air quality impacts from development of vacant land in the future based on SCAQMD emissions thresholds;
- Determine the long-term air quality impacts, including vehicular traffic, of buildout of the planned land uses within the City based on SCAQMD emissions modeling and thresholds; and
- Determine if mitigation measures beyond the goals, policies, and programs of the Air Quality Element of the 2017 General Plan are needed to address short-term and long-term air quality impacts from all sources.

A number of modeling tools are available to assess air quality impacts of projects. In addition, certain air districts, such as the SCAQMD, have created guidelines and requirements to conduct air quality analysis. SCAQMD's current guidelines, *CEQA Air Quality Handbook, April 1993*, were adhered to in the assessment of air quality impacts for the proposed General Plan. The air quality models identified in that document are outdated, so the California Emissions Estimator Model Version 2013.2.2 (CalEEMod) was used to estimate mobile and stationary source emissions in this air quality assessment.

Localized air quality impacts (i.e., higher CO concentrations [CO hot spots] near intersections or roadway segments) would be small and less than significant due to the generally low ambient CO concentrations (5.8 parts per million [ppm] versus the State one-hour CO standard of 20.0 ppm and 2.15 ppm versus the State eight-hour CO standard of 9.0 ppm) in the project area. The net increase in pollutant emissions determines the significance and impact on regional air quality as a result of the proposed General Plan. The results also allow the local government to determine whether the General Plan will deter the region from achieving the goal of reducing pollutants in accordance with the AQMP in order to comply with Federal and State AAQS.

Air quality in the Jurupa Valley would be affected by long-term air pollutant emissions from stationary sources and mobile sources related to future development projects. Mobile source emissions from motor vehicles are the largest long-term generators of air pollutants. A smaller amount of emissions will be generated from area source emissions at individual project sites, through sources like natural gas usage, consumer products, and landscaping. The CalEEMod model was used to predict these specific kinds of long-term impacts. Localized air quality impacts (i.e., CO hotspots) in the project area would be affected by increased traffic flow due to future development. The Caltrans CALINE4 model and the CARB's CalEEMod model were used to assess potential impacts on the local CO concentrations.

The SCAQMD has developed Local Significance Threshold (LST) methodology that can be used to determine whether or not a particular future development project would generate significant adverse localized air quality impacts. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable Federal or State AAQS and are developed based on the ambient concentrations of that pollutant for each source receptor area. SCAQMD current guidelines, *Final Localized Significance Threshold Methodology* (revised July 2008), were adhered to in the assessment of air quality impacts for the proposed project. The LST mass rate look-up tables are used to determine whether the daily emissions for the proposed construction activities could result in significant localized air quality impacts. The emissions of concern from construction activities are NO_x, CO, PM₁₀, and PM_{2.5} combustion emissions from construction equipment and fugitive PM₁₀ dust from construction site preparation activities.

A screening level or full health risk assessment (HRA) can also be prepared for new industrial projects or activities that involve a large amount of truck movement. An HRA assesses potential exposure of existing residents near future industrial projects or future project residents to toxic air pollutants (see Section 4.3.5.2). An HRA is a process used to estimate the increased risk of health problems in people who are exposed to different amounts of toxic substances. An HRA combines results of studies on the health effects of various animal and human exposures to toxic air pollutants with results of studies that estimate the level of people's exposures at different distances from the sources of the pollutants.

4.3.3.1 Types of Impacts

- **Direct Impacts.** Direct impacts are the result of emissions from a specific project (from construction and operation) in the form of project activity and trips generated by a particular project. For example, in the case of a residential project, construction emissions (e.g., equipment exhaust, wind erosion, and vehicle exhaust) and trips to and from the homes (e.g., vehicle exhaust and tire wear) represent direct impacts.
- **Indirect Impacts.** Indirect impacts are the result of changes that would not occur without a specific proposed project. Indirect impacts on the surrounding community can be generated in many ways: nearby construction of roadways (or roadway modifications) and other infrastructure to support a subdivision, construction and operation of development, changes in traffic/circulation patterns that result in increased congestion/delays, etc.
- **Cumulative Impacts.** Cumulative impacts are direct and indirect impacts to which a particular project contributes. In the case of a residential project, a given project has a cumulative impact with all other area development projects, from the standpoint of each type of impact (cumulative

construction emissions, residential natural gas consumption, solvent use, transportation emissions, congestion, etc.).

- **Conformity Impacts.** A project is non-conforming if it conflicts with or delays implementation of any applicable attainment or maintenance plan. A project is conforming if it complies with all applicable air district rules and regulations, complies with all proposed control measures that are not yet adopted from the applicable plan(s), and is consistent with the growth forecasts in the applicable plan(s) (or is directly included in the applicable plan). Conformity with regional growth forecasts can be established by demonstrating that the project is consistent with the land use plan that was used to generate the growth forecast, such as a City's General Plan (i.e., a project is consistent with the established local land use and zoning designations of the General Plan at the time the regional plan was prepared).

4.3.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. Appendix G of the *State CEQA Guidelines* recognizes the following significance thresholds related to air quality. Based on these significance thresholds, potential impacts to air quality could be considered significant if the proposed project would:

- Violate any AAQS;
- Contribute substantially to an existing air quality violation;
- Expose sensitive receptors to substantial pollutant concentrations;
- Create objectionable odors affecting a substantial number of people; and/or
- Conflict with adopted environmental plans and goals of the community in which it is located.

In addition to the federal and state AAQS, there are daily emissions thresholds for construction and operation of proposed development projects in the Basin. The Basin is administered by the SCAQMD, and guidelines and emissions thresholds established by the SCAQMD in its CEQA Air Quality Handbook (SCAQMD, April 1993) are used as a guide to evaluate this analysis.

It should be noted that the emissions thresholds were established based on the attainment status of the air Basin with regard to air quality standards for specific criteria pollutants. Because the concentration standards were set at a level that protects public health with an adequate margin of safety (EPA), these emissions thresholds are regarded as conservative and would overstate an individual project's contribution to health risks.

It should also be noted that this EIR is examining the programmatic impacts of a General Plan for the entire City rather than for a specific development project, so the SCAQMD daily thresholds are less relevant to this type of project compared to a more typical development project.

4.3.4.1 Thresholds for Construction Emissions

The following CEQA significance thresholds for construction emissions of individual development projects have been established by the SCAQMD for the Basin:

- 75 pounds per day of reactive organic compounds (ROC) or volatile organic compounds (VOC).
- 100 pounds per day of NO_x.
- 550 pounds per day of CO.
- 150 pounds per day of PM₁₀.
- 150 pounds per day of SO₂.

- 55 pounds per day of PM_{2.5}.

Individual development projects in the Basin with construction-related emissions that exceed any of the emission thresholds would be considered to be significant under CEQA.

4.3.4.2 Thresholds for Operational Emissions

Individual development projects with operation-related emissions that exceed any of the emission thresholds listed below are considered significant under the SCAQMD guidelines with respect to CEQA.

- 55 pounds per day of ROC/VOC.
- 55 pounds per day of NO_x.
- 550 pounds per day of CO.
- 150 pounds per day of PM₁₀.
- 150 pounds per day of SO₂.
- 55 pounds per day of PM_{2.5}.

4.3.4.3 Air Pollutant Standards for CO with Localized Effects

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the project are above or below state and federal CO standards. If ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a State or Federal standard, project emissions are considered significant if they increase one-hour CO concentrations by 1.0 ppm or more or eight-hour CO concentrations by 0.45 ppm or more. The Basin (with the exception of Los Angeles County) meets state and federal attainment standards for CO; therefore, the proposed project would have a significant CO impact if project emissions result in an exceedance of State or Federal one-hour or eight-hour standard. The following emission concentration standards for CO apply to proposed private or public development projects:

- California State one-hour CO standard of 20.0 ppm.
- California State eight-hour CO standard of 9.0 ppm.

4.3.4.4 Local Significance Thresholds

Localized Significance Thresholds (LSTs) are the maximum emissions for a specific development site that are not expected to result in exceedance of national or state air quality standards. LSTs are based on a project's Source Receptor Area (SRA) which identifies ambient pollution levels. For the City, the appropriate SRA is the Metropolitan Riverside County (SRA 23). For pollutants below the standards, a particular project would have a significant impact if its emissions results in exceedance of any standards. If pollutants are already above federal and state standards, then a project would have a significant impact if it increases ambient levels by a measurable amount. Ambient carbon monoxide and nitrogen dioxide are considered to be in attainment and are subject to the former threshold. PM₁₀ and PM_{2.5} are nonattainment pollutants for the project area, and the latter rule applies. For both particulate matter pollutants, the significance criteria are the pollutant concentration thresholds found in SCAQMD Rules 403, which applies a threshold of 10.4 micrograms per cubic meter to construction emissions.

The most stringent standards would be applied if sensitive receptors are located adjacent to a particular site and only 5 acres per day were to be graded. Under those circumstances, construction and operational LST thresholds for a 5-acre site in the Metropolitan Riverside County SRA (SRA 23) at 25 meters are as follows:

- Construction LST Thresholds
 - 270 lbs/day of NO_x
 - 1,577 lbs/day of CO
 - 13 lbs/day of PM₁₀
 - 8 lbs/day of PM_{2.5}
- Operation LST Thresholds
 - 270 lbs/day of NO_x
 - 1,557 lbs/day of CO
 - 13 lbs/day of PM₁₀
 - 8 lbs/day of PM_{2.5}

4.3.5 Programmatic Impact Evaluation

4.3.5.1 Violate Air Quality Standards

| | |
|-----------|---|
| Threshold | Would the proposed project violate any air quality standard? |
| Threshold | Would the project contribute substantially to an existing or projected air quality violation? |
| Threshold | Would the proposed project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable Federal or State ambient air quality standard? |

Programmatic Impacts. Future development in the City would be required to be consistent with the goals, policies, and programs of the 2017 General Plan, including the Air Quality Element. Future development will generate both operational and construction-related emissions.

Operational Emissions. The previous Table 4.3.D demonstrated that the Basin is in non-attainment for ozone (O₃), large particulate matter (PM₁₀), and small particulate matter (PM_{2.5}). It should be noted that ozone is a secondary pollutant formed through the interaction of sunlight on nitrogen oxides (NO_x) and hydrocarbons, both prevalent in vehicle exhaust. In theory, any activities that contribute or result in additional ozone or particulate matter in the City would cause a significant air quality impact because the Basin is already in non-attainment for those pollutants. According to the CalEEMod data, existing land uses in the City currently generate air pollutants in amounts, including NO_x and particulates, that far exceed the daily SCAQMD thresholds (see Tables 4.3.E and 4.3.F). Some of the pollutants actually decrease over time while others increase, which results from implementation of federal and state air quality regulations over time (e.g., higher mileage cars, lower carbon fuels, etc.).

As shown in Table 4.3.E, even activities and operations in the City from existing land uses result in significant air quality impacts compared to the project-level significance thresholds established by the SCAQMD. However, this is a programmatic EIR and is examining if the goals, policies, and programs of the 2017 General Plan will result in significant air quality impacts, which is less direct assessment than comparing project emissions to a “bright line” (specific numerical) threshold.

Construction Emissions. The 2017 General Plan itself will not cause construction-related air pollutant emissions. However, future development on vacant land within the City will result in construction-related emissions. Construction activities produce combustion emissions from various sources, such as demolition, grading, site preparation, utility engines, tenant improvements, and motor vehicles transporting the construction crew. Exhaust emissions from construction activities on a particular site would vary considerably, depending on the size and type of project and project site, and the amount of daily construction activity. The use of construction equipment on a particular site would result in localized exhaust emissions, but the actual determination of whether those emissions were significant compared to the SCAQMD daily thresholds would have to be conducted for each specific development project in the future. At this point in time, that would require input into the SCAQMD's CalEEMod model (currently Version 2013.2.2) or whatever was the accepted air modeling program or procedure at the time the development was proposed. Given the large size of vacant parcels still available in the City for development in 2017, it is possible that future development could result in significant air pollutant emissions that would have to be mitigated on a project by project basis.

VMT vs. LOS. Level of Service (LOS) has long been the standard of determining significant traffic impacts under CEQA, which in turn influence air pollutant emissions. In 2008 the state legislature passed SB 375, the *Sustainable Communities and Climate Protection Act of 2008*, which among other guidance directs agencies to focus on reducing vehicle miles traveled (VMT) rather than LOS as a determination of significance under CEQA. The State Office of Planning and Research (OPR) has not yet issued final guidance on how VMT is to be calculated in reference to significance determinations in CEQA documents, and SCAG has not issued baseline community-level VMT information upon which to prepare a VMT analysis under SB 375. However, the following information will provide a baseline against which future VMT assessments can be measured. Table 4.3.G shows that (average daily trips) ADT and VMT are both expected to increase by 29.2 percent City-wide by 2035. The CalEEMod results assume the same rate of increase for both ADT and VMT, but it is more likely in the future that VMT will not increase as fast as ADT as more employment is generated by non-residential uses in the City which will reduce the commuting and some non-home trip distances (e.g., shopping) as more jobs and businesses are created. This will help further reduce potential air pollutant impacts as the jobs/housing ratio of the City improves and local residents have to travel shorter distances to work and other destinations.

Table 4.3.G: VMT Estimates for Existing and Future Land Uses in the City

| Land Use/Activity | Existing | | Year 2035 | | Increase (%) |

Evaluation of General Plan Goals and Policies. Essentially all of the goals, policies, and programs of the Air Quality Element of the 2017 General Plan are specifically related to minimizing air pollutant emissions to the greatest degree practical. Some examples include the following policies to help reduce criteria pollutants from local sources:

Air Quality Element

Policies

- AQ 1.1.1 Cooperation with regional agencies to reduce area pollution.
- AQ 2.1.1 Proper site planning to minimize traffic and air quality impacts.
- AQ 3.1.3 Promote stationary source reduction measures.
- AQ 3.1.5 Implement fugitive dust reduction measures.
- AQ 4.1.2 Reduce particulate matter wherever feasible.
- AQ 4.1.4 Use natural gas and electric vehicles at distribution centers.
- AQ 5.1.2 Promote energy conservation City-wide.
- AQ 6.1.9 Allow mixed use to maximize internal trips and reduce air pollution.
- AQ 7.1.7 Develop bicycle and pedestrian networks to reduce vehicular trips.
- EJ 2.1.4 Implement stationary source controls to protect local residents.
- EJ 2.1.6 Protect sensitive receptors from industrial air pollution.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan policies will help reduce programmatic air quality impacts from future land uses (i.e., air pollutants generated by new development) but will not be able to reduce impacts from future development to less than significant levels when compared to SCAQMD daily thresholds, as shown in Table 4.3.F.

Programmatic Mitigation Measures. Individual projects will have to identify and implement their own project-specific mitigation but there are no additional programmatic measures available other than the goals, policies, and programs of the Air Quality Element and other elements of the 2017 General Plan that will help reduce air pollution from future development. Future development projects may exceed SCAQMD daily thresholds even with project-specific mitigation, so this long-term impact remains significant.

Level of Programmatic Impact After Mitigation. Even with implementation of all the goals, policies and programs in the 2017 General Plan, long-term air pollutant emissions from future development may exceed SCAQMD daily thresholds therefore impacts are significant and no additional feasible mitigation is available at a programmatic level.

4.3.5.2 Sensitive Receptors

| | |
|-----------|--|
| Threshold | Would the proposed project expose sensitive receptors to substantial pollutant concentrations? |
|-----------|--|

Programmatic Impacts. Future development in the City would be required to be consistent with the goals, policies, and programs of the 2017 General Plan, including the Air Quality Element. Future development will generate air pollutant emissions that could affect sensitive receptors within the City.

CO Hotspots. Typically, high CO concentrations are associated with roadways or intersections operating at unacceptable levels of service or with extremely high traffic volumes. In areas with high ambient background CO concentrations, modeling is recommended, to determine a project's effect on local CO levels. The SCAQMD suggests that a local CO hot spot analysis be conducted if an intersection meets one the following criteria: 1) the intersection is at level of service (LOS) D or worse and where the project increases the volume to capacity ratio by 2 percent, or 2) a project decreases the Level of Service (LOS) at an intersection from C to D.

Vehicular trips associated with future development would contribute to traffic levels at intersections and along roadway segments in the specific project vicinity. Localized air quality impacts would occur when emissions from vehicular traffic increase in local areas as a result of a proposed project. The primary mobile-source pollutant of local concern is CO, which is a direct function of vehicle idling time and, thus, traffic flow conditions. CO transport is extremely limited and disperses rapidly with distance from the source under normal meteorological conditions; however, under certain extreme meteorological conditions, CO concentrations proximate to a congested roadway or intersection may reach unhealthful levels affecting local sensitive receptors (residents, schoolchildren, the elderly, hospital patients, etc.).

The SCAQMD has demonstrated that the Basin is in attainment for CO and that there are no "hotspots" anywhere in the Basin, even at intersections with much worse congestion than anywhere in Riverside County. If a particular project area has low ambient CO concentrations, the SCAQMD does not require modeling to be conducted. If worst-case intersections, as identified by the SCAQMD, have no "hotspot" potential, it follows that any local impacts from a particular project will be below the above applicable thresholds, and thus sensitive receptors would not be impacted by CO hotspots in the City.

Localized Significance Thresholds. Depending on the size and type of project and proximity to sensitive receptors, future development in the City may result in exceedances of Localized Significance Thresholds (LSTs) as developed by the SCAQMD. For example, a very large development project on a site that is adjacent to residential uses may result in significant LST impacts. Specific mitigation would

be required for such projects to help assure there would be no significant impacts to nearby sensitive receptors.

Health Risks. Local residents, especially sensitive receptors, are subject to air quality impacts from Toxic Air Contaminants (TAC). In Jurupa Valley, the most common TAC is diesel particulate matter (DPM) associated with diesel truck exhaust. A long-standing concern of public health groups in the area is DPM from the many warehouses and shipping/logistics uses found in the Mira Loma portion of the City. DPM is considered a carcinogen (i.e., capable of causing cancer). Exposure to diesel exhaust can have immediate health effects, such as irritation of the eyes, nose, throat, and lungs, and it can cause coughs, headaches, light-headedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks.

Under SCAQMD methodology, health risks from TACs are estimated based on “Individual Cancer Risk,” which is the likelihood that a person exposed to TACs over a 70-year lifetime will get cancer. Based on the pollutant drop-off rates defined by the SCAQMD in their guidance document, the distance separating sources of diesel emissions from nearby receptors is one of the most effective ways of reducing potential cancer risk. It should also be noted that the cancer risk posed by DPM emissions from individual development projects in the Jurupa Valley is less than the estimated background carcinogenic risk of one in 627 million.

For individual large commercial or industrial projects, the SCAQMD recommends preparation of a Health Risk Assessment (HRA) to determine the specific health risks posed by long-term project emissions. The SCAQMD also recommends analyzing health risks for new residential developments planned to occur along or near freeways. Analysis is based on their guidance document, *“Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning, (A Reference for Local Governments Within the South Coast Air Quality Management District).”* In the document, busy traffic corridors are defined as freeways with an average daily traffic (ADT) above 100,000 and roadways with an ADT above 50,000 vehicles per day.

Long-term air pollutant emission impacts also accrue from local and regional stationary sources such as energy consumption as well as other area sources. The energy consumption emissions would come from natural gas consumption and use of electricity from future land uses and development projects. Area sources include use of consumer products, landscaping equipment, and architectural coatings.

The use of construction equipment on a particular site would result in localized exhaust emissions, but the actual determination of whether those emissions had significant impacts on local sensitive receptors compared to the SCAQMD LST thresholds would have to be conducted for each specific development project in the future. At that point in time, project data would be input into the SCAQMD’s CalEEMod model (currently Version 2013.2.2) or whatever was the accepted air modeling program or procedure at the time the development was proposed. Given the size of vacant parcels still available in the City for future development, it is possible that future development could result in significant air quality impacts to sensitive receptors that would have to be mitigated on a project by project basis.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Air Quality and Environmental Justice Elements of the 2017 General Plan are specifically related to protecting sensitive receptors:

Air Quality Element

Goal

AQ 2 A city that protects its and other sensitive receptors from toxic air pollution.

Policies

- AQ 2.1.1 Design projects to protect sensitive receptors and land uses from air pollution.
- AQ 2.1.2 Encourage non-structural air pollution control measures (landscaping, etc.).
- AQ 2.1.3 Create a City-wide tree planning program to help filter air pollutants.

Program

- AQ 2.1.1.1 Monitor adherence to air pollution “best practices” by CARB and SCAQMD.

Goal

- AQ 3 A city that actively works to reduce emissions from stationary and mobile sources.

Policies

- AQ 3.1.4 Require projects to meet air emission standards (SCAQMD, USEPA, and CARB).
- AQ 3.1.5 Apply the County's Fugitive Dust Reduction Measures to the entire City.

Environmental Justice Element

Goal

- EJ 3 Reduce disproportionate environmental impacts on EJ populations.

Policies

- EJ 2.1.2 Require new sensitive land uses to have adequate setbacks for air quality.
- EJ 2.1.3 Provide buffers between schools and industrial facilities and transportation corridors.
- EJ 2.1.4 Require existing stationary sources near sensitive land uses to minimize emissions.
- EJ 2.1.5 Provide adequate separation and buffering between residential and industrial uses.
- EJ 2.1.6 Identify resources for existing sensitive receptors to reduce impacts.
- EJ 2.1.7 Give preference to projects using the latest technologies to reduce diesel emissions.
- EJ 2.1.8 Require buffers for industrial facilities to protect public health.
- EJ 2.1.11 Ensure EJ population understands effect of toxic materials and emissions.
- EJ 2.1.14 Enforce 5-minute idling limit on heavy-duty diesel vehicles.
- EJ 2.1.17 Remediate contaminated brownfield sites especially those near EJ populations.

These goals, policies, and programs emphasize protecting sensitive receptors as development occurs in the future. As long as project-specific impacts of future development on nearby sensitive receptors are evaluated before project approval, then implementation of the 2017 General Plan will not have significant air quality impacts in this regard.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will provide sufficient protection for sensitive receptors. Therefore, programmatic impacts from implementing the 2017 General Plan will be less than significant relative to sensitive receptors, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will provide adequate protection for local sensitive receptors so impacts in this regard will be less than significant and no mitigation is required.

4.3.5.3 Odors

| | |
|-----------|---|
| Threshold | Would the proposed project create objectionable odors affecting a substantial number of people? |
|-----------|---|

Programmatic Impacts. During construction of future development, the various diesel-powered vehicles and equipment in use on a specific project site would create odors. SCAQMD Rule 402 states that air pollutants discharged from any source shall not cause injury, nuisance, or annoyance to the health, safety, or comfort of the public. With the exception of short-term construction-related odors (e.g., equipment exhaust and asphalt odors), most proposed land uses in the City would not be expected to generate offensive odors. The application of architectural coatings and installation of asphalt may generate odors during construction of a particular project, but these odors would be temporary and not likely to be noticeable beyond the project boundaries.

Based on the types of land uses proposed under future development within the City, long-term objectionable odors are not expected to occur during construction or occupancy of typical land uses, especially for residential projects. Some potential sources of odors include emissions from diesel trucks and trash storage areas, mainly in commercial and industrial projects. In addition, solid waste generated by future land uses would be collected by a contracted waste hauler, ensuring that any odors resulting from operations would be adequately managed. Typical procedures that stem from General Plan goals and policies would generally prevent the proliferation of odors, so no significant odor impacts are expected to occur.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Air Quality and Land Use Elements of the 2017 General Plan are specifically related to protecting City residents and businesses from odors:

Air Quality Element

Goal

AQ 2 A city that protects its and other sensitive receptors from toxic air pollution.

Policies

AQ 2.1.1 Design projects to protect sensitive receptors and land uses from air pollution.

AQ 2.1.2 Encourage non-structural air pollution control measures (landscaping, etc.).

Land Use Element

Policies

LUE 3.5 Design commercial uses to protect abutting residential properties from...odors...

LUE 4.3 Design public facilities to protect sensitive uses from...odors...

These goals, policies, and programs address preventing impacts from odors as development occurs in the future. As long as project-specific impacts of future development are evaluated before project approval, implementation of the 2017 General Plan will not have significant air quality impacts in this regard.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals and policies will provide sufficient protection to prevent significant impacts from odors. Therefore, programmatic odor impacts from implementing the 2017 General Plan will be less than significant and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals and policies will provide adequate protection for local residents and businesses from odors, so impacts in this regard will be less than significant and no mitigation is required.

4.3.5.4 Air Quality Management Plan Consistency

| | |
|-----------|---|
| Threshold | Would the proposed project conflict with or obstruct implementation of the applicable air quality plan? |
|-----------|---|

Programmatic Impacts. An AQMP consistency determination plays an essential role in local agency project review by linking local planning and unique individual projects to the air quality plans. It fulfills the CEQA goal of fully informing local agency decision-makers of the environmental costs of the project under consideration at a stage early enough to ensure that air quality concerns are addressed. Only new or amended General Plan elements, Specific Plans, and significantly unique projects need to undergo a consistency review due to the air quality plan strategy being based on projections from local General Plans. The SCAQMD has the following consistency criteria:

- **Consistency Criterion No. 1:** The 2017 General Plan is a programmatic document and by itself would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP. In fact, the goals, policies, and programs of the Air Quality Element are designed to help minimize air pollutant emissions from future development to the degree possible and practical given the limits of City control over this regional issue.
- **Consistency Criterion No. 2:** Future development under the 2017 General Plan will not exceed the growth assumptions in the 2012 AQMP. The 2012 AQMP is based on regional growth projections developed by the Southern California Association of Governments (SCAG). Future land uses under the proposed General Plan would result in more traffic than at present. However, land uses are generally similar to those identified in the County's Jurupa Area Plan (see previous Table 3.A) which means buildout of the City under the 2017 General Plan would be equivalent to buildout that would have occurred under the County's General Plan. The AQMP was based on the County's General Plan land use data and growth projections, so the proposed 2017 General Plan is consistent in terms of growth and land use buildout to that data used to prepare the AQMP. In addition, the previous Sections 4.10, *Land Use and Planning*, and Section 4.13, Population, Housing, and Employment, demonstrate that the 2017 General Plan is consistent with the regional land use, housing, and transportation planning documents prepared by the (SCAG).

For these reasons, the proposed 2017 General Plan is consistent with the AQMP at a programmatic level.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Air Quality Element of the 2017 General Plan are specifically related to consistency with regional plans:

Air Quality Element

Goal

- AQ 1 A city that works with regional, sub-regional, and state agencies to protect and improve air quality and reduce greenhouse gas emissions.

Policies

- AQ 1.1.1 **Regional Participation.** Promote and participate with regional, subregional and state agencies, both public and private, in all areas to protect and improve air quality, including enforcement of all regulations.

Program

AQ 1.1.1.1 **Regional Committees.** Actively participate on regional committees, which can influence regulations affecting air quality.

This goal, policy, and program emphasizes cooperation with regional agencies and consistency with their planning processes and documents. As long as project-specific impacts of future development are evaluated and mitigated before project approval, implementation of the 2017 General Plan will not have significant air quality impacts in this regard.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not conflict with the goals or intent of the AQMP. Therefore, programmatic impacts from implementing the 2017 General Plan will be less than significant relative to AQMP consistency and no mitigation is required.

Programmatic Mitigation Measures. None needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will be consistent with the goals and overall intent of the AQMP, so impacts in this regard will be less than significant and no mitigation is required.

4.3.6 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a plan summary of long-term development impacts. In this case, the growth projections of the General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

For context, the cumulative "universe" for air quality impacts relative to the City's 2017 General Plan would be the South Coast Air Basin. The AQMP describes and evaluated regional/area-wide conditions within the Basin and sets regional emission significance thresholds for both construction and operation of development projects. The SCAQMD recommends that a project's potential contribution to cumulative impacts should be assessed using the same significance criteria as those for project-specific impacts. This would mean that if a project exceeds the SCAQMD recommended daily regional emission thresholds, the project-specific impacts would also result in a cumulatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment. However, the "project" in this case is a programmatic document, the City's 2017 General Plan, which establishes standards under which future development will be constructed and operate, and one of the major constraints for future development will be to minimize additional traffic and air pollutant emissions. In addition, Section 4.3.5.3 found the 2017 General Plan to be consistent on a programmatic basis with the AQMP. Therefore, implementation of the City's 2017 General Plan will not make a significant contribution to cumulatively adverse regional air quality impacts.

4.4 BIOLOGICAL RESOURCES

This section discusses the potential impacts of development under the 2017 General Plan on biological resources. The analysis in this section is based on the following reference documents:

- *California Natural Diversity Data Base (CNDDB)*, California Department of Fish and Wildlife website, accessed March 4, 2016;
- *Multi-Species Habitat Conservation Plan for Western Riverside County, Riverside Conservation Authority (RCA), Final June 17, 2013*; and
- *South Coast Missing Linkages - A Wildland Network for the South Coast Ecoregion. South Coast Wildlands (cooperative project with federal and state resource agencies). 2016.*

4.4.1 Existing Setting

The City of Jurupa Valley comprises a number of vegetation communities and supports a variety of wildlife, much of which is adapted to human activities. The topography and other physical land features within the City vary widely, including areas with relatively dry undisturbed native vegetation in the northern and central hills, down to the lush northern bank of the Santa Ana River along the southern boundary of the City.

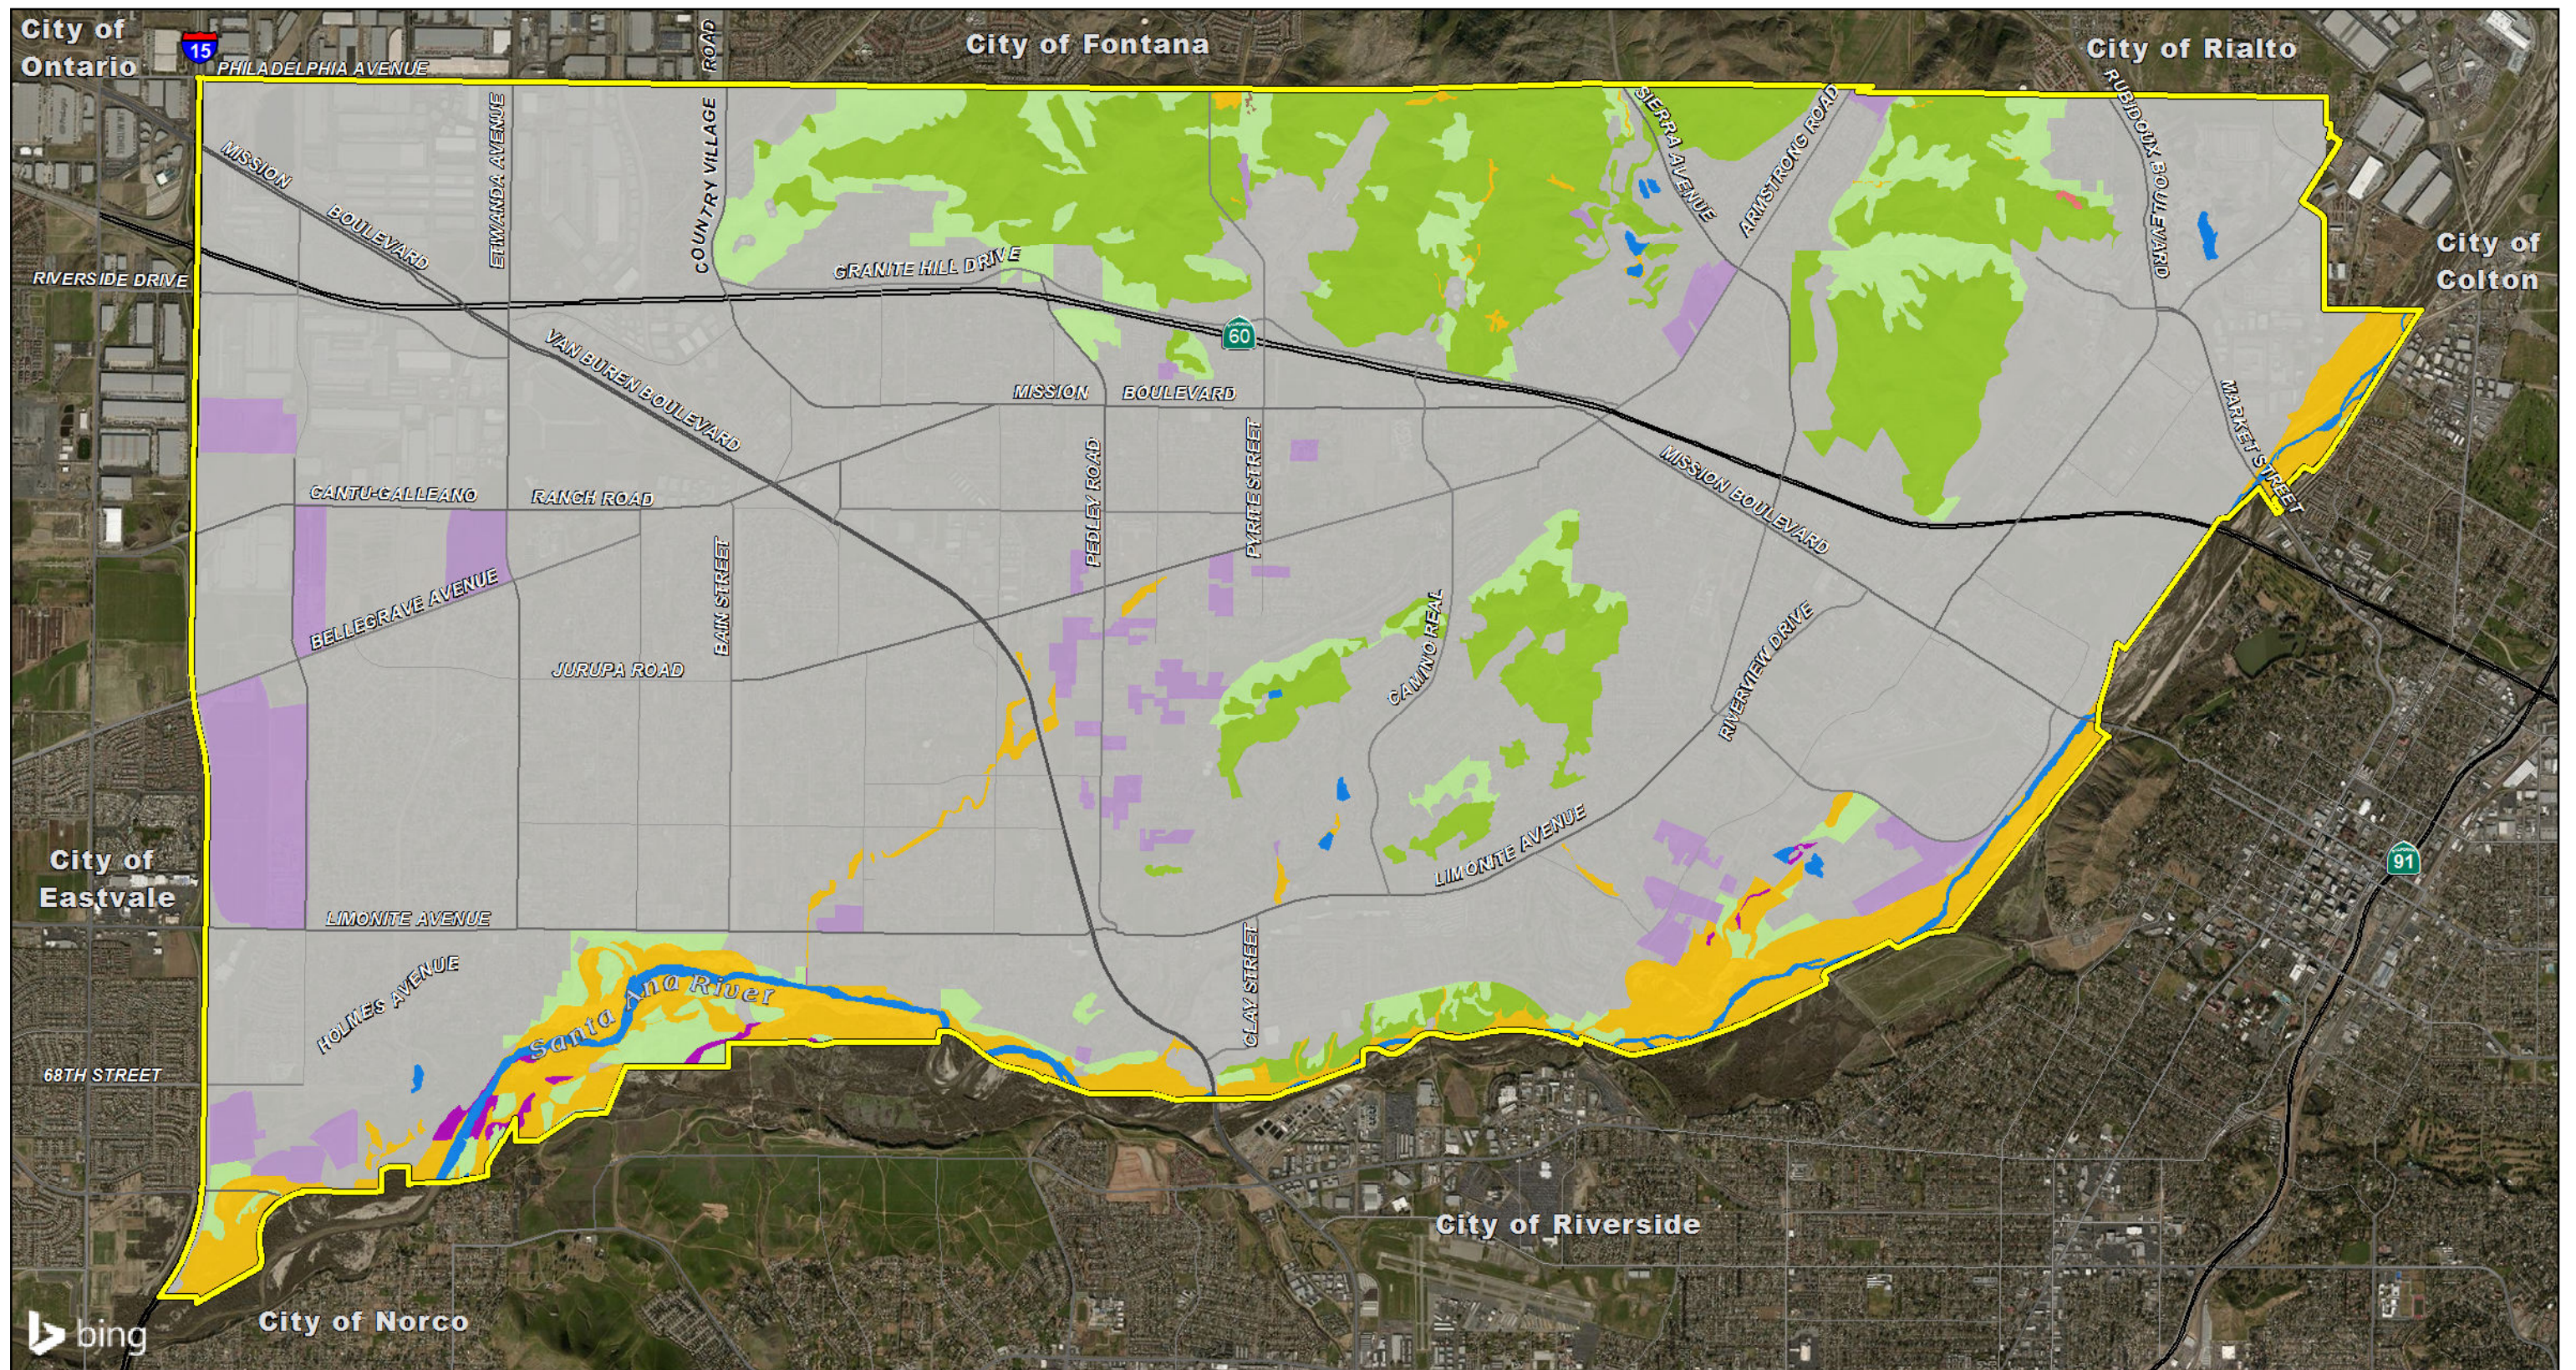

4.4.1.1 Plant Communities

According to data from the County MSHCP, the land within the City supports a variety of native and non-native landscaping and ruderal plant species which make up several specific vegetation communities (see Figure 4.4.1). Within the City there are only three areas with predominantly native plant associations that comprise approximately 25 percent of City land. The uplands in the northern portion of the City (north of the SR-60 Freeway) and the Jurupa Hills in the center portion of the City support coastal sage scrub mixed with grasslands. The southern-most portion of the site, along the Santa Ana River, support riparian scrub and woodland plant communities. Approximately 75 percent of the City consists of disturbed agricultural land and grasslands.

Local trees are mostly introduced species including tree of heaven (*Ailanthus altissima*), white alder (*Alnus rhombifolia*), Tecate cypress (*Cupressus forbesii*), Mediterranean Cypress (*Cupressus sempervirens*), various kinds of eucalyptus trees (*Eucalyptus* spp.), Arizona ash (*Fraxinus velutina*), California juniper (*Juniperus californica*), Canary Island date palm (*Phoenix canariensis*), various kinds of pine trees (*Pinus* spp.), western sycamore (*Platanus racemosa*, *fremontii*), purple leaf plum (*Prunus cerasifera*), California Pepper (*Schinus molle*), Brazilian Pepper (*Schinus terebenthifolius*), Queen palm (*Syagrus romanzoffiana*), Mediterranean tamarisk (*Tamarix ramosissima*), California fan palm (*Washingtonia filifera*), Mexican fan palm (*Washingtonia robusta*), and Mojave yucca (*Yucca schidigera*). Typical trees found within and along the Santa Ana River include Western Cottonwood (*Populus fremontii* ssp), California Sycamore (*Platanus racemosa*), Willow (*Salix* spp), and Giant Reed (*Arundo donax*).

Much of the land along the Santa Ana River comprises riparian plant communities. These communities are confined to deep, well-watered loamy alluvial soils along the river banks and a number of influent channels (e.g., Pyrite Creek). Based on the dominant species composition, a number of areas along the river are classified as Southern Cottonwood/Willow Riparian Forest. This is a tall, open and broadleaved winter-deciduous streamside riparian forest. This habitat is considered to be an early successional stage as both cottonwood and willow species are known to germinate almost exclusively on recently deposited or exposed alluvial soils. In the absence of disturbance, this habitat type will transition to include oaks and sycamores or, at higher elevations, will include white alder.

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.4.1
Local Vegetation Communities

THIS PAGE INTENTIONALLY LEFT BLANK

Other areas of the Santa Ana River bank support tall trees and shrubs including eucalyptus, western cottonwood, western sycamore, black locust (*Robinia pseudoacacia*), black willow (*Salix gooddingii*), red willow (*Salix laevigata*), and Peruvian pepper trees. The understory includes a variety of ferns, herbaceous plants, sub-shrubs, shrubs, and shrubby trees. Abundant species include tumbling pigweed, annual burweed, western ragweed, California mugwort (*Artemisia douglasiana*), tarragon (*Artemisia dracunculus*), giant reed¹ (*Arundo donax*), coyote brush (*Baccharis pilularis* ssp. *consanguinea*), mule fat (*Baccharis salicifolia*), shortpod mustard, lamb's quarters, pitseed goosefoot, common horseweed (*Conyza canadensis*), alkali weed (*Cressa truxillensis*), coyote melon (*Cucurbita palmata*), tall umbrella-sedge (*Cyperus eragrostis*), tall umbrella-sedge (*Cyperus eragrostis*), jimsonweed, salt grass, Parish spikerush (*Eleocharis parishi*), Orcutt's lovegrass (*Eragrostis mexicana* ssp. *virescens*), small-seed sandmat (*Euphorbia polycarpa* var. *polycarpa*), western sunflower, telegraph weed (*Heterotheca grandiflora*), golden aster (*Heterotheca sessiliflora*), prickly lettuce (*Lactuca serriola*), tree tobacco, castor-bean (*Ricinus communis*), curly dock (*Rumex crispus*), willow dock (*Rumex salicifolius* var. *salicifolius*), narrow-leaved willow (*Salix exigua*), arroyo willow (*Salix lasiolepis* var. *lasiolepis*), California bulrush (*Scirpus californicus*), common sow-thistle (*Sonchus oleraceus*), Mediterranean tamarisk, cotton-thorn (*Tetradymia comosa*), broad-leaved cat-tail (*Typha latifolia*), and desert wild grape (*Vitis girdiana*).

Aside from the native plant communities described above, two thirds of the City's vacant land area consists of disturbed land which supports a variety of species commonly found in the region, including many along the outer banks of the Santa Ana River. Species include tumbling pigweed (*Amaranthus albus*), prostrate pigweed (*Amaranthus blitoides*), annual burweed (*Ambrosia acanthicarpa*), western ragweed (*Ambrosia psilostachya* var. *californica*), Australian saltbush (*Atriplex semibaccata*), shortpod mustard (*Brassica geniculata*), brome grasses (*Bromus diandrus* and *B. madritensis* ssp. *rubens*), lamb's quarters (*Chenopodium album*), jimsonweed (*Datura wrightii*), salt grass, filarees (*Erodium botrys* and *Bromus cicutarium*), western sunflower (*Helianthus annuus*), alkali heliotrope (*Heliotropium curassavicum* ssp. *oculatum*), white sweetclover (*Melilotus albus*), sourclover (*Melilotus indicus*), common knotweed (*Polygonum arenastrum*), common purslane (*Portulaca oleracea*), Russian thistle (*Salsola tragus*), common groundsel (*Senecio vulgaris*), London rocket (*Sisymbrium irio*), and puncture vine (*Tribulus terrestris*).

4.4.1.2 Wildlife Species

The various vegetation communities within the City support a variety of wildlife. Most of the species typical in this area are tolerant of human activity and proximity. The banks of the Santa Ana River support a higher diversity of wildlife compared to drier upland or disturbed areas within the developed portions of the City. Common wildlife species include the western mosquito fish (*Gambusia affinis*), bullfrog (*Rana catesbeiana*), western fence lizard (*Sceloporus occidentalis*), side-blotched lizard (*Uta stansburiana*), mallard (*Anas platyrhynchos*), great egret (*Casmerodius albus*), killdeer (*Charadrius vociferus*), red-tailed hawk (*Buteo jamaicensis*), American kestrel (*Falco sparverius*), mourning dove (*Zenaidura macroura*), Anna's hummingbird (*Calypte anna*), Nuttall's woodpecker (*Picoides nuttallii*), western kingbird (*Tyrannus verticalis*), ash-throated flycatcher (*Myiarchus cinerascens*), black phoebe (*Sayornis nigricans*), northern rough-winged swallow (*Stelgidopteryx serripennis*), common raven (*Corvus corax*), bushtit (*Psaltiriparus minimus*), American robin (*Turdus migratorius*), western bluebird (*Sialia mexicana*), northern mockingbird (*Mimus polyglottos*), yellow-rumped warbler (*Dendroica coronata*), red-winged blackbird (*Agelaius phoeniceus*), brownheaded cowbird (*Molothrus ater*), chipping sparrow (*Spizella passerina*), song sparrow (*Melospiza melodia*), Lincoln's sparrow (*Melospiza lincolni*), California towhee (*Pipilo crissalis*), house finch (*Carpodacus mexicana*), lesser goldfinch (*Carduelis psaltria*), Great blue heron (*Ardea Herodias*), and house sparrow (*Passer domesticus*).

Feral pigs (*Sus scrofa*), native to Eurasia and North Africa, have been observed within or along the Santa Ana River for years. California's feral pigs, sometimes also referred to as "wild pigs," are descendants of domestic pigs kept by Spanish settlements in the late 1700s and Eurasian wild boars introduced in the 1920s and 1950s. In addition, desert cottontail (*Sylvilagus audubonii*), California

¹ Arundo is a particularly aggressive invasive plant that chokes out native riparian vegetation along the Santa Ana River.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

ground squirrel (*Spermophilus beecheyi*), Botta's pocket gopher (*Thomomys bottae*), and coyote (*Canis latrans*) are also present within the City.

Special status species are plant and animal species or subspecies for which there is concern for population sustainability or that are otherwise considered worthy of consideration for protection by the California Department of Fish and Wildlife (CDFW), United States Fish and Wildlife Service (USFWS), local agencies, or special interest groups, such as the California Native Plant Society (CNPS). In addition to species federally or State listed as endangered or threatened, these include species that are candidates or proposed for listing as endangered or threatened, plant species that are state listed as rare, animal species designated as fully protected or species of special concern by the State of California, and plant species designated as California Rare Plant Rank (RPR) 1A, 1B, or 2. California Rare Plant Ranks are assigned by a committee of government agency and non-governmental botanical experts, including experts from CNPS, and are not official State designations of rarity status. Legal protection for sensitive species varies widely, from the comprehensive protection extended to federally-listed threatened and/or endangered species to species without legal protection at the current time.

The Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) was developed with the goal of protecting biological and ecological diversity in the rapidly growing region. Habitat Conservation Plans (HCPs) set aside areas where development can occur as well as areas that should be protected due to their value as species habitat. Table 4.4.A summarizes listed and otherwise sensitive species and biological resources that have the potential to occur within the City.

Table 4.4.A: Biological Resources of Concern in Jurupa Valley

| Species or Environmental Issue of Concern | Federal Listing Status | State Listing Status | Findings |
|---|------------------------|----------------------|--|
| Blueline Stream(s) | None | None | The Santa Ana River and a number of tributary channels are classified as streams. |
| Coastal California gnatcatcher (<i>Poliophtila californica californica</i>) | Threatened | None | Has been observed in association with sage scrub habitat. |
| San Bernardino Kangaroo Rat (<i>Dipodomys merriami ssp. parvus</i>) | Endangered | None | Can be found in loose soils associated with grassland and coastal sage scrub in the Jurupa Mountains. |
| Coastal Sage Scrub | None | None | Observed in the uplands north of the SR-60 Freeway and the Jurupa Hills in the east-central portion of the City. |
| Alluvial Fan Sage Scrub | None | None | Considered sensitive and in need of protection by the CDFW, found in some locations adjacent to the Santa Ana River. |
| Least Bell's vireo (<i>Vireo bellii pusillus</i>) | Endangered | Endangered | Has been found along the adjacent Santa Ana River and its larger tributaries. |
| Western yellow-billed cuckoo (<i>Coccyzus americanus occidentalis</i>) | None ¹ | Endangered | Has been found along the adjacent Santa Ana River and its larger tributaries. |
| Oak Woodlands | None | None | Present along some portions of the Santa Ana River. |
| Riverside fairy shrimp (<i>Streptocephalus woottoni</i>) | Endangered | None | Found in vernal pools which are not typically found within the City. |
| Santa Ana River woolly-star (<i>Eriastrum densifolium ssp. sanctorum</i>) | Endangered | Endangered | Has been found along the adjacent Santa Ana River and its larger tributaries. |

¹ Was a candidate for federal endangered list in the 1980's but was not listed.

Table 4.4.A: Biological Resources of Concern in Jurupa Valley

| Species or Environmental Issue of Concern | Federal Listing Status | State Listing Status | Findings |
|--|------------------------|----------------------|---|
| Many-stemmed live-forever (<i>Dudleya multicaulis</i>) | None | None ¹ | Often found in rock outcroppings, cliff faces, or road cuts, could be present in Jurupa Hills or in areas with stony soils or along the Santa Ana River |
| Vernal Pools | None | None | Not typically found within the City but possible in relatively flat undisturbed areas with underlying clay soils. |
| Wetlands | None | None | Present within the Santa Ana River and some of its tributary channels. |
| San Miguel savory (<i>Satureja chandleri</i>) | None | None | Potential presence in mountain chaparral vegetation, uncommon in Southern California. |
| San Diego ambrosia (<i>Ambrosia pumila</i>) | Endangered | None | Potential presence in grasslands and drainages, mainly found in a small segment of San Diego County and uncommon in western Riverside County. |
| Brand's phacelia (<i>Phacelia stellaris</i>) | None | None | Potential presence in coastal sage scrub and possibly along the Santa Ana River. |
| Burrowing owl (<i>Athene cunicularia hypugaea</i>) | None | Special Concern | Common in disturbed areas and can move in and occupy vacant land in a short amount of time. |

Sources: Summarized from Western Riverside MSHCP. June 17, 2016 and current USFWS and CDFW websites, accessed in July 2016.

4.4.1.3 County Multi-Species Habitat Conservation Plan

To address regional biological resources and habitat sustainability, the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) was developed in 2001 by the County of Riverside in cooperation with state and federal agencies (the MSHCP is provided in GP Appendix 12.0). The MSHCP applies to unincorporated and incorporated Riverside County land, including Jurupa Valley, excluding Native American tribal land, west of the crest of the San Jacinto Mountains to the Orange County line. It applies to a total area of approximately 1.26 million acres (approximately 1,997 square miles) and is one of the largest conservation plans in the U.S. The MSHCP covers multiple species and multiple habitats within multiple jurisdictions, including the City of Jurupa Valley.

The MSHCP was conceived, developed, and is being implemented specifically to address the direct, indirect, cumulative, and growth-related effects on covered species resulting from build out of planned land use and infrastructure, including the proposed General Plan. The MSHCP involves efforts by the County, State, and Federal governments, the fourteen cities in western Riverside County, and private and public entities engaged in construction activities that potentially affect the species covered under the MSHCP. The plan specifies an obligation of local projects, both public and private, to mitigate their impacts on species. The MSHCP includes incentives for conservation or the purchase of properties from willing sellers and will eventually result in a Conservation Area in excess of 500,000 acres, focusing on conservation of 146 species. The MSHCP Conservation Area includes approximately 347,000 acres of existing Public/Quasi-Public Lands and approximately 153,000 acres of Additional Reserve Land.

The MSHCP Conservation Area is made up of existing and proposed “Core” areas, or large assemblages of public land that contain important habitat and listed or sensitive species populations. The core areas are connected by a series of “linkages” or “corridors” identified across public and private lands to allow wildlife movement and genetic connectivity and diversity among the core areas.

¹ California Native Plant Society (CNPS) 1B.2 listed (“fairly endangered in California”)

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

The MSHCP identifies conservation areas through a series of “criteria cells” within which certain biological resources (i.e., vegetation and/or physical features) should be preserved over the long term. The MSHCP also establishes various processes to evaluate land development proposals in light of its goals and requirements. The MSHCP also identifies when studies need to be performed within certain criteria cells to determine the presence or absence of listed or otherwise sensitive species of plants or animals.

The MSHCP indicates the City is located within the Jurupa Area Plan which is further divided into three Subunits. For each Subunit, the MSHCP establishes target conservation acreages along with a description of the Planning Species, Biological Issues and considerations, and Criteria for each Subunit. For more information regarding specific conservation objectives for the Planning Species, see MSHCP Section 9.0. Subunit boundaries are depicted on the Cells and Cell Groupings map displays (MSHCP Figures 3-12 and 3-13). MSHCP Table 3-7 presents the Criteria for the Jurupa Area Plan which is summarized in the following Table 4.4.B.

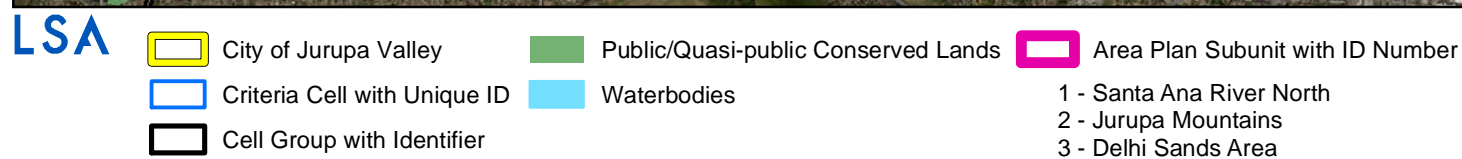

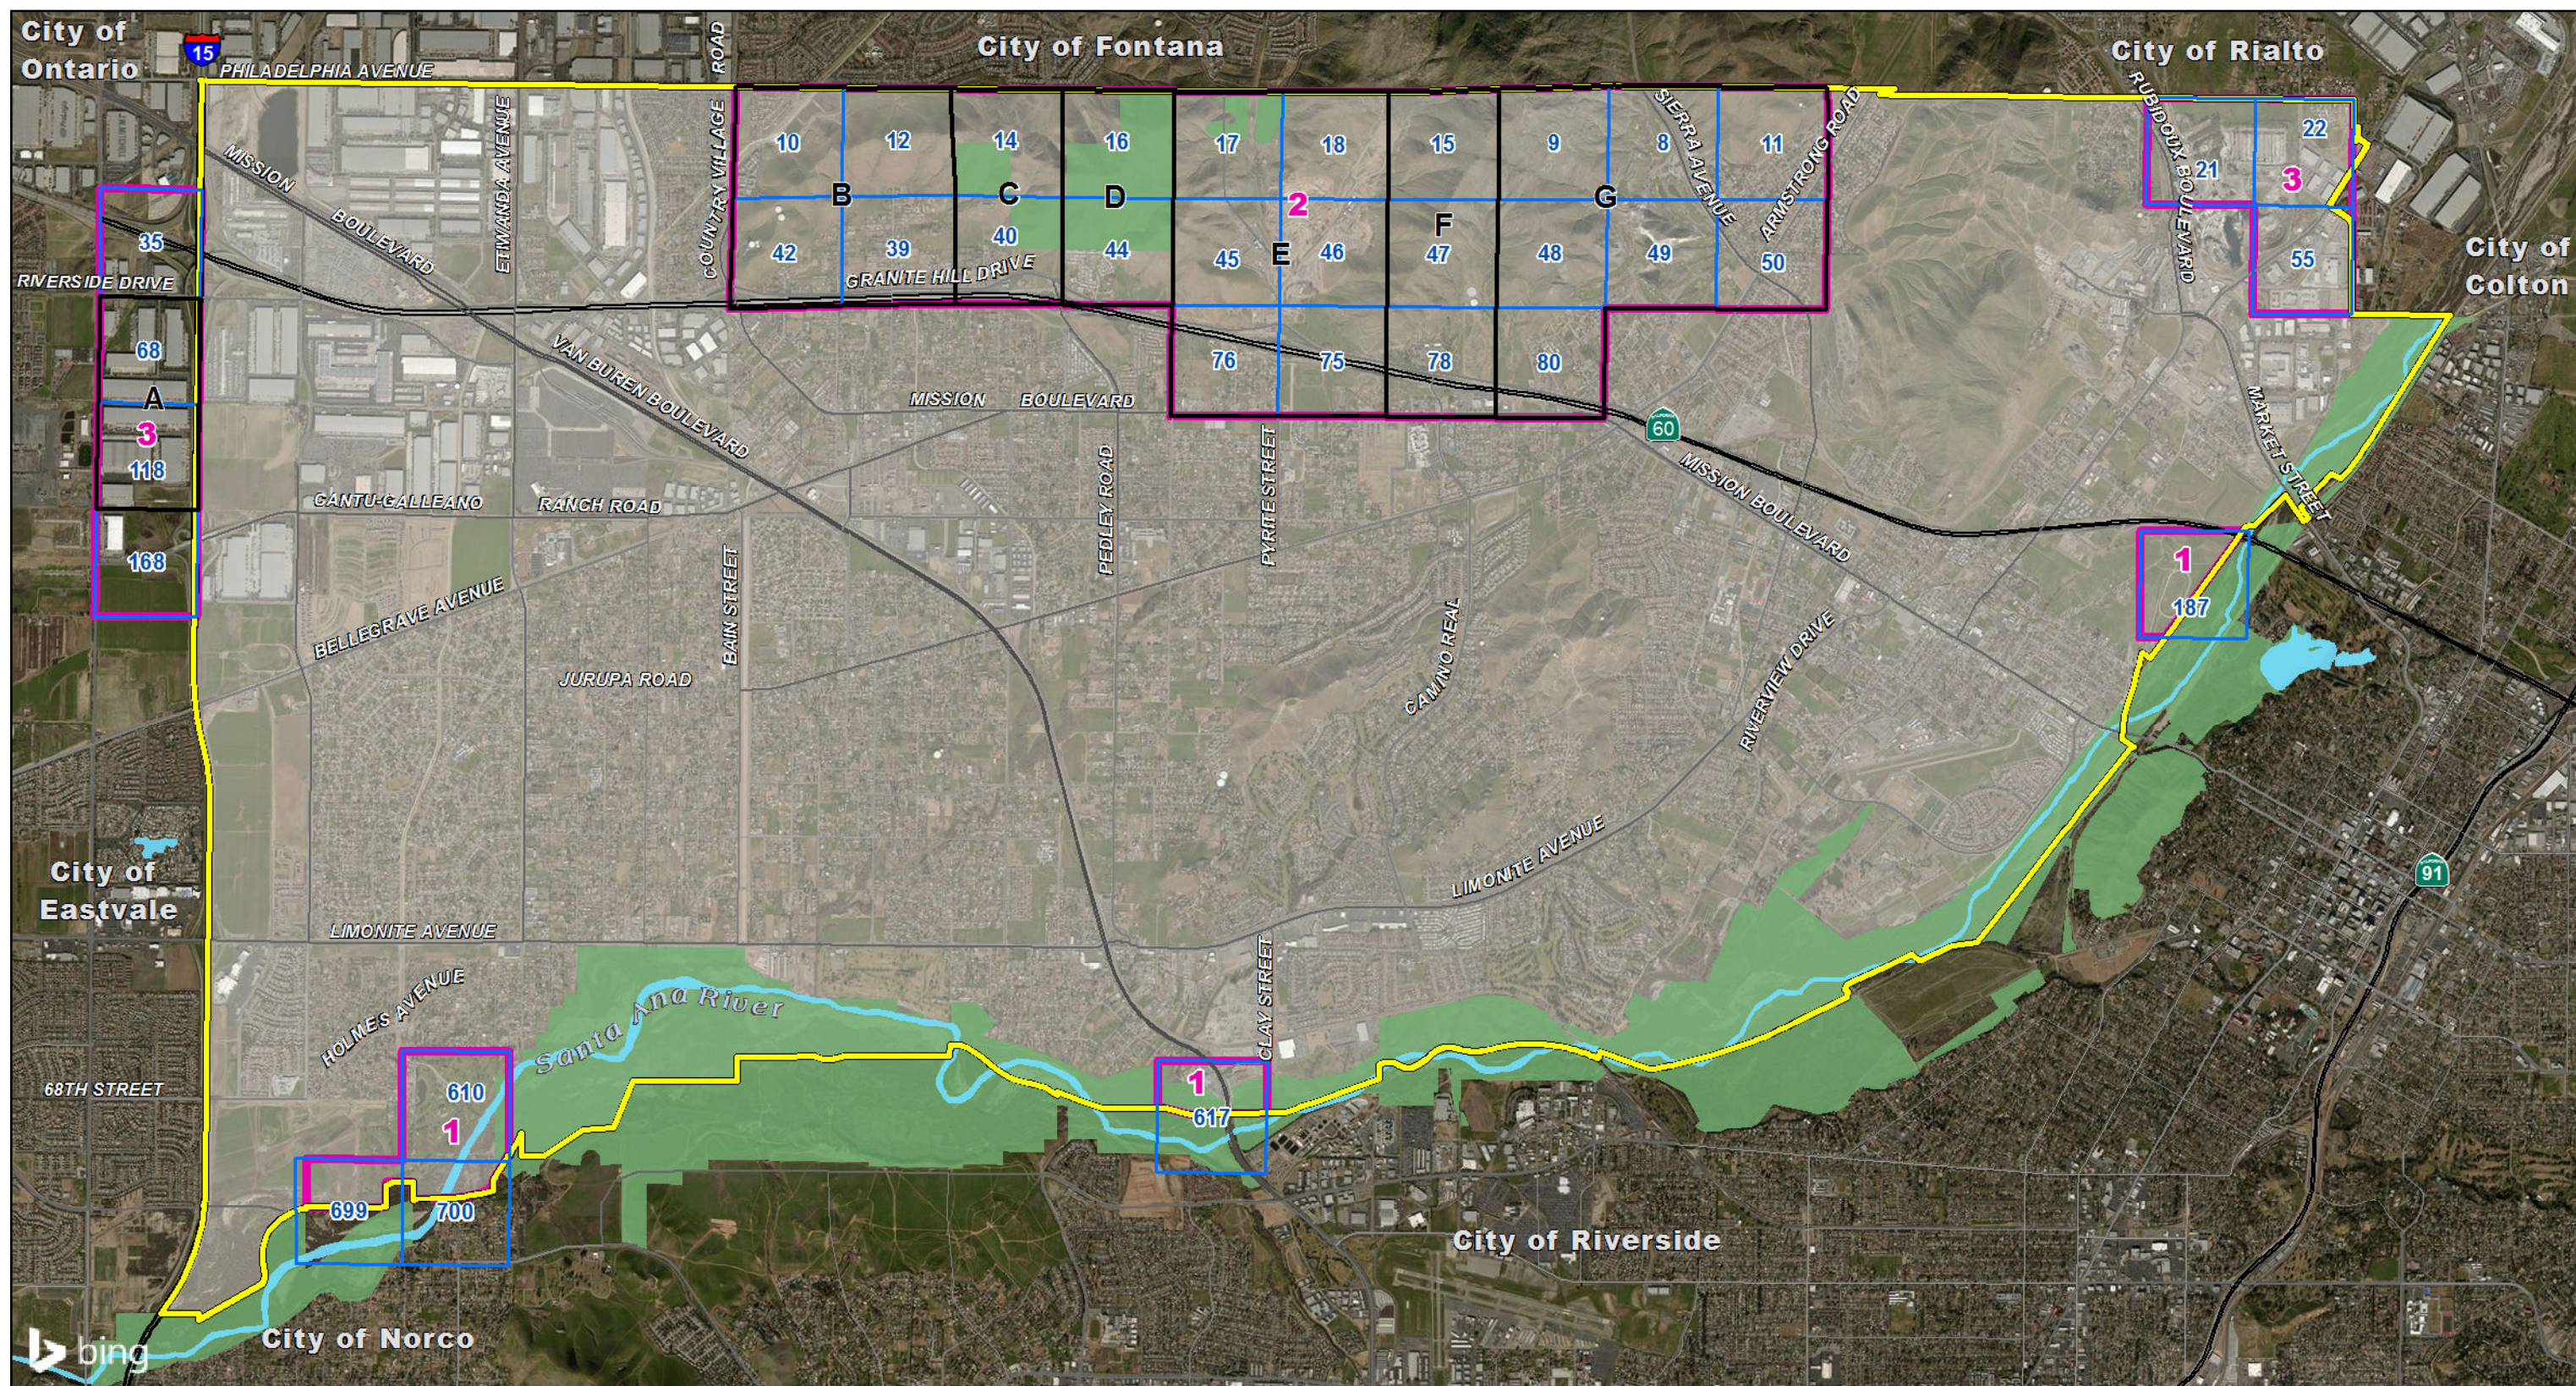

The Santa Ana River is classified as Core Area A while the northern Jurupa Hills are described as non-contiguous habitat block 2 (MSHCP Figure 3-2, Schematic Cores and Linkage). As shown in Figure 4.4.2, the City encompasses 31 Criteria Cells in seven cell group areas (A-G) within the City. Table 4.4.B provides the descriptions of the habitat conservation goals for these MSHCP cell areas.

Table 4.4.B: MSHCP Criteria Cell Groups within Jurupa Valley

| Cell Group* | Criteria Cells | Location | Summary of Conservation Goals |
|-------------|------------------------------|--|---|
| -- | 187, 610, 617, 699, 700 | Santa Ana River and agricultural land just east of the I-15 Freeway and south of the SR-60 Freeway | Sub-Unit 1 – Santa Ana River North: Contributes to Existing Core A and focuses on riparian scrub, woodland, forest and water habitat and agricultural land adjacent to the Santa Ana River. |
| A | 21, 22, 34, 55, 68, 118, 168 | Jurupa Hills north of the SR-60 Freeway | Sub-Unit 3 - Delhi Sands Area: Protect habitat for the Delhi Sands flower-loving fly |
| B | 10, 12, 39, 42 | Jurupa Hills north of the SR-60 Freeway | Sub-Unit 2 – Jurupa Mountains: Connect areas with coastal sage scrub and grassland habitat with similar habitat in Cell Group C to the east. |
| C | 14,40 | Jurupa Hills north of the SR-60 Freeway | Sub-Unit 2 – Jurupa Mountains: Connect areas with coastal sage scrub and chaparral habitat with similar habitat in Cell Group D to the east. |
| D | 16, 44 | Jurupa Hills north of the SR-60 Freeway | Sub-Unit 2 – Jurupa Mountains: Connect areas with coastal sage scrub and chaparral habitat with similar habitat in Cell Group C to the west. |
| E | 17, 18, 45, 46, 75, 76 | Jurupa Hills mainly north of the SR-60 Freeway | Sub-Unit 2 – Jurupa Mountains: Connect areas with coastal sage scrub habitat with similar habitat in Cell Group F to the east. |
| F | 15, 47, 78 | Jurupa Hills mainly north of the SR-60 Freeway | Sub-Unit 2 – Jurupa Mountains: Connect areas with coastal sage scrub habitat with similar habitat in Cell Group E to the west and Cell Group G to the east. |
| G | 8, 9, 111, 48, 49, 50, 80 | Jurupa Hills north of the SR-60 Freeway | Sub-Unit 2 – Jurupa Mountains: Connect areas with coastal sage scrub and grassland habitat with similar habitat in Cell Group F to the west. |

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.4.2
MSHCP Criteria Cells

THIS PAGE INTENTIONALLY LEFT BLANK

Development within a Criteria Cell requires a private project applicant, the City, and the County¹ to use the Habitat Acquisition Negotiation Strategy (HANS) process established in the MSHCP to identify and acquire habitat as part of the development review process. The HANS process involves negotiations between a landowner and the Western Riverside County Regional Conservation Authority (RCA) so the County can acquire land with important habitat or other biological resources while providing fair compensation and/or reasonable development opportunities on the remaining land for the landowner. It should be noted the southern portion of the City (i.e., the Santa Ana River) is already classified as “Public Conserved Land” under the MSHCP.

4.4.1.4 Drainages and Wildlife Movement

The City contains a number of isolated water features and drainage channels, some of which have more natural conditions while many are fully improved (concrete-line) flood control channels. The Santa Ana River, along the southern boundary of the City, represents the most significant drainage feature in the City, and a number of smaller tributary channels and streams drain into the river. The largest relatively natural tributary to the river within the City is Pyrite Creek which flows into the river just west of the Paradise Knolls golf course (i.e., south of Limonite Avenue west of Van Buren Boulevard). Figure 4.4.3 shows the locations of major drainages within the City which may have riparian or related resources associated with them. Major flood control channels that drain into the Santa Ana River include the Etiwanda, San Sevaine, and the Riverside Canals.

Other than the Santa Ana River, the County MSHCP does not identify any wildlife movement corridors through the City, although the northern portion of the Jurupa Hills, north of the SR-60 Freeway, has been identified in the MSHCP for east-west habitat connectivity. In addition, the Santa Ana River has been identified as an important wildlife corridor by the South Coast Wildlands in their South Coast Missing Linkages report on wildlife movement in Southern California (SCW 2016).

4.4.1.5 NOP/Scoping Comments

There were no comments by public agencies or members of the public regarding biological resources during the scoping meeting.

4.4.2 Regulatory Framework

4.4.2.1 Federal Regulations

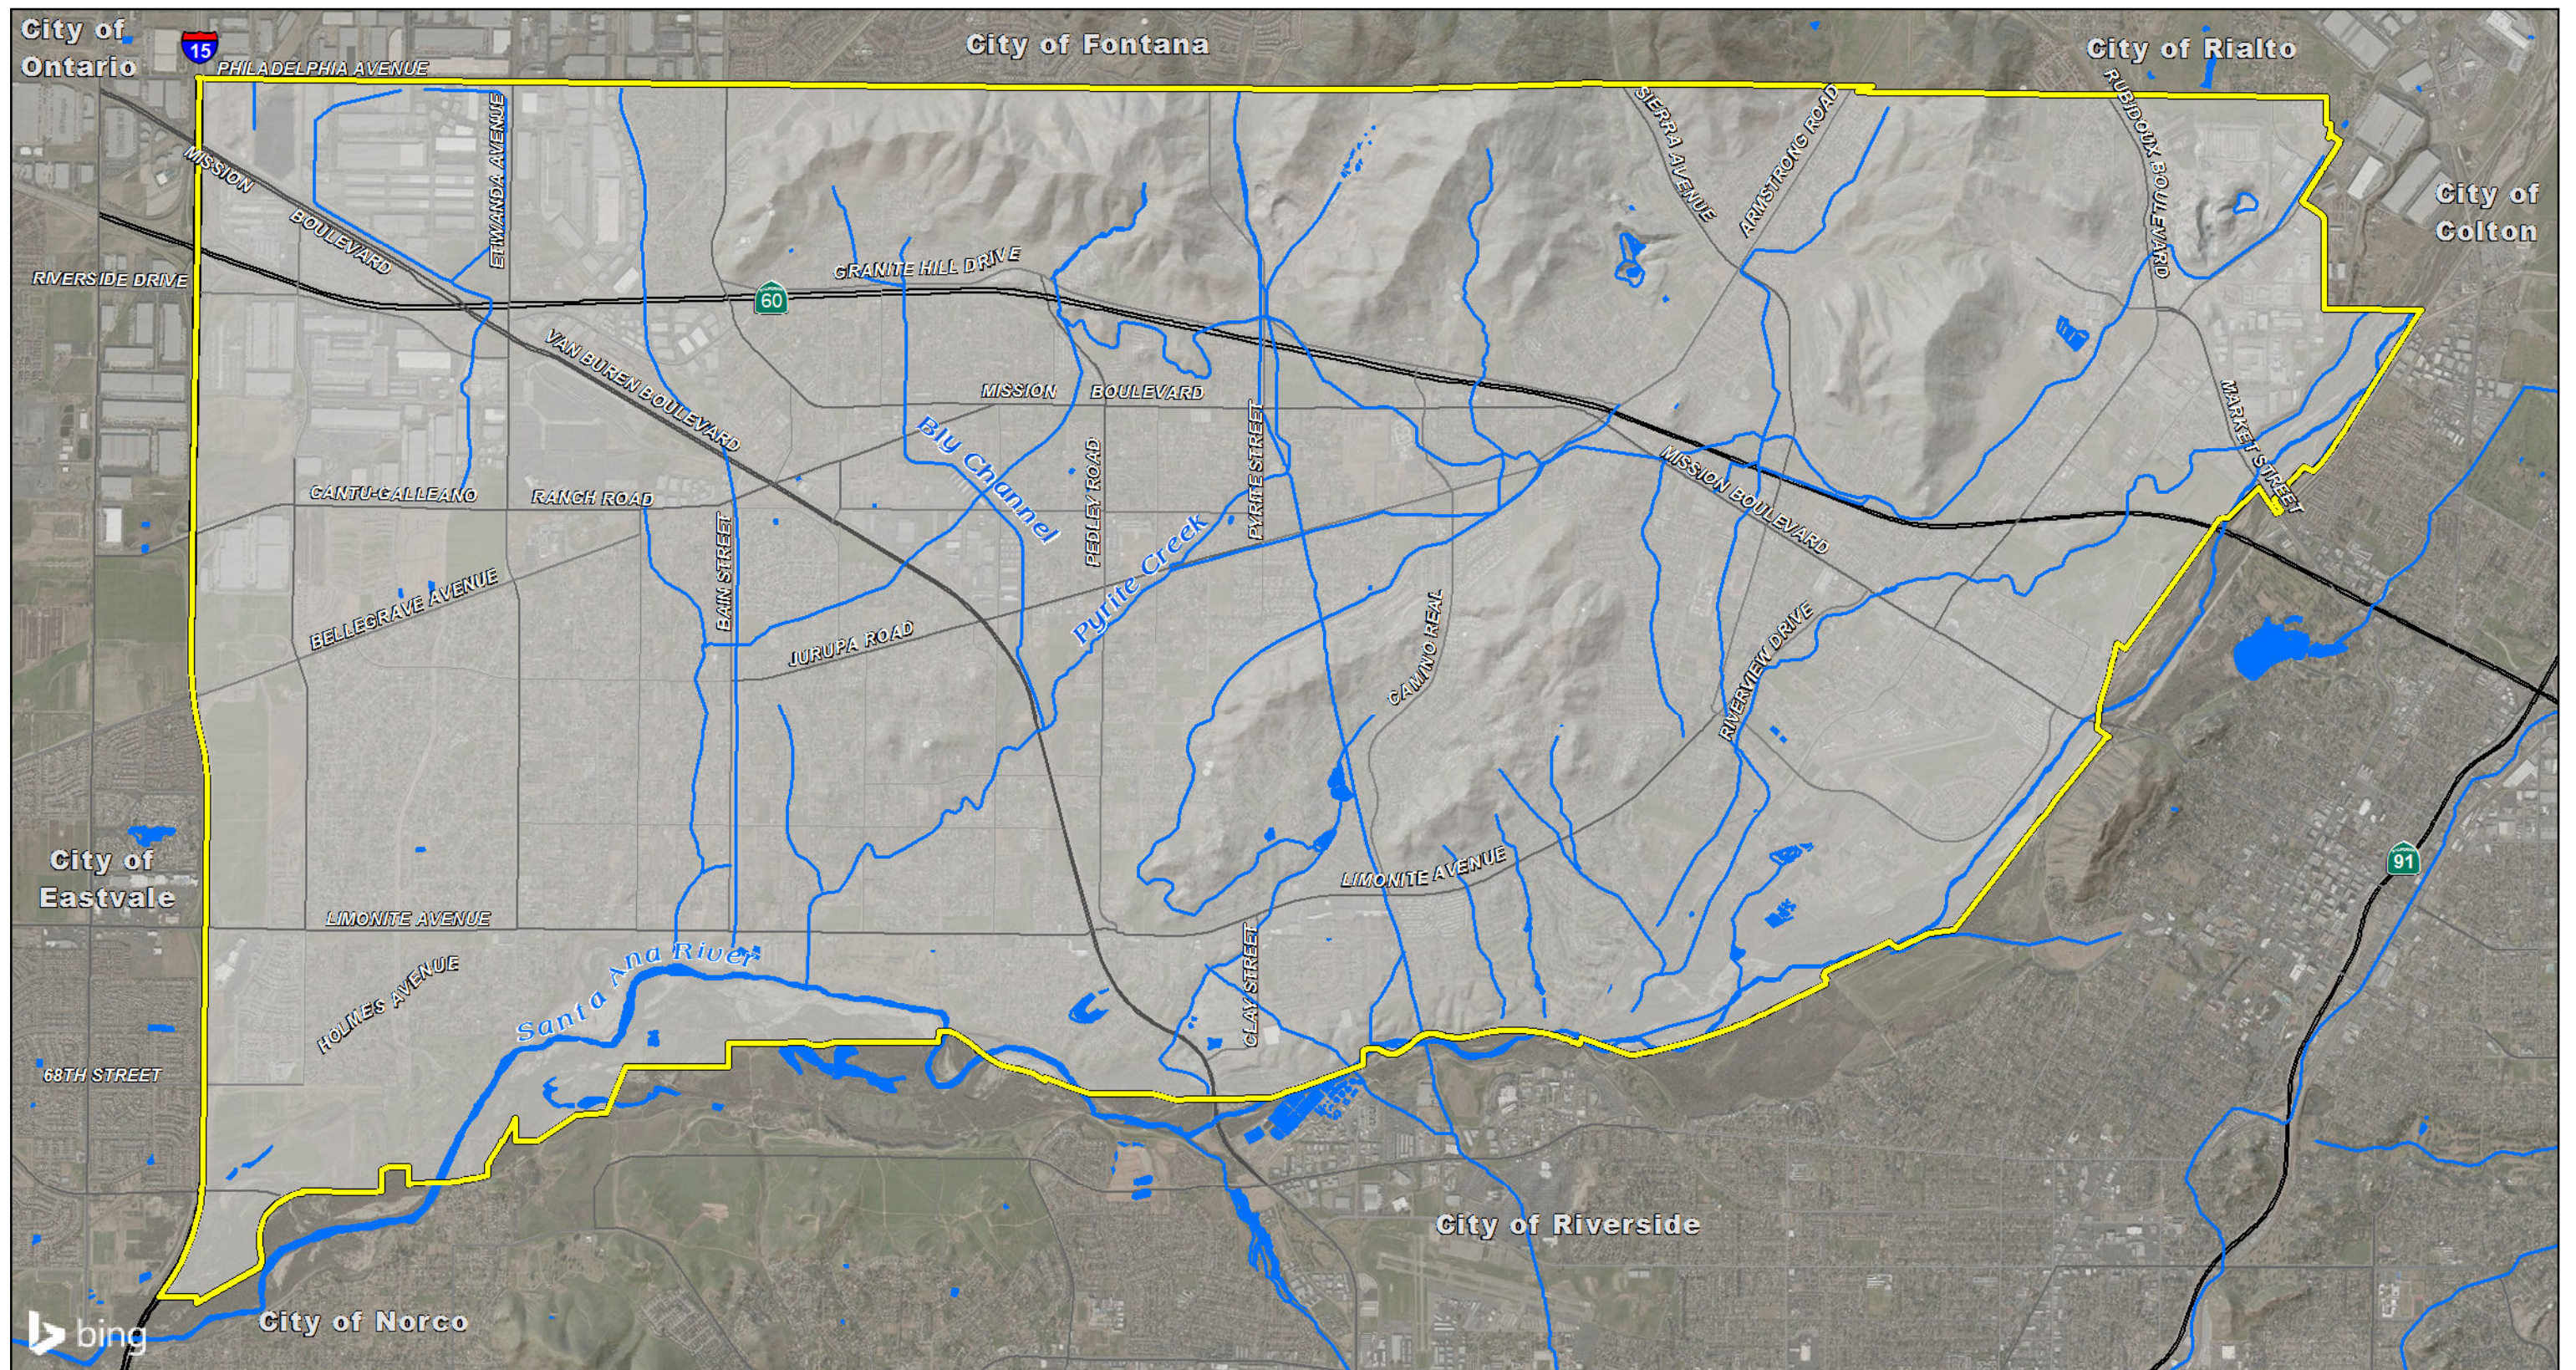

Federal Endangered Species Act (FESA). The FESA was enacted to protect any species of plant or animal that is endangered or threatened with extinction. Section 9 of the FESA prohibits “take” of federally threatened or endangered wildlife. Take, as defined under the FESA, means to harass, harm, pursue, hunt, wound, kill, trap, capture, collect, or attempt to engage in any such conduct (16 USC 1532[19]). Section 9 also prohibits the removal and reduction of endangered plants from lands under Federal jurisdiction, and the removal, cutting, digging, damage, or destruction of endangered plants on any other area in “knowing violation of State law or regulation.”

Section 9 of the FESA (16 USC 1538) prohibits take of a federally listed endangered species of fish or wildlife except pursuant to a permit and HCP approved under Section 10(a) of the FESA (16 USC 1539). The FESA prohibitions and requirements are different, however, for endangered species of plants. Section 9 prohibits the take of endangered plants only from areas under Federal jurisdiction, or if such take would violate state law.

For listed plants located on private land, formal consultation with the USFWS is required when a project has a federal “nexus” (i.e., a federal permit is required or federal funding is involved). In the absence of a federal nexus, a project does not require a permit under the FESA for impacts to listed plants on private lands.

Figure 4.4.3
Local Drainages

THIS PAGE INTENTIONALLY LEFT BLANK

Clean Water Act. The United States Army Corps of Engineers (USACE) regulates discharges of dredged or fill material into waters of the United States. These waters include wetlands and non-wetland bodies of water that meet specific criteria, including a direct or indirect connection to interstate commerce. The USACE regulatory jurisdiction pursuant to Section 404 of the Federal Clean Water Act (CWA) is founded on a connection, or nexus, between the water body in question and interstate commerce. This connection may be direct (through a tributary system linking a stream channel with traditional navigable waters used in interstate or foreign commerce) or may be indirect (through a nexus identified in the USACE regulations). The USACE typically regulates as non-wetland waters of the U.S. any body of water displaying an ordinary high water mark (OHWM). In order to be considered a jurisdictional wetland under Section 404, an area must possess three wetland characteristics: hydrophytic vegetation, hydric soils, and wetland hydrology. Each characteristic has a specific set of mandatory wetland criteria that must be satisfied in order for that particular wetland characteristic to be met. The portion of the Santa Ana River in Jurupa Valley meets the USACE's Clean Water Act Section 404 wetland criteria, as do upstream reaches to the north and downstream reaches to the south down to Prado Dam and beyond.

In 2006, the United States Supreme Court¹ addressed CWA jurisdiction over wetlands adjacent or abutting navigable, non-navigable and ephemeral tributaries and jurisdiction over permanent and relatively permanent non-navigable tributaries. According to the United States Supreme Court, the CWA does not assert jurisdiction over upland erosional features, gullies, and roadside ditches that have infrequent, low volume, and short duration of water flow, instead, the USACE uses a "significant nexus" analysis. A water body is considered to have a "significant nexus" with a traditional navigable water (TNW)² if its flow characteristics and functions in combination with the ecologic and hydrologic functions performed by all wetlands adjacent to such a tributary, affect the chemical, physical, and biological integrity of a downstream traditional navigable water. Additional information is provided in the Environmental Protection Agency (EPA) memorandum titled "Clean Water Act Jurisdiction Following the U.S. Supreme Court's Decision in *Rapanos v. United States* & *Caravell v. United States*," dated June 5, 2007 (USACE 2007), and also the *U.S. Army Corps of Engineers Jurisdictional Determination Form Instructional Guidebook* (USACE and EPA 2007).

The Regional Water Quality Control Board (RWQCB) is responsible for the administration of Section 401 of the CWA, through water quality certification of any activity that may result in a discharge to jurisdictional waters of the U.S. The RWQCB may also regulate discharges to "waters of the State," including wetlands, under the California Porter-Cologne Water Quality Control Act.

4.4.2.2 State Regulations

California Endangered Species Act (CESA). The CESA is similar to the FESA in that its intent is to protect species of fish, wildlife, and plants that are in danger of, or threatened with, extinction because their habitats are threatened with destruction, adverse modification, or severe curtailment, or because of overexploitation, disease, predation, or other factors.

"Take" as defined under CESA means hunt, pursue, capture, or kill, or attempt to hunt, pursue, capture, or kill. Under certain conditions, CESA has provisions for take through a 2081 Permit or a Section 2081 Memorandum of Understanding. The impacts of the authorized take must be minimized and fully mitigated. No permit may be issued if the issuance of the permit would jeopardize the continued existence of the species.

California Environmental Quality Act. Section 15380(b) of the *CEQA Guidelines* provides that a species not listed on the federal or state lists of protected species may be considered rare or endangered if the species can be shown to meet specified criteria. These criteria have been modeled after the definitions in FESA and CESA and § 2780–2781 of Article 1 of the California Fish and Game Code dealing with the California Wildlife Protection Act of 1990. This section was included in the

¹ Consolidated cases *Rapanos v. United States* and *Caravell v. United States*, Nos. 04-1034 and 04-1384 (*Rapanos*: June 19, 2006)

² A "traditional navigable water" includes all of the "navigable waters of the United States," defined in 33 C.F.R. § 329 and by numerous decisions of the federal courts, plus all other waters that are navigable-in-fact.

guidelines primarily to deal with situations in which a public agency is reviewing a project that may have a significant effect on a species that has not yet been listed by either the USFWS or CDFW.

California Fish and Game Code Section 3503 and the Migratory Bird Treaty Act (MBTA). Section 3503 of the California Fish and Game Code prohibits the destruction of bird nests except as otherwise provided for in the Fish and Game Code. The MBTA similarly protects the nests of migratory birds. These regulations apply to the individual nests of these species, but do not regulate impacts to the species' habitats.

Raptor Protection. The California Fish and Game Code (Fish and Game Code, Sections 3503, 3503.5, 3505 and 3513), and California Code of Regulations (Title 14, Sections 251.1, 652 and 783-786.6) have specific provisions for the protection of raptors (birds of prey).

Streambed Alteration Agreements. Sections 1600 et seq. of the California Fish and Game Code define the responsibilities of the CDFW and require public and private applicants to obtain an agreement for projects that would "divert, obstruct, or change the natural flow or bed, channel, or bank of any river, stream, or lake designated by the CDFW in which there is at any time an existing fish or wildlife resource or from which those resources derive benefit, or would use material from the streambed designated by the department." CDFW wardens and/or unit biologists typically have the responsibility for formulating and issuing Streambed Alteration Agreements. The CDFW, through provisions of the Code (Sections 1601–1603), is empowered to issue agreements for any alteration of a river, stream, or lake where fish or wildlife resources may be adversely affected. Streams (and rivers) are defined by the presence of a channel bed and banks, and at least an intermittent flow of water. The CDFW regulates wetland areas only to the extent that those wetlands are part of a river, stream, or lake as defined by the CDFW.

Native Plant Protection Act (NPPA). Sections 1900–1913 of the California Fish and Game Code (Native Plant Protection Act) direct the CDFW to carry out the Legislature's intent to "... preserve, protect and enhance endangered or rare native plants of this state." The NPPA gives the California Fish and Game Commission the power to designate native plants as "endangered" or "rare" and protect endangered and rare plants from take.

4.4.2.3 County Multi-Species Habitat Conservation Plan

As previously outlined in Section 4.4.1.3, the County of Riverside, eight additional land jurisdictions, and approximately fourteen cities adopted a Multi-Species Habitat Conservation Plan (MSHCP) in 2003. Approximately half of the land within the City north of the SR-60 Freeway is within 27 Criteria Cells of the MSHCP and planned to protect coastal sage scrub, chaparral, and grassland habitat across the Jurupa Mountains in the northern portion of the City. In addition, the Santa Ana River property within the City is designated in the MSHCP as "Public/Quasi-Public Conserved Lands" (PQP) which is comprised of the Santa Ana River Wildlife Area (CDFW) and Santa Ana River Regional Park (Riverside County).

4.4.2.4 City General Plan

The Conservation and Open Space Element of the General Plan describes the biological resources of City land as follows:

Jurupa Valley provides diverse habitats for a variety of native plant and animal species. The pattern of hills, valleys, and river basins provide wildlife habitats including riparian corridors, oak woodlands, and chaparral. Examples include features such as the Jurupa Mountains, the Santa Ana River, and the Pedley Hills. Located along Jurupa Valley's eastern and southern boundary, the Santa Ana River is a significant ecological, recreational, and visual resource. Many native and endangered species thrive here, including the Least Bell's Vireo, Santa Ana River Woolly Star, and San Bernardino Kangaroo Rat. The Santa Ana River Wildlife Area and Jurupa Nature Center provide nature study, conservation and outdoor education, and hiking and equestrian activities. Throughout the area, interconnecting trails provide access to outstanding scenery. The Jurupa Mountains are the dominant visual resource in the northern portion of the City. The highest peak,

Mount Jurupa, stands at an elevation of 2,217 feet. Substantial portions of the mountains are identified as potential habitat for the endangered Delhi Sands Flower-loving Fly.

The vegetation of Jurupa Valley is diverse in its size, shape and form, yet various species share similar adaptations to climate and environmental conditions. Further, habitat areas are associated with the dominant natural vegetation that thrives here. Although ecological conditions fluctuate in the various plant communities, these natural changes occur gradually, with most species adapting to the habitat and climate changes. However, with development, changes occur that can adversely affect wildlife habitats, local microclimates, water percolation, soil erosion, fires, and aesthetic quality.

Figure 4.4.4 summarizes the important biological resources within the City. The General Plan outlines policies and goals that aim to protect the biological resources of Jurupa Valley in conjunction with the MSHCP. The General Plan goals and policies attempt to maintain a balance between growth and natural resource preservation throughout Jurupa Valley to preserve the ecological health and overall character of this special environment.

The habitat requirements of sensitive and listed species, combined with sound habitat-management practices, help shape the following goals and policies of the Conservation and Open Space Element will guide the City's conservation efforts:

Conservation and Open Space Element

COS 1. Biological Resources

Goal

- COS 1.1 Protect, preserve, and create the conditions that will promote the preservation of significant trees and other vegetation, particularly native California species.

Policies

- COS 1.1.1 **Habitat Conservation.** Conserve key habitats, including existing wetlands and California native plant communities, with a focus on protecting and restoring the following endangered species habitats:
- A. Conserve alluvial fan sage scrub associated with the Santa Ana River to support key populations of Santa Ana River woolly-star (*Eriastrum densifolium*, ssp. *sanctorum*).
 - B. Conserve clay soils to support key populations of Many-Stemmed Live-Forever plants (*Dudleya multicaulis*) known to occur along the Jurupa Valley portion of the Santa Ana River.
 - C. Conserve known populations of Least Bell's Vireo (*Vireo bellii* ssp. *pusillus*) and Southwestern Willow Flycatcher (*Empidonax traillii* ssp. *extimus*) along the Santa Ana River.
 - D. Conserve large intact habitat areas consisting of coastal sage scrub, chaparral, and grasslands to support known locations of Coastal California Gnatcatcher (*Polioptila californica*).
 - E. Conserve grassland and coastal sage scrub supporting known populations of San Bernardino Kangaroo Rat (*Dipodomys merriami* ssp. *parvus*) in the Jurupa Mountains.
 - F. Conserve grasslands adjacent to sage scrub for foraging habitat for raptors.
- COS 1.1.2 **Protection of Significant Trees.** Protect and preserve significant trees, as determined by the City Council upon the recommendation of the Planning Commission. Significant trees are those trees that make substantial contributions to natural habitat or to the urban landscape due to their species, size, or rarity. In particularly, California native trees are protected.

THIS PAGE INTENTIONALLY LEFT BLANK

THIS PAGE INTENTIONALLY LEFT BLANK

- COS 1.1.3 **Other Significant Vegetation.** Maintain and conserve superior examples of agricultural windrows, street trees, stands of mature native and non-native trees, and other features of ecological, aesthetic, and conservation value.

Programs

- COS 1.1.1.1 **Soil Conservation and Landform Modification.** Public and private development projects shall be designed to prevent soil erosion, minimize landform modifications to avoid habitat disturbance and conserve and reuse on-site soils.
- COS 1.1.1.2 **Riparian Corridors.** Identify and protect riparian corridors through zoning, easements, or other measures that ensure effective, long-term conservation.
- COS 1.1.1.3 **Public Information.** Provide public information materials regarding the City's sensitive habitats, the values of watershed, biological resources, and sensitive habitats and how to protect them.
- COS 1.1.1.4 **Nature Trail Signage.** Working with Community Service Districts and other agencies, help create minimal and appropriate signage along major trails (e.g. Santa Ana River and Jurupa Mountains) for educational outreach about critical habitats and native plant and animal species.
- COS 1.1.1.5 **Urban Encroachment.** Amend the Zoning Ordinance to regulate the establishment or encroachment of non-compatible land uses or activities in habitat areas and passive open space, such as commercial uses, off-road motorized vehicle use, off-trail, non-motorized vehicle use, hang gliding, grading or other activities that conflict with biological resource conservation goals or policies.
- COS 1.1.1.6 **Volunteer Conservation Programs.** Working with community volunteers, conservation clubs, youth groups, recreation and conservation agencies, help plan and support conservation activities such as habitat restoration, interpretive signage and tours, trail building, erosion control and litter removal.
- COS 1.1.1.7 **Tree Protection Ordinance.** Develop a Tree Protection Ordinance.

COS 2. Wildlife Habitats

Goal

- COS 2.1 The City will seek to achieve self-sustaining populations of the native birds, fish and other wildlife and avoid actions that remove or damage habitat for native plants and animals.

Policies

- COS 2.1.1 **MSHCP Implementation.** Implement provisions of the MSHCP when conducting review of development applications, General Plan amendments/Zoning changes, transportation or other infrastructure projects that are covered activities in the MSHCP.
- COS 2.1.2 **Wildlife Corridors.** Identify and maintain a continuous wildlife corridor along the City's northern boundary through the Jurupa Mountains and along the Santa Ana River from the northern boundary to the City's western boundary. Condition development approvals to ensure important corridors for wildlife movement and dispersal are protected. Features of particular importance to wildlife include riparian corridors, wetlands, streams, springs and protected natural areas with cover and water. Linkages and corridors shall be provided to maintain connections between habitat areas.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- COS 2.1.3 **Biological Reports.** For development projects with the potential to affect adversely wildlife habitat and that require discretionary approvals, require the preparation of biological reports to assess the impacts of such development and provide mitigation for impacts to biological resources.

Programs

- COS 2.1.1.1 **Preservation Incentives.** Develop and provide incentives to private landowners that will encourage the protection of significant wildlife habitat resources, such as transfer of development rights, tax incentives, and grants.
- COS 2.1.1.2 **Regulation and Enforcement of Destructive Practices.** Develop and adopt regulations that effectively regulate dumping, camping, off-road vehicle use, illegal entry and polluting within protected conservation areas such as the Santa Ana River corridor and the Jurupa Hills along the north City boundary.

COS 3. Water Resources

Goal

- COS 3.1 Work with JCSD, RCSD and other community service districts and agencies, to help meet Jurupa Valley's urban water needs without substantial harm to the natural environment or to agriculture. Measures to help meet water needs include requiring conservation measures such as drought-tolerant landscaping and water saving fixtures in new homes.

Policies

- COS 3.1.1 **Water use planning.** Adopt and strive for the most efficient available water conservation practices in the City's operations and planning and encourage community service districts and other agencies to do the same. "Most efficient available practices" means actions and equipment that use the least water for a desired outcome, considering available equipment, life-cycle costs, social and environmental side effects, and the regulations of other agencies.
- COS 3.1.2 **Multi-Use Consideration.** Consider, in planning, land use decisions, and municipal operations, the effects of water supply on urban growth, wildlife habitat, agriculture and stream flows, and seek to ensure continued water availability for these uses in planning for long-term water supplies. The City will encourage individuals, organizations, and other agencies to follow this policy.
- COS 3.1.6 **Landscaping with Native Plants.** Encourage the use of California Native Plants for drought-resistant landscape planting.
- COS 3.1.17 **Environmental Mitigation.** Encourage, and where possible, require substantial modifications of a floodplain to be designed to reduce adverse environmental effects to the maximum extent feasible, considering the following factors:
- Stream scour
 - Erosion protection and sedimentation
 - Wildlife habitat and linkages
 - Groundwater recharge capability
 - Adjacent property
 - Designed to achieve a natural effect. Examples could include soft riparian bottoms, riparian corridors within the floodway, and gentle bank slopes, wide and shallow floodways, minimization of visible use of concrete, and landscaping with California native plants to the maximum extent possible. A site-specific hydrologic study may be required.

- COS 3.1.18 **Setbacks.** Based upon site-specific study, all development shall be set back from the designated floodway boundary or top of bank, whichever is most appropriate, a distance adequate to address the following issues:
- a. Public safety
 - b. Erosion
 - c. Riparian or wetland buffer
 - d. Wildlife movement corridor or linkage, and
 - e. Slopes
- COS 3.1.19 **Trails.** Consider designating floodway setbacks to accommodate greenways, trails, and recreation opportunities and allowing such uses within floodways, where appropriate.
- COS 3.1.20 **Riparian Area Preservation.** Require development projects to preserve and enhance native riparian habitat and prevent obstruction of natural watercourses. Zoning incentives, such as averaging of development rights, should be used to the maximum extent possible.
- COS 3.1.21 **Ecotones.** Identify and, to the maximum extent possible, conserve remaining upland habitat areas, or “ecotones” adjacent to wetland and riparian areas that are critical to the feeding, hibernation, or nesting of wildlife species.

Programs

- COS 3.1.1.4 **Floodway Protection and Enhancement.** Working with other responsible agencies, help implement the following actions:
- A. Encourage preparation of an inventory of natural areas that have been degraded and list sites in priority order, for restoration efforts.
 - B. Encourage revegetation of disturbed areas using native plants.
 - C. Eliminate sources of water pollutants and improper water diversions.
 - D. Remove invasive, non-native species in natural habitat areas, and prevent the introduction or spread of invasive, non-native species.
 - E. Discourage the placement and where possible, remove man-made elements such as buildings, paving, structural elements, concrete lining of waterways, signs, streets and utilities within floodways or floodplains, unless they are needed for public health or safety, or for implementation of City plans.
 - F. Require that suitably sized access corridors be provided and/or maintained through or under new and previously established, man-made obstacles to wildlife movement (such as appropriately sized culverts under arterial streets, highways and other major roads).
 - G. Discourage or prevent camping, off-road vehicles, hunting and other activities that are not compatible with floodplain health and preservation.
 - H. Remove trash, debris, and contaminants, using methods that minimally disrupt the open-space resources.
 - I. Provide continuing community education and outreach for all citizens, youth, and youth groups, and property owners on open space and natural resource values, programs and responsibilities.
 - J. Enlist the help of volunteers, youth and service groups, and academic programs in restoring and monitoring habitat health.

2017 General Plan – City of Jurupa Valley
Draft Environmental Impact Report

Goal

- COS 3.2 Protect and maintain water quality in aquifers, Santa Ana River, streams and wetlands that help support beneficial uses, including domestic and commercial/industrial uses, agricultural uses, and wildlife habitat.

COS 8. Open Space and Recreation Resources

Goal

- COS 8.1 Secure and maintain a diverse network of open lands including valuable natural and recreational resources, including:
- A. Santa Ana River floodway and riparian areas
 - B. Jurupa Mountains
 - C. Wetlands and vernal pools
 - D. Wildlife habitat and corridors, particularly for species of local concern or for species that are officially listed as threatened or endangered.
 - E. Parks and natural areas with significant recreational opportunities
- COS 8.2 Encourage public access to open space without harming the resource and without exposing the public or property owners to unacceptable risk.
- COS 8.3 Preserve open space and wildlife habitat and help provide trails and other recreation opportunities where they will not harm the environment.
- COS 8.4 Avoid actions that will result in the loss of designated open space resources and when feasible, require mitigation for their loss.

Policies

- COS 8.1.1 **Environmental Resource Protection.** Preserve and maintain open space that protects environmental resources and protects public health and safety.

Programs

- COS 8.1.1.1 **Protect open space resources.** Take the following actions to protect open space, and encourage individuals, organizations, and other agencies to take the same actions within their areas of responsibility and jurisdiction:
- A. **Open Space Designation.** Apply Open Space or Agriculture zoning to private property where equitable development potential is granted to the property owner for the remainder of the land and appropriate and consistent with General Plan goals and policies.
 - B. **Open Space and Trails Dedication.** Preserve or enhance open space and trails resources through application of conditions of subdivision and development approvals, consistent with General Plan goals and policies, including dedications of fee ownership or easements where necessary and appropriate.
 - C. **Donations and Grants.** Seek and use grants, donations, other revenue sources, and long-term financing mechanisms to purchase fee ownership or easements. The City will consider allocating funding for open space acquisition and protection, and will explore all potential funding sources and other creative incentive programs, including general obligation bonds, sales tax increase, property transfer tax, assessment districts, tax incentives, and state and federal loans and grants.
 - D. **Interagency Cooperation.** Promote interagency cooperation for open space acquisition, greenbelt, creeks, wetlands, and wildlife habitat protection in open space areas by coordinating with other government agencies and organizations having interest or expertise in resource protection.

- E. **Taxes and Fees.** Avoid imposing taxes or fees that discourage dedication, improvement and retention of open space, trails, or agricultural uses.

4.4.3 Methodology

As development occurs within the MSHCP criteria cells in the City, the City and the developer will have to determine how to best protect the biological resources identified in that particular cell. In other areas of the City (i.e., not in criteria cells), there would be fewer or less strict restrictions on development relative to biological resources.

Development of properties with potential impacts on water-related resources would still have to obtain permits or approvals for activities under the jurisdiction of various resource agencies (e.g., U.S. Army Corps of Engineers (ACOE), U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW)). The EIR examines how future development within the City will affect or impact existing biological resources (e.g., listed or sensitive species, the Santa Ana River and other drainages, etc.).

4.4.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. Based on Appendix G of the *CEQA Guidelines*, biological resource impacts would occur if the proposed project would:

- Have a substantial adverse effect, either directly or indirectly or through habitat modification, on any species identified as endangered or threatened in local or regional plans, policies, or regulations, or by the CDFW or USFWS;
- Have a substantial adverse effect, either directly or indirectly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS;
- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or the USFWS;
- Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;
- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native or resident migratory wildlife corridors, or impede the use of native wildlife nursery sites;
- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or
- Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan.

4.4.5 Programmatic Impact Evaluation

4.4.5.1 Endangered and Threatened Species

| | |
|-----------|---|
| Threshold | Would the proposed project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as endangered or threatened in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? |
|-----------|---|

Programmatic Impacts. There are eight species (five animals and three plants) listed by either the federal or state government as endangered or threatened that have the potential to occur within the City (see previous Table 4.4.A). The following addresses potential impacts to each listed species.

California Gnatcatcher. Development in the northern and central Jurupa Hills could impact this species if it was present or suitable habitat was present as the species can be found in intact sage scrub vegetation generally in the region.

San Bernardino Kangaroo Rat. This species may be found on the slopes of alluvial fans, on flood plains, along washes, and adjacent upland areas with sandy soils. Recent biological surveys in the City have not found this species present, including at least one along the Santa Ana River¹. However, the species may be present in other less disturbed areas and would need to be protected if found according to established guidelines of the resource agencies.

Least Bell's Vireo. Development along or adjacent to the Santa Ana River or related riparian vegetation may impact this species. Where suitable habitat and conditions exist, surveys should be conducted prior to development to determine if the species is present. If impacts will occur, development will be subject to regulatory permitting and appropriate onsite or off-site habitat protection is needed.

Western Yellow-Billed Cuckoo. Development along or adjacent to the Santa Ana River or related riparian vegetation may impact this species. Where suitable habitat and conditions exist, surveys should be conducted prior to development to determine if the species is present. If impacts will occur, development will be subject to regulatory permitting and appropriate onsite or off-site habitat protection is needed.

Riverside Fairy Shrimp. This species can be found in vernal pools which are uncommon in the Jurupa Valley area. However, potential development sites, especially in the flatter more western portions of the site (i.e. where vernal pools are more likely) should be surveyed prior to development to determine if the species is present. If impacts will occur, development will be subject to regulatory permitting and appropriate onsite or off-site habitat protection is needed.

Santa Ana Woolly-Star. Development along or adjacent to the Santa Ana River or related riparian vegetation may impact this species. Where suitable habitat and conditions exist, surveys should be conducted prior to development to determine if the species is present. If impacts will occur, development will be subject to regulatory permitting and appropriate onsite or off-site habitat protection is needed.

San Diego Ambrosia. This plant may be present in grasslands or drainages and surveys should be conducted prior to development to determine if suitable conditions exist or if the species is present. If impacts will occur, development will be subject to regulatory permitting and appropriate onsite or off-site habitat protection is needed.

¹ Proposed conversion of the Paradise Knolls golf course adjacent to the Santa Ana River.

Conservation Lands. The previous Table 3.A indicates in the City there are 658.8 acres of land designated for Open Space-Conservation, 867.6 acres designated as Open Space-Conservation Habitat, and 834.3 acres designated for Open Space-Water for a total of 2,360.7 acres or 8.5 percent of the City designated for some type of conserved open space use.

Critical Habitat. The City contains identified USFWS-designated critical habitat for three federally listed species; the California gnatcatcher in the northern Jurupa Hills and the Santa Ana sucker (fish) and least Bell's vireo along the Santa Ana River (see Figure 4.4.5).

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Conservation and Open Space Element of the General Plan are specifically related to endangered and threatened species:

Conservation and Open Space Element

Goal

COS 1.1 Help protect, preserve, and create the conditions that will promote the preservation of significant trees and other vegetation, particularly native California species.

Policies

COS 1.1.1 Conserve important habitat areas to help protect the Santa Ana Woolly-Star, Many-Stemmed Live-Forever, Least Bell's Vireo, Southwestern Willow Flycatcher, California Gnatcatcher, San Bernardino Kangaroo Rat, coastal sage scrub, grasslands, and the Santa Ana River resources.

COS 1.1.2 Protect and preserve significant trees.

COS 1.1.3 Maintain and conserve superior examples of agricultural windrows, street trees, stands of mature native and non-native trees, and other features of ecological, aesthetic, and conservation value.

Programs

COS 1.1.1.1 Design development to prevent soil erosion and avoid habitat disturbance.

COS 1.1.1.2 Identify and protect riparian corridors.

COS 1.1.1.3 Provide public information materials on sensitive habitats and how to protect them.

COS 1.1.1.4 Create signage along major trails (e.g. Santa Ana River and Jurupa Mountains) to educate the public about critical habitats, native plant, and animal species.

COS 1.1.1.5 Regulate encroachment of non-compatible land uses or activities into habitat areas.

COS 1.1.1.6 Work with community groups to plan conservation activities such as habitat restoration, interpretive signage, trails, erosion control, and litter removal.

COS 1.1.1.7 Develop a Tree Protection Ordinance.

Goal

COS 2.1 Avoid actions that remove or damage habitat for native plants and animals.

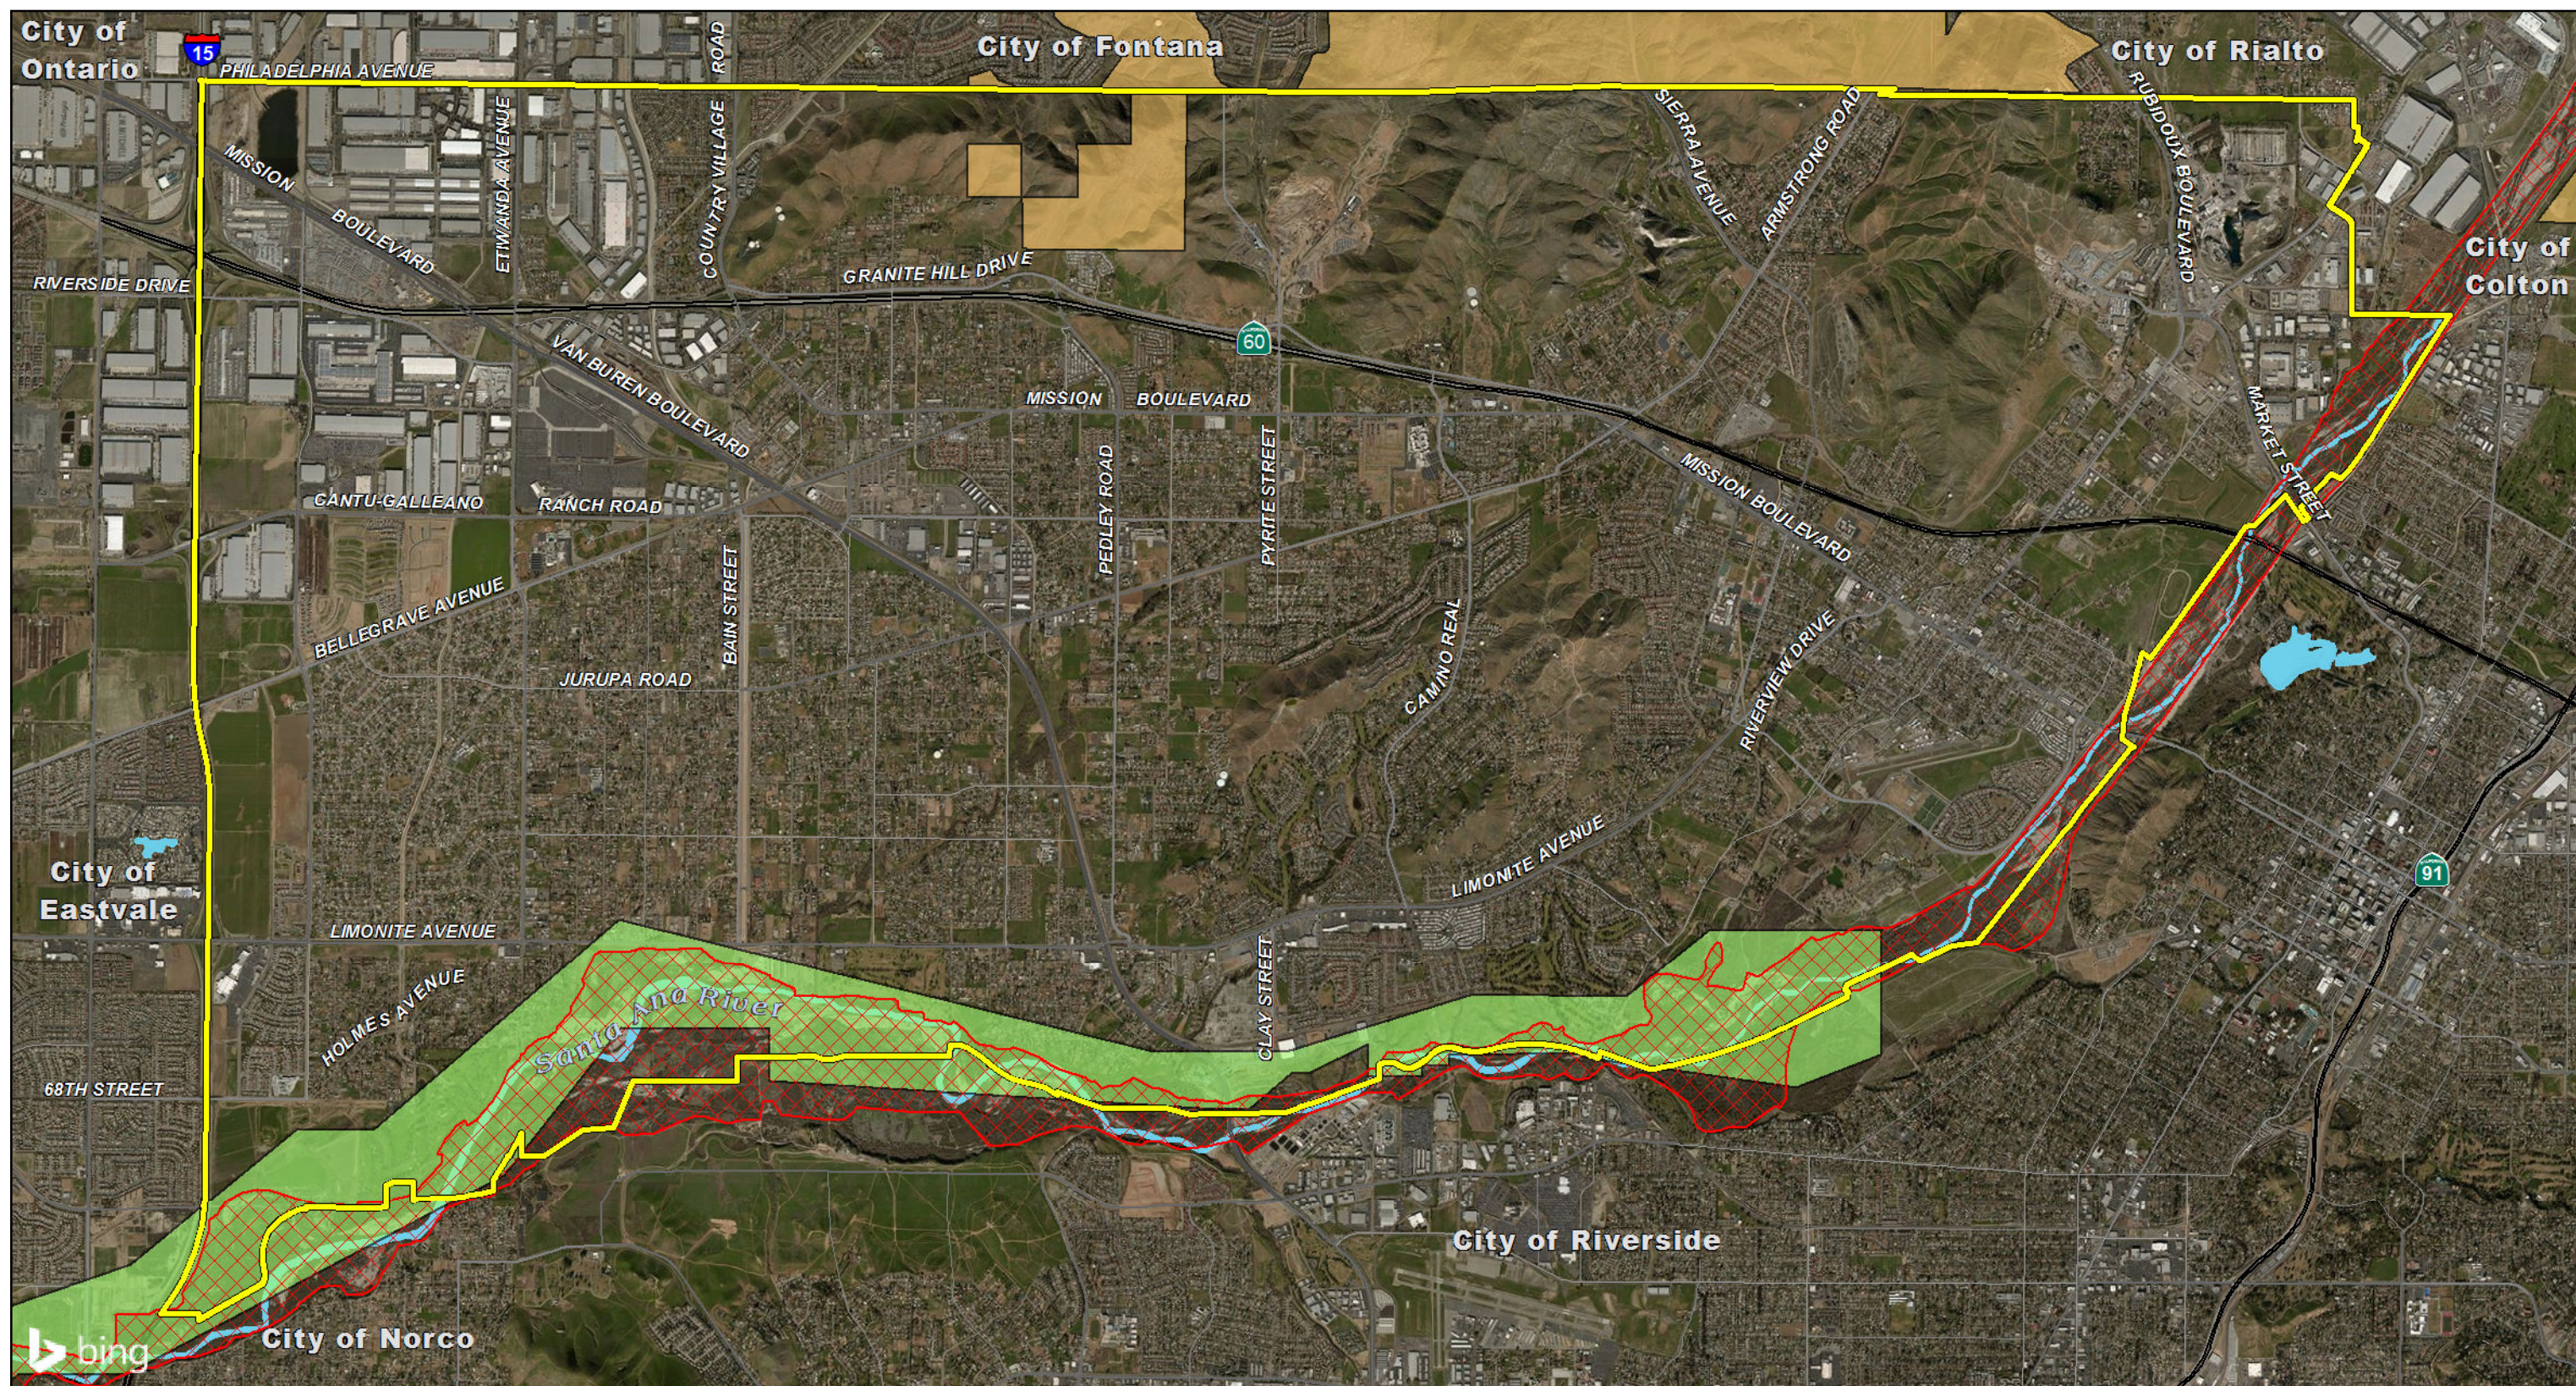

Policies

COS 2.1.1 Implement provisions of the MSHCP.

COS 2.1.2 Maintain wildlife corridors along the City's northern boundary through the Jurupa Mountains and along the City's portion of the Santa Ana River.

COS 2.1.3 Future development must provide biological reports to identify impacts and mitigation for project-specific impacts.

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.4.5
Critical Habitat

THIS PAGE INTENTIONALLY LEFT BLANK

Programs

- COS 2.1.1.1 Provide incentives to encourage the protection of significant wildlife habitat.
- COS 2.1.1.2 Regulate practices that might damage or destroy habitat (SA River, Jurupa Hills).

Goal

- COS 3.1 Meet potable water needs without harming habitat resources

Policies

- COS 3.1.1 Use water conservation in ways that do not adversely affect the environment.
- COS 3.1.2 Water use practices should include protecting wildlife habitat and stream flows.
- COS 3.1.6 Encourage the use of native plants for drought-resistant landscape planting.
- COS 3.1.17 Encourage floodplain modifications to assist wildlife habitat and linkages.
- COS 3.1.18 Development shall provide setbacks from drainages for safety, riparian or wetland buffers, or wildlife movement or linkage.
- COS 3.1.20 Require development to protect riparian resources when possible.
- COS 3.1.21 Conserve upland habitat areas or “ecotones” adjacent to wetland and riparian areas for feeding, hibernation, or nesting of wildlife species.

Program

- COS 3.1.1.4 Work with other agencies for floodway protection and enhancement.

Goal

- COS 3.2 Protect and maintain the water quality of the Santa Ana River and local streams.
- COS 8.1 Maintain network of open lands including Santa Ana River, Jurupa Hills, wetlands and vernal pools, wildlife habitat, and wildlife movement corridors.
- COC 8.2 Encourage public access to open space areas without damaging resources.
- COS 8.3 Provide trails in open space areas in ways they will not damage habitat resources.
- COS 8.4 Avoid the loss of valuable open space resources.

Policies

- COS 8.1.1 Preserve a network of open space resources for City residents.

Program

- COS 8.1.1.1 Promote interagency cooperation for open space acquisition, greenbelt, creeks, wetlands, and wildlife habitat protection.

Implementation of the above General Plan goals, policies, and programs as future development occurs will help ensure that potential impacts to listed species within the City will be less than significant. The most important policies in this regard will be protection of listed species (Policy 1.1.1), implementation of the MSHCP (Policy COS 2.1.1), and preparing biological reports to identify and protect site-specific resources (Policy COS 2.1.3). It should be noted that the term “development” in this policy applies to building improvements on both private and public actions involving vacant land.

For properties along the Santa Ana River, it will be important to assure implementation of MSHCP restrictions regarding: (a) direct and indirect lighting and noise levels to protect listed species associated with the river; and (b) Table 6-2 of Volume 1 of the MSHCP (*Plants That Should Be Avoided Adjacent to the MSHCP Conservation Area*) lists the plants that should not be planted adjacent to the river.

Level of Programmatic Impact Before Mitigation. In addition to required regulatory permitting where necessary, the General Plan goals, policies, and programs outlined above will provide sufficient protection for listed species to reduce potential impacts to less than significant levels.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the identified General Plan goals, policies, programs, plus the regulatory requirements of the federal and state resource agencies, potential impacts to listed species from development within the City will be reduced to less than significant levels, and no mitigation is required.

4.4.5.2 Candidate, Non-listed Sensitive, or Special-Status Species

| | |
|-----------|--|
| Threshold | Would the proposed project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? |
|-----------|--|

Programmatic Impacts. There are three species considered to be candidate, non-listed sensitive, or special status resources by either the federal or state government that have the potential to occur within the City. In addition, there are six biological resources that are considered sensitive (see previous Table 4.4.A). The following addresses potential impacts to each of these resources:

San Miguel Savory. While this species is likely uncommon within the City, surveys on land proposed for development will be needed to determine if suitable habitat or the species is present on the site. Future development will be responsible for suitable mitigation for any significant impacts to this species.

Brand's Phacelia. This species may be present in relatively undisturbed coastal sage scrub in the northern or central Jurupa Hills, or possibly along the Santa Ana River. Future development in these areas will need to prepare biological surveys to determine if this species is present, or if suitable habitat is present. Future development will be responsible for suitable mitigation for any significant impacts to this species.

Burrowing Owl. This species can quickly inhabit vacant or disturbed land, utilizing existing small mammal burrows. It will be important to do surveys on land proposed for development to determine if suitable habitat or the species is present on the site, following established regulatory procedures and requirements of the resource agencies.

Blueline Stream(s). The Santa Ana River forms the southern boundary of the City, and there are several perennial or ephemeral channels that drain directly into the Santa Ana River (e.g., Pyrite Creek). The river and channels have associated riparian vegetation that supports non-listed but sensitive biological resources. In addition, water quality in the tributary streams is important to help protect the water quality of the Santa Ana River. It is important to restrict/control development along drainage channels and the Santa Ana River to minimize impacts to important biological resources.

Coastal Sage Scrub. Areas of relatively undisturbed sage scrub vegetation may be found in the northern or central Jurupa Hills. The California Department of Fish and Wildlife considers this plant assemblage to be a sensitive biological resource and encourages preservation of intact areas whenever possible. In addition, Sub-Unit 2 (Cell Groups B-G) of the MSHCP requires some level of preservation of sage scrub vegetation north of the SR-60 Freeway. Therefore, development in this area will need to take into account the conservation goals and requirements of the MSHCP regarding coastal sage scrub.

Alluvial Fan Sage Scrub. This plant assemblage is considered sensitive by the California Department of Fish and Wildlife and should be protected or preserved where intact areas are found. Development along or near the Santa Ana River could result in removal of this vegetation type. This may result in significant impacts if a substantial amount of undisturbed vegetation were to be removed.

Oak Woodlands. There are oak woodlands within the City associated with the northern bank of the Santa Ana River. There may also be isolated oak trees or groves of oak trees that represent significant resources in isolated areas of the City. It will be important to do surveys on land proposed for development to determine if oak woodlands are present on the site. Development will be required to follow established regulatory procedures regarding tree removal (see Section 4.4.5.6 on local regulations).

Vernal Pools. There may be isolated areas in the City that contain playas or vernal pools, however, these resources are not generally observed to be considered to be widespread within the City.

Wetlands. The Santa Ana River supports open water and wetland resources along its length within the City of Jurupa Valley. There may also be isolated wetland areas in the City resulting from manmade or natural drainage that eventually reaches the Santa Ana River. Where these resources are present, they need to be evaluated and protected as required by the established regulatory procedures of the resource agencies (see Section 4.4.6.5 on jurisdictional land). It will be important to do surveys on land proposed for development to determine if wetlands are present on the site.

Conservation Lands. The previous Table 3.A indicates in the City there are 658.8 acres of land designated for Open Space-Conservation, 867.6 acres designated as Open Space-Conservation Habitat, and 834.3 acres designated for Open Space-Water for a total of 2,360.7 acres or 8.5 percent of the City designated for some type of conserved open space use.

Nesting Birds. Trees or large shrubs within the City may provide suitable nesting and foraging habitats for migratory birds. Nesting activity typically occurs from February 1 to August 31. Disturbing or destroying active nests is a potential violation of the Migratory Bird Treaty Act (MBTA) (16 U.S.C. 703 et seq.). In addition, nests and eggs are protected under California Fish and Game Code Section 3503. The removal of vegetation and/or destruction of nests during the breeding season are considered potentially significant impacts.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Conservation and Open Space Element of the General Plan are related to candidate, non-listed sensitive, or special status species or biological resources:

Conservation and Open Space Element

Goal

COS 1.1 Help protect, preserve, and create the conditions that will promote the preservation of significant trees and other vegetation, particularly native California species.

Policies

COS 1.1.1 Conserve important habitat areas to help protect the Santa Ana River Woolly-Star, Many-Stemmed Live-Forever, Least Bell's Vireo, Southwestern Willow Flycatcher, California Gnatcatcher, San Bernardino Kangaroo Rat, coastal sage scrub, grasslands, and the Santa Ana River resources.

COS 1.1.2 Protect and preserve significant trees.

COS 1.1.3 Maintain and conserve superior examples of agricultural windrows, street trees, stands of mature native and non-native trees, and other features of ecological, aesthetic, and conservation value.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Programs

- COS 1.1.1.1 Design development to prevent soil erosion and avoid habitat disturbance.
- COS 1.1.1.2 Identify and protect riparian corridors.
- COS 1.1.1.3 Provide public information materials on sensitive habitats and how to protect them.
- COS 1.1.1.4 Create signage along major trails (e.g. Santa Ana River and Jurupa Mountains) to educate the public about critical habitats, native plant, and animal species.
- COS 1.1.1.5 Regulate encroachment of non-compatible land uses or activities into habitat areas.
- COS 1.1.1.6 Work with community groups to plan conservation activities such as habitat restoration, interpretive signage, trails, erosion control, and litter removal.
- COS 1.1.1.7 Develop a Tree Protection Ordinance.

Goal

- COS 2.1 Avoid actions that remove or damage habitat for native plants and animals.

Policies

- COS 2.1.1 Implement provisions of the MSHCP.
- COS 2.1.2 Maintain wildlife corridors along the City's northern boundary through the Jurupa Mountains and along the City's portion of the Santa Ana River.
- COS 2.1.3 Future development must provide biological reports to identify impacts and mitigation for project-specific impacts.

Programs

- COS 2.1.1.1 Provide incentives to encourage the protection of significant wildlife habitat.
- COS 2.1.1.2 Regulate practices that might damage or destroy habitat (SA River, Jurupa Hills).

Goal

- COS 3.1 Meet potable water needs without harming habitat resources

Policies

- COS 3.1.1 Use water conservation in ways that do not adversely affect the environment.
- COS 3.1.2 Water use practices should include protecting wildlife habitat and stream flows.
- COS 3.1.6 Encourage the use of native plants for drought-resistant landscape planting.
- COS 3.1.17 Encourage floodplain modifications to assist wildlife habitat and linkages.
- COS 3.1.18 Development shall provide setbacks from drainages for safety, riparian or wetland buffers, or wildlife movement or linkage.
- COS 3.1.20 Require development to protect riparian resources when possible.
- COS 3.1.21 Conserve upland habitat areas or "ecotones" adjacent to wetland and riparian areas for feeding, hibernation, or nesting of wildlife species.

Program

- COS 3.1.1.4 Work with other agencies for floodway protection and enhancement.

Goal

- COS 3.2 Protect and maintain the water quality of the Santa Ana River and local streams.
- COS 8.1 Maintain network of open lands including Santa Ana River, Jurupa Hills, wetlands and vernal pools, wildlife habitat, and wildlife movement corridors.

- COC 8.2 Encourage public access to open space areas without damaging resources.
- COS 8.3 Provide trails in open space areas in ways they will not damage habitat resources.
- COS 8.4 Avoid the loss of valuable open space resources.

Policy

- COS 8.1.1 Preserve a network of open space resources for City residents.

Program

- COS 8.1.1.1 Promote interagency cooperation for open space acquisition, greenbelt, creeks, wetlands, and wildlife habitat protection.

Implementation of the above 2017 General Plan goals, policies, and programs as future development occurs will help ensure that potential impacts to non-listed sensitive species within the City will be less than significant. Of highest importance will be implementation of the MSHCP (Policy COS 2.1.1) and preparing biological reports to identify and protect site-specific resources (Policy COS 2.1.3). It should be noted that the term “development” in this policy applies to building improvements on both private and public actions involving vacant land.

For properties along the Santa Ana River, it will be important to assure implementation of MSHCP restrictions regarding: (a) direct and indirect lighting and noise levels to protect listed species associated with the river; and (b) Table 6-2 of Volume 1 of the MSHCP (*Plants That Should Be Avoided Adjacent to the MSHCP Conservation Area*) lists the plants that should not be planted adjacent to the river.

Level of Programmatic Impact Before Mitigation. The 2017 General Plan goals, policies, and programs outlined above will provide sufficient protection for non-listed candidate species and important biological resources to reduce potential impacts to all these resources to less than significant levels.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the identified 2017 General Plan goals, policies, programs, plus the regulatory requirements of the federal and state resource agencies, potential impacts to non-listed sensitive species from development within the City will be reduced to less than significant levels, and no mitigation is required.

4.4.5.3 Riparian Habitat or Other Sensitive Natural Communities

| | |
|-----------|--|
| Threshold | Would the proposed project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? |
|-----------|--|

Programmatic Impacts. The Santa Ana River supports riparian, woodland, and other important vegetation associations along much of its length within the City of Jurupa Valley. There is also riparian vegetation along several tributary drainages within the City such as Pyrite Creek. Riparian or riverine areas are lands that contain habitat dominated by trees, shrubs, and herbaceous plants that occur close to or depend upon soil moisture from a nearby water source; or areas with fresh water flowing during all or a portion of the year. Based on vegetation and hydrographic characteristics, the Santa Ana River and Pyrite Creek contain several kinds of woodland vegetation (e.g., southern cottonwood/willow riparian forest, etc.).

Upland areas in the northern portion of the City (i.e., north of the SR-60 Freeway) may contain grassland, coastal sage scrub, or chaparral vegetation which are considered sensitive natural communities by the California Department of Fish and Wildlife and under the County MSHCP.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Where these resources are present, they need to be evaluated and protected as required by the established regulatory procedures of California Department of Fish and Wildlife (see Section 4.4.6.5 on jurisdictional land). It will be important to do surveys on land proposed for development to determine if riparian or other sensitive natural communities are present on the site.

The previous Table 3.A indicates in the City there are 658.8 acres of land designated for Open Space-Conservation, 867.6 acres designated as Open Space-Conservation Habitat, and 834.3 acres designated for Open Space-Water for a total of 2,360.7 acres or 8.5 percent of the City designated for some type of conserved open space use. Future development within the City may have significant impacts on riparian habitat or other sensitive natural communities.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Conservation and Open Space Element of the 2017 General Plan are related to riparian habitat or other sensitive natural communities:

Conservation and Open Space Element

Goal

- COS 1.1 Help protect, preserve, and create the conditions that will promote the preservation of significant trees and other vegetation, particularly native California species.

Policies

- COS 1.1.1 Conserve important habitat areas to help protect the Santa Ana Woolly-Star, Many-Stemmed Live-Forever, Least Bell's Vireo, Southwestern Willow Flycatcher, California Gnatcatcher, San Bernardino Kangaroo Rat, coastal sage scrub, grasslands, and the Santa Ana River resources.
- COS 1.1.2 Protect and preserve significant trees.
- COS 1.1.3 Maintain and conserve superior examples of agricultural windrows, street trees, stands of mature native and non-native trees, and other features of ecological, aesthetic, and conservation value.

Programs

- COS 1.1.1.1 Design development to prevent soil erosion and avoid habitat disturbance.
- COS 1.1.1.2 Identify and protect riparian corridors.
- COS 1.1.1.3 Provide public information materials on sensitive habitats and how to protect them.
- COS 1.1.1.4 Create signage along major trails (e.g. Santa Ana River and Jurupa Mountains) to educate the public about critical habitats, native plant, and animal species.
- COS 1.1.1.5 Regulate encroachment of non-compatible land uses or activities into habitat areas.
- COS 1.1.1.6 Work with community groups to plan conservation activities such as habitat restoration, interpretive signage, trails, erosion control, and litter removal.
- COS 1.1.1.7 Develop a Tree Protection Ordinance.

Goal

- COS 2.1 Avoid actions that remove or damage habitat for native plants and animals.

Policies

- COS 2.1.1 Implement provisions of the MSHCP.
- COS 2.1.2 Maintain wildlife corridors along the City's northern boundary through the Jurupa Mountains and along the City's portion of the Santa Ana River.
- COS 2.1.3 Future development must provide biological reports to identify impacts and mitigation for project-specific impacts.

Programs

- COS 2.1.1.1 Provide incentives to encourage the protection of significant wildlife habitat.
- COS 2.1.1.2 Regulate practices that might damage or destroy habitat (SA River, Jurupa Hills).

Goal

- COS 3.1 Meet potable water needs without harming habitat resources

Policies

- COS 3.1.1 Use water conservation in ways that do not adversely affect the environment.
- COS 3.1.2 Water use practices should include protecting wildlife habitat and stream flows.
- COS 3.1.6 Encourage the use of native plants for drought-resistant landscape planting.
- COS 3.1.17 Encourage floodplain modifications to assist wildlife habitat and linkages.
- COS 3.1.18 Development shall provide setbacks from drainages for safety, riparian or wetland buffers, or wildlife movement or linkage.
- COS 3.1.20 Require development to protect riparian resources when possible.
- COS 3.1.21 Conserve upland habitat areas or “ecotones” adjacent to wetland and riparian areas for feeding, hibernation, or nesting of wildlife species.

Program

- COS 3.1.1.4 Work with other agencies for floodway protection and enhancement.

Goals

- COS 3.2 Protect and maintain the water quality of the Santa Ana River and local streams.
- COS 8.1 Maintain network of open lands including Santa Ana River, Jurupa Hills, wetlands and vernal pools, wildlife habitat, and wildlife movement corridors.
- COC 8.2 Encourage public access to open space areas without damaging resources.
- COS 8.3 Provide trails in open space areas in ways they will not damage habitat resources.
- COS 8.4 Avoid the loss of valuable open space resources.

Policy

- COS 8.1.1 Preserve a network of open space resources for City residents.

Program

- COS 8.1.1.1 Promote interagency cooperation for open space acquisition, greenbelt, creeks, wetlands, and wildlife habitat protection.

Implementation of the above 2017 General Plan goals, policies, and programs as future development occurs will help ensure that potential impacts to riparian and other sensitive natural communities within the City will be less than significant. Of highest importance will be implementation of the MSHCP (Policy COS 2.1.1) and preparing biological reports to identify and protect site-specific resources (Policy COS 2.1.3). It should be noted that the term “development” in this policy applies to building improvements on both private and public actions involving vacant land.

For properties along the Santa Ana River, it will be important to assure implementation of MSHCP restrictions regarding: (a) direct and indirect lighting and noise levels associated with riparian or woodland areas along the river; and (b) Table 6-2 of Volume 1 of the MSHCP (*Plants That Should Be Avoided Adjacent to the MSHCP Conservation Area*) lists the plants that should not be planted adjacent to riparian resources of the river or in areas with coastal sage scrub to be preserved in the northern portion of the City.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Level of Programmatic Impact Before Mitigation. The 2017 General Plan goals, policies, and programs outlined above will provide sufficient protection for riparian, woodland, and other natural communities to reduce potential impacts to less than significant levels.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the identified 2017 General Plan goals, policies, programs, plus the regulatory requirements of the federal and state resource agencies, potential impacts to riparian, woodland, and other natural communities from future development within the City will be reduced to less than significant levels, and no mitigation is required.

4.4.5.4 Jurisdictional Waters/Wetlands

| | |
|-----------|--|
| Threshold | Would the proposed project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? |
|-----------|--|

Programmatic Impacts. The water and land associated with the northern bank of the Santa Ana River are within the City of Jurupa Valley. In addition, there are a number of natural (e.g., Pyrite Creek) and man-made drainages (e.g. Day Creek) that are tributary to the river within the City. The river and drainages that are considered “Waters of the U.S.” are under the jurisdiction of the U.S. Army Corps of Engineers (USACE) under Section 404 of the federal Clean Water Act. Such drainages may also under the jurisdiction of the USFWS related to federally listed biological resources. The USACE issues two types of permits under Section 404 of the Clean Water Act to authorize the discharge of dredged or fill material into Waters of the United States: a nation-wide permit (NWP) or an individual permit (IP). NWPs are general permits for specific categories of activities that result in minimal impacts to Waters of the United States (≤ 0.5 acres). In order to receive authorization under an NWP, the applicant/project developer must demonstrate avoidance or minimization of discharges into Waters of the United States to the maximum extent practicable.

These drainages may also within the jurisdiction of the Santa Ana RWQCB. Under Section 401 of the Clean Water Act, the RWQCB must certify that the discharge of dredged or fill material into Waters of the United States does not violate Federal, State, and local water quality standards. A Water Quality Certification will need to be obtained from the Santa Ana RWQCB.

Drainages that are considered “Waters of the State” are under the jurisdiction of the California Department of Fish and Wildlife. All of these agencies have their own regulatory requirements and procedures when development impacts land under their jurisdiction. The previous Table 3.A indicates in the City there are 658.8 acres of land designated for Open Space-Conservation, 867.6 acres designated as Open Space-Conservation Habitat, and 834.3 acres designated for Open Space-Water for a total of 2,360.7 acres or 8.5 percent of the City designated for some type of conserved open space use.

Land adjacent to the Santa Ana River, or land within the City that contain drainages under federal or state jurisdiction need to be evaluated and protected as required by the established regulatory procedures. It will be important to do surveys on land proposed for development to determine if or to what degree jurisdictional land is present on a particular site. Development in the future within the City has the potential to disturb or impact land or drainages under federal or state jurisdiction – this is a significant impact.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Conservation and Open Space Element of the General Plan are related to jurisdictional waters or wetlands:

Conservation and Open Space Element

Goal

- COS 1.1 Help protect, preserve, and create the conditions that will promote the preservation of significant trees and other vegetation, particularly native California species.

Policies

- COS 1.1.1 Conserve important habitat areas to help protect the Santa Ana Woolly-Star, Many-Stemmed Live-Forever, Least Bell's Vireo, Southwestern Willow Flycatcher, California Gnatcatcher, San Bernardino Kangaroo Rat, coastal sage scrub, grasslands, and the Santa Ana River resources.
- COS 1.1.2 Protect and preserve significant trees.
- COS 1.1.3 Maintain and conserve superior examples of agricultural windrows, street trees, stands of mature native and non-native trees, and other features of ecological, aesthetic, and conservation value.

Programs

- COS 1.1.1.1 Design development to prevent soil erosion and avoid habitat disturbance.
- COS 1.1.1.2 Identify and protect riparian corridors.
- COS 1.1.1.3 Provide public information materials on sensitive habitats and how to protect them.
- COS 1.1.1.4 Create signage along major trails (e.g. Santa Ana River and Jurupa Mountains) to educate the public about critical habitats, native plant, and animal species.
- COS 1.1.1.5 Regulate encroachment of non-compatible land uses or activities into habitat areas.
- COS 1.1.1.6 Work with community groups to plan conservation activities such as habitat restoration, interpretive signage, trails, erosion control, and litter removal.
- COS 1.1.1.7 Develop a Tree Protection Ordinance.

Goal

- COS 2.1 Avoid actions that remove or damage habitat for native plants and animals.

Policies

- COS 2.1.1 Implement provisions of the MSHCP.
- COS 2.1.2 Maintain wildlife corridors along the City's northern boundary through the Jurupa Mountains and along the City's portion of the Santa Ana River.
- COS 2.1.3 Future development must provide biological reports to identify impacts and mitigation for project-specific impacts.

Programs

- COS 2.1.1.1 Provide incentives to encourage the protection of significant wildlife habitat.
- COS 2.1.1.2 Regulate practices that might damage or destroy habitat (SA River, Jurupa Hills).

Goal

- COS 3.1 Meet potable water needs without harming habitat resources.

Policies

- COS 3.1.1 Use water conservation in ways that do not adversely affect the environment.
- COS 3.1.2 Water use practices should include protecting wildlife habitat and stream flows.
- COS 3.1.6 Encourage the use of native plants for drought-resistant landscape planting.
- COS 3.1.17 Encourage floodplain modifications to assist wildlife habitat and linkages.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- COS 3.1.18 Development shall provide setbacks from drainages for safety, riparian or wetland buffers, or wildlife movement or linkage.
- COS 3.1.20 Require development to protect riparian resources when possible.
- COS 3.1.21 Conserve upland habitat areas or “ecotones” adjacent to wetland and riparian areas for feeding, hibernation, or nesting of wildlife species.

Program

- COS 3.1.1.4 Work with other agencies for floodway protection and enhancement.

Goals

- COS 3.2 Protect and maintain the water quality of the Santa Ana River and local streams.
- COS 8.1 Maintain network of open lands including Santa Ana River, Jurupa Hills, wetlands and vernal pools, wildlife habitat, and wildlife movement corridors.
- COC 8.2 Encourage public access to open space areas without damaging resources.
- COS 8.3 Provide trails in open space areas in ways they will not damage habitat resources.
- COS 8.4 Avoid the loss of valuable open space resources.

Policy

- COS 8.1.1 Preserve a network of open space resources for City residents.

Program

- COS 8.1.1.1 Promote interagency cooperation for open space acquisition, greenbelt, creeks, wetlands, and wildlife habitat protection.

Implementation of the above 2017 General Plan goals, policies, and programs as future development occurs will help ensure that potential impacts to jurisdictional waters and wetlands within the City will be less than significant. Of highest importance will be implementation of the MSHCP (Policy COS 2.1.1) and preparing biological reports to identify and protect site-specific resources (Policy COS 2.1.3). It should be noted that the term “development” in this policy applies to building improvements on both private and public actions involving vacant land.

For properties along the Santa Ana River, it will also be important to assure implementation of MSHCP restrictions regarding: (a) direct and indirect lighting and noise levels associated with riparian or woodland areas along the river; and (b) Table 6-2 of Volume 1 of the MSHCP (*Plants That Should Be Avoided Adjacent to the MSHCP Conservation Area*) lists the plants that should not be planted adjacent to jurisdictional resources of the river or in tributary drainages with jurisdictional resources in the City.

Level of Programmatic Impact Before Mitigation. The 2017 General Plan goals, policies, and programs outlined above will provide sufficient protection for jurisdictional drainages, waters, or wetlands to reduce potential impacts in this regard to less than significant levels.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the identified 2017 General Plan goals, policies, programs, plus the regulatory requirements of the federal and state resource agencies, potential impacts to jurisdictional drainages, waters, or wetlands from future development within the City will be reduced to less than significant levels, and no mitigation is required.

4.4.5.5 Habitat Fragmentation/Wildlife Movement

| | |
|-----------|--|
| Threshold | Would the proposed project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? |
|-----------|--|

Programmatic Impacts. Habitat fragmentation occurs when a single, contiguous habitat area is divided into two or more areas, or where an action isolates the two or more new areas from each other. Isolation of habitat occurs when wildlife cannot move freely from one portion of the habitat to another or to/from one habitat type to another. Habitat fragmentation may occur when a portion of one or more habitats is converted into another habitat, as when scrub habitats are converted into annual grassland habitat because of frequent burning. Wildlife movement includes seasonal migration along corridors, as well as daily movements for foraging. Examples of migration corridors may include areas of unobstructed movement for deer, riparian corridors providing cover for migrating birds, routes between breeding waters and upland habitat for amphibians, and between roosting and feeding areas for birds.

The Santa Ana River represents a significant regional resource for biological habitat and wildlife movement. Future development along the northern bank of the river, within the City, must be carefully planned and built to minimize impacts on habitat areas and wildlife movement. The river also represents a wildlife nursery site for birds and fish when present. Impacts of future development adjacent to the river could be significant unless carefully controlled or restricted. In addition to future development, the creation or maintenance of equestrian trails along the river must be monitored and controlled to prevent significant impacts to wildlife movement.

Development in the northern portions of the site, in the Jurupa Hills north of the SR-60 Freeway, may impact coastal sage scrub and grassland vegetation that may also allow for wildlife movement through these upland areas. Development in MSHCP criteria cells north of the freeway must be carefully controlled to assure there will be no significant impacts to biological resources protected by the MSHCP. Although not a specifically identified wildlife movement corridor, Pyrite Creek and its riparian resources may allow for some limited wildlife movement north-south between the Jurupa Hills and the Santa Ana River.

Summary of General Plan Goals and Policies. The following goals, policies, and programs of the Conservation and Open Space Element of the 2017 General Plan are related to habitat fragmentation and wildlife movement:

Conservation and Open Space Element

Goal

- COS 1.1 Help protect, preserve, and create the conditions that will promote the preservation of significant trees and other vegetation, particularly native California species.

Policies

- COS 1.1.1 Conserve important habitat areas to help protect the Santa Ana Woolly-Star, Many-Stemmed Live-Forever, Least Bell's Vireo, Southwestern Willow Flycatcher, California Gnatcatcher, San Bernardino Kangaroo Rat, coastal sage scrub, grasslands, and the Santa Ana River resources.
- COS 1.1.2 Protect and preserve significant trees.
- COS 1.1.3 Maintain and conserve superior examples of agricultural windrows, street trees, stands of mature native and non-native trees, and other features of ecological, aesthetic, and conservation value.

Programs

- COS 1.1.1.1 Design development to prevent soil erosion and avoid habitat disturbance.
- COS 1.1.1.2 Identify and protect riparian corridors.
- COS 1.1.1.3 Provide public information materials on sensitive habitats and how to protect them.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- COS 1.1.1.4 Create signage along major trails (e.g. Santa Ana River and Jurupa Mountains) to educate the public about critical habitats, native plant, and animal species.
- COS 1.1.1.5 Regulate encroachment of non-compatible land uses or activities into habitat areas.
- COS 1.1.1.6 Work with community groups to plan conservation activities such as habitat restoration, interpretive signage, trails, erosion control, and litter removal.
- COS 1.1.1.7 Develop a Tree Protection Ordinance.

Goal

- COS 2.1 Avoid actions that remove or damage habitat for native plants and animals.

Policies

- COS 2.1.1 Implement provisions of the MSHCP.
- COS 2.1.2 Maintain wildlife corridors along the City's northern boundary through the Jurupa Mountains and along the City's portion of the Santa Ana River.
- COS 2.1.3 Future development must provide biological reports to identify impacts and mitigation for project-specific impacts.

Program

- COS 2.1.1.1 Provide incentives to encourage the protection of significant wildlife habitat.
- COS 2.1.1.2 Regulate practices that might damage or destroy habitat (SA River, Jurupa Hills).

Goal

- COS 3.1 Meet potable water needs without harming habitat resources.

Policies

- COS 3.1.1 Use water conservation in ways that do not adversely affect the environment.
- COS 3.1.2 Water use practices should include protecting wildlife habitat and stream flows.
- COS 3.1.6 Encourage the use of native plants for drought-resistant landscape planting.
- COS 3.1.17 Encourage floodplain modifications to assist wildlife habitat and linkages.
- COS 3.1.18 Development shall provide setbacks from drainages for safety, riparian or wetland buffers, or wildlife movement or linkage.
- COS 3.1.20 Require development to protect riparian resources when possible.
- COS 3.1.21 Conserve upland habitat areas or "ecotones" adjacent to wetland and riparian areas for feeding, hibernation, or nesting of wildlife species.

Program

- COS 3.1.1.4 Work with other agencies for floodway protection and enhancement.

Goals

- COS 3.2 Protect and maintain the water quality of the Santa Ana River and local streams.
- COS 8.1 Maintain network of open lands including Santa Ana River, Jurupa Hills, wetlands and vernal pools, wildlife habitat, and wildlife movement corridors.
- COC 8.2 Encourage public access to open space areas without damaging resources.
- COS 8.3 Provide trails in open space areas in ways they will not damage habitat resources.
- COS 8.4 Avoid the loss of valuable open space resources.

Policy

- COS 8.1.1 Preserve a network of open space resources for City residents.

Program

COS 8.1.1.1 Promote interagency cooperation for open space acquisition, greenbelt, creeks, wetlands, and wildlife habitat protection.

Implementation of the above 2017 General Plan goals, policies, and programs as future development occurs will help prevent habitat fragmentation or potential impacts to wildlife movement within the City will be less than significant. Of highest importance will be implementation of the MSHCP (Policy COS 2.1.1) and preparing biological reports to identify and protect site-specific resources (Policy COS 2.1.3) including habitat assessments and the presence of wildlife movement corridors. It should be noted that the term “development” in this policy applies to building improvements on both private and public actions involving vacant land, as well as to equestrian trails along or connecting to the Santa Ana River. Policy 3.1.17 and Program 3.1.1.2 also encourage protecting wildlife movement corridors along the Santa Ana River and in the northern Jurupa Hills.

For properties along the Santa Ana River, it will also be important to assure implementation of MSHCP restrictions regarding: (a) direct and indirect lighting and noise levels to facilitate wildlife movement along the river; (b) Table 6-2 of Volume 1 of the MSHCP (*Plants That Should Be Avoided Adjacent to the MSHCP Conservation Area*) lists the plants that should not be planted adjacent to conservation areas; and (c) access restrictions into the Santa Ana River property other than on established equestrian trails. Goal 3.2 also specifically recommends protecting the water quality of the Santa Ana River.

Level of Programmatic Impact Before Mitigation. The 2017 General Plan goals, policies, and programs outlined above will provide sufficient protection against habitat fragmentation and for wildlife movement to reduce potential impacts in this regard to less than significant levels.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the identified 2017 General Plan goals, policies, programs, plus the regulatory requirements of the federal and state resource agencies, potential impacts related to habitat fragmentation and wildlife movement from future development within the City will be reduced to less than significant levels, and no mitigation is required.

4.4.5.6 Adopted Policies and/or Ordinances

| | |
|-----------|---|
| Threshold | Would the proposed project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? |
|-----------|---|

Programmatic Impacts. The proposed action studied by this EIR is the adoption of a General Plan with goals, policies, and programs that address potential impacts to biological resources. The General Plan is intended by its very nature to be the framework for the subsequent establishment of specific programs or ordinances that implement these goals and policies. Therefore by its very nature it cannot conflict with adopted policies or ordinances.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Conservation and Open Space Element of the General Plan will become the adopted policies and the basis for subsequent ordinances for the protection of biological resources:

Conservation and Open Space Element

Goal

COS 1.1 Help protect, preserve, and create the conditions that will promote the preservation of significant trees and other vegetation, particularly native California species.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Policies

- COS 1.1.1 Conserve important habitat areas to help protect the Santa Ana Woolly-Star, Many-Stemmed Live-Forever, Least Bell's Vireo, Southwestern Willow Flycatcher, California Gnatcatcher, San Bernardino Kangaroo Rat, coastal sage scrub, grasslands, and the Santa Ana River resources.
- COS 1.1.2 Protect and preserve significant trees.
- COS 1.1.3 Maintain and conserve superior examples of agricultural windrows, street trees, stands of mature native and non-native trees, and other features of ecological, aesthetic, and conservation value.

Programs

- COS 1.1.1.1 Design development to prevent soil erosion and avoid habitat disturbance.
- COS 1.1.1.2 Identify and protect riparian corridors.
- COS 1.1.1.3 Provide public information materials on sensitive habitats and how to protect them.
- COS 1.1.1.4 Create signage along major trails (e.g. Santa Ana River and Jurupa Mountains) to educate the public about critical habitats, native plant, and animal species.
- COS 1.1.1.5 Regulate encroachment of non-compatible land uses or activities into habitat areas.
- COS 1.1.1.6 Work with community groups to plan conservation activities such as habitat restoration, interpretive signage, trails, erosion control, and litter removal.
- COS 1.1.1.7 Develop a Tree Protection Ordinance.

Goal

- COS 2.1 Avoid actions that remove or damage habitat for native plants and animals.

Policies

- COS 2.1.1 Implement provisions of the MSHCP.
- COS 2.1.2 Maintain wildlife corridors along the City's northern boundary through the Jurupa Mountains and along the City's portion of the Santa Ana River.
- COS 2.1.3 Future development must provide biological reports to identify impacts and mitigation for project-specific impacts.

Programs

- COS 2.1.1.1 Provide incentives to encourage the protection of significant wildlife habitat.
- COS 2.1.1.2 Regulate practices that might damage or destroy habitat (SA River, Jurupa Hills).

Goal

- COS 3.1 Meet potable water needs without harming habitat resources.

Policies

- COS 3.1.1 Use water conservation in ways that do not adversely affect the environment.
- COS 3.1.2 Water use practices should include protecting wildlife habitat and stream flows.
- COS 3.1.6 Encourage the use of native plants for drought-resistant landscape planting.
- COS 3.1.17 Encourage floodplain modifications to assist wildlife habitat and linkages.
- COS 3.1.18 Development shall provide setbacks from drainages for safety, riparian or wetland buffers, or wildlife movement or linkage.
- COS 3.1.20 Require development to protect riparian resources when possible.
- COS 3.1.21 Conserve upland habitat areas or "ecotones" adjacent to wetland and riparian areas for feeding, hibernation, or nesting of wildlife species.

Program

COS 3.1.1.4 Work with other agencies for floodway protection and enhancement.

Goals

COS 3.2 Protect and maintain the water quality of the Santa Ana River and local streams.
 COS 8.1 Maintain network of open lands including Santa Ana River, Jurupa Hills, wetlands and vernal pools, wildlife habitat, and wildlife movement corridors.
 COC 8.2 Encourage public access to open space areas without damaging resources.
 COS 8.3 Provide trails in open space areas in ways they will not damage habitat resources.
 COS 8.4 Avoid the loss of valuable open space resources.

Policy

COS 8.1.1 Preserve a network of open space resources for City residents.

Program

COS 8.1.1.1 Promote interagency cooperation for open space acquisition, greenbelt, creeks, wetlands, and wildlife habitat protection.

The following Table 4.4.C provides a comparison of the policies of the existing General Plan to the new proposed General Plan to determine consistency with the overall intent of the existing County General Plan adopted by the City.

Table 4.4.C: 2017 General Plan Consistency Analysis – Biological Resources

| Existing County General Plan | Proposed 2017 General Plan ¹ |
|---|--|
| Jurupa Area Plan | |
| JURAP 7.1 Protect the multipurpose open space attributes of the Santa Ana River Corridor through adherence to policies in the Flood and Inundation Hazards section of the Safety Element, the Multiple Species Habitat Conservation Plans section of the Multipurpose Open Space Element, and the Open Space, Habitat and Natural Resource Preservation section of the Land Use Element. | Consistent: Goals 1.1 and 2.1 Policies 1.1.1, 2.1.1, and 2.1.2 All designed to protect the Santa Ana River resources. |
| JURAP 7.4 Minimize the disruption of sensitive vegetation and species. | Consistent: Goals 1.1 and 2.1 Policies 1.1.1, 1.1.2, 1.1.3, 2.1.1, 2.2.2, and 2.2.3 |
| JURAP 16.1 Conserve existing wetlands and wetlands functions and values in the Jurupa Area Plan portion of the Santa Ana River, with a focus on conserving existing habitats in the river. | Consistent: Goals 1.1, 2.1 and 3.1 Policies 1.1.1, 2.1.1, 2.1.2, 2.1.3, 3.1.2, and 3.1.17 |
| JURAP 16.2 Conserve alluvial fan sage scrub associated with the Santa Ana River to support key populations of Santa Ana [River] woolly-star. | Consistent: Goals 1.1 Policy 1.1.1 (specifically mentions AFSS and SAWS) |
| JURAP 16.3 Conserve clay soils to support key populations of many-stemmed dudleya, known to occur along the Jurupa Area Plan portion of the Santa Ana River. | Consistent: Goals 1.1 Policies 1.1.1 (specifically mentions plant species) |
| JURAP 16.4 Conserve known populations of least Bell's vireo and southwestern willow flycatcher along the Santa Ana River. | Consistent: Goals 1.1 Policy 1.1.1 (specifically mentions these species) Policy 2.1.1 (HSHCP implementation) |
| JURAP 16.5 Provide for and maintain a continuous linkage along the Santa Ana River from the northern boundary of the Area Plan to the western boundary. | Consistent: Goal 2.1 and 3.1 Policies 2.1.2 and 3.1.17 (linkages) |

2017 General Plan – City of Jurupa Valley
Draft Environmental Impact Report

Table 4.4.C: 2017 General Plan Consistency Analysis – Biological Resources

| Existing County General Plan | Proposed 2017 General Plan¹ |
|--|---|
| JURAP 16.8 Conserve grasslands adjacent to sage scrub for foraging habitat for raptors. | Consistent: Goals 1.1 and 3.1 Policy 1.1.1 (Sub-Section F specifically for raptors) Policy 2.1.1 (HSHCP implementation) Policy 3.1.21 (ecotones) |
| JURAP 18.1 Continue abatement and mitigation programs for the removal of Arundo Donax within the Santa Ana River corridor. | Consistent: Goals 3.1 and 3.2 Policies 3.1.2, 3.1.7, 3.1.20 |
| Open Space | |
| OS 17.4 Require the preparation of biological reports in compliance with Riverside County Planning Department Biological Report Guidelines for development related uses that require discretionary approval to assess the impacts of such development and provide mitigation for impacts to biological resources until such time as the CVAG MSHCP and/or Western Riverside County MSHCP are adopted or should one or both MSHCPs not be adopted. | Consistent: Goal 2.1 Policy 2.1.1 (MSHCP implementation) Policy 2.1.3 (bio reports) |
| OS 5.5 New development shall preserve and enhance existing native riparian habitat and prevent obstruction of natural watercourses. Incentives shall be utilized to the maximum extent possible. (AI 25, 60) | Consistent: Goals 1.1, 2.1, and 3.2 Policies 1.1.1, 2.1.1, and 2.1.2 |
| OS 5.6 Identify and, to the maximum extent possible, conserve remaining upland habitat areas adjacent to wetland and riparian areas that are critical to the feeding, hibernation, or nesting of wildlife species associated with these wetland and riparian areas. (AI 60, 61) | Consistent: Goal 2.1 Policies 2.1.2 and 2.1.3 |
| OS 6.1 During the development review process, ensure compliance with the Clean Water Act's Section 404 in terms of wetlands mitigation policies and policies concerning fill material in jurisdictional wetlands. (AI 3) | Consistent: Goals 3.1 and 3.2 Policies 3.1.17, 3.1.18, and 3.1.20 |
| OS 6.2 Preserve buffer zones around wetlands where feasible and biologically appropriate. (AI 61) | Consistent: Goals 3.1 Policies 3.1.8 and 3.1.20 |
| OS 9.3 Maintain and conserve superior examples of native trees, natural vegetation, stands of established trees, and other features for ecosystem, aesthetic, and water conservation purposes. (AI 3, 79) | Consistent: Goal 1.1 Policies 1.1.2 and 1.1.3 Program 1.1.1.7 Tree Protection Ord. |
| OS 9.4 Conserve the oak tree resources in the County. (AI 3, 78) | Consistent: Goals 1.1 Policies 1.1.2 and 1.1.3 Program 1.1.1.7 Tree Protection Ord. |
| OS 17.4 Require the preparation of biological reports in compliance with Riverside County Planning Department Biological Report Guidelines for development related uses that require discretionary approval to assess the impacts of such development and provide mitigation for impacts to biological resources until such time as the CVAG MSHCP and/or Western Riverside County MSHCP are adopted or should one or both MSHCPs not be adopted. | Consistent: Goal 2.1 Policy 2.1.1 (MSHCP implementation) Policy 2.1.3 (bio reports) |
| OS 19.8 Whenever existing information indicates that a site proposed for development may contain biological, paleontological, or other scientific resources, a report shall be filed stating the extent and potential significance of the resources that may exist within the proposed development and appropriate measures through which the impacts of development may be mitigated. | Consistent: Goal 2.1 Policy 2.1.1 (MSHCP implementation) Policy 2.1.3 (bio reports) |

Sources: Existing Jurupa General Plan, July 2011 and new proposed Jurupa Valley General Plan, July 2016.

Level of Programmatic Impact Before Mitigation. The 2017 General Plan goals, policies, and programs outlined above will establish a framework within which subsequent programs and ordinances for the protection of biological resources will occur (e.g., tree protection ordinance). Therefore, the proposed General Plan will be consistent with adopted policies and ordinances and no mitigation will be required.

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. Implementation of the identified 2017 General Plan goals, policies, programs, plus the regulatory requirements of the federal and state resource agencies, will establish the City's adopted policies and the basis for subsequent ordinances for protecting biological resources, so impacts from future development within the City will be reduced to less than significant levels, and no mitigation is required.

4.4.5.7 Adopted Habitat Conservation Plans

| | |
|-----------|---|
| Threshold | Would the proposed project conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan? |
|-----------|---|

Programmatic Impacts. Policy 2.1.1 specifically requires future development projects to comply with the requirements of the MSHCP. In addition, Policy 2.1.3 requires future development to prepare biological reports that would identify potential impacts to biological resources on specific development sites. There are no other Habitat Conservation Plans applicable to the City of Jurupa Valley. In addition, the other goals and policies outlined in Section 4.4.2.4 will help minimize future impacts to biological resources as development occurs within the City.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan, specifically Policies 2.1.1 and 2.1.3, require future development to be consistent with the MSHCP and provide assessments of onsite biological resources. With implementation of these policies, potential impacts of future development on adopted habitat conservation plans will be less than significant, and no mitigation is needed.

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. With implementation of the 2017 General Plan policies, potential impacts of future development on adopted habitat conservation plans will be less than significant, and no mitigation is needed.

4.4.6 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

For context, the cumulative "universe" for impacts to biological resources relative to the City's 2017 General Plan would be western Riverside County which would take into account the City's proximity to the Santa Ana River. CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a plan summary of long-term development impacts. In this case, the growth projections of the General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation.

The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 26.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

The worst case growth projections assumed no new open space or conservation areas would be added but it is more likely new development, especially larger developments and those in the Jurupa Hills north of the SR-60 Freeway will be required to dedicate open space consistent with the MSHCP requirements for Sub-Unit 2 in this area (see Figure 4.4.B). The 2017 General Plan growth projections also provide “less intense” growth estimates which would be more likely since some amount of new development would be dedicated as open space.

At a programmatic level, 2017 General Plan Policy 2.1.1 requires all future development to be consistent with the MSHCP and Policy 2.1.3 requires biological studies for all new development which will identify onsite biological resources and appropriate methods of mitigating those project-level impacts. These programmatic actions will help reduce impacts of individual development projects within the City to less than significant levels.

It should also be noted that the County’s MSHCP is a regional mitigation plan for regional or potential cumulative impacts to biological resources. Implementation of project-level mitigation measures in the MSHCP, including payment of regional MSHCP impact fees, will help ensure that potential regional (i.e., cumulative) impacts of future development within the City are reduced to less than significant levels.

For these reasons, implementation of the City’s 2017 General Plan will not make a significant contribution to cumulatively adverse impacts to biological resources, and no mitigation is required beyond implementation of the goals, policies, and programs outlined in the 2017 General Plan.

4.5 CULTURAL RESOURCES

This section identifies and evaluates the potential for implementation of the Proposed Plan to have adverse effects on archaeological, historical, tribal cultural resources, and paleontological resources. The resources of concern include, but are not limited to, prehistoric and historic artifacts, burials, sites of religious or cultural significance to Native American groups, and historic structures.

The analysis contained in this section is based on the following reference document:

- *City of Jurupa Valley General Plan, Conservation and Open Space Element, December 2016 (draft).*

The following publications also helped contribute to the understanding of the local history in the Jurupa Valley:

- *“Jurupa (Images of America).”* Kim Jarrell Johnson. 2006
- *Wicked Jurupa Valley.* Kim Jarrell Johnson. 2012.

4.5.1 Existing Setting

4.5.1.1 Archaeological Resources

Jurupa Valley derives its name from the first Native American inhabitants of the area who called “Jurupa” their home. At the time of Spanish contact the Santa Ana River banks were occupied by Shoshonean speakers, a language family that covers most of the southwest United States and reaches southward as far as Mexico City. These Native groups shared similar social organization and resource procurement strategies. Villages were based on clan or lineage groups, and the home sites are marked by midden deposits, often with bedrock mortars. During seasonal rounds to exploit available resources, small groups often ranged some distances in search of specific plants and animals. The gathering strategies often left behind signs of special use sites, usually grinding slicks on bedrock boulders, at the locations of the resources.

The Jurupa Valley/Riverside area was traditionally home to three Native American groups during the late prehistoric to proto-historic periods. Ethnographic sources have indicated that the groups may have included the Luiseño of the Perris-Elsinore region, the Serrano of the San Bernardino Mountains and the Gabrieleno of the San Gabriel Valley. Additionally, a late influx of Cahuilla occurred during the 19th century. The Jurupa Valley area currently lies at the territorial boundaries of three Native American tribal groups, Gabrieleno, Luiseño, and Serrano.

Archaeological resources are those associated with prehistoric cultural sites, prehistoric isolates, and the remnants of historic cultural sites that lack substantive building remnants (termed “historic archaeological sites”) such as roads and trails. Prehistoric cultural resources consist of those physical properties that predate the advent of written records in a particular region that are considered important to a culture, subculture, or community for scientific or humanistic reasons. These include geographic districts, structures, sites, objects, and other physical evidence of past human activity. Similar to prehistoric cultural resources, historic cultural resources in a particular geographic region are considered important to a culture, subculture, or community, and postdate the advent of written records.

The County has mapped sensitivity classifications to reflect the regional potential of containing historical or archaeological resources: high, undetermined, and low. Properties with high potential include those listed or determined eligible for listing in the National Register of Historic Places. General Plan Figure COS-17, *Archaeological Sensitivity Map, Riverside County*, which is taken from Figure OS-6 in the County’s General Plan, entitled *Relative Archaeological Sensitivity of Diverse Landscapes*, does not identify any specific cultural resources that have been mapped in the general

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

area of Jurupa Valley. However, local Native American tribal groups consider the valley to be generally sensitive and have indicated a desire to monitor future growth according to the requirements of AB 52.

4.5.1.2 Historic Resources

Over the years, there have been various interpretations of the meaning of “Jurupa”, from a greeting meaning “peace and friendship” to the first padre to visit the area, to a more widely recognized origination that “Jurupa” refers to the California sagebrush plant common to the area. In 1838 the area became known as Rancho Jurupa under a land grant to Senor Don Juan Bandini by the Mexican government. By the late 1800’s the Jurupa Valley area began to live in the shadow of the more popular City of Riverside. Much of Jurupa Valley area has what once was a Riverside mailing address. Yet, settlement of the area in and around what is now the City of Riverside actually began in the Jurupa Valley many years before Riverside’s founding.

Historical resources are buildings, structures, objects, sites, and districts of significance in history, archaeology, architecture, and culture. These resources include intact structures of any type that are 50 years or more of age. They are sometimes called the built environment and can include, in addition to houses, structures such as irrigation works and engineering features. Historical resources are preserved because they provide a link to a region’s past and a frame of reference for a community. Often these sites are a source of pride for a city. The historical period for the Jurupa Valley includes settlement from 1774, with the expedition of Juan Bautista de Anza into the region, to 45 years before the present as defined by CEQA. A generalized inventory of historical resources in Jurupa Valley is shown in inset map of Figure 4.5.1 below. In addition, a listing of potentially historic structures is shown in Table 4.5.A. In addition, a recent environmental assessment for a project in the Mira Loma area (Etiwanda Avenue north of SR-60) indicated remnants of a World War II Quartermaster Depot may be present onsite, and monitoring of grading was recommended to determine if any resources remain from that historical use.

Table 4.5.A: Inventory of Historic and Potentially Historic Resources in Jurupa Valley

| Historic Name | Location | Category/Status | Significance |
|--------------------------|---|---|--|
| Jensen-Alvarado Ranch | 4307 Briggs St, Jurupa Valley, CA 92509 | California Historical Landmark (Cornelius and Mercedes Jensen Ranch, No. 943); listed on the National Register of Historic Places on September 6, 1979. | First kiln-fired brick building built in Riverside County and the oldest non-adobe structure in the Inland Empire. Ranch house and grounds serve as an 1880s living history interpretive museum administered by Riverside County Parks |
| Crestmore Manor | 4600 Crestmore Road, Jurupa Valley, CA 92509 | Potentially significant, architecture and commerce. | Crestmore Manor, a 10,830 sq. ft. colonial-style mansion, built in mid-1950s by W.W. “Tiny” Naylor, a restaurateur and the state’s then second-leading thoroughbred horse breeder. |
| Galleano Winery | 4231 Wineville Rd., Jurupa Valley, CA | Listed, National Register of Historic Places, architecture and commerce. | Early example of Southern California vineyard and winery. |
| Rubidoux Grist Mill Site | 5540 Molina Way, Rubidoux | California State Historic Landmark #303; marker. | One of the first grist mills in this part of Southern California, built by Jurupa Valley pioneer Louis Rubidoux on the Rancho |

Table 4.5.A: Inventory of Historic and Potentially Historic Resources in Jurupa Valley

| Historic Name | Location | Category/Status | Significance |
|---|--|--|---|
| | | | Jurupa in 1846-47. |
| Site of Louis Rubidoux House | 5575 block, Mission Boulevard, Rubidoux | California State Historic Landmark and Riverside County Historic Landmark; marker. | Location of former home of Louis Rubidoux (nee' Robidoux). |
| Site of de Anza crossing of the Santa Ana River, 1775 and 1776. | Jurupa Hills Country Club. Site is near Union Pacific Bridge, Jurupa Heights; plaque is located between the clubhouse and No. 1 tee, Jurupa Hills Country Club Golf Course, 6161 Moraga Avenue | California State Historic Landmark; marker. | On January 1, 1776, the first party of colonists to come overland to the Pacific Coast, led by Early California explorer Juan Bautista de Anza, crossed the Santa Ana River south of this marker and camped between here and the River. |
| Spinney House | 7811 Mission Boulevard | Potentially significant, architecture and commerce. | Two-story Victorian farmhouse, pre-1900. |
| Rubidoux Drive-in Theater | 3770 Opal Street | Potentially significant, architecture and entertainment/cultural. | Vintage 1948 drive-in movie theatre, one of the oldest drive-in theaters in continuous operation; only about 20 drive-in theaters remain in California. |

Source: General Plan Table COS-20:- Historic and Potentially Historic Resources in Jurupa Valley

4.5.1.3 Paleontological Resources

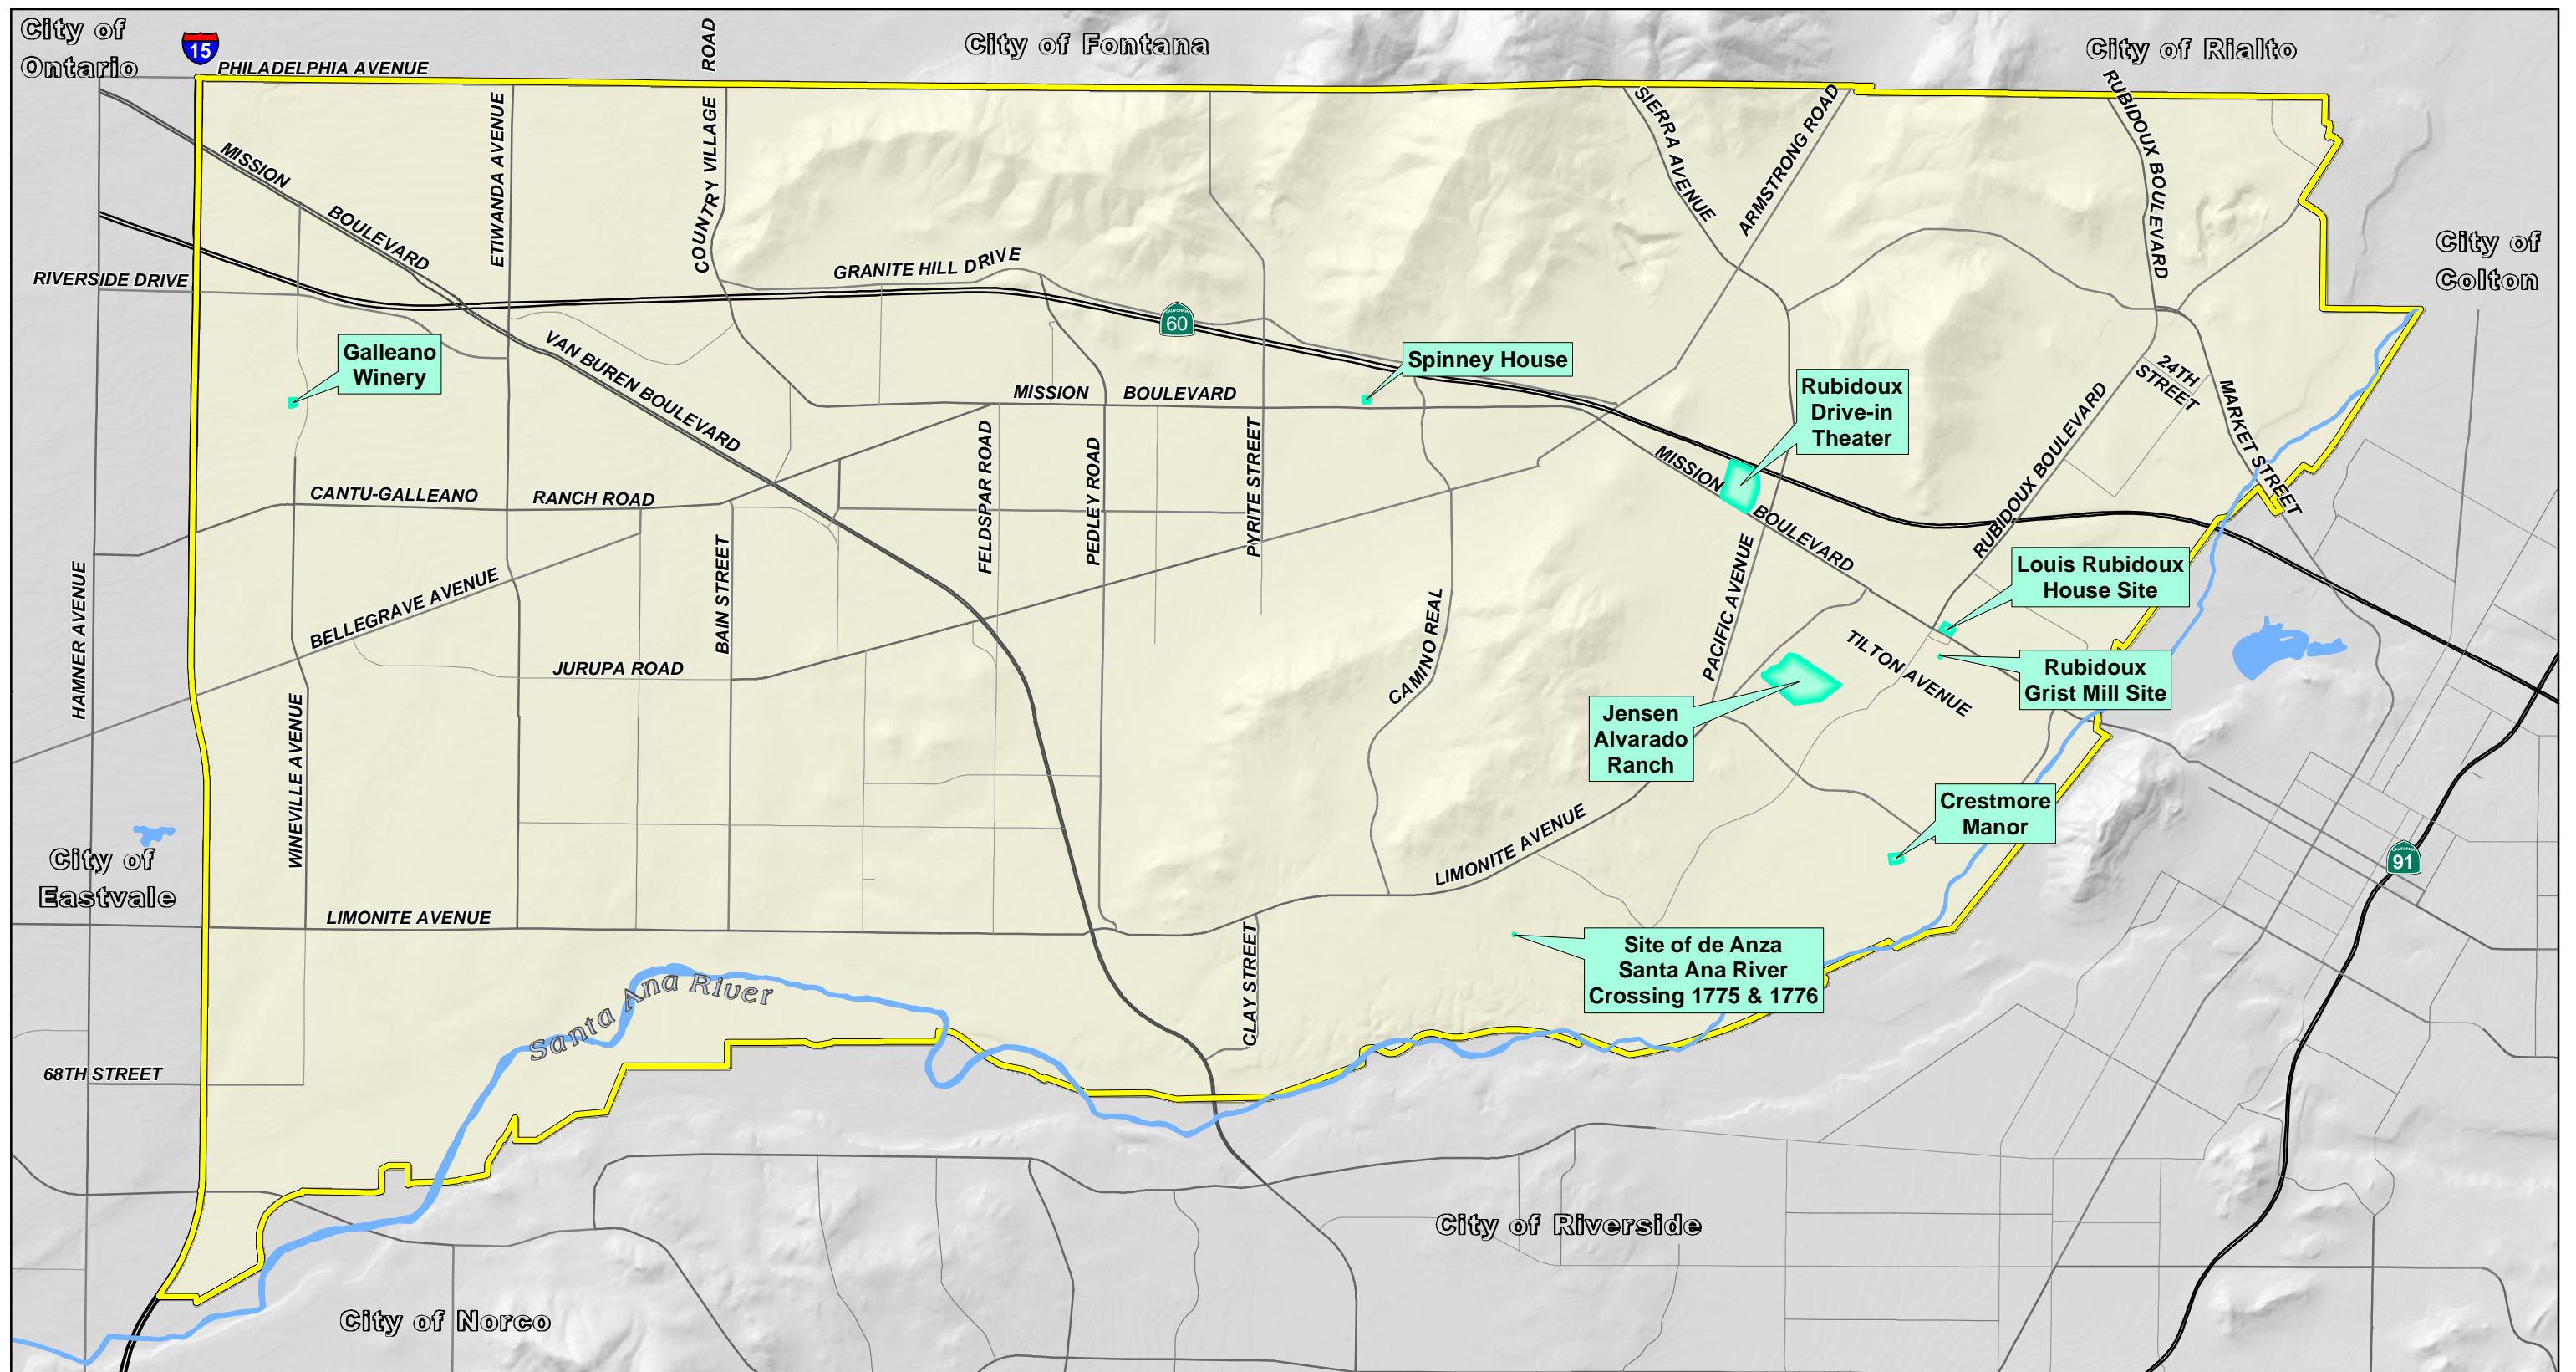

The City of Jurupa Valley lies in the northern portion of the Peninsular Ranges province, which is bounded on the north by the Transverse Ranges province, on the northeast by the Colorado Desert province, and on the west by the Pacific Ocean. The Peninsular Ranges province extends southward to the southern tip of Baja California. More specifically, the Jurupa Valley area is located within the San Bernardino Valley, a structurally depressed trough surrounded by the Santa Ana Mountains, the San Jacinto Mountains, the San Gabriel Mountains, and the San Bernardino Mountains, and filled with sediments of Miocene through Recent age.

The San Bernardino Valley is one of the many tectonically controlled valleys within the valley-and-ridge systems of the Perris Block. The Perris Block is a region between the San Jacinto and Elsinore-Chino fault zones. It is bounded on the north by the Cucamonga (San Gabriel) Fault and on the south by a vaguely delineated boundary near the southern end of the Temecula Valley. This structural block has been active since Pliocene time. The Pliocene- and Pleistocene-age non-marine sedimentary rocks filling the valley areas have provided a few vertebrate and invertebrate fossils.

Jurupa Valley contains geologic formations known potentially to contain paleontological resources. The City is located in the upper left hand corner of Figure 4.5.2 below which shows the City has a combination of low to high (County "High A" and "High B" categories) sensitivity for paleontological resources.

The following types of geologic or soil deposits are found within Jurupa Valley, and their individual sensitivity for paleontological resources are discussed below.

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.5.2
Paleontological Sensitivity in Jurupa Valley

THIS PAGE INTENTIONALLY LEFT BLANK

Artificial Fill. Artificial fill consists of sediments that have been removed from one location and transported to another by human activity. Artificial fill will sometimes contain modern debris such as asphalt, wood, bricks, concrete, metal, glass, plastic, and plant material. Artificial fill can contain fossils, but since these fossils have been removed from their original location, it is unlikely to contain in-situ fossils.

Holocene Alluvial Fan Deposits. Holocene Alluvial Fan Deposits are also known as Recent to Young Alluvial Fan Deposits. They are found at the mouths of canyons or along the sides of hills that flank river and stream valleys. They represent deposition by small streams that flow out of mountains and hills. They were deposited during the early to late Holocene and range in age from the recent to 10,000 years before the present. Although Holocene alluvium can contain remains of plants and animals, generally not enough time has passed for the remains to become fossilized. In addition, the remains are contemporaneous with modern species, and these remains are usually not considered to be significant. These deposits are too young to contain in-situ fossils and have low paleontological sensitivity; however, it should be noted that although an area may be mapped with younger alluvium on the surface, deposits of older alluvium are often encountered at shallow depths below the surface, and these older sediments can and do contain fossils.

Pleistocene Alluvial Fan Deposits. Pleistocene Alluvial Fan Deposits are also known as Old Alluvial Fan Deposits and Very Old Alluvial Fan Deposits. Like the Holocene Alluvial Fan Deposits described above, they are found at the mouths of canyons and along the sides of hills that flank river and stream valleys, they are older than the Holocene deposits. The Old Alluvial Fan Deposits were deposited during the late to middle Pleistocene (10,000–300,000 years ago) and the Very Old Alluvial Fan Deposits were deposited during the middle to Early Pleistocene (300,000–1.8 million years ago). Within the subsurface of the project area, sediments from the middle to late Pleistocene likely exist at depths (i.e., possibly as shallow as 5 feet). In addition, as early to middle Pleistocene alluvial sediments are mapped as occurring just to the east and west of the project area, it is also likely that these older sediments may be encountered as well. Pleistocene age deposits have produced significant fossils of Ice Age animals and plants in other portions of the Inland Empire area of California. For this reason, Pleistocene deposits have a high paleontological sensitivity.

4.5.1.5 NOP/Scoping Comments

No public comments or concerns regarding cultural resources were made during the scoping meeting. In addition, no comment letters were received from the public or agencies during the NOP period.

4.5.2 Regulatory Framework

4.5.2.1 Federal Regulations

National Historic Preservation Act (NHPA) of 1966 (as amended), Section 106. The NHPA declares a national policy of historic preservation to protect, rehabilitate, restore, and reuse districts, sites, buildings, structures, and objects significant in American architecture, history, archaeology, and culture. The NHPA established the National Register of Historic Places (National Register), State Historic Preservation Offices (SHPOs) and programs, and the Advisory Council on Historic Preservation. This Act applies to all properties on or eligible for inclusion in the National Register. The Section 106 review process requires consultation to mitigate damage to “historic properties” (defined per 36 CFR 800.16[1] as places that qualify for the National Register), including Native American traditional cultural places (TCPs). Evaluation of cultural resources consists of determining whether it is significant (i.e., whether it meets one or more of the criteria for listing in the National Register). These eligibility criteria are defined in 36 CFR 60.4 as follows:

The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association:

- A. That is associated with events that have made a significant contribution to the broad patterns of our history;
- B. That is associated with the lives of persons significant in our past;
- C. That embodies the distinctive characteristics of a type, period or method of construction, or that represents the work of a master, or possesses high artistic values, or that represents a significant and distinguishable entity whose components may lack individual distinction; and/or
- D. That has yielded, or may be likely to yield, information important to prehistory or history.

4.5.2.2 State Regulations

California Environmental Quality Act. An “historic resource” includes, but is not limited to, any object, building, site, area, place, record, or manuscript that is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California.¹ CEQA mandates that lead agencies consider a resource “historically significant” if it meets the criteria for listing in the California Register of Historic Resources (California Register). Such resources meet this requirement if they (1) are associated with events that have made a significant contribution to the broad patterns of California history, (2) are associated with the lives of important persons in the past, (3) embody distinctive characteristics of a type, period, region, or method of construction, and/or (4) represent the work of an important creative individual or possesses high artistic value.² These criteria mimic the criteria utilized to determine eligibility for the National Register.

In addition, Public Resources Code Section 21083.2 and *CEQA Guidelines* Section 15064.5(f) recognize that historical or unique archaeological resources other than potential Native American burials may be accidentally discovered during project construction. This guideline recommends that immediate evaluation defined by qualified archaeologists be included in mitigation measures. This guideline also recommends that if the find is determined to be a historical or unique archaeological resource, that contingency funding and time allotments sufficient to allow for implementation and avoidance measures be available.

Senate Bill 18. Signed into law in September 2004, and effective March 1, 2005, SB 18 permits California Native American tribes recognized by the Native American Heritage Commission (NAHC) to hold conservation easements on terms mutually satisfactory to the tribe and the landowner. The term “California Native American tribe” is defined as “a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC.” The bill also requires that, prior to the adoption or amendment of a city or county’s general plan, the city or county consult with California Native American tribes for the purpose of preserving specified places, features, and objects located within the city or county’s jurisdiction. SB 18 also applies to the adoption or amendment of specific plans. This bill requires the planning agency to refer to the California Native American tribes specified by the NAHC and to provide them with opportunities for involvement.

Assembly Bill 52. This bill, passed in 2014, establishes a consultation process with all California Native American Tribes on the Native American Heritage Commission List and federally non-recognized tribes. It establishes a new class of resources: Tribal Cultural Resources (TCR), and consideration is now given to Tribal Cultural Values in the determination of project impacts and

¹ Public Resources Code, Section 5020.1(j).

² Public Resources Code, Section 5024.1(c).

mitigation. It requires Tribal notice and meaningful consultation [PRC 21080.3.2(b)]. Consultation ends when either Parties agree to mitigation measures or avoid a significant effect on TCR. In preparation of the Draft 2017 General Plan, local Native American tribes were contacted and two tribes consulted, pursuant to AB 52 and invited to participate in the General Plan review process.

Tribe must submit written request to lead agency requesting to be notified of proposed projects in the geographic area that is traditionally and culturally affiliated with the tribe. (§21080.3.1(b)(1)). The Lead agency must submit written notification to the tribe that requested notification within 14 days of determining that an application for a project is complete – notification must include project description and proposed location. (§21080.3.1(d)). Tribes must submit written response within 30 days of receiving notification requesting consultation. Tribe must designate lead contact person. If no designation, or if tribe designates multiple lead contacts, the lead agency shall consult with Native American Heritage Commission's SB 18 list contact person. (§21080.3.1(b)(2)). Consultation shall begin prior to the release of the environmental document. (§21080.3.1(b)). Consultation shall include discussion regarding alternatives, recommended mitigation measures, or significant effects, but only if the tribe requests consultation regarding these issues. (§21080.3.2(a)).

Consultation may include discussion concerning the type of environmental review necessary (in circumstances where consultation begins prior to that determination), the significance of tribal cultural resources, the significance of a project's impacts on tribal cultural resources, and, if necessary, project alternatives or mitigation measures. (§21080.3.2(a)). Any mitigation measures agreed upon during consultation must be recommended for inclusion in the environmental document. (§21082.3(a)). Consultation shall be concluded when either occurs (§21080.3.2(b)):

- a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
- b. A party, acting in good faith and after reasonable effort, concludes that a mutual agreement cannot be reached.

A "tribal cultural resource" is one of the following (§21074):

- a. A site, feature, place, cultural landscape, sacred place, and object with cultural value to the tribe that is either (1) included or determined to be eligible for inclusion in the California Register of Historical Resources or (2) included in a local register of historical resources; or
- b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying these criteria, the lead agency must consider the significance of the resource to a California Native American tribe.

In determining whether a project will have a significant impact on tribal cultural resource, the lead agency must evaluate whether the project has an effect that may cause a substantial adverse change in the significance of a tribal cultural resource. (§21084.2). 12. OPR, by July 1, 2016, will have issued Guidelines, including sample questions that a lead agency may ask when evaluating whether a project may have a significant impact on a tribal cultural resource. (§21083.09).

California Health and Safety Code. The California Health and Safety Code Section 7050.5 states that if human remains are discovered, no further disturbance shall occur until the County Coroner has made a determination of origin and disposition. If the Coroner determines that the remains are not subject to his or her authority and if the Coroner recognizes the human remains to be those of a Native American, or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission. This regulation is applicable to any project where ground disturbance would occur.

4.5.2.3 City General Plan

The Conservation and Open Space Element of the City's proposed 2017 General Plan contains the following goals, policies, and programs designed to protect archaeological, historic, and

paleontological resources:

Conservation and Open Space Element

COS 7. Cultural and Paleontological Resources

Goal

COS 7.1 The City will seek to ensure the preservation of cultural, historical, archaeological, and paleontological resources.

Policies

COS 7.1.1 **Preservation of Significant Cultural Resources.** Identify, protect, and where necessary, archive significant paleontological, archaeological, and historical resources.

COS 7.1.2 **Public Information.** Encourage programs that provide public information on the City's history and cultural heritage, and participate with other agencies to help educate students about the City's rich natural and manmade environment.

COS 7.1.3 **Development Review.** Evaluate project sites for archaeological sensitivity and for a project's potential to uncover or disturb cultural resources as part of development review.

COS 7.1.4 **Site Confidentiality.** Protect the confidentiality and prevent inappropriate public exposure or release of information on locations or contents of paleontological and archaeological resource sites.

COS 7.1.5 **Native American Consultation.** Refer development projects for Native American tribal review and consultation as part of the environmental review process, in compliance with State law.

COS 7.1.6 **Non-Development Activities.** Prohibit activities other than private development projects that could disturb or destroy cultural resource sites, such as off-road vehicle use, site excavation or fill, mining, or other activities on or adjacent to known sites, or the unauthorized collection of artifacts.

COS 7.1.7 **Qualified archaeologist present.** Cease construction or grading activities in and around sites where substantial archaeological resources are discovered until a qualified archaeologist knowledgeable in Native American cultures can determine the significance of the resource and recommend alternative mitigation measures.

COS 7.1.8 **Native American Monitoring.** Include Native American participation in the City's guidelines for resource assessment and impact mitigation. Native American representatives should be present during archaeological excavation and during construction in an area likely to contain cultural resources. The Native American community shall be consulted as knowledge of cultural resources expands and as the City considers updates or significant changes to its General Plan.

COS 7.1.9 **Archaeological Resources Mitigation.** Require a mitigation plan to protect resources when a preliminary site survey finds substantial archaeological resources before permitting construction. Possible mitigation measures include presence of a qualified professional during initial grading or trenching; project redesign; covering with a layer of fill; excavation, removal and curation in an appropriate facility under the direction of a qualified professional.

COS 7.1.10 **Historically significant buildings.** Prohibit the demolition or substantial alteration in outward appearance of historically significant buildings and structures unless doing so is necessary to remove a threat to health and safety and other means to eliminate or reduce the threat to acceptable levels are infeasible. (See *Table COS-20* for a listing of Historic and Potentially Historic Structures)

Programs

- COS 7.1.1.1 **Historic Resources, Districts and Neighborhoods.** Identify historic resources, districts and neighborhoods, such as the historic city areas or Rubidoux, Glen Avon, and Pedley with the HRO Overlay and protect and, where possible enhance, their historic character through appropriate district signage, public improvements, and development incentives.
- COS 7.1.1.2 **Historical Preservation Incentives.** Consider offering preservation incentives, such as the Mills Act Tax Reduction program to encourage maintenance and restoration of historic properties.
- COS 7.1.1.3 **Construction in Historic Districts.** Prepare (or update, where guidelines already exist) architectural design guidelines to provide specific guidance on the construction of new buildings and public improvements within areas designated in the General Plan with the Historic Resource Overlay (“HRO”), such as village centers, historic districts and historic neighborhoods.
- COS 7.1.1.4 **Public Information Programs.** Foster public awareness and appreciation of cultural resources by sponsoring educational programs or by partnering with agencies, non-profit organizations, and citizens groups to provide public information on cultural resources and display artifacts that illuminate the City’s history. The City will encourage private development to include historical and archaeological displays where feasible and appropriate.

4.5.3 Methodology

The analysis of potential cultural resources impacts is based upon review of City of Jurupa Valley documents and figures, federal and state regulations, and analysis of General Plan goals, policies, and programs relative to future growth on vacant land within the City over the next 20 years.

4.5.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. The following thresholds of significance regarding potential impacts to cultural resources are based on Appendix G of the *CEQA Guidelines*. Implementation of the General Plan would have a significant impact related to cultural resources if it would:

- Cause a substantial adverse change in the significance of a historical resource as defined in *CEQA Guidelines* Section 15064.5;
- Cause a substantial adverse change in the significance of an archaeological resource pursuant to *CEQA Guidelines* Section 15064.5;
- Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature; and/or
- Result in any disturbance of human remains, including those interred outside of formal cemeteries.

In addition, AB 52 was passed by the legislature and signed by the governor on September 25, 2014 and added/amended Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3 of the Public Resources Code relating to CEQA and Native Americans. These changes expanded the government to government consultation originally outlined in SB 18 (governor signed on September 29, 2004). AB 52 also requires CEQA documents to examine “tribal cultural resources” which is a broader concept more akin to traditional tribal landscapes (i.e., geographic areas or

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

features) rather than specific archaeological sites or artifacts as was considered in the past. Since this is a programmatic EIR for a General Plan, the City is required to consult with local Native American tribal groups/representatives under both SB 18 and AB 52.

4.5.5 Programmatic Impact Evaluation

4.5.5.1 Historic Resources

| | |
|-----------|--|
| Threshold | Would the proposed project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5 of the <i>State CEQA Guidelines</i> ? |
|-----------|--|

Programmatic Impacts. The California Register of Historical Resources criteria are based on National Register criteria. For a property to be eligible for inclusion in the California Register, one or more of the following criteria must be met:

1. It is associated with the events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States;
2. It is associated with the lives of persons important to local, California, or national history;
3. It embodies the distinctive characteristics of a type, period, region, or method or construction, or represents the work of a master, or possesses high artistic values; and/or
4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

The California Register requires that a resource possess integrity, which is defined as “the authenticity of a historical resource’s physical identity evidenced by the survival of characteristics that existed during the resource’s period of significance” (California Office of Historic Preservation 1999). To retain integrity, a resource should have its original location, design, setting, materials, workmanship, feeling, and association. Which of these factors is most important depends on the particular criterion under which the resource is considered eligible for listing (California Office of Historic Preservation 1999).

In the City of Jurupa Valley, there are three potentially significant historic resources, three California State Historical Landmarks, one resource listed on the National Register of Historic Places, and one resource on both the state and national registers. At the time development or redevelopment projects are proposed, the project-level CEQA document would need to identify impacts to known or potential historic sites and structures. The CEQA Guidelines require a project that will have potentially adverse impacts on historical resources to conform to the Secretary of the Interior’s Standards for the Treatment of Historic Properties.

Without guidance, it is possible that future development could have significant impacts on historical resources if goals, policies, and programs are not in place to adequately protect such resources.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Conservation and Open Space Element of the 2017 General Plan are related to historic resources:

Conservation and Open Space Element

Goal

COS 7.1 Protect cultural, historical, archaeological, and paleontological resources.

Policies

COS 7.1.1 Preserve significant paleontological, archaeological, and historical resources.

COS 7.1.2 Encourage public information programs on cultural resources in the City.

- COS 7.1.6 Restrict activities that could disturb or destroy cultural resource sites.
- COS 7.1.10 Prohibit the demolition or substantial changes to historically significant buildings.

Programs

- COS 7.1.1.1 Identify historic resources and implement appropriate preservation activities.
- COS 7.1.1.2 Consider preservation incentives for maintenance/restoration of historic properties.
- COS 7.1.1.3 Prepare architectural design guidelines for development within Historic Resource Overlay (“HRO”) areas.
- COS 7.1.1.4 Promote public awareness regarding local cultural resources.

Implementation of the proposed goals, policies, and programs will generally be effective in reducing potential impacts to historical resources, although there could still be impacts if buildings older than 45 years are demolished without a complete inventory of historic resources within the City. It should be noted that Land Use Element Policy LUE 5.1.11 requires preparation of an historic survey to identify historic buildings, sites and other important cultural landmarks to be preserved, but only within the Historic Resource Overlay (HRO) area, so it is possible that historic structures outside of the HRO might be subject to demolition without proper study. Therefore, the following mitigation is needed.

Level of Programmatic Impact Before Mitigation. The General Plan goals, policies, and programs outlined above will provide sufficient protection for historical resources with the implementation of Mitigation Measure 4.5.5.1A.

Programmatic Mitigation Measures. The following measure is proposed to help assure no potentially historic buildings are demolished in the City without appropriate evaluation:

- 4.5.5.1A** Prior to issuance of a demolition permit for any structure older than 45 years at the time of application and according to City building records or other official documentation, a project applicant shall provide an historical assessment of the structure prepared by a qualified professional (i.e., certified historian or architectural historian) with a determination of whether the structure represents a significant historical resource according to Section 15064.5 of the State CEQA Guidelines. The assessment shall include contact with a local source of historical information regarding the structure’s potential local significance, as available.

If the structure is determined to not be historic or potentially historic, either at a state or local level, the structure may be demolished without further documentation. If the structure is not historic on a state level but has local historical significance, the structure may be demolished with City Council approval, provide that the property is photo-recorded and archived prior to demolition. If the structure has state historical significance, the project historian shall prepare a preservation plan which shall address in-place or onsite preservation, relocation to an appropriate offsite location, or demolition only if it can be clearly demonstrated that preservation in place is not physically, or structurally feasible. This measure shall be implemented to the satisfaction of the City Planning Department.

[NOTE: This shall become a standard Condition of Approval for development within the City.]

Level of Programmatic Impact After Mitigation. With implementation of the identified General Plan goals, policies, programs, plus the recommended Mitigation Measure 4.5.5.1A, potential impacts to historical structures from future development within the City will be reduced to less than significant levels.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

4.5.5.2 Archaeological Resources

| | |
|-----------|---|
| Threshold | Would the proposed project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5 or tribal cultural resources? |
|-----------|---|

Programmatic Impacts. The land within the City has the potential to yield archaeological resources or tribal cultural resources from past Native American activities. Lands along the Santa Ana River may contain archaeological artifacts or tribal cultural resources from past human activities, however, this area is an active floodplain and contains deep alluvial soils so the potential for finding undisturbed artifacts is relatively low. In addition, the upland portions of the City (i.e., Jurupa Hills in the northern and central portions of the City) contain many rock outcroppings and boulders that may represent archaeological resources.

A General Plan requires consultation with local Native American tribal groups under both SB 18 and AB 52. The State Native American Heritage Commission has indicated there are 23 Native American groups or individuals in the region who may have an interest in the Jurupa Valley General Plan. Of these groups/individuals contacted by the City, representatives from the following three Native American Groups expressed interest in the City's General Plan process in terms of Native American monitoring of any and all ground disturbing activities as well as formal government to government consultation:

1. Andy Salas, Gabrieleno Band of Mission Indians-Kizh Nation
2. Mr. Ray Huaute, Morongo Band of Mission Indians
3. Mr. Anthony Ontiveros, Soboba Tribe.

In addition, Ms. Croft, THPO, with the Agua Caliente Band of Mission Indians has indicated the City is outside the boundaries of the Agua Caliente traditional use area and no further consultation is necessary.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Conservation and Open Space Element of the General Plan are related to archaeological resources and coordination with Native American tribal groups:

Goal

COS 7.1 Protect cultural, historical, archaeological, and paleontological resources.

Policies

- COS 7.1.1 Preserve significant paleontological, archaeological, and historical resources.
- COS 7.1.2 Encourage public information programs on cultural resources in the City.
- COS 7.1.3 Evaluate a project site for archaeological resources.
- COS 7.1.4 Protect the confidentiality of archaeological or paleontological site information.
- COS 7.1.5 Refer development projects for Native American tribal review and consultation.
- COS 7.1.6 Restrict activities that could disturb or destroy cultural resource sites.
- COS 7.1.7 Require a qualified archaeologist if resources are found during site grading.
- COS 7.1.8 Involve local Native American participation in the City's development review process.
- COS 7.1.9 Require an archaeological mitigation plan to protect undiscovered resources.
- COS 7.1.10 Prohibit the demolition or substantial changes to historically significant buildings.

Program

- COS 7.1.1.4 Promote public awareness regarding local cultural resources.

Public Resources Code Section 21083.2 and *CEQA Guidelines* Section 15064.5(f) recognizes that historical or unique archaeological resources other than potential Native American burials may be accidentally discovered during project construction. This guideline recommends that immediate evaluation defined by qualified archaeologists be included in mitigation measures. This guideline also recommends that if the find is determined to be a historical or unique archaeological resource, that contingency funding and time allotments sufficient to allow for implementation and avoidance measures be available. Based on this, development of vacant land within the City in the future has the potential to result in significant impacts to archaeological resources.

Level of Programmatic Impact Before Mitigation. The 2017 General Plan goals, policies, and programs outlined above will provide sufficient programmatic protection for undiscovered archaeological resources or artifacts that may be present within the City. They also require consultation and coordination with local Native American tribal representatives prior to grading for future development, so impacts related to these resources will be reduced to less than significant levels, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the identified 2017 General Plan goals, policies, programs, plus the regulatory requirements of the federal and state resource agencies, potential impacts to archaeological resources from future development within the City will be reduced to less than significant levels, and no mitigation is required.

4.5.5.3 Paleontological Resources

Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Programmatic Impacts. County mapping indicates the City is underlain by a variety of soils and shallow geologic formations that may contain fossils or other paleontological materials. The mapping also indicates these resources have a higher probability of being located in the northwestern and southeastern portions of the site, but are not concentrated in any one area of the City. It is even possible, although less likely, that fossils may be found in deeper alluvial deposits along the Santa Ana River and adjacent floodplain. The upland portions of the City (i.e., Jurupa Hills in the northern and central portions of the City) contain many rock outcroppings and boulders but these do not necessarily represent unique geologic features. Future development of vacant land throughout the City may uncover previously undiscovered fossiliferous materials. Western Riverside County has yielded megafaunal¹ fossils and other important paleontological materials, so this impact is potentially significant.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Conservation and Open Space Element of the 2017 General Plan are related to paleontological resources:

¹ For example, during excavation of the Diamond Valley Lake reservoir near Hemet, bones and skeletons were found from extinct mastodons, mammoth, camel, sloth, dire wolf, and long-horned bison. Paleontologists from the San Bernardino County Museum in Redlands California uncovered thousands of fossils that have made significant contributions to scientific knowledge of this region. This area is now referred to as the “Valley of the Mastodons” and comprise a unique assemblage of classic late Pleistocene fossils.

Conservation and Open Space Element

Goal

COS 7.1 Protect cultural, historical, archaeological, and paleontological resources.

Policies

COS 7.1.1 Preserve significant paleontological, archaeological, and historical resources.

COS 7.1.2 Encourage public information programs on cultural resources in the City.

COS 7.1.4 Protect the confidentiality of archaeological or paleontological site information.

Program

COS 7.1.1.4 Promote public awareness regarding local cultural resources.

Level of Programmatic Impact Before Mitigation. The 2017 General Plan goals, policies, and programs outlined above will provide sufficient programmatic protection for undiscovered paleontological resources that may be present within the City with implementation of Mitigation Measure 4.5.5.3A.

Programmatic Mitigation Measures. The following measure is recommended to help assure there will be no significant impacts of future development relative to paleontological resources:

4.5.5.3A Prior to issuance of a grading permit, a project applicant must provide an assessment, prepared by a qualified professional, of whether the proposed project grading will impact underlying soil units or geologic formations that have a moderate to high potential to yield fossiliferous materials. If the potential for fossil discovery is low, no pre-grading monitoring needs to be established. If the potential for fossil discovery is moderate to high, the applicant must provide a paleontological monitor during rough grading of the project. If a paleontologist is not onsite and possible fossil materials are found, work shall be halted in that area until the material can be assessed by a qualified professional. If materials are found onsite during grading, a qualified professional shall evaluate the find and determine if it represents a significant paleontological resource. If the resource is determined to be significant, the paleontologist shall supervise removal of the material and determine the most appropriate archival storage of the material. Appropriate materials shall be prepared, catalogued, and archived at the applicant's expense and shall be retained within Riverside County if feasible. This measure shall be implemented to the satisfaction of the City Planning Department.

[NOTE: This shall become a standard Condition of Approval for development within the City.]

Level of Programmatic Impact After Mitigation. With implementation of the identified 2017 General Plan goals, policies, programs, plus the regulatory requirements of the state and the recommended Mitigation Measure 4.5.5.3A, potential impacts to paleontological resources from future development within the City will be reduced to less than significant levels.

4.5.5.3 Human Remains

| | |
|-----------|--|
| Threshold | Would the proposed project disturb any human remains, including those interred outside of formal cemeteries? |
|-----------|--|

Programmatic Impacts: In the event that human remains are discovered during new project construction, compliance with state law (Health and Safety Code § 7050.5) (HSC § 7050.5) would be

required. These requirements are imposed on any activity in which human remains are detected, and include the following provisions:

- There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:
 - The coroner of the county in which the remains are discovered must be contacted to determine that no investigation of the cause of death is required; and
 - If the coroner determines the remains to be Native American:
 - The coroner shall contact the Native American Heritage Commission within 24 hours.
 - The Native American Heritage Commission (NAHC) shall identify the person or persons it believes to be the most likely descended from the deceased Native American.
 - The most likely descendant may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code § 5097.98 (PRC § 5097.98), or
 - Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further and future subsurface disturbance pursuant to PRC § 5097.98(e).
 - The NAHC is unable to identify a most likely descendant.
 - The most likely descendant is identified by the NAHC, fails to make a recommendation within 48 hours of being granted access to the site; or
 - The landowner or his authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.

Public Resources Code Section 21083.2 and *CEQA Guidelines* Section 15064.5(f) recognizes that historical or unique archaeological resources other than potential Native American burials may be accidentally discovered during project construction (see Section 4.5.5.2 above). This guideline recommends that immediate evaluation defined by qualified archaeologists be included in mitigation measures. This guideline also recommends that if the find is determined to be a historical or unique archaeological resource, that contingency funding and time allotments sufficient to allow for implementation and avoidance measures be available.

Evaluation of General Plan Goals and Policies. There are no specific goals, policies, and programs in the Conservation and Open Space Element of the 2017 General Plan that are directly related to the discovery of human remains during excavation or grading activities. However, state law already regulates actions under such conditions, so no programmatic goals, policies, or programs are necessary in the 2017 General Plan in this regard.

Level of Programmatic Impact Before Mitigation. State law provides adequate guidance on procedures to follow if human remains are found during excavation or grading. Therefore, the proposed General Plan does not need to have specific goals, policies, or programs to address this issue, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. State law provides adequate guidance on procedures to follow if human remains are found during excavation or grading. Therefore, the proposed 2017 General Plan does not need to have specific goals, policies, or programs to address this issue, and no mitigation is required.

4.5.6 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

For context, the cumulative "universe" for impacts to cultural resources relative to the City's 2017 General Plan would be western Riverside County generally encompassing the ranges of the Native American Tribes that inhabited and continue to inhabit this area.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a plan summary of long-term development impacts. In this case, the growth projections of the General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation.

The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

The worst case growth projections assumed no new open space or conservation areas would be added which could help protect potential cultural resources. However, it is likely new development, especially larger developments and those in the Jurupa Hills north of the SR-60 Freeway will be required to dedicate open space consistent with the MSHCP for biological resources. Such open space may but will not necessarily contain cultural resources, but the City's open space acquisition and preservation policies do not limit themselves to biological habitat alone. The goals and policies of the Conservation and Open Space Element of the General Plan related to cultural resources indicate such resources will be taken into account if found and considered for preservation as part of dedicated open space. It should be noted that the General Plan growth projections also provide "less intense" growth estimates which would be more likely since some amount of new development would be dedicated as open space as part of the City's development review process.

At a programmatic level, General Plan Policy 2.1.1 requires all future development to protect cultural resources, including archaeological, historical, and paleontological materials or artifacts. In addition, Mitigation Measures 4.5.5.1A and 4.5.5.3A require future development to determine if such resources are onsite prior to development.

These programmatic actions will help reduce impacts of individual development projects within the City to less than significant levels. For these reasons, implementation of the City's 2017 General Plan will not make a significant contribution to cumulatively adverse impacts to cultural resources (with the recommended mitigation).

4.6 GEOLOGY AND SOILS

This section describes the location of the proposed project relative to the known geologic features and soil conditions and qualitatively evaluates potential impacts. It also evaluates whether development under the General Plan would significantly be affected by fault rupture, seismic shaking, erosion or unstable slopes, liquefaction, settlement, expansive soils, or other soil or geologic conditions. The following documents were used to analyze the geologic impacts of the proposed 2017 General Plan:

- *Soil Survey, Natural Resources Conservation Service, United States Department of Agriculture. Web Soil Survey. Available online at <http://websoilsurvey.nrcs.usda.gov/>. Accessed October 2015.*

4.6.1 Existing Setting

The City of Jurupa Valley (City) is located within the Chino Basin of the northern portion of the Peninsular Range Geomorphic Province of California. The Chino Basin is bound by the Cucamonga fault and San Gabriel Mountains to the north, the Chino fault and Puente/Chino Hills to the west, and the San Jacinto fault to the east. The Peninsular Range Geomorphic Province, one of the major geologic provinces of southern California (California Geologic Survey 2002) and is characterized by a series of mountain ranges separated by northwest-trending valleys sub-parallel to faults branching from the San Andreas Fault. The City is underlain by older alluvial fan deposits in the north and young alluvial wash deposits in the south. The younger deposits are within the active floodplain of the Santa Ana River.

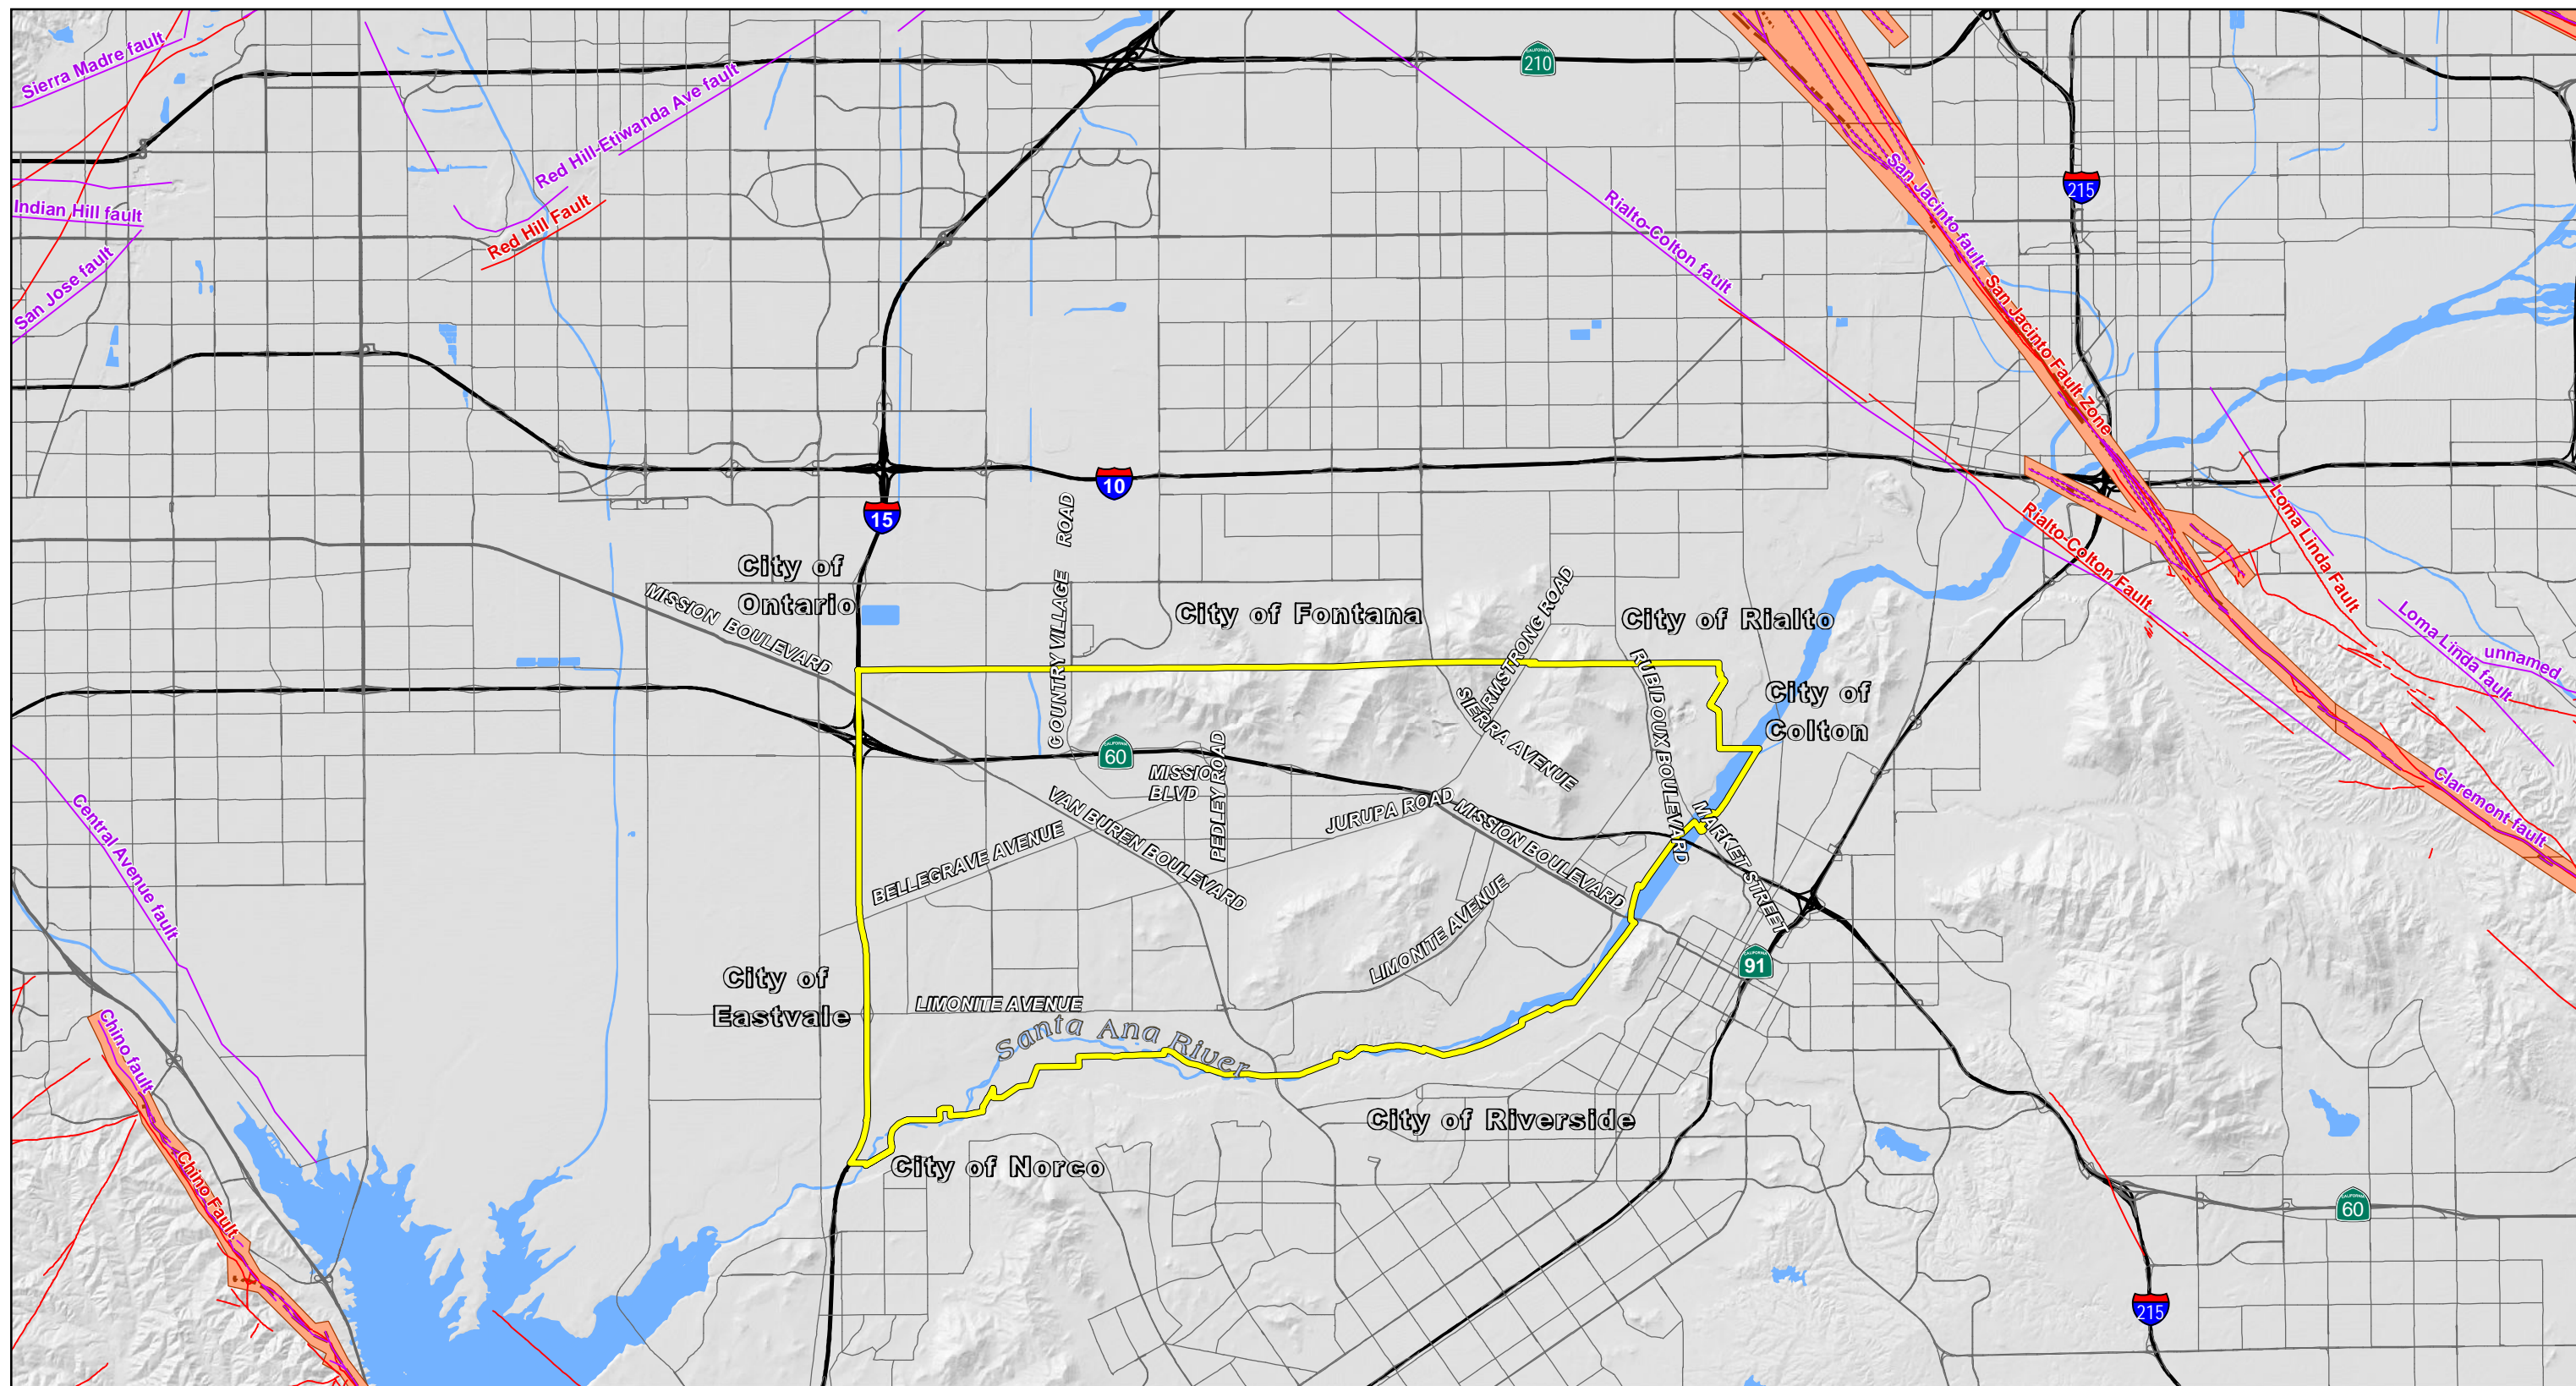

The existing setting for geology and soils includes faulting and seismicity, soils, and geologic and seismic hazards, which are discussed below.

4.6.1.1 Faulting and Seismicity

The City, like the rest of Southern California, is located within a seismically active region as a result of being located near the active margin between the North American and Pacific tectonic plates. The principal source of seismic activity is movement along the northwest-trending regional fault systems such as the San Andreas and Sierra Madre Fault Zones.

By definition of the California Geological Survey, an active fault is one which has had surface displacement within Holocene time (about the last 11,000 years). This definition is used in delineating Earthquake Fault Zones as mandated by the Alquist-Priolo Geologic Hazards Zones Act of 1972 and as most recently revised in 2007 as the Alquist-Priolo Earthquake Fault Zoning Act and Earthquake Fault Zones. The intent of this act is to require fault investigations on sites located within Earthquake Fault Zones to ensure that certain inhabited structures are not constructed across the traces of active faults. Although Riverside County as a whole is considered seismically active, there are no known seismic faults within Jurupa Valley, nor is Jurupa Valley located within a mapped Alquist-Priolo Earthquake Fault Zone. While the potential earthquake risk is considered low, regional faults such as the Rialto-Colton, San Jacinto and Chino Faults, pose earthquake risks to the West Riverside County area, including Jurupa Valley. The closest known active or potentially active faults to the City are the San Jacinto and Chino Faults located east and west of the City (refer to Figure 4.6.1).

4.6.1.2 Soils

The parent material of the soils on the site is granitic alluvium deposited by the Santa Ana River. The site is underlain by older alluvial fan deposits in the north and young alluvial wash deposits in the south. The project area is underlain by a variety of soil types included in Figure 4.6.2. The soils within the City are described in Table 4.6.A.

Table 4.6.A: Soils within the City of Jurupa Valley

| Map Symbol | Soil Series | Permeability | Runoff/Erosion Potential | Shrink-Swell potential |
|------------|---|------------------------|--------------------------|------------------------|
| ChD2 | Cieneba sandy loam, 8-15% slopes | slow | medium | moderate |
| ChF2 | Cieneba sandy loam, 15-50% slopes | rapid | | low |
| CkD2 | Cieneba rocky sandy loam, 8-15% slopes | rapid | medium | low |
| CkF2 | Cieneba rocky sandy loam, 15-50% slopes | rapid | rapid | low |
| DaD2 | Delhi fine sand, 2-15% slopes | rapid | very slow/slight | low |
| Db | Delhi fine sand | rapid | Very slow | low |
| DbA | Delhi loamy fine sand, 0-2% slopes | rapid | Very slow | low |
| DgB | Dello loamy sand, 0-5% slopes | moderately rapid/rapid | slow | low |
| DmA | Dello loamy sand, poorly drained, 0-2% slopes | moderately rapid/rapid | Very slow | low |
| DoA | Dello loamy fine sand, 0-2% slopes | moderately rapid/rapid | Very slow | low |
| DrA | Dello loamy fine sand, gravelly substratum, 2-2% slopes | moderately slow | Very slow | low |
| FaD2 | Fallbrook sandy loam, 8-15% slopes | moderate | medium | moderate |
| FaE2 | Fallbrook sandy loam, 15-25% slopes | moderately slow | medium | low |
| FfC2 | Fallbrook fine sandy loam, 2-8% slopes | moderately slow | slow | low |
| GP | Gravel pits | NA | NA | NA |
| GIC | Gorgonio loamy sand, deep, 2-8% slopes | rapid | slow | low |
| GoB | Grangeville loamy fine sand, drained, 0-5% slopes | moderately rapid | slow/slight | low |
| GsB | Grangeville sandy loam, sandy substratum, saline-alkali | moderately slow | slow | low |
| GtA | Grangeville fine sandy loam, 0-2% slopes | moderate | slow | low |
| GuB | Grangeville fine sandy loam, 0-5% slopes | moderately rapid | slow/slight | low |
| GvB | Grangeville fine sandy loam, 0-5% slopes | moderately slow | slow | low |
| GyC2 | Greenfield sandy loam, 2-8% slopes | moderate | slow/medium | low |
| GyD2 | Greenfield sandy loam, 8-15% slopes | moderately slow | medium | low |
| HaC | Hanford loamy fine sand, 0-8% slopes | rapid | | low |
| HcA | Hanford coarse sandy loam, 0-2% slopes | moderate/rapid | slow | low |
| HcC | Hanford coarse sandy loam, 2-8% slopes | moderate/rapid | slow/medium | low |
| HcD2 | Hanford coarse sandy loam, 8-15% slopes | moderate/rapid | medium | low |
| HdD2 | Hanford cobbly coarse sandy loam, 2-15% slopes | moderately slow | slow/medium | low |
| HgA | Hanford fine sandy loam, 0-2% slopes | moderately slow | slow | low |
| HhA2 | Hilmar loamy sand, 0-2% slopes | moderately slow | very slow/slow | low |
| HIA | Hilmar loamy very fine sand, 0-2% slopes | rapid | slow | low |
| HIC | Hilmar loamy very fine sand, 2-8% slopes | rapid | slow | low |
| Hr | Hilmar loamy fine sand | NI | NI | NI |
| MaB2 | Madera fine sandy loam, 2-5% slopes | moderately slow | slow/medium | low |
| MaD2 | Madera fine sandy loam, 5-15% slopes | moderately slow | medium | low |
| MbC2 | Madera fine sandy loam, shallow, 2-8% slopes | moderately slow | slow/medium | low |

2017 General Plan – City of Jurupa Valley
Draft Environmental Impact Report

Table 4.6.A: Soils within the City of Jurupa Valley

| Map Symbol | Soil Series | Permeability | Runoff/Erosion Potential | Shrink-Swell potential |

4.6.1.3 Geologic and Seismic Hazards

Geologic and seismic hazards discussed in this subsection include the following:

- Surface rupture;
- Ground shaking;
- Liquefaction;
- Subsidence and seismic settlement;
- Landslides/slope stability; and
- Compressible, expansive, and collapsible soils.

SOURCE: Bing Aerial, 2015; Riverside County 7/2015, Soil Data Mart, 2015.

Soils

THIS PAGE INTENTIONALLY LEFT BLANK

Surface Rupture. Surface rupture occurs where displacement or fissuring occurs along a fault zone. While ground shaking is the main source of damage in earthquakes, ground rupture from fault movement can cause substantial damage to structures or facilities located too close to a rupturing fault. It is difficult to reduce the hazards of surface rupture through structural design. The primary method to avoid this hazard is to set structures and facilities back from active faults.

Faults throughout southern California have formed over millions of years. Some of these faults are considered inactive under present geologic conditions, and other faults are known to be active.¹ Such faults have either generated earthquakes in historic times (200 years), or indicate movement within the last 11,000 years. Faults that have moved in the relatively recent geological past are generally presumed to be the most likely to cause damaging earthquakes in the lifetimes of residents, buildings, or communities. Surface rupture typically occurs less than a mile from the moving fault, and the closest active fault, the Chino fault, is six miles from the City.

Ground Shaking. The vast majority of earthquake damage is caused by ground shaking. The amount of shaking results from the size, location, and distance from the earthquake. In general, shaking and damage decrease with distance from the fault, although they are also affected by the orientation of the fault and the localized geology and soils beneath a particular site.

Earthquake Measurement. An earthquake is classified according to its moment (a measure of the energy released when a fault ruptures), its magnitude (a measure of maximum ground motion) or its intensity (a qualitative assessment of an earthquake's effects at a given location). A given earthquake will have one moment, and in principle, one magnitude (although there are several methods of calculating magnitude, which give slightly different results). However, earthquakes can produce several intensities, because effects generally decrease with distance from the earthquake. Two scales are in general use, the Richter and Modified Mercalli. The Richter Scale, which measures the magnitude of earthquakes, ranges from 0 to (in theory) 10. On this scale a value of 2.0 can just be felt as a tremor. Damage to buildings occurs for values over 6.0. This scale is logarithmic and is related to the amplitude of groundwave and its duration. Because of the logarithmic basis of the scale, each whole number increase in magnitude represents a tenfold increase in measured amplitude. As an estimate of energy, each whole number step in the magnitude scale corresponds to the release of about 31 times more energy than the amount associated with the preceding whole number value. The Modified Mercalli Intensity (MMI) scale is composed of 12 increasing levels of intensity that range from imperceptible shaking to catastrophic destruction, and is designated by Roman numerals. It does not have a mathematical basis; instead it is an arbitrary ranking based on observed effects. The higher the number, the greater the damage. Table 4.6.B compares the Modified Mercalli Intensity Scale to the Richter Scale.

Table 4.6.B: Comparison of Richter Magnitude and Modified Mercalli Intensity

| Richter Magnitude | Expected Modified Mercalli Maximum Intensity (At Epicenter) |
|-------------------|---|
| 2 | I-II Usually detected only by instruments |
| 3 | III Felt indoors |
| 4 | IV-V Felt by most people; slight damage |
| 5 | VI-VII Felt by all; many frightened and run outdoors; damage mild to moderate |
| 6 | VII-VIII Everybody runs outdoors; damage moderate to major |
| 7 | IX-X Major damage |
| 8+ | X-XII Total and major damage |

Source: *California Geology*, 1984

¹ The Alquist-Priolo Earthquake Fault Zoning Act defines *active faults* as those that show proven displacement of the ground surface within about the last 11,000 years. *Potentially active faults* are those that show evidence of movement within the last 1.6 million years.

The strength of seismic ground shaking at any given site is a function of many factors. Of primary importance are the size of the earthquake, its distance, the paths the waves take as they travel through the earth, the rock or soils underlying the site, and topography (particularly whether a site sits in a valley, or atop a hill). The amount of damage also depends on the size, shape, age, and engineering characteristics of the affected structures.

Strong ground shaking causes the vast majority of earthquake damage. There are many ways that seismic waves can cause damaging ground shaking, but few of them will affect any particular location in a single earthquake. Horizontal ground acceleration is frequently responsible for widespread damage to structures. It is commonly measured as a percentage of g, the acceleration of gravity. In general, the degree of shaking can depend upon:

Source effects: These include earthquake size, location, and distance. The bigger and closer the earthquake is, the more likely damage will be. The exact way that rocks move along the fault can also influence shaking, as can the orientation of the fault in the ground. The 1995 Kobe, Japan earthquake was about the same size as the 1994 Northridge, earthquake, but caused much worse damage, because in Kobe, the fault directed seismic waves into the city. During the Northridge earthquake, the fault directed waves away from populated areas.

Path effects: Just as a light bounces (reflects) and bends (refracts), seismic waves change direction as they travel through the Earth's contrasting layers. Composition of layers can sometimes focus seismic energy at one location, and cause damage in unexpected areas.

Site effects: Seismic waves slow down in the loose sediments and weathered rock at the earth's surface. As they slow, their energy converts from speed to amplitude, which increases shaking. Seismic waves, at times, get trapped at the surface and resonate. Whether resonance will occur depends on the period (the length) of the incoming waves. Waves, soils, and buildings all have resonant periods. When these match, tremendous damage can occur.

The known regionally active and potentially active faults that could produce the most significant ground shaking in the City include the Chino-Elsinore fault zone, Whittier, Elsinore-Glen Ivy, San Jacinto-San Bernardino, Cucamonga, San Jose, Sierra Madre, and San Andreas faults.

Liquefaction. Liquefaction occurs primarily in saturated, loose, fine-to-medium grained soils in areas where the groundwater table is within 50 feet of the surface. Shaking suddenly increases pore water pressure, causing the soils to lose strength and behave as liquid. Excess water pressure is vented upward through fissures and soil cracks and a water soil slurry bubbles onto the ground surface. The resulting features are called “sand boils,” “sand blows,” or “sand volcanoes.” Liquefaction related effects include loss of bearing strength, ground oscillations, lateral spreading, and flow failures or slumping. Site specific geotechnical studies are the only practical and reliable way of determining the liquefaction potential of a site. The City has very high susceptibility to liquefaction in the area of the Santa Ana River (see Figure 4.6.3).

Subsidence and Seismic Settlement. Ground subsidence is typically a gradual settling or sinking of the ground surface with little or no horizontal movement, although fissures (cracks and separations) can result from lowering of the ground surface. The common causes of subsidence that can produce small or local collapses to broad regional subsidence include:

- Dewatering of peat or organic soils;
- Dissolution in limestone aquifers;
- First-time wetting of dry low-density soils (hydrocompaction);
- Natural compaction;
- Liquefaction;

- Crustal deformation;
- Ground shaking;
- Subterranean mining; and
- Withdrawal of fluids (groundwater, petroleum, or geothermal).

Most of the damage caused by subsidence is the result of oil, gas, or groundwater extraction from below the ground surface, or the organic decomposition of peat or other organic materials. Ground subsidence may occur as a response to natural forces such as earthquake movements, which can cause abrupt elevation changes of several feet or densification of low density granular soils during an earthquake event that may cause several inches of settlement. Seismic loading can result in moderate settlement at the site, up to three inches assuming the historic high groundwater level. Areas of the City subject to subsidence are indicated on Figure 4.6.4.

Landslides/Slope Stability. “Slope” is defined as the vertical change in elevation over a given horizontal distance. It can be measured as a percentage, a ratio, or as an angle. A 10 percent slope is one that rises 10 feet over a horizontal distance of 100 feet. That same slope would have a 10:1 ratio (10 feet horizontal distance for each 1 foot in vertical rise) and would have a slope angle of 5.7 percent. A 2:1 would have a 50-foot vertical rise over a 100-foot horizontal distance (50 percent), and a 26-degree angle to the slope (refer to Table 4.6.C).

Table 4.6.C: Slope Calculation

| % Grade | 100% | 50% | 40% | 33.3% | 30% | 25% | 20% | 15% | 12% | 10% | 8% | 6% |
|--------------------------|------|------|-------|-------|-------|-----|------|-------|-------|------|--------|--------|
| Angle of slope (degrees) | 45 | 26.6 | 21.8 | 18.4 | 16.7 | 14 | 11.3 | 8.5 | 6.8 | 5.7 | 4.6 | 3.4 |
| Ratio | 1:1 | 2:1 | 2.5:1 | 3:1 | 3.3:1 | 4:1 | 5:1 | 6.7:1 | 8.3:1 | 10:1 | 12.5:1 | 16.7:1 |

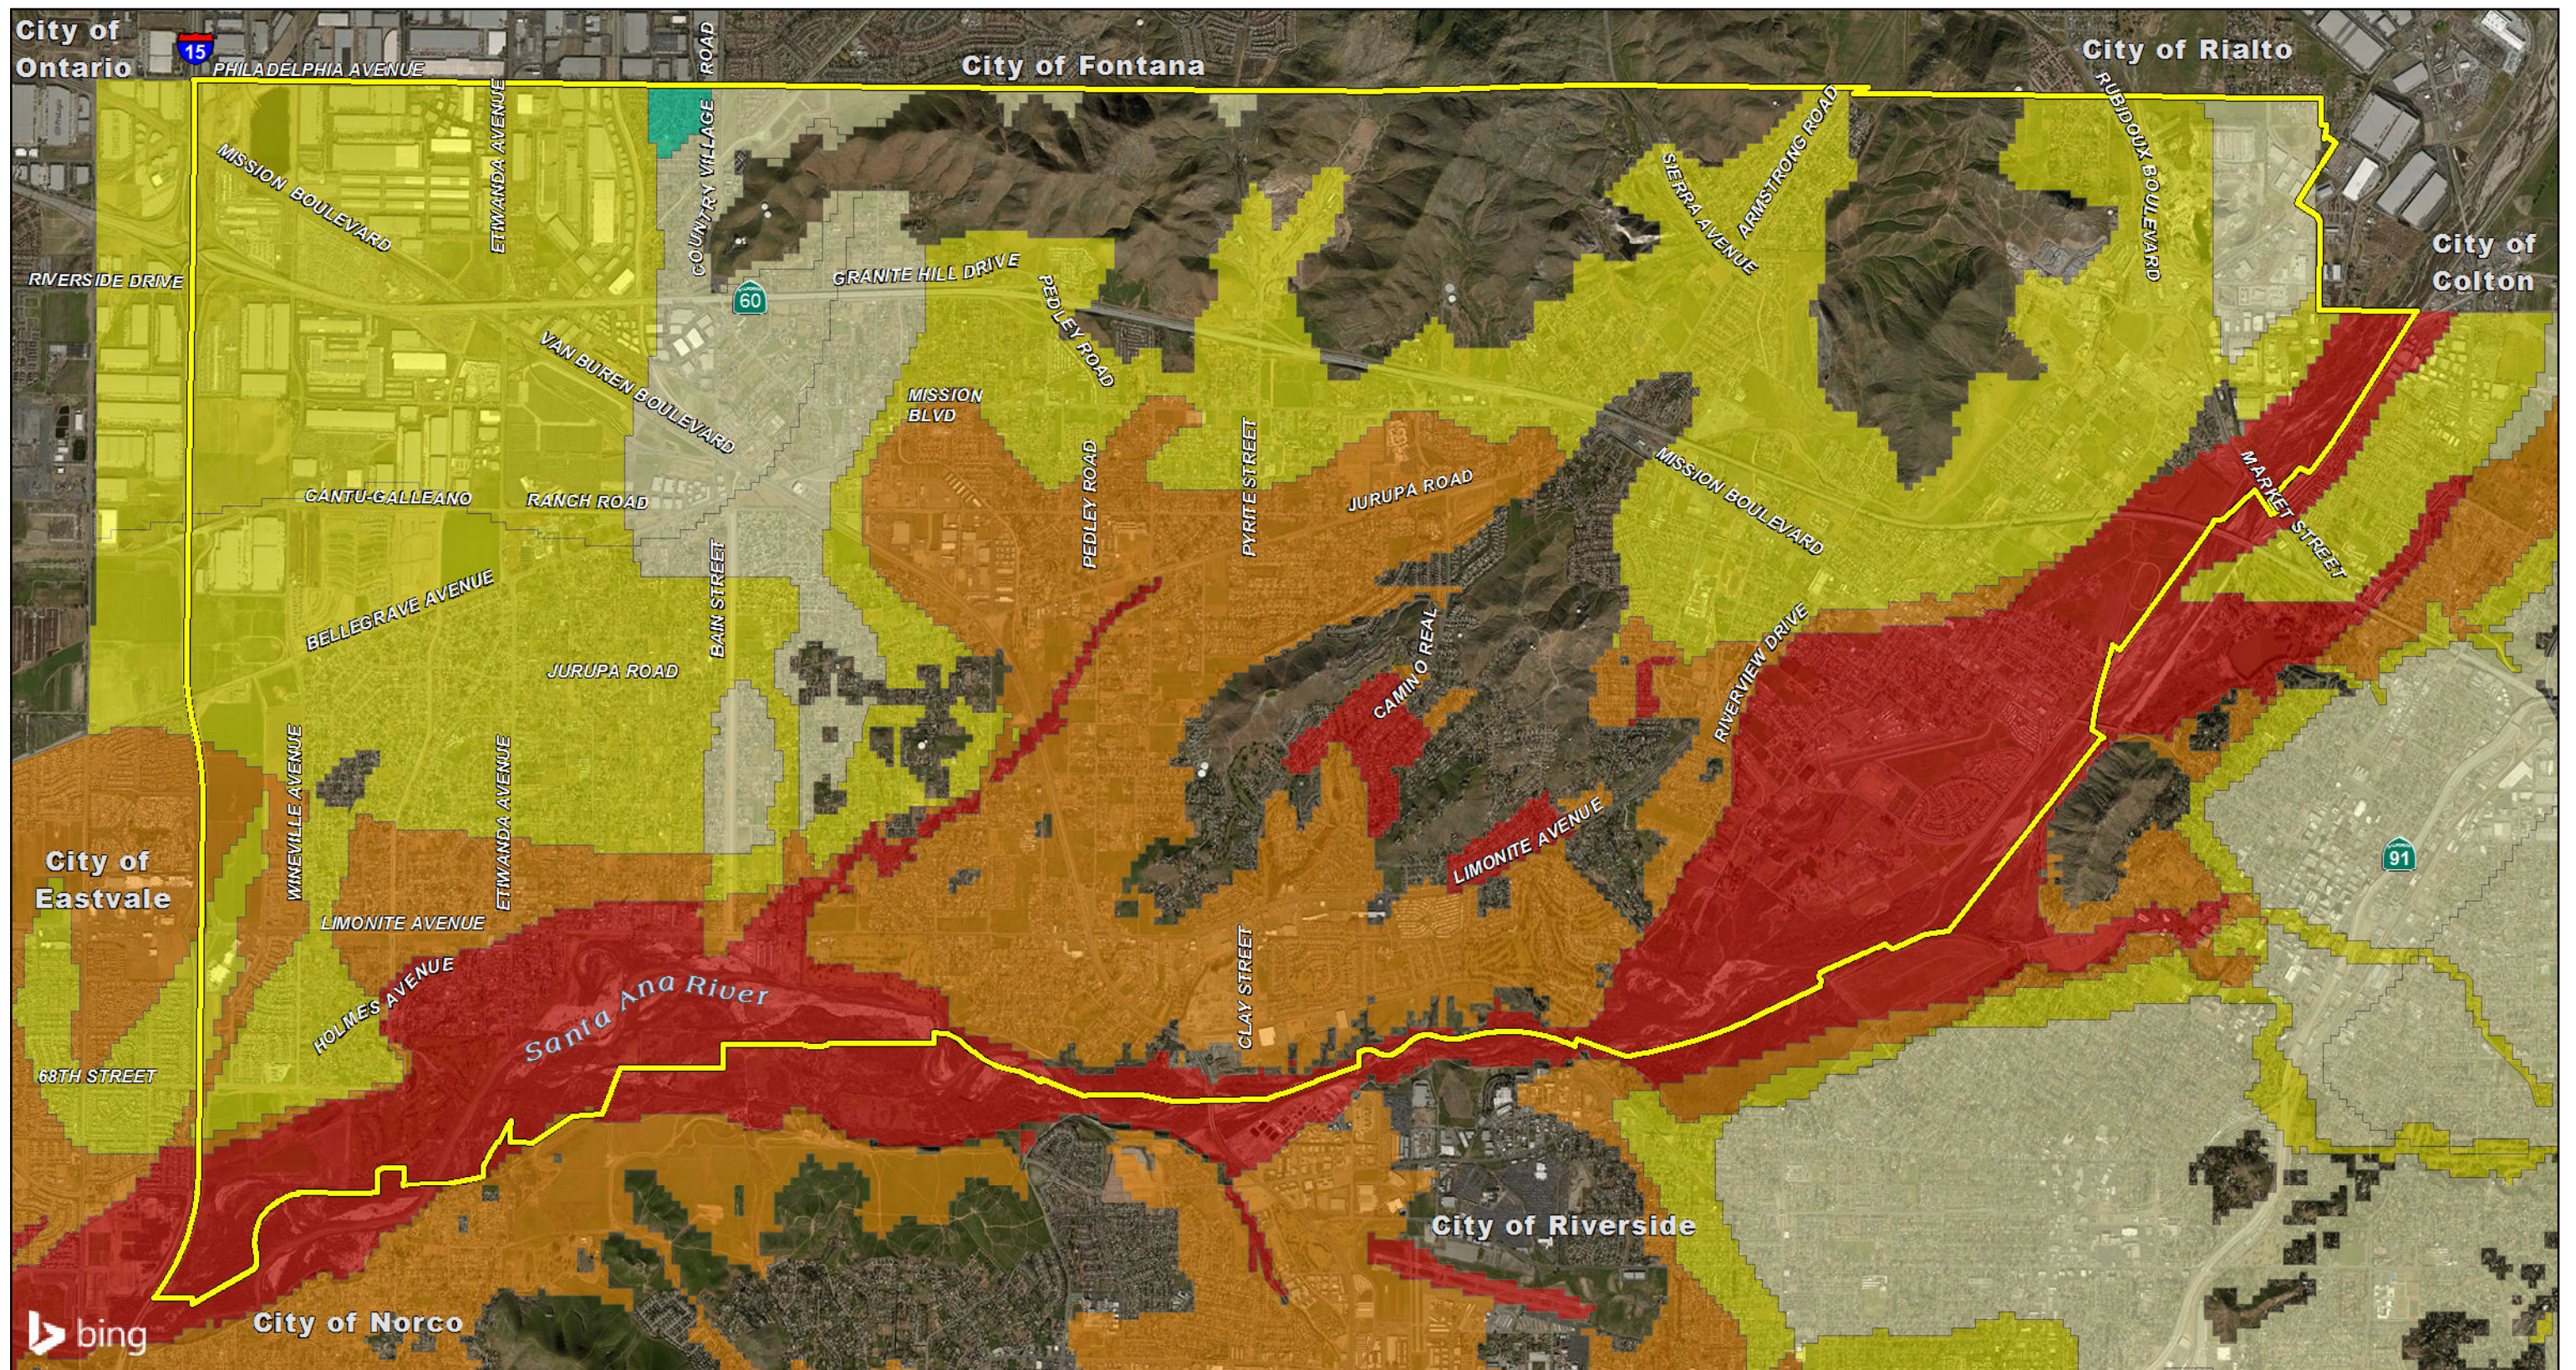

Hillsides, generally speaking, can be unstable platforms for development. Unless a landslide is already occurring, a steep slope can generally be thought of as existing in a state of equilibrium. When this equilibrium is disturbed, the likelihood of slope failure, soil erosion, silting of lower slopes, and downstream flooding increases.

Factors that contribute to slope failure include slope height and steepness, shear strength and orientation of weak layers in the underlying geologic units, and pore water pressures. Areas susceptible to landslides in the City are shown on Figure 4.6.5.

Alluvial Soil. Alluvial soil is formed from water-transported sediments, such as river sediments. Most of the site is underlain by alluvial deposits except for the southeast portion of the site which contains substantial artificial fill material. The alluvial soils include layered sands and silts with some clay and gravel.

Expansive Soils. Expansive soils generally have a significant amount of clay particles that can give up water (shrink) or take on water (swell). The change in volume exerts stress on buildings and other loads placed on these soils. The extent of shrink/swell is influenced by the amount and kind of clay in the soil. The occurrence of these soils is often associated with geologic units having marginal stability. The potential for a soil to shrink/swell is provided in Table 4.6.A.

Collapse Potential. Hydroconsolidation, or soil collapse, typically occurs in recently deposited Holocene (less than 11,000 years before present time) soils that were deposited in an arid or semi-arid environment. Soils prone to collapse are commonly associated with man-made fill, wind-laid sands and silts, and alluvial fan and mudflow sediments deposited during flash floods. When saturated, collapsible soils lose their cohesion and sudden substantial settlement may occur. An increase in surface water infiltration, such as from irrigation or a rise in the groundwater table, combined with the weight of a building or structure, may initiate settlement, causing foundations and walls to crack.

4.6.1.5 NOP/Scoping Comments

No public comments on geology or soils were made during the scoping meeting. In addition, no comment letters were received from the public or agencies during the NOP period.

4.6.2 Regulatory Framework

4.6.2.1 State Regulations

Alquist-Priolo Earthquake Fault Zoning Act. The major State legislation regarding earthquake fault zones is the *Alquist-Priolo Earthquake Fault Zoning Act* (A-P Act). In 1972, the State of California began delineating “Earthquake Fault Zones” (called Special Studies Zones prior to 1994) around and along faults that are “sufficiently active” and “well defined” to reduce fault-rupture risks to structures for human occupancy¹. The boundary of an “Earthquake Fault Zone” is generally 500 feet from major active faults and from 200 to 300 feet from well-defined minor faults. The mapping of active faults has been completed by the State Geologist, and these maps are distributed to all affected cities, counties, and State agencies for their use in developing planning policies and controlling renovation or new construction. Before a project can be permitted within an identified Earthquake Fault Zone, cities and counties must require a geologic investigation to demonstrate that proposed buildings will not be constructed across active faults. A site-specific evaluation and written report must be prepared by a licensed geologist. If an active fault is identified, a structure intended for human occupancy cannot be placed over the trace of the fault and must be set back from the fault.

The A-P Act only addresses the hazard of surface fault rupture and is not directed toward other earthquake hazards.

The Seismic Hazards Mapping Act. Passed in 1990, the Seismic Hazards Mapping Act (SHMA) addresses non-surface fault rupture earthquake hazards, including strong ground shaking, liquefaction, and seismically induced landslides. The California Geological Survey (CGS) is the principal State agency charged with implementing the 1990 SHMA. Pursuant to the SHMA, the CGS is directed to provide local governments with seismic hazard zone maps that identify areas susceptible to amplified shaking, liquefaction, earthquake-induced landslides, and other ground failures. The goal is to minimize loss of life and property by identifying and mitigating seismic hazards. The seismic hazard zones delineated by the CGS are referred to as “zones of required investigation.” Site-specific geotechnical hazard investigations are required by SHMA when construction projects fall within these areas.

Natural Hazards Disclosure Act. Effective June 1, 1998, the Natural Hazards Disclosure Act requires that sellers of real property and their agents provide prospective buyers with a “Natural Hazard Disclosure Statement” when the property being sold lies within one or more State-mapped hazard areas. If a property is located in a Seismic Hazard Zone as shown on a map issued by the State Geologist, the seller or the seller’s agent must disclose this fact to potential buyers.

¹ California Public Resources Code Sections 2621–2630.

The Recovery (and) Reconstruction Act. The Recovery (and) Reconstruction Act of 1986 authorizes local governments to prepare for expeditious and orderly recovery before a disaster and reconstruction afterward. It enables localities to prepare pre-disaster plans and ordinances that may include: an evaluation of the vulnerability of specific areas to damage from a potential disaster; streamlined procedures for appropriate modification of existing General Plans or zoning ordinances affecting vulnerable areas; a contingency plan of action; organization for post-disaster, short-term and long-term recovery and reconstruction; and a pre-disaster ordinance to provide adequate local authorization for post-disaster activities.

4.6.2.2 City General Plan

Geologic hazards are addressed in the Community Safety, Services, and Facilities Element of the proposed 2017 General Plan. The 2017 General Plan outlines policies and goals that aim to protect the structures, residents and businesses of Jurupa Valley from the hazards of geologic features and processes. The 2017 General Plan defines Community Safety, Services, and Facilities Element as the following:

Safety hazards are natural and man-made conditions that must be respected if life and property are to be protected as growth and development occur. As the ravages of wildland fires, floods, dam failures, earthquakes, and other disasters become clearer through the news, public awareness and sound public policy combine to require serious attention to these conditions.

Portions of Jurupa Valley may be subjected to hazards such as flooding, dam inundation, seismic occurrences and structure and wildland fire. These hazards are located throughout Jurupa Valley and pose varying degrees of risk and danger. Some hazards must be avoided entirely while the potential impacts of others can be mitigated by special building techniques and other measures.

Critical Facilities and lifelines are those facilities, which must remain operational after a disaster. Critical facilities include schools, hospitals, fire and police stations, emergency operation centers, communication centers and industrial sites that use or store hazardous materials. Lifelines are utilities or networks that are essential to daily living such as transportation facilities, water and gas lines, electrical power, as well as communications networks. Critical facilities and lifelines must be sited and designed to reduce or avoid damage and plan for redundant and/or replacement facilities in the event they are compromised.

Community Safety, Services, and Facilities Element

Geologic Hazards

Goal

CS 1 Minimize risks resulting from natural and manmade hazards to its residents and businesses.

Policies

- CS 1.1.1 **Fault Rupture Hazards.** When reviewing new development, minimize fault rupture hazards through enforcement of Alquist-Priolo Earthquake Fault Zoning Act provisions and the following requirements:
- Require geologic studies or analyses for new, critical structures, such as schools, medical facilities, senior or disabled housing or other high-risk occupancies located within 0.5 miles of all active or potentially active faults.
 - Require geologic trenching studies for new developments within all designated Earthquake Fault Studies Zones, unless adequate evidence is presented and

accepted by the City Engineer or Building Official. The City may also require geologic trenching for new development located outside of designated fault zones for especially critical or vulnerable structures or lifelines.

- c. Require that critical infrastructure, including roads, bridges and utilities be designed to resist, without failure, their crossing of a fault, should fault rupture occur.
- d. Encourage and support efforts by the geologic research community to better define better the locations and risks of County faults. Such efforts could include data sharing and database development with regional entities, state and local governments, private organizations, utility agencies or universities.

CS 1.1.2 **Geologic Investigations.** Require geological and geotechnical investigations as part of the environmental and development review process. This requirement shall apply to the development of any structure proposed for human occupancy or to unoccupied structures, whose damage could cause secondary hazards in areas with potential for earthquake-induced liquefaction, landslides, or settlement.

CS 1.1.3 **Structural/Non-Structural Assessment.** Require structural and nonstructural assessment and when necessary, mitigation, for other types of potentially hazardous buildings that: 1) are undergoing substantial repair or improvements costing more than half of the assessed property value. Potential implementation measures could include:

- a. Use of variances, tax rebates fee waivers, credits, or public recognition as incentives.
- b. Inventory and structural assessment of potentially hazardous buildings based on screening methods developed by the Federal Emergency Management Agency.
- c. Development of a mandatory retrofit program for hazardous, high occupancy, essential, dependent, or high-risk facilities.
- d. Development of a mandatory program requiring public posting of seismically vulnerable buildings.

CS 1.1.4 **Structural Damage.** Utilize the latest approaches to minimize damage to structures located in areas determined to have a high liquefaction potential during seismic events.

CS 1.1.5 **Hillside Development.** Encourage, and where possible require mitigation of potential erosion, landslide and settlement hazards for existing public and private development located on unstable hillside areas, especially slopes with recurring failures where City property or public right-of-way is threatened from slope instability, or where considered appropriate and urgent by the City Engineer, Cal Fire, or County Sheriff's Department.

Programs

CS 1.1.1.1 **Hazard Mitigation.** Mitigate potential seismic hazards through adoption and strict enforcement of current building codes, which will be amended as necessary when local deficiencies are identified.

CS 1.1.1.2 **Liaison Program.** Develop a liaison program with all water purveyors to prevent water extraction-induced subsidence.

Conservation and Open Space Element

Program

COS 1.1.1.1 **Soil Conservation and Landform Modification.** Public and private development projects shall be designed to prevent soil erosion, minimize landform modifications to avoid habitat disturbance and conserve and reuse on-site soils.

Air Quality Element

Policies

- AQ 3.1.5 **Fugitive Dust Reduction Measures.** Apply, as appropriate, measures contained in the County's Fugitive Dust Reduction to the entire City.
- AQ 3.1.6 **Grading in High Winds.** Suspend all grading when wind speeds exceed 25 miles per hour.

4.6.3 Methodology

The analysis of potential geologic and soil-related impacts is based upon the City's Community Safety, Services and Facilities Element of the General Plan, literature prepared by the California Department of Mines and Geology (CDMG), information from the federal Natural Resources Conservation Service (NRCS), mapping published by the United States Geological Survey (USGS), information in the adopted Riverside County General Plan for the Jurupa Valley Planning Area and other documents such as the City's Building Code, and the City's Standard Design Guidelines, which were reviewed and summarized to establish existing conditions. In determining the level of significance, the analysis assumes that construction and operation of the proposed General Plan would comply with relevant federal and state laws and regulations.

4.6.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. The following thresholds of significance regarding potential impacts to geology and soils are based on Appendix G of the *CEQA Guidelines*. The General Plan would have a significant impact related to geology and soils if it would:

- Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:
 - Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zone Maps issued by the State Geologist for the area or based on other substantial evidence of a known fault.
 - Strong seismic ground shaking.
 - Seismic-related ground failure, including liquefaction.
 - Landslides.
- Result in substantial soil erosion or the loss of topsoil;
- Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-site or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse;
- Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994 or most current edition), creating substantial risks to life or property; and/or
- Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater.

For the purpose of this EIR, significant geologic hazards would pertain to soil and/or seismic conditions so unfavorable that they could not be overcome by reasonable design, construction, and maintenance practices.

4.6.5 Programmatic Impact Evaluation

The following impacts were determined to be less than significant. In each of the following issues, either no impact would occur (therefore, no mitigation would be required) or adherence to established regulations, standards and policies would reduce potential impacts to a less than significant level.

4.6.5.1 Fault Rupture

| | |
|-----------|--|
| Threshold | Would the proposed project expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zone Maps issued by the State Geologist for the area or based on other substantial evidence of a known fault. |
|-----------|--|

Programmatic Impacts. Development under the General Plan may result in the total of approximately 13,140 residential units and 33 million square feet of new non-residential buildings in 20 years, thereby exposing more structures and people (residents and employees) to the effects of a fault rupture.

Future development on these lands, as envisioned in the proposed General Plan, may result in the construction and occupation of structures, critical facilities, and pipelines adjacent to known and/or as yet undetected earthquake fault zones. Such development would increase the number of persons and the amount of developed property exposed to fault rupture hazards. To lessen the potential for property loss, injury, or death that could result from rupture(s) of faults during earthquake events, policies and mitigation measures have been identified, the implementation of which will reduce potential impacts associated with fault rupture hazards to a less than significant level.

Evaluation of the General Plan Goals and Policies: The following summarized goal, policies, and programs in the Community Safety, Services, and Facilities Element (for the full text of measures see Section 4.6.2.2) address fault rupture and related seismic hazards:

Community Safety, Services, and Facilities Element

Goal

CS 1 Minimize risks resulting from natural and manmade hazards to its residents and businesses.

Policies

CS 1.1.1 **Fault Rupture Hazards.** When reviewing new development, minimize fault rupture hazards through enforcement of Alquist-Priolo Earthquake Fault Zoning Act provisions and the following requirements:

- a. Require geologic studies or analyses for new, critical structures, such as schools, medical facilities, senior or disabled housing or other high-risk occupancies located within 0.5 miles of all active or potentially active faults.
- b. Require geologic trenching studies for new developments within all designated Earthquake Fault Studies Zones, unless adequate evidence is presented and accepted by the City Engineer or Building Official. The City may also require geologic trenching for new development located outside of designated fault zones for especially critical or vulnerable structures or lifelines.
- c. Require that critical infrastructure, including roads, bridges and utilities be designed to resist, without failure, their crossing of a fault, should fault rupture occur.
- d. Encourage and support efforts by the geologic research community to better define better the locations and risks of County faults. Such efforts could include

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

data sharing and database development with regional entities, state and local governments, private organizations, utility agencies or universities.

Program

CS 1.1.1.1 **Hazard Mitigation.** Mitigate potential seismic hazards through adoption and strict enforcement of current building codes, which will be amended as necessary when local deficiencies are identified.

Implementation of the above General Plan goals, policies, and programs as future development occurs will help ensure that potential impacts from fault hazards within the City will be less than significant. It should be noted that the term “development” in this policy applies to building improvements including critical infrastructure by both private and public actions involving vacant land. The most important policies in this regard include reviewing new development to minimize fault rupture hazards through enforcement of Alquist-Priolo Earthquake Fault Zoning Act (Policy CS 1.1.1). Geotechnical studies will be required for any critical structures within 0.5 miles of all active or potentially active faults. Critical infrastructure will be designed to withstand fault rupture. The City is also required to update its building codes periodically to ensure the most current California building codes related to seismic hazards are strictly enforced.

Level of Programmatic Impact Before Mitigation. While implementation of the aforementioned policies would reduce the significance of potential fault rupture impacts, they do not address potential impact related to undiscovered faults or impacts that may be identified through the use of new scientific data, equipment, or procedures. To provide adequate mitigation for potential fault rupture hazards, mitigation measures have been identified to provide flexibility to the City of Jurupa Valley in requiring site-specific geotechnical investigations in any area falling within identified or as yet unidentified fault zones. Adherence to the mitigation measure identified below will reduce potential impacts associated with this issue to a less than significant level.

Programmatic Mitigation Measure. The following measure is recommended to protect any future structures within the City from earthquake fault hazard zones:

4.6.5.1A Before a project is approved or otherwise permitted within an A-P Zone or within 150 feet of any other active or potentially active fault mapped in a published United States Geologic Survey (USGS) or CGS reports, or within other potential earthquake hazard area (as determined by the City), a site-specific geologic investigation shall be prepared to assess potential seismic hazards resulting from development of the project site. Where and when required, the geotechnical investigation shall address the issue(s), hazard(s), and geographic area(s) determined by the City of Jurupa Valley Planning and Building Departments to be relevant to each development. The site-specific geotechnical investigation shall incorporate up-to-date data from government and non-government sources.

Based on the site-specific geotechnical investigation, no structures intended for human occupancy shall be constructed across active faults. This site-specific evaluation and written report shall be prepared by a licensed geologist and shall be submitted to City of Jurupa Valley Planning and Building Departments for review and approval as part of the environmental and entitlement process and prior to the issuance of building permits. If an active fault is discovered, any structure intended for human occupancy shall be set back at least 50 feet from the fault. A larger or smaller setback may be established if such a setback is supported by adequate evidence as presented to and accepted by the City.

Level of Programmatic Impact After Mitigation. With the implementation of the proposed 2017 General Plan policies and Mitigation Measure 4.6.5.1A, potential impacts to future development in the City with respect to fault rupture will be reduced to less than significant levels.

4.6.5.2 Ground Shaking

| | |
|-----------|---|
| Threshold | Would the proposed project expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving strong ground shaking? |
|-----------|---|

Programmatic Impacts. The City of Jurupa Valley has and will continue to be subject to ground shaking resulting on seismic activity on local and regional faults. Earthquakes are a common occurrence in Southern California. Historically, Jurupa Valley has experienced the geologic effects of earthquakes outside the Planning Area. There have been several notable earthquakes in Southern California over the last 15 years including the 1986 Palm Springs, 1987 Imperial Valley, 1991 Sierra Madre, 1992 Landers, 1992 Big Bear, 1994 Northridge, and 1999 Hector Mine earthquakes.

Future development permitted by the General Plan may increase the potential for property loss, injury, or death resulting from this ground shaking hazard. To lessen the potential for property loss, injury, or death that could result from ground shaking during earthquake events, policies and mitigation measures have been identified, the implementation of which will reduce potential impacts associated with ground shaking hazards to a less than significant level.

Evaluation of the General Plan Goals and Policies: The following goal, policies, and programs in the Community Safety, Services, and Facilities Element of the 2017 General Plan (for the full text of measures see Section 4.6.2.2) address ground shaking and related risks:

Community Safety, Services, and Facilities Element

Goal

- CS 1 Minimize risks resulting from natural and manmade hazards to its residents and businesses.

Policies

- CS 1.1.2 **Geologic Investigations.** Require geological and geotechnical investigations as part of the environmental and development review process. This requirement shall apply to the development of any structure proposed for human occupancy or to unoccupied structures, whose damage could cause secondary hazards in areas with potential for earthquake-induced liquefaction, landslides, or settlement.
- CS 1.1.3 **Structural/Non-Structural Assessment.** Require structural and nonstructural assessment and when necessary, mitigation, for other types of potentially hazardous buildings that: 1) are undergoing substantial repair or improvements costing more than half of the assessed property value. Potential implementation measures could include:
- Use of variances, tax rebates fee waivers, credits, or public recognition as incentives.
 - Inventory and structural assessment of potentially hazardous buildings based on screening methods developed by the Federal Emergency Management Agency (FEMA).
 - Development of a mandatory retrofit program for hazardous, high occupancy, essential, dependent, or high-risk facilities.
 - Development of a mandatory program requiring public posting of seismically vulnerable buildings.

Program

CS 1.1.1.1 **Hazard Mitigation.** Mitigate potential seismic hazards through adoption and strict enforcement of current building codes, which will be amended as necessary when local deficiencies are identified.

Implementation of the above 2017 General Plan goals, policies, and programs as future development occurs will help ensure that potential impacts from ground shaking within the City will be less than significant. It should be noted that the term “development” in this policy applies to building improvements including critical infrastructure by both private and public actions involving vacant land. The policies that provide protection to new development from ground shaking hazards include requiring geotechnical investigations as a part of the environmental and development review process. (Policy CS 1.1.2). Policy COS 1.1.3, requires a structural and nonstructural assessment and when necessary, including mitigation for potentially hazardous buildings that are undergoing substantial repair or improvements costing more than half of the assessed property value. Potential implementation measures for this policy include public incentive programs to repair a structurally deficient structure, an inventory and structural assessment of potentially hazardous buildings based on screening methods developed by FEMA, development of a retrofit program and a program to require public posting of seismically vulnerable buildings.

Level of Programmatic Impact Before Mitigation. While implementation of the aforementioned policies would reduce the significance of potential ground shaking impacts, they do not provide specific development standards for development within areas subject to potential ground shaking impacts, nor do they provide adequate mitigation for potential ground shaking impacts that may be identified through the use of new scientific data, equipment, or procedures. To provide adequate mitigation for potential ground shaking hazards, mitigation has been identified to provide flexibility to the City in requiring site-specific ground shaking assessment for any development subject to potential ground shaking impacts and to require adherence to identified design standards. Adherence to these measures would reduce potential impacts related to this issue to a less than significant level.

Programmatic Mitigation Measure. The following measure is recommended to help ensure future development is not significantly impacted by area seismic conditions. This measure shall be made a standard Condition of Approval for future development within the City.

4.6.5.2A If required by the City, a site-specific assessment shall be prepared to ascertain potential ground shaking impacts on development. The site-specific ground shaking assessment shall incorporate up-to-date data from government and non-government sources and may be included as part of any site-specific geotechnical investigation. The site-specific ground shaking assessment shall include specific measures to reduce the significance of potential ground shaking hazards. This site-specific ground shaking assessment shall be prepared by a licensed geologist and shall be submitted to the City of Jurupa Valley Planning and Building Departments for review and approval as part of the environmental and entitlement process and prior to the issuance of building permits.

Level of Programmatic Impact After Mitigation. With the implementation of the proposed General Plan policies and mitigation measure, the impacts related to ground shaking would be reduced to less than significant.

4.6.5.3 Landslides, Rock Falls, and Debris Flows

| | |
|-----------|--|
| Threshold | Would the proposed project expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides? |
|-----------|--|

Programmatic Impacts. Seismically induced landslides and rock falls could occur in Jurupa Valley in a major earthquake. Landslides and rock falls occur most often on steep, eroded or undercut, or disturbed hillsides. Factors controlling the stability of slopes include: 1) slope height and steepness; 2) engineering characteristics of the earth materials comprising the slope; and 3) the intensity of ground shaking. Field investigation enables identification of slide-prone areas before an earthquake occurs.

The Jurupa Mountains and the Pedley Hills are characterized by moderate to steep rocky slopes and are potentially prone to landslides, rock falls, and debris flows. Future development permitted by the General Plan in these areas may increase the potential for property loss, injury, or death resulting from landslides. The City's building code establishes specific site investigation requirements for hillside development to reduce risks from landslides, rock falls, and debris flows. To lessen the potential for property loss, injury, or death that could result from landslides during earthquake events, policies and programs have been identified, the implementation of which will reduce potential impacts associated with landslide, rock falls, and debris flows hazards to a less than significant level.

Evaluation of the General Plan Goals and Policies: The policies related to landslides, rockfalls, and debris flows are found in the proposed 2017 General Plan in the Community Safety, Services, and Facilities Element. The 2017 General Plan includes the following policies to reduce or minimize the effects associated with ground shaking on structures and infrastructure. The effectiveness of the policies at reducing such impacts is analyzed below and an additional mitigation measure has been identified.

Community Safety, Services, and Facilities Element

Goal

- CS 1 Minimize risks resulting from natural and manmade hazards to its residents and businesses.

Policies

- CS 1.1.2 **Geologic Investigations.** Require geological and geotechnical investigations as part of the environmental and development review process. This requirement shall apply to the development of any structure proposed for human occupancy or to unoccupied structures, whose damage could cause secondary hazards in areas with potential for earthquake-induced liquefaction, landslides, or settlement.
- CS 1.1.5 **Hillside Development.** Encourage, and where possible require mitigation of potential erosion, landslide and settlement hazards for existing public and private development located on unstable hillside areas, especially slopes with recurring failures where City property or public right-of-way is threatened from slope instability, or where considered appropriate and urgent by the City Engineer, Cal Fire, or County Sheriff's Department.

Program

- CS 1.1.1.1 **Hazard Mitigation.** Mitigate potential seismic hazards through adoption and strict enforcement of current building codes, which will be amended as necessary when local deficiencies are identified.

Implementation of the above 2017 General Plan goals, policies, and programs as future development occurs within steep slopes and hillside areas will help ensure that potential impacts from landslides, rock falls and debris flows within the City will be less than significant. It should be noted that the term

“development” in this policy applies to building improvements including critical infrastructure by both private and public actions involving vacant land. The policies that provide protection to new development from landslide hazards include requiring geotechnical investigations as a part of the environmental and development review process. (Policy CS 1.1.2). All development within unstable hillside areas is required to implement mitigation to reduce the hazards of landslide, rock falls, and slope failure (Policy COS 1.1.5). Program CS 1.1.1.1 requires the City to adopt and implement the latest building codes the reduce landslide, rock falls, and debris flow hazards on future development.

Level of Programmatic Impact Before Mitigation. Implementation of the aforementioned policies and programs would reduce the significance of potential of landslide, rock falls, and debris flow hazards on future development. Adherence to these policies and programs would reduce potential impacts related to this issue to a less than significant level and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. With the implementation of the proposed General Plan policies and programs, and the latest building codes the impacts related to landslides, rock falls, and debris flows be reduced to less than significant.

4.6.5.4 Soil Erosion or Loss of Topsoil

| | |
|-----------|---|
| Threshold | Would the proposed project result in substantial soil erosion or the loss of topsoil? |
|-----------|---|

Programmatic Impacts. Soil erosion and loss of topsoil can be associated with groundbreaking excavation activities, such as grading or cut and fill for new development. These activities can expose unprotected soils to storm water runoff causing erosion and loss of topsoil. An increase in population anticipated by the City’s 2017 General Plan would cause an increase in residential and non-residential structures, resulting with alterations and loss to existing topsoil. In addition, exposure of underlying soils during landform modifications substantially increases the potential for soil erosion.

Future development within the City and related off-site improvements that would involve the disturbance of more than one acre is required to obtain a National Pollutant Discharge Elimination System (NPDES) permit. A Storm Water Pollution Prevention Plan (SWPPP) will also be required to address erosion and discharge impacts associated with the proposed on-site grading. Good housekeeping practices at a construction site would protect receiving waters from soil erosion and silt deposition during grading activities.

The following SWPPP components would reduce potential impacts of soil erosion or loss of topsoil to less than significant levels:

- Protect all storm drain inlets and streams located near the construction site to prevent sediment-laden water from entering the storm drain system.
- Prevent erosion by implementing one or more of the following soil stabilization practices: mulching, surface roughening, permanent or temporary seeding.
- Limit vehicular access to and from the site. Stabilize construction entrances/exits to minimize the track out of dirt and mud onto adjacent streets. Conduct frequent street sweeping.
- Protect stockpiles and construction materials from winds and rain by storing them under a roof, secured impermeable tarp or plastic sheeting.
- Avoid storing or stockpiling materials near storm drain inlets, gullies or streams.
- Phase grading operations to limit disturbed areas and duration of exposure.
- Perform major maintenance and repairs of vehicles and equipment off site.

- Wash out concrete mixers only in designated washout areas at the construction site.
- Set-up and operate small concrete mixers on tarps or heavy plastic drop cloths.
- Keep construction sites clean by removing trash, debris, wastes, etc. on a regular basis.
- Clean up spills immediately using dry clean-up methods (e.g., absorbent materials such as cat litter, sand or rags for liquid spills; sweeping for dry spills such as cement, mortar or fertilizer) and by removing the contaminated soil from spills on dirt areas.
- Maintain all vehicles and equipment in good working condition. Inspect frequently for leaks, and repair promptly.
- Cover open dumpsters with secured tarps or plastic sheeting. Clean out dumpsters only in approved locations on the construction site.
- Arrange for an adequate debris disposal schedule to insure that dumpsters do not overflow.

New development within the City is required to prepare a site specific Water Quality Management Plan (WQMP). The WQMP can contain the following post-construction measures, which will help reduce potential impacts to soil erosion to less than significant levels and identifies measures to treat and/or limit the entry of contaminants into the storm drain system:

- Identify and preserve existing drainage patterns. The grading design of the project will follow the existing topography of the golf course.
- Identify and preserve natural infiltration capacity. Infiltration trenches and infiltration basins will infiltrate water runoff using native soil.
- Identify and minimize impervious area. Impervious areas will drain into proposed pervious and landscaped areas as a pre-treatment before entering into the proposed infiltration trenches and basins.
- Identify and disperse runoff into pervious areas. The project will be designed such that runoff drains into pervious areas. Roof runoff will be conveyed to adjacent proposed landscaped area before entering the infiltration trenches and basins.

Policies and a program are identified below to mitigate the potentially significant erosion impacts associated with implementation of the proposed 2017 General Plan.

Evaluation of the General Plan Goals and Policies: The policies related to soils erosion are found in the proposed 2017 General Plan in the Community Safety, Services, and Facilities Element, Conservation and Open Space Element, and Air Quality Element. The General Plan includes the following policies to reduce or minimize the effects associated with ground soils erosion. The effectiveness of the policies at reducing such impacts is analyzed below and an additional mitigation measure has been identified.

Community Safety, Services, and Facilities Element

Policy

- CS 1.1.5 **Hillside Development.** Encourage, and where possible require mitigation of potential erosion, landslide and settlement hazards for existing public and private development located on unstable hillside areas, especially slopes with recurring failures where City property or public right-of-way is threatened from slope instability, or where considered appropriate and urgent by the City Engineer, Cal Fire, or County Sheriff's Department.

Conservation and Open Space Element

Program

COS 1.1.1.1 **Soil Conservation and Landform Modification.** Public and private development projects shall be designed to prevent soil erosion, minimize landform modifications to avoid habitat disturbance and conserve and reuse on-site soils.

Air Quality Element

Policies

AQ 3.1.5 **Fugitive Dust Reduction Measures.** Apply, as appropriate, measures contained in the County's Fugitive Dust Reduction to the entire City.

AQ 3.1.6 **Grading in High Winds.** Suspend all grading when wind speeds exceed 25 miles per hour.

Implementation of the above General Plan policies and program as future development occurs within will help ensure that potential impacts from soils erosion within the City. The policies that provide protection to soils include CS 1.1.5, AQ 3.1.5 and AQ 3.1.6, and program COS 1.1.1.1. Program COS 1.1.1.1, is meant to provide protection from soils erosion through the design of a project. Although the Policy CS 1.1.5 protects soil erosion in hillside areas it does not protect soil erosion in other areas of the City. The policies in the Air Quality Element reduce the erosion of soils during grading activities; however, there is no protection afforded to soils from water erosion. However, state, regional and local regulations protect soils from water erosion through site specific NPDES, SWPP and WQMPs within all areas of the City.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan policies, program and state, regional and local regulations the protect soils reduce the impact of soil erosion to a less than significant level.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. No mitigation is required; however, adherence to the General Plan policies, program and state, regional and local regulations would reduce potential impacts related to this issue to a less than significant level.

4.6.5.5 Septic Tanks

| | |
|-----------|--|
| Threshold | Would the proposed project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater? |
|-----------|--|

Programmatic Impacts. All new development within the City would be required to connect to the local Community Service Districts' sewer systems. Septic tanks and alternative wastewater treatment disposal systems would not be allowed. Therefore,

Evaluation of the General Plan Goals and Policies: There are no policies related to septic tanks or alternative wastewater disposal systems in the proposed 2017 General Plan. Because septic tanks and alternative wastewater treatment facilities would not be allowed for new development, soils incapable of supporting such facilities are not of concern and no significant impacts are expected or likely.

Level of Programmatic Impact Before Mitigation. There is no impact because new development would not be allowed to install septic tanks or alternative wastewater treatment facilities.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. There is no impact; therefore, no mitigation is required.

4.6.5.6 Seismic-Related Ground Failure

| | |
|-----------|--|
| Threshold | Would the proposed project expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic ground failure? |
|-----------|--|

Programmatic Impacts. Liquefaction is a process by which water-saturated materials (including soil, sediment, and certain types of volcanic deposits) lose strength and may fail during strong ground shaking. Liquefaction is defined as “the transformation of a granular material from a solid state into a liquefied state as a consequence of increased pore-water pressure.” The potential for liquefaction also depends on soil conditions and groundwater levels, which may fluctuate. Liquefaction occurs worldwide, commonly during moderate to great earthquakes. Four kinds of ground failure commonly result from liquefaction: lateral spread, flow failure, ground oscillation, and loss of bearing strength.

Portions of the City are susceptible to liquefaction, a destructive secondary effect of strong seismic shaking. These areas are identified on Figure 4.6.3. The majority of the City, outside the hillside areas, is located within areas susceptible to ground subsidence (refer to Figure 4.6.4). Build out of proposed General Plan will increase the number of persons, residential units, and non-residential development that would occur on soils susceptible to liquefaction, subsidence or soil collapse. Measures are identified below to mitigate the potentially significant impacts associated with future development within the City.

Evaluation of the General Plan Goals and Policies: The policies related to seismic related ground failure are found in the proposed General Plan in the Community Safety, Services, and Facilities Element. The General Plan includes the following policies to reduce or minimize the effects associated with liquefaction, seismic related ground subsidence, collapse or settlement on structures and infrastructure. The effectiveness of the policies at reducing such impacts is analyzed below and an additional mitigation measure has been identified.

Community Safety, Services, and Facilities Element

Goal

CS 1 Minimize risks resulting from natural and manmade hazards to its residents and businesses.

Policies

CS 1.1.2 **Geologic Investigations.** Require geological and geotechnical investigations as part of the environmental and development review process. This requirement shall apply to the development of any structure proposed for human occupancy or to unoccupied structures, whose damage could cause secondary hazards in areas with potential for earthquake-induced liquefaction, landslides, or settlement.

CS 1.1.4 **Structural Damage.** Utilize the latest approaches to minimize damage to structures located in areas determined to have a high liquefaction potential during seismic events.

CS 1.1.5 **Hillside Development.** Encourage, and where possible require mitigation of potential erosion, landslide and settlement hazards for existing public and private development located on unstable hillside areas, especially slopes with recurring failures where City property or public right-of-way is threatened from slope instability, or where considered appropriate and urgent by the City Engineer, Cal Fire, or County Sheriff’s Department.

Program

CS 1.1.1.1 **Hazard Mitigation.** Mitigate potential seismic hazards through adoption and strict enforcement of current building codes, which will be amended as necessary when local deficiencies are identified.

Implementation of the above 2017 General Plan goals, policies, and programs as future development occurs within will help ensure that potential impacts from seismic related liquefaction and ground settlement within the City will be less than significant. It should be noted that the term “development” in this policy applies to building improvements including critical infrastructure by both private and public actions involving vacant land. The policies that provide protection to new development from seismic hazards include requiring geotechnical investigations as a part of the environmental and development review process. (Policy CS 1.1.2). Policy CS 1.1.4 requires utilizing the most updated geotechnical approaches to minimize damage to structures in areas that have a high potential for liquefaction. All development within unstable hillside areas is required to implement mitigation to reduce the hazards of slope failure and settlement (Policy COS 1.1.5). Program CS 1.1.1.1 requires the City to adopt and implement the latest building codes to reduce seismically related hazards on future development.

Level of Programmatic Impact Before Mitigation. Implementation of the aforementioned policies would reduce the significance of potential seismic related liquefaction and ground settlement within the City on future development. Adherence to these policies would reduce potential impacts related to this issue to a less than significant level and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. With the implementation of the proposed 2017 General Plan policies and programs, and the latest building codes the impacts related to seismic related liquefaction and ground settlement within the City would be reduced to less than significant.

4.6.5.7 Expansive Soils

| | |
|-----------|--|
| Threshold | Would the proposed project be located on expansive soil, creating substantial risks to life or property? |
|-----------|--|

Programmatic Impacts. Expansive soils are those soils with a significant amount of clay particles that have the ability to give up water (shrink) or take on water (swell). When these soils shrink or swell, the change in volume exerts significant pressures on loads (such as buildings) that are placed on them. Implementation of the proposed 2017 General Plan may result in the construction and occupation of structures within areas underlain by expansive soils. Expansive soil conditions (as defined in the current building code), if not properly mitigated by site preparation and/or foundation design, can cause substantial damage to structures and other improvements over time.

Table 4.1.A identifies the soils within the City. There is one soil type identified within the City that have a high shrink/swell (Monserate sandy loam, shallow, 5-15% slopes). Build out of proposed 2017 General Plan would increase the number of persons, residential units, and non-residential development that would occur on moderately expansive soils within the City that are identified as Monserate sandy loam, shallow, 5-15% slopes as shown on Figure 4.6.2. Policies are identified below to mitigate the potentially significant impacts associated with future development within the City.

Evaluation of the General Plan Goals and Policies: The goal related to soils is found in the proposed 2017 General Plan in the Community Safety, Services, and Facilities Element. The General Plan includes the following goal to reduce or minimize the effects associated with expansive soils on

structures and infrastructure. The effectiveness of the goal at reducing such impacts is analyzed below.

Community Safety, Services, and Facilities Element

Goal

CS 1 Minimize risks resulting from natural and manmade hazards to its residents and businesses.

Implementation of the above 2017 General Plan goal as future development occurs will help ensure that potential impacts from soil expansion within the City will be less than significant. The goal (CS 1) provides protection to new development from natural hazards including soil expansion. There are no policies or programs in the General Plan that specifically addresses expansive soils.

Level of Programmatic Impact Before Mitigation. While implementation of the aforementioned goal would reduce the significance of expansive soils impacts, it does not provide specific development standards for development within areas subject to potential soil expansion, nor do they provide adequate mitigation for potential soil expansion impacts that may be identified through the use of new scientific data, equipment, or procedures. To provide adequate mitigation for potential soil expansion hazards, mitigation has been identified to provide flexibility to the City in requiring site-specific soils assessment for any development subject located on Monserate sandy loam, shallow, 5-15% slopes soils and to require adherence to identified design standards. Adherence to these measures would reduce potential impacts related to this issue to a less than significant level.

Programmatic Mitigation Measures. The following measure is recommended to help ensure future development in the City will not be subject to impacts related to expansive soils.

4.6.5.7A As determined by the City, a site-specific soil assessment shall be prepared to ascertain potential soil expansion on development within the Monserate sandy loam, shallow, 5-15% slopes identified on Figure 4.6.2. The site-specific soil assessment shall incorporate up-to-date data from government and non-government sources and may be included as part of any site-specific geotechnical investigation. The site-specific soils assessment shall include specific measures to reduce the significance of potential soil swell/shrink potential.

This site-specific soils assessment shall be prepared by a licensed soils engineer or geologist and shall be submitted to the City of Jurupa Valley Planning and Building Departments for review and approval as part of the environmental and entitlement process and prior to the issuance of building permits.

Level of Programmatic Impact After Mitigation. With the implementation of the proposed 2017 General Plan goal and mitigation measure, the impacts related to expansive soils would be reduced to less than significant.

4.6 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a "plan summary" of long-term development impacts. In this case, the growth projections of the 2017 General

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Plan represent the “plan summary” for the purposes of characterizing cumulative impacts related to General Plan implementation.

The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

The cumulative “universe” for geologic issues is the City of Jurupa Valley and western Riverside County, within the larger context of southern California due to regional seismicity. The project area has potential geotechnical and soils constraints, as the entire southern California area contains a number of major regional and local faults, including the Chino-Elsinore fault zone, Whittier, Elsinore Glen Ivy, San Jacinto-San Bernardino, Cucamonga, San Jose, Sierra Madres, and San Andreas faults.

The presence of regional faults creates the potential for damage to structures or injury to persons during seismic events. However, City, County, and state regulations provide guidelines for development in areas with geologic constraints and ensure that the design of buildings is in accordance with applicable CBC standards and other applicable standards, which reduces potential property damage and human safety risks to less than significant levels. Anticipated development in the City and surrounding area in general will not have a cumulatively considerable impact on earth resources, nor will regional geotechnical constraints have a cumulatively considerable impact on the proposed project or cumulative projects, as long as proper design and engineering are implemented based on available seismic and other geotechnical data. The implementation of the proposed General Plan represents an incremental portion of this potential impact, so it will not have cumulatively significant impacts in this regard.

Because it is reasonable to conclude that all development within seismically active areas will be required to adhere to applicable state regulations, CBC standards, and the design and siting standards required by local agencies, implementation of the 2017 General Plan would not result in significant cumulative impacts regarding regional geology, seismicity, or soil constraints.

4.7 GREENHOUSE GAS EMISSIONS AND CLIMATE CHANGE

This section provides a discussion of global climate change, existing regulations pertaining to global climate change, and an analysis of greenhouse gas (GHG) emissions associated with the proposed 2017 General Plan. This analysis examines the long-term operational impacts and evaluates the effectiveness of goals, policies, and programs incorporated into the Air Quality Element of the General Plan. This section analyzes the potential climate change impacts of the proposed General Plan based on the following technical information:

- *WRCOG Subregional Climate Action Plan*. Western Regional Council of Governments, Final Report, September 2014.
- *Air Quality Element, 2017 General Plan*, City of Jurupa Valley. December 2016 (draft).
- *CalEEMod Greenhouse Gas Emissions Data*, DEIR Appendix D, 2016.

4.7.1 Existing Setting

4.7.1.1 Global Climate Change

Global climate change is the change in average meteorological conditions on the earth with respect to temperature, precipitation, and storms. The term “global climate change” is often used interchangeably with the term “global warming,” but “global climate change” is preferred by some scientists and policy makers to “global warming” because it helps convey the notion that there are other changes in addition to rising temperatures.

Climate change refers to any significant change in measures of climate such as temperature, precipitation, or wind, lasting for decades or longer (U.S. Environmental Protection Agency [EPA], 2007). Climate change may result from:

- Natural factors, such as changes in the sun’s intensity or slow changes in the Earth’s orbit around the sun;
- Natural processes within the climate system (e.g., changes in ocean circulation); and/or
- Human activities that change the atmosphere’s composition (e.g., through burning fossil fuels) and the land surface (e.g., deforestation, reforestation, urbanization, and desertification).

The primary observed effect of global climate change has been a rise in the average global tropospheric¹ temperature of 0.36 degrees Fahrenheit (°F) per decade, determined from meteorological measurements worldwide between 1990 and 2005. Climate change modeling shows that further warming could occur, which would induce additional changes in the global climate system during the current century. Changes to the global climate system, ecosystems, and the environment of California could include higher sea levels, drier or wetter weather, changes in ocean salinity, changes in wind patterns or more energetic aspects of extreme weather, including droughts, heavy precipitation, heat waves, extreme cold and increased intensity of tropical cyclones (hurricanes). Specific effects in California might include a decline in the Sierra Nevada snowpack, erosion of California’s coastline, and seawater intrusion in the Delta.

Human activities, such as fossil fuel combustion and land use changes release carbon dioxide (CO₂) and other compounds, cumulatively termed greenhouse gases (GHGs). GHGs are effective in trapping infrared radiation that otherwise would have escaped the earth’s atmosphere, thereby reducing heat buildup in the atmosphere the oceans, and earth’s surface (EPA, 2007). These

¹ The troposphere is the zone of the atmosphere characterized by water vapor, weather, winds, and decreasing temperature with increasing altitude.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

activities over the last 50 years are increasing the amounts of CO₂ and other GHGs in the atmosphere which are thought to be the primary cause of global warming.”¹

GHGs are present in the atmosphere naturally, released by natural sources, or formed from secondary reactions taking place in the atmosphere. They include CO₂, methane (CH₄), nitrous oxide (N₂O), and ozone (O₃). In the last 200 years, substantial quantities of GHGs have been released into the atmosphere. These extra emissions are increasing natural GHG concentrations in the atmosphere, enhancing the natural greenhouse effect, which is believed to be causing global climate change. While human-made GHGs include CO₂, CH₄, and N₂O, some compounds are not naturally occurring and (like chlorofluorocarbons [CFCs]) are completely new to the atmosphere.

GHGs vary considerably in terms of Global Warming Potential (GWP), which is a concept developed to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The global warming potential is based on several factors, including the relative effectiveness of a gas to absorb infrared radiation and length of time that the gas remains in the atmosphere (“atmospheric lifetime”). The GWP of each gas is measured relative to CO₂, the most abundant GHG. The definition of GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to the ratio of heat trapped by one unit mass of CO₂ over a specified time period. GHG emissions are typically measured in terms of pounds or tons of “CO₂ equivalents” (CO₂e). Table 4.7.A identifies the atmospheric lifetimes and global warming potentials of the GHGs of primary concern in this analysis.

Table 4.7.A: Atmospheric Lifetimes and Global Warming Potentials

| GHG | Chemical Makeup | Atmospheric Lifetime (Years) | 100-Year ^(a) Global Warming Potential |
|----------------|------------------|------------------------------|--|
| Carbon Dioxide | CO ₂ | 50-200 | 1 |
| Methane | CH ₄ | 12 | 25 |
| Nitrous Oxide | N ₂ O | 114 | 298 |

^(a) The warming effects over 100-year time frame relative to carbon dioxide

Source: U.S. Environmental Protection Agency, *Greenhouse Gases Overview*, 2016.

Natural sources of CO₂ include the respiration (breathing) of humans and animals and evaporation from the oceans. Together, these natural sources release approximately 150 billion metric tons² of CO₂ each year, far outweighing the 7 billion metric tons of human-made emissions from fossil fuel burning, waste incineration, deforestation, and cement manufacture. Nevertheless, natural removal processes such as photosynthesis by land- and ocean-dwelling plant species cannot keep pace with this extra input of human-made CO₂, and consequently the gas is building up in the atmosphere.³

Methane is produced when organic matter decomposes in environments lacking sufficient oxygen. Natural sources include wetlands, termites, and oceans. Human-made sources include the mining and burning of fossil fuels; digestive processes in ruminant animals such as cattle; rice paddies; and the burying of waste in landfills. Total annual emissions of CH₄ are approximately 500 million metric tons, with human-made emissions accounting for the majority. As for CO₂, the major removal process of atmospheric CH₄—chemical breakdown in the atmosphere—cannot keep pace with source emissions, and CH₄ concentrations in the atmosphere are increasing.

Nitrous oxide is emitted from a variety of human-related and natural sources. Human-related sources of nitrous oxide include agricultural soil management, animal manure management, sewage treatment, combustion of fossil fuel and solid waste, adipic (fatty) acid production, and nitric acid production. Nitrous oxide is also produced naturally through sources associated with the biological nitrogen cycle, particularly microbial action in wet tropical forests. Nitrous oxide emission levels from a source can vary significantly from one country or region to another, depending on many factors

² A tonne is a ton in the metric unit system, also called a metric ton, equal to 1,000 kilograms or about 2,204 pounds.

³ Enviropedia, http://www.enviropedia.org.uk/Global_Warming/Emissions.php.

such as industrial and agricultural production characteristics, combustion technologies, waste management practices, and climate. For example, heavy utilization of synthetic nitrogen fertilizers in crop production typically results in significantly more nitrous oxide emissions from agricultural soils than that occurring from less intensive, low-tillage techniques. Also, the presence or absence of control devices on combustion sources, such as catalytic converters on automobiles, can have a significant effect on the level of nitrous oxide emissions from these types of sources. It is estimated that 40 percent of global nitrous oxide emissions are related to human activities.¹

4.7.1.2 Effects of Global Climate Change

Climate change is a change in the average weather of the earth that is measured by alterations in wind patterns, storms, precipitation, and temperature. These changes are assessed using historical records of temperature changes occurring in the past, such as during previous ice ages. Many of the concerns regarding climate change use these data to extrapolate a level of statistical significance specifically focusing on temperature records from the last 150 years (the Industrial Age) that differ from previous climate changes in rate and magnitude.

The Intergovernmental Panel on Climate Change (IPCC) constructed several emission trajectories of greenhouse gases needed to stabilize global temperatures and climate change impacts. In its Fourth Assessment Report, the IPCC predicted that the global mean temperature change from 1990 to 2100, given six scenarios, could range from 1.1 degrees Celsius (°C) to 6.4 °C. Regardless of analytical methodology, global average temperatures and sea levels are expected to rise under all scenarios (IPCC 2007a). The IPCC concluded that global climate change was largely the result of human activity, mainly the burning of fossil fuels. However, the scientific literature is not consistent regarding many of the aspects of global warming or climate change, including actual temperature changes during the 20th century, the accuracy of the IPCC report, and contributions of human versus non-human activities.

Effects from global climate change may arise from temperature increases, climate-sensitive diseases, extreme weather events, and degradation of air quality. There may be direct temperature effects through increases in average temperature leading to more extreme heat waves and less extreme cold spells. Those living in warmer climates are likely to experience more stress and heat-related problems. Heat-related problems include heat rash and heat stroke. In addition, climate-sensitive diseases may increase, such as those spread by mosquitoes and other disease-carrying insects. Such diseases include malaria, dengue fever, yellow fever, and encephalitis. Extreme events such as flooding and hurricanes can displace people and agriculture. Global warming may also contribute to air quality problems from increased frequency of smog and particulate air pollution.

Additionally, according to the 2006 California Climate Action Team (CAT) Report,² the following climate change effects, which are based on trends established by the IPCC, can be expected in California over the course of the next century:

- A diminishing Sierra snowpack declining by 70 percent to 90 percent, threatening the State's water supply.
- A rise in sea levels resulting in the displacement of coastal businesses and residences. During the past century, sea levels along California's coast have risen about seven inches. If emissions continue unabated and temperatures rise into the higher anticipated warming range, sea level is expected to rise an additional 22 to 35 inches by the end of the century. Elevations of this magnitude would inundate coastal areas with salt water, accelerate coastal erosion, threaten vital levees and inland water systems, and disrupt wetlands and natural habitats. (Note: This condition would not affect the project area as it is a significant distance away from coastal areas.)

¹ IPCC. *Climate Change 2014: Synthesis Report. Contribution of the Working Groups I, II, and III to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change*. 2014.

² California Environmental Protection Agency, *Climate Action Team Report to Governor Schwarzenegger and the Legislature*, March 2006.

- An increase in temperature and extreme weather events. Climate change is expected to lead to increases in the frequency, intensity, and duration of extreme heat events and heat waves in California. More heat waves can exacerbate chronic disease or heat-related illness.
- Increased risk of large wildfires if rain increases as temperatures rise. Wildfires in the grasslands and chaparral ecosystems of southern California are estimated to increase by approximately 30 percent toward the end of the 21st century because more winter rain will stimulate the growth of more plant fuel available to burn in the fall. In contrast, a hotter, drier climate could promote up to 90 percent more northern California fires by the end of the century by drying out and increasing the flammability of forest vegetation.
- Increasing temperatures from 8 to 10.4 °F under the higher emission scenarios, leading to a 25 percent to 35 percent increase in the number of days ozone pollution levels are exceeded in most urban areas (see below).
- Increased vulnerability of forests due to forest fires, pest infestation, and increased temperatures.
- Reductions in the quality and quantity of certain agricultural products. The crops and products likely to be adversely affected include wine grapes, fruit, nuts, and milk.
- Exacerbation of air quality problems. If temperatures rise to the medium warming range, there could be 75 to 85 percent more days with weather conducive to ozone formation in Los Angeles and the San Joaquin Valley, relative to today's conditions. This is more than twice the increase expected if rising temperatures remain in the lower warming range. This increase in air quality problems could result in an increase in asthma and other health-related problems.
- A decrease in the health and productivity of California's forests. Climate change can cause an increase in wildfires, an enhanced insect population, and establishment of non-native species.
- Increased electricity demand, particularly in the hot summer months.
- Increased ground-level ozone formation due to higher reaction rates of ozone precursors.

4.7.1.3 Greenhouse Gases

Greenhouse gases defined by AB 32 include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. Natural processes and human activities emit greenhouse gases. The presence of greenhouse gases in the atmosphere affects the earth's temperature. Many scientists believe that emissions from human activities, such as electricity production and vehicle use, have led to elevated concentrations of these gases in the atmosphere beyond the level of naturally occurring concentrations. Table 4.7.B lists greenhouse gases, the effects of each greenhouse gas, and sources for each of the greenhouse gases.

4.7.1.4 Greenhouse Gas Emission Sources and Inventories

An emissions inventory that identifies and quantifies the primary human-generated sources and sinks of GHGs is a well-recognized and useful tool for addressing climate change. This section summarizes the latest information on global, national, State, and local GHG emission inventories. However, because GHGs persist for a long time in the atmosphere (see Table 4.7.A), accumulate over time, and are generally well mixed, their impact on the atmosphere and climate cannot be tied to a specific point of emission.

Global Emissions. Worldwide anthropogenic GHG emissions in 2010 were approximately 49 billion MT of CO₂e, including ongoing emissions from industrial and agricultural sources and emissions from land use changes such as deforestation and biomass decay. Carbon dioxide emissions from fossil fuels and industrial processes accounted for 65 percent of the total GHG emissions, while carbon dioxide emissions from all sources accounted for 77 percent of the total GHG emissions. Methane emissions accounted for 16 percent of the total GHG emissions. Nitrous oxide emissions accounted for 6.2 percent of total GHG emissions.

Table 4.7.B: Greenhouse Gas Properties, Effects, and Sources

| Constituent | Description and Physical Properties | Health Effects ^(a) | Sources |
|----------------------|--|--|---|
| Carbon Dioxide | Carbon dioxide (CO ₂) is an odorless, colorless natural greenhouse gas. | Outdoor levels of carbon dioxide are not high enough to result in negative health effects. | Carbon dioxide is emitted from natural and anthropocentric (human) sources. Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic out gassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood. |
| Methane | Methane (CH ₄) is an extremely effective absorber of radiation, though its atmospheric concentration is less than carbon dioxide and its lifetime in the atmosphere is brief (10–12 years) compared to other greenhouse gases. | There are no health effects from methane at current levels in the atmosphere; however, in high concentrations in confined areas, the gas presents the hazard of suffocation. | Methane has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of methane. Other anthropocentric sources include fossil-fuel combustion and biomass burning. |
| Nitrous Oxide | Nitrous oxide (N ₂ O), also known as laughing gas, is a colorless greenhouse gas. | Nitrous oxide can cause dizziness, euphoria, and sometimes slight hallucinations. In small doses it is harmless. In some cases, heavy and extended use can cause Olney's Lesions (brain damage). | Concentrations of nitrous oxide also began to rise at the beginning of the Industrial Revolution. In 1998, the global concentration was 314 ppb. Nitrous oxide is produced by microbial processes in soil and water, including those reactions that occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. It is used as an aerosol spray propellant, e.g., in whipped cream bottles. It is also used in potato chip bags to keep chips fresh. It is used in rocket engines and in race cars. |
| Chloro-fluorocarbons | Chlorofluorocarbons (CFCs) are gases formed synthetically by replacing all hydrogen atoms in methane or ethane (C ₂ H ₆) with chlorine and/or fluorine atoms. CFCs are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the earth's surface). | In confirmed indoor locations, working with CFC-113 or other CFCs is thought to have resulted in death by cardiac arrhythmia (heart frequency too high or too low) or asphyxiation. | CFCs have no natural source, but were first synthesized in 1928. They were used for refrigerants, aerosol propellants, and cleaning solvents. Due to the discovery that they are able to destroy stratospheric ozone, a global effort to halt their production was undertaken and was extremely successful, so much so that levels of the major CFCs are now remaining level or declining. However, their long atmospheric lifetimes mean that some of the CFCs will remain in the atmosphere for over 100 years. |
| Hydro-fluorocarbons | Hydrofluorocarbons (HFCs) are synthetic man-made chemicals that are used as a substitute for CFCs. Out of all the greenhouse gases, they are one of three groups with the highest global warming potential. Prior to 1990, the only significant emissions were HFC-23. HFC-134a use is increasing due to its use as a refrigerant. | None. | HFCs are man-made for applications such as automobile air conditioners and refrigerants. |
| Per-fluorocarbons | Perfluorocarbons (PFCs) have stable molecular structures and do not break down through the chemical processes in the lower atmosphere. Because of this, PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane (CF ₄) and hexafluoroethane (C ₂ F ₆). | None. | The two main sources of PFCs are primary aluminum production and semiconductor manufacture. |
| Sulfur Hexafluoride | Sulfur hexafluoride (SF ₆) is an inorganic, odorless, colorless, nontoxic, nonflammable gas. It also has the highest GWP of any gas evaluated, 23,900. Concentrations in the 1990s were about 4 ppt. | In high concentrations in confined areas, the gas presents the hazard of suffocation because it displaces the oxygen needed for breathing. | Sulfur hexafluoride is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection. |

^(a) According to the USEPA under the Endangerment Finding (see section 4.7.2.2) of the Clean Air Act, there are no direct health impacts from each GHG. However, the USEPA has determined that there are indirect health impacts related to climate change.
Source: LSA Associates 2016

THIS PAGE INTENTIONALLY LEFT BLANK

The Global Carbon Project releases an annual update of the global carbon budget and trends. According to the Carbon Budget and Trends 2015 update, the atmospheric carbon dioxide concentration in 2014 was 397 parts per million (ppm), 43 percent above the concentration at the start of the Industrial Revolution (about 277 ppm in 1750). The present concentration is the highest during the last 800,000 years. The annual growth rate of atmospheric carbon dioxide was 3.0 ± 0.2 billion tons (Gt) of CO₂e in 2014, corresponding to an increase of 1.83 ± 0.09 ppm in the atmospheric concentration.¹

United States Emissions. The United States Environmental Protection Agency's (USEPA) Inventory of U.S. GHG Emissions and Sinks provides a comprehensive emissions inventory of the nation's primary anthropogenic sources and sinks of GHGs back to 1990. According to the 1990-2012 Inventory, U.S. GHG emissions totaled 6,525.6 million MTCO₂e in 2012, which represents a 4.7 percent increase from 1990 levels.² From 2011 to 2012, GHG emissions decreased by 3.4 percent. This decrease was due to a decrease in the carbon intensity of fuels consumed by power producers to generate electricity due to a decrease in the price of natural gas, a decrease in transportation sector emissions attributed to a small increase in fuel efficiency across different transportation modes and limited new demand for passenger transportation, and much warmer winter conditions resulting in a decreased demand for heating fuel in residential and commercial sectors.

State of California Emissions. The State of California is a substantial contributor of GHG emissions, with the second largest GHG emissions in the U.S. and the 14th largest carbon dioxide emissions in the world. The California Air Resources Board (CARB) is responsible for developing the California Greenhouse Gas Emission Inventory. This inventory estimates the volume of GHGs emitted to and removed from the atmosphere by human activities within the State of California and supports the AB 32 Climate Change Program. The CARB's current GHG emission inventory covers the years 2000-2012 and is based on fuel use, equipment activity, industrial processes, and other relevant data (e.g., housing, landfill activity, agricultural lands). According to the 2000-2012 California GHG Emissions Inventory, total California GHG emissions were 459 million MTCO₂e in 2012, which represents a 6.1 percent increase from 1990 levels.³ From 2011 to 2012, GHG emissions increased by 1.7 percent. Table 4.7.C summarizes California GHG emissions by economic sectors. As shown, the transportation sector was the largest contributor to California GHG emissions, followed by the industrial sector and electricity generation from both in-state and imported sources.

Table 4.7.C: State of California Annual GHG Emissions by Economic Sector (2012)

| Economic Sector | GHG Emissions (million MTCO₂e) | Percent of Total GHG Emissions |
|--|--|---|
| Agriculture and Forestry | 37.86 | 8 |
| Commercial | 22.02 | 5 |
| Electric Generation (imports) | 44.15 | 10 |
| Electric Generation (in-state) | 51.18 | 11 |
| Industrial | 100.67 | 22 |
| Residential | 31.59 | 7 |
| Transportation | 171.01 | 37 |
| Unspecified ^(a) | 0.21 | <1 |
| Total GHG Emissions^(b) | 458.60 | 100 |

^(a) Unspecified includes emissions from evaporative losses, which could not be attributed to an individual sector.

^(b) The sector emissions may not add up exactly to the above listed gross and net total emissions due to rounding.

4.7.1.5 NOP/Scoping Comments

During the NOP period and the scoping meetings, no residents expressed concerns regarding greenhouse gases and related topics. The South Coast Air Quality Management District submitted a letter during the NOP period requesting the air quality study examine potential greenhouse gas emission impacts of the project, and recommended their methodologies to follow (Refer to Appendix D of this EIR).

4.7.2 Regulatory Framework

4.7.2.1 International Regulation of Climate Change

Intergovernmental Panel on Climate Change (IPCC). In 1988, the United Nations created the IPCC to provide independent scientific information regarding climate change to policymakers. The IPCC does not conduct research itself, but rather compiles information from a variety of sources into reports regarding climate change and its impacts. The IPCC has thereafter periodically released reports on climate change, and in 2007 released its Fourth Assessment Report which concluded most global climate change was the result of human activity, mainly the burning of fossil fuels (see Section 4.7.1.1).

United Nations Framework Convention on Climate Change (UNFCCC). On March 21, 1994, the United States joined a number of countries around the world in signing the United Nations Framework Convention on Climate Change (UNFCCC). Under the UNFCCC, governments gather and share information on greenhouse gas emissions, national policies, and best practices; launch national strategies for addressing greenhouse gas emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change.

Kyoto Protocol. The Kyoto Protocol (Protocol) is an international agreement linked to the UNFCCC that mandates industrialized nations to reduce GHG emissions in an effort to prevent anthropogenic impacts to the climate. Developed countries have contributed more emissions over the last 150 years; therefore, the Protocol places a heavier burden on developed nations under the principle of “common but differentiated responsibilities.”

The Protocol was adopted on December 11, 1997 and entered into force on February 16, 2005. The Protocol’s first commitment period set binding targets for 37 industrialized countries and the European community to reduce greenhouse gas emissions an average of five percent below 1990 levels over the five-year period 2008-2012. The second commitment period (2013-2020) was adopted during the Conference of Parties in Doha, Qatar on December 8, 2012. As of 2016, the United States is the only signatory that has not ratified the Protocol.

Paris Agreement. The Paris Agreement (Agreement) was adopted in December 12, 2015 and builds upon the UNFCCC by reducing the maximum allowable rise in global temperature from 2 to 1.5 degrees Celsius above pre-industrial levels. In addition, all Parties are required to establish “nationally determined contributions” which set forth domestic mitigation measures and regularly report their GHG emissions and implementation efforts. Furthermore, a global inventory will be conducted every 5 years to assess the collective progress towards achieving the purpose of the agreement. The United States signed the Agreement on April 22, 2016, but has yet to ratify the Agreement as of 2016.

4.7.2.2 Federal Regulations/Standards

The United States has historically had a voluntary approach to reducing GHG emissions and planning for climate change adaptation. While there currently are no adopted federal regulations following are actions regarding the Federal government, greenhouse gases, and fuel efficiency.

Greenhouse Gas Endangerment. *Massachusetts v. EPA* (Supreme Court Case 05-1120) was argued before the United States Supreme Court on November 29, 2006, in which it was petitioned that the EPA regulate four greenhouse gases, including carbon dioxide, under Section 202(a)(1) of the Clean Air Act. A decision was made on April 2, 2007, in which the Supreme Court found that greenhouse gases are air pollutants covered by the Clean Air Act. The Court held that the Administrator must determine whether emissions of greenhouse gases from new motor vehicles cause or contribute to air pollution, which may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. On December 7, 2009, the EPA Administrator signed two distinct findings regarding greenhouse gases under section 202(a) of the Clean Air Act:

- *Endangerment Finding:* The Administrator finds that the current and projected concentrations of the six key well-mixed greenhouse gases—carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride—in the atmosphere threaten the public health and welfare of current and future generations.
- *Cause or Contribute Finding:* The Administrator finds that the combined emissions of these well-mixed greenhouse gases from new motor vehicles and new motor vehicle engines contribute to the greenhouse gas pollution, which threatens public health and welfare.

These findings do not impose requirements on industry or other entities. However, this was a prerequisite for implementing greenhouse gas emissions standards for vehicles, as discussed in the section “Clean Vehicles” below.

Clean Vehicles. Congress first passed the Corporate Average Fuel Economy law in 1975 to increase the fuel economy of cars and light duty trucks. The law has become more stringent over time. On May 19, 2009, President Obama put in motion a new national policy to increase fuel economy for all new cars and trucks sold in the United States. On April 1, 2010, the EPA and the Department of Transportation’s Highway Traffic and Safety Administration (NHTSA) announced a joint final rule establishing a national program that would reduce greenhouse gas emissions and improve fuel economy for new cars and trucks sold in the United States.

The first phase of the national program would apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles, covering model years 2012 through 2016. They require these vehicles to meet an estimated combined average emissions level of 250 grams of carbon dioxide per mile, equivalent to 35.5 miles per gallon if the automobile industry were to meet this carbon dioxide level solely through fuel economy improvements. Together, these standards would cut carbon dioxide emissions by an estimated 960 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program (model years 2012–2016). The EPA and the National Highway Safety Administration are working on a second-phase joint rulemaking to establish national standards for light-duty vehicles for model years 2017 and beyond.

On October 25, 2010, the EPA and the U.S. Department of Transportation proposed the first national standards to reduce greenhouse gas emissions and improve fuel efficiency of heavy-duty trucks and buses. For combination tractors, the agencies are proposing engine and vehicle standards that begin in the 2014 model year and achieve up to a 20 percent reduction in carbon dioxide emissions and fuel consumption by the 2018 model year. For heavy-duty pickup trucks and vans, the agencies are proposing separate gasoline and diesel truck standards, which phase in starting in the 2014 model year and achieve up to a 10 percent reduction for gasoline vehicles and up to a 15 percent reduction for diesel vehicles by 2018 model year (12% and 17% respectively if accounting for air conditioning leakage). Lastly, for vocational vehicles (includes other vehicles like buses, refuse trucks, concrete mixers; everything except for combination tractors and heavy-duty pickups and vans), the agencies are proposing engine and vehicle standards starting in the 2014 model year, which would achieve up to a 10 percent reduction in fuel consumption and carbon dioxide emissions by the 2018 model year.

New Source Review Prevention of Significant Deterioration (GHG Tailoring Rule). The EPA issued a final rule on May 13, 2010, that establishes thresholds for greenhouse gases that define when permits under the New Source Review Prevention of Significant Deterioration and Title V

Operating Permit programs are required for new and existing industrial facilities. Operating permits are legally enforceable documents that permitting authorities issue to air pollution sources after the source has begun to operate. Title V Operating Permits are required from Title V of the Clean Air Act. This final rule “tailors” the requirements of these Clean Air Act permitting programs to limit which facilities will be required to obtain Prevention of Significant Deterioration and Title V permits. In the preamble to the revisions to the Federal Code of Regulations, the EPA states:

This rulemaking is necessary because without it the Prevention of Significant Deterioration and Title V requirements would apply, as of January 2, 2011, at the 100 or 250 tons per year levels provided under the Clean Air Act, greatly increasing the number of required permits, imposing undue costs on small sources, overwhelming the resources of permitting authorities, and severely impairing the functioning of the programs. EPA is relieving these resource burdens by phasing in the applicability of these programs to greenhouse gas sources, starting with the largest greenhouse gas emitters. This rule establishes two initial steps of the phase-in. The rule also commits the agency to take certain actions on future steps addressing smaller sources, but excludes certain smaller sources from Prevention of Significant Deterioration and Title V permitting for greenhouse gas emissions until at least April 30, 2016.

EPA estimates that facilities responsible for nearly 70 percent of the national greenhouse gas emissions from stationary sources will be subject to permitting requirements under this rule. This includes the nation’s largest greenhouse gas emitters—power plants, refineries, and cement production facilities.

On December 23, 2010, the EPA issued a series of rules that put the necessary regulatory framework in place to ensure that 1) industrial facilities can get Clean Air Act permits covering their GHG emissions when needed and 2) facilities emitting GHGs at levels below those established in the Tailoring Rule do not need to obtain Clean Air Act permits.

Standards of Performance for Greenhouse Gas Emissions for New Stationary Sources. As required by a settlement agreement, the EPA proposed new performance standards for emissions of carbon dioxide for new affected fossil fuel-fired electric utility generating units on March 27, 2012. New sources greater than 25 megawatt would be required to meet an output based standard of 1,000 pounds of carbon dioxide per megawatt-hour, based on the performance of widely used natural gas combined cycle technology.

Energy Policy and Conservation Act. The Energy Policy and Conservation Act of 1975 sought to ensure that all vehicles sold in the U.S. would meet certain fuel economy goals. Through this Act, Congress established the first fuel economy standards for on-road motor vehicles in the U.S. Pursuant to the Act, the National Highway Traffic and Safety Administration (NHTSA), which is part of the U.S. Department of Transportation (USDOT), is responsible for establishing additional vehicle standards and for revising existing standards. Since 1990, the fuel economy standard for new passenger cars has been 27.5 miles per gallon (mpg). Since 1996, the fuel economy standard for new light trucks (gross vehicle weight of 8,500 pounds or less) has been 20.7 mpg. The Corporate Average Fuel Economy (CAFE) program, administered by the EPA, was created to determine vehicle manufacturers’ compliance with the fuel economy standards. The EPA calculates a CAFE value for each manufacturer based on city and highway fuel economy test results and vehicle sales. Based on the information generated under the CAFE program, the USDOT is authorized to assess penalties for noncompliance.

Energy Policy Act of 1992. The Energy Policy Act (EPA) of 1992 was passed to reduce the country’s dependence on foreign petroleum and improve air quality. EPA includes several parts intended to build an inventory of alternative fuel vehicles (AFVs) in large, centrally fueled fleets in metropolitan areas. EPA requires certain federal, state, and local governments and private fleets to purchase a percentage of light-duty AFVs capable of running on alternative fuels each year. In addition, financial incentives are also included in EPA. Federal tax deductions will be allowed for businesses and individuals to cover the incremental cost of AFVs. States are also required by the Act to consider a variety of incentive programs to help promote AFVs.

Energy Policy Act of 2005. The Energy Policy Act of 2005 includes provisions for renewed and expanded tax credits for electricity generated by qualified energy sources, such as landfill gas; provides bond financing, tax incentives, grants, and loan guarantees for clean renewable energy and rural community electrification; and establishes a federal purchase requirement for renewable energy.

Clean Power Plan. On August 3, 2015, the USEPA issued the Clean Power Plan (CPP), which will cut GHG emissions from existing power plants. The CPP establishes interim and final carbon dioxide emission performance rates for two types of electric generating units—steam electric and natural gas fired power plants—under Section 111(d) of the Clean Air Act. The CPP also establishes state-specific interim and final goals for each state, based on these limits and each state’s mix of power plants.

Mandatory Reporting of GHG. The Consolidated Appropriations Act of 2008, passed in December 2007, requires the establishment of mandatory GHG reporting requirements. On September 22, 2009, the EPA issued the Final Mandatory Reporting of Greenhouse Gases rule. The rule requires reporting of GHG emissions from large sources and suppliers in the United States, and is intended to collect accurate and timely emissions data to inform future policy decisions. Under the rule, suppliers of fossil fuels or industrial GHGs, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of GHG emissions, are required to submit annual reports to the EPA.

4.7.2.3 State Regulations/Standards

California Code of Regulations Title 24, Part 6. Enacted in 1978, this part of the California Code established energy efficiency standards for residential and nonresidential buildings in response to a legislative mandate to reduce California’s energy consumption. These standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods. Continual updates to Title 24 along with the State’s implementation of AB 1493 and SB 1368 will have a major impact on the State’s attainment of the AB 32 goals.

The 2016 Title 24 standards, which will become effective on January 1, 2017, are estimated to result in new buildings that use 28 percent less energy for lighting, heating, cooling, ventilation, and water heating than the previous 2013 Standards. The 2016 updates to Title 24 are focused on moving closer to zero net energy homes by getting energy loads down so remaining electricity demand can be met by solar photovoltaic (PV) panels. The 2016 Title 24 standards require “solar-ready roofs” to accommodate future installations of solar PV panels. Additionally, the 2016 Title 24 standards will save millions of gallons of water per year.

California Code of Regulations Title 24, Part 11. This part of the California Code is known as the California Green Building Standards Code (CALGreen Code) and was enacted to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts with positive environmental impacts and through encouragement of sustainable construction practices. The CALGreen Code is not intended to substitute for or be identified as meeting the certification requirements of any green building program that is not established and adopted by the California Building Standards Commission (CBSC). This update to Part 11 of Title 24 of the California Code of Regulations was effective January 1, 2011. Key provisions of the CALGreen Code that apply to the type of new residential development proposed for the project site are as follows:

Division 5.1—Planning and Design

Section 5.106 Site Development

5.106.4 Bicycle Parking and Changing Rooms:

Short-term bicycle parking. If the new project or an addition or alteration is anticipated to generate visitor traffic, provide permanently anchored bicycle racks within 200 feet of the visitors’ entrance, readily visible to passers-by, for 5 percent of new visitor

motorized vehicle parking spaces being added, with a minimum of one two-bike capacity rack (5.106.4.1).

Long-term bicycle parking. For buildings with over 10 tenant-occupants or alterations that add 10 or more tenant vehicular parking spaces, provide secure bicycle parking for 5 percent of tenant vehicular parking spaces being added, with a minimum of one space. Acceptable parking facilities shall be convenient from the street and shall meet the following: 1. Covered, lockable enclosures with permanently anchored racks for bicycles; 2. Lockable bicycle rooms with permanently anchored racks; or 3. Lockable, permanently anchored bicycle lockers (5.106.4.2).

5.106.5 Clean Air Vehicle Parking: For new projects or additions or alterations that add 10 or more vehicular parking spaces, provide designated parking for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles [201 spaces and over require at least 8 percent] (5.106.5.2).

5.106.8 Light Pollution Reduction (specific backlight, uplight, and glare ratings)

5.106.10 Grading and Paving: Construction plans shall indicate how site grading or a drainage system will manage all surface water flows to keep water from entering buildings.

Division 5.2—Energy Efficiency

Section 5.201.1 Energy Efficiency (Mandatory energy efficiency standards through California Code of Regulations, Title 24, Part 6)

Division 5.3—Water Efficiency and Conservation

Section 5.303 Indoor Water Use

5.303.1 Meters: Separate water meters for buildings in excess of 50,000 sq ft or buildings projected to consume more than 1,000 gallons per day.

5.303.2 Twenty Percent Savings: Use of plumbing fixtures and fittings that will reduce the overall use of potable water within the building by 20 percent, based on the maximum allowable water use per fixture and fitting as required by the California Building Code (California Code of Regulations, Title 24, Part 2).

5.304.3 Irrigation design: Automatic irrigation system controllers installed at the time of final inspection shall be weather- or soil moisture-based controllers that adjust irrigation in response to changes in plant needs; weather-based controllers.

5.303.4 Wastewater Reduction: Each building shall reduce by 20 percent wastewater by one of the following methods: 1. The installation of water-conserving fixtures or 2. Use of non-potable water systems (5.303.4).

5.303.6 Plumbing Fixtures and Fittings

Section 5.304 Outdoor Water Use

5.304.1 Water Budget: A water budget shall be developed for landscape irrigation use that conforms to the local water efficient landscape ordinance or to the California Department of Water Resources Model Water Efficient Landscape Ordinance where no local ordinance is applicable.

5.304.2 Outdoor Water Use (separate submeters or metering devices)

5.304.3 Irrigation Design (irrigation controllers and sensors)

Division 5.4—Material Conservation and Resource Efficiency

Section 5.407 Water Resistance and Moisture Management

Section 5.408 Construction Waste Reduction, Disposal and Recycling

5.408.1 and 5.408.3 Construction Waste Diversion: Recycle and/or salvage for reuse a minimum 50 percent of the nonhazardous construction and demolition waste. 100 percent of trees, stumps, rocks and associated vegetation and soils resulting from land clearing shall be reused or recycled.

5.408.2 Construction Waste Management Plan

Section 5.410 Building Maintenance and Operation

5.410.1 and 5.713.10 Recycling by Occupants: Provide readily accessible areas that serve the entire building and are identified for the depositing, storage and collection of non-hazardous materials for recycling.

Division 5.5—Environmental Quality

Section 5.504 Pollutant Control

5.504.3 Covering of Duct Openings and Protection of Mechanical Equipment During Construction.

5.504.4 Finish Material Pollutant Control: Low-pollutant emitting interior finish materials such as adhesives, paints, carpet, and flooring.

5.404.5.3 Filters: Minimum Efficiency Reporting Value (MERV) of 8 or higher in mechanically ventilated buildings.

California Code of Regulations Titles 14 and 27. These parts of the California Code require energy-efficient practices as part of solid and hazardous waste handling and disposal.

Pavley Regulations and Fuel Efficiency Standards. California AB 1493 (“Pavley Bill”), enacted on July 22, 2002, required the CARB to develop and adopt regulations that reduce greenhouse gases emitted by passenger vehicles and light duty trucks beginning with model year 2009. On September 24, 2009, the CARB adopted amendments to the Pavley regulations that reduce GHG emissions in new passenger vehicles from 2009 through 2016. When fully phased in, the near term (2009–2012) standards will result in about a 22 percent reduction compared with the 2002 fleet, and the mid-term (2013–2016) standards will result in about a 30 percent reduction. Several technologies stand out as providing significant reductions in emissions at favorable costs. These include discrete variable valve lift or camless valve actuation to optimize valve operation rather than relying on fixed valve timing and lift as has historically been done; turbocharging to boost power and allow for engine downsizing; improved multi-speed transmissions; and improved air conditioning systems that operate optimally, leak less, and/or use an alternative refrigerant.

Low Carbon Fuel Standard, Executive Order S-01-07. The Governor signed Executive Order S-01-07 on January 18, 2007. The order mandates that a statewide goal shall be established to reduce the carbon intensity of California’s transportation fuels by at least 10 percent by 2020. In particular, the executive order established a Low Carbon Fuel Standard and directed the Secretary for Environmental Protection to coordinate the actions of the California Energy Commission (CEC), the CARB, the University of California, and other agencies to develop and propose protocols for measuring the “life-cycle carbon intensity” of transportation fuels. The CARB adopted the Low Carbon Fuel Standard on April 23, 2009. The Low Carbon Fuel Standard requires producers of petroleum based fuels to reduce the carbon intensity of their products, beginning with a quarter of a percent in 2011, ending in a 10 percent total reduction in 2020. Petroleum importers, refiners and wholesalers can either develop their own low carbon fuel products, or buy LCFS Credits from other companies that develop and sell low carbon alternative fuels, such as biofuels, electricity, natural gas or hydrogen. The Low Carbon Fuel Standard was challenged in the United States District Court in Fresno in 2011. The court’s ruling issued on December 29, 2011, included a preliminary injunction against the CARB’s implementation of the rule. The Ninth Circuit Court of Appeals stayed the injunction on April 23, 2012 pending final ruling on appeal, allowing the CARB to continue to

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

implement and enforce the regulation and vacated the injunction on September 18, 2013, and remanded the case to the district court for further consideration.

Senate Bill (SB) 1368. In 2006, the State Legislature adopted SB 1368, which was subsequently signed into law by the Governor. SB 1368 directs the California Public Utilities Commission (CPUC) to adopt a performance standard for greenhouse gas emissions for the future power purchases of California utilities. SB 1368 seeks to limit carbon emissions associated with electrical energy consumed in California by forbidding procurement arrangements for energy longer than 5 years from resources that exceed the emissions of a relatively clean, combined cycle natural gas power plant. Because of the carbon content of its fuel source, a coal-fired plant cannot meet this standard because such plants emit roughly twice as much carbon as combined cycle natural gas plants. Accordingly, the new law will effectively prevent California's utilities from investing in, otherwise financially supporting, or purchasing power from new coal plants located in or out of the State. Thus, SB 1368 will lead to dramatically lower greenhouse gas emissions associated with California's energy demand, as SB 1368 will effectively prohibit California utilities from purchasing power from out-of-state producers that cannot satisfy the performance standard for greenhouse gas emissions required by SB 1368. The CPUC adopted the regulations required by SB 1368 on August 29, 2007.

SB 97 and the CEQA Guidelines Update. Passed in August 2007, SB 97 amends the CEQA statute to clearly establish that GHG emissions and the effects of GHG emissions are appropriate subjects for CEQA analysis. The legislation directed the California Office of Planning and Research (OPR) to develop draft CEQA Guidelines "for the mitigation of GHG emissions or the effects of GHG emissions" and directed the Resources Agency to certify and adopt the State CEQA Guidelines. On February 16, 2010, the Office of Administrative Law approved the Amendments, and filed them with the Secretary of State for inclusion in the California Code of Regulations. The Amendments became effective on March 18, 2010.

The CEQA Amendments provide guidance to public agencies regarding the analysis and mitigation of the effects of greenhouse gas emissions in CEQA documents. The CEQA Amendments fit within the existing CEQA framework by amending existing *CEQA Guidelines* to reference climate change.

A new section, *CEQA Guidelines* Section 15064.4, was added to assist agencies in determining the significance of GHG emissions. The new section allows agencies the discretion to determine whether a quantitative or qualitative analysis is best for a particular project. However, the *CEQA Guidelines* offer little guidance on the crucial next step in this assessment process—how to determine whether the project's estimated greenhouse gas emissions are significant or cumulatively considerable.

Also amended were *CEQA Guidelines* Sections 15126.4 and 15130, which address mitigation measures and cumulative impacts respectively. Greenhouse gas mitigation measures are referenced in general terms, but no specific measures are championed. The revision to the cumulative impact discussion requirement (Section 15130) simply directs agencies to analyze greenhouse gas emissions in an EIR when a project's incremental contribution of emissions may be cumulatively considerable; however, it does not answer the question of how to determine whether emissions are cumulatively considerable.

Section 15183.5 permits programmatic greenhouse gas analysis and later project-specific tiering. A tiered project is a project that was addressed in a certified program document, such as an EIR or Mitigated Negative Declaration. The *CEQA Guidelines* state the following:

Lead agencies may analyze and mitigate the significant effects of greenhouse gas emissions at a programmatic level, such as in a general plan, a long range development plan, or a separate plan to reduce greenhouse gas emissions. Later project-specific environmental documents may tier from and/or incorporate by reference that existing programmatic review. Project-specific environmental documents may rely on an EIR containing a programmatic analysis of greenhouse gas emissions (Section 15183.5(a)).

Compliance with plans for the reduction of GHG emissions can support a determination that a project's cumulative effect is not cumulatively considerable, according to proposed Section 15183.5(b).

In addition, the amendments revised Appendix F of the *CEQA Guidelines*, which focuses on energy conservation. The sample environmental checklist in the *CEQA Guidelines'* Appendix G was amended to include greenhouse gas impact questions, which are used in this analysis (see Section 4.7.4).

Executive Order S-3-05. Executive Order S-3-05 (issued June 1, 2005) established the following GHG emissions reduction targets for California:

- By 2010, reduce GHG emissions to 2000 levels;
- By 2020, reduce GHG emissions to 1990 levels; and
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

The 2050 reduction goal represents what scientists believe is necessary to reach levels that will stabilize the climate. The 2020 goal was established to be an aggressive, but achievable, mid-term target. The Executive Order is not a legislative action and a private project is not subject to its requirements.

Assembly Bill 32 (AB 32). California's major initiative for reducing GHG emissions is outlined in AB 32, the "Global Warming Solutions Act," passed by the California State legislature on August 31, 2006. AB 32 codifies Executive Order S-3-05's year 2020 goal by requiring that statewide GHG emissions be reduced to 1990 levels by the year 2020. The CARB has established the level of GHG emissions in 1990 at 431 MMT CO₂e. The emissions target of 431 MMT requires the reduction of 78 MMT from the State's projected business-as-usual (BAU) 2020 emissions of 509 MMT. AB 32 requires the CARB to prepare a Scoping Plan that outlines the main State strategies for meeting the 2020 deadline and to reduce GHGs that contribute to global climate change.

The initial Scoping Plan was approved by the CARB on December 11, 2008, and includes measures to address GHG emission reduction strategies related to energy efficiency, water use, and recycling and solid waste, among other measures. The Scoping Plan¹ contains the following 18 strategies to reduce the State's emissions:²

1. *California Cap-and-Trade Program Linked to Western Climate Initiative.* Implement a broad-based California Cap-and-Trade program to provide a firm limit on emissions. Link the California cap-and-trade program with other Western Climate Initiative Partner programs to create a regional market system to achieve greater environmental and economic benefits for California. Ensure California's program meets all applicable AB 32 requirements for market-based mechanisms.
2. *California Light-Duty Vehicle Greenhouse Gas Standards.* Implement adopted standards and planned second phase of the program. Align zero-emission vehicle, alternative and renewable fuel and vehicle technology programs with long-term climate change goals.
3. *Energy Efficiency.* Maximize energy efficiency building and appliance standards; pursue additional efficiency including new technologies, policy, and implementation mechanisms. Pursue comparable investment in energy efficiency from all retail providers of electricity in California.
4. *Renewable Portfolio Standard.* Achieve 33 percent renewable energy mix statewide. Renewable energy sources include (but are not limited to) wind, solar, geothermal, small hydroelectric, biomass, anaerobic digestion, and landfill gas.
5. *Low Carbon Fuel Standard.* Develop and adopt the Low Carbon Fuel Standard.

¹ Scoping Plan Reduction Measures from California Air Resources Board 2008 and Table 69 from MBA 2013.

² CARB, *Climate Change Proposed Scoping Plan: a Framework for Change*, October 2008.

6. *Regional Transportation-Related Greenhouse Gas Targets.* Develop regional greenhouse gas emissions reduction targets for passenger vehicles. This measure refers to SB 375.
7. *Vehicle Efficiency Measures.* Implement light-duty vehicle efficiency measures.
8. *Goods Movement.* Implement adopted regulations for the use of shore power for ships at berth. Improve efficiency in goods movement activities.
9. *Million Solar Roofs Program.* Install 3,000 MW of solar-electric capacity under California's existing solar programs.
10. *Medium/Heavy-Duty Vehicles.* Adopt medium and heavy-duty vehicle efficiency measures.
11. *Industrial Emissions.* Require assessment of large industrial sources to determine whether individual sources within a facility can cost-effectively reduce greenhouse gas emissions and provide other pollution reduction co-benefits. Reduce greenhouse gas emissions from fugitive emissions from oil and gas extraction and gas transmission. Adopt and implement regulations to control fugitive methane emissions and reduce flaring at refineries.
12. *High Speed Rail.* Support implementation of a high-speed rail system.
13. *Green Building Strategy.* Expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings.
14. *High Global Warming Potential Gases.* Adopt measures to reduce high global warming potential gases.
15. *Recycling and Waste.* Reduce methane emissions at landfills. Increase waste diversion, composting, and commercial recycling. Move toward zero-waste.
16. *Sustainable Forests.* Preserve forest sequestration and encourage the use of forest biomass for sustainable energy generation.
17. *Water.* Continue efficiency programs and use cleaner energy sources to move and treat water.
18. *Agriculture.* In the near-term, encourage investment in manure digesters and at the five-year Scoping Plan update determine if the program should be made mandatory by 2020.

The Scoping Plan must be updated every five years. The *First Update to the Climate Change Scoping Plan* was approved by the CARB on May 22, 2014 and builds upon the initial Scoping Plan with new strategies and recommendations. The First Update identifies opportunities to leverage existing and new funds to further drive GHG emission reductions through strategic planning and targeted low carbon investments. Furthermore, the First Updated included the following statement concerning emissions reduction targets:

As California continues to build its climate policy framework, there is a need for local government climate action planning to adopt mid-term and long-term reduction targets that are consistent with scientific assessments and the statewide goal of reducing emissions 80 percent below 1990 levels by 2050. Local government reduction targets should chart a reduction trajectory that is consistent with, or exceeds, the trajectory created by statewide goals.¹

The CARB is currently working on the second update to the Scoping Plan to reflect the 2030 target established in Executive Order B-30-15.

Greenhouse Gas Cap-and-Trade Program. On October 20, 2011, CARB adopted the final cap-and-trade program for California. The cap-and-trade program is a central element of AB 32 and covers major sources of GHG emissions in the State such as refineries, power plants, industrial facilities, and transportation fuels. The California cap-and-trade program will create a market-based system with an

¹ CARB. *First Update to the Climate Change Scoping Plan: Building on the Framework Pursuant to AB 32, The California Global Warming Solutions Act of 2006.* May 2014.

overall emissions limit for affected sectors. The program is currently proposed to regulate more than 85% of California's emissions and will stagger compliance requirements according to the following schedule: (1) electricity generation and large industrial sources (2012); (2) fuel combustion and transportation (2015).

The program includes an enforceable GHG cap that will decline over time. The CARB will distribute allowances, which are tradable permits, equal to the emission allowed under the cap. The program started on January 1, 2012, with the first offset credit auctions in November 2012 and an enforceable compliance obligation beginning with 2013 GHG emissions. For the first two years of the program, large industrial emitters received 90 percent of their allowances for free in a soft start meant to give companies time to reduce emissions through new technologies or other means. The cap, or number of allowances, will decline over time in an effort to drastically reduce greenhouse gas emissions by 2050.

Executive Order B-30-15. Executive Order B-30-15 (issued April 29, 2015) established the following GHG emissions reduction targets for California:

- By 2030, reduce GHG emissions to 40 percent below 1990 levels;

The emissions reduction target is an interim-year goal to make it possible to reach the ultimate goal of reducing emissions to 80 percent below 1990 levels by 2050.

Senate Bill 32 (SB 32). Passed by the California State legislature on August 24, 2016, SB 32 codifies Executive Order B-30-15's year 2030 goal by requiring that statewide GHG emissions be reduced 40 percent below 1990 levels by the year 2030.

Senate Bill 1368 (SB 1368). In September 2006, Governor Arnold Schwarzenegger signed Senate Bill 1368, which calls for the adoption of a GHG performance standard for in-State and imported electricity generators to mitigate climate change. On January 25, 2007, the CPUC adopted an interim GHG emissions performance standard. This standard is a facility-based emissions standard requiring all new long-term commitments for baseload generation to serve California consumers with power plants that have emissions no greater than a combined cycle gas turbine plant. The established level is 1,100 pounds of CO₂ per megawatt-hour.

Senate Bill 375 (SB 375). SB 375 was signed into law on October 1, 2008. SB 375 provides emissions-reduction goals around which regions can plan, integrating disjointed planning activities, and provides incentives for local governments and developers to implement "smart growth" planning and development strategies, including reducing the average VMT to reduce commuting distances and reduce criteria and greenhouse gas air pollutant emissions. SB 375 has three major components:

- Using the regional transportation planning process to achieve reductions in GHG emissions consistent with AB 32's goals;
- Offering CEQA incentives to encourage projects that are consistent with a regional plan that achieves GHG emission reductions; and
- Coordinating the regional housing needs allocation process with the regional transportation process while maintaining local authority over land use decisions.

SB 375 requires each Metropolitan Planning Organization (MPO) to include a Sustainable Communities Strategy (SCS) in the regional transportation plan that demonstrates how the region will meet the greenhouse gas emission targets and creates CEQA streamlining incentives for projects that are consistent with the regional SCS. The focus of SB 375 is on location of new residential projects and coordinated transportation planning.

Executive Order S-21-09. Executive Order S-21-09 (issued September 15, 2009) required that the ARB, under its AB 32 authority, adopt a regulation consistent with the 33 percent renewable energy target established in Executive Order S-14-08 by July 31, 2010. Under Executive Order S-21-09, the

ARB is directed to work with the California Public Utilities Commission and California Energy Commission to encourage the creation and use of renewable energy sources. The ARB will consult with the Independent System Operator and other load balancing authorities on, among other aspects, impacts on reliability, renewable integration requirements, and interactions with wholesale power markets in carrying out the provisions of Executive Order S-21-09. The ARB will also establish the highest priority for those resources that provide the greatest environmental benefits with the least environmental costs and impacts on public health that can be developed most quickly and that support reliable, efficient, cost-effective electricity system operations.

Renewables Portfolio Standard. Senate Bill 1078, which was enacted on September 12, 2002, established the Renewables Portfolio Standard program that requires retail sellers of electricity, including electrical corporations, community choice aggregators, and electric service providers, to purchase a specified minimum percentage of electricity generated by eligible renewable energy resources such as wind, solar, geothermal, small hydroelectric, biomass, anaerobic digestion, and landfill gas. Senate Bill 107, which was enacted on September 26, 2006, accelerated the Renewables Portfolio Standard to require that at least 20 percent of electricity retail sales be served by renewable energy resources by year 2010. In response to Executive Order S-21-09 (described above), the Renewables Portfolio Standard was expanded in 2011 to require investor-owned utilities, electric service providers, and community choice aggregators to increase procurement from eligible renewable energy resources to 33 percent of total procurement by year 2020. The Renewables Portfolio Standard is included as a reduction measure in the ARB's Climate Change Scoping Plan. Increased use of renewable energy would decrease California's reliance on fossil fuels, thus reducing emissions of GHGs from the electricity sector. The ARB estimates that full achievement of the 33 percent by 2020 Renewables Portfolio Standard would decrease statewide GHG emissions by 21.3 million MTCO_{2e}. Senate Bill 350 described below increase the Renewable Portfolio Standard to require 50 percent of electricity generated to be from renewables by 2030.

Senate Bill 350. SB 350, Clean Energy and Pollutions Reduction Act of 2015, (issued October 7, 2015) builds upon EO S-14-08 by increasing the renewable energy target to 50 percent by 2030. In addition, SB 350 increases the energy efficiency in buildings by 50 percent by 2030.

4.7.2.4 Regional Regulations/Guidelines

Southern California Association of Governments. Southern California Association of Governments (SCAG) functions as the MPO for six counties including Riverside County, wherein the City is located. As the designated MPO, SCAG is federally mandated to research and plan for transportation, growth management, and regional management of GHG emissions.

On April 7, 2016, the Regional Council of SCAG adopted the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) for the SCAG area aimed at attaining the reduction targets of an 8 percent per capita reduction in GHG emissions from passenger vehicles by the year 2020, 18 percent reduction by 2035 and 21 percent reduction by 2040 (compared with 2005 levels).¹ The RTP/SCS strives to provide a regional investment framework to address the region's transportation and related challenges, and looks to strategies that integrate land use into transportation planning with an emphasis on transit and other non-vehicle transportation modes. The RTP/SCS also provides the framework for aggregating sub-regional and local efforts to institute measures aimed at mitigating the adverse air pollution impacts from transportation activities. These measures are known as transportation control measures (TCMs). The RTP/SCS links the goal of sustaining mobility with the goals of fostering economic development, enhancing the environment, reducing energy consumption, promoting transit-friendly development patterns, and encouraging fair and equitable access to residents affected by socio-economic, geographic, and commercial limitations. The Regional Transportation Implementation Plan (RTIP) is the vehicle used to implement

¹ Southern California Association of Governments. *The 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy: A Plan for Mobility, Accessibility, Sustainability and a High Quality of Life*. April 7, 2016.

the RTP/SCS. The RTIP also provides the schedule and framework for the timely implementation of the Region's TCM strategies.

South Coast Air Quality Management District. South Coast Air Quality Management District (SCAQMD) is the agency principally responsible for comprehensive air pollution control in the South Coast Air Basin (Basin), wherein the City is located. In order to provide GHG emission guidance to local jurisdictions within the Basin, the SCAQMD has organized a Working Group to develop GHG emissions analysis guidance and thresholds. The goal of the working group is to develop and reach consensus on an acceptable CEQA significance threshold for GHG emissions that would be utilized on an interim basis until the CARB (or some other State agency) develops statewide guidance on assessing the significance of GHG emissions under CEQA.

Initially, SCAQMD staff presented the working group with a significance threshold that could be applied to various types of projects—residential, non-residential, industrial, etc. However, the threshold is still under development. In December 2008, staff presented the SCAQMD Governing Board with a significance threshold for stationary source projects in which it is the lead agency. This threshold uses a tiered approach to determine a project's significance, with 10,000 metric tons (MT) of carbon dioxide equivalent (CO₂e) as a screening numerical threshold.

In September 2010, the Working Group released additional revisions, which recommended a project-level efficiency target of 4.8 MT CO₂e per service population (SP) as a 2020 target and 3.0 MT CO₂e, per SP as a 2035 target. The recommended plan-level target for 2020 was 6.6 MT CO₂e and the plan level target for 2035 was 4.1 MT CO₂e. The SCAQMD's GHG significance thresholds are further discussed in Section 4.7.4. The SCAQMD has not announced when staff is expecting to present a finalized version of these thresholds to the Governing Board. The SCAQMD has also adopted Rules 2700, 2701, and 2702 that address GHG reductions; however, these rules are currently applicable to boilers and process heaters, forestry, and manure management projects.

WRCOG Sub-Regional Climate Action Plan. The Western Riverside Council of Governments (WRCOG) is an association of local governments located in the western portion of Riverside County. It is part of the larger Southern California Association of Governments (SCAG). In the past, WRCOG adopted a Sustainability Framework, Western Riverside Energy Leader Partnership (WRELP), HERO Program—an energy efficiency and water conservation financing program, and Western Riverside County Clean Cities Coalition. In 2014, WRCOG approved a Subregional Climate Action Plan (SCAP) to reduce regional greenhouse gas (GHG) emissions. The SCAP covers 11 cities in western Riverside County including the City of Jurupa Valley.

4.7.2.5 City General Plan Policies

The Air Quality Element of the City's 2017 General Plan contains the following goals and policies directly related to greenhouse gases, climate change, energy conservation, and sustainability:

Air Quality Element

Goal

AQ 1 A city that works with regional, sub-regional, and state agencies to protect and improve air quality and reduce greenhouse gas emissions.

Goal

AQ 9 **Climate Change**

Policies

AQ 9.1.1 **State and Regional Plans and Programs.** Monitor federal, state and regional plans and programs to stay abreast on emerging information, practices and strategies to address climate change.

- AQ 9.1.2 **Critical Infrastructure.** Locate critical infrastructure in areas not subject to severe climate change impacts, such as flooding.
- AQ 9.1.3 **Climate Action Plan.** Work with WRCOG to periodically monitor and update the Subregional Climate Action Plan.
- AQ 9.1.4 **Vulnerability.** Develop strategies to reduce the City's vulnerability to climate change impacts.

4.7.3 Methodology

Bearing in mind that CEQA does not require “perfection” but instead “adequacy, completeness, and a good faith effort at full disclosure,” the analysis of project GHG emissions and climate change is based on methodologies and information available at the time this EIR was prepared. Estimation of GHG emissions in the future does not account for changes in technology that may reduce such emissions; therefore, the estimates are based on past performance and represent a scenario that is worse than that which is likely to be encountered. Additionally, as explained in greater detail below, many uncertainties exist regarding the precise relationship between specific levels of GHG emissions and the ultimate impact on global climate. Significant uncertainties also exist regarding the reduction potential of mitigation strategies. Thus, while information is presented below to assist the public and the City's decision-makers in understanding the project's potential contribution to global climate change impacts, the information available to the City is not sufficiently detailed to allow a direct comparison between particular project characteristics and particular climate change impacts, nor between any particular proposed mitigation measure and any reduction in climate change impacts.

The recommended approach for GHG analysis included in the OPR's June 2008 release is to: (1) identify and quantify GHG emissions, (2) assess the significance of the impact on climate change, and (3) if significant, identify alternatives and/or mitigation measures to reduce the impact below a level of significance.¹ Neither the CEQA statute nor Guidelines prescribe quantitative thresholds of significance or a particular methodology for performing an impact analysis; as with most environmental topics, significance criteria are left to the judgment and discretion of the lead agency.

The June 2008 OPR guidance provides some additional direction regarding planning documents as follows: “CEQA can be a more effective tool for GHG emissions analysis and mitigation if it is supported and supplemented by sound development policies and practices that will reduce GHG emissions on a broad planning scale and that can provide the basis for a programmatic approach to project-specific CEQA analysis and mitigation. For local government lead agencies, adoption of General Plan policies and certification of General Plan EIRs that analyze broad jurisdiction-wide impacts of GHG emissions can be part of an effective strategy for addressing cumulative impacts and for streamlining later project-specific CEQA reviews.”

Pursuant to SB 97, the OPR is in the process of developing guidelines for analysis of the effects of GHG emissions. As part of this process, the OPR has asked CARB technical staff to recommend statewide interim thresholds of significance for GHGs. The CARB released a preliminary draft staff proposal in October 2008 that included initial suggestions for significance criteria related to industrial, commercial, and residential projects.

In March 2010, *CEQA Guidelines* amendments were adopted and include the following direction regarding determination of significant impacts from GHG emissions (Section 15064.4):

- (a) The determination of the significance of greenhouse gas emissions calls for a careful judgment by the lead agency consistent with the provisions in Section 15064. A lead agency should make a good-faith effort, based on available information, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project. A lead agency shall have discretion to determine, in the context of a particular project, whether to:

¹ State of California, 2008. Governor's Office of Planning and Research. *CEQA and Climate Change: Addressing Climate Change through California Environmental Quality Act Review*. June 19.

- (1) Use a model or methodology to quantify greenhouse gas emissions resulting from a project, and which model or methodology to use. The lead agency has discretion to select the model it considers most appropriate provided it supports its decision with substantial evidence. The lead agency should explain the limitations of the particular model or methodology selected for use; or
 - (2) Rely on a qualitative analysis or performance based standards.
- (b) A lead agency may consider the following when assessing the significance of impacts from greenhouse gas emissions on the environment:
- (1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting.
 - (2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
 - (3) The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. Such regulations or requirements must be adopted by the relevant public agency through a public review process and must include specific requirements that reduce or mitigate the project's incremental contribution of greenhouse gas emissions. If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project.

CEQA Guidelines Section 15064(b) provides that the “determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data,” and further, states that an “ironclad definition of significant effect is not always possible because the significance of an activity may vary with the setting.”

On October 2, 2013, SCAQMD released the California Emission Estimator Model Version 2013.2.2. This version of CalEEMod was used to model both onsite and offsite GHG emissions. The purpose of the new model is to calculate air quality and GHG emissions more accurately from direct and indirect sources and quantify applicable air quality and GHG reductions achieved from mitigation measures

For construction, the analysis estimated emissions for all three construction phases for the following activities: site preparation, grading, building construction, paving, and coating. The analysis also projected operational emissions using area source, energy source, mobile source, waste, water, and construction (averaged over 30 years) emissions. For a detailed description of the assumptions used to estimate GHG emissions, refer to the air quality and greenhouse gas report in Appendix D.

4.7.4 Thresholds of Significance

As the SCAQMD has recognized, the analysis of GHGs is a much different analysis than the analysis of criteria pollutants for the following reasons. For criteria pollutants, significance thresholds are based on daily emissions because attainment or nonattainment is based on daily exceedances of applicable AAQS. Furthermore, several AAQS are based on relatively short-term exposure effects on human health (e.g., 1-hour and 8-hour). However, since the half-life of CO₂ is approximately 100 years, for example, the effects of GHGs are longer-term, affecting global climate over a relatively long time frame. As a result, the SCAQMD's current position is to evaluate GHG effects over a longer time frame than a single day.

The recommended approach for GHG analysis included in OPR's June 2008 release is to: (1) identify and quantify GHG emissions, (2) assess the significance of the impact on GCC, and (3) if significant,

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

identify alternatives and/or mitigation measures to reduce the impact to below a level of significance.¹ The June 2008 OPR guidance provides some additional direction regarding planning documents as follows: “CEQA can be a more effective tool for GHG emissions analysis and mitigation if it is supported and supplemented by sound development policies and practices that will reduce GHG emissions on a broad planning scale and that can provide the basis for a programmatic approach to project-specific CEQA analysis and mitigation. For local government lead agencies, adoption of general plan policies and certification of general plan EIRs that analyze broad jurisdiction-wide impacts of GHG emissions can be part of an effective strategy for addressing cumulative impacts and for streamlining later project-specific CEQA reviews.”

Pursuant to SB 97, OPR submitted to the Secretary for Natural Resources its proposed amendments to the State CEQA Guidelines for GHG emissions on April 13, 2009. These proposed CEQA Guideline amendments provide guidance to public agencies regarding the analysis and mitigation of the effects of GHG emissions in draft CEQA documents. The Natural Resources Agency conducted formal rulemaking in 2009, prior to certifying and adopting the amendments, as required by SB 97. The Natural Resources Agency had certified and adopted the guidelines as of January 1, 2010.

As noted above on page 4.7-21, on December 30, 2009, the California Natural Resources Agency adopted the CEQA Guideline Amendments related to climate change. The amendments became effective on March 18, 2010, and state:

(a) The determination of the significance of greenhouse gas emissions calls for a careful judgment by the Lead Agency consistent with the provisions in section 15064. A lead agency should make a good-faith effort, based on available information, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project. A lead agency shall have discretion to determine, in the context of a particular project, whether to:

(1) Use a model or methodology to quantify greenhouse gas emissions resulting from a project, and which model or methodology to use. The lead agency has discretion to select the model it considers most appropriate provided it supports its decision with substantial evidence. The lead agency should explain the limitations of the particular model or methodology selected for use; or

(2) Rely on a qualitative analysis or performance based standards.

(b) A lead agency may consider the following when assessing the significance of impacts from greenhouse gas emissions on the environment:

(1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting.

(2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.

(3) The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. Such regulations or requirements must be adopted by the relevant public agency through a public review process and must include specific requirements that reduce or mitigate the project's incremental contribution of greenhouse gas emissions. If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project.

¹ State of California, 2008. OPR. *CEQA and Climate Change: Addressing Climate Change Through California Environmental Quality Act Review* (June 19).

CEQA Guidelines Section 15064(b) provides that the “determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data,” and further, states that an “ironclad definition of significant effect is not always possible because the significance of an activity may vary with the setting.”

Individual projects incrementally contribute toward the potential for GCC on a cumulative basis in concert with all other past, present, and probable future projects. While individual projects are unlikely to measurably affect GCC, each project incrementally contributes toward the potential for GCC on a cumulative basis, in concert with all other past, present, and probable future projects.

Revisions to Appendix G of the *CEQA Guidelines* suggest that the project be evaluated for the following impacts:

- Would the project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?
- Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs?

However, despite this, neither the CEQA statutes nor the OPR guidelines, nor the draft proposed changes to the CEQA Guidelines, currently prescribe thresholds of significance or a particular methodology for performing an impact analysis; as with most environmental topics, significance criteria are left to the judgment and discretion of the lead agency.

In this vacuum, on December 5, 2008, the SCAQMD adopted an interim GHG threshold of significance for projects where it is the Lead Agency using a tiered approach for determining significance.¹ The objective of the SCAQMD's interim GHG threshold of significance proposal is to achieve a GHG emission capture rate of 90 percent of all new or modified stationary-source projects. The SCAQMD asserts that a GHG threshold of significance based on a 90 percent emission capture rate is considered more appropriate to address the long-term adverse impacts associated with GCC because most projects will be required to implement GHG reduction measures. The SCAQMD further asserts that a 90 percent GHG emission capture rate sets the emission threshold low enough to capture a substantial fraction of the future stationary-source projects that will be constructed to accommodate future statewide population and economic growth while setting the emission threshold high enough to exclude small projects that will in aggregate contribute a relatively small fraction of the cumulative statewide GHG emissions. The following bullet points describe the basic structure of the SCAQMD's tiered interim GHG significance threshold for stationary sources:

- **Tier 1** consists of evaluating whether or not the project qualifies for any applicable exemption under CEQA. For example, SB 97 specifically exempted a limited number of projects until it expired in 2010. If the project qualifies for an exemption, no further action is required. If the project does not qualify for an exemption, then it would move to the next tier.
- **Tier 2** consists of determining whether or not the project is consistent with a GHG reduction plan that may be part of a local General Plan, for example. The concept embodied in this tier is equivalent to the existing consistency determination requirements in CEQA Guidelines Sections 15064(h)(3), 15125(d), or 15152(a). The GHG reduction plan must, at a minimum, comply with AB 32 GHG reduction goals, include an emissions inventory agreed upon by either the ARB or SCAQMD, have been analyzed under CEQA and have a certified final CEQA document, and have monitoring and enforcement components. If the proposed project is consistent with the qualifying local GHG reduction plan, it is not significant for GHG emissions. If the project is not consistent with a local GHG reduction plan, there is no approved plan, or the GHG reduction plan does not include all of the components described above, the project would move to Tier 3.

¹ SCAQMD Draft Guidance Document – *Interim CEQA Greenhouse Gas Significance Threshold* (October 2008).

- **Tier 3** establishes a screening significance threshold level to determine significance using a 90 percent GHG emission capture rate. The 90 percent capture rate GHG significance screening level in Tier 3 for stationary sources was derived using the following methodology. Using the SCAQMD's Annual Emission Reporting (AER) Program, the reported annual natural gas consumption for 1,297 permitted facilities for 2006 through 2007 was compiled and the facilities were ranked to estimate the 90th percentile of the cumulative natural gas usage for all permitted facilities. Approximately 10 percent of facilities evaluated comprise more than 90 percent of the total natural gas consumption, which corresponds to 10,000 MT of CO₂e/yr (the majority of combustion emissions comprise CO₂).

At the November 19, 2009, Board meeting, staff recommended the following GHG screening thresholds:

- **Residential:** 3,500 TPY CO₂e
- **Commercial:** 1,400 TPY CO₂e
- **Mixed-use:** 3,000 TPY CO₂e

If a project's GHG emissions exceed the GHG screening threshold, the project would move to Tier 4.

- **Tier 4** establishes a decision tree approach that includes compliance options for projects that have incorporated design features into the project and/or implement GHG mitigation measures.
 - Efficiency Target (2020 Targets)
 - 4.8 MT of CO₂e per SP for project-level threshold (land use emissions only) and total residual emissions not to exceed 25,000 million tons per year (MTY) of CO₂e
 - 6.6 MT of CO₂e per SP for plan-level threshold (all sectors)
 - Efficiency Target (2035 Targets)
 - 3.0 MT of CO₂e per SP for project-level threshold
 - 4.1 MT of CO₂e per SP for plan-level threshold

If a project fails to meet any of these emissions efficiency targets, the project would move to Tier 5.

- **Tier 5** would require projects that implement off-site GHG mitigation that includes purchasing offsets to reduce GHG emission impacts to purchase sufficient offsets for the life of the project (30 years) to reduce GHG emissions to less than the applicable GHG screening threshold level.

This analysis analyzes whether the project's GHG emissions should be considered cumulatively significant based on whether the project would:

- Exceed the City's GHG plan-level threshold of 4.1 MT per service population. This threshold was chosen because it is a planning level threshold for plans that have a horizon year of 2035. Since the Jurupa Valley General Plan is a planning level project with a horizon year of 2035 it is the most appropriate threshold to use in evaluating the impacts of GHG emissions.
- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases

The analysis uses compliance with AB 32, considered a "previously approved mitigation program," as set forth in the CEQA Guidelines Section 15064(h)(3), to determine whether the project's incremental contribution of GHGs represents a cumulatively considerable contribution to GCC. OPR's proposed

draft amendment to Section 15064.7 of the CEQA Guidelines reinforces the use of this approach. CEQA Guidelines Section 15064(h)(3) states three main conditions that a plan must meet to be sufficient for use as a basis for determining the significance of GHG emissions. The plan must:

1. Be “a previously approved plan or mitigation program.”
2. Provide “specific requirements that will avoid or substantially lessen the cumulative problem.”
3. “Be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency.”
 - AB 32 meets Conditions 1 and 3 provided above. Accordingly, in addition to determining whether the project’s GHG emissions exceed SCAQMD’s interim residential stationary-source threshold to determine the significance of the project’s GHG emission impact on GCC, consistency or inconsistency with the reduction targets in AB 32 is also evaluated. To do so, project features that implement specific reduction measures identified in the rules and regulations that implement AB 32 were evaluated.

4.7.5 Programmatic Impact Evaluation

4.7.5.1 Greenhouse Gas Plan, Policy, Regulation Consistency

| | |
|-----------|--|
| Threshold | Would the proposed project conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases? |
|-----------|--|

Programmatic Impacts. Table 4.7.D evaluates the consistency of the proposed project with the various federal and state energy conservation and other regulations related to GHG emissions.

The proposed project is not considered to be in conflict with GHG reduction goals under AB 32 or other State regulations. The CAT and the ARB have developed several reports to achieve the Governor’s GHG targets that rely on voluntary actions of California businesses, local government and community groups, and State incentive and regulatory programs. These include the CAT’s 2006 *“Report to Governor Schwarzenegger and the Legislature,”* the ARB’s 2007 *“Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California,”* and the ARB’s 2014 *“Proposed First Update to the Climate Change Scoping Plan: Building on the Framework.”*

The reports identify strategies to reduce California’s emissions to the levels proposed in EO S-3-05 and AB 32 that are applicable to the proposed project. The Proposed Scoping Plan update is the most recent document, and the strategies included in the Scoping Plan that apply to the project are contained in Table 4.7.D, which also summarizes the extent to which the project would comply with the strategies to help California reach the emission reduction targets.

The City of Jurupa Valley is included in the WRCOG Subregional CAP (SCAP) which states it is ...“for the communities of Jurupa Valley and Riverside, commercial/industrial energy takes up a larger share of emissions than residential energy, due to a more developed commercial and industrial building infrastructure” (SCAP pg. 2-4).

SCAP Figure 2-2 indicates the baseline for community emissions in Jurupa Valley is 500,000 MT CO₂e, and SCAG Figure 2-3 indicates the City has an average GHG emission of about 3.8 MT CO₂e per service population. The City’s service population is the number of residents and employees in the City, which is currently estimated at approximately 100,000 persons and 25,000 jobs (500,000 MT divided by 125,000 or 4.0 per person). The SCAP indicates accurate GHG generation figures are only applicable to residential uses which are consistent with the subregional GHG emission estimate shown in Table 4.7.D in the next Section (4.7.5.2).

SCAP Emission Reduction Targets. The WRCOG Subregional CAP establishes a community-wide emissions reduction target of 15 percent below 2010 levels which follows guidance from the California

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Air Resources Board (CARB) and the Governor's Office of Planning and Research (OPR). CARB and the California Attorney General have determined this approach to be consistent with the state-wide AB 32 goal of reducing emissions to 1990 levels. The Subregional CAP does not establish a reduction target for 2035 or future years; however, the SCAP identifies a reduction goal of 49 percent below baseline emissions levels to help the WRCOG subregion meet targets identified in SB 375 and Executive Order (EO) S-3-05. These projections recognize that the information, methodologies, and data availability may change between now and 2035. As described in SCAG Chapter 4..."progress toward achieving the 2020 emissions reduction target will be monitored over time through preparation of an annual memorandum documenting program implementation and performance. Following each annual report, WRCOG and the participating jurisdictions may adjust or otherwise modify the strategies to achieve the reductions needed to reach the target. Such adjustments could include more prescriptive measures, reallocation of funding to more successful programs, and modifications to the 2020 BAU emissions projection and reduction target based on revised population, housing, and employment growth estimates. Additionally, there will be a comprehensive inventory update prior to 2020 to track overall progress toward meeting the GHG reduction target" (SCAG pg. 2-7).

Community Emissions Targets. The SCAP set a community emissions target for the Subregion by 2020 of 4,959,240 MT CO₂e which is equivalent to a 15 percent reduction from 2010 baseline emissions of 5,834,400 MT CO₂e. This is a net a reduction of 2,330,647 MT CO₂e from the 2020 BAU emissions forecast of 7,289,887 MT CO₂e. The community-wide emissions reduction target is shown in Figure 2-7. SCAP strategies are expected to reduce community-wide emissions by 2,454,383 MT CO₂e by 2020, exceeding the target by approximately 2.1% (for a total 17.1% reduction).

Table 4.7.D lists the state and regional measures included in the Subregional CAP and provides a breakdown of the GHG reduction potential for these measures, while Table 4.7.E outlines to what degree the City of Jurupa Valley will participate in specific local implementation measures in the SCAP.

Tables 4.7.D and 4.7.E outline how the City will comply with the various state and local GHG reduction strategies in the Subregional CAP. With implementation of these strategies/measures and the goals, policies, and programs of the General Plan, the project's contribution to cumulative GHG emissions would be reduced to the greatest degree practical based on the programmatic nature of the General Plan. Therefore, the proposed General Plan also complies with and would not conflict with or impede the implementation of reduction goals identified in AB 32, the Governor's EO S-3-05, and other strategies to help reduce GHGs to the level proposed by the Governor. Many of the individual elements of the General Plan contain measures to reduce energy use, water consumption and pumping, and other activities in the City that generate GHGs. Thus, the project would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions.

Evaluation of General Plan Goals and Policies. Human activities contribute to increasing concentrations of GHG in the atmosphere. Measures to reduce potential impacts of criteria air pollutants, which indirectly also help reduce GHG emissions, are included throughout the 2017 General Plan. In addition to the Air Quality Element, the Land Use; Housing; Mobility; Conservation and Open Space; and Community Safety, Services and Facilities Elements include policies and programs to reduce GHG emissions and help slow the progression of climate change. The following goals, policies, and programs of the Air Quality Element of the 2017 General Plan are specifically related to minimizing GHG emissions to the greatest degree practical.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Air Quality Element

Goal

AQ 9 Climate Change

Policies

- AQ 9.1.1 **State and Regional Plans and Programs.** Monitor federal, state and regional plans and programs to stay abreast on emerging information, practices and strategies to address climate change.
- AQ 9.1.2 **Critical Infrastructure.** Locate critical infrastructure in areas not subject to severe climate change impacts, such as flooding.
- AQ 9.1.3 **Climate Action Plan.** Work with WRCOG to periodically monitor and update the Subregional Climate Action Plan.
- AQ 9.1.4 **Vulnerability.** Develop strategies to reduce the City's vulnerability to climate change impacts.

In addition to all the measures in the General Plan that are related to GHG emissions, Air Quality Element Policy AQ 9.1.3 clearly directs the City to work with WRCOG to regularly update the Subregional Climate Action Plan.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will help the City comply with the requirements of the WRCOG Subregional Climate Action Plan, so impacts will be less than significant and no mitigation is needed.

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. Implementation of the goals, policies, and programs of the 2017 General Plan will be consistent with the WRCOG Subregional Climate Action Plan so there will be no significant impacts relative to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases, and no mitigation is required.

4.7.5.2 Greenhouse Gas Emissions

| | |
|-----------|---|
| Threshold | Would the proposed project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? |
|-----------|---|

Programmatic Impacts. This section evaluates potential significant impacts to GCC that could result from implementation of the proposed 2017 General Plan. Because it is not possible to tie specific GHG emissions to actual changes in climate, this evaluation focuses on the GHG emissions from future development in the City under the 2017 General Plan.

Emissions estimates for future development under the 2017 General Plan are discussed below. Bearing in mind that CEQA does not require “perfection” but instead “adequacy, completeness, and a good faith effort at full disclosure,” the analysis below is based on methodologies and information available to the City and the applicant at the time this analysis was prepared. Estimation of GHG emissions in the future does not account for all changes in technology that may reduce such emissions; therefore, the estimates are based on past performance and represent a scenario that is worse than that which is likely to be encountered (after energy-efficient technologies have been implemented). While information is presented below to assist the public and decision-makers in understanding the project's potential contribution to GCC impacts, the information available to the City is not sufficiently detailed to allow a direct comparison between particular project characteristics and particular climate change impacts, nor between any particular proposed mitigation measure and any reduction in climate change impacts.

Construction and operation of future development would generate GHG emissions, with the majority of energy consumption (and associated generation of GHG emissions) occurring during operation (as opposed to during its construction) of future land uses. Typically, more than 80 percent of total operational energy consumption takes place during the use of a building, and less than 20 percent of energy is consumed during construction.¹ As of yet, there is no study that quantitatively assesses all of the GHG emissions associated with each phase of the construction and use of an individual development. Overall, the following activities associated with new development could directly or indirectly contribute to the generation of GHG emissions:

- **Construction Activities:** During construction of any given project, GHGs would be emitted through the operation of construction equipment and from worker and vendor vehicles, each of which typically uses fossil-based fuels to operate. The combustion of fossil-based fuels creates GHGs such as CO₂, CH₄, and N₂O. Furthermore, CH₄ is emitted during the fueling of heavy equipment.
- **Gas, Electricity, and Water Use:** Natural gas use results in the emission of two GHGs: CH₄ (the major component of natural gas) and CO₂ (from the combustion of natural gas). Electricity use can result in GHG production if the electricity is generated by combusting fossil fuel. California's water conveyance system is energy-intensive. Preliminary estimates indicate that the total energy used to pump and treat this water exceeds 6.5 percent of the total electricity used in the State per year.²
- **Solid Waste Disposal:** Solid waste generated by a new project could contribute to GHG emissions in a variety of ways. Landfilling and other methods of disposal use energy for transporting and managing the waste, and they produce additional GHGs to varying degrees. Landfilling, the most common waste management practice, results in the release of CH₄ from the anaerobic decomposition of organic materials. CH₄ is 25 times more potent a GHG than CO₂. However, landfill CH₄ can also be a source of energy. In addition, many materials in landfills do not decompose fully, and the carbon that remains is sequestered in the landfill and not released into the atmosphere.
- **Motor Vehicle Use:** Transportation associated with vehicles used for new development would result in GHG emissions from the combustion of fossil fuels in daily automobile and truck trips.

GHG emissions associated with future new development would occur over the short-term from construction activities and would consist primarily of emissions from equipment exhaust. There would also be long-term regional emissions associated with specific project-related new vehicular trips and stationary-source emissions, such as natural gas used for heating and electricity usage for lighting. Preliminary guidance from OPR and recent letters from the Attorney General critical of CEQA documents that have taken different approaches indicate that Lead Agencies should calculate, or estimate, emissions from vehicular traffic, energy consumption, water conveyance and treatment, waste generation, and construction activities. GHG emissions generated by new development would predominantly consist of CO₂. In comparison to criteria air pollutants such as O₃ and PM₁₀, CO₂ emissions persist in the atmosphere for a substantially longer period of time. While emissions of other GHGs, such as CH₄, are important with respect to GCC, emission levels of other GHGs are less dependent on the land use and circulation patterns associated with the proposed land use development project than are levels of CO₂. However, there are no established GHG thresholds at present for construction emissions.

Operational Emissions. Long-term operation of the 2017 General Plan would generate GHG emissions from area and mobile sources and indirect emissions from stationary sources associated with energy consumption. Mobile-source emissions of GHGs would include project-generated vehicle

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

trips associated with residential and commercial activities. Area-source emissions would be associated with activities such as landscaping and maintenance of proposed land uses, natural gas for heating, and other sources. Increases in stationary-source emissions would also occur at off-site utility providers as a result of demand for electricity, natural gas, and water by the proposed uses. In addition, methane generated from wastewater treatment and solid waste disposal are calculated. The data presented in Tables 4.7.F-K includes operational emissions in terms total and annual CO₂e GHG emissions from future developed land uses in the City.

According to the City of Jurupa Valley GHG emissions inventory conducted as part of the SCAP, the City's community-wide emissions were approximately 498,832 MT CO₂e in the baseline year (2011).¹ However, emissions from the generation of solid waste and the treatment and distribution of water and wastewater were not included in this inventory. Therefore, the City's community GHG emissions inventory has been updated with these emissions sources and presented in Table 4.7.F. The updated baseline inventory indicates the total GHG emission inventory for the City is approximately 599,679 MT CO₂e. SCAP Figure 2-6 indicates the City of Jurupa Valley has a "business as usual" emission forecast of approximately 800,000 MT CO₂e by 2035. However, based on the updated baseline emissions data, Table 4.7.G indicates the City's projected 2035 GHG community-wide emissions would be 979,440 MT CO₂e. This 2035 BAU emissions forecast does not include state, regional, and local GHG reduction measures.

Table 4.7.F: Existing City-Wide GHG Emissions

| Land Use/Activity | CO ₂ e (MT/year) | Percent of Total |
|---|-----------------------------|-----------------------------------|
| Residential Uses | | |
| Area Sources | 8,884 | 1.5% |
| Energy Sources | 54,242 | 9.0% |
| Waste Sources | 13,170 | 2.2% |
| Water Sources | 1,976 | 0.3% |
| Sub-Total | 78,272 | 13.0% |
| Non-Residential Uses | | |
| Area Sources | 3 | >0.01% |
| Energy Sources | 84,043 | 14.0% |
| Waste Sources | 56,756 | 9.5% |
| Water Sources | 20,048 | 3.3% |
| Sub-Total | 160,850 | 28.7% |
| Transportation | | |
| On-Road Transportation | 360,557 | 60.1% |
| Sub-Total | 360,557 | 60.1% |
| Total Emissions | 599,679 | 100% |
| Service Population | | |
| Residents | 97,774 | 80.7% |
| Gross Employment | 26,504 | 21.9% |
| Employees that live in CJV | -3,074 | 2.5% |
| Net Employment | 23,429 | 19.3% |
| Service Population | 121,203 | 100% |
| Emissions per Service Population | | 4.95 CO₂e/SP/Yr |

Table 4.7.G presents state policies and regional measures that will reduce the City's future GHG emissions without any actions from the City. This is also known as an adjusted BAU (ABAU)

¹ The City's base year differs from the SCAP because the City incorporated mid-year, on July 1, 2011.

WRCOG, AECOM, ICLEI, PMC, Atkins Global, and Fehr & Peers. 2011 Jurupa Valley Western Riverside Council of Governments Climate Action Plan Greenhouse Gas Emissions Inventory.

Draft Environmental Impact Report

scenario. Based on the combined GHG reduction potential of these measures (234,766 MT CO₂e), the City's projected 2035 ABAU emissions forecast is 744,674 MT CO₂e. (Table 4.7.H)

In addition to state and regional measures, the City has decided to implement local GHG reduction measures. Table 4.7.I presents these measures and their associated GHG reduction potential. Based on the GHG reduction potential of these local measures (27,656 MT CO₂e), the City's projected 2035 emissions forecast is 717,018 MT CO₂e (including State measures as well). (Table 4.7.J)
