| Local Measure By Sector | 2020 Reductions (MT CO ₂ e/yr) | City of Jurupa Valley Participation ¹ |
|--|---|---|
| E-1: Energy Action Plans | NA | None: In 2011, Southern California Edison (SCE) provided funding to WRCOG to implement the California Long-Term Energy Efficiency Strategic Plan (CEESP) developed by the California Energy Commission. WRCOG and 11 participating jurisdictions established the WRELP Program and adopted energy efficiency targets and programs to meet those targets, which will reduce utility costs and GHG emissions associated with the energy use at the municipal and community level. |
| E-2: Traffic and Street Lights | 728 | Platinum Level: 100% replacement of traffic and street lights to high efficiency bulbs by 2020 (11,000 kWh/yr from streetlights sub-sector of Local Government GHG Inventory (SCAP Appendix A). |
| E-3: Shade Trees | 32 | Platinum Level: Shade trees required for all new development (2,150 new trees by 2020). |
| Energy Sub-Total | 760 | |
| T-1: Bicycle Infrastructure Improvements | 2,116 | Silver Level: Implement 100% increase in bicycle lane miles from baseline level. |
| T-2: Bicycle Parking | 548 | Platinum Level: Amend zoning to require provision of bike parking for all multi-family or mixed-use projects consisting of a mix of residential, retail, and office space. |
| T-3: End of Trip Facilities | 175 | Gold Level: Amend zoning to require installation of end-of-trip facilities for new commercial buildings greater than 100,000 square feet. |
| T-4: Promotional Transp. Demand Management | 227 | Silver Level: Train an existing staff person to promote TDM strategies to existing business. |
| T-5: Transit Service Expansion | 122 | Silver Level: Work with RTA to increase fixed-route service miles by 5% by 2020. |
| T-6: Transit Frequency Expansion | 496 | Silver Level: Work with RTA to increase fixed-route service frequency by 5% over 2010 levels in transit priority areas as defined by SCAG in the RTP/SCS. |
| T-7: Traffic Signal Coordination | 3,350 | Silver Level: Coordinate traffic signals on an additional 10% of arterial roads that were not coordinated in the base year. |
| T-8: Density | 220 | Silver Level: Achieve a 5% increase in community-wide household and employment density over baseline conditions by 2020. |
| T-9: Mixed Use Development | 1,285 | Platinum Level: Achieve a 25% jobs/housing ratio improvement over baseline conditions. |
| T-10: Design/Site Planning | NA | None: Increase annual percentage of neighborhood streets with traffic calming treatments installed. |
| T-11: Pedestrian Only Areas | 233 | Silver Level: Designate one additional pedestrian-only area during weekends tied to a special event (e.g. farmer's market) over baseline conditions. |
| T-12: Limited Parking Req'd. for New Development | 3,459 | Gold Level: Amend zoning to reduce parking requirements for new non-residential development by 10% over baseline conditions. |
| T-13: High Frequency Transit Services | 1,801 | None: Increase number of corridors in which high frequency transit service has been implemented. |
| T-14: Voluntary Transp. Demand Management | NA | None: Increase percentage of employees in each jurisdiction participating in voluntary TDM programs. |
| T-15: Accelerated Bike Plan Implementation | NA | None: Increase annual percentage of bicycle facility miles identified in jurisdiction's Bike Plan installed. |
| T-16: Fixed Guideway Transit | NA | None: Install annual community-wide fixed guideway transit ridership. |
| T-17: Neighborhood | NA | None: Increase use of NEVs by 2020. |

2017 General Plan – City of Jurupa Valley
Draft Environmental Impact Report

Table 4.7.I: 2035 City GHG Reductions Achieved from Local Measures

| Local Measure By Sector | 2020 Reductions (MT CO ₂ e/yr) | City of Jurupa Valley Participation ¹ |
|--------------------------------------|---|---|
| Electric Vehicle Programs | | |
| T-18: Subsidized Transit | NA | None: Increase annual number of discounted transit passes provided per total of residents, students, and employees living, working, or going to school in the community. |
| Transit Sub-Total | 12,232 | |
| A-1: No Hearths | 14,448 | Prohibit installation of hearths in new development. |
| A-2: Electric Landscape Equipment | 215 | Require use of electrical equipment for landscaping activities. (assume 90% participation) |
| Area Sources Sub-Total | 14,663 | |
| TOTAL LOCAL ACTION REDUCTIONS | 27,656 | Summary: Various elements of the 2017 General Plan address all of the measures indicated with participation by the City of Jurupa Valley at the platinum, gold, or silver levels. |

Source: SCAP Table 3-2, Reductions Achieved from Local Measures

¹ SCAP has 3 participation levels: Silver (good); Gold (better); and Platinum (best).

Table 4.7.J: Year 2035 ABAU City-Wide GHG Emissions (State & Regional Measures)

| Land Use/Activity | CO ₂ e (MT/year) | Percent of Total |
|------------------------|-----------------------------|------------------|
| Area Sources | 577 | 0.1% |
| Energy | 211,958 | 29.5% |
| Waste | 22,250 | 3.1% |
| Water | 28,365 | 4.0% |
| Transportation | 454,629 | 63.4 |
| Total Emissions | 717,018 | 100% |

| | | |
|----------------------------|----------------|-------------|
| Service Population | | |
| Residents | 126,000 | 71.8% |
| Gross Employment | 53,500 | 30.5% |
| Employees that live in CJV | -3,962 | 2.3% |
| Net Employment | 49,558 | 28.2% |
| Service Population | 175,538 | 100% |

| | |
|---|-----------------------------------|
| Emissions per Service Population | 4.08 CO₂e/SP/Yr |
| SCAQMD Threshold | 4.1 CO ₂ e/SP/Yr |
| Significant? | No |

Source: WRCOG Sub-Regional CAP, CalEEMod 2016 data (Appendix E)

CJV = City of Jurupa Valley

CO₂e = carbon dioxide equivalent

MT = metric tons

SCAQMD = South Coast Air Quality Management District

SP = Service Population

At present, land uses and related traffic in the City generate 599,679 MT CO₂e per year while this is expected to increase to 717,018 MT CO₂e per year by 2035 (including state, regional, and local GHG reduction measures) based on the land uses outline in the 2017 General Plan. Future operational GHG emissions would result from the following sources:

Area Sources. Area sources of GHG emissions include architectural coatings, consumer products, hearth, and landscaping. Emissions from Area Sources will contribute less than 1 percent (0.1 percent) of the City's GHG emissions in 2035 and account for 577 MT of CO₂e/yr.

Energy Use. Buildings represent 39 percent of the United States' primary energy usage and 70 percent of its electricity consumption.¹ Electricity and natural gas consumption will account for almost 30 percent (211,958 MT of CO₂e/yr) of the City's GHG emissions in 2035.

Waste Generation. Emissions from waste generation and disposal are an estimate of methane generated from the decomposition of organic wastes (such as paper, food scraps, plant debris, wood, etc.) that were deposited in a landfill. Emissions from waste generation and disposal will contribute 3 percent of the City's GHG emissions in 2035 and account for 22,250 MT of CO₂e/yr.

Water Use. GHG emissions associated with energy used for water supply and conveyance, water treatment, water distribution, and wastewater treatment has been accounted for in the Energy Sources sectors. Biogenic CO₂ and methane generated from wastewater treatment will contribute 4 percent the City's GHG emissions in 2035 and account for 28,365 MT of CO₂e/yr.

Transportation. Mobile sources (vehicle trips and associated miles traveled) are the largest source of GHG emissions in California and represent approximately 38 percent of annual CO₂ emissions generated in the State. On-road transportation related emissions will account for approximately 63 percent (454,629 MT of CO₂e/yr) of the City's GHG emissions in 2035.

CFCs. At present, there is a federal ban on chlorofluorocarbons (CFCs); therefore, it is assumed that future development in the City would not generate emissions of CFCs. Therefore, it is not anticipated that future development would contribute significant emissions of these additional GHGs.

City GHG Standards. In addition to showing improvement over "Business As Usual" forecasts, the GHG emissions from future development can be compared to the City's adopted GHG significance threshold which is equivalent to the SCAQMD's Tier 4 threshold outlined in Section 4.7.4, *Thresholds of Significance*. South Coast Air Quality Management District's 2035 plan-level efficiency target of 4.1 MT CO₂e per service population or per capita. Table 4.13.C in Section 4.10, Population, Housing, and Employment, indicates the City is projected to have a population of 126,000 residents and 49,558 employees by 2035. If the projected Buildout service population of the City (residents and workers) is multiplied by the efficiency target (175,538 times 4.1), the City's efficiency goal would be 719,706 MT CO₂e/yr. Table 4.7.J indicates the City is expected to generate 717,018 MT CO₂e at buildout. Therefore, future development in the City under the proposed General Plan would be consistent with these goals and thresholds.

Evaluation of General Plan Goals and Policies. Human activities contribute to increasing concentrations of GHG in the atmosphere. Measures to reduce potential impacts of criteria air pollutants, which indirectly also help reduce GHG emissions, are included throughout the 2017 General Plan. In addition to the Air Quality Element, the Land Use; Housing; Mobility; Conservation and Open Space; and Community Safety, Services and Facilities Elements include policies and programs to reduce GHG emissions and help slow the progression of climate change. The following goals, policies, and programs of the Air Quality Element of the 2017 General Plan are specifically related to minimizing GHG emissions to the greatest degree practical.

Air Quality Element

Goal

AQ 9 Climate Change

Policies

AQ 9.1.1 State and Regional Plans and Programs. Monitor federal, state and regional plans and programs to stay abreast on emerging information, practices and strategies to address climate change.

¹ United States Department of Energy. 2003. *Buildings Energy Data Book*.

- AQ 9.1.2 **Critical Infrastructure.** Locate critical infrastructure in areas not subject to severe climate change impacts, such as flooding.
- AQ 9.1.3 **Climate Action Plan.** Work with WRCOG to periodically monitor and update the Subregional Climate Action Plan.
- AQ 9.1.4 **Vulnerability.** Develop strategies to reduce the City’s vulnerability to climate change impacts.

Implementation of these measures, plus the additional goals, policies, and programs in the General Plan regarding air pollution, energy conservation, water conservation, etc. will substantially reduce potential GHG emissions from future land uses (i.e., development) within the City. However, the City does not have an established GHG emission target for 2035, a local emissions inventory, and it has not been quantified how the proposed General Plan goals, policies, and programs will achieve the emission targets of the WRCOG Subregional Climate Action Plan.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will help reduce greenhouse gas emissions impacts from future land uses (i.e., greenhouse gas emissions generated by new development) but will not be able to reduce impacts to less than significant levels.

Programmatic Mitigation Measures. Since the WRCOG Sub-Regional Climate Action Plan has not had a CEQA document prepared for it, the following measure is proposed to more effectively reduce potential GHG emissions as the City builds out under the General Plan:

- 4.7.5.2A** Within two years of General Plan approval, the City will prepare and adopt a Climate Action Plan (CAP) specifically for the City of Jurupa Valley, including a 2030 and 2035 reduction target and local emission inventory. The City CAP will be consistent with the WRCOG Subregional CAP but will identify specific additional measures in addition to those outlined in various elements of the General Plan for the reduction of future GHG emissions. The City CAP shall demonstrate how the City will reduce its greenhouse gas emissions to 50 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050, consistent with State law and current guidance on GHG reduction planning.

Specific actions that may be included in the City CAP to help keep City-wide emissions below the SCAQMD service population significance threshold include but are not limited to requiring the installation of electrical and conduit improvements to support the installation of future roof-mounted photovoltaic solar systems and electrical vehicle charging stations for individual homes and businesses.

Level of Programmatic Impact After Mitigation. Implementation of the recommended Mitigation Measure 4.7.5.2A, and the 2017 General Plan goals, policies, and programs regarding GHG emissions, potential programmatic climate change impacts will be reduced to less than significant levels.

4.7.6 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City’s General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a “list” of cumulative projects or a “plan summary” of long-term development impacts. In this case, the growth projections of the General Plan

represent the “plan summary” for the purposes of characterizing cumulative impacts related to General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

This analysis has concluded that the amount of GHG emissions from future development within the City and subject to the 2017 General Plan will be less than significant.

Implementation of applicable regulatory requirements (e.g., California Green Building Code, Title 24, etc.), the goals, policies, and programs of the 2017 General Plan, including the Air Quality Element, the City’s participation in the WRCOG Subregional Climate Action Plan, and Mitigation Measure 4.7.5.2A will reduce potential GHG emissions of future land uses in the City to a less than significant contribution to cumulatively considerable regional GHG emission impacts.

Climate change is occurring because of increased concentrations of greenhouse gases (GHG) globally. No one source or project can generate enough GHG emissions to increase global concentrations in the upper atmosphere. Rather, it is the combination of all anthropogenic sources of emissions that have occurred in the past and continue to be emitted that is causing global climate change impacts. Due to the nature of the assessment of GHG emissions and the effects of global climate change, impacts are only analyzed from a cumulative context. The analysis provided above includes the analysis of both the project and cumulative impacts; thus, impacts related to GHG emissions and compliance with applicable policies would be less than significant.

4.8 HAZARDS AND HAZARDOUS MATERIALS

This section describes and analyzes the potential impact to human health and the environment due to the exposure to hazardous materials or conditions that could be encountered as a result of the construction activities within the proposed project and also the operational activities of the project. Potential effects include those associated with the routine transport, use, or disposal of hazardous materials; reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment; safety hazards, impairment/interference with adopted emergency response plans or emergency evacuation plans, and exposure of people or structures to risks involving wildland fires. Geological and seismic hazards are addressed in Section 4.6. Hydrology, water quality, and flood hazards are addressed Section 4.9, *Hydrology and Water Quality*.

Information for this analysis is based on review of the following:

- *Community Safety, Services, and Facilities Element, 2017 General Plan, December 2016.*
- *Land Use Element. 2017 General Plan, (draft), December 2016.*
- *Environmental Justice Element, 2017 General Plan, (draft), December 2016.*

4.8.1 Existing Setting

Portions of Jurupa Valley may be subjected to hazards such as flooding, dam inundation, seismic occurrences and structure and wildland fire. These hazards are located throughout Jurupa Valley and pose varying degrees of risk and danger. Some hazards must be avoided entirely while the potential impacts of others can be mitigated by special building techniques and other measures.

Hazardous materials are substances that have the potential to cause harm to humans, animals, or the environment, by themselves or through interaction with other factors. In Jurupa Valley, hazardous materials include petroleum products, solvents, pesticides and other substances used in or generated by commercial, industrial, agricultural, or residential activities. State and federal laws govern the storage, transport, and disposal of hazardous materials.

Contaminated sites are another source of hazardous materials in Jurupa Valley. The Stringfellow Remediation Site near CA-60 and Pyrite Street is the most well-known contaminated site in the region. The former hazardous waste disposal site leached toxins into the environment and has been undergoing remediation through the Federal Superfund process. In addition to contaminating the surface and soil, the site leaked toxins into Pyrite Creek and the groundwater basin, which traveled in a southwest-trending 'plume' to the community of Glen Avon and other areas. The remediation effort includes monitoring and remediation of groundwater supplies. Table 4.8.A summarizes a number of facilities within the City that are catalogued on the Envirostor database of the State Department of Toxic Substances Control (DTSC).

Table 4.8.A: Local Hazmat Facilities¹

| DTSC# | Facility | Status | Type | Address |
|--------------|---|---------------------------------------|-------------------|----------------------------------|
| 33490001 | Stringfellow Hazardous Waste Site - Plume Characterization and Monitoring | Certified – Operation and Maintenance | Federal Superfund | 3450 Pyrite Street, Riverside |
| 60002365 | Stringfellow Hazardous Waste Site – Plant Operation and Monitoring | Certified – Operation and Maintenance | Federal Superfund | 3450 Pyrite Street, Riverside |
| 71002959 | Aluminum Die Casting | Inactive – Needs Evaluation | Tiered Permit | 10775 San Sevaine Way, Mira Loma |

| 70000079 | Readiness Center | No Action Required | School Investigation | Southwest Mustang Lane, Riverside |

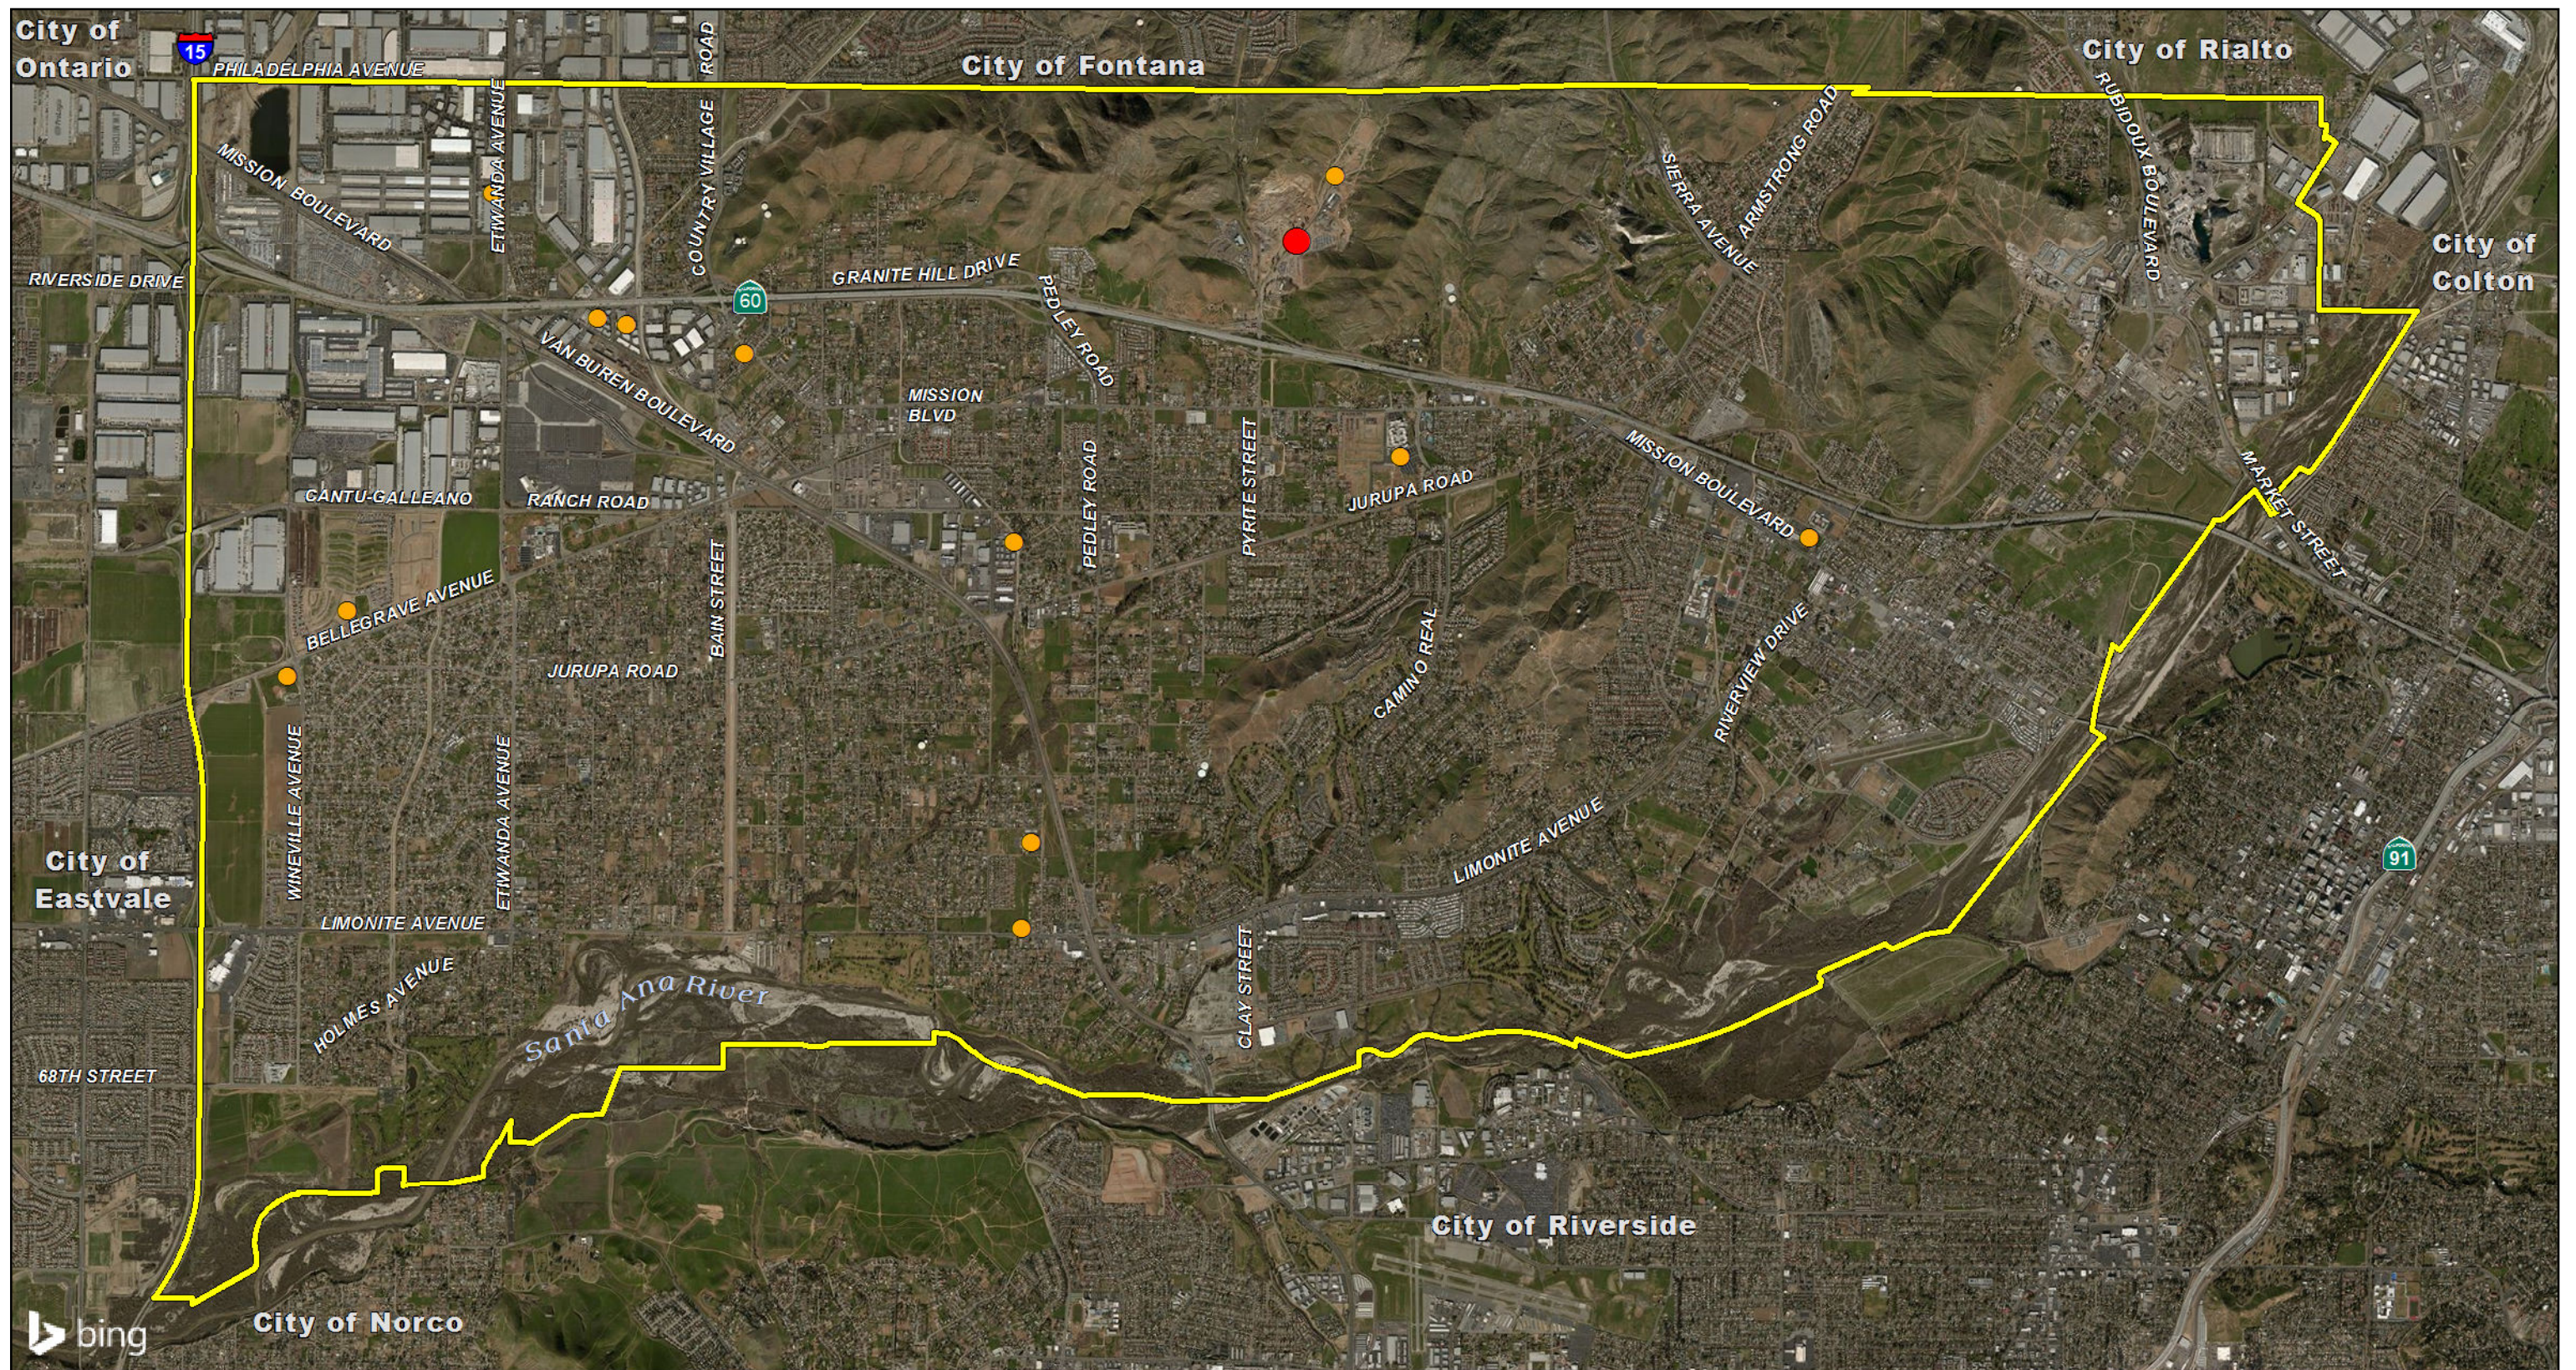

Source: California Department of Toxic Substances Control (DTSC), Envirostor website database, accessed August 11, 2016

¹ See Figure 4.8.1, Local Hazmat Facilities (NOTE: list may not include every facility that stores or handles hazardous materials, only those sites listed on the Envirostor database for Jurupa Valley).

Due to the rural and somewhat mountainous nature and vegetation in the northern portion of the City, the foothill areas and mountainsides are subject to a risk of fire hazards. The highest danger of wildfires can be found in the most rugged terrain where, fortunately, development intensity is relatively low (i.e., northern Jurupa Hills).

Hazard Mitigation Plans exist at the federal, state, regional and local Level. The California Disaster Mitigation Act of 2000 requires state, local and tribal governments to prepare Hazard Mitigation Plans that address actions and strategies to mitigate hazards, risks, and vulnerabilities. The City of Jurupa Valley is in the process of adopting a Local Hazard Mitigation Plan (LHMP) and participates in the County of Riverside Multi-Jurisdictional Local Hazard Mitigation Plan (MHFP). The MHFP is currently being reviewed by FEMA. The plans set goals to mitigate potential risks from natural and man-made hazards, identify vulnerabilities, provide recommendations for actions, evaluate resources, and identify future mitigation planning and maintenance of existing plan.

The City also has an Emergency Operations Plan (EOP) that addresses how the City will respond to emergency situations ranging from minor incidents to large-scale disasters. The plan addresses four primary phases of emergency operation including Preparedness, Response, Recovery, and Mitigation. The plan discusses the activation and management of the City's Emergency Operations Center (EOC), which may be set up during an emergency to manage the event and coordinate with other EOCs such as the Riverside County EOC. The EOC also coordinates the sharing of resources under the California Mutual Aid Agreement.

Local Hazmat Sites

THIS PAGE INTENTIONALLY LEFT BLANK

4.8.1.3 NOP/Scoping Comments

No public or agency comments were made during the scoping meeting about hazards or hazardous materials.

4.8.2 Regulatory Framework

4.8.2.1 Federal Regulations

Comprehensive Environmental Response, Compensation, and Liability Act. Discovery of environmental health damage from disposal sites prompted the U.S. Congress to pass the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund). The purpose of the CERCLA is to identify and clean up chemically contaminated sites that pose a significant environmental health threat. The Hazard Ranking System is used to determine whether a site should be placed on the National Priorities List for cleanup activities.

Superfund Amendments and Reauthorization Act. The Superfund Amendments and Reauthorization Act (SARA) pertain primarily to emergency management of accidental releases. It requires formation of State and local emergency planning committees, which are responsible for collecting, material handling, and transportation data for use as a basis for planning. Chemical inventory data are made available to the community at large under the “right-to-know” provision of the law. In addition, SARA also requires annual reporting of continuous emissions and accidental releases of specified compounds. These annual submissions are compiled into a nationwide Toxics Release Inventory (TRI).

Resource Conservation and Recovery Act. The Resource Conservation and Recovery Act (RCRA) Subtitle C addresses hazardous waste generation, handling, transportation, storage, treatment, and disposal. It includes requirements for a system that uses hazardous waste manifests to track the movement of waste from its site of generation to its ultimate disposition. The 1984 amendments to the RCRA created a national priority for waste minimization. Subtitle D establishes national minimum requirements for solid waste disposal sites and practices. It requires states to develop plans for the management of wastes within their jurisdictions. Subtitle I requires monitoring and containment systems for underground storage tanks that hold hazardous materials. Owners of tanks must demonstrate financial assurance for the cleanup of a potential leaking tank.

Hazardous Materials Transportation Act. The Hazardous Materials Transportation Act is the statutory basis for the extensive body of regulations aimed at ensuring the safe transport of hazardous materials on water, rail, highways, in the sky, or in pipelines. It includes provisions for materials classification, packaging, marking, labeling, placarding, and shipping documentation. The act of regulating the transport of hazardous materials on state highways is governed by the United States Department of Transportation (USDOT), as described in Title 49 of the Code of Federal Regulations¹ and by Title 13 of the California Code of Regulations. The State Office of Hazardous Materials Safety enforces regulations for the safe transportation of hazardous materials.

4.8.2.2 State Regulations

California Code of Regulations. Most state and federal regulations and requirements that apply to generators of hazardous waste are spelled out in the California Code of Regulations (CCR), Title 22, Division 4.5. Title 22 contains the detailed compliance requirements for hazardous waste generators, transporters, treatment, storage, and disposal facilities. Because California is a fully authorized State according to RCRA, most RCRA regulations (those contained in 40 Code of Federal Regulations [CFR] 260, et seq.) have been duplicated and integrated into Title 22. However, because the Department of Toxic Substance Control (DTSC) regulates hazardous waste more stringently than the

¹ Code of Federal Regulations, Title 49—Transportation, Pipeline and Hazardous Materials Safety Administration, Department of Transportation, <http://ecfr.gpoaccess.gov/cgi/t/text/text>.

U.S. EPA, the integration of California and federal hazardous waste regulations that make up Title 22 do not contain as many exemptions or exclusions as does 40 CFR 260. As with the California Health and Safety Code, Title 22 also regulates a wider range of waste types and waste management activities than do the RCRA regulations in 40 CFR 260. To aid the regulated community, California compiled the hazardous materials, waste and toxics-related regulations contained in CCR, Titles 3, 8, 13, 17, 19, 22, 23, 24, and 27 into one consolidated CCR, Title 26 “Toxics.” However, the California hazardous waste regulations are still commonly referred to as Title 22. For the purposes of clarity, because of the extensive reach of Title 22 and Title 26, many common household products sold in grocery stores and home improvement warehouses qualify as hazardous materials. These items include household cleaners, detergents, paint, motor oil, lubricants, glues, pesticides, etc. The term “hazardous materials” is also defined to include many onsite materials as well, such as lubricants, fuel, etc. Thus, when this section of the EIR discusses the transport and storage of “hazardous materials,” it is referring to the potential transport of bulk products to project locations and to the temporary storage of such materials at project sites prior to repackage and transport to subsequent destinations.

Cortese List: Section 65962.5(a). Government Code Section 65962.5 requires the California Environmental Protection Agency (CalEPA) to develop at least annually an updated Hazardous Waste and Substances Sites list (Cortese List). The Cortese List is a planning document used by the State, local agencies, and developers to comply with CEQA requirements in providing information about the location of hazardous materials release sites. Release sites include or hazardous materials release sites may include the following:

- All hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code.
- All land designated as hazardous waste property or border zone property pursuant to Article 11 (commencing with Section 25220) of Chapter 6.5 of Division 20 of the Health and Safety Code.
- All information received by the Department of Toxic Substances Control pursuant to Section 25242 of the Health and Safety Code on hazardous waste disposals on public land.
- All sites listed pursuant to Section 25356 of the Health and Safety Code.
- All sites included in the Abandoned Site Assessment Program.

The California DTSC is responsible for a portion of the information contained in the Cortese List. Other state and local government agencies are required to provide additional hazardous material release information for the Cortese List.

California Emergency Services Act. Government Code 8550–8692 provides for the assignment of functions to be performed by various agencies during an emergency so that the most effective use may be made of all manpower, resources, and facilities for dealing with any emergency that may occur. The coordination of all emergency services is recognized by the State to mitigate the effects of natural, man-made, or war-caused emergencies that result in conditions of disaster or extreme peril to life, property, and the resources of the State, and generally, to protect the health and safety and preserve the lives and property of the people of California.

State Fire Plan. The State Board of Forestry and the California Department of Forestry and Fire Protection have drafted a comprehensive update of the State Fire Plan for wildland fire protection in California. The planning process defines a level of service measurement, considers assets at risk, incorporates the cooperative interdependent relationships of wildland fire protection providers, provides for public stakeholder involvement, and creates a fiscal framework for policy analysis.

4.8.2.3 City General Plan

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the 2017 General Plan Community Safety, Services and Facilities, Land Use, and Environmental Justice

Elements of the General Plan are related to hazards and hazardous materials, fire safety, and emergency response plans. Geological and seismic hazards are addressed in Section 4.6. Hydrology, water quality, and flood hazards are addressed Section 4.9, *Hydrology and Water Quality*.

Community Safety, Services and Facilities Element

Goal

- CS 1 Minimize risks resulting from natural and manmade hazards to residents and businesses.

Policies

- CS 1.1.31 **Federal/State Laws.** Comply with federal and state laws regarding the management of hazardous waste and materials.
- CS 1.1.32 **Hazardous Waste Storage/Disposal.** Identify, assess and mitigate safety hazards from the storage, use and disposal of hazardous materials through the development review process.
- CS 1.1.33 **Hazardous Waste Collection.** Encourage and as resources allow, support household hazardous waste collection activities.
- CS 1.1.34 **Stringfellow Remediation Site.** Encourage and support state and federal efforts to complete the clean-up the Stringfellow Remediation site and related groundwater and soil contamination.
- CS 1.1.35 **Information Dissemination.** Disseminate information to the public on the storage, use, and disposal of hazardous materials.
- CS 1.1.23 **Fire Prevention.** Develop and enforce construction and design standards that ensure that proposed development incorporates fire prevention features through the following:
- a. All proposed construction shall meet minimum standards for fire safety as defined in the City Building or Fire Codes, or by City zoning, or as dictated by the Building Official based on building type, design, occupancy, and use.
 - b. In addition to the fire safety provisions of the Uniform Building Code and Uniform Fire Codes, apply additional standards for high-risk, high occupancy, hospital and health care facilities, dependent care, emergency operation centers, and other essential or “lifeline” facilities, per County or State standards. These shall include assurance that structural and nonstructural architectural elements of the building will not:
 - impede emergency egress for fire safety staffing/personnel, equipment, and apparatus; nor
 - hinder evacuation from fire, including potential blockage of stairways or fire doors.
 - c. Proposed development in Hazardous Fire areas shall provide secondary public access, unless determined unnecessary by Cal Fire or City Building Official.
- CS 1.1.24 **Adjacent Natural Vegetation.** Development that adjoins large areas of native vegetation will require fuel modification with drought tolerant landscaping that blends with the natural vegetation to the greatest extent possible.
- CS 1.1.25 **Wildfire Hazards.** Encourage, and as resources allow, support Cal Fire and other agency efforts to reduce wildfire hazards and improve fire-fighting capacity in order to successfully respond to multiple fires.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- CS 1.1.26 **Gas Shutoff.** Require automatic natural gas shutoff earthquake sensors in high-occupancy industrial and commercial facilities and encourage their installation in all residences.
- CS 1.1.27 **Coordination.** During preparation and implementation of the City's capital improvement programs, encourage coordination between Cal Fire and Community Service Districts providing water services in Jurupa Valley to improve firefighting infrastructure, by proposing or requiring, when appropriate:
- Replacement and/or relocation of old cast-iron pipelines and inadequate water mains when street improvements are planned;
 - Assessment of impact fees as a condition of development; and
 - Redundant emergency distribution pipelines in areas of potential ground failure or where determined to be necessary.
- CS 1.1.28 **Fire Protection Master Plan.** Continue to utilize the Riverside County Fire Protection Master Plan and Jurupa LHP as the base documents to implement the goals and objectives of the Community Safety Element.
- CS 1.1.29 **Water Resources.** Encourage and as resources allow, support efforts to utilize existing water bodies, tanks, and water wells in the City for emergency fire suppression water sources.
- CS 1.1.30 **Brush Clearance.** Utilize ongoing brush-clearance fire inspections to educate homeowners on fire prevention tips).

Programs

- CS 1.1.1.5 **Fire Safety Planning.** Conduct and implement long-range fire safety planning, including stringent building, fire, subdivision, and municipal code standards, improved infrastructure, and improved mutual aid agreements with the private and public sectors.
- CS 1.1.1.6 **Fire Response Agreements.** Review inter-jurisdictional fire response agreements, and improve firefighting resources as recommended in the County Fire Protection Master Plan, to keep pace with development and to ensure that:
- Fire reporting and response times do not exceed those listed in the County Fire Protection Master Plan identified for each of the development densities described;
 - Fire flow requirements (water for fire protection) are consistent with Insurance Service Office (ISO) recommendations; and
 - The planned deployment and height of aerial ladders and other specialized equipment and apparatus are sufficient for the intensity of development anticipated.

Policies

- CS 1.1.36 **Multi-Hazard Functional Plan.** Strengthen the Multi-Hazard Functional Plan and maintain mutual aid agreements with federal, state, local agencies and the private sector to assist in:
- a. clearance of debris in the event of widespread slope failures, collapsed buildings or structures, or other circumstances that could result in blocking emergency access or regress;
 - b. heavy search and rescue;
 - c. fire suppression;
 - d. hazardous materials response;
 - e. temporary shelter;
 - f. geologic and engineering needs;

- g. traffic and crowd control; and
- h. building inspection.

- CS 1.1.37 **Hazardous Waste Handling.** Require businesses, utilities, and industrial facilities that handle hazardous materials to:
- install automatic fire and hazardous materials detection, reporting and shut-off devices; and
 - install an alternative communication system in the event power is out or telephone service is saturated following an earthquake.
- CS 1.1.38 **Self-Sufficiency.** Use incentives and disincentives to persuade private businesses, consortiums, and neighborhoods to be self-sufficient in an emergency by:
- maintaining a fire control plan, including an onsite firefighting capability and volunteer fire response teams to respond to and extinguish small fires; and
 - identifying medical personnel, employees, or local residents who are capable and certified in first aid and CPR.
- CS 1.1.39 **Critical Facilities.** Ensure that critical facilities such as City Hall, Sheriff's Substations, City Fire Stations, electrical substations, and community-service district offices, water and sewer facilities are subject to the following design considerations:
- a. Require that special development standards, designs and construction practices be implemented to reduce risk to of compromise in a disaster to acceptable levels for capital improvements, utility projects, and development projects involving critical facilities, large-scale residential development, and major commercial or industrial development. Special standards should be applied through conditional use permits and the subdivision review process and where appropriate, impact fees should be assessed to finance required actions.
 - b. Require mitigation measures to reduce potential damage caused by ground failure for sites determined to have potential for liquefaction. Such measures shall apply to critical facilities, utilities, and large commercial and industrial projects as a condition of project approval.
 - c. Require that planned lifeline utilities, as a condition of project approval, be designed, located, structurally upgraded, fit with safety shutoff valves, be designed for easy maintenance, and have redundant back up lines where unstable slopes, earth cracks, active faults, or areas of liquefaction cannot be avoided.
 - d. Review proposed uses of fault setback areas closely to ensure that City infrastructure (roads, utilities, sanitary and storm sewers) are not unduly placed at risk by the developer. Insurance, bonding, or compensation plans should be used to compensate the City for the potential costs of repair.
- CS 1.1.40 **Strengthen Utilities/Lifelines.** Encourage the strengthening of planned and existing utilities and lifelines, the retrofit and rehabilitation of structurally unsound utility structures and public facilities, and the relocation of certain critical facilities where appropriate.
- CS 1.1.41 **Alternative Facilities.** Encourage alternatives that improve site safety for the protection of critical facilities, including property acquisition for open space, change in building use or occupancy, or other appropriate measures that can reduce risks posed by hazards.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- CS 1.1.42 **Critical Facilities in Inundation Areas.** Discourage development of critical facilities that are proposed in dam failure inundation areas, and apply hazardous materials safety guidelines within such zones.
- CS 1.1.43 **Santa Ana River Levees.** Ensure the City's emergency preparedness plans include response protocols for the breaching of the Santa Ana River levees.
- CS 1.1.44 **Rebuilding After Disaster.** Allow rebuilding after a disaster consistent with the General Plan allowing exceptions on a case-by-case basis for previously non-conforming uses and structures when such an action would be consistent with public safety goals and in the City's best interests.

Programs

- CS 1.1.1.7 **Post-Disaster Recovery.** Develop plans for short-term and long-term post-disaster recovery.
- CS 1.1.1.8 Coordinate with the Public Utilities Commission (PUC) and/or utilize the Capital Improvement Program, to strengthen, relocate, or take other appropriate measures to safeguard high-voltage lines, water, sewer, natural gas and petroleum pipelines, and trunk electrical and telephone conduits that:
- extend through areas of high liquefaction potential;
 - cross active faults; or
 - traverse earth cracks or landslides.
- CS 1.1.1.9 **Earthquake Drills.** Conduct City earthquake drills and, where appropriate:
- Develop internal scenarios for City emergency response, including emergency drills; and
 - test back-up power generators in public facilities and other critical facilities taking part in emergency drills.
- CS 1.1.1.10 **Information Dissemination.** Improve management and emergency dissemination of information using portable computers with geographic information systems and disaster-resistant Internet access, to obtain:
- Hazardous Materials Disclosure Program Business Plans regarding the location and type of hazardous materials;
 - real-time information on seismic, geologic, or flood hazards; and the locations of high-occupancy, immobile populations, potentially hazardous building structures, utilities and other lifelines.

Land Use Element

Policies

- LUE 3.5 **Residential Compatibility.** Commercial uses abutting residential properties shall be designed to protect the residential use from the impacts of noise, vibration, light, fumes, odors, vehicular traffic, parking, and safety hazards.
- LUE 3.18 **Toxic Materials.** Prohibit the development of industrial and business park uses that use, store, produce, or transport toxic substances, or which generate unacceptable levels of noise or air pollution.
- LUE 4.3 **Locations.** New public facilities shall be located and designed to protect sensitive uses, such as schools and housing, from impacts due to noise, vibration, light, fumes, odors, vehicular traffic, and parking and safety hazards.
- LUE 5.43 Special Development Requirements for the Policy Area (Stringfellow Remediation Site):

- a. Piped water and domestic sewer service shall be provided.
 - b. Clearance from the appropriate State authorities must be provided and must indicate that all significant hazards have been abated and the proposed project can occur without jeopardizing public health and safety, or that any proposed clean-up plans have been determined adequate by the State to permit development of the site.
 - c. In general, only commercial and industrial uses, which do not consist of a high concentration of people, shall be permitted within this area. A residence for an onsite caretaker shall not be permitted without clearance from the State.
- LUE 5.53 **ALUP Compliance.** To provide for the orderly operation and development of Flabob and Riverside Municipal Airports and the surrounding area, the City will comply with the Airport Land Use Compatibility Plan as fully set forth in Appendix 4.0 and as summarized in Table-34, as well as any applicable policies related to airports in the Land Use, Circulation, Safety and Noise Elements of the 2017 General Plan, unless the City Council overrides the Plan as provided for in State law.
- LUE 5.54 **Development Review.** Until such time as 1) the Commission finds the City's General Plan to be consistent with the ALUP, or 2) the City Council has overruled the Commission's determination of inconsistency, or 3) the Commission elects not to review a particular action, the City will refer all *major land use actions* to the Airport Land Use Commission for review, pursuant to Policy 1.5.3 of the ALUP.
- LUE 5.55 **Continued Airport Operation.** Support the continued operation of Flabob and Riverside Municipal Airports to help meet airport services needs within the land-use compatibility criteria with respect to potential noise and safety impacts.
- LUE 5.56 **Consistency Requirement.** Review all proposed projects and require consistency with any applicable provisions of the Riverside County Airport Land Use Plan as set forth in Appendix A-4.0, and require General Plan and/or Zoning Ordinance amendments to achieve compliance, as appropriate.
- LUE 5.57 **ALUP Amendments.** Review all subsequent amendments to any airport land-use compatibility plan and either adopt the plan as amended or overrule the Airport Land Use Commission as provided by law (Government Code Section 65302.3).
- LUE 5.58 **General Plan Adoption or Amendment.** Prior to the adoption or amendment of this General Plan or any specific plan, or the adoption or amendment of a zoning ordinance or building regulation within the planning boundary of any airport land use compatibility plan, the City will refer such proposed actions for determination and processing as provided by the Airport Land Use Law.
- LUE 5.59 **Cluster Development.** Allow the use of development clustering and/or density transfers to meet airport compatibility requirements as set forth in the applicable airport land-use compatibility plan.
- LUE 5.60 **Bird-attracting Uses.** In accordance with FAA criteria, avoid locating sanitary landfills and other land uses that are attract birds within 10,000 feet of any runway used by turbine-powered aircraft and within 5,000 feet of other runways. Also, avoid locating attractors of other wildlife that can be hazardous to aircraft operations in locations adjacent to airports.
- LUE 5.61 **Encroachment.** Ensure that no structures or activities encroach upon or adversely affect the use of navigable airspace.
- LUE 5.62 **Voluntary Review.** The City, from time to time, may elect to submit proposed actions or projects voluntarily that are not otherwise required to be submitted to the ALUC under the Airport Land Use Law in the following circumstances:

- a. Clarification: If there is a question as to the purpose, intent or interpretation of an airport land use compatibility plan (CLUP) or its provisions; or
- b. Advisory: If assistance is needed concerning a proposed action or project relating to Airport Land Use matters.

LUE 5.63 **Airport Referrals.** All development proposals located within an Airport Influence Area will be submitted to the affected airport.

LUE 9.1 **Land Use Compatibility.** Require land to be developed and used in accordance with the General Plan, specific plans and community and village plans to ensure compatibility and minimize impacts.

Environmental Justice Element

EJ 2 Land Use and the Environment

Goal

EJ3 A reduction in disproportionate environmental burdens affecting low-income and minority populations.

Policies

EJ 2.1.8 **Separation of Uses.** Build new sensitive land uses with sufficient buffering from industrial facilities and uses that pose a significant hazard to human health and safety. The California ARB recommends that sensitive land uses be located at least 1,000 feet from hazardous industrial facilities.

EJ 2.1.11 **Toxic Emissions.** Ensure that low-income and minority populations understand the effect of projects that may use or generate toxic materials or emissions.

EJ 2.1.17 **Brownfield Sites.** Promote the remediation and reuse of contaminated brownfield sites within the City, with priority given to those near environmental justice populations.

EJ 4.1.5 **Applicant Responsibilities.** Require applicants of residential remodel and rehabilitation projects to remediate lead-based paint, mold and mildew and any other structural hazards.

4.8.3 Methodology

Evaluation of hazards and hazardous material impacts included a focus on the use, generation, management, transport, and disposal of hazardous or potentially hazardous materials within the planning area. In determining the level of significance, the analysis assumes that implementation of the proposed General Plan would be in compliance with relevant local, state, and federal laws and regulations pertaining to the use, storage, and disposal of hazardous materials.

4.8.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. Based on Appendix G of the *CEQA Guidelines*, the proposed project would result in a significant adverse impact with regard to hazards if it were to:

- Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;
- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;

- Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;
- Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment;
- For a project located within an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, result in a safety hazard for people residing or working in the project area;
- For a project located within the vicinity of a private airstrip, result in a safety hazard for people working in the project area;
- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation; and/or

Result in the exposure of people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands.

4.8.5 Programmatic Impact Evaluation

4.8.5.1 Routine Transport, Use, or Disposal of Hazardous Materials and Reasonably Foreseeable Release of Hazardous Materials

| | |
|-----------|---|
| Threshold | Would the project create a significant hazard to the public through the routine transport, use, or disposal of hazardous materials? Would the project create a significant hazard to the public or the environment through reasonably foreseeable release of hazardous materials into the environment? |
|-----------|---|

Programmatic Impacts. There is a possibility that future development in the City, especially industrial projects, could accidentally release hazardous materials within the City during routine use, transport, or disposal. The most likely method of release would be a traffic accident involving one or more vehicles hauling hazardous materials. Additionally, there are many vacant parcels which could be the site of earlier development or unknown dumping of potentially hazardous materials. Many properties in the City have been developed prior to existing federal and state laws and regulations regarding hazardous materials. As these properties are redeveloped in the future, there is a possibility that hazardous materials such as asbestos, lead-based paint, etc. could be encountered.

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and programs of the 2017 General Plan Community Safety, Services, and Facilities Element, Land Use Element, and Environmental Justice Element of the General Plan are specifically related to routine transport, use, or disposal of hazardous materials and reasonably foreseeable upset and accident conditions (full text of actions are provided in Section 4.8.2.3).

Community Safety, Services, and Facilities Element

Goal

CS 1 Minimize risks from natural and manmade hazards to residents and businesses.

Policies

- CS 1.1.31 Comply with federal and state laws regarding hazardous wastes and materials.
- CS 1.1.32 Identify, assess and mitigate safety hazards from the use of hazardous materials.
- CS 1.1.33 Encourage household hazardous waste collection activities.
- CS 1.1.34 Support clean-up of the Stringfellow Site (groundwater and soil contamination).

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- CS 1.1.35 Provide public information on storage, use, and disposal of hazardous materials.
- CS 1.1.36 Strengthen the Multi-Hazard Functional Plan and maintain mutual aid agreements.
- CS 1.1.37 Require businesses, utilities, and industrial facilities to handle hazardous materials in prescribed safe ways.

Land Use Element

Goals

- LUE 3.5 Protect residential properties from hazards related to adjacent non-residential uses.
- LUE 3.18 Prohibit the development of uses that use, store, produce, or transport toxic substances, or which generate unacceptable levels of noise or air pollution.
- LUE 4.3 Protect sensitive receptors from impacts due to noise, vibration, light, fumes, odors, vehicular traffic, and parking and safety hazards.

Environmental Justice Element

Goals

- EJ 2.1.8 Separate sensitive land uses from industrial or other impactful facilities.
- EJ 2.1.11 Help the public understand the effects of toxic materials or emissions.

Level of Programmatic Impact Before Mitigation. Enforcement of compliance with applicable local, state, and federal laws, regulations, and standards will ensure that potential impacts associated with the routine transport, use, or disposal of hazardous materials are less than significant. Implementation of the 2017 General Plan will not create or facilitate upset or accident conditions involving the release of hazardous materials into the environment. The 2017 General Plan goals and policies outlined above, plus compliance of individual future projects with applicable hazmat laws and regulations, will provide sufficient protection from hazards and hazardous materials to reduce potential impacts to less than significant levels.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the identified General Plan goals and policies above, in addition to enforcement of compliance with federal and state laws and regulations regarding transport, use, or disposal of hazardous materials, potential hazardous waste impacts to people and the environment from development within the City will be reduced to less than significant levels and no mitigation is required.

4.8.5.2 Located on a List of Hazardous Materials Sites

| | |
|-----------|--|
| Threshold | Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment? |
|-----------|--|

Programmatic Impacts. The Community Safety, Services and Facilities Element of the General Plan states the following regarding hazardous materials: “Hazardous materials are those substances, which have the potential to cause harm to humans, animals, or the environment, by themselves or through interaction with other factors (Institute of Hazardous Materials Management). In Jurupa Valley, hazardous materials include petroleum products, solvents, pesticides and other substances used in or generated by commercial, industrial, agricultural, or residential activities. State and federal laws govern the storage, transport, and disposal of hazardous materials.

Contaminated sites are another source of hazardous materials in Jurupa Valley. The Stringfellow Remediation Site near CA-60 and Pyrite Street is perhaps the most well-known contaminated site in

the region. The former hazardous waste disposal site leached toxins into the environment and has been undergoing remediation through the Federal Superfund process. In addition to contaminating the surface and soil, the site leaked toxins into Pyrite Creek and the groundwater basin, which traveled in a southwest-trending 'plume' to the community of Glen Avon and other areas. The remediation effort includes monitoring and remediation of groundwater supplies."

The planning area includes the Stringfellow Remediation Site (see Figure 4.8.1) is a major historical regional source of contamination in the Jurupa Valley. It is listed on many governmental databases regarding hazardous materials (e.g., NPL, CERCLIS, US ENG CONTROLS, ROD, RCRA-SQC, CONCENT, and, PRP databases). According to available public documents, the Stringfellow groundwater contamination plume consists primarily of volatile organic compounds (VOCs) and perchlorate; however, the VOCs extend approximately one mile from the source area in the down-gradient direction with the remainder of the plume consisting of perchlorate.

Evaluation of General Plan Goals and Policies. The following summarized goals and policies in the Community Safety, Services, and Facilities Element and Land Use Element of the 2017 General Plan are specifically related to hazardous materials sites (for full text of measures see Section 4.8.2.3).

Community Safety, Services, and Facilities Element

Goal

CS 1 Minimize risks resulting from natural and manmade hazards to residents and businesses.

Policies

- CS 1.1.31 **Federal/State Laws.** Comply with federal and state laws regarding the management of hazardous waste and materials.
- CS 1.1.34 **Stringfellow Remediation Site.** Encourage and support State and Federal efforts to complete the clean-up the Stringfellow Remediation site and related groundwater and soil contamination.

Land Use Element

Goal

LUE 5.43 Special Development Requirements for the Stringfellow Remediation Site.

Level of Programmatic Impact Before Mitigation. The Stringfellow Remediation Site an active Superfund clean-up project with all activities heavily regulated by the EPA and other federal and state agencies to protect people and the environment from potential impacts. Enforcement of compliance with federal and state laws and regulations related to hazardous waste sites and implementation of the 2017 General Plan goal and policies above will further reduce the potential for impacts to less than significant.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals and policies above and compliance with local, state, and federal laws and regulations regarding hazardous waste sites would further reduce impacts; mitigation is not required.

4.8.5.3 Within Two Miles of a Private Airport or Within an Airport Land Use Plan or Within Two Miles of a Public Airport

| | |
|-----------|--|
| Threshold | For a project located within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the proposed project area? Would the project be located within an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, resulting in a safety hazard for people residing or working in the project area? |
|-----------|--|

Programmatic Impact. Safety zones of two public airports, Riverside Municipal Airport (RMA) and the Flabob Airport, overlap portions of the City of Jurupa Valley. The Flabob Airport is located in the eastern portion of the City just north of the Santa Ana River. The RMA is located south of the eastern portion of the City across the Santa Ana River. Table 4.8.B compares the basic airport safety zone designations with their land use compatibility criteria.

Riverside Municipal Airport (RMA). The RMA is south of the eastern portion of the City across the Santa Ana River. Portions of the City are within RMA's Airport Land Use Compatibility (ALUC) Plan Zone E (see Figure 4.8.2). Zone E within ALUC is considered an area that includes Other Airport Environs. Zone E does not include residential, other land uses, or open space land restrictions. Hazards to flight, including physical, visual, and electronic forms of interference with safety of aircraft operations, are not allowed in Zone E.

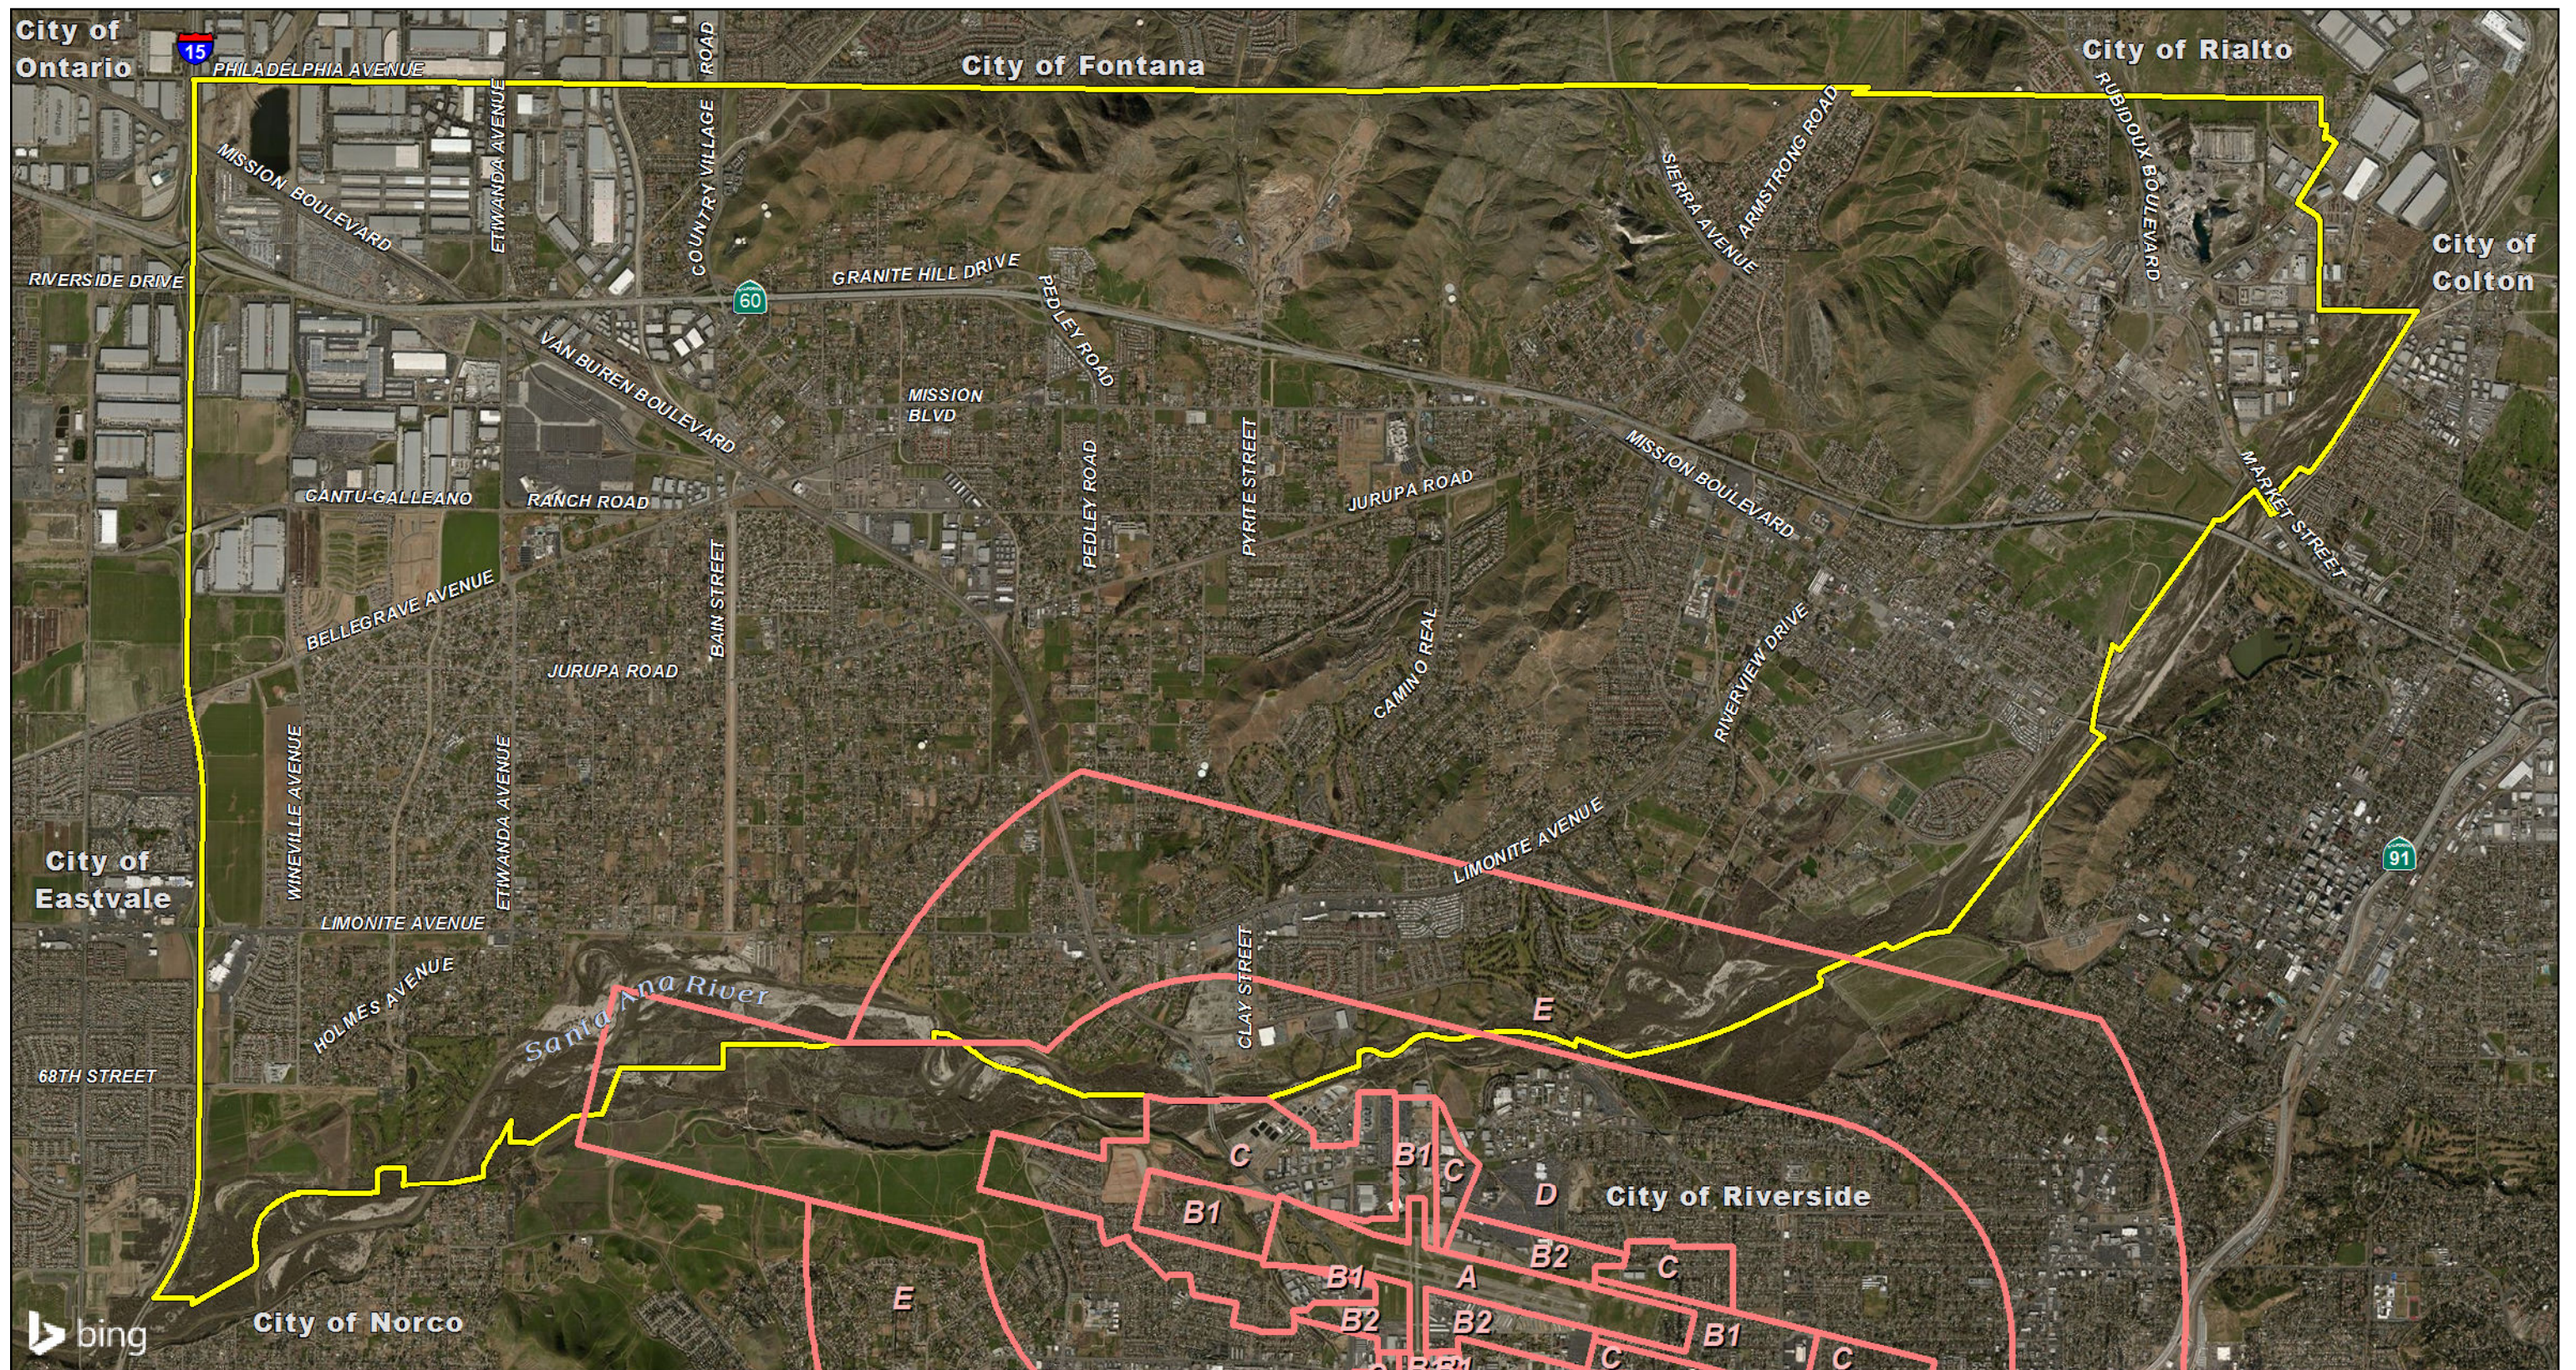

Flabob Airport. This airport is located in the eastern portion of the City and some of its safety zones overlap developed uses and vacant land within the City. To minimize land use conflicts with adjacent uses, much of the remaining undeveloped area adjacent to the airport is designated as Estate Density Residential, with most of the developed land designated and used for Medium-Density Residential. The Airport Compatibility Areas are shown in Figure 4.8.3, Flabob Airport Zones. Potential land use conflicts could occur primarily in Safety Zones C and In ZoneD, new residential development is limited to one dwelling per five acres, gross; and in Zone D, residential densities are limited to a prescribed density range of no greater than one dwelling per five acres or at least five dwellings per acre.

Evaluation of General Plan Goals and Policies. The following policies in the Land Use Element of the 2017 General Plan are specifically related to safety hazards at public and private airports:

Land Use Element

Policies

- LUE 5.53 **ALUP Compliance.** To provide for the orderly operation and development of Flabob and Riverside Municipal Airports and the surrounding area, the City will comply with the Airport Land Use Compatibility Plan as fully set forth in Appendix 4.0 and as summarized in Table-34, as well as any applicable policies related to airports in the Land Use, Circulation, Safety and Noise Elements of the 2017 General Plan, unless the City Council overrides the Plan as provided for in State law.
- LUE 5.54 **Development Review.** Until such time as 1) the Commission finds the City's General Plan to be consistent with the ALUP, or 2) the City Council has overruled the Commission's determination of inconsistency, or 3) the Commission elects not to review a particular action, the City will refer all *major land use actions* to the Airport Land Use Commission for review, pursuant to Policy 1.5.3 of the ALUP.

Riverside Municipal Airport Compatibility Zones

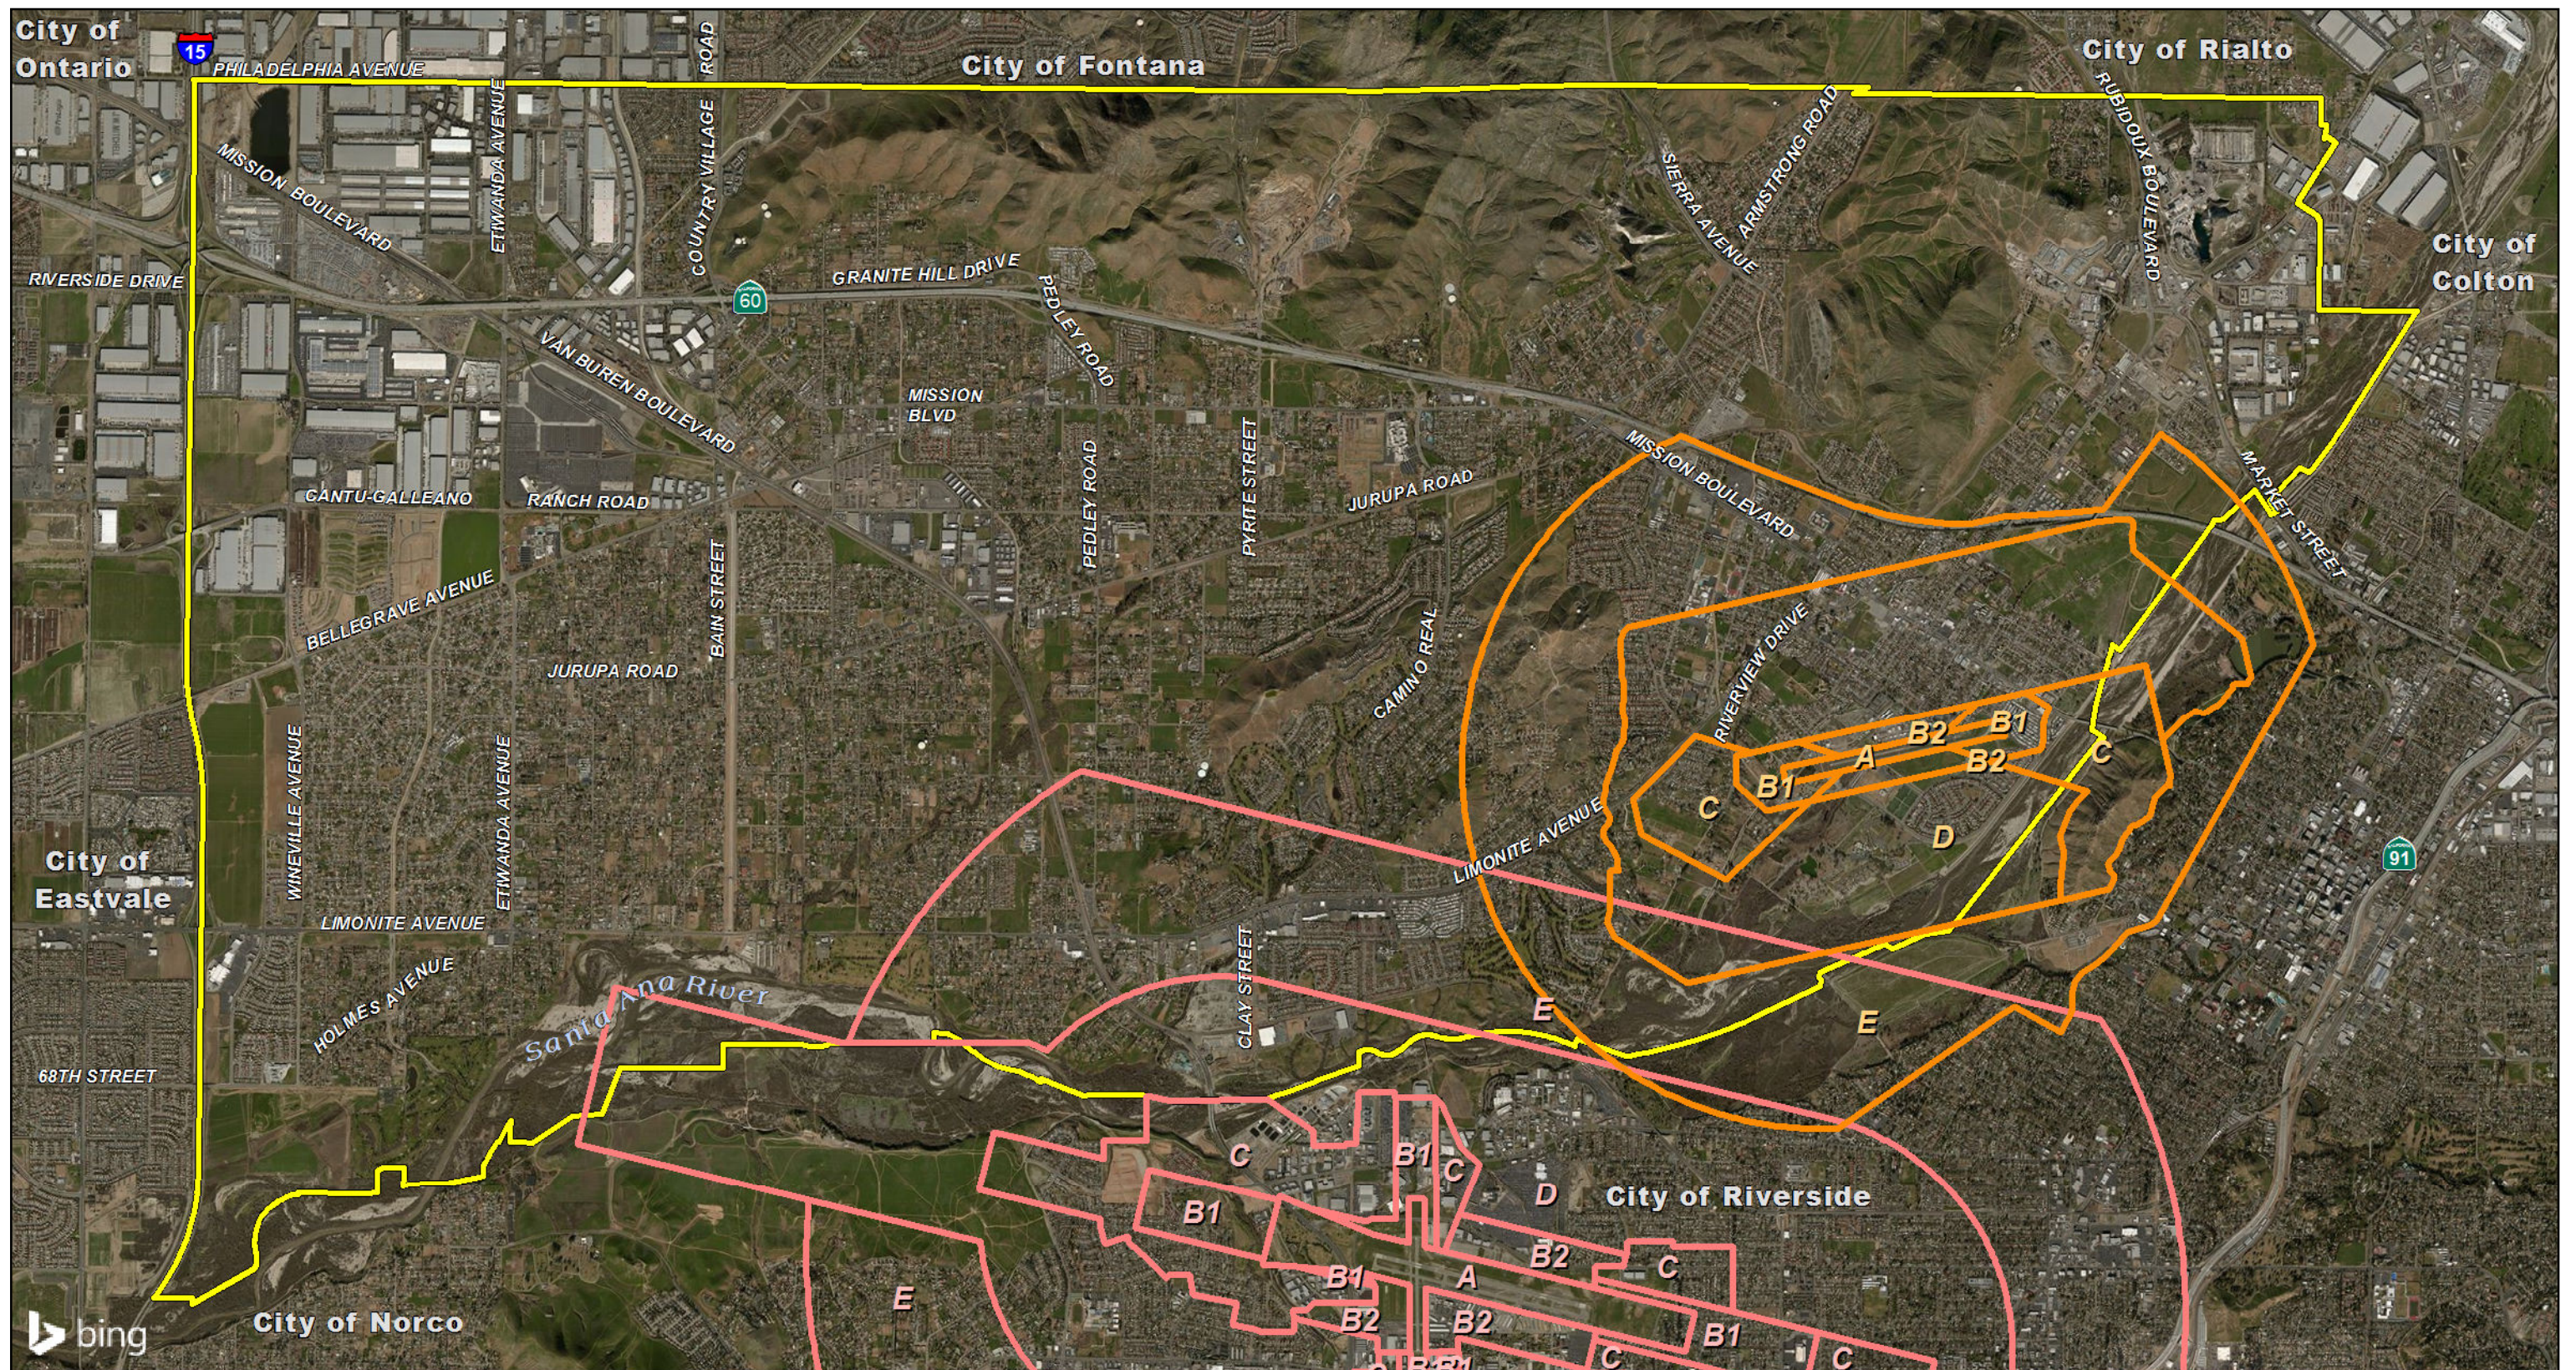

THIS PAGE INTENTIONALLY LEFT BLANK

Figure 4.8.3: Flabob Airport Safety Zones

- LUE 5.55 **Continued Airport Operation.** Support the continued operation of Flabob and Riverside Municipal Airports to help meet airport services needs within the land-use compatibility criteria with respect to potential noise and safety impacts.
- LUE 5.56 **Consistency Requirement.** Review all proposed projects and require consistency with any applicable provisions of the Riverside County Airport Land Use Plan as set forth in Appendix A-4.0, and require General Plan and/or Zoning Ordinance amendments to achieve compliance, as appropriate.
- LUE 5.57 **ALUP Amendments.** Review all subsequent amendments to any airport land-use compatibility plan and either adopt the plan as amended or overrule the Airport Land Use Commission as provided by law (Government Code Section 65302.3).
- LUE 5.58 **General Plan Adoption or Amendment.** Prior to the adoption or amendment of this General Plan or any specific plan, or the adoption or amendment of a zoning ordinance or building regulation within the planning boundary of any airport land use compatibility plan, the City will refer such proposed actions for determination and processing as provided by the Airport Land Use Law.
- LUE 5.59 **Cluster Development.** Allow the use of development clustering and/or density transfers to meet airport compatibility requirements as set forth in the applicable airport land-use compatibility plan.
- LUE 5.60 **Bird-attracting Uses.** In accordance with FAA criteria, avoid locating sanitary landfills and other land uses that are attract birds within 10,000 feet of any runway used by turbine-powered aircraft and within 5,000 feet of other runways. Also, avoid locating attractors of other wildlife that can be hazardous to aircraft operations in locations adjacent to airports.

| * | Height Review Overlay | Same as Underlying Compatibility Zone | Not Applicable | Not Applicable | Not Applicable | Same as Underlying Compatibility Zone | <ul style="list-style-type: none"> › Airspace review required for objects >35 feet tall ¹⁴ › Aviation easement dedication |

See Chapter 3 for airport-specific additions or exceptions to these policies

Source: Airport Land Use Planning Guide, Riverside County Airport Land Use Commission, 2013.

LUE 5.61 **Encroachment.** Ensure that no structures or activities encroach upon or adversely affect the use of navigable airspace.

LUE 5.62 **Voluntary Review.** The City, from time to time, may elect to submit proposed actions or projects voluntarily that are not otherwise required to be submitted to the ALUC under the Airport Land Use Law in the following circumstances:

- Clarification: If there is a question as to the purpose, intent or interpretation of an airport land use compatibility plan (CLUP) or its provisions; or

- b. Advisory: If assistance is needed concerning a proposed action or project relating to Airport Land Use matters.

LUE 5.63 **Airport Referrals.** All development proposals located within an Airport Influence Area will be submitted to the affected airport.

LUE 9.1 **Land Use Compatibility.** Require land to be developed and used in accordance with the General Plan, specific plans and community and village plans to ensure compatibility and minimize impacts

Level of Programmatic Impact Before Mitigation. These policies in the Land Use Element of the 2017 General Plan establish clear parameters for planning and guidance for future development within the City for vacant land or redevelopment of existing land uses in the City that are within the influence areas of the Flabob or Riverside Municipal Airports. For example, Policies LUE 5.53 and 5.56 require new development to comply with the Airport Land Use Compatibility Plan of the affected airport, and Policy 5.54 requires plans to be submitted to the airports for review before City action. With implementation of these policies, new development in the City will have less than significant impacts on the airport facilities and operations.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the General Plan policies above and compliance with local, state, and federal laws and regulations regarding airport compatibility and safety would further reduce impacts, and no mitigation is required.

4.8.5.4 Existing or Proposed School

| | |
|-----------|--|
| Threshold | Would the proposed project emit hazardous emissions or handle acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? |
|-----------|--|

Programmatic Impacts. The City does not have jurisdiction with respect to the location, design, or construction of school facilities, however, the City works cooperatively with the Jurupa Valley Unified School District and the Corona-Norco Unified School District in the design of roads and other public improvements in and around school sites, and is responsible for fire, police, and public safety concerns involving all facilities within the City, including schools.

Evaluation of General Plan Goals and Policies. The following policies from the Land Use Element and the Environmental Justice Element of the 2017 General Plan are specifically related to the protection of sensitive land uses such as schools.

Land Use Element

Policy

LUE 4.3 **Locations.** New public facilities shall be located and designed to protect sensitive uses, such as schools and housing, from impacts due to noise, vibration, light, fumes, odors, vehicular traffic, and parking and safety hazards.

Environmental Justice Element

Policy

EJ 2.1.8 **Separation of Uses.** Build new sensitive land uses with sufficient buffering from industrial facilities and uses that pose a significant hazard to human health and safety. The California ARB recommends that sensitive land uses be located at least 1,000 feet from hazardous industrial facilities.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Level of Programmatic Impact Before Mitigation. At a programmatic level, implementation of the General Plan will not result in the increased use of hazardous materials or create hazardous emissions near schools. Enforcement of compliance with federal and state laws and regulations related to hazardous waste and implementation of the 2017 General Plan policies above regarding the separation of new public facilities and sensitive land uses will reduce potential impacts to less than significant. Future development will be carefully planned based on the guidelines established in the General Plan which will help assure hazardous facilities and activities do not have significant impacts on local schools.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan policies listed above, along with compliance with local, state, and federal laws and regulations regarding hazardous material impacts on schools would be reduced to less than significant levels, and no mitigation is required.

4.8.5.5 Conflict with Emergency Response Plans

| | |
|-----------|--|
| Threshold | Would the project impair the implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? |
|-----------|--|

Programmatic Impacts. As development occurs in the future within the City, additional traffic may create congestion on local streets and intersections to the degree that emergency response by local police and fire vehicles is delayed. This could be a significant impact if local roads and intersections are not planned to accommodate projected traffic. At a programmatic level, the General Plan must have goals, policies, and programs in place to assure the City will have adequate emergency response in the future as growth occurs. This does not necessarily mean that roads and intersections must be widened to accommodate all traffic at Level of Service A (i.e., no congestion) but rather than streets and intersection size, design, etc. do not contribute to excessive delay or congestion such that emergency vehicles cannot access all areas of the City within prescribed response time standards.

The Community Safety, Services and Facilities Element of the 2017 General Plan states the following regarding emergency response plans: “The City has an Emergency Operations Plan (EOP) that addresses how the City will respond to emergency situations ranging from minor incidents to large-scale disasters. The plan addresses four primary phases of emergency operation including Preparedness, Response, Recovery, and Mitigation. The plan discusses the activation and management of the City’s Emergency Operations Center (EOC), which may be set up during an emergency to manage the event and coordinate with other EOCs such as the Riverside County EOC. The EOC also coordinates the sharing of resources under the California Mutual Aid Agreement.”

Under a state-declared disaster, the coordination of all emergency services is recognized by the State to mitigate the effects of natural, man-made, or war-caused emergencies that result in conditions of disaster or extreme peril to life, property, and the resources of the State, and generally, to protect the health and safety and preserve the lives and property of the people of California.

Evaluation of General Plan Goals and Policies. The following policy from the Community Safety, Services, and Facilities Element of the 2017 General Plan is specifically related to emergency response plans.

Community Safety, Services, and Facilities Element

Policy

CS 1.1.36 **Multi-Hazard Functional Plan.** Strengthen the Multi-Hazard Functional Plan and maintain mutual aid agreements with federal, state, local agencies and the private sector to assist in:

- a. clearance of debris in the event of widespread slope failures, collapsed buildings or structures, or other circumstances that could result in blocking emergency access or regress;
- b. heavy search and rescue;
- c. fire suppression;
- d. hazardous materials response;
- e. temporary shelter;
- f. geologic and engineering needs;
- g. traffic and crowd control; and
- h. building inspection.

In addition, the **Mobility Element** contains numerous goals, policies, and programs to help assure the City has a safe and efficient road network, which will facilitate safe and efficient emergency travel throughout the City.

Level of Programmatic Impact Before Mitigation. Implementation of the General Plan policy above and compliance with the California Emergency Services Act will facilitate the protection of health and safety and preserve the lives and property of City residents and businesses, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

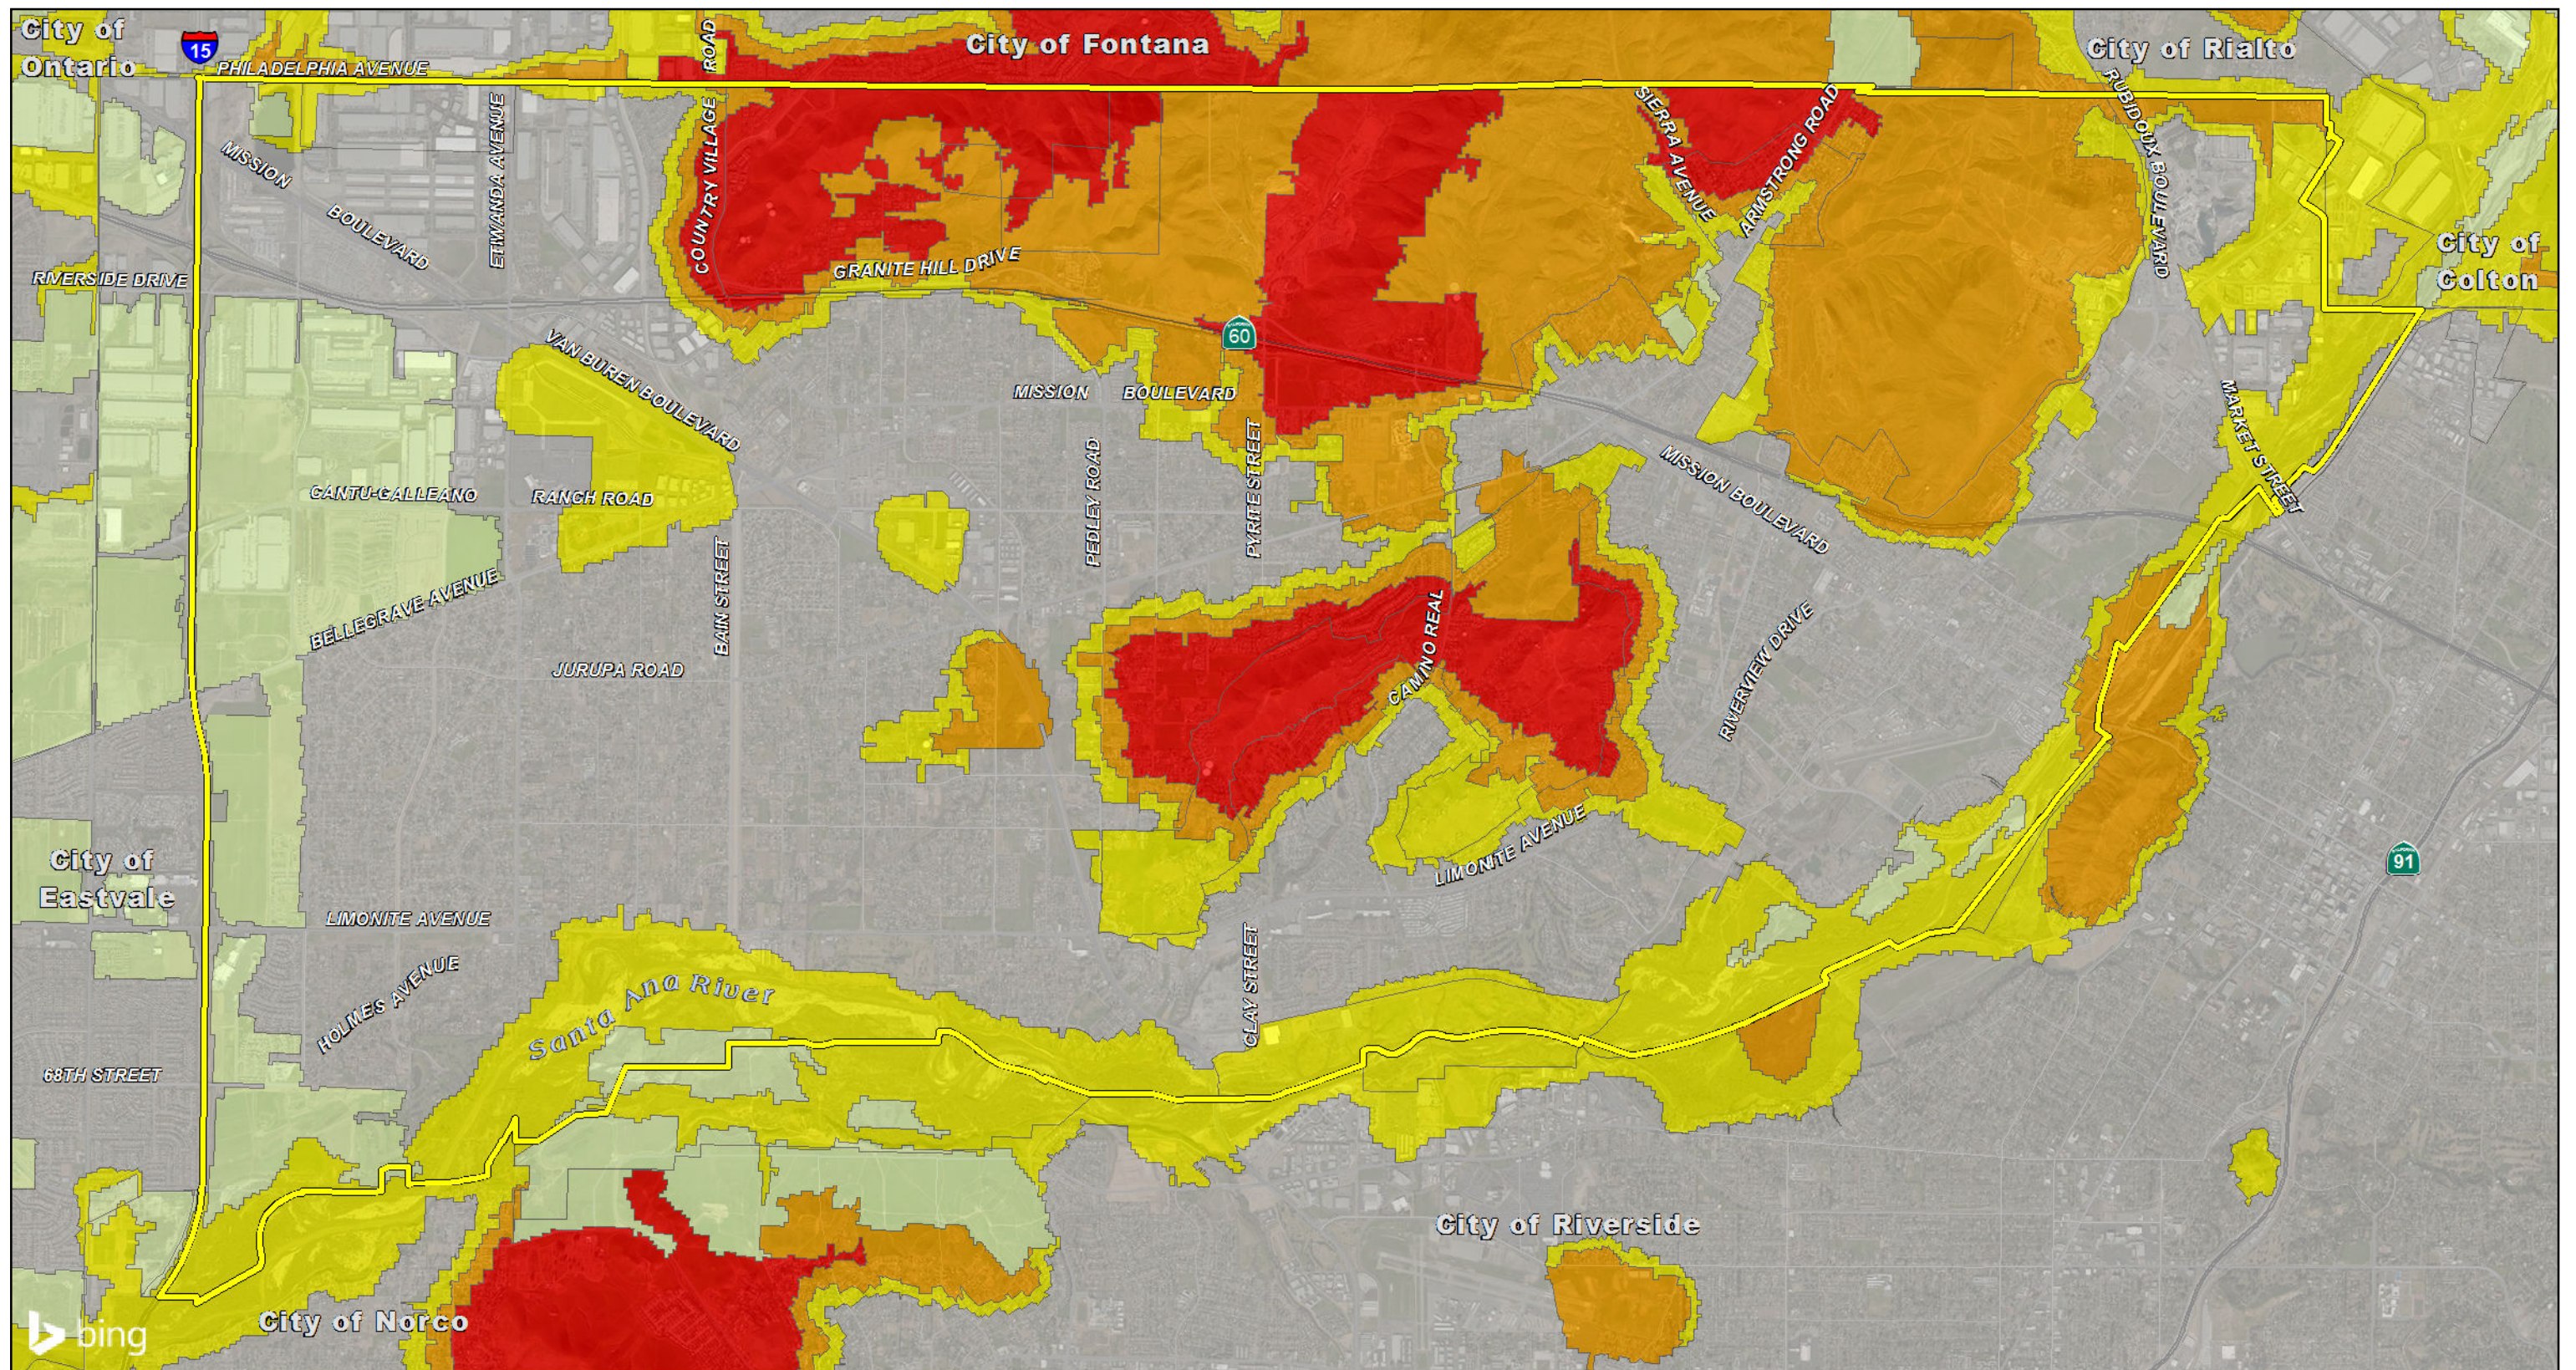

Level of Programmatic Impact After Mitigation. Implementation of the General Plan policy above and compliance with the California Emergency Services Act will facilitate the protection of health and safety and preserve the lives and property of the people of California; mitigation is not required.

4.8.5.6 Wildland Fire Risks

| | |
|-----------|---|
| Threshold | Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands? |
|-----------|---|

Programmatic Impact. Future development within the City, especially in areas of moderate to high fire risk, may expose future residents and businesses to the threat of wildland fires. Isolated upland areas in the east-central portion of the City have a high fire danger. The Community Safety, Services and Facilities Element of the 2017 General Plan states the following regarding fire risks: “The State passed Senate Bill 1241 to require that General Plan Safety Elements address the fire severity risks in State Responsibility Areas (SRAs) and Local Responsibility Areas (LRAs). As shown in Figure 4.8.5, Jurupa Valley contains several areas within moderate, high and very high fire severity zones, which are located in SRAs. These include areas of the state in which responsibility of preventing and suppressing fires is primarily the responsibility of the Department of Forestry and Fire Protection, also known as CalFIRE.” The Riverside County Fire Department, in cooperation with the California Department of Forestry and Fire Protection (CalFIRE), provides full service municipal and wildland fire protection, emergency medical response, technical rescue services and response to hazardous materials discharges in Jurupa Valley. The Department operates 97 fire stations throughout the County of Riverside with four of those located in Jurupa Valley.

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.8.5
Wildfire Severity Zones in Jurupa Valley

THIS PAGE INTENTIONALLY LEFT BLANK

Evaluation of General Plan Goals and Policies. The following policies from the Community Safety, Services, and Facilities Element of the 2017 General Plan are specifically related to wildland fire risks.

Community Safety, Services, and Facilities Element

Policies

- CS 1.1.24 **Adjacent Natural Vegetation.** Development that adjoins large areas of native vegetation will require fuel modification with drought tolerant landscaping that blends with the natural vegetation to the greatest extent possible.
- CS 1.1.25 **Wildfire Hazards.** Encourage, and as resources allow, support Cal Fire and other agency efforts to reduce wildfire hazards and improve fire-fighting capacity in order to successfully respond to multiple fires.
- CS 1.1.28 **Fire Protection Master Plan.** Continue to utilize the Riverside County Fire Protection Master Plan and Jurupa LHP as the base documents to implement the goals and objectives of the Community Safety Element.
- CS 1.1.29 **Water Resources.** Encourage and as resources allow, support efforts to utilize existing water bodies, tanks, and water wells in the City for emergency fire suppression water sources.
- CS 1.1.30 **Brush Clearance.** Utilize ongoing brush-clearance fire inspections to educate homeowners on fire prevention tips).

Programs

- CS 1.1.1.5 **Fire Safety Planning.** Conduct and implement long-range fire safety planning, including stringent building, fire, subdivision, and municipal code standards, improved infrastructure, and improved mutual aid agreements with the private and public sectors.
- CS 1.1.1.6 **Fire Response Agreements.** Review inter-jurisdictional fire response agreements, and improve firefighting resources as recommended in the County Fire Protection Master Plan, to keep pace with development and to ensure that:
- Fire reporting and response times do not exceed those listed in the County Fire Protection Master Plan identified for each of the development densities described;
 - Fire flow requirements (water for fire protection) are consistent with Insurance Service Office (ISO) recommendations; and
 - The planned deployment and height of aerial ladders and other specialized equipment and apparatus are sufficient for the intensity of development anticipated.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan policies and programs above will reduce potential wildland fire hazards in the City to less than significant levels.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan policies and programs above will reduce risks of wildland fire to less than significant levels and no mitigation is required.

4.8.7 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a plan summary of long-term development impacts. In this case, the growth projections of the 2017 General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

For context, the cumulative "universe" for impacts related to hazards would be the City but also western Riverside County for hazmat incidents or wildland fires. The use of hazardous materials in the City of Jurupa Valley is controlled and permitted by Riverside County Department of Environmental Health Hazardous Materials Branch (Branch), a State-designated CUPA, whose responsibilities include: inspecting hazardous material handlers and hazardous-waste generators to ensure compliance with laws and regulations; ensuring the preparation and implementation of Business Plans, emergency response plans, and accident prevention plans for businesses that handle hazardous materials; providing 24-hour response to emergency incidents involving hazardous materials or wastes; and conducting investigations and taking enforcement action as necessary against anyone who disposes of hazardous waste illegally or otherwise manages hazardous materials or wastes in violation of Federal, State, or local laws and regulations.

The hazardous materials control and safety programs and available emergency-response resources of the Branch reduce the potential risk of upset and exposure to hazardous materials in the planning area. Development of projects within the City of Jurupa Valley would require adherence to General Plan policies and to the existing laws and regulations regarding the use, storage, transport, or disposal of hazardous materials and waste. Implementation of the proposed General Plan would not result in safety hazards related to nearby airports, airstrips, adopted emergency response plans, or wildland fire hazards and would not make a significant contribution to cumulatively considerable impacts related to hazardous materials, hazardous waste, or the creation of any health hazards.

4.9 HYDROLOGY AND WATER QUALITY

This section describes the hydrologic conditions in and around the City as they relate to various water-related environmental issues such as runoff/drainage, flooding, surface and groundwater quantity and quality. The analysis contained in this section is also based on the following reference documents:

- *Urban Water Management Plan, Jurupa Community Services District*. Albert A. Webb Associates, June 27, 2016.
- *Urban Water Management Plan, Rubidoux Community Services District*. Krieger and Stewart, Engineering Consultants. July 2016.
- *2009 Construction Best Management Practices (BMP) Handbook*, California Stormwater Quality Association (CASQA), July 1, 2010.
- *Santa Ana Region Basin Plan*. Santa Ana Regional Water Quality Control Board. 2008.
- *Watershed Action Plan, Riverside County, Santa Ana Region*. May 29, 2014.
- *City of Jurupa Valley, General Plan, June 2011*.
- *Conservation and Open Space Element, 2017 General Plan, (draft), December 2016*.
- *Community Safety, Services, and Facilities Element, 2017 General Plan, (draft), July 2016*.
- *Water Quality Management Plan: A Guidance Document for the Santa Ana Region of Riverside County*. October 22, 2012.

4.9.1 Existing Setting

4.9.1.1 Drainage and Flooding

The City is located in the Santa Ana River Basin Watershed. The Santa Ana Region consists of connected inland basins and open coastal basins drained by surface streams flowing southwestward toward the Pacific Ocean. The City, in general, slopes to the south toward the Santa Ana River which forms much of the southern boundary of the City.

The Conservation and Open Space Element says the following about water resources drainage and flood-related conditions in the City...

“Riverside County includes four major watershed areas in which river systems, numerous lakes and reservoirs, and natural drainage areas are located. The City and County's supply of water is limited by its arid climate, agricultural practices, projected population growth and its associated demand and development, and the dependence on low quality imported water. Further, the availability of imported surface water has been reduced due to extended period of drought in California, and changing regulations, despite an ever-increasing water demand. In Jurupa Valley, contamination from Stringfellow Acid Pits, mining and other human activities has affected groundwater quality such that its use requires treatment. Management of the amount of water available (local and imported) and its quality, is an important response to the gap between supply and demand. Policies in this section seek to protect and enhance Jurupa Valley's water resources and to meet future water needs. These policies also address broad water planning issues, and their relationship to land use decisions.”

Watercourses and their floodways are usually the focus of construction and control; while fertile, flat and "reclaimed" floodplain lands are typically used for other activities, such as agriculture, commerce, and residential development. These areas form a complex physical and biological system that not only supports a variety of natural resources, but also provides natural flood and erosion control. In addition, the floodplain represents a natural filtering system, with water percolating back into the ground and replenishing groundwater. When a watercourse is separated from its floodplain with levees and other flood control facilities, then natural, built-in benefits are lost, altered, or significantly reduced. The floodway fringe is that portion of the floodplain between the floodway and the limits of the existing 100-year floodplain.

The City follows Riverside County's adopted methods of using the USGS "blue line stream" overlay as its major form of mapping watercourses in its boundaries (see Figure COS-10, the Land Use Element, and Area Plan Maps). Also, see the Flood and Inundation Hazard Abatement section of the Safety Element). The conventional assumption that flooding can be completely eliminated has meant not only an unrealistic reliance on manufactured flood protection, but also the development of a flood control system that squeezes rivers into artificially narrow channels, adds steeply sloped levees (devoid of riparian vegetation), and eliminates historic floodplains, all in the interest of reclamation, flood protection and urban growth. Unfortunately, this highlights the fact that floods have been viewed for far too long as everything except part of the natural life cycle of rivers and floodplains.

Flooding is part of the dynamic nature of healthy rivers and ecosystems. High flows and floodwaters are needed to cleanse the channels of accumulated debris, build stream banks, import gravels for aquatic life, thin riparian forests and create riparian habitat.

The open space of floodplains adjacent to rivers and streams helps store and slowly release floodwaters, thus reducing flood flow, peaks, and their subsequent impacts during small and frequent flood events. Further, riparian habitat within floodplains is of great value to resident and migratory animal species, as it provides corridors and linkages to and from the City's wildlife corridors.

Wetlands typically occur in low-lying areas that receive fresh water at the edges of lakes, ponds, streams, and rivers. Wetlands provide habitat for a wide variety of plants, invertebrates, fish, and larger animals, including many rare, threatened, or endangered species. The plants and animals found in wetlands include both those that are able to live on dry land or in the water and those that can live only in a wet environment. Wetlands in Jurupa Valley may include riverbanks, vernal springs and pools, and desert washes.

In addition, the Community Safety, Services, and Facilities Element of the 2017 General Plan states the following about flood-related conditions in the City:

"...the Santa Ana River is tremendous asset to the City, providing open space, environmental, recreational, and visual amenities. It also presents the potential for flood hazards and inundation. Throughout the years, flooding events on the Santa Ana River have resulted in the loss of livestock, infrastructure, property, and even lives. To manage and minimize the risk of flooding, the Riverside County Flood Control and Water Conservation District was formed in 1945 to reduce the risks and damage due to flooding in western Riverside County. The District's responsibilities include the maintenance and construction of flood control structures and facilities and regulating development in and near floodplains. Despite major improvements in flood management methods and planning, portions of Jurupa Valley are still at risk of flooding during major events. It continues to be in the City's best interest to regulate and monitor development in floodplain and flood prone areas.

The Federal Emergency Management Agency (FEMA) prepares Flood Insurance Rate Maps, or FIRM maps, to graphically show areas prone to flooding during 100-year and 500-year frequency

floods. Figure CS-10, identifies the flood prone portions of Jurupa Valley based on FIRM maps. In addition to the Santa Ana River, the Riverside Basin (northeast of the Interstate 15/State Route 60 interchange), and those areas bordering the Etiwanda Flood Control Channel, Pyrite Channel, and the Riverside Canal are part of the 100-year floodplain. Most of these areas are also where a substantial amount of development exists or is intended to occur. Many techniques may be used to address the danger of flooding, such as preventing or limiting development in floodplains, reducing urban runoff, maintaining floodways, using special building techniques, elevating foundations and structures, and enforcing building setbacks.

One effective technique for maintaining floodways and reducing flood hazards is controlling the spread of Arundo donax Giant Reed which is a highly invasive, non-native aquatic plant that grows in the Santa Ana River and other local drainage courses. The plant is hazardous from a flooding perspective because it grows quickly, clogs channels, and increases flood risks. Left unchecked, the plant can easily take over riparian areas, excluding native plants and damaging natural habitat. However, the Santa Ana Watershed Project Authority (SAWPA), the County of Riverside and other agencies have been working to eliminate Arundo donax from the Santa Ana River Watershed and restore natural habitat.”

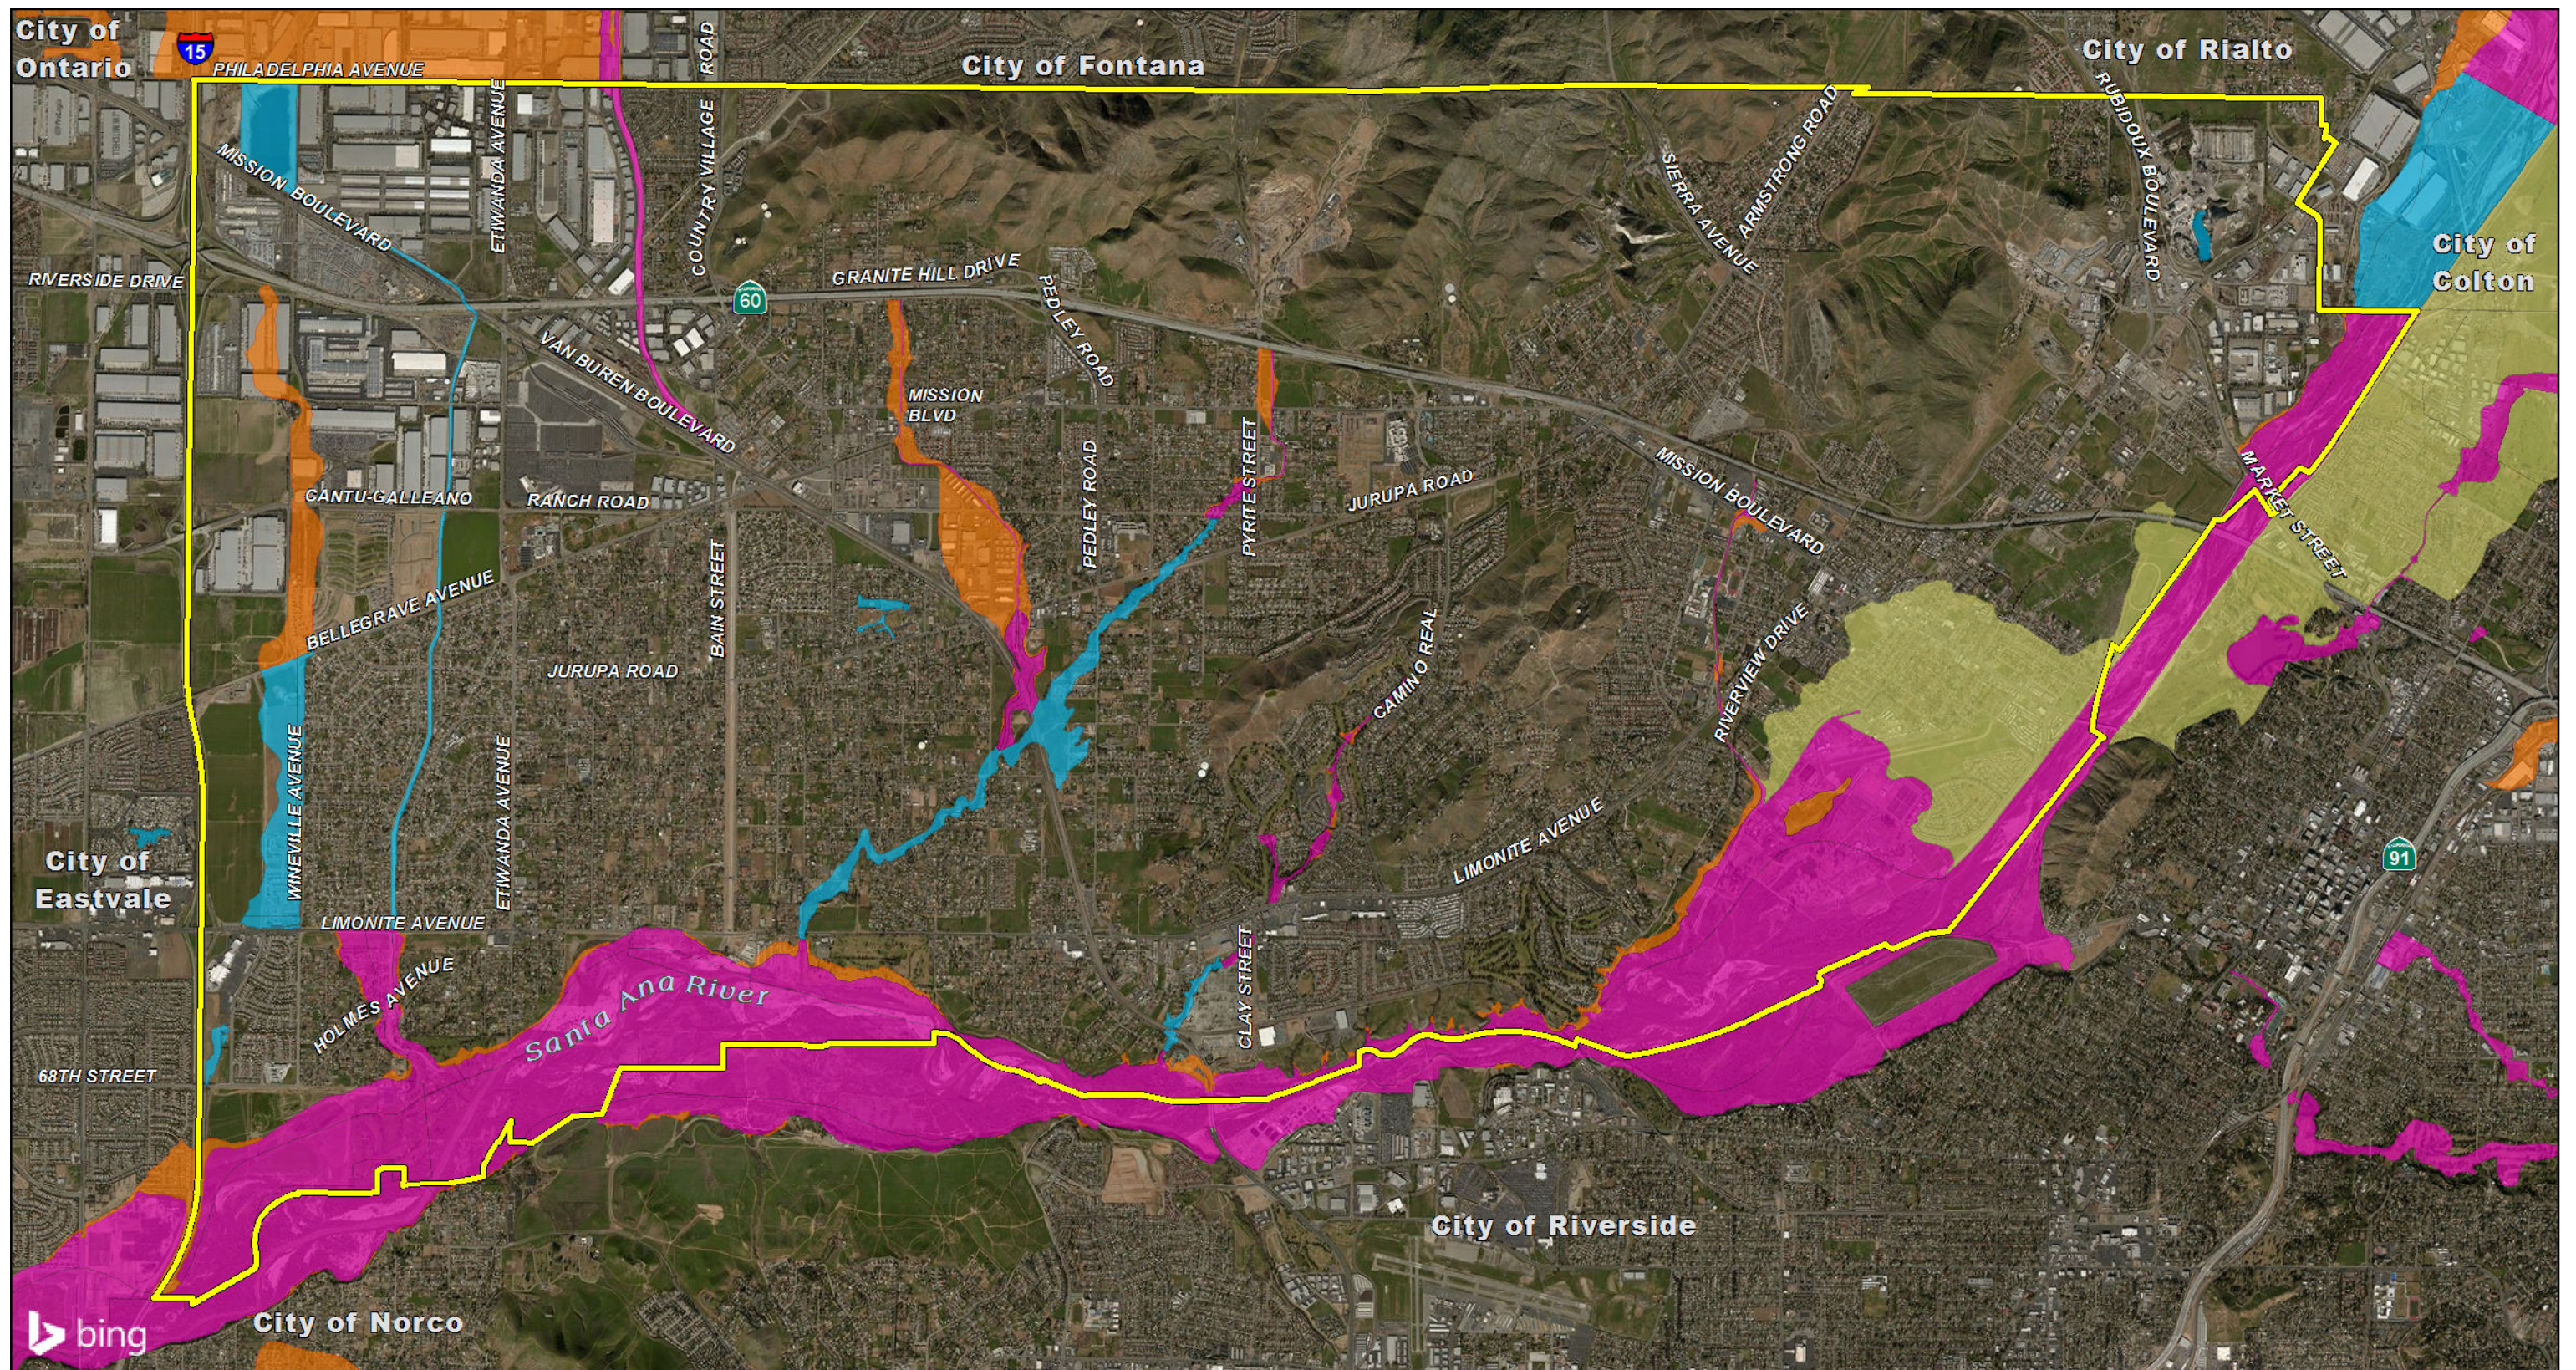

Figure 4.9.1 shows the locations of flood-prone areas in the City, Figure 4.9.2 shows the flood areas indicated in the Flood Insurance Rate Maps (FIRMs) for the City, and Figure 4.9.3 shows the existing floodways and drainages in the City.

4.9.1.2 Water Quality

The Conservation and Open Space Element says the following about water quality in the City...

“Water quality problems that have occurred in Jurupa Valley have related to Stringfellow runoff, inadequate subsurface sewage disposal, waste disposal management in the Santa Ana River and floodway, and pollution due to urban storm water system runoff. Regional Water Quality Control Boards for Region 8 provides state-level water quality policy for the City and Riverside County. Further, the National Pollutant Discharge Elimination System mandates Best Management Practices in order to effectively minimize the adverse effects of pollution and protect water quality and groundwater resources.

Groundwater resources, or “aquifers,” are defined by their quality as well as quantity. Most groundwater basins store local and imported water for later use to meet seasonal and drought-year demands. Under current groundwater recharge programs, groundwater is artificially replenished in wet years with surplus imported water. Water is then extracted during drought years or during emergencies. Groundwater recharge that may also involve the recharge of reclaimed water enhances the City's ability to meet water demand during years of short supply and increases overall local supply reliability. The following policies are intended to provide local guidance for the protection and maintenance of water quality and groundwater resources.”

The project area is within the Santa Ana Region of the State Regional Water Quality Control Board (SARWQCB), which covers parts of southwestern San Bernardino County, western Riverside County, and northwestern Orange County. The Santa Ana Regional Board's Basin Plan (Basin Plan) is designed to preserve and enhance water quality and protect the beneficial uses of all regional waters. Specifically, the Basin Plan: (a) designates beneficial uses for surface and ground waters; (b) sets narrative and numerical objectives that must be attained or maintained to protect the designated beneficial uses and conform to the state's anti-degradation policy; and (c) describes implementation programs to protect all waters in the Region. In addition, the Basin Plan incorporates (by reference) all applicable State and Regional Board plans and policies and other pertinent water quality policies and regulations.

The Basin Plan is a resource for the Santa Ana Regional Board and others who use water and/or discharge wastewater in the Santa Ana Region. Other agencies and organizations involved in environmental permitting and resource management activities also use the Basin Plan. Finally, the Basin Plan provides valuable information to the public about local water quality issues.

The Basin Plan is reviewed and updated as necessary. Following adoption by the Regional Board, the Basin Plan and subsequent amendments are subject to approval by the State Board, the State Office of Administrative Law (OAL), and the United States Environmental Protection Agency (USEPA).

According to the Santa Ana Region Basin Plan, water quality in the Jurupa Valley is affected by a number of factors including but not limited to wastewater discharge, consumptive use, import of water high in dissolved solids, runoff from urban and agricultural areas, and the recycling of water within the basin. The most serious water-related problem identified by the Basin Plan was water supply; the region uses twice as much water as is available from local sources. The Basin also faces pollutant and toxicity concerns. The Santa Ana River is a discharge dominated river, receiving most of its inputs from treated wastewater. As a result of human discharges, some of the key pollutants in the river and watershed are Total Inorganic Nitrogen (TIN) and Total Dissolved Solids (TDS).¹

Three of the receiving waters were identified by the WQMP as being in the most recent Federal Clean Water Act (CWA) Section 303(d) list of impaired water bodies:

- Santa Ana River (Reach 3) for pathogens, metals (copper and lead);

¹ http://www.waterboards.ca.gov/rwqcb8/water_issues/programs/basin_plan/docs/2006_AWQ.pdf accessed October 17, 2015

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- Prado Flood Control basin for nutrients and pathogens; and
- Santa Ana River (Reach 2) for pathogens.

Future development within the City is subject to the Riverside County Water Quality Management Plan for Urban Runoff (RCWQMP) requirements under the "Significant Development" category. According to the RCWQMP, "Significant Development" means "a land-disturbing activity that result in the creation, addition, or replacement of 5,000 square-feet or more of impervious surface area on an existing vacant site". Tables 3.B and 3.C indicate that future development in the City may convert a maximum of 2,691 acres of land to residential uses and 765 acres to non-residential uses. If those future uses build out assuming present conditions¹, an additional 46 million square feet (over 1,000 acres) of impervious surfaces could be added to the City in the future. This could represent potentially significant impacts in terms of flooding and water quality as development occurs.

As indicated in Tables 4.9.A and 4.9.B, each of the receiving waters has multiple designated beneficial uses. These designations provide a description of how the water is used and what beneficial purposes it serves. Table 4.9.A provides a description of each of these beneficial water uses, while Table 4.9.B shows the specific locations of the various beneficial use designations. Note that in addition to the beneficial uses shown in Table 4.9.A, the Prado Flood Control Basin area is described as a wetland in the Basin Plan Figure 3-1. Located approximately seven miles southwest of the City, it contains wetlands initially created by the construction of the Prado Dam. These wetlands are now utilized as constructed wetlands by the Orange County Water District to remove nitrate from Santa Ana River waters². The Santa Ana River represents a regionally significant water resource, and much of the southern boundary of the City of Jurupa Valley is immediately adjacent to the northern bank of the river.

Table 4.9.A: Descriptions of Beneficial Uses of the Santa Ana River

| Designated Beneficial Use | Description of Beneficial Use |
|--|---|
| Agricultural Supply (AGR) | Waters used for farming, horticulture or ranching. These uses may include, but are not limited to, irrigation, stock watering, and support of vegetation for range grazing. |
| Groundwater Recharge (GWR) | Waters used for natural or artificial recharge of groundwater proposed for future extraction, maintenance of water quality, or halting of saltwater intrusion into freshwater aquifers. |
| Warm Freshwater Habitat (WARM) | Waters that support warm water ecosystems including, but not limited to, preservation and enhancement of aquatic habitats, vegetation, fish, and wildlife, including invertebrates. |
| Wildlife Habitat (WILD) | Water that support wildlife habitats including, but not limited to, the preservation and enhancement of vegetation and prey species used by wildlife, such as waterfowl. |
| Rare and Endangered Species Habitat (RARE) | Waters support habitats necessary for the survival and successful maintenance of plant or animal species designated under State or Federal law as rare, threatened, or endangered. |
| Water Contact Recreation (REC1) | Waters used for recreational activities involving body contact with water where ingestion of water is reasonably possible. These uses may include, but are not limited to, swimming, wading, water-skiing, skin and scuba diving, surfing, whitewater activities, fishing and use of natural hot springs. |

¹ Assumes impervious surfaces could represent 25% lot coverage for residential uses and 50% lot coverage for non-residential uses.

² <http://www.ocwd.com/Environment/PradoWetlands.aspx> accessed October 23, 2015

Table 4.9.A: Descriptions of Beneficial Uses of the Santa Ana River

| Designated Beneficial Use | Description of Beneficial Use |
|--|---|
| Non-contact Water Recreation (REC2) | Waters used for recreational activities involving proximity to water, but not normally involving body contact with water where ingestion of water would be reasonably possible. These uses may include, but are not limited to, picnicking, sunbathing, hiking, beachcombing, camping, boating, tide pool and marine life study, hunting, sightseeing and aesthetic enjoyment in conjunction with the above activities. |
| Spawning, Reproduction, and Development (SPWN) | Waters that support high quality aquatic habitats necessary for reproduction and early development of fish and wildlife. |

4.9.1.3 Water Sources

The Conservation and Open Space Element says the following about water sources for the City...

“Although Jurupa Valley receives all of its potable water from groundwater supplies, regional and statewide water demands and on-going drought conditions require continued conservation efforts and careful monitoring of water supplies to ensure adequacy for future growth. The overall County water supply is uncertain for two reasons: water apportionments from northern California have been reduced as part of the CALFED Bay-Delta Program, as well as decreased supplies to California from the Colorado River. Additionally, most of the County's sources of water are currently at capacity. Water storage to meet peak demand, or a two-day to one-day supply, is provided by many local water agencies within Riverside County. However, long-term storage of large quantities of water is provided only in the Metropolitan Water District (MWD) and California Department of Water Resources (DWR) facilities. Total storage capacity in the existing reservoir system is 871,000-acre feet (AF). Three of these storage facilities are located in Riverside County: Lake Mathews, Lake Skinner, and Lake Perris. Together, these facilities have 342,300 AF of storage capacity. Diamond Valley Lake triples this capacity with an additional 800,000 AF of storage, bringing the total storage capacity available within Riverside County to 1,142,300 AF. Even though the creation of Diamond Valley Lake has allowed for three times the current storage of water, there is no increase in the total amount of water available to the County that can be identified.

This increase in water storage will benefit the whole South Coast region, which includes other significant jurisdictional water users, such as San Diego County, as well as Riverside County.

Currently, approximately 3/8 of existing storage capacity may be used to meet seasonal demand. The remaining 5/8 is reserved for emergency needs such as severe droughts and/or use when a natural disaster, such as an earthquake, makes it impossible to meet demand through usual supply facilities. Projected 2020 water use and population levels indicate an expected water shortage for the two hydrologic regions that comprise Riverside County: the South Coast and Colorado River regions. Though these regions include most of southern California, and not just Riverside County, they are each representative of the types of supply and demand within the County. The two regions are defined as follows:

- South Coast Region: Basins draining into the Pacific Ocean from the southeastern boundary of Rincon Creek Basin in western Ventura County, south to the Mexican border. Jurupa Valley is part of the South Coast Region.
- Colorado River Region: Basins south and east of the South Coast and South Lahontan regions; areas that drain into the Colorado River, the Salton Sea, and other closed basins north of the Mexican border.

The DWR produces a California Water Plan every five years that not only includes a statewide water budget but also regional watershed water budgets. These water budgets are based on California Department of Finance population projections and indicate clearly that demand for water will exceed supply in 2020 whether or not a drought condition exists at that time. Most of the State's regions, except for the North Coast and San Francisco Bay Regions, experience average-year and drought-year shortages now, and are forecasted to experience increased shortages in 2020. The largest average-year shortages are forecasted for the South Coast Region, which heavily relies on imported water. Future average-year shortages in the South Coast Region reflect forecasted population growth plus lower Colorado River supplies as California reduces its use of Colorado River water to the State's basic apportionment. To help bridge the projected gap between water supply and demand, water conservation must be a priority.”

Water service to the majority of the City is provided by the Jurupa Community Services District (JCSD), a special district that provides water, sewer, and street light services in newly incorporated areas of the City of Jurupa Valley and the City of Eastvale. A portion of the City's water and sewer needs are met through the Rubidoux Community Service District. While Western Municipal Water District (WMWD) is a wholesaler in the region, JCSD currently depends on groundwater from the Chino Groundwater Basin. The Chino Basin is the largest groundwater basin in the Upper Santa Ana River Watershed, and underlies portions of San Bernardino, Riverside, and Los Angeles County. The JCSD uses a combination of its own wells and purchases from the Chino Desalter Authority to extract water from the Basin. In addition, the JCSD receives a small portion of its supplies from the Rubidoux Community Services District.

These underground reservoirs are tapped throughout the year according to the demand for water. Groundwater conditions in the Basin are influenced by natural hydrologic conditions such as percolation of precipitation, groundwater seepage from adjacent basins, and infiltration of surface flow within the watershed areas. Water supply reliability in the Chino Basin is supplemented by artificial recharge facilities that use stormwater, State Water Project water, and recycled water to recharge the basin. Currently, the Inland Empire Utilities Agency¹ and Chino Basin Watermaster 2010 Recharge Master Plan Update² do not identify any major groundwater recharge areas within the City or immediate surrounding area.

Private development projects that exceed 500 residential units or the equivalent in non-residential development are required to prepare a Water Supply Assessment (WSA) in order to determine the sufficiency of water supply, pursuant to the requirements of SB 610.

4.9.1.6 NOP/Scoping Comments

There were no public comments received during the NOP review period regarding impacts on local drainage, localized flooding, groundwater, or water quality. One comment letter was received from the Jurupa Community Services District which said they wished to review any data on water or sewer services for the portion of the City within the District.

4.9.2 Regulatory Framework

In the past, the effort to control the discharge of storm water has focused on managing the quantity of storm water (e.g., flood control) and only to a limited extent on managing the quality of storm water. In recent years, awareness of the need to improve water quality has increased. With this awareness, an extensive body of federal, state, and local laws and regulatory programs has been established to pursue the goal of reducing pollutants contained in storm water discharges to waterways. The emphasis of these programs is to promote the concept and the practice of preventing pollution at the source, before it can cause environmental harm.

4.9.2.1 Federal Regulations

Clean Water Act. The CWA was amended in 1972 to prevent discharge of pollutants to waters of the United States from any point source unless the discharge is in compliance with a National Pollutant Discharge Elimination System (NPDES) permit. The 1987 amendments to the CWA added Section 402(p), which establishes the NPDES, a permitting system for the regulation of discharges of any pollutant into waters of the United States. Regional Water Quality Control Boards (RWQCBs) administer this permitting program in California. In November 1990, the EPA published final regulations that establish application requirements for storm water permits. The regulations require NPDES permits for discharges of storm water from industrial/construction and Municipal Separate Storm Sewer Systems (MS4s). To comply with the permits, storm water pollution controls must be implemented for construction and industrial activity that discharges either directly to surface waters or indirectly through separate municipal storm drains. Pollution control is achieved by establishing engineering measures that have been designed, tested and successfully implemented throughout the past decades, such as detention basins and sediment traps, during both the construction period and the operational phases of a project.

Pursuant to the requirements of the State Water Resources Control Board (SWRCB), the NPDES General Permit No. CAS000002 applies to all construction activities that result in the disturbance of at least one acre of total land area, or activity which is part of a larger common plan of development of one acre or greater. General Permit No. CAS000002 is issued by the SWRCB as part of the Federal delegation responsibilities under this section of the CWA. The RWQCB regulates hydromodification¹ as well as surface and groundwater quality through adoption of water quality plans and standards, and issuance of water quality permits and waivers. The NPDES permit deals with both the construction phase and operational phase of development projects. For the construction phase of a project, the NPDES permit identifies the preparation of an SWPPP.

The implementation of NPDES permits ensures that the state's mandatory standards for the maintenance of clean water and the Federal minimum standards are met. Coverage under an NPDES permit regulates sedimentation and soil erosion through implementation of an SWPPP and periodic inspections by RWQCB staff. An SWPPP is a written document that describes the construction operator's activities to comply with the requirements in the NPDES permit. The SWPPP establishes a process whereby the operator evaluates potential pollutant sources at the site and implements Best Management Practices (BMPs) designed to prevent or control the discharge of pollutants in storm water runoff.

¹ Hydromodification is the alteration of the hydrologic characteristics of coastal and non-coastal waters, which, in turn, could cause degradation of water resources.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Storm water control measures during construction and grading will be outlined in the construction NPDES permit and SWPPP prepared for each proposed phase of the project. Examples of such BMP control measures include but are not limited to the following:

- Temporary detention basins for runoff and silt containment;
- Regular street-sweeping and truck washing prior to exiting construction areas;
- Covering of soil hauling trucks to minimize dust generation (and silt buildup on project roads);
- Dirt rockers at project exits to reduce soil transported out of construction areas;
- Monitoring of runoff and protection devices during storm events;
- Use of silt fencing, gravel bags, and/or straw bales to channel runoff to temporary basins; and
- Identification of emergency procedures in case of hazardous materials spills.

The project proponent will be required to obtain a construction NPDES permit prior to any site grading. In addition, the NPDES permit will require the identification of post-construction BMPs to be incorporated into the project WQMP and any subsequent site-specific WQMP. The WQMP identifies measures to control the post-construction entry of contaminants into storm flows.

In addition, pursuant to Section 404 of the CWA, the U.S. Army Corps of Engineers (USACE) regulates discharges of dredged or fill material into waters of the United States. These waters include wetlands and non-wetland bodies of water that meet specific criteria, including a direct or indirect connection to interstate commerce. The USACE regulatory jurisdiction pursuant to Section 404 of the CWA is founded on a connection, or nexus, between the water body in question and interstate commerce. This connection may be direct (through a tributary system linking a stream channel with traditional navigable waters used in interstate or foreign commerce) or may be indirect (through a nexus identified in the USACE regulations). The USACE typically regulates as non-wetland waters of the U.S. any body of water displaying an ordinary high water mark (OHWM). In order to be considered a jurisdictional wetland under Section 404, an area must possess three wetland characteristics: hydrophytic vegetation, hydric soils, and wetland hydrology. Each characteristic has a specific set of mandatory wetland criteria that must be satisfied in order for that particular wetland characteristic to be met. A project-specific discussion regarding Section 404 issues is provided in Section 4.4, *Biological Resources*, of this EIR.

National Flood Insurance Program. The National Flood Insurance Program (NFIP) is a relatively recent Federal program. The Federal government has been actively involved in flood control since 1927 following major floods on the Mississippi River. Beginning with the Flood Control Act of 1936, Congress assigned the USACE the responsibility for flood control engineering works and later for floodplain information services. Flood control was provided through the construction of dams and reservoirs. Despite these programs and rapidly rising Federal expenditures for flood control, flood losses continued to rise. In 1968, Congress passed the National Flood Insurance Act, which created the NFIP. The Flood Disaster Protection Act of 1973, which amended the 1968 Act, required the purchase of flood insurance by property owners who were located in special flood hazard areas and were being assisted by Federal programs, or by federally supervised, regulated, or insured agencies or institutions.

National Flood Insurance Program Reform Act of 1994. In 1994, the National Flood Insurance Program Reform Act went through its first major revision since its inception. Included in this revision were provisions that if a lender were to escrow an account and if the structure were in the floodplain, then the lender *must* escrow for flood insurance. The revised legislation also included increased flood insurance limits and the elimination of the 1962 buy-out program. However, the legislation did initiate the Hazard Mitigation Fund as part of the flood insurance policy. Also included in this legislation was the increase from a 5-day to a 30-day waiting period for a new policy to become effective. It also prohibits the waiver of flood insurance purchase requirements as a condition of receiving Federal

disaster assistance. If the flood insurance policy were not maintained, in the event of another disaster, no disaster assistance would be made available for that structure.

Executive Order 11988, Floodplain Management. Executive Order 11988 requires the USACE to provide leadership and to take action to:

- Reduce the hazards and risk associated with floods;
- Minimize the impact of floods on human health, safety, and welfare; and
- Restore and preserve the natural and beneficial values of the current floodplain.

To comply with Executive Order 11988, the policy of the USACE is to develop projects that, to the extent possible, avoid or minimize adverse effects associated with use of the floodplain and that avoid development (or the inducement of development) in an existing floodplain unless there is no practicable alternative.

4.9.2.2 State Regulations

Porter-Cologne Water Quality Control Act. The California Water Code (CWC) is the principal state law regulating water quality in California. The CWC contains provisions regulating water and its use. This portion of the CWC, Division 7 (Porter-Cologne Act), establishes a program to protect water quality and beneficial uses of the State water resources and includes groundwater and surface water. The SWRCB is the principal State agency responsible for control of water quality. It establishes waste discharge requirements, water quality control planning and monitoring, enforcement of discharge permits, and ground and surface water quality objectives. It also prevents waste and unreasonable use of water, and adjudicates water rights.

Pursuant to requirements of the SWRCB, the NPDES Construction General Permit (CGP) No. CAS000002 applies to all construction activities in the Santa Ana River Basin that result in the disturbance of at least one acre of total land area, or activity which is part of a larger common plan of development of one acre or greater. The CGP is issued by the SWRCB as part of the Federal delegation responsibilities under Section 402 of the CWA. For all projects subject to the CGP, applicants are required to develop and implement an effective Storm Water Pollution Prevention Plan (SWPPP) to implement sediment, erosion, and pollution prevention control measures; and to obtain coverage under the CGP. The purpose of a SWPPP is to:

- 1) Identify all pollutant sources, including sources of sediment that may affect the quality of storm water discharges associated with daily use / activity (storm water discharges) from the property site;
- 2) Identify non-storm water discharges;
- 3) Identify, construct, implement and maintain Best Management Practices (BMPs) to reduce or eliminate pollutants in storm water discharges and authorized non-storm water discharges from the property site; and
- 4) Develop a maintenance schedule for BMPs designed to reduce or eliminate pollutants.

California Fish and Game Code. The California Fish and Game Code has provisions to prevent unauthorized diversions of any surface water and discharge of any substance that may be deleterious to fish, plant, animal, or bird life. The California Department of Fish and Wildlife (CDFW), through provisions of the California Fish and Game Code (§1601 through §1603), is empowered to regulate any alteration of a river, stream, or lake where fish or wildlife resources may be adversely affected. The presence of a channel bed and banks, and at least an intermittent flow of water define streams (and rivers), is one of the most important factors in establishing CDFW jurisdiction. The CDFW regulates wetland areas only to the extent that those wetlands are part of a river, stream, or lake as defined by the CDFW. Discussion of jurisdictional waters and riparian/wetland resources is provided in Section 4.4, *Biological Resources*, of this EIR.

California Code of Regulations. The California Code of Regulations (CCR) contains administrative procedures for the State and the nine Regional Water Quality Control Boards (RWQCBs) in Title 23, and for water quality for domestic uses, wastewater reclamation, and hazardous waste management in Title 22.

Health and Safety Code. The Health and Safety Code provides for protection of ground and surface waters from hazardous waste and other toxic substances.

Groundwater Management Act (AB 3030) [Sections 10750–10756 of the California Water Code].

The availability of groundwater and issues involving the adequacy of recharge capability are regional in nature. The Groundwater Management Act¹ (AB 3030) provides a systematic procedure for an existing local agency to develop a groundwater management plan. AB 3030 allows a local agency whose service includes a groundwater basin that is not already subject to groundwater management pursuant to law or court order to adopt and implement a groundwater management plan and includes plans to mitigate overdraft conditions, control brackish water, and to monitor and replenish groundwater.

Cobey-Alquist Flood Plain Management Act (California Water Code Section). This Act states that a large portion of land resources of the State of California is subject to recurrent flooding. The public interest necessitates sound development of land use, as land is a limited, valuable, and irreplaceable resource, and the floodplains of the State are a land resource to be developed in a manner that, in conjunction with economically justified structural measures for flood control, would result in prevention of loss of life and of economic loss caused by excessive flooding. The primary responsibility for planning, adoption, and enforcement of land use regulations to accomplish floodplain management rests with local levels of government. It is policy of the State of California to encourage local government to plan land use regulations to accomplish floodplain management and to provide state assistance and guidance. As part of its discretionary review process, the City must determine how the project will comply with this Act and not create flooding impacts on new occupied land uses.

California Toxics Rule. On May 18, 2000, the State Environmental Protection Agency (CalEPA) promulgated numeric water quality criteria for priority toxic pollutants and other provisions for water quality standards to be applied to waters in the State of California. The CalEPA promulgated this rule based on the Administrator's determination that the numeric criteria are necessary in California to protect human health and the environment. The rule fills a gap in California water quality standards that was created in 1994 when a State court overturned the State's water quality control plans containing water quality criteria for priority toxic pollutants. Thus, the State of California has been without numeric water quality criteria for many priority toxic pollutants as required by the CWA, necessitating this action by CalEPA. These Federal criteria are legally applicable in the State of California for inland surface waters, enclosed bays, and estuaries for all purposes and programs under the CWA.

SB 610 and SB 221. Senate Bills 610 and 221 amended state law in 2002 to include water supply assessment as part of land use planning decisions made by cities and counties². Both statutes require that information regarding water availability be made available to decision makers prior to approval of a large development project. The two bills complement each other in facilitating this process. Under SB 610, water assessments for certain projects (as defined in Water Code 10912 [a]) must be made available to local governments as part of environmental documentation prepared pursuant to the California Environmental Quality Act (CEQA). SB 221 requires that a written

¹ Sections 10750–10756 of the California Water Code.

² Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001, California Department of Water Resources. Accessed on October 17, 2014: http://www.water.ca.gov/pubs/use/sb_610_sb_221_guidebook/guidebook.pdf

verification of sufficient water supply be made by a city or county in order to approve certain residential subdivisions.

4.9.2.3 Local Regulations

Municipal Separate Storm Sewer System (MS4) Permit System. The City is a Co-Permittee under the NPDES MS4 Permit No. CAS 618033 (OrderR8-2010-0033), issued by the Santa Ana Regional Board 2010. The NPDES MS4 permit is intended to regulate the discharge of urban runoff from the MS4 within Riverside County. Under the NPDES MS4 permit, the City is responsible for the management of storm drain systems within its jurisdiction. Cities are required to implement management programs, monitoring programs, implementation plans, and all applicable BMPs outlined in the Water Quality Management Plan for the Santa Ana Region of Riverside County.

The 2010 MS4 Permit mandates a Low Impact Development (LID) approach to storm water treatment and management of runoff discharges. A project site should be designed to minimize imperviousness, detain runoff, and infiltrate, reuse or evapotranspire runoff where feasible. LID BMPs should be used to infiltrate, evapotranspire, harvest and use, or treat runoff from impervious surfaces, in accordance with the Design Handbook for Low Impact Development Practices. A project must ensure that runoff does not create a hydrologic condition of concern. The RWQCB continuously updates impairments as studies are completed.

Ordinance No. 2012.07. The intent of this Ordinance is to protect and enhance the water quality of County/City watercourses, water bodies, ground water, and wetlands in a manner pursuant to and consistent with applicable requirements contained in the Santa Ana Region Order No. R8-2010-0033, NPDES No. CAS 618033 regulated by the State of California, California Regional Water Quality Control Board, parented by the Federal Clean Water Act (Title 33 U.S.C. §§ 1251 et seq.), Porter-Cologne Water Quality Control Act (California Water Code §§ 13000 et seq.), any applicable state or federal regulations promulgated thereto, and any related administrative orders or permits issued in connection therewith.

4.9.2.4 City General Plan

The Conservation and Open Space Element of the 2017 General Plan contains the following goals, policies, and programs that are applicable to water resources:

Conservation and Open Space Element

Goals

- | | |
|---------|---|
| COS 3.1 | Work with JCSD, RCSD and other community service districts and agencies, to help meet Jurupa Valley's urban water needs without substantial harm to the natural environment or to agriculture. Measures to help meet water needs include requiring conservation measures such as drought-tolerant landscaping and water saving fixtures in new homes. |
| COS 3.2 | Protect and maintain water quality in aquifers, Santa Ana River, streams and wetlands that help support beneficial uses, including domestic and commercial/industrial uses, agricultural uses, and wildlife habitat. |
| COS 3.3 | Protect and improve the quality of local water sources, including groundwater and the Santa Ana River. |
| COS 3.4 | Encourage JCSD and RCSD to retain and where possible, expand the capacity of wells, aquifers and other groundwater reserves. |
| COS 3.5 | Preserve natural floodways, floodplains and wetlands, and avoid actions that adversely affect waterways or riparian areas, or that increase flood hazards to urban uses. |

Water Resources Policies

- COS 3.1.1 **Water use planning.** Adopt and strive for the most efficient available water conservation practices in the City's operations and planning and encourage community service districts and other agencies to do the same. "Most efficient available practices" means actions and equipment that use the least water for a desired outcome, considering available equipment, life-cycle costs, social and environmental side effects, and the regulations of other agencies.
- COS 3.1.2 **Multi-Use Consideration.** Consider in planning, land use decisions, and municipal operations, the effects of water supply on urban growth, wildlife habitat, agriculture and stream flows, and seek to ensure continued water availability for these uses in planning for long-term water supplies. The City will encourage individuals, organizations, and other agencies to follow this policy.
- COS 3.1.3 **Water Quality.** Employ the best available practices for pollution avoidance and control and encourage others to do the same. "Best available practices" means actions and equipment that result in the highest water quality, considering available equipment, life-cycle costs, social and environmental side effects, and the regulations of other agencies.
- COS 3.1.4 **Water Conservation Systems.** Encourage the installation of water-conserving systems such as dry wells and graywater systems, where feasible, especially in new developments. The installation of cisterns or infiltrators shall also be encouraged to capture rainwater from roofs for irrigation in the dry season and to reduce runoff during heavy storms.
- COS 3.1.5 **Site Water Collection and Retention.** Consider requiring design practices such as permeable parking bays and porous parking lots with bermed, landscaped storage areas for rainwater detention as a condition of development approval,
- COS 3.1.6 **Landscaping with Native Plants.** Encourage the use of California Native Plants for drought-resistant landscape planting.
- COS 3.1.7 **Edible Landscaping.** Encourage the use of edible landscaping in residential areas, streetscapes, public spaces, and parks, including vegetable gardens, herbs and fruit trees in lieu of large expanses of lawn or other more water-demanding plantings.

Programs

- COS 3.1.1.1 **Public Information.** Promote and support educational outreach programs that provide information services to the public about water conservation techniques, benefits and water-saving technologies in conjunction with water providers, Riverside County, community services districts, and other entities.
- COS 3.1.1.2 **Regional Cooperation.** Monitor and participate in regional activities addressing water resources, groundwater and water quality to help ensure adequate and safe water supplies for existing and future residents and businesses.

Water Quality Policies

- COS 3.1.8 **Wastewater Treatment.** Encourage the use of innovative and creative techniques for wastewater treatment.
- COS 3.1.9 **Pollution Discharge.** Minimize pollutant discharge into storm drainage systems and natural drainage and aquifers.
- COS 3.1.10 **Regional Cooperation.** Support efforts to create additional water storage where needed, in cooperation with federal, state, community service districts, Riverside County Flood Control District, and other water authorities. Additionally, support

and/or engage in water banking in conjunction with these agencies where appropriate, as needed.

- COS 3.1.11 **Aquifer Protection.** Require that aquifer water-recharge areas are preserved and protected.
- COS 3.1.12 **Drainage Systems in Development Projects.** Require that developers and designers incorporate natural drainage systems into development projects where appropriate and feasible.
- COS 3.1.13 **Storm Water Retention.** Retain storm water at or near the site of generation for percolation into the groundwater to conserve it for future uses and to mitigate adjacent flooding.
- COS 3.1.14 **Natural Channels.** Collaborate with the Riverside County Flood Control District to promote natural approaches to managing streams and avoid lined, non-porous channels to the maximum extent possible where groundwater recharge is likely to occur.
- COS 3.1.15 **Water Retention Incentives.** Consider granting incentives to landowners to preserve natural ground water recharge areas, through measures such as density averaging..

Programs

- COS 3.1.1.3 **Aquifer Recharge.** Participate in the development, implementation, and maintenance of a program to recharge the aquifers underlying the City and Western Riverside County, where feasible and appropriate. The program shall make use of flood and other waters to offset existing and future groundwater pumping, except where:
- A. Groundwater quality would be reduced,
 - B. Available groundwater aquifers are full, or
 - C. Rising water tables threaten the stability of existing structures.

Flood-Related Policies

- COS 3.1.16 **Floodway Modification.** Encourage other agencies to limit floodway modification or channelization only as a "last resort," and limit the alteration to:
- a. That necessary for the protection of public health and safety, only after all other options are exhausted
 - b. Essential public service projects where no other feasible construction method or alternative project location exists,
 - c. Projects where the primary function is improvement of fish and wildlife habitat, or
 - d. Private development entitlements shall be required to design floodplain and river edge treatments to simulate and ultimately regenerate natural terrain and riparian habitat, using techniques such as covering and re-planting over rip-rap embankments, utilizing gentle contoured slopes that do not exceed 8:1 slope ratio, etc.
- COS 3.1.17 **Environmental Mitigation.** Encourage, and where possible, require substantial modifications of a floodplain to be designed to reduce adverse environmental effects to the maximum extent feasible, considering the following factors:
- a. Stream scour
 - b. Erosion protection and sedimentation
 - c. Wildlife habitat and linkages

- d. Groundwater recharge capability
- e. Adjacent property
- f. Designed to achieve a natural effect. Examples could include soft riparian bottoms, riparian corridors within the floodway, and gentle bank slopes, wide and shallow floodways, minimization of visible use of concrete, and landscaping with California native plants to the maximum extent possible. A site-specific hydrologic study may be required.

COS 3.1.18 **Setbacks.** Based upon site-specific study, all development shall be set back from the designated floodway boundary or top of bank, whichever is most appropriate, a distance adequate to address the following issues:

- a. Public safety
- b. Erosion
- c. Riparian or wetland buffer
- d. Wildlife movement corridor or linkage, and
- e. Slopes

COS 3.1.19 **Trails.** Consider designating floodway setbacks to accommodate greenways, trails, and recreation opportunities and allowing such uses within floodways, where appropriate.

COS 3.1.20 **Riparian Area Preservation.** Require development projects to preserve and enhance native riparian habitat and prevent obstruction of natural watercourses. Zoning incentives, such as averaging of development rights, should be used to the maximum extent possible.

COS 3.1.21 **Ecotones.** Identify and, to the maximum extent possible, conserve remaining upland habitat areas, or “ecotones” adjacent to wetland and riparian areas that are critical to the feeding, hibernation, or nesting of wildlife species.

Programs

COS 3.1.1.4 **Floodway Protection and Enhancement.** Working with other responsible agencies, help implement the following actions:

- A. Encourage preparation of an inventory of natural areas that have been degraded and list sites in priority order, for restoration efforts.
- B. Encourage revegetation of disturbed areas using native plants.
- C. Eliminate sources of water pollutants and improper water diversions.
- D. Remove invasive, non-native species in natural habitat areas, and prevent the introduction or spread of invasive, non-native species.
- E. Discourage the placement and where possible, remove man-made elements such as buildings, paving, structural elements, concrete lining of waterways, signs, streets and utilities within floodways or floodplains, unless they are needed for public health or safety, or for implementation of City plans.
- F. Require that suitably sized access corridors be provided and/or maintained through or under new and previously established, man-made obstacles to wildlife movement (such as appropriately sized culverts under arterial streets, highways and other major roads).
- G. Discourage or prevent camping, off-road vehicles, hunting and other activities that are not compatible with floodplain health and preservation.

- H. Remove trash, debris, and contaminants, using methods that minimally disrupt the open-space resources.
- I. Provide continuing community education and outreach for all citizens, youth, and youth groups, and property owners on open space and natural resource values, programs and responsibilities.
- J. Enlist the help of volunteers, youth and service groups, and academic programs in restoring and monitoring habitat health.

In addition, the Community Safety, Services, and Facilities Element of the 2017 General Plan contains the following goals, policies, and programs related to flooding and water-related planning:

Community Safety, Services, and Facilities Element

Policies

- CS 1.1.6 **Flood Risk.** In reviewing new construction and substantial improvements within the 100-year floodplain, the City shall disapprove projects that cannot minimize the flood risks to acceptable levels in areas mapped by FEMA or as determined by site-specific hydrologic studies for areas not mapped by FEMA. The City shall:
- a. Prohibit the construction, location, or substantial improvement of structures in areas designated as floodways, except upon approval of a plan which provides that the proposed development will not result in any significant increase in flood levels during the occurrence of a 100-year flood; and
 - b. Prohibit the filling or grading of land for nonagricultural purposes and for non-authorized flood control purposes in areas designated as floodways, except upon approval of a plan, which provides that the proposed development will not result in any significant increase in flood levels during the occurrence of a 100- year flood discharge.
- CS 1.1.7 **Floodway Alteration.** Require that any alterations of the floodway utilize naturalized edge treatments as outlined in the Conservation and Open Space Element (Policies 3.1.14 and 3.1.17).
- CS 1.1.8 **Building Codes.** Enforce provisions of the Building Code in conjunction with the following guidelines:
- a. Critical facilities shall not be permitted in floodplains unless the project design ensures that there are at least two routes for emergency ingress and egress, and minimizes the potential for debris or flooding to block emergency routes.
 - b. Development using, storing, or otherwise involved with substantial quantities of onsite hazardous materials shall not be permitted, unless all standards for evaluation, anchoring, and flood-proofing have been satisfied; and hazardous materials are stored in watertight containers, not capable of floating, to the extent required by state and federal laws and regulations.
 - c. Specific flood-proofing measures that may be required include, but are not limited to: use of paints, membranes, or mortar to reduce water seepage through walls; installation of water tight doors, bulkheads, and shutters; installation of flood water pumps in structures; and proper modification and protection of all electrical equipment, circuits, and appliances so that the risk of electrocution or fire is eliminated. Fully enclosed areas that are below finished floors shall require openings to equalize the forces on both sides of walls.
- CS 1.1.9 **Permanent Structures.** Prohibit construction of permanent structures for human housing or employment to the extent necessary to convey floodwaters without

property damage or risk to public safety. Agricultural, recreational, or other similar, non-habitation uses are allowable if flood control and groundwater recharge functions are maintained.

- CS 1.1.10 **Floodway Alteration.** Prohibit alteration of floodways and channelization unless alternative methods of flood control are not technically feasible or unless alternative methods are already utilized to the maximum extent practicable. The intent is to balance the need for protection with prudent land use solutions, recreation needs, and habitat preservation requirements, and as applicable to provide incentives for natural watercourse preservation. Preservation incentives may include density transfer programs as may be adopted.
- CS 1.1.11 **Modification of Water Courses.** Prohibit substantial modification to water courses, unless modification does not increase erosion or adjacent sedimentation, or increase water velocities, so as to be detrimental to adjacent property, nor adversely affect adjacent wetlands or riparian habitat.
- CS 1.1.12 **Flood Control Improvements.** Direct flood-control improvement measures toward the protection of existing and planned development.
- CS 1.1.13 **Environmental Protection.** Ensure that any substantial modification to a watercourse is accomplished in the least environmentally damaging manner possible to maintain adequate wildlife corridors and linkages and maximize groundwater recharge
- CS 1.1.14 **Ability to Withstand Flooding.** Require development within the floodplain to be capable of withstanding flooding and to minimize use of fill. Compatible uses shall not, however, obstruct flows or adversely affect upstream or downstream properties with increased velocities, flood heights, erosion backwater effects, or concentrations of flows.
- CS 1.1.15 **Regional Storm Drain System.** All proposed development projects shall address and mitigate any adverse impacts on the carrying capacity of local and regional storm drain systems.
- CS 1.1.16 **Neighboring Jurisdictions.** Encourage neighboring jurisdictions to require development occurring adjacent to the City to consider the impact of flooding and flood control measures on properties within the City.
- CS 1.1.17 **Hazardous Materials Storage.** Require that facilities storing substantial quantities of hazardous materials within designated 100- or 500-year flood zones shall be adequately flood-proofed and that hazardous materials containers be anchored and secured to prevent flotation and contamination.
- CS 1.1.18 **Lifeline Facilities.** Require that all lifeline and dependent care facilities, such as convalescent homes, group housing, police stations, fire stations and emergency operation centers in designated flood zones be flood-proofed and to maintain and rehearse inundation response plans.
- CS 1.1.19 **Open Space Tools.** Utilize various means of land acquisition tools and land use measures, such as density credit for open space, dedication of flood plain areas to the Riverside Conservation Agency, etc., to create open space zoning in designated flood zones that are likely to be developed or redeveloped with uses that are more intensive.
- CS 1.1.20 **Risk Assessment.** Continue to assess and upgrade inundation risk and protection in the City.
- CS 1.1.21 **Flood Hazard Zones.** Encourage periodic reevaluation of the 500-year, 100-year and 10-year flood hazard zones by state, federal, County, and other sources and use

such studies to improve existing protection, review flood protection standards for new development and redevelopment, and to update emergency response plans.

- CS 1.1.22 **Specific Plans.** Encourage the use of specific plans to allow increased densities in certain areas of a proposed development and to transfer density to locate residential, commercial, industrial and public facility uses outside of natural hazard areas; and to direct appropriate uses to these areas, such as open space, passive recreational uses, or other uses compatible with these hazards.

Programs

- CS 1.1.1.3 **Property Acquisition.** Take an active role in acquiring property in high-risk flood zones and designating the land as open space for public use or wildlife habitat.
- CS 1.1.1.4 **Giant Cane.** Encourage and as resources allow, support the efforts of SAWPA, the County of Riverside and other agencies to remove Giant Cane (*Arundo donax*) from the Santa Ana River corridor and restore native riparian habitat.

Policies

- CS 2.1.43 **Grey Water Systems.** Facilitate the utilization of grey water systems.
- CS 2.1.44 **Drought-Tolerant Landscaping.** Require the use of drought-tolerant landscaping in all new development.
- CS 2.1.45 **Reclaimed Water.** Encourage the development and use of reclaimed water for landscape irrigation and other uses.
- CS 2.1.46 **Public Education.** Support public education efforts to promote water conservation throughout the community.
- CS 2.1.47 **Water Storage.** Encourage local water purveyors to expand local domestic water storage and recycling capabilities.
- CS 2.1.48 **Public Education/Outreach.** Continue providing education and community outreach on water conservation options and methods.

Programs

- CS 2.1.1.5 **Urban Water Management Plan.** Work with local water purveyors to prepare a unified Urban Water Management Plan for Jurupa Valley and to ensure the Plan is updated as needed.
- CS 2.1.1.6 **Alternative Water Resources.** Explore the feasibility of desalinization and other regional projects as an alternative resource to reduce the City's dependency on imported water.
- CS 2.1.1.7 **Water Conservation Ordinance.** Implement and enforce the City's Landscape Water Conservation ordinance.

4.9.3 Methodology

The existing conditions within the City regarding potential dam inundation, flooding, groundwater quantity and quality, and overall water resources will be examined in light of future needs for protection of new housing and businesses that would be built, and the need for adequate surface and groundwater supplies as appropriate. The proximity to the Santa Ana River has a major influence on all water-related issues facing the City.

It is assumed that future development will be required to comply with the following hydrology, flooding, and water quality requirements:

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- All drainage facilities will be designed and constructed in accordance with the Riverside County Flood Control and Water Conservation District (RCFC&WCD) standards and specifications.
- Drainage facilities will be subject to the review and approval of the City of Jurupa Valley and, as applicable, RCFC&WCD.
- Jurupa Community Services Department (JCSD) and the Rubidoux Community Services District (RCSD) will review the design of drainage facilities in conjunction with their review of the sewer and water facilities to ensure that there are no design conflicts between the proposed utilities.
- The capital cost of all on-site facilities will be the responsibility of the applicant. Such facilities will be dedicated to City of Jurupa Valley, Jurupa CSD, Rubidoux CSD, RCFC&WCD, a Homeowners Association (if private system), or Community Facilities District (CFD) for maintenance and operations.
- New development will be required to prepare Water Quality Management Plans (WQMPs) and Storm Water Pollutant Prevention Plans (SWPPPs) in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) standards.
- All projects proposing construction activities including: clearing, grading, excavation that results in the disturbance of at least one acre total land area, or activity which is part of a larger common plan of development of one acre or greater, shall obtain the appropriate NPDES construction permit and pay the appropriate fees. All development less than one-acre are required to manage storm water drainage and retention during construction pursuant to the California Green Building Standards Code. All development within the specific plan boundaries shall be subject to future requirements adopted by the City to implement the NPDES program. Project-specific mitigation measures may include, but not be limited to: on-site detention; water quality basins; covered storage of all outside facilities; vegetated swales; monitoring programs; etc.

4.9.3.1 Pollutants of Concern and Assessment Methodology

The pollutants of concern for the water quality analysis have been identified based on the previously described regulations and the pollutants identified by regulatory agencies that potentially could be generated by urban runoff from the proposed project. The potential pollutants associated with the project are reflected in Table 4.9.C which describes these pollutants (bacterial indicators, metals, nutrients, pesticides, toxic organic compounds, sediments, trash & debris, and oil & grease) and their general impact on water quality and aquatic habitat (primarily the Santa Ana River and downstream receiving basin). Pollutants of most concern from urban runoff include pathogens, nutrients, sediments, and toxicity.

Table 4.9.C: Pollutants and General Water Quality Impacts

| Pollutant | Water Quality Impact |
|----------------------|--|
| Bacterial Indicators | May result in water body impairments, can exceed public health standards for water contact recreation, creating a harmful environment. Can alter the aquatic habitat and create a harmful environment for aquatic life. |
| Metals | Bio-available forms of trace metals are toxic to aquatic life, potential of groundwater contamination, bio-accumulation in aquatic life, affect beneficial uses of a water body. |
| Nutrients | Elevated nutrient levels in surface waters cause algal blooms, excessive vegetative growth, and dissolved oxygen levels, which is detrimental to aquatic life. |
| Pesticides | Elevated levels can indirectly or directly constitute a hazard to life or health. During cleaning activities, these compounds can be washed off into storm drains creating runoff containing toxic levels of the pesticides active component. Dirt, grease, and grime may adsorb concentrations that are harmful or hazardous to aquatic life. |

Table 4.9.C: Pollutants and General Water Quality Impacts

| Pollutant | Water Quality Impact |
|-------------------------|---|
| Toxic Organic Compounds | May contain levels that are harmful or hazardous to aquatic life. |
| Sediments | Excessive sediment can be detrimental to aquatic life by interfering with photosynthesis, respiration, growth, and reproduction. |
| Trash and Debris | Detrimental effect on recreational value of a water body and aquatic habitat; interferes with aquatic life respiration and can be harmful or hazardous to aquatic animals that mistakenly ingest floating debris. |
| Oil and Grease | Can accumulate in aquatic life from contaminated water, sediments, and food and are toxic at low concentrations. Can persist in sediments for long periods of time and result in adverse impacts on the diversity and abundance of existing bio-communities and can affect the aesthetic value of a water body. |

Source: Santa Ana Basin Plan.

4.9.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. The following thresholds of significance regarding potential impacts to hydrology and water quality are based on Appendix G of the *CEQA Guidelines*. A project would have a significant impact on surface hydrology, water quality, and/or groundwater if it would:

- Result in violations of any water quality standards or waste discharge requirements of the City of Jurupa Valley or the Regional Water Quality Control Board;
- Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level;
- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion, siltation on site or off site;
- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff which would result in on-site or off-site flooding;
- Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff;
- Otherwise substantially degrade water quality;
- Place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map;
- Place within a 100-year flood hazard area structures which would impede or redirect flood flows;
- Expose people or structures to a significant risk of loss injury or death involving flooding, including flooding as a result of the failure of a levee or dam; and/or
- Expose people or structures to inundation by seiche, tsunami, or mudflow.

4.9.5 Programmatic Impact Evaluation

4.9.5.1 Dam Inundation Impacts

| | |
|-----------|---|
| Threshold | Would the project expose people or structure to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam? |
|-----------|---|

Programmatic Impacts. Prior to completion of the Prado Dam in 1941, the Santa Ana River historically flooded along various portions of its length from the Santa Ana Mountains to the Pacific Ocean. Particularly destructive were the floods of 1938 which highlighted the need for the dam which now protects the lower stretch of the river. In 1969 severe flooding occurred along the portion of the river upstream of Prado Dam that killed between 90–100 people. In 2001, the Army Corps of Engineers completed the Seven Oaks Dam in Mentone to protect the upper stretch of the river. Seven oaks is a “dry” dam that almost exclusively provides flood protection for Orange, San Bernardino, and Riverside Counties, including Jurupa Valley. Since completion of the Seven Oaks Dam, the lower portion of the Santa Ana River has not experienced severe flooding and is not expected to be subject to flooding under expected future conditions. The City is not located in a currently mapped dam inundation area. The nearest dam to the City is the Prado Dam, located ten miles downstream to the southwest.

Due to the presence of the Seven Oaks Dam, future development, residents, or businesses within the City would not subject to risk of loss, injury, or death involving flooding as a result of failure of a nearby dam or other water retention facility.

Evaluation of General Plan Goals and Policies. Since completion of the Seven Oaks Dam, the City is no longer subject to flooding along the Santa Ana River. The following summarized goal, policies, and programs in the 2017 General Plan Community Safety, Services, and Facilities Element (for the full text of measures see Section 4.9.2.2):

Community Safety, Services, and Facilities Element

Goal

CS 1 Minimize risks from natural and manmade hazards to its residents and businesses.

Policies

- CS 1.1.5 Require projects to mitigation onsite geologic and related hazards.
- CS 1.1.6 Require new development to protect structures/persons in the 100-year floodplain.
- CS 1.1.9 New development shall convey expected flood flows safely without damage or risk.
- CS 1.1.10 Do not alter floodways unless other methods of protection are not feasible.
- CS 1.1.11 Do not modify drainages unless it can be done safety and without impacts.
- CS 1.1.12 Flood-control improvements must protect existing and planned development.
- CS 1.1.14 Development in the floodplain must withstand flooding and minimize the use of fill.
- CS 1.1.15 New development shall integrate into local and regional storm drain systems.
- CS 1.1.16 Coordinate with neighboring jurisdictions regarding flood protection.
- CS 1.1.18 Protect lifeline facilities from potential flooding.
- CS 1.1.19 Use creative land use solutions to reduce or eliminate development in floodplains.
- CS 1.1.20 Assess and upgrade inundation risk and protection in the City.
- CS 1.1.21 Evaluate 500-year, 100-year, and 10-year flood hazard zones to improve safety.

CS 1.1.22 Use specific plans to transfer density if needed for flood protection improvements.

Programs

CS 1.1.1.3 Acquire property in high-risk flood zones and designating the land as open space.

CS 1.1.1.4 Support efforts to remove *Arundo donax* from the Santa Ana River corridor and restore native riparian habitat.

Policy CS 1.1.6 addresses flood risk by requiring the review of new construction and substantial improvements within the 100-year floodplain. It also requires projects to minimize its flood risks to acceptable levels in areas mapped by FEMA or as determined by site-specific hydrologic studies for areas not mapped by FEMA (i.e., the 100-year flood zone). In addition, Policy CS 1.1.12 requires that flood control improvements must be in place to protect not only existing development but future development in the City. With implementation of these flood-related goals, policies, and programs, the proposed 2017 General Plan will have less than significant impacts regarding dam inundation, and no mitigation is needed.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not have significant impacts regarding dam inundation and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not have significant impacts regarding dam inundation and no mitigation is required.

4.9.5.2 Seismic-Related Impacts

| | |
|-----------|---|
| Threshold | Would the project expose people or structure to a significant risk of loss, injury, or death involving inundation by seiche, tsunami, or mudflow? |
|-----------|---|

Programmatic Impacts. A tsunami is a series of waves generated in a body of water by a pulsating or abrupt disturbance that vertically displaces water. Seiches are oscillations in enclosed bodies of water that are caused by a number of factors, most often wind or seismic activity. Lakes in seismically active areas such as Lake Perris are at risk from seiches. A mudslide (also known as a mudflow) occurs when there is fast-moving water and a great volume of sediment and debris that surges down a slope, stream, canyon, arroyo, or gulch. Mudslides are similar to flash floods and can occur suddenly without time for adequate warning. Mudflows can ruin substantial improvements with the force of the flow itself and the burying or erosion of improvements by mud and debris.

The City is not at risk of inundation by a tsunami as it is located approximately 33 miles inland from the Pacific Ocean. The City is also not located downstream of or near any enclosed body of water and could be subject to a seiche during a seismic event. There are several small reservoirs and water tanks in the City, and residences or businesses immediately down slope may be impacted by seiche events or standing waves within the enclosed water facility if they were to fail during a large seismic event. However, this would likely be an isolated event and it is not considered a substantial risk to public health or safety. Given these factors, impacts associated with seiche events are less than significant for the 2017 General Plan.

Jurupa Valley has a number of rolling hills and variable topography that gently slopes from the north to the south, from the Jurupa Hills toward the Santa Ana River. There are some areas with steep slopes and rock outcrops especially in the northern portion of the City, north of the SR-60 Freeway, in the Jurupa Hills. It is possible some of these areas could potentially become unstable during a seismic event. However, Section 4.6.5.3 discusses impacts associated with landslides, rockfalls, or

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

mudslides and determined that potential impacts to new development in the future would be less than significant with implementation of the 2017 General Plan, and no mitigation was recommended.

Evaluation of General Plan Goals and Policies. The 2017 General Plan Community Safety, Services, and Facilities Element contains the following summarized policies to address potential seismic-related impacts that are related to water resources (for the full text of measures see Section 4.9.2.2):

Community Safety, Services, and Facilities Element

Goal

CS 1 Minimize risks from natural and manmade hazards to its residents and businesses.

Policies

CS 1.1.2 Require geotechnical studies for new development to identify potential hazards.

CS 1.1.5 Require projects to mitigation onsite geologic and related hazards.

These policies plus others specifically related to geotechnical hazards (see Section 4.6.5) will help assure the 2017 General Plan will effectively minimize risks and seismically induced impacts on water resources.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not have significant impacts regarding seismic impacts related to water resources, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not have significant impacts regarding inundation by seiche, tsunami, or mudflow and no mitigation is required.

4.9.5.3 Groundwater

| | |
|-----------|---|
| Threshold | Would the proposed project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level? |
|-----------|---|

Programmatic Impacts. Jurupa Valley does not rely on imported water to provide its domestic needs but rather uses local groundwater from the Santa Ana River Basin. Three agencies provide potable water to the City of Jurupa Valley. They are the Jurupa Community Services District, the Rubidoux Community Services District, and the Santa Ana River Water Company.

Jurupa Community Services District (JCSD). A large portion of the City is within the service area of the Jurupa Community Services District (JCSD) which owns, operates, and maintains its own water system. The water supply available to the JCSD in 2009 was 23,660 acre feet. Water sources for the JCSD come primarily from the Chino Groundwater Basin and the Chino Basin Desalter Authority, with the remainder made up of transfers from the Rubidoux Community Services District. The JCSD estimates that its customers average 3.6 persons per household for single family units and 3.1 persons for multi-family units. Single family water usage averages 0.5 to 0.6 acre feet per year, while multi-family averages 0.26 acre feet per dwelling per year.

In May of 2011, the JCSD adopted its *2010 Urban Water Management Plan* (UWMP), which details the JCSD's current and future water supply. The document found that with all of its existing and

planned supplies, the JCSD can meet 100 percent of projected demand through 2035, even with a repeat of a severe drought.

At present, the 2010 Urban Water Master Plan (UWMP) for the JCSD estimates that per capita consumption within its service area is approximately 197.6 gallons per person per day (JCSD 2010). The JCSD's UWMP is designed to help ensure that local groundwater resources are conserved and groundwater overdraft does not occur, based on projections of future growth and expected water supply conditions. The UWMP projects the water consumption demands of existing and future development based on rates of growth assumed by regional planning organizations (i.e., SCAG) and estimates water demand versus available supply under different water supply scenarios (e.g., multiple dry years). Currently, the JCSD does not purchase imported water, but there are plans to do so in the future (Year 2020) to accommodate growth in the area. In addition, JCSD receives water from the Chino Basin, which is in part recharged using water purchased from Metropolitan Water District (MWD). Since JCSD currently indirectly benefits from State Water Project (SWP) water, and plans to purchase SWP water from MWD in the future discussion of the reliability of state water supplies is appropriate. In addition, the UWMP addresses conservation, local supplies and reliability of imported supplies. Table 4.9.D identifies the JCSD's past, present, and projected water potable supplies and demand. Note that one of the goals of the City is to help organize preparation of a joint UWMP for the entire City.

Table 4.9.D: JCSD Potable Water Supplies and Demand for Average Year Hydrology

| | 2015 | 2020 | 2025 | 2030 | 2035 |
|--|---------------------------|---------------|---------------|---------------|---------------|
| JCSD Water Supplies | | | | | |
| Supply Source | acre-feet per year | | | | |
| Supplier Produced Potable Groundwater from Chino Basin | 13,805 | 13,748 | 12,819 | 11,920 | 10,491 |
| Desalination from Chino Desalination Authority | 11,500 | 11,500 | 11,500 | 11,500 | 11,500 |
| Transfer from Metropolitan/Western MWD | - | 5,000 | 6,500 | 8,000 | 10,000 |
| Transfers from Rubidoux CSD | 1,500 | 1,500 | 1,500 | 1,500 | 1,500 |
| Total | 26,805 | 31,748 | 32,319 | 32,920 | 33,491 |
| JCSD Water Demands | | | | | |
| Demand Source | acre-feet per year | | | | |
| Residential | 18,028 | 21,227 | 21,597 | 21,986 | 22,356 |
| Commercial | 2,757 | 3,227 | 3,281 | 3,339 | 3,393 |
| Industrial | 1,182 | 1,383 | 1,407 | 1,431 | 1,454 |
| Institutional | 802 | 939 | 955 | 971 | 987 |
| Landscape | 2,841 | 3,326 | 3,382 | 3,442 | 3,497 |
| Total | 25,610 | 30,102 | 30,622 | 31,169 | 31,687 |

Source: JCSD 2010 Urban Water Management Plan, May 2011 (Tables 2-3 and 3-1).

Rubidoux Community Services District (RCSD). The RCSD serves the northeastern portion of City located around SR-60 at Rubidoux Boulevard (see Figure 4.9.4). RCSD is a retail water supplier serving more than 3,000 water service connections and more than 3,000 acre-feet of water per year, it meets the definition of an "urban water supplier" and must prepare an Urban Water Management Plan (UWMP) every five years and submit it to the California Department of Water Resources. The RCSD water supply and distribution system can provide over 8.0 million gallons a day of potable water. The construction of a manganese removal plant and a nitrate treatment plant has afforded the District the opportunity to provide the community with water from existing groundwater supplies. The District delivers 2.0 million gallons a day to the Regional Wastewater Treatment Plant located in the City of Riverside. Note that one of the goals of the City is to help organize preparation of a joint

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

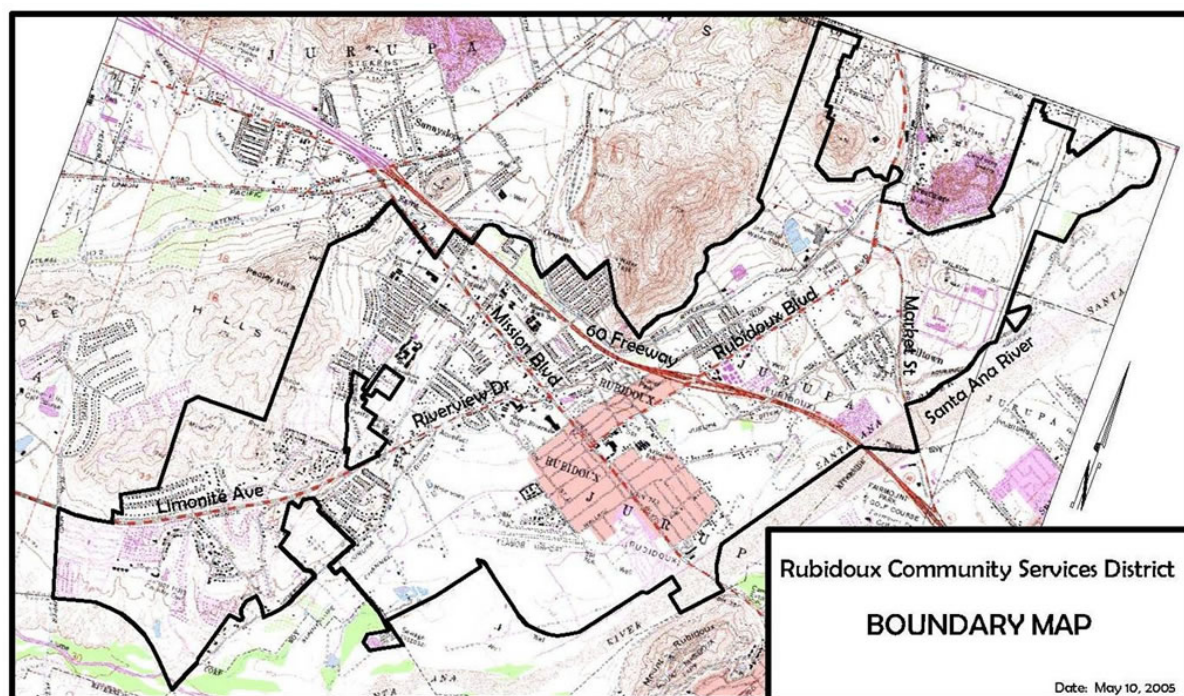

UWMP for the entire City. The District's UWMP states it will continue to rely on local groundwater supplies and needs to develop additional groundwater extraction and groundwater treatment facilities to ensure a continuous and adequate water supply for its service area. In addition, the District has an emergency interconnection with JCSD and Western Municipal Water District which would provide lifeline water service in the event of a catastrophic outage. Table 4.9.E summarizes the water demand and supply conditions projected within the RCSD at present.

Table 4.9.E: RUSD Projected Water Supply and Demand Conditions (AF/yr)

| Water Condition | 2020 | 2025 | 2030 | 2035 | 2040 |
|-------------------------------------|--------|--------|--------|--------|--------|
| Projected Normal Year | | | | | |
| Supply Total | 17,000 | 17,000 | 17,000 | 17,000 | 17,000 |
| Demand Total | 10,397 | 11,045 | 11,754 | 12,465 | 13,202 |
| Difference | 6,603 | 5,955 | 5,246 | 4,535 | 3,798 |
| Projected Single Dry Year | | | | | |
| Supply Total | 17,000 | 17,000 | 17,000 | 17,000 | 17,000 |
| Demand Total | 10,397 | 11,045 | 11,754 | 12,465 | 13,202 |
| Difference | | | | | |
| Projected Multiple Dry Years | | | | | |
| Supply Total | 17,000 | 17,000 | 17,000 | 17,000 | 17,000 |
| Demand Total | 10,397 | 11,045 | 11,754 | 12,465 | 13,202 |
| Difference | 6,603 | 5,955 | 5,246 | 4,535 | 3,798 |

Source: RCSD website, accessed July 21, 2016

Santa Ana River Water Company (SARWC). The SARWC is a mutual water company that serves portions of "Old Mira Loma" which is now in the City of Jurupa Valley. This water company does not have enough connections to qualify as a retail water supplier (i.e., serving more than 3,000 water service connections and more than 3,000 acre-feet of water per year). It does not meet the definition of an "urban water supplier" so it has not prepared an Urban Water Management Plan (UWMP). Note that one of the goals of the City is to help organize preparation of a joint UWMP for the entire City.

State Water Supply Reliability. The water suppliers in the City do not currently rely on imported water, however, long-term regional water supplies are supported by water imported from Northern California, and reductions in state project water supplies could ultimately affect water use in Jurupa Valley.

The Water Allocation analysis released by the California Department of Water Resources (DWR) on March 22, 2010, export restriction could reduce Metropolitan deliveries by 150 to 200 thousand acre-feet (TAF) under mean hydrologic conditions, and operations could remain restricted until a long-term solution is found to improve the stability of the Bay-Delta region.

The State Water Project (SWP) and Central Valley Project (CVP) are the responsible partners for operation of the DWR and Bureau of Reclamation (Reclamation), respectively. In November 1986, DWR and Reclamation signed the Coordinated Operations Agreement (COA). The COA was subsequently authorized and approved by the California State Legislature and Congress. Under COA, DWR and Reclamation agree to operate the SWP and CVP in a balanced manner to coordinate releases from upstream reservoirs and unregulated flows to meet Sacramento Valley in-basin and in-Delta uses, including water quality standards established by the SWRCB.

Reclamation, as a federal agency is required to consult with National Marine Fisheries Service (NMFS) and U.S. Fish and Wildlife Service (USFWS) under Section 7 of the Federal Endangered Species Act (FESA) to determine if a federal action that they authorize, fund, or implement could jeopardize the continued existence of a listed species in the wild, or destroy or modify the species' critical habitat. Because the SWP and CVP are operated in a balanced manner, the findings under Section 7 of the FESA affect operations of both the SWP and CVP.

The initial biological opinions related to long-term operations of the SWP and CVP were issued in 1993 by NMFS for protection of the winter-run Chinook salmon and by USFWS for protection of delta smelt. Operations of the SWP and CVP were modified to reduce potential adverse impacts to these species primarily through:

- 1) Increased storage volumes of water in upstream reservoirs to provide adequate flows with appropriate temperatures for the winter-run Chinook salmon and adequate flows in the Delta for both species;
- 2) Flows released from upstream reservoirs to provide adequate in-Delta flows and Delta outflows for these species; and
- 3) Modification of periods of time when water can be diverted at the SWP and CVP south Delta intakes to reduce the potential for reverse flows, reduce the potential for high salinity in the south Delta, and reduce the potential for entrainment and entrapment of fish in the SWP and CVP south Delta intake facilities.

The biological opinions were modified as DWR and Reclamation modified operations of the SWP and CVP and new information related to aquatic resources became available. During this period, NMFS re-designated the Sacramento River winter-run Chinook salmon as "endangered" and designated two species as "threatened" (i.e., Central Valley spring-run Chinook salmon and Central Valley steelhead). Therefore, the consultations under Section 7 of the FESA were modified and new biological opinions were issued between 2000 and 2004. In 2005, the Department of the Interior was sued with respect to the 2004 biological opinion issued by USFWS. Subsequently, USFWS re-issued the biological opinion in 2005; however, the Department of the Interior was sued in 2005 with respect

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

to the reissued biological opinion. The 2005 USFWS biological opinion was invalidated and the United States District Court for the Eastern District of California (the Court) ordered a new biological opinion and issued interim operations orders to protect delta smelt until a new biological opinion could be issued in 2008. The interim operations criteria included limitations for operation of the SWP and CVP south Delta intakes to protect delta smelt.

In response to these actions, Reclamation requested consultation with USFWS and NMFS in August 2008 with respect to the coordinated long-term operation of the SWP and CVP. In December 2008, the USFWS issued a new biological opinion on the coordinated long-term operation of the SWP and CVP on the effects to delta smelt. In June 2009, the NMFS issued a new biological opinion on the coordinated long-term operation of the SWP and CVP on the effects to currently listed species (e.g., Central Valley spring-run Chinook salmon, Central Valley steelhead, Southern District Population Segment of North American green sturgeon, and Southern Resident killer whale). Reclamation provisionally accepted and then implemented the Reasonable and Prudent Alternatives included in these biological opinions. The operational criteria included in the Reasonable and Prudent Alternatives resulted in changes to operations of upstream reservoirs, stream flows, Delta outflow, and SWP and CVP south Delta intakes.

Several lawsuits were filed in the Court related to various aspects of the USFWS and NMFS biological opinions, and to the acceptance and implementation of the associated Reasonable and Prudent Alternatives by Reclamation. Between 2009 and 2010, the Court ruled that Reclamation failed to conduct an environmental analysis under the National Environmental Policy Act (NEPA) of potential impacts to the human environment before provisionally accepting and implementing the Biological Opinion Reasonable and Prudent Alternatives. In 2010, the Court found certain portions of the USFWS biological opinion to be arbitrary and capricious, and remanded those portions of the biological opinion to the USFWS. The Court ordered Reclamation to review the biological opinion and Reasonable and Prudent Alternative in accordance with NEPA. In 2011, the Court remanded the biological opinion to the NMFS.

Reclamation has continued the consultation with USFWS and NMFS for modification of the biological opinions, and has initiated the NEPA process through publication of the Notice of Intent on March 28, 2012. The Court order required completion by Reclamation of the Environmental Impact Statement (EIS) and the USFWS biological opinion related to delta smelt by December 1, 2013. The Court order also required completion by Reclamation of the EIS and the NMFS biological opinion related to Central Valley spring-run Chinook salmon, Central Valley steelhead, Southern District Population Segment of North American green sturgeon, and Southern Resident killer whale by February 1, 2016. The Court did not vacate the biological opinions, and therefore, SWP and CVP operations are analyzed each year with respect to the Reasonable and Prudent Alternatives.

The most recent Metropolitan Regional Urban Water Management Plan (RUWMP) (Metropolitan November 2010, page 1-18) indicates that operational constraints similar to the most recent biological opinions and associated Reasonable and Prudent Alternatives would likely be continued until future long-term plans, such as the Bay Delta Conservation Plan (BDCP), would be implemented.

To address potential constraints on the SWP, Metropolitan has developed near and long-term action plans to increase water supply reliability. Metropolitan is also working with stakeholders throughout the state to develop and implement long term solutions to the problem in the Bay Delta. The BDCP developed by State and Federal resource agencies, aimed at addressing ecosystem needs and securing long-term operating permits for the SWP. A working draft of the BDCP was released in November of 2010 and reflects significant progress toward consensus on a plan to restoring the Bay-Delta ecosystem and associated sensitive species and provides for improved water supply and reliability.

Drought Restrictions. On April 1, 2015, the Governor issued Executive Order B-29-15. Key provisions include ordering the State Water Resources Control Board to impose restrictions to achieve a 25 percent reduction in potable urban water usage through February 28, 2016. The Governor's drought declaration also calls upon local urban water suppliers and municipalities to implement their local water shortage contingency plans immediately in order to avoid or forestall outright restrictions that could become necessary later in the drought season.

As a result of the Governor's Executive Order issued on April 1, 2015, the State Water Resources Control Board's (State Water Board) updated Emergency Water Conservation regulations went into effect on May 18, 2015. The Jurupa Community Services District (JCSD) and its customers are mandated to meet a total 28% district-wide reduction in potable water usage. Development within the City is required to comply with the following Level 3 Water Use Restrictions per the JCSD in the event drought conditions are in effect at the time development contemplated by the General Plan commences to be occupied:

- Ornamental landscape and turf irrigation will be limited to 3 days per week for no more than 10 minutes per station per day
- Irrigating landscape will be limited to the hours between 8 p.m. and 8 a.m.
- Odd addresses (last digit is an odd number) may irrigate Monday, Wednesday, and Friday.
- Even addresses (last digit is an even number) may irrigate Tuesday, Thursday, and Saturday.

Violation of these mandatory water- conservation restrictions are subject to administrative, civil, and criminal penalties.

In response to the State of California's mandated water conservation emergency regulation, the Rubidoux Community Services District adopted Resolution 2015-820 implementing a modified Stage 2 water restrictions. Effective immediately, RCSD customers are asked to reduce their water use. The City is required to comply with the following Water Use Restrictions per the RCSD in the event drought conditions are in effect at the time development contemplated by the General Plan commences to be occupied:

1. No outdoor watering between 10:00 AM - 6:00 PM;
2. Don't water more than 20 minutes per station;
3. Outdoor watering limited to 2 days per week;
4. No watering during or within 48-hours of measurable precipitation;
5. No watering of outdoor landscapes that cause runoff;
6. No using hoses without shut-off nozzles;
7. No using water in a fountain or water feature, unless the water is recirculated; and
8. No washing of driveways and/or sidewalks.

Evaluation of General Plan Goals and Policies. The 2017 General Plan Conservation and Open Space Element contains the following summarized goals and policies to address potential water supply and groundwater-related impacts (for the full text of measures see Section 4.9.2.2):

Conservation and Open Space Element

Goals

- COS 3.1 Work with JCSD, RCSD and other community service districts and agencies, to help meet Jurupa Valley's urban water needs without substantial harm to the natural environment or to agriculture. Measures to help meet water needs include requiring conservation measures such as drought-tolerant landscaping and water saving fixtures in new homes.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- COS 3.2 Protect and maintain water quality in aquifers, Santa Ana River, streams and wetlands that help support beneficial uses, including domestic and commercial/industrial uses, agricultural uses, and wildlife habitat.
- COS 3.3 Protect and improve the quality of local water sources, including groundwater and the Santa Ana River.
- COS 3.4 Encourage JCSD and RCSD to retain and where possible, expand the capacity of wells, aquifers and other groundwater reserves.

Policies

- COS 3.1.8 Encourage the use of innovative and creative techniques for wastewater treatment.
- COS 3.1.9 Minimize pollutant discharge into storm drains, natural drainages, and aquifers.
- COS 3.1.10 Support efforts to create additional regional water storage where needed.
- COS 3.1.11 Require that aquifer water-recharge areas are preserved and protected.
- COS 3.1.12 Require natural drainage systems be incorporated into development projects.
- COS 3.1.13 Retain storm water to allow percolation into local groundwater supplies.
- COS 3.1.14 Promote natural drainages and avoid lined, non-porous channels when possible.
- COS 3.1.15 Consider incentives to landowners to preserve natural ground water recharge areas.

In addition, the 2017 General Plan Community Safety, Services, and Facilities Element contains the following summarized policies and programs to address potential water supply and groundwater-related impacts (for the full text of measures see Section 4.9.2.2):

Community Safety, Services, and Facilities Element

Goal

- CS 1 Minimize risks from natural and manmade hazards to its residents and businesses.

Policies

- CS 1.1.9 New development shall convey expected flood flows safely without damage or risk, including groundwater recharge facilities.
- CS 1.1.13 Carefully plan any modifications to watercourses to maximize groundwater recharge.
- CS 2.1.43 Encourage installation of grey water systems.
- CS 2.1.44 Require new development install drought-tolerant landscaping.
- CS 2.1.45 Encourage the use of reclaimed water for landscape irrigation and other uses.
- CS 2.1.46 Support public education efforts to promote water conservation.
- CS 2.1.47 Encourage local water purveyors to expand local domestic water storage.
- CS 2.1.48 Continue community outreach on water conservation options and methods.

Programs

- CS 2.1.1.5 Work with local water purveyors to prepare a unified Urban Water Management Plan.
- CS 2.1.1.6 Explore desalinization and other regional projects as an alternative water source.
- CS 2.1.1.7 Implement and enforce the City's Landscape Water Conservation ordinance.

This goal and these policies and programs address potential impacts related to both groundwater and to some degree surface water supplies and quality, since local potable supplies or local groundwater recharge may be augmented with imported water in the future. Water conservation and source augmentation (e.g., grey water) are key aspects of these policies. This emphasis is consistent with directives from the state regarding the ongoing state drought and the possibility it may continue for some time into the future. Additional analysis is provided in Section 4.17.5 regarding water

infrastructure, but this section has addressed the programmatic issue of groundwater and attendant surface water supply issues for the foreseeable future. Based on this analysis, new development in the future is not expected to interfere with groundwater recharge activities or groundwater supplies, either directly or through the use of imported water.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not have significant impacts on groundwater supplies or quality, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not have significant impacts regarding groundwater supply or quality, and no mitigation is required.

4.9.5.4 100-Year Flooding-Related Impacts

| | |
|-----------|--|
| Threshold | Would the proposed project place within a 100-year flood hazard area structures that would impede or redirect flood flows? Would the proposed project place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map? |
|-----------|--|

Programmatic Impacts. The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) identify areas subject to flooding during the 100-year flood.¹ The one percent annual, or 100-year flood, is the flood that has a one percent chance of being equaled or exceeded in any given year. As shown in Figures 4.9.1 and 4.9.2, there are several identified flood zones in the City, including areas within the 100-year flood zone adjacent to the Santa Ana River and in the western portions of the City. Future development in the City in these flood zones could be significantly impacted by flooding, especially during a 100-year event.

Evaluation of General Plan Goals and Policies. Since completion of the Seven Oaks Dam, the City is no longer subject to catastrophic flooding along the Santa Ana River. The following summarized goal, policies, and program in the 2017 General Plan Community Safety, Services, and Facilities Element address flooding concerns including areas within the 100-year flood zone (for the full text of measures see Section 4.9.2.2):

Community Safety, Services, and Facilities Element

Goal

CS 1 Minimize risks from natural and manmade hazards to its residents and businesses.

Policies

CS 1.1.6 Require new development to protect structures/persons in the 100-year floodplain.

CS 1.1.9 New development shall convey expected flood flows safely without damage or risk.

CS 1.1.10 Do not alter floodways unless other methods of protection are not feasible.

CS 1.1.11 Do not modify drainages unless it can be done safely and without impacts.

CS 1.1.12 Flood-control improvements must protect existing and planned development.

¹ The term “100-year” is a measure of the size of the flood, not how often it occurs. The “100-year flood” is a flooding event that has a one percent chance of occurring in any given year.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- CS 1.1.14 Development in the floodplain must withstand flooding and minimize the use of fill.
- CS 1.1.15 New development shall integrate into local and regional storm drain systems.
- CS 1.1.16 Coordinate with neighboring jurisdictions regarding flood protection.
- CS 1.1.18 Protect lifeline facilities from potential flooding.
- CS 1.1.19 Use creative land use solutions to reduce or eliminate development in floodplains.
- CS 1.1.20 Assess and upgrade inundation risk and protection in the City.
- CS 1.1.21 Evaluate 500-year, 100-year, and 10-year flood hazard zones to improve safety.
- CS 1.1.22 Use specific plans to transfer density if needed for flood protection improvements.

Program

- CS 1.1.1.3 Acquire property in high-risk flood zones and designating the land as open space.

Policies CS 1.1.6 and CS 1.1.21 address flood risk by requiring the review of new construction and substantial improvements within the 100-year floodplain. It also requires projects to minimize its flood risks to acceptable levels in areas mapped by FEMA or as determined by site-specific hydrologic studies for areas not mapped by FEMA (i.e., the 100-year flood zone). In addition, Policy CS 1.1.12 requires that flood control improvements must be in place to protect not only existing development but future development in the City. Implementation of these flood-related goals, policies, and programs, the proposed 2017 General Plan will adequately address potential flooding issues within the City.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not have significant impacts regarding flooding and 100-year flood zones, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not have significant impacts regarding flooding and 100-year flood zones, and no mitigation is required.

4.9.5.5 Construction-Related Water Quality Impacts

| | |
|-----------|---|
| Threshold | Would the proposed project violate any water quality standards or waste discharge requirements during construction phases of the project in form of increased soil erosion, sedimentation, or storm water discharges? |
|-----------|---|

Programmatic Impacts. Grading of now vacant land to support future development in the City will require temporary disturbance of surface soils and removal of vegetative cover, which could potentially result in erosion and sedimentation, major visible water quality impacts attributable to construction activities. Stockpiles and excavated areas would be susceptible to high rates of erosion from wind and rain and, if not managed properly, could result in increased sedimentation in local watercourses, including the Santa Ana River.

By volume, sediment is the principal component in most storm runoff. The delivery, handling, and storage of construction materials and wastes, as well as the use of on-site construction equipment will also introduce a risk for storm water contamination. Spills and leaks could occur from the use of construction equipment and could originate from construction staging areas. Once released, substances such as fuels, oils, paints, and solvents can be transported to nearby surface waterways and/or to groundwater in storm water runoff, wash water, and dust control water, potentially reducing the quality of the receiving waters. The anticipated and potential pollutants in storm water or urban runoff for various land uses are reflected in previously referenced Table 4.9.D.

Short-term storm water pollutant discharges from each development site within the project area will be mitigated through compliance with the required NPDES permits, resulting in a less than significant impact. The NPDES permit program was established under Section 402 of the CWA, which prohibits the unauthorized discharge of pollutants, including municipal, commercial, and industrial wastewater discharges, from point sources to U.S. waters. Permittees must verify compliance with permit requirements by monitoring their effluent, maintaining records, and filing periodic reports. An NPDES permit specifies an acceptable level of a pollutant or pollutant parameter in a discharge (for example, a certain level of bacteria) and the permittee selects an appropriate process or technology to achieve that level. Some permits, however, do contain certain generic “*Best Management Practices*”, or *BMPs*. Table 4.9.F lists possible construction site BMPs for runoff control, sediment control, erosion control, and housekeeping that may be used during the construction phases of the proposed project. These construction site BMPs are only examples of what should be considered and should not preclude new or innovative approaches currently available or being developed.

Table 4.9.F: General Construction Site Best Management Practices

| Runoff Control | Sediment Control | Erosion Control | Good Housekeeping |
|--|---|---|---|
| <ul style="list-style-type: none"> Minimize clearing Preserve natural vegetation Stabilize drainage ways Install check dams Install diversion dikes | <ul style="list-style-type: none"> Install perimeter controls (e.g., silt fences) Install sediment trapping devices (e.g. straw wattles, hay bales, gravel bags) Inlet protection (e.g. check dams) Install fiber rolls | <ul style="list-style-type: none"> Stabilize exposed soils (e.g., hydroseed, soil binders) Protect steep slopes(e.g., geotextiles, compost blankets) Cover stockpiles with blankets Complete construction in phases | <ul style="list-style-type: none"> Create waste collection area Put lids on containers Clean up spills immediately |

Source: National Pollutant Discharge Elimination System, *Construction Site Storm Water Runoff Control*, <http://cfpub.epa.gov/npdes/stormwater/menuofbmps/index.cfm>, site accessed April 20, 2012.

The implementation of NPDES permits, including the General Construction permit, ensures that the federal and state standards for clean water are met. Enforcement of required NPDES permit requirements will prevent sedimentation and soil erosion through implementation of an SWPPP and periodic inspections by RWQCB staff. An SWPPP is a written document that describes the construction operator’s activities to comply with the requirements in the NPDES General Construction permit. Required elements of an SWPPP include (1) site description addressing the elements and characteristics specific to a specific development site; (2) descriptions of BMPs for erosion and sediment controls; (3) BMPs for construction waste handling and disposal; (4) implementation of approved local plans; and (5) proposed post-construction controls, including a description of local post-construction erosion and sediment control requirements. The SWPPP establishes a plan whereby the operator evaluates potential pollutant sources at the site and selects and implements BMPs designed specifically to prevent or control the discharge of the identified pollutants into storm water runoff.

For sites less than one-acre in size which are not required to prepare a SWPPP to manage construction storm water runoff, those sites to manage storm water drainage and retention during construction pursuant to the California Green Building Standards Code.

Evaluation of General Plan Goals and Policies. The following summarized goal and policies in the 2017 General Plan Conservation and Open Space Element address construction-related water quality issues in the City (for the full text of measures see Section 4.9.2.2):

Conservation and Open Space Element

Goal

COS 3.2 Protect/maintain water quality in aquifers, Santa Ana River, streams and wetlands.

Policies

COS 3.1.9 Minimize pollutant discharge into storm drains, natural drainages, and aquifers.

COS 3.1.11 Require that aquifer water-recharge areas are preserved and protected.

COS 3.1.12 Require natural drainage systems be incorporated into development projects.

COS 3.1.13 Retain storm water for percolation into the local groundwater supply.

COS 3.1.14 Promote natural drainages and avoid lined, non-porous channels where possible.

Although construction is a project-level impact, this goal and these policies of the Conservation and Open Space Element provide a framework within which to plan and regulate future development in ways that will control, reduce, or eliminate potential water pollution from construction-related activities. There are also a number of federal, state, regional, and local regulations in place for the evaluation and control of short-term water pollution from construction.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals and policies will not have significant impacts regarding construction-related water quality, and no mitigation is required.

Programmatic Mitigation Measures. None needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals and policies, compliance with NPDES requirements (preparation of SWPPPs and WQMPs, and site-specific drainage control measures required by the California Green Building Standards Code on new development will prevent short- or long-term significant impacts regarding construction water quality, and no mitigation is required.

4.9.5.6 Operational-Related Water Quality Impacts

| | |
|-----------|--|
| Threshold | Would the proposed project violate any water quality standards or waste discharge requirements during the operational phases of the project in the form of increased soil erosion, sedimentation, or urban runoff? |
|-----------|--|

Programmatic Impacts. During the operational phase of any urban use, the major source of pollution in storm water runoff will be contaminants that have accumulated on the land surface over which runoff passes. Storm runoff from the roadways, parking lots, and commercial and residential buildings can carry a variety of pollutants such as sediment, petroleum products, commonly utilized construction materials, landscaping chemicals, and (to a lesser extent) trace metals such as zinc, copper, lead, cadmium, and iron, which may lead to the degradation of storm water in downstream channels. Runoff from landscaped areas may contain elevated levels of phosphorus, nitrogen, and suspended solids. Oil and other hydrocarbons from vehicles are also expected in storm water runoff.

Pollutant concentrations in urban runoff are variable depending on storm intensity, land use, elapsed time since previous storms, and the volume of runoff generated in a given area that reaches receiving waters. Pollutant concentrations are typically highest during the first major rainfall event after the dry season, known as the “first-flush.” Most new development is required to prepare a Water Quality Management Plan (WQMP) which identifies pollutants and hydrologic conditions of concern that may be associated with the implementation of a particular development project.

The pollutants associated with the operations of future land uses include pathogens, metals, nutrients, pesticides, organic compounds, sediments, trash and debris, oxygen demanding substances, and oil and grease. Based on a WQMP, downstream receiving waters to which a project directly or indirectly discharges have been identified. The selection of treatment controls for a project is based primarily on the potential pollutants associated with the project that are also present in impaired receiving waters. Potential project pollutants that are also a concern in receiving waters are pathogens, nutrients, sediments, toxic compounds.

A WQMP prepared for a project identifies Best Management Practices (BMPs) to be implemented that will minimize a project's effects on site hydrology, urban runoff flow rates, and pollutant loads. Site specific WQMPs are required to use the methodology outlined in the programmatic WQMP for the Santa Ana Region of Riverside County. This comprehensive water quality approach will be implemented for future development within the City which establishes a three-tier program for achieving water quality goals through the enforcement of site design, source control, and treatment control BMPs. Typical kinds of project-specific site design, source control, and treatment control BMPs are listed below.

Site Design BMPs. Site design BMPs are implemented to create a hydrologically-functional project design that attempts to mimic the natural hydrologic regime. In accordance with the Riverside County WQMP guidelines for the Santa Ana Region, projects shall implement site design concepts that achieve each of the following:

1. Preserve Existing Drainage Patterns
 - a. Where possible, conform the site layout along natural landforms, avoid excessive grading and disturbance of vegetation and soils, and preserve or replicate the site's natural drainage features and patterns. Set back development from creeks, wetlands, and riparian habitats. Use both existing and proposed site drainage patterns as a natural design element, rather than using expensive impervious conveyance systems. Use depressed landscape areas, vegetated buffers, and bioretention areas as amenities and focal points within the site and landscape design.
 - b. Concentrate development on portions of the site with less permeable soils, and preserve areas that can promote infiltration.
2. Minimize Impervious Area
 - a. Limit overall coverage of paving and roofs. This can be accomplished by designing compact, taller structures, narrower and shorter streets and sidewalks, clustering buildings and sharing driveways, smaller parking lots (fewer stalls, smaller stalls, and more efficient lanes), and indoor or underground parking. Examine site layout and circulation patterns and identify areas where landscaping can be substituted for pavement, such as for overflow parking. Inventory planned impervious areas on a site plan. Identify where permeable pavements, such as crushed aggregate, turf block, unit pavers, pervious concrete, or pervious asphalt could be substituted for impervious concrete or asphalt paving. This will help minimize the amount of runoff that may need to be addressed through Stormwater BMPs. Consider green roofs. Green roofs are roofing systems that provide a layer of soil/vegetative cover over a waterproofing membrane. A green roof mimics pre-development conditions by filtering, absorbing, and evapotranspiring precipitation to help mitigate the effects of an otherwise impervious rooftop. Green roofs with growing media 4 inches or deeper are considered 'self-retaining areas' and do not produce increased runoff or runoff pollutants (i.e., any runoff from a green roof requires no further treatment or hydrograph controls).
3. Disperse Runoff to Adjacent Pervious Areas
 - a. Direct roof runoff into landscaped areas such as medians, parking islands planter boxes, etc. and/or areas of pervious paving. Instead of having landscaped areas raised above the surrounding impervious areas, design them as depressed areas that can receive stormwater from adjacent impervious pavement. For example, a lawn or garden depressed 3"-4" below surrounding walkways or driveways provides a simple but quite functional landscape design

element. Detain and retain runoff throughout the site. On flatter sites, Stormwater BMPs may be interspersed in landscaped areas among the buildings and paving. On hillside sites, drainage from upper areas may be collected in conventional catch basins and piped to landscaped areas and Low Impact Development (LID) BMPs in lower areas. Low retaining walls may also be used to create terraces that can accommodate LID BMPs. Wherever possible, direct drainage from landscaped slopes offsite and not to impervious surfaces like parking lots.

- b. Reduce curb maintenance and provide for allowances for curb cuts.

Source Control BMPs. Source control BMPs are implemented to eliminate the presence of pollutants through prevention. Such measures can be both non-structural and structural.

- Non-structural operational source control BMPs include:
 - Education for property owners and visitors;
 - Activity restrictions;
 - Irrigation system and landscape maintenance;
 - Common area litter control;
 - Street sweeping streets and parking lots; and
 - Drainage facility inspection and maintenance.
- Permanent Structural source control BMPs include:
 - MS4 stenciling and signage;
 - Landscape and irrigation system design; and
 - Protect slopes and channels.

Treatment Control BMPs. Treatment control BMPs supplement the pollution prevention and source control measures by treating the water to remove pollutants before it is released from future development sites. Since landscaped areas are located downstream of developed areas, the project design allows for the use of surface infiltration BMPs. The treatment control BMP strategy for the project is to select LID BMPs that promote infiltration of runoff, including the construction of infiltration basins and infiltration trenches. Where infiltration BMPs are not appropriate, bioretention, and/or biotreatment BMPs (including extended detention basins, bioswales, and constructed wetlands) that provide opportunity for evapotranspiration and incidental infiltration may be utilized. Harvest and use BMPs (i.e., storage pods) may be used as a treatment control BMP to store runoff for later non-drinkable uses.

Evaluation of General Plan Goals and Policies. The following summarized goal and policies in the 2017 General Plan Conservation and Open Space Element address construction-related water quality issues in the City (for the full text of measures see Section 4.9.2.2):

Conservation and Open Space Element

Goal

COS 3.2 Protect/maintain water quality in aquifers, Santa Ana River, streams and wetlands.

Policies

COS 3.1.9 Minimize pollutant discharge into storm drains, natural drainages, and aquifers.

COS 3.1.11 Require that aquifer water-recharge areas are preserved and protected.

COS 3.1.12 Require natural drainage systems be incorporated into development projects.

COS 3.1.13 Retain storm water for percolation into the local groundwater supply.

COS 3.1.14 Promote natural drainages and avoid lined, non-porous channels where possible.

Although operational water quality is a project-level impact, this goal and these policies of the Conservation and Open Space Element provide a framework within which to plan and regulate future development in ways that will control, reduce, or eliminate potential water pollution once projects have been occupied over the long-term. There are also a number of federal, state, regional, and local regulations in place for the evaluation and control of long-term water pollution.

By volume, sediment is the principal component in most urban storm runoff. Substances such as fuels, oils, paints, and solvents can be transported to nearby surface waterways and/or to groundwater in storm water runoff, potentially reducing the quality of the receiving waters. Implementation of a Water Quality Management Plan (WQMP) as part of the NPDES permit program, established under Section 402 of the CWA, which prohibits the unauthorized discharge of pollutants, including municipal, commercial, and industrial wastewater discharges, from point sources to U.S. waters. Permittees must verify compliance with permit requirements by monitoring their effluent, maintaining records, and filing periodic reports. An NPDES permit specifies an acceptable level of a pollutant or pollutant parameter in a discharge (for example, a certain level of bacteria) and the permittee selects an appropriate process or technology to achieve that level. Some permits, however, do contain certain generic BMPs.

Development sites must be designed to prevent offsite runoff that could contaminate local surface or groundwater supplies. The goal and policies outlined above will help assure future development is designed to prevent long-term water quality problems from urban runoff.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals and policies will substantially reduce potential impacts regarding long-term water quality, however, the long-term control of sediment from large parking areas is not addressed in the Plan.

Programmatic Mitigation Measures. The following mitigation measure is recommended to help the City protect local surface and groundwater quality over the long-term. This measure shall be made a standard condition of approval in the City.

4.9.5.6A Upon issuance of an occupancy permit, all non-residential development shall be required to mechanically sweep its truck and vehicular parking areas at least once every two weeks to reduce particulate materials that can contribute to degradation of local surface and groundwater quality. This measure may also be applied to institutional uses on a discretionary basis depending on the amount of parking area required.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals and policies, compliance with NPDES requirements (preparation of WQMPs, and site-specific drainage control measures on new development, and Mitigation Measure 4.9.5.6A will prevent long-term significant impacts regarding water quality.

4.9.5.7 Drainage Pattern and Capacity-Related Impacts

| | |
|-----------|--|
| Threshold | Would the proposed project substantially alter the existing local drainage patterns of the site and substantially increase the rate or amount of surface runoff in a manner which would result in substantial erosion, siltation, or flooding on site or off site? Would the proposed project create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff? |
|-----------|--|

Programmatic Impacts. As shown in the previous Figures 4.9.1 and 4.9.2, there are several areas in the City within identified flood zones, including areas adjacent to the Santa Ana River and in the western portions of the City. Future development in the City in these areas may affect local runoff patterns or local drainages, some of which flow into the Santa Ana River. Since completion of the Seven Oaks Dam, the City is no longer subject to catastrophic flooding along the Santa Ana River. However, many areas in the City are adjacent to or affected by small ephemeral drainages, and future development may cause or be impacted by changes in runoff patterns or the capacity of local drainages.

Evaluation of General Plan Goals and Policies. The following summarized policies in the 2017 General Plan Community Safety, Services, and Facilities Element address drainage-related issues (for the full text of measures see Section 4.9.2.2):

Conservation and Open Space Element

Goal

CS 1 Minimize risks from natural and manmade hazards to its residents and businesses.

Policies

- CS 1.1.9 New development shall convey expected flood flows safely without damage or risk.
- CS 1.1.10 Do not alter floodways unless other methods of protection are not feasible.
- CS 1.1.11 Do not modify drainages unless it can be done safely and without impacts.
- CS 1.1.12 Flood-control improvements must protect existing and planned development.
- CS 1.1.14 Development in the floodplain must withstand flooding and minimize the use of fill.
- CS 1.1.15 New development shall integrate into local and regional storm drain systems.
- CS 1.1.16 Coordinate with neighboring jurisdictions regarding flood protection.
- CS 1.1.19 Use creative land use solutions to reduce or eliminate development in floodplains.
- CS 1.1.20 Assess and upgrade inundation risk and protection in the City.
- CS 1.1.21 Evaluate 500-year, 100-year, and 10-year flood hazard zones to improve safety.
- CS 1.1.22 Use specific plans to transfer density if needed for flood protection improvements.

Program

- CS 1.1.1.3 Acquire property in high-risk flood zones and designating the land as open space.

Policies CS 1.1.9 and CS 1.1.11 address impacts on local drainages by requiring the review of new construction and substantial improvements that could affect these drainages or overall runoff patterns in general. In addition, Policy CS 1.1.12 requires that flood control improvements must be in place to protect not only existing development but future development in the City. Implementation of these flood-related goals, policies, and programs, the proposed 2017 General Plan will adequately address potential flooding issues within the City.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not have significant impacts regarding flooding and 100-year flood zones, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will not have significant impacts regarding flooding and 100-year flood zones, and no mitigation is required.

4.9.6 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a "plan summary" of long-term development impacts. In this case, the growth projections of the General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation.

The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

For context, the cumulative "universe" for water-related impacts relative to the City's General Plan would be the portion of western Riverside County drained by the Santa Ana River. Cumulatively, continued development within the Jurupa Valley will put additional pressure on water supplies from the Chino Basin. However, the groundwater basin is adjudicated so the Basin Watermaster will manage groundwater supplies in the basin consistent with the UWMPs for the various serving agencies that utilize these sources of groundwater.

Cumulatively, development within the watershed will result in a substantial increase in impervious surfaces (+46 million square feet or 1,056 acres) in addition to changes in land use and associated pollutant runoff characteristics. Increased impervious surfaces are likely to alter existing hydrology and increase potential pollutant loads. However, all future development in the City and throughout the Santa Ana RWQCB will be required to comply with the requirements of the NPDES permit program. Continued growth is anticipated to occur in the City and surrounding areas and all new development and significant redevelopment will be required to minimize its individual impacts to water quality and pollutant transport by retaining storm water and through implementation of BMPs. Therefore, since all new developments will be required to mitigate for impacts to water quality, a less than significant cumulative impact to water quality is anticipated.

Future development will generate urban pollutants but site-specific water quality Best Management Practices and compliance with the California Green Building Standards Code as discussed above, will help ensure that future development in the City will not make a significant contribution to any cumulatively considerable regional water quality impacts.

In summary, the 2017 General Plan will not make a significant contribution to any cumulatively considerable water-related impacts on a local or regional basis.

THIS PAGE INTENTIONALLY LEFT BLANK

4.10 LAND USE AND PLANNING

This section of the EIR addresses the land use impacts that will result from implementation of the proposed 2017 General Plan. The analysis contained in this section is based on the following reference documents:

- *Land Use Element, City of Jurupa Valley General Plan*, (draft) December 2016;
- *Housing Element, City of Jurupa Valley General Plan*, (draft) December 2016;
- *Municipal Code*, City of Jurupa Valley, codified through August 2016;

4.10.1 Existing Setting

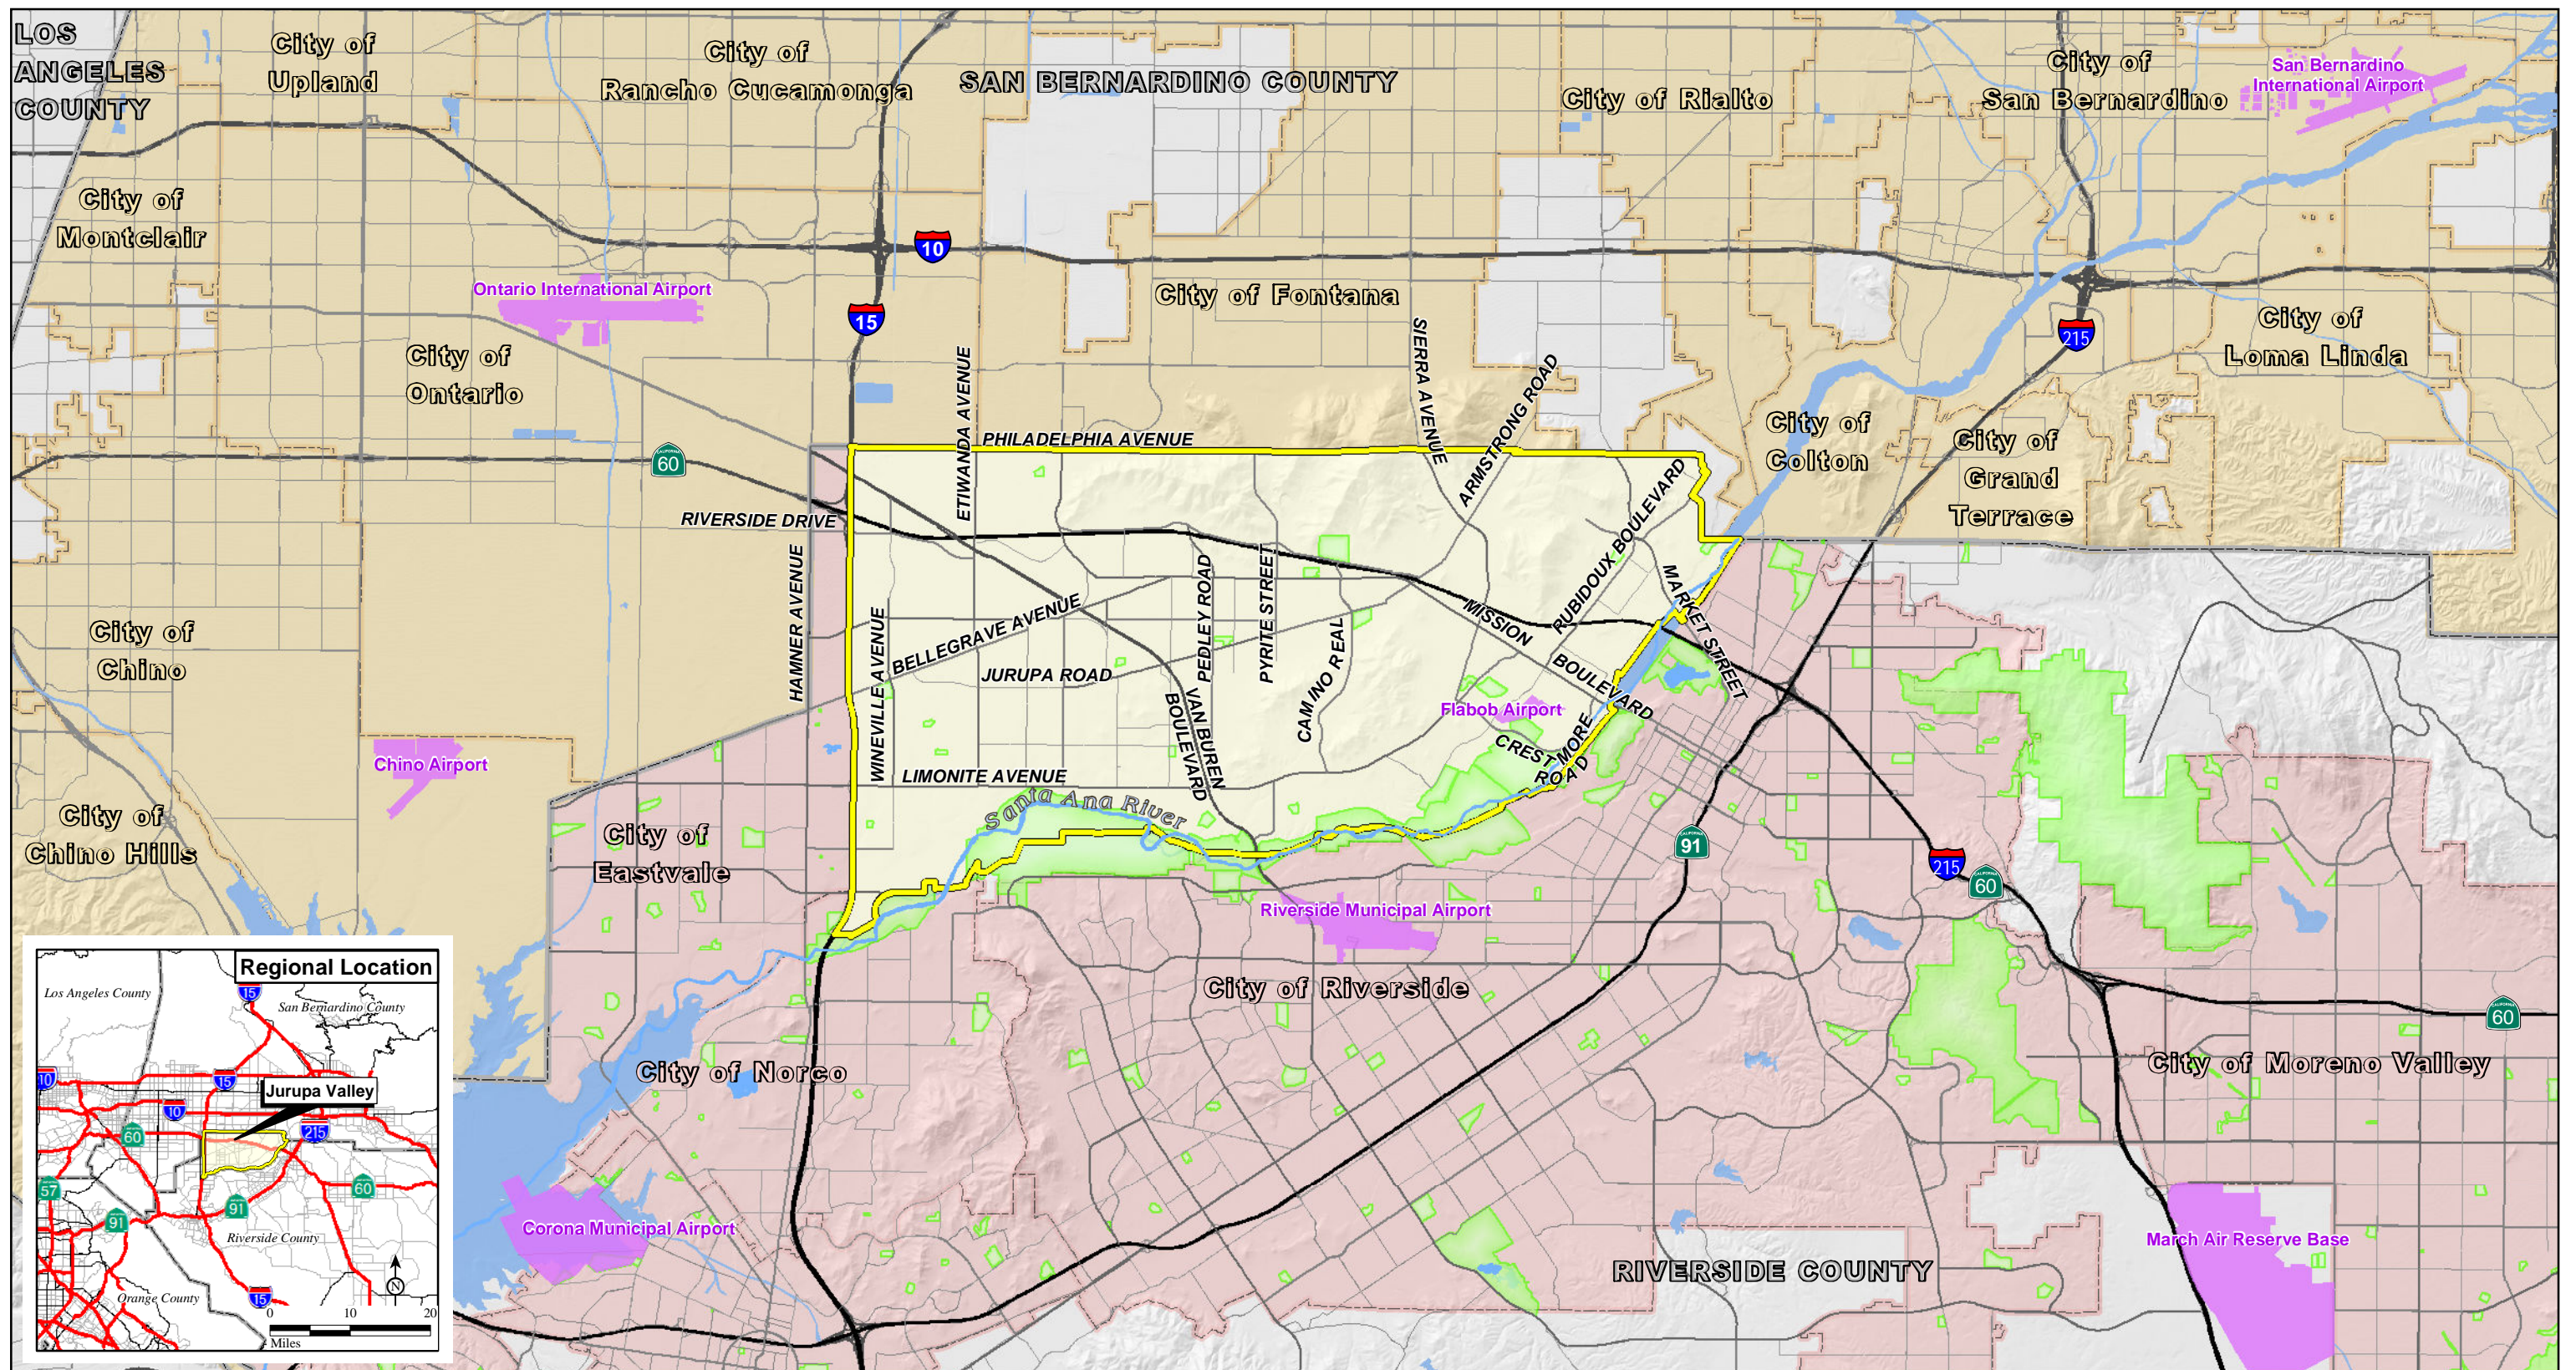

The City of Jurupa Valley comprises a broad alluvial valley along the north side of the Santa Ana River and is bounded by the Jurupa Hills on the north and the I-15 Freeway and the City of Eastvale on the west (see Figure 4.10.1) in western Riverside County. The City is comprised of nine (9) distinct communities, four are predominantly suburban or small town neighborhoods (Rubidoux, Bell Town, Jurupa Hills, and Indian Hills), while the other five (Mira Loma, Pedley, Glen Avon, Sunnyslope, and Crestmore Heights) are more semi-rural and low density in character. Pedley is considered the most diverse with a combination of old style small town neighborhoods and large lots with animal keeping (see Figure 4.10.2). The Land Use Element of the 2017 General Plan states:

“The Land Use Element is an essential tool in achieving Jurupa Valley’s goals. It is one of 10 chapters, or “elements” that comprise the 2017 General Plan. Traditionally, the Land Use Element is considered the General Plan’s most important policy document because it describes the allowed types and configurations of land uses and where they can be located, including residential, commercial, mixed-use, industrial, open space, recreation, and public uses. In combination with the other elements, the Land Use Element guides how we plan, arrange, develop, and conduct these land uses and serves as a key tool in ensuring a high quality of life for all Jurupa Valley citizens. Land use decisions have the potential to add value to our community in terms of safety, convenience, environmental quality, aesthetics, and economic benefits.”

To help guide land use and development-related decisions, this Element provides:

- 1) A Land Use Plan that graphically depicts where different types of land uses are allowed;
- 2) A description of Land Use Designations that comprise the Land Use Plan, including density and development intensity standards;
- 3) A summary of population and employment build-out estimates for the City;
- 4) Goals and policies that help guide public and private land use actions; and
- 5) More detailed policies and programs for individual communities and Overlay areas.

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.10.2

City of Jurupa Valley Communities

THIS PAGE INTENTIONALLY LEFT BLANK

To prepare its 2017 General Plan, the City formed a General Plan Advisory Committee (GPAC) that developed the following primary goal and two value statements about the City based on extensive public involvement and discussion with the community:

Primary Goal: *“To be a city which maintains and enhances its unique, small-town character and equestrian-friendly neighborhoods while promoting economic opportunities and prosperity for all. The City will accomplish this goal by preserving its semi-rural character and by re-aligning its mix of land uses to help provide the housing, shopping, employment and cultural opportunities its residents desire while improving the quality and compatibility of land uses within each community.*

“Small-Town Feel. *Maintain Jurupa Valley’s small-town feel, where neighbors know neighbors and merchants, the built environment reflects and is compatible with the area’s character, and where residents can grow gardens, raise and keep livestock, and choose from diverse lifestyles in a semi-rural town setting,” and*

“Community of Communities. *Jurupa Valley consists of many distinctive communities and neighborhoods in a valley surrounded by stunning natural scenery and views. As a “community of communities,” we will preserve and enhance those positive qualities that make our communities unique, enhance our “gateways” to welcome residents and visitors and embrace a unifying community theme and spirit. Our ability to offer the choice of a semi-rural, equestrian lifestyle is an essential part of who we are as a community and of our quality of life.”*

The primary community issues identified by the GPAC were:

- 1) preserving and enhancing community character;
- 2) achieving balanced land uses and healthy, safe neighborhoods;
- 3) maintaining large-lot semi-rural or “equestrian” lifestyles;
- 4) attracting much-needed community-serving uses such as medical services, quality retail and restaurants, higher education and job training facilities, civic center, cultural, arts, entertainment and recreation uses;
- 5) allowing mixed use development where appropriate;
- 6) removing and preventing “blight,” and
- 7) allowing high-quality multifamily housing where appropriate.

Additional community issues identified by GPAC were:

- 8) promoting Jurupa Valley as a destination city;
- 9) expanding and preserving trails and open spaces within the City;
- 10) correcting and preventing illegal construction and land uses or activities;
- 11) providing community centers at various locations throughout the City;
- 12) preventing incompatible uses or providing “buffers” between incompatible uses and
- 13) addressing the effects of commercial truck traffic on streets, neighborhoods, and public safety.

In response to GPAC recommendations and the input received during eight public workshops on the General Plan, the *primary land use issues* identified were:

- a. **Warehousing** – Address warehousing location, design, and potential impacts, including traffic, noise, and streets.
- b. **Vacant Land** – Many large, vacant parcels that may be suitable for development.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- c. **Freeway Access and Visibility** – Good freeway access and visibility from Interstate 15 (I-15) and State Route 60 (SR 60).
- d. **Regional Connection** – Regional Metro link Station linking Jurupa Valley with larger urban centers.
- e. **Flabob Airport** – Local airport with potential community benefits as a historic, cultural, and recreational hub.
- f. **Recreation Facilities and Open Space** – Community has many attractive and well-used recreational facilities, including community parks, Community Center, Nature Center, Discovery Center, campground, and sports park and include several large open space areas.
- g. **Scenic Valley and Agricultural Setting** – The Community’s scenic backdrop, with distinctive rocky hills, riparian woodlands, farmed land and long views of the San Bernardino Mountains helps define Jurupa Valley’s character and contributes to its quality of life.

4.10.1.1 Existing Land Uses

According to the Land Use Element...

“In 2016, the young city is experiencing significant residential and industrial growth and has a mix of medium and low-density residential development, equestrian and agricultural activities, and a mix of retail commercial, office, and industrial uses. In particular, the City is experiencing significant development interest for more industrial warehousing, and the Inland Empire’s booming transportation/logistics industry has resulted in industrial and warehouse uses encroaching into historically residential and rural neighborhoods. This trend has also limited opportunities for development in the retail commercial, office, and job-rich manufacturing sectors. Two primary transportation corridors traverse the Jurupa Valley area: I-15, which runs north and south and SR 60, which runs east and west. It has been in recent years that residential development and economic activity has increased, in particular in the areas adjacent to the I-15 and SR 60. The City has significant capacity for expansion of both residential and commercial development activity in the future.”

Table 4.10.A summarizes existing land uses within the City and provides a comparison of land uses as currently classified by the County to the proposed 2017 General Plan classifications. Figure 4.10.3 shows the existing land uses within the City and 4,258 acres or approximately 15.3 percent of the City land is currently vacant. The City existing land uses are primarily single-family residential (31 percent) and industrial Land (11 percent). Undeveloped areas contribute to the City’s semi-rural, “country” character and include permanent open space areas, such as the Santa Ana River and most of the Jurupa Mountains, public parks and campgrounds, and land designated for urban uses but not yet developed.

Table 4.10.A: County vs. City Land Use Designations

| Land Use* (Category/Designation) | Total Acres | | Existing Land Uses (acres) | | |
|--|-------------|---------|----------------------------|--------|---------|
| | County | City | Developed | Vacant | %Vacant |
| Residential Uses | | | | | |
| Rural Residential (RR) | 103.6 | 103.6 | 73.5 | 30.1 | 29.1% |
| Estate Residential (EDR) | 338.5 | 338.5 | 259.5 | 79.0 | 23.3% |

Source: GP DEIR Table 3.A

* The City's Interim General Plan eliminated the County's agriculture and rural community-low density residential designations and added commercial tourist, neighborhood commercial, business park-specific plan, and railroad designations.

** City re-designated land in the old agriculture category to very low density residential, and re-designated rural community-low density residential to low density residential

NA = Not Applicable (open space uses have no development potential)

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.10.3
Riverside County Existing General Plan Land Use with Vacant Land

THIS PAGE INTENTIONALLY LEFT BLANK

4.10.1.4 NOP/Scoping Comments

No public comments were made at the scoping meeting about land use. No public or agency letters were received during the NOP period that commented on land use.

4.10.2 Regulatory Framework

The Land Use Element contains the following three primary land use objectives:

1. Preserve small-town character and equestrian lifestyle;
2. Provide sustainable prosperity by expanding housing strengthening the employment base; and
3. Create a more balanced range of land uses that meet the needs and values of the wider community, and ensure vacant land resources are used wisely.

The existing pattern of land use and development has resulted in a homogenous employment base that should be strengthened with skilled labor, professional and management job opportunities. Moreover, new housing and retail-commercial opportunities have lagged behind those of other nearby cities. The City's relatively high percentages of Single-family Residential, Vacant, and Industrial Land when compared with Commercial and Services, Offices and Public Facilities suggest an imbalance in providing sufficient land designated for retail-commercial, professional business and public services needs in the City. As a result, recent economic studies by Kosmont Company show significant retail "leakage" to shopping areas in neighboring cities. In addition, virtually no land is designated for multi-family housing, visitor- or traveler-oriented uses, such as hotels, motels, conferencing, travel centers, and other similar uses. Right now residents must leave the City for many services such as dining and entertainment. Consequently, the planned Land Use strategy expands the areas to be devoted to retail commercial sales and services, visitor-oriented uses, professional offices and business parks, and multi-family housing while maintaining adequate land resources for Industrial and Open Space/Agricultural uses.

During public meetings, Jurupa Valley's residents emphasized the need for a more "balanced" community. To that end, the focus of the 2017 General Plan is to preserve those aspects of Jurupa Valley that residents treasure most, and to improve and expand land uses and public facilities to promote long-term economic vitality and quality of life.

The Land Use Element of the City's proposed 2017 General Plan contains the following goals, policies, and programs designed to protect and provide compatibility and consistency between various land uses within the City:

Land Use Element

Goals

- | | |
|-------|---|
| LUE 1 | Encourages attractive, safe, and well-maintained residential neighborhoods that offer a range of high quality housing opportunities that "fit" the community in which they are to be located; |
| LUE 2 | Attracts high quality commercial, office and industrial areas offering a range of retail, service and employment uses that complement rather than compete with one another; |
| LUE 3 | Enhances Jurupa Valley's equestrian lifestyle, with equestrian-friendly features such as extensive multi-use trails and a mix of passive and active recreational areas; |
| LUE 4 | Protects open space and natural resource areas for solitude and a relief from urban stresses, recreation and views, diverse and healthy natural habitats for a variety of plant and animal life and distinct community edges; and |

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- LUE 5 Supports diverse and well-funded public and institutional uses that provide essential utilities and public services, lifelong learning opportunities and improved access to recreational, cultural, historic and social amenities and resources.

LUE 1 Open Space

Policies (Resource Designations)

- LUE 1.1 **Compatible Structures.** Require that structures be designed and operated in a manner, which preserves and is compatible with the environmental character where they are located, including lighting, telecommunications equipment and other facilities and equipment.
- LUE 1.2 **Agency Cooperation.** Cooperate with the California Department of Fish and Wildlife (CDFG), United States Fish and Wildlife Service (USFWS), and any other appropriate agencies to conserve non-MSHCP habitat.
- LUE 1.3 **Prime Farmland.** Encourage conservation of designated Prime Farmland and productive agricultural lands.
- LUE 1.4 **Right-To-Farm.** Adhere to the Riverside County Right-To-Farm Ordinance and any subsequent ordinance assuring the ability of farmers to continue with legally-established agricultural activities.

Policies (Recreation Designations)

- LUE 1.5 **County Facilities.** Encourage the County to continue to develop and maintain regional park facilities in Jurupa Valley that provide recreational opportunities for residents and visitors.
- LUE 1.6 **Accessibility.** Require that open space recreation facilities be accessible to the community, regardless of age, physical limitation, or income level.
- LUE 1.7 **Compatible Structures.** Require that structures be designed and operated in a manner, which preserves and is compatible with the environmental character where they are located, including lighting, telecommunications equipment and other facilities and equipment.
- LUE 1.8 **Parkland Requirements.** Require that new development meet the parkland requirements as established in the Quimby Act and City enabling ordinances.

Policies (Rural Designations)

- LUE1.9 **Compatible Structures.** Require that structures be designed and operated in a manner, which preserves and is compatible with the environmental character where they are located, including lighting, telecommunications equipment and other facilities and equipment.
- LUE 1.10 **Siting and Grading.** Require that development be sited and designed to blend with a site's undeveloped natural contours and to avoid a padded, unvaried, unnatural, or manufactured appearance.
- LUE 1.11 **Adequacy of Services.** Require that adequate and available circulation facilities, water resources, sewer facilities and/or septic capacity, and storm drainage exist to meet the demands of the proposed land use.
- LUE 1.12 **Rural Character.** Ensure that development does not adversely impact the open space, rural character and environmental sustainability of the surrounding area.
- LUE 1.13 **Parcel Consolidation.** Encourage parcel consolidation.
- LUE 1.14 **Agriculture.** In the OS-R designation, agricultural uses shall be allowed.

Programs

LUE 1.1.6 **Incentives.** Provide programs and incentives that encourage Open Space-Rural areas to be maintained in a manner that enhances their existing and desired visual character.

LUE 1.1.7 **Mineral Extraction Controls.** Establish a zoning overlay zone to designate open space areas in the OS-RUR that are appropriate for mineral extraction such that scenic resources such as prominent ridgelines, rivers and forests, are not adversely affected.

Open Space-Mineral Resource (OS-MIN) - The Open Space-Mineral Resource land use designation allows for mineral extraction and processing facilities designated based on the Surface Mining and Reclamation Act (SMARA) of 1975 classification. The extraction of mineral resources is conditionally permitted, subject to an approved surface mining permit, if the proposed project can be undertaken in a manner that preserves and protects threatened or endangered species, sensitive habitat, scenic resources, and views from residential neighborhoods and major roadways. Areas held in reserve for future mining activities also fall under this designation. Ancillary structures or uses may be permitted, which assist in the extraction, processing, or preservation of minerals. Actual building or structure size, siting, and design will be determined on a case-by-case basis.

Policies (Mineral Designations)

LUE 1.14 **SMARA Compliance.** Require that surface mining activities and lands containing mineral deposits of statewide or of regional significance comply with City ordinances and the SMARA.

LUE 1.15 **Encroachment.** Protect lands designated as Open Space-Mineral Resource from encroachment of incompatible land uses through buffer zones or visual screening.

LUE 1.16 **Road Access.** Protect road access to mining activities and prevent or mitigate traffic conflicts with surrounding properties.

LUE 1.17 **Reclamation.** Require the recycling and reclamation of mineral extraction sites to open space, recreational, or other uses that are compatible with the surrounding land uses.

LUE 1.18 **Reuse Plan.** Require an approved reclamation and reuse plan prior to the issuing of a permit to operate an extraction operation.

Program

LUE 1.1.8 **Mineral Extraction Controls.** Establish a zoning overlay zone to designate open space areas in the OS-RUR that are appropriate for mineral extraction such that scenic resources such as prominent ridgelines, rivers and forests, are not adversely affected.

LUE 2 Residential

Policies

LUE 2.1 **Residential Development.** Accommodate the development of single-family and multifamily residential units in areas appropriately designated by the General Plan, specific plans, Equestrian Lifestyle Protection Overlay, and community and village plans land use maps.

LUE 2.2 **Higher Density Residential.** Accommodate higher density residential development near major transportation corridors, concentrated employment areas and community and village centers, and to promote the development of high quality apartments and condominiums that will encourage local investment and pride of ownership.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- LUE 2.3 **Infrastructure.** Ensure that circulation facilities, water resources, sewer and storm drainage facilities, and other utilities available or provided by the developer are adequate to meet the demands of a proposed residential land use in addition to those services and resources required to serve existing residents and businesses.
- LUE 2.4 **Housing Variety.** Accommodate the development of a variety of housing types, styles and densities that are accessible to and meet the needs of a range of lifestyles, physical abilities, and income levels.
- LUE 2.5 **Connectivity.** Integrate residential development with a continuous network of parks, open space, public areas, bicycle trails, equestrian trails, public transit routes, and pedestrian paths to connect neighborhoods and communities with key nodes. Key nodes include parks and recreation facilities, schools, village and neighborhood centers, and other in-city communities and surrounding cities and points of interest.
- LUE 2.6 **Buffering.** Require setbacks and other design elements to buffer residential units from the impacts of abutting agricultural, roadway, commercial, and industrial uses, to the maximum extent possible.
- LUE 2.7 **Reduced Street Widths.** Allow for reduced widths for local streets to minimize impacts of traffic on neighborhood safety and character, in accordance with Cal Fire standards.
- LUE 2.8 **Supportive Uses.** Accommodate activity centers or nodes within or near residential neighborhoods that allow such services as child or adult-care, recreation, public meeting rooms, convenience commercial uses, and similar facilities, where appropriate.
- LUE 2.9 **Design Compatibility.** Ensure that new residential developments are designed to be compatible with their surroundings and to enhance visually the appearance of neighborhoods and adjacent structures.
- LUE 2.10 **Special Needs Housing.** Require that special needs housing, such as transitional or group housing, is designed to enhance and be compatible with adjacent uses, structures, and neighborhoods.

Programs

- LUE 2.1.1 **Regional Housing Needs.** Within one year of adoption of the 2017 General Plan, the City will amend the Zoning Ordinance density standards for the R-6 to allow a base density up to 25 dwelling units per acre, and amend the Zoning Map to show the locations of about 34 acres of additional R-6 zoning to help meet Regional Housing Needs (RHNA).

LUE 3 Commercial, Industrial and Business Park

Policies

- LUE 3.1 **Commercial Development.** Accommodate the development of commercial uses in areas designated by the General Plan, specific plans, community and village plan land use maps.
- LUE 3.2 **Accessibility.** Commercial buildings and centers should be sited along or easily accessible from public sidewalks, pedestrian areas, neighborhoods, and bicycle routes and include amenities that encourage walking and biking.
- LUE 3.3 **Community Facilities.** Accommodate community-oriented facilities, such as public meeting rooms, day care facilities, public transit, public buildings (e.g., government-owned buildings, community service district facilities with public services), and cultural uses.

- LUE 3.4 **Transit and Housing.** Locate commercial uses near transit facilities and residential areas, and require the incorporation of facilities such as bus turnout lanes and bus shelters to promote use of public transit.
- LUE 3.5 **Residential Compatibility.** Commercial uses abutting residential properties shall be designed to protect the residential use from the impacts of noise, vibration, light, fumes, odors, vehicular traffic, parking, and safety hazards.
- LUE 3.6 **Infrastructure.** Adequate parking, transportation facilities and utilities, including sidewalks and trails, street trees, water resources, sewer and storm water facilities and other utilities shall be available to serve new and existing commercial development in addition to meeting the needs of existing residents and businesses.
- LUE 3.7 **Mixed Uses.** Allow mixed-use projects to develop in commercially designated areas in accordance with the Design Guidelines of the Village Center Overlay and Mixed Use Overlays, and with consideration of potential impacts to adjacent uses.
- LUE 3.8 **Architectural Compatibility.** Commercial development shall be designed to enhance and be architecturally compatible with its surroundings and with designated scenic highways or public view corridors by providing high quality architecture, landscaping and site improvements. Architectural styles that reflect the City's small town rural, agricultural history shall be utilized in the design of new commercial developments in or near the Village Centers, consistent with the applicable design guidelines.
- LUE 3.9 **Maintenance.** Commercial areas and uses shall be properly maintained by property owners and tenants to ensure they reflect community expectations for a quality environment and remain competitive with commercial facilities located outside of the City.
- LUE 3.10 **Pedestrian, Bicycle, and Transit Access.** Commercial projects should be designed to promote convenient access to and from nearby neighborhoods, transit facilities, bikeways, and other amenities.
- LUE 3.11 **Environmental Compatibility and Quality.** We require commercial districts and uses to be compatible with their environmental setting, promote City environmental goals and be designed and operated to avoid or mitigate environmental impacts.

Programs

- LUE 3.1.1 **Broaden and Refine Commercial Zones.** During the next three years, the zoning code will be amended to provide for office parks, large-scale shopping centers, specialized commercial such as medical clusters, tourist commercial, entertainment complexes, etc. and add a zoning classification for heavy commercial uses such as auto body shops.

Industrial and Business Park Area Plan Land Use Designations

Policies

- LUE 3.13 **Industrial and Business Park Development.** Accommodate the continuation of existing and the development of new industrial, manufacturing, research and development, and professional offices in areas designated by the General Plan, specific plans, community and village plan land use maps.
- LUE 3.14 **Commercial Trucks.** Manage commercial truck traffic, access, loading and parking to minimize potential impacts on adjacent residential and commercial properties.
- LUE 3.15 **Encroachment.** Protect industrial and business park designated areas from encroachment by incompatible or noise-sensitive uses that could be impacted by industrial activity, such as housing and schools.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- LUE 3.16 **Locations.** Concentrate industrial and business park uses near major transportation facilities and utilities and along public transit corridors. Avoid siting such uses in close proximity to residentially zoned neighborhoods or well they will route truck traffic through residential neighborhoods.
- LUE 3.17 **Employee Facilities.** Encourage the inclusion of daycare, onsite lunch areas, showers, meeting rooms, and other employee-oriented facilities for new industrial and business park development.
- LUE 3.18 **Toxic Materials.** Prohibit the development of industrial and business park uses that use, store, produce, or transport toxic substances, or which generate unacceptable levels of noise or air pollution.
- LUE 3.19 **Infrastructure.** Adequate parking, transportation facilities, including sidewalks and trails, street trees, water resources, sewer facilities and other utilities shall be available to serve new and existing industrial and business park development in addition to meeting the needs of existing residents and businesses.
- LUE 3.20 **Architectural Compatibility.** Industrial and business park development shall be designed to enhance and be architecturally compatible with its surroundings and with designated scenic highways or public view corridors by providing high quality architecture, landscaping and site improvements.

LUE 4 Public Facility/Institutional

Policies

- LUE 4.1 **Public Facility Development.** Accommodate the development of public facilities and services in areas designated by the General Plan, specific plans, community and village plan land use maps.
- LUE 4.2 **Encroachment.** Protect major public facilities, such as Flabob Airport, publicly owned buildings, landfill, and solid waste disposal sites, from the encroachment of incompatible uses.
- LUE 4.3 **Locations.** New public facilities shall be located and designed to protect sensitive uses, such as schools and housing, from impacts due to noise, vibration, light, fumes, odors, vehicular traffic, and parking and safety hazards.
- LUE 4.4 **Infrastructure.** Adequate parking, transportation facilities, including sidewalks and trails, street trees, water resources, sewer facilities and other utilities shall be available to serve new and existing Public Facility development in addition to meeting the needs of existing residents and businesses.
- LUE 4.5 **Architectural Compatibility.** Public Facility development shall be designed to enhance and be architecturally compatible with its surroundings and with designated scenic highways or public view corridors by providing high quality architecture, landscaping and site improvements.
- LUE 4.6 **Public Utilities, Easements, and Rights-of-Way.** New development and conservation land uses shall not infringe upon existing public utility corridors, including fee owned rights-of-way and permanent easements whose true land use is that of Public Facilities. This policy will ensure that the “public facilities” designation governs what otherwise may be inferred from large-scale, general plan maps.
- LUE 4.7 **Consideration of Scale.** Due to the scale of General Plan maps and the area of the City, utility easements and linear rights-of-way may not be shown on General Plan, specific, and community plan maps. These features need to be taken into consideration in the review of applications to develop land and proposals to preserve land for conservation.

- LUE 4.8 **Impact Mitigation of New Public Facilities.** Planning and development of new public facilities, such as public buildings, utility transmission lines (water, sewer, communications and power), roads, bridges, storage and equipment yards, flood control channels, etc., shall avoid adverse impacts to prime residential or commercial properties, or areas with residential and commercial development potential, and shall not adversely affect the character and quality of life in the City's residential neighborhoods.

LUE 5 Land Use Overlays

Policies

- LUE 5.1 **Application.** The Equestrian Lifestyle Protection Overlay is applied to those areas where equestrian uses, facilities, trails and accessory uses are encouraged, as shown in *Figure LUE-24*, and includes both equestrian Core and Support areas.
- LUE 5.2 **Land Use and Circulation Planning.** Within the Overlay, land use and transportation/public facilities planning shall give priority consideration to preserving, facilitating and improving equestrian uses, access and safety, trails and other facilities and facilities.
- LUE 5.3 **Land Use Compatibility.** Within the Core area, equestrian uses and facilities shall be allowed by right, subject to appropriate standards for horse density and well-being, setbacks, access, sanitation and safety. Horse-keeping and equestrian activities shall be conditionally allowed in land use designations where it is compatible and can meet appropriate standards. New land use entitlement applications, whether for residential, commercial, industrial, or institutional uses, shall be designed such that there will be no interference with surrounding equestrian neighborhoods.
- LUE 5.4 **Residential Development.** New residential neighborhoods proposed near existing equestrian neighborhoods shall be designed to be equestrian friendly and integrate the new neighborhoods with the existing equestrian lifestyle as an asset to future residents. Land within the Equestrian Lifestyle Protection Overlay shall be developed to promote and protect the semi-rural equestrian lifestyle within it.
- LUE 5.5 **Development Review.** New development in the Core area should accommodate horse-keeping, horse facilities and equestrian activities, where feasible and appropriate. Within the Support area, equestrian uses, trails and facilities are encouraged.
- LUE 5.6 **Special Mobility Considerations.** In mobility and streets planning, the City will do the following:
- a. Designate local streets within the Overlay as "equestrian routes," provide attractive signs that designate semi-rural neighborhood streets as equestrian-priority over motor vehicles, require waste bins to be removed from the street right-of-way, and allow equestrians to use entire street rights-of-way, where appropriate, to link key trails, facilities or open spaces, as designated in the City's Streets Master Plan and Trail Plan.
 - b. Provide grade-separated crossings where equestrian routes and equestrian trails meet arterial streets, wherever feasible. Where this is not feasible, equestrian crossings shall be signalized and use two-tiered signal activation and special signage and pavement markings, overhead lighting and/or paving annunciators.
 - c. Equestrian trails along and within public rights-of-way shall include appropriate railing, signage, lighting and trail surface material to protect public and equestrian safety.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- LUE 5.7 **Incentives.** Provide development incentives to encourage equestrian-friendly development and to help preserve communities' equestrian lifestyle, including residential cluster development, transfer of development rights (TDR) programs, density bonus associated with innovative land use planning and priority planning application and permit processing.
- LUE 5.8 **Residential Density.** Development of Rural Residential, Estate Density, Very-Low and Low-Density housing shall be allowed. Higher densities may be allowed if equestrian-friendly and upon the City Council finding that the project will provide significant, overall benefits to equestrian uses and lifestyle.
- LUE 5.9 **Incompatible Uses.** Discourage the encroachment of incompatible land uses that impact the feasibility or safety of equestrian trails and lifestyle in the Core Area.

Programs

- LUE 5.1.1 **Zoning Update.** Update the Zoning Ordinance to protect and encourage equestrian uses and facilities within the ELO and to remove obstacles and disincentives.
- LUE 5.1.2 **Transfer of Development Rights.** Consider a TDR program to provide incentives for open space preservation and equestrian uses.
- LUE 5.1.4 **Public Awareness.** In coordination with community service districts, equestrian groups and non-profit agencies, help improve public awareness of equestrian uses, rules, responsibilities, routes and activities to help improve public safety, enjoyment and sense of community.
- LUE 5.1.5 **Funding.** Consider an assessment district, joint-powers agreement with JARPD or the County, or other funding mechanism for the acquisition of rights-of-way and the construction and maintenance of multipurpose trails within the Overlay Area.

Community Development Overlay (CDO)

Two Community Development Overlay areas are included as a part of the 2017 Land Use Element. These two overlay areas are commercial corridors on major segments of Etiwanda and Mission:

- a. Etiwanda Avenue Commercial Corridor. This overlay is applied to the east side of Etiwanda between Limonite Avenue and Bellegrave Avenue. The properties that abut the street are designated for retail commercial land use. The Etiwanda Commercial Corridor overlay will provide for the City Council to change the zoning to low or medium density residential for mid-block properties consistent with the General Plan. This option creates the opportunity to generate an economic stimulus for the existing and future retail along the corridor.
- b. Mission Boulevard Commercial Corridor. This overlay is applied to the commercial designated area on Mission Boulevard between Country Village Road and Valley Way. The properties that abut the street are designated for retail commercial land use. The Mission Commercial Corridor overlay will provide for the City Council to change the zoning to low or medium density residential for mid-block properties consistent with the General Plan. This option creates the opportunity to generate an economic stimulus for the existing and future retail along the corridor.

Policies

- LUE 5.10 **Purpose.** The CDO Overlay shall be applied to specific areas and properties to encourage new development and strategic land use changes through additional planning studies and public participation in future General Plan amendments and/or Zoning Map changes.
- LUE 5.11 **Application.** CDO shall be applied to sites, corridors or areas where land use changes are anticipated or encouraged that cannot be accommodated under existing General Plan land use designations. The specific goals, issues and incentives, where applicable, shall be described when the CDO overlay is applied.

- LUE 5.12 **Incentives.** Areas within a CDO overlay may include development incentives, such as the ability to apply for land use changes (including rezoning) in advance of a General Plan amendment, provided certain minimum standards (e.g., minimum lot area) and procedures are met.

Village Center Overlay (VCO)

Policies

- LUE 5.13 **Village Center Development.** In areas designated as Village Center Overlay, development should be compact, pedestrian-oriented and designed to accommodate a broad range of uses, including commercial, residential, and public facility uses, consistent with the Community's historic character.
- LUE 5.14 **Locations.** The Village Center Overlay is applied to the historic community centers of downtown Rubidoux, downtown Glen Avon and downtown Pedley; and may be applied to other areas determined to be consistent with the intent and policies of this section.
- LUE 5.15 **Development Standards.** Require areas within Village Center Overlay designations to develop in accordance with the land use standards for Village Centers as detailed in the Village Center Design Standards and Rubidoux Area Design Standards of the Zoning Regulations.
- LUE 5.16 **Incentives.** Provide incentives, such as density bonuses and relaxation of development standards, as appropriate, to facilitate the development of village centers as designated on the Land Use Plan, *Figure LUE-7*.
- LUE 5.17 **Mixed Uses.** Accommodate the development of structures and sites with a mix of housing, retail, commercial office, cultural, public/quasi-public, and recreational uses in areas designated as "Village Centers" on the General Plan, specific plan, community and village plan land use maps.
- LUE 5.18 **Allowed Uses.** Areas designated as Village Centers shall be planned and designed with a list of allowed and conditionally allowed land uses that are appropriate to the specific village area.
- LUE 5.19 **Open Space.** Provide open space areas within village centers, such as plazas or parklets, to provide visual relief from the urban environment, form linkages to other portions of the City and to serve as buffers from incompatible uses.
- LUE 5.20 **Community-Oriented Uses.** Accommodate community-oriented facilities, such as public meeting rooms, day care facilities, public transit, public buildings (e.g., government-owned buildings, community-service district facilities with public services), public art, and cultural uses in village centers.
- LUE 5.21 **Public Transit.** Locate village centers along public transit routes and other major circulation facilities, where possible, to enhance accessibility and promote transit ridership.
- LUE 5.22 **Infrastructure.** Adequate parking, transportation facilities, including sidewalks and trails, street trees, water resources, sewer facilities and other utilities shall be available to serve Village Center development in addition to meeting the needs of existing residents and businesses.
- LUE 5.23 **Public Entrances.** Orient public building entrances in village centers to the public street and locate parking in the rear or to the side of the building.
- LUE 5.24 **Shared Parking.** Allowed shared parking and reduced parking standards in village centers, where appropriate.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- LUE 5.25 **Connectivity.** Integrate pedestrian, equestrian, and bicycle-friendly street and trail networks connecting village centers with surrounding land uses.
- LUE 5.26 **Compatibility.** Require that mixed-use developments be designed to enhance compatibility with adjacent uses and, mitigate potential conflicts between uses, considering such issues as noise, lighting, security, trash and recycling storage, deliveries, truck and automobile access and parking.
- LUE 5.27 **Architectural Compatibility.** Require that village center development be designed to be architecturally compatible with its surroundings and visually enhance the character of the surrounding neighborhood and designated scenic highways or public view corridors.

Programs

- LUE 5.1.6 **Village Center Master Plans.** The City will prepare a master plan for each of its three village centers to establish a consensus and a vision that is shared by the stakeholders and the City Council. The master plans will be prepared in the following order of priority:
1. Pedley Village Center
 2. Glen Avon Village Center
 3. Rubidoux Village Center
- LUE 5.1.7 **Village Center Standards.** The City will prepare Village Center Standards and update the Zoning Ordinance to include them and to integrate the Rubidoux Design Standards with the new Standards.

Pedley Village Center

Policies

- LUE 5.28 **Semi-Truck Traffic.** Semi-truck traffic generated by uses shall be limited to a maximum of 15 trucks per day, Monday through Friday.
- LUE 5.29 **Limonite Avenue Improvements.** Proposed development applications, or applications to bring existing uses into conformity with City requirements, shall provide for improvements to Limonite Avenue, which may include, but are not limited to, street widening in accordance with General Plan right-of-way width, access limitations (not more than one driveway), provision of right-of-way for an access/deceleration lane, and pavement improvements.

Rubidoux Village Center

Policies

- LUE 5.30 **Allowed Uses.** The Rubidoux Village Policy Area is intended to be redeveloped with a variety of pedestrian-oriented, compact residential, retail commercial and service uses appropriate for a village center.
- LUE 5.31 **Architectural Theme.** The entire Rubidoux Village Policy Area shall be subject to an architectural theme, as illustrated in the Rubidoux Village Design Workbook
- LUE 5.32 **Infill Development Priority.** In an attempt to revitalize the commercial area, infill development of vacant and deteriorated properties and the expansion and improvement of existing businesses shall receive the highest priority.
- LUE 5.33 **Signage.** All signage within the Rubidoux Village Policy Area shall be subject to the Rubidoux Village Sign Program prepared specifically for the area. The sign program shall be implemented through the Zoning Ordinance.

- LUE 5.34 **Shared Parking.** Provide special consideration for parking through the establishment of a shared parking program designed specifically for the Rubidoux Village Policy Area as outlined in the County Land Use Ordinance.
- LUE 5.35 **Residential Buffering.** Require projects adjacent to residential lots to provide mitigation measures so as to buffer the impacts of the commercial development from the residential uses. These mitigation measures shall include, but not be limited to, landscaping, noise berms, and operation hours.
- LUE 5.36 **Flexible Development Standards.** Permit modification of development standards stated in the design workbook for architectural features when a project applicant can demonstrate that, due to the design of the existing building(s) and/or structure(s), it would be architecturally infeasible to incorporate the specific architectural design(s). Modifications shall be subject to the approval of the Planning Commission or City Council.

Program

- LUE 5.1.8 **Village Center Standards.** The City will prepare Village Center Standards and update the Zoning Ordinance to include them and to integrate the Rubidoux Design Standards with the new Standards.

Specific Plan Overlay (SPO)

Policies

- LUE 5.37 **Specific Plan Content.** Require that all specific plans must meet the requirements of State law and be comprised of four planning frameworks: Land Use, Design, Circulation and Infrastructure/Public Facilities. Within each framework, the specific plan will provide the goals and policies that will guide future decisions on projects within the specific plan area. The plan will also include a detailed implementation plan that will identify responsibilities, financing requirements, and phasing/timing.
- LUE 5.38 **Application of New Specific Plan Overlays.** The 2017 General Plan designates several large key undeveloped areas of the City with the Specific Plan Overlay. These areas are shown on Exhibit X, and include industrial and business park property along I-15 and in the Agua Mansa industrial area.

Mixed Use Overlay (MUO)

Policies

- LUE 5.39 **Horizontal and Vertical Mix.** Permit a range of horizontally and vertically mixed uses appropriate to key areas of the City.
- LUE 5.40 **Flexibility.** Apply flexible development standards where it can be demonstrated that by doing so, the proposed development, or land use will help achieve General Plan goals.
- LUE 5.41 **Ground Floor Retail.** In pedestrian-oriented environments, require retail uses to be located on the ground floor to provide convenience and good visibility for shoppers. Whenever possible, we require off-street parking to be screened and located on the side or at the rear of buildings.

Program

- LUE 5.1.9 **Zoning Ordinance Update.** Update the Zoning Ordinance, Zoning Map, and specific plans to ensure consistency with the Mixed Use Overlay and to establish flexible development standards.

Business Park Overlay (BPO)

Policies

- LUE 5.42 **Prohibited Uses.** Truck terminals, as well as draying, freight and trucking operations, or other industrial/manufacturing uses which could be expected to generate substantial truck traffic, shall not be allowed in areas designated Business Park on the General Plan Land Use Map.

Mira Loma Warehouse and Distribution Center Overlay

The Mira Loma Warehouse and Distribution Overlay is located in the northwest section of the City and consists primarily of large logistics warehouses with storage, loading and shipping facilities and industrial/manufacturing properties. The area has a high concentration of commercial and industrial truck traffic, and includes some small-scale retail commercial and services adjacent to a small residential neighborhood. This overlay is designed to limit the locations of logistics and other similar supply-chain uses to the Mira Loma Warehouse and Distribution Center Overlay area. These uses generate a greater concentration of industrial truck traffic than other typical manufacturing uses, and thus generate significant environmental impacts on air quality, noise, and traffic.

Policies

- LUE 5.42 **Permitted Uses.** In the Business Park, Light Industrial, and Heavy Industrial land use designations, warehousing and distribution uses, logistics and other goods storage facilities shall be permitted only in the following area:

The area in Mira Loma defined and enclosed by these boundaries: San Sevaine Channel from Philadelphia Street southerly to Galena Street on the east, Galena Street from the San Sevaine Channel westerly to Wineville Road on the south, Wineville Road northerly to Riverside Drive, then Riverside Drive westerly to Milliken Avenue, then Milliken Avenue north to Philadelphia Street on the west, and Philadelphia Street easterly to the San Sevaine Channel on the north.

Stringfellow Remediation Site and Pyrite Canyon

Policies

- LUE 5.43 **Special Development Requirements.** In addition to the commercial and industrial development policies within this text, development proposals within the Policy Area must meet the following requirements:
- a. Piped water and domestic sewer service shall be provided.
 - b. Clearance from the appropriate State authorities must be provided and must indicate that all significant hazards have been abated and the proposed project can occur without jeopardizing public health and safety, or that any proposed clean-up plans have been determined adequate by the State to permit development of the site.
 - c. In general, only commercial and industrial uses, which do not consist of a high concentration of people, shall be permitted within this area. A residence for an onsite caretaker shall not be permitted without clearance from the State.

Santa Ana River Corridor

Policies

- LUE 5.44 **Development Setbacks.** Require development, where allowable, to be set back an appropriate distance from the top of bluffs, in order to protect the natural and recreational values of the river and to avoid public responsibility for property damage that could result from soil erosion or future floods.

- LUE 5.45 **Common Access and Views.** Encourage future development that borders the Policy Area to design for common access and views to and from the Santa Ana River.
- LUE 5.46 **Sensitive Habitat and Species.** Public and private development, operations, and maintenance shall avoid damaging or sensitive habitat or species, including significant native trees, species of local significance, and threatened and endangered species.
- LUE 5.47 **Protect Flood Areas.** Preserve areas subject to erosive flooding in a natural state and encourage recreation development, such as parks and golf courses, along the riverbanks above and outside of flood areas.
- LUE 5.48 **Interconnected Trails.** Establish trails and related facilities for riding, hiking, and bicycling for the entire reach of the river connecting to the state- and nationally-designated Orange County and San Bernardino Santa Ana River trails and connected with the countywide system of trails.
- LUE 5.49 **Trail Crossings.** Provide for recreational trail crossings under bridges crossing the river and along flood channels crossing under roadways, where feasible.
- LUE 5.49 **Connectivity.** Private developments along the River shall provide riding, hiking, and biking trails to ensure connectivity to the Riverside Countywide trails system.
- LUE 5.50 **Caltrans Coordination.** Coordinate with the California Department of Transportation (Caltrans) on future freeway expansions to ensure compatibility with the natural character of the River corridor.
- LUE 5.51 **Roads and Bridges.** Discourage the addition of local road crossings. If any additional crossing is allowed, careful consideration shall be given to location, design, and landscaping to take advantage of the scenic character of the River and to avoid damage to or destruction of natural systems.
- LUE 5.52 **Utilities.** Discourage utility lines within the River corridor and floodplain. If approved, lines shall be placed underground where feasible and shall be located and designed in a manner to harmonize with the natural environment and to be visually unobtrusive.

Flabob and Riverside Municipal Airports Overlay

Policies

- LUE 5.53 **ALUP Compliance.** To provide for the orderly operation and development of Flabob and Riverside Municipal Airports and the surrounding area, the City will comply with the Airport Land Use Compatibility Plan as fully set forth in Appendix 4.0 and as summarized in Table-34, as well as any applicable policies related to airports in the Land Use, Circulation, Safety and Noise Elements of the 2017 General Plan, unless the City Council overrides the Plan as provided for in State law.
- LUE 5.54 **Development Review.** Until such time as 1) the Commission finds the City's General Plan to be consistent with the ALUP, or 2) the City Council has overruled the Commission's determination of inconsistency, or 3) the Commission elects not to review a particular action, the City will refer all *major land use actions* to the Airport Land Use Commission for review, pursuant to Policy 1.5.3 of the ALUP.
- LUE 5.55 **Continued Airport Operation.** Support the continued operation of Flabob and Riverside Municipal Airports to help meet airport services needs within the land-use compatibility criteria with respect to potential noise and safety impacts.
- LUE 5.56 **Consistency Requirement.** Review all proposed projects and require consistency with any applicable provisions of the Riverside County Airport Land Use Plan as set forth in Appendix A-4.0, and require General Plan and/or Zoning Ordinance amendments to achieve compliance, as appropriate.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- LUE 5.57 **ALUP Amendments.** Review all subsequent amendments to any airport land-use compatibility plan and either adopt the plan as amended or overrule the Airport Land Use Commission as provided by law (Government Code Section 65302.3).
- LUE 5.58 **General Plan Adoption or Amendment.** Prior to the adoption or amendment of this General Plan or any specific plan, or the adoption or amendment of a zoning ordinance or building regulation within the planning boundary of any airport land use compatibility plan, the City will refer such proposed actions for determination and processing as provided by the Airport Land Use Law.
- LUE 5.59 **Cluster Development.** Allow the use of development clustering and/or density transfers to meet airport compatibility requirements as set forth in the applicable airport land-use compatibility plan.
- LUE 5.60 **Bird-attracting Uses.** In accordance with FAA criteria, avoid locating sanitary landfills and other land uses that are attract birds within 10,000 feet of any runway used by turbine-powered aircraft and within 5,000 feet of other runways. Also, avoid locating attractors of other wildlife that can be hazardous to aircraft operations in locations adjacent to airports.
- LUE 5.61 **Encroachment.** Ensure that no structures or activities encroach upon or adversely affect the use of navigable airspace.
- LUE 5.62 **Voluntary Review.** The City, from time to time, may elect to submit proposed actions or projects voluntarily that are not otherwise required to be submitted to the ALUC under the Airport Land Use Law in the following circumstances:
- a. Clarification: If there is a question as to the purpose, intent or interpretation of an airport land use compatibility plan (CLUP) or its provisions; or
 - b. Advisory: If assistance is needed concerning a proposed action or project relating to Airport Land Use matters.
- LUE 5.63 **Airport Referrals.** All development proposals located within an Airport Influence Area will be submitted to the affected airport.

Historic Resource Overlay (HRO)

Policies

- LUE 5.64 **Resource Preservation.** Within the HRO, require the preservation of designated historic structures in compliance with the Secretary of the Interior's Standards for the Treatment of Historic Properties and other standards and guidelines as adopted by the City.
- LUE 5.65 **Property Maintenance.** Encourage owners of historic resources to maintain their property in a manner, which preserves the property's historic integrity.
- LUE 5.66 **CEQA Compliance.** As a condition of approval of any project requiring California Environmental Quality Act (CEQA) review, require mitigation of significant, adverse impacts to onsite and adjacent, designated historic or other cultural resources.
- LUE 5.67 **Adaptive Reuse.** Encourage adaptive reuse of historic resources to preserve them and prevent architecturally inappropriate changes or loss through disrepair and demolition.
- LUE 5.68 **New Development.** Encourage developers of residential and commercial developments within a 300-foot radius from a historic resource to be compatible with the historic resource in terms of scale, massing, building materials, and general architectural treatment.

- LUE 5.69 **Preservation.** Encourage the continued preservation and operation of the Jensen-Alvarado Historic Ranch and Museum and avoid municipal actions, such as capital improvements and development approvals that would detract from its historic significance and setting, or otherwise affect its long-term viability as a public historic park and museum.
- LUE 5.70 **Flexible Standards.** Apply flexible development standards where appropriate and necessary to help preserve historic buildings and sites. In the event of an earthquake, flood, or other natural disaster, or in the event of arson, we encourage property owners to preserve, repair and restore damaged historic structures. If a historic building is damaged so that it is physically infeasible to restore, the replacement building should reflect the former building's architectural character.
- LUE 5.71 **Wayfinding Signs and Historic Plaques.** Encourage the placement of attractive and historically appropriate City "wayfinding" or directional signage, including electronic or web-based interpretive information, and the installation historic plaques that identify and celebrate historic buildings and other cultural resources.

Programs

- LUE 5.1.10 **Historic Resource Criteria.** Prepare eligibility criteria and procedures for the designation of potential historic resources (e.g., Galleano Winery; Jensen-Alvarado Ranch) and potential historic districts (e.g., Downtown Rubidoux).
- LUE 5.1.11 **Historic Survey.** Prepare a historic resources survey to identify historic buildings, sites and other important cultural landmarks to be preserved.
- LUE 5.1.12 **Zoning Ordinance Amendment.** Amend the Zoning Ordinance to require an assessment of potential impacts to onsite and nearby historic resources as part of planning applications for general plan amendments, rezoning, and conditional use permits.
- LUE 5.1.13 **Demolition.** Amend the Zoning Regulations to include Historic Resource demolition procedures.

LUE 6: **Distinct Communities (no goals or policies)**

LUE 7: **General Plan Administration**

Policies

- LUE 7.1 **Existing, Non-Conforming Uses.** Allow for the continued occupancy, operation, and maintenance of land uses and structures that existed legally at the time of the adoption of the 2017 General Plan and became non-conforming due to use, density, and/or other development standards, and provide for their abatement where appropriate.
- LUE 7.2 **Achieving Conformance.** Encourage existing non-conforming uses to transition into conformance with the new land use designations and/or policies by enacting incentives, facilitating entitlement processing for new conforming land uses and where necessary, establishing a fair abatement program.
- LUE 7.3 **Regional Planning.** Participate in regional efforts to address issues of mobility, transportation, traffic congestion, economic development, air and water quality, and watershed and habitat management with cities, local and regional agencies, stakeholders, Indian nations, and surrounding jurisdictions.
- LUE 7.4 **Agency Coordination.** Coordinate with local agencies, such as community service districts (CSDs), school districts, Riverside County Fire and Sheriff Departments and others to ensure to ensure adequate service provision for development.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

LUE 7.5 **Development Intensity.** The zoning, development, and use of properties may not exceed the maximum level of development intensity or residential density specified in the General Plan, specific plan or village plan. If an existing property is smaller in area than would be required by the General Plan, zoning that recognizes the existing lot size may be applied.

LUE 7.6 **Population Density.** Pursuant to State law, each land use designation that provides for residential development (other than caretaker's dwellings) is assigned a population density standard for the purposes of projection and infrastructure planning. These population density standards are relevant only for general planning purposes and shall not be interpreted as constituting legal limitations on the number of persons who may reside at any particular location or parcel.

LUE 8 **Land Use Patterns**

Policies

LUE 8.1 **Land Use Map.** Accommodate land development and uses in accordance with the patterns and distribution of uses and density depicted on the *General Plan Land Use Map, Figure LUE-7*, specific plans, and community and village land use maps.

LUE 8.2 **Consistency with Community Values Statement.** Provide a land use mix at Citywide and village plan levels that is consistent with the Community Values Statement, is based on projected need and supported by evaluation of impacts to the environment, economy, infrastructure, and public services.

LUE 8.3 **Community Character.** Accommodate a range of community types and character, from semi-rural equestrian properties, agricultural and rural enclaves to traditional village and suburban communities with a small-town "feel."

LUE 8.4 **Multimodal Orientation.** Provide for a broad range of land uses, intensities, and densities, including a range of residential, commercial, business, industry, open space, recreation, and public facilities uses and locate them to capitalize on multimodal transportation opportunities and to promote compatible land use patterns that reduce reliance on the automobile.

LUE 8.5 **Residential Growth Areas.** Locate residential growth in areas near major transportation or where well served by rail or public transit and within easy walking or biking distance from schools, parks and neighborhood-serving uses, to the greatest extent possible.

LUE 8.6 **Retail and Office Growth Areas.** Locate retail commercial and professional office growth near or within existing and planned village centers and commercial nodes to the greatest extent possible.

LUE 8.7 **Industrial, Warehousing and Service-Commercial Growth Areas.** Limit industrial, warehousing and service-commercial uses to the *Mira Loma Warehouse and Distribution Center Area, Figure LUE-12*, and to other areas readily accessible from major highways or rail traffic, and sufficiently separated and buffered to protect residential uses.

LUE 8.8 **Environmentally-Sensitive Areas.** Prevent inappropriate development in areas that are environmentally sensitive or subject to severe natural hazards.

LUE 9 **Land Use Compatibility**

Policies

LUE 9.1 **Land Use Compatibility.** Require land to be developed and used in accordance with the General Plan, specific plans and community and village plans to ensure compatibility and minimize impacts.

- LUE 9.2 **High Quality Development.** New development shall be of high quality, consider, and enhance the positive characteristics and unique features of the project site and surrounding community.
- LUE 9.3 **Protect Existing Legal Uses.** Retain and enhance the integrity of legal, existing residential, commercial, agricultural, and open space areas by protecting them from encroachment of land uses that would result in significant, adverse impacts from noise, vibration, noxious fumes, glare, shading, and traffic.
- LUE 9.4 **Buffering.** Require buffering between urban uses and adjacent rural/equestrian oriented land uses to the maximum extent feasible. New development shall be responsible for providing the buffering on its own site or offsite where appropriate and acceptable to affected property owners.

LUE 10 Hillside Development

Policies

- LUE 10.1 A Limit development in areas that contain natural slopes, canyons, ravines, or other significant elevation changes, regardless of land use designation and apply the following policies:
- LUE 10.2 Hillside development shall minimize alteration of the natural landforms and natural vegetation, and preserve established trails.
- LUE 10.3 Development clustering shall be used to retain natural slopes, open space, and to preserve scenic views, whenever possible.
- LUE 10.4 Hillside structures, roads, and site improvements shall be developed in a manner to minimize hazards from erosion and slope failures.
- LUE 10.5 Development on visually significant ridgelines, canyon edges, and hilltops shall use sensitive siting, architectural design, and appropriate landscaping to ensure development is visually unobtrusive and compatible with its setting.
- LUE 10.6 Use adaptive construction techniques, such as post and beam construction, and special foundations when the need is identified in a soils and geology report accepted by the City.
- LUE 10.7 Limit grading, cut, and fill to the minimum quantities necessary to provide stable areas for structural foundations, street rights-of-way, parking facilities, and other intended uses.

LUE 11 Community Design and Aesthetics

Policies

- LUE 11.1 Encourage communities that provide a balanced mix of land uses, including open space, employment, recreation, shopping, and housing.
- LUE 11.2 Assist in and promote the development of infill and underutilized parcels, which are located in Opportunity and specific plan areas, as identified on the General Plan Land Use Map.
- LUE 11.3 Promote parcel consolidation or coordinated planning of adjacent parcels through incentive programs and planning assistance, where appropriate.
- LUE 11.4 Create street and trail networks that directly connect local destinations and that are promote use by pedestrians, equestrians, and bicyclists.
- LUE 11.5 Maintain and/or provide connectivity between residential and commercial developments where appropriate.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- LUE 11.6 Promote walkable and bikeable compact growth that takes advantage of public transit routes and facilities.
- LUE 11.7 Create opportunities to link communities through access to multimodal transportation systems.
- LUE 11.8 Use open space, hills, greenways, agricultural lands, parks, and riparian areas to help define the City's character and views and to serve as land use buffers from adjacent cities.
- LUE 11.9 Use community plans to promote the development and preservation of unique communities in which each community exhibits a special sense of place and quality of design.
- LUE 11.10 Allow techniques such as development incentives, transfer of development credit programs or other mechanisms to achieve broad community or preservation goals.

Program

- LUE 11.1.1 **Distinctive Communities Map.** Prepare a Distinctive Communities Map that reflects the intent of the General Plan and its residents that the unique qualities and characters of the City's distinctive communities will be maintained and not be absorbed into continuous suburban development. The map should be a "bubble" diagram rather than attempting to delineate precise community boundaries. Topographic features such as hills, watercourses, floodplains, and manmade features, such as streets and landmarks should constitute the community definers or approximate boundaries.

LUE 12 Project Design

Policies

- LUE 12.1 **Small-Town Character.** Protect and enhance Jurupa Valley's small-town character, maintain or improve walkability, provide bike and equestrian trails, and social connectivity and "sense of place."
- LUE 12.2 **Design Standards.** Comply with the design standards of the appropriate General Plan and community plan land use category.
- LUE 12.3 **Construction.** Structures shall be constructed in accordance with the requirements of the City's zoning, building, and other pertinent codes and regulations.
- LUE 12.4 **Landscape and Irrigation Plans.** Landscape and irrigation plans shall be submitted and implemented for development projects subject to discretionary review, as required by City Landscape Standards.
- LUE 12.5 **Water Conservation Techniques.** Water conservation techniques, such as groundwater recharge basins, use of porous pavement, cisterns for non-potable water uses, drought tolerant landscaping, drought-conscious irrigation systems, water recycling, and other water conservation methods should be included in new public and private development, as appropriate.
- LUE 12.6 **Energy Efficiency.** Development projects should use energy efficient design features in their site planning, building design and orientation, and landscape design that meet or exceed state energy standards.
- LUE 12.7 **Public Art.** Developers and designers are encouraged to incorporate innovative and creative design and development concepts into new development, including provisions for public art.
- LUE 12.8 **Signage.** Development projects shall use consistent and well-designed signage that is architecturally integrated with and complementary to the building and adjacent development.

- LUE 12.9 **Commercial Vehicle Access.** Use safe and convenient vehicular access and reciprocal access between adjacent commercial uses and properties.
- LUE 12.10 **Residential Compatibility.** Non-residential uses shall be designed so that site and building entries, driveways, parking and loading areas, trash and recycling areas, drive-through uses, and storage bays are located and designed so as to minimize conflicts with adjacent residential neighborhoods due to traffic, noise, vibration, odor, lighting, and other impacts on surrounding properties. Any potential impacts shall be mitigated to a level of non-significance, to the approval of the City.
- LUE 12.11 **Landscape Maintenance.** Development projects shall include landscaping in all site areas, including street trees, parking lots, setback areas, open spaces and other exterior use areas. Landscaping shall include trees, shrubs and ground covers, an automatic, water-conserving irrigation system and shall be designed and maintained in accordance with City Landscape Standards.
- LUE 12.12 **Natural Features.** Development projects, including public projects, utilities, and earthworks/grading shall preserve natural features, such as unique natural terrain, rocky outcrops, ridgelines, drainage ways, mature trees, and native vegetation, wherever possible, particularly where they provide continuity with more extensive regional systems.
- LUE 12.13 **Connectivity.** Be designed to provide adequate space for pedestrian connectivity and access, recreational trails, vehicular access and parking, supporting functions, open space, and other amenities.
- LUE 12.14 **Parking Lots.** Design parking lots and structures to be functionally and visually integrated and connected, with parking adequately screened from public streets by a three-foot-tall landscape planting, earth berm or wall, and located behind or on the side of the building(s) served.
- LUE 12.15 **Accessibility.** Building entries shall be accessible from the public sidewalk, parking and pedestrian areas, and equestrian and bicycle routes where appropriate, and include amenities that encourage accessibility, such as low-scale entry signage, bicycle parking, equestrian hitching posts, down lighting, and waiting areas, where appropriate.
- LUE 12.16 **Street Crossings.** New development shall provide safe and frequent pedestrian, bicycle and where appropriate, equestrian street crossings.
- LUE 12.17 **Screened Trash and Recycling Areas.** New development shall provide clean, safe, secure, visually screened trash and recycling enclosures that are architecturally compatible with the development. Existing development and uses are encouraged to provide safe, secure, and visually screened trash and recycling enclosures.
- LUE 12.18 **Crime Prevention.** Development projects should consider public safety and “defensible space” in their design through the appropriate use of building windows, entries, landscaping and site lighting which is designed for efficiency and to reduce glare and “light spillage” across property lines.
- LUE 12.19 **Property Maintenance.** Property owners shall maintain their sites, structures and landscaping in a safe, healthy, and attractive condition through the following:
- a. Provide proactive code enforcement activities.
 - b. Promote programs and work with local service organizations and educational institutions to inform residential, commercial, and industrial property owners and tenants about property maintenance methods.
 - c. Promote and support community and neighborhood based efforts for the maintenance, upkeep, and renovation of structures and sites.

- d. Promptly clean up and remove graffiti, trash, animal waste, toxic materials or other materials or substances that have the potential to detract from residential and neighborhood safety, health or environmental quality. Inoperable appliances and vehicles, and abandoned or unsafe structures should be removed, repaired or properly stored and visually screened.

Program

- 12.1.1 **Architectural Guidelines.** Within one year of adopting the 2017 General Plan, the City will adopt consolidated Architectural Guidelines addressing site planning, building and landscape design and signage. The Guidelines shall update and where appropriate, merge and integrate community design standards developed by the County of Riverside and applied to various areas within Jurupa Valley.

LUE 13 Infrastructure, Public Facilities and Services

Policies

- LUE 13.1 **Service Capacity.** Ensure that development does not exceed the City's or community services districts' ability to adequately provide supporting infrastructure and services, such as water, wastewater treatment, energy, solid waste and public services such as police/fire/emergency medical services, recreational facilities and transportation systems.
- LUE 13.2 **Monitoring.** Monitor the capacities of infrastructure and services in coordination with service providers, utilities, and outside agencies and jurisdictions to ensure that housing and population growth does not reduce levels of service below acceptable levels.
- LUE 13.3 **Urban Water Management Plans.** Review all projects for consistency with the appropriate community service district's urban water management plans.

LUE 14 Fiscal Impacts

Policies

- LUE 14.1 **Fair Share Infrastructure Funding.** Require that new development contribute its fair share to fund infrastructure and public facilities, such as police and fire facilities, parks, streets, and trail improvements.
- LUE 14.2 **Fiscal Analysis.** Require a fiscal impact analysis for specific plans and major development proposals to reduce or prevent fiscal impacts to the City.

4.10.3 Methodology

The focus of this analysis is on potential impacts that would result from implementing the various land use goals, policies, and programs outlined in the 2017 General Plan, but particularly those in the Land Use Element. Land use compatibility is based on the types, intensity and patterns of future land uses to determine whether a future project would result in incompatible uses or nuisance impacts to sensitive receptors (e.g., residences, medical facilities, or schools) based on the proposed goals, policies, programs, or the arrangement of land uses on the Preferred Land Use Plan.

An evaluation of the potential land use impacts associated with implementation of the proposed General Plan is also based on review of the City's 2017 General Plan relative to regional plans such as the SCAG Regional Comprehensive Plan, SCAG Regional Transportation Plan, SCAG Compass Growth Vision, SCAQMD Air Quality Management Plan, Santa Ana Regional Water Quality Control Plan, Riverside County Drainage Area Management Plan (Riverside County DAMP), and Jurupa Community Services District Urban Water Management Plan.

4.10.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. Appendix G of the *CEQA Guidelines* recognizes the following significance thresholds related to land use. Based on these significance thresholds, potential impacts to land use could be considered significant if the proposed 2017 General Plan would result in the following:

- Physically divide an established community;
- Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect; and;
- Conflict with any applicable habitat conservation plan or natural community conservation plan.

4.10.5 Programmatic Impact Evaluation

The following potential impacts were determined to be less than significant. In each of the following issues, either no impact would occur (therefore, no mitigation would be required) or adherence to established regulations, standards, and policies would reduce potential impacts to a less than significant level.

4.10.5.1 Physically Divide an Established Community

| | |
|------------------|--|
| Threshold | Would the proposed project physically divide an established community? |
|------------------|--|

Programmatic Impacts. Many of the goals, policies, and programs in the Land Use and Conservation and Open Space Elements of the 2017 General Plan are intended to help maintain connectivity between the various communities within Jurupa Valley (e.g., sidewalks, equestrian and pedestrian trails, etc.). The following section outlines only a few of the goals and policies that encourage connectivity which discourages dividing established communities:

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of various elements of the General Plan are related to maintaining connectivity with surrounding neighborhoods which would prevent dividing established communities:

Land Use Element

Goal

LUE 3 Enhances Jurupa Valley's equestrian lifestyle, with equestrian-friendly features such as extensive multi-use trails and a mix of passive and active recreational areas;

Policies

LUE 3.10 **Pedestrian, Bicycle, and Transit Access.** Commercial projects should be designed to promote convenient access to and from nearby neighborhoods, transit facilities, bikeways, and other amenities.

LUE 5.2 **Land Use and Circulation Planning.** Within the Overlay, land use and transportation/public facilities planning shall give priority consideration to preserving, facilitating and improving equestrian uses, access and safety, trails and other facilities and facilities.

LUE 5.25 **Connectivity.** Integrate pedestrian, equestrian, and bicycle-friendly street and trail networks connecting village centers with surrounding land uses.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- LUE 8.3 **Community Character.** Accommodate a range of community types and character, from semi-rural equestrian properties, agricultural and rural enclaves to traditional village and suburban communities with a small-town “feel.”
- LUE 11.4 Create street and trail networks that directly connect local destinations and that are promote use by pedestrians, equestrians, and bicyclists.
- LUE 11.5 Maintain and/or provide connectivity between residential and commercial developments where appropriate.
- LUE 11.6 Promote walkable and bikeable compact growth that takes advantage of public transit routes and facilities.
- LUE 12.13 **Connectivity.** Be designed to provide adequate space for pedestrian connectivity and access, recreational trails, vehicular access and parking, supporting functions, open space, and other amenities.

Level of Programmatic Impact Before Mitigation. As demonstrated above, implementation of the 2017 General Plan goals and policies would not divide established neighborhoods, in fact they are intended to help connect neighborhoods within the City, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals and policies would not divide established neighborhoods, in fact they are intended to help connect neighborhoods within the City, and no mitigation is required.

4.10.5.2 Conflict with Applicable Land Use Plans, Policies, or Regulations (Local)

| | |
|-----------|---|
| Threshold | Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? |
|-----------|---|

Programmatic Impacts. Section 15125 (d) of the *CEQA Guidelines* requires EIRs to “discuss any inconsistencies between the proposed project and applicable general plans and regional plans.” The objective of such a discussion is to find ways to modify a project, if warranted, to eliminate any identified inconsistencies with relevant plans and policies, and thereby avoid creating an impact to the environment that consistency with the plan would otherwise mitigate. In this case, the proposed project is the City’s 2017 General Plan which is programmatic in nature and intended to establish short- and long-term guidelines for future development within the City. In addition, it should be noted that the Jurupa Area Plan is being incorporated into the 2017 General Plan, therefore the General Plan’s goals, policies, and programs will be consistent with the Jurupa Area Plan as well. Therefore, the proposed General Plan is consistent with local plans, and no mitigation is needed.

Evaluation of General Plan Goals and Policies. By its very nature the proposed 2017 General Plan is consistent with local plans (i.e., it is the local plan).

Level of Programmatic Impact Before Mitigation. By its nature, the 2017 General Plan goals, policies, and programs would be consistent and not conflict with local land use plans, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. By its nature, the 2017 General Plan goals, policies, and programs would be consistent and not conflict with local land use plans, and no mitigation is required.

4.10.5.3 Conflict with Any Applicable Habitat or Natural Community Conservation Plan

| | |
|-----------|---|
| Threshold | Would the proposed project conflict with any applicable habitat conservation plans (HCP) or natural community conservation plan (NCCP)? |
|-----------|---|

Programmatic Impacts. The City is within the boundaries of the Multiple Species Habitat Conservation Plan (MSHCP) for western Riverside County. The Santa Ana River is designated Public/Quasi-Public Conserved Lands, the Santa Ana River Wildlife Area (CDFW), and Santa Ana River Regional Park (Riverside County). For additional information, Section 4.4.5.6, *Biological Resources – Consistency with Adopted Plans*, which discusses the General Plan's consistency with the MSHCP based on goals, policies, and programs in the Conservation and Open Space Element. The project site is not subject to any other established HCPs or NCCPs.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the Conservation and Open Space Element of the 2017 General Plan are related to applicable habitat conservation plans to protect biological resources:

Conservation and Open Space Element

Goal

COS 2.1 Avoid actions that remove or damage habitat for native plants and animals.

Policies

COS 2.1.1 Implement provisions of the MSHCP.

COS 2.1.2 Maintain wildlife corridors along the City's northern boundary through the Jurupa Mountains and along the City's portion of the Santa Ana River.

COS 2.1.3 Future development must provide biological reports to identify impacts and mitigation for project-specific impacts.

Level of Programmatic Impact Before Mitigation. The 2017 General Plan goals and policies outlined above will establish a framework within which future development will comply with the MSHCP. Therefore, the proposed 2017 General Plan will be consistent with applicable habitat conservation plans and no mitigation will be required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the identified 2017 General Plan goals and policies plus the regulatory requirements of the federal and state resource agencies, future development in the City will not have significant impacts with respect to adopted habitat conservation plans, and no mitigation is required.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

4.10.5.4 Conflict with Applicable Land Use Plans, Policies, or Regulations (Regional)

| | |
|-----------|--|
| Threshold | Conflict with any applicable regional land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? |
|-----------|--|

It should be noted that Section 4.3, *Air Quality*, provides a separate discussion of the General Plan's consistency with the regional Air Quality Management Plan.

Programmatic Impacts. Section 15125 (d) of the *CEQA Guidelines* requires EIRs to “discuss any inconsistencies between the proposed project and applicable general plans and regional plans.” The objective of such a discussion is to find ways to modify a project, if warranted, to eliminate any identified inconsistencies with relevant plans and policies, and thereby avoid creating an impact to the environment that consistency with the plan would otherwise mitigate. Pursuant to *CEQA Guidelines* Section 15125 (d), this EIR section includes an evaluation of the consistency of the proposed General Plan with pertinent goals and policies of relevant adopted local and regional plans. Because certain plans are more specifically tailored to other issue areas, such as air quality, transportation, biology, hazards, water quality, and water supply, the local and regional plans identified below are addressed in detail in other sections of this EIR.

It should be noted that the Jurupa Area Plan is being incorporated into the 2017 General Plan, therefore the General Plan's goals, policies, and programs will be consistent with the Jurupa Area Plan. The City has already adopted a number of Specific Plans, including ones originally processed through the County, and the City's Zoning Ordinance will be updated within approximately one year to maintain consistency with the 2017 General Plan.

The following analysis evaluates the proposed 2017 General Plan against applicable regional planning documents and processes (e.g., SCAG regional plans, etc.).

Airport Regulations. Portions of the City, including a substantial amount of vacant land, are within the land use planning areas of the Flabob and Riverside Municipal Airports. The following policies analysis is related to land use planning within the City as a result of proximity to these airports.

LUE 4 Public Facility/Institutional

Policy

LUE 4.2 Protect Flabob Airport from the encroachment of incompatible uses.

Flabob and Riverside Municipal Airports Overlay

Policies

LUE 5.53 **ALUP Compliance.** To provide for the orderly operation and development of Flabob and Riverside Municipal Airports and the surrounding area, the City will comply with the Airport Land Use Compatibility Plan as fully set forth in Appendix 4.0 and as summarized in Table-34, as well as any applicable policies related to airports in the Land Use, Circulation, Safety and Noise Elements of the 2017 General Plan, unless the City Council overrides the Plan as provided for in State law.

LUE 5.54 **Development Review.** Until such time as 1) the Commission finds the City's General Plan to be consistent with the ALUP, or 2) the City Council has overruled the Commission's determination of inconsistency, or 3) the Commission elects not to review a particular action, the City will refer all *major land use actions* to the Airport Land Use Commission for review, pursuant to Policy 1.5.3 of the ALUP.

- LUE 5.55 **Continued Airport Operation.** Support the continued operation of Flabob and Riverside Municipal Airports to help meet airport services needs within the land-use compatibility criteria with respect to potential noise and safety impacts.
- LUE 5.56 **Consistency Requirement.** Review all proposed projects and require consistency with any applicable provisions of the Riverside County Airport Land Use Plan as set forth in Appendix A-4.0, and require General Plan and/or Zoning Ordinance amendments to achieve compliance, as appropriate.
- LUE 5.57 **ALUP Amendments.** Review all subsequent amendments to any airport land-use compatibility plan and either adopt the plan as amended or overrule the Airport Land Use Commission as provided by law (Government Code Section 65302.3).
- LUE 5.58 **General Plan Adoption or Amendment.** Prior to the adoption or amendment of this General Plan or any specific plan, or the adoption or amendment of a zoning ordinance or building regulation within the planning boundary of any airport land use compatibility plan, the City will refer such proposed actions for determination and processing as provided by the Airport Land Use Law.
- LUE 5.59 **Cluster Development.** Allow the use of development clustering and/or density transfers to meet airport compatibility requirements as set forth in the applicable airport land-use compatibility plan.
- LUE 5.60 **Bird-attracting Uses.** In accordance with FAA criteria, avoid locating sanitary landfills and other land uses that are attract birds within 10,000 feet of any runway used by turbine-powered aircraft and within 5,000 feet of other runways. Also, avoid locating attractors of other wildlife that can be hazardous to aircraft operations in locations adjacent to airports.
- LUE 5.61 **Encroachment.** Ensure that no structures or activities encroach upon or adversely affect the use of navigable airspace.
- LUE 5.62 **Voluntary Review.** The City, from time to time, may elect to submit proposed actions or projects voluntarily that are not otherwise required to be submitted to the ALUC under the Airport Land Use Law in the following circumstances:
- a. Clarification: If there is a question as to the purpose, intent or interpretation of an airport land use compatibility plan (CLUP) or its provisions; or
 - b. Advisory: If assistance is needed concerning a proposed action or project relating to Airport Land Use matters.
- LUE 5.63 **Airport Referrals.** All development proposals located within an Airport Influence Area will be submitted to the affected airport.

Analysis of Airport Plan Consistency. These policies in the Land Use Element of the 2017 General Plan establish clear parameters for planning and guidance for future development within the City for vacant land or redevelopment of existing land uses in the City that are within the influence areas of the Flabob or Riverside Municipal Airports. For example, Policies LUE 5.53 and 5.56 require new development to comply with the Airport Land Use Compatibility Plan of the affected airport, and Policy 5.54 requires plans to be submitted to the airports for review before City action. With implementation of these policies, new development in the City will have less than significant impacts on the airport facilities and operations, and no mitigation is needed.

SCAG Applicable Regional Plans. On April 4, 2012, the SCAG approved the following regional plans which are applicable to the proposed project: (a) Regional Comprehensive Plan (RCP); (b) Regional Transportation Plan (RTP); (c) and Sustainable Communities Strategy (SCS) Plan related to the RTP. The following sections (a) through (c) evaluate the proposed project's consistency with these various SCAG plans.

a. Regional Comprehensive Plan (RCP)

The SCAG (the designated Metropolitan Planning Organization [MPO] for the Counties of Ventura, Orange, San Bernardino, Riverside, Imperial, and Los Angeles) is federally mandated to develop plans for transportation, growth management, hazardous waste management, and air quality. With its members and other regional planning entities, the SCAG prepared the 2012 RCP to serve as a framework to guide decision-making with respect to the growth and changes that can be anticipated in the region in the coming years. The RCP is a major advisory plan prepared by the SCAG that addresses important regional issues like housing, traffic/transportation, water, and air quality. The RCP serves as an advisory document to local agencies in the Southern California region for their information and voluntary use for preparing local plans and handling local issues of regional significance.

The RCP identifies voluntary best practices to approach growth and infrastructure challenges in an integrated and comprehensive way. It also includes goals and outcomes to measure progress toward a more sustainable region. The RCP includes nine chapters, each based on specific areas of planning or resource management. Each of the nine chapters contains goals, policies, implementation, and strategies to achieve the SCAG's overall goals of improving the standard of living for all; improving the quality of life for all; and enhancing equity and access to government. Local governments are required to use the RCP as the basis for their own plans and are required to discuss the consistency of projects of "regional significance" with the RCP.

The RCP's overall goal is to reinvigorate the region's economy, avoid social and economic inequities and the geographical dislocation of communities, and to maintain the region's quality of life. The document is described as a regional policy framework for future land use decisions in the SCAG area that respects the need for strong local control, but that also recognizes the importance of regional comprehensive planning for issues of regional significance. The RCP is laid out much like a General Plan and organizes recommended policies into nine chapters. The highlight of each chapter is the regional strategy that addresses the RCP's vision for that resource area. As such, each chapter includes three levels of recommendations for the region:

- *Goals.* Each goal will help define how sustainability is defined for that resource area.
- *Outcomes.* These focus on quantitative targets that define progress toward meeting the RCP's Goals. Where possible, they are clearly defined (e.g., a 20% reduction in greenhouse gas emissions from 2007 levels), capable of being monitored with existing or reasonably foreseeable resources, and have a strong link to sustainability goals.
- *Action Plan.* This critical part of the RCP lays out a comprehensive implementation strategy that recommends how the region can systematically move to meet the RCP's quantitative Outcomes and achieve its Goals, Guiding Principles, and Vision. Each Action Plan contains:
 - *Constrained Policies.* This includes a series of recommended near-term, feasible policies that stakeholders should consider for implementation. For example, the RCP calls on the SCAG to adopt policies that reflect its role as a planning agency, council of governments, and metropolitan planning organization. The RCP also recommends voluntary policies for consideration by local governments and other key stakeholders.
 - *Strategic Initiatives.* This encompasses longer-term strategies that require significant effort to implement but are necessary to achieve the RCP's desired Goals and Outcomes. For example, identifying technological breakthroughs that can reduce air pollution from the transportation sector requires both commitment and time. Most of these initiatives are not constrained and will require political will, enabling legislation, new funding sources, and other key developments to become a reality. In most cases, this tier of strategies is the key to achieving the region's sustainability Goals and Outcomes.

Other policies contained within the 2012 RCP were either not applicable to the proposed General Plan or are directed at the SCAG and actions that the SCAG would undertake at the regional level

that would not pertain directly to the City 2017 General Plan. Policies within the RCP that are applicable to the 2017 General Plan are identified and discussed below.

Land Use and Housing Chapter

Goal *Focusing growth in existing and emerging centers and along major transportation corridors.*

Consistent. The 2017 General Plan does attempt to focus growth in various town centers and along major transportation routes, and much of the vacant land remaining in the City is located either in or near one of the various town centers in the City or along the major roadways in the City (e.g., the I-15 Freeway, the SR-60 Freeway, Van Buren Boulevard, Limonite Avenue, Etiwanda Avenue, Mission Boulevard, Rubidoux Boulevard, Jurupa Road, etc.). Therefore, the City General Plan is consistent with this SCAG policy in that it plans growth in an urbanized area and with access to major transportation corridors.

Goal *Targeting growth in housing, employment, and commercial development within walking distance of existing and planned transit stations.*

Consistent. The City has identified the Pedley community, which is proximate to the existing Metrolink transit station near Van Buren Boulevard and Limonite Avenue, as an excellent area for new infill growth, commercial development, and possible future multi-family housing within walking distance to the station. No other transit stations are currently located within the City. In addition, a substantial amount of vacant land within the City is within walking distance to the many bus routes that currently serve the City of Jurupa Valley. Riverside Transit Agency (RTA) has numerous bus routes that serve the City including Lines 21 and 29 that run along Limonite Avenue. These routes provide connections to other bus routes in the surrounding area. Therefore, the 2017 General Plan is consistent with this policy.

Goal *Inject new life into underused areas by creating vibrant new business districts, redeveloping old buildings, and building new businesses and housing on vacant lots.*

Consistent. The Land Use Element of the 2017 General Plan contains many policies and programs for specific “village centers” within the City that will help focus community and commercial activities on a more local level, and many of these community centers will be walkable for existing and future residents. The General Plan will help introduce new residential units and commercial uses into economically underutilized areas to help promote stronger “small town” areas within the City.

Outcome *Significantly increase the number and percentage of new housing units and jobs created within the Compass Blueprint 2% Strategy Opportunity Areas by 2012 and improve the regional jobs-housing balance. (Tracking the number of new units will measure the region’s progress in accommodating forecast growth. The percentage of housing and jobs developed within the Opportunity Areas will indicate the locational efficiency of growth.)*

Consistent. When a city or county has a ratio of jobs to housing lower than the overall regional standard, it means there are more houses than jobs which results in many of the local residents commuting to places of employment that are far away. These longer commutes result in freeway congestion, increased air pollution, and reduced quality of life for commuters. The 2011 jobs-to-housing ratios for the City, County, and SCAG region are 0.87, 0.72, and 1.14, respectively (see Table 4.13.B in the *Population, Housing, and Employment* section of the EIR). These ratios indicate that both the City of Jurupa Valley and Riverside County are both “jobs poor” and “housing rich” because the jobs-to-housing ratios are well below that of the Southern California region as defined by SCAG. Direct population increases are generally associated with residential developments, while direct job growth is most associated with non-residential development.

Tables 3.B and 3.C in Section 3 of this EIR indicate the City currently has 2,691 vacant acres of land designated for residential uses, and 1,495 acres of land designated for non-residential uses. These tables also project the City could have 9,198 to 13,140 new housing units within the City as it builds out. Over this same period, development of non-residential uses is expected to generate 28,012 to

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

37,350 new jobs (employees). Assuming all of the residents in these new units and all the employees in the new non-residential development are new to the City, future development could have a jobs/housing ratio of 2.84 which is significantly higher than the 2011 job/housing ratio of 0.87. This means future growth in the City will add much more employment than housing, which is consistent with SCAG regional goals to increase jobs in housing rich areas like Jurupa Valley. Therefore, the 2017 General Plan is consistent with this goal.

Outcome *Reduce total regional vehicle miles traveled (VMT) to 1990 levels by 2020. (The Land Use and Housing Action Plan can be expected to result in a 10% reduction in VMT in 2035 when compared to current trends. VMT serves as a proxy for jobs/housing balance, urban design, transit accessibility, and other urban form issues. VMT per household will decrease with Compass Blueprint implementation.)*

Consistent. As previously identified, future development under the proposed General Plan is expected to add substantially more employment than housing, with new growth having a jobs/housing ratio of 2.84 as outlined above. Eventually this will substantially raise the City's jobs/housing ratio which is consistent with SCAG regional goal to increase jobs in housing rich areas like Jurupa Valley. Adding jobs in a housing rich area necessarily reduces VMT by providing job opportunities within the City so that local residents do not have to drive long distances to work. Therefore, the 2017 General Plan is consistent with this goal.

Policy LU-6.2 *Developers and local governments should integrate green building measures into project design and zoning such as those identified in the U.S. Green Building Council's Leadership in Energy and Environmental Design, Energy Star Homes, Green Point Rated Homes, and the California Green Builder Program.*

Consistent. The City's 2017 General Plan requires new development at a minimum to comply with and encourages new development to exceed the California's CALGreen building regulations as implemented through the requirements of the UBC Title 24. The UBC Title 24 is 1) "the most stringent, environmentally friendly building codes in the U.S.;" and 2) "CALGreen is a comprehensive, far-reaching set of regulations which mandate environmentally advanced building practices and regulations designed to conserve natural resources and reduce greenhouse gas emissions, energy use, and water use."

In addition, in compliance with the CALGreen building regulations, the project proposes to incorporate the following sustainable design features to further reduce its environmental footprint, including:

- Building design to reduce energy consumption by complying with the most current version of Title 24 energy conservation standards;
- Channelizing street runoff into landscape areas instead of storm drains;
- Use of recycled and/or locally sourced building materials to the extent feasible;
- Reduction in the use of impervious surfaces throughout the project;
- Provide for site access via existing transit systems; and
- Provide for internal circulation via bicycles and walking.
- The project plans to include built-in recycling bins in residential units, in or near kitchens in order to reduce waste deposited to landfills.

Therefore, the proposed 2017 General Plan is consistent with this SCAG policy.

Open Space and Habitat Chapter

Policy OSC-8 *Local governments should encourage patterns of urban development and land use, which reduce costs of infrastructure and make better use of existing facilities.*

Consistent. Except for the far northern portion of the City (i.e., in the Jurupa Hills north of the SR-60 Freeway), vacant land within the City is adjacent to or relatively close to existing water, sewer, storm

drainage, electrical, natural gas, and transportation services. Future development in the City will be required to extend or connect to existing utilities and roads. The supply of electricity and natural gas is demand-responsive and future development will be required to meet the service requirements of utility providers at the time of development. By maximizing the use of existing facilities, the costs of expanding infrastructure would be minimized. Therefore, the 2017 General Plan is consistent with this growth management policy.

Policy OSC-12 *Developers and local governments should promote water-efficient land use and development.*

Consistent. The 2017 General Plan requires future development to implement water-efficient landscaping design (i.e., drought-tolerant landscaping) and use of drought-tolerant native plants. Therefore, the General Plan would be consistent with this SCAG policy.

Water Chapter

Policy WA-11 *Developers and local governments should encourage urban development and land uses to make greater use of existing and upgraded facilities prior to incurring new infrastructure costs.*

Consistent. The City has, in general, a good backbone of existing infrastructure for water, sewer, storm drainage, electrical, natural gas, and transportation facilities. Future development will be required to install or connect to utility and roadway improvements. The availability of this infrastructure would reduce the cost to public agencies that would provide services to the City as a whole. Future development will also pay all applicable development fees and fair share contributions toward necessary infrastructure and public service improvements, including those associated with water, sewer, drainage, roadways, fire, and police; therefore, the proposed General Plan is consistent with this policy.

Policy WA-12 *Developers and local governments should reduce exterior uses of water in public areas, and should promote reduced use in private homes and businesses by shifting to drought-tolerant native landscape plants (xeriscaping), using weather-based irrigation systems, educating other public agencies about water use, and installing related water pricing incentives.*

Consistent. The 2017 General Plan requires future development to implement water-efficient landscaping design (i.e., drought-tolerant landscaping) and use of drought-tolerant native plants. . In addition, future development will have to comply with the latest Green Building Code requirements for water conservation. Therefore, the General Plan would be consistent with this SCAG policy.

Energy Chapter

Policy EN-10 *Developers and local governments should integrate green building measures into project design and zoning such as those identified in the U.S. Green Building Council's Leadership in Energy and Environmental Design, Energy Star Homes, Green Point Rated Homes, and the California Green Builder Program. Energy-saving measures that should be explored for new and remodeled buildings include:*

- *Using energy-efficient materials in building design, construction, rehabilitation, and retrofit.*
- *Encouraging new development to exceed Title 24 energy efficiency requirements.*
- *Developing Cool Communities measures including tree planting and light-colored roofs. These measures focus on reducing ambient heat, which reduces energy consumption related to air conditioning and other cooling equipment.*
- *Utilizing efficient commercial/residential space and water heaters. This could include the advertisement of existing and/or development of additional incentives for energy-efficient appliance purchases to reduce excess energy use and save*

money. Federal tax incentives are provided online at http://www.energystar.gov/index.cfm?c=Products.pr_tax_credits.

- *Encouraging landscaping that requires no additional irrigation; utilizing native, drought-tolerant plants can reduce water usage up to 60 percent compared to traditional lawns.*
- *Encouraging combined heating and cooling (CHC), also known as cogeneration, in all buildings.*
- *Encouraging neighborhood energy systems, which allow communities to generate their own electricity.*
- *Orienting streets and buildings for best solar access.*
- *Encouraging buildings to obtain at least 20 percent of their electric load from renewable energy.*

Consistent. The 2017 General Plan contains policies that require implementation of California's "CALGreen" building regulations and the UBC Title 24 energy conservation standards which are considered the most stringent, environmentally friendly building codes in the U.S. In addition, the strategies listed in Section 4.7, *Greenhouse Gases and Global Climate Change*, of this EIR are considered to be greenhouse gas emission reduction strategies, which include green building measures. These strategies are either part of the project, required mitigation measures, or requirements under local or State ordinances. Since the project would implement these strategies into project design and operation, the 2017 General Plan would be consistent with this SCAG policy.

Solid Waste Chapter

Policy SW-14 *Developers and local governments should integrate green building measures into project design and zoning including, but not limited to, those identified in the U.S. Green Building Council's Leadership in Energy and Environmental Design, Energy Star Homes, Green Point Rated Homes, and the California Green Builder Program. Construction reduction measures to be explored for new and remodeled buildings include:*

- *Reuse and minimization of construction and demolition (C&D) debris and diversion of C&D waste from landfills to recycling facilities.*
- *An ordinance that requires the inclusion of a waste management plan that promotes maximum C&D diversion.*
- *Source reduction through (1) use of building materials that are more durable and easier to repair and maintain, (2) design to generate less scrap material through dimensional planning, (3) increased recycled content, (4) use of reclaimed building materials, and (5) use of structural materials in a dual role as finish material (e.g., stained concrete flooring, unfinished ceilings).*
- *Reuse of existing building structure and shell in renovation projects.*

Building lifetime waste reduction measures that should be explored for new and remodeled buildings include:

- *Development of indoor recycling program and space;*
- *Design for deconstruction; and*
- *Design for flexibility through use of moveable walls, raised floors, modular furniture, moveable task lighting, and other reusable components.*

Consistent. The 2017 General Plan outlines how solid waste disposal and recycling services for the City are provided by several private firms, and solid wastes would be transferred to regional landfills operated by the County. The City of Jurupa Valley is responsible for meeting the requirements of AB

939 and SB 1016, which includes a 50 percent reduction in disposal by the start of 2020 and preparation of a solid waste reduction plan to help reduce the amount of solid waste disposed of at the landfills. Programs implemented by the City to satisfy the mandated reduction in solid waste include, but are not limited to, the following:

- Public outreach via print and electronic media (public education);
- Municipal solid waste ordinances and product and landfill bans (policy incentives); and
- Operation of material recovery and composting facilities (facility recovery).

The City would also assure that future development complied with applicable elements of AB 1327, Chapter 18 (California Solid Waste Reuse and Recycling Access Act of 1991) and other applicable local, State, and Federal solid waste disposal standards, thereby ensuring that the solid waste stream to regional landfills are reduced in accordance with existing regulations. The proposed General Plan is therefore consistent with this policy.

Transportation Chapter

Goal *A more efficient transportation system that reduces and better manages vehicle activity.*

Consistent. The 2017 General Plan establishes a plan for future land uses so that new development of residences would be in relatively close proximity to existing roadways, commercial uses and employment. In addition, the General Plan proposes sidewalks, bicycle/walking trails, and landscaping treatments to eventually provide for pedestrian and bicycle access throughout much of the City. The type and locations of land uses outlined in the proposed General Plan, and their proximity to each other, will allow for increased pedestrian and bicycle activity, limiting the need for vehicle travel. Therefore, the General Plan is consistent with this transportation goal.

Security and Emergency Preparedness Chapter

Goal *Ensure transportation safety, security, and reliability for all people and goods in the region.*

Consistent. The 2017 General Plan proposes to provide transportation safety and security. It contains goals and policies that aim to provide adequate and reliable transportation facilities. The goals and policies identified in the City's General Plan resemble those of the RCP that address mobility, traffic safety, environmental concerns, and land use consistency as the major traffic study factors to identify existing traffic conditions and to assess the future effects on area traffic patterns/flow. Therefore, the 2017 General Plan is consistent with this transportation goal.

Economy Chapter

Goal *Enable business to be profitable and competitive (locally, regionally, nationally, and internationally).*

Consistent. Future development according to the 2017 General Plan would add thousands of new residents in close proximity to shopping and work places. This will expand the City's economic competitiveness with other areas in the region by bringing residents closer to shopping and jobs. Therefore, the 2017 General Plan is consistent with this goal.

Goal *Promote sustained economic health through diversifying the region's economy, strengthening local self-reliance and expanding competitiveness.*

Consistent. As previously stated, future development under the 2017 General Plan would provide more commercial and business land uses that would help the City to be more self-reliant by providing houses in close proximity to goods and services within the City. The City would also be able to expand its economic competitiveness with other areas in the region by bringing residents who would

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

raise the median income level for the City, thereby encouraging new business in the City. Therefore, the 2017 General Plan is consistent with this goal.

b. Regional Transportation Plan (RTP)

The 2012 RTP adopted by the SCAG contains a set of existing socioeconomic projections used as the basis for the SCAG's transportation planning efforts. They include projections of population, housing, and employment at the regional, county, sub-regional, jurisdictional, Census tract, and transportation analysis zone levels. The RTP includes policies and regulations set forth to ensure development within the SCAG regional area is within planned and forecast socioeconomic projections. Goals established within the RTP include the following:

- Maximize mobility and accessibility for all people and goods in the region (discussed in Section 4.16, *Traffic and Circulation*);
- Ensure travel safety and reliability for all people and goods in the region (discussed in Section 4.16, *Traffic and Circulation*);
- Preserve and ensure a sustainable regional transportation system (discussed in Section 4.16, *Traffic and Circulation*);
- Maximize the productivity of our transportation system (discussed in Section 4.16, *Traffic and Circulation*);
- Protect the environment, improve air quality, and promote energy efficiency (discussed in Section 4.3, *Air Quality*);
- Encourage land use and growth patterns that complement our transportation investments and improve the cost-effectiveness of expenditures (discussed in Section 4.16, *Traffic and Circulation*); and
- Maximize the security of our transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies (discussed in Section 4.16, *Traffic and Circulation*).

The proposed 2017 General Plan is consistent with the RTP in that it would bring many more jobs than housing to the City in the future, which will substantially improve the City's jobs/housing ratio which in turn helps reduce Vehicle Miles Travelled (VMT) generated by the City.

Due to the amount of expected growth, the City will experience traffic congestion on major roadways and at a number of intersections. However, the General Plan contains goals and policies that aim to minimize traffic congestion, provide adequate transportation facilities, and require development to pay its share of costs. The goals and policies identified in the 2017 General Plan resemble those of the RTP that address mobility, traffic safety, environmental concerns, and land use consistency as the major traffic study factors to identify existing traffic conditions and to assess the future effects on area traffic patterns/flow. Therefore, the proposed 2017 General Plan is consistent with the RTP.

c. Sustainable Communities Strategy (SCS) Plan

As part of the adoption of the 2012 RTP, SCAG developed an SCS which was required as part of SB 375. According to SB 375, each metropolitan planning organization shall prepare a sustainable communities strategy, including the requirement utilizing the most recent planning assumptions considering local general plans and other factors. The Sustainable Communities Strategy shall:

1. Identify the general location of uses, residential densities, and building intensities within the region;
2. Identify areas within the region sufficient to house all the population of the region, including all economic segments of the population, over the course of the planning period of the regional

transportation plan taking into account net migration into the region, population growth, household formation and employment growth;

3. Identify areas within the region sufficient to house an eight-year projection of the regional housing need for the region;
4. Identify a transportation network to service the transportation needs of the region;
5. Gather and consider the best practically available scientific information regarding resource areas and farmland in the region;
6. Consider the State housing goals specified in Sections 65580 and 65581;
7. Set forth a forecast development pattern for the region, which, when integrated with the transportation network, and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets approved by the State Board; and
8. Allow the regional transportation plan to comply with the Federal Clean Air Act.

The SCS and the 2012 RTP contain new regional growth projections for each city in the Southern California region. Table 4.10.B contains the population and employment forecasts for the City of Jurupa Valley.

Table 4.10.B: SCAG Population and Employment Projections – 2020 and 2035

| Population | | | Employment | | | Increase 2011–2035 | |
|-------------|-----------------|-----------------|-------------|-----------------|-----------------|--------------------|------------|
| 2011 Actual | 2020 Projection | 2035 Projection | 2011 Actual | 2020 Projection | 2035 Projection | Population | Employment |
| 96,680 | 103,714 | 125,950 | 23,300 | 34,397 | 53,466 | 30.2% | 129.4% |

Source: SCAG 2012 RTP

The 2012–2035 RTP/SCS contains a number of “Outcome and Performance Measures/Indicators”¹ that are used to evaluate various regional land use plan alternatives, with the objective being an improvement over the No Project (i.e., no SCS) baseline. These measures are applied on a regional basis and so are generally relevant to the City’s proposed 2017 General Plan. A general discussion of GP consistency with the relevant RTP measures is provided in Table 4.10.C.

Table 4.10.C: Discussion of RTP Outcomes and Performance Measures/Indicators

| Performance Measure/Indicator | Definition | Consistency of Proposed Project |
|---|--|---|
| Share of growth in High Quality Transit Areas (HQTAs) | Increase share of the region's growth in households and employment in HQTAs | Consistent. Future development within any SCAG-defined HQTAs will be required to meet these criteria. Local transit has numerous bus routes that serve the City and lines connect to Metrolink and transit centers in other cities. |
| Land consumption | Reduce additional land needed for development that has not previously been developed or otherwise affected, including agricultural land, forest land, desert land, and other virgin sites. | Consistent. The SCAG plan calls for reducing the amount of virgin land converted to development, as compared to the “No Project” condition. Most of the City is already built and only about 15% of the City is vacant at present, including the steep upland areas of the Jurupa Hills north of the SR-60 Freeway which will not support extensive new development. |
| Average distance for work or non-work trips | Decrease the average distance traveled for work or non-work trips separately. | Consistent. The City is housing-rich which forces many workers to commute long distances from their homes to work. By providing many more jobs than housing opportunities, the General Plan will |

¹ http://rtpscs.scag.ca.gov/Documents/2012/final/SR/2012fRTP_PerformanceMeasures.pdf, Table 2.

2017 General Plan – City of Jurupa Valley
Draft Environmental Impact Report

Table 4.10.C: Discussion of RTP Outcomes and Performance Measures/Indicators

| Performance Measure/Indicator | Definition | Consistency of Proposed Project |
|--|---|---|
| | | eventually reduce the length of work-related trips. |
| Percentage of work trips less than 3 miles. | Increase the share of total work trips that are fewer than 3 miles. | Consistent. As noted above, future development under the 2017 General Plan will provide more employment than housing, which will improve the ability of residents to find work closer to home and thereby decrease commute travel times. |
| Work trip length distribution. | Reduce the statistical distribution of work trip length in the region. | Consistent. Future development under the proposed 2017 General Plan is expected to add substantially more employment than housing, with new growth having a jobs/housing ratio of 2.84 as outlined above. Eventually this will raise the City's jobs/housing ratio consistent with SCAG regional goals. Adding jobs in a housing rich area necessarily reduces VMT by providing job opportunities within the City so that local residents do not have to drive long distances to work. |
| Criteria pollutants and greenhouse gas emissions. | Reduce CO, NO _x , PM _{2.5} , PM ₁₀ , VOC, and per capita greenhouse gas emissions (CO ₂). | Consistent. Due to the size and scope of the 2017 General Plan, future development will cumulatively exceed the SCAQMD thresholds for criteria air pollutants and GHGs. However, it is estimated the per capita contributions of these pollutants will decrease over time as the City's jobs/housing ratio improves and City-generated VMT declines. |
| Annual household transportation cost. | Reduce annual household spending on transportation costs of vehicle ownership, operation, and maintenance, and public transportation. | Consistent. As outlined above, the 2017 General Plan will eventually reduce work-related trip lengths (by improving the jobs/housing ratio and reducing VMT) so related costs would also decrease. |
| Percentage of jobs within 15 minutes' walk of transit. | Increase the number of jobs within 15 minutes' walk of public transportation. | Consistent. Future development under the 2017 General Plan will introduce hundreds if not thousands of new residents who will be within a 15-minute walk of public transportation (i.e., bus service and Metrolink train station). |

Source: http://rtpscs.scag.ca.gov/Documents/2012/final/SR/2012fRTP_PerformanceMeasures.pdf

As Table 4.10.C shows, the 2017 General Plan is generally consistent with the SCAG RTP/SCS performance measures because it will substantially improve the City's jobs/housing ratio compared to regional standards. Additional information and analysis in this regard is provided in Section 4.13, *Population, Housing, and Employment*.

Santa Ana Water Quality Control Plan (Basin Plan). The Santa Ana Basin Plan, which is implemented by the Santa Ana Regional Water Quality Control Board (RWQCB), specifically (1) designates beneficial uses for surface and ground waters, (2) sets qualitative and quantitative objectives that must be attained and maintained at that level in order to protect the designated beneficial uses and conform to the State's anti-degradation policy, and (3) describes implementation policies and programs to protect all waters in the region. In cases where the Basin Plan does not contain a standard for a particular pollutant, other criteria are used to establish a standard. Storm water runoff from future development within the City will eventually make its way to the Santa Ana River. Future development will be required to comply with all applicable water quality standards and requirements established by the RWQCB, and will therefore be in compliance with the NPDES permitting system. Therefore, the 2017 General Plan will be consistent with the Basin Plan. For additional detailed analysis on this issue, see Section 4.9, *Hydrology and Water Quality*.

Riverside County Drainage Area Management Plan (DAMP). Like the Basin Plan, the Drainage Area Management Plan (DAMP) deals primarily with the Santa Ana Region. The DAMP describes a wide range of continuing and enhanced BMPs and control techniques for development projects within a municipality and are being implemented during the five-year terms of the third-term MS4 permits. In essence, the DAMP describes the overall urban runoff management strategies planned by the permittees in the Santa Ana Region. Future development within the City will be required to comply with all applicable drainage standards and requirements designed to protect water resources and enhance water quality. Therefore, the 2017 General Plan is consistent with the DAMP.

Summary of Programmatic Impact 4.10.6.1: Conflict with Applicable Regional Land Use Plans, Policies, or Regulations. The preceding analysis demonstrates that the proposed 2017 General Plan is consistent with the related goals of local airports and SCAG's Regional Comprehensive Plan, Compass Plan and Regional Transportation Plan that address regional jobs/housing balance.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. The proposed 2017 General Plan is consistent with the identified regional goals and policies related to jobs/housing balance, VMT, energy and water conservation, etc. Therefore, the 2017 General Plan will have less than significant impacts on regional plans¹ and no mitigation is needed.

4.10.7 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years. CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a "plan summary" of long-term development impacts. In this case, the growth projections of the 2017 General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to 2017 General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3 of this EIR, *General Plan Components, Projected Growth*). It should be noted that the 2017 General Plan growth projections also provide "optimum" growth estimates which would be more likely since some amount of new development would be dedicated as open space as part of the City's development review process.

For context, the cumulative "universe" for land use impacts is western Riverside County within which regional land use changes will occur from future development in the City of Jurupa Valley as well as the other surrounding jurisdictions. By its very nature, the 2017 General Plan establishes overall guiding principles or programmatic direction against which to review new development to assure it does not result in significant impacts to land use. As long as development occurs as outlined in the 2017 General Plan Land Use Element, consistent with the goals, policies, and programs outlined in the other elements of the 2017 General Plan, these programmatic actions will help reduce land use impacts of individual development projects within the City to less than significant levels. The 2017 General Plan is also consistent with regional plans (i.e., the RCP, the RTP, and SCS plans) indirectly related to land use. For these reasons, implementation of the City's new 2017 General Plan will not make a significant contribution to cumulatively adverse land use impacts.

¹ See separate section on consistency with the Air Quality Management Plan in Section 4.3, *Air Quality*.

THIS PAGE INTENTIONALLY LEFT BLANK

4.11 MINERAL RESOURCES

This chapter evaluates potential impacts related to known mineral resources that may result from the proposed project. This chapter is based in part on the following documents, which are incorporated by reference:

- *City of Jurupa Valley General Plan, Multipurpose Open Space Element*, City of Jurupa Valley, adopted July, 2011.
- *Conservation and Open Space Element*, City of Jurupa Valley. (draft) December 2016.
- *Mineral Resource Zones – Temescal Valley and San Bernardino Production – Consumption Regions*. California State Mining and Geology Board. 1987.

4.11.1 Existing Setting

Historically, mineral extraction has been an important component of Jurupa Valley's economy. Western Riverside County has extensive deposits of clay, limestone, iron, sand, and aggregates. Classification of land within California takes place according to a priority list that was established by the State Mining and Geology Board (SMGB) in 1982, or when the SMGB is petitioned to classify a specific area. The SMGB has also established Mineral Resources Zones (MRZ) to designate lands that contain mineral deposits. The State of California has also designated Aggregate Mineral Resource areas within the County. These mineral resource zones are shown in Figure. 4.11.1.

County mapping data indicates the “upper” third of the Santa Ana River within the City boundaries is considered to be a significant source of construction aggregate (i.e., sand and gravel). According to the U.S. Geological Survey (USGS), this area is designated by the State as a Mineral Resources Zone 2 (MRZ-2) area, and is considered a significant mineral resource. However, the river and adjacent lands in this area are designated as Public/Quasi-Public Land in the County's General Plan.

The northern area of the City (i.e., the Jurupa Hills north of the SR-60 Freeway) was mined years ago for extensive deposits of clay, limestone, iron, sand, and aggregates, however, there are no longer any active mines in this area, but a number of former quarries would require rehabilitation or restoration to support future development.

The remaining land within the City is classified as MRZ-3 which are areas where the available geologic information indicates that mineral deposits are likely to exist, however, the significance of the deposit is undetermined.

4.11.1.1 NOP/Scoping Comments

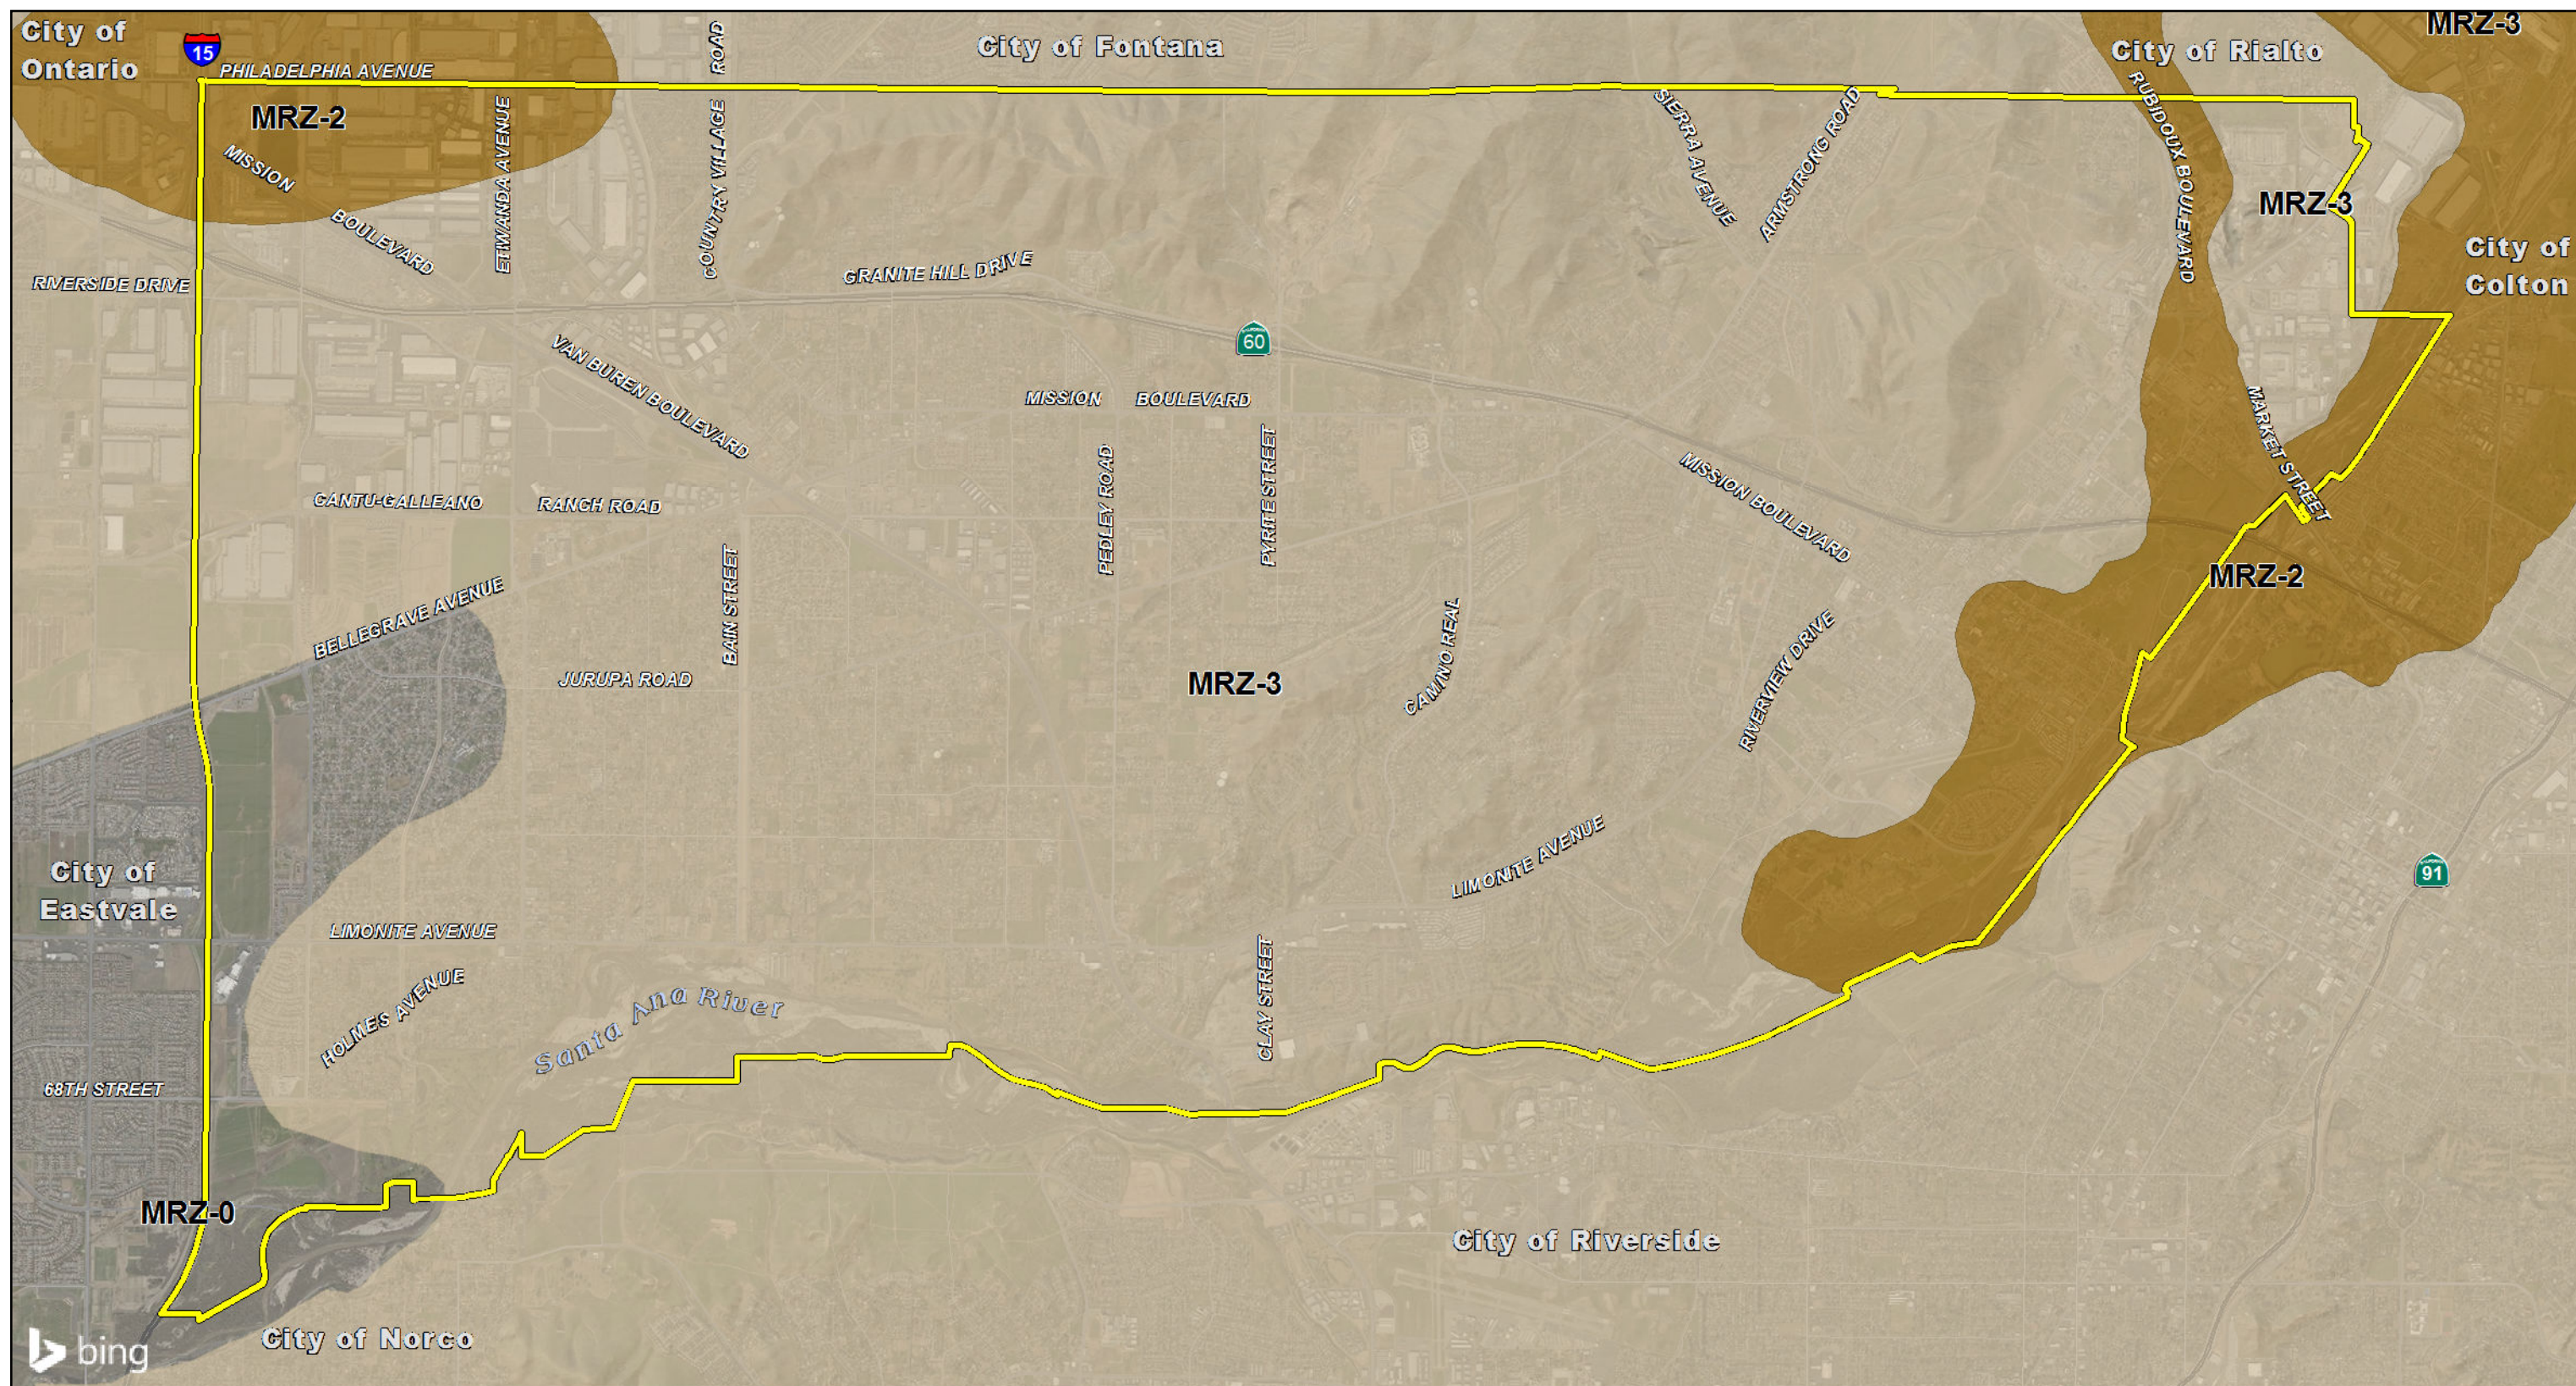

No comments were received from public agencies or the public regarding mineral resources.

4.11.2 Regulatory Framework

4.11.2.1 State Regulations

Surface Mining and Reclamation Act. The Surface Mining and Reclamation Act of 1975 (SMARA) requires classification of land into mineral resource zones (MRZs) according to the known or inferred mineral potential of the area. Construction aggregate resources (sand and gravel) deposits were the first commodity selected for classification by the State Mining and Geology Board. Once mapped, the State Mining and Geology Board is required to designate for future use those areas that contain aggregate deposits that are of prime importance in meeting the region's future need for construction-quality aggregates. There are three key objectives of SMARA regulations:

THIS PAGE INTENTIONALLY LEFT BLANK

LSA

City of Jurupa Valley

Mineral Resource Zones

MRZ-2, Areas where adequate information indicates that significant mineral deposits are present or where it is judged that a high likelihood for their presence exists

MRZ-3, Areas containing mineral deposits the significance of which cannot be evaluated from available data

SOURCE: Bing Aerial, 2015; Riverside County 7/2015; California Geological Survey, 1984.

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.11.1
Regional Mineral Resources

THIS PAGE INTENTIONALLY LEFT BLANK

- Adverse environmental effects are prevented or minimized, and mined lands are reclaimed to a usable condition that is readily adaptable for alternative uses;
- The production and conservation of minerals are encouraged, while consideration is given to values relating to recreation, watershed, wildlife, range and forage, and aesthetic enjoyment; and
- Residual hazards to the public health and safety are eliminated.

The primary objective of the SMARA is for each jurisdiction to develop policies that will conserve important mineral resources, where feasible, that might otherwise be unavailable when needed. The SMARA requires that once policies are adopted, local agency land use decisions must be in accordance with its mineral resource management policies. These decisions must also balance the mineral value of the resource to the market region as a whole, not just their importance to the local jurisdiction. Under SMARA, areas are categorized into four MRZs as follows:

| | |
|---------------|---|
| MRZ-1 | Areas where the available geologic information indicates no significant mineral deposits or a minimal likelihood of significant mineral deposits. |
| MRZ-2a | Areas where the available geologic information indicates that there are significant mineral deposits. |
| MRZ-2b | Areas where the available geologic information indicates that there is a likelihood of significant mineral deposits. |
| MRZ-3a | Areas where the available geologic information indicates that mineral deposits are likely to exist, however, the significance of the deposit is undetermined. |
| MRZ-4 | Areas where there is not enough information available to determine the presence or absence of mineral deposits. |

4.11.2.2 City General Plan

The following goals, policies, and programs of the Conservation and Open Space Element of the 2017 General Plan are related to mineral resources:

COS 6. Non-Renewable Resources

Goal

- COS 6.1 The City will help to reduce consumption of non-renewable energy sources and ensure efficient use, development and conservation of sustainable, non-polluting energy sources.

Policies

- COS 6.1.1 **Efficient Use of Non-Renewable Resources.** Utilize non-renewable resources efficiently in City buildings and facilities, services and operations, and encourage others to do the same.
- COS 6.1.2 **Compliance with SMARA.** Require that the operation and reclamation of surface mines be consistent with the State Surface Mining and Reclamation Act (SMARA) and with the Municipal Code.
- COS 6.1.3 **Incompatible Uses.** Restrict incompatible land uses within the impact area of legal existing or potential surface mining uses and within areas designated in the General Plan as Open Space-Mineral Resources.
- COS 6.1.4 **Approval Conditions.** Impose conditions as necessary on mining operations to minimize or eliminate the potential adverse impact of mining operations on surrounding properties, and environmental resources.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- COS 6.1.5 **Buffers.** Require that new non-mining land uses adjacent to existing mining operations be designed to provide a buffer between the new development and the mining operations. The buffer distance shall be based on an evaluation of noise, aesthetics, drainage, operating conditions, biological resources, topography, lighting, traffic, operating hours, and air quality.

Programs

- COS 6.1.1.1 **Minerals Inventory.** Maintain up-to-date information regarding the location of mineral resource zones in the City.
- COS 6.1.1.2 **City Review.** Update City ordinances to require that all proposals for mineral extraction and reclamation be reviewed by the Planning Commission and City Council.

In addition, the Land Use Element contains the following policies regarding mineral resources:

Land Use Element

Policies

- LUE 1.14 **SMARA Compliance.** Require that surface mining activities and lands containing mineral deposits of statewide or of regional significance comply with City ordinances and the SMARA.
- LUE 1.15 **Encroachment.** Protect lands designated as Open Space-Mineral Resource from encroachment of incompatible land uses through buffer zones or visual screening.
- LUE 1.16 **Road Access.** Protect road access to mining activities and prevent or mitigate traffic conflicts with surrounding properties.
- LUE 1.17 **Reclamation.** Require the recycling and reclamation of mineral extraction sites to open space, recreational, or other uses that are compatible with the surrounding land uses.
- LUE 1.18 **Reuse Plan.** Require an approved reclamation and reuse plan prior to the issuing of a permit to operate an extraction operation.

Program

- LUE 1.1.8 **Mineral Extraction Controls.** Establish a zoning overlay zone to designate open space areas in the OS-RUR that are appropriate for mineral extraction such that scenic resources such as prominent ridgelines, rivers and forests, are not adversely affected.

4.11.3 Methodology

The California Geological Survey (CGS) provides objective geologic information about California's diverse non-fuel mineral resources. Maps, reports, and other data products developed by CGS were used to locate mineral extraction areas in the project area. In addition, the City's 2017 General Plan was used to determine the location of possible mineral extraction areas in the project area.

4.11.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. Appendix G of the *State CEQA Guidelines* recognizes the following thresholds related to mineral resources. Based on these significance thresholds, potential impacts to mineral resources could be considered significant if the proposed project:

- Resulted in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State;
- Resulted in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plans.

4.11.5 Programmatic Impact Evaluation

The following potential impacts were determined to be less than significant. In both of the following issues, either no impact would occur or adherence to established regulations, standards, and policies would reduce potential impacts to a less than significant level. In both instances, no mitigation is required.

4.11.5.1 Loss of Statewide, Regional, or Locally Important Mineral Resources

| | |
|-----------|---|
| Threshold | Would the proposed project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State? |
| Threshold | Would the proposed project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plans? |

Programmatic Impacts. A portion of the land along the Santa Ana River in the southeastern portion of the City has been designated as MRZ-2. This area contains undetermined amounts of construction aggregate (i.e., sand and gravel) but is designated for public use associated with the Santa Ana River, and so aggregate deposits are not readily available for mining in this area. In addition, the rest of the City is designated as MRZ-3 which means the significance of any deposits is unknown. None of the vacant developable land remaining in the City contains significant mineral resources. In addition, mining would be an incompatible land use with surrounding suburban land uses. Future development in the City would not result in the loss of identified regional or local mineral resources, conversion of an identified mineral resource use, or conflict with existing mineral resource extraction activities. Therefore, future development in the City on identified vacant and available land would not result in a loss of statewide, regional, or locally important mineral resources. No significant impacts associated with this issue would occur and no mitigation is required.

Evaluation of General Plan Goals and Policies. The following goals, policies, and programs of the 2017 General Plan are specifically related to mineral resources:

Conservation and Open Space Element

Goal

COS 6.1 Reduce consumption of non-renewable energy sources and ensure efficient use.

Policies

COS 6.1.1 Utilize non-renewable resources efficiently in City buildings and facilities.

COS 6.1.2 Require surface mines be consistent with the State Surface Mining and Reclamation Act (SMARA) and with the Municipal Code.

COS 6.1.3 Restrict incompatible land uses next to approved mining activities.

COS 6.1.4 Condition mining operations to minimize impacts on surrounding properties.

COS 6.1.5 Require buffers for new non-mining land uses adjacent to existing mining operations.

Programs

COS 6.1.1.1 Maintain up-to-date information on mineral resource zones in the City.

COS 6.1.1.2 Require discretionary approvals for all mineral extraction and reclamation.

Land Use Element

Policies

- LUE 1.14 Require compliance with the Surface Mining and Reclamation Act (SMARA).
- LUE 1.15 Protect mineral designated lands from encroachment and incompatible land uses.
- LUE 1.16 Prevent or mitigate traffic conflicts with surrounding properties.
- LUE 1.17 Require the recycling and reclamation of mineral extraction sites to open space.
- LUE 1.18 Require an approved reclamation and reuse plan for extraction operations.

Program

- LUE 1.1.8 Establish a zoning overlay zone for mineral extraction.

These goals, policies, and programs emphasize coordination and careful planning for mining activities within the City, and to provide adequate buffers for adjacent uses and important resources (Policies COS 6.1.3 through COS 6.1.5).

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs regarding mineral resources will not result in significant impacts to these resources and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs regarding mineral resources will not result in significant impacts to these resources and no mitigation is required.

4.11.7 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a "plan summary" of long-term development impacts. In this case, the growth projections of the 2017 General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to 2017 General Plan implementation.

The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

For context, the cumulative "universe" for impacts to mineral resources relative to the City's 2017 General Plan would be western Riverside County. The previous Figure 4.11.1 shows the location of regional mineral resources. A few isolated areas along the I-15 Freeway south of SR-91 are designated as MRZ-2 areas that contain significant amounts of construction aggregate (i.e., sand and gravel). The rest of the flatter portions of the County in the general area of Jurupa Valley are designated as MRZ-3 with unknown amounts mineral resources (mainly aggregate deposits along the Santa Ana River from historical flooding). As population levels increase in the region, greater demand

for aggregate and other mineral materials will be placed on mineral resources, especially sand and gravel. Similarly, development pressures in areas where these materials are known or expected to occur would result in the loss of availability of these mineral resources.

It is unknown at this time if or where additional mineral extraction activities will occur, however, General Plan Policies 6.1.2 through 6.1.5 require future development to coordinate carefully between proposed mining and existing development, or between existing mining and proposed development. These programmatic goals, policies, and programs in the 2017 General Plan will help reduce impacts between mining and development within the City to less than significant levels. For these reasons, implementation of the City's 2017 General Plan will not make a significant contribution to cumulatively adverse impacts to mineral resources.

THIS PAGE INTENTIONALLY LEFT BLANK

4.12 NOISE

This section of the EIR discusses the fundamentals of sound, examines federal, state, and local noise guidelines, policies, and standards, reviews noise levels at existing sensitive receptor locations; evaluates potential noise impacts associated with the City's General Plan, and provides mitigation where necessary to reduce noise impacts at noise-sensitive locations. This section of the EIR evaluates the potential for implementation of the General Plan to result in noise impacts in the City and surrounding areas adjacent to the City. Noise calculations on which this analysis is based are included in Appendix J. The analysis contained in this section is based on the following documents:

- *Noise Element, 2017 General Plan*, City of Jurupa Valley, (draft) December 2016.
- *General Plan Noise Conditions Report*, LSA Associates, August 2016.

In addition to the documents above, the analysis contained in this section is also based on the following reference documents:

- *Transit Noise and Vibration Impact Assessment*, Federal Transit Authority (FTA), May 2006.
- *California Noise Insulation Standards*, California Code of Regulations, Title 24, Part 2, §3501;
- *Highway Traffic Noise Prediction Model (FHWA-RD-77-108)*, Federal Highway Administration (FHWA);
- *State of California General Plan Guidelines*, Governor's Office of Planning and Research, October 2003, pages 249 and 250.
- *Jurupa Valley Ordinance No. 2012-01: Noise Regulations*.

4.12.1 Existing Setting

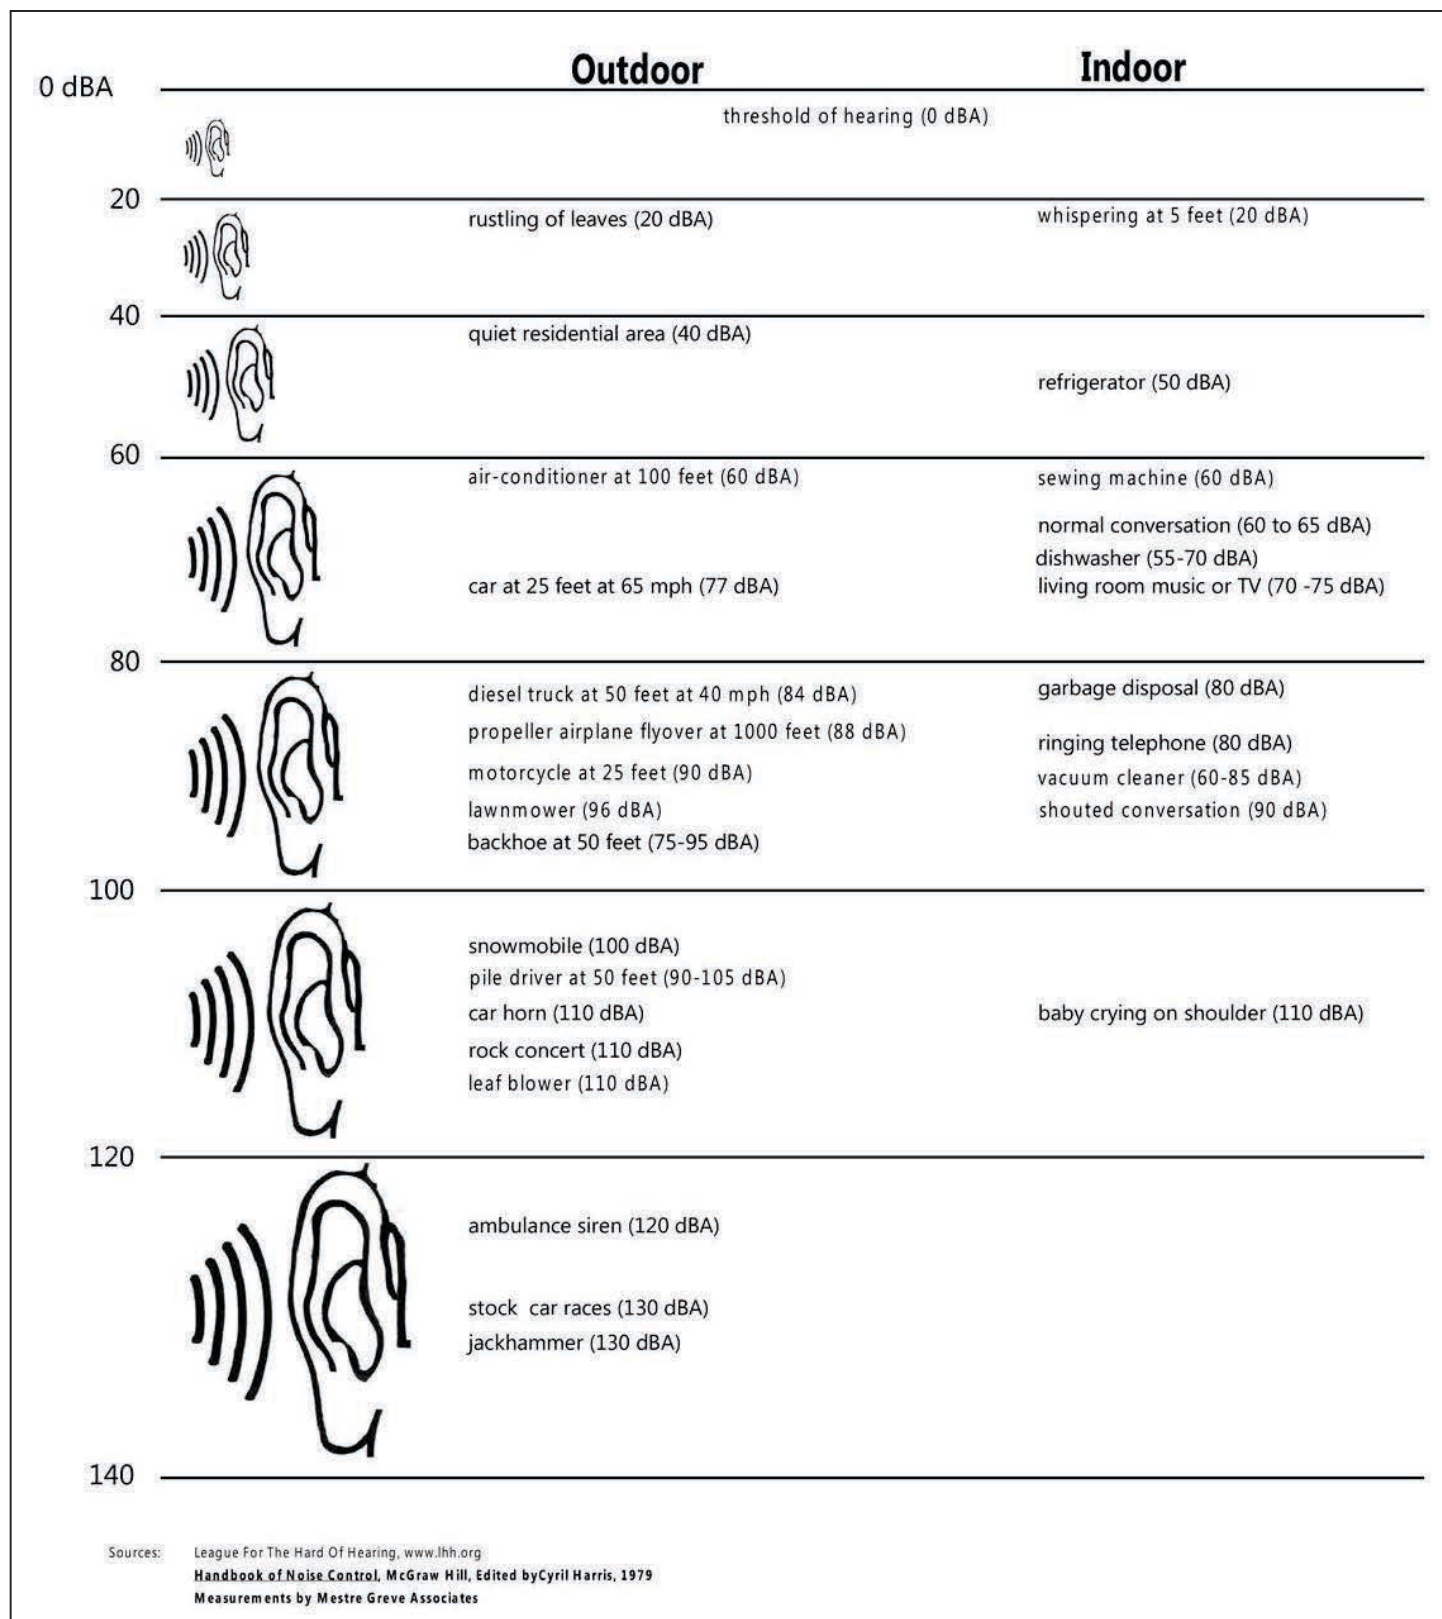

4.12.1.1 Background

Characteristics of Noise. To the human ear, sound is technically described in terms of its loudness (amplitude) and pitch (frequency). Pitch is generally an annoyance, while loudness can affect our ability to hear. Noise is usually defined as unwanted sound; it consists of any sound that may produce physiological or psychological damage and/or interfere with communication, work, rest, recreation, and sleep.

Measurement of Noise. The standard unit of measurement of the loudness of sound is the decibel (dB). Decibels are based on a logarithmic scale. The logarithmic scale compresses the wide range in sound levels resulting in a more usable range of sound level values, similar to the Richter scale used to measure earthquakes. To humans, a sound 10 dB higher than another is considered to be twice as loud; a sound 20 dB higher than another is considered four times as loud; etc. Typical daily sounds in the environmental range from 30 dB (very quiet) to 100 dB (very loud).

Since the human ear is not equally sensitive to sound at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity. The A-weighted decibel (dBA) scale performs this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear. Community noise levels are measured in terms of the dBA. Figure 4.12.1 shows examples of various noises sources and their typical dBA noise level.

Environmental Impact Report*

Figure 4.12.1
Typical A-Weighted Noise Levels

THIS PAGE INTENTIONALLY LEFT BLANK

There are two categories of noise that are measured to characterize noise conditions: single event noise and community, or cumulative, noise. Single event measurements describe the noise levels from an individual event such as a passing airplane or a heavy-duty truck. Cumulative measurements average the total noise in a community over a specific time period, which is typically 1 or 24-hours. The noise impact analysis performed for this EIR is based on assessment of both single event noise and community or cumulative, noise.

Several rating scales have been developed for measurement of community noise. These account for: (1) the parameters of noise that have been shown to contribute to the effects of noise on humans; (2) the variety of noises found in the environment; (3) the variations in noise levels that occur as a person moves through the environment; and (4) the variations associated with the time of day. They are designed to account for the known health effects of noise on people described previously. Based on these effects, the observation has been made that the potential for a noise to affect people is dependent on the total acoustical energy content of the noise. A number of noise scales have been developed to account for this observation. Two of the predominant noise scales are the Equivalent Continuous Noise Level (L_{eq}) and the Community Noise Equivalent Level (CNEL). L_{eq} is the sound level corresponding to a steady-state sound level containing the same total energy as a time-varying signal over a given sample period. L_{eq} is the “energy” average noise level during the time period of the sample. L_{eq} can be measured for any time period, but is typically measured for 1 hour. This 1-hour noise level can also be referred to as the Hourly Noise Level (HNL). It is the energy sum of all the events and background noise levels that occur during that time period.

CNEL is the predominant rating scale now in use in California for land use noise compatibility assessment. The CNEL scale represents a time weighted 24-hour average noise level based on the dBA. Time weighted refers to the inclusion of penalties for noise that occurs during certain noise-sensitive time periods. The evening time period (7 p.m. to 10 p.m.) penalizes noises by 5 dBA, while nighttime (10 p.m. to 7 a.m.) noises are penalized by 10 dBA, reflecting people’s increased sensitivity to noise during these time periods. A CNEL noise level may be reported as a CNEL of 60 dBA, 60 dBA CNEL, or simply 60 CNEL.

$L(\%)$ is a statistical method of describing noise which accounts for variance in noise levels throughout a given measurement period. $L(\%)$ is a way of expressing the noise level exceeded for a percentage of time in a given measurement period. For example, since 5 minutes is 25 percent of 20 minutes, $L(25)$ is the noise level that is equal to or exceeded for five minutes in a twenty-minute measurement period. It is $L(\%)$ that is used for most Noise Ordinance standards. For example most daytime County, State and City noise ordinances use a standard of 55 dBA for 30 minutes per hour, or an $L(50)$ level of 55 dBA. In other words, the noise ordinance may state that no noise level should exceed 55 dBA for more than fifty percent of a given period.

The maximum noise level (L_{max}) is the highest exponential time averaged sound level that occurs during a stated time period. The noise levels discussed in this analysis for short-term noise impacts are specified in terms of maximum levels denoted by L_{max} , which reflects peak noise conditions and addresses the annoying aspects of intermittent noise. It is often used together with another noise scale, or noise standards in terms of percentile noise levels, in noise ordinances for enforcement purposes. For example, the L_{10} noise level represents the noise level exceeded 10 percent of the time during a stated period. The L_{50} noise level represents the median noise level. Half the time the noise level exceeds this level, and half the time it is less than this level. The L_{90} noise level represents the noise level exceeded 90 percent of the time and is considered the background noise level during a monitoring period. For a relatively constant noise source, the L_{eq} and L_{50} are approximately the same.

Fundamentals of Groundborne Vibration. Vibration refers to groundborne noise and perceptible motion of the earth. Similar to airborne noise, vibration is transmitted in noise-like waves through the earth and solid objects. There are several ways to categorize vibration sources. One way is to divide vibration into natural sources (e.g., earthquakes, volcanic eruptions, sea waves, and landslides) and

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

human sources (e.g., explosions, machinery, traffic, trains, and construction equipment). Similar to noise sources, vibration sources can also be described as continuous (e.g., operating factory machinery) or transient (e.g., explosions).

As with noise, ground vibrations can be described by amplitude and frequency. Vibration amplitude is characterized by its displacement, velocity, and acceleration. Displacement is the distance that soil particles travel from their original location as a result of vibration, as measured in inches or millimeters. Velocity is the speed of the soil particles measured in inches per second or millimeters per second. Acceleration of the soil particles is measured in inches per second or millimeters per second. Particle velocity is the most commonly used vibration attribute used to describe vibration. Table 4.12.A presents the human reaction to various levels of peak particle velocity. Vibrations also vary in frequency. Traffic vibrations generally range in frequencies from 10 to 30 hertz (Hz), and tend to average around 15 Hz. As a point of reference, city buses often generate frequencies around 3 Hz at high vehicle speeds, due to their suspension systems.

Table 4.12.A: Human Reaction to Typical Vibration Levels

| Vibration Level Peak Particle Velocity (inches/second) | Human Reaction |
|--|---|
| 0.0059–0.0188 | Threshold of perception, possibility of intrusion. |
| 0.0787 | Vibrations readily perceptible. |
| 0.0984 | Level at which continuous vibrations begin to annoy people. |
| 0.1968 | Vibrations annoying to people in buildings. |
| 0.3937–0.5905 | Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges. |

Source: Caltrans 1992.

Groundborne vibration is almost exclusively a concern inside buildings and is rarely perceived as a problem outdoors, where the motion may be discernable. However, without the effects associated with the shaking of a building, there is less adverse reaction. Building vibration may be perceived by the occupants as motion of building surfaces, rattling of items on shelves or hanging on walls, or as a low-frequency rumbling noise. Building damage is not a factor for normal projects, with the occasional exception of blasting and pile driving during construction or mining. Annoyance from vibration often occurs when the vibration exceeds the threshold of perception by up to 10 decibels. This is an order of magnitude below the damage threshold for normal buildings.

Typical sources of groundborne vibration are construction activities (e.g., blasting, pile driving, and operating heavy-duty earthmoving equipment), steel-wheeled trains, and occasional traffic on rough roads. Problems with groundborne vibration and noise from these sources are usually localized to within about 100 feet of the vibration source, although there are examples of groundborne vibration causing interference out to distances greater than 200 feet.¹ When roadways are smooth, vibration from traffic, even heavy trucks, is rarely perceptible.

Factors that influence groundborne vibration and noise include the following:

- *Vibration Source:* Vehicle suspension, wheel types and condition, track/roadway surface, track support system, speed, transit structure, and depth of vibration source.
- *Vibration Path:* Soil type, rock layers, soil layering, depth to water table, and frost depth.
- *Vibration Receiver:* Foundation type, building construction, and acoustical absorption.

¹ "Transit Noise and Vibration Impact Assessment" prepared by the Federal Transit Authority (FTA), May 2006.

Among the factors listed above, there are significant differences in the vibration characteristics when the source is underground versus at ground surface. In addition, soil conditions are known to have a strong influence on the levels of groundborne vibration. Among the most important factors are the stiffness and internal damping of the soil and the depth to bedrock. Vibration propagation is more efficient in stiff clay soils than in loose sandy soils, and shallow rock seems to concentrate the vibration energy close to the surface and can result in groundborne vibration problems at a great distance from the track. Factors such as layering of the soil and depth to water table can have significant effects on the propagation of groundborne vibration. Soft, loose, sandy soils tend to attenuate more vibration energy than hard, rocky materials. Vibration propagation through groundwater is more efficient than through sandy soils.

Table 4.12.B shows the various land use compatibility classifications based on exterior noise levels, and these categories are described as follows:

Noise Range I—Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

Noise Range II—Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made, and needed noise insulation features are included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning, will normally suffice.

Noise Range III—Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

Noise Range IV—Clearly Unacceptable: New construction or development should generally not be undertaken.

Table 4.12.B: Land Use Compatibility for Exterior Community Noise

| Land Use Category | Noise Range (L_{dn} or CNEL), dB | | | |
|--|-------------------------------------|-------|-------|-----|
| | I | II | III | IV |
| Passively used open spaces | 50 | 50–55 | 55–70 | 70+ |
| Auditoriums, concert halls, amphitheaters | 45–50 | 50–65 | 65–70 | 70+ |
| Residential, low-density single-family, duplex, mobile homes | 50–55 | 55–70 | 70–75 | 75+ |
| Residential multifamily | 50–60 | 60–70 | 70–75 | 75+ |
| Transient lodging, motels, hotels | 50–60 | 60–70 | 70–80 | 80+ |
| Schools, libraries, churches, hospitals, nursing homes | 50–60 | 60–70 | 70–80 | 80+ |
| Actively used open spaces, playgrounds, neighborhood parks | 50–67 | – | 67–73 | 73+ |
| Golf courses, riding stables, water recreation, cemeteries | 50–70 | – | 70–80 | 80+ |
| Office buildings, business commercial and professional | 50–67 | 67–75 | 75+ | – |

dB = decibel(s)

L_{dn} = day-night average noise level

4.12.1.2 Sensitive Land Uses

People that reside in certain land uses are considered more sensitive to noise than others of the general public. Examples include residential areas, educational facilities, hospitals, childcare facilities, and senior housing. These local land uses would be considered to have “sensitive receptors” and careful planning is required to assure future land uses and transportation routes do not create significant noise impacts on these uses.

4.12.1.3 Local Sources of Noise

City residents are exposed to noise from a number of sources, including traffic, railroad, aircraft, and stationary sources.

Vehicular Noise. The primary source of noise in the City is vehicular traffic on the two local freeways (I-15 and SR-60), Van Buren Boulevard as a regional highway, and over a dozen roadways considered to be urban highways or arterials in the roadway classification used for the traffic study (see Table 4.16.D and Figure 4.16.2 in the Traffic section for more details on roadway classifications). Noise levels vary depending on distance from the centerline of a particular roadway, time of day, and traffic speeds and activities. The General Plan noise study modeled noise contours using the FHWA Traffic Noise Prediction Model. Figure 4.12.2 illustrates the existing (Year 2015) noise contours from major roads and highways in and near the City.

Automobiles, buses, trucks, and trains dominate transportation noise in the City. Bus service is provided on major streets, collectors, and local streets within the City's circulation system. For purposes of assessing vehicular noise, three generic weight classifications are considered (light, medium, and heavy). Buses do not fit exactly into either the medium truck or heavy truck category, and their measured noise emission characteristics are equally intermediate. At 35 miles per hour (mph), 1 medium duty truck is as loud as 10 cars, and 1 heavy truck is as loud as 30 cars. A bus is approximately equivalent to 20 cars. In addition, bus noise may be worsened by grade or by the condition of the pavement. Major transportation noise sources in the City include traffic on Interstate 15 (I-15), State Route 60 (SR 60), Mission Boulevard, Van Buren Boulevard, Bellegrave Avenue, Jurupa Road, Etiwanda Avenue, Limonite Avenue, Armstrong Road, Rubidoux Boulevard, Pedley Road, and Market Street.

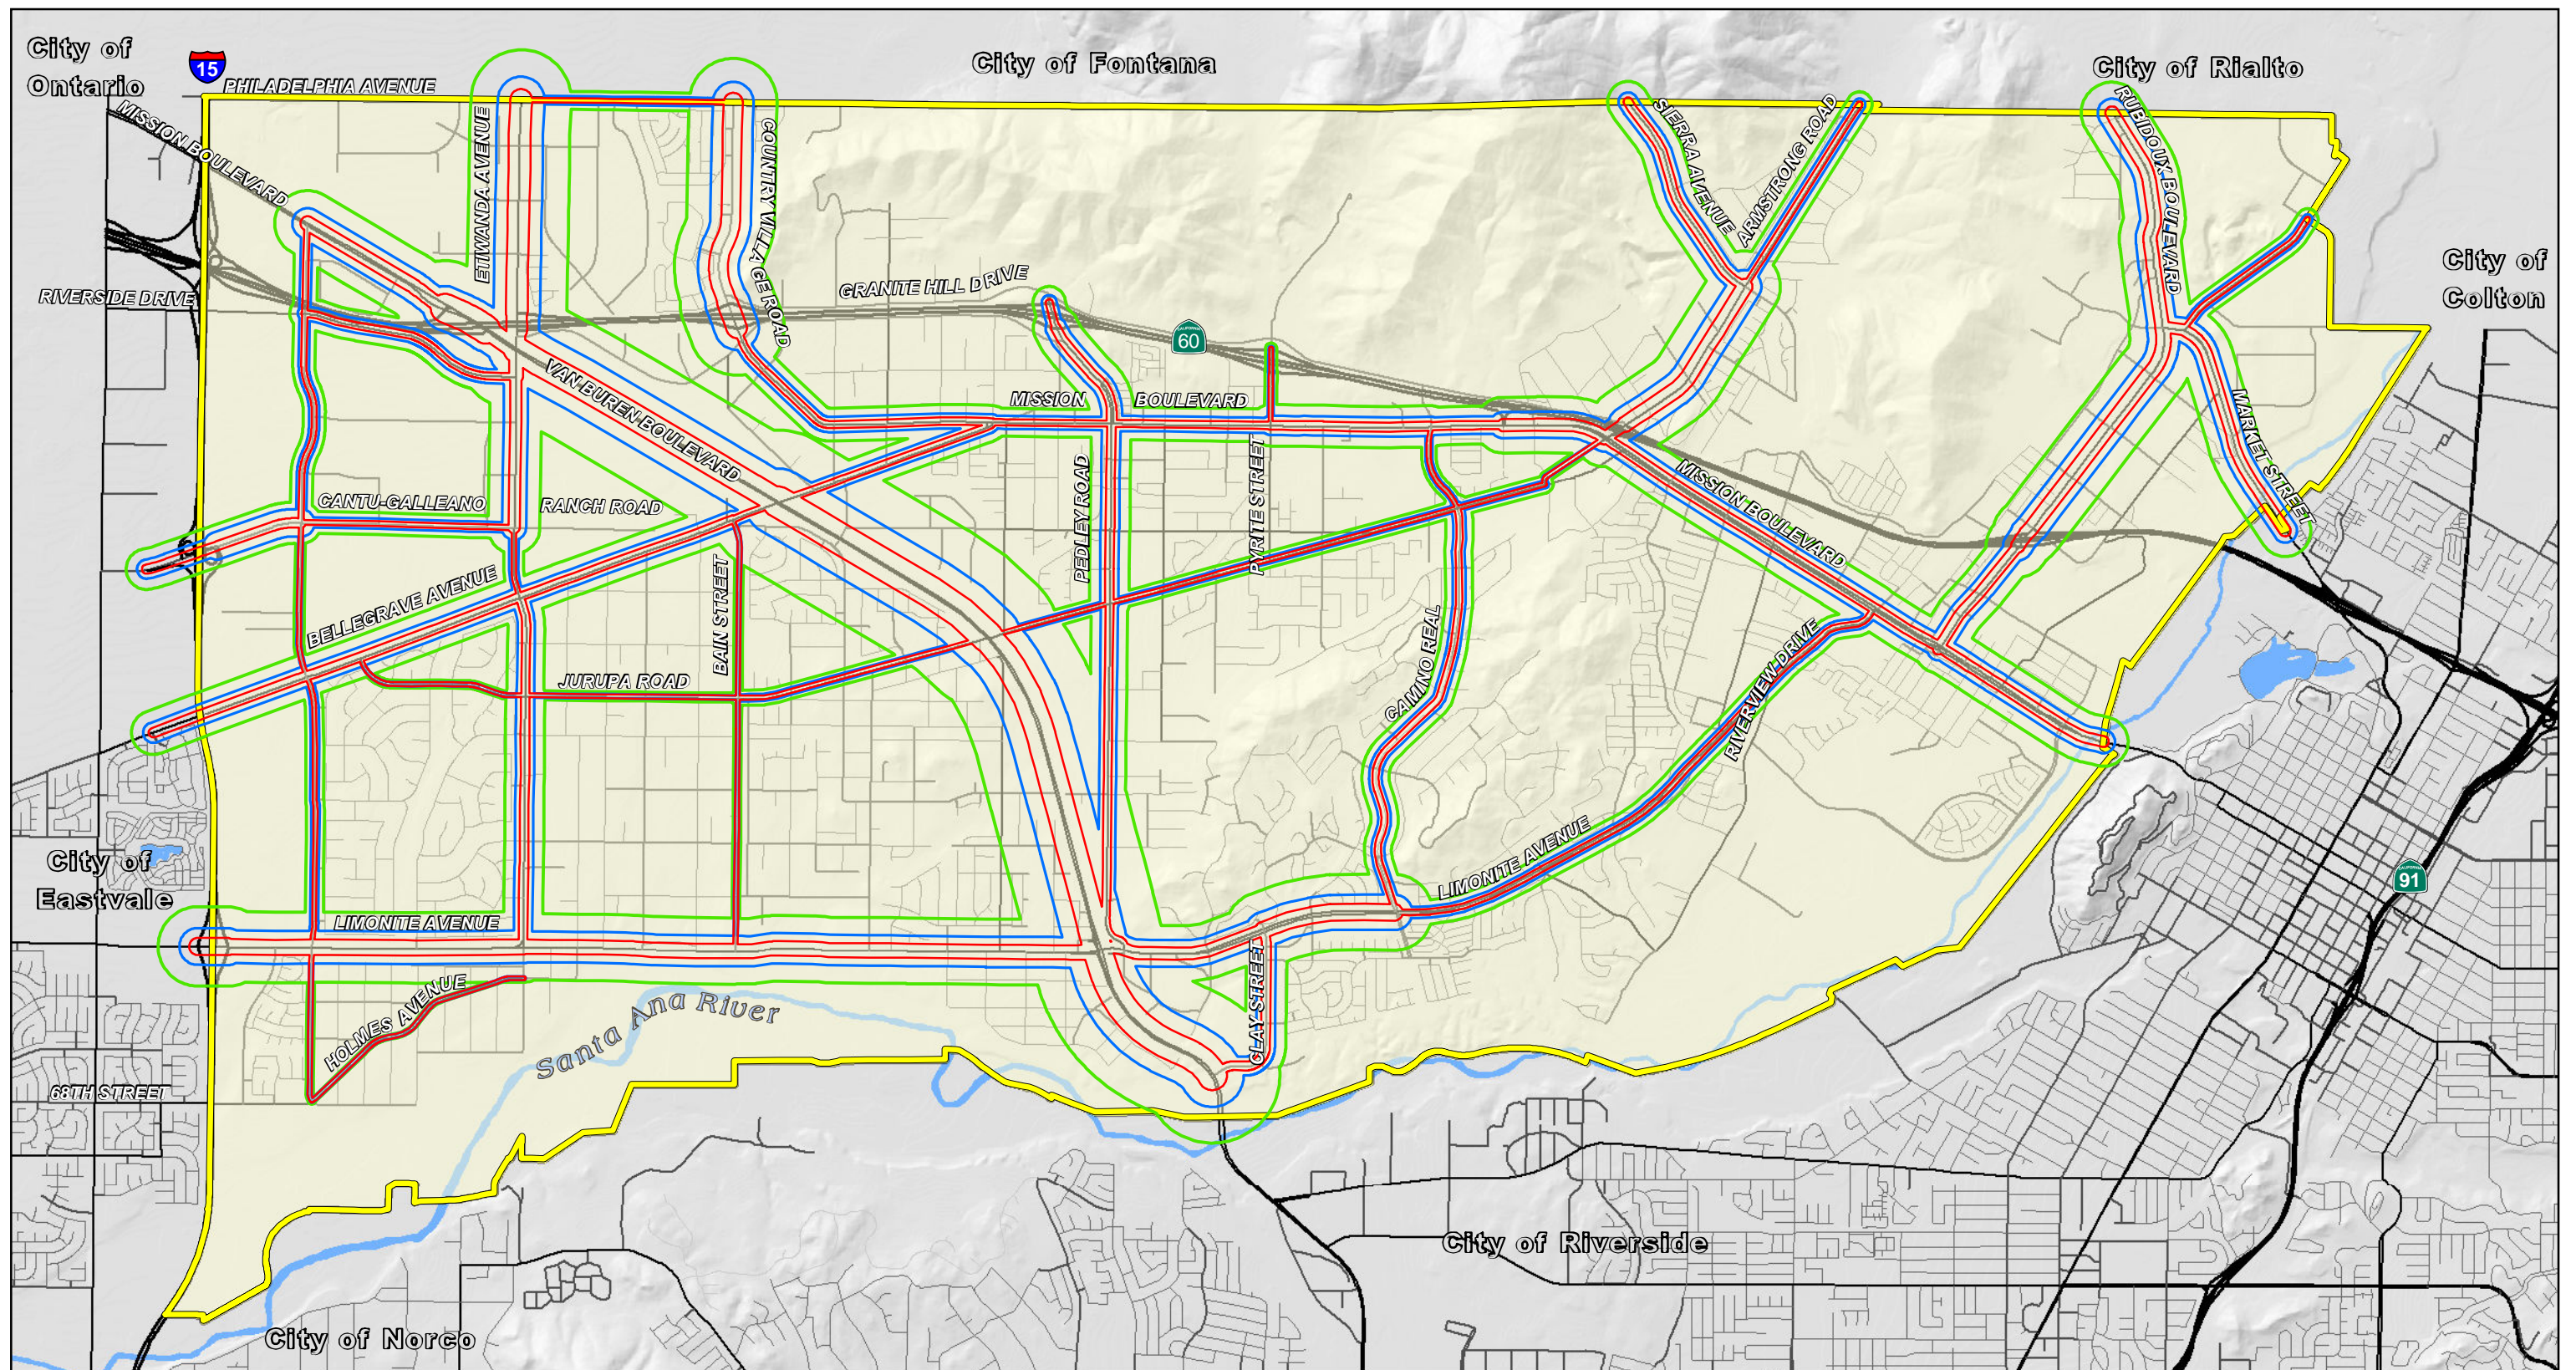

The City is currently served by Riverside Transit Agency, a public transit agency serving Riverside County, with bus service along Limonite Avenue, Mission Boulevard and other small segments within the City through various routes (i.e., Routes 3, 21, 29, 49 and 204).

Rail Noise. The noise impacts associated with rail activities depend heavily on a number of factors, including the type of train, the length of train, the physical track conditions, the geometry and intervening structures between the rail line and its receptor, the number of trains operating during the day time, the number of trains operating during the nighttime, and the speed of the train. Additionally, if the horn is required to sound a warning (typically at at-grade crossings), the noise level impact will be greater to those uses nearest the intersection.

Currently, one main rail line passes through the City operated by Union Pacific Railroad Company. The rail line generally runs from the northwest corner of the City to the southeastern corner of the City. The rail line also has a spur which starts at the intersection of Van Buren Boulevard and Jurupa Road and continues northeast generally along the eastern side of Jurupa Road ending in the northeast corner of the City.

Based on the Federal Railroad Administration (FRA) crossing inventory completed on January 1, 2011, at various crossings within the City, typical operations along the main rail line included approximately 10 daytime trains and 8 nighttime freight trains ranging in speed from 45 to 80 mph. Typical operations on the spur include approximately 2 daytime trains ranging in speed from 5 to 10 mph. In addition to freight train operations on the main line, Metrolink operates a commuter train line, the Riverside Line that is scheduled to have 6 trains pass through in each direction, Monday through Friday.

For all future developments within the City that fall within the required noise screening distances as specified in the Federal Transit Authority (FTA) *Noise and Vibration Manual*, a detailed noise analysis

THIS PAGE INTENTIONALLY LEFT BLANK

would be required. The screening distances for commuter and freight rail are 750 feet with no obstruction between the rail line and receptor and 375 feet with intervening buildings. Figures 4.12.3A, 4.12.3B and 4.12.3C show typical railroad 65 dBA, 70 dBA and 75 dBA noise contours and their distances from railroad centerline of commuter trains and freight trains of various sizes.

Aircraft Noise. The City of Jurupa Valley has the potential to be influenced by operations at two different airports: Flabob Airport located within the Jurupa Valley city limits, and Riverside Municipal Airport to the south.

The Flabob Airport is a source of noise, primarily from takeoffs and landings. Average inbound and outbound flights from this airport are approximately 75 per day currently and may reach up to approximately 120 per day in the future (Riverside County ALCUP 2004). Aircrafts at this airport include single-engine airplanes, twin-engine piston and turboprop airplanes, and sail planes. Noise from the aircraft generates a relatively minor contribution to the overall noise environment. Based on the noise contour map shown in Figure 4.12.4A, the 65 dBA CNEL contour appears to overlap with very few single-family homes located near the intersections of 42nd Street and Wallace Street and Carol Way and Wallace Street, otherwise, the 65 dBA CNEL contour remains within the Flabob Airport property limits.

Figures 4.12.4B shows the noise contours the Riverside Municipal Airport. The Riverside Municipal Airport's 65 dBA CNEL and 60 dBA CNEL contours are within the Riverside city limits.

Stationary Noise. A stationary noise source is a land use, building, or activity in a relatively fixed location that emits noise. They may be temporary, intermittent, or continuous. Stationary noise sources are common in many noise-sensitive areas. Motors, appliances, air conditioners, lawn and garden equipment, power tools, and generators, and amplified sounds are often found in residential neighborhoods, as well as on or near the properties of schools, hospitals, and parks. Industrial, commercial, and manufacturing facilities can also generate stationary noise that may affect sensitive land uses. Another local source of nuisance noise reported during public meetings on the General Plan is diesel trucks idling in residential neighborhoods, especially late at night or in the early morning, and to a lesser degree diesel truck noise from commercial and industrial areas that are close to residential areas. The emitted noise can usually be reduced to acceptable levels either at the source or on the adjacent property through the use of proper planning, setbacks, block walls, acoustic-rated windows, dense landscaping, or by changing the location of the noise producer. In Jurupa Valley, some of the stationary noise producers include truck transfer stations, construction activities, idling trucks, and a go-kart racetrack. Maximum noise exposure levels from stationary sources for noise-sensitive uses are regulated by the Municipal Code.

Nuisance Noise. Many infrequent sources of noise, such as amplified music from bars and private parties, dog barking and illegal firework use, is another type of stationary source noise that has been identified by area residents as creating a problem within the City. The effects or significance of nuisance noise can be compounded by the time of day, volume, and proximity to sensitive receptors. For instance, a loud party might be tolerated by neighbors in the early evening hours but be considered a nuisance after 10:00 p.m. The City's Noise Ordinance contains regulations limiting the allowable noise generated by private parties and other events.

Commercial-industrial and light-industrial land uses in the City have the potential to generate high noise levels and impact surrounding land uses with their equipment operation. Noise sources from these land uses include: air conditioning or refrigeration units, power tools, lawn equipment, generators, and other powered mechanical equipment. Chapter 11.10, Sections 010-090, of the City's Municipal Code has established noise level requirements for operations involving stationary noise sources.

4.12.1.4 Existing Noise Measurements

Existing noise levels in the vicinity of the proposed project are used to establish baseline noise levels in key areas. The noise study conducted by LSA Associates included 19 short-term and 12 long-term noise measurement locations distributed throughout the City based on potential areas of concern regarding noise impacts. Several criteria were used in the site selection process including, but not limited to, the proximity of a measurement site to sensitive land uses as well as its proximity to significant noise generators. Several of the significant noise generators within the City are the SR-60, I-15, Van Buren Boulevard, and Etiwanda Avenue. This was due to the very high volume of automobile and truck traffic at these freeways and roadways. In addition, many houses in the City are located adjacent to railroad lines which generate infrequent but substantial noise as trains pass houses or idle on stacked tracks to allow other trains to pass.

To provide noise measurement coverage of the area, measurement sites were chosen within the confines of the City. After the site selection process was over, a series of long-term 24-hour and short-term noise 15-minute measurements were taken at the chosen sites. The measurement site locations are described in Table 4.12.C, and their locations are shown in Figure 4.12.5, *Noise Measurement Locations*. Figure 4.12.2 shows the existing (ambient) noise levels along major roadways in and adjacent to the City which are then summarized in Table 4.12.D. Many residences (and residents) experience ongoing noise from the I-15 Freeway but especially from the SR-60 Freeway which passes through the northern portion of the City in an east/west direction. There are also isolated locations in the City (e.g., in the northwest and northeast portions) where industrial land uses and truck activity raise ambient noise levels in adjacent or surrounding residential neighborhoods. In addition, many residences in the southeastern and eastern portions of the City experience infrequent noise from aircraft overflights from the Flabob and Riverside Municipal Airports.

4.12.1.4 NOP and Scoping Comments

No comments were received from the public regarding noise impacts of the General Plan, and no agencies submitted comment letters regarding noise during the NOP period.

4.12.2 Regulatory Framework

4.12.2.1 Federal Guidelines

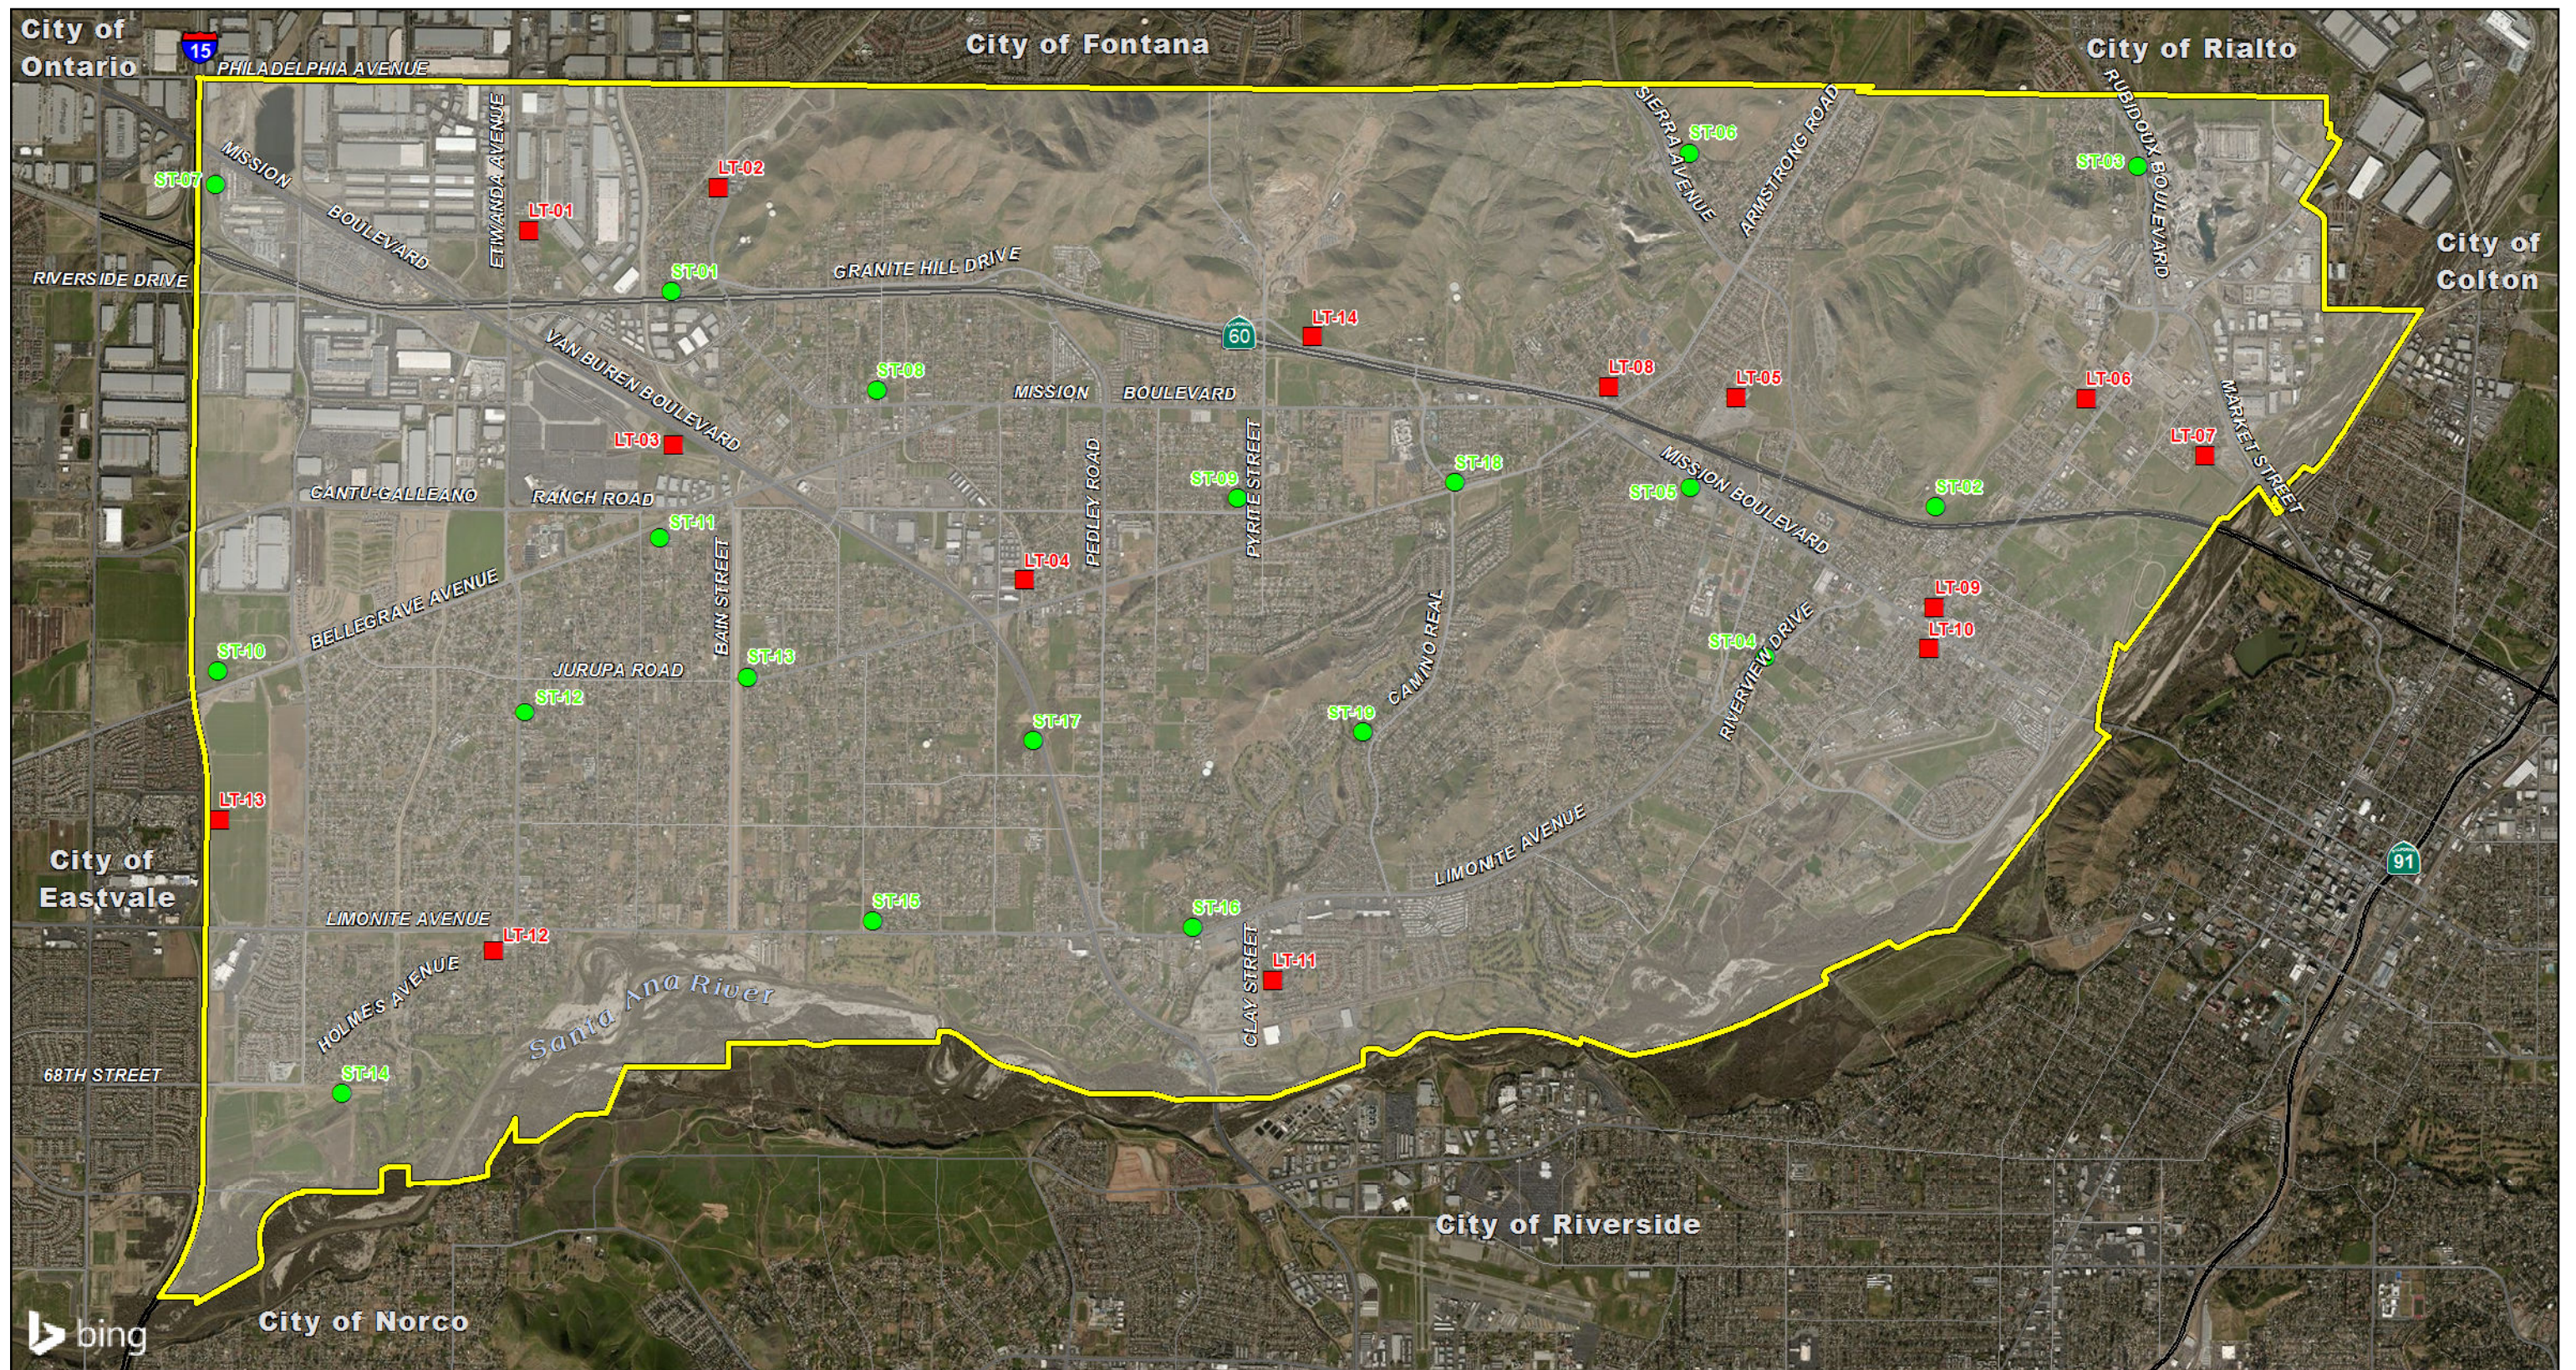

For train vibration, the typical criteria are those in the Transit Noise and Vibration Impact Assessment (FTA, May 2006) by the Federal Transit Administration¹. The criterion presented in Table 8-1 of that report for infrequent events (defined as fewer than 30 per day) in residences is that the vibration levels not exceed 80 VdB. (VdB is a measurement of ground velocity relative to 10⁻⁶ inches per second). Note that the threshold of perception is usually taken to be approximately 65 VdB. Therefore, even if the requirements are met, vibration from train pass-bys will be felt.

4.12.2.2 State Regulations

Noise Compatibility Guidelines. The State of California Noise Compatibility Guidelines, published by the Department of Health, Services provides guidance for use when siting land uses. The compatibility guidelines are shown in Figure 4.12.6. The guidelines will be used to evaluate the compatibility of the proposed land uses with the noise environment. The guidelines show

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.12.5
Noise Measurement Locations

THIS PAGE INTENTIONALLY LEFT BLANK

-  **NORMALLY ACCEPTABLE**
Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.
-  **CONDITIONALLY ACCEPTABLE**
New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.
-  **NORMALLY UNACCEPTABLE**
New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise reduction features included in the design.
-  **CLEARLY UNACCEPTABLE**
New construction or development should generally not be undertaken.

Environmental Impact Report*

Figure 4.12.6
California Noise Compatibility Guidelines

THIS PAGE INTENTIONALLY LEFT BLANK

compatibility of various land uses with different noise environments. The guidelines show that residential uses are normally acceptable in noise environments up to 60 CNEL for low density single family uses and 65 CNEL for multi-family residential uses.

State of California Building Code

The State of California's noise insulation standards are codified in the California Code of Regulations (CCR), Title 24, Building Standards Administrative Code, Part 2, California Building Code. These noise standards are applied to new construction in California for the purpose of ensuring that the level of exterior noise transmitted to and received within the interior living spaces of buildings is compatible with their comfortable use. For new residential dwellings, hotels, motels, dormitories, and school classrooms, the acceptable interior noise limit for habitable rooms in new construction is 45 dBA CNEL or L_{dn} . Title 24 requires acoustical studies for residential development in areas exposed to more than 60 dBA CNEL to demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. Where exterior noise levels are projected to exceed 60 dBA CNEL or L_{dn} at the facade of a building, a report must be submitted with the building plans that describe the noise control measures that have been incorporated into the design of the project to meet the 45 dBA noise limit.

State Land Use Compatibility Criteria

The State of California adopts suggested land use noise compatibility levels as part of its General Plan Update Guidelines. These suggested guidelines provide urban planners with an integral tool to gauge the compatibility of land uses relative to existing and future noise levels. The guidelines identify normally acceptable, conditionally acceptable, and clearly unacceptable noise levels for various land uses. A conditionally acceptable designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated into the design. By comparison, a normally acceptable designation indicates that standard construction can occur with no special noise reduction requirements. The Land Use Compatibility Guidelines are shown in Figure 4.12.6.

State and federal agencies regulate vehicle noise emissions from the source, but local governments have little direct control of transportation noise at the source. The most effective methods available to the City for mitigating transportation noise are the locating of sensitive uses away from noise sources, establishing commercial truck routes, constructing, maintaining adequate setbacks between land uses and noise sources, constructing noise barriers, and by requiring development project site design review. Figure 4.12.6, presents the State's Land Use Compatibility Matrix which may be used to assess the compatibility of the proposed land uses with the noise environment. These criteria are the basis for specific Noise Standards.

4.12.2.3 Riverside County

Riverside County Airport Land Use Commission

The California Public Resources Code requires that the adoption or approval of any amendment to a general or specific plan affecting the property within an airport influence area (AIA), as defined by an airport land use compatibility plan, shall require review from the ALUC for determination of consistency with the Commission's Plan prior to their approval by the local jurisdiction. In general, consistency with the Commission's Plan is determined based on noise and safety compatibility issues.

The locations of CNEL contours are among the factors used to define compatibility zone boundaries and criteria. According to guidelines included in the Riverside County Airport Land Use Compatibility Plan (ALUCP), areas exposed to aircraft noise levels above 65 dBA CNEL are considered clearly unacceptable for new residential land uses, schools, libraries, and hospitals. For churches,

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

auditoriums, concert halls, and amphitheaters, noise levels above 70 dBA CNEL are clearly unacceptable. These standards shall be based upon projected noise contours calculated based upon forecasted aircraft activity as indicated in an airport master plan, or that is considered by the Riverside County ALUC to be plausible.

The maximum, aircraft-related, interior noise level that shall be considered acceptable for land uses near airports is 45 dB CNEL in: (a) any habitable room of single- or multi-family residences; (b) hotels and motels; (c) hospitals and nursing homes; (d) churches, meeting halls, theaters, and mortuaries; (e) office buildings; and (f) schools, libraries, and museums. According to the Riverside County ALUC, when reviewed as part of a general plan or zoning ordinance amendment or as a major land use action, evidence that proposed structures will be designed to comply with the above criteria shall be submitted to the ALUC under the following circumstances:

- Any mobile home situated within an airport's 55-dB CNEL contour. (A typical mobile home has an average exterior-to-interior noise level reduction (NLR) of approximately 15 dB with windows closed);
- Any single- or multi-family residence situated within an airport's 60-dB CNEL contour. (Wood frame buildings constructed to meet 1990s standards for energy efficiency typically have an average NLR of approximately 20 dB with windows closed.); and
- Any hotel or motel, hospital or nursing home, church, meeting hall, office building, mortuary, school, library, or museum situated with an airport's 65-dB CNEL contour.

4.12.2.4 City General Plan

The Noise Element of the proposed 2017 General Plan contains the following goals, policies, and programs to help monitor, regulate, and mitigate excessive noise levels (i.e., potential noise impacts) within the City as development occurs:

Noise Element

Goal

- NE 1.1 Ensure adjacent land uses are compatible and protect sensitive receptors from outside sources of noise and vibration.

Policies

- NE 1.1.1 **Land Use/Noise Compatibility.** Utilize the Land Use/Noise Compatibility Matrix, Table NE-2, to determine the compatibility of proposed general plan amendments and rezones with existing noise-sensitive land uses and/or noise exposure due to transportation sources.
- NE 1.1.2 **New Development and Stationary Noise Sources.** New development of noise-sensitive land uses near existing stationary noise sources may be permitted only where their location or design allow the development to meet the standards of Table NE-1.
- NE 1.1.3 **New or Modified Stationary Noise Sources.** Noise created by new, stationary noise sources, or by existing stationary noise sources that undergo modifications that may increase noise levels, shall be mitigated to not exceed the noise level standards of Table NE-1, for noise-sensitive uses. This policy does not apply to noise levels associated with agricultural operations existing in 2016.
- NE 1.1.4 **Acoustical Assessment.** Require an acoustical assessment for proposed general plan amendments and rezones that exceed the "Normally Acceptable" thresholds of the Land Use/Noise Compatibility Matrix.

- NE 1.1.5 **Noise-Sensitive Uses.** Consider the following uses noise-sensitive and discourage these uses in areas in excess of 65 CNEL: schools, hospitals, assisted living facilities, mental care facilities, residential uses, libraries, passive recreational uses, and places of worship.
- NE 1.1.6 **Protection of Noise-Sensitive Uses.** Protect noise-sensitive land uses from high levels of noise by restricting noise-producing land uses from these areas. If the noise-producing land uses cannot be relocated, then measures such as building techniques, setbacks, landscaping and noise walls should be considered.
- NE 1.1.7 **Noise-Tolerant Uses.** Guide new or relocated noise-tolerant land uses into areas irrevocably committed to land uses that are noise producing, such as along major transportation corridors or within the projected noise contours of area airports.
- NE 1.1.8 **Airport Noise Compatibility.** Ensure that new land use development within Airport Influence Areas complies with airport land use noise compatibility criteria contained in the applicable Airport Land Use Compatibility (ALUC) plan for the area.
- NE 1.1.9 **Acoustic Site Planning and Design.** Incorporate acoustic site planning into the design and placement of new development, particularly large scale, mixed-use, or master-planned development, including building orientation, berming, special noise-resistant walls, window and door assemblies, and other appropriate measures.
- NE 1.1.10 **Mixed Uses.** Require that mixed commercial and residential development minimizes the transfer or transmission of noise from the commercial land use to the residential land use.

Programs

- NE 1.1.1.1 **Municipal Code:** Amend the Municipal Code to require that development entitlements (tract maps, site development plans, conditional use permits, etc.) comply with the Land Use/Noise Compatibility Matrix (Table NE-2) and other requirements of the General Plan.
- NE 1.1.1.2 **Noise Guide.** The Planning Department shall prepare and maintain a Noise Guide containing “Good Neighbor” guidelines and rules for neighborhood noise reduction and procedures for mitigating noise, and make the Guide available to the public, property owners, and developers.
- NE 1.1.1.3 **Homeowner Assistance.** Assist homeowners living in high noise areas to reduce noise levels in their homes through funding assistance and retrofitting program development, as City resources allow.

Goal

- NE 2.1 Minimize excessive noise levels and community health risks due to mobile noise sources.

Policies

- NE 2.1.1 **Roadway Projects.** Include noise mitigation measures in the design and construction of new roadway projects in the City. Noise mitigation may include speed reduction, roadway design, noise-reducing materials or surfaces, edge treatments and parkways with berms and landscaping, and other measures.
- NE 2.1.2 **Commercial Truck Deliveries.** Require commercial or industrial truck delivery hours be limited to least-sensitive times of the day when adjacent to noise-sensitive land

uses, unless there is no feasible alternative or there are overriding transportation benefits, as determined by the Planning Director.

- NE 2.1.3 **Off-Road Vehicles.** Restrict the use of motorized trail bikes, mini-bikes, and other off-road vehicles except where designated for that purpose. Enforce strict operating hours for these vehicles where they are located to minimize noise impacts on sensitive land uses adjacent to public trails and parks.
- NE 2.1.4 **Rail Noise.** Minimize the noise effect of rail transit (freight and passenger) on residential uses and other sensitive land uses through the land use planning and discretionary approval process.
- NE 2.1.5 **Rail Noise Mitigation.** Encourage, and where possible, require the rail service provider to install noise mitigation features where rail operations impact existing adjacent residential or other noise-sensitive uses.
- NE 2.1.6 **Noise Contours.** Check all proposed development projects for possible location within roadway, railroad, and airport noise contours.
- NE 2.1.7 **Airport Compatibility.** Comply with applicable noise mitigation policies contained in the Airport Land Use Compatibility (ALUC) Plans for Flabob Airport, Riverside Municipal Airport, and the LA/Ontario International Airport.
- NE 2.1.8 **Preferred Noise Mitigation Methods.** When approving new development of noise-sensitive uses or noise-generating uses, the City will require noise mitigation in the order of preference, as listed below, with “1” being most preferred. For example, when mitigating outdoor noise exposure, providing distance between source and recipient is preferred to providing berms and walls. Before approving a less desirable approach, the City approval body must make a finding that more desirable approaches are not effective or that it is not practical to use the preferred approaches consistent with other design criteria based on the General Plan.
- A. Mitigating Noise Generation
1. Design the site of the noise-producing project so that buildings or other solid structures shield neighboring noise-sensitive uses;
2. Limit the operating times of noise-producing activities;
3. Provide features, such as walls, with a primary purpose of blocking noise.
- B. Mitigating Outdoor Noise Exposure
1. Provide distance between noise source and recipient;
2. Provide distance plus planted earthen berms;
3. Provide distance and planted earthen berms, combined with sound walls;
4. Provide earthen berms combined with sound walls;
5. Provide sound walls only;
6. Integrate buildings and sound walls to create a continuous noise barrier.
- NE 2.1.9 **Noise Walls.** Noise mitigation walls (sound walls) should be used only when it is shown that preferred approaches are not effective or that it is not practical to use the preferred approaches consistent with other design criteria based on the General Plan. Where noise walls are used, they should be designed to enhance community character, protect significant views, discourage graffiti, and help create an attractive

pedestrian, residential setting through features such as setbacks, changes in vertical and horizontal alignment, detail and texture, public art, walkways or trails, and landscaping. The height of such walls should be minimized, and where sound attenuation requires that a buffer that exceeds ten feet in height, the sound buffer should consist of a combination of berms and a wall, or two or more retaining walls stepped back to allow intervening landscaping.

Programs

NE 2.1.1.1 **Truck Routes.** Prepare and adopt truck routes to direct commercial trucks away from sensitive noise receptors.

NE 2.1.1.2 **City Actions.** The City will consider implementing one or more of the following measures where existing or cumulative increases in noise levels from new development significantly affect noise-sensitive land uses or residential neighborhoods:

- A. Rerouting traffic onto streets that can maintain desired levels of service, consistent with the Mobility Element, and which do not adjoin noise-sensitive land uses.
- B. Rerouting commercial trucks onto streets that do not adjoin noise-sensitive land uses.
- C. Constructing noise barriers.
- D. Reducing traffic speeds through street or intersection design methods (also refer to the Mobility Element).
- E. Retrofitting buildings with noise-reducing features.
- F. Establishing financial programs, such as low cost loans to owners of noise-impacted property, or requiring noise mitigation or trip reduction programs as a condition of development approval.
- G. Encourage and support stepped up enforcement of traffic laws and the California Vehicle Code.

NE 2.1.1.3 **City Operations and Purchasing.** City will pursue alternatives to the use of noisy equipment and vehicles, and will purchase equipment and vehicles only if they incorporate the best available noise reduction technology.

NE 3 Stationary Noise Sources

Goal

NE 3.1 Minimize excessive noise levels and community health risks due to stationary noise sources.

Policies

NE 3.1.1 **Noise Analysis.** Require that a noise analysis be conducted by an acoustical specialist for all proposed development projects that have the potential to generate significant noise near a noise-sensitive land use, or on or near land designated for noise-sensitive land uses, and ensure that recommended mitigation measures are implemented.

NE 3.1.2 **Truck Loading, Shipping, and Parking.** Require that the loading, shipping or parking facilities of commercial and industrial land uses, which abut residential parcels, be located and designed to minimize potential noise impacts upon residents.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Overnight Commercial Truck parking areas shall be regulated in the Zoning Ordinance as a commercial use.

- NE 3.1.3 **Noise Buffers.** Require major stationary noise-generating sources to install noise buffering or reduction mechanisms within their facilities to reduce noise generation levels to the lowest level practical as a condition of the approval or renewal of project entitlements.
- NE 3.1.4 **Construction Equipment.** Require that all construction equipment utilize noise reduction features (i.e., mufflers and engine shrouds) that are at least as effective as those originally installed by the manufacturer.
- NE 3.1.5 **Construction Noise.** Limit commercial construction activities near residential uses to weekdays, between 7:00 am and 6:00 p.m., and limit high-noise generating construction activities (e.g. grading, demolition, pile driving) near sensitive receptors to weekdays between 9:00 a.m. and 3:00 p.m.
- NE 3.1.6 **Commercial Truck Idling.** Restrict truck idling near noise sensitive receptors.
- NE 3.1.7 **Automobile-Oriented Uses.** Require that parking structures, terminals, drive-through restaurants, automobile sales, and repair, fueling stations, mini-marts, car washes and similar automobile-oriented uses be sited and designed to minimize potential noise impacts on adjacent land uses.
- NE 3.1.8 **Entertainment Uses.** Minimize the generation of excessive noise from entertainment and restaurant/bar establishments into adjacent residential or noise-sensitive uses.
- NE 3.1.9 **Neighborhood Noise.** Support efforts of the Sheriff's Department, Animal Control, and Code Enforcement to curb nuisance noise from private parties, barking dogs and illegal firework use.

Program

- NE 3.1.1.1 **Ensuring Compliance.** Ensure that required noise mitigation measures are carried out as a project is built, and in place and/or fully implemented prior to release of occupancy, including enforcement of the State Building Codes regarding Chapter 35, "Sound Transmission Control," as amended, and "Noise Insulation Standards" (California Code of Regulations, Title 24).

NE 4 Ground-Borne Vibration

Goal

- NE 4.1 Minimize excessive noise levels and community health risks due to ground-borne vibration.

Policies

- NE 4.1.1 **Sensitive Land Uses.** Avoid the placement of sensitive land uses in proximity to vibration-producing land uses.
- NE 4.1.2 **Vibration Producing Land Uses.** Avoid the placement of vibration-producing land uses near sensitive receptors.
- NE 4.1.3 **Truck Idling.** Restrict truck idling near sensitive vibration receptors.

- NE 4.1.4 **Passing Trains.** Prohibit exposure of residential dwellings to perceptible ground vibration from passing trains as perceived at the ground or second floor. Perceptible motion shall be presumed to be a motion velocity of 0.01 inches/second over a range of 1 to 100 Hz.
- NE 4.1.5 **Mining Operations.** Require measures to protect properties adjacent to mining or construction sites that will entail blasting as part of the operation when considering land use entitlement applications.

Programs

- NE 4.1.1.1 **Rail-related Noise.** Minimize the noise impact of passenger (Metrolink) and freight rail service on sensitive land uses by coordinating with rail authorities to effectively manage train noise and by establishing and enforcing noise mitigation measures that apply to rail uses.
- NE 4.1.1.2 **Quiet Zone Crossings.** Require new development in the vicinity of railroad crossings that are within 1,000 feet of existing residential neighborhoods to design and construct Quiet Zone railroad crossing improvements and seek to qualify for a Quiet Zone designation.

The applicable noise standards governing activities in the City are in the City General Plan and the City's Municipal Code, Noise Ordinance. The General Plan noise policies cite to applicable state standards including the California Administrative Code, Section 1092 of Title 25, Chapter 1, Subchapter 1, Article 4 and Section 5014 of Title 21, Subchapter 6, Article 2.

City General Plan Stationary Source Noise Standards. The City of Jurupa Valley Noise Element in the General Plan considers the impacts of stationary noise producers. Stationary noise producers are entities with a fixed location that emit noise. The General Plan requires that sensitive land uses not be subjected to excessive stationary noise, either by mitigation at the source or through planning measures that reduce sound exposure. Table 4.12.E summarizes the criteria for sensitive receivers.

Table 4.12.E: Jurupa Valley General Plan Noise Standards

| Land Use | Stationary Source Land Use Noise Standards | |
|---------------------------------|--|--------------------------------|
| | Interior Standards | Exterior Standards |
| Residential 10:00 pm to 7:00 am | 40 L _{eq} (10 minute) | 45 L _{eq} (10 minute) |
| Residential 7:00 am to 10:00 pm | 55 L _{eq} (10 minute) | 65 L _{eq} (10 minute) |

Source: City of Jurupa Valley General Plan Table N-22

4.12.2.5 City Municipal Code

The City of Jurupa Valley's Municipal Code (Section 11.10.040 – General sound level standards) has established maximum exterior sound levels standards. Standards vary depending on land use. Therefore, future development will be subject to different standards depending on the proposed land uses of a particular project. Table 4.12.F outlines examples of these criteria.

Table 4.12.F: Maximum Local Noise Criteria

| General Plan Land Designation | Maximum Noise Criteria (dB L _{max}) | |
|-------------------------------|---|----------------|
| | 7 a.m.–10 p.m. | 10 p.m.–7 a.m. |
| Low Density (LDR) | 55 | 45 |
| Medium Density (MDR) | 55 | 45 |

Table 4.12.F: Maximum Local Noise Criteria

| General Plan Land Designation | Maximum Noise Criteria (dB L_{max}) | |
|--------------------------------------|--|----|
| Medium High Density (MHDR) | 55 | 45 |
| Very High Density (VHDR) | 55 | 45 |
| Retail Commercial (CR) | 65 | 55 |
| Open Space (OS) | 45 | 45 |

The criteria in the table above represent some but not all the noise limits that persons shall not exceed through sound they create or allow to be created. Private construction projects are exempt under the City's Noise Ordinance.

4.12.3 Methodology

The Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA RD-77-108) was used to evaluate traffic-related noise conditions in the City. This model requires various parameters, including traffic volumes, vehicle mix, vehicle speed, and roadway geometry to compute typical equivalent noise levels during daytime, evening, and nighttime hours. The resultant noise levels are weighted and summed over 24-hour periods to determine the CNEL values. Existing traffic volumes were used to assess existing traffic noise levels in the City.

4.12.4 Thresholds of Significance

A project is considered to have a significant effect on the environment related to noise if it would substantially increase the ambient noise levels for adjoining areas or if it would conflict with adopted environmental plans and goals of the community in which it is located.

The applicable noise standards and guidelines governing the project are those specified previously in Sections 4.12.2.1 through 4.12.2.4. In summary, these criteria are contained within the City's Noise Element of the General Plan, the City Municipal Code, the California Vehicle Code, and the State Noise Compatibility Guidelines.

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. The following thresholds of significance regarding potential impacts to noise and are based on Appendix G of the *CEQA Guidelines*). A project would have a significant impact if it would:

- Expose persons to or generate noise levels in excess of standards established in the *City General Plan*, *Municipal Code*, or applicable standards of other agencies;
- Expose persons to or generate excessive groundborne vibration or groundborne noise levels;
- Cause a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project;
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels; and/or
- For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.

The standards within the *City General Plan* and *City Municipal Code* determine the acceptable noise environment for future proposed development and the areas surrounding that development. The standards are as follows:

- Ensure through the design review process that exterior noise levels at residential areas do not exceed 60 dBA CNEL for low density housing and 65 dBA CNEL for multifamily.
- Prohibit facility-related noise, received by any sensitive use, from exceeding the following worst-case noise levels:
 - a) 45 dBA-10-minute L_{eq} between 10 pm and 7 am
 - b) 65 dBA-10-minute L_{eq} between 7 am and 10 pm
- Consider the following uses noise-sensitive and discourage them in areas where exterior noise levels exceed 65 dBA CNEL unless measures are implemented that reduce the noise exposure below this level: single-family and multiple-family residential uses, group homes, hospitals, schools and other learning institutions, and parks and open space areas where quiet is a basis for use.

4.12.5 Programmatic Impact Evaluation

The following evaluates the potential impacts of future growth and development impacts were identified as having a less than significant impact or no impact on the environment with implementation of the proposed project.

4.12.5.1 Long-Term Noise Impacts

| | |
|-----------|---|
| Threshold | Would the project result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project? |
|-----------|---|

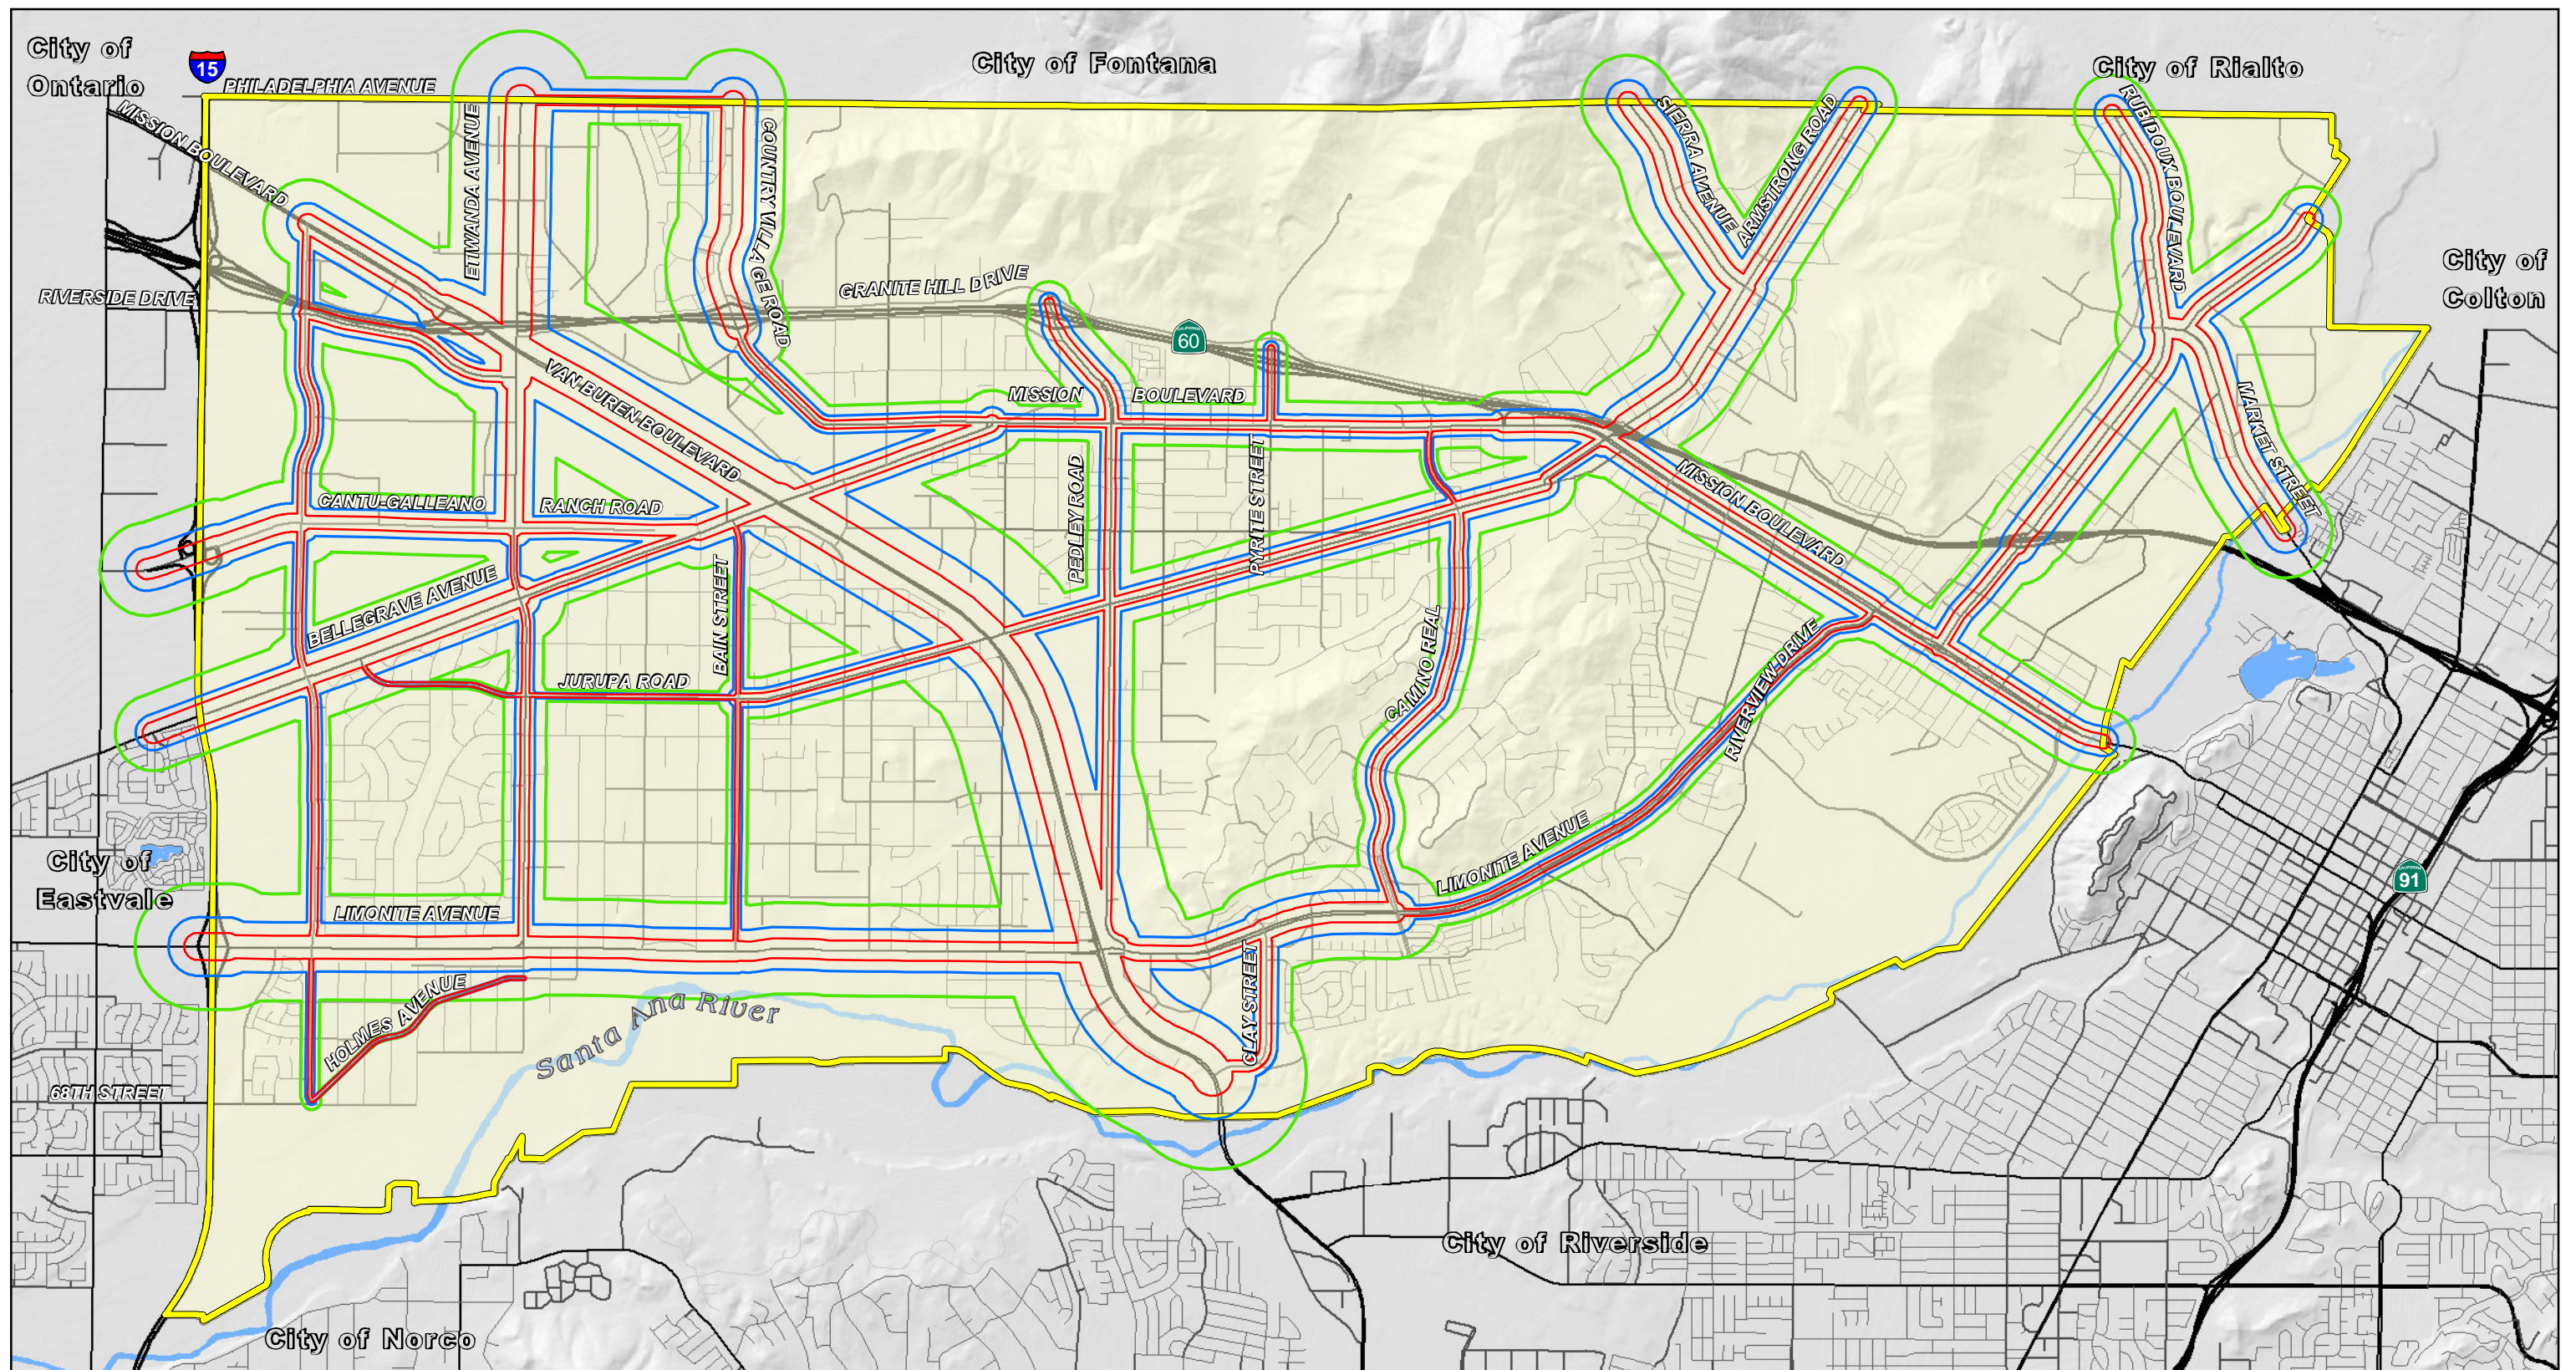

Programmatic Impacts

Vehicular Noise. Future development in the City add traffic and increased human activity as growth occurs. Table 4.12.G and Figure 4.12.7 show future noise levels and areas of noise impacts based on Year 2035 conditions. The City of Jurupa Valley will experience significant noise impacts if noise generated by traffic or other activities exceeds the City's established noise standards. For example, if exterior noise levels in residential areas with sensitive receptors exceeds 65 dBA.

The future traffic noise levels along City arterials were calculated using the FHWA Highway Traffic Noise Prediction Model. Table 4.12.G lists the calculated Year 2035 traffic noise levels along roadway links within the City. Similar to the existing condition, these traffic noise levels represent the worst-case scenario, which assumes that no shielding is provided between the roadway traffic and where the contours are drawn.

This programmatic analysis is different than project-level determinations. For example, if a specific project's contribution to increases in the ambient noise environment equals 3.0 dBA or more, then it is considered a significant noise impact at a project level. For context, a change of 3.0 dBA is considered "barely perceptible" by the human ear and changes of less than 3.0 dBA generally cannot be perceived except in carefully controlled laboratory environments. Based on available information, it appears future development in the City will generate significant noise impacts along certain major transportation routes.

Jurupa Valley 2017 General Plan Environmental Impact Report

Figure 4.12.7

Future Noise Contours (2035)

THIS PAGE INTENTIONALLY LEFT BLANK

Table 4.12.G shows that increased traffic would add up to 7.9 dBA to area roadway links. Twenty-five of the 82 roadway sections modeled have a projected increase in noise greater than or equal to the 3 dBA threshold of significance. Figure 4.12.7 shows the 60, 65 and 70 dBA CNEL contours along all modeled roadways. As can be seen, nearly all of the roadway links analyzed have the 65 dBA CNEL extending outside the roadway right-of-way. The 65 dBA CNEL extends up to 1,085 feet from the centerline of the road. Noise-sensitive uses along the roadway links where the 65 dBA CNEL extends beyond the roadway right-of-way may be exposed to traffic noise exceeding the City's exterior noise standards.

Rail Noise. Although the proposed General Plan would not result in potential measureable project-related increases in railroad noise, there could be new proposed sensitive land uses along and adjacent to the railroads that would be affected by high noise levels from railroad operations. New development, particularly residential uses along and adjacent to railroad corridors, could be exposed to excessive train-related noise levels. Future increases in rail usage are anticipated as the result of establishment and expansion of commuter rail service. However, it is not possible to quantify impacts as specific plans for commuter operations (e.g., number and size of trains) are not available.

Stationary Noise. New development associated with implementation of the proposed General Plan could expose existing and/or new sensitive uses to stationary noise sources, such as industrial and/or commercial uses. The development of new commercial and industrial uses pursuant to the proposed General Plan may increase noise levels in their vicinity due to the establishment of new stationary noise sources. Although vehicular noise is exempt from local regulation when operating on public streets, cities and counties can regulate vehicular noise while operating on private property. The use of heavy trucks on private properties (e.g., making deliveries to commercial and industrial uses) will result in noise levels of 73 dBA at 50 feet from the source of the noise (e.g., truck's engine, idling trucks). The use of multiple trucks on a site, such as might occur at a warehouse, could generate noise levels of about 80 dBA L_{eq} as measured at a distance of 50 feet. Industrial processing equipment and conducting outdoor industrial activities could also generate increased noise levels. New projects developed under the proposed General Plan would be subject to the City's noise ordinance and the provisions of the proposed General Plan.

Evaluation of General Plan Goals and Policies. While all of the following goals, policies, and programs of the Noise Element of the 2017 General Plan are intended to help reduce noise impacts to City residents and sensitive receptors, the following summarized goals, policies, and programs are examples of the degree to which the 2017 General Plan goes in that effort (for full text of measures see Section 4.12.2.4):

Goal

NE 1.1 Ensure adjacent land uses are compatible and protect sensitive receptors from outside sources of noise and vibration.

Policies

- NE 1.1.1 Use the Land Use/Noise Compatibility Matrix to determine the compatibility of projects and noise exposure due to transportation sources.
- NE 1.1.2 Allow new noise-sensitive land uses near existing stationary noise sources only when the project can be designed to prevent significant noise impacts.
- NE 1.1.3 Stationary source projects must mitigate impacts on noise-sensitive uses.
- NE 1.1.4 Require acoustical studies for projects that exceed the “Normally Acceptable” thresholds of the Land Use/Noise Compatibility Matrix.
- NE 1.1.5 Discourage noise-sensitive land uses in areas in excess of 65 CNEL.
- NE 1.1.6 Protect noise-sensitive land uses from high levels of noise.
- NE 1.1.7 Place noise-tolerant land uses in areas with elevated noise levels if possible.
- NE 1.1.8 New uses within Airport Influence Areas must comply with airport land use noise compatibility criteria contained in the ALUC plan.
- NE 1.1.9 Use acoustic site planning techniques.
- NE 1.1.10 Mixed commercial/residential development shall minimize internal noise impacts.

Programs

- NE 1.1.1.1 Amend the Municipal Code to require that development comply with the Land Use/Noise Compatibility Matrix and other requirements of the General Plan.
- NE 1.1.1.2 Maintain a Noise Guide containing “Good Neighbor” guidelines and rules for neighborhood noise reduction and procedures for mitigating noise.
- NE 1.1.1.3 Assist homeowners living in high noise areas to reduce noise levels in their homes.

Goal

- NE 2.1 Minimize excessive noise levels and health risks due to mobile noise sources.

Policies

- NE 2.1.1 Design and construct new roads to minimize noise impacts on adjacent land uses.
- NE 2.1.2 Restrict truck deliveries to the least-sensitive times of the day.
- NE 2.1.3 Restrict use of off-road vehicles to allowed areas to minimize noise impacts.
- NE 2.1.4 Carefully plan land uses to minimize rail-related noise impacts.
- NE 2.1.5 Encourage rail service providers to install noise mitigation features when possible.
- NE 2.1.6 Check project location within roadway, railroad, and airport noise contours.
- NE 2.1.7 Comply with applicable noise mitigation policies contained in the Airport Land Use Compatibility (ALUC) Plans for Flabob Airport, Riverside Municipal Airport, and the LA/Ontario International Airport.
- NE 2.1.8 Require noise mitigation for new development in prioritized order.
- NE 2.1.9 Limit installation of noise mitigation walls (sound walls) where possible.

Programs

- NE 2.1.1.1 Prepare truck route map to direct trucks away from sensitive noise receptors.
- NE 2.1.1.2 Implement strategies to reduce significant noise impacts in the community.

Goal

- NE 3.1 Minimize excessive noise levels and health risks due to stationary noise sources.

Policies

- NE 3.1.1 Require a noise analysis for projects near sensitive receptors.
- NE 3.1.2 Design truck loading areas to minimize noise impacts on nearby residential areas.
- NE 3.1.3 Stationary noise sources to install noise buffering or reduction mechanisms.
- NE 3.1.4 Require all construction equipment use mufflers and engine shrouds.
- NE 3.1.5 Limit commercial construction activities near residential uses.
- NE 3.1.6 Restrict truck idling near noise sensitive receptors.
- NE 3.1.7 Design automobile-oriented uses to minimize potential noise on adjacent land uses.
- NE 3.1.8 Minimize excessive noise from entertainment and restaurant/bar establishments.
- NE 3.1.9 Support efforts to curb noise from parties, barking dogs, and illegal firework use.

Program

- NE 3.1.1.1 Ensure required noise mitigation measures are built and in place.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs would help reduce vehicular noise levels in the City as future land uses build out, however, due to the level of growth and location of major roadways, there will be significant impacts and no additional feasible mitigation is available to reduce these impacts.

Implementation of the 2017 General Plan goals, policies, and programs would reduce the effect of rail noise on sensitive land uses and include mechanisms to ensure appropriate review and placement of noise reduction requirements into new development. As a result, impacts of railroad noise will be reduced to less than significant levels.

Implementation of the 2017 General Plan goals, policies, and programs would reduce the impacts of stationary noise sources on sensitive land uses, and include mechanisms to ensure appropriate review and placement of noise reduction requirements on new development. As a result, impacts from stationary noise sources will be reduced to less than significant levels.

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. Implementation of the goals, policies, and programs of the 2017 General Plan would help reduce overall noise levels and impacts in the City, but some areas with identified traffic congestion will result in significant noise impacts over the long-term, and no additional feasible mitigation is available.

4.12.5.2 Airport Noise Impacts

| | |
|-----------|---|
| Threshold | For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, results in exposure of people residing or working in the project area to excessive noise levels. For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels. |
|-----------|---|

Programmatic Impacts. The noise contours of two public airports affect the City of Jurupa Valley. The Flabob Airport is located in the eastern portion of the City and its noise contours overlap both developed uses and vacant land within the City. To minimize land use conflicts with adjacent uses, much of the remaining undeveloped area adjacent to the airport is designated as Estate Density Residential, with most of the developed land designated and used for Medium-Density Residential. The Riverside Municipal Airport (RMA) is south of the eastern portion of the City across the Santa Ana River. Portions of the City are within RMA's Airport Land Use Compatibility (ALUC) Plan Zone E and also within its 65 dBA CNEL noise contour. If future residential land uses were to be located where airport activities exceeded the applicable residential noise standards, which is within 65 dBA CNEL noise contour of either airport, the General Plan might contribute to significant noise impacts in the future.

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and programs of the Noise and Land Use Elements of the 2017 General Plan address airport-related noise impacts (for full text of measures see Section 4.12.2.4):

Noise Element

Goal

- NE 1.1 Ensure adjacent land uses are compatible and protect sensitive receptors from outside sources of noise and vibration.

Policies

- NE 1.1.8 **Airport Noise Compatibility.** Ensure that new land use development within Airport Influence Areas complies with airport land use noise compatibility criteria contained in the applicable Airport Land Use Compatibility (ALUC) plan for the area.
- NE 1.1.7 **Noise-Tolerant Uses.** Guide new or relocated noise-tolerant land uses into areas irrevocably committed to land uses that are noise producing, such as along major transportation corridors or within the projected noise contours of area airports.

Goal

- NE 2.1 Minimize excessive noise levels and community health risks due to mobile noise sources.

Policies

- NE 2.1.6 **Noise Contours.** Check all proposed development projects for possible location within roadway, railroad, and airport noise contours.
- NE 2.1.7 **Airport Compatibility.** Comply with applicable noise mitigation policies contained in the Airport Land Use Compatibility (ALUC) Plans for Flabob Airport, Riverside Municipal Airport, and the LA/Ontario International Airport.

Land Use Element

Policies

- LUE 5.53 **ALUP Compliance.** To provide for the orderly operation and development of Flabob and Riverside Municipal Airports and the surrounding area, the City will comply with the Airport Land Use Compatibility Plan as fully set forth in Appendix 4.0 and as summarized in Table-34, as well as any applicable policies related to airports in the Land Use, Circulation, Safety and Noise Elements of the 2017 General Plan, unless the City Council overrides the Plan as provided for in State law.
- LUE 5.54 **Development Review.** Until such time as 1) the Commission finds the City's General Plan to be consistent with the ALUP, or 2) the City Council has overruled the Commission's determination of inconsistency, or 3) the Commission elects not to review a particular action, the City will refer all *major land use actions* to the Airport Land Use Commission for review, pursuant to Policy 1.5.3 of the ALUP.
- LUE 5.55 **Continued Airport Operation.** Support the continued operation of Flabob and Riverside Municipal Airports to help meet airport services needs within the land-use compatibility criteria with respect to potential noise and safety impacts.
- LUE 5.56 **Consistency Requirement.** Review all proposed projects and require consistency with any applicable provisions of the Riverside County Airport Land Use Plan as set forth in Appendix A-4.0, and require General Plan and/or Zoning Ordinance amendments to achieve compliance, as appropriate.
- LUE 5.57 **ALUP Amendments.** Review all subsequent amendments to any airport land-use compatibility plan and either adopt the plan as amended or overrule the Airport Land Use Commission as provided by law (Government Code Section 65302.3).
- LUE 5.58 **General Plan Adoption or Amendment.** Prior to the adoption or amendment of this General Plan or any specific plan, or the adoption or amendment of a zoning ordinance or building regulation within the planning boundary of any airport land use

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

compatibility plan, the City will refer such proposed actions for determination and processing as provided by the Airport Land Use Law.

LUE 5.59 **Cluster Development.** Allow the use of development clustering and/or density transfers to meet airport compatibility requirements as set forth in the applicable airport land-use compatibility plan.

LUE 5.62 **Voluntary Review.** The City, from time to time, may elect to submit proposed actions or projects voluntarily that are not otherwise required to be submitted to the ALUC under the Airport Land Use Law in the following circumstances:

- a. Clarification: If there is a question as to the purpose, intent or interpretation of an airport land use compatibility plan (CLUP) or its provisions; or
- b. Advisory: If assistance is needed concerning a proposed action or project relating to Airport Land Use matters.

LUE 5.63 **Airport Referrals.** All development proposals located within an Airport Influence Area will be submitted to the affected airport.

LUE 9.1 **Land Use Compatibility.** Require land to be developed and used in accordance with the General Plan, specific plans and community and village plans to ensure compatibility and minimize impacts.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals and policies of the 2017 General Plan will help protect City residents from future noise impacts related to airport activities. Impacts on this regard will be less than significant.

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. Implementation of the goals and policies of the 2017 General Plan will prevent existing and future land uses from experiencing significant noise impacts from airport operations, and no mitigation is required.

4.12.5.3 Groundborne Vibration Impacts

| | |
|-----------|--|
| Threshold | Would the project result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels? |
|-----------|--|

Programmatic Impacts. Future development under the General Plan could generate substantial noise and vibration near construction sites, and if sensitive receptors or land uses are adjacent to these sites, there could be significant impacts from noise or vibration. Construction activities can produce vibration that may be felt by adjacent land uses. As long as construction of a particular development did not require the use of equipment, such as pile drivers, known to generate substantial construction vibration levels, the primary source of vibration during construction would likely be from bulldozer operation. A small bulldozer has a vibration impact of 0.003 inches per second peak particle velocity (PPV) at 25 feet and 0.035 inches per second PPV is considered barely perceptible. It is possible that future development could result in significant vibration impacts if large construction projects are located adjacent to residential or other sensitive uses.

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and programs of the Noise Element of the 2017 General Plan addresses vibration-related noise impacts (for full text of measures see Section 4.12.2.4):

4.12.5.4 Short-Term Construction Noise Impacts

| | |
|-----------|---|
| Threshold | Would the project result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project? |
|-----------|---|

Short-term noise would occur during the construction of future development projects under the proposed 2017 General Plan. First, construction crew commuting and the transport of construction equipment and materials to a project site in the future would incrementally increase noise levels on access roads in the particular project area. In addition, noise would be generated during excavation, grading, and building construction on various portions of a specific development site.

Each step of the construction process has its own mix of equipment, and consequently, its own noise characteristics. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. The site preparation phase, which includes excavation and grading of a site, tends to generate the highest noise levels, because the noisiest construction equipment is earthmoving equipment, which includes excavating machinery such as backfillers, bulldozers, draglines, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at lower power settings.

Figure 4.12.8 presents general construction noise levels measured at 50 feet, which are based on EPA data from typical equipment. The peak noise level for the majority of the equipment that will be used during construction of typical development projects will range from 68-105 dBA. Noise levels would diminish rapidly with distance from a particular construction site at a rate of 6 dBA per doubling of distance. For example, a noise level of 86 dBA measured 50 feet from the source would reduce to 80 dBA at 100 feet. At 200 feet from the source, the noise level would reduce to 74 dBA, and then reduce to 68 dBA at 400 feet. Typical construction noise measurements for urban type development projects demonstrate that the noise levels generated by commonly used grading equipment (e.g., loaders, graders, and trucks) generate noise levels that typically do not exceed the middle of the range shown in Figure 4.12.8.

It should be noted the City has an exemption for noise levels created during construction, but limits times of construction activity. Future development projects will be required to provide site specific noise impacts studies when residential land uses are adjacent to demonstrate there will be no project specific significant noise impacts.

Evaluation of General Plan Goals and Policies. While all of the following goals, policies, and programs of the Noise Element of the 2017 General Plan are intended to help reduce noise impacts to City residents and sensitive receptors, the following summarized goals, policies, and programs are examples of the degree to which the General Plan goes in that effort (for full text of measures see Section 4.12.2.4):

Noise Element

Goal

- NE 1.1 Ensure adjacent land uses are compatible and protect sensitive receptors from outside sources of noise and vibration.

Policies

- NE 1.1.2 Allow new noise-sensitive land uses near existing stationary noise sources only when the project can be designed to prevent significant noise impacts.
- NE 1.1.3 Stationary source projects must mitigate impacts on noise-sensitive uses.

- NE 1.1.4 Require acoustical studies for projects that exceed the “Normally Acceptable” thresholds of the Land Use/Noise Compatibility Matrix.
- NE 1.1.9 Use acoustic site planning techniques.
- NE 1.1.10 Mixed commercial/residential development shall minimize internal noise impacts.

Programs

- NE 1.1.1.1 Amend the Municipal Code to require that development comply with the Land Use/Noise Compatibility Matrix and other requirements of the General Plan.
- NE 1.1.1.2 Maintain a Noise Guide containing “Good Neighbor” guidelines and rules for neighborhood noise reduction and procedures for mitigating noise.
- NE 1.1.1.3 Assist homeowners living in high noise areas to reduce noise levels in their homes.

Goal

- NE 2.1 Minimize excessive noise levels and health risks due to mobile noise sources.

*Jurupa Valley 2017 General Plan
Environmental Impact Report*

Figure 4.12.8

Typical Construction Equipment Noise Levels

THIS PAGE INTENTIONALLY LEFT BLANK

Policies

- NE 2.1.2 Restrict truck deliveries to the least-sensitive times of the day.
- NE 2.1.3 Restrict use of off-road vehicles to allowed areas to minimize noise impacts.
- NE 2.1.8 Require noise mitigation for new development in prioritized order.
- NE 2.1.9 Limit installation of noise mitigation walls (sound walls) where possible.

Programs

- NE 2.1.1.2 Implement strategies to reduce significant noise impacts in the community.

Goal

- NE 3.1 Minimize excessive noise levels and health risks due to stationary noise sources.

Policies

- NE 3.1.1 Require a noise analysis for projects near sensitive receptors.
- NE 3.1.2 Design truck loading areas to minimize noise impacts on nearby residential areas.
- NE 3.1.3 Stationary noise sources to install noise buffering or reduction mechanisms.
- NE 3.1.4 Require all construction equipment use mufflers and engine shrouds.
- NE 3.1.5 Limit commercial construction activities near residential uses.
- NE 3.1.6 Restrict truck idling near noise sensitive receptors.

Program

- NE 3.1.1.1 Ensure required noise mitigation measures are built and in place.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will help prevent significant noise impacts from construction on adjacent sensitive uses.

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. Implementation of the goals, policies, and programs of the 2017 General Plan will effectively reduce potential noise impacts during future construction, therefore noise impacts will be less than significant and no mitigation is required.

4.12.7 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a plan summary of long-term development impacts. In this case, the growth projections of the 2017 General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or five percent per year for approximately 19 years (2016 to 2035). Future growth

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

The cumulative “universe” for noise impacts is the City of Jurupa Valley and adjacent surrounding communities. As growth occurs, vehicular traffic (passenger cars, various sizes of trucks) will incrementally increase depending on the size, type, and location of future development. Major roadways are expected to experience considerable traffic increases, which will substantially increase noise levels adjacent to these roadways. It should be noted that a significant percentage of the expected traffic increases on local roads and freeways will come from regional sources (i.e., land uses in other jurisdictions). Section 4.12.5.1 determined there would be significant noise impacts in the City from future traffic along selected roadways, therefore, the 2017 General Plan will make an incremental but significant contribution to cumulatively considerable regional noise impacts in the future.

It is also possible that future residents will experience noise impacts from increased rail and airport activities in the future, as well as stationary noise impacts from new commercial and industrial development, but these are not expected to be significant on a local level, so any contributions of noise by local land uses under the 2017 General Plan would not represent a significant contribution to a cumulatively considerable regional noise impacts related to airport or railroad sources.

4.13 POPULATION, HOUSING, AND EMPLOYMENT

This section identifies population and housing conditions within the City of Jurupa Valley and addresses potential impacts that may result from future development under the 2017 General Plan. The analysis is based in part on population and housing projections identified by the California Department of Finance (DOF), Southern California Association of Governments (SCAG), as well as information contained in the City's 2017 General Plan. The analysis contained in this section is based in part on the Riverside County Transportation and Land Management Agency (RCTLMA) Jurupa Valley 2013 Progress Report. The analysis contained in this section is based on the following reference documents:

- *Land Use Element, City of Jurupa Valley General Plan*, (draft) December 2016;
- *Housing Element, City of Jurupa Valley General Plan*, (draft) December 2016;
- *Municipal Code*, City of Jurupa Valley, codified through August 2016;
- *Final Sustainable Communities Strategies Plan*, Southern California Association of Governments (SCAG), April 2012;
- *Final Regional Comprehensive Plan*, SCAG, adopted May 2012;
- *Regional Transportation Plan 2012-2035 Sustainable Communities Strategy*, SCAG, adopted April 4, 2012.
- *Draft SCAG Data/Map Book for the Development of the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)*, SCAG. November 2013; and
- *Riverside County Transportation and Land Management Agency (RCTLMA) Jurupa Valley 2013 Progress Report*. County of Riverside.

4.13.1 Existing Setting

4.13.1.1 Population

The U.S. Census as reported by the DOF estimates the City's 2014 population at 97,774 persons.¹ SCAG projections estimate the population of the City, Riverside County, and Southern California (SCAG) regions will continue to grow. The SCAG projects the City's population will grow to 103,700 persons by the year 2020 and 126,000 persons by the year 2035 (Table 4.13.A).

4.13.1.2 Housing

The number of housing units in the City has increased and is reflected in the City's growing population (Table 4.13.A). Currently, the DOF identifies that approximately 76.7 percent of the existing housing units in the City are single-family detached units. Multiple-unit dwellings comprise approximately 13.3 percent of the City's current housing stock. Mobile homes comprise approximately 7.4 percent and 6.3 percent of the housing units in the City of Jurupa Valley remain unoccupied.

Note: Sources 1 and 2 provided total housing units which is considered equivalent to households.

4.13.1.3 Jobs/Housing Ratio

The ratio of jobs to housing units in the City is used by regional planning groups to try to balance regional home-to-work motor vehicle trips to minimize freeway congestion, air pollutant emissions, and greenhouse gas emissions. The jobs-to-housing ratio measures the extent to which job opportunities in a given geographic area are sufficient to meet the employment needs of area residents. This ratio identifies the number of jobs available in a given region compared to the number of housing units in the same region. For example, a region with a jobs-to-housing factor of 1.5 would indicate that 1.5 jobs exist for every housing unit within that region. The standard used for comparison is the jobs-to-housing ratio of the SCAG region, which is currently 1.14 jobs for every household. This standard is used because most residents of the region are employed somewhere in the SCAG region. A City or sub-region with a jobs-to-housing ratio lower than the overall standard of 1.14 jobs for every household would be considered a “jobs poor” area, indicating that many of the residents must commute to places of employment outside the sub-area. Table 4.13.B shows the current and potential jobs/housing ratios for the City, Riverside County, and SCAG and the target ratios for the 2035 planning horizon.

Table 4.13.B: Existing and Future Jobs/Housing Ratios

| | 2011 Jobs/Housing Ratio | 2035 Jobs/Housing Ratio |
|------------------------------------|-------------------------|-------------------------|
| City of Jurupa Valley ¹ | 0.87 | 1.5 |
| Riverside County ² | 0.72 | 1.05 |
| SCAG ³ | 1.14 | 1.29 |

Sources: SCAG 2013.

1. Jurupa Valley Progress Report 2013, RCTLA, <http://rctlma.org/Departments/Administrative-Services/Riverside-County-Center-for-Demographic-Research/Progress-Reports/Current-Progress-Report>, accessed August 11, 2015.
2. Riverside County Progress Report 2013, RCTLA, <http://rctlma.org/Departments/Administrative-Services/Riverside-County-Center-for-Demographic-Research/Progress-Reports/Current-Progress-Report>, accessed August 11, 2015.
3. *Report P-1: State and County Population Projections by County, by Race/Ethnicity, and by Major Age Groups, 2010-2060 (by decade)*, <http://www.dof.ca.gov/research/demographic/reports/projections/P-1/>, accessed August 11, 2015.

These jobs/housing ratios indicate that both the City of Jurupa Valley and Riverside County are currently considered to be “housing rich” or “job poor” because their jobs-to-housing ratios are below the Southern California regional average values as identified by SCAG. A low jobs/housing ratio results in longer distances that City residents must drive to and from work. The target jobs/housing ratio for the City of Jurupa Valley indicates “jobs rich” and “housing poor” because the jobs-to-housing ratio is above the Southern California regional value for the year 2035, however, Riverside County as a whole remains “jobs poor” because the ratio continues to be below SCAG’s regional target.

According to the Air Quality Element...

“Part of the solution to the region’s air quality problems is to reduce commuting by locating jobs and housing closer together. According to SCAG, 11.2% of Jurupa Valley workers are employed within the City. The remaining 88.8% of workers commute to other places including the cities of Riverside (13.2%), Ontario (6.8%), San Bernardino (4.3%) and Corona (4.1%) (SCAG, Jurupa Valley Profile, 2015). In an ideal situation, the appropriate number of housing units in various income categories would be available to house the City’s workforce. While this does not ensure that residents will live and work within Jurupa Valley, the likelihood of it occurring does increase.”

4.13.1.4 NOP/Scoping Comments

During the public scoping meeting, there were no comments made about the 2017 General Plan’s growth inducing effects on population or housing. No agency letters or comments were made during the NOP period.

4.13.2 Regulatory Framework

4.13.2.1 Federal Regulations

The Federal Community Development Block Grant (CDBG) monies are part of Federal housing assistance programs at the local level. Housing and Urban Development (HUD) and CDGB monies are a function of the potential change in the jobs and housing mix (<http://www.hud.gov/offices/cpd/about/conplan/>). The HUD’s Office of Community and Planning Development’s (CPD’s) Consolidated Plan is designed to help states and local jurisdictions to assess their affordable housing and community development needs and market conditions, and to make data-driven, place-based investment decisions.

CPD Maps is an online data mapping tool for place-based planning. Grantees and the public can use CPD Maps to analyze and compare housing and economic conditions across their jurisdictions. The CPD Maps tool is publicly available, giving all community stakeholders access to the same data. The Consolidated Plan template allows grantees to insert maps and data tables from CPD Maps with ease, throughout their plans.

4.13.2.2 State Regulations

State law requires the preparation of a Housing Element as part of a jurisdiction’s General Plan (Government Code §65302(c)). It is the primary planning guide for local jurisdictions to identify and prioritize the housing needs and to determine ways to meet these needs best while balancing community objectives and resources. The 2017 Housing Element consists of five chapters, including: 1) Introduction, 2) Needs Assessment, 3) Resources and Opportunities, 4) Constraints, 5) Housing Action Plan, and the Appendices. The evaluation of the previous Housing Element is found in Appendix A, while Appendix B contains background details regarding the city’s inventory of sites for housing development.

The California State Housing Law, and Guidelines adopted by the Department of Housing and Community Development (HCD), were used in the preparation of the Element (Government Code Section 65585). Periodic review of the Element is required to evaluate (1) the appropriateness of its goals, objectives, and policies in contributing to the attainment of the state housing goals, (2) its

effectiveness in attaining the City's housing goals and objectives and (3) the progress of its implementation (Government Code Section 65588).

The preparation of the Housing Element is regulated by Title 7, Chapter 3, Article 10.6, Sections 65580 through 65589.8 of the California Government Code. The law governing the contents of Housing Elements is among the most detailed of all elements of the General Plan. According to Section 65583 of the Government Code, "The Housing Element shall consist of an identification and analysis of existing and projected housing needs and a statement of goals, policies, quantified objectives, and scheduled programs for the preservation, improvement, and development of housing and shall make adequate provision for the existing and projected needs of all economic segments of the community."

4.13.2.3 Regional Housing Needs Assessment

The Regional Housing Needs Assessment (RHNA) is mandated by State Housing Law as part of the periodic process of updating local housing elements of the General Plan. The RHNA quantifies the need for housing within each jurisdiction during specified planning periods. The most recently completed RHNA planning period is January 1, 2006, to June 30, 2014. Due to the requirements of SB 375, the current RHNA planning cycle runs from October 1, 2013, to September 30, 2021.

4.13.2.3 Local Regulations

The specific policies outlined in the City's General Plan Land Use Element, Housing Element, Environmental Justice Element, and Air Quality Element related to population and housing include:

Land Use Element

LUE 2 Residential

Policies

- LUE 2.1 **Residential Development.** Accommodate the development of single-family and multifamily residential units in areas appropriately designated by the General Plan, specific plans, Equestrian Lifestyle Protection Overlay, and community and village plans land use maps.
- LUE 2.2 **Higher Density Residential.** Accommodate higher density residential development near major transportation corridors, concentrated employment areas and community and village centers, and to promote the development of high quality apartments and condominiums that will encourage local investment and pride of ownership.
- LUE 2.4 **Housing Variety.** Accommodate the development of a variety of housing types, styles and densities that are accessible to and meet the needs of a range of lifestyles, physical abilities, and income levels.

Programs

- LUE 2.1.1 **Regional Housing Needs.** Within one year of adoption of the 2017 General Plan, the City will amend the Zoning Ordinance density standards for the R-6 to allow a base density up to 25 dwelling units per acre, and amend the Zoning Map to show the locations of about 34 acres of additional R-6 zoning to help meet Regional Housing Needs (RHNA).
- LUE 8.3 **Community Character.** Accommodate a range of community types and character, from semi-rural equestrian properties, agricultural and rural enclaves to traditional village and suburban communities with a small-town "feel."
- LUE 8.4 **Multimodal Orientation.** Provide for a broad range of land uses, intensities, and densities, including a range of residential, commercial, business, industry, open space, recreation, and public facilities uses and locate them to capitalize on

- multimodal transportation opportunities and to promote compatible land use patterns that reduce reliance on the automobile.
- LUE 8.5 **Residential Growth Areas.** Locate residential growth in areas near major transportation or where well served by rail or public transit and within easy walking or biking distance from schools, parks and neighborhood-serving uses, to the greatest extent possible.
- LUE 8.6 **Retail and Office Growth Areas.** Locate retail commercial and professional office growth near or within existing and planned village centers and commercial nodes to the greatest extent possible.
- LUE 8.7 **Industrial, Warehousing and Service-Commercial Growth Areas.** Limit industrial, warehousing and service-commercial uses to the *Mira Loma Warehouse and Distribution Center Area, Figure LUE-12*, and to other areas readily accessible from major highways or rail traffic, and sufficiently separated and buffered to protect residential uses.
- LUE 11 **Community Design and Aesthetics**
- LUE 11.1 Encourage communities that provide a balanced mix of land uses, including open space, employment, recreation, shopping, and housing.
- LUE 11.2 Assist in and promote the development of infill and underutilized parcels, which are located in Opportunity and specific plan areas, as identified on the General Plan Land Use Map.

Housing Element¹

Goals

- HE 1 Encourage and where possible, assist in the development of quality housing to meet the City's share of the region's housing needs for all income levels and for special needs populations.
- HE 2 Conserve and improve the housing stock, particularly housing affordable to lower income, and special housing needs households.
- HE 3 Promote equal housing opportunities for all persons.
- HE 4 Maintain and enhance residential neighborhoods and remove blight.
- HE 5 Reduce residential energy and water use.
- HE 6 Accommodate and facilitate the development of new market rate housing of varying densities to diversify the City's housing stock.

Policies

- HE 1.1 **Regional Housing Needs Allocation.** Changes to the General Plan and Zoning Ordinance and Map shall provide and/or maintain sufficient land at appropriate densities to meet the City's Regional Housing Needs Allocation for the 2014-2021 Planning Period.
- HE 1.2 **Affordable Housing.** To encourage affordable residential development on sites zoned to allow multi-family residential uses and identified in the vacant land inventory, City will adopt development incentives and standards to encourage lot consolidation and to allow residential development at a density of up to 25 dwelling units per Acre (du/A) in the HHDR residential designation, where appropriate.

¹ Only goals and policies are shown to minimize unrelated detailed information on specific housing programs.

- HE 1.3 **Preservation of Affordable Housing.** All residential development projects that receive City financial incentives shall be required to remain affordable, in compliance with the specific requirements of the program in which they participate.
- HE 1.4 **Availability of Suitable Sites.** Ensure the availability of suitable sites for the development of affordable housing to meet the needs of all household income levels, including special needs populations.
- HE 1.5 **Housing for Mentally Disabled.** Encourage the development of additional housing for the mentally disabled.
- HE 1.6 **Housing for Homeless Persons.** In cooperation with other cities and/or the County of Riverside, assist in the development of emergency, transitional, and permanent supportive housing for homeless persons and families.
- HE 1.7 **Self-Help Housing.** City will promote Self-Help Housing programs (e.g., Habitat for Humanity), and as budget allows, provide financial assistance.
- HE 1.8 **Innovative Housing.** Encourage innovative housing, site plan design and construction techniques to promote new affordable housing, improve energy efficiency, and reduce housing costs.
- HE 2.1 **Retain Housing.** Where feasible and appropriate, older, sound housing should be retained, rehabilitated and maintained as a significant part of the City's affordable housing stock, rather than demolishing it. Demolition of non-historic housing may be permitted where conservation of existing housing would preclude the achievement of other housing objectives or adopted City goals.
- HE 2.2 **Removal of Affordable Housing.** Discourage the removal or replacement of sound housing which is affordable to extremely low, very-low, low- and moderate income households, and avoid discretionary approvals or other municipal actions that remove or adversely impact such housing unless: 1) it can be demonstrated that rehabilitation of lower-cost units at risk of replacement is financially or physically infeasible, or 2) an equivalent number of new units comparable or better in affordability and amenities to those being replaced is provided, or 3) the project will remove substandard, blighted or unsafe housing.
- HE 2.3 **Public Housing.** Encourage the Riverside County Housing Authority to pursue federal and state funds to modernize public housing affordable to very low and low-income households.
- HE 2.4 **Tax-Exempt Bonds.** Consider using tax-exempt private activity bonds for the financing of multi-family housing rehabilitation.
- HE 2.5 **Historic Residential Properties.** Consider adopting incentives for the preservation of historic residential structures, such as the Mills Act Program, which provides property tax relief for rehabilitation of historic properties, as well as grants for the identification of historic structures.
- HE 2.6 **Housing Rehabilitation Funding.** Pursue all available federal, state, and local funds to assist housing rehabilitation.
- HE 2.7 **Neighborhood Quality.** The condition and quality of residential neighborhoods is a key measure of a community's housing health. City will consider and promote the safety, appearance, and quality of residential neighborhoods by preserving the fabric, amenities, spacing (i.e., building heights and setbacks) and overall character and quality of life in established neighborhoods.
- HE 2.8 **At-Risk Housing Preservation.** Work with Riverside County Housing Authority and other housing agencies to help preserve the affordability of federal, state, and

- County-subsidized units or other affordable housing resources at risk of conversion to market rate housing, as budget allows.
- HE 3.1 **Fair Housing Program.** Continue to support fair housing laws and organizations that provide fair housing information and enforcement.
- HE 3.2 **Housing Information.** Provide referrals to low-income households and households with special housing needs on how to obtain housing counseling, financing, and other housing information.
- HE 3.3 **Housing Opportunities for Disabled Persons.** Encourage, and as budget allows, help support programs and activities that promote affordable housing opportunities for disabled persons and veterans.
- HE 4.1 **Removal of Blight.** As part of development approvals, City budget and CIP program and other municipal actions, give high priority to removing and reversing the effects of blight, particularly in residential neighborhoods and highly visible locations along major street and highway corridors. Within established neighborhoods, new residential development shall be of a character, scale and quality that preserves the neighborhood character and maintains the quality of life for existing and future residents.
- HE 4.2 **Design Compatibility.** Higher density housing should maintain high quality standards for unit design, privacy, security, on-site amenities, public and private open space. Such standards should be flexible enough to allow innovative and affordable design solutions and shall be designed to enhance prevailing neighborhood architectural and site character.
- HE 4.3 **Neighborhood Integration.** New neighborhoods should be an integral part of an existing neighborhood or should establish pedestrian, bicycle, and where appropriate, equestrian linkages that provide direct, convenient and safe access to adjacent neighborhoods, schools, parks and shopping.
- HE 5.1 **New Construction.** Encourage the development of dwellings with energy-efficient designs, utilizing passive and active solar features and energy-saving features that exceed minimum requirements in State law.
- HE 5.2 **Sustainable Design.** Residential developments should promote sustainability in their design, placement, and use. Sustainability can be promoted through a variety of housing strategies, including the following:
- a) Maximize use of renewable, recycled-content, recycled materials, and minimize use of building materials that require high levels of energy to produce or that cause significant, adverse environmental impacts.
 - b) Incorporate renewable energy features into new homes, including passive solar design, solar hot water, solar power, and natural ventilation and cooling.
 - c) Minimize thermal island effects through reduction of heat-absorbing pavement and increased tree shading.
 - d) Avoid building materials that may contribute to health problems through the release of gasses or glass fibers into indoor air.
 - e) Design dwellings for quiet, indoors and out, including appropriate noise mitigation for residential uses near noise sources such as highways, major streets, railroad tracks and industrial uses.
 - f) Design dwellings to be economical to live in due to reduced energy or resource use, ease of maintenance, floor area, or durability of materials.

- g) Help inform residents, staff, and builders of the advantages and methods of sustainable design, and thereby develop consumer demand for sustainable housing.
- h) Consider adopting a sustainable development rating system, such as the LEED® or Green Globes program.

HE 5.3 **Site and Neighborhood Design.** Residential site, subdivision, and neighborhood designs should consider sustainability. Some ways to do this include:

- a) Design subdivisions to maximize solar access for each dwelling and site.
- b) Design sites so residents have usable outdoor space with access to both sun and shade.
- c) Streets and access ways should minimize pavement devoted to vehicular use.
- d) Use multi-purpose neighborhood “pocket parks”/retention basins to purify street runoff prior to its entering creeks. Retention basins shall be designed to be visually attractive as well as functional. Fenced-off retention basins should be avoided.
- e) Encourage cluster developments with dwellings grouped around significantly sized, shared open space in return for City approval of smaller individual lots.
- f) Treat public streets as landscaped parkways, using continuous plantings at least six feet wide and where feasible, median planters to enhance, define, and to buffer residential neighborhoods of all densities from the effects of vehicle traffic.

Environmental Justice Element

EJ 3 Mobility and Active Living

Goal

EJ 4 Increased mobility and accessibility for all residents.

Policies

EJ 3.1.1 **Location of Housing.** Locate medium and high-density housing near jobs, transit, shopping, schools, and other needed facilities.

Air Quality Element

AQ 6 Jobs and Housing

Policies

AQ 6.1.1 **Small Business Assistance.** Assist small businesses by supporting organizations that develop education and job training programs.

AQ 6.1.2 **Educational Programs.** Collaborate with local colleges and universities to develop appropriate educational programs to assist residents in obtaining job skills to meet market demands.

AQ 6.1.3 **Business Incentives.** Provide incentives to encourage new firms to locate within the City and existing firms to expand operations.

AQ 6.1.4 **Small Business Loan Programs.** Encourage loan programs to induce small businesses to locate or expand within the City.

AQ 6.1.5 **Small Business Emissions Control.** Offer incentives to businesses to control emissions and implement the Air Quality Management Plan.

- AQ 6.1.6 **Regulation Relief.** Reduce regulations on small businesses wherever possible and thereby encourage small business development and job creation. The City shall set performance standards as well as design standards, thus giving small business owners as many options as possible to comply with City regulations.
- AQ 6.1.7 **Job Creation.** Emphasize job creation and reductions in vehicle miles traveled to improve air quality over other less efficient methods.
- AQ 6.1.8 **Public Facilities/Services.** Time and locate public facilities and services so that they help create new jobs.
- AQ 6.1.9 **Mixed-Use Land Use.** Support new mixed-use land use patterns with employment centers and community centers, which encourage community self-sufficiency and containment, promote efficient modes of travel, and help reduce automobile dependency.
- AQ 6.1.10 **Community Centers/Telecommuting/Home-Based Businesses.** Implement zoning code provisions, which encourage community centers, telecommuting and home-based businesses.
- AQ 6.1.11 **Non-Polluting Transportation.** Encourage and promote the use of non-polluting alternative modes of transportation such as natural gas and electric vehicles and bicycles.
- AQ 6.1.12 **Housing Types.** Provide for a variety of housing types that support a local market for a skilled, professional and management labor pool when approving new residential developments.

4.13.3 Methodology

The EIR will compare population, housing, and employment data and projections for the City to determine if those factors related to the land uses proposed in the 2017 General Plan are consistent with regional plans. This analysis is based on data published by the DOF and SCAG, as well as information presented in the City's 2017 General Plan.

4.13.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. The following thresholds of significance regarding potential impacts related to population and housing are based on the State *CEQA Guidelines*, Appendix G. A project (i.e., the General Plan) would have a significant impact on population and housing if it would:

- Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure);
- Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure) that may lead to fiscal or economic impacts;
- Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere; and/or
- Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

In addition, this section will evaluate the project's consistency with applicable General Plan policies and goals regarding population, housing, and growth.

4.13.5 Programmatic Impact Evaluation

4.13.5.1 Displace Substantial Housing/People

| | |
|-----------|---|
| Threshold | Would the proposed project displace substantial numbers of people or existing housing, necessitating the construction of replacement housing elsewhere? |
|-----------|---|

Programmatic Impacts. The 2017 General Plan is a programmatic document that is intended to lay the regulatory groundwork for future growth of housing and employment in the City. Although it applies to land uses City-wide, it is critical that future development on vacant land be consistent with the City goals, policies, and programs established in the 2017 General Plan. On a City-wide level, it is not known if or to what degree existing land contains housing or residents that may be displaced by future development. In most cases, new development occurs on vacant land, but it is possible that some new development will result in the demolition of older structures, and some of them may be residences, which may result in the displacement of housing or people within the City. However, the Land Use and Housing Elements of the 2017 General Plan contain goals, policies, and programs that discourage such displacement. Due to the wide variety of housing found in the City, displaced residents would have opportunities to find adequate replacement housing within the City, either by purchasing or renting an existing unoccupied residence or by renting or purchasing new housing. In the coming years the City is expected to add from 9,198 to 13,140 new residential units in the City to meet a wide variety of needs within the housing market (e.g., single family homes, condominiums, apartments, etc.).

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and programs of the Housing Element of the 2017 General Plan are related to displacement of housing or population within the City (full text of measures in Section 4.13.2.3):

Housing Element

Goal

- HE 2 Conserve and improve the housing stock, particularly housing affordable to lower income, and special housing needs households.
- HE 3 Promote equal housing opportunities for all persons.
- HE 4 Maintain and enhance residential neighborhoods and remove blight.

Policies

- HE 2.1 Retain older, sound housing where feasible.
- HE 2.2 Discourage the removal or replacement of sound affordable housing.
- HE 2.3 Encourage the County to pursue funds to modernize public housing.
- HE 2.8 Help preserve subsidized units or other affordable housing resources that are at risk of conversion to market rate housing.

Level of Programmatic Impact Before Mitigation. As demonstrated above, implementation of the 2017 General Plan goals and policies would not result in significant displacement of housing or people as development occurs within the City, and no mitigation is required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals and policies programs would not result in significant displacement of housing or people as development occurs within the City, and no mitigation is required.

4.13.5.2 Consistent with General Plan Growth Policies

| | |
|-----------|--|
| Threshold | Would the proposed project be consistent with the policies and goals of the City's General Plan relative to population and housing growth? |
|-----------|--|

Programmatic Impacts. As shown in the previous Section 4.10.5.4, *Conflict with Applicable Land Use Plans, Policies, or Regulations (Regional)*, the project is consistent with regional policies and goals related to housing and population because it will improve the current imbalance of jobs to housing in the City and region. That analysis also demonstrates that the proposed 2017 General Plan is consistent with SCAG's Regional Comprehensive Plan, Compass Plan and Regional Transportation Plan that address regional jobs/housing balance and overall growth. Table 4.13.C also demonstrates that growth under the 2017 General Plan will be very similar to that estimated for the City by SCAG. It should be noted the SCAG figures are based on regional trends and the City projections are based on new housing, population, and employment added to existing figures which were calculated totally independent of SCAG regional projections.

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and programs of the Land Use and Housing Elements of the 2017 General Plan are related to consistency with regional planning to accommodate growth within the City (full text of measures in Section 4.13.2.3):

Land Use Element

Policies

- LUE 2.2 Accommodate higher density residential development near major transportation corridors, concentrated employment areas and community and village centers.
- LUE 2.4 Accommodate a variety of housing types and densities.

Program

- LUE 2.1.1 Modify City ordinances to help meet Regional Housing Needs (RHNA).

Housing Element

Goals

- HE 1 Encourage housing to meet the City's share of the region's housing needs.
- HE 1.1 Modify City ordinances to meet Regional Housing Needs (RHNA).

2017 General Plan – City of Jurupa Valley
Draft Environmental Impact Report

Table 4.13.C: Comparison of Growth Forecasts¹

| | Existing 2012 | Projected 2020 | Projected 2035 |
|-------------------------------|---------------|----------------|----------------|
| Population | | | |
| SCAG Projection for City | 96,996 | 103,714 | 130,537 |
| Projected General Plan Growth | | | |
| Maximum | 96,996 | 113,453 | 152,587 |
| Less Intense (-30%) | 96,996 | 110,810 | 136,464 |
| Difference (compared to LI) | -- | +6.8% | +4.5% |
| Households | | | |
| SCAG Projection for City | 25,001 | 27,117 | 33,298 |
| Projected General Plan Growth | | | |
| Maximum | 25,001 | 30,017 | 39,333 |
| Less Intense (-30%) | 25,001 | 28,512 | 35,033 |
| Difference (compared to LI) | -- | +5.1% | +5.2% |
| Employment | | | |
| SCAG Projection for City | 24,505 | 37,651 | 50,089 |
| Projected General Plan Growth | | | |
| Maximum | 24,505 | 38,987 | 65,881 |
| Less Intense (-30%) | 24,505 | 35,366 | 55,537 |
| Difference (compared to LI) | -- | +6.1% | +10.9% |

Source: SCAG 2013. LI = Less Intense estimate

1. Assumes buildout of all vacant land within the City per DEIR Tables 3.B and 3.C using Less Intense scenario. 2020 figures for City GP projections are pro-rated (8yrs/3 yrs or 0.35) based on maximum buildout in 2035

Programmatic Impact Before Mitigation. Planned growth under the 2017 General Plan is consistent with regional population, housing, and employment projections by SCAG which are used by other regional planning organizations in their planning processes. Therefore the General Plan will have less than significant impacts on local and regional growth policies.

Mitigation Measures. No mitigation required.

Programmatic Impact Before Mitigation. The 2017 General Plan will have less than significant impacts on local and regional growth policies and no mitigation is required.

4.13.5.3 Population Growth

| | |
|-----------|---|
| Threshold | Would the proposed project induce substantial population growth in an area, either directly (e.g., new homes and businesses) or indirectly (e.g., extension of roads and infrastructure) that may lead to fiscal or economic impacts? |
|-----------|---|

Programmatic Impacts. CEQA requires a discussion of ways in which the proposed project could be growth inducing (see also Section 5.0, *Other CEQA Topics*). The *CEQA Guidelines* identify a project as growth inducing if it fosters economic or population growth, or the construction of additional housing either directly or indirectly in the surrounding environment (*CEQA Guidelines* Section 15126.2[d]). New employees from commercial or industrial development and new population from residential development represent direct forms of growth. These direct forms of growth have a secondary effect of expanding the size of local markets and inducing additional economic activity in the area.

Future development projects could indirectly induce growth by reducing or removing barriers to growth, or by creating a condition that attracts additional population or new economic activity. However, a project's potential to induce growth does not automatically result in growth. Growth can only happen through capital investment in new economic opportunities by the private or public sectors. Under CEQA, growth inducement is not considered necessarily detrimental, beneficial, or of little significance to the environment. Typically, the growth-inducing potential of a project would be considered substantial if it fosters growth or a concentration of population in excess of what is assumed in pertinent master plans, land use plans, or in projections made by regional planning agencies (e.g., SCAG). Substantial growth impacts could also occur if a project provides infrastructure or service capacity to accommodate growth beyond the levels currently permitted by local or regional plans and policies. In general, growth induced by a project is considered a significant impact if it directly or indirectly affects the ability of agencies to provide needed public services, or if it can be demonstrated that the potential growth significantly affects the environment in some other way.

A future development project could also indirectly induce growth at the local level by increasing the demand for additional goods and services associated with the increase in project population and thus reducing or removing the barriers to growth. This occurs in suburban or rural areas where population growth results in increased demand for service and commodity markets responding to the new population such as a shopping center or grocery store. This type of growth is, however, a regional phenomenon resulting from introduction of a major employment center or regionally significant housing project. Additional commercial uses may be drawn to the area by the increased number of residents in the area as a result of a project; however, it is expected that any such development would occur consistent with planned growth identified in the 2017 General Plan or applicable specific plans.

As demonstrated in Section 4.13.5.2 above and Table 4.13.C, future development within the City is anticipated to add between 37,622 and 53,745 new residents to the City at buildout, which is a substantial amount of population growth for the area. However, the amount of housing, population, and employment growth anticipated under the 2017 General Plan will be consistent with those developed by SCAG and utilized by other regional planning organizations. At a programmatic level, the General Plan will have less than significant impacts from population growth.

Regarding the second part of the threshold, the City's Economic Sustainability Element contains a variety of goals, policies, and programs for different community and use areas within the City to maintain a healthy local economy. Therefore, at a programmatic level there is no indication that implementation of the proposed General Plan would result in any direct or indirect adverse impact on the physical environment.

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and programs of the Land Use and Housing Elements of the 2017 General Plan are related to consistency with regional planning to accommodate growth within the City (full text of measures in Section 4.13.2.3):

Land Use Element

Policies

- | | |
|---------|---|
| LUE 2.1 | Accommodate single-family and multifamily residential units in appropriate areas. |
| LUE 2.2 | Accommodate higher density residential development near major transportation corridors, concentrated employment areas and community and village centers. |
| LUE 2.4 | Accommodate a variety of housing types and densities. |
| LUE 8.5 | Locate residential growth in areas near major transportation or where well served by rail or public transit and within easy walking or biking distance to community facilities. |

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Housing Element

Goals

- HE 1 Encourage housing to meet the City's share of the region's housing needs.
- HE 1.1 Modify City ordinances to meet Regional Housing Needs (RHNA).

Economic Sustainability Element

Goals

- ES 1 Be a stable municipal government with adequate financial resources.
- ES 2 Achieve a sustainable industrial base with skilled and professional employment.
- ES 3 Promote a diversity of commercial enterprises that meet local needs.
- ES 4 Provide a wide range of visitor-serving uses.
- ES 5 Have a well-trained workforce with diverse opportunities for living wage jobs.
- ES 6 Attract economically sustainable businesses in needed market areas.
- ES 7 Generate sustainable increases in median income and property values.

Programmatic Impact Before Mitigation. Planned growth under the 2017 General Plan is consistent with regional population, housing, and employment projections by SCAG which are used by other regional planning organizations in their planning processes. Therefore the General Plan will have less than significant impacts on local and regional growth policies.

Mitigation Measures. No mitigation required.

Programmatic Impact Before Mitigation. The 2017 General Plan will have less than significant impacts on local and regional growth policies and no mitigation is required.

4.13.6 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a "plan summary" of long-term development impacts. In this case, the growth projections of the 2017 General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to 2017 General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

For context, the cumulative "universe" for population or housing impacts is at one level western Riverside County but on a larger scale would be the entire SCAG region within which future development in the City of Jurupa Valley, as well as the other surrounding jurisdictions, will occur, and future land use changes (e.g. conversion of vacant land to suburban uses) will generate additional housing and population.

By its very nature, the 2017 General Plan establishes overall guiding principles or programmatic direction against which to review new development to assure it does not result in significant impacts to housing or population growth. As long as development occurs as outlined in the 2017 General Plan Land Use Element, consistent with the goals, policies, and programs outlined in the other elements of the 2017 General Plan, these programmatic actions will help reduce population and housing impacts of individual development projects within the City to less than significant levels. The 2017 General Plan is also consistent with regional plans (i.e., the RCP, the RTP, and SCS plans). For these reasons, implementation of the City's 2017 General Plan will not make a significant contribution to cumulatively adverse impacts to population or housing growth.

THIS PAGE INTENTIONALLY LEFT BLANK

4.14 PUBLIC SERVICES

This section addresses potential impacts on public services as a result of General Plan implementation. These include fire and police protection, emergency services, and school and library services. The analysis is based on the following reference documents:

- *Community Safety, Services, and Facilities Element, 2017 General Plan, December 2016.*
- *Land Use Element. 2017 General Plan, (draft), December 2016.*

4.14.1 Existing Setting

Jurupa Valley's community services and facilities are a source of pride for the community and directly affect public health and safety, quality of life, land values, economic and environmental sustainability and fiscal health. Due to the City's recent history as an unincorporated area, community services and facilities are provided by a number of public and private agencies and service districts.

This section of the EIR describes the existing setting for the following major services and facilities in Jurupa Valley: fire and police emergency services, educational facilities, and libraries. Additional services and facilities provided in Jurupa Valley but not specifically addressed in this section include social services, parks and recreation (see Section 4.15, *Recreation*), water, wastewater, storm water and solid waste disposal (see Section 4.17, *Utilities*), and natural gas and electricity are discussed in Section 5.3, *Energy Conservation*.

4.14.1.1 Fire Protection

The Riverside County Fire Department, in cooperation with the California Department of Forestry and Fire Protection (CalFIRE), provides full service municipal and wildland fire protection, emergency medical response and technical rescue services in the City of Jurupa Valley. The Department operates 97 fire stations throughout the County of Riverside with four of those located in Jurupa Valley, as shown in Table 4.14.A.

Table 4.14.A: Jurupa Valley Fire Stations

| Station Number | Name/Location | Address |
|-----------------------|------------------------|------------------------|
| 16 | Pedley Fire Station | 9270 Limonite Avenue |
| 17 | Glen Avon Station | 10400 San Sevaine Way |
| 18 | West Riverside Station | 7545 Mission Boulevard |
| 38 | Rubidoux Station | 5721 Mission Boulevard |

Source: Table CS-2, Jurupa Valley Fire Stations, Community Safety, Services, and Facilities Element, December 2016.

In 2015, the Department responded to a total of 9,161 calls for service with the majority for emergency medical assistance (73%), traffic collisions, (10%) and false alarms (8%). (Riverside County Fire Department 2015 Annual Report).

4.14.1.2 Police Protection

The Riverside County Sheriff's Department provides police services in Jurupa Valley and throughout much of Riverside County. The department is the second largest Sheriff's Office in California and includes ten stations, five correctional facilities and other facilities. Sheriff services are provided to Jurupa Valley through a contract with the City from the Jurupa Valley Sheriff's station located at 7477 Mission Boulevard. The station also serves the cities of Norco and Eastvale and several unincorporated areas of the County. The station is led by a commander who serves as the Police Chief for the area.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

As of 2016, the Jurupa Valley Sheriff's Station responds to approximately 35,000 total calls per year. Calls are broken down by priority level. Priority 1 calls are urgent calls that involve a threat to human life or property and have the potential for serious injury. Priority 2 calls involve circumstances that are urgent but not life threatening. Priority 3 and 4 calls involve non-urgent nor life threatening issues. The Department's 2015 response times for Priority 1 and 2 calls within the service area of the Jurupa Valley Sheriff's Station are shown in Table 4.14.B:

Table 4.14.B: 2015 Police Response Times, Jurupa Valley Sheriff's Station*

| Type of Emergency Call | 2015 Response Times |
|------------------------|---------------------|
| Priority 1 | 7.57 minutes |
| Priority 2 | 21.31 minutes |

Source: Table CS-1, Police Response Times, Community Safety, Services, and Facilities Element, December 2016. Captain Jason Horton, Riverside County Sheriff's Department, February 17, 2016.

The Jurupa Valley Sheriff's Department actively engages in *Community-Oriented Policing*, which brings together law enforcement professionals with the community in a variety of outreach efforts to reduce crime. In addition, the Department assists the City of Jurupa Valley to incorporate *Crime Prevention through Environmental Design, or CPTED*, techniques in new development.

4.14.1.3 Schools

Two school districts provide public educational services in Jurupa Valley, the Jurupa Unified School District (JUSD) and the Corona-Norco Unified School District (CNUSD). The JUSD serves most of Jurupa Valley as well as a small portion of Eastvale west of the I-15 Freeway. The JUSD operates sixteen elementary schools, three middle schools, and three high schools in Jurupa Valley. Total K-12 enrollment as of 2015 was 19,465 students.

The CNUSD serves students living in the southwestern area of Jurupa Valley, as well as students living in the cities of Corona, Norco, and Eastvale, and portions of unincorporated Riverside County. The CNUSD Education Center is located in the City of Norco. The District operates one school in the City of Jurupa Valley, VanderMolen Fundamental Elementary School, located at 6744 Carnelian Street. Older students living in this area attend River Heights Intermediate School and Roosevelt High, both of which are located in Eastvale. Students may also request a transfer to other schools based on available space.

During the City's planning process, community members pointed out that schools should ideally be community centers and serve as focal points where the community comes together for education, recreation, and other activities. They also identified the need to modernize and remodel several additional schools within JUSD and to provide a community college, occupational training institute, or similar facility. There are presently no institutions of higher education in Jurupa Valley. The closest facilities within Riverside County are Norco College, Riverside City College and the University of California, Riverside. The community also expressed a strong desire to build a satellite college campus and/or trade school in Jurupa Valley, and to provide other venues offering adult education.

4.14.1.4 Libraries

The Riverside County Library System provides library services in Jurupa Valley and throughout Riverside County. Overall, the Library System operates 35 libraries and 2 bookmobiles. Library facilities in Jurupa Valley include the Glen Avon Library located at 9244 Galena Street and the Rubidoux Library located at 5840 Mission Blvd. The community stressed the importance of Jurupa Valley's libraries and their desire to provide additional libraries in underserved areas of the City such as the western quadrant of the City. They also expressed a desire to develop libraries as focal points of the community with good access to pedestrian and bicycle routes, and to public transit.

NOP/Scoping Comments. During the public scoping meeting no public comments were made about the potential significant impacts on existing and future public services such as police and fire protection, schools and libraries, and parks. No comment letters from agencies were received during the NOP period regarding public services.

4.14.2 Regulatory Framework

4.14.2.1 Federal Regulations

The National Fire Protection Association (NFPA), Fire Code section 1710 recommends that a first-responder unit arrive at the fire scene in 6 minutes or less at least 90 percent of the time, measured from the 911 call. NFPA recommends that full response to a structural fire occur within 10 minutes of the 911 call at least 90 percent of the time. NFPA also recommends a 6-minute response time for basic life support and 10 minute response for advanced life support at least 90 percent of the time.

4.14.2.2 State Regulations

Assembly Bill 2926. To assist in providing school facilities to serve students generated by new development projects, the state passed Assembly Bill (AB) 2926 in 1986. This bill allows school districts to collect impact fees from developers of new residential and commercial/industrial building space. Development impact fees are also referenced in the 1987 Leroy Greene Lease-Purchase Act, which requires school districts to contribute a matching share of costs for construction, modernization, and reconstruction projects.

Senate Bill (SB) 50. This bill, passed in 1998, provides a comprehensive school facilities financing and reform program, and enables a statewide bond issue to be placed on the ballot. The provisions of SB 50 allow the state to offer funding to school districts to acquire school sites, construct new school facilities, and modernize existing school facilities. SB 50 also establishes a process for determining the amount of fees developers may be charged to mitigate the impact of development on school facilities resulting from increased enrollment. Under this legislation, a school district could charge fees above the statutory cap only under specified conditions, and then only up to the amount of funds that the district would be eligible to receive from the state. According to Section 65996 of the California Government Code, development fees authorized by SB 50 are deemed to be “full and complete school facilities mitigation.” SB 50 establishes three levels of developer fees that may be imposed upon new development by the governing board of a school district, depending on certain conditions within a district.

4.14.2.3 Local Regulations

The Community Safety, Services, and Facilities Element and the Land Use Element of the 2017 General Plan contain the following goals, policies, and programs relative to public services:

Community Safety, Services, and Facilities Element

CS 2 Community Services and Facilities

Goal

CS 2 Provide a high level of community services and facilities to serve the existing and future needs of Jurupa Valley.

Policies

CS 2.1.1 **Provide Facilities and Services.** Work with community service agencies and districts on the planning and provision of adequate community facilities and services.

CS 2.1.2 **Concurrency with Development.** Ensure the provision of sufficient public facilities and services prior to, or concurrently with, new development.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- CS 2.1.3 **Facility Design.** Work with service agencies to ensure new public facilities are well designed, energy efficient and compatible with adjacent land uses.
- CS 2.1.4 **Fair Share.** Ensure that new development pays its fair share of public facility and service costs.
- CS 2.1.5 **Joint Use.** Promote the joint use of public facilities to meet multiple needs of the community.

Police Services

Policies

- CS 2.1.7 **Community Safety.** Coordinate with the Riverside Sheriff's Department on an on-going basis to ensure the continued safety of the City.
- CS 2.1.8 **Criminal Activity.** Support efforts to develop innovative methods to reduce criminal activity and increase safety in the community.
- CS 2.1.9 **Graffiti.** Support efforts of the Sheriff's Department, JCSD, and the Riverside County Economic Development Agency to identify and remove graffiti and prosecute graffiti vandals.
- CS 2.1.10 **Homelessness.** Support efforts to reduce the homeless population and provide outreach services to the homeless.
- CS 2.11.1 **Residential Noise Complaints.** Discourage loud parties with amplified music in residential neighborhoods and support the Sheriff Department's efforts to do the same.
- CS 2.1.12 **CPTED.** Incorporate CPTED principles in the design of new development to encourage natural surveillance and reduce crime.

Programs

- CS 2.1.1.2 **CPTED Guidelines.** Incorporate CPTED design guidelines into the City's development review standards and procedures.
- CS 2.1.1.3 **Planning Applications.** Route new Planning applications to the Sheriff's Department to increase public safety and maintain close coordination with the Sheriff's Department and law enforcement programs.

Fire and Emergency Medical Services

Policies

- CS 2.1.13 **Fire Safety Techniques.** Incorporate fire-safety techniques in new development.
- CS 2.1.14 **Fire Department Review.** Involve the Fire Department in the review of development applications in fire prone areas.
- CS 2.1.15 **Coordination.** Coordinate with the Fire Marshal on fire prevention throughout the community.
- CS 2.1.16 **Adequate Facilities.** Work with the Fire Department to ensure the provision of adequate fire stations, personnel, and equipment to meet the City's needs over time.
- CS 2.1.17 **Public Education.** Support efforts to educate the public about fire safety and prevention.

Educational Facilities

Policies

- CS 2.1.18 **Coordination With School Districts.** Coordinate with JUSD and CNUSD in planning for the current and future needs of Jurupa Valley students.
- CS 2.1.19 **Modernization.** Encourage efforts of JUSD to modernize and renovate schools within the district.
- CS 2.1.20 **Safe Routes to School.** Work with the school districts to ensure the safety of travel routes to and from schools.
- CS 2.1.21 **Schools As Neighborhood Centers.** Develop new schools, as needed, that also serve as neighborhood centers and that are pedestrian and bicyclist-friendly.
- CS 2.1.22 **Joint Use.** Encourage school districts to allow joint use of schools for after-school sports, classes, childcare, or other uses to maximize the community value of these important public investments.
- CS 2.1.23 **Review of Development Proposals.** Involve the school districts in the review of large residential development proposals to ensure that adequate schools are provided without affecting existing facilities.
- CS 2.1.24 **Higher Education.** Encourage institutions of higher education, and other adult education providers, to locate facilities and programs in Jurupa Valley.
- CS 2.1.25 **Vocational and Trade Schools.** Encourage and accommodate to the greatest extent possible the development and location of vocational and trade schools in order to broaden the local pool of skilled and technical workers.

Program

- CS 2.1.1.4 Review the Zoning Ordinance to identify potential zones, locations, development incentives and requirements for advanced educational and occupational training schools and similar facilities. Make this information available to potential applicants, real estate and development professionals, marketing and construction firms, and local school districts.

Libraries

Policies

- CS 2.1.26 **Provide Adequate Facilities.** Work with the Riverside County Library System to provide adequate facilities and services for the current and future population of Jurupa Valley and to promote and use the libraries for community meetings and events.
- CS 2.1.27 **New Libraries.** Encourage the development of new libraries in underserved areas of the city.
- CS 2.1.28 **Libraries as Community Centers.** Design new library facilities as community centers with access to pedestrian and bicycle routes as well as public transit.
- CS 2.1.29 **Educational Programming.** Encourage the County of Riverside to provide reading and literacy programs and other educational programs at the local library branch or via other means for those who cannot visit library facilities.
- CS 2.1.30 **Funding.** Encourage County of Riverside efforts to provide adequate funding for improvements to local library facilities and programs through County, State and Federal funding, private and corporate donations, or other resources.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- CS 2.1.31 **Technology.** Encourage the adoption of technological advances that can provide improved access to library resources.

Land Use Element

LUE 4 Public Facility/Institutional

Policies

- LUE 4.1 **Public Facility Development.** Accommodate the development of public facilities and services in areas designated by the General Plan, specific plans, community and village plan land use maps.
- LUE 4.2 **Encroachment.** Protect major public facilities, such as Flabob Airport, publicly owned buildings, landfill, and solid waste disposal sites, from the encroachment of incompatible uses.
- LUE 4.3 **Locations.** New public facilities shall be located and designed to protect sensitive uses, such as schools and housing, from impacts due to noise, vibration, light, fumes, odors, vehicular traffic, and parking and safety hazards.
- LUE 4.7 **Consideration of Scale.** Due to the scale of General Plan maps and the area of the City, utility easements and linear rights-of-way may not be shown on General Plan, specific, and community plan maps. These features need to be taken into consideration in the review of applications to develop land and proposals to preserve land for conservation.
- LUE 4.8 **Impact Mitigation of New Public Facilities.** Planning and development of new public facilities, such as public buildings, utility transmission lines (water, sewer, communications and power), roads, bridges, storage and equipment yards, flood control channels, etc., shall avoid adverse impacts to prime residential or commercial properties, or areas with residential and commercial development potential, and shall not adversely affect the character and quality of life in the City's residential neighborhoods.

LUE 13 Infrastructure, Public Facilities and Services

Policies

- LUE 13.1 **Service Capacity.** Ensure that development does not exceed the City's or community services districts' ability to adequately provide supporting infrastructure and services, such as water, wastewater treatment, energy, solid waste and public services such as police/fire/emergency medical services, recreational facilities and transportation systems.
- LUE 13.2 **Monitoring.** Monitor the capacities of infrastructure and services in coordination with service providers, utilities, and outside agencies and jurisdictions to ensure that housing and population growth does not reduce levels of service below acceptable levels.

LUE 7 General Plan Administration

Policy

- LUE 7.4 **Agency Coordination.** Coordinate with local agencies, such as community service districts (CSDs), school districts, Riverside County Fire and Sheriff Departments and others to ensure adequate service provision for development.

LUE 14 Fiscal Impacts

Policies

LUE 14.1 **Fair Share Infrastructure Funding.** Require that new development contribute its fair share to fund infrastructure and public facilities, such as police and fire facilities, parks, streets, and trail improvements.

LUE 14.2 **Fiscal Analysis.** Require a fiscal impact analysis for specific plans and major development proposals to reduce or prevent fiscal impacts to the City.

4.14.3 Methodology

The evaluation of impacts to public services (fire, police, schools, and libraries) associated with implementation of the City 2017 General Plan is based upon the City's Community Safety, Services, and Facilities Element and the Land Use Element of the 2017 General Plan.

4.14.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. Based on Appendix G of the CEQA Guidelines, fire and police protection, school and library services, and park facilities impacts would be considered significant if the following condition resulted from implementation of the City General Plan (i.e., from increased consumption or generation from new development in the future).

- Substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for fire, police, school, and library services.

4.14.5 Programmatic Impact Evaluation

4.14.5.1 Fire Protection

| | |
|-----------|--|
| Threshold | Would the proposed project result in substantial adverse physical impacts associated with the provision of new or physically altered fire-fighting facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for fire services? |
|-----------|--|

Programmatic Impacts. Development under the 2017 General Plan may result in a total of approximately 13,140 additional residential units and 33 million square feet of new non-residential buildings in 20 years, increasing the number of new residents to just under 50,000 at maximum build-out. New fire stations and equipment could be required as the city grows. The increased demand for fire and emergency services could result in a significant impact.

Evaluation of the General Plan Goals and Policies: The following summarized policies of the Community Safety, Services and Facilities Element and the Land Use Element of the 2017 General Plan are relative to maintaining fire services in the City (full text of measures is provided in Section 4.14.2.3):

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Community Safety, Services, and Facilities Element

Policies

- CS 2.1.1 Work with community service agencies and districts on the planning and provision of adequate community facilities and services.
- CS 2.1.2 Ensure the provision of sufficient public facilities and services prior to, or concurrently with, new development.
- CS 2.1.4 Ensure that new development pays its fair share of public facility and service costs.
- CS 2.1.5 Promote the joint use of public facilities to meet multiple needs of the community.
- CS 2.1.14 Involve the Fire Department in the review of development applications in fire prone areas.
- CS 2.1.15 Coordinate with the Fire Marshal on fire prevention throughout the community.
- CS 2.1.16 Work with the Fire Department to ensure the provision of adequate fire stations, personnel, and equipment to meet the City's needs over time.

Land Use Element

Policies

- LUE 13.1 Ensure that development does not exceed the City's or community services districts' ability to adequately provide fire and emergency services.
- LUE 13.2 Monitor the capacities of infrastructure and services in coordination with service providers and outside agencies and jurisdictions to ensure that housing and population growth does not reduce public service levels.
- LUE 7.4 Coordinate with local agencies, such as Riverside County Fire Department to ensure adequate service provision for development.
- LUE 14.1 Require that new development contribute its fair share to fund infrastructure and public facilities such as fire facilities.

The General Plan policies regarding public services are designed to assure the City will have adequate services now and in the future as development occurs, the City grows, and increases in population which will require additional public services. These policies all focus on making sure the City has adequate public services in the future, including fire protection.

Level of Programmatic Impact Before Mitigation. Project developers would be required to pay Development Impact Fees to offset the project-related demand on existing fire services. The fees would ensure that as each future project is developed, adequate fire protection and emergency/medical services would be provided. In addition, each project would be required to be constructed consistent with current fire regulations, including provision of fire safety features. Compliance with the applicable design requirements and payment of its full, fair share of infrastructure costs would ensure that a proposed project would not adversely impact current fire protection services. Impact fees levied on new projects would be used to fund construction of new stations and/or expansion of existing facilities to reduce fire service impacts. Development fees would also be used to purchase required fire trucks and equipment and/or to hire additional fire fighters.

Programmatic Mitigation Measure. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the 2017 General Plan policies above, particularly the "fair share" policy that requires new development to pay its related costs for public facilities and services, along with standard conditions of construction imposed on new developments and fire marshal review to ensure compliance with fire standards, programmatic

impacts to fire protection service would be reduced to less than significant levels and no mitigation is required.

4.14.5.2 Police Services

| | |
|-----------|--|
| Threshold | Would the proposed project result in substantial adverse physical impacts associated with the provision of new or physically altered law enforcement facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for police services? |
|-----------|--|

Programmatic Impacts. Development under the General Plan may result in a total of approximately 13,140 additional residential units and 33 million square feet of new non-residential buildings in 20 years, increasing the number of new residents to just under 50,000 at maximum build-out. There would be a need for expanded police protection services routinely associated with residential and commercial growth, including routine patrols, responding to calls for service such as graffiti or vandalism, robbery, domestic violence, etc. The number of additional service calls and call response times would slowly increase, and overall service levels would decrease incrementally. The subsequent increased demand for police protection services could be a significant impact.

Evaluation of the General Plan Goals and Policies: The following summarized policies and programs of the Community Safety, Services and Facilities Element and the Land Use Element of the 2017 General Plan are relative to maintaining police services in the City:

Community Safety, Services and Facilities Element

Policies

- CS 2.1.1 Work with community service agencies and districts on the planning and provision of adequate community facilities and services.
- CS 2.1.2 Ensure the provision of sufficient public facilities and services prior to, or concurrently with, new development.
- CS 2.1.4 Ensure that new development pays its fair share of public facility and service costs.
- CS 2.1.7 Coordinate with the Riverside Sheriff's Department on an on-going basis to ensure the continued safety of the City.

Programs

- CS 2.1.1.2 Incorporate CPTED design guidelines into the City's development review standards and procedures.
- CS 2.1.1.3 Route new Planning applications to the Sheriff's Department to increase public safety and maintain close coordination with the Sheriff's Department and law enforcement programs.

Land Use Element

Policies

- LUE 13.1 Ensure that development does not exceed the City's or community services districts' ability to adequately provide supporting infrastructure and public services such as police services.
- LUE 13.2 Monitor the capacities of infrastructure and services in coordination with service providers and outside agencies and jurisdictions to ensure that housing and population growth does not reduce levels of service below acceptable levels.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- LUE 7.4 Coordinate with local agencies such as Sheriff Departments to ensure to ensure adequate service provision for development.
- LUE 14.1 Require that new development contribute its fair share to fund infrastructure and public facilities such as police facilities.

The 2016 General Plan policies regarding public services are designed to assure the City will have adequate services now and in the future as development occurs, the City grows, and increases in population which will require additional public services. These policies all focus on making sure the City has adequate public services in the future, including police protection.

Level of Programmatic Impact Before Mitigation. Impact fees levied on new development projects in the future would be used to fund construction or expansion of facilities to reduce police service impacts. With implementation of the 2017 General Plan policies and programs above, particularly the “fair share” policy that requires new development to pay its fair share of public facility and service costs, impacts to existing police protection services would be reduced to less than significant levels and no mitigation is required.

Programmatic Mitigation Measure. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the General Plan policies and programs above, particularly the “fair share” policy that requires new development to pay its fair share of public facility and service costs, impacts would be reduced to less than significant levels and no mitigation is required.

4.14.5.3 Schools

| | |
|-----------|--|
| Threshold | Would the proposed project result in substantial adverse physical impacts associated with the provision of new or physically altered school facilities, need for new or physically altered school facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives? |
|-----------|--|

Programmatic Impacts. Development under the 2017 General Plan may result in a total of approximately 13,140 additional residential units and 33 million square feet of new non-residential buildings in 20 years, increasing the number of new residents to just under 50,000 people at maximum build-out. The related increase in school enrollment could result in a significant impact to area schools. As growth occurs in the future, enrollments at the JUSD and CNUSD schools that serve City residents will incrementally increase. The additional 13,140 (maximum) residential units that could be built in the City could generate thousands of additional students at JUSD schools and increase enrollment at the one CNUSD school serving the City. The City of Jurupa Valley has several General Plan policies related to providing adequate community services and facilities; however, school services and facilities are the responsibility of the JUSD and CNUSD which are separate governmental entities from the City of Jurupa Valley.

Evaluation of the General Plan Goals and Policies: The following summarized policies and programs of the Community Safety, Services and Facilities Element and the Land Use Element of the 2017 General Plan are relative to school services in the City:

Community Safety, Services and Facilities Element

Policies

- CS 2.1.1 Work with community service agencies and districts on the planning and provision of adequate community facilities and services.

- CS 2.1.2 Ensure the provision of sufficient public facilities and services prior to, or concurrently with, new development.
- CS 2.1.4 Ensure that new development pays its fair share of public facility and service costs.
- CS 2.1.5 Promote the joint use of public facilities to meet multiple needs of the community.
- CS 2.1.18 Coordinate with JUSD and CNUD in planning for the current and future needs of Jurupa Valley students.
- CS 2.1.19 Encourage efforts of JUSD to modernize and renovate schools within the district.
- CS 2.1.20 Work with the school districts to ensure the safety of travel routes to and from schools.
- CS 2.1.21 Develop new schools, as needed, that also serve as neighborhood centers and that are pedestrian and bicyclist-friendly.
- CS 2.1.22 Encourage school districts to allow joint use of schools for after-school sports, classes, childcare, or other uses to maximize the community value of these important public investments.
- CS 2.1.23 Involve the school districts in the review of large residential development proposals to ensure that adequate schools are provided without affecting existing facilities.
- CS 2.1.24 Encourage institutions of higher education and other adult education providers to locate facilities and programs in Jurupa Valley.
- CS 2.1.25 Encourage and accommodate to the greatest extent possible the development and location of vocational and trade schools in order to broaden the local pool of skilled and technical workers.

Program

- CS 2.1.1.4 Review the Zoning Ordinance to identify potential zones, locations, development incentives and requirements for advanced educational and occupational training schools and similar facilities. Make this information available to potential applicants, real estate and development professionals, marketing and construction firms, and local school districts.

Land Use Element

Policies

- LUE 7.4 Coordinate with local agencies, such as school districts to ensure adequate service provision for development.
- LUE 13.1 Ensure that development does not exceed the City's or community services districts' ability to adequately provide supporting infrastructure and services, such as water, wastewater treatment, energy, solid waste and public services such as police/fire/emergency medical services, recreational facilities and transportation systems.
- LUE 14.1 Require that new development contribute its fair share to fund infrastructure and public facilities such as schools.

The General Plan policies regarding public services are designed to assure the City will have adequate services now and in the future as development occurs, the City grows, and increases in population which will require additional public services. These policies all focus on making sure the City has adequate public services in the future, including schools.

Level of Programmatic Impact Before Mitigation. Project developers would be required to pay Development Impact Fees to offset project-related demand on public school services. Fair share

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

payment of infrastructure costs by project developers would ensure that newly proposed projects would not adversely impact school services.

Programmatic Mitigation Measure. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the identified 2017 General Plan policies and programs above, potential programmatic impacts to public school services will be reduced to less than significant levels and no mitigation is required.

4.14.5.4 Libraries

| | |
|-----------|---|
| Threshold | Would the proposed project result in substantial adverse physical impacts associated with the provision of new or physically altered library facilities, need for new or physically altered libraries, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives? |
|-----------|---|

Programmatic Impacts. Development under the General Plan may result in a total of approximately 13,140 additional residential units and 33 million square feet of new non-residential buildings in 20 years, increasing the number of new residents to just under 50,000 people at maximum build-out. New or expanded libraries could be required as the city grows and a decrease in library services could result in a significant impact.

Evaluation of the General Plan Goals and Policies: The following summarized policies of the Community Safety, Services and Facilities Element and the Land Use Element of the General Plan are relative to library services in the City:

Community Safety, Services and Facilities Element

Policies

- | | |
|-----------|---|
| CS 2.1.1 | Work with community service agencies and districts on the planning and provision of adequate community facilities and services. |
| CS 2.1.2 | Ensure the provision of sufficient public facilities and services prior to, or concurrently with, new development. |
| CS 2.1.4 | Ensure that new development pays its fair share of public facility and service costs. |
| CS 2.1.5 | Promote the joint use of public facilities to meet multiple needs of the community. |
| CS 2.1.26 | Work with the Riverside County Library System to provide adequate facilities and services for the current and future population of Jurupa Valley and to promote and use the libraries for community meetings and events. |
| CS 2.1.27 | Encourage the development of new libraries in underserved areas of the city. |
| CS 2.1.28 | Design new library facilities as community centers with access to pedestrian and bicycle routes as well as public transit. |
| CS 2.1.29 | Encourage the County of Riverside to provide reading and literacy programs and other educational programs at the local library branch or via other means for those who cannot visit library facilities. |
| CS 2.1.30 | Encourage the County of Riverside efforts to provide adequate funding for improvements to local library facilities and programs through County, State and Federal funding, private and corporate donations, or other resources. |
| CS 2.1.31 | Encourage the adoption of technological advances that can provide improved access to library resources. |

Land Use Element

Policies

- LUE 13.1 Ensure that development does not exceed the City's or community services districts' ability to adequately provide library services.
- LUE 13.2 Monitor the capacities of infrastructure and services in coordination with service providers and outside agencies and jurisdictions to ensure that housing and population growth does not reduce public service levels.
- LUE 14.1 Require that new development contribute its fair share to fund infrastructure and public facilities, such as police and fire facilities, parks, streets, and trail improvements.

The General Plan policies regarding public services are designed to assure the City will have adequate services now and in the future as development occurs, the City grows, and increases in population which will require additional public services. These policies all focus on making sure the City has adequate public services in the future, including libraries.

Level of Programmatic Impact Before Mitigation. Project developers would be required to pay Development Impact Fees to offset project-related demand on existing library services. Fair share payment of infrastructure costs by project developers would ensure that newly proposed projects would not have an adverse impact on the availability of library services. These impact fees could also be used to fund construction or expansion of library facilities, if necessary, to reduce impacts.

Programmatic Mitigation Measure. No mitigation needed.

Level of Programmatic Impact After Mitigation. With implementation of the identified 2017 General Plan policies above, impacts to library services will be reduced to less than significant levels and no mitigation is required.

4.14.6 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a "plan summary" of long-term development impacts. In this case, the growth projections of the General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to 2017 General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,322 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

The cumulative "universe" for police and fire protection services is the service areas for the City of Jurupa Valley. The need for the public services and associated facilities is measured by service area population, or the number of residents and workers within the City's service area. Service population, as well as the type and density of development, determines the need for new or expanded police and other public services. Utilizing statistical information, local planning policies, and by interacting with other agencies, fire and police service providers can delineate past patterns, emerging trends, and

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

future issues of concern. Once identified, service providers can redeploy resources to meet future needs.

As additional development occurs in the City of Jurupa Valley, there may be an overall increase in the demand for law enforcement and fire protection services, including personnel, equipment, and/or facilities. Increases in demand are routinely assessed by these agencies as part of the annual monitoring and budgeting process. New development within the service areas of the Riverside County Sheriff's Department Jurupa Valley Station and Riverside County Fire Department Stations that serve Jurupa Valley, in cooperation with Cal Fire, would be required to adhere to conditions established by fire and police service providers, and pay applicable development impact fees to ensure adequate staffing and equipment levels. Therefore, there would be no cumulative impact on police and fire services in the City. Accordingly, cumulative impacts to the environment resulting from new or expanded police and fire protection facilities would be evaluated as those facilities are cleared under CEQA and mitigation provided where appropriate.

The following policies of the Community Safety, Services, and Facilities Element and the Land Use Element address potential cumulative public service impacts:

Community Safety, Services, and Facilities Element

Policies

- CS 2.1.1 Work with community service agencies and districts on the planning and provision of adequate community facilities and services.
- CS 2.1.2 Ensure the provision of sufficient public facilities and services prior to, or concurrently with, new development.
- CS 2.1.4 Ensure that new development pays its fair share of public facility and service costs.
- CS 2.1.5 Promote the joint use of public facilities to meet multiple needs of the community.
- CS 2.1.16 Work with the Fire Department to ensure the provision of adequate fire stations, personnel, and equipment to meet the City's needs over time.

Land Use Element

Policies

- LUE 13.1 Ensure that development does not exceed the City's or community services districts' ability to adequately provide fire and emergency services.
- LUE 13.2 Monitor the capacities of infrastructure and services in coordination with service providers and outside agencies and jurisdictions to ensure that housing and population growth does not reduce public service levels.
- LUE 7.4 Coordinate with local agencies, such as Riverside County Fire Department to ensure adequate service provision for development.
- LUE 14.1 Require that new development contribute its fair share to fund infrastructure and public facilities such as fire facilities.

The cumulative "universe" for school-related issues encompasses the Jurupa Unified School District and Corona-Norco Unified School District that provides school services/facilities in the project area. The District's requires payment of development fees to provide for new school services and/or facilities. Because every new development is mandated to provide the fees applicable to the school district affected, there would be no cumulative impact on school services in the City. Accordingly, cumulative impacts to the environment resulting from new or expanded school facilities would be evaluated as those facilities are cleared under CEQA and mitigation provided where appropriate.

4.15 RECREATION AND PARKS

This chapter of the EIR analyzes the impact of future development under the 2017 General Plan on existing local and regional recreational services or the need to construct or expand additional recreational facilities as the City grows. This section is based in part on the following reference documents, which are incorporated by reference:

- *City of Jurupa Valley General Plan*, July 1, 2011.
- *Community Safety, Services, and Facilities Element*, 2017 General Plan, December 2016.

4.15.1 Existing Setting

The Community Safety, Services, and Facilities Element states that the City...

“...promotes public health and safety by redirecting development away from areas subject to geologic hazards, flooding, and fires. Jurupa Valley contains a variety of open spaces that serve many functions, hence the often used label of “multi-purpose.” The City’s quilted pattern of hills, valleys, and slopes provides a variety of habitats including riparian corridors, oak woodlands, and chaparral habitats. Examples include the Jurupa Mountains, the Santa Ana River, and the Pedley Hills. In particular, the Santa Ana River borders the City on its eastern and southern flanks and includes many native plant species, some of which grow only in the habitat this river provides.”

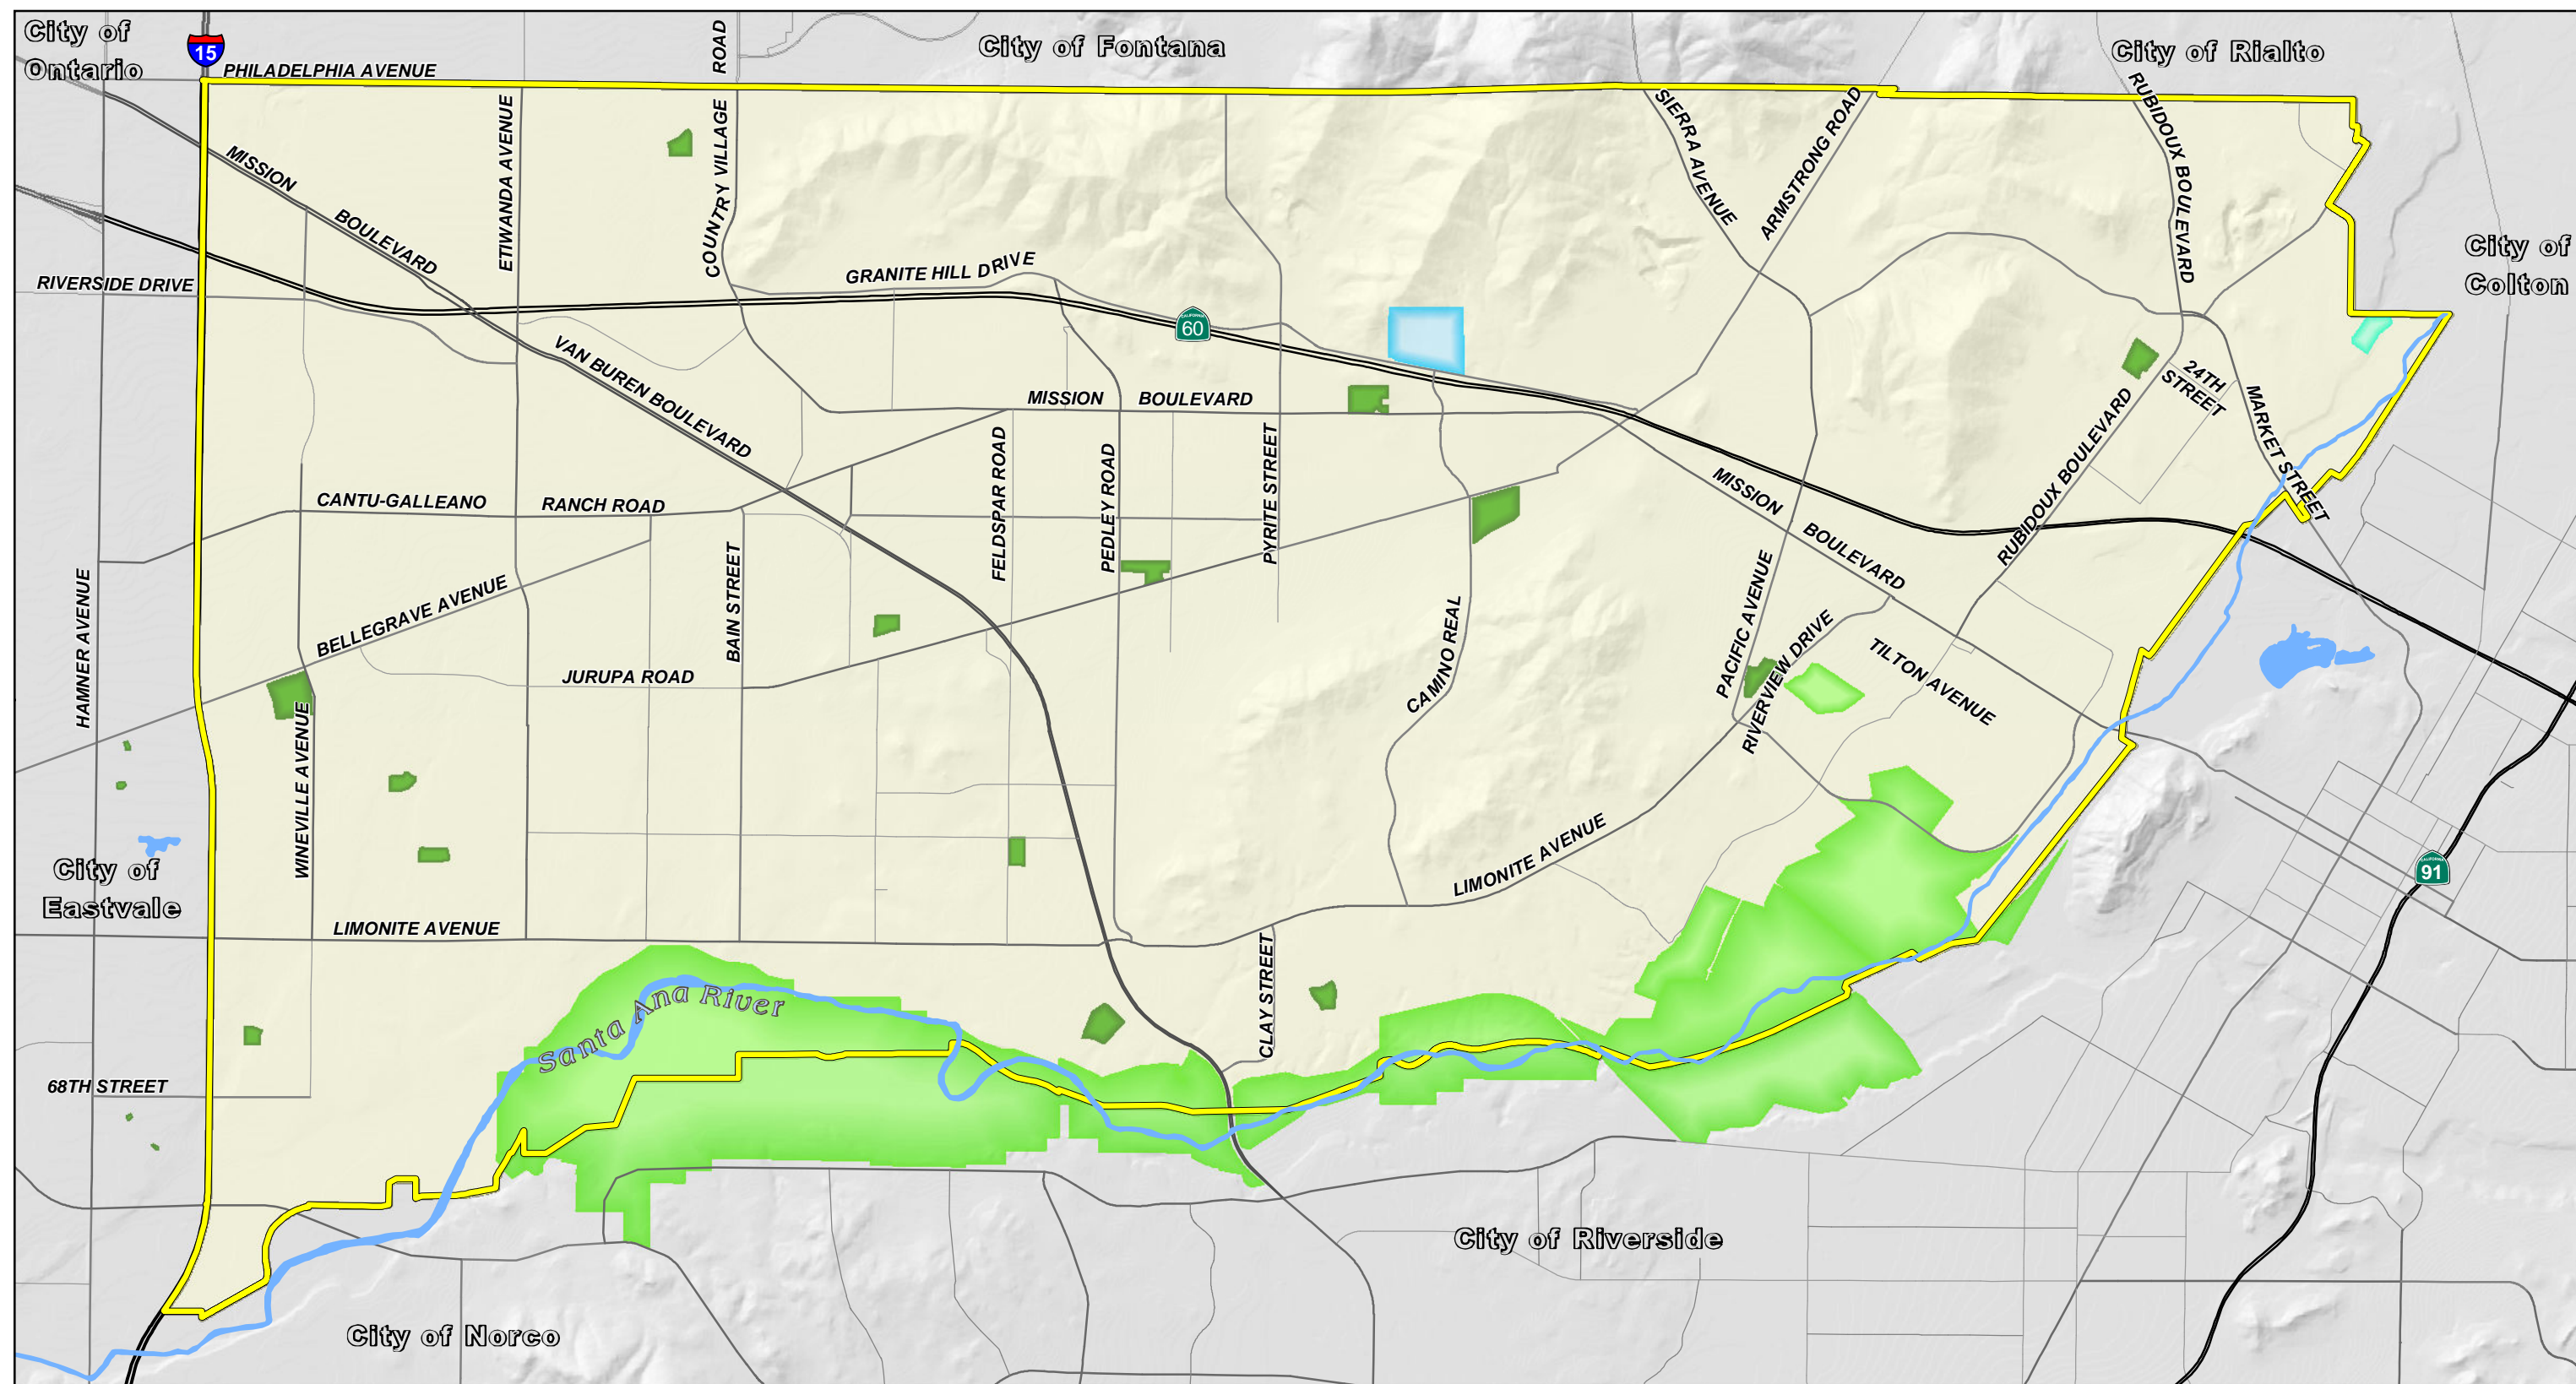

The parks and recreational areas in the City of Jurupa Valley are provided by the Jurupa Area Recreation and Park District (JARPD) and the Riverside County Regional Park and Open-Space District (District). The Jurupa Mountains Discovery Center is also located in the City of Jurupa Valley (see Figure 4.15.1 Jurupa Valley Area Parks). The JARPD provides recreational facilities for current and future families in the Jurupa Area. The JARPD also manages youth sports, classes, special events, childcare, after-school programs, summer programs, community classes, community involvement programs, and reservations for ball fields, picnics, and facilities. The District includes three Bureaus including: the Parks and Recreation Bureau, Resources Bureau, and the Business Operations Bureau. The District provides high-quality recreational opportunities and preserves important features of the County’s natural, cultural, and historical heritage. The District’s Parks and Recreation Bureau provides services and facilities such as aquatic programs and facilities, regional parks, trails, camping, sports facilities, special event planning, and reservation. The Jurupa Mountains Discovery Center includes the Ruth and Sam Kirby Earth Science Museum, trails, gardens, and educational classes for students and boy scouts.

The City of Jurupa Valley also contains many trail and bikeway systems that travel through urban, rural, and natural areas. The equestrian trails contribute to the long withstanding equine culture of the City. The rails in the City are Community and Regional Trails which are designed for all types of non-motorized use, including equestrian (see Figure 4.15.2). The Community Trail runs adjacent to the east and northeast boundary of the site and the Regional Trail runs parallel, south of the site through the Regional Parks area. The main purpose of Community Trails is to link areas of the community to the Regional Trails system and to link areas of the community to each other. The Regional Trails are the main trails throughout the County of Riverside and are meant to serve as the link to areas that are distant from each other. Regional Trails are also designed to connect with state, federal, and other trail systems outside the City’s jurisdiction.

4.15.1.1 Riverside County Parks in Jurupa Valley

The District provides services throughout Riverside County. The following facilities are provided by the District within the City of Jurupa Valley. See Figure 4.15.1 for park locations.

Cove Waterpark and Jurupa Aquatic Center (Map #2) is located at 4310 Camino Real in the City of Jurupa Valley. The waterpark includes pools, a lazy river, slides, and a FlowRider. The aquatic center offers swimming lessons, specialty classes such as lifeguarding, and summer camps.

Rancho Jurupa Park (Map #3) is located at 4800 Crestmore Road and includes 200 acres and 140 campsites. The park offers camping, fishing, hiking, miniature golf, and disk golf.

Rancho Jurupa Regional Sports Park (Map #4) is located at 5249 Crestmore Road and includes 32 acres of natural and synthetic turf fields. The sports park includes four large marked and lighted synthetic turf fields, two large natural turf fields, and nine smaller natural turf fields. In addition, picnic shelters, restrooms, a snack bar and two playgrounds are also located within the park's property.

4.15.1.2 Jurupa Area Recreation and Park District Local Parks

The City's existing General Plan designates open space uses as Open Space/Recreation, Open Space Rural, or Conservation and Conservation Habitat. The JARPD website indicates it currently has approximately 125.82 acres of Developed Park Space, 171.40 acres of Open Space, and 22.81 acres of Trails.¹ Table 4.15.A summarizes the acreages and features of recreational facilities, open space, and trails within the City. See Figure 4.15.3 for park locations.

Table 4.15.A: City Recreation Facilities

| Map Number | Name | Address | Acreage | Amenities |
|------------------------|---|--|---------|---|
| Developed Parks | | | | |
| 1 | District Office (entire block) | 4810 Pedley Road | 13.18 | Playground, community center, restrooms, and skate park |
| 2. | Rick Thompson Arena and Agate Park-Harvey Field | 8629 Jurupa Road and 8623 Jurupa Road | -- | Equestrian Arena, restrooms, playground, grassy area, picnic tables, ball fields, and picnic shelters |
| 3. | Avalon Park | 2510 Avalon Street | 10.00 | Playground, grassy area, picnic tables, ballfields, outdoor basketball, sand volleyball, gymnasium, and restrooms |
| 4. | Clay Park | 8029 Havenview Drive | 6.45 | Playground, grassy area, picnic tables, outdoor basketball, sand volleyball, restrooms, and picnic shelter |
| 5. | Knowles Field | 5001 Poinsetta Place | 6.41 | Ballfields and restrooms |
| 6. | Laramore Park and Arena | 11380 Little Dipper Street | 5.18 | Playground, grassy area, picnic tables, equestrian arena, and restrooms |
| 7. | Veterans Memorial Park | 4389 Riverview Drive | 10.24 | Playground, grassy area, picnic tables, ballfields, outdoor basketball, community center, pool, picnic shelter, and restrooms |
| 8. | Rancho Mira Loma Park | 34 Rouselle off Wysocki 3205 Wysocki | 6.41 | Playground, grassy area, picnic tables, outdoor basketball, restrooms, and picnic shelter |
| 9. | Wineville Park | 34 Trail Canyon - 5551 Trail Canyon Drive. | 4.89 | Playground, grassy area, picnic tables, and picnic shelter |
| 10. | Felspar Arena | Felspar and 58th Street | 1.50 | Equestrian arena |

4.15.1.3 NOP/Scoping Comments

During the public scoping meeting three public comments were made about the project's potential impacts to existing equestrian trails and equestrian safety. No agency letters or comments were made during the NOP period.

4.15.2 Regulatory Framework

4.15.2.1 State Regulations

Quimby Act (California Government Code 66477). This State policy requires the dedication of land and/or imposes a requirement of fees for park and recreational purposes as a condition of approval of tentative map or parcel map.

4.15.2.2 Local Policies

City of Jurupa Valley General Plan Policies. The Community Safety, Services, and Facilities Element of the 2017 General Plan contains the following goals, policies, and programs to address recreational facilities and programs:

Community Services and Facilities Element

Goal

CS 2 Provide a high level of community services and facilities to serve the existing and future needs of Jurupa Valley.

Policies

- CS 2.1.32 **Evaluation of User Needs.** Encourage park and recreation service providers to evaluate user feedback, track facility use, and utilize projections to understand park and recreation facility needs and plan for future acquisition and development.
- CS 2.1.33 **Park and Recreation Facilities Maintenance.** Encourage park and recreation service providers to maintain parks, trails and other recreation facilities in good condition and strive to meet Council-adopted community parks and recreation goals.
- C S 2.1.34 **Joint Use Agreements.** Maintain and improve joint-use recreational agreements with school districts and public agencies and seek new opportunities for joint recreational uses.
- CS 2.1.35 **Universal Access.** Encourage responsible agencies to provide, where feasible, inclusive recreation facilities that meet or exceed accepted standards for universal access for all persons and abilities and encourage others to do likewise.
- CS 2.1.36 **Users.** Encourage responsible agencies to provide parks and recreation facilities and programs that meet the needs of all residents, regardless of income levels, ages, and abilities and encourage others to do likewise.
- CS 2.1.37 **Historic Sites.** Celebrate historic sites with recreational learning opportunities in parks and recreation facilities.
- CS 2.1.38 **Natural Environment.** Protect and where possible, utilize parks, trails and open spaces for learning opportunities and passive recreation, in conjunction with our environmental goals.
- CS 2.1.39 **Street Closures/Public Spaces.** Support temporary, and where safe and appropriate, long-term street closures to create or expand public spaces and to accommodate street fairs, farmers' markets, art shows and other special community events.

THIS PAGE LEFT INTENTIONALLY BLANK

THIS PAGE LEFT INTENTIONALLY BLANK

- CS 2.1.40 **Master Plan.** In cooperation with JARPD, County of Riverside, JCSD and other responsible agencies, prepare and adopt a Joint Recreational Opportunities and Open Space Master Plan, which identifies priorities for park expansion, acquisition, improvement, and funding. The Plan will be adopted within two years of General Plan adoption and updated at least every ten years.
- CS 2.1.41 **Equestrian Heritage.** Work with community groups to encourage, promote, and as resources allow, help support projects that help celebrate the City's equestrian heritage, such as trails, staging areas, hitching posts, corrals, exercise areas, and performance arena.

It should be noted that the Conservation and Open Space Element of the 2017 General Plan contains a number of goals, policies, and programs related to open space and scenic resources, which are independent from but indirectly related to recreation and parks. These goals, policies, and programs are addressed in Section 4.1, *Aesthetics*.

4.15.3 Methodology

The potential impacts of the proposed project on recreation and park resources were evaluated based on whether implementation of the proposed project could result in increased use of existing recreation and park resources, or whether implementation of the proposed project could necessitate the construction or expansion of recreation and park facilities.

4.15.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. The following thresholds of significance regarding potential impacts related to recreation facilities are based on the State *CEQA Guidelines*, Appendix G. A project would have a significant impact related to recreational facilities if it would:

- The project increases the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; and/or
- The project includes recreational facilities or requires the construction or expansion of recreational facilities that have an adverse physical effect on the environment.

4.15.5 Programmatic Impact Evaluation

4.15.5.1 Increased Use of Existing Recreational Facilities

| | |
|-----------|--|
| Threshold | Would the project result in increased use of existing neighborhood and regional parks or other recreational facilities where substantial physical deterioration would occur or be accelerated? |
| Threshold | Would the project result in construction or expansion of recreational facilities that would have an adverse physical effect on the environment? |

Programmatic Impacts. The City's primary park provider, JARPD, has established a parkland service ratio goal of 5.0 acres per 1,000 residents. The City has current population of 97,774 people which results in 490 acres of required parkland, based on the 5.0 acres per 1,000 residents standard. The City currently has 126 acres of parkland, so the City has a deficit of 162 acres of parkland. Based

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

on the land use plan of the 2017 General Plan, the City could add up to 49,275 additional residents as the City builds out¹, which would create an additional demand for 148 acres of local parkland (at 3 acres per thousand) or up to 246 acres of parkland at 5 acres per thousand). Eventually the City may need up to 751 total acres of local parkland based on the projected total buildout population¹ of the City. This additional acreage does not include any future parks or park sites not listed in Table 4.15.A or any joint use of school facilities through the local school districts.

The City and other agencies (JAPD, County of Riverside, etc.) provide a variety of recreational facilities and programs that serve residents and visitors to this portion of the County, including the City of Jurupa Valley. These include the nearby Santa Ana River and several county parks, as well as a network of local parks. Unless carefully planned, it is possible that future private development or public infrastructure may negatively affect existing parkland or result in inadequate provision of public parkland in the future. This represents a potentially significant impact.

Evaluation of General Plan Goals and Policies. The following summarized goals and policies of the Community Safety, Services, and Facilities Element of the 2017 General Plan are specifically related to recreational facilities and programs (for complete text, see Section 4.15.2.2):

Community Safety, Services, and Facilities Element

Goal

CS 2 Provide a high level of community services and facilities *[including recreation]*.

Policies

- CS 2.1.32 Collect and evaluated feedback from park users to improve services.
- CS 2.1.33 Maintain parks, trails and other recreation facilities in good condition.
- CS 2.1.34 Maintain joint-use recreational agreements with school districts and public agencies.
- CS 2.1.35 Seek to provide universal access to facilities and programs.
- CS 2.1.36 Provide parks that meet the needs of all residents.
- CS 2.1.37 Integrate park and historic sites and provide learning opportunities for both.
- CS 2.1.38 Protect environmental resources when planning and operating parks and trails.
- CS 2.1.39 Support temporary and safe road closures to promote community events.
- CS 2.1.40 Implement a Joint Recreational Opportunities and Open Space Master Plan.
- CS 2.1.41 Promote the City's equestrian heritage (hitching posts, corrals, arenas, etc.).

This goal and these policies emphasize the proper care and maintenance of existing park facilities to avoid substantial physical deterioration but also make it clear the City will continue to require new development to provide adequate park and recreational facilities (e.g., Policy CS 2.1.36).

These programmatic plans address existing and future needs of City residents, and also are sensitive to direct or indirect impacts that providing additional recreational facilities may have on the environment (Policy CS 2.1.38). Therefore, these policies will help reduce potential programmatic impacts of the 2017 General Plan to less than significant levels, and no mitigation is needed.

Possible Indirect Impacts. Active parkland required under AB1600 that must be provided by private development within the City may result in project-level and project-specific environmental impacts that would need to be addressed at the time specific parkland sites or facilities are proposed or built. Provision of recreational facilities within the City would help reduce additional impacts from increased use of other City and regional recreational facilities (e.g., County or State parks). If park facilities are constructed through the use of in-lieu fees paid by private development, it is possible the construction

¹ See Table 3.B, Residential Land Use Buildout Projections, in Section 3

and/or operation of those facilities may result in significant environmental impacts, depending on size and location of the new facilities. Any new offsite park facilities would be required to separately comply with the requirements of CEQA, and the CEQA documents and processes for those facilities would have to identify any significant impacts at that time. It is overly speculative at this time to estimate potential impacts of any offsite recreational facilities associated with any private development projects within the City.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals and policies regarding recreational facilities and programs will reduce potential impacts related to recreation and parks to less than significant levels and no mitigation is required.

4.15.6 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

For context, the cumulative “universe” for impacts to parks would mainly be the City but taking into consideration the location of parks maintained by the County, CSDs or other agencies overlapping or adjacent to the City of Jurupa Valley (i.e., not all of western Riverside County). This analysis is also sensitive to the fact there are federal and state recreational facilities that City residents can utilize in the nearby San Gabriel and San Bernardino Mountains as well.

CEQA typically requires a cumulative analysis using a “list” of cumulative projects or a “plan summary” of long-term development impacts. In this case, the growth projections of the 2017 General Plan represent the “plan summary” for the purposes of characterizing cumulative impacts related to 2017 General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

The worst case growth projections assumed no new open space, conservation, or parks would be added to meet the needs of City residents in the coming years. However, practically speaking, that will not be the case. The City's development review process, especially for larger developments, will identify specific properties or sites for additional park facilities consistent with area master plans for park facilities (e.g., County, JCSD, JARPD, etc.).

By its very nature, the 2017 General Plan establishes overall guiding principles or programmatic direction against which to review new development to assure it does not result in significant impacts to scenic resources, or results in a substantial increase in lighting or glare as development occurs. The goals and policies of the Community Safety, Services, and Facilities Element of the 2017 General Plan related to parks and recreational facilities are designed to protect existing and provide for new recreational resources during the evaluation of future development.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

It should be noted that the 2017 General Plan growth projections also provide “optimum” growth estimates which would be more likely since some amount of new development would be dedicated as parks or open space as part of the City’s development review process. At a programmatic level, General Plan Policy 2.1.1 requires all future development to provide additional parks or recreational resources as appropriate.

These programmatic actions will help reduce impacts of individual development projects within the City to less than significant levels. For these reasons, implementation of the City’s 2017 General Plan will not make a significant contribution to cumulatively adverse impacts to cultural resources (with the recommended mitigation).

4.16 TRANSPORTATION AND TRAFFIC

This section analyzes the potential traffic and circulation impacts of the proposed 2017 General Plan Mobility Element. The primary purpose of this analysis is to identify the circulation system improvements and programs (e.g., traffic calming measures, speed reduction measures, volume control measures, intelligent transportation systems, adaptive traffic control systems, transportation demand management, transit pass programs, safe routes to school, complete streets, transit strategies, equestrian/multi-purpose trails) necessary to maintain the level of service standards and mobility goals proposed as part of the Mobility Element. This section is based on the following technical study:

- *General Plan Traffic Study (GPTS)*, City of Jurupa Valley, Riverside County, California. LSA Associates, Inc. (LSA). November 2016 (EIR Appendix K).

4.16.1 Existing Setting

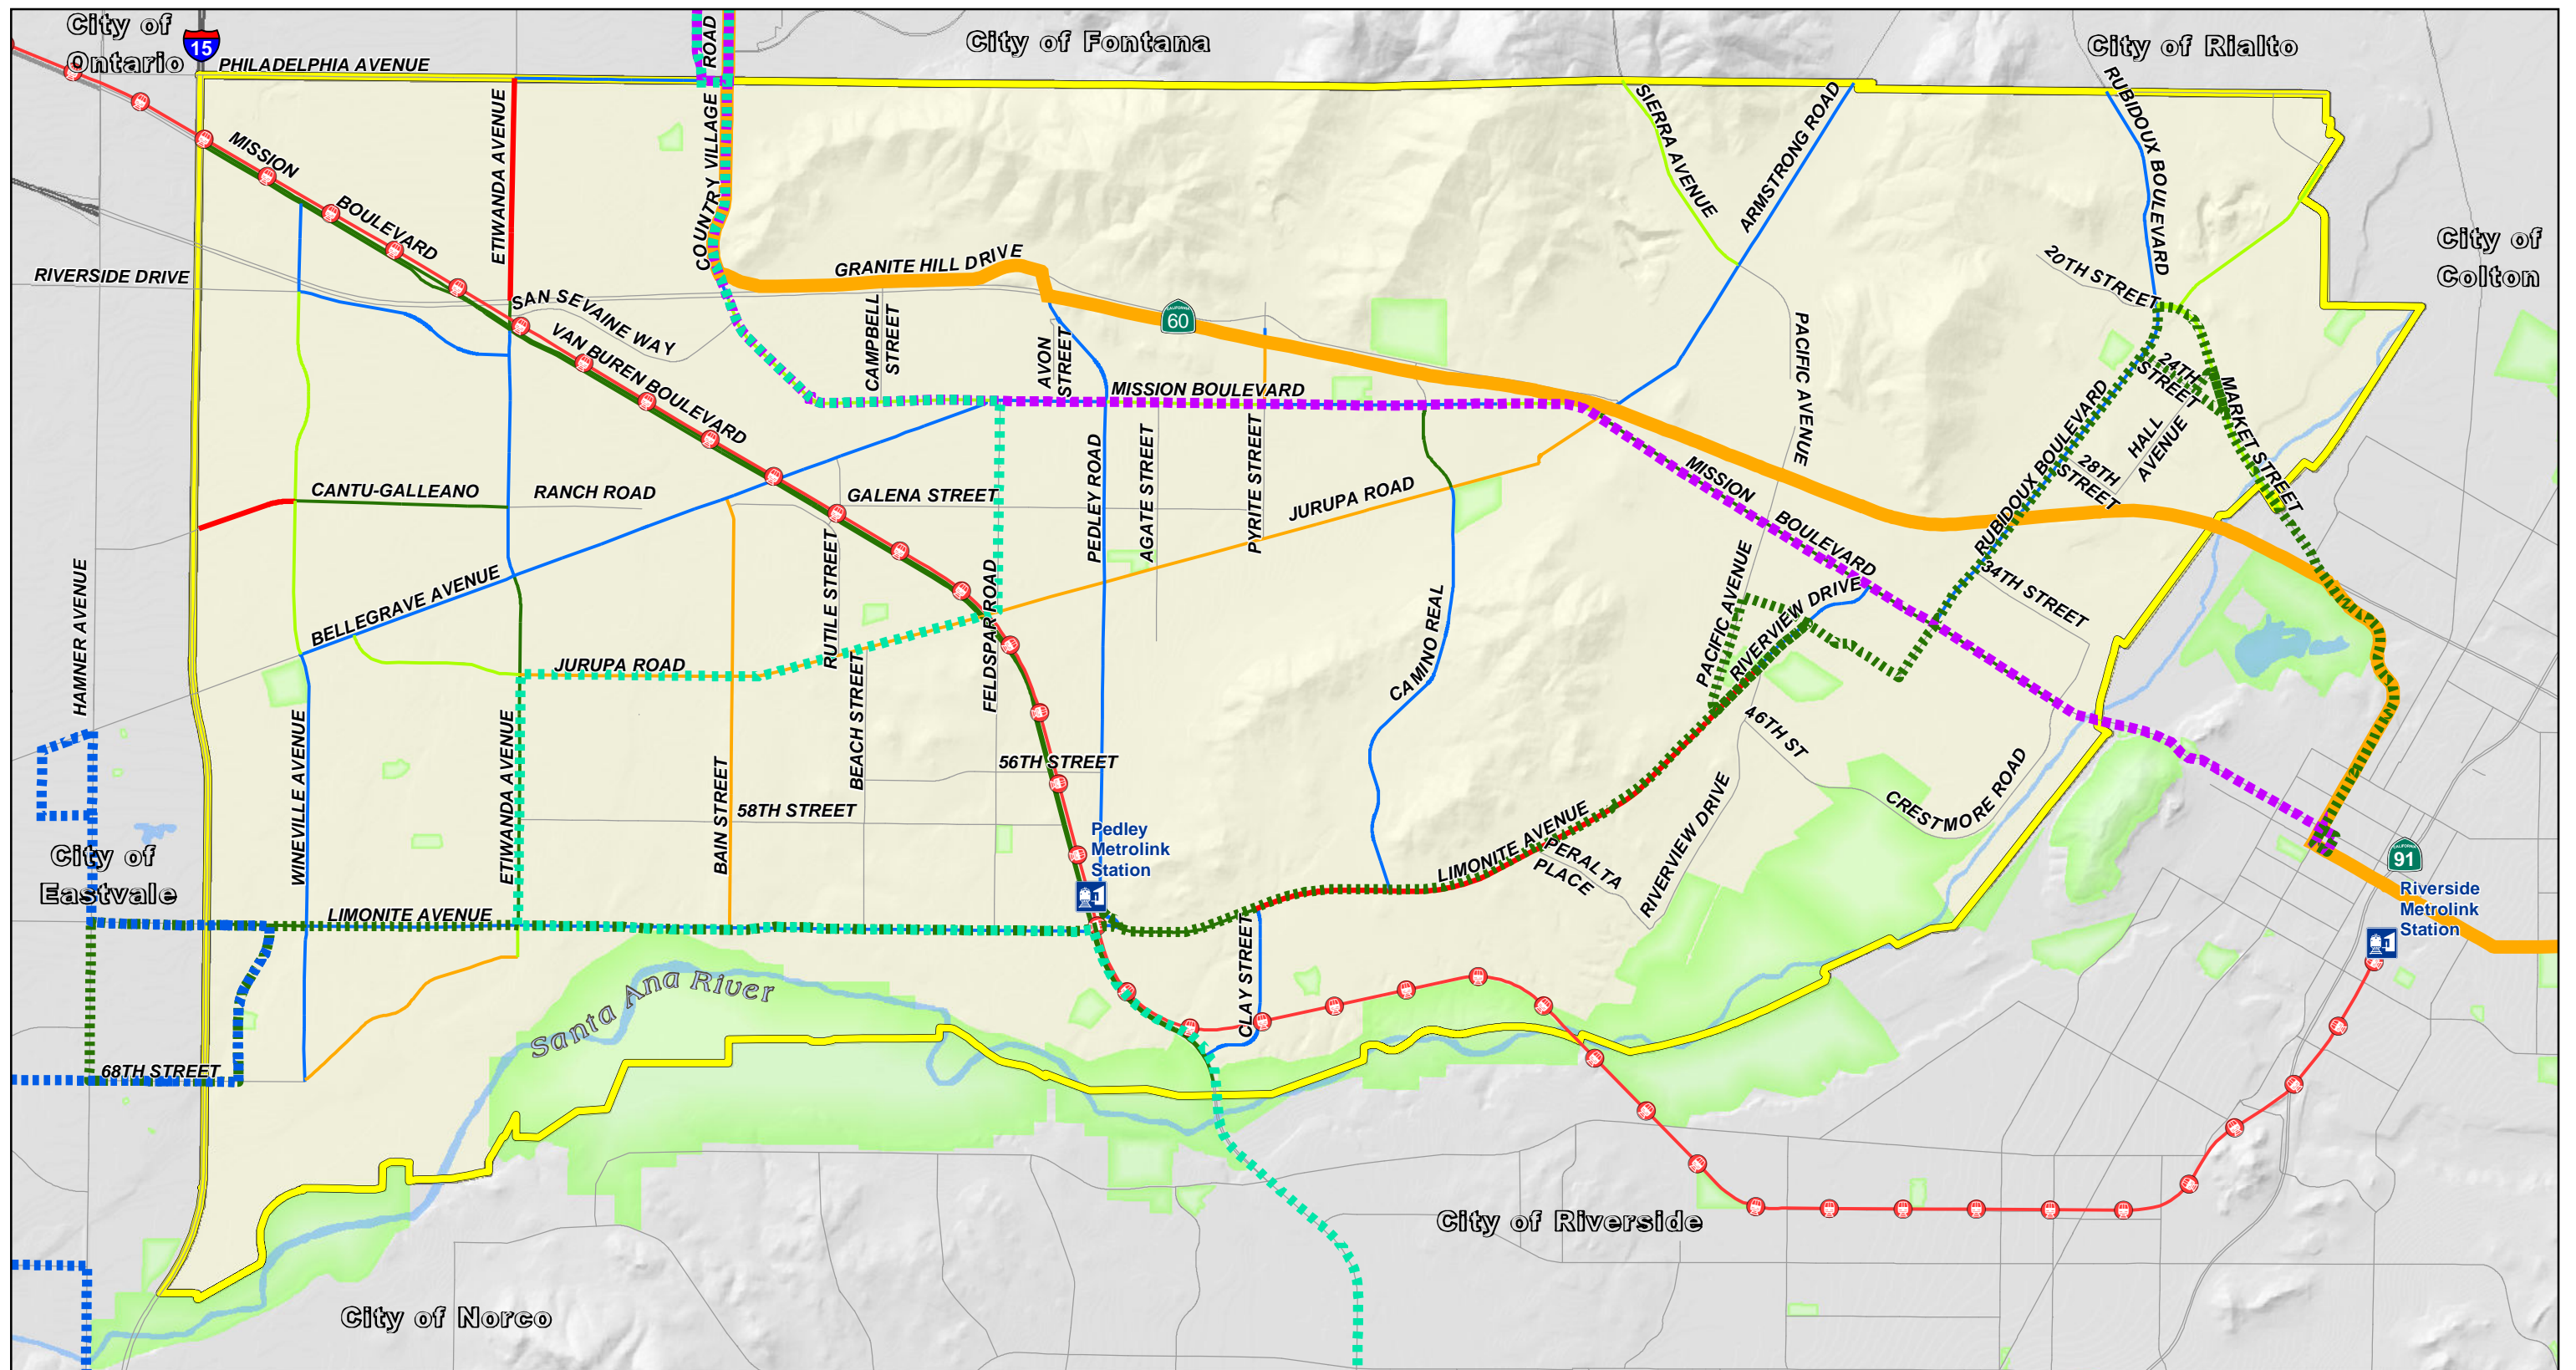

The City of Jurupa Valley (City) is located in the County of Riverside and is generally bounded by the Interstate 15 to the west, Philadelphia Street/El Rivino Road to the north, and the Santa Ana River to the east and south. The ability to move people and goods throughout Jurupa Valley and beyond is important to residents and businesses. While local roadways are an important element for mobility in Jurupa Valley, public transit, a multi-use trail system, and bicycle facilities provide opportunities for alternative modes of travel that could relieve pressure on roadways. Furthermore, alternate modes, such as bicycles and pedestrians, have valuable secondary benefits that enhance the overall setting of Jurupa Valley. These benefits include traffic calming, walkability, healthy living, air quality improvement and community cohesion. The Mobility Element governs the long term mobility system of the City and is closely correlated with the Land Use Element. It is intended to provide the best possible balance between the City's future growth and land use development, roadway size, traffic service levels, bicycle and pedestrian amenities, transit opportunities and community character. The overall circulation network of roads and intersections in the City is shown in Figures 4.16.1A and 4.16.1B.

4.16.1.1 Traffic Level of Service Definitions

Before discussing existing road and intersection conditions, information on how traffic movement along roadways and through intersections is measured must be provided. The term "Level of Service" (LOS) will be referred to frequently in this section. LOS was used in the GPTS to determine performance at study intersections and roadway segments. Roadway operations and the relationship between capacity and traffic volumes are generally expressed in LOS, which are described using the letter grades A through F (see Table 4.16.A). LOS "grades" or levels reflect the reality that conditions rapidly deteriorate as traffic approaches the absolute capacity of the roadway. These levels recognize that, while an absolute limit exists as to the amount of traffic which can travel through a given intersection or roadway segment for a given time interval (the absolute capacity), the conditions that motorists experience rapidly deteriorate as traffic approaches the absolute capacity. Under such conditions, congestion is experienced. There is general instability in the traffic flow, which means that relatively small incidents (e.g., momentary engine stall) can cause considerable fluctuations in speeds and delays. This near-capacity situation is labeled Level of Service (LOS) E. Beyond LOS E, capacity has been exceeded, and arriving traffic will exceed the ability of the intersection or roadway segment to accommodate it. An upstream queue will then form and continue to expand in length until the demand volume again declines.

The GPTS used the 2000 Highway Capacity Manual (HCM 2000) methodology to determine LOS at signalized and unsignalized intersections. Overall average intersection delay and level of service were reported for intersections with traffic signal or all-way stop control. For intersections with cross-

street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) were shown. Table 4.16.B shows the level of service criteria for unsignalized and signalized intersections.

The GPTS used the County of Riverside Urban Arterial (4- and 6-lane) roadway segment capacities to determine roadway segment LOS. Table 4.16.C shows the level of service criteria for roadway segments.

Table 4.16.A: Traffic Level of Service (LOS) Definitions

| LOS | Description |
|-----|--|
| A | No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication. The approach appears quite open, turns are made easily, and nearly all drivers find freedom of operation. |
| B | This service level represents stable operation, where an occasional approach phase is fully utilized and a substantial number approach full use. Many drivers begin to feel restricted within platoons of vehicles. |
| C | This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted, but not objectionably so. |
| D | This level encompasses a zone of increasing restriction approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups. |
| E | Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand. |
| F | This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero. |

4.16.1.2 Roadways

The traffic study for the 2017 General Plan looked at the 82 roadways listed in Table 4.16.D to determine existing Level of Service (LOS). Based largely on comments by surrounding jurisdictions, two roadway segments were added to the evaluation of 2035 conditions under a with-project (General Plan Build-out) scenario. These locations are south of Holmes Avenue along Etiwanda Avenue and Etiwanda Avenue to Bellegrave Avenue along Cantu-Galleano Ranch Road, as shown in Table 4.16.G in Section 4.16.6. The analysis of existing conditions will aid in determining existing circulation deficiencies within the City of Jurupa Valley and act as a benchmark for future improvements to the City's circulation network. The analysis includes a level of service analysis at study area intersections and roadway segments, a summary of existing transit service, truck circulation patterns, bicycle and pedestrian facilities, trails, and public transit within the City of Jurupa Valley. The existing major roadways within the City of Jurupa Valley are described below:

- **Wineville Avenue** is a 4-lane Major Highway and is oriented in a north-south direction. The speed limit on Wineville Avenue is 45–50 miles per hour.
- **Etiwanda Avenue** is a 6-lane Urban Arterial from the northern City limits to State Route 60 and transitions to a 4-lane Arterial Highway. Etiwanda Avenue oriented in a north-south direction and has a speed limit of 45–55 miles per hour.

- **Bain Street** is a 2-lane collector roadway and is oriented in a north-south direction. The speed limit on Bain Street is 45 miles per hour.
- **Country Village Road** is a 3 to 4-lane Major Highway and is oriented in a north-south direction. The speed limit on Country Village Road is 45 miles per hour.
- **Pedley Road** is a 2-lane Major Highway¹ (variable designation) and is oriented in a north-south direction. The speed limit on Pedley Road is 45 miles per hour.
- **Pyrite Street** is a 2-lane Collector roadway and is oriented in a north-south direction. The speed limit on Pyrite Street is 40 miles per hour.
- **Clay Street** is a 4-lane Major Highway and is oriented in a north-south direction from Limonite Avenue to General Road, and transitions to an east-west direction from General Road to Van Buren Boulevard. The speed limit on Clay Street is 35 miles per hour.
- **Camino Real** is a 4-lane Major Highway and is oriented in a north-south direction. The speed limit on Camino Real is 25–40 miles per hour.
- **Philadelphia Avenue** is oriented in an east-west direction from the western City limits to Rochester Avenue, from Rochester Avenue to Wineville Avenue is a 2-lane Major Highway, from Wineville Avenue to Etiwanda Avenue is a 3-lane Major Highway, and from Etiwanda Avenue to Country Village Road is a 2-lane Major Highway. The speed limit on Philadelphia Avenue is 45 miles per hour.
- **Van Buren Boulevard** is a 4-lane Urban Arterial roadway that is oriented in a north-south direction. The speed limit on Van Buren Boulevard is generally 55 miles per hour.
- **Riverside Drive** is a Major Highway with 2 lanes in the eastbound direction and 1 lane in the westbound direction. The speed limit on Riverside Drive is 50 miles per hour.
- **Cantu-Galleano Ranch Road** is a 6-lane Urban Arterial from the I-15 SB Ramps to Wineville Avenue, and transitions to a 2-lane roadway east of Wineville Avenue. The speed limit on Cantu-Galleano Ranch Road is 45 miles per hour.
- **Mission Boulevard** is a 4-lane Major Highway that is generally oriented in an east-west direction and transitions to a north-south direction from Lindsay Street to the SR-60 Ramps. The speed limit on Mission Boulevard is generally 35–45 miles per hour.
- **Bellegrave Avenue** is a 3 to 4-lane Major Highway from Wineville Avenue to Bain Street, and transitions to a 2-lane Major Highway east of Bain Street. Bellegrave Avenue is oriented in an east-west direction and has a speed limit of 25–45 miles per hour.
- **Jurupa Road** is a 2-lane Collector roadway and is oriented in an east-west direction. The speed limit on Jurupa Road is 40–45 miles per hour.
- **Valley Way** is a 4-lane Arterial Highway and is oriented in a north-south direction. The speed limit on Valley Way is 30–45 miles per hour.
- **Limonite Avenue** is a 4-lane Major Highway that is oriented in an east-west direction. The speed limit on Limonite Avenue is generally 45–50 miles per hour.
- **Rubidoux Boulevard** is a 4-lane Major Highway and is oriented in a north-south direction. The speed limit on Rubidoux Boulevard is 40–50 miles per hour.

As shown in Table 4.16.D and Figure 4.16.2, all roadway segments are operating at satisfactory levels of service, with the exception of the following ten roadway segments:

¹ The existing conditions report has seven street classifications – Expressway, Urban Arterial, Arterial, Major, Secondary, Collector and Industrial Collector. Pedley has multiple classifications including a Major based on descriptions in the street classification. This description is from the City-wide traffic report.

2017 General Plan – City of Jurupa Valley
Draft Environmental Impact Report

- Country Village Road from Philadelphia Avenue to SR-60 Westbound Ramps;
- Country Village Road from SR-60 Westbound Ramps to SR-60 Eastbound Ramps;
- Van Buren Boulevard from Etiwanda Avenue to Bellegrave Avenue;
- Van Buren Boulevard from Bellegrave Avenue to Jurupa Road;
- Van Buren Boulevard from Jurupa Road to Limonite Avenue;
- Van Buren Boulevard from Limonite Avenue to Clay Street;
- Limonite Avenue from I-15 Southbound Ramps to I-15 Northbound Ramps;
- Limonite Avenue from Etiwanda Avenue to Bain Street;
- Limonite Avenue from Bain Street to Collins Streets; and
- Market Street east of Rubidoux Boulevard.

Table 4.16.D: Existing Roadway Segment Levels of Service

| Roadway Segment | | Functional Classification | Existing Conditions | | |
|-----------------------------------|--|---------------------------|---------------------|------|-----|

4.16.1.3 Intersections

The traffic study for the 2017 General Plan looked at 61 intersections to determine existing and future Level of Service (LOS), as shown in Figures 4.16.3A through 4.16.3C. The existing study area includes all intersections that would be necessary to analyze the impacts of the City's future Land Use Plan and was defined through collaboration between LSA and City staff. A level of service analysis was conducted at study area intersections to determine current intersection performance. Table 4.16.E indicates all intersections are currently operating at satisfactory levels of service, with the exception of the following 13 intersections:

Intersections

- Wineville Avenue/Mission Boulevard (p.m. peak hour);
- Mission Boulevard/SR-60 Eastbound Off-Ramp (a.m. and p.m. peak hours);
- Etiwanda Avenue/Limonite Avenue (a.m. and p.m. peak hours);
- Country Village Road/SR-60 Westbound Ramps (a.m. peak hour);
- Pedley Road/SR-60 Westbound Ramps (a.m. and p.m. peak hours);
- Pedley Road/Jurupa Road (a.m. and p.m. peak hours);
- Van Buren Boulevard/Jurupa Road (a.m. and p.m. peak hours);
- Van Buren Boulevard/Clay Street (p.m. peak hour);
- Camino Real/Jurupa Road (a.m. peak hour)
- Armstrong Road/Sierra Avenue (a.m. and p.m. peak hours);
- Riverview Drive/Mission Boulevard (p.m. peak hour);
- Rubidoux Boulevard/Market Street (p.m. peak hour); and
- Rubidoux Boulevard/Mission Boulevard (p.m. peak hour).

AWSC = All-Way Stop Control

TWSC = Two-Way Stop Control

Delay = Average control delay in seconds (For TWSC intersections, reported delay is for worst-case movement).

LOS = Level of Service

Shaded Rows Exceed LOS Standard

4.16.1.4 Truck Circulation

At present trucks of various types and sizes travel along freeways and roadways within and adjacent to the City, providing goods and services to commercial and industrial land uses within the City. Commercial uses are located throughout the City along major roads and at major intersections. Industrial uses areas are located in the northwest and northeast portions of the City, mostly north of the SR-60 freeway. Connectivity with regional roadways and freeways provides for an efficient, safe movement of goods both into and out of the City. Although the City does not have specific designated truck routes at present, the following roadway segments have restricted truck access¹ (see Figure 4.16.4):

- Etiwanda Avenue from Riverside Drive to Cantu-Galleano Ranch Road;
- Etiwanda Avenue from Cantu-Galleano Ranch Road to Bellegrave Avenue;
- Jurupa Road from Camino Real to Valley Way;
- Valley Way-Armstrong Road from Jurupa Road to Mission Boulevard;
- Holmes Avenue from Wineville Avenue to Etiwanda Avenue. Etiwanda Avenue between Riverside Drive to Cantu-Galleano Ranch Road; and
- Between Riverside Drive and Cantu-Galleano Ranch Road.

Trucks comprise at least 15 percent of the daily traffic volume on some of the primary goods movement corridors in Riverside County, such as Interstate 15 from Temecula to Ontario, State Route 60 westward from Interstate 215, and Interstate 10 in the Coachella Valley and San Geronio Pass areas. As robust industrial growth is projected to continue within Riverside County, the scale of industrial-related truck traffic will continue to increase. It is anticipated that the region's truck volumes will increase by 40 percent through Year 2020.

4.16.1.5 Alternative (Non-Vehicular) Access

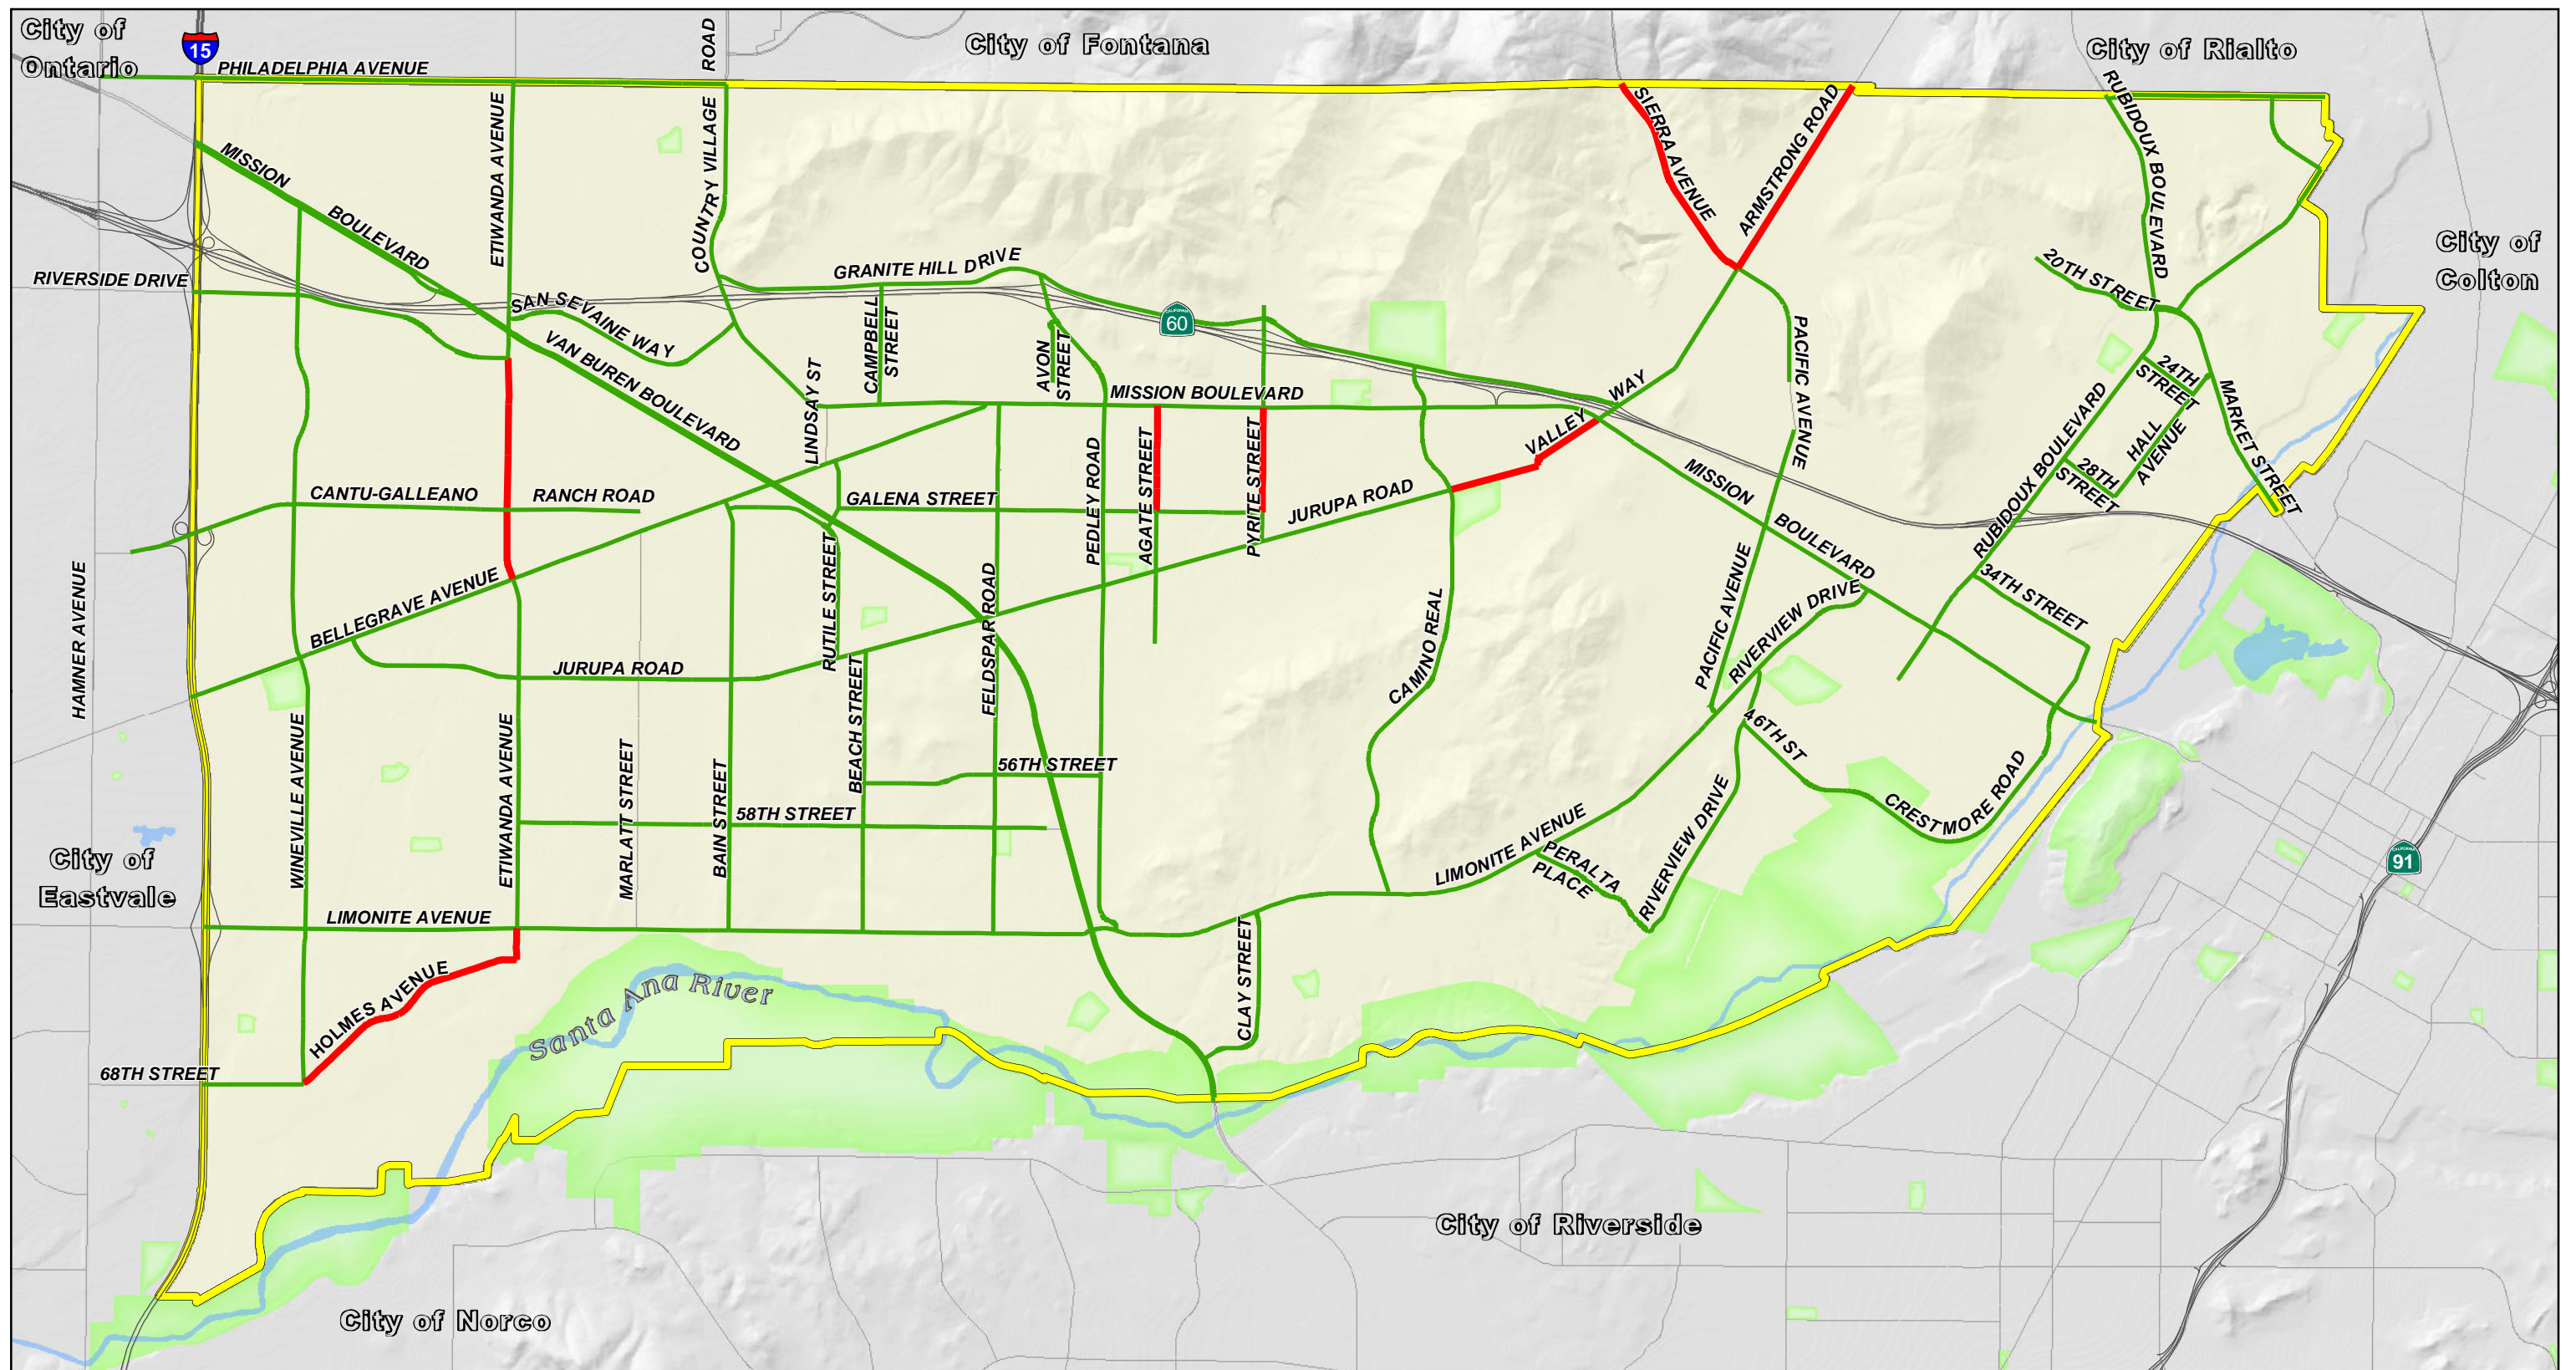

City residents expressed a desire to have choice in travel modes. Planned bicycle routes and trail systems can provide alternatives to driving automobiles. Planned bicycle, pedestrian, and multi-use trail systems will also help the City provide functional multi-modal transportation alternatives for City residents. The key to successful non-vehicular mobility is *connectivity*. Bicyclists, walkers, and equestrians all need to be able to travel seamlessly on a network to reach their destinations.

Bicycle Routes. Bicycle classifications include Class 1 bike paths, Class 2 bike paths, and Combination Trails (Regional/Class 1 bike paths). These facilities are described below. Each type of facility has certain characteristics and offer varying levels of safety, perceived or otherwise.

- Class I: Provides a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross-flow minimized. The right-of-way for Class I bikeways may be substantial, separated from roadways by landscaped strips or other barriers. May be designed and signed to also permit golf carts.
- Class II: Intended for preferential use by bicycles, and are provided for within the paved areas of roadways. Bike lane pavement striping and other markings, and bikeway signs are intended to promote an orderly flow of traffic by establishing demarcations between lanes designated for bicycles and lanes designated for motor vehicles.

¹ Cities have the legal basis for local authorities' to enforce varying weight limits or to restrict vehicles under California Vehicle Code Section 35700 which states that local authorities may fix a weight limit greater than the maximum on local roads.

- **Combination Class I Bikeway/Regional Trails:** Regional collectors linking together the urban and rural communities and major water bodies and regional parks in the County and provide opportunities for long-distance users to take advantage of this system for long one-way or loop-type trips.

Pedestrians. Sidewalks provide safe passage for pedestrians by creating a right-of-way that is separate from vehicular traffic. They are particularly important in, to, and from activity areas around the City, such as shopping districts, schools, recreation centers, and government buildings. Sidewalks encourage pedestrian activity, which is a defining element of community and neighborhood identity. In addition, good pedestrian connections are imperative for transit service because most transit trips begin and end with a pedestrian trip. Lack of sidewalks discourages pedestrian transportation.

The ideal pedestrian system could be described as a grid system of streets with sidewalks on both sides that provide easy and direct connections between the trip origin and destination. It should also provide for convenient and safe street crossings and include sidewalks separated from streets and provide shade from trees.

Multi-Use Trails. The City of Jurupa Valley has a strong equestrian heritage that dates back many years and has many trails throughout the community that reflect the importance of that heritage. Protection of the existing equestrian character of the community and planning for new trails is an expressed priority of the City's General Plan. Trails also provide connections to activity centers within the City and to adjacent communities and provide recreation and leisure opportunities for local residents. Figure 4.16.5 illustrates the network of existing or planned trails within the City. In 2016, the City's trail network is planned and maintained primarily by Jurupa Valley Community Recreation and Parks

District (JARPD), and installed primarily by developers as a condition of City approval of new development. Existing trails in Jurupa Valley at the time of the preparation of this EIR are located along:

- East side of Bain Street, between Bellegrave Avenue and Limonite Avenue;
- West side Etiwanda Avenue between Bellegrave Avenue and Limonite Avenue;
- North and south sides of Bellegrave Avenue, from Etiwanda Avenue to Wineville Avenue;
- East side of Wineville Avenue, between Limonite Avenue and 68th Street;
- East side of Wineville Avenue between Bellegrave Avenue and Redbud Lane;
- South side of Cantu-Galleano Ranch Road between Calle Del Sol and Etiwanda Avenue;
- North side of Limonite Avenue, between Wineville Avenue and Etiwanda Avenue;
- South side of 68th Street between the I-15 freeway and Lucretia Street;
- East side of Lucretia Street between 66th and 68th Streets;
- West side of Armstrong Road between 29th Street and 34th Street; and
- South side of 66th Street between Lucretia Street and Etiwanda Avenue.

In 2016, the City maintains one developed trail along the Santa Ana River Trail which is part of a planned regional trail extending across multiple jurisdictions from the Pacific Ocean in Orange County to the San Bernardino Mountains in San Bernardino County. Some communities have disconnected trails, resulting in a fragmented system. The City has four types of recreational trails:

- **Parkway Trails** are located in, along, or adjacent to a stream's floodplain. Ordinarily it extends the length of the stream but may be broken into segments. Road and trailside parks are part of a parkway.
- **Regional Trails** are the main trails within the County, generally maintained and operated by the County of Riverside's Parks and Open Space District. They are designed to eventually provide linkages between areas which could be quite distant from each other. They are also designed to connect with State and Federal trails as well as trails within Jurupa Valley, other cities and unincorporated areas.
- **Community Trails** are designed to link areas of a community to the regional trail system and to link areas of a community with each other. Such trails are typically maintained and operated by a local parks and recreation district. Community Trails will have an easement of 10 to 14 feet wide and a trail width of 8 feet.
- **Historic Trails** are designated historic routes that recognize the rich history of Jurupa Valley and Riverside County. For example, the Juan Bautista de Anza National Historic Trail, the Southern Immigrant Trail, the Pacific Crest Trail and the Bradshaw Trail are graphical representations of the general location of these historic routes and do not necessarily represent a planned Regional or Community Trail.

Future Multi-Purpose Trails Vision. The vision for the Jurupa Valley Multi-Purpose Community Trails System is a network of pedestrian, equestrian and bicycle trails that link Jurupa Valley's eight distinct communities and its many neighborhoods with open space areas, schools, recreation facilities, regional trail connections and local landmarks (e.g. Mt. Rubidoux). This vision was shaped by many community groups and individuals, including the GPAC, Jurupa Valley residents and property owners, the City of Jurupa Valley decision-makers and staff, Jurupa Area Recreation and Parks District (JARPD), Riverside County Regional Park and Open-Space District, Riverside County Flood Control and Water Conservation District, Inland Empire Resource Conservation District and others. The JARPD's vision for a Master Trails Plan for the City is shown in Figure 4.16.5.

Transit. The Riverside Transit Agency (RTA) provides numerous public transportation opportunities for residents and visitors in Jurupa Valley. RTA operates fixed-routes providing public transit service throughout western Riverside County and coordinates transit services throughout a 2,500-square mile service area. RTA provides local and regional services throughout the region with 35 fixed-routes, eight CommuterLink routes, and Dial-A-Ride services. These public transportation opportunities include fixed-route transit, intercity transit, paratransit, senior transit, rural transit, and private transit services. Transit, paratransit, and private provider services are characterized as being either a fixed-route or demand response system. The Community Transit Association of America (CTAA) defines fixed-route service to include any transit service in which vehicles run along an established path at preset times. Demand response service is any non-fixed-route system of transporting individuals that requires advanced scheduling by the customer including services provided by public entities, non-profits, and private providers. Figure 4.16.6 shows the fixed-route transit services available in the City. Adequate connectivity exists on most major roadways in the east/west and north/south directions with the exception of Van Buren Boulevard from Limonite Avenue to the northwestern City limits, Bellegrave Avenue from the western City limits to Mission Boulevard, Jurupa Road from Van Buren Boulevard to Mission Boulevard, Camino Real from Mission Boulevard to Limonite Avenue, and Etiwanda Avenue from Jurupa Road to the northern City limits.

Commuter Rail. Although railroads are independent operations, the interaction between rail and other modes of transportation does affect the transportation system. Motorized vehicles and pedestrians, as well as freight movement, are affected by delay caused by trains at at-grade crossings. The commuter rail service through the City of Jurupa Valley is provided by Metrolink and is illustrated in Figure 4.16.6.

The City of Jurupa Valley has one Metrolink station, the Jurupa Valley/Pedley Station, located at 6001 Pedley Road (Figure 4.16.6). “Jurupa Valley” was added to the Pedley Station moniker on October 3, 2016 to reflect Jurupa Valley’s incorporation as a City in 2011. The Jurupa Valley/Pedley Station is owned by the Riverside County Transportation Commission and connects to the Riverside-Downtown Station to the east and the East Ontario Station to the west as part of the Metrolink Riverside Line.

The Pedley RTA fixed-route 29 provides a transit connection to the Jurupa Valley/Pedley Metrolink station, and passengers with a valid Metrolink ticket may ride the local bus system for free. Additionally, through collaboration and connectivity with the RTA, Metrolink passengers who take the train to the Riverside-Downtown Station may ride RTA fixed-route 54 to various destinations throughout Downtown Riverside free of charge with a valid Metrolink ticket.

The Riverside-Downtown Station is eleven minutes by train from the Jurupa Valley/Pedley Station and serves as a major public transit hub in the Inland Empire, with four Metrolink Lines (Riverside Line, San Bernardino Line, Inland Empire-Orange County Line, and 91/Perris Valley Line) serving southern California to Oceanside, Downtown Los Angeles, and San Bernardino. On June 6, 2016, Metrolink officially extended the 91/Perris Valley Line southeast from the Riverside-Downtown Station, adding 24 miles of rail and four additional stations (Riverside-Hunter Park, Moreno Valley/March Field, Perris Downtown, and South Perris) from Riverside to Perris Valley.

In conjunction with the existing Riverside Line connecting the Jurupa Valley/Pedley Station to Downtown Los Angeles and Downtown Riverside, the 2016 extension of the 91/Perris Valley Line from Downtown Riverside to Perris Valley contributes to the strategies developed to manage “pass-through” regional traffic in Jurupa Valley.

4.16.1.6 Transportation Demand Management

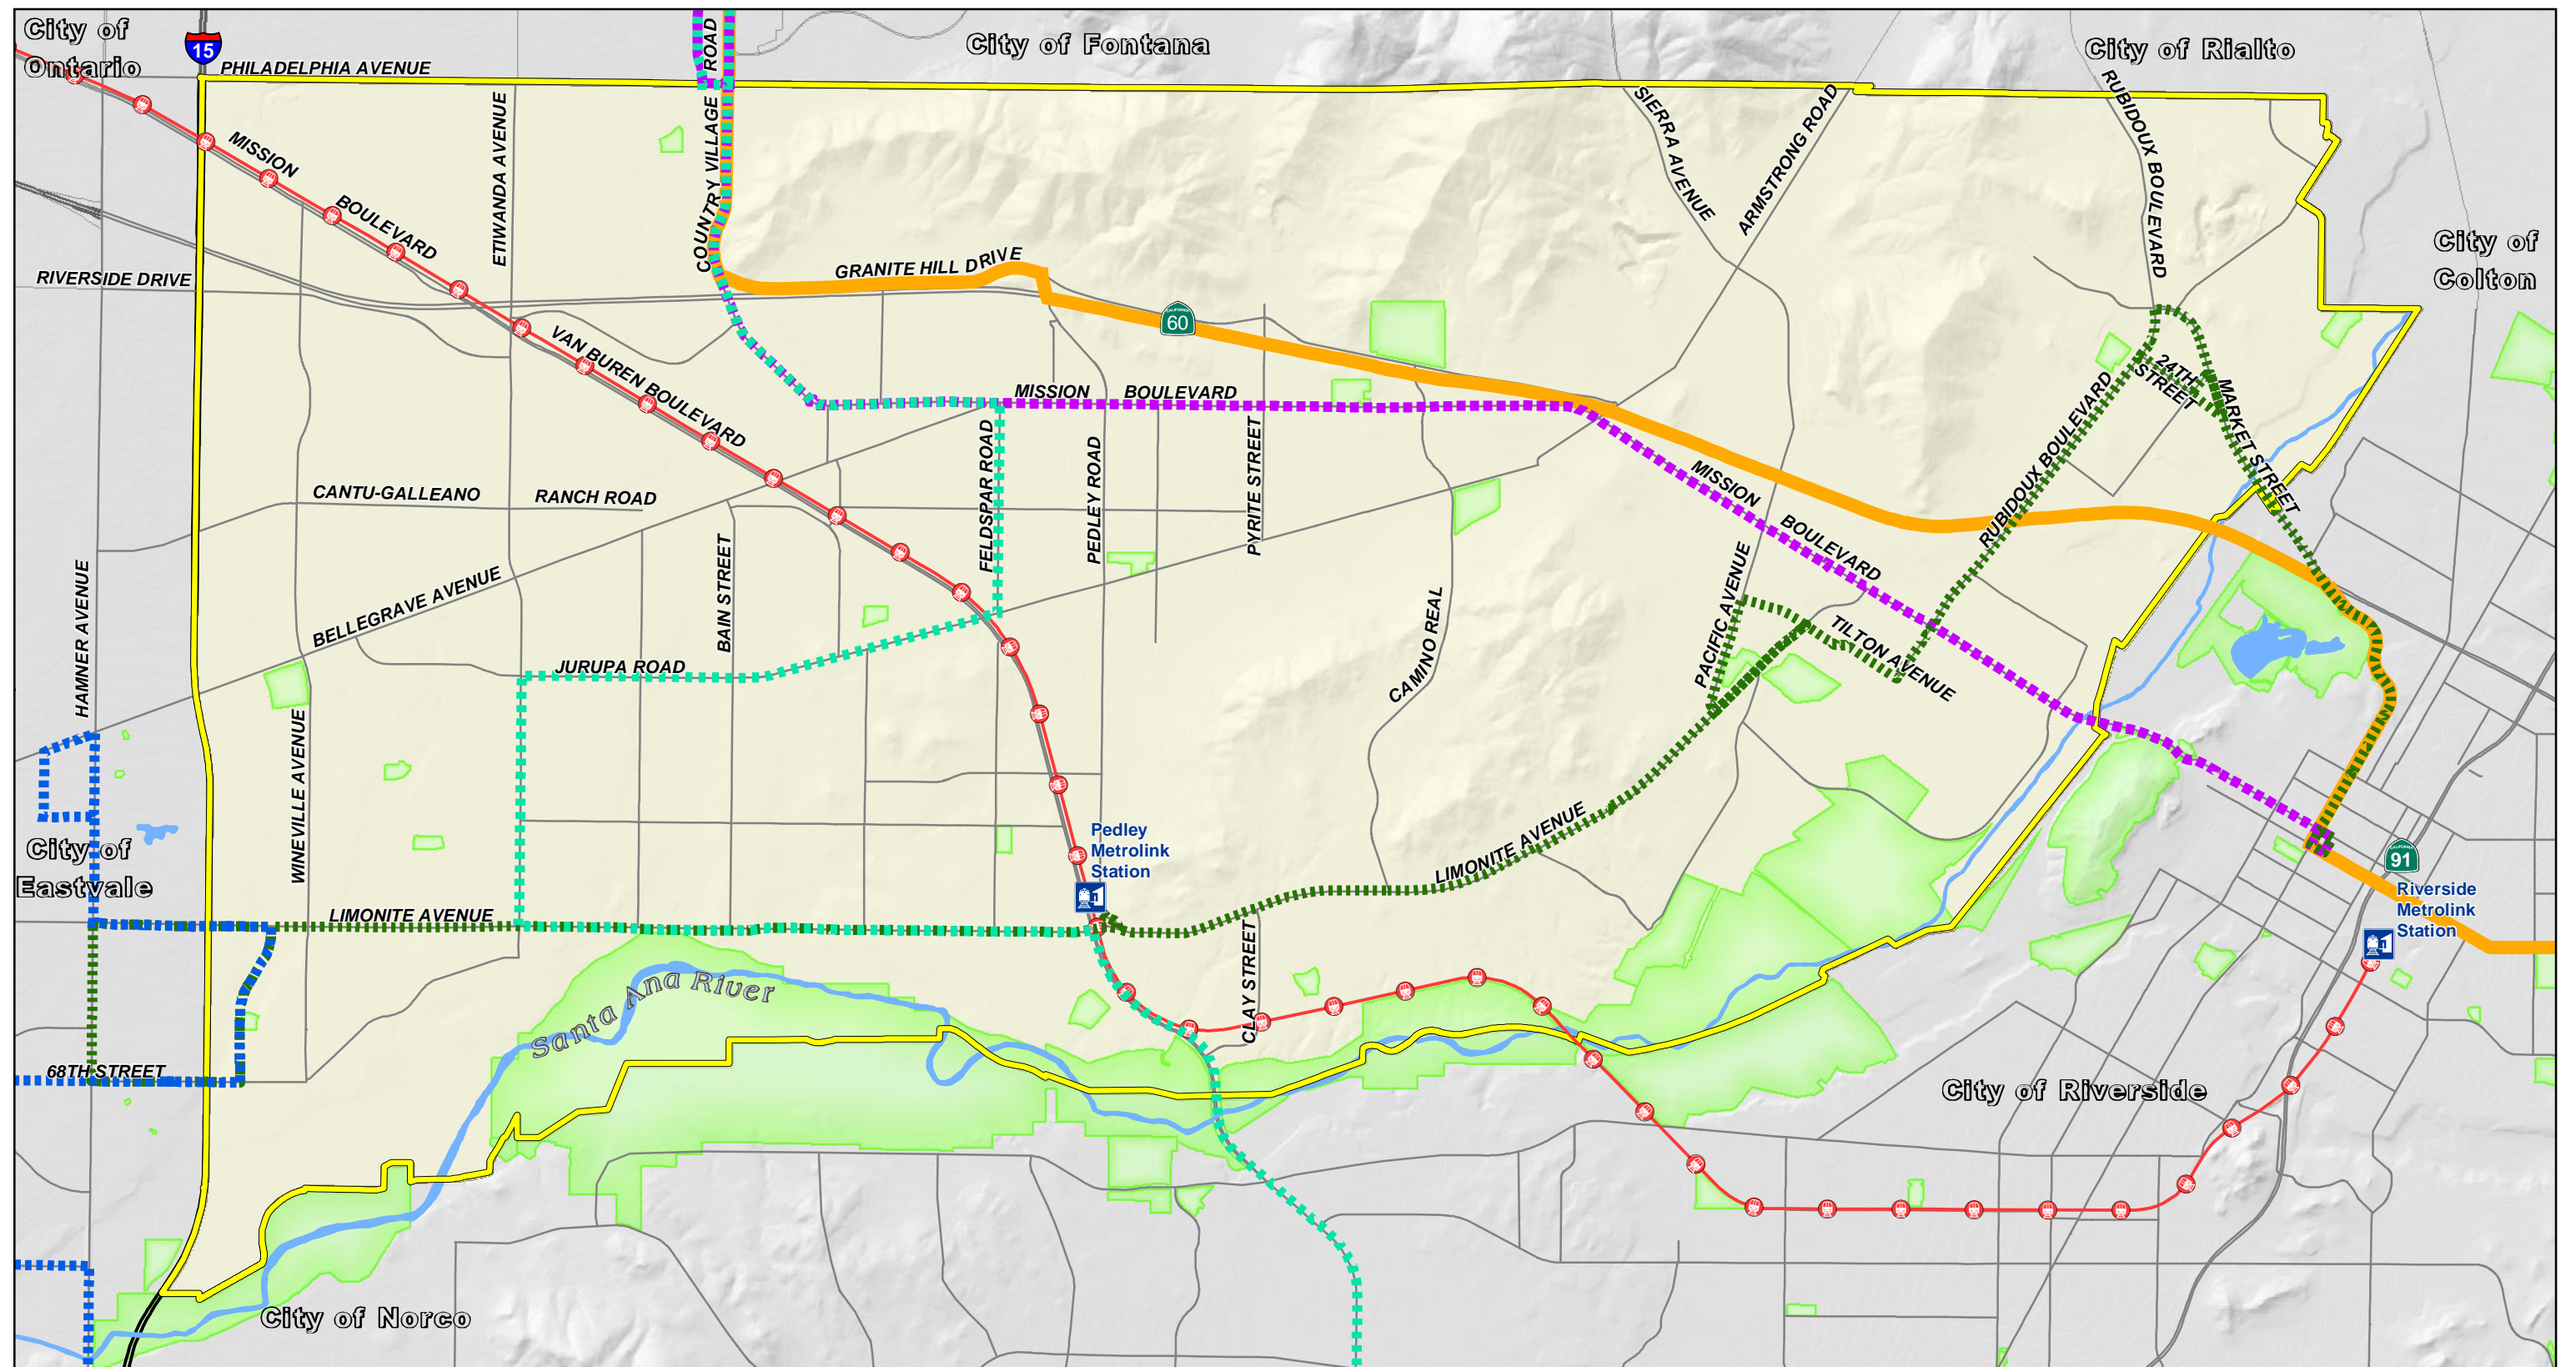

Transportation demand management (TDM) strategies reduce dependence on the single-occupant vehicle, increase the ability of the existing transportation system to carry more people, and enhance mobility along congested corridors. A reduction in peak hour trips, overall roadway congestion, and

improved air quality can be achieved through the implementation of TDM strategies. Examples of these strategies include: telecommuting, flexible work hours, expanded public transit services and other transportation alternatives to the automobile, and electronic commerce that enables people to work and shop from home.

As the City continues to grow, transportation demand management and systems management will be necessary to preserve and increase available roadway "capacity." Level of Service (LOS) standards are used to assess the performance of a street or highway system and the capacity of a roadway. An important goal when planning the local transportation system is to maintain acceptable levels of service along local streets and at intersections, while encouraging the California Department of Transportation (Caltrans), County of Riverside, and the Southern California Association of Governments (SCAG) to determine future infrastructure needs for federal and State highways.

According to the Southern California Association of Governments (SCAG), vanpools will become more prevalent for short-to-medium range commute trips and will supplement the traditional long-distance usage. Park-n-ride facilities and carpooling will also continue to be a significant link between highway and transit modes. In the last decade, the region's number of trips and amount of travel have grown at a much faster rate than the population growth. TDM strategies are designed to counter this trend. The region cannot build its way out of congestion; it has neither the financial resources nor the willingness to bear the environmental impacts of such a strategy. TDM is one of the many approaches that will be used to maintain mobility and access as the region continues to grow and prosper. The County has established TDM Guidelines to reduce single occupant motor vehicle trips during peak hours and modify the vehicular demand for travel to increase the ability of the existing system to carry more people, and the City may choose to adopt similar guidelines.

4.16.1.7 Existing (Baseline) Conditions

Roadway Segments. As shown in previously referenced Figure 4.16.2 and Table 4.16.D, all roadway segments are operating at satisfactory levels of service, with the exception of the following ten (10) locations:

- Country Village Road from Philadelphia Avenue to SR-60 Westbound Ramps;
- Country Village Road from SR-60 Westbound Ramps to SR-60 Eastbound Ramps;
- Van Buren Boulevard from Etiwanda Avenue to Bellegrave Avenue;
- Van Buren Boulevard from Bellegrave Avenue to Jurupa Road;
- Van Buren Boulevard from Jurupa Road to Limonite Avenue;
- Van Buren Boulevard from Limonite Avenue to Clay Street;
- Limonite Avenue from I-15 Southbound Ramps to I-15 Northbound Ramps;
- Limonite Avenue from Etiwanda Avenue to Bain Street;
- Limonite Avenue from Bain Street to Collins Streets; and
- Market Street east of Rubidoux Boulevard.

Intersections. As shown in previously referenced Table 4.16.E, the intersections in the City are currently operating at satisfactory levels of service with the exception of the following thirteen (13) locations:

- Wineville Avenue/Mission Boulevard (p.m. peak hour);
- Mission Boulevard/SR-60 Eastbound Off-Ramp (a.m. and p.m. peak hours);
- Etiwanda Avenue/Limonite Avenue (a.m. and p.m. peak hours);
- Country Village Road/SR-60 Westbound Ramps (a.m. peak hour);
- Pedley Road/SR-60 Westbound Ramps (a.m. and p.m. peak hours);
- Pedley Road/Jurupa Road (a.m. and p.m. peak hours);
- Van Buren Boulevard/Jurupa Road (a.m. and p.m. peak hours);
- Van Buren Boulevard/Clay Street (p.m. peak hour);
- Camino Real/Jurupa Road (a.m. peak hour);
- Armstrong Road/Sierra Avenue (a.m. and p.m. peak hours);
- Riverview Drive/Mission Boulevard (p.m. peak hour);
- Rubidoux Boulevard/Market Street (p.m. peak hour); and
- Rubidoux Boulevard/Mission Boulevard (p.m. peak hour).

4.16.1.8 NOP Comments

No public comments were received during the Notice of Preparation (NOP) period and the scoping meeting. The Riverside County Transportation and Land Management Agency (RCTLMA) sent a letter requesting consideration of traffic impacts to roads under County jurisdiction, and the Riverside County Airport Land Use Commission (ALUC) sent a letter stating the ALUC's right to review future proposed development that fell within its airport's compatibility zones.

4.16.2 Regulatory Framework

4.16.2.1 State Legislation

Governor Brown signed Senate Bill (SB) 743 in 2013 which will eventually change the way that transportation impacts are analyzed under CEQA. SB 743 requires the Governor's Office of Planning and Research (OPR) to amend the CEQA Guidelines to provide an alternative to LOS for evaluating transportation impacts. Particularly within areas served by transit, those alternative criteria must "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." (New Public Resources Code Section 21099(b)(1).) Measurements of transportation impacts may include "vehicle miles traveled, vehicle miles traveled per capita, automobile trip generation rates, or automobile trips generated" (Ibid.). Once the CEQA Guidelines are amended to include those alternative criteria, auto delay will no longer be considered a significant impact under CEQA. Transportation impacts related to air quality, noise and safety must still be analyzed under CEQA where appropriate. SB 743 also amended congestion management law to allow cities and counties to opt out of LOS standards within certain infill areas. SB 743 also included several important changes to CEQA that apply to transit oriented developments, including aesthetics and parking. The Governor's Office of Planning and Research is working with local agencies to develop guidelines to help local governments implement Assembly Bill (AB) 742. In the interim, cities must take into account Vehicle Miles Traveled (VMT) as part of environmental review but may also continue to use LOS to evaluate roadway performance.

4.16.2.2 City of Jurupa Valley General Plan

The Mobility Element of the General Plan contains the following goals, policies, and programs that will regulate the size, design, and activities associated with streets, intersections, and other circulation-related issues.

Mobility Element

Mobility Corridors Policies and Programs

Goal

ME-1 Provides mobility corridors for all modes of travel, including transit, bicyclists, pedestrians, equestrians, rail traffic, and motor vehicles, and that helps reduce locally-generated VMT.

Policies

- ME 1.1 **Mobility Corridors.** Require that the City's mobility corridors:
- Accommodate public transit, motor vehicles, bicyclists, equestrians, and pedestrians within the public right-of-way wherever feasible, using multi-modal, "complete streets" design strategies.
 - Maintain at least a Level of Service (LOS) D or better at all intersections, except where flexibility is warranted based on a multi-modal LOS evaluation, or where LOS E is deemed appropriate to accommodate complete streets/multi-modal facilities.
 - Be designed to meet the needs of the existing population and business activities, as designated by the Land Use Element and in accordance with the Mobility Corridor concept and to maintain consistency with the *Master Plan of Streets and Trails* (to be developed).
 - Be designed so that new roadways, ramps, traffic control devices, bridges or similar facilities, and significant changes to such facilities, are designed to accommodate multi-modal facilities in a balanced manner.

- e. Be maintained in accordance with best practices and the City's Street Improvement Program.

ME 1.2

Corridor Design. When existing mobility corridors require modification or new corridors are established, their design shall be consistent with the following standards:

- a. Roadway designs shall maintain no more than two through travel lanes wherever possible and shall not exceed four through travel lanes except within Express Mobility Corridors, or where a transition is required for roadways that connect to roads in other jurisdictions at the City boundaries.
- b. Existing improvements and rights of way within mobility corridors may establish the general design criteria for the relevant segment in order to avoid replacing existing street improvements or right of way acquisitions for street widening.
- c. Where sidewalks are appropriate, they should be detached and separated from the roadway by landscaped parkways. Where sidewalks are adjacent to curb on an existing roadway within a mobility corridor, sidewalks on either side of the relevant segment may be continued to a reasonable transition point.
- d. Where two lane roadways exist within a mobility corridor in low density, semi-rural areas, widening the existing through lanes for safety may be determined appropriate by the City Council on a case-by-case basis. Adding lanes to accommodate additional vehicular traffic shall require a finding by the City Council that the need for additional capacity takes precedence over preserving the existing corridor character.
- e. Provisions for bus turnouts, bus shelters, and connectivity to the Jurupa Valley/Pedley Metrolink Station.

ME 1.3

Preserving Community Character in Mobility Corridors. Mobility corridors shall be designed to consider the land use and aesthetic contexts of their surroundings and shall include the following features unless determined infeasible or inconsistent with General Plan goals and policies:

- a. Mobility corridors shall include parkways, street trees and where appropriate, medians that include substantial landscape treatments and that separate pedestrians and equestrians from vehicle traffic and provide a pleasant and inviting traveling experience for non-vehicular travel.
- b. Express and Primary Mobility Corridors shall include a landscaped raised median wherever possible and shall include substantial setbacks and landscape buffers to protect adjacent noise-sensitive uses.
- c. Mobility corridors shall be designed to produce an attractive, safe, and high-quality environment of tree lined streets within a semi-rural, small-town community.

Programs

(TBA)

Roadway Network Policies and Programs

Goal

ME-2

Maintains an interconnected network of bicycle, pedestrian, equestrian, and public transit facilities that encourage non-automotive travel.

Policies

ME 2.1

Roadway System. Require that the City's mobility corridors:

- a. Accommodate public transit, motor vehicles, bicyclists, equestrians, and pedestrians within the public right-of-way wherever feasible, using multi-modal, “complete streets” design strategies.
- b. Maintain at least a Level of Service (LOS) D or better at all intersections, except where flexibility is warranted based on a multi-modal LOS evaluation, or where LOS E is deemed appropriate to accommodate complete streets/multi-modal facilities.
- c. Be designed to meet the needs of the existing population and business activities, as designated by the Land Use Element and in accordance with the Mobility Corridor concept and to maintain consistency with the *Master Plan of Streets and Trails* (to be developed).
- d. Be designed so that new roadways, ramps, traffic control devices, bridges or similar facilities, and significant changes to such facilities, are designed to accommodate multi-modal facilities in a balanced manner.
- e. Be maintained in accordance with best practices and the City’s Street Improvement Program.

- ME 2.2 **Transportation Infrastructure.** Traffic control devices and transportation infrastructure shall operate to serve the needs of all roadway users, including motorists, public transit, pedestrians, equestrians, and cyclists.
- ME 2.3 **Development Project Impacts.** Require development projects to analyze potential off-site traffic impacts and related environmental impacts through the CEQA process and to mitigate adverse impacts to less-than-significant levels.
- ME 2.4 **Transportation Options.** Support development of a variety of transportation options for major employment and activity centers, including direct access to transit routes, primary highways, bikeways, park-n-ride facilities, and pedestrian facilities.
- ME 2.5 **Public Transit Connections.** Support the development of transit connections that link the village centers located throughout the City and as identified in the Land Use Element and in the specific, community, and village plans.
- ME 2.6 **Efficient Use.** Utilize existing infrastructure and utilities to the maximum extent practicable and provide for the logical, timely, and economically efficient extension of infrastructure and services.
- ME 2.7 **System Evaluation.** Evaluate the planned circulation system as needed to enhance the street network to respond to anticipated growth and mobility needs.
- ME 2.8 **Interagency Cooperation.** Cooperate with local, regional, State, and federal agencies to establish an efficient circulation system.
- ME 2.9 **Project Integration.** Encourage development of projects that facilitate use of alternative modes of transportation, including public transit, light rail, pedestrian-oriented retail and activity centers, equestrian trails and related facilities, and bicycle facilities.
- ME 2.10 **Transportation Projects.** Consider the following regional and community wide transportation projects when developing transportation improvement plans in Jurupa Valley:
- a. Construct new interchanges on State Route 60 at Camino Real and Sierra Avenue/Pacific Avenue.
 - b. Support the development of regional transportation facilities and services (such as high-occupancy vehicle lanes, express bus service, and fixed transit facilities) to

encourage the use of public transportation and ridesharing for longer distance trips.

- c. Construct new grade separated interchanges on Van Buren Boulevard and parallel rail lines at Jurupa Road, Limonite Avenue, and Galena/Bellegrave Avenue.

Programs

- ME 2.1.1 **Mitigation Measures.** As necessary to mitigate potential impacts, the City will implement improvements identified as mitigation measures in the Final Environmental Impact Report for the 2017 General Plan.
- ME 2.1.2 **School Planning.** Provide assistance to school districts in facility planning and transportation operations to ensure safety for users of all modes during school pick-up, drop-off, and other special events.
- ME 2.1.3 **Sidewalks.** Prepare and maintain an inventory of sidewalk facilities to determine where pedestrian improvements are most needed to provide a continuous safe route for pedestrians.
- ME 2.1.4 **Barrier-free Access.** Retrofit streets and require developments to install public improvements that provide disabled access and mobility on public streets, as required by State or federal law.
- ME 2.1.5 **Master Plan of Streets and Trails.** Within two years of adopting the 2017 General Plan, prepare a Master Plan of Streets and Trails, including specific plans for future major capital projects such as the Cantu-Galleano/Bellegrave connection, cross sections for unimproved linkages to be developed through land development, design standards for mobility corridors to address all transportation needs, including rural and local streets, industrial collector streets, etc. Phase 1 of the plan shall address mobility corridors and major roadways and shall be prepared within one year of 2017 General Plan adoption. Phase 2 shall include Local Streets, Collectors, and the trails network as described in Policies and programs Sections 3.0 and 4.0. The Plan shall be consistent with this Mobility Element.

Levels of Service

- ME 2.11 **Target Levels of Service.** Until a multi-modal based metric is adopted, City will maintain the following target Levels of Service, or “LOS”:
 - a) LOS "C" along all City maintained roads and conventional State highways. As an exception, LOS "D" may be allowed in designated areas, only at intersections of any combination of Secondary Highways, Major Highways, Arterials, Urban Arterials, Express ways, conventional State highways or freeway ramp intersections.
 - b) LOS "E" may be allowed in designated village centers to the extent that it would support transit-oriented development and walkable communities. LOS F is not considered an acceptable level of service.

Planned Circulation Systems

- ME 2.12 **Multi-Modal Level of Service.** When the City determines there is a suitable tool available, we will measure and evaluate roadway performance and CEQA compliance and mitigation from a multi-modal, “complete streets” perspective using Vehicle Miles traveled (VMT), consistent with SB 743 and State guidelines.
- ME 2.13 **Traffic Study Guidelines.** Apply level of service and/or VMT standards to new development, consistent with State law, based on new Traffic Study Guidelines, to be developed by City to evaluate traffic impacts and identify appropriate mitigation measures for new development.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- ME 2.14 **Traffic Impact Evaluation.** New developments shall be reviewed to identify project-related impacts to circulation facilities and shall provide site improvements necessary to mitigate such impacts. The Engineering Department may require developers and/or subdividers to provide traffic impact studies prepared by qualified professionals to identify the impacts of a development.
- ME 2.15 **Traffic Impacts.** Traffic studies prepared for development entitlements (tracts, plot plans, public use permits, conditional use permits, etc.) shall identify project-related traffic impacts and determine the "significance" of such impacts in compliance with CEQA.
- ME 2.16 **Impact Mitigation.** Mitigate direct project related traffic impacts by requiring street improvements as a condition of approval, or for indirect and cumulative impacts, through the payment of mitigation fees to fund improvement of streets and other transportation facilities.

Programs

- ME 2.1.6 **Traffic Study Guidelines.** City will prepare and adopt Traffic Study Guidelines to aid in the evaluation of transportation-related impacts to circulation facilities, residential neighborhoods, environmental conditions and open space, and to identify the appropriate mitigation for such impacts.
- ME 2.1.7 **Planned Network Improvements.** City will evaluate and where appropriate, include the planned intersection and roadway segment improvements as described in the 2017 General Plan Mobility Element in its Capital Improvement Program. City will implement the improvements as resources allow.

Pedestrian and Bicycle Facilities Policies and Programs

Goal

- ME-3 Promotes trails for pedestrian, bicycle, and equestrian use for recreational as well as local travel needs.

Policies

- ME 3.1 **Bicycle and Pedestrian Trail Network.** Plan, develop and maintain a bikeway and pedestrian network according to a Bicycle and Pedestrian Plan, to be prepared following General Plan adoption. Bicycle facilities should be located off-road to the greatest extent possible, such as along flood control channels, the Santa Ana River banks, regional parks, and within residential developments and greenbelts.
- ME 3.2 **Bicycle- and Pedestrian-Oriented Site Design.** Encourage bicycle- and pedestrian-oriented site design in commercial areas.
- ME 3.3 **Design Standards.** In determining the appropriate street or intersection design standard to apply, the City will seek to balance cyclists' and pedestrians' safety and convenience with that of other roadway users.
- ME 3.4 **Intersections and Crossing Locations.** Utilize federal, State, and local guidelines and standards for traffic operations, signal timing, geometric design, Universal Access (ADA) and roadway maintenance that facilitate walking and bicycling at intersections and other key crossing locations.
- ME 3.5 **Grant Funding.** Pursue federal, State, county, regional, and other funding opportunities to increase non-motorized mode share percentages, improve transportation system performance, and increase user safety.
- ME 3.6 **Internal Linkages.** Bicycle and pedestrian trail networks should be located and designed to link to retail and commercial centers.

ME 3.7 **External Linkages.** Link on-road and off-road bicycle and pedestrian facilities to existing and planned bicycle and pedestrian facilities in adjacent and regional jurisdictions.

ME 3.8 **Traffic Control Devices.** Traffic control devices and transportation infrastructure will be operated to serve the needs of all users of the roadway and pedestrians.

Programs

ME 3.1.1 **Pedestrian and Bikeway Plan.** Prepare a comprehensive Master Pedestrian and Bikeway Plan within two years of adoption of this General Plan Update.

Pedestrian Facilities

Policies

ME 3.9 **Pedestrian Facilities.** Public streets shall provide pedestrian facilities in accordance with adopted City standards. Sidewalks shall be separated from the roadway by a landscaped parkway, except where the Planning Director determines that attached sidewalks are appropriate due to existing sidewalk location, design, or other conditions.

ME 3.10 **Accessible Pedestrian Facilities.** All new streets shall have provisions for the adequate and safe movement of pedestrians, including improvements for the elderly and disabled.

ME 3.11 **Pedestrian Connectivity.** Require development projects and site plans to be designed to encourage pedestrian connectivity among buildings within a site, while linking buildings to the public bicycle and pedestrian network.

ME 3.12 **Pedestrian Facility Improvements.** As funding permits, the City will install, or require as a condition of development approval, pedestrian facility improvements such as installation of signs, signals, sidewalks, street crosswalks, proper lighting, pedestrian- and equestrian-activated signals, street trees, benches, transit shelters, trails, landscaping, and other ancillary pedestrian features.

ME 3.13 **Sidewalk Repair or Replacement.** Repair or replace substandard public sidewalks and paving in public areas, in accordance with a Sidewalk Repair Program.

ME 3.14 **Public Pedestrian Improvements.** Encourage public pedestrian improvement projects such as public art, fountains, street trees, lighting, and directional signs.

ME 3.15 **Pedestrian Facilities.** Provide facilities for the safe movement of pedestrians within new developments, as specified in the General Plan and City Engineering and trail standards.

ME 3.16 **Removal of Barriers.** Maximize visibility and access and encourage the removal of barriers (walls, easements, and fences) for safe and convenient movement of pedestrians within and between adjacent developments, where appropriate. Special emphasis should be placed on the needs of disabled persons considering Americans with Disabilities Act (ADA) regulations.

ME 3.17 **Public Transit Connections.** Ensure safe pedestrian access from developments to existing and future transit routes and terminal facilities through project design.

ME 3.18 **Safe Crossings.** City will plan for and implement pedestrian access facilities improvements that are consistent with road design standards, including provisions for interconnected pedestrian and equestrian paths, sidewalks, crosswalks, timing and actuation of traffic signals, in-street annunciators, or other features necessary for safe street crossing.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- ME 3.19 **Safe Routes to Schools.** Collaborate with school districts and other agencies to provide and designate safe routes to schools, consisting of sidewalks, bicycle facilities, or improved trails.
- ME 3.20 **Development Review.** Consult the Engineering Department as part of the development review process regarding any development proposals where pedestrian facilities may be warranted. City may require both the dedication and improvement of pedestrian facilities as a condition of development approval.
- ME 3.21 **ADA Compliance.** Require safe pedestrian walkways that comply with the Americans with Disabilities Act (ADA) requirements within commercial, office, industrial, mixed use, residential, and recreational developments.
- ME 3.22 **Trail Crossings.** Require, where appropriate and feasible, the construction of overpasses or under crossings where pedestrian, bicycle, and equestrian facilities intersect freeways, expressways, urban arterials, and primary roadways.
- ME 3.23 **Facility Improvements.** Review all existing roadways without pedestrian facilities when they are considered for improvements (whether maintenance or upgrade) to determine if new or improved facilities are warranted.

Programs

(TBA)

Bicycle Facilities

Policies

- ME 3.24 **Integration of Bicycle Planning.** Integrate development of the bicycle facilities network into larger land use planning and development projects.
- ME 3.25 **Bicycle-Friendly Infrastructure.** Require bicycle-friendly infrastructure design using new technologies and innovative treatments, where necessary to improve bicyclists' safety and convenience.
- ME 3.26 **Bicycle Facilities.** In preparing City land use plans and applicable Capital Improvement Programs, the City will address bicycle needs, including:
- Attractive destination facilities, such as secure bicycle lockers, showers, and changing rooms that are conveniently located for bicyclists (i.e., a bike station);
 - Facilities for bicycle parking within newly-built and renovated multi-family residential developments, residential condominiums and apartment conversions to condominiums, multi-use, and non-residential sites;
 - Safe, secure, attractive, and convenient bicycle parking; and
 - Wayfinding systems and traffic control signage or markings for all bicycle facilities.
- ME 3.27 **Bicycle and Pedestrian Wayfinding.** Bicycle and pedestrian network wayfinding and information shall be provided through signs, street markings, or other technologies.
- ME 3.28 **Regional Bicycle and Pedestrian Coordination.** Coordinate regional trail and bicycle planning, acquisition, and development efforts with adjacent jurisdictions.
- ME 3.29 **Off-Road Trail Linkages.** Where feasible, the City connects off-road trails with the on-road transportation network.
- ME 3.30 **Bicycle and Pedestrian Facility Design Standards.** City shall utilize the Caltrans Highway Design Manual and other infrastructure guidelines as appropriate to design and maintain bicycle and pedestrian facilities to high safety standards.

- ME 3.31 **Safety Awareness.** Encourage and support the creation of comprehensive safety awareness programs for pedestrians, equestrians, cyclists, and drivers.
- ME 3.32 **Improvements along Bicycle and Pedestrian Routes.** Improve and maintain alternative transportation infrastructure and assign a high priority to improvements along primary pedestrian and bicycle routes to schools.
- ME 3.33 **Roadway Repairs.** When roadway repairs are done by the City or other agencies, such as utility companies, the roadway shall be restored in accordance with City standards, with restriping suitable for bicycle use, as appropriate.
- ME 3.34 **Bikeway Width.** Where feasible, design bikeways beyond the minimum required widths, but within federal, State, or local standards (For example, Class 2 lanes should not exceed eight feet in width to avoid confusion with driving lanes).
- ME 3.35 **Bicycle Parking.** Require convenient, secure, attractive, and easy to use bicycle parking to be provided at public buildings, commercial areas, multi-family residential development projects, and at schools and parks, and encourage other agencies to provide bicycle parking for rail transit and Park-n-Ride facilities.
- ME 3.36 **Bicycle Improvements Conditionally Required.** Require the construction or rehabilitation of bicycle facilities and/or “bicycle-friendly” improvements as a condition of approving new development, in accordance with Zoning Ordinance standards.

Programs

- ME 3.1.2 **Zoning Ordinance Update.** Update the Zoning Ordinance to require end of trip bicycle facilities, as appropriate to the scale and use of the project, such as bicycle parking, lockers, and showers in new or major remodels of multi-family residential and non-residential uses.
- ME 3.1.3 **Class II Bike Lanes.** Identify and designate Class II bike lanes where considered appropriate and there is sufficient curb-to-curb street paveout width.
- ME 3.1.4 **Education.** Promote Bicycle and Walking Safety lessons in local recreation programs and collaborate with local schools and law enforcement to offer bicycle and pedestrian skills and safety education programs.
- ME 3.1.5 **Safe Routes to Schools.** Expand the Safe Routes to School program, including City sponsorship of bicycle safety training, International Walk/Bike to School events, cyclovias and similar events, and encourage all Jurupa Valley schools to get involved.
- ME 3.1.6 **Bicycle-Friendly Businesses.** Establish a bicycle-friendly business program to incentivize and facilitate use of alternative modes of transportation by employees and customers.

Equestrian and Multi-Purpose Trail Facilities Network Policies and Programs

Goal

- ME-4 Establishes policies that coordinate the circulation system with the General Plan, specific plans and village center plans, and Land Use Element, and that provide direction for future decision-making

Policies

- ME 4.1 **Equestrian and Multi-Purpose Trails.** Provide trails for the safe movement of pedestrians and equestrians within and between new developments where

appropriate, and as specified in the General Plan and City Engineering and trail standards.

ME 4.2 **Removal of Barriers.** Maximize visibility and access and encourage the removal or modification of barriers (e.g. walls, fences, utilities, drainage ditches, refuse bins) for safe and convenient equestrian movement. Special emphasis should be placed on creating and maintaining safe and convenient trail linkages with the Equestrian Lifestyle Protection Overlay.

ME 4.3 **Development Review.** Consult the Engineering Department as part of the development review process regarding any development proposals where trail facilities or improvements may be warranted. City may require both the dedication and improvement of pedestrian and equestrian facilities as a condition of development approval.

ME 4.4 **Safe Crossings.** City will plan for and implement pedestrian and equestrian access that is consistent with road design standards, including provisions for interconnected pedestrian and equestrian paths, sidewalks, crosswalks, timing and actuation of traffic signals, in-street annunciators, or other features necessary for safe street crossing.

ME 4.5 **Facility Improvements.** Review all existing roadways without pedestrian facilities when they are considered for improvements (whether maintenance or upgrade) to determine if new or improved facilities are warranted.

Programs

ME 4.1.1 **Equestrian and Multipurpose Trails Implementation.** Implement the Equestrian Trails Plan as shown in Figure 3-48 (page 3-88) and implement the City Multi-Purpose Trail System Plan, to be developed.

ME 4.1.2 **Trail Linkages.** Locate and design trails to provide access to or link scenic corridors, schools, parks, and other natural areas.

ME 4.1.3 **Trail Access.** Require that all development proposals located along a planned trail or trails provide access to the trails system.

ME 4.1.4 **Gated Communities.** Ensure that existing and proposed gated communities with dedicated trails and new gated communities do not preclude trails from traversing their properties.

ME 4.1.5 **Trail Siting and Design.** Adhere to the following guidelines when siting or designing a trail:

- a. Permit urban trails to be located in or along transportation rights-of-way in fee, utility corridors, and along irrigation and flood control waterways so as to take advantage of existing rights-of-way, separate traffic and noise, and provide more services at less cost in one corridor.
- b. Secure separate rights-of-way for non-motorized trails when physically, financially, and legally feasible.
- c. Where a separate right-of-way is not feasible, maintain recreation trails within the City right-of-way.
- d. Use trail design standards which will minimize maintenance due to erosion or vandalism.
- e. When a trail is to be reserved through the development approval process, base the precise trail alignments on the physical characteristics of the property, assuring connectivity through adjoining properties.
- f. Place all recreation trails a safe distance from the edge of active aggregate mining operations and separate them by physical barriers.

- g. Install warning signs indicating the presence of a trail at locations where regional or community trails cross public streets with high amounts of traffic.
- h. Take into consideration such issues as sensitive habitat areas, flood potentials, access to neighborhoods and open space, safety, alternate land uses, and usefulness for both transportation and alternate land uses when designing and constructing trails.
- i. Coordinate with other agencies and/or organizations (such as the U.S. Fish and Wildlife Service and the Department of Transportation) to encourage the development of multi-purpose trails. Potential joint uses may include historic and environmental interpretation, access to fishing areas and other recreational uses, opportunities for education, and access for the disabled.
- j. Work with landowners to address concerns about privacy, liability, security, and trail maintenance.

ME 4.1.6 **Rail Fencing.** Install, or require the installation where appropriate, of a rail type fence separating road rights-of-way from adjacent trail easements and designed with two to three rails constructed of white PVM material.

Trail Acquisition, Maintenance, and Funding

Policies

- ME 4.6 **Acquisition of Right-of-Way.** To expand its trails network, the City will:
- a. Promote public/private partnerships for trail acquisition.
 - b. Determine which public and/or private agencies have easements or existing, unused rights-of-way which could be incorporated as trail linkages. Such agencies may include the Riverside County Flood Control District, community service districts, utilities, and railroads.
 - c. Evaluate the potential use of private-landowner tax credits for acquiring necessary trail easements and/or rights-of-way. A system such as this would allow a landowner to dedicate an easement for trail purposes in exchange for having that portion of the property assessed as open-space instead of a higher land-use category.
- ME 4.7 **Alternative Trail Locations.** Examine the use of utility easements and rights-of-way for use as public trail linkages to the regional trails system and/or other open space areas. Potential corridors include the right-of-way easements for:
- a. Water and wastewater mains
 - b. Water storage project aqueducts
 - c. Flood control channels and maintenance access ways
 - d. Overhead utilities, and
 - e. Unused or abandoned rail rights-of-way
- ME 4.8 **Trail Maintenance.** To help maintain its trails, the City will:
- a. Consider the use of volunteers, associations, or private landowner maintenance agreements, and/or adopt-a-trail programs sponsored by various groups,
 - b. Discourage unauthorized use of trails by motorized vehicles, which may cause trail deterioration, create an unsafe environment, and/or disrupt the enjoyment of the trails by intended trail users. These methods may include the installation of gates and motorcycle barriers, posting signs prohibiting unauthorized activities, or implementing educational programs to encourage the proper use of trails.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- ME 4.9 **Trails Program Funding.** Consider all possible sources of funding to plan, acquire, and construct trails. Sources can include, but not be limited to, development mitigation fees, private foundation grants, and/or funds from local, regional, State, and federal government entities.

Programs

- ME 4.1.7 **Grants.** Working with other agencies, the City will seek grants to help develop, operate, and maintain a comprehensive trail system through Jurupa Valley's designated open spaces, trails is a priority of the City. Trails also provide connections to activity centers within the City and to adjacent communities and provide recreation and leisure opportunities for residents.

Public Transit Policies and Programs

Goal

- ME-5 Creates a comprehensive, interconnected, and economical system of public transportation options that help reduce traffic congestion and vehicle emissions, and that help reduce dependence on the personal automobile.

Policies

- ME 5.1 **Transit Funding.** Support transit operator efforts to maximize revenue sources for short- and long-range transit needs, including the operators' use of federal grants, State enabling legislation, and fare box revenue, and other appropriate funding sources. This can be accomplished through the Riverside County Transportation Commission (RCTC) and development of Short- and Long-Range Transit Plans.
- ME 5.2 **Transit Usage.** Support transit operators' programs to foster transit usage.
- ME 5.3 **"Clean" Transit.** Demand that local and regional public transit providers operate and maintain fleet vehicles so as to not generate significant noise and air quality impacts.
- ME 5.4 **Paratransit Service.** Support appropriate and cost-effective transit services for seniors, disabled persons, and those who are unable to drive motor vehicles by coordinating with regional transit providers, non-profit service providers, private services, and community-based services.
- ME 5.5 **Transit Right-of-Way.** Reserve sufficient right-of-way to plan for and accommodate public transit service.
- ME 5.6 **Village Centers.** Incorporate the potential for public transit service in the design of developments that are identified as major trip attractions (i.e., village centers, tourist attractions and employment centers).
- ME 5.7 **Street Design for Transit.** Design the physical layout of major streets and collector highways to facilitate transit operations. Locations of bus turnouts and other transit features should be considered.
- ME 5.8 **Transit Oriented Development.** Consider offering developer incentives to locate new development near transit-oriented areas such as village centers, mixed use areas, or along a designated transit corridor near a transit station. Incentives could include density bonuses, parking reductions, or fast-track development review and/or permit processing.
- ME 5.9 **Public Transit Planning.** Encourage public transit development and expanded use through higher densities where appropriate, innovative street and building design, street improvements, and right-of-way dedication.
- ME 5.10 **Transit-Only Lanes.** Advocate the designation of exclusive transit-only lanes on freeways.

- ME 5.11 **Transit Centers and Park-N-Rides.** Encourage the development of transit centers and park-n-rides for use by all transit operators, including development of multi-modal facilities.
- ME 5.12 **Bus Shelters.** Coordinate with transit operators to ensure that bus shelters are provided along and/or near all transit routes, whenever feasible. New developments may be required to provide bus shelters due to existing or future planned transit routes, even if demand for pedestrian facilities are not immediately warranted.
- ME 5.13 **Accessible Transit.** Require bicycle, pedestrian, and wheelchair access to all transit facilities and maintain bicycle, pedestrian, and wheelchair facilities so that they are safe, attractive, and well lit.
- ME 5.14 **Metrolink Facilities and Services.** Encourage continued improvements to the Jurupa Valley/Pedley Metrolink Station facilities and services.
- ME 5.15 **Linkage.** Design and improve street and trails to link all transportation modes, including public transit, with the Metrolink station, park-n-ride facilities, and other transit centers.

Program

- ME 5.1.1 Work with RTA to identify shelter options to ensure adequate safety and comfort for transit users and encourage RTA to provide bus shelters at all bus stops along Limonite, Mission, and Jurupa Road.

Freight Movement and Airports Policies and Programs

Goal

- ME-6 Accommodates and manages *commercial* truck traffic to promote local jobs and economic growth and protect public safety, health, and welfare.
- ME-7 Accommodates continued, safe freight railroad operations in Jurupa Valley.
- ME-8 Helps preserve, protect, and enhance safety and land use compatibility at Flabob Airport.

Commercial Trucks

Policies

- ME 6.1 **Commercial Truck Roadway Standards.** Implement commercial truck roadway standards, where practicable, to accommodate large trucks where extensive truck travel involving regional movement of bulk goods is anticipated.
- ME 6.2 **Freight Rail System.** Support continued operation of the regional freight rail system, which offers safe, convenient, and economical transport of commodities.
- ME 6.3 **Rail Separation.** Support provisions to physically separate heavily traveled rail lines from heavily traveled streets and roads.
- ME 6.4 **Intermodal Freight Facilities.** Encourage intermodal freight facilities and a shift of a portion of the goods previously moved by trucks onto the rail freight system.

Programs

- ME 6.1.1 **Identify Street Improvements.** Identify and where feasible, help Implement street and highway improvements and maintenance projects to provide convenient and

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

economical goods movement, particularly where heavy commercial truck traffic or congestion exists.

ME 6.1.2 **Establish Truck Routes.** Study commercial truck movements and operations in the City and establish weight-restricted truck routes away from noise-sensitive areas, where feasible.

ME 6.1.3 **Implement Truck Routes.** Limit truck traffic in residential and commercial areas to designated truck routes; limit construction and commercial truck through-traffic to designated routes; and include truck routes on City's Master Plan of Streets and Trails.

Railroad Freight Movement

Policies

ME 6.5 **Railroad Buffers.** Require sufficient buffers and physical safety barriers between railroad tracks and new noise-sensitive development, such as residential uses, schools, and public facilities.

ME 6.6 **Grade Separations and Crossings.** As resources allow, support construction of grade separations and crossings; or reconstruct existing grade separations and crossings as necessary for the smooth flow of traffic within the City, consistent with plans developed by the Western Riverside Council of Governments (WRCOG) and other responsible agencies.

ME 6.7 **Rails-To-Trails.** Reserve, where warranted, the repurposing of abandoned rail right-of-ways for public trail use or for alternative transportation purposes.

ME 6.8 **Transit Center Dedications.** Dedicate right-of-way and land for future transit centers in village centers and major activity areas (high concentrations of employment and residential uses) and away from noise-sensitive land uses.

Programs

(TBA)

Airports

Policies

ME 6.9 **Interagency Coordination.** Promote coordinated long-range planning between the City, County of Riverside, Airport Land Use Commission, Flabob airport authorities, businesses, and the public to meet City, County, and the region's aviation needs.

ME 6.10 **Airport Land Use Planning.** Apply a variety of land use planning techniques to maintain the viability of Flabob Airport. (See Land Use Element, Flabob and Riverside Municipal Airports Overlay).

ME 6.11 **Noise Reduction Measures.** Encourage the use of noise-reducing flight procedures for airplanes and helicopters, such as maintaining flight altitudes or using take-off, landing, and general flight patterns that avoid noise-sensitive neighborhoods to the extent permitted by Federal Aviation Administration regulations.

Programs

(TBA)

Scenic Corridors, Street Character, and Design Goals, Policies, and Programs

Goal

- ME-9 Preserves and where possible, enhances scenic corridors and communities' visual character through context-sensitive street and roadway design that removes blight, preserves scenic views, retains mature trees, protects sensitive environments and wildlife habitats, and enhances neighborhood safety and character.

Policies

Scenic Corridors

- ME 7.1 **Scenic Corridors Designated.** The route segments shown in *Figure 3-62* designated as Local Scenic Corridors.
- ME 7.2 **Scenic Corridor Preservation.** Protect and where possible, enhance views of important scenic resources from highways, streets, and roads designated as local scenic corridors, in accordance with City policies.
- ME 7.3 **Development along Scenic Corridors.** Public and Private development along and within local scenic corridors shall comply with the following:
- a. Public and private development projects, including noise walls, shall not wall off scenic roadways or block views of scenic resources, such as Santa Ana River or the Jurupa Mountains.
 - b. Development projects, including signs, visible from and located 500 feet of a scenic roadway shall be considered "sensitive" and require architectural review.
 - c. As part of the city's environmental review process, blocking of views along scenic roadways should be considered a significant environmental impact.
 - d. Signs along scenic roadways should not obstruct or detract from scenic vistas or views.
 - e. Street lights should be low scale and focus light at intersections where it is needed most. Tall light standards should be avoided. Street lighting should be integrated with other street furniture at locations where views are least disturbed.
- ME 7.4 **Public Equipment and Facilities.** The City and other agencies should locate and design utility and circulation-related equipment and facilities to avoid blocking or cluttering views of scenic resources from scenic roadways, consistent with the following standards:
- a. Whenever possible, signs in the public right-of-way should be consolidated onto a single low-profile standard.
 - b. Public utilities along scenic highways should be installed underground.
 - c. The placement and design of fencing, walls, landscaping, and street trees should not block views of scenic resources from Scenic Routes. Clustering of street trees along scenic roadways should be considered as an alternative to uniform spacing.
 - d. Traffic signals with long mast arms should be discouraged along scenic roadways.
- ME 7.5 **Creation of Scenic Highways.** The City will encourage the creation of State-designated (Caltrans) Scenic Highways within Jurupa Valley and adjoining Riverside, San Bernardino, and Orange County areas when:
- a. Reviewing draft county general plan elements or major revisions to them.
 - b. Reviewing changes to the Regional Transportation Plan (RTP) as a member agency of the Southern California Association of Governments (SCAG).

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- c. Reviewing development projects that are referred to the City by State or County agencies and that are located along locally designated scenic routes.

Transportation System Landscaping

- ME 7.6 **Highway Landscaping.** Encourage Caltrans to install and maintain landscaping and other mitigation elements along freeways and highways, especially when they are adjacent to existing residential or other noise sensitive uses.
- ME 7.7 **Use of Native Plants and Recycled Water.** Encourage the use of drought-tolerant California native plants and the use of recycled water for roadway landscaping.
- ME 7.8 **Landscape Buffers.** Require parking areas of all commercial and industrial land uses that abut residential areas to be buffered and shielded by adequate landscaping and/or other effective visual screens.

Programs

(TBA)

System Operation, Maintenance, and Funding Policies and Programs

Goal

- ME-10 Develops implementation strategies and identifies funding sources to provide for the timely implementation of the Mobility Element's goals, policies, and programs.
- ME-11 Provides strategies to manage "pass-through" regional traffic such that the character of the community is preserved.

Policies

System Access

- ME 8.1 **Dedicated Access.** All developments shall provide dedicated and recorded public access, except as provided for under the statutes of the State of California.
- ME 8.2 **Driveway Location and Number.** Limit driveway locations and/or number based upon the street's General Plan classification and function. Driveways shall be located a sufficient distance away from major intersections and designed to allow for safe, efficient operation and minimize traffic conflicts.
- ME 8.3 **Driveways along Highways.** Discourage driveways taken directly off General Plan designated highways. Access may be permitted off of General Plan designated highways only if such access poses no traffic hazards or impacts to local streets.
- ME 8.4 **Common Access Driveways.** Provide common access via shared driveways and/or reciprocal access easements whenever access must be taken directly off a General Plan designated arterial street or highway. Parcels on opposite sides of a highway shall have access points located directly opposite each other, whenever possible, to allow for future street intersections and increased safety.

Programs

(TBA)

Design, Construction and Maintenance

Policies

- ME 8.5 **City Standards.** Design, construct, and maintain streets as specified in the City Street Improvement Standards and Engineering Specifications.

- ME 8.6 **Facilities Maintenance.** Maintain the transportation network while providing for future expansion and improvement based on travel demand and the development of alternative travel modes.
- ME 8.7 **Design Guidelines.** Develop and implement street and intersection design guidelines and update City Engineering Standards for consistency with the design guidelines.
- ME 8.8 **Residential Neighborhood Streets.** Streets in residential neighborhoods shall be designed to enhance and be compatible with neighborhood character, circulation patterns, and modal choices and to provide safe access to neighborhood-serving commercial uses, schools, churches, parks, and recreational areas.
- ME 8.9 **Equestrian Streets.** In the Equestrian Lifestyle Protection Overlay, local residential streets shall also serve as equestrian routes for the entire right-of-way width and shall be posted to require motor vehicles to yield to equestrians.
- ME 8.10 **Right-of-Way Improvements.** Developers shall be responsible for right-of-way dedication and improvements that provide access to and enhance new developments. Improvements include street construction or widening, new paving, frontage improvements like curb, gutter, sidewalks, street trees, trails, and parkways, installation of traffic signals, pavement markings, and annunciators, and other facilities needed for the safe and efficient movement of pedestrians, bicyclists, equestrians, and motor vehicles.
- ME 8.11 **Street Design for Heavy Trucks.** Design interior collector street systems for commercial and industrial subdivisions to accommodate the movement of heavy trucks.
- ME 8.12 **Heavy Truck Restrictions in Residential Neighborhoods.** Restrict heavy truck through-traffic and parking in residential and village center areas and plan land uses so that trucks do not need to traverse these areas.
- ME 8.13 **Off-Street Loading Facilities.** Design off-street loading facilities for new commercial and industrial developments so that they do not face surrounding roadways or residential neighborhoods. Truck backing and maneuvering to access loading areas shall not be permitted on public streets, except when specifically permitted by the City Engineer.
- ME 8.14 **Driveway Access.** Locate and design commercial and industrial land uses so that they take driveway access from streets with a General Plan classification of arterial or greater, and limit the number of such commercial access points by encouraging shared access. Exceptions may be considered for isolated convenience commercial uses, such as standalone convenience stores or gas stations. Industrial or business park type developments may be served via an internal network of Industrial Collector streets.
- ME 8.15 **Intersection Design.** Design street intersections, where appropriate, to ensure the safe, efficient passage of pedestrians, bicyclists, equestrians, and vehicles.
- ME 8.16 **Roadway Design.** Design curves and grades to permit safe movement of vehicular traffic at the road's target speed. Target speed should be consistent with and complement the character of the adjacent area.
- ME 8.17 **Sight Distance.** Provide adequate sight distances for safe pedestrian, equestrian, and vehicular movement at all intersections.
- ME 8.18 **Additional Right-of-Way.** Require additional right-of-way or easements where needed for utilities, noise mitigation, trails, bikeways, street trees, slope landscaping or stabilization, or drainage facilities.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- ME 8.19 **Right-of-Way Alignment.** Align right-of-way dedications with existing dedications along adjacent parcels and maintain widths consistent with the ultimate design standard of the road, including required turning lanes.
- ME 8.20 **Pass-Through Traffic.** To the maximum extent feasible, design and maintain roadways to direct “pass through” traffic to use Regional Routes and Highways, Highway Arterials, and Parkways, not Arterials, Collectors, or Local streets.
- ME 8.21 **Traffic Calming.** Consider using innovative traffic-calming techniques, such as roundabouts, road “diets”, raised cross walks, stop signs, speed tables, bulbouts, planters, textured street paving, curbside parking, offset intersections, and other traffic control measures designed to slow traffic speeds where appropriate to reduce speed and increase safety.
- ME 8.22 **Emergency Response Routes.** Provide a street network with quick and efficient routes for emergency vehicles, meeting necessary street widths, turn-around radii, and other factors as determined by the City Engineer in consultation with emergency responders.
- ME 8.23 **On-Street Parking.** Design and manage on-street parking, where appropriate, to reduce traffic congestion, meet parking needs, and improve pedestrian and equestrian safety.
- ME 8.24 **Off-Street Parking.** Design off-street parking facilities to support and enhance the concept of walkable and transit-oriented communities by including separated walkways, bicycle and motorcycle parking, landscaping including trees with overhead canopies, shielded down lighting for safety, and other amenities, as appropriate.
- ME 8.25 **Street and Highway Widening or Extensions.** Evaluate proposed street and highway extensions or widening projects for potential noise, air quality, and aesthetic impacts on existing and future land uses. Require that the effects of truck routes, speed limits, and motor vehicle volumes on noise levels are evaluated and mitigated during the environmental review process.
- ME 8.26 **Transportation Noise.** Control transportation noise and speeds through proper roadway design and coordination of truck and vehicle routing and speed.
- ME 8.27 **Wildlife Corridors.** Design roadways to accommodate wildlife crossings or established corridors whenever necessary and physically feasible.
- ME 8.28 **Dirt Roads.** Identify dirt roads serving residential areas which may be impacted by traffic from new developments and design new developments to discourage traffic from using existing dirt roads. When this is unavoidable, require that new developments participate in the improvement of the affected dirt roads.
- ME 8.29 **TDM in Development Review.** Encourage on-site features in all new non-residential developments that support Transportation Demand Management (TDM). Potential features may include preferred rideshare parking, car sharing vehicles, on-site food service, and exercise facilities.

Programs

(TBA)

Regional Coordination

- ME 8.30 **Interagency Coordination.** Coordinate with transportation planning, programming, and implementation agencies such as Caltrans, Southern California Association of Governments, Riverside County Transportation Commission, Western Riverside Council of Governments, and the cities adjacent to the City of Jurupa Valley on

various studies relating to freeway design, high occupancy vehicle/high occupancy toll lanes, and transportation corridor planning, construction, and improvement.

- ME 8.31 **Joint Funding and Improvements.** Partner with government agencies and authorities to secure funding and encourage transportation corridor improvements between Jurupa Valley and Los Angeles and Orange counties.

Programs

(TBA)

System Funding

- ME 8.32 **Balanced Funding.** Implement a mobility plan that balances transportation facility needs with City fiscal capabilities. Supplement City funding with grant funding whenever possible.
- ME 8.33 **Spread Costs.** Develop funding tools that help equitably spread costs of transportation system improvements among the users of the systems, including developers, property owners, community service districts, City and County, State and Federal agencies.
- ME 8.34 **Funding Tools.** Use annexations, redevelopment agreements, tax-increment financing, revenue-sharing agreements, tax allocation agreements, and/or the CEQA process as tools to ensure that new development pays a fair share of costs to provide local and regional transportation improvements and to mitigate cumulative traffic impacts.
- ME 8.35 **Capital Improvement Program.** Prepare a multi-year Capital Improvement Program (CIP) that establishes improvement priorities and scheduling for transportation project construction over a period from five to ten years. The CIP will be reviewed and updated annually.
- ME 8.36 **Regional Traffic Mitigation Fees.** Participate in the establishment of regional traffic mitigation fees and/or road and bridge benefits districts to be assessed on new development. The fees shall cover a reasonable share of the costs of providing local and subregional transportation improvements needed for serving new development.

Programs

(TBA)

Environmental Considerations

- ME 8.37 **Tree Preservation in Rights-of-Way.** Preserve mature trees with street or highway rights-of-way that are identified as superior examples of California native species or naturalized tree species.
- ME 8.38 **Flood Protection.** Provide all roadways located within identified flood areas with adequate flood control measures and locate roadways outside identified flood plains whenever possible.
- ME 8.39 **Impact Mitigation.** Control dust and mitigate other environmental impacts during all stages of roadway maintenance, repair, or construction.
- ME 8.40 **Noise Mitigation.** Protect residents from transportation generated noise hazards through the use of increased setbacks, landscaped berms, walls or other sound absorbing barriers, or a combination of these measures along freeways, expressways, and four-lane highways to protect adjacent noise-sensitive land uses from traffic- and rail-generated noise impacts.

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

- ME 8.41 **Habitat Conservation Planning.** Incorporate specific requirements of the Western Riverside County Multiple Species Habitat Conservation Plan into transportation plans and development proposals.
- ME 8.42 **Habitat Protection.** Avoid disturbance of plant and animal communities, wildlife corridors, and biotic resource areas when identifying alignments for new roadways, or for improvements to existing roadways and other transportation system improvements.
- ME 8.43 **Hazardous Materials Transport.** Review and monitor proposals for expansion of pipelines for the transport of suitable products and materials, and require mitigation of environmental impacts. In particular, require mitigation of the potential for hazardous chemical or gas leakage and explosion.
- ME 8.44 **Air Quality.** Incorporate specific requirements of the General Plan Air Quality Element into transportation plans and development proposals where applicable.
- ME 8.45 **Non-Motorized Transportation.** Encourage the use of alternative non-motorized transportation and the use of non-polluting vehicles.
- ME 8.46 **Runoff Control.** Implement National Pollutant Discharge Elimination System Best Management Practices relating to construction of roadways to control runoff contamination from affecting the groundwater supply.

Programs

(TBA)

Transportation Systems Management

- ME 8.47 **TSM Strategies.** Give priority to Transportation System Management (TSM) strategies to improve level of service, particularly in areas that are fully developed.
- ME 8.48 **Traffic Signal Synchronization.** Construct and improve traffic signals at appropriate intersections. Whenever possible, traffic signals should be spaced and operated as part of coordinated systems to optimize traffic operation.
- ME 8.49 **Street Widening.** Consider roadway widening or extension at public expense to relieve congestion only after the determination has been made that TSM measures will not be effective and that widening would be consistent with and contribute to the character of the community.
- ME 8.50 **Turn Lanes.** Install special turning lanes whenever necessary to relieve congestion and improve safety for all users.
- ME 8.51 **Bus Turnouts.** Encourage development of bus turnouts, bus stop signage, and other features to improve traffic flow and safety, and to encourage use of public transit.
- ME 8.52 **ITS.** Encourage the integration of Intelligent Transportation Systems (ITS), consistent with the principles and recommendations referenced in the Inland Empire ITS Strategic Plan, as the transportation system is improved and maintained.

Programs

- ME 8.1.1 **New Interchanges on State Route 60.** Construct new interchanges on State Route 60 at Camino Real and Sierra Avenue/Pacific Avenue.
- ME 8.1.2 **Regional Transportation Facilities and Services.** Support the development of regional transportation facilities and services (such as high-occupancy vehicle lanes, express bus service, and fixed transit facilities), which will encourage the use of public transportation and ridesharing for longer distance trips.

ME 8.1.3 **New Interchanges on Van Buren Boulevard.** Construct new interchanges on Van Buren Boulevard at Jurupa Road and Galena/Bellegrave Avenue.

4.16.3 Proposed General Plan Circulation System

Improvements to the City's roadway network are proposed under the future 2035 General Plan Build-out scenario and are based on input from Jurupa Valley citizens, the General Plan Advisory Committee, and City Staff, and reflect the Jurupa Valley Mobility Goals previously outlined in Section 4.16.2.2. The roadway and intersection circulation improvements include five roadway improvements established from the outset by City staff plus intersection improvements defined by the peak hour intersection level of service analyses conducted for the proposed General Plan. The roadway and intersection analyses are detailed in Section 4.16.6.2.

Roadway Segments. The following improvements are proposed to roadway segments within the City in an attempt to reflect Jurupa Valley's Mobility goals:

- **Etiwanda Avenue:** The roadway segment south of Limonite Avenue is proposed to include a two-lane Secondary roadway bridge extension from 66th Street over the Santa Ana River to Arlington Avenue.
- **Van Buren Boulevard:** The roadway segments from Etiwanda Avenue to Clay Street are proposed to be widened from a four-lane Urban Arterial to an eight-lane Expressway. The intersection of Van Buren Boulevard/Bellegrave Avenue is proposed to realign to the south with a new connector at Van Buren Boulevard/Van Buren Connector. Also, the intersection of Van Buren Boulevard/Jurupa Road is proposed to realign to the north with a new connector at Van Buren Boulevard/Van Buren Connector.
- **Cantu-Galleano Ranch Road:** The roadway segments between Etiwanda Avenue and Van Buren Boulevard are proposed to be widened from four-lane Major roadways to six-lane Urban Arterials. The roadway segment east of Etiwanda Avenue is proposed to align with Bellegrave Avenue and create a new intersection at Bellegrave Avenue/Cantu-Galleano Ranch Road.
- **Bellegrave Avenue:** The roadway segment between Marlatt Street and Dodd Street is proposed to realign with Cantu-Galleano Ranch Road and end at the new intersection of Bellegrave Avenue/Cantu-Galleano Ranch Road. A new intersection west of Bain Street is proposed to connect at Van Buren Connector/Bellegrave Avenue.
- **Market Street:** The roadway segment east of Rubidoux Boulevard is proposed to be widened from a two-lane Arterial to a three-lane Major Roadway.

Intersections. The following improvements are proposed to City intersections in support of the City's General Plan Land Use Element:

- **I-15 Southbound Ramps/Limonite Avenue:** Optimize the signal timing.
- **I-15 Northbound Ramps/Limonite Avenue:** Optimize the signal timing.
- **Wineville Road/Mission Boulevard:** Install a traffic signal.
- **Wineville Road/Riverside Drive:** Install a traffic signal.
- **Wineville Road/Cantu-Galleano Ranch Road:** Optimize the signal timing.
- **Mission Boulevard/SR-60 Eastbound Off-Ramp:** Optimization of the signal timing improves operations. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.

- **Etiwanda Avenue/Philadelphia Avenue:** Stripe eastbound right-turn lane and add overlap phasing. Add westbound right-turn lane with overlap phasing. Add a second northbound left-turn lane. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the p.m. peak hour.
- **Etiwanda Avenue/SR-60 Eastbound On-Ramp:** Install a traffic signal. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the p.m. peak hour.
- **Etiwanda Avenue/Van Buren Boulevard:** Southbound right-turn lane with overlap phasing and optimization of signal timing improvements operations. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Etiwanda Avenue/Bellegrave Avenue:** Optimize the signal timing.
- **Etiwanda Avenue/Limonite Avenue:** Add an eastbound left-turn lane and westbound left-turn lane. Add protected phasing to the eastbound/westbound approaches.
- **Country Village Road/Philadelphia Avenue:** Optimize the signal timing.
- **Country Village Road/SR-60 Westbound Ramps:** Add a second westbound right-turn lane; this will require modification of the westbound off-ramp. Stripe a southbound right-turn lane, and restripe the southbound through lane to a through/right-turn lane.
- **Van Buren Boulevard-Bellegrave Connector/Bellegrave Avenue:** Install a traffic signal. Add a westbound left-turn lane and restripe the southbound approach to include a southbound left-turn lane and through/right-turn lane. Restripe the northbound approach to include a northbound left-turn lane and a through/right-turn lane.
- **Van Buren Boulevard/Van Buren-Bellegrave Connector:** Install a traffic signal and add two northbound left-turn lanes, a second eastbound right-turn lane, and a southbound right-turn lane.
- **Pedley Road/SR-60 Westbound Ramps:** Install a traffic signal.
- **Pedley Road/SR-60 Eastbound Ramps:** Install a traffic signal. Although this intersection operates satisfactorily, a signal has been added due to the addition of a signal at Pedley Road/SR-60 Westbound Ramps.
- **Jurupa Road/Van Buren-Jurupa Connector:** Install a traffic signal. Add an eastbound left-turn lane.
- **Van Buren Boulevard/Van Buren-Jurupa Connector:** Install a traffic signal. Add two northbound left-turn lanes.
- **Pedley Road/Jurupa Road:** Install a traffic signal.
- **Pedley Road-Morton Avenue/Limonite Avenue:** Optimize the signal timing.
- **Pyrite Street/SR-60 Westbound Ramps:** Install a traffic signal.
- **Pyrite Street/SR-60 Eastbound Ramps:** Install a traffic signal.
- **Clay Street/Limonite Avenue:** Add overlap phasing to the northbound right-turn lane.
- **Van Buren Boulevard/Clay Street:** Optimize the signal timing.
- **Camino Real/Jurupa Road:** Add a northbound right-turn lane with overlap phasing.
- **Camino Real/Limonite Avenue:** Add overlap phasing to the southbound right-turn lane.

- **Byrne Road-SR-60 Eastbound Ramps/Mission Boulevard:** Add a southbound left-turn lane. This improvement will require modification to the off-ramp.
- **Valley Way/Jurupa Road:** Install a traffic signal. Add an eastbound left-turn lane.
- **Armstrong Road/Sierra Avenue:** Add overlap phasing to the eastbound right-turn lane. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Valley Way/SR-60 Westbound Off-Ramp-Granite Hill Drive:** Restripe the north leg to separate the southbound left-turn lane and right-turn lane. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Valley Way/SR-60 Westbound On-Ramp:** This intersection may be combined with Valley Way/SR-60 Westbound Off-Ramp-Granite Hill Drive as a five-legged intersection with one signal controller. This will require Caltrans review. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Valley Way/Mission Boulevard:** Optimize the signal timing. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Riverview Drive/Mission Boulevard:** Add a second northbound right-turn lane and add overlap phasing to the northbound right-turn lane and eastbound right-turn lane. Restripe the north leg approach to the southbound left-turn lane and through/right-turn lane. Change the northbound/southbound signal phasing from split phasing to protected phasing. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
- **Rubidoux Boulevard/Market Street:** Add overlap phasing to the northbound right-turn lane and reduce the median on the east leg to accommodate a separate westbound left-turn lane. Restripe the westbound through/left-turn lane to a through lane. Change the eastbound/westbound signal phasing from split phase to protected phasing. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the p.m. peak hour.
- **Rubidoux Boulevard/SR-60 Eastbound Ramps:** Add a northbound right-turn lane and an eastbound left-turn lane. The eastbound left-turn lane will require widening of the eastbound off-ramp and will require Caltrans review.
- **Rubidoux Boulevard/Mission Boulevard:** Restripe the south leg to accommodate separate northbound left-turn lane and through/right-turn lane. Change the northbound/southbound signal phasing from split phase to protected phasing. Add overlap phasing to the southbound and westbound right-turn lane.
- **Bellegrave Avenue/Cantu-Galleano Ranch Road:** Install a traffic signal. Add a westbound left-turn lane and overlap phasing to the northbound right-turn lane.

The City has examined and is continuing to examine a number of physical and operational changes or improvements to its circulation network in an attempt to meet its stated Level of Service standards. However, based on right-of-way constraints and the City's desire to maintain its rural character and discourage cut-through traffic on local streets, no additional roadway segment or intersection improvements are proposed for the 2035 General Plan Build-out. Figure 4.16.7 illustrates the City's 2035 General Plan Build-out circulation system. Figure 4.16.8A and Figure 4.16.8B illustrate the detailed intersection geometric improvements recommended for the 2035 General Plan Build-out circulation system.

4.16.4 Methodology

As stated previously, the primary purpose of the traffic analysis performed for proposed General Plan is to identify the circulation system improvements and programs necessary to maintain or improve levels of service and to achieve mobility goals proposed as part of the Mobility Element. Improvements to the City's roadway network were listed in Section 4.16.3.

The General Plan Traffic Study, including the base assumptions, technical methodologies, and analytical study area, was developed in conjunction with City staff and complies with the Congestion Management Program (CMP) for Riverside County and California Department of Transportation (Caltrans) traffic impact analysis guidelines.

The City of Jurupa Valley Focused Version of the Riverside Transportation Analysis Model (RivTAM) was developed to evaluate the trip-making characteristics and resulting travel patterns of the Jurupa Valley General Plan. To accomplish this, the land uses in the City were converted to socioeconomic data, the roadway network was updated, and the model processes were performed. The resulting forecasts were evaluated to determine appropriate circulation system features. Detailed level of service analyses were conducted using the TRAFFIX 8.0 computer program. In consultation with City staff, the traffic analysis zone (TAZ) structure of the RivTAM was used with only minor modifications to 3 zones. Existing TAZs were divided along logical boundaries (e.g., major parcel lines) to allow a more detailed representation of traffic within the study area. The base year socioeconomic data for each TAZ were verified, and General Plan build-out socioeconomic data were developed for each TAZ consistent with the Land Use Element of the proposed General Plan. Base year and build-out socioeconomic data for each TAZ are included in Appendix K. For TAZs outside the City, the forecast year 2030 socioeconomic data already in the model were maintained for the build-out scenario because no later data are available.

Existing roadway segment bidirectional volumes are derived from Annual Average Daily Traffic (AADT) volume data provided by the City and through other available sources. Total bidirectional volumes on study area segments have been divided into passenger vehicles and truck volumes based on the truck percentages available from the most recent AADT truck counts for each segment. Consistent with *Highway Capacity Manual* methodologies, PCE volumes for these segments were computed using a PCE factor of 1.5 for all trucks, since the impact of trucks on freeway operations is less than on intersection operations. The CMP guidelines require examination of traffic impacts under forecast General Plan build-out conditions for Year 2035. All selected intersections were evaluated by applying the 2000 Highway Capacity Manual (HCM) methodology for calculating levels of service at signalized and unsignalized intersections.

The roadway, intersection, and freeway analyses are detailed in Section 4.16.6.2. The analysis includes an assessment of Future 2035 No-Project and Future 2035 General Plan Build-out Scenarios. The Future 2035 No Project scenario includes land use data and the roadway network from the County of Riverside's Circulation Element adopted in 2008 through the Riverside County Integrated Project (RCIP) which was adopted by the City after the City incorporated. The General Plan Build-out includes the land use data and roadway network from the City of Jurupa Valley 2017 General Plan Land Use Element. For both scenarios, build-out conditions are assumed for year 2035.

4.16.5 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the State CEQA Guidelines to determine the significance of environmental impacts. The proposed project could create potentially significant traffic impacts associated with the following CEQA traffic impact thresholds of significance if it would:

- Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.
- Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the County Congestion Management Agency for designated roads or highways.
 - (A significant traffic impact would occur if the project would cause a decrease from a standard LOS to a less than standard LOS at a study intersection based on a peak hour analysis. The following are the LOS standards that apply within the project study area:

- City LOS D is based on the Jurupa Valley General Plan Mobility Element and applies to all study area intersections. Therefore, any study intersection potentially operating at LOS E or F requires mitigation.
- Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.
- Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).
- Result in inadequate emergency access.
- Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

There are currently no approved procedures, database materials, standards, significance thresholds, or other guidelines for traffic impact studies using Vehicle Miles Traveled (VMT) rather than Level of Service (LOS) per SB 743. However, the following analysis does present programmatic information on VMT for existing and future conditions which may help establish the groundwork for future VMT studies when state guidelines are adopted.

4.16.6 Programmatic Impact Evaluation

4.16.6.1 Conflict with Applicable Circulation Plan

| | |
|-----------|--|
| Threshold | Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit. |
|-----------|--|

For the purpose of the following analysis, it is important to note that the General Plan is a regulatory document that sets the framework for future growth and development and does not directly result in or cause development. Before any development can occur, it must be analyzed for conformance with the General Plan, zoning requirements, and other applicable local and state requirements; comply with the requirements of CEQA; and obtain all necessary clearances and permits.

Programmatic Impacts. The Mobility Element of the proposed 2017 General Plan would establish the local circulation plan to guide growth in Jurupa Valley. All of the goals, policies, or programs of the proposed Mobility Element are generally consistent and do not conflict with the County's Jurupa Area Plan that was the Circulation Element and has guided growth in the City up to adoption of the 2017 General Plan. Once adopted, the Mobility Element will become the circulation plan for the entire City, so there will be no significant impacts regarding conflicts with applicable plans.

Evaluation of General Plan Goals and Policies. All of the goals, policies, and programs of the 2017 General Plan Mobility Element are specifically related to the movement of goods and people, including pedestrians, bicycles, transit, light rail and commuter rail, air, and automobile traffic flows. There are too many to enumerate in this section, see the previous Section 4.16.2 for the complete text of the goals, policies, and programs. In general, the Mobility Element is organized as follows:

- Goal ME-1: Create an effective transportation network
 - Policies ME 1.1 – 1.3
- Goal ME-2: Create a multi-modal alternative circulation network
 - Policies ME 2.1 – 2.16
- Goal ME-3: Develop and promote the use of trails for recreational and local travel needs

- Policies ME 3.1 – 3.36
- Goal ME-4: Coordinate circulation system with General Plan, specific plans, and Land Use Element
 - Policies ME 4.1 – 4.9
- Goal ME-5: Comprehensive, interconnected, and economical public transportation network
 - Policies ME 5.1 – 5.15
- Goal ME-6: Manage commercial truck traffic
 - Policies ME 6.1 – 6.4
- Goal ME-7: Safe freight railroad operations
 - Policies ME 6.5 – 6.8
- Goal ME-8: Safety and land use compatibility at Flabob Airport
 - Policies ME 6.9 – 6.11
- Goal ME-9: Scenic corridors, street character, and design
 - Policies ME 7.1 – 7.8
- Goal ME-10: Fund and implement the Mobility Element's goals, policies, and programs
 - Policies ME 8.1 – 8.52
- Goal ME-11: Strategies to manage "pass-through" traffic
 - Policies ME 8.1 – 8.52

Level of Programmatic Impact Before Mitigation. Upon adoption, the goals and policies of the Mobility Element of the proposed 2017 General Plan will become the approved circulation plan for Jurupa Valley, so there will be no significant impacts in this regard.

Programmatic Mitigation Measures. No mitigation required.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals and policies will become the adopted circulation plan for the City, and no mitigation is required.

4.16.6.2 Level of Service Impacts

| | |
|-----------|---|
| Threshold | Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways. |
|-----------|---|

Programmatic Analysis. Future development of Jurupa Valley will contribute traffic onto local roadways, at local intersections, Congestion Management Program roadways, and onto area freeways as growth occurs. Projected growth by 2035 will result from conversion of a total of 4,258 acres of now vacant land which is 15.3 percent of the total City area. If development occurs at a regular pace, it would equal roughly 213 acres or 0.8 percent per year for approximately 20 years (2015 to 2035). Future growth is expected to add a maximum of 13,140 new residential units and maximum of 33 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*). The additional residential units alone could contribute approximately 131,400 total vehicular trips each day with over 13,000 trips during peak hours. The non-residential uses would add thousands more of daily and peak hour trips, although adding local jobs will help improve the City's job/housing balance on a regional scale and will reduce long regional commutes by providing more local jobs for local residents.

As shown in previously referenced Tables 4.16.D and 4.16.E, a number of existing roadways and intersections within the City already experience significant congestion during peak hours each day. The projected additional traffic would eventually result in significant traffic impacts along additional

2017 General Plan – City of Jurupa Valley
Draft Environmental Impact Report

roadways and at additional intersections within the City including roadways identified as Congestion Management Program roadways. *These conditions are expected to occur even if local roadways and intersections were fully improved within their existing rights-of-way.*

Local Roadway Analysis. Previously referenced Table 4.16.D and Figure 4.16.2 indicated 10 roadway segments out of 82 segments studied were operating at unsatisfactory levels of service under existing conditions. Under a future 2035 no-project scenario, the City will have 18 roadways that exceed LOS D as shown in Table 4.16.F and Figure 4.16.9.

Based largely on comments by surrounding jurisdictions, two (2) roadway segments were added to the evaluation of 2035 conditions under a with-project (General Plan Build-out) scenario, as shown in Table 4.16.G. Under a future 2035 General Plan Build-out scenario, the City will have 31 roadways that exceed LOS D as shown in Table 4.16.G and Figure 4.16.10. Because of these forecast deficiencies, the City will be concentrating on planning long-term solutions to anticipated congestion on local roadways. The Mobility Element of the 2017 General Plan lays the groundwork for this effort. Based on this information, it appears a number of streets will not meet the LOS standard as traffic volumes increase from future growth. Therefore, this is considered to be a significant impact, and mitigation is needed to specifically address a comprehensive strategy to reduce future traffic congestion.

Table 4.16.F: Future No Project Roadway Segment Levels of Service

| Roadway Segment | | Functional Classification | Existing Conditions | | |
|-----------------------------------|--|---------------------------|---------------------|------|-----|

General Plan Build-out Roadway Segment Levels of Service

THIS PAGE INTENTIONALLY LEFT BLANK

Local Intersection Analysis. Under existing conditions alone, Table 4.16.E indicates 13 intersections already exceed City peak hour standards and are considered of high concern when attempting to solve congestion issues. If growth were to occur under a 2035 no-project scenario, 37 intersections would become of either moderate or high concern regarding congestion, as shown in Table 4.16.H, Figure 4.16.11, and Figure 4.16.12. A high level of congestion or concern would be when one or both peak hours of an intersection is already at LOS E or F, or has LOS D in one peak hour and its contributing roadway segments are projected to be at LOS E or F by 2035. An intersection with a moderate level of concern would be one that is already at LOS D in one peak hour and one of its contributing roadways is expected to be above LOS C by 2035.

Under a future 2035 General Plan Build-out without improvements scenario, the City will still have 37 intersections operating at LOS standards exceeding City peak hour standards, as shown in Table 4.16.I, Figure 4.16.13, and Figure 4.16.14. However, implementation of the proposed roadway segment and intersection improvements outlined in Section 4.16.3 will reduce the number of intersections operating at deficient LOS from 37 to nine, as detailed in Table 4.16.J and Figures 4.16.15 and 4.16.16. This is considered to be a significant impact, and mitigation is required.

Based on this information, a number of intersections will not meet the LOS standard as traffic volumes increase from anticipated growth. Therefore, mitigation is needed to specifically address a comprehensive strategy to reduce future traffic congestion.

To address these deficiencies, the City in the near-term will be concentrating on intersections with high or moderate conditions and planning long-term solutions to anticipated congestion at local intersection. The Mobility Element of the 2017 General Plan lays the groundwork for this effort. In addition, mitigation is needed to specifically address a comprehensive strategy to reduce future traffic congestion.

Other Intersection Impacts. Level of Service at the following major intersections administered by surrounding jurisdictions will slowly decrease as development occurs in Jurupa Valley and the surrounding region as traffic volumes on local roadways increase under future conditions:

City of Ontario

- Philadelphia Street/Etiwanda Avenue
- Jurupa Avenue/Etiwanda Avenue

City of Fontana

- Jurupa Avenue/Etiwanda Avenue
- Jurupa Avenue/Mulberry Avenue (Country Village Road)
- Jurupa Avenue/Sierra Avenue
- Jurupa Avenue/Armstrong Road (Locust Avenue)
- Philadelphia Avenue/Country Village Road

County of Riverside

- Jurupa Avenue/Armstrong Road (Locust Avenue)
- Jurupa Avenue/Rubidoux Boulevard (Cedar Street)

City of Rialto

- Jurupa Avenue/Riverside Avenue

City of Colton

- Riverside Avenue/Agua Mansa Road

City of Riverside

- Mission Boulevard/Market Street

2017 General Plan – City of Jurupa Valley
Draft Environmental Impact Report

- Van Buren Boulevard/Jurupa Avenue
- Etiwanda Avenue/Arlington Avenue (Future)

General Plan Build-Out With Improvements P.M. Peak Hour Intersection Levels of Service

THIS PAGE INTENTIONALLY LEFT BLANK

City of Eastvale

- Limonite Avenue/Hamner Avenue

Etiwanda Avenue south of Limonite Avenue in Jurupa Valley is proposed to include a two-lane secondary roadway bridge extension from 66th Street over the Santa Ana River to Arlington Avenue in Riverside. Extension of Etiwanda Avenue will result in additional roadway interconnection between Jurupa Valley and Riverside to supplement existing interconnecting roadway segments Van Buren Boulevard, Mission Boulevard, Market Street, Interstate 15, and State Route 60 crossing the Santa Ana River.

Although the anticipated two-lane secondary roadway bridge extension will increase the number of motorists at the Etiwanda Avenue/66th Street intersection in Jurupa Valley and the Etiwanda Avenue/Arlington Avenue intersection in Riverside, construction of this roadway interconnection between the two cities will result in a direct reduction in VMTs for motorists travelling between Jurupa Valley and Riverside, as well as an improvement to the LOS at other interconnecting roadway segments (i.e., Van Buren Boulevard, Mission Boulevard, Market Street, Interstate 15, and State Route 60) and corresponding intersections, by providing an additional and more direct north-south route for motorists between Jurupa Valley and Riverside to supplement existing interconnecting roadway segments and corresponding intersections.

These intersections will be of concern to the City of Jurupa Valley to the extent that future development in the City contributes traffic, however incrementally, to these intersections. This is an incremental but potentially significant impact to the regional circulation network.

In addition, the City is interested in the construction of new interchanges on Van Buren Boulevard at Jurupa Road, Limonite Avenue and Galena/Bellegrave Avenue.

Regional Freeway Impacts. Future development in Jurupa Valley will contribute traffic to local freeways. The following freeway segments will be of concern as development occurs in the City and surrounding region, and traffic volumes increase under future conditions:

I-15 Freeway

- Jurupa Street (in Ontario) to SR-60 Freeway
- SR-60 Freeway to Cantu-Galleano Ranch Road
- Cantu-Galleano Ranch Road to Limonite Avenue
- Limonite Avenue to 6th Street (in Norco)

SR-60 Freeway

- Milliken Avenue (in Ontario) to Etiwanda Avenue
- Etiwanda Avenue to Country Village Road
- Country Village Road to Pedley Road
- Pedley Road to Pyrite Street
- Pyrite Street to Valley Way
- Valley Way to Rubidoux Boulevard
- Rubidoux Boulevard to Market Street (in City of Riverside)

Future development in Jurupa Valley will contribute traffic to these freeways, and one or more of these freeway segments may experience congestion in the future that exceeds Caltrans standards. This is an incremental but potentially significant impact to the regional circulation network.

The City is also interested in the construction of new interchanges on State Route 60 at Camino Real and Sierra Avenue/Pacific Avenue.

Achieving Level of Service Standards. The City is studying all possible options to improve roadway, intersection, and overall network capacity. However, residents have expressed a strong

collective desire to maintain the semi-rural character of the City to the degree possible, and a major way to accomplish that is to avoid widening major roadways to very wide urban standards, even if that will result in congestion during peak periods. In response to this desire, the City has been investigating ways of improving network capacity without necessarily widening roads or intersections to the maximum extent possible. The following are but several possible ways of accomplishing this goal:

- **Non-Vehicular Network.** One important way of reducing future vehicular trips is to develop a fully integrated network of bicycle routes, multi-use trails, sidewalks, and transit as alternatives to making multiple individual vehicle trips within the City.
- **Targeted Improvements.** The City could focus on key improvements to streets or intersections that provide the most congestion reduction for the least cost, rather than incremental overall improvements to the network as a whole as growth occurs (e.g., widen Van Buren Boulevard to 6 or 8 lanes to pull congestion off of local streets).
- **Roundabouts.** The City could install traffic circles or roundabouts at key intersections to improve traffic flow without expanding its system of traffic signals.
- **Restricted Access.** The City is studying if limiting or precluding direct access onto arterial streets may redirect peak hour traffic to controlled intersections, thus improving through access on the arterial streets (e.g., Limonite Avenue). For example, this could be done by closing off smaller streets that now enter an arterial or by using small traffic islands to limit access onto the smaller street to “right-in right-out only”.
- **Express Transit Routes.** The City could work with the local transit authority to develop key roadways to enhance bus transit opportunities (e.g., Van Buren Boulevard, Limonite Avenue) and further interconnect bus transit routes with commuter rail stations (i.e. Jurupa Valley/Pedley Metrolink Station along Van Buren Boulevard).

The Mobility Element of the proposed 2017 General Plan clearly encourages a wide range of alternatives to improving overall circulation. The City can implement many improvements and programs within its boundaries to help reduce future roadway and intersection congestion. However, a link analysis of major local roadways indicates that a substantial amount of existing and future roadway and intersection congestion is the result of regional “cut through” traffic (i.e., non-residents driving through the City to get to their destinations), most often trying to find shortcuts along City roads to avoid congestion on local freeways, especially at peak periods. Table 4.16.K demonstrates that external traffic on major roads exceeds internal traffic (e.g., Country Village Road = 54%, Van Buren = up to 79%, Sierra Avenue = 58%, etc.). A number of roadways and intersections have physical constraints that limit the potential for expansion. In addition, the City has no control over a wide range of improvements that could substantially reduce roadway and intersection congestion within its boundaries, such as on area freeways (i.e. controlled by Caltrans) and on account of right-of-way constraints along properties adjacent to roadway segments and intersections (e.g., Mission Boulevard/State Route 60 Eastbound Ramp, Etiwanda Avenue/Philadelphia Avenue, and Armstrong Road/Sierra Avenue).

As noted previously, future growth will cause additional street and intersection congestion beyond City LOS standards. In addition, it will incrementally contribute traffic at local freeway ramps, along local freeway segments, and along identified Congestion Management Program roadways. Without improvements, these impacts will be significant; however, the City cannot control the timing or installation of improvements to local freeways or some Congestion Management Program roadways, so these impacts will be significant.

Table 4.16.K: Existing Link Analysis (Regional vs. Local Traffic)

| Roadway/Segment | Classification | 2035 General Plan Build-out Conditions | | Traffic Source (%) | |
|---|----------------|--|-----|--------------------|----------|
| | | ADT | LOS | Internal | External |
| Etiwanda Avenue 6 - Philadelphia Ave. to SR-60 WB Off-Ramp | 6-lane UAH | 52,991 | E | 57 | 43 |
| Country Village Road 18 - Philadelphia Ave. to SR-60 WB Ramps | 4-lane MH | 50,687 | F | 46 | 54 |
| Van Buren Blvd./East Mission Blvd. 34 - Bellegrave Ave. to Jurupa Road | 8-lane Ex | 86,873 | F | 21 | 79 |
| Mission Boulevard 48 - Valley Way to Riverview Drive | 4-lane AH | 30,436 | D | 81 | 19 |
| Bellegrave Avenue 52 - Wineville Ave. to Etiwanda Ave. | 4-lane MH | 30,666 | D | 60 | 40 |
| Valley Way-Armstrong Road 65 - SR-60 WB Ramps to Sierra Ave. | 4-lane MH | 42,653 | F | 66 | 34 |
| Limonite Avenue 69 - Wineville Ave. to Etiwanda Ave. | 4-lane MH | 38,039 | F | 58 | 42 |
| Rubidoux Boulevard 79 - SR-60 WB Ramps to Market Street | 4-lane MH | 29,685 | D | 80 | 20 |
| Sierra Avenue 82 - West of Armstrong Road | 4-lane SH | 29,489 | F | 42 | 58 |
| Market Street 83 - East of Rubidoux Blvd. | 2-lane MH | 25,930 | F | 50 | 50 |

Source: General Plan Traffic Study, LSA Associates, Inc., November 2016.

NOTES: ADT = average daily traffic, LOS = Level of Service

AH = Arterial Highway

Ex = Expressway

MH = Major Highway

SH = Secondary Highway

UAH = Urban Arterial Highway

VMT vs. LOS. Level of Service (LOS) has long been the standard of determining significant traffic impacts under CEQA. In 2008 the state legislature passed SB 743, the *Sustainable Communities and Climate Protection Act of 2008*, which among other guidance directs agencies to focus on reducing vehicle miles traveled (VMT) rather than LOS as a determination of significance under CEQA. The State Office of Planning and Research (OPR) has not yet issued final guidance on how VMT is to be calculated in reference to significance determinations in CEQA documents, and SCAG has not issued baseline community-level VMT information upon which to prepare a VMT analysis under SB 375. However, the following information will provide a baseline against which future VMT assessments can be measured. Table 4.16.L shows that ADT and VMT are both expected to increase by 29.2 percent City-wide by 2035. The SCAQMD's CalEEMod computer program was used to generate preliminary information regarding VMT vs. ADT in the City. This will allow for future consideration of long-range planning guidance that will ultimately help reduce VMT within the City which is the long-range goal of SB 743. The CalEEMod results assume the same rate of increase for both ADT and VMT, but it is more likely in the future that VMT will not increase as fast as ADT as more employment is generated by non-residential uses in the City which will reduce the commuting and some non-home trip distances (e.g., shopping) as more jobs and businesses are created.

2017 General Plan – City of Jurupa Valley
Draft Environmental Impact Report

Table 4.16.L: ADT and VMT Estimates for Existing and Future Land Uses in the City

| Land Use/Activity | Existing | | Year 2035 | | Increase (%) |

Evaluation of General Plan Goals and Policies. Essentially all of the following goals, policies, and programs of the 2017 General Plan are related to the movement of goods and people, including pedestrians, bicycles, transit, light rail and commuter rail, air, and automobile traffic flows, and will not be repeated here. However, several key goals and policies will be highlighted to demonstrate the extent to which the City is planning to help reduce its share of regional congestion and attempt to provide effective travel for residents and workers throughout the City.

Congestion Options and Design. Mobility Element Policies ME 1.1 through ME 1.3, ME 2.4, 2.6, 2.7, and 2.13 through 2.16 provide various guidelines for design parameters and options for project design to help alleviate potential traffic congestion.

Funding Improvements. Mobility Element Policies 5.1, 8.31 through 8.36 outline the need for finding creative alternative funding solutions for needed improvements.

Inter-Agency Coordination. Mobility Element Policies ME 2.8 through 2.10, 6.9, 7.5, 8.30, and 8.31 provide guidance on how the City will coordinate the provision of future mutually beneficial improvements with surrounding jurisdictions.

Alternative Transportation (trails, transit, etc.). Mobility Element Policies ME 3.1 through 3.36, and 4.1 through 4.9 all provide guidance on how trail systems should be planned and implemented.

Transit Coordination. Mobility Element Policies ME 2.5, 2.12, 2.14, 3.17, and 5.1 through 5.15 provide direction for how the City will coordinate transit service needs with RTA and local projects will provide transit improvements.

Truck Routes. It is generally best practice not to include truck routes within general plans, as these routes may change and flexibility is needed to allow modifications without requiring a general plan amendment. Program ME 6.1.2 states the City will strive to adopt truck routes separately, subject to City Council approval and modification on an as-needed basis. In addition, Mobility Element Policies 6.1 through 6.4 address trucks and routes to accommodate trucks.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs regarding vehicular and non-vehicular circulation will result in significant traffic impacts (i.e., future Level of Service deficiencies) along local roads, at local intersections, and along local freeway segments as growth occurs.

Programmatic Mitigation Measures. The following measures are proposed to help reduce potential programmatic traffic impacts of future growth within the City to the greatest degree practical:

- 4.16.6.2A Strategic Traffic Congestion Management Plan.** Within two years of adopting the 2017 General Plan, the City will develop a Strategic Traffic Congestion Management Plan that will identify the type and timing of roadway and intersection improvements as well as other solutions that may not involve road widenings or standard intersection improvements. The goal of this plan will be to identify those specific improvements or actions that will achieve the City's Level of Service standards to the greatest degree practical, including potential funding and the critical timing of improvements. The future roadway and intersection improvements will include those identified in Section 4.16.3. This measure may not be needed in the event the state develops VMT-based standards applicable to the City in the future in lieu of LOS-based standards.
- 4.16.6.2B Cooperative Agreements.** The City will seek to enter into a cooperative agreement with each of the surrounding jurisdictions regarding reciprocal fair share contributions for intersection and/or roadway improvements of mutual benefit to the City of Jurupa Valley and each cooperative jurisdiction. The City would then require future development to make the identified fair share payment, if any, under this agreement. This agreement would apply to any private or public development project that contributed 50 or more peak hour trips to a particular street or intersection, based on a project-specific traffic study that met the traffic study requirements of the City at the time the project was proposed.
- 4.16.6.2C Multi-Jurisdictional Study.** The City of Jurupa Valley will seek to participate in a multi-jurisdictional study with Caltrans to identify fair share contribution funding sources attributable to and paid from future private and public development, to supplement other regional and State funding sources, to implement necessary improvements to local freeways and freeway ramps to meet Caltrans Level of Service Standards. Once the study identifies appropriate improvements, costs, and fair share fee amounts, the City shall enter into a cooperative agreement with Caltrans to collect such fees from developers of future projects in the City to help fund the identified improvements. The City would then require future development to make the identified fair share payments under this agreement.

The City has examined and is continuing to examine a number of physical and operational changes or improvements to the City's circulation network in an attempt to meet its stated Level of Service standards. However, the majority of traffic impacts in the future will result from non-local traffic (i.e., from regional sources) which cannot be effectively mitigated at the local level. Therefore, there are no

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

other feasible programmatic mitigation measures beyond the goals, policies, and programs outlined in the Mobility Element of the 2017 General Plan.

Level of Programmatic Impact After Mitigation. Even with implementation of the planned circulation system roadway and intersection improvements proposed as part of the General Plan Mobility Element and recommended Mitigation Measures 4.16.6.2A through 4.16.6.2C, future development in the City under the goals, policies, and programs of the 2017 General Plan will result in significant traffic impacts mainly due to contributions by regional traffic and lack of feasible actions at the local level to mitigate these impacts. This is a significant and unavoidable impact.

4.16.6.3 Inadequate Emergency Access

| | |
|-----------|---|
| Threshold | Would the proposed project result in inadequate emergency access? |
|-----------|---|

Programmatic Impacts. Future development would be required to design, construct, and maintain structures, roadways, and facilities to provide adequate emergency access and evacuation. Construction activities, which may temporarily restrict vehicular traffic, would be required to implement measures to facilitate the passage of persons and vehicles through/around any required road closures. Future development plans would be submitted to and approved by the City's Fire and Police Departments prior the issuance of building permits. Adherence to applicable existing requirements of the City of Jurupa Valley and other agencies would reduce impacts associated with this issue to a less than significant level and no further discussion is required.

Over the long-term, future development is not expected to cause any significant impacts with respect to emergency vehicle access at study area intersections that may be used by emergency vehicles. Therefore, potential impacts are less than significant.

Evaluation of General Plan Goals and Policies. The following goal and policy of the Mobility Element are specifically related to emergency access:

Mobility Element

Goal

- ME-4 Establishes policies that coordinate the circulation system with General Plan, specific plans and village center plans, and Land Use Element, and that provide direction for future decision-making.
- ME-10 Develops implementation strategies and identifies funding sources to provide for the timely implementation of the Mobility Element's goals, policies, and programs.

Policy

- ME 8.22 **Emergency Response Routes.** Provide a street network with quick and efficient routes for emergency vehicles, meeting necessary street widths, turn-around radii, and other factors as determined by the City Engineer in consultation with emergency responders.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals and policies regarding emergency access will result in less than significant impacts as growth occurs.

Programmatic Mitigation Measures. None required.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals and policies will result in less than significant traffic impacts related to emergency access, and no mitigation is needed.

4.16.6.4 Alternative Transportation

| | |
|-----------|---|
| Threshold | Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities? |
|-----------|---|

Programmatic Impacts. As development occurs within the City, there will be increased need for alternatives to traditional vehicular transportation in the form of bicycle lanes, sidewalks and trails for pedestrians and equestrians, and various forms of public transit. In 2016, the City does not have a complete non-vehicular circulation network, but the goals and policies of the 2017 General Plan indicate that development of trails is a high priority for the community. In addition to the need for bike lanes and trails, the RTA has numerous bus routes that serve the City of Jurupa Valley, and the Jurupa Valley/Pedley Metrolink Station is located just north of the intersection of Limonite Avenue and Pedley Road near the center of the City. Through the City's project review process, policies, plans, and/or programs supporting alternative transportation would be reviewed and incorporated as applicable. Consequently, potential impacts from future development related to non-vehicular circulation (i.e., trails, bike routes, transit service, etc.) will be less than significant.

Evaluation of General Plan Goals and Policies. The following goals and policies of the Mobility Element in the 2017 General Plan are specifically related to alternative transportation:

ME 3.1 through 3.36 Pedestrian and Bicycle Facilities Policies and Programs

ME 4.1 through 4.9 Equestrian and Multi-Purpose Trails Network

ME 5.1 through 5.15 Public Transit-related services

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals and policies regarding trails, transit, and alternative transportation will result in less than significant impacts as growth occurs.

Programmatic Mitigation Measures. None required.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will result in less than significant traffic impacts related to alternative transportation, and no mitigation is needed.

4.16.6.5 Air Traffic Patterns

| | |
|-----------|--|
| Threshold | Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks? |
|-----------|--|

Programmatic Impacts. Safety zones of two public airports, Riverside Municipal Airport (RMA) and the Flabob Airport, overlap portions of the City of Jurupa Valley. The RMA is south of the eastern portion of the City across the Santa Ana River. Portions of the City are within RMA's Airport Land Use Compatibility (ALUC) Plan Zone E (see Figure 4.8.2). Zone E within ALUC is considered an area that includes Other Airport Environs. Zone E does not include residential, other land uses, or open space land restrictions. Hazards to flight, including physical, visual, and electronic forms of interference with safety of aircraft operations, are not allowed in Zone E. The Flabob Airport is located in the eastern portion of the City and some of its safety zones overlap developed uses and vacant land within the City. To minimize land use conflicts with adjacent uses, much of the remaining undeveloped area adjacent to the airport is designated as Estate Density Residential, with most of the developed land designated and used for Medium-Density Residential. Potential land use conflicts could occur primarily in Safety Zones C. In Zone C, new residential development is limited to one dwelling per five acres, gross; and in Zone D, residential densities are limited to a prescribed density range of no

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

greater than one dwelling per five acres or at least five dwellings per acre. The previous Figure 4.8.5 showed the airport safety zones that overlap the City.

Evaluation of General Plan Goals and Policies. The following goals and policies of the Mobility and Land Use Elements of the 2017 General Plan are specifically related to airport safety and compatibility at public and private airports:

Mobility Element

Policies

- ME 6.9 **Interagency Coordination.** Promote coordinated long-range planning between the City, County of Riverside, Airport Land Use Commission, Flabob airport authorities, businesses and the public to meet City, County and the region's aviation needs.
- ME 6.10 **Airport Land Use Planning.** Apply a variety of land use planning techniques to maintain the viability of Flabob Airport. (See Land Use Element, Flabob and Riverside Municipal Airports Overlay).

Land Use Element

Policies

- LUE 5.53 **ALUP Compliance.** To provide for the orderly operation and development of Flabob and Riverside Municipal Airports and the surrounding area, the City will comply with the Airport Land Use Compatibility Plan as fully set forth in Appendix 4.0 and as summarized in Table-34, as well as any applicable policies related to airports in the Land Use, Circulation, Safety and Noise Elements of the 2017 General Plan, unless the City Council overrides the Plan as provided for in State law.
- LUE 5.54 **Development Review.** Until such time as 1) the Commission finds the City's General Plan to be consistent with the ALUP, or 2) the City Council has overruled the Commission's determination of inconsistency, or 3) the Commission elects not to review a particular action, the City will refer all *major land use actions* to the Airport Land Use Commission for review, pursuant to Policy 1.5.3 of the ALUP.
- LUE 5.55 **Continued Airport Operation.** Support the continued operation of Flabob and Riverside Municipal Airports to help meet airport services needs within the land-use compatibility criteria with respect to potential noise and safety impacts.
- LUE 5.56 **Consistency Requirement.** Review all proposed projects and require consistency with any applicable provisions of the Riverside County Airport Land Use Plan as set forth in Appendix A-4.0, and require General Plan and/or Zoning Ordinance amendments to achieve compliance, as appropriate.
- LUE 5.57 **ALUP Amendments.** Review all subsequent amendments to any airport land-use compatibility plan and either adopt the plan as amended or overrule the Airport Land Use Commission as provided by law (Government Code Section 65302.3).
- LUE 5.58 **General Plan Adoption or Amendment.** Prior to the adoption or amendment of this General Plan or any specific plan, or the adoption or amendment of a zoning ordinance or building regulation within the planning boundary of any airport land use compatibility plan, the City will refer such proposed actions for determination and processing as provided by the Airport Land Use Law.
- LUE 5.59 **Cluster Development.** Allow the use of development clustering and/or density transfers to meet airport compatibility requirements as set forth in the applicable airport land-use compatibility plan.
- LUE 5.60 **Bird-attracting Uses.** In accordance with FAA criteria, avoid locating sanitary landfills and other land uses that are attract birds within 10,000 feet of any runway used by turbine-powered aircraft and within 5,000 feet of other runways. Also, avoid

- locating attractors of other wildlife that can be hazardous to aircraft operations in locations adjacent to airports.
- LUE 5.61 **Encroachment.** Ensure that no structures or activities encroach upon or adversely affect the use of navigable airspace.
- LUE 5.62 **Voluntary Review.** The City, from time to time, may elect to submit proposed actions or projects voluntarily that are not otherwise required to be submitted to the ALUC under the Airport Land Use Law in the following circumstances:
- a. Clarification: If there is a question as to the purpose, intent or interpretation of an airport land use compatibility plan (CLUP) or its provisions; or
 - b. Advisory: If assistance is needed concerning a proposed action or project relating to Airport Land Use matters.
- LUE 5.63 **Airport Referrals.** All development proposals located within an Airport Influence Area will be submitted to the affected airport.
- LUE 9.1 **Land Use Compatibility.** Require land to be developed and used in accordance with the General Plan, specific plans and community and village plans to ensure compatibility and minimize impacts

These policies in the Mobility and Land Use Elements of the 2017 General Plan establish clear parameters for planning and guidance for future development within the City for vacant land or redevelopment of existing land uses in the City that are within the influence areas of the Flabob or Riverside Municipal Airports. For example, Policies LUE 5.53 and 5.56 require new development to comply with the Airport Land Use Compatibility Plan of the affected airport, and Policy LUE 5.54 requires plans to be submitted to the airports for review before City action. With implementation of these policies, new development in the City will have less than significant impacts on the airport traffic patterns and potential safety risks.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan policies above and compliance with local, state, and federal laws and regulations regarding airport traffic patterns and safety risks, and no mitigation is required.

4.16.6.6 Design Features or Incompatible Uses

| | |
|-----------|---|
| Threshold | Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? |
|-----------|---|

Programmatic Impacts. The design of future roadways and developments must provide adequate sight distance and traffic control measures. This provision is normally implemented through roadway design to facilitate roadway traffic flows. Roadway improvements in and around future project sites would have to be designed and constructed to satisfy all City requirements for street widths, corner radii, and intersection control as well as incorporate design standards tailored specifically to site access requirements.

Evaluation of General Plan Goals and Policies. All of the design-oriented goals, policies, and programs of the Mobility Element of the 2017 General Plan are intended to prevent hazardous or unsafe roadways or other circulation improvements or incompatible uses, including but not limited to:

2017 General Plan – City of Jurupa Valley

Draft Environmental Impact Report

Mobility Element

Goal

ME-1 Provides mobility corridors for all modes of travel, including transit, bicyclists, pedestrians, equestrians, rail traffic and motor vehicles, and that helps reduce locally-generated VMT.

Policies

ME 1.1 through 1.3, ME 2.4, 2.6, 2.7, and 2.16.

Goal

ME-2 Maintains an interconnected network of bicycle, pedestrian, equestrian, and public transit facilities that encourage non-automotive travel.

Policies

ME 3.2 through 3.4, 3.8, 3.10, 3.12 through 3.26, 3.30 through 3.36.

Goal

ME-3 Promotes trails for pedestrian, bicycle, and equestrian use for recreational as well as local travel needs.

Policies

ME 3.1 through 3.36, ME 4.1 through 4.5.

Goal

ME-6 Accommodates and manages *commercial* truck traffic to promote local jobs and economic growth and protect public safety, health, and welfare.

Policies

ME 6.1 through 6.4

Goal

ME-7 Accommodates continued, safe freight railroad operations in Jurupa Valley.

Policies

ME 6.5 through 6.8

Goal

ME-8 Helps preserve, protect, and enhance safety and land use compatibility at Flabob Airport.

Policies

ME 6.9 through 6.11

Goal

ME-4 Establishes policies that coordinate the circulation system with General Plan, specific plans and village center plans, and Land Use Element, and that provide direction for future decision-making.

ME-10 Develops implementation strategies and identifies funding sources to provide for the timely implementation of the Mobility Element's goals, policies, and programs.

Policies

ME 8.1 through 8.29, 7.43, and 8.47 through 8.52.

As part of the City's plan check process, the final design of all roadways and intersections within a future development project would be reviewed by a licensed professional civil engineer to ensure adequate safety to and from each site. Future development should not have any unsafe or sharp curves or dangerous intersections in its design with adherence to City design standards.

Level of Programmatic Impact Before Mitigation. Adherence to applicable existing requirements of the City and other agencies, in addition to implementation to the goals, policies, and programs of the Mobility Element, would reduce potential impacts associated with unsafe design or incompatible uses to less than significant levels.

Programmatic Mitigation Measures. None needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals and policies will reduce potential impacts related to unsafe design or incompatible uses to less than significant levels, and no mitigation is required.

4.16.7 Cumulative Impacts

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions over the years.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a "plan summary" of long-term development impacts. In this case, the growth projections of the 2017 General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land with a mixture of rural and suburban land uses which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or five percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

For context, the cumulative "universe" for mobility impacts relative to the City's 2017 General Plan would be this portion of western Riverside County (i.e., Jurupa Valley and the surrounding jurisdictions). In this EIR, both the baseline (Existing) and long-term buildout conditions (Year 2035) were analyzed which represents a cumulative programmatic analysis of the 2017 General Plan relative to mobility impacts.

The City has examined and is continuing to examine a number of physical and operational changes or improvements to the City's circulation network in an attempt to meet its stated Level of Service standards. However, the majority of traffic impacts in the future will result from non-local traffic (i.e., from regional sources) which cannot be effectively mitigated at the local level. Section 4.16.6.2 concluded that even with implementation of the recommended Mitigation Measures 4.16.6.2A through 4.16.6.2C, future development in the City under the goals, policies, and programs of the 2017 General Plan will result in significant traffic impacts mainly due to contributions by regional traffic and lack of feasible actions at the local level to mitigate these impacts. This also represents a **significant and unavoidable** contribution to a cumulatively considerable long-term traffic impact.

THIS PAGE INTENTIONALLY LEFT BLANK

4.17 UTILITIES AND SERVICE SYSTEMS

This section analyzes the existing and planned potable water supply and wastewater, solid waste, and stormwater facilities. Water-related environmental issues such as water sources and water quality, runoff/drainage, flooding, and surface and groundwater quantity and quality are discussed in Section 4.9, Hydrology and Water Quality. Information for this section was obtained from review of the following:

- *Community Safety, Services, and Facilities Element, 2017 General Plan, December 2016.*
- *Land Use Element. 2017 General Plan, (draft), December 2016.*
- *Conservation and Open Space Element, 2017 General Plan, (draft), December 2016.*
- *Urban Water Management Plan, Jurupa Community Services District. Albert A. Webb Associates, June 27, 2016.*
- *2010 Urban Water Management Plan, Rubidoux Community Services District, Krieger and Stewart Incorporated, November 2011.*
- *2015 Urban Water Management Plan, Rubidoux Community Services District, Krieger and Stewart Incorporated, (draft) July 2016.*
- *2015 Urban Water Management Plan, Metropolitan Water District of Southern California, June 2016.*

4.17.1 Existing Setting

4.17.1.1 Water Supply

Three agencies provide potable water to the City of Jurupa Valley. They are the Jurupa Community Services District (JCSD), the Rubidoux Community Services District (RCSD), and the Santa Ana River Water Company. The JCSD owns, operates, and maintains the water system within the city. The JCSD also provides sewer and street light services to Jurupa Valley. The JCSD service area encompasses approximately 48 square miles in Riverside County. JCSD is a water supply retailer and depends on groundwater from the Chino Groundwater Basin. The Chino Basin is the largest groundwater basin in the Upper Santa Ana River Watershed, and underlies portions of San Bernardino, Riverside, and Los Angeles County. The JCSD uses a combination of its own wells and purchases from the Chino Desalter Authority to extract water from the Basin. In addition, the JCSD receives a small portion of its supplies from the RCSD.

The Community Safety, Services and Facilities Element of the City General Plan states that: *"Although Jurupa Valley receives all of its potable water from groundwater supplies, regional and statewide water demands and on-going drought conditions require continued conservation efforts and careful monitoring of water supplies to ensure adequacy for future growth. The overall County water supply is uncertain for two reasons: water apportionments from northern California have been reduced as part of the CALFED Bay-Delta Program, as well as decreased supplies to California from the Colorado River. Additionally, most of the County's sources of water are currently at capacity. Water storage to meet peak demand, or a two-day to one-day supply, is provided by many local water agencies within Riverside County. However, long-term storage of large quantities of water is provided only in the Metropolitan Water District (MWD) and California Department of Water Resources (DWR) facilities."*

JCSD uses a diverse mix of sources in its current and planned water supply as outlined in its UWMP. The plan takes into account projected growth for the region. JCSD plans to incorporate imported State Water Project (SWP) water into its supply portfolio. The Chino Basin is also partially recharged by imported surface water. Chino Basin storage allows for flexibility in imports from the Metropolitan Water District (Metropolitan), thereby reducing potential impacts to JCSD related to water importation.

During dry years where import of water is reduced, groundwater pumping is increased. In years of normal precipitation, pumping returns to its normal rate while the basin is replenished with SWP water. Metropolitan currently does not have surplus water available, due in part to pumping restrictions imposed on the SWP to avoid and minimize impacts to Federal- and State-protected fish species in the Delta. However, Metropolitan has analyzed the reliability of water delivery through the SWP and the Colorado River Aqueduct. Metropolitan's Urban Water Management Plan¹ concludes that, with implementation of its storage and transfer programs, it has supply capabilities that would be sufficient to meet expected demands in Jurupa Valley from 2020 through 2040 under single dry-year and multiple dry-year hydrologic conditions.

The sole source of potable water supply for the Rubidoux Community Services District is groundwater extracted from the southern portion of the Riverside-Arlington portion of the Upper Santa Ana Groundwater Basin. The District currently does not purchase or otherwise obtain water from a wholesale water supplier, and recycled water is not currently available to the District. The District expects that groundwater extracted from the Basin by six potable and six non-potable (irrigation only) groundwater wells will continue to be its primary (and possibly only) source of water through the year 2035, and possibly beyond.

The District does not have an immediate concern with water supply reliability. Because the District's water supply is groundwater, which is not subject to seasonal or year-to-year climatic change, it is not subject to short-term water shortages resulting from temporary dry weather conditions. The District and other groundwater users in the Santa Ana Watershed have been implementing ongoing groundwater management practices to extend the useful life of the groundwater resource to meet current and future demands. In the foreseeable future, the District will continue to be reliant on local groundwater supplies. The District will develop additional groundwater extraction and groundwater treatment facilities as needed to ensure a continuous and adequate water supply for its service area.

The Santa Ana Water Company ensures a continuing supply of good quality water through participation in a Joint Powers Authority with other neighboring water purveyors, called the Chino Desalter Authority.

The DWR produces a California Water Plan every five years that not only includes a statewide water budget but also regional watershed water budgets. These water budgets are based on California Department of Finance population projections and indicate clearly that demand for water will exceed supply in 2020 whether or not a drought condition exists at that time. For the past year, local water agencies have had to implement state-imposed water conservation goals initiated by the Governor last year in response to the ongoing drought. However, on August 16, 2016 the State Water Resources Control Board² lifted the state mandated conservation restrictions and local water districts, including the Jurupa Valley Water District and the Rubidoux Community Services District, are no longer required to implement the 20 percent annual water conservation limit on its users. For additional information on local water supply, see Section 4.9, *Hydrology and Water Quality*.

4.17.1.2 Wastewater Services

The JCSD and the RCSD provide municipal wastewater service for Jurupa Valley. Wastewater is transported to the City of Riverside Water Quality Control Plant (RWQCP) and the Western Riverside County Regional Wastewater Authority's (WRCRWA) treatment plant. Some areas of the City, including the Mira Loma area just east of Etiwanda, are not connected to municipal wastewater infrastructure and use septic systems for wastewater disposal.

¹ 2015 Urban Water Management Plan, Metropolitan Water District of Southern California, June 2016. Website accessed August 15, 2016

² "Mandatory Water Cuts End for Many", Los Angeles Times, August 17, 2016.

JCSD's Sewer System serves the residents of the City of Eastvale and the western portion of the City of Jurupa Valley¹. The City of Riverside, WRCRWA, and Orange County Sanitation District are responsible for treatment of wastewater in the JCSD service area. Currently, the RWQCP treats 40 million gallons per day.² A plant-wide expansion, currently in progress, will increase treatment capacity to 46 million gallons per day.

Local governments and water districts are responsible for complying with Federal regulations, both for wastewater plant operation and the collection systems (e.g., sanitary sewers) that convey wastewater to wastewater treatment facilities. Proper operation and maintenance is critical for sewage collection and treatment because impacts from these processes have the potential to degrade water resources and affect human health. For these reasons, publicly owned treatment works (POTWs) receive Waste Discharge Requirements (WDRs) to ensure that such wastewater facilities operate in compliance with water quality regulations set forth by the State. WDRs, issued by the State, establish effluent limits on the kinds and quantities of pollutants that POTWs can discharge. These permits also contain pollutant monitoring, recordkeeping, and reporting requirements. POTWs that intend to discharge into the nation's waters must obtain a WDR prior to initiating discharge.

4.17.1.3 Solid Waste Services

Solid waste disposal and recycling services are provided to City residents by two private franchise haulers - Burrtec Waste Industries and Waste Management³. Solid waste is transferred to regional landfills operated by the County of Riverside.

4.17.1.4 Stormwater Drainage

The City of Jurupa Valley is located in the Santa Ana River Basin Watershed. The Santa Ana Region consists of connected inland basins and open coastal basins drained by surface streams flowing southwestward toward the Pacific Ocean. The City in general slopes gently to the south toward the Santa Ana River, which forms much of the southern boundary of the City.

NOP/Scoping Comments. No public comments were made on any water-related issues regarding the proposed project. No agencies submitted comment letters during the NOP period addressing water resources.

4.17.2 Regulatory Framework

4.17.2.1 Federal Regulations

Federal Water Pollution Control Act. The major piece of Federal legislation dealing with wastewater is the Federal Water Pollution Control Act, which is designed to restore and preserve the integrity of the nation's waters. In addition to the Federal Water Pollution Control Act, other federal environmental laws have a bearing on the location, type, planning, and funding of wastewater treatment facilities.

4.17.2.2 State Regulations

Regional Water Quality Control Board. Operation of the JCSD's and RCSD's Sewer System is subject to regulations set forth by the California Department of Health Services (DHS) and the Regional Water Quality Control Board (RWQCB). NPDES permits are required for operators of publically owned treatment works, municipal separate storm sewer systems (MS4s), construction, projects, and industrial facilities who discharge to surface waters within the City.

¹ <http://www.jcsd.us/Portals/0/COVER%20TOC%20INTRO.pdf> (Accessed August 17, 2016)

² <http://www.riversideca.gov/publicworks/sewer/wqcp.asp> (Accessed August 17, 2016)

³ <http://jurupavalley.org/Departments/Development-Services/Public-Works-and-Engineering/Solid-Waste-Collection> (Website accessed August 17, 2016)

Assembly Bill 341 (Chapter 476, Statutes of 2011). AB 341 was signed into law in 2011 and established a goal of processing 75 percent of generated waste through source reduction, recycling, or composting activities by the year 2020. The bill also instituted a commercial recycling mandate. In the mandate, businesses that generate four or more cubic yards of waste per week and multifamily developments of five or units are required to arrange for recycling services.

Assembly Bill 1327 (AB 1327) California Solid Waste Reuse and Recycling Access Act of 1991. Signed into law in 1991, AB 1327 added Chapter 18 to Part 3 of Division 30 of the Public Resources Code. Chapter 18 required the California Integrated Waste Management Board (CIWMB) to develop a model ordinance for adoption of recyclable materials in development projects. Local agencies were then required to adopt the model, or ordinances of their own, in order to govern adequate areas for collection and loading of recyclable materials in development projects by September 1, 1993. If a local agency had not adopted a model ordinance by that date, the CIWMB model would be adopted and enforced by the local agency.

Senate Bill 1016 (SB 1016). The California Integrated Waste Management Act of 1989 (AB 939) requires each jurisdiction to divert 50 percent of its solid waste from being disposed in landfills. The new per capita disposal measurement system (SB 1016, Wiggins, Chapter 343, Statutes of 2008) became effective January 1, 2009. It builds on AB 939 compliance requirements by implementing a simplified measure of local jurisdictions' performance. SB 1016 accomplishes this by changing to a disposal-based indicator: the per capita disposal rate, which uses only two factors: a jurisdiction's population and its disposal as reported by disposal facilities.

Riverside Countywide Integrated Waste Management Plan. The Riverside Countywide Integrated Waste Management Plan (RCIWMP), was approved by the California Integrated Waste Management Board in 1996. The Plan outlines the goals, policies, and programs the County and its cities, including what is now the City of Jurupa Valley, would implement to create an integrated and cost-effective waste management system that complies with the provisions of AB 939 and its diversion mandates. The RCIWMP is composed of the Riverside Countywide Summary Plan, the Source Reduction and Recycling Element (SRRE) for the County and each of its cities, the Nondisposal Facility Element (NDFE) for the County and each of its cities, the Household Hazardous Waste Element (HHWE) for the County and each of its cities, and the Riverside Countywide Siting Element.

Water Conservation in Landscaping Act. To ensure adequate supplies are available for future uses and to promote the conservation and efficient use of water, local agencies are required to adopt water-efficient landscape ordinances. The City implements landscape and irrigation design standards (Chapter 17.276 of the City's Municipal Code), which address the proper maintenance of landscaping or irrigation systems.

Sections 13550–13556 of the State Water Code. These sections of the State Water Code state that local, regional, or state agencies shall not use water from any quality source of potable water for non-potable uses if suitable recycled water is available as provided in Section 13550 of the Water Code.

Urban Water Management Planning Act (Cal. Water Code Section 10631). Since 1984, the Urban Water Management Planning Act has required "urban water suppliers" to develop written "urban water management plans (UWMPs)." While generally aimed at encouraging water suppliers to implement water conservation measures, it also created long-term planning obligations. The Act requires that urban water suppliers use a 20-year planning horizon and update the data in the urban water plans every five years.

SB 610 and SB 221. Senate Bills 610 and 221 amended state law in 2002 to include water supply assessment as part of land use planning decisions made by cities and counties. Both statutes require that information regarding water availability be made available to decision makers prior to approval of a large development project. The two bills complement each other in facilitating this process. Under SB 610, water assessments for certain projects (as defined in Water Code 10912 [a]) must be made

available to local governments as part of environmental documentation prepared pursuant to the California Environmental Quality Act (CEQA). SB 221 requires that a written verification of sufficient water supply be made by a city or county in order to approve certain residential subdivisions.

Municipal Separate Storm Sewer System (MS4) Permit System. The NPDES MS4 permit is intended to regulate the discharge of urban runoff to storm sewer systems within Riverside County. Under the NPDES MS4 permit, the City is responsible for the management of storm drain systems within its jurisdiction. Cities are required to implement management programs, monitoring programs, implementation plans, and all applicable BMPs outlined in the Water Quality Management Plan for the Santa Ana Region of Riverside County.

4.17.2.3 City General Plan

The City 2017 General Plan Conservation and Open Space Element, the Community Safety, Services and Facilities Element, and the Land Use Element contain the following goals, policies, and programs that are applicable to water supply and wastewater, solid waste, and stormwater drainage facilities:

Conservation and Open Space Element

Goals

- COS 3.1 Work with JCSD, RCSD and other community service districts and agencies, to help meet Jurupa Valley's urban water needs without substantial harm to the natural environment or to agriculture. Measures to help meet water needs include requiring conservation measures such as drought-tolerant landscaping and water saving fixtures in new homes.
- COS 3.4 Encourage JCSD and RCSD to retain and where possible, expand the capacity of wells, aquifers and other groundwater reserves.

Policies

- COS 3.1.1 **Water use planning.** In its operations and planning, the City will adopt and strive for the most efficient available water conservation practices and encourage community service districts and other agencies to do the same. "Most efficient available practices" means actions and equipment that use the least water for a desired outcome, considering available equipment, life-cycle costs, social and environmental side effects, and the regulations of other agencies.
- COS 3.1.2 **Multi-Use Consideration.** In its planning, land use decisions, and municipal operations, the City will consider the effects of water supply on urban growth, wildlife habitat, agriculture and stream flows, and should seek to ensure continued water availability for these uses in planning for long-term water supplies. The City will encourage individuals, organizations, and other agencies to follow this policy.
- COS 3.1.4 **Water Conservation Systems.** Encourage the installation of water-conserving systems such as dry wells and graywater systems, where feasible, especially in new developments. The installation of cisterns or infiltrators shall also be encouraged to capture rainwater from roofs for irrigation in the dry season and to reduce runoff during heavy storms.
- COS 3.1.5 **Site Water Collection and Retention.** As a condition of development approval, City shall consider requiring design practices such as permeable parking bays and porous parking lots with bermed, landscaped storage areas for rainwater detention.
- COS 3.1.8 **Wastewater Treatment.** Encourage the use of innovative and creative techniques for wastewater treatment.

Programs

- COS 3.1.1.1 **Public Information.** In conjunction with water providers, Riverside County, community services districts, and other entities, promote and support educational outreach programs that provide information services to the public about water conservation techniques, benefits and water-saving technologies.
- COS 3.1.1.2 **Regional Cooperation.** Monitor and participate in regional activities addressing water resources, groundwater and water quality to help ensure adequate and safe water supplies for existing and future residents and businesses.
- COS 3.1.1.3 **Aquifer Recharge.** Participate in the development, implementation, and maintenance of a program to recharge the aquifers underlying the City and Western Riverside County, where feasible and appropriate. The program shall make use of flood and other waters to offset existing and future groundwater pumping, except where:
- Groundwater quality would be reduced,
 - Available groundwater aquifers are full, or
 - Rising water tables threaten the stability of existing structures

Community Safety, Services and Facilities Element

Policies

- CS 2.1.43 **Grey Water Systems.** Facilitate the utilization of grey water systems.
- CS 2.1.44 **Drought-Tolerant Landscaping.** Require the use of drought-tolerant landscaping in all new development.
- CS 2.1.45 **Reclaimed Water.** Encourage the development and use of reclaimed water for landscape irrigation and other uses.
- CS 2.1.46 **Public Education.** Support public education efforts to promote water conservation throughout the community.
- CS 2.1.47 **Water Storage.** Encourage local water purveyors to expand local domestic water storage and recycling capabilities.
- CS 2.1.48 **Public Education/Outreach.** Continue providing education and community outreach on water conservation options and methods.
- CS 2.1.49 **Adequate Wastewater Conveyance.** Work with the Jurupa Community Services District and the RCSD to ensure sufficient wastewater conveyance and pumping capacity to meet the existing and future needs of the City.
- CS 2.1.50 **Septic Systems.** Work with the Jurupa Community Services District to convert areas of the City relying on septic systems to municipal wastewater service.
- CS 2.1.51 **Recycled Water.** Encourage the continued production, and expansion, of recycled water for irrigation and other purposes.
- CS 2.1.52 **Wastewater Treatment Capacity.** Encourage efforts of the City of Riverside and the Western Riverside County Regional Wastewater Authority (WRCWA) to provide adequate wastewater treatment capacity to serve the existing and future needs of the City.
- CS 2.1.53 **Fair-Share Costs.** Require new development to contribute fair-share costs for the provision of wastewater infrastructure and treatment.

- CS 2.1.54 **Brine Line.** Support the continued maintenance and use of the Inland Empire Brine Line to transport salty wastewater to the ocean and maintain the quality of the Santa Ana River Watershed.
- CS 2.1.55 **Water Conservation.** Make use of state of art water conservation with all City facilities and land, and require new developments to include drought tolerant landscaping and water saving systems and fixtures.
- CS 2.1.59 **Solid Waste Services.** Work with private disposal companies to ensure the continued provision of adequate solid waste and recycling services in Jurupa Valley, including the availability of adequate landfill capacity to meet the City's future needs.
- CS 2.2.60 **Waste Reduction.** Encourage the diversion of waste from landfills through reduction, reuse, and recycling efforts.
- CS 2.1.61 **Waste Management.** Encourage new development to employ construction waste management techniques to divert construction materials and debris away from landfills.
- CS 2.1.62 **Public Education.** Encourage and as resources allow, support public education efforts to inform the public about waste reduction, reuse and recycling.
- CS 2.1.63 **Neighborhood Clean-Up Efforts.** Sponsor and/or participate in neighborhood clean-up efforts.
- CS 2.1.64 **Commercial Recycling.** Expand mandatory recycling for commercial customers consistent with State requirements.
- CS 2.1.66 **Waste Diversion.** Achieve at least the minimum construction and demolition waste.

Programs

- CS 2.1.1.5 **Urban Water Management Plan.** Work with local water purveyors to prepare a unified Urban Water Management Plan for Jurupa Valley and to ensure the Plan is updated as needed.
- CS 2.1.1.6 **Alternative Water Resources.** Explore the feasibility of desalinization and other regional projects as an alternative resource to reduce the City's dependency on imported water.
- CS 2.1.1.7 **Water Conservation Ordinance.** Implement and enforce the City's Landscape Water Conservation ordinance.

Land Use Element

Goal

- LUE 5 Support diverse and well-funded public and institutional uses that provide essential utilities and public services, lifelong learning opportunities and improved access to recreational, cultural, historic and social amenities and resources.

Policies

- LUE 4.6 **Public Utilities, Easements, and Rights-of-Way.** New development and conservation land uses shall not infringe upon existing public utility corridors, including fee owned rights-of-way and permanent easements whose true land use is that of Public Facilities. This policy will ensure that the "public facilities" designation governs what otherwise may be inferred from large-scale, general plan maps.
- LUE 4.7 **Consideration of Scale.** Due to the scale of General Plan maps and the area of the City, utility easements and linear rights-of-way may not be shown on General Plan, specific, and community plan maps. These features need to be taken into

consideration in the review of applications to develop land and proposals to preserve land for conservation.

- LUE 4.8 **Impact Mitigation of New Public Facilities.** Planning and development of new public facilities, such as public buildings, utility transmission lines (water, sewer, communications and power), roads, bridges, storage and equipment yards, flood control channels, etc., shall avoid adverse impacts to prime residential or commercial properties, or areas with residential and commercial development potential, and shall not adversely affect the character and quality of life in the City's residential neighborhoods.
- LUE 5.52 **Utilities.** Discourage utility lines within the River corridor and floodplain. If approved, lines shall be placed underground where feasible and shall be located and designed in a manner to harmonize with the natural environment and to be visually unobtrusive.
- LUE 12.5 **Water Conservation Techniques.** Water conservation techniques, such as groundwater recharge basins, use of porous pavement, cisterns for non-potable water uses, drought tolerant landscaping, drought-conscious irrigation systems, water recycling, and other water conservation methods should be included in new public and private development, as appropriate.
- LUE 13.1 **Service Capacity.** Ensure that development does not exceed the City's or community services districts' ability to adequately provide supporting infrastructure and services, such as water, wastewater treatment, energy, solid waste and public services such as police/fire/emergency medical services, recreational facilities and transportation systems.
- LUE 13.2 **Monitoring.** Monitor the capacities of infrastructure and services in coordination with service providers, utilities, and outside agencies and jurisdictions to ensure that housing and population growth does not reduce levels of service below acceptable levels.
- LUE 13.3 **Urban Water Management Plans.** Review all projects for consistency with the appropriate community service district's urban water management plans.

4.17.3 Methodology

Existing conditions within the City regarding utilities and service systems were examined in light of future development and population growth according to the 2017 General Plan projections and the need for adequate water supplies, wastewater treatment, landfill capacity, and storm drainage systems as appropriate.

4.17.4 Thresholds of Significance

The City of Jurupa Valley has not established local CEQA significance thresholds as described in §15064.7 of the State CEQA Guidelines. For this reason, this Draft EIR incorporates the CEQA checklist included in Appendix G of the *State CEQA Guidelines* to determine the significance of environmental impacts. Implementation of the City 2017 General Plan would have a significant impact on the provision of utilities or service systems if it would:

- Require or result in the construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects; and/or
- Have insufficient water supplies available to serve the project from existing entitlements and resources, or need new or expanded entitlements;
- Exceed wastewater treatment requirements of the Santa Ana Regional Water Quality Control Board;

- Result in a determination by the wastewater treatment provider, which serves or may serve the project, that it lacks adequate capacity to serve the project's projected demand in addition to the provider's existing commitments; and/or
- Require or result in the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.
- Be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs; and/or
- Fail to comply with applicable federal, state, and local statutes and regulations related to solid waste.
- Require construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

4.17.5 Programmatic Impact Evaluation

4.17.5.1 Water Supply and Construction or Expansion of Water Treatment Facilities

| | |
|-----------|---|
| Threshold | Would the proposed project have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? |
| Threshold | Would the proposed project require the construction of new water treatment facilities or expansion of existing facilities, the construction of which would cause significant environmental effects? |

Programmatic Impacts. Increases in population, square footage, and intensity of uses would contribute to increases in the overall regional demand for water. Implementation of water conservation measures and recycling programs are necessary to help reduce the need for increased water supply. The previous Section 4.9.5.3 examined the impacts of future development on local groundwater, which is the primary source of the local water supplies, and determined the goals, policies, and programs of the 2017 General Plan would support and not hinder the implementation of the Urban Water Management Plans of the water suppliers to Jurupa Valley. Therefore, the City's General Plan will not have a significant adverse impact to water supplies or having to expand water treatment facilities.

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and program in the 2017 General Plan Conservation and Open Space Element, Community Safety, Services, and Facilities Element, and Land Use Element address water supply and water treatment facilities (for the full text of measures see Section 4.17.2.3):

Conservation and Open Space Element

Goals

- COS 3.1 Work with JCSD, RCSD and other community service districts and agencies, to help meet Jurupa Valley's urban water needs.
- COS 3.4 Encourage JCSD and RCSD to retain and where possible, expand the capacity of wells, aquifers and other groundwater reserves.

Community Safety, Services, and Facilities Element

Policies

- CS 2.1.43 Facilitate the utilization of grey water systems.
- CS 2.1.44 Require the use of drought-tolerant landscaping in all new development.

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

- CS 2.1.45 Encourage the use of reclaimed water for landscape irrigation and other uses.
- CS 2.1.46 Support public education efforts to promote water conservation.
- CS 2.1.47 Encourage local water purveyors to expand local domestic water storage and recycling capabilities.
- CS 2.1.48 Continue providing education and community outreach on water conservation.
- CS 2.1.5 Encourage continued production and expansion of recycled water use for irrigation.
- CS 2.1.53 Require new development to contribute fair-share costs for wastewater infrastructure and treatment.
- CS 2.1.55 Encourage water conservation and require new developments to include drought tolerant landscaping and water saving systems and fixtures.

Programs

- CS 2.1.1.5 Work with local water purveyors to prepare a unified Urban Water Management Plan for Jurupa Valley and to ensure the Plan is updated as needed.
- CS 2.1.1.6 Explore the feasibility of desalinization and other regional projects as an alternative resource to reduce the City's dependency on imported water.
- CS 2.1.1.7 Implement and enforce the City's Landscape Water Conservation ordinance.

Land Use Element

Policies

- LUE 4.6 New development and conservation land uses shall not infringe upon existing public utility corridors, including fee owned rights-of-way and permanent easements.
- LUE 4.7 Show utility easements and linear rights-of-way on General Plan, specific, and community plan maps.
- LUE 4.8 New public facilities cannot impact prime residential or commercial properties or adversely affect the character and quality of residential neighborhoods.
- LUE 5.52 Discourage utility lines within the River corridor and floodplain.
- LUE 12.5 Water conservation methods should be included in new public and private development.
- LUE 13.1 Development must not exceed the City's or community services districts' ability to adequately provide supporting infrastructure and services.
- LUE 13.2 Monitor the capacities of infrastructure and services in coordination with service providers, utilities, and outside agencies and jurisdictions to ensure that housing and population growth does not reduce levels of service below acceptable levels.
- LUE 13.3 Review all projects for consistency with the community service district's urban water management plans.

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will support the Urban Water Master Plans of the agencies providing water to the City in the future, so there are no significant impacts in this regard (see also Section 4.9 regarding surface and groundwater supplies).

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan goals, policies, and programs will support the Urban Water Master Plans of the agencies providing water to

the City in the future, so the 2017 General Plan will have less than significant impacts regarding water supply and construction or expansion of water treatment facilities, and no mitigation is needed.

4.17.5.2 Wastewater Treatment Requirements and Wastewater Treatment Capacity, New or Expanded Wastewater Treatment Facilities, and/or Wastewater Conveyance Facilities

| | |
|-----------|---|
| Threshold | Would the proposed project exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board? |
| Threshold | Would the proposed project result in a determination by the wastewater treatment provider, which serves or may serve the project, that it lacks adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? |
| Threshold | Would the proposed project require the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? |
| Threshold | Would the proposed project cause or contribute to a deficiency in any wastewater conveyance facilities which serves or may serve the project? |

Programmatic Impacts. The County's Regional Water Quality Control Plant (RWQCP) is a publically operated treatment works (POTW), so operational discharge flows treated at the plant would be required to comply with waste discharge requirements contained within the Waste Discharge Requirements (WDRs) for the Santa Ana Regional Water Quality Control Board (RWQCB). Compliance with policies established by the City would ensure that discharges into the wastewater treatment facility system would not exceed applicable Santa Ana RWQCB wastewater treatment requirements.

Population increases and development within the planning area serviced by the Jurupa Community Services District (JCSD) and Rubidoux Community Services District (RCSD) would increase the overall demand for wastewater treatment service. The current treatment capacity at the RWQCP is 40 million gallons per day (mgd), and will increase to 46 mgd after completion of the plant expansion. The City of Riverside anticipates that flows to the plant will increase 0.75 percent in a low growth scenario, and 1.5 percent in a high growth scenario. The former would result in a 2025 flow of 47.3 mgd, and the latter 52.2 mgd. Proposed changes to capacity of the RWQCP or any facility maintained by RWQCP are reviewed throughout the year by the County of Riverside which operates the treatment facility. For all new development within the RWQCP service area, impact fees are allocated to assist in the financing of future collection and disposal facilities and future sewer treatment plant facilities. Development would not exceed the capacity of the wastewater treatment system because the RWQCP is currently being expanded and development fees would pay for future expansion or new wastewater treatment plants as growth occurs.

Evaluation of General Plan Goals and Policies. The following summarized policies in the 2017 General Plan Community Safety, Services, and Facilities Element, Conservation and Open Space Element, and Land Use Element address wastewater treatment capacity and facilities (for the full text of measures see Section 4.17.2.3):

Community Safety, Services, and Facilities Element

Policies

CS 2.1.49 Work with JCSD and RCSD to ensure sufficient wastewater conveyance and pumping capacity to meet existing and future needs.

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

- CS 2.1.50 Work with JCSD to convert areas of the City relying on septic systems to municipal wastewater service.
- CS 2.1.52 Encourage efforts of the City of Riverside and WRCWRA to provide adequate wastewater treatment capacity to serve existing and future needs of the City.
- CS 2.1.53 Require new development to contribute fair-share costs for the provision of wastewater infrastructure and treatment.

Conservation and Open Space Element

Policy

- CS 2.1.50 **Septic Systems.** Work with the Jurupa Community Services District to convert areas of the City relying on septic systems to municipal wastewater service.

Land Use Element

Policies

- LUE 4.8 New public facilities cannot impact prime residential or commercial properties or adversely.
- LUE 13.1 Development must not exceed the City's or community services districts' ability to adequately provide supporting infrastructure and services.
- LUE 13.2 Monitor the capacities of infrastructure and services in coordination with service providers, utilities, and outside agencies and jurisdictions to ensure that housing and population growth does not reduce levels of service below acceptable levels.

Level of Programmatic Impact Before Mitigation. Implementation of the policies of the 2017 General Plan, as well as compliance with federal, state, and local regulations, will ensure that wastewater treatment requirements are met and that there is sufficient capacity for wastewater conveyance and disposal.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the goal and policies of the 2017 General Plan, as well as compliance with federal, state, and local regulations, will ensure that wastewater treatment requirements are met and that there is sufficient capacity for wastewater conveyance and disposal, and no mitigation is needed.

4.17.5.3 Solid Waste Facilities

| | |
|-----------|--|
| Threshold | Would the proposed project be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs? |
| Threshold | Would the proposed project fail to comply with applicable federal, state, and local statutes and regulations related to solid waste? |

Programmatic Impacts: Solid waste collection is a "demand-response" service and current service levels would be expanded and funded through user fees imposed on new development within the City. Solid waste from the City would be hauled by Burrtec Waste Industries or Waste Management and transferred to the Agua Mansa Materials Recovery Facility (MRF)/Transfer Station. From the MRF the non-recyclable material would be transferred to regional landfills (most likely the Badlands Sanitary Landfill or the El Sobrante Landfill) as available. According to the Cal Recycle Facility/Site Summary Details website accessed on August 21, 2016 the Badlands Sanitary Landfill has a permitted disposal capacity of 4,000 tons per day with a remaining capacity of 14,730,020 cubic

yards. The Badlands Sanitary Landfill is estimated to reach capacity, at the earliest time, in the year 2024.

The El Sobrante Landfill has a permitted disposal capacity of 16,034 tons per day with a remaining capacity of 145,530,000 tons. The El Sobrante Landfill is estimated to reach capacity, at the earliest time, in the year 2045.

As discussed above, adequate daily surplus capacity exists at the receiving regional landfills, and build-out of the proposed 2017 General Plan would not significantly affect current operations or the expected lifetime of the area landfills. No significant solid waste disposal impact would occur and no mitigation is required.

The City compels its waste haulers to comply with Assembly Bill 341 (Chapter 476, Statutes of 2011), as amended by Senate Bill 1018, which became effective July 1, 2012 by providing the necessary education, outreach and monitoring programs and by processing the solid waste from the City's commercial customers through its waste haulers' material recovery facility.

AB 341 mandates the reduction of solid waste disposal in landfills. With planned expansion activities of landfills in the region and projected growth rates identified in the City's General Plan, sufficient landfill capacity exists to accommodate disposal needs through 2030. Therefore, implementation of the City General Plan would not create demands for solid waste services that would exceed the capabilities of the County's waste management system.

Evaluation of General Plan Goals and Policies. The following summarized goals, policies, and program in the 2017 General Plan Community Safety, Services, and Facilities Element and Land Use Element address solid waste facilities (for the full text of measures see Section 4.17.2.3):

Community Safety, Services, and Facilities Element

Policies

- | | |
|-----------|---|
| CS 2.1.59 | Work with private disposal companies to ensure adequate solid waste and recycling services, including adequate landfill capacity. |
| CS 2.2.60 | Encourage diversion of waste from landfills through reduction, reuse, and recycling. |
| CS 2.1.61 | New development should employ construction waste management techniques to divert debris from landfills. |
| CS 2.1.62 | Support public education efforts about waste reduction, reuse and recycling. |
| CS 2.1.63 | Sponsor and/or participate in neighborhood clean-up efforts. |
| CS 2.1.64 | Expand mandatory recycling for commercial customers consistent with State requirements. |
| CS 2.1.66 | Achieve at least the minimum construction and demolition waste diversion requirement of 75 percent. |

Land Use Element

Policies

- | | |
|----------|---|
| LUE 4.8 | New public facilities cannot impact prime residential or commercial properties. |
| LUE 13.1 | Development must not exceed the City's or community services districts' ability to adequately provide supporting infrastructure and services. |
| LUE 13.2 | Monitor the capacities of infrastructure and services in coordination with service providers, utilities, and outside agencies and jurisdictions to ensure that housing and population growth does not reduce levels of service below acceptable levels. |

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

Level of Programmatic Impact Before Mitigation. Implementation of the 2017 General Plan policies would ensure that impacts would be less than significant and mitigation is not required.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan policies would ensure that impacts would be less than significant. No mitigation is required.

4.17.5.4 Storm Water Drainage Requirements

| | |
|-----------|---|
| Threshold | Would the proposed project result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? |
|-----------|---|

Programmatic Impacts. Development within the watershed will result in an increase in impervious surfaces in addition to changes in land use and associated pollutant runoff characteristics. Increased impervious surfaces are likely to alter existing hydrology and increase potential pollutant loads. However, all future development in the City will be required to comply with the requirements of the NPDES permit program. In addition, development within the City is required to be in compliance with Chapter 6.10, Storm Water/Urban Runoff Management and Discharge Controls of the City of Jurupa Valley Municipal Code.

Evaluation of General Plan Goals and Policies. The following summarized policies in the 2017 General Plan Conservation and Open Space Element and Community Safety, Services, and Facilities Element address stormwater drainage facilities (for the full text of measures see Section 4.17.2.3):

Conservation and Open Space Element

Policy

COS 3.1.12 Require that developers and designers incorporate natural drainage systems into development projects where appropriate and feasible.

Community Safety, Services, and Facilities Element

Policy

CS 1.1.15 All proposed development projects shall address and mitigate any adverse impacts on the carrying capacity of local and regional storm drain systems. The City will require that future development comply with the following hydrology, flooding, and water quality requirements:

- All drainage facilities will be designed and constructed in accordance with the Riverside County Flood Control and Water Conservation District (RCFC&WCD) standards and specifications.
- Drainage facilities will be subject to the review and approval of the City of Jurupa Valley and, as applicable, RCFC&WCD.
- Jurupa Community Services Department (JCSD) will review the design of drainage facilities in conjunction with their review of the sewer and water facilities to ensure that there are no design conflicts between the proposed utilities.
- The capital cost of all on-site facilities will be the responsibility of the applicant. Such facilities will be dedicated to City of Jurupa Valley, RCFC&WCD, a Homeowners Association (if private system), or Community Facilities District (CFD) for maintenance and operations.
- New development will be required to prepare Water Quality Management Plans (WQMPs) and Storm Water Pollutant Prevention Plans (SWPPPs) in accordance

with the requirements of the National Pollutant Discharge Elimination System (NPDES) standards.

- All projects proposing construction activities including: clearing, grading, excavation that results in the disturbance of at least one acre total land area, or activity which is part of a larger common plan of development of one acre or greater, shall obtain the appropriate NPDES construction permit and pay the appropriate fees. All development within the specific plan boundaries shall be subject to future requirements adopted by the City to implement the NPDES program. Project-specific mitigation measures may include, but not be limited to: on-site detention; water quality basins; covered storage of all outside facilities; vegetated swales; monitoring programs; etc.

Level of Programmatic Impact Before Mitigation. With implementation of the 2017 General Plan policies above, along with enforcement of established city regulations and requirements, stormwater drainage impacts would be reduced to a less than significant level.

Programmatic Mitigation Measures. No mitigation needed.

Level of Programmatic Impact After Mitigation. Implementation of the 2017 General Plan policies will not create significant impacts to stormwater drainage facilities. No mitigation is required.

4.17.6 Cumulative Impacts to Utilities and Service Systems

Cumulative impacts refer to incremental effects of an individual project when viewed in connection with the effects of past projects, current projects, and probable future projects. In this case, the proposed project or action is the City's 2017 General Plan, which by its very nature is an assessment of various potential cumulative impacts from future development. Under the 2017 General Plan, the City will experience incremental conversion of vacant land in various locations of the City based on market conditions during the planning period.

CEQA typically requires a cumulative analysis using a "list" of cumulative projects or a "plan summary" of long-term development impacts. In this case, the growth projections of the General Plan represent the "plan summary" for the purposes of characterizing cumulative impacts related to General Plan implementation. The projected growth conditions in the City by 2035 include conversion of a total of 4,494 acres of vacant developable land which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2015 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building (see Tables 3.A through 3.C in Section 3, *General Plan Components, Projected Growth*).

For context, the cumulative "universe" for utility-related impacts relative to the City's General Plan would be the City of Jurupa Valley in this portion of western Riverside. Cumulatively, continued development within the Jurupa Valley will put additional pressure on water supplies from the Chino Basin, generate additional wastewater and solid waste that must be treated and disposed, and produce additional runoff which carries urban pollutants.

The groundwater basin is adjudicated so that the Basin Watermaster will manage groundwater supplies in the basin consistent with the UWMPs for the various serving agencies that utilize these sources of groundwater. The County has planned regular expansions of its treatment plant as growth occurs, and its landfill capacity for this area is adequate until at least 2040. The Riverside County Flood Control and Water Conservation District has master plans for each drainage area of the County, including Jurupa Valley, and the City's General Plan is consistent with the County's wastewater, solid waste, and flood control master plans and water supply plans for this portion of western Riverside County. Therefore, the City's 2017 General Plan should have no significant impacts on cumulatively considerable regional impacts on utility infrastructure and water supplies.

THIS PAGE INTENTIONALLY LEFT BLANK

5.0 ADDITIONAL TOPICS REQUIRED BY CEQA

Section 15126 of the *CEQA Guidelines* requires that all aspects of a project or plan must be considered when evaluating its impacts on the environment, including planning, acquisition, development, and operation. As part of this analysis, the EIR must also identify (1) significant environmental effects of the proposed General Plan; (2) significant environmental effects that cannot be avoided if the proposed Plan is implemented; and (3) growth-inducing impacts.

5.1 SIGNIFICANT ENVIRONMENTAL EFFECTS WHICH CANNOT BE AVOIDED IF THE PROPOSED PROJECT IS IMPLEMENTED

Table 5.A illustrates the significant unavoidable impacts anticipated to result from the proposed project (i.e., 2017 General Plan), even with implementation of the Plan-specific mitigation measures identified in the Chapter 4.0 analysis.

Table 5.A: Significant Environmental Effects Which Cannot Be Avoided

| Topic | Type of Impact | Impact |
|-----------------------------|---|--|
| Agriculture Section 4.2 | Loss of Prime Farmland | Impact 4.2.5.5 — Development in the City will eventually cover over 612 acres of prime farmland and 2,077 acres of locally important farmland. |
| | Cumulative Loss of Agriculture in the Region | Impact 4.2.6 – Buildout of the City to rural and suburban uses will contribute to an overall decline and eventual loss of agricultural activities and resources from western Riverside County. |
| Air Quality, Section 4.3 | Violate Air Quality Standards | Impact 4.3.5.2 - Long-term emissions from the operation of developed land uses in the future will exceed SCAQMD regional thresholds for ROC, NOx, CO, PM10, and PM2.5 even with implementation of the goals, policies, and programs of the General Plan and compliance with existing air pollution regulations. |
| | Cumulative Air Quality Impacts | Impact 4.3.6 — Long-term significant emissions from future development in the City will contribute to cumulatively considerable regional air quality impacts, even with implementation of the goals, policies, and programs of the General Plan and compliance with existing air pollution regulations. |
| Noise Section 4.12 | Long-term Levels Exceed City Standards | Impact 4.12.5.1 – Future development in the City will contribute additional traffic which will cause noise levels along several major roadways to exceed City standards. |
| | Cumulative Noise Impacts | Impact 4.12.6 – Noise from traffic increases on local streets will contribute to cumulative noise impacts in the region as development occurs in the future. |
| Traffic Section 4.16 | Level of Service Impacts | Impact 4.16.5.2 — Future development in the City and especially in the surrounding region will cause a number of local roadway segments and intersections to exceed City Level of Service standards as growth occurs, even with implementation of the goals, policies, and programs of the General Plan and the recommended mitigation measures. |
| | Cumulative Traffic Contributions and Mitigation Control | Impact 4.16.6 — As the City grows in the future, traffic from new land uses will add incremental traffic onto area freeways and highways, causing Level of Service impacts proportional to traffic increases. The City does not have control over the installation of improvements that might mitigate these impacts, so it will make a significant contribution to cumulatively considerable regional traffic impacts. |

5.2 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

Section 15126(c) of the *CEQA Guidelines* mandates that the EIR must address any significant irreversible environmental changes that would be involved in the proposed action should it be implemented. An impact would fall into this category if it resulted in any of the following:

- The project would involve a large commitment of non-renewable resources;
- The primary and secondary impacts of the project would generally commit future generations of people to similar uses;
- The project involves uses in which irreversible damage could result from any potential environmental incidents associated with the project; and/or
- The proposed consumption of resources is not justified (e.g., the project could waste energy).

Determining whether the proposed 2017 General Plan may result in significant irreversible effects requires a determination of whether key resources would be degraded or destroyed in such a way that there would be little possibility of restoring them.

The City currently contains 4,258 acres of vacant land which represents approximately 15 percent of the land in the City, with the remaining 85 percent having already been developed. The project (i.e., the General Plan) would result in a long-term commitment of 4,258 acres of now vacant land to various rural and suburban land uses.

Natural resources in the form of construction materials would be utilized in the construction of development in the future within the City, and energy resources in the form of electricity and natural gas would be used during the long-term operation of new land uses, however, their use is not expected have a negative impact on the availability of these resources.

The City is largely a rural-suburban community or group of communities at present, and that same overall style or organization is expected to continue as vacant land develops in the City, which will be similar in appearance, intensity, and use as existing land uses. Due to the amount and location of vacant land in the City, future development is not expected to result in a fundamental change in the overall appearance or nature of the City of Jurupa Valley.

If the proposed 2017 General Plan were not adopted, it is likely the remaining vacant land in the City would still develop in a manner similar to that of existing land uses. Therefore, the General Plan does not represent a substantial adverse and irreversible change in community character or quality of life for this area.

5.3 GROWTH-INDUCING IMPACTS

Pursuant to Sections 15126(d) and 15126.2(d) of the *CEQA Guidelines*, this section examines ways in which the proposed 2017 General Plan could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Also required is an assessment of other projects that would foster other activities which could affect the environment, individually or cumulatively. To address this issue, potential growth-inducing effects will be examined through analysis of the following questions:

- Would this project remove obstacles to growth, e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area, or through changes in existing regulations pertaining to land development?
- Would this project result in the need to expand one or more public services to maintain desired levels of service?
- Would this project encourage or facilitate economic effects that could result in other activities that could significantly affect the environment?

- Would approval of this project involve some precedent-setting action that could encourage and facilitate other activities that could significantly affect the environment?

Please note that growth-inducing effects are not to be construed as necessarily beneficial, detrimental, or of little significance to the environment. This issue is presented to provide additional information on ways in which this project could contribute to significant changes in the environment, beyond the direct consequences of developing the land use concept examined in the preceding sections of this EIR.

Would this Plan remove obstacles to growth, e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area, or through changes in existing regulations pertaining to land development?

As discussed in DEIR Section 4.17, *Utilities and Service Systems*, new infrastructure facilities are required in some areas of the City to implement the 2017 General Plan. Buildout of future land uses would require construction of paved roadways in areas of the City where they do not currently exist, and extension of water mains, sewer mains, natural gas transmission pipelines, and electricity distribution lines where such infrastructure does not currently exist.

The purpose of 2017 General Plan is to guide growth and development in the Jurupa Valley community and provide a framework in which the growth can be managed and tailored to suit the needs of the community and the surrounding area. Approval of the General Plan would allow future development of the City through a system of land use designations. As discussed in Section 4.13, *Population, Housing, and Employment*, 2017 General Plan buildout would result in a maximum population of 146,241 people, 61,855 additional jobs, and 38,141 additional housing units. Therefore, the 2017 General Plan would be considered to be growth inducing, although in a programmatic sense it would more accurately be described as accommodating growth based on market conditions rather than actually causing some amount of growth to occur in and of itself.

Would this project result in the need to expand one or more public services to maintain desired levels of service?

As discussed in Sections 4.14, *Public Services*, and 4.15, *Recreation*, as vacant land in the City continues to be developed, further commitment of public services in the form of fire protection, police protection, schools, parks, and other public facilities would be required. An increase in the amount of development in the City would also require an increased commitment to public services in order to maintain a desired level of service, and that would be considered a long-term commitment.

Would this project encourage or facilitate economic effects that could result in other activities that could significantly affect the environment?

The 2017 General Plan assumes a moderate amount of growth will occur within the City in the future. The City currently contains 4,258 acres of vacant land which represents approximately 15 percent of the land in the City, with the remaining 85 percent having already been developed. The project (i.e., the General Plan) would result in a long-term commitment of 4,258 acres of now vacant land to various rural and suburban land uses. As development occurs, a number of temporary jobs would be created during the construction of each individual project. This would be a direct, growth-inducing effect of the General Plan. As the population grows and occupies new dwelling units, these new residents would seek shopping, entertainment, employment, home improvement, auto maintenance, and other economic opportunities in the City and surrounding areas. This would facilitate economic goods and services and could, therefore, encourage the creation of new businesses and/or the expansion of existing businesses to address these economic needs. However, the proposed General Plan would also provide for new office, commercial, and industrial development which would also generate additional employment opportunities. Therefore, the 2017 General Plan would have both direct and indirect growth-inducing effects.

Would approval of this project involve some precedent-setting action that could encourage and facilitate other activities that could significantly affect the environment?

Although adoption of a General Plan may be considered a precedent-setting action, the impacts of subsequent similar actions would require environmental analysis and associated mitigation to ensure that such subsequent impacts would not significantly affect the environment. The General Plan would not significantly induce growth, but the increases to the area's employment and housing bases would help accommodate future growth in the City based on market conditions. Approval of the proposed 2017 General Plan would not encourage and facilitate other activities that could significantly affect the environment. Cities and counties in California periodically update their General Plans pursuant to California Government Code Sections 65300 et seq.

5.4 ENERGY CONSERVATION

Public Resources Code Section 21100(b)(3) and CEQA Guidelines Appendix F requires a description (where relevant) of the wasteful, inefficient, and unnecessary consumption of energy caused by a project. In 1975, the California State Legislature adopted Assembly Bill 1575 (AB 1575) in response to the oil crisis of the 1970s. Appendix F of the State CEQA Guidelines provides guidance for assessing potential impacts that a project could have on energy supplies, focusing on the goal of conserving energy by ensuring that projects use energy wisely and efficiently. Because Appendix F does not include specific significance criteria, this threshold is based on the goal of Appendix F. Therefore, an energy impact is considered significant if a proposed project would:

- Develop land uses and patterns that cause wasteful, inefficient, and unnecessary consumption of energy or construct new or retrofitted buildings that would have excessive energy requirements for daily operation.

In this case, the "project" is the proposed 2017 General Plan for the City, which will provide a framework for future land use changes and growth rather than act as a type of separate development project. Therefore, standard calculations and an assessment of the project's level of energy conservation of consistency with energy conservation laws or regulations is inappropriate at this programmatic level.

The Air Quality and Conservation and Open Space Elements of the City's General Plan contains the following goals, policies, and programs regarding energy conservation and developing new energy resources within the City:

Air Quality Element

Goal

AQ 5 Energy Efficiency and Conservation

Policies

AQ 5.1.1 **Reduce Solid Waste.** Utilize source reduction, recycling and other appropriate measures to reduce the amount of solid waste disposed of in landfills.

AQ 5.1.2 **Energy Conservation.** Encourage advanced energy conservation techniques and the incorporation of energy-efficient design elements for private and public developments, including appropriate site orientation and the use of shade and windbreak trees to reduce fuel consumption for heating and cooling and offer incentives, as appropriate.

Conservation and Open Space Element

COS 5. Renewable Energy Resources

Goal

- COS 5.1 Increase use of sustainable energy sources such as solar, wind and thermal energy, and reduce reliance on non-sustainable energy sources to the extent possible with available technology and resources.

Policies

- OS 5.1.1 **Use Best Available Practices.** Employ the best available practices in energy conservation, procurement, use, and production, and encourage individuals, organizations and other agencies to do likewise. "Best available practices" means behavior and technologies that reflect recommendations of specialists and that use the least energy for a desired outcome, considering available equipment, life-cycle costs, social and environmental side effects, and the regulations of other agencies. Best available practices include use of sustainable energy sources. Sustainable energy sources are naturally renewed in a relatively short time and avoid substantial undesirable side effects, and include:
- A. Space heating and cooling using earth, plantings and/or building thermal mass to moderate temperature changes.
 - B. Space cooling through natural ventilation.
 - C. Space cooling through reflectivity and shading.
 - D. Indoor illumination by natural light.
 - E. Solar space and water heating.
 - F. Wind electricity generation.
- COS 5.1.2 **Energy-Efficient City Facilities.** Operate and maintain City facilities in the most energy-efficient manner, without reducing public safety or service levels, as budget resources allow.
- COS 5.1.3 **Energy-efficiency improvements.** Identify energy efficiency improvement measures to the greatest extent possible, undertake all necessary steps to seek funding for their implementation and, upon securing availability of funds, implement the measures in a timely manner, as budget resources allow.
- COS 5.1.4 **Agency Cooperation.** Cooperate with Federal, State and local governments and other appropriate entities to accomplish energy conservation objectives when consistent with the City's General Plan goals and policies.
- COS 5.1.5 **Energy Efficiency and Green Building.** Encourage energy-efficient "green buildings" as certified by the U.S. Green Building Council's LEED® (Leadership in Energy and Environmental Design) Program or equivalent certification.
- COS 5.1.6 **Energy Efficiency Incentives.** Support standards and incentives that encourage developers, designers, and property owners to design, build, and operate buildings to achieve energy savings that exceed Title 24 requirements of the State Building Code.
- COS 5.1.7 **Energy Efficient Materials.** Specify and use energy efficient materials and systems for City facilities as budget resources allow.
- COS 5.1.8 **Reduce "Heat Island" Effect.** Encourage the conversion of asphalt and concrete paving to porous surfaces that help reduce surface runoff and the "heat island" effect.

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

COS 5.1.9 **Renewable Energy Projects.** Encourage and accommodate applications for projects that will produce renewable energy for the grid, such as solar generating stations, etc.

Programs

COS 5.1.1.1 **Energy-Efficient Operations.** Budget for, and manage City operations, capital improvements, and facilities for energy efficiency, including purchase and use of fleet vehicles, equipment, and materials.

COS 5.1.1.2 **Sustainable Design.** Incorporate sustainable design and sustainable energy sources and features in existing and new City facilities.

COS 5.1.1.3 **Zoning Ordinance Update.** Update the Zoning Ordinance to further the energy conservation goals, policies and implementations actions and reduce impediments or disincentives to it.

COS 5.1.1.4 **Encourage Public Information Programs.** Encourage private utility programs for public information programs and energy audits to promote energy conservation.

COS 5.1.1.5 **Energy Grants.** Solicit state and federal grants to implement the City's energy conservation programs as such funding becomes available.

Wind Energy

Because of its valley location and pattern of development, Jurupa Valley is generally not suitable for efficient, large-scale wind energy generation. Small-scale, non-commercial wind energy generation, and “windmotors” historically associated with agricultural uses may be appropriate in connection with residential, institutional, recreational and agricultural uses.

Conservation and Open Space Element

Policy

COS 5.1.10 **Wind Energy.** Where appropriate, allow non-commercial wind energy generation in a manner that maximizes beneficial uses and minimizes detrimental effects to residents and the environment.

Solar Energy

Due to its location and climate, solar energy generation has important applications for residential, commercial, and institutional applications in Jurupa Valley. Sunlight can be utilized for energy production in two ways: active solar systems involve the use of electronic and mechanical devices to convert solar energy to heat or electricity; passive solar systems utilize natural heating and cooling from the sun through building orientation and building design techniques.

Conservation and Open Space Element

Policies

COS 5.1.11 **Solar access.** Encourage the provision for and protection of solar access.

COS 5.1.12 **Solar Energy Use.** Use solar energy in City facilities and operations, as budget resources allow, and encourage the use of active and passive solar energy by homeowners, business owners, developers, government, and public agencies.

Program

- COS 5.1.1.6 **Update City Regulations.** Update development and subdivision standards to include clear, specific standards to ensure desirable solar access is provided for all new development.

Biomass Resources

Biomass resources refer to organic materials, either waste products, residues, or specific crops that can be converted to energy fuel to replace conventional sources or directly used in combustion processes. Due to agricultural production in the County, resources exist that enable this technology to be more widely employed.

Conservation and Open Space Element

Policy

- COS 5.1.12 **Biomass Conversion.** Encourage economic biomass conversion under sensible environmental controls, and where compatible with adjacent uses.

Petroleum Resources

Riverside County's petroleum resources are deposited in the form of oil and gas seeps. The State Division of Oil and Gas does not report significant or active petroleum extraction in Jurupa Valley or the County. Should extraction activities be undertaken in the future, the following policy provides direction for the siting of oil and gas facilities.

Conservation and Open Space Element

Policies

- COS 6.1.6 **City Operations.** Seek ways to improve the energy efficiency of City operations to save energy, reduce consumption of non-renewable materials, reduce municipal costs, and set a positive example for the community.
- COS 6.1.7 **City Vehicles and Equipment.** Purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use no- or low-emission sources of energy, if economically feasible.
- COS 6.1.6 **Renewable Energy Resources.** Work with other agencies and utility providers to encourage safe, economical, and renewable energy resources, and to reduce non-renewable energy use through public education and participation in energy conservation programs.

State Energy Efficiency Measures. Title 24, California's Energy Efficiency Standards for Residential and Non-residential Buildings, was established by the California Energy Commission (CEC) in 1978 in response to a legislative mandate to create uniform building codes to reduce California's energy consumption, and provide energy efficiency standards for residential and non-residential buildings. In 2013, the CEC updated Title 24 standards with more stringent requirements. The 2013 Standards are incorporated within the California Building Code and are expected to substantially reduce the growth in electricity and natural gas use. Additional savings result from the application of the Standards on building alterations, and these savings are cumulative. Future development within the City would be required to comply with these energy conservation standards.

2017 General Plan - City of Jurupa Valley

Draft Environmental Impact Report

Conclusion. The previous analysis has demonstrated the City's proposed 2017 General Plan contains numerous goals, policies, and programs designed to conserve and develop new energy resources within the City as new development occurs in the future. New development would also have to adhere to all federal, state, and local requirements for energy efficiency, including the Title 24 standards. For these reasons, the proposed 2017 General Plan would not result in the inefficient, wasteful, or unnecessary consumption of building energy at a programmatic level, as required for this type of project under CEQA. This analysis is consistent with and meets the requirements of Appendix F of the State CEQA Guidelines regarding energy conservation.

6.0 ALTERNATIVES

6.1 INTRODUCTION

An EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment. In compliance with *CEQA Guidelines* Section 15126.6(a), an EIR must describe “a range of reasonable alternatives to the project, or to the location of the project which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project.” The EIR need not consider every conceivable alternative; rather it must consider a reasonable range of potentially feasible alternatives to the project, or to the location of the project, which would avoid or substantially lessen significant effects of the project, even if “these alternatives would impede to some degree the attainment of the project objectives, or would be more costly” (*CEQA Guidelines* Section 15126.6(b)). The discussion of project alternatives must “include sufficient information about each (to) allow meaningful evaluation, analysis, and comparison with the proposed project.” An EIR must evaluate a “No Project” alternative in order to allow decision-makers to compare the effect of approving the project to the effect of not approving the project.

The City, acting as the CEQA Lead Agency, is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. The range of alternatives addressed in an EIR is governed by a “rule of reason,” which requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. Of the alternatives considered, the EIR need examine in detail only those the Lead Agency determines could feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project. Per *CEQA Guidelines* Section 15364, “feasible” has been defined as “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors.”

6.1.1 Summary of the Proposed General Plan

The City of Jurupa Valley is proposing to adopt the 2017 General Plan to identify City-wide goals, policies, and programs that will establish a framework for ongoing activities and new development in the City into the future. The Land Use Element represents a generalized “blueprint” for the future of the City and is the core of the General Plan. It sets forth a pattern for the use, development, and preservation of land within the City's planning area. The pattern is based on Community needs and preferences and describes the expected level of population growth resulting from housing construction anticipated by the plan. It also shows the type, location, and intensity of new commercial and industrial uses to meet the City's economic sustainability needs. The General Plan consists of ten elements, including the Land Use Element. The following elements relate to the Land Use Element as described below.

- The *Mobility Element* recognizes implications of land use policy on all modes of movement and establishes policies, standards, and implementation measures that work with the Land Use Element update and address both existing and potential circulation opportunities and deficiencies.
- The *Housing Element* goals, policies, and programs reflect the land use policies as they relate to residential development.
- The *Noise Element* contains policies that protect residents and land uses from noise and vibration impacts while allowing development and a mix of compatible land uses.
- The *Community Safety, Services and Facilities Element* identifies hazards that influence the locations and types of proposed land uses and describes the services and facilities necessary to serve those land uses. In addition, the Land Use and Safety Elements share

several safety topics. For example, the Land Use Element includes airport safety policies and programs that relate to compatible land use and design.

- The *Conservation and Open Space Element* contains policies and programs to protect natural resources and open spaces, including natural habitat areas, environmentally sensitive areas, watersheds, recreation areas, agricultural land, and other open space amenities. The Land Use Element works with this element and incorporates concepts such as clustering and buffering open space areas in order to enhance their protection.
- The *Air Quality Element* contains policies and programs that address land use, design, and transportation measures intended to help maintain healthy air quality in Jurupa Valley. The pattern of land use and communities' transportation systems can help reduce motor vehicle emissions and have positive, healthy effects on residents and visitors' quality of life.
- The *Environmental Justice Element* contains policies and programs that seek to ensure that all members of the Community have meaningful input into the decision-making process. In addition, the Element protects low-income persons and communities from land use actions that adversely affect the health, safety, and welfare of these groups.
- The *Economic Sustainability Element's* policies and programs focus on the City's financial health to achieve other key Community goals and to provide essential services. Economic-sustainability strategies typically involve land-use and transportation decisions, and are guided by long-term consideration of City assets, opportunities, needs, and costs.
- The *Healthy Communities Element* includes policies and programs to support the overall health of Jurupa Valley's residents. It focuses on providing healthy choices for food, recreation, and health care, and seeks to improve everyone's access to information on healthy living.

6.1.2 Plan Objectives

The purpose of the proposed 2017 General Plan is to provide a framework for growth and change in the future (e.g., new residential and non-residential development). The General Plan is necessarily considered at a program level under CEQA, which means its objectives, as outlined in its goals, policies, and programs, are more broad than objectives for typical private development projects or even public works projects. The Community Values Statement of the 2017 General Plan document states its "guiding values" (considered to be "objectives" under CEQA) are to:

1. **Small-Town Feel.** Maintain Jurupa Valley's small-town feel, where neighbors know neighbors and merchants, the built environment reflects and is compatible with the area's character, and where residents can grow gardens, raise and keep livestock, and choose from diverse lifestyles in a semi-rural town setting.
2. **Community of Communities.** Jurupa Valley consists of many distinctive communities and neighborhoods in a valley surrounded by stunning natural scenery and views. As a "community of communities", we will preserve and enhance those positive qualities that make our communities unique, enhance our "gateways" to welcome residents and visitors and embrace a unifying community theme and spirit. Our ability to offer the choice of a semi-rural, equestrian lifestyle is an essential part of who we are as a community and of our quality of life.
3. **Open Space and Visual Quality.** We value and protect the Santa Ana River and river plain, ridgelines, and hillsides for their exceptional value for recreation, watershed, wildlife habitat, environmental health, and as scenic backdrops for the City. As part of our values, we support prevention and removal of visual blight, protection of public vistas, and community awareness

and beautification activities. Jurupa Valley's special places will be protected, maintained and promoted to preserve our unique character, instill local pride and encourage tourism.

4. **Active Outdoor Life.** Many Jurupa Valley residents were drawn here because of its unique outdoor setting and the recreation opportunities it offers. Our parks and recreation facilities are essential to maintain and improve our health and quality of life. We place high value on our public parks, sports fields, pedestrian and equestrian trails and support facilities, golf courses, outdoor use areas, historic sites and nature centers, campgrounds, airport, and joint use school facilities.
5. **Public Safety.** Support for public safety, law enforcement and emergency medical services is a value that's widely held by Jurupa Valley residents. We honor and respect the safety professionals who faithfully serve Jurupa Valley. We support strong, collaborative efforts to prevent crime and homelessness, enforce planning and building codes, and to improve the safety of neighborhoods, homes, public facilities, streets, trails and other transportation facilities. We take proactive measures to cope with and recover from emergencies and natural and manmade disasters.
6. **Education, Culture and Technology.** We place high priority on maintaining and improving our educational, cultural and technical opportunities, including programs and events at schools, libraries, museums, performing arts facilities and other community venues. We support the establishment of new community centers as well as college-level, life-enrichment, and career training opportunities in Jurupa Valley
7. **Mobility.** We support the creation and maintenance of transportation networks (e.g., multi-use equestrian, pedestrian and bicycle trails, complete streets, sidewalks, airport, rail, and public transit) that are safe, attractive, and efficient and provide connectivity to meet the diverse needs for the movement of people and goods.
8. **Diversity.** We value Jurupa Valley's cultural and social diversity and celebrate our cultural richness through arts and culture, community festivals, educational programs and exhibits, seasonal and equestrian-themed events, preservation of historic landmarks, youth and adult sports.
9. **Environmental Justice.** We value the health, well-being, safety and livability of all our communities and strive to equitably distribute public benefits and resources. We endeavor to enhance underserved communities so that all residents can thrive and share in a high quality of life.
10. **Healthy Communities.** We have a comprehensive view of health. We enhance existing opportunities for healthy living and create new ones by helping residents to make the healthy choice the easy choice. The health and well-being of all individuals, families, neighborhoods and businesses is our shared value and concern. We take positive steps to maintain a clean, visually attractive City, to improve Jurupa Valley's physical, social and environmental health and to share and teach these values to achieve and sustain a healthy, clean and safe environment for current and future generations.
11. **Economic and Fiscal Health.** We support high quality economic growth and development that is environmentally sustainable and that fosters housing, living wage jobs, retail goods and services, public facilities and services, environmental benefits, destination tourism, and medical and educational facilities. We seek ways to be good stewards of our local assets, to make wise land use and fiscal decisions, to conduct open and accessible government, and to preserve and enhance the City's prosperity and quality of life.

6.1.3 Summary of the General Plan's Significant Impacts

The analysis provided in Section 4.0 determined that, despite the implementation of the goals, policies, and programs of the General Plan, and mitigation measures recommended in this EIR, significant environmental impacts would result from future construction and operation of new development in the City. To satisfactorily provide the CEQA-mandated alternatives analysis, the alternatives considered must reduce or eliminate one or more of the following significant impacts related to implementation of the General Plan:

- **Agriculture**
 - Loss of Prime agricultural soils
 - Cumulative loss of regional agriculture
- **Air Quality**
 - Long-Term Operational Emissions
 - Cumulative emission impacts
- **Noise**
 - Noise levels along road segments will exceed standards
 - Contributions to cumulative noise impacts
- **Traffic**
 - Future Level of Service impacts (roads and intersections)
 - Cumulative traffic mitigation not under City control

6.2 ALTERNATIVES CONSIDERED BUT NOT ANALYZED FURTHER

In determining an appropriate range of alternatives to be evaluated in the EIR, several possible alternatives were considered by the lead agency and eventually rejected because they could not accomplish the basic objectives of the project as listed above or they were considered infeasible. Per the *CEQA Guidelines* (Section 15126.6(c)), factors that may be considered when addressing the feasibility of alternatives include failure to meet most of the stated project objectives, infeasibility, or inability to avoid environmental effects.

During preliminary discussions, some potential alternatives included various “global” reductions in overall future development intensity, from 5 percent up to 40 percent. An evaluation of the existing baseline conditions in the City indicate that the significant impacts identified for the 2017 General Plan (i.e., air pollutant and GHG emissions, traffic, and noise) are already present and exceed accepted standards, so any less intense alternative compared to the proposed 2017 General Plan would still have the same types of impacts but which would be incrementally reduced (i.e., less traffic, less noise) compared to the proposed General Plan. However, one lower intensity land use plan (20 percent reduction in housing units and commercial/industrial floor area increases) was selected for further analysis.

To help improve the City's future job/housing balance, several alternatives that significantly increased the amount of non-residential development were discussed, essentially developing up to all the remaining vacant land in the City with such uses to maximum the amount of new employment and services available to City residents. However, this alternative would create incompatible uses adjacent to each other, and would lead to inappropriate locations of non-residential development in residential areas. It would also significantly increase local traffic generation and noise which could have significant effects on existing residential areas. Therefore, none of the potential “all non-residential growth” alternatives was studied further.

Based on a desire to expand equestrian opportunities in the City, several alternatives were discussed that would essentially develop all the remaining vacant land in the City as equestrian or rural residential uses that would support horse keeping (essentially half-acre lots or larger). This alternative

would substantially reduce future traffic, noise, and air pollutants from vehicular related sources. However, it would introduce low density residential land uses in areas where it might be inappropriate or there may be impacts from adjacent uses (e.g., warehousing, commercial uses, airport, etc.), and it would not allow the City to meet its housing goals.

Finally, analysis of an “alternative site” in a CEQA document is not appropriate for a for a programmatic document like a proposed General Plan, it is rather more appropriate for a project-level CEQA analysis where moving a specific development project to another site may eliminate or largely reduce one or more significant impacts of that project. In this case, “moving” the proposed General Plan would be equivalent to implementing the existing County General Plan instead, which is already being examined in the No Project Alternative (see Section 6.4.1).

6.3 DEVELOPMENT OF PROGRAMMATIC ALTERNATIVES

The following alternatives have been identified and evaluated to provide decision-makers with a reasonable range of alternatives that would address at least to some degree the identified impacts of the proposed General Plan. An EIR need not consider an alternative whose impact cannot be reasonably ascertained and whose implementation is remote or speculative. In accordance with *CEQA Guidelines*, the alternatives considered in this EIR include those that 1) could accomplish most of the basic objectives of the project or plan, 2) are reasonably feasible given the nature of the plan and surrounding land uses, and 3) could avoid or substantially lessen one or more of the significant impacts of the proposed General Plan.

At present, the City has adopted a modified version of the Riverside County General Plan (and Jurupa Area Plan) until it could adopt its own General Plan (i.e., the proposed project or plan). Therefore, the No Project Alternative required for consideration under CEQA will be buildout of the City under the existing County General Plan (i.e. assuming the proposed 2017 General Plan is not adopted). As discussed above, even under existing conditions the City's land uses result in significant traffic, air quality, GHG, and noise impacts. However, one lower intensity scenario was selected as a reasonable representative alternative for more detailed study (-20% of proposed Plan growth).

Table 6.A summarizes the characteristics of the proposed 2017 General Plan and the two alternatives selected for more detailed environmental review, and Table 6.B presents the quantitative characteristics of each alternative.

2017 General Plan - City of Jurupa Valley
Draft Environmental Impact Report

Table 6.A: Description of Analyzed Alternatives

| Project Alternative | Alternative Description |
|--|---|
| Proposed 2017 General Plan | The projected growth conditions in the City by 2035 include conversion of a total of 4,493 acres of vacant land which is 16.1 percent of the total City area. If development occurs at a regular pace, that would equal roughly 236.5 acres or 5 percent per year for approximately 19 years (2016 to 2035). Future growth is expected to add a maximum of 14,332 new residential units and maximum of 36.6 million square feet of new non-residential building. |
| No Project Alternative "Buildout under the County General Plan" | Proposed land uses under the County General Plan are slightly less intense overall than the proposed General Plan, resulting in slightly lower population projections at buildout (148,314 vs. 150,741 persons) from a slighter lower number of housing units at buildout (38,686 vs. 39,333 units). The additional non-residential development at buildout would also be slightly lower at 33.8 million square feet added vs. 36.6 million square feet. The number of additional employees would also be decreased from 65,881 to 61,444 workers under this alternative. Due to a different mix of land uses, the total ADT and VMT would increase under this alternative compared to the proposed General Plan. |
| Lower Intensity Development Alternative | This alternative would result in an overall reduction in new residential densities by approx. 20% with a similar reduction in Floor Area Ratio or total developable building area for non-residential development. These reductions could result from modified site designs to incorporate more open space, landscaping, public improvements, trails, or less intensive development on a particular site. The overall effect would be a lower population projection at buildout (136,416 vs. 150,741 persons) from fewer housing units at buildout (35,513 vs. 39,333 units). The additional non-residential development at buildout would also be lower (26.6 million square feet added vs. 36.6 million square feet). The projected number of new employees would also be reduced from 65,881 to 54,385 workers under this alternative. Total ADT and VMT would similarly be reduced compared to the proposed General Plan. |

6.4 PROGRAMMATIC ANALYSIS OF ALTERNATIVES

The following sections evaluate and compare the impacts of the Alternatives to the proposed General Plan by each environmental topic presented in Section 4 of this EIR. while Section 6.5 summarizes the impacts of each alternative and determine if or to what degree each one would achieve the objectives of the proposed General Plan.

6.4.1 No Project Alternative – Buildout According to the County General Plan

Under the No Project Alternative, the proposed land uses under the County General Plan are slightly less intense overall than the proposed City 2017 General Plan, resulting in slightly lower population projections at buildout (148,314 vs. 150,741 persons) from fewer housing units at buildout (38,686 vs. 39,333 units). The additional non-residential development at buildout would also be lower at 33.8 million square feet added vs. 36.6 million square feet. Employees would be decreased from 65,881 to 61,444 workers under this alternative. Because of the mix of land uses, the total ADT and VMT would actually be higher under this alternative compared to the proposed General Plan.

6.4.1.1 Aesthetics

Development in the City under this alternative (i.e. County General Plan) would result in slightly higher densities of housing and non-residential development, but they would likely be indistinguishable from development under the proposed City 2017 General Plan because the total number of units and non-residential building is very similar or equivalent between the two plans. Assuming a similar level of open space or other amenities provided by individual development projects, there would be little or no difference visually or in terms of night lighting between this alternative and the proposed Plan. Therefore, aesthetic impacts would be similar to those of the 2017 General Plan (i.e., less than significant).

6.4.1.2 Agriculture and Forestry Resources

Future development in the City under the County General Plan would be similar to that under the 2017 General Plan in that eventually all the land either designated or currently supporting agricultural uses would be converted to some form of suburban or urban land use. There are no forest resources so those would not be affected under either Plan. Therefore, impacts of the alternative relative to agriculture and forest resources would be the same as under the proposed General Plan (i.e., significant for loss of prime soils and cumulative loss of agriculture in the region).

6.4.1.3 Air Quality

There would be slightly more residential units and slightly more non-residential development under this alternative compared to the proposed Plan. However, air pollutant emissions under either plan are far in excess of the daily SCAQMD thresholds, as shown in Table 6.C. While a project exceeding the SCAQMD thresholds is considered inconsistent with the Air Quality Management Plan (AQMP), the environmental evaluation of a General Plan is determined by consistency with the land use assumptions that went into developing the AQMP. In this case, the AQMP estimates for the City were based on the land uses of the County General Plan which is the No Project Alternative. Therefore, development under either the County or proposed City 2017 General Plan would be consistent with the AQMP on a programmatic level. The goals, policies, and programs of the County General Plan would likely be similar to those of the proposed Plan in terms of impacts to sensitive receptors, which are considered to be less than significant on a programmatic level. Future development would produce such large amounts of criteria pollutants that long-term development in the City, under either Plan, would be considered to make a significant contribution to cumulatively considerable air quality impacts. In summary, air quality impacts of this alternative would be similar to those of the proposed General Plan (i.e., significant for daily emissions and cumulative impacts).

Table 6.C: No Project Alternative - Operational Emissions

| Source | Pollutant Emissions, lbs/day | | | | | |
|--------------------------|------------------------------|-----------|------------|-----------------|------------------|-------------------|
| | VOC | NOx | CO | SO _x | PM ₁₀ | PM _{2.5} |
| City General Plan | 33,760 | 17,264 | 93,013 | 299 | 20,993 | 8,500 |
| County General Plan | 35,448 | 18,127 | 97,664 | 314 | 22,043 | 8,925 |
| Net Change | +1,688 | +863 | +4,651 | +15 | +1,050 | +425 |
| SCAQMD thresholds | 55 | 55 | 550 | 150 | 150 | 55 |
| Exceeds thresholds? | Yes | Yes | Yes | Yes | Yes | Yes |

Source: CalEEMod data, LSA August 2016 and DEIR Table 4.3.F.

6.4.1.4 Biological Resources

This alternative (development under the County General Plan) would eventually lead to the development or loss of a similar amount of vacant land compared to the proposed General Plan. Development intensity would be similar to that proposed under the 2017 General Plan. Therefore, potential impacts to listed species, sensitive species and habitats, riparian areas, wetlands, etc. would be similar between the two Plans. Impacts to the Santa Ana River and the Criteria Cells of the Multiple Species Habitat Conservation Plan for western Riverside County from development in the City would also be equivalent between these two Plans. Therefore, overall impacts to biological resources of the two Plans would be similar (i.e., less than significant).

6.4.1.5 Cultural Resources

Future development under this alternative would have equivalent impacts compared to the proposed General Plan because a similar amount and location of vacant land would be lost under either Plan. Therefore, similar archaeological, tribal cultural resources, and paleontological impacts would be anticipated under this alternative compared to the proposed General Plan.

6.4.1.6 Geology and Soils

Development of this alternative would have similar geologic and soil-related impacts to those of the proposed General Plan. Like all of southern California, the City is located in a seismically active area and is subject to ground shaking resulting from activity on local and regional faults. The California Building Code (California Code of Regulations, Title 24) established engineering standards appropriate for the seismic zone in which development may occur. Future development within the City under either the County or City General Plan would have similar risks and environmental impacts regarding regional faults, seismic movement, or soil limitations. Development under either Plan would be required to adhere to the California Green Building Code, and City's standard design and engineering standards. Compared with the proposed Plan, no greater impact would occur with this alternative.

6.4.1.7 Global Climate Change

Section 4.7 indicates City-wide GHG emissions by 2035 would be 717,018 MT CO₂e compared to an adjusted "Business As Usual" (aBAU) threshold of 744,674 MT CO₂e, so City-wide emissions would be less than significant according to applicable SCAQMD thresholds (see Tables 4.7.I and 4.7.K). Under this alternative, GHG emissions would be approximately 5% higher compared to the proposed 2017 General Plan, or 752,869 MT CO₂e compared to 717,018 MT CO₂e. These GHG emissions would slightly exceed the SCAQMD's GHG service area significance threshold outlined above. Under this alternative, there would be no mitigation for the City to prepare a Climate Action Plan for subsequent CEQA tiering for future development. Therefore, both project and cumulative GHG impacts would be significant for this alternative compared to less than significant for the proposed

General Plan (i.e., less than significant volumes of GHG emissions and significant cumulative impacts contributions to regional GHG emissions).

6.4.1.8 Hazards and Hazardous Materials

Development of this alternative would result in similar amounts and distributions of non-residential land uses, including industrial uses, so the types, amounts, and locations of potential hazardous substances would be similar between these two Plans. All development in the City is also required to adhere to existing local, State, and Federal regulations pertaining to hazardous materials. Similar to the proposed Plan, impacts associated with hazards and hazardous materials under this alternative would be equivalent compared to the proposed General Plan (i.e., less than significant).

6.4.1.9 Hydrology and Water Quality

As with the proposed Plan, development under the County General Plan would require similar typed of modifications to existing drainages and patterns of drainage since the location and size of vacant land is very similar between the two Plans. Due to the similar level of development anticipated under these plans, similar types of drainage improvements would be expected. The extent of permeable vs. impermeable surfaces for this alternative would also be similar to that of the proposed Plan. All local, State, and Federal policies and regulations pertaining to surface water and groundwater resources would remain in effect under this alternative. Sedimentation and erosion from any on-site development has the potential to affect water quality. Future construction under either Plan would have to follow applicable NPDES requirements, including the preparation of and adherence to an SWPPP and BMPs. Runoff from paved surfaces, especially during a “first-flush” event, may be contaminated by a mixture of sediment, debris, and other contaminants but would also be similar between the two Plans. Future development would also be required to prepare and implement WQMPs that would effectively mitigate post-construction water quality impacts from developed sites under either Plan. Therefore, potential impacts of this alternative related to hydrology and water quality would be less than significant, similar to the proposed General Plan.

6.4.1.10 Land Use and Planning

If the proposed Plan were not to be approved, future development in the City would occur under the guidelines of the County General Plan. The land use classifications are different between the two Plans, but the overall buildout of residential and non-residential uses in the City would be very similar between the two Plans. The existing vacant land would exist under either Plan, and the land use designations for the remaining vacant land are very similar between the two Plans. Future development in the City would have to comply with applicable provisions of local and regional plans (e.g., Water Quality Control Plan and Air Quality Management Plan, SCAG Regional Comprehensive Plan, Regional Transportation Plan, and Sustainable Communities Strategy plans). Both the County and proposed City 2017 General Plans are similar in that they would introduce more workers into this job-poor area compared to new residents. Therefore, land use impacts associated with this alternative would be equivalent to those of the proposed Plan (i.e., less than significant).

6.4.1.11 Mineral Resources

The General Plan does identify limited areas of locally important mineral resources in the City, but there are no specifically designated Mineral Resource Zones located with the City of Jurupa Valley. Future development under either Plan would cover up the same remaining vacant land and present the same constraints to any future extraction of mineral resources, mainly sand and gravel, under either General Plan. Compared with the proposed General Plan, no greater impacts to mineral resources would occur for under this alternative.

6.4.1.12 Noise

Development of this alternative would result in similar amounts and distributions of traffic onto local roadways compared to the proposed Plan. Since the type, amount, and location of future development under this alternative is so similar to the proposed Plan, noise impacts would be expected to be similar, and either Plan would likely provide a similar level of protection for City residents and sensitive receptors. Traffic volumes on major roadways would be incrementally higher (approximately 5 percent) for this alternative compared to the proposed Plan, but that would not result in a substantial change in the level of noise impacts expected within the City. The extent and duration of construction activities for future development would be similar under either Plan as well. Therefore, overall noise impacts under this alternative would be significant, similar to those of the proposed Plan.

6.4.1.13 Population, Housing, and Employment

This alternative would result in the development of a similar amount of vacant land and at a similar level of intensity compared to the proposed General Plan. The alternative would generate fewer new residential units (13,685 vs. 14,332 units) and a similar amount of population increase (51,318 vs. 53,745 additional residents). The amount of new non-residential development and additional employees would also be similar between the two Plans. Both plans would increase jobs faster and to a larger degree compared to housing, which would benefit the area's jobs/housing ratio consistent with a number of regional plans. Therefore, potential population, housing, and employment impacts of this alternative would be equivalent to the proposed Plan (i.e., less than significant).

6.4.2.14 Public Services

As discussed above, this alternative could result in population increase of 51,318 people within the City compared to 53,745 people for the proposed General Plan. Therefore, the demands on schools, parks, other public facilities, law enforcement, and fire protection services would be similar and service impacts for either Plan would be less than significant. Similar to the proposed Plan, development under this alternative (i.e. County General Plan) would also be required to pay development impact fees for schools, police services, and fire services. The payment of development impact fees would offset any impacts to public services that may result from future development under this alternative. Therefore, when compared to the proposed Plan, impacts associated with public services from this alternative plan would remain less than significant with implementation of General Plan goals, policies, and programs and the payment of development impact fees.

6.4.1.15 Recreation

This alternative would result in a similar level of residential development and population growth (i.e., 5% higher than the proposed Plan), so potential impacts of future development on recreational facilities and programs would be expected to be equivalent between the two Plans. Similar to with the proposed Plan, the dedication of land or the payment of parkland fees under the County General Plan would reduce recreational impacts to less than significant levels.

6.4.1.16 Traffic

As identified in Table 6.B, this alternative would generate approximately 2.6 million average daily vehicle trips (ADT) compared to 2.5 million ADT under the proposed Plan. Similarly, this alternative would generate 6,776.5 million vehicle miles traveled (VMT) compared to 6,453.8 million VMT under the proposed Plan. The amount of ADT between the two Plans differs by less than 5 percent which means the potential traffic impacts along local roadways and at local intersections would be equivalent between the two Plans. As identified in Section 4.16, traffic-related impacts of future development under the proposed Plan would be significant and unavoidable based on the City's Level of Service standards and the City's contribution to regional cumulative traffic. The traffic impacts of this alternative would be similar to those of the proposed Plan (i.e., significant and cumulative).

6.4.1.17 Utilities and Service Systems

Future development under this alternative (i.e., County General Plan) would have infrastructure impacts very similar to those identified for the proposed Plan, mainly because they would result in an overall similar level of housing, population, and employment growth, and those people and businesses would place similar demands on local schools and utility systems (i.e., water, wastewater, solid waste, and flood control). Likewise, the future population of the City would utilize similar amounts of electricity and natural gas under this alternative compared to the proposed Plan. Section 4.17 determined that utility impacts of the proposed Plan were less than significant, so the utility impacts of this alternative would be less than significant as well.

6.4.1.18 Cumulative Impacts

Similar to the proposed Plan, this alternative would contribute toward the permanent conversion of vacant former agricultural and open space lands in the City and surrounding areas to suburban land uses. Development of this alternative would generate slightly more traffic, long-term operational air pollutant emissions, and noise. It would also make a significant contribution to regional cumulative impacts in terms of loss of agriculture, air pollution, traffic, and noise, similar to the proposed Plan.

6.4.1.19 Conclusion

Under the No Project Alternative, future development in the City would be guided by the 2008 County General Plan rather than the proposed City 2017 General Plan. Traffic, air quality, GHG, and noise impacts would be significant, similar to those of the proposed Plan. Due to the size and scope of future development in the City, this alternative does not eliminate or reduce any of the significant impacts identified for the proposed Plan to less than significant levels.

6.4.2 Lower Intensity Alternative

Under the Lower Intensity Alternative, the projected growth of residential and non-residential uses would be reduced by approximately 20 percent (i.e., 20% less new housing units and non-residential building floor area compared to the maximum buildout projections. This lowered intensity of development could result from providing more open space, landscaping, public improvements, trails, etc. or reducing the development intensity or density of projects. This alternative acknowledges what can typically occur during the urban development process (i.e., many projects do not build out at their maximum intensity). Such changes would result in a lower population projection at buildout (136,416 vs. 150,741 persons) from a lower number of housing units at buildout (35,513 vs. 39,333 units). The additional non-residential development at buildout would also be lower at 26.6 million square feet added vs. 36.6 million square feet. Employees would also be reduced from 65,881 to 54,385 workers under this alternative. Total ADT and VMT would be reduced by 20% compared to the proposed General Plan.

6.4.2.1 Aesthetics

Development in the City under this lower intensity alternative would result in lower densities of housing and non-residential development on the remaining vacant land, however, it would be similar to development under the proposed City General Plan. Assuming a similar level of open space or other amenities provided by individual development projects, there would be minor differences visually (in the areas currently vacant) and in terms of night lighting between this alternative and the proposed Plan. Throughout the rest of the City, there would be very minor aesthetic differences (i.e., in the existing developed areas). Therefore, aesthetic impacts would be similar to those of the 2017 General Plan (i.e., less than significant).

6.4.2.2 Agriculture and Forestry Resources

Future development in the City under this alternative would be similar to the 2017 General Plan since eventually all the land either designated or currently supporting agricultural uses would be converted to some form of suburban or urban land use. There are no forest resources so those would not be affected under either Plan. Therefore, impacts of the alternative relative to agriculture and forest resources would be the same as under the proposed General Plan (i.e., significant for loss of prime soils and cumulative loss of agriculture in the region).

6.4.2.3 Air Quality

There would be fewer residential units and less non-residential development on the remaining vacant land in the City under this alternative compared to the proposed Plan. However, air pollutant emissions under either plan are far in excess of the daily SCAQMD thresholds, as shown in Table 6.D. While a project exceeding the SCAQMD thresholds is considered inconsistent with the Air Quality Management Plan (AQMP), the environmental evaluation of a General Plan is determined by consistency with the land use assumptions that went into developing the AQMP. In this case, the AQMP estimates for the City were based on the land uses of the County General Plan which is the No Project Alternative. The development proposed under this alternative (and under the County General Plan for that matter) would be consistent with the AQMP on a programmatic level (i.e., the lower intensity alternative proposes less intense development than that used to prepare the AQMP). The goals, policies, and programs of the lower intensity alternative would be equal or less than those of the proposed Plan in terms of impacts to sensitive receptors, which are considered to be less than significant on a programmatic level. Future development would produce such large amounts of criteria pollutants that long-term development in the City under either Plan would be considered to make a significant contribution to cumulatively considerable air quality impacts. In summary, air quality impacts of this alternative would be similar to those of the proposed General Plan (i.e., significant for daily emissions and cumulative impacts).

Table 6.D: Lower Intensity Alternative - Operational Emissions

| Source | Pollutant Emissions, lbs/day | | | | | |
|--------------------------|------------------------------|-----------------|------------|-----------------|------------------|-------------------|
| | VOC | NO _x | CO | SO _x | PM ₁₀ | PM _{2.5} |
| City General Plan | 33,760 | 17,264 | 93,013 | 299 | 20,993 | 8,500 |
| Less Intense Alternative | 32,072 | 16,401 | 88,362 | 284 | 19,943 | 8,075 |
| Net Change | -1,688 | -863 | -4,651 | -15 | -1,050 | -425 |
| SCAQMD thresholds | 55 | 55 | 550 | 150 | 150 | 55 |
| Exceeds thresholds? | Yes | Yes | Yes | Yes | Yes | Yes |

Source: CalEEMod data, LSA August 2016 and DEIR Table 4.3.F.

6.4.2.4 Biological Resources

This lower intensity alternative would eventually lead to the development or loss of a similar amount of vacant land compared to the proposed General Plan. Although development intensity on the remaining vacant land would be 20% less than under the 2017 General Plan, the overall potential impacts to listed species, sensitive species and habitats, riparian areas, wetlands, etc. would be similar between the two Plans. Impacts to the Santa Ana River and the Criteria Cells of the Multiple Species Habitat Conservation Plan for western Riverside County from development in the City would also be equivalent between these two Plans as their requirements apply regardless of the development intensity. Therefore, overall impacts to biological resources of the two Plans would be similar (i.e., less than significant).

6.4.2.5 Cultural Resources

Future development under this alternative would have equivalent impacts compared to the proposed General Plan because a similar amount and location of vacant land would be lost under either Plan. It is possible that larger lots (i.e. less intense development) on vacant land has the potential to preserve any found archaeological resources. However, overall archaeological, tribal cultural resources, and paleontological impacts would be expected to be similar to the proposed General Plan for this alternative.

6.4.2.6 Geology and Soils

Development of this alternative would have similar geologic and soil-related impacts to those of the proposed General Plan although it would introduce slightly fewer new residents onto now vacant land in the City. Like all of southern California, the City is located in a seismically active area and is subject to ground shaking resulting from activity on local and regional faults. The California Building Code (California Code of Regulations, Title 24) established engineering standards appropriate for the seismic zone in which development may occur. Future development within the City under either this alternative of the proposed General Plan would have similar risks and environmental impacts regarding regional faults, seismic movement, or soil limitations. Development under either Plan would be required to adhere to the California Green Building Code, and City's standard design and engineering standards. Compared with the proposed Plan, no greater impact would occur with this alternative (i.e., less than significant).

6.4.2.7 Global Climate Change

Section 4.7 indicates City-wide GHG emissions by 2035 would be 717,018 MT CO₂e compared to an adjusted "Business As Usual" (aBAU) threshold of 744,674 MT CO₂e, so City-wide emissions would be less than significant according to applicable SCAQMD thresholds (see Tables 4.7.I and 4.7.K). GHG emissions would be approximately 5% lower under this alternative compared to the proposed 2017 General Plan, or 681,167 MT CO₂e compared to 717,018 MT CO₂e. These GHG emissions would not exceed the SCAQMD's GHG significance threshold. Therefore, impacts would be similar

for this alternative compared to the proposed General Plan (i.e., less than significant volumes of GHG emissions and less than significant cumulative impacts contributions to regional GHG emissions).

6.4.2.8 Hazards and Hazardous Materials

Development of this lower intensity alternative would result in similar amounts and distributions of non-residential land uses, including industrial uses, so the types, amounts, and locations of potential hazardous substances would be similar between these two Plans. All development in the City is also required to adhere to existing local, State, and Federal regulations pertaining to hazardous materials. Similar to the proposed Plan, impacts associated with hazards and hazardous materials under this alternative would be equivalent compared to the proposed General Plan (i.e., less than significant).

6.4.2.9 Hydrology and Water Quality

As with the proposed Plan, development under this lower intensity alternative would require similar types of modifications to existing drainages and patterns of drainage since the location and size of vacant land is very similar between the two Plans. Due to the similar level of development anticipated under these plans, similar types of drainage improvements would be expected. The extent of permeable vs. impermeable surfaces for this alternative would also be similar to that of the proposed Plan. All local, State, and Federal policies and regulations pertaining to surface water and groundwater resources would remain in effect under this alternative. Sedimentation and erosion from any on-site development has the potential to affect water quality. Future construction under either Plan would have to follow applicable NPDES requirements, including the preparation of and adherence to an SWPPP and BMPs. Runoff from paved surfaces, especially during a “first-flush” event, may be contaminated by a mixture of sediment, debris, and other contaminants but would also be similar between the two Plans. Future development would also be required to prepare and implement WQMPs that would effectively mitigate post-construction water quality impacts from developed sites under either Plan. Therefore, potential impacts of this alternative related to hydrology and water quality would be less than significant, similar to the proposed General Plan.

6.4.2.10 Land Use and Planning

The land use classifications of this alternative would be slightly less intense (e.g., larger lots) on the remaining vacant land in the City, but the overall buildout of residential and non-residential uses in the City would still be very similar between these two plans. The same amount of vacant land would exist under the General Plan or this alternative, although the land use designations for the remaining vacant land would be less intense under this alternative. Future development in the City would have to comply with applicable provisions of local and regional plans (e.g., Water Quality Control Plan and Air Quality Management Plan, SCAG Regional Comprehensive Plan, Regional Transportation Plan, and Sustainable Communities Strategy plans). Both this alternative and the proposed City General Plans would introduce more workers into this job-poor area compared to new residents. Therefore, land use impacts associated with this alternative would be equivalent to those of the proposed Plan (i.e., less than significant).

6.4.2.11 Mineral Resources

The General Plan does identify limited areas of locally important mineral resources in the City, but there are no specifically designated Mineral Resource Zones located within the City of Jurupa Valley. Future development under the proposed General Plan or this alternative would remove the same remaining vacant land and present the same constraints to any future extraction of mineral resources, mainly sand and gravel, under either Plan. Compared with the proposed General Plan, no greater impacts to mineral resources would occur for under this alternative.

6.4.2.12 Noise

Development of this alternative would result in slightly less amount of traffic onto local roadways compared to the proposed General Plan (2.4 million ADT vs. 2.5 million ADT). Since the type, amount, and location of future development under this alternative is similar to the proposed Plan, noise impacts would be expected to be similar, and either Plan would likely provide a similar level of protection for City residents and sensitive receptors. Traffic volumes on major roadways would be incrementally lower (approximately 5 percent) for this alternative compared to the proposed Plan, but that would not result in a substantial change in the level of noise impacts expected within the City. The extent and duration of construction activities for future development would be similar under either Plan as well. Therefore, overall noise impacts under this alternative would be significant, similar to those of the proposed General Plan.

6.4.2.13 Population, Housing, and Employment

This alternative would result in the development of a similar or less amount of vacant land and possibly at a lower intensity compared to the proposed General Plan. The alternative would generate slightly less new residential units (10,512 vs. 14,332 units) and have a slightly lower population increase (39,420 vs. 53,745 additional residents). The amount of new non-residential development and additional employees would also be similar between the two Plans (26.6 million vs. 36.6 million square feet and 54,385 vs. 65,885 new employees, respectively). Both plans would increase jobs faster and to a larger degree compared to housing, which would benefit the area's jobs/housing ratio consistent with a number of regional plans. Therefore, potential population, housing, and employment impacts of this alternative would be equivalent to the proposed General Plan (i.e., less than significant).

6.4.2.14 Public Services

As discussed above, this alternative could result in population increase of 39,420 people within the City compared to 53,745 people for the proposed General Plan. Therefore, the demands on schools, parks, other public facilities, law enforcement, and fire protection services would be similarly decreased but to an incremental degree, and service impacts for either Plan would be less than significant. Similar to the proposed Plan, development under this alternative would also be required to pay development impact fees for schools, police services, and fire services. The payment of development impact fees would offset any impacts to public services that may result from future development under this alternative. Therefore, when compared to the proposed Plan, impacts associated with public services from this alternative plan would remain less than significant with implementation of General Plan goals, policies, and programs and the payment of development impact fees.

6.4.2.15 Recreation

This alternative would result in less residential development and population growth lower than the proposed Plan), so potential impacts of future development on recreational facilities and programs would be expected to be equivalent between the two Plans. Similar to the proposed Plan, the dedication of land or the payment of parkland fees under this lower intensity alternative would reduce recreational impacts to less than significant levels.

6.4.2.16 Traffic

As identified in Table 6.B, this alternative would generate approximately 2.4 million average daily vehicle trips (ADT) compared to 2.5 million ADT under the proposed Plan. Similarly, this alternative would generate 5,172 million vehicle miles traveled (VMT) compared to 6,454 million VMT under the proposed General Plan. The amount of ADT between the two Plans differs by only 5 percent which means the potential traffic impacts along local roadways and at local intersections would be equivalent between the two Plans. As identified in Section 4.16, traffic-related impacts of future

development under the proposed Plan would be significant and unavoidable based on the City's Level of Service standards and the City's contribution to regional cumulative traffic. The traffic impacts of this alternative would be similar to those of the proposed Plan (i.e., significant and cumulative).

6.4.2.17 Utilities and Service Systems

Future development under this less intense alternative would have infrastructure impacts very similar to those identified for the proposed Plan, mainly because they would result in an overall similar level of housing, population, and employment growth, and those people and businesses would place similar demands on local schools and utility systems (i.e., water, wastewater, solid waste, and flood control). Likewise, the future population of the City would utilize similar amounts of electricity and natural gas under this alternative compared to the proposed Plan. Section 4.17 determined that utility impacts of the proposed Plan were less than significant, so the utility impacts under this alternative would be less than significant as well.

6.4.2.18 Cumulative Impacts

Similar to the proposed Plan, this alternative would contribute toward the permanent conversion of vacant former agricultural and open space lands in the City and surrounding areas to suburban land uses. Development of this alternative would generate slightly less traffic, long-term operational air pollutant emissions, and noise. It would also make a significant contribution to regional cumulative impacts in terms of loss of agriculture, air pollution, traffic, and noise, similar to the proposed 2017 General Plan.

6.4.2.19 Conclusion

Under the Less Intense Alternative, future development in the City would be approximately 20% less intense than that under the proposed 2017 General Plan. Agriculture, traffic, air quality, and noise impacts would still be significant, similar to those of the proposed 2017 General Plan. Due to the size and scope of future development in the City, this alternative does not eliminate or reduce any of the significant impacts identified for the proposed Plan to less than significant levels.

6.5 COMPARISON OF PROJECT ALTERNATIVES

The following discussion compares the impacts of each alternative with the impacts of the proposed project, as detailed in Chapter 4.0 of this EIR. Table 6.E compares the impacts of the alternatives with those of the proposed 2017 General Plan. This table identifies whether the alternative results in (1) a reduction of the impact; (2) a greater impact than the proposed Plan; or (3) the same impact as the proposed Plan. In addition, Table 6.F further summarizes the changes in significant impacts among the various alternatives and Table 6.G compares the degree to which the alternatives achieve the City's objectives compared to the proposed 2017 General Plan.

Table 6.E: Summary of Impacts for Plan Alternatives

| Environmental Issue | Existing Conditions | Proposed 2016 General Plan | No Project Alternative Buildout under County General Plan | Lower Intensity Alternative |
|----------------------------------|---------------------|----------------------------|---|-----------------------------|

→ Compared with the proposed Plan, the significance of the impact is increased.
← Compared with the proposed Plan, the significance of the impact is reduced.
←SIG Compared with the proposed Plan, the volume or extent of the impact is reduced, yet still significant.
→SIG Compared with the proposed Plan, the volume or extent of the impact is increased and still significant.

Table 6.F: Comparison of Significant Impacts of the Alternatives

| Topic | Proposed Project Impact | Existing Conditions | Proposed General Plan | No Project County General Plan | Lower Intensity Alternative |
|--------------------------|---|---------------------|-----------------------|--------------------------------|-----------------------------|
| Agriculture | Loss of Prime Ag. Soils | LTS | S | S | S |
| | Cumulative Loss of Agriculture | LTS | S | S | S |
| Air Quality | Long-Term Operational Emissions | S | S | S | S |
| | Cumulative Emissions | S | S | S | S |
| Greenhouse Gas Emissions | Emissions from Future Land Uses | S | LTS | S | LTS |
| | Cumulative GHG Emissions | S | LTS | S | LTS |
| Noise | Exceed City Standards | S | S | S | S |
| | Cumulative Impacts | S | S | S | S |
| Traffic | Future Level of Service Impacts (roads and intersections) | S | S | S | S |
| | Cumulative Traffic Impacts and Mitigation | S | S | S | S |
| TOTAL | | 8 | 8 | 10 | 8 |

Source: Table 6.G, Summary of Impacts for Plan Alternatives

LTS = Less Than Significant

S = Significant and Unavoidable

Table 6.G: Degree to Which the Alternatives Meet the Plan Objectives

| Project Objectives | Alternative Meets Project Objectives? ¹ | | |
|---|--|--------------------------------|--------------------------|
| | Proposed General Plan | No Project County General Plan | Less Intense Alternative |
| 1. Small-Town Feel. Maintain Jurupa Valley's small-town feel, where neighbors know neighbors and merchants, the built environment reflects and is compatible with the area's character, and where residents can grow gardens, raise and keep livestock, and choose from diverse lifestyles in a semi-rural town setting. | Yes | NSD | Yes |
| 2. Community of Communities. Jurupa Valley consists of many distinctive communities and neighborhoods in a valley surrounded by stunning natural scenery and views. As a "community of communities", we will preserve and enhance those positive qualities that make our communities unique, enhance our "gateways" to welcome residents and visitors and embrace a unifying community theme and spirit. Our ability to offer the choice of a semi-rural, equestrian lifestyle is an essential part of who we are as a community and of our quality of life. | Yes | NSD | Yes |

2017 General Plan - City of Jurupa Valley
Draft Environmental Impact Report

| Project Objectives | Alternative Meets Project Objectives? ¹ | | |
|--|--|--------------------------------|--------------------------|
| | Proposed General Plan | No Project County General Plan | Less Intense Alternative |
| 3. Open Space and Visual Quality. We value and protect the Santa Ana River and river plain, ridgelines, and hillsides for their exceptional value for recreation, watershed, wildlife habitat, environmental health, and as scenic backdrops for the City. As part of our values, we support prevention and removal of visual blight, protection of public vistas, and community awareness and beautification activities. Jurupa Valley's special places will be protected, maintained and promoted to preserve our unique character, instill local pride and encourage tourism. | Yes | NSD | Yes |
| 4. Active Outdoor Life. Many Jurupa Valley residents were drawn here because of its unique outdoor setting and the recreation opportunities it offers. Our parks and recreation facilities are essential to maintain and improve our health and quality of life. We place high value on our public parks, sports fields, pedestrian and equestrian trails and support facilities, golf courses, outdoor use areas, historic sites and nature centers, campgrounds, airport, and joint use school facilities. | Yes | NSD | Yes |
| 5. Public Safety. Support for public safety, law enforcement and emergency medical services is a value that's widely held by Jurupa Valley residents. We honor and respect the safety professionals who faithfully serve Jurupa Valley. We support strong, collaborative efforts to prevent crime and homelessness, enforce planning and building codes, and to improve the safety of neighborhoods, homes, public facilities, streets, trails and other transportation facilities. We take proactive measures to cope with and recover from emergencies and natural and manmade disasters. | Yes | Yes | Yes |
| 6. Education, Culture and Technology. We place high priority on maintaining and improving our educational, cultural and technical opportunities, including programs and events at schools, libraries, museums, performing arts facilities and other community venues. We support the establishment of new community centers as well as college-level, life-enrichment, and career training opportunities in Jurupa Valley. | Yes | NSD | Yes |
| 7. Mobility. We support the creation and maintenance of transportation networks (e.g., multi-use equestrian, pedestrian and bicycle trails, complete streets, sidewalks, airport, rail, and public transit) that are safe, attractive, and efficient and provide connectivity to meet the diverse needs for the movement of people and goods. | Yes | NSD | Yes |
| 8. Diversity. We value Jurupa Valley's cultural and social diversity and celebrate our cultural richness through arts and culture, community festivals, educational programs and exhibits, seasonal and equestrian-themed events, preservation of historic landmarks, youth and adult sports. | Yes | NSD | Yes |
| 9. Environmental Justice. We value the health, well-being, safety and livability of all our communities and strive to equitably distribute public benefits and resources. We endeavor to enhance underserved communities so that all residents can thrive and share in a high quality of life. | Yes | NSD | Yes |

| Project Objectives | Alternative Meets Project Objectives? ¹ | | |
|---|--|--------------------------------|--------------------------|
| | Proposed General Plan | No Project County General Plan | Less Intense Alternative |
| 10. Healthy Communities. We have a comprehensive view of health. We enhance existing opportunities for healthy living and create new ones by helping residents to make the healthy choice the easy choice. The health and well-being of all individuals, families, neighborhoods and businesses is our shared value and concern. We take positive steps to maintain a clean, visually attractive City, to improve Jurupa Valley's physical, social and environmental health and to share and teach these values to achieve and sustain a healthy, clean and safe environment for current and future generations. | Yes | NSD | Yes |
| 11. Economic and Fiscal Health. We support high quality economic growth and development that is environmentally sustainable and that fosters housing, living wage jobs, retail goods and services, public facilities and services, environmental benefits, destination tourism, and medical and educational facilities. We seek ways to be good stewards of our local assets, to make wise land use and fiscal decisions, to conduct open and accessible government, and to preserve and enhance the City's prosperity and quality of life. | Yes | Yes | Yes |
| Meets Objectives? | Yes | NSD | Yes |

¹ NSD = Not to the Same Degree (as the Proposed General Plan)

6.6 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

When an alternatives analysis is prepared consistent with *CEQA Guidelines Section 15126.6 (e)[2]*, an environmentally superior alternative must be identified in the EIR. As shown in Tables 6.F and 6.G, The Lower Intensity Alternative does reduce some of the significant impacts of future development but not to less than significant levels. For comparison, the significant impacts related to any future development (i.e., traffic, air quality, greenhouse gas emissions, and noise) are all considered significant now under existing baseline conditions (i.e. they exceed the established significance thresholds). In addition, any alternative that eventually develops all the vacant land remaining in the City would result in covering over prime agricultural soils, which has even occurred under existing baseline conditions. The Lower Intensity Alternative does incrementally reduce 3 of the 6 significant impacts identified under the proposed General Plan, and this alternative does achieve the objectives of the City to a similar degree as the proposed General Plan. Therefore, the Reduced Intensity Alternative is environmentally superior to the proposed 2017 General Plan.

7.0 LIST OF PREPARERS

7.1 CITY OF JURUPA VALLEY

Tom Merrill, AICP, Planning Director
Ernest Perea, CEQA Administrator
Rob Olson, Transportation Manager

7.2 CIVIC SOLUTIONS, INC.

Jeff Hook, Principal Planner
Mary Wright, General Plan Program Manager
Maryann Marks, General Plan

7.3 LSA ASSOCIATES, INC.

7.3.1 Environmental Impact Report

Lynn Calvert-Hayes, AICP, Principal in Charge
Kent Norton, AICP, REPA, Senior Project Manager
Ray Hussey, AICP, Associate
Connie Thoman, Associate
Carl Winter, Associate
Dionisios Glentis, Environmental Planner
Margaret Gooding, Senior GIS/Graphics Manager
David Cisneros, GIS/Graphics Specialist

7.3.2 Technical Evaluations

Tony Chung, PhD, Principal (Noise)
J.T. Stephens, Senior Noise Specialist (Noise)
Michael Hendrix, Associate (Greenhouse Gas Emissions)
Sarah Favrot, Air Quality/Climate Change Specialist (Greenhouse Gas Emissions)
Zhen Chen, Air Quality/Climate Change Specialist (Greenhouse Gas Emissions)
Ron Brugger, Senior Air Quality Specialist (Air Quality)
Denise Woodward, Associate Biologist (Conservation)
Rory Goodwin, Senior Archaeologist (Cultural Resources)
Ambarish Mukherjee, AICP, Associate (Traffic)
Nicole West, CPSWQ, QSD/QSP, Associate (Drainage and Water Quality)
Ryan Bensley, Land Use Specialist (Land Use Analysis)

7.4 VERONICA TAM ASSOCIATES

Housing Element

Veronica Tam, Principal

City of Jurupa Valley

NOTICE OF PREPARATION INTERIM GENERAL PLAN DRAFT PROGRAM ENVIRONMENTAL IMPACT REPORT CITY OF JURUPA VALLEY Case No. GPA 1406

TO: State Clearinghouse, Responsible Agencies, Trustee Agencies, and Interested Parties (Refer to Attached Distribution List)

The City of Jurupa Valley ("City"), as lead agency, will be preparing a Program Environmental Impact Report (EIR) for the project identified below. We are requesting your comments on the scope and content of the EIR.

PURPOSE OF THE NOTICE OF PREPARATION: This notice is given to inform the State Clearinghouse, trustee agencies and interested parties that the City plans to oversee the preparation on an EIR for the above-described project. The purpose of this notice is to solicit input from your agency as to the scope and content of the environmental information germane to your agency's statutory responsibility to be included in the EIR. Information in that regard must be submitted to the City as soon as possible, but **not later than thirty (30) days** after receiving this notice.

HOW AND WHEN TO COMMENT: According to State law, the deadline for your response is **not later than 30 days after receipt of this notice**; however, we would appreciate an earlier response, if possible. Please identify a contact person, and send your response by email or hard copy to:

City of Jurupa Valley Planning Department
Attn: Ernest Perea, CEQA Administrator
8930 Limonite Avenue, Jurupa Valley, CA 92509
Phone: (951) 332-6464 Fax: (951) 332-6995, e-mail: eperea@jurupavalley.org

The City will hold a **Public Scoping Meeting** for the EIR to describe the proposed project and the environmental review process and to obtain verbal input on the EIR analysis for the proposal. This EIR Public Scoping Meeting will be held **Tuesday, March 1st at 7:00 PM at the Jurupa Valley City Hall** (address above). You are welcome to attend and give us your input on the scope of the EIR so that it addresses all relevant environmental issues.

Ernest Perea, CEQA Administrator

Date: February 2, 2016

PROJECT TITLE: Interim General Plan - Draft Program Environmental Impact Report - DPEIR

PROJECT LOCATION: The project encompasses the City of Jurupa Valley in western Riverside County, California (see Figures 1 and 2).

PROJECT DESCRIPTION: The proposed Program Environmental Impact Report (PEIR) will be prepared to support adoption of the City's Interim General Plan (the "Project", also referred to as "IGP", pursuant to the California Environmental Quality Act (CEQA). City procedures for CEQA implementation, as well as integration of the latest changes to the Appendix G Checklist questions in the latest *State CEQA Guidelines*, will be used as thresholds for significance in the EIR. The City is preparing the following IGP Elements:

- Land Use;
- Mobility (Circulation)
- Conservation/Open Space;
- Environmental Justice
- Housing
- Safety/Noise
- Public Facilities and Services
- Healthy Communities
- Environmental Sustainability
- Air Quality

The following technical studies/analyses will be prepared to support the IGP:

- Traffic and Street Classification Study for the Circulation Element;
- Demographic and Housing Data Report for the Housing Element;
- Noise and Vibration Study for the Noise Element;
- Land Use Mapping for the Land Use Element; and
- Air Pollutant and GHG Emission Calculations per CalEEMod and consistent with the WRCOG CAP.

The Traffic and Street Classification Study will evaluate the existing circulation setting and identify improvements to help improve vehicular circulation and multimodal transportation facilities within the City of Jurupa Valley. Its goal will be to create a circulation network that increases the use of alternative modes of transportation, promotes safe travel for pedestrians, equestrians and bicyclists and maintains safe and efficient facilities for all travel modes.

The Demographic and Housing Data Report will include a housing needs assessment, demographic analysis, constraints analysis, site inventory, special needs assessment, and transitional and assisted housing assessment in support of the Housing Element to evaluate impacts from full build-out of the IGP.

The Noise and Vibration Study will be prepared consistent with applicable procedures and requirements to evaluate the potential noise impacts of proposed land uses in the IGP. The Noise and Vibration Study will include local noise standards, vibration standards, an ambient noise survey, noise contours maps, evaluation of mobile and

stationary noise and vibration sources, and land use compatibility recommendations based on anticipated noise and vibration levels from IGP implementation.

Land Use Maps will be prepared for the various technical studies and for the IGP Land Use Element based on input from City staff, the General Plan Advisory Committee, and the public to reflect the City's preferred land use strategy. Additionally, existing mapping resources such as GIS layers from the Southern California Association of Governments (SCAG) and/or Riverside County will be utilized to the extent practical in support of the IGP and PEIR.

Note that the Climate Action Plan (CAP) prepared by the Western Regional Council of Governments (WRCOG) is being incorporated by reference into the City's Air Quality Element and will be an appendix of the PEIR.

The PEIR environmental analysis will describe the existing conditions of the City as well as the surrounding area and region as applicable. All relevant federal, State, regional, and local adopted laws and regulations will be summarized. Upon incorporation in July 2011, the City of Jurupa Valley adopted the 2008 Riverside County General Plan, the Jurupa Valley Area Plan, and Riverside County Ordinance No. 348 (Zoning) that were in effect at the time. These documents currently constitute *The City of Jurupa Valley General Plan and Zoning Ordinance* respectively. The proposed EIR will support the IGP effort to create the City's first locally prepared General plan by amending a portion of the 2008 Riverside County General Plan and adding additional information, policies and programs as needed. The City intends to do a more comprehensive update of the General Plan in 5–10 years as budget and staff time allow.

An Initial Study has not been prepared for the IGP, in accordance with State CEQA Guidelines Section 15060(d), because the PEIR will address all Initial Study environmental topics in appropriate detail in order to ensure comprehensive coverage of every environmental topic pursuant to CEQA. Each environmental topic will include an assessment of the direct and indirect short-term and long-term environmental impacts that will be created by the proposed IGP based on established thresholds of significance. In addition, a discussion of implementable mitigation measures that can be monitored effectively during development and operations of the proposed IGP will be included for each issue. The IGP is intended to be self-mitigating, meaning the goals and policies contained within the IGP will be crafted to avoid, reduce and/or mitigate environmental impacts.

Key EIR Issues

The PEIR will incorporate relevant data gleaned from City planning and environmental documents, site-specific technical studies, applicant-provided materials, and publically available data. The EIR will address relevant comments received and will respond to the specific areas of concern identified in responses to this Notice of Preparation. Since an Initial Study was not prepared for the project, this will be a "full scope" EIR which will describe the existing environmental conditions on the project site and will identify the significant environmental impacts anticipated to result from development of the project.

Where potentially significant environmental impacts are identified, the PEIR will also discuss mitigation measures that may make it possible to avoid or reduce significant land use impacts. The analysis in the EIR will include the following specific categories of environmental impacts and concerns related to the proposed project.

Aesthetics: The PEIR will address the potential effects on scenic vistas, scenic corridors, visual character, and light and glare.

Agriculture and Forestry Resources: The PEIR will address the potential effects on farmland, forest land and timberland and the loss of land zoned for agricultural use.

Air Quality: The PEIR will describe the existing air quality conditions in the City and will evaluate the potential air quality impacts of the proposed IGP land uses and policies consistent with SCAQMD methodology. The PEIR will discuss the measures included in the IGP to minimize impacts of criteria air pollutant emissions.

Biological Resources: The PEIR will describe the existing biological conditions within the City, and potential impacts of the IGP on vegetation and wildlife, including special status species. The PEIR will evaluate the likelihood of any significant impacts, including consistency with the Western Riverside County Multiple Species Habitat Conservation Plan.

Cultural Resources: The PEIR will address potential impacts to historic structures, archaeological and paleontological resources.

Geology and Soils: The PEIR will assess soil and geologic conditions of the City and address seismic hazards, including the potential for liquefaction, ground-shaking, and soil erosion.

Greenhouse Gas Emissions: The PEIR will examine the potential impacts of implementing the IGP relative to greenhouse gas (GHG) emissions and global climate change. The PEIR will discuss the measures included in the IGP to minimize impacts of GHG emissions. The Climate Action Plan (CAP) prepared by the Western Regional Council of Governments (WRCOG) will also be incorporated by reference into the City's Air Quality Element and evaluated in the PEIR.

Hazards and Hazardous Materials: The PEIR will include a description of the potential hazards in the City and the health and safety effects based on implementation of the IGP.

Hydrology and Water Quality: The PEIR will discuss the drainage conditions throughout the City and the potential for flooding. Water quality impacts and conformance with the Santa Ana Regional Water Quality Control Board requirements will be addressed.

Land Use and Planning: The PEIR will identify the land uses in the City and evaluate potential land use constraints created by existing conditions. The IGP's compatibility

with existing and proposed land uses in the City and consistency with the City's land use, planning, and environmental justice policies and plans will be evaluated.

Mineral Resources: The PEIR will discuss impacts to mineral resources from implementation of the IGP.

Noise: The PEIR will discuss noise impacts from implementation of the IGP, including impacts from area noise sources (e.g., railroads, airports, I-15 and SR-60 freeways, etc.). A noise analysis will identify existing settings and noise level scenarios associated with implementation of the IGP. The PEIR will address potential noise impacts associated with implementation of the IGP on residential land uses as well as noise impacts on future residences from nearby land uses. Conformance to the City's noise guidelines will be analyzed. Potential impacts resulting from construction noise will also be addressed.

Population and Housing: The PEIR will evaluate the potential for the proposed land uses of the IGP to result in population or housing growth, and will also discuss the potential displacement of housing and people as development occurs.

Public Services: The PEIR will identify existing police, fire, schools, parks, and other public services and facilities serving the City, and will quantify the increase in service demands resulting from implementation of the IGP. The availability and adequacy of existing services will be generally analyzed.

Recreation: The PEIR will discuss the potential to result in the increase in the use of existing recreational facilities that may result in an accelerated physical deterioration of such facilities.

Traffic and Circulation: The traffic analysis prepared for the IGP and PEIR will describe the existing roadway conditions, circulation patterns, and other elements of the transportation system in the City, including the local streets and intersections and regional facilities (e.g., I-15 and SR-60 freeways). A transportation modeling analysis will be prepared in order to evaluate full build-out of the IGP on the overall transportation network. The IGP's compliance with adopted policies, plans, and programs supporting alternative modes of transportation will also be discussed.

Utilities and Service Systems: The PEIR will discuss the ability of existing infrastructure in the City, such as sanitary sewer, storm drains, water supply, and solid waste, to serve full buildout of the IGP. The PEIR will also discuss the availability of the existing water supply to provide for full buildout of the IGP.

Alternatives to the Project: Identification of potential alternatives to the IGP Preferred Land Use Plan will be addressed. Analysis of a "No Project" alternative is required by law. Up to three alternatives, in addition to the "No Project–No Build" Alternative, will be evaluated. The scope of the alternatives will be developed in consultation with the City. The evaluation of alternatives will provide a comparative analysis of alternatives to the proposed IGP.

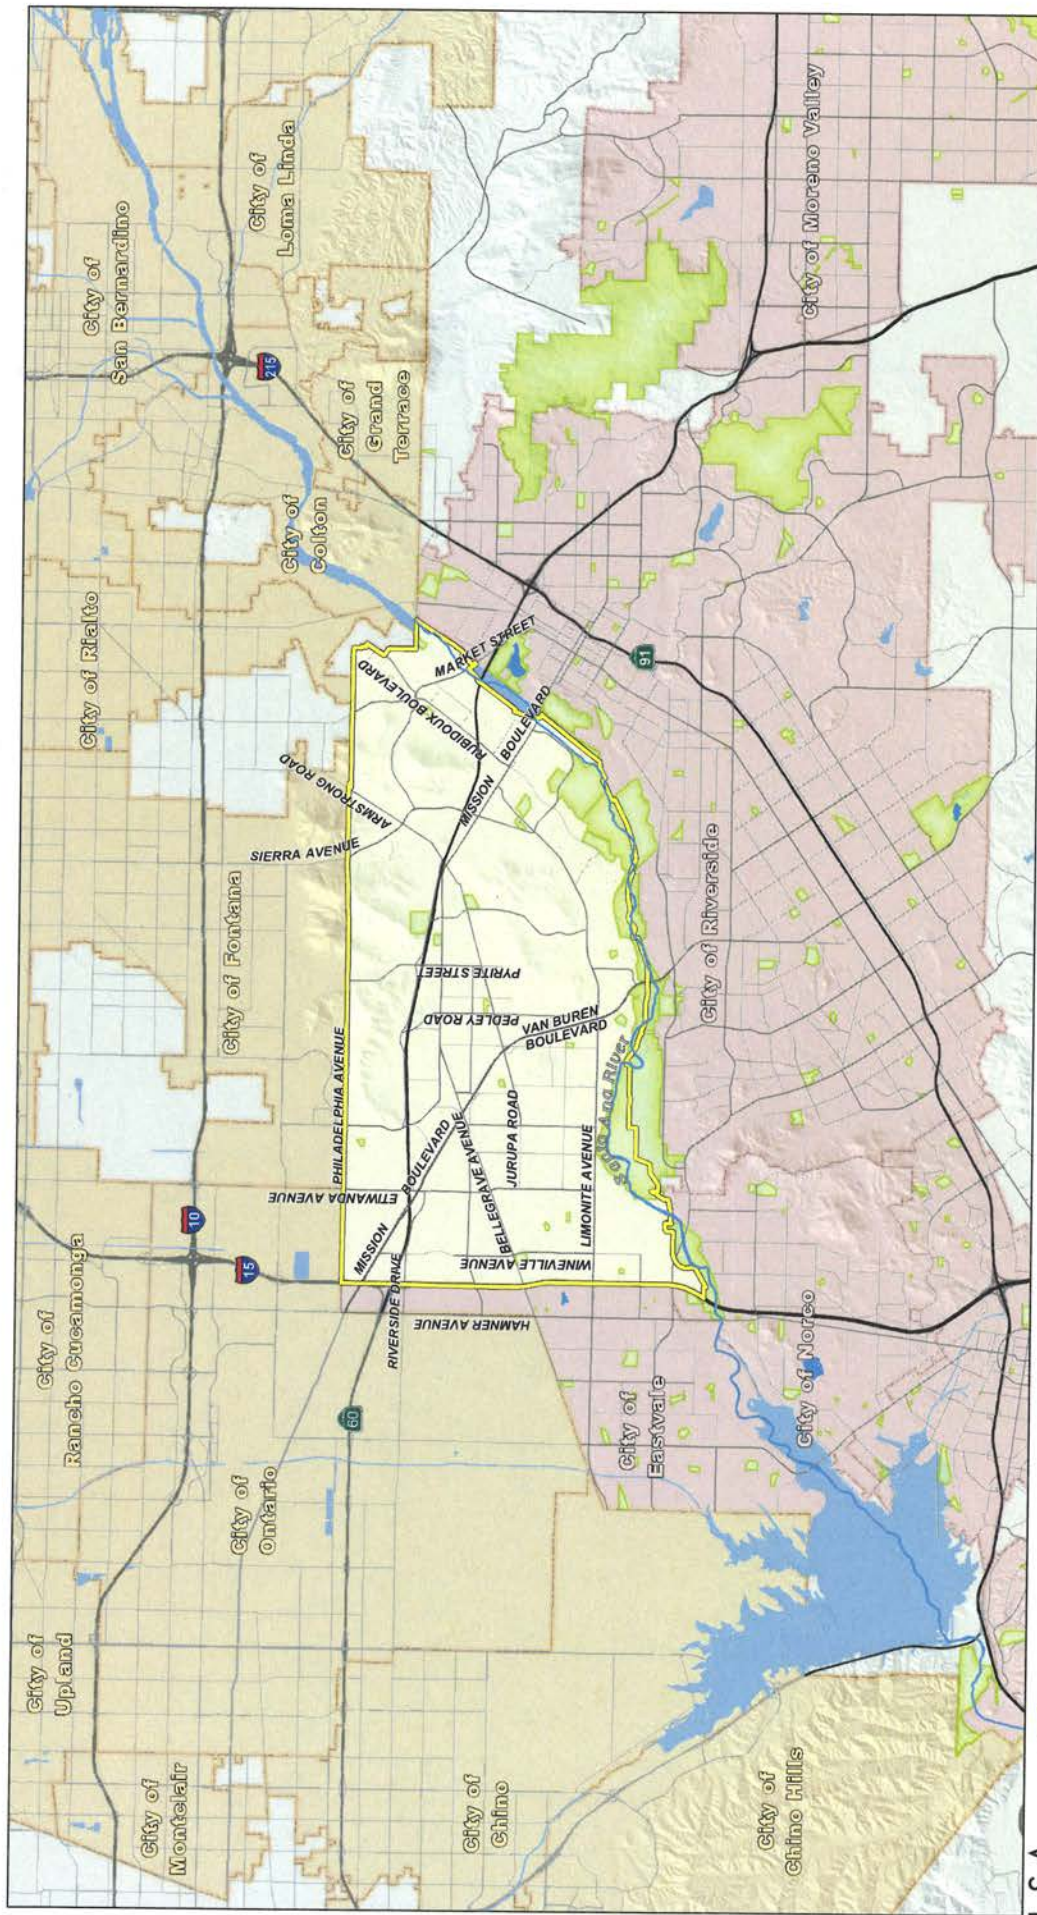

The PEIR will identify the degree to which each alternative might reduce one or more of the impacts associated with implementation of the IGP, whether or not the alternative could result in other or increased impacts, the viability of the alternative, and the degree to which the alternative is consistent with the City's goals and objectives.

Cumulative Impacts: The PEIR will include a discussion of the potentially significant cumulative impacts of the IGP when considered with other past, present, and reasonably foreseeable future projects in the area.

Other Required Sections: The PEIR will also include other information typically required for an EIR. These other sections include the following: 1) Growth-Inducing Impacts; 2) Significant, Unavoidable Impacts; 3) Significant Irreversible Environmental Changes; 4) Consistency with Regional Plans; 5) Energy Use and Conservation per State CEQA Guidelines Appendix F; 6) References; and 7) EIR Authors. Relevant technical reports will be provided as PEIR appendices.

CITY OF JURUPA VALLEY - NOTICE OF PREPARATION (NOP) INTERIM GENERAL PLAN (IGP) - DRAFT PROGRAM EIR (DPEIR)

The City of Jurupa Valley is the lead agency and will prepare a Program Environmental Impact Report (PEIR) for the City's Interim General Plan (Case No. GPA 1406) to comply with the California Environmental Quality Act (CEQA). The IGP includes the following elements: Land Use; Mobility (Circulation); Conservation/ Open Space; Environmental Justice; Housing; Safety/Noise; Public Facilities and Services; Healthy Communities; Environmental Sustainability; and Air Quality.

The PEIR will address potential environmental impacts of development within the City (see attached figure) over the period of implementation of the IGP. Technical studies on traffic, noise/vibration, housing, land use mapping, and air pollutant emissions will be prepared in support of the PEIR. The PEIR will address all potential environmental issues outlined in the State CEQA Guidelines Appendix G checklist.

The 30-day Notice of Preparation (NOP) period for the PEIR is from February 5 to March 6, 2016. A public scoping meeting will be held on Tuesday, March 1st at 7:00 pm at the Jurupa Valley City Hall. Comments on the scope of the EIR should be addressed to Mr. Ernest Perea, CEQA Administrator, City of Jurupa Valley Planning Department, 8930 Limonite Avenue, Jurupa Valley, CA 92509 Phone: (951) 332-6464 e-mail: eperea@jurupavalley.org

PRESENT LAND USE/ZONING/GENERAL PLAN USE DESIGNATION:

Upon incorporation in July 2011, the City of Jurupa Valley adopted the 2008 Riverside County General Plan, the Jurupa Valley Area Plan, and Riverside County Ordinance No. 348 (Zoning) that were in effect at the time. These documents currently constitute *The City of Jurupa Valley General Plan and Zoning Ordinance* respectively. The proposed Program Environmental Impact Report will support the Interim General Plan effort to create the City's first locally prepared General Plan by amending a portion of the 2008 Riverside County General Plan and adding additional information, policies and programs as needed. The City intends to do a more comprehensive update of the General Plan in 5–10 years as budget and staff time allow.

NOTE: Clearinghouse will assign identification numbers for all new projects. If an SCH number already exists for a project (e.g., Notice of Preparation or previous draft document) please fill in.

January 2015

PROJECT DESCRIPTION *(please use a separate page if necessary)*

The proposed Program Environmental Impact Report (PEIR) will be prepared to support adoption of the City's Interim General Plan (the "Project", also referred to as "IGP"), pursuant to the California Environmental Quality Act (CEQA). City procedures for CEQA implementation, as well as integration of the latest changes to the Appendix G Checklist questions in the latest *State CEQA Guidelines*, will be used as thresholds for significance in the PEIR. The City has prepared or is preparing the following IGP Elements:

- Land Use
- Mobility (Circulation)
- Conservation/Open Space
- Environmental Justice
- Housing
- Noise
- Public Facilities and Services
- Healthy Communities
- Environmental Sustainability
- Air Quality

The following technical studies/analyses will be prepared to support the IGP and its EIR:

- Traffic and Street Classification Study for the Circulation Element;
- Demographic and Housing Data Report for the Housing Element;
- Noise and Vibration Study for the Noise Element;
- Land Use Mapping for the Land Use Element; and
- Air Pollutant and GHG Emission Calculations per CalEEMod.

The Traffic and Street Classification Study will evaluate the existing circulation setting and identify improvements to help improve vehicular circulation and multimodal transportation facilities within the City of Jurupa Valley. Its goal will be to create a circulation network that increases the use of alternative modes of transportation, promotes safe travel for pedestrians, equestrians and bicyclists and maintains safe and efficient facilities for all travel modes.

The Demographic and Housing Data Report will include a housing needs assessment, demographic analysis, constraints analysis, site inventory, special needs assessment, and transitional and assisted housing assessment in support of the Housing Element to evaluate impacts from full build-out of the IGP.

The Noise and Vibration Study will be prepared consistent with applicable procedures and requirements to evaluate the potential noise impacts of proposed land uses in the IGP. The Noise and Vibration Study will include local noise standards, vibration standards, an ambient noise survey, noise contours maps, evaluation of mobile and stationary noise and vibration sources, and land use compatibility recommendations based on anticipated noise and vibration levels from IGP implementation.

Land Use Maps will be prepared for the various technical studies and for the IGP Land Use Element based on input from City staff, the General Plan Advisory Committee, and the public to reflect the City's preferred land use strategy. Additionally, existing mapping resources such as GIS layers from the Southern California Association of Governments (SCAG) and/or Riverside County will be utilized to the extent practical in support of the IGP and PEIR.

The PEIR environmental analysis will describe the existing conditions of the City as well as the surrounding area and region as applicable. All relevant federal, State, regional, and local adopted laws and regulations will be summarized.

An Initial Study has not been prepared for the IGP, in accordance with State CEQA Guidelines Section 15060(d), because the PEIR will address all Initial Study environmental topics in appropriate detail in order to ensure comprehensive coverage of every environmental topic pursuant to CEQA. Each environmental topic will include an assessment of the direct and indirect short-term and long-term environmental impacts that will be created by the proposed IGP based on established thresholds of significance. In addition, a discussion of implementable mitigation measures that can be monitored effectively during development and operations of the proposed IGP will be included for each issue. The IGP is intended to be self-mitigating, meaning the goals and policies contained within the IGP will be crafted to avoid, reduce and/or mitigate environmental impacts.

The PEIR will incorporate relevant data gleaned from City planning and environmental documents, site-specific technical studies, applicant-provided materials, and publically available data. The PEIR will address relevant comments received and will respond to specific areas of concern. Since an Initial Study was not prepared for the project, this will be a "full scope" PEIR which will describe the existing environmental conditions on the City and will identify the significant environmental impacts anticipated to result from complete buildout of the IGP. Where potentially significant environmental impacts are identified, the PEIR will also discuss mitigation measures that may make it possible to avoid or reduce significant land use impacts. The analysis in the PEIR will include the categories of environmental impacts and concerns outlined in Appendix G "*Environmental Checklist Form*" of the CEQA Guidelines.

Re: Interim General Plan - Draft Program Environmental Report
SCH# 2016021025

CITY OF JURUPA VALLEY

Attached for your review and comment is the Notice of Preparation (NOP) for the Interim General Plan - Draft Program Environmental Report draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Ernest Perea
City of Jurupa Valley
8930 Limonite Avenue
Jurupa Valley, CA 92509

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan
Director, State Clearinghouse

SCH# 2016021025
Project Title Interim General Plan - Draft Program Environmental Report
Lead Agency Jurupa Valley, City of

Type NOP Notice of Preparation

Description The proposed Program Environmental Impact Report (PEIR) will be prepared to support adoption of the City's Interim General Plan (the "Project", also referred to as "IGP", pursuant to CEQA. City procedures for CEQA implementation, as well as integration of the latest changes to the Appendix G Checklist questions in the latest State CEQA Guidelines, will be used as thresholds for significance in the EIR. The City is preparing the following IGP Elements: land use, mobility (circulation), conservation/open space, environmental justice, housing, safety/noise, public facilities and services, healthy communities, environmental sustainability, and air quality.

Lead Agency Contact

| | | | |

| Parcel No. | multiple | | | | |
| Township | 2S | Range | 5W,6W | Section | Mult |
| | | | | Base | SBBM |

Proximity to:

| | |
|------------------|--|
| Highways | I-15, I-215, SR-60, SR-91 |
| Airports | Riverside Municipal; Flabob |
| Railways | Union Pacific (Metrolink) |
| Waterways | Santa Ana River, Day Creek, Etiwands/San Sevaine/Pyrite Channels, Riverside Canal, Horeshoe Lake |
| Schools | Jurupa Unified School District |
| Land Use | Upon incorporation in July 2011, the City of Jurupa Valley adopted the 2008 Riverside County General Plan, the Jurupa Valley Area Plan, and Riverside County Ordinance No. 348 (Zoning) that were in effect at the time. These documents currently constitute The City of Jurupa Valley General Plan and Zoning Ordinance respectively. The proposed PEIR will support the Interim General Plan effort to create the City's first locally prepared General Plan by amending a portion of the 2008 Riverside County General Plan and adding additional information, policies and programs as needed. The City intends to do a more comprehensive update of the General Plan in 5-10 years as budget and staff time allow. |

RE: SCH# 2016021025, Interim General Plan – Draft Environmental Impact Report Project, City of Jurupa Valley, Riverside County, California

Dear Mr. Perea:

The Native American Heritage Commission has received the Notice of Preparation (NOP) for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code § 21000 et seq.), specifically Public Resources Code section 21084.1, states that a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, § 15064.5 (b) (CEQA Guidelines Section 15064.5 (b))). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an environmental impact report (EIR) shall be prepared. (Pub. Resources Code § 21080 (d); Cal. Code Regs., tit. 14, § 15064 subd.(a)(1) (CEQA Guidelines § 15064 (a)(1))). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources with the area of project effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code § 21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code § 21084.3 (a)). AB 52 applies to any project for which a notice of preparation or a notice of negative declaration or mitigated negative declaration is filed on or after July 1, 2015. If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). Both SB 18 and AB 52 have tribal consultation requirements. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. § 800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments. **Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.**

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
 - a. A brief description of the project.
 - b. The lead agency contact information.
 - c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code § 21080.3.1 (d)).
 - d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code § 21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code § 21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. (Pub. Resources Code § 21080.3.1(b)).
 - a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18). (Pub. Resources Code § 21080.3.1 (b)).
3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
 - a. Alternatives to the project.
 - b. Recommended mitigation measures.
 - c. Significant effects. (Pub. Resources Code § 21080.3.2 (a)).
4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
 - a. Type of environmental review necessary.
 - b. Significance of the tribal cultural resources.
 - c. Significance of the project's impacts on tribal cultural resources.
 - d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code § 21080.3.2 (a)).
5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code § 21082.3 (c)(1)).
6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
 - a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
 - b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code § 21082.3 (b)).
7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
 - a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
 - b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code § 21080.3.2 (b)).
8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code § 21082.3 (a)).
9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code section 21084.3 (b). (Pub. Resources Code § 21082.3 (e)).
10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
 - a. Avoidance and preservation of the resources in place, including, but not limited to:
 - i. Planning and construction to avoid the resources and protect the cultural and natural context.
 - ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

- b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
 - i. Protecting the cultural character and integrity of the resource.
 - ii. Protecting the traditional use of the resource.
 - iii. Protecting the confidentiality of the resource.
 - c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
 - d. Protecting the resource. (Pub. Resource Code § 21084.3 (b)).
 - e. Please note that a federally recognized California Native American tribe or a nonfederally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code § 815.3 (c)).
 - f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code § 5097.991).
11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An environmental impact report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
- a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
 - b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
 - c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code § 21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code § 65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code § 65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code section 65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code sections 5097.9 and 5097.993 that are within the city's or county's jurisdiction. (Gov. Code § 65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
 - a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
 - b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
 - a. If part or all of the APE has been previously surveyed for cultural resources.
 - b. If any known cultural resources have been already been recorded on or adjacent to the APE.
 - c. If the probability is low, moderate, or high that cultural resources are located in the APE.
 - d. If a survey is required to determine whether previously unrecorded cultural resources are present.
2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
 - a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
 - b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.
3. Contact the NAHC for:
 - a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
 - b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
 - a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, section 15064.5(f) (CEQA Guidelines section 15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
 - b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
 - c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code section 7050.5, Public Resources Code section 5097.98, and Cal. Code Regs., tit. 14, section 15064.5, subdivisions (d) and (e) (CEQA Guidelines section 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

In the Notice of Preparation provided for review, the Cultural Resources section (page 4) does not include Tribal Cultural Resources. Please include this section and specific details for tribal consultation, tribal cultural resource assessments, and proposed mitigation.

Sincerely,

Gayle Totton
Associate Governmental Program Analyst

CITY OF JURUPA VALLEY

Notice of Preparation of a CEQA Document for the Interim General Plan

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The SCAQMD staff's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the draft CEQA document. Please send the SCAQMD a copy of the CEQA document upon its completion. Note that copies of the Draft EIR that are submitted to the State Clearinghouse are not forwarded to the SCAQMD. Please forward a copy of the Draft EIR directly to SCAQMD at the address in our letterhead. **In addition, please send with the draft EIR all appendices or technical documents related to the air quality and greenhouse gas analyses and electronic versions of all air quality modeling and health risk assessment files. These include original emission calculation spreadsheets and modeling files (not Adobe PDF files). Without all files and supporting air quality documentation, the SCAQMD will be unable to complete its review of the air quality analysis in a timely manner. Any delays in providing all supporting air quality documentation will require additional time for review beyond the end of the comment period.**

Air Quality Analysis

The SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. The SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from the SCAQMD's Subscription Services Department by calling (909) 396-3720. More recent guidance developed since this Handbook was published is also available on SCAQMD's website here: [http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-\(1993\)](http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993)). SCAQMD staff also recommends that the lead agency use the CalEEMod land use emissions software. This software has recently been updated to incorporate up-to-date state and locally approved emission factors and methodologies for estimating pollutant emissions from typical land use development. CalEEMod is the only software model maintained by the California Air Pollution Control Officers Association (CAPCOA) and replaces the now outdated URBEMIS. This model is available free of charge at: www.caleemod.com.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, that is, sources that generate or attract vehicular trips should be included in the analysis.

The SCAQMD has also developed both regional and localized significance thresholds. The SCAQMD staff requests that the lead agency quantify criteria pollutant emissions and compare the results to the recommended regional significance thresholds found here: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2>. In addition to analyzing regional air quality impacts, the SCAQMD staff recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LSTs can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts when preparing a CEQA document. Therefore, when preparing the air quality analysis for the proposed project, it is recommended that the lead agency perform a localized analysis by either using the LSTs developed by the SCAQMD or

performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds>.

In the event that the proposed project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the lead agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("*Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*") can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis>. An analysis of all toxic air contaminant impacts due to the use of equipment potentially generating such air pollutants should also be included.

In addition, guidance on siting incompatible land uses (such as placing homes near freeways) can be found in the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Perspective*, which can be found at the following internet address: <http://www.arb.ca.gov/ch/handbook.pdf>. CARB's Land Use Handbook is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process.

Mitigation Measures

In the event that the project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate these impacts. Pursuant to CEQA Guidelines §15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed. Several resources are available to assist the Lead Agency with identifying possible mitigation measures for the project, including:

- Chapter 11 of the SCAQMD *CEQA Air Quality Handbook*
- SCAQMD's CEQA web pages at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies>.
- CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures* available here: <http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf>.
- SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook for controlling construction-related emissions
- Other measures to reduce air quality impacts from land use projects can be found in the SCAQMD's Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning. This document can be found at the following internet address: <http://www.aqmd.gov/docs/default-source/planning/air-quality-guidance/complete-guidance-document.pdf?sfvrsn=4>.

Data Sources

SCAQMD rules and relevant air quality reports and data are available by calling the SCAQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available via the SCAQMD's webpage (<http://www.aqmd.gov>).

The SCAQMD staff is available to work with the Lead Agency to ensure that project emissions are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at Jwong1@aqmd.gov or call me at (909) 396-3176.

Sincerely,

Jillian Wong

RE: Interim General Plan Notice of Preparation

Dear Mr. Perea:

Thank you for the opportunity to review and comment on the Notice of Preparation (NOP) for Draft Program Environmental Impact Report (DEIR) for the Jurupa Valley Interim General Plan. The City of Fontana appreciates the City of Jurupa Valley's outreach efforts as part of the NOP process. We look forward to working with your agency throughout the project. Once available, please send a copy of the Draft General Plan, Draft Environmental Impact Report, and associated technical studies to my attention. My contact information is provided below:

RE: NOTICE OF PREPARATION OF A DRAFT PROGRAM ENVIRONMENTAL IMPACT REPORT
FOR THE INTERIM GENERAL PLAN

Dear Mr. Perea,

Thank you for the opportunity to provide comments on the Notice of Preparation (NOP) of a Draft Program Environmental Impact Report (EIR) for the City's Interim General Plan. The Transportation Department (County) received the NOP on February 4, 2016. Please consider the following comments as the City prepares the environmental document for its Interim General Plan (Project).

The project title and description indicates the City is processing an interim general plan. The County recommends that the City provide clarification on the intent of the interim general plan and its use as opposed to an ultimate general plan for the City. Additionally, the project description indicates the City will implement the latest changes to the Appendix G Checklist questions in the latest State CEQA Guidelines. The County would like clarification if the City will be utilizing Vehicle Miles Traveled (VMT) as its significance threshold in place of levels of service (LOS) as the California Office of Planning and Research has proposed.

The traffic analysis for the Project should address potential impacts and mitigation measures on any Riverside County roadways in the area included in the Riverside County General Plan. The County requests that the analysis study any intersections identified in the County's General Plan where the Project is anticipated to add 50 or more peak hourly trips. Necessary improvements to mitigate project impacts shall

Mr. Ernest Perea

Page 2

be identified, and responsibility for the needed improvements shall be designated. The County requests that Riverside County Traffic Study Guidelines be followed for the impact analysis for facilities within Riverside County. The most recent Traffic Study Guidelines can be found on the County website: <http://rctlma.org/trans/General-Information/Pamphlets-Brochures>.

If you have any questions about these comments, please contact me at (951) 955-2016 or at ruwillia@rctlma.org.

Sincerely,

Russell Williams

RE: Notice of Preparation of a Draft Program Environmental Impact Report for
City of Jurupa Valley GPA 1406 (Interim General Plan)

Dear Mr. Perea:

On behalf of the Jurupa Community Services District (JCSD), Albert A. Webb Associates (WEBB), as consultants to the District, has reviewed the Notice of Preparation (NOP) for a Draft Program Environmental Impact Report (Draft PEIR) for GPA 1406 (Interim General Plan or IGP). JCSD is responsible for providing water and sewer service to that portion of Jurupa Valley within JCSD's boundaries as shown on the attached exhibit.

WEBB reviewed the NOP and requests the Draft PEIR include:

- A figure that identifies the boundaries of JCSD and all other water and sewer providers within Jurupa Valley.
- A table that shows the proposed land use and density changes for that portion of the City within JCSD's boundaries.

Please direct questions regarding the JCSD's potable water, non-potable water, or sewer facilities to Robert O. Tock, Director of Engineering & Operations at rtock@jcsd.us or 951-685-7434. If you have any questions regarding this letter please do not hesitate to contact the undersigned at cheryl.degano@webbassociates.com or 951-686-1070.

Sincerely yours,
ALBERT A. WEBB ASSOCIATES

RE: Notice of Preparation of a Draft Program Environmental Impact Report (EIR): City of Jurupa Valley Interim General Plan (Case No. GPA 1406)

Dear Mr. Perea:

Thank you for providing the Riverside County Airport Land Use Commission (ALUC) with an opportunity to provide comments in response to your Notice of Preparation dated February 2, 2016 and received by this agency on February 4, 2016.

ALUC's role, as stated in Section 21670(a) (2) of the California Public Utilities Code, is "to protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses." (Our Commissioners often summarize this as "protecting people from airports and airports from people.")

In order to achieve this purpose, ALUCs are tasked with identifying areas in the vicinity of airports that are affected by aircraft noise and overflight and are subject to risk in the event of an aircraft accident, known as Airport Influence Areas (AIAs), and with preparation of Airport Land Use Compatibility Plans regulating land use in these areas subsequent to Plan adoption. The City of Jurupa Valley includes Flabob Airport (in the community of Rubidoux) and most of its Airport Influence Area. Additionally, the Airport Influence Area of Riverside Municipal Airport extends into the City of Jurupa Valley. (Some areas of the City are also subject to overflight from aircraft heading to or from Ontario International Airport.)

ALUC adopted Airport Land Use Compatibility Plans (ALUCPs) for the Flabob Airport Influence Area in 2004 and for the Riverside Municipal Airport Influence Area in 2005. (These ALUCPs are available for viewing on our website, www.rcaluc.org (click Plans)). Unfortunately, the adoption of these ALUCPs occurred after Riverside County's adoption of its RCIP (Riverside County Integrated Project) General Plan, including the Jurupa Area Plan, on October 7, 2003.

The land use designation amendments within the Jurupa Area Plan that would be needed to achieve consistency were compiled and included in the County's comprehensive General Plan update amendment (GPA No. 960) with an Environmental Impact Report, but the County was unable to complete the EIR and General Plan Amendment process prior to the incorporation of the City of Jurupa Valley. Hence the City has a General Plan that is not consistent with adopted ALUCPs.

The Land Use and Planning section of the Program Environmental Impact Report should address the inconsistencies between General Plan designations and ALUCP Compatibility Zone criteria.

As stated in our meeting with Mr. Jeff Hook and Ms. Mary Wright of Civic Solutions last spring, ALUC would welcome the opportunity to assist the City of Jurupa Valley in formulating a General Plan that is consistent with the adopted ALUCPs, and we have a primary interest in General Plan land use designations for properties in the AIAs.

The 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics, is an excellent resource that can be consulted in your efforts to provide for a General Plan that furthers the objectives of airport land use compatibility planning. We recommend that the chapter addressing "Responsibilities of Local Agencies" be reviewed. The attached table may be helpful in the effort to establish a consistent General Plan.

As a goal, there should be no direct conflicts between General Plan Land Use Map designations and applicable land use compatibility criteria of the ALUCPs and the Countywide Policies. Ideally, the City may wish to incorporate the ALUCPs and the Countywide Policies into the General Plan document as an Appendix.

Pursuant to Section 21676(b) of the California Public Utilities Code, the adoption of a General Plan and all general plan amendments affecting land use designations within airport influence areas are subject to Airport Land Use Commission review, involving formal submittal for a consistency review by the project applicant – in this case, the City of Jurupa Valley. In regard to the adoption of a General Plan, the City should plan for at least two Commission hearings.

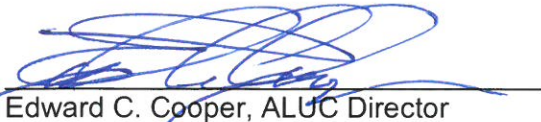

The major advantage of a General Plan that has been determined to be consistent is that the spectrum of cases that would be subject to mandatory ALUC review is limited to those projects involving a general plan amendment, specific plan, specific plan amendment, zone change, or ordinance amendment, as opposed to all activity within the AIA.

The protection of airports from incompatible land use encroachments is vital to California's economic future. In crafting the legislation that authorized the formation of airport land use commissions, the State of California established a framework for ALUCs to work cooperatively with local jurisdictions in a joint effort to provide for compatible land usage in the vicinity of public use airports. ALUC staff is available to assist the City in this effort in order to provide for a General Plan that is consistent with the adopted Compatibility Plans, and would be happy to meet with you and City staff to discuss the General Plan and the ALUC review process at a mutually convenient time. We would like to continue to receive general plan notifications, which may be sent either to John Guerin, ALUC Principal Planner (at jguerin@rctlma.org) or to myself.

Thank you for the opportunity to provide comments. If you have any questions, please contact John Guerin, ALUC Principal Planner, at (951) 955-0982.

Sincerely,

RIVERSIDE COUNTY AIRPORT LAND USE COMMISSION

Edward C. Cooper, ALUC Director

TABLE 5A: GENERAL PLAN CONSISTENCY CHECKLIST

| For additional guidance see: | COMPATIBILITY CRITERIA |
|---|------------------------|
| This checklist is intended to assist local agencies with modifications necessary to make their local plans and other local policies consistent with the ALUCP. It is also designed to facilitate ALUC reviews of these local plans and policies. The list will need to be modified to reflect the policies of each individual ALUC and is not intended as a state requirement. | |
| | |
| <i>Page 6-17</i> | |
| <i>Pages 3-8</i> | |
| <i>Page 4-26, Appendix G</i> | |
| <i>Pages 3-11, 4-29, Figures 4B - G</i> | |
| <i>Page 4-31</i> | |
| <i>Page 3-56, 4-18, 4-42</i> | |
| <i>Pages 3-29, 4-35</i> | |
| General Plan Document | |
| The following items typically appear directly in a general plan document. Amendment of the general plan will be required if there are any conflicts with the ALUCP | |
| <ul style="list-style-type: none"> • Land Use Map—No direct conflicts should exist between proposed new land uses indicated on a general plan land use map and the ALUC land use compatibility criteria. <ul style="list-style-type: none"> – Residential densities (dwelling units per acre) should not exceed the set limits. – Proposed nonresidential development needs to be assessed with respect to applicable intensity limits (see below). – No new land uses of a type listed as specifically prohibited should be shown within affected areas. | |
| <ul style="list-style-type: none"> • Noise Element—General plan noise elements typically include criteria indicating the maximum noise exposure for which residential development is normally acceptable. This limit must be made consistent with the equivalent ALUCP criteria. Note, however, that a general plan may establish a different limit with respect to aviation-related noise than for noise from other sources (this may be appropriate in that aviation-related noise is sometimes judged to be more objectionable than other types of equally loud noises). | |
| Zoning or Other Policy Documents | |
| The following items need to be reflected either in the general plan or in a separate policy document such as a combining zone ordinance. If a separate policy document is adopted, modification of the general plan to achieve consistency with the ALUCP may not be required. Modifications would normally be needed only to eliminate any conflicting language which may be present and to make reference to the separate policy document. | |
| <ul style="list-style-type: none"> • Intensity Limitations on Nonresidential Uses—ALUCPs may establish limits on the usage intensities of commercial, industrial, and other nonresidential land uses. This can be done by duplication of the performance-oriented criteria—specifically, the number of people per acre—indicated in the ALUCP. Alternatively, ALUCs may create a detailed list of land uses which are allowable and/or not allowable within each compatibility zone. For certain land uses, such a list may need to include limits on building sizes, floor area ratios, habitable floors, and/or other design parameters which are equivalent to the usage intensity criteria. | |
| <ul style="list-style-type: none"> • Identification of Prohibited Uses—ALUCPs may prohibit schools, day care centers, assisted living centers, hospitals, and other uses within a majority of an airport's influence area. The facilities often are permitted or conditionally permitted uses within many commercial or industrial land use designations. | |
| <ul style="list-style-type: none"> • Open Land Requirements—ALUCP requirements, if any, for assuring that a minimum amount of open land is preserved in the airport vicinity must be reflected in local policies. Normally, the locations which are intended to be maintained as open land would be identified on a map with the total acreage within each compatibility zone indicated. If some of the area included as open land is private property, then policies must be established which assure that the open land will continue to exist as the property develops. Policies specifying the required characteristics of eligible open land should also be established. | |
| <ul style="list-style-type: none"> • Infill Development—If an ALUCP contains infill policies and a jurisdiction wishes to take advantage of them, the lands that meet the qualifications must be shown on a map. | |
| <ul style="list-style-type: none"> • Height Limitations and Other Hazards to Flight—To protect the airport airspace, limitations must be set on the height of structures and other objects near airports. These limitations are to be based upon FAR Part 77. Restrictions also must be established on other land use characteristics which can cause hazards to flight (specifically, visual or electronic interference with navigation and uses which attract birds). Note that many jurisdictions have already adopted an airport-related hazard and height limit zoning ordinance which, if up to date, will satisfy this consistency requirement. | |

TABLE 5A: GENERAL PLAN CONSISTENCY CHECKLIST

| For additional guidance see: | COMPATIBILITY CRITERIA |
|------------------------------|---|
| Pages 3-9, 4-14 | <ul style="list-style-type: none"> • Buyer Awareness Measures—Besides disclosure rules already required by state law, as a condition for approval of development within certain compatibility zones, some ALUCPs require either dedication of an aviation easement to the airport proprietor or placement on deeds of a notice regarding airport impacts. If so, local agency policies must contain similar requirements. |
| Page 4-42 | <ul style="list-style-type: none"> • Nonconforming Uses and Reconstruction—Local agency policies regarding nonconforming uses and reconstruction must be equivalent to or more restrictive than those in the ALUCP, if any. |
| | REVIEW PROCEDURES In addition to incorporation of ALUC compatibility criteria, local agency implementing documents must specify the manner in which development proposals will be reviewed for consistency with the compatibility criteria. |
| Page 6-1 | <ul style="list-style-type: none"> • Actions Always Required to be Submitted for ALUC Review—PUC Section 21676 identifies the types of actions that must be submitted for airport land use commission review. Local policies should either list these actions or, at a minimum, note the local agency's intent to comply with the state statute. |
| Page 6-5 | <ul style="list-style-type: none"> • Other Land Use Actions Potentially Subject to ALUC Review—In addition to the above actions, ALUCPs may identify certain major land use actions for which referral to the ALUC is dependent upon agreement between the local agency and ALUC. If the local agency fully complies with all of the items in this general plan consistency check list or has taken the necessary steps to overrule the ALUC, then referral of the additional actions is voluntary. On the other hand, a local agency may elect not to incorporate all of the necessary compatibility criteria and review procedures into its own policies. In this case, referral of major land use actions to the ALUC is mandatory. Local policies should indicate the local agency's intentions in this regard. |
| Pages 5-10, 6-13 | <ul style="list-style-type: none"> • Process for Compatibility Reviews by Local Agencies—If a local agency chooses to submit only the mandatory actions for ALUC review, then it must establish a policy indicating the procedures which will be used to assure that airport compatibility criteria are addressed during review of other projects. Possibilities include: a standard review procedure checklist which includes reference to compatibility criteria; use of a geographic information system to identify all parcels within the airport influence area; etc. |
| Page 6-9 | <ul style="list-style-type: none"> • Variance Procedures—Local procedures for granting of variances to the zoning ordinance must make certain that any such variances do not result in a conflict with the compatibility criteria. Any variance that involves issues of noise, safety, airspace protection, or overflight compatibility as addressed in the ALUCP must be referred to the ALUC for review. |
| Page 5-10 | <ul style="list-style-type: none"> • Enforcement—Policies must be established to assure compliance with compatibility criteria during the lifetime of the development. Enforcement procedures are especially necessary with regard to limitations on usage intensities and the heights of trees. An airport combining district zoning ordinance is one means of implementing enforcement requirements. |

City of Jurupa Valley

NOTICE OF PREPARATION INTERIM GENERAL PLAN DRAFT PROGRAM ENVIRONMENTAL IMPACT REPORT CITY OF JURUPA VALLEY Case No. GPA 1406

TO: State Clearinghouse, Responsible Agencies, Trustee Agencies, and Interested Parties (Refer to Attached Distribution List)

The City of Jurupa Valley ("City"), as lead agency, will be preparing a Program Environmental Impact Report (EIR) for the project identified below. We are requesting your comments on the scope and content of the EIR.

PURPOSE OF THE NOTICE OF PREPARATION: This notice is given to inform the State Clearinghouse, trustee agencies and interested parties that the City plans to oversee the preparation on an EIR for the above-described project. The purpose of this notice is to solicit input from your agency as to the scope and content of the environmental information germane to your agency's statutory responsibility to be included in the EIR. Information in that regard must be submitted to the City as soon as possible, but **not later than thirty (30) days** after receiving this notice.

HOW AND WHEN TO COMMENT: According to State law, the deadline for your response is **not later than 30 days after receipt of this notice**; however, we would appreciate an earlier response, if possible. Please identify a contact person, and send your response by email or hard copy to:

City of Jurupa Valley Planning Department
Attn: Ernest Perea, CEQA Administrator
8930 Limonite Avenue, Jurupa Valley, CA 92509
Phone: (951) 332-6464 Fax: (951) 332-6995, e-mail: eperea@jurupavalley.org

The City will hold a **Public Scoping Meeting** for the EIR to describe the proposed project and the environmental review process and to obtain verbal input on the EIR analysis for the proposal. This EIR Public Scoping Meeting will be held **Tuesday, March 1st at 7:00 PM at the Jurupa Valley City Hall** (address above). You are welcome to attend and give us your input on the scope of the EIR so that it addresses all relevant environmental issues.

Ernest Perea, CEQA Administrator

Date: February 2, 2016

PROJECT TITLE: Interim General Plan - Draft Program Environmental Impact Report - DPEIR

PROJECT LOCATION: The project encompasses the City of Jurupa Valley in western Riverside County, California (see Figures 1 and 2).

PROJECT DESCRIPTION: The proposed Program Environmental Impact Report (PEIR) will be prepared to support adoption of the City's Interim General Plan (the "Project", also referred to as "IGP", pursuant to the California Environmental Quality Act (CEQA). City procedures for CEQA implementation, as well as integration of the latest changes to the Appendix G Checklist questions in the latest *State CEQA Guidelines*, will be used as thresholds for significance in the EIR. The City is preparing the following IGP Elements:

- Land Use;
- Mobility (Circulation)
- Conservation/Open Space;
- Environmental Justice
- Housing
- Safety/Noise
- Public Facilities and Services
- Healthy Communities
- Environmental Sustainability
- Air Quality

The following technical studies/analyses will be prepared to support the IGP:

- Traffic and Street Classification Study for the Circulation Element;
- Demographic and Housing Data Report for the Housing Element;
- Noise and Vibration Study for the Noise Element;
- Land Use Mapping for the Land Use Element; and
- Air Pollutant and GHG Emission Calculations per CalEEMod and consistent with the WRCOG CAP.

The Traffic and Street Classification Study will evaluate the existing circulation setting and identify improvements to help improve vehicular circulation and multimodal transportation facilities within the City of Jurupa Valley. Its goal will be to create a circulation network that increases the use of alternative modes of transportation, promotes safe travel for pedestrians, equestrians and bicyclists and maintains safe and efficient facilities for all travel modes.

The Demographic and Housing Data Report will include a housing needs assessment, demographic analysis, constraints analysis, site inventory, special needs assessment, and transitional and assisted housing assessment in support of the Housing Element to evaluate impacts from full build-out of the IGP.

The Noise and Vibration Study will be prepared consistent with applicable procedures and requirements to evaluate the potential noise impacts of proposed land uses in the IGP. The Noise and Vibration Study will include local noise standards, vibration standards, an ambient noise survey, noise contours maps, evaluation of mobile and

stationary noise and vibration sources, and land use compatibility recommendations based on anticipated noise and vibration levels from IGP implementation.

Land Use Maps will be prepared for the various technical studies and for the IGP Land Use Element based on input from City staff, the General Plan Advisory Committee, and the public to reflect the City's preferred land use strategy. Additionally, existing mapping resources such as GIS layers from the Southern California Association of Governments (SCAG) and/or Riverside County will be utilized to the extent practical in support of the IGP and PEIR.

Note that the Climate Action Plan (CAP) prepared by the Western Regional Council of Governments (WRCOG) is being incorporated by reference into the City's Air Quality Element and will be an appendix of the PEIR.

The PEIR environmental analysis will describe the existing conditions of the City as well as the surrounding area and region as applicable. All relevant federal, State, regional, and local adopted laws and regulations will be summarized. Upon incorporation in July 2011, the City of Jurupa Valley adopted the 2008 Riverside County General Plan, the Jurupa Valley Area Plan, and Riverside County Ordinance No. 348 (Zoning) that were in effect at the time. These documents currently constitute *The City of Jurupa Valley General Plan and Zoning Ordinance* respectively. The proposed EIR will support the IGP effort to create the City's first locally prepared General plan by amending a portion of the 2008 Riverside County General Plan and adding additional information, policies and programs as needed. The City intends to do a more comprehensive update of the General Plan in 5–10 years as budget and staff time allow.

An Initial Study has not been prepared for the IGP, in accordance with State CEQA Guidelines Section 15060(d), because the PEIR will address all Initial Study environmental topics in appropriate detail in order to ensure comprehensive coverage of every environmental topic pursuant to CEQA. Each environmental topic will include an assessment of the direct and indirect short-term and long-term environmental impacts that will be created by the proposed IGP based on established thresholds of significance. In addition, a discussion of implementable mitigation measures that can be monitored effectively during development and operations of the proposed IGP will be included for each issue. The IGP is intended to be self-mitigating, meaning the goals and policies contained within the IGP will be crafted to avoid, reduce and/or mitigate environmental impacts.

Key EIR Issues

The PEIR will incorporate relevant data gleaned from City planning and environmental documents, site-specific technical studies, applicant-provided materials, and publically available data. The EIR will address relevant comments received and will respond to the specific areas of concern identified in responses to this Notice of Preparation. Since an Initial Study was not prepared for the project, this will be a "full scope" EIR which will describe the existing environmental conditions on the project site and will identify the significant environmental impacts anticipated to result from development of the project.

Where potentially significant environmental impacts are identified, the PEIR will also discuss mitigation measures that may make it possible to avoid or reduce significant land use impacts. The analysis in the EIR will include the following specific categories of environmental impacts and concerns related to the proposed project.

Aesthetics: The PEIR will address the potential effects on scenic vistas, scenic corridors, visual character, and light and glare.

Agriculture and Forestry Resources: The PEIR will address the potential effects on farmland, forest land and timberland and the loss of land zoned for agricultural use.

Air Quality: The PEIR will describe the existing air quality conditions in the City and will evaluate the potential air quality impacts of the proposed IGP land uses and policies consistent with SCAQMD methodology. The PEIR will discuss the measures included in the IGP to minimize impacts of criteria air pollutant emissions.

Biological Resources: The PEIR will describe the existing biological conditions within the City, and potential impacts of the IGP on vegetation and wildlife, including special status species. The PEIR will evaluate the likelihood of any significant impacts, including consistency with the Western Riverside County Multiple Species Habitat Conservation Plan.

Cultural Resources: The PEIR will address potential impacts to historic structures, archaeological and paleontological resources.

Geology and Soils: The PEIR will assess soil and geologic conditions of the City and address seismic hazards, including the potential for liquefaction, ground-shaking, and soil erosion.

Greenhouse Gas Emissions: The PEIR will examine the potential impacts of implementing the IGP relative to greenhouse gas (GHG) emissions and global climate change. The PEIR will discuss the measures included in the IGP to minimize impacts of GHG emissions. The Climate Action Plan (CAP) prepared by the Western Regional Council of Governments (WRCOG) will also be incorporated by reference into the City's Air Quality Element and evaluated in the PEIR.

Hazards and Hazardous Materials: The PEIR will include a description of the potential hazards in the City and the health and safety effects based on implementation of the IGP.

Hydrology and Water Quality: The PEIR will discuss the drainage conditions throughout the City and the potential for flooding. Water quality impacts and conformance with the Santa Ana Regional Water Quality Control Board requirements will be addressed.

Land Use and Planning: The PEIR will identify the land uses in the City and evaluate potential land use constraints created by existing conditions. The IGP's compatibility

with existing and proposed land uses in the City and consistency with the City's land use, planning, and environmental justice policies and plans will be evaluated.

Mineral Resources: The PEIR will discuss impacts to mineral resources from implementation of the IGP.

Noise: The PEIR will discuss noise impacts from implementation of the IGP, including impacts from area noise sources (e.g., railroads, airports, I-15 and SR-60 freeways, etc.). A noise analysis will identify existing settings and noise level scenarios associated with implementation of the IGP. The PEIR will address potential noise impacts associated with implementation of the IGP on residential land uses as well as noise impacts on future residences from nearby land uses. Conformance to the City's noise guidelines will be analyzed. Potential impacts resulting from construction noise will also be addressed.

Population and Housing: The PEIR will evaluate the potential for the proposed land uses of the IGP to result in population or housing growth, and will also discuss the potential displacement of housing and people as development occurs.

Public Services: The PEIR will identify existing police, fire, schools, parks, and other public services and facilities serving the City, and will quantify the increase in service demands resulting from implementation of the IGP. The availability and adequacy of existing services will be generally analyzed.

Recreation: The PEIR will discuss the potential to result in the increase in the use of existing recreational facilities that may result in an accelerated physical deterioration of such facilities.

Traffic and Circulation: The traffic analysis prepared for the IGP and PEIR will describe the existing roadway conditions, circulation patterns, and other elements of the transportation system in the City, including the local streets and intersections and regional facilities (e.g., I-15 and SR-60 freeways). A transportation modeling analysis will be prepared in order to evaluate full build-out of the IGP on the overall transportation network. The IGP's compliance with adopted policies, plans, and programs supporting alternative modes of transportation will also be discussed.

Utilities and Service Systems: The PEIR will discuss the ability of existing infrastructure in the City, such as sanitary sewer, storm drains, water supply, and solid waste, to serve full buildout of the IGP. The PEIR will also discuss the availability of the existing water supply to provide for full buildout of the IGP.

Alternatives to the Project: Identification of potential alternatives to the IGP Preferred Land Use Plan will be addressed. Analysis of a "No Project" alternative is required by law. Up to three alternatives, in addition to the "No Project-No Build" Alternative, will be evaluated. The scope of the alternatives will be developed in consultation with the City. The evaluation of alternatives will provide a comparative analysis of alternatives to the proposed IGP.

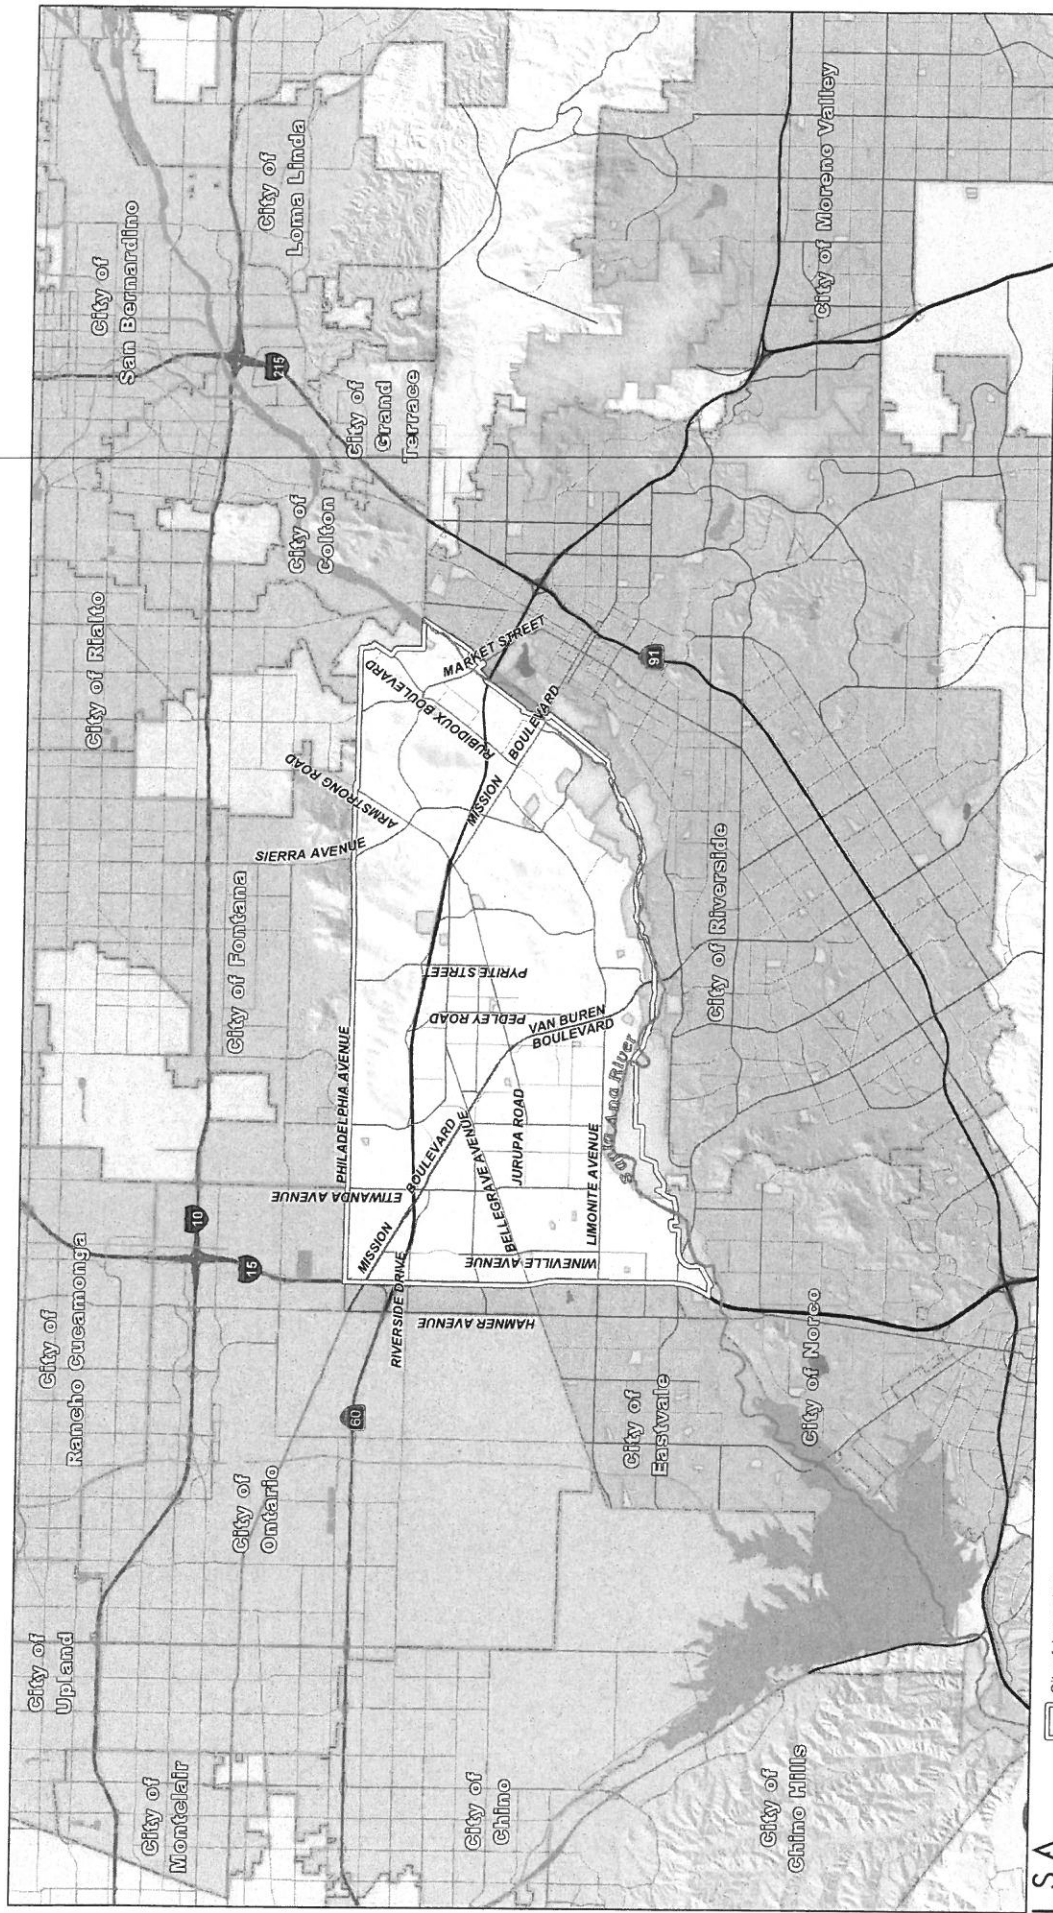

The PEIR will identify the degree to which each alternative might reduce one or more of the impacts associated with implementation of the IGP, whether or not the alternative could result in other or increased impacts, the viability of the alternative, and the degree to which the alternative is consistent with the City's goals and objectives.

Cumulative Impacts: The PEIR will include a discussion of the potentially significant cumulative impacts of the IGP when considered with other past, present, and reasonably foreseeable future projects in the area.

Other Required Sections: The PEIR will also include other information typically required for an EIR. These other sections include the following: 1) Growth-Inducing Impacts; 2) Significant, Unavoidable Impacts; 3) Significant Irreversible Environmental Changes; 4) Consistency with Regional Plans; 5) Energy Use and Conservation per State CEQA Guidelines Appendix F; 6) References; and 7) EIR Authors. Relevant technical reports will be provided as PEIR appendices.

LSA

CEQA EIR Process

- | | |
|---|------------------|
| ▣ Prepare Project Description | January 2016 |
| ▣ 30 - day Notice of Preparation | Feb 4– March 4 |
| ▣ <u>Public Scoping Meeting</u> | <u>March 1</u> |
| ▣ Prepare Draft Program EIR | Late Spring |
| ▣ 45-day Draft EIR Public Review | Summer 2016 |
| ▣ Prepare Final EIR (RTC, findings, etc.) | Late Summer 2016 |
| ▣ Public Hearings (PC, CC) | Summer/Fall 2016 |

Notice of Preparation (NOP)

- ▣ Sent to the State Clearinghouse, local agencies, and adjacent jurisdictions to inform of City's intent to prepare a Program EIR.
- ▣ Made available on the City website, at City Hall, local library, and published in local newspaper.
- ▣ As appropriate, comments received by the City during the NOP public review period will be incorporated into the Draft EIR.

Public Scoping Meeting

- ▣ Present project information to the community and interested parties.
- ▣ Solicit public comment on the scope of issues to be addressed in the Draft EIR.
- ▣ Information as appropriate will be incorporated into the Draft EIR.

Draft Environmental Impact Report

▣ Issues to be evaluated in the Draft EIR include:

- Aesthetics
- Air Quality
- Cultural Resources
- Greenhouse Gas Emissions
- Hydrology & Water Quality
- Mineral Resources
- Population and Housing
- Recreation
- Services and Utilities
- Agricultural Resources
- Biological Resources
- Geology and Soils
- Hazards and HazMat
- Land Use and Planning
- Noise
- Public Services
- Transportation/Traffic
- Energy Conservation

▣ The Draft EIR will incorporate relevant comments received during public review of the NOP and this Public Scoping Meeting.

Draft Environmental Impact Report

- ▣ Draft EIR will include a discussion of Cumulative Impacts, Growth Inducing Impacts, Alternatives to the Proposed Plan, and Mitigation Measures to reduce the significance of identified impacts.
- ▣ Analysis is based on technical reports, existing environmental documentation, and public input from City and agency representatives.
- ▣ Draft EIR will distributed for a 45-day public review period, and will be made available for review at the City Planning Division and the local library.

Final Environmental Impact Report

- ▣ After close of 45-day public review period, the City will prepare the Final EIR that includes:
 - Response to all comments received on the Draft EIR during the 45-day public review period.
 - Revisions (if required) to the Draft EIR.
 - A Mitigation Monitoring and Reporting Program
 - Statement of Overriding Considerations.
- ▣ Upon completion, the Final EIR will be considered by the Planning Commission and City Council and take appropriate action on the Interim General Plan and EIR.

CEQA Scoping Meeting

- ▣ Existing Conditions
- ▣ Environmental Impacts
- ▣ Mitigation Measures
- ▣ Alternatives to the Plan

Written comments should be submitted to the City as soon as possible so they can be addressed in the EIR.

Subject: Re: General Plan AB52 and SB18 Consulations

Ernie,

Some months ago we consulted with the Soboba and Gabrieleno nations and shared draft GP information. Both representatives indicated that they would follow up with additional information; however I have not received anything from them that is relevant to the GP.

Although we requested consultation, the Agua Caliente Band of Cahuilla Indians (Pat Garcia) pulled out of consultation or further notification. I haven't heard any follow-up from the other nations. We should provide notice of Draft General Plan and DEIR availability, but I don't believe we are required to send them CDs or pursue additional consultation.

Your thoughts?

Jeff

Subject: Request for Tribal Consultation regarding City of Jurupa Valley's Interim General Plan Update

Greetings Mr. Ontiveros,

I'm writing on behalf of Thomas Merrell, Planning Director for the City of Jurupa Valley. I'm a member of the City's planning team working on an update to the City's General Plan. The City would like to initiate consultation with the Soboba Band of Luiseno Indians regarding the General Plan Update. We've identified tentative meeting times on:

Thursday, January 7th, 10:30 am; or

Tuesday, January 19th, 10:30 am; or

Thursday, January 21st, 10:30 am

If acceptable to you, the meetings would be held in Jurupa Valley City Hall, 8930 Limonite Avenue, Jurupa Valley, CA 92509.

The City of Jurupa Valley is in the process of updating the portions of the Riverside County General Plan and Jurupa Area Plan the it adopted in 2011, upon incorporation. The current General Plan needs revising to better reflect the goals, needs and aspirations of the City's residents, and to remove policies that are outdated or that no longer apply.

At the meeting, we would like to 1) brief you and other Soboba tribal representatives about the Interim General Plan process, milestones and products, 2) learn how the City can best address the interests of the Soboba Tribe in the General Plan process, and 3) identify ways to build and maintain a mutually respectful and positive working relationship.

Please advise us on which times work best for you; or if you prefer, please suggest a different meeting date and/or time. I look forward to hearing from you.

Sincerely,

Jeff Hook, AICP

On Jul 19, 2016, at 11:31 AM, Jeff Hook <jhook@jurupavalley.org> wrote:

Hi Andy,

This is to confirm our meeting on Wednesday, July 27th at 1:30 pm at the Jurupa Valley, City Hall, 8930 Limonite Avenue, in Jurupa Valley (951.332.6464). We will meet with Tom Merrell, Community Development Director. The purpose of the meeting is to discuss the City's General Plan update process and to consult with the Gabrieleno Band of Mission Indians - Kizh Nation, on tribal input on the Plan, now being prepared.

The new General Plan will replace the current Riverside County General Plan which was adopted by the City when it incorporated in 2011. The new General Plan is considered an "interim" general plan due to a limited budget and workscope; it will serve as a near-term blueprint for future growth and development and will be tailored to reflect the character and values of the City. This update is a "project" under CEQA and an EIR will be prepared.

Overall, the update emphasizes a more balanced approach to land use in JV, with a reduction in land area devoted to Industrial/Manufacturing uses, a wider range of residential products and densities, more locally-serving retail commercial uses and open space/park protection and trails. Major swaths of the City, including Santa Ana river and floodplain, and Jurupa Mountains would remain in permanent open space. The General Plan process began in January of 2015 with a series of eight public workshops to identify what makes the area unique and address issues to be discussed in the plan. A General Plan Advisory Committee, or "GPAC", was also convened and held 11 meetings throughout 2015. The GPAC developed a Community Values Statement which describes the fundamental goals of the City which will be used to set the

framework for the General Plan. To view the Community Values Statement, *attached*. The GPAC also provided input on assets, issues and needs related to the elements to be included in the General Plan. The elements to be included are: Land Use; Open Space/Conservation; Mobility; Community Safety, Services & Facilities; Noise; Housing; Air Quality; Environmental Justice; Healthy Communities; and, Economic Sustainability. The process also includes a limited number of land use changes on designated parcels within existing City limits.

City staff and its consultants are currently preparing drafts of the Interim General Plan, technical studies and Environmental Impact Report (EIR). The City's consultant, LSA, is providing technical analyses on traffic, noise, housing and land use mapping. The documents are expected to be

available for public review in late summer of 2016 with public hearings to follow, with final adoption anticipated in late 2016 or early 2017. Additional information is *attached* for background.

Religion Assumed have converted to Roman Catholic

Benjamin Davis Wilson (December 1, 1811 – March 11, 1878) was a California statesman and politician. He was known to the Native Americans as **Don Benito** because of his benevolent manner in his treatment of Indian affairs. Wilson, a native of Tennessee, was a fur trapper and trader before coming to California.

Detained in Southern California while attempting to obtain passage to China, Wilson decided to remain there. He married Ramona Yorba, daughter of Bernardo Yorba, a wealthy and prominent landowner, and purchased part of Rancho Jurupa in what would become Riverside County. Wilson was made Justice of the Peace for the Inland Territory and was entrusted with the care of Indian affairs. He was also commissioned to deal with the hostile Ute tribe over their cattle rustling and other crimes against the ranchers. His marriage to his second wife, Margaret Hereford produced a daughter Ruth who would later be mother to General George S. Patton Jr. commander of U.S. and allied forces during World War II.

Wilson became the first non-Hispanic owner of Rancho San Pascual, which encompassed today's towns of Pasadena, Altadena, South Pasadena, Alhambra, San Marino and San Gabriel. Wilson was the second elected Mayor of Los Angeles for one term, Los Angeles County Supervisor and served three terms as a California State Senator.

Life in California

Rancho Jurupa

Wilson came to California with the Workman-Rowland Party in 1841 seeking passage to China.

In 1842 Wilson bought a key portion of Rancho Jurupa from Juan Bandini, a section that would later be named Rancho Rubidoux. Encompassing most of present-day Rubidoux, California, as well as a significant portion of downtown Riverside, Wilson became the first permanent settler in the Riverside area.^[1] In 1844 he married his first wife, Ramona Yorba, whose father Bernardo Yorba, was the prominent Spanish (Mexican) landholder of Rancho Cañón de Santa Ana.

Wilson gained esteem and was often asked to assist with Indian affairs.^[2] Wilson accepted by becoming Justice of the Peace of the Inland Territory.

Big Bear Lake

In 1845 he was asked to pursue a band of marauding Indians led by an escaped neophyte from the San Gabriel Mission,^[3] who stole horses from the local ranchers. The Indians drove the horses, numbering in the thousands, up to the high desert near Lucerne. In his pursuit, Wilson sent 22 men through the Cajon Pass and led another 22 into the depths of the San Bernardino Mountains. According to Trafzer, the resident Serrano let Wilson pass through their territory in pursuit of the raiders. Wilson, later sent his 22 men in pairs on a bear hunt, gathering 11 pelts. On their return trip to Jurupa, they gathered another 11 pelts. He named the place Big Bear Lake. The lake today is known as Baldwin Lake, after Elias J. "Lucky" Baldwin, while the name Big Bear Lake was re-applied to a reservoir built nearby in 1884.

Political activities

In 1850, Wilson was elected to the Los Angeles Common Council,^[4] and a year later he became the second elected mayor of Los Angeles after California was made a state. He also served as a Los Angeles County supervisor.^[5] He was elected to three terms of the California State Senate.

Rancho San Pascual

In 1854 Wilson established Lake Vineyard, his own ranch and winery near modern-day San Gabriel, California. He came into possession of adjoining Rancho San Pascual (present day Pasadena) through a series of complicated land deals, which began with his lending money to the Rancho's owner Manuel Garfias in 1859. In 1863 Wilson and Dr. John Strother Griffin, who had also lent Garfias money — and with whom Wilson undertook many business deals in early Los Angeles, including railways, oil exploration, real estate, farming and ranching — bought the entire rancho property outright, and diverted water from the Arroyo Seco up to the dry mesa via an aqueduct called the "Wilson Ditch."

In 1864 Wilson took the first white man's expedition to a high peak of the San Gabriel Mountains that would be named Mount Wilson. He hoped to harvest timber there for the making of wine vats, but he found the wood inadequate. The Wilson Trail became a popular one or two-day hike to the crest of the San Gabriel Mountains by local residents for years to come.

Wilson about 1850

In 1873, Wilson and Griffin subdivided their land (with Griffin getting almost 2/3 of the property, but Wilson retaining some better land (east of current Fair Oaks Avenue), near his Lake Vineyard property). Griffin then sold 2,500 acres (10 km²) of his property to the "Indiana Colony," represented by Daniel M. Berry. In 1876, after the Colony had sold most of its allotted land and established what would become the City of Pasadena, Wilson began subdividing and developing his adjacent landholdings which would become the eastern side of the new settlement.

Legacy

Wilson lived out his days in present-day San Gabriel. He gave several acres of property to his son-in-law James de Barth Shorb which he named San Marino. Other parts developed as Alhambra. Wilson's first wife died in 1849, after which time he married the widow Margaret Hereford. They would have four children of which one daughter Ruth would marry George Patton, Sr. and have a son who would become the World War II General George S. Patton, Jr. The Pattons would later purchase Lake Vineyard. Wilson died at the ranch in 1878 and was buried in San Gabriel Cemetery.^[6] The last of his land holdings in the downtown Pasadena area were bequeathed to Central School on South Fair Oaks Avenue.

Mount Wilson, a metromedia center (television and radio transmission towers) for the greater Los Angeles area, is the most famous monument to Benjamin Wilson. Wilson Avenue in Pasadena and Don Benito School of the Pasadena Unified School District also honor his name.

Rubidoux (/ˈruːbɪdoʊ/ *ROO-bə-doh*) was a census-designated place and an unincorporated community in Riverside County, California. As of the 2010 census, the population was 34,280, up from 29,180 at the 2000 census. Like much of the fast-growing Inland Empire Metropolitan Area, Rubidoux is rapidly changing from a rural area of quarries and dairy farms to an exurb of Riverside. As of the 2000 Census, Rubidoux was the largest unincorporated community in the Inland Empire and in Riverside County. On July 1, 2011, the CDP became part of the newly incorporated City of Jurupa Valley.

Rubidoux is iconically identified with its landmark, Mount Rubidoux.

Flabob Airport (IATA: **RIR**, ICAO: **KRIR**, FAA LID: **RIR**) in Rubidoux has a 3,200-foot (980 m) runway.

Geography

Rubidoux was located at 33°59′45″N 117°25′6″W﻿ / ﻿33.99583°N 117.41833°W﻿ / 33.99583; -117.41833.^[2] According to the United States Census Bureau, the CDP had a total area of 9.9 square miles (25.6 km²), of which 9.7 square miles (25.1 km²) was land and 0.3 square miles (0.8 km²) (2.87%) was water.

History

The community's name refers to Louis Robidoux who settled in the area in 1843. Of French Canadian origin, Robidoux's grandfather migrated from Quebec to St. Louis,

Missouri, where his interest in the fur trade expanded to become the family business. Robidoux and his brothers became US citizens after 1803 when St. Louis officially became part of the United States. Robidoux was also a naturalized Mexican citizen who had served as Alcalde of Santa Fe, New Mexico. The town of Rubidoux is sited on part of what was once Rancho Jurupa, the Robidoux family ranch. Current descendants of Robidoux now spell their surname Rubidoux.

Incorporation into the City of Jurupa Valley

On March 8, 2011, voters of Rubidoux and adjoining towns passed Measure A by a 54% "Yes" vote, to incorporate the areas of Mira Loma, Pedley, Rubidoux, Glen Avon, and Sunnyslope into the new city of Jurupa Valley. The effective date of incorporation was July 1, 2011.^[3]

2010

The 2010 United States Census^[4] reported that Rubidoux had a population of 34,280. The population density was 3,447.0 people per square mile (1,330.9/km²). The racial makeup of Rubidoux was 16,935 (49.4%) White, 1,850 (5.4%) African American, 391 (1.1%)

Native American, 855 (2.5%) Asian, 136 (0.4%) Pacific Islander, 12,469 (36.4%) from other races, and 1,644 (4.8%) from two or more races. Hispanic or Latino of any race were 23,322 persons (68.0%).

The Census reported that 33,958 people (99.1% of the population) lived in households, 106 (0.3%) lived in non-institutionalized group quarters, and 216 (0.6%) were institutionalized.

There were 8,931 households, out of which 4,730 (53.0%) had children under the age of 18 living in them, 5,043 (56.5%) were opposite-sex married couples living together, 1,459 (16.3%) had a female householder with no husband present, 762 (8.5%) had a male householder with no wife present. There were 651 (7.3%) unmarried opposite-sex partnerships, and 61 (0.7%) same-sex married couples or partnerships. 1,261 households (14.1%) were made up of individuals and 473 (5.3%) had someone living alone who was 65 years of age or older. The average household size was 3.80. There were 7,264 families (81.3% of all households); the average family size was 4.13.

The population was spread out with 10,997 people (32.1%) under the age of 18, 4,038 people (11.8%) aged 18 to 24, 9,304 people (27.1%) aged 25 to 44, 7,367 people (21.5%) aged 45 to 64, and 2,574 people (7.5%) who were 65 years of age or older. The median age was 29.2 years. For every 100 females there were 100.4 males. For every 100 females age 18 and over, there were 98.1 males.

There were 9,518 housing units at an average density of 957.1 per square mile (369.5/km²), of which 5,834 (65.3%) were owner-occupied, and 3,097 (34.7%) were occupied by renters. The homeowner vacancy rate was 2.8%; the rental vacancy rate was 6.5%. 22,079 people (64.4% of the population) lived in owner-occupied housing units and 11,879 people (34.7%) lived in rental housing units.

2000

As of the census^[5] of 2000, there were 29,180 people, 7,991 households, and 6,464 families residing in the CDP. The population density was 3,186.5 people per square mile (1,230.0/km²). There were 8,497 housing units at an average density of 927.9 per square mile (358.2/km²). The racial makeup of the CDP was 51.8% White, 7.3% African American, 1.4% Native American, 2.2% Asian, 0.3% Pacific Islander, 32.0% from other

racess, and 4.9% from two or more races. Hispanic or Latino of any race were 54.3% of the population.

There were 7,991 households out of which 48.8% had children under the age of 18 living with them, 56.6% were married couples living together, 16.9% had a female householder with no husband present, and 19.1% were non-families. 14.4% of all households were made up of individuals and 5.2% had someone living alone who was 65 years of age or older. The average household size was 3.6 and the average family size was 3.9.

In the CDP the population was spread out with 36.0% under the age of 18, 10.3% from 18 to 24, 29.7% from 25 to 44, 17.3% from 45 to 64, and 6.7% who were 65 years of age or older. The median age was 28 years. For every 100 females there were 101.2 males. For every 100 females age 18 and over, there were 99.1 males.

The median income for a household in the CDP was \$38,731, and the median income for a family was \$40,019. Males had a median income of \$32,252 versus \$23,287 for females. The per capita income for the CDP was \$13,912. About 17.2% of families and 20.8% of the population were below the poverty line, including 28.4% of those under age 18 and 8.8% of those age 65 or over.

Government

In the California State Legislature, Rubidoux is in the 31st Senate District, represented by Democrat Richard Roth, and in the 60th Assembly District, represented by Democrat Sabrina Cervantes.^[6]

In the United States House of Representatives, Rubidoux is in California's 41st congressional district, represented by Democrat Mark Takano.^[7]

Re: AB-52/ California Environmental Quality Act Public Resources Code Consultation

Dear Mr. Hook,

In September of 2015 the Agua Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic Preservation Office (THPO) sent letters to agencies within the tribe's traditional use area requesting to be notified of projects subject to AB-52 of the California Environmental Quality Act. The City of Jurupa was one of the agencies. After reviewing several projects from the City of Jurupa and discussing the AB-52 process with other THPO departments, the ACBCI THPO would like to defer to Soboba for project within the City of Jurupa Valley. Please remove the ACBCI THPO department from the city's AB-52 distribution list. If you have any questions, please feel free to contact me at (760)699-6907 or by email at ACBCI-THPO@aguacaliente.net.

Sincerely,

Patricia Garcia-Plotkin

A. WELCOME TO THE CITY OF JURUPA VALLEY'S 2017 GENERAL PLAN!

It is with much pride and excitement that we present the City of Jurupa Valley's new 2017 General Plan. As the City's first "locally grown" general plan, it sets an up-to-date framework to help guide this young city's future. The 2017 General Plan provides comprehensive mid- to long-term goals and policies for maintaining and enhancing Jurupa Valley's quality of life. It guides land use, circulation, open space preservation, housing, and many other facets of the City's growth and development. At the same time, it recognizes that the City's ability to achieve its goals depends to a large degree on its people—and on its physical, economic, and environmental resources.

We hope you enjoy the new Plan, its content, its easily accessible information, and more. There is a wealth of useful information here about Jurupa Valley, its people, its places, and its resources. Finally, the Plan establishes policies and programs to address community needs and issues, and to create a prosperous, healthy, and bright future. General plans are not static; they can and do change and adapt over time to meet community needs. If you have questions or want to comment on the Plan or your experience using it, please contact the City. We want to hear from you!

Figure 1-2: Aerial view of Jurupa Valley looking north toward Jurupa Mountains

General Plan Purpose

This General Plan is a statement of fundamental values and a shared vision for the future of Jurupa Valley. Its primary purpose is to address the young City's most pressing planning needs until the resources are available to prepare a more comprehensive, long-range General Plan update. It was not the City's intent, nor has the City attempted, to address all of the planning issues, needs, and opportunities that a more extensive planning process would allow. Instead, the 2017 General Plan provides the focused vision, goals, policies, and programs to address the most important issues identified by residents, the City Council, the Planning Commission, and the General Plan Advisory Committee, including:

- Protecting the City's semi-rural character and equestrian lifestyle;
- Reducing conflicts between residential and industrial land uses;
- Improving housing quality, availability and choice;
- Creating economic sustainability through diversified, quality development and job growth; and
- Enhancing residents' safety, convenience and quality of life.

This Plan directs and coordinates *near-term* planning decisions to improve the quality of life for all Jurupa Valley residents and businesses, and guides the use and protection of various resources to meet community needs and circumstances. It does this by setting goals, policies, and programs to guide the City's orderly and sustainable growth and development during an interim period through the year 2022—a relatively brief 5-year planning horizon. Within approximately 5 years of adopting this General Plan, or by 2022, the City should initiate a more comprehensive, longer-term planning process to update the 2017 General Plan and address the full range of community planning needs and issues, as more extensive resources will allow.

City decision-makers will refer to this Plan when considering land use, planning, capital improvements, and budgets. City staff will use

the Plan on a day-to-day basis in evaluating development proposals, protecting environmental resources, and preparing other mid- and long-range plans. Jurupa Valley residents, businesses, and property owners will use the Plan to understand City development policies and programs, work together to achieve a healthy and prosperous City, and help guide the use and enjoyment of their property.

General Plan adoption is a major accomplishment. It reflects consensus and compromise among citizens, businesses, and property owners. All cities and counties in California must prepare and adopt general plans and, per state law, they must include seven sections, or “elements”: Land Use, Housing, Circulation (Mobility), Noise, Safety, Open Space, and Conservation. The organization of these seven elements, and any optional elements, is determined by the local jurisdiction. Jurupa Valley’s 2017 General Plan includes these elements, plus five additional “optional” elements: 1) Community Safety, Services, and Facilities; 2) Air Quality; 3) Environmental Justice; 4) Healthy Communities; and 5) Economic Sustainability. Due to consolidation of some topics, the 2017 General Plan includes ten elements.

Planning Context

The 2017 General Plan is consistent with and derives its authority from California state law. Once adopted, the General Plan becomes the basis for land use and other important municipal decisions; however, the Plan itself is not a regulation. The General Plan is implemented through zoning regulations, adopted standards, and other City laws. As required by state law, capital improvement programs, zoning regulations, and related land use policies must be consistent with the General Plan.

The Land Use Element represents a generalized “blueprint” for the future of the City and is the core of the General Plan. It sets forth a pattern for the use, development, and preservation of land within the City’s planning area. The pattern is based on Community needs and preferences, and describes the expected level of population growth resulting from housing construction anticipated by the Plan. The Land Use Element also shows the type, location, and intensity of new commercial and industrial uses to meet the City’s economic sustainability needs. The 2017 General Plan consists of ten elements, including the Land Use Element. The following elements relate to the Land Use Element as described below.

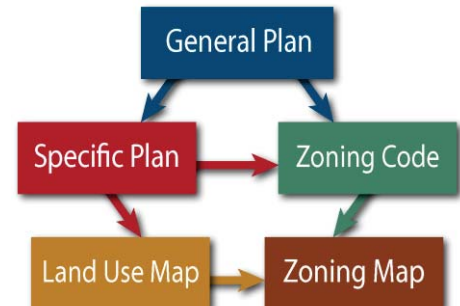

Figure 1-3: Role of the General Plan

- The **Mobility Element** recognizes implications of land use policy on all modes of movement and establishes policies, standards, and implementation measures that work with the Land Use Element update and address existing and potential circulation opportunities and deficiencies.
- The **Conservation and Open Space Element** contains policies and programs to protect natural resources and open spaces, including natural habitat areas, environmentally sensitive areas, watersheds, recreation areas, agricultural land, and other open space amenities. The Land Use Element works with this element and incorporates concepts such as clustering and buffering open space areas to enhance their protection.
- The **Housing Element** goals, policies, and programs reflect the land use policies as they relate to residential development.
- The **Air Quality Element** contains policies and programs that address land use, design, and transportation measures intended to help maintain healthy air quality in Jurupa Valley. The pattern of land use and communities' transportation systems can help reduce motor vehicle emissions and have positive, healthy effects on the quality of life for residents and visitors.
- The **Noise Element** contains policies that protect residents and land uses from noise and vibration impacts while allowing development and a mix of compatible land uses.
- The **Community Safety, Services, and Facilities Element** identifies hazards that influence the locations and types of proposed land uses and describes the services and facilities necessary to serve those land uses. In addition, the Land Use Element and the Safety Element share several safety topics. For example, the Land Use Element includes airport safety policies and programs that relate to compatible land use and design.
- The **Environmental Justice Element** contains policies and programs that seek to ensure that all members of the Community have meaningful input into the decision-making process. In addition, the Element protects low-income persons and communities from land use actions that adversely affect the health, safety, and welfare of these groups.
- The **Healthy Communities Element** includes policies and programs to support the overall health of Jurupa Valley's residents. It focuses on providing healthy choices for food, recreation, and health care, and seeks to improve everyone's access to information on healthy living.
- The **Economic Sustainability Element's** policies and programs focus on the City's financial health to achieve other key Community goals and to provide essential services. Economic sustainability strategies typically involve

DRAFT

Introduction

land use and transportation decisions, and are guided by long-term consideration of City assets, opportunities, needs, and costs.

Background to the 2017 General Plan

At a public hearing held on [REDACTED], 2016, the Jurupa Valley City Council unanimously approved the 2017 General Plan and the Plan's Final Environmental Impact Report [\[insert hyperlink to City Council Resolutions\]](#). This is the first General Plan prepared by and specifically for the new City. When Jurupa Valley incorporated in 2011, the City adopted the Riverside County General Plan, the Jurupa Area Plan, and the Zoning Ordinance applicable to the City. Adoption of existing plans and policies is the normal procedure when new cities incorporate. To establish a new General Plan that truly reflects the goals, vision, and values of the residents of the City, the City Council approved a work program in August 2014 and directed City staff to update the existing General Plan. The program approved by the Council was designed to fit the limited time and resources available. As such, it constituted an "Interim" General Plan, with the objective of identifying the most pressing needs of the City until a more comprehensive update could be done. The 2017 General Plan updates and merges the previously adopted County General Plan and the Jurupa Area Plan to create a new General Plan within a limited budget and time frame.

Figure 1-4: Community input into the General Plan process

Public Participation and General Plan Workshops

Public General Plan Workshops and Stakeholder Meetings

In all, including public General Plan workshops, GPAC meetings, Planning Commission meetings, and City Council meetings, Jurupa Valley citizens provided valuable input at numerous public workshops and meetings. Public participation kicked off with a series of eight community workshops held during January and February of 2015. The City retained a public relations firm to provide public outreach services as a foundation for the new General Plan. Specifically, the outreach focus was to conduct and summarize eight neighborhood meetings under the direction of City staff. The purpose of the meetings was to gather public input on the residents' concerns, values, and goals for Jurupa Valley and to identify positive and negative Community features. The City Council identified eight key areas on which to focus the public workshops and/or neighborhood meetings: Mira Loma, Pedley, Glen Avon, Sunnyslope, Rubidoux, Belltown, Indian Hills, and Sky Country.

A vigorous public outreach effort was launched and was designed to: 1) inform the Community about the 2017 General Plan process and 2) solicit public input on Community issues, needs, and opportunities to help inform and guide the General Plan effort. The outreach effort was also designed to reach out to diverse groups and areas within the City, including but not limited to Spanish-speaking residents, seniors, families, businesses, Healthy Jurupa Valley, the Center for Action and Environmental Justice, the Chamber of Commerce, Rotary, environmental groups, houses of worship, homeowner associations, youth sports leagues, and school districts. The workshop promotion and publicity strategy was extensive. Workshop publicity and notices were provided in English and Spanish.

Eight public workshops were held between January 10 and February 7, 2015. A total of 128 community members participated in the workshops, including 5 individuals attending multiple workshops, and provided many wide-ranging and valuable comments on various Community issues, needs, and opportunities. That input was provided to the General Plan Advisory Committee, the Planning Commission, and the City Council and provided key guidance in the development of this General Plan. A final report summarizing the results of the public workshops is included as *Appendix 7.0*.

General Plan Advisory Committee (GPAC)

Prior to commencing the 2017 General Plan effort, the City Council appointed a General Plan Advisory Committee (GPAC) to guide City staff and planning consultants in the development of the Plan. The GPAC was made up of 31 community members, representing various agencies, commissions, committees, organizations, and citizens at-large. The GPAC's main roles were: 1) to provide input into what topics should be addressed in the 2017 General Plan, 2) to serve as a channel for the Community to make recommendations to the Planning Commission and the City Council regarding Community needs, values, issues, and goals, and 3) to help define a vision for Jurupa Valley's future.

The GPAC's first major effort was to prepare a Community Values Statement on which the goals, policies, and programs of the new General Plan would be based. Following that effort, the GPAC reviewed a series of worksheets that were designed to help define the City's major issues, assets, and needs. GPAC members worked in teams to provide recommendations on the main policy areas of the General Plan, including land use, circulation and mobility, and conservation and open space. After identifying key policy issues, assets, and needs, the GPAC prepared a Final Report listing its findings and recommendations, included here as *Appendix 5.0*.

In addition, City staff held a number of meetings with key stakeholders to further engage the Community and to involve those agencies and groups that might be directly affected by potential changes. Meetings were conducted with stakeholders representing the following groups, geographical areas, or issues:

- Jurupa Community Services District
- West Riverside Airport Land Use Commission Staff
- Rubidoux Community Services District
- City of Eastvale Planning Department
- Jurupa Area Recreation and Park District
- City of Colton Planning Department
- Jurupa Unified School District
- Corona-Norco Unified School District
- County of Riverside Planning Department
- City of Riverside Planning Department
- City of Fontana Planning and Engineering Departments
- City of Rialto Planning Department
- Riverside County Flood Control and Water Conservation District

Figure 1-5: GPAC meeting on the General Plan

Community Values

Jurupa Valley's 2017 General Plan is guided by values that describe what is most important to City residents. These values are at the core of what people enjoy most about living, working, and recreating in Jurupa Valley—the scenic views, the Santa Ana River, the small-town feel, the equestrian lifestyle, the natural environment, a vibrant economy, friendly residents, healthy and safe neighborhoods, and respect for our history and diverse cultures. These values will enhance and sustain this young City's health and prosperity for generations to come. Proclaiming our values is essential if we are to create a new General Plan that truly reflects the current needs, aspirations, and values of Jurupa Valley residents.

The City Council, in adopting this General Plan for Jurupa Valley, hereby affirms that these Community Values (*Table 1.1* below) are the foundation and heart of the 2017 General Plan.

Table 1.1: Community Values Statement

| City of Jurupa Valley Community Values Statement |
|--|
| <i>Small-Town Feel.</i> Maintain Jurupa Valley's small-town feel, where neighbors know neighbors and merchants, the built environment reflects and is compatible with the area's character, and where residents can grow gardens, raise and keep livestock, and choose from diverse lifestyles in a semi-rural town setting. |
| <i>Community of Communities.</i> Jurupa Valley consists of many distinctive communities and neighborhoods in a valley surrounded by stunning natural scenery and views. As a "community of communities", we will preserve and enhance those positive qualities that make our communities unique, enhance our "gateways" to welcome residents and visitors and embrace a unifying community theme and spirit. Our ability to offer the choice of a semi-rural, equestrian lifestyle is an essential part of who we are as a community and of our quality of life. |
| <i>Open Space and Visual Quality.</i> We value and protect the Santa Ana River and river plain, ridgelines and hillsides for their exceptional value for recreation, watershed, wildlife habitat, environmental health, and as scenic backdrops for the City. As part of our values, we support prevention and removal of visual blight, protection of public vistas, and community awareness and beautification activities. Jurupa Valley's special places will be protected, maintained, and promoted to preserve our unique character, instill local pride, and encourage tourism. |

City of Jurupa Valley Community Values Statement

Active Outdoor Life. Many Jurupa Valley residents were drawn here because of its unique outdoor setting and the recreation opportunities it offers. Our parks and recreation facilities are essential to maintain and improve our health and quality of life. We place high value on our public parks, sports fields, pedestrian and equestrian trails and support facilities, golf courses, outdoor use areas, historic sites and nature centers, campgrounds, airport and joint use school facilities.

Public Safety. Support for public safety, law enforcement and emergency medical services is a value that's widely held by Jurupa Valley residents. We honor and respect the safety professionals who faithfully serve Jurupa Valley. We support strong, collaborative efforts to prevent crime and homelessness, enforce planning and building codes, and to improve the safety of neighborhoods, homes, public facilities, streets, trails, and other transportation facilities. We take proactive measures to cope with and recover from emergencies and natural and man-made disasters.

Education, Culture and Technology. We place high priority on maintaining and improving our educational, cultural, and technical opportunities, including programs and events at schools, libraries, museums, performing arts facilities and other community venues. We support the establishment of new community centers as well as college-level, life-enrichment, and career training opportunities in Jurupa Valley.

Mobility. We support the creation and maintenance of transportation networks (e.g., multi-use equestrian, pedestrian and bicycle trails, complete streets, sidewalks, airport, rail, and public transit) that are safe, attractive, and efficient and provide connectivity to meet the diverse needs for the movement of people and goods.

Diversity. We value Jurupa Valley's cultural and social diversity and celebrate our cultural richness through arts and culture, community festivals, educational programs and exhibits, seasonal and equestrian-themed events, preservation of historic landmarks and youth and adult sports.

Environmental Justice. We value the health, well-being, safety, and livability of all our communities and strive to equitably distribute public benefits and resources. We endeavor to enhance underserved communities so that all residents can thrive and share in a high quality of life.

City of Jurupa Valley Community Values Statement

Healthy Communities. We have a comprehensive view of health. We enhance existing opportunities for healthy living and create new ones by helping residents to make the healthy choice the easy choice. The health and well-being of all individuals, families, neighborhoods, and businesses is our shared value and concern. We take positive steps to maintain a clean, visually attractive City, to improve Jurupa Valley's physical, social, and environmental health and to share and teach these values to achieve and sustain a healthy, clean, and safe environment for current and future generations.

Economic and Fiscal Health. We support high quality economic growth and development that is environmentally sustainable and that fosters housing, living wage jobs, retail goods and services, public facilities and services, environmental benefits, destination tourism, and medical and educational facilities. We seek ways to be good stewards of our local assets, to make wise land use and fiscal decisions, to conduct open and accessible government, and to preserve and enhance the City's prosperity and quality of life.

Planning Commission

Throughout the course of the effort, the Planning Commission held 25 public meetings to consider GPAC's recommendations and other matters regarding the new General Plan. In addition, two members of the Planning Commission served on the GPAC. Based on GPAC and public input, and with the assistance of technical consultants and City staff, the Planning Commission prepared the draft 2017 General Plan for review and final action by the City Council.

City Council

In addition to unanimously adopting the final 2017 General Plan document and certifying its accompanying Environmental Impact Report on [REDACTED], 2017, the City Council set the initial work program for the General Plan effort and provided key input and guidance during the two and one-half year effort. Additionally, two Council members served on the GPAC.

Using the 2017 General Plan

The General Plan expresses the Community's values and broad consensus in the form of goals, policies, and programs. Goals are aspirational statements of intent that are not necessarily achievable within the planning period of this General Plan. Policies are statements that guide decision-making; they guide actions the City must take to implement the General Plan and to make progress in achieving its goals. Programs are specific actions to be taken to

carry out the General Plan’s intent. Typically, programs require time and resources to accomplish and produce measurable results.

Policies are typically organized in each element by topical area or issue. For instance, policies related to “land use compatibility” can be found under that topical area in the Land Use Element. For policies and programs to be successfully implemented, they must be clear as to purpose and method of implementation. Additional information that may be included is implementation timing, responsible party, and resources required for implementation.

Details for implementing policies in the General Plan are contained in the Implementation Program in the form of action items (*see Appendix 9.0*). Programs describe specific steps necessary to achieve the City’s objectives and describe the desired outcome. To allow easy reference, a numbering system has been established. Both an element and a sequential number (see the example in *Table 1.2* below) identify each policy. For instance, the first policy in the Land Use Element is identified as LUE 1.1. Policies are followed by program numbers, using the section number followed by “.1”, plus consecutive numbers of programs related to the specific policy.

Table 1.2: General Plan Policy Numbering System

| | |
|--------------------------|-----------|
| Land Use Element Section | LUE 1 |
| Policy | LUE 1.1 |
| Program | LUE 1.1.1 |

Policy Interpretation

For a policy to be useful, it must be clear. However, not all policies are worded the same; they differ in terms of expected results, commitment of resources, and importance or urgency. Therefore, it is important to use simple and clear policy and to understand the different levels of policy. The following definitions of terms provide guidance in interpreting the policy language of the General Plan.

- **Shall** – Policies containing the word *shall* indicate that an action must be taken in all cases. This represents absolute commitment to the policy, and the expectation is that the policy will always be carried out.
- **Should** – Policies containing the word *should* indicate that an action will be taken, in most cases, but exceptions are possible for good reason.
- **Allow** – Policies containing the word *allow* indicate that a proposed action will be supported within certain parameters and following certain guidelines.
- **Coordinate** – Policies containing the word *coordinate* indicate that an action will be taken with the cooperation

and/or assistance of some other entity, and the City will fulfill its share of the burden or responsibility.

- **Explore** – Policies containing the word *explore* indicate that an action will be taken to investigate the subject at hand to discover whether some further commitment is needed and appropriate.
- **Consider** – Policies containing the word *consider* indicate that an action may or may not be taken, depending upon the results of analysis that remain to be completed.
- **Limit** – Policies containing the word *limit* indicate that an action will be taken to keep the subject within certain limits, or at least operate to make undesired change more difficult.
- **Restrict** – Policies containing the word *restrict* indicate that an action will be taken to actively keep the undesired action to a minimum.

The reader should refer to Section 12– Glossary for the meanings of other common terms in this Plan.

General Plan Relationship to other Plans and Regulations

A number of plans and ordinances implement or are affected by the City's General Plan.

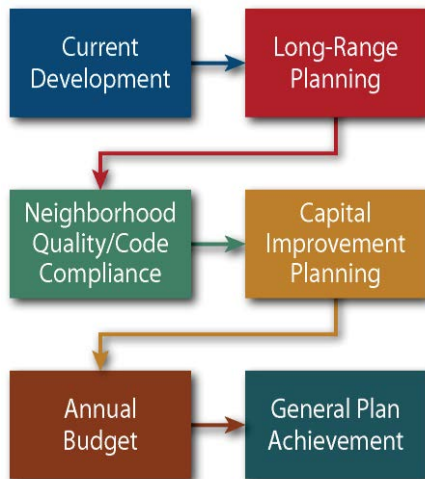

Figure 1-6: General Plan implementation

Zoning Ordinance: The General Plan is implemented primarily through its Zoning Ordinance. While the General Plan designates land uses to be accommodated in the long term, zoning identifies the specific land uses allowed and development standards that describe how they should be developed and operated. The General Plan's successful implementation depends, in large measure, upon the regular updating of the Zoning Ordinance to maintain consistency with the General Plan, as required by state law.

Subdivision Ordinance: State law mandates local approval of land subdivision via the Subdivision Map Act. Local review of proposed subdivisions and parcel maps includes assessment of consistency with, and implementation of, General Plan objectives and policies.

Specific Plans: Specific plans are customized regulatory documents in lieu of standard zoning that are typically used to plan large development projects and delineate land uses, infrastructure, development phasing and standards, and implementation measures. Specific plans must be consistent with the General Plan and can be used to implement the General Plan within a limited area.

Planned Unit Developments (PUDs): Planned Unit Developments are custom zones applied to specific areas. They contain development standards intended to provide land use, site planning, and/or design flexibility to create more innovative developments than would otherwise be possible under conventional standards.

Development Agreements: Developers and local governments may enter into development agreements. These agreements define permitted uses of property, density, and intensity of uses, development criteria, and provisions for the reservation or dedication of land for public purposes. They are in effect for predetermined periods and identify vested development rights that apply to the specific development project they govern. Development agreements assure that General Plan objectives and policies are carried out as development occurs.

Community and Specific Plans

The General Plan is not the only long-range “blueprint” for the City. From time to time, the City may adopt “Community,” “Village,” or “Area” plans. These are typically smaller-scale plans that address the localized needs and conditions of a particular neighborhood or community within the Jurupa Valley Planning Area. Such plans refine the policies of the Jurupa Valley General Plan as they apply to a smaller area. They are implemented by local ordinances such as those regulating land use and design. Area plans are focused planning policy documents that become part of, and must be internally consistent with, the Jurupa Valley General Plan.

Specific Plans are another type of long-range plan, typically associated with a specific, master planned development project or a large area to be developed. Unlike an area plan or a community plan, a specific plan is not an amendment to the General Plan, but is designed to implement the goals and policies of the General Plan for a specific geographical area. When a specific plan is adopted, it represents a separate document that must be fully consistent with the goals and policies stated in the General Plan. A specific plan is a hybrid policy statement and/or regulatory tool that places the emphasis on development standards and supplements those stated in the General Plan. Specific plans must address land use (including open space), infrastructure, development phasing, standards for development and natural resource conservation, and implementation measures. The generalized boundaries of the specific plans are shown in Land Use *Figure 2-18* (page [2-49](#)).

The City already has several adopted specific plans in effect. These Specific Plans are available for review on the City’s website at www.jurupavalley.org. As of the adoption date of this General Plan, the City’s adopted specific plans are shown in *Table 1.3*.

Figure 1-7: A view of Jurupa Mountains from the Pedley Hills

Table 1.3: Adopted Specific Plans, 2017

| Specific Plan | Number |
|-----------------------|--------|
| Mission de Anza | 123 |
| Sky Country | 125 |
| Agua Mansa | 210 |
| Rio Vista | 243 |
| Emerald Meadows Ranch | 337 |
| Thoroughbred Farms | 376 |

Setting

Jurupa Valley is a distinct and special environment. From virtually any place in Jurupa Valley, one has a sweeping view of distant mountains and nearby hills. Rock outcroppings accent the hillsides and provide a distinct texture to the landscape. The hills, mountains, and watercourses that frame this valley also serve to focus urban development in the more suitable portions of the landscape. Jurupa's open hills, fields, and river plain provide a habitat for many native plant and animal species, while the more distant mountains provide a scenic backdrop. The Santa Ana River provides another spectacular, contrasting natural feature. Located along the southern and eastern edges of Jurupa Valley, the river and the river plain buffer Jurupa Valley from development in the neighboring City of Riverside and provide habitat for numerous species of plants and animals. The Mission Boulevard and Van Buren Boulevard corridors augment the strong swaths of Interstate 15 (I-15) and State Route 60 (SR 60) to knit the land together in a strong pattern of travel routes. Jurupa Valley occupies a pivotal position along I-15 and SR 60, anchoring the northwestern portion of western Riverside City, western Riverside County, and southern San Bernardino County. The 2017 General Plan seeks to capitalize upon not only the spectacular visual qualities of Jurupa Valley, but its strategic location as well.

Location

The City's strategic Inland Empire location within Southern California is evident in *Figure 1-8*. The map shows the location of the City of Jurupa Valley relative to the surrounding cities of Riverside and Corona to the south, San Bernardino and Fontana to the north, Pomona and Ontario to the northwest, and Orange County to the west. Jurupa Valley is located in the northwestern portion of Riverside County, and it stretches east beyond the curve of the Santa Ana River, just touching the corner of San Bernardino County's City of Colton.

The distinctiveness of the Jurupa Valley area can be found in its wonderful natural setting. From the lush riparian corridor of the Santa Ana River, to the slightly undulating flatlands of Mira Loma, to the dramatic rolling terrain of the Pedley Hills, to the stark, rugged outcroppings of the Jurupa Mountains, Jurupa Valley provides diverse habitat for wildlife and an outstanding location for a semi-rural city that values its equestrian heritage in balance with economic and residential progress.

Figure 1-9: Santa Ana River in Jurupa Valley

The western portion of Jurupa Valley is primarily flat, with gentle rolling foothills scattered throughout the Glen Avon and Mira Loma areas. North of SR 60 lies the dramatic sloping terrain of the Jurupa Mountains, which provide a natural backdrop for the communities of Sunnyslope and Belltown. The Pedley Hills provide a picturesque setting for the community of Pedley as well as a pleasing backdrop for communities adjacent to the hills. The Santa Ana River, with its lush riparian habitat, provides a natural contrast along the southern boundary of Jurupa Valley. Though not located within the City's boundaries, Mount Rubidoux serves as a prominent visual landmark for residents in Jurupa Valley's eastern communities.

Unique Features

Santa Ana River

Located along the southern boundary of Jurupa Valley, the Santa Ana River represents a significant recreational, habitat, and visual resource. This watercourse is one of the most significant in the nation, partly because it serves such a major part of this entire region and is one of the fastest growing watersheds in the continental United States. Moreover, it offers outstanding value in the area of drainage, flood control, water conservation, and natural habitat conservation/restoration. The 2017 General Plan reinforces these functions through the pattern of recreation and open space

Figure 1-10: Aerial photograph of Jurupa Mountains and Pyrite Canyon, with SR 60, looking northeast

designations in combination with extensive policies. Throughout the area, interconnecting trails provide access to a scenic wildlife setting. The Santa Ana River Wildlife Area serves as a nature center that includes hiking and equestrian activities. The river, which drains a watershed of more than 2,650 square miles, is also the general alignment of the long-awaited Coast to Crest trail that will connect the far reaches of the San Bernardino Mountains with the Pacific Ocean.

Jurupa Mountains/Pyrite Canyon

Located between the northern boundary of Jurupa Valley and SR 60, the Jurupa Mountains are the dominant visual resource in the northern portion of Jurupa Valley. The highest peak, Mount Jurupa, stands at an elevation of 2,217 feet. In addition, substantial portions of the mountains are identified as potential habitat for the endangered Delhi Sands flower-loving fly. Industrial and mineral extraction uses were formerly located in Pyrite Canyon, located southwest of Mount Jurupa. The Stringfellow Reclamation Site is also located here. The site was designated a Superfund site to remediate and recover from the toxic pollution associated with decades-old waste disposal practices.

Pedley Hills

Reaching a peak elevation of 1,424 feet, the Pedley Hills provide the most significant physical feature in central Jurupa Valley and serve as a backdrop for several communities, especially Indian Hills and Pedley. The Hills' distinctive rock outcroppings and rugged landforms add visual interest and create scenic vistas in combination with the nearby Jurupa Mountains and distant San Bernardino Mountains.

Figure 1-11: Aerial view of Pedley Hills with housing

B. LOOKING AHEAD – UPDATING THE GENERAL PLAN

Once adopted, the General Plan is not a static document. Community needs, values, land use patterns, environmental conditions, and economic factors may change over time, and the General Plan must change and evolve with them. To meet the needs of change and to ensure continued General Plan relevance and value, state law permits up to four amendments per mandatory element per year. Most amendments usually propose either a change in the land use designation of a particular property or a change in the General Plan's wording, or "text." Any changes to the General Plan must be done with due consideration to maintaining consistency between zoning and the General Plan.

The City intends to review the General Plan annually to determine if amendments are needed. General plans are based on analyses and assumptions concerning land use, environmental, or other planning factors that may change over time. If the City Council

determines that changes have occurred that merit General Plan amendments, the City will update the Plan to reflect new conditions and information. General Plan Amendments must be supported by findings of fact. Findings provide a rationale for City Council approval or denial of an amendment. While special findings may be applied on an individual amendment basis, the following standard findings should be made for each General Plan amendment.

- The amendment is deemed to be in the public interest.
- The amendment is consistent and compatible with the rest of the General Plan and any implementation programs that may be affected.
- The potential impacts of the amendment have been assessed and have been determined not to be detrimental to the public health, safety, and welfare of the community.
- The amendment has been processed in accordance with the applicable provisions of the *California Government Code* and the California Environmental Quality Act (CEQA).

City-initiated amendments, as well as amendments requested by property owners, developers, and other public agencies, are subject to the same basic process and requirements described above to assure consistency and compatibility with the General Plan. This includes appropriate environmental review, public notice, and public hearings leading to an official action by City Council resolution.

###

A. INTRODUCTION

The Land Use Element is an essential tool in achieving Jurupa Valley's goals. It is one of ten sections, or "elements" that comprise the 2017 General Plan. Traditionally, the Land Use Element is considered the General Plan's most important policy document, because it describes the allowed types and configurations of land uses and where they can be located, including residential, commercial, mixed use, industrial, open space, recreation, and public uses. In combination with the other elements, the Land Use Element guides how the City plans, arranges, develops, and conducts these land uses and serves as a key tool in ensuring a high quality of life for all Jurupa Valley citizens. Land use decisions have the potential to add value to our Community in terms of safety, convenience, environmental quality, aesthetics, and economic benefits.

To help guide land use and development-related decisions, this element provides:

1. A Land Use Plan that graphically depicts where different types of land uses are allowed;
2. A description of Land Use Designations that comprise the Land Use Plan, including density and development intensity standards;
3. A summary of population and employment build-out estimates for the City;
4. Goals and policies that help guide public and private land use actions; and
5. More detailed policies and programs for individual communities and Overlay areas.

General Plan Advisory Committee Guidance

The General Plan Advisory Committee (GPAC) provided extensive and essential guidance in shaping the Land Use Element's vision and policies. Committee members noted that the City of Jurupa Valley is defined by its small-town feel and is best described as a "Community of Communities." These aspects of Jurupa Valley life are so important that they were adopted as Community Values and have an overarching role in shaping the goals, policies, and programs of the Land Use Element and are more particularly described in the Value Statements below.

City of Jurupa Valley Community Values Statement

Small-Town Feel. Maintain Jurupa Valley’s small-town feel, where neighbors know neighbors and merchants, the built environment reflects and is compatible with the area’s character, and residents can grow gardens, raise and keep livestock, and choose from diverse lifestyles in a semi-rural town setting.

Community of Communities. Jurupa Valley consists of many distinctive communities and neighborhoods in a valley surrounded by stunning natural scenery and views. As a “community of communities,” we will preserve and enhance those positive qualities that make our communities unique, enhance our “gateways” to welcome residents and visitors and embrace a unifying community theme and spirit. Our ability to offer the choice of a semi-rural, equestrian lifestyle is an essential part of who we are as a community and of our quality of life.

The GPAC identified nine distinct communities within the overall Jurupa Valley community, as shown in *Figure 2-1*. Of these nine, four are predominantly suburban or small town neighborhoods (Rubidoux, Belltown, Jurupa Hills, and Indian Hills). The other five—Mira Loma, Pedley, Glen Avon, Sunnyslope, and Crestmore Heights—are predominantly semi-rural and low density in character. Pedley is the most diverse; with a combination of old style small town neighborhoods and large lots with animal keeping.

Primary City Goal

To be a city that maintains and enhances its unique, small-town character and equestrian-friendly neighborhoods while promoting economic opportunities and prosperity for all. The City will accomplish this goal by preserving its semi-rural character and by realigning its mix of land uses to help provide the housing, shopping, employment, and cultural opportunities its residents desire while improving the quality and compatibility of land uses within each community.

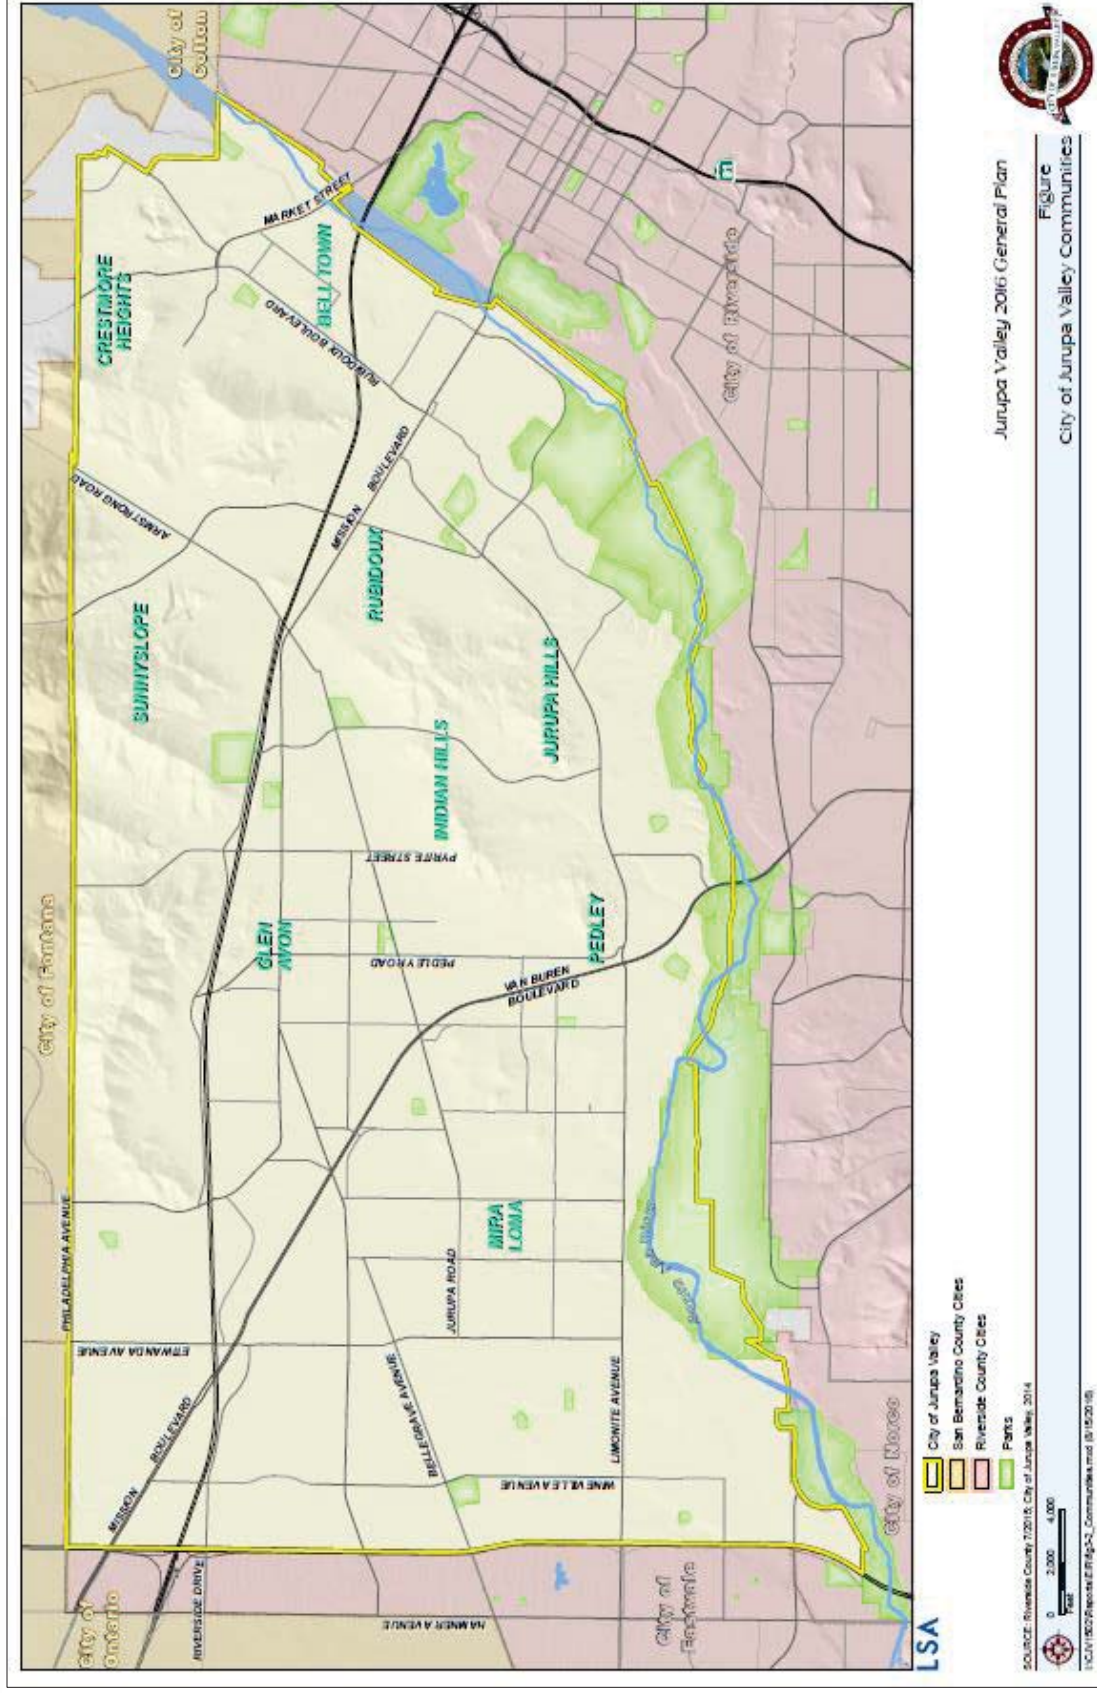

Figure 2-1: City of Jurupa Valley Communities

Contents of the 2017 General Plan

To help guide land-use and development-related decisions, this element provides:

1. A Land Use Plan that graphically depicts where different types of land uses are allowed;
2. A description of land use designations that comprise the Land Use Plan, including density and development intensity standards;
3. A summary of population and employment build-out estimates for the City; and
4. Goals, policies, and programs that help guide public and private land use actions.

Land Use Assets, Issues, and Needs

The GPAC played a major role in identifying land use assets, issues, and needs. Committee members' discussion of land use was wide-ranging and quite detailed, for certain topics. Overall, the primary issues discussed were: 1) preserving and enhancing community character; 2) achieving balanced land uses and healthy, safe neighborhoods; 3) maintaining large-lot semi-rural or "equestrian" lifestyles; 4) attracting much-needed community-serving uses such as medical services, quality retail and restaurants, higher education and job training facilities, a civic center, cultural, arts, entertainment, and recreation uses; 5) allowing mixed use development where appropriate; 6) removing and preventing "blight," and 7) allowing high-quality multi-family housing where appropriate.

Additional issues discussed were: 8) promoting Jurupa Valley as a destination city; 9) expanding and preserving trails and open spaces within the City; 10) correcting and preventing illegal construction and land uses or activities; 11) providing community centers at various locations throughout the City; 12) preventing incompatible uses or providing "buffers" between incompatible uses; and 13) addressing the effects of commercial truck traffic on streets, neighborhoods, and public safety.

In response to GPAC recommendations and the input received during eight public workshops on the General Plan, the *primary land use issues* identified were:

1. **Warehousing** – Address warehousing location, design, and potential impacts, including traffic, noise, and streets.
2. **Vacant Land** – Many large, vacant parcels that may be suitable for development.
3. **Freeway Access and Visibility** – Good freeway access and visibility from Interstate 15 (I-15) and State Route 60 (SR 60).

4. **Regional Connection** – Regional Metrolink station linking Jurupa Valley with larger urban centers.
5. **Flabob Airport** – Local airport with potential community benefits as a historic, cultural, and recreational hub.
6. **Recreation Facilities and Open Space** – The Community has many attractive and well-used recreational facilities, including community parks, a Community Center, a Nature Center, a Discovery Center, a campground, and a sports park, and includes several large open space areas.
7. **Scenic Valley and Agricultural Setting** – The Community's scenic backdrop, with distinctive rocky hills, riparian woodlands, farmed land, and long views of the San Bernardino Mountains helps define Jurupa Valley's character and contributes to its quality of life.

Policy and Program Sections

1. *Open Space*
2. *Residential*
3. *Commercial, Industrial, and Business Park*
4. *Public Facility/Institutional*
5. *Land Use Overlays*
6. *Distinct Communities*
7. *General Plan Administration*
8. *General Plan Land Use Implementation*
9. *Land Use Compatibility*
10. *Hillside Development*
11. *Community Design and Aesthetics*
12. *Project Design*
13. *Infrastructure, Public Facilities, and Services*
14. *Fiscal Impacts*

B. BACKGROUND

Jurupa Valley's unique setting, with rocky hills and mountains to the north, northeast, and south, adjacent to the wide and mostly natural Santa Ana River, is a major reason so many residents come here and stay. Located in the northwest corner of Riverside County, Jurupa Valley is within commuting distance for many residents employed in neighboring Los Angeles, Orange, and San Bernardino counties, as shown in *Figure 2-2*. With a total land area of 44 square miles and a 2016 population estimated at about 97,000, Jurupa Valley is one of the largest, yet lowest density cities in the western Riverside-San Bernardino Region with a citywide average density of a little over one dwelling unit per acre. This, coupled with its historic development as an unincorporated area under County of Riverside jurisdiction, has contributed to the evolution of Jurupa Valley into nine distinct communities—each with its own character, qualities, and challenges.

Existing Conditions

In 2017, the young city is experiencing significant residential and industrial growth and has a mix of medium- and low-density residential development, equestrian and agricultural activities, and a mix of retail commercial, office, and industrial uses. In particular, the City is experiencing significant development interest for more industrial warehousing, and the Inland Empire's booming transportation/logistics industry has resulted in industrial and warehouse uses encroaching into historically residential and rural neighborhoods. This trend has also limited opportunities for development in the retail commercial, office, and job-rich manufacturing sectors.

Figure 2-3: Mount Rubidoux with Jurupa Valley in background

Two primary transportation corridors traverse the Jurupa Valley area: I-15, which runs north and south; and SR 60, which runs east and west. In recent years residential development and economic activity have increased, in particular in the areas adjacent to the I-15 and SR 60 freeways. The City has significant capacity for expansion of residential and commercial development activity in the future.

A Brief History

The City of Jurupa Valley incorporated on July 1, 2011 due to the efforts of a group of passionate community volunteers. Jurupa Valley is proud to be the 482nd city in California, the most recent California city to incorporate, and the 28th city in Riverside County.

The primary reason for incorporation was the strong desire to control land use and planning within its boundaries and to provide enhanced local services, such as police, fire, and planning. The City covers a 44-square-mile area encompassing the communities of Jurupa Hills, Mira Loma, Glen Avon, Pedley, Indian Hills, Belltown, Sunnyslope, Crestmore Heights, and Rubidoux. It borders Fontana and Rialto in San Bernardino County to the north, Riverside to the south and east, and Eastvale and Ontario in San Bernardino County to the west. The Santa Ana River and the cities of Riverside and

Norco abut the City along its southern and southeastern boundaries.

Jurupa Valley is rich in history dating back hundreds of years. “Jurupa” in Jurupa Valley derives its name from the first inhabitants of the area, Native Americans who called “Jurupa” their home. Over the years, there have been various interpretations of the meaning of “Jurupa,” from a greeting meaning “peace and friendship” to the first padre to visit the area, to a more widely recognized interpretation that “Jurupa” refers to the California sagebrush common to the area. In 1838, the area became known as Rancho Jurupa under a land grant to Señor Don Juan Bandini by the Mexican government. By the late 1800s, the Jurupa Valley area began to live in the shadow of the more urbanized City of Riverside. Once, much of Jurupa Valley had a Riverside mailing address, and was known as “West Riverside.” Yet, settlement of the area in and around what is now the City of Riverside actually began in the Jurupa Valley many years before Riverside’s founding.

Existing Land Uses

According to a 2016 study, the City of Jurupa Valley’s existing land uses consist primarily of Single-Family Residential (31% of the City’s total land area), Vacant Land (28%), and Industrial Land (11%), as shown in *Figure 2-4* and *Figure 2-5*.

In 2017, about 28% of the City’s land area is vacant and undeveloped or minimally developed (e.g., agriculture, open space, parks, and playgrounds), as shown in *Figure 2-4*. Undeveloped areas contribute to the City’s semi-rural, “country” character and include permanent open space areas, such as the Santa Ana River and most of the Jurupa Mountains, public parks and campgrounds, and land designated for urban uses but not yet developed. *Figure 2-6* shows existing land uses along with vacant areas.

Land Use Objectives of 2017 General Plan

Based on public and GPAC input, the City identified these primary land use objectives.

1. Preserve small-town character and equestrian lifestyle;
2. Provide sustainable prosperity by expanding housing, strengthening the employment base; and
3. Promote a more balanced range of land uses that meets the needs and values of the wider community, and ensure that vacant land resources are used wisely.

Figure 2-4: Land use by acres, as a percent of total city land area (SCAG, 2015)

Figure 2-5: Existing land use by number of acres, City of Jurupa Valley, 2015

DRAFT

Land Use

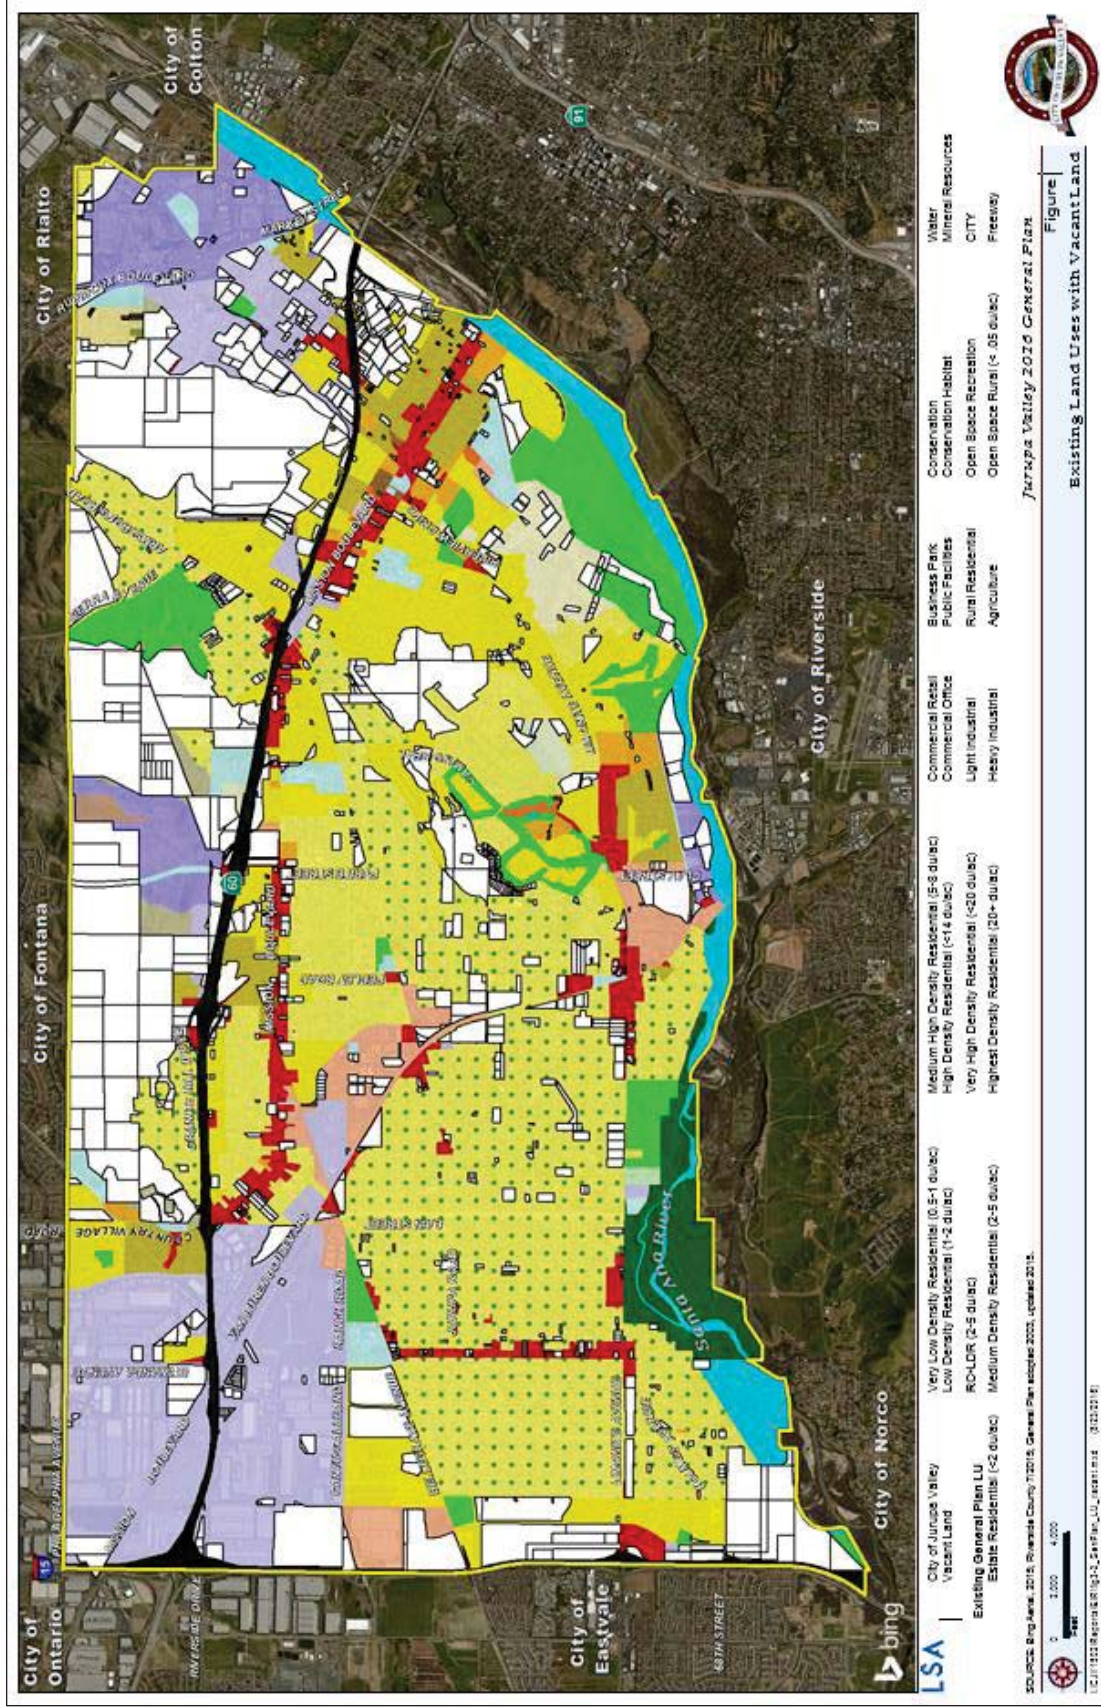

Figure 2-6: Existing land uses with vacant land

The existing pattern of land use and development has resulted in a homogenous employment base that should be strengthened and diversified with skilled labor, professional, and management job opportunities. Moreover, new housing and retail-commercial opportunities have lagged behind those of other nearby cities. The City's relatively high percentages of single-family housing, vacant, and industrial land uses, when compared with retail commercial and services, offices and public facilities, suggest an imbalance in providing sufficient land to meet a broad range of commercial, residential, and public services needs in the City. Economic studies by Kosmont Companies, an economic consultant, confirm the lack of retail commercial opportunities. The studies show significant retail "leakage" to shopping areas in neighboring cities.

Moreover, virtually no land is committed to multi-family housing, visitor- or traveler-oriented uses, such as hotels, motels, conferencing, travel centers, and other similar uses. Residents must leave the Jurupa Valley for many services such as dining and entertainment. Consequently, the City's 2017 General Plan Land Use strategy expands the areas to be devoted to retail commercial sales and services, visitor-oriented uses, professional offices and business parks, and multi-family housing while maintaining adequate land resources for Industrial and Open Space/Agricultural uses.

Land Use Plan

The Land Use Plan, *Figure 2-7*, focuses on preserving the unique features in the Jurupa area, guiding the City's growth and improvement, and on preserving and enhancing its citizens' quality of life. To accomplish this, the City has updated and refined many of its General Plan land use designations that were originally established by Riverside County before Jurupa Valley's incorporation. The acreages of the various land uses under Riverside County and City jurisdictions are compared in *Table 2.1* (page [2-15](#)). The proposed General Plan Land Use designations are summarized in *Table 2.4* (page [2-22](#)).

Figure 2-7 (page [2-14](#)), shows the location and boundaries of planned land uses. The Plan is organized around 22 land use designations and 11 land use overlays, as summarized in *Table 2.4* (page [2-22](#)). The table describes the allowed maximum residential density, development intensity (as measured by floor area ratio or FAR), typical allowable land uses, and general characteristics for each of the land use designations. Sections LUE 1 through LUE 5 describe the General Plan's land use designations and list pertinent policies and programs.

Jurupa Valley's rich heritage of rural living continues to be accommodated in areas committed to that lifestyle, and its environmental and economic sustainability are reinforced by strong commitments to open space preservation and urban development, as provided in this 2017 General Plan.

DRAFT

Land Use

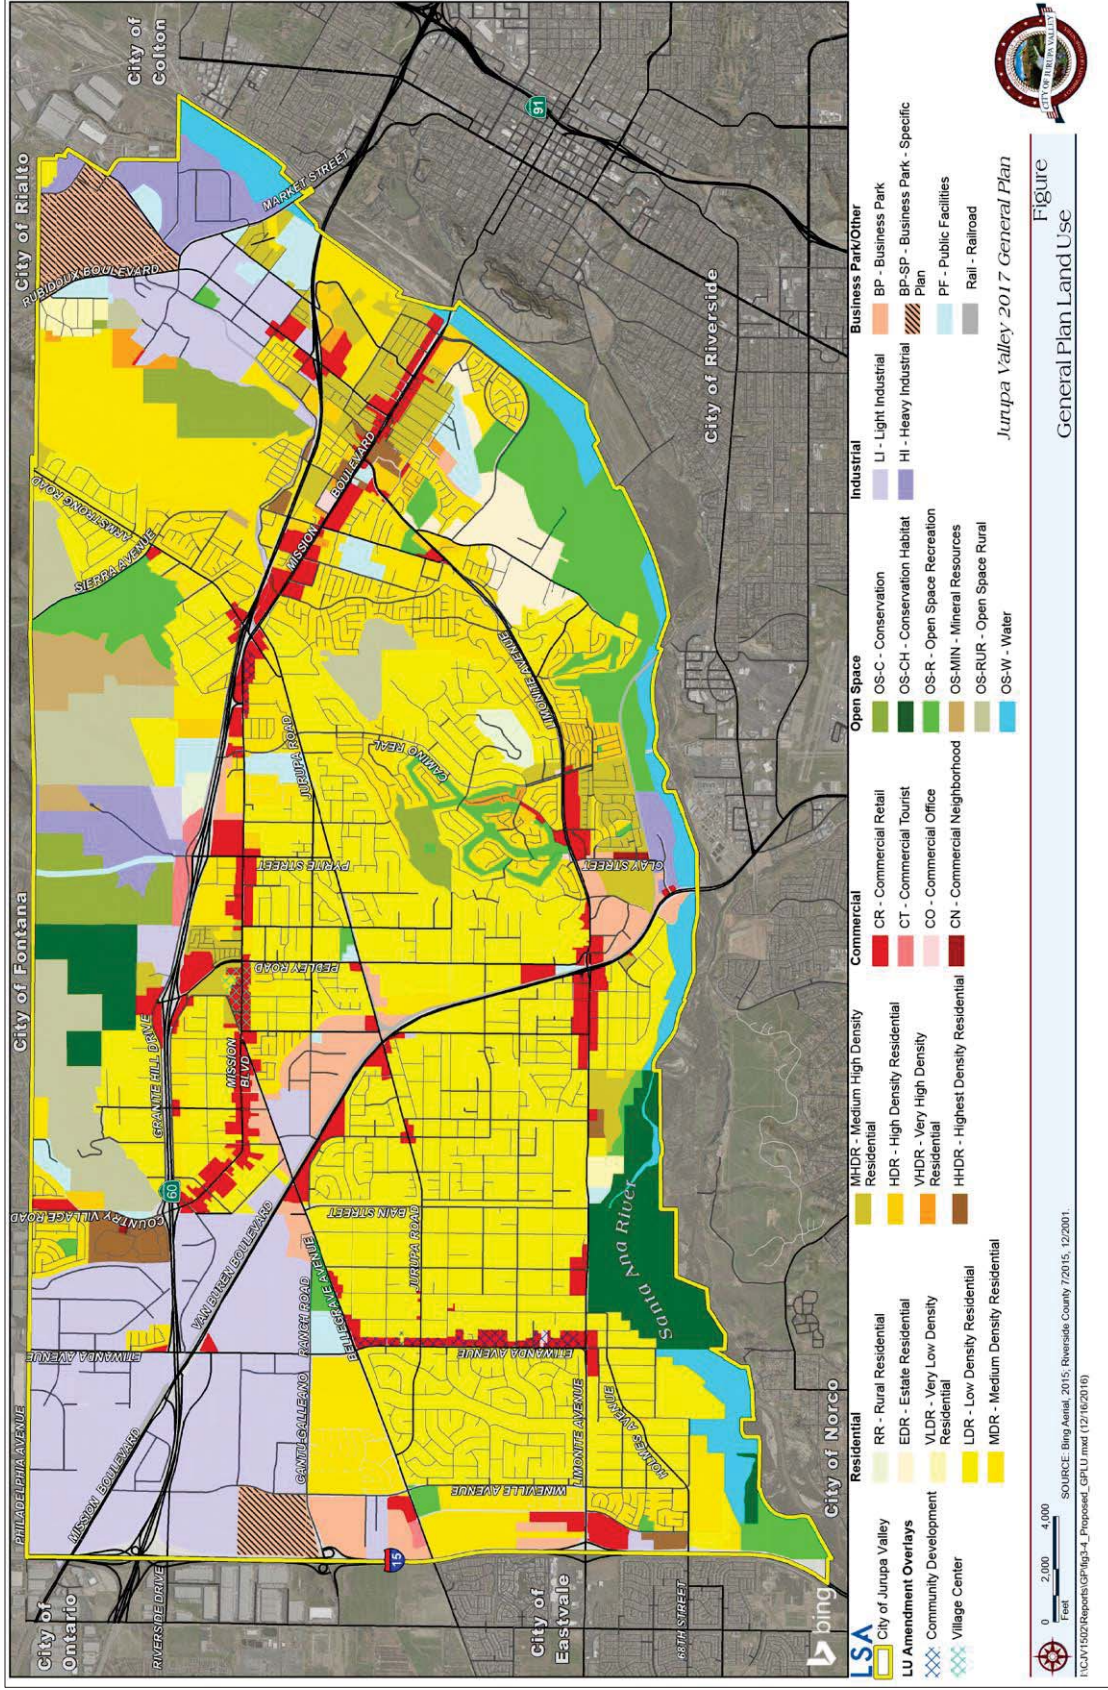

Figure 2-7: 2017 General Plan Land Use Plan

Table 2.1: Comparison of Previous and 2017 General Plan Land Use Designations

| Land Use ¹ (Category/Designation) | Total Acres | | Existing Land Uses | | |

¹ The City's 2017 General Plan eliminated the County's Agriculture and Rural Community-Low Density Residential designations and added Commercial Tourist, Neighborhood Commercial, Business Park-Specific Plan, and Railroad designations.

² The City re-designated land in the old Agriculture category to Very Low Density Residential, and re-designated Rural Community-Low Density Residential to Low Density Residential.

NA Not applicable (open space uses have no development potential)

The proposed land use designations represent a wide range of uses that respond to community needs, natural characteristics of the land, and the economic potential to accommodate a range of compatible uses. Many factors led to the designation of land use patterns. Among the most influential were previous County plans, established land use patterns, public input, transportation plans and needs, conservation and habitat plans, citizen input, and Planning Commission and City Council guidance.

Due to the 2017 General Plan's intent as an interim plan, the Plan Land Use Plan takes a focused approach on land use changes, emphasizing those changes deemed most necessary in achieving near- and mid-term community goals. The 2017 General Plan was prepared with the expectation that within 5 years, or by 2022, the City will initiate a more comprehensive General Plan update. It will address land use issues that could not be fully addressed in the current update due to the lack of resources and will refine and update the General Plan elements based on Jurupa Valley's evolving needs, priorities, and issues during its first 11 years of cityhood.

City Development Potential under This General Plan

Table 2.2 and *Table 2.3* summarize the projected development capacity of the 2017 General Plan. The tables include existing and projected population, numbers of dwelling units and employees.

Overall Land Use Strategy

The 2017 General Plan continues to provide for substantial areas devoted to semi-rural, suburban, and equestrian uses, as allowed by the Rural Residential, Estate Residential, Very Low Density Residential, and Low Density Residential designations. The land use plan also allows for a range of conventional suburban residential densities outside the Equestrian Lifestyle Protection Overlay, as reflected by the Medium Density, Medium High Density, High Density, Very High Density, and Highest Density Residential designations. Complementing these residential land uses are Commercial Retail Corridors, new Commercial Tourist areas near City gateways, and a new Commercial Neighborhood designation. In addition, there are 11 overlay designations that, when used in combination with base designations like Low Density Residential (LDR) or Commercial Retail (CR), apply special requirements in these areas to help meet special community needs or to address special planning concerns.

Table 2.2: Residential Land Use Statistics and Buildout Projections

| Residential Land Use (Category/ Designation) | Existing Land Uses (acres) | | (B) Maximum Density (Units/Acre) | Additional Dwelling Units | | Additional Population (Persons) | |
|---|-------------------------------|---------------|---|---------------------------|--------------------------------|---------------------------------|-------------------------|
| | Developed | (A) Vacant | | (C) Maximum (A × B) | (D) Less Intense (C × E) | Maximum (C × F) | Less Intense (D × F) |
| Rural Residential (RR) | 73.5 | 30.1 | 0.2 | 6 | 4 | 23 | 16 |
| Estate Residential (EDR) | 259.5 | 79.0 | 0.5 | 40 | 8 | 148 | 104 |
| Very Low Density Residential (VDR) | 93.1 | 8.7 | 1 | 9 | 6 | 33 | 23 |
| Low Density Residential (LDR) | 6,316.6 | 851.5 | 2 | 1,703 | 1,192 | 6,386 | 4,470 |
| Medium Density Residential (MDR) | 2,200.0 | 1,357.7 | 5 | 6,789 | 4,752 | 25,457 | 17,820 |
| Medium High Density Residential (MHDR) | 602.6 | 202.5 | 8 | 1,620 | 1,134 | 6,075 | 4,253 |
| High Density Residential (HDR) | 219.5 | 72.8 | 14 | 1,019 | 713 | 3,822 | 2,675 |
| Very High Density Residential (VHDR) | 31.6 | 54.0 | 20 | 1,080 | 756 | 4,050 | 2,835 |
| Highest Density Residential (HHDR) | 15.9 | 0.0 | 20+ | 0 | 0 | 0 | 0 |
| Highest Density Affordable Projects* | -- | 35.0 | 25 | 875 | 613 | 3,281 | 2,297 |
| Total Residential Uses | 9,812.3 | 2,691.3 | | 13,140 | 9,198 | +49,275 | +34,492 |
| City Population (2014) | | | | | | 98,842 | 98,842 |
| Buildout Population (2035) | | | | | | 148,117 | 133,334 |
| Percent Increase | | | | | | +50% | +35% |
| Average Annual Percent Increase (20 years) | | | | | | +2.5% | +1.75% |

(E) "Less Intense" land use density is considered to be 70% or 0.7 of maximum density

(F) Units times 3.75 persons per dwelling unit (based on US Census 2014 total population divided by total housing units)

*New category - specific sites not identified yet but the General Plan Housing Element indicates they will be distributed to several areas in the City.

Table 2.3: Non-Residential Land Use Statistics and Buildout Projections

| Non-Residential Land Use (Category/ Designation) | Existing Land Uses (acres) | | (B) Maximum Floor Area Ratio | Additional Acres | | Additional Square Feet | | Additional Employees | |
|---|-------------------------------|---------------|------------------------------------|---------------------------|-----------------------------------|---------------------------|--------------------------------|----------------------|-------------------------|
| | Developed | (A) Vacant | | (C) Maximum (A × B) | (D) Less Intense (C × 0.75) | (F) Maximum (C × E) | (G) Less Intense (D × E) | Maximum (F × H) | Less Intense (G × H) |
| Commercial Retail (CR) | 700.9 | 379.3 | 0.35 | 133 | 100 | 5,782,808 | 4,337,106 | 9,638 | 7,229 |
| Commercial Tourist (CT) | 1.9 | 42.7 | 0.35 | 2 | 2 | 87,120 | 65,340 | 145 | 109 |
| Commercial Neighborhood (CN) | 4.3 | 4.2 | 0.6 | 3 | 2 | 109,771 | 82,328 | 183 | 137 |
| Commercial Office (CO) | 12.0 | 2.9 | 1.0 | 3 | 2 | 126,324 | 94,743 | 158 | 118 |
| Business Park (BP) | 478.7 | 201.9 | 0.6 | 121 | 91 | 5,276,858 | 3,957,644 | 6,596 | 4,947 |
| Business Park-Specific Plan (BP-SP) (estimate) | 297.9 | 216.5 | 0.6 | 130 | 97 | 5,658,444 | 4,243,833 | 7,073 | 5,305 |
| Light Industrial (LI) | 2,503.1 | 499.1 | 0.6 | 299 | 225 | 13,044,478 | 9,783,358 | 10,870 | 8,153 |
| Heavy Industrial (HI) | 478.6 | 148.0 | 0.5 | 74 | 56 | 3,223,440 | 2,417,580 | 2,686 | 2,015 |
| Total Non-Residential Uses | 4,477.4 | 1,494.6 | | 765 | 574 | 33,309,243 | 24,981,932 | 37,350 | 28,102 |

(E) 1 acre = 43,560 square feet

(H) Commercial = 1 employee per 600 square feet; office/business park = 1 employee per 800 square feet; industrial = 1 employee per 1,200 square feet

During public meetings, Jurupa Valley's residents emphasized the need for a more "balanced" community. To that end, the focus of the 2017 General Plan is to preserve those aspects of Jurupa Valley that residents treasure most, and to promote long-term economic vitality and improve residents' quality of life. This is accomplished through the identification, distribution, and arrangement of various land uses throughout the City. As part of General Plan adoption, 20 land use changes were identified to address key land use objectives. These areas are shown in *Figure 2-8 below* and described in *Appendix 2.0*. In general, the land use changes are intended to reduce conflicts between residential and industrial uses, to expand housing and retail-commercial opportunities, and to promote local job growth by designating more land for professional office/business park uses. Preserving Jurupa Valley's rural, small-town character and equestrian lifestyle has been a major consideration in the preparation of the 2017 General Plan.

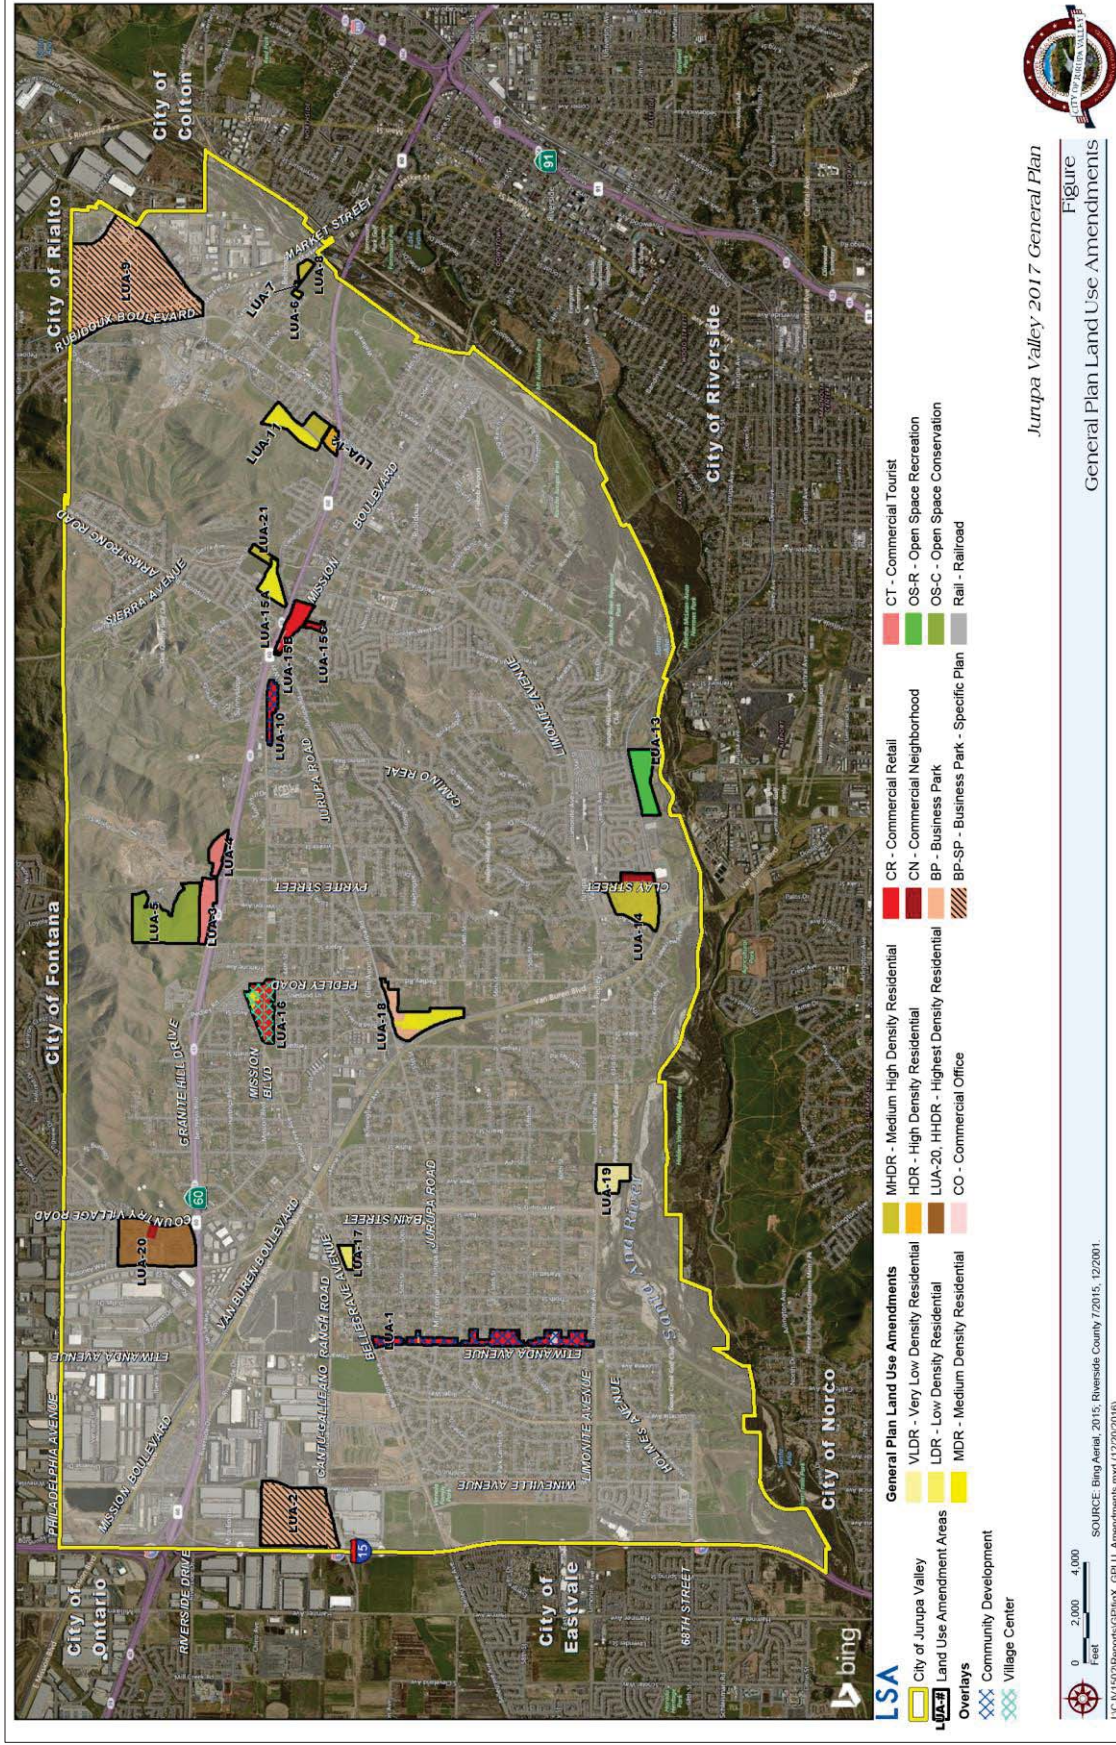

A key step in achieving the Community's Vision as described in the Community Values Statement has been to modify or delete some previously adopted County of Riverside land use categories and to add new designations to better achieve the new City's goals. These changes to the previous General Plan's land use designations are described below and in *Section LUE 5 – Land Use Overlays* (beginning on page [2-48](#)).

For example, the Community Development Overlay (CDO) has been revised to allow multiple land use options to encourage the eventual conversion of older land uses to more compatible, high quality land uses. In particular, the CDO is applied to portions of the Mission Boulevard and Etiwanda Avenue corridors. These areas include vacant and/or aging buildings along with numerous vacant and unsightly parcels along these important commercial corridors in Jurupa, including those along Mission Boulevard in Glen Avon. This policy area is intended to facilitate optimum development of these infill properties and stimulate economic development of the adjacent communities.

Large areas of open space line the Santa Ana River, providing an expansive natural scenic corridor between Jurupa Valley and the cities of Riverside and Norco. Portions of the Jurupa Mountains along the northern border of the City also contain Open Space designations intended to preserve the rugged nature of this area, protect sensitive habitat areas, and buffer the City from the cities of Fontana and Rialto. Recreational open space areas designed for active recreational uses, such as golf courses and athletic fields, are located throughout Jurupa Valley.

DRAFT

Land Use

General Plan Land Use Designations and Land Use Intensity

The 2017 General Plan's land use designations are summarized in *Table 2.4*. The Land Use Plan, *Figure 2-7* (page [2-14](#)), uses these designations to accommodate the full range of land uses existing in the City in 2017, as well as new land uses in those areas where land use changes are desired. The land use designations were originally developed by the County of Riverside and adopted by the City upon incorporation; however, many of the land use designations did not apply to the City of Jurupa Valley, or did not make sense in terms of the City's values, needs, and overall scale. Consequently, the General Plan land use designations have been updated and consolidated to better meet the City's needs.

Table 2.4 lists the titles and abbreviations of all land use designations, such as Low Density Residential (abbreviated LDR) followed by descriptions of land use intensity and typical allowed uses. Two types of land use descriptions are shown: 1) the base designations, including Residential, Commercial, Open Space, and Public Facility, that establish the primary land uses for a particular property; and 2) land use *overlays* that are specialized land use designations applied to the base land use designation.

The overlays may be applied to any base designation to address special land use needs, concerns, or goals and create a combining designation such as Low Density Residential/Equestrian Lifestyle Protection Overlay (LDR/ELO) to protect the City's semi-rural equestrian areas within Low Density Residential areas.

Land use intensity refers to the number of dwellings or the amount of non-residential floor area occupying a unit of land—typically an acre. This, in turn, provides a measure of the numbers of person living or working in an area, and allows cities to anticipate and plan for streets, utilities, and schools and other community needs based on population. City land use and population estimates are based on land use intensities in *Table 2.4* (page [2-22](#)). Land use intensity is also governed by Zoning Ordinance standards that address building setbacks, building height, lot coverage, and parking requirements.

Table 2.4: Summary of 2017 General Plan Land Use Designations

| Land Use Designation | Allowed Density (Minimum Parcel Size per DU) or Development Intensity (Floor Area Ratio) ^{1,3} | Notes |
|--|---|---|
| Open Space | | |
| Open Space, Conservation (OS-C) | N/A | <ul style="list-style-type: none"> Protection of open space for natural hazards, cultural resource preservation, wildlife and habitat, and natural and scenic resources. Agricultural uses are permitted. |
| Open Space, Conservation Habitat (OS-CH) | N/A | <ul style="list-style-type: none"> Protection of open space conserved and managed in accordance with adopted MSHCPs. |
| Open Space, Water (OS-W) | N/A | <ul style="list-style-type: none"> Includes bodies of water and natural or artificial drainage corridors. Extraction of mineral resources subject to conditional use permit (CUP). May be permissible if flooding hazards are addressed and long-term habitat and riparian values are maintained. |
| Open Space, Recreation (OS-R) | 20 acres minimum | <ul style="list-style-type: none"> Recreational uses, including parks, trails, athletic fields, and golf courses Neighborhood parks are permitted within residential land uses. |
| Open Space, Rural (OS-RUR) | 20 acres minimum | <ul style="list-style-type: none"> One single-family residence allowed per 20 acres. Allows new and existing agricultural activities |
| Open Space, Mineral Resources (OS-MIN) | N/A | <ul style="list-style-type: none"> Mineral extraction and processing facilities conditionally allowed. Includes areas held in reserve for future mineral extraction and processing. |
| Residential | | |
| Rural Residential (RR) | 5 acres minimum | <ul style="list-style-type: none"> Single-family residences. Allows limited animal keeping and agricultural uses, recreational uses, compatible resource development (not including the commercial extraction of mineral resources), and governmental uses. |
| Estate Density Residential (EDR) | 2 acres minimum | <ul style="list-style-type: none"> Single-family detached residences on large parcels of at least 2 acres. Limited agriculture, intensive equestrian, and animal keeping uses are expected and encouraged. |
| Very Low Density Residential (VLDR) | 1 acre minimum | <ul style="list-style-type: none"> Single-family detached residences on large parcels of 1 to 2 acres. Limited agriculture, intensive equestrian, and animal keeping uses are expected and encouraged. |
| *Low Density Residential (LDR) | 1/2 acre minimum | <ul style="list-style-type: none"> Single-family detached residences on parcels of 1/2 to 1 acre. Limited agriculture, intensive equestrian, and animal keeping uses are expected and encouraged. Formerly designated RC-LDR. |
| Medium Density Residential (MDR) | Up to 5 DU per acre | <ul style="list-style-type: none"> Single-family detached and attached residences with a density range of 2 to 5 dwelling units per acre. Limited agriculture and animal keeping is permitted; however, intensive animal keeping is discouraged. Lot sizes range from 5,500 to 22,000 square feet. |
| Medium-High Density Residential (MHDR) | Up to 8 DU per acre | <ul style="list-style-type: none"> Single-family attached and detached residences with a density range of 5 to 8 dwelling units per acre. Lot sizes range from 5,000 to 8,700 square feet |
| High Density Residential (HDR) | Up to 14 DU per acre | <ul style="list-style-type: none"> Single-family attached and detached residences, including townhouses, stacked flats, courtyard homes, patio homes, and zero lot line homes. |
| Very High Density Residential (VHDR) | Up to 20 DU per acre | <ul style="list-style-type: none"> Single-family attached residences and all types of multi-family dwellings. |

| Land Use Designation | Allowed Density (Minimum Parcel Size per DU) or Development Intensity (Floor Area Ratio) ^{1,3} | Notes |
|---|---|--|
| Highest Density Residential ² (HHDR) | 25 DU per acre | <ul style="list-style-type: none"> Multi-family dwellings, includes apartments and condominium. To achieve affordable housing goals, minimum density set at 20 dwelling units per acre. Maximum densities set by City Council subject to affordability agreement and level of affordability and community benefits achieved. |
| Commercial, Industrial, and Business Park | | |
| Commercial Retail (CR) | 0.20 - 0.35 FAR | <ul style="list-style-type: none"> Local- and regional-serving retail and service uses. Applied to shopping centers of 5 acres or more. |
| *Commercial Neighborhood (CN) | 0.25 - 0.60 FAR | <ul style="list-style-type: none"> Uses providing goods and services to meet the frequent shopping needs of people living nearby, typically within a one-half mile radius of residences served. Allowed uses include small grocery stores, cleaners, laundromats, drug stores, restaurants, small specialty stores, feed and tack, and other neighborhood convenience uses. Applied to smaller commercial centers, generally less than 5 acres in area. |
| Commercial Tourist (CT) | 0.20 - 0.35 FAR | <ul style="list-style-type: none"> Tourist-related commercial including hotels, restaurants, conference and meeting facilities, theaters, museums, golf courses, and recreation/amusement activities. |
| Commercial Office (CO) | 0.35 - 1.0 FAR | <ul style="list-style-type: none"> Variety of office and office-related uses including financial, legal, medical, dental, real estate, insurance, and other office services. |
| Light Industrial (LI) | 0.25 - 0.60 FAR | <ul style="list-style-type: none"> Industrial, service-commercial, and related uses including warehousing/distribution, research and development, assembly and light manufacturing, repair facilities, and supporting retail uses. |
| Heavy Industrial (HI) | 0.15 - 0.50 FAR | <ul style="list-style-type: none"> More intense industrial activities, such as manufacturing, materials processing, and any related industrial activities that generate significant impacts such as excessive noise, dust, and other nuisances. |
| Business Park (BP) | 0.25 - 0.60 FAR | <ul style="list-style-type: none"> Employee-intensive uses, including research and development, technology centers, corporate offices, clean industry, and supporting retail uses. |
| Other | | |
| Public Facility/Institutional (PF) | Maximum 0.60 FAR | <ul style="list-style-type: none"> Civic uses and facilities providing academic, medical, governmental, or similar services to the public, including health care facilities, churches, schools, social services, cultural and public recreational uses, compatible businesses (provided they do not displace public uses), and other public and quasi-public uses. Includes privately held uses with public facility characteristics that are not required to be designated as public facilities, but are eligible to be so designated based on site-specific reviews of the characteristics of the use. |
| Overlays | | |
| *Equestrian Lifestyle Protection Overlay (ELO) | N/A | <ul style="list-style-type: none"> Defines areas in which the long-term character, safety, and viability of equestrian uses are specifically protected from encroachment by incompatible uses, activities, and public facilities. |
| *Community Development Overlay (CDO) | N/A | <ul style="list-style-type: none"> Encourages new development and land use changes to be applied through future General Plan Amendments. Applied to Opportunity sites and areas where land use changes are anticipated or encouraged. May include development incentives, such as flexible development standards or transfer of development potential. Incentives may require minimum site area. |

| Land Use Designation | Allowed Density (Minimum Parcel Size per DU) or Development Intensity (Floor Area Ratio) ^{1,3} | Notes |
|---|---|---|
| *Village Center Overlay (VCO) | N/A | <ul style="list-style-type: none"> Applied to three historic core areas, namely Rubidoux Village, Pedley Village, and Glen Avon Village. Promotes infill and improvement of established town centers; a more urbanized, pedestrian-oriented mix of residential, commercial, office, entertainment, civic, transit, educational, and/or recreational uses, or other uses is encouraged. Special Design Guidelines apply to the Pedley, Rubidoux and Glen Avon Village Centers |
| Specific Plan Overlay (SPO) | N/A | <ul style="list-style-type: none"> Requires preparation of a specific plan before an area can be further developed. Typically applied to large undeveloped or underdeveloped areas. Special land use and development standards may apply. (See Land Use Element and specific plans for detailed information.) |
| Mixed Use Overlay (MUO) | N/A | <ul style="list-style-type: none"> This designation is applied to areas where a mixture of residential, commercial, office, entertainment, educational, and/or recreational uses, or other uses is planned, allowing either vertical or horizontal mixed use. |
| Business Park Overlay (BPO) | N/A | <ul style="list-style-type: none"> Applies to areas where a clear separation of industrial and business park uses from residential uses is desired. |
| Mira Loma Warehouse and Distribution Center Overlay (MLO) | N/A | <ul style="list-style-type: none"> Within the Overlay, Light Industrial, and Heavy Industrial land use designations, warehousing, logistics and distribution uses, and other goods storage facilities shall be permitted only in a defined area in Mira Loma. Land uses governed by a City Council-adopted land use plan for the Overlay Area (see Appendix 17.) |
| Stringfellow Remediation Site/ Pyrite Canyon (SRO) | N/A | <ul style="list-style-type: none"> Applies to a recognized as a hazardous waste disposal reclamation site, which is subject to an abatement and reuse plan to be prepared and implemented by the appropriate authorities. |
| Santa Ana River Corridor (SAO) | N/A | <ul style="list-style-type: none"> Include policies to protect and enhance portions of Santa Ana River within Jurupa Valley. |
| Flabob and Riverside Municipal Airports Overlay (FLO) | N/A | <ul style="list-style-type: none"> Special policies apply to this area to minimize land use conflicts with adjacent uses and to maintain consistency with the Western Riverside County Airport Land Use Plan. |
| *Historic Resource Overlay (HRO) | N/A | <ul style="list-style-type: none"> Allows use of flexible development standards, incentives, and building codes to encourage preservation of historically designated properties and districts, such as Mills Act and the Historic Building Code. |

Notes:

* Asterisk indicates new or significantly revised land use designation

1 FAR = Floor Area Ratio, which is the measurement of the amount of non-residential building floor area divided by site area, in square feet, as determined by Zoning Ordinance development standards for building/lot coverage, setbacks, building height, and parking requirements (see General Plan Land Use Designations and Land Use Intensity (beginning on page 2-21).

2 The Development Intensity Range provides a range of anticipated building intensity, where noted.

3 Clustering is encouraged in all residential designations. The allowable density of a particular land use designation may be clustered in one portion of the site in smaller lots, as long as the ratio of dwelling units/area remains within the allowable density range associated with the designation. The rest of the site would then be preserved as open space or a use compatible with open space (e.g., agriculture, pasture, or wildlife habitat).

Residential Density

Table 2.4 (page [2-22](#)) sets allowed densities for the six residential land use designations. Residential land use intensity is based on the minimum lot size required per dwelling unit, or maximum number of dwellings per acre. For example, the Low Density Residential designation requires one-half acre per dwelling, or a maximum density of two dwellings per acre.

Floor Area Ratio (FAR)

Non-residential land use intensity is typically measured by the amount of building floor area allowed per acre, also referred to as Floor Area Ratio or “FAR” *Table 2.3* (page [2-18](#)) includes ranges for floor area ratios for non-residential land uses, including commercial, industrial, and public facility/institutional uses. The ranges reflect FARs that could be anticipated based on Zoning Ordinance standards and are included in the General Plan to describe non-residential land uses in terms of intensity, massing, and scale and to estimate non-residential floor area square footages for planning purposes. FARs are effectively set by development standards in the Zoning Ordinance, and are not expressly fixed by the General Plan. FARs may be modified by the City Council on a project or area-wide basis, such as specific plans or village plans.

Promoting Economic Sustainability and Prosperity

The 2017 General Plan provides for major employment centers at the I-15/SR 60 junction, in the Mira Loma Warehouse Policy Area, shown in *Figure 2-9* below, along sections of Van Buren Boulevard, and in the Agua Mansa area. Typical employment uses within Business Park and Light Industrial designated areas include research and development, manufacturing, assembly, research institutions, academic institutions, medical facilities, and support commercial uses. Heavy Industrial designated areas accommodate the most intensive types of industrial activities, including heavy manufacturing and processing plants. Under the Mira Loma Warehouse and Distribution Policy, logistics and distribution warehousing uses are limited to the area generally north of Rancho Cantu-Galleano and west of San Sevaie Channel.

Figure 2-9: Mira Loma Warehouse and Distribution Center Overlay

Commercial Corridors

Several older “strip commercial corridors” are located in the City. These areas have a mix of residential, light industrial/service commercial, and commercial uses. Visual blight due to unmaintained land and buildings is a problem in some areas along these major commercial corridors, including portions of Etiwanda Avenue, Jurupa Road, Pedley Road, and Mission Boulevard. To promote parcel consolidation and redevelopment with high-quality residential and commercial uses in selected areas, the 2017 General Plan applies the Community Development Overlay (CDO) to portions of Etiwanda Avenue and Mission Boulevard. This designation will implement General Plan policies by preserving and expanding residential uses in the Equestrian Lifestyle Protection Overlay, encouraging neighborhood-serving commercial uses, where appropriate, and by discouraging “strip commercial” development.

The Overlay will provide an incentive for residential development by allowing owners of parcels of 5 acres or larger, except on corner lots, to request rezoning to allow Medium Density Residential development (allows up to five dwelling units per acre). This rezoning would then be allowed under the 2017 General Plan. It also indicates that the City intends to work with property owners

and conduct public outreach to determine whether the General Plan should continue to allow for Retail Commercial uses in this area, and if so, where.

Preserving Historic Village Centers

This policy area is intended to encourage high-quality development of these infill properties and to stimulate economic development of the communities served by Mission Boulevard. The Village Center Overlay is applied at key existing community centers, namely the Glen Avon area along Jurupa Road near Van Buren, the Pedley/Limonite area, and the Rubidoux Village Center along northeast Mission Boulevard, as shown in *Figure 2-12* below. These areas are intended to function as pedestrian-oriented community centers, in keeping with their historic uses. Developers are encouraged to develop with a mixture of high-quality residential, retail, office, and public uses in close proximity. To address compatibility and design issues, special design guidelines for site planning, building design, landscaping, and signage apply to these areas (see *Section LUE 11 – Community Design and Aesthetics* beginning on page [2-84](#)). The strategic locations make these centers focal points of community social and commercial activity and valuable assets in the City's economic development efforts. For example, the Rubidoux Village Center Overlay takes advantage of the existing pattern of development on Mission Boulevard by allowing for vertically or horizontally mixed residential units, thereby increasing the development feasibility and economic value of this area.

Jurupa Valley's proximity to major freeways, Metrolink services, and railroad tracks provides an opportunity for regional multimodal transportation connections. Combined with the relatively compact activities envisioned in the *Village Centers*, these transportation links offer the long-term potential to provide improved commuter and public transit access. Future multimodal transportation options are a part of this General Plan, in part, due to the need to reduce traffic loading from local arterial streets as well as on highway and freeway systems. This is particularly critical in Jurupa Valley due to the concentration of warehousing and logistics uses. These uses are associated with high volumes of heavy trucks, which affects local air quality and street paving, and which causes traffic congestion, despite the importance of these uses to the City's economic development.

DRAFT

Land Use

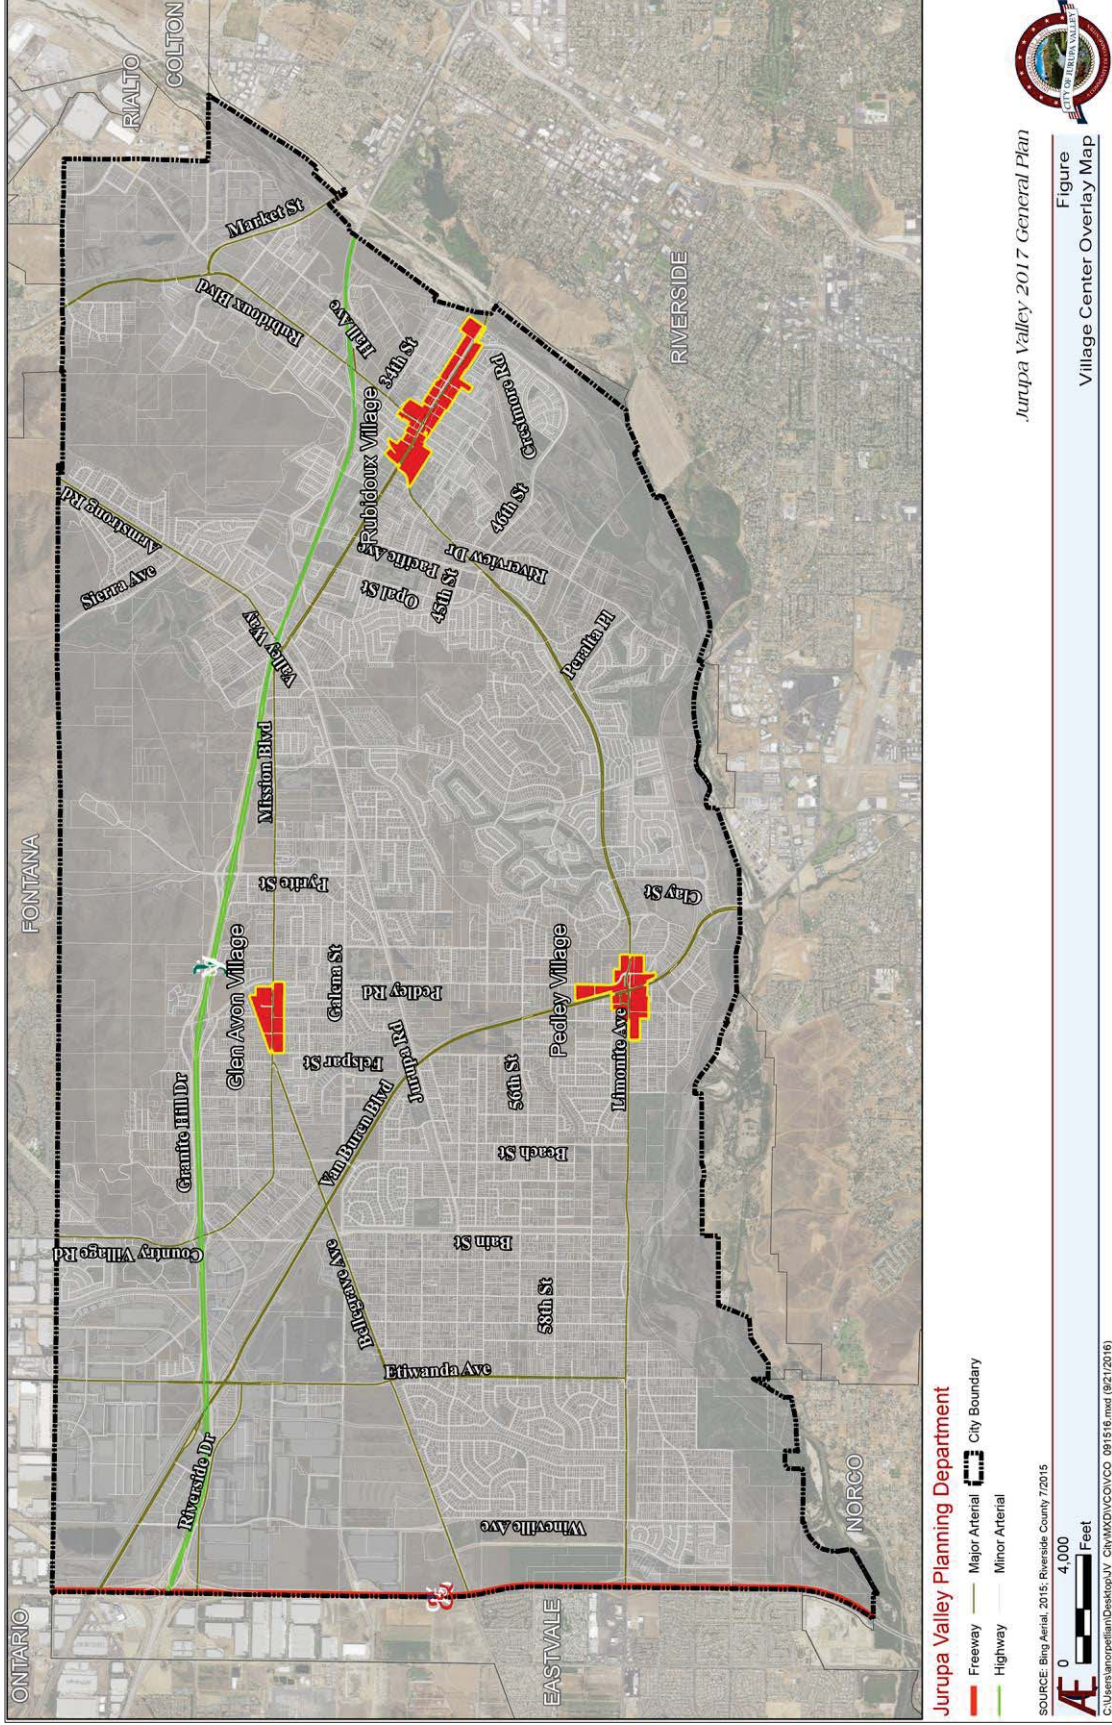

Figure 2-12: Historic Village Centers

Changes from the Riverside County Land Use Element

The types and patterns of land uses described above are, in most areas, a continuation of land use patterns established by the County of Riverside, but with some important changes. This land use continuity helps maintain the identity and character of Jurupa Valley's many distinctive communities. Selective additions and changes to the land use designations help refine potential types of development while providing for mid- to long-range community improvements by expanding the range of shopping, services, and housing opportunities, and the removal of blight. Additionally, preserving the natural features and unique landscape helps to buffer and distinguish the City from surrounding communities.

Jurupa Valley's heritage of rural living continues to be accommodated in areas committed to that lifestyle, as designated by the Equestrian Life Style Protection Overlay, as described in *Section LUE 5 – Land Use Overlays* (beginning on page [2-48](#)) and as shown in *Figure 2-20* (page [2-51](#)). The City's environmental sustainability is reinforced by strong open space, conservation, and trails commitment, as described in the Conservation and Open Space Element. Large swaths of open space line the Santa Ana River corridor, providing an expansive natural buffer between Jurupa and the City of Riverside. Portions of the Jurupa Mountains also contain Open Space designations intended to preserve the rugged nature of this area and protect sensitive habitat areas. Recreational open space areas designed for active recreational uses, such as golf courses and athletic fields, are located throughout Jurupa.

New Concepts to Preserve the City's Rural and Small Town Character

The 2017 General Plan land use classifications represent a full spectrum of land uses. These, in turn, relate to the City's identified values and goals, the natural characteristics of the land, and the area's economic needs and potential. The Land Use Plan focuses on preserving Jurupa Valley's unique and scenic visual setting by guiding growth, types of development, and land use characteristics.

The Land Use Plan, *Figure 2-7* (page [2-14](#)), depicts the geographic distribution of land uses within the area. The Plan is organized around land use classifications described in *Table 2.4* (page [2-22](#)), which summarizes the development intensity, density, typical allowable land uses, and general characteristics for each land use designation and overlay.

Many factors led to the existing and proposed land use patterns and designations. Among the most influential were the previous

Riverside County Jurupa Area Plan and General Plan; the Community and Environmental Transportation Acceptability Process (CETAP) that focused on major transportation corridors; the Multiple Species Habitat Conservation Plan (MSHCP) that focused on opportunities and strategies for significant open space and habitat preservation; established patterns of existing uses and parcel configurations; and the oral and written testimony of City residents, business owners, and property owners during some 25 public meetings between October 2014 and December 2016. As part of its implementation, the 2017 General Plan also encourages the preparation of more detailed plans for key areas of the City. Village and Community Plans, specific plans, and planned developments, addressed under “Programs”, will provide clear and more focused opportunities to enhance each community’s character, distinctive identity, and quality of life.

Preserving Jurupa Valley’s Small Town Rural Character

As shown in *Figure 2-6* (page [2-12](#)), the City has several large, vacant areas that are suitable for development. Rural and semi-rural areas still comprise large areas of Jurupa Valley. The City’s semi-rural communities, such as parts of Old Mira Loma, Glen Avon, and Pedley, exemplify the lifestyle choice of many Jurupa Valley residents. Rural uses like horse keeping, animal keeping, and small-scale orchards and vegetable gardening define the unique character of many neighborhoods and communities in Jurupa Valley and help to define their boundaries and lifestyles. These semi-rural areas also help retain precious water resources by reducing run-off and providing important wildlife habitat and habitat linkages.

Due to increasing growth pressures, there is danger that the character of some rural areas may be diminished by encroaching urbanization. A delicate balance exists between accommodating future growth, meeting community needs for jobs and services, and preserving this rural lifestyle. In some locations, allowing limited growth is desirable and appropriate, while in others, there is a need to maintain and/or upgrade the character of an area. In either instance, it is necessary to ensure that an appropriate level of services and infrastructure is available.

This General Plan uses several important planning tools to help achieve this balance, including the creation of village centers, a new Equestrian Lifestyle Protection Overlay with special polices to preserve rural lifestyles and animal keeping, by maintaining mostly large residential parcels with relatively low densities in many areas, and by providing incentives to encourage parcel consolidation, expand trail programs, preserve agricultural uses, and cluster

residential units to preserve open space and protect sensitive habitats and species. These tools can be accomplished through a number of techniques, including City-initiated programs and incentives, coordination with community service districts, Riverside County and other responsible agencies, and the City's development review process.

The City is committed to ensuring that rural uses remain an integral part of the City's future and are protected through the policies of the General Plan, as reflected in the following General Plan goals, policies, and programs.

C. LAND USE ELEMENT GOALS, POLICIES AND PROGRAMS

Goals

To be a City that establishes and maintains a balance of land uses that:

- LUE 1 Encourages attractive, safe, and well-maintained residential neighborhoods that offer a range of high quality housing opportunities that "fit" the community in which they are to be located;
- LUE 2 Attracts high quality commercial, office, and industrial areas offering a range of retail, service and employment uses that complement rather than compete with one another;
- LUE 3 Enhances Jurupa Valley's equestrian lifestyle, with equestrian-friendly features such as extensive multi-use trails and a mix of passive and active recreational areas;
- LUE 4 Protects open space and natural resource areas for solitude and a relief from urban stresses, recreation and views, diverse and healthy natural habitats for a variety of plant and animal life and distinct community edges; and
- LUE 5 Supports diverse and well-funded public and institutional uses that provide essential utilities and public services, lifelong learning opportunities, and improved access to recreational, cultural, historic, and social amenities and resources.

Land Use Categories – Descriptions

LUE 1 – Open Space

Figure 2-13: Wine grapes, Jurupa Valley

As shown on the Land Use Designation Summary, *Table 2.4* (page [2-22](#)), the Open Space category consists of six land use designations: Open Space-Conservation, Open Space-Conservation Habitat, Open Space-Water, Open Space-Recreation, Open Space-Rural, and Open Space-Mineral Resources.

Open Space-Conservation (OS-C)

The Open Space-Conservation land use designation is applied to land designated for preservation of non-MSHCP habitat lands, protection from natural hazards, conservation of prime farmland and existing, productive agricultural land, and preservation of scenic and other natural resources. Ancillary structures or uses may be permitted if they further the intent of this designation and do not substantially alter the character of the area. Actual building or structure size, siting, and design will be determined on a case-by-case basis.

Open Space-Conservation Habitat (OS-CH)

The Open Space-Conservation Habitat land use designation applies to public and private lands conserved and managed in accordance with adopted MSHCPs. Ancillary structures or uses may be permitted for the purpose of preserving or enjoying open space. Actual building or structure size, siting, and design will be determined on a case-by-case basis.

Open Space-Water (OS-W)

The Open Space-Water designation primarily includes the Santa Ana River and its floodplain. It also includes natural creeks and springs. Ancillary structures or uses may be permitted for flood control or recreational purposes. The extraction of mineral resources subject to an approved surface mining permit may be permitted if the proposed project can be undertaken in a manner that does not result in increased flooding hazards and that is consistent with maintenance of long-term habitat and riparian values.

Policies

The following policies apply to properties designated as Open Space-Conservation, Open Space-Conservation Habitat, or Open Space-Water.

- LUE 1.1 Compatible Structures.** Require that structures be designed and operated in a manner that preserves and

is compatible with the environmental character where they are located, including lighting, telecommunications equipment and other facilities and equipment.

- LUE 1.2 **Agency Cooperation.** Cooperate with the California Department of Fish and Wildlife (CDFG), the United States Fish and Wildlife Service (USFWS), and any other appropriate agencies to conserve non-MSHCP habitat.
- LUE 1.3 **Prime Farmland.** Encourage conservation of designated Prime Farmland and productive agricultural lands.
- LUE 1.4 **Right-To-Farm.** Adhere to the Riverside County Right-To-Farm Ordinance and any subsequent ordinance assuring the ability of farmers to continue with legally established agricultural activities.

Programs

(TBA)

Open Space-Recreation (OS-R)

The Open Space-Recreation land use designation allows for active and passive recreational uses such as parks, trails, campgrounds, athletic fields, golf courses, and off-road vehicle parks. Ancillary structures may be permitted for recreational opportunities. Actual building or structure size, siting, and design will be determined on a case-by-case basis.

Policies

The following policies apply to those properties designated as Open Space-Recreation on the area plan land use maps.

- LUE 1.5 **County Facilities.** Encourage the County to continue to develop and maintain regional park facilities in Jurupa Valley that provide recreational opportunities for residents and visitors.
- LUE 1.6 **Accessibility.** Require that open space recreation facilities be accessible to the community, regardless of age, physical limitation, or income level.
- LUE 1.7 **Compatible Structures.** Require that structures be designed and operated in a manner that preserves and is compatible with the environmental character where they are located, including lighting, telecommunications equipment, and other facilities and equipment.

- LUE 1.8 **Quimby Act.** Require that new development meet the parkland requirements as established in the Quimby Act and City enabling ordinances.

Programs

- LUE 1.1.1 **Parkland Requirements.** In coordination with community service districts, schools, residents, and the development community, consider amending the City's parkland requirements, including park area dedication and in-lieu fee requirements, to help address under-served parkland needs.

Open Space-Rural (OS-RUR)

The Open Space-Rural land use designation is applied to remote, privately owned open space areas with limited access and a lack of public services. Single-family residential uses are permitted at a density of 1 dwelling unit per 20 acres. This is also the primary land use classification applied to new and existing agricultural uses, including commercial orchards, row crops, greenhouses, vineyards, animal breeding, and grazing.

Policies

The following policies apply to properties designated as Open Space-Rural.

- LUE 1.9 **Compatible Structures.** Require that structures be designed and operated in a manner that preserves and is compatible with the environmental character where they are located, including lighting, telecommunications equipment, and other facilities and equipment.
- LUE 1.10 **Siting and Grading.** Require that development be sited and designed to blend with a site's undeveloped natural contours and to avoid a padded, unvaried, unnatural, or manufactured appearance.
- LUE 1.11 **Adequacy of Services.** Require that adequate and available circulation facilities, water resources, sewer facilities and/or septic capacity, and storm drainage exist to meet the demands of the proposed land use.
- LUE 1.12 **Rural Character.** Ensure that development does not adversely impact the open space, rural character, and environmental sustainability of the surrounding area.
- LUE 1.13 **Parcel Consolidation.** Encourage parcel consolidation.
- LUE 1.14 **Agriculture.** Allow agricultural uses in the OS-R designation.

Programs

- LUE 1.1.2 **Incentives.** Provide programs and incentives that encourage Open Space-Rural areas to be maintained in a manner that enhances their existing and desired visual character.
- LUE 1.1.3 **Mineral Extraction Controls.** Establish a zoning overlay zone to designate open space areas in the OS-RUR designation that are appropriate for mineral extraction such that scenic resources such as prominent ridgelines, rivers, and forests are not adversely affected.

Open Space-Mineral Resources (OS-MIN)

The Open Space-Mineral Resources land use designation allows for mineral extraction and processing facilities designated based on the Surface Mining and Reclamation Act (SMARA) of 1975 classification. The extraction of mineral resources is conditionally permitted, subject to an approved surface mining permit, if the proposed project can be undertaken in a manner that preserves and protects threatened or endangered species, sensitive habitat, scenic resources, and views from residential neighborhoods and major roadways. Areas held in reserve for future mining activities also fall under this designation. Ancillary structures or uses may be permitted that assist in the extraction, processing, or preservation of minerals. Actual building or structure size, siting, and design will be determined on a case-by-case basis.

Policies

The following policies apply to properties designated as Open Space – Mineral Resources.

- LUE 1.15 **SMARA Compliance.** Require that surface mining activities and lands containing mineral deposits of statewide or regional significance comply with City ordinances and the SMARA.
- LUE 1.16 **Encroachment.** Protect lands designated as Open Space-Mineral Resources from encroachment of incompatible land uses through buffer zones or visual screening.
- LUE 1.17 **Road Access.** Protect road access to mining activities and prevent or mitigate traffic conflicts with surrounding properties.
- LUE 1.18 **Reclamation.** Require the recycling and reclamation of mineral extraction sites to open space, recreational, or

other uses that are compatible with the surrounding land uses.

- LUE 1.19 **Reuse Plan.** Require an approved reclamation and reuse plan prior to issuing a permit to operate an extraction operation.

Program

- LUE 1.1.4 **Mineral Extraction Controls.** Establish a zoning overlay zone to designate open space areas in the OS-RUR that are appropriate for mineral extraction such that scenic resources such as prominent ridgelines, rivers, and forests are not adversely affected.

LUE 2 – Residential

Figure 2-14: New housing in Mira Loma

Residential land uses in Jurupa Valley are the single largest land use in terms of acreage, and can be found in areas ranging from rugged hillside areas to large lot, level terrain adjacent to the Santa Ana River.

Residential land uses accommodate not only a wide variety of housing types and land use designs, but also an assortment of public uses such as churches, schools, parks, daycare centers, libraries, and other cultural and civic uses that support healthy neighborhoods and communities, and help establish neighborhood character and quality of life. The intent of these policies is to help meet housing needs, accommodate a range of housing styles, types, densities and affordability, and enhance the quality of neighborhoods through appropriate housing design and site planning, property maintenance, and public improvements. Housing choices range from rural retreat to suburban neighborhood and from higher cost executive homes to modest but sound starter housing for young families. Increasingly, homebuyers are attracted to Jurupa Valley not only because of the range of housing types available and at prices affordable for a wide range of household incomes.

Affordable Housing

As further discussed in the Housing Element, this General Plan identifies areas suitable for affordable housing, consistent with the City's assigned regional housing needs. Potential affordable housing areas in 2017 are shown in *Figure 2-15* below.

Residential land uses are divided into nine land use designations:

- Rural (RR)
- Estate Density (EDR)
- Very Low Density (VLDR)
- Low Density (LDR)
- Medium Density (MDR)
- Medium-High Density (MHDR)
- High Density (HDR)
- Very High Density (VHDR)
- Highest Density (HHDR)

Rural Residential (RR)

The Rural Residential land use allows one single-family dwelling per 5 acres, plus ancillary structures, as well as limited animal keeping and agricultural activities. For clustered, multi-lot developments, the minimum lot size per residential unit is 2.5 acres, though the overall density of the development must not exceed 0.2 dwelling units per acre. Limited recreational uses, compatible resource development (not including the commercial extraction of mineral resources) and associated uses, and governmental uses are allowed within this designation.

Estate Density Residential (EDR)

The Estate Density Residential land use designation allows development of detached single-family residential dwellings and ancillary structures on parcels of at least 2 acres. In this designation, animal keeping is allowed, but regulated to ensure compatibility between the EDR designation and other, more intense residential uses in the vicinity. Limited agriculture is permitted in this designation. The density range is from 1 dwelling unit per 5 acres up to 1 dwelling unit per 2 acres.

Very Low Density Residential (VLDR)

The Very Low Density Residential land use designation provides for the development of detached single-family residential dwellings and ancillary structures on parcels of at least 1 acre. Intensive animal keeping uses are discouraged or are limited to ensure compatibility between the VLDR designation and other uses in the vicinity. Limited agriculture is permitted in this designation. The density range is from 1 dwelling unit per 2 acres up to 1 dwelling unit per acre.

DRAFT

Land Use

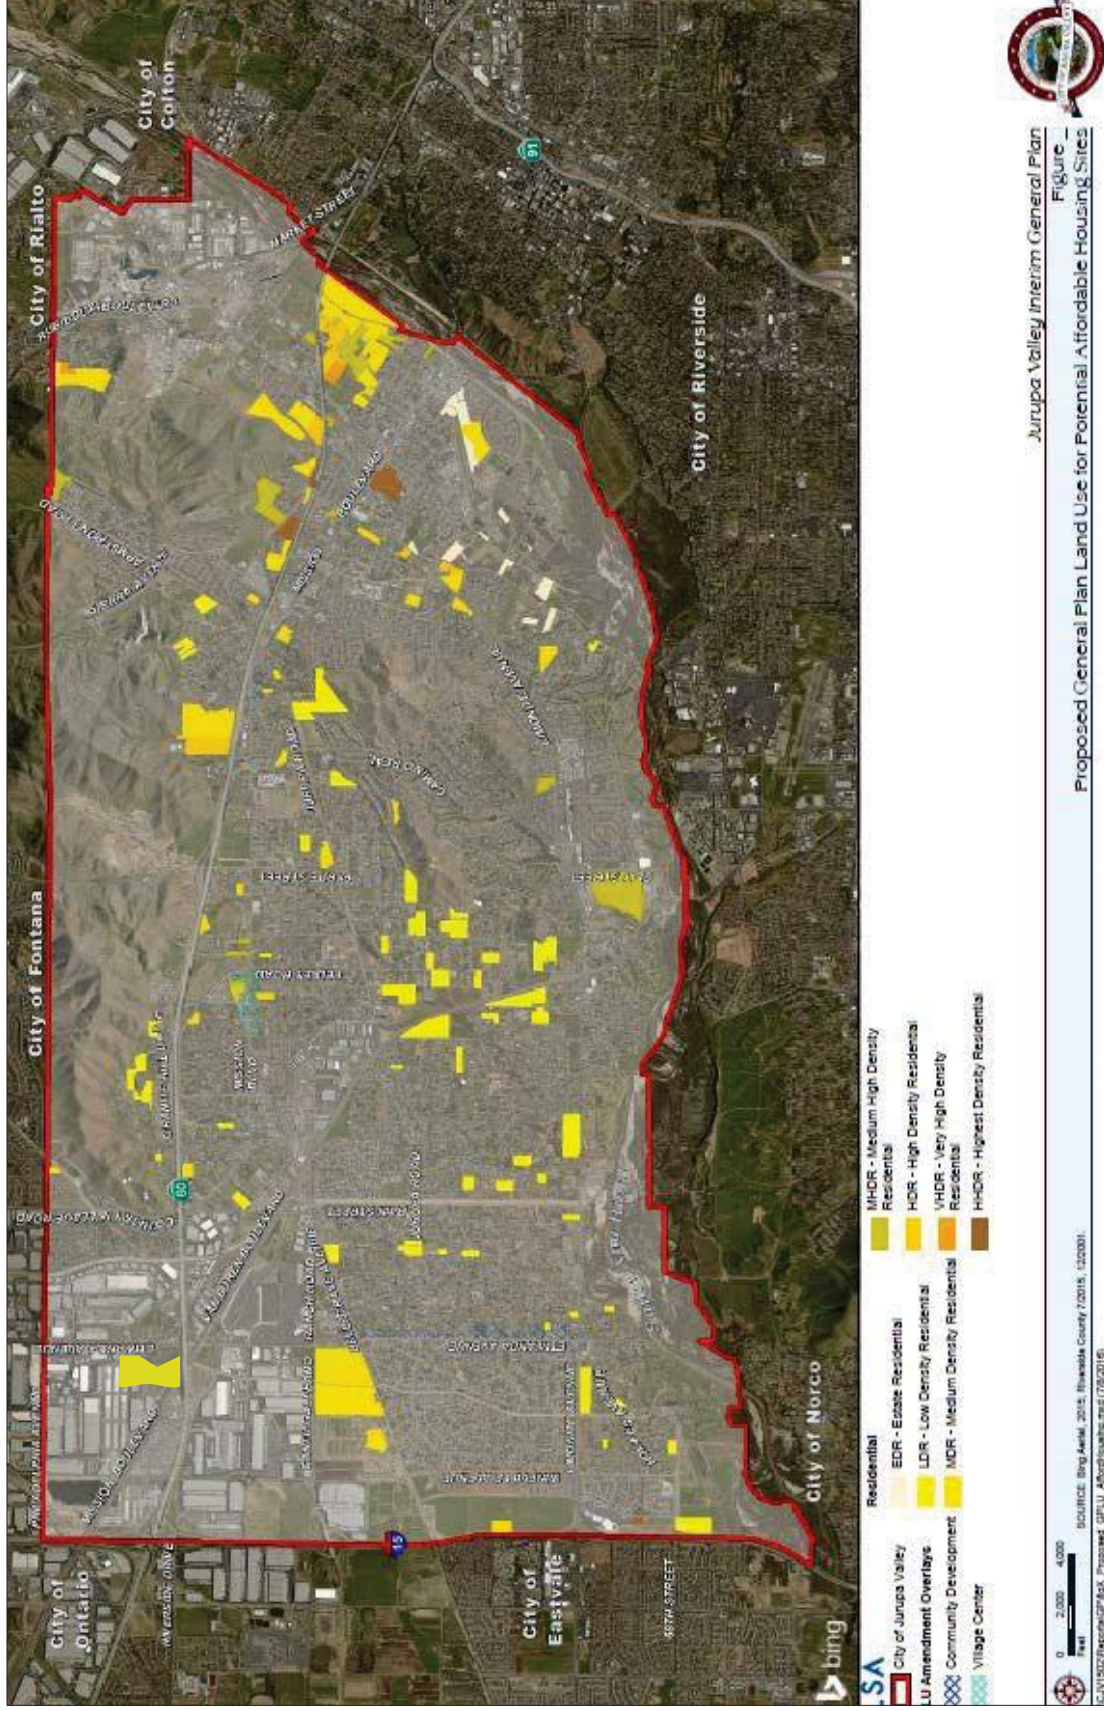

Figure 2-15: Potential affordable housing areas

Low Density Residential (LDR)

The Low Density Residential land use designation provides for the development of detached single-family residential dwellings and ancillary structures on parcels of at least one-half acre. Intensive animal keeping uses are discouraged or are limited to ensure compatibility between the LDR designation and other uses in the vicinity. Limited agriculture is permitted in this designation. The density range is from 1 dwelling unit per acre up to 2 dwelling units per acre.

Medium Density Residential (MDR)

The Medium Density Residential land use designation provides for the development of detached single-family dwellings on parcels typically ranging from 5,500 to 20,000 square feet. Limited agriculture and animal-keeping uses, including horses, are also allowed within this category. The density range is 2 to 5 dwelling units per acre, with a minimum lot size of 5,500 square feet to encourage clustering.

Medium-High Density Residential (MHDR)

The Medium-High Density Residential land use designation provides for the development of smaller lot, single-family dwellings. Typical allowable uses in this category include detached, small-lot single-family homes, attached single-family patio homes, courtyard development, and townhouses. Clustered development is encouraged in this category. The density range is 5 to 8 dwelling units per acre, with lot sizes typically ranging from 4,000 to 6,500 square feet.

High Density Residential (HDR)

The High Density Residential land use designation allows detached and attached small lot single-family dwellings, homes, patio homes, zero lot line homes, multi-family apartments, duplexes, and townhouses. The potential for clustered development is also provided for in this land use category. The density range is 8 to 14 dwelling units per acre.

Very High Density Residential (VHDR)

The Very High Density Residential land use designation allows for the development of multi-family apartments, duplexes, and condominiums, with a density range of 14 to 20 dwelling units per acre.

Highest Density Residential (HHDR)

The Highest Density Residential land use designation allows for the development of multi-family apartments and condominiums, with a density range of between 20 and 25 dwellings per acre.

Policies

The following policies apply to residentially designated properties within the designations described above and as depicted on the Land Use Element Map (also see the *Housing Element*).

- LUE 2.1 **Residential Development.** Accommodate the development of single-family and multi-family residential units in areas appropriately designated by the General Plan, specific plans, the Equestrian Lifestyle Protection Overlay, and community and village plans land use maps.
- LUE 2.2 **Higher Density Residential.** Accommodate higher density residential development near major transportation corridors, concentrated employment areas, and community and village centers, and promote the development of high quality apartments and condominiums that will encourage local investment and pride of ownership.
- LUE 2.3 **Infrastructure.** Ensure that circulation facilities, water resources, sewer and storm drainage facilities, and other utilities available or provided by the developer are adequate to meet the demands of a proposed residential land use in addition to those services and resources required to serve existing residents and businesses.
- LUE 2.4 **Housing Variety.** Accommodate the development of a variety of housing types, styles and densities that are accessible to and meet the needs of a range of lifestyles, physical abilities, and income levels.
- LUE 2.5 **Connectivity.** Integrate residential development with a continuous network of parks, open space, public areas, bicycle trails, equestrian trails, public transit routes, and pedestrian paths to connect neighborhoods and communities with key nodes. Key nodes include parks and recreation facilities, schools, village and neighborhood centers, and other in-city communities and surrounding cities and points of interest.
- LUE 2.6 **Buffering.** Require setbacks and other design elements to buffer residential units from the impacts of abutting

agricultural, roadway, commercial, and industrial uses, to the maximum extent possible.

- LUE 2.7 **Reduced Street Widths.** Allow for reduced widths for local streets to minimize impacts of traffic on neighborhood safety and character, in accordance with CAL FIRE standards.
- LUE 2.8 **Supportive Uses.** Accommodate activity centers or nodes within or near residential neighborhoods that allow such services as child or adult care, recreation, public meeting rooms, convenience commercial uses, and similar facilities, where appropriate.
- LUE 2.9 **Design Compatibility.** Ensure that new residential developments are designed to be compatible with their surroundings and to enhance visually the appearance of neighborhoods and adjacent structures.
- LUE 2.10 **Special Needs Housing.** Require that special needs housing, such as transitional or group housing, is designed to enhance and be compatible with adjacent uses, structures, and neighborhoods.

Programs

- LUE 2.1.1 **Regional Housing Needs.** Within one year of adoption of the 2017 General Plan, amend the General Plan Land Use Map and Zoning Ordinance density standards for the R-6 zone to allow a base density up to 25 dwelling units per acre, and amend the Zoning Map to show the locations of at least 34 acres of additional R-6 zoning to help meet Regional Housing Needs Assessment (RHNA).

LUE 3 – Commercial, Industrial and Business Park

Commercial Land Use Designations

Commercial land uses are critical to the long-term economic and fiscal stability of the City. They provide jobs for local residents, provide necessary goods and services, and generate much of the tax base necessary to fund essential public facilities and services such as police and fire. However, underutilized and unmaintained commercial buildings and storefronts can result in visual blight that detracts from the communities they occupy and discourages private investment. The City intends to accommodate retail commercial and office space demand, stimulate focused commercial centers, encourage a variety and range of commercial uses needed by residents, and ensure that new or rehabilitated commercial structures and centers enhance the visual character of

Figure 2-16: Newer office development, Riverside County

the area and are integrated into the community they are intended to serve. The Commercial land use designations are:

- Commercial Retail (CR)
- Commercial Neighborhood (CN)
- Commercial Tourist (CT)
- Commercial Office (CO)

Commercial Retail (CR)

The Commercial Retail land use designation allows for the development of a broad range of retail commercial and services, including professional office and visitor-serving commercial uses. Commercial Retail uses will be permitted based on their compatibility with surrounding land uses, and based on the amount of Commercial Retail acreage already developed in the City. Floor area ratios (FARs) range from 0.2 to 0.35.

Commercial Neighborhood (CN)

The Commercial Neighborhood land use designation allows for the development of a neighborhood-serving uses that meet the convenience needs for nearby residents. These are freestanding commercial uses or smaller-scale commercial centers located within or on the edges of residential neighborhoods and include such uses as neighborhood food markets, local-serving retail commercial, personal services, professional offices, cultural facilities, and eating and drinking uses. Commercial Neighborhood uses will be permitted based on their compatibility with surrounding land uses. Floor area ratios range from 0.35 to 0.50.

Commercial Tourist (CT)

The Commercial Tourist land use designation allows for visitor-serving commercial uses such as hotels, motels, golf courses, commercial recreation and amusement facilities, and sale of new and used automobiles and trucks. Commercial Tourist uses will be permitted based on their compatibility with surrounding land uses. Floor area ratios range from 0.20 to 0.35.

Commercial Office (CO)

The Commercial Office land use designation allows for a variety of office uses, including professional offices such as medical and dental offices, legal and financial services, insurance services, and other office and support services. Commercial Office uses will be permitted based on their compatibility with surrounding land uses. Floor area ratios range from 0.35 to 1.0.

Policies

The following policies apply to commercially designated properties, as shown on the Land Use Map.

- LUE 3.1 **Commercial Development.** Accommodate the development of commercial uses in areas designated by the General Plan, specific plans, and community and village plan land use maps.
- LUE 3.2 **Accessibility.** Require commercial buildings and centers to be sited along or easily accessible from public sidewalks, pedestrian areas, neighborhoods, and bicycle routes, and include amenities that encourage walking and biking.
- LUE 3.3 **Community Facilities.** Accommodate community-oriented facilities, such as public meeting rooms, daycare facilities, public transit, public buildings (e.g., government-owned buildings, community service district facilities with public services), and cultural uses.
- LUE 3.4 **Transit and Housing.** Locate commercial uses near transit facilities and residential areas, and require the incorporation of facilities such as bus turnout lanes and bus shelters to promote use of public transit.
- LUE 3.5 **Residential Compatibility.** Commercial uses abutting residential properties shall be designed to protect the residential use from the impacts of noise, vibration, light, fumes, odors, vehicular traffic, parking, and safety hazards.
- LUE 3.6 **Infrastructure.** Require that new commercial development provide adequate parking, transportation facilities and utilities, including sidewalks and trails, street trees, water resources, sewer and storm water facilities, and other utilities to serve new businesses in addition to meeting the needs of existing residents and businesses.
- LUE 3.7 **Mixed Uses.** Allow mixed-use projects to develop in commercially designated areas in accordance with the Design Guidelines of the Village Center Overlay and the Mixed Use Overlay, and with consideration of potential impacts to adjacent uses.
- LUE 3.8 **Architectural Compatibility.** Require commercial development to be designed to enhance and be architecturally compatible with its surroundings and with designated scenic highways or public view corridors by providing high quality architecture, landscaping, and site improvements. Architectural styles that reflect the City's small town rural, agricultural

history shall be utilized in the design of new commercial developments in or near the Village Centers, consistent with the applicable design guidelines.

- LUE 3.9 **Maintenance.** Require property owners and tenants of commercial properties to properly maintain and repair buildings, landscaping, signs, and fencing to ensure they reflect community expectations for a quality environment and remain competitive with commercial facilities located outside the City.
- LUE 3.10 **Pedestrian, Bicycle, and Transit Access.** Require commercial projects to be designed to promote convenient access to and from nearby neighborhoods, transit facilities, bikeways, and other amenities.
- LUE 3.11 **Environmental Compatibility and Quality.** Require commercial districts and uses to be compatible with their environmental setting, promote City environmental goals, and be designed and operated to avoid or mitigate environmental impacts.

Programs

- LUE 3.1.1 **Broaden and Refine Commercial Zones.** During the next 3 years, amend the Zoning Ordinance to allow office parks, large-scale shopping centers, specialized commercial such as medical clusters, tourist commercial, and entertainment complexes.

Industrial and Business Park Area Plan Land Use Designations

Industrial land aids in creating economic growth by providing jobs for local and area-wide residents, providing growth opportunities for new and existing businesses, and by building and maintaining a tax base, which can help fund essential public services. The goal is to provide attractive work environments that fit with the character of each community and are well served by convenient and adequate multimodal transportation options. Stimulation of clusters of similar industrial businesses can facilitate competitive advantages in the market place.

Industrial/Business Park land uses are divided into three land use designations: Light Industrial, Heavy Industrial, and Business Park.

Light Industrial (LI)

The Light Industrial land use designation allows for a wide variety of industrial and related uses, including assembly and light manufacturing, repair and other service facilities, warehousing and

distribution centers within the Mira Loma Warehouse and Distribution Center Overlay, and supporting retail uses. Floor area ratios range from 0.25 to 0.6.

Heavy Industrial (HI)

The Heavy Industrial land use designation allows for intense industrial activities that may have significant impacts (noise, vibration, glare, odors) on surrounding uses. Floor area ratios range from 0.15 to 0.5.

Business Park (BP)

The Business Park land use designation allows for employee-intensive uses, including research and development, technology centers, corporate and support office uses, “clean” industry, and supporting retail uses. Floor area ratios range from 0.25 to 0.6.

Policies

The following policies apply to Industrial and Business Park designated properties, as shown on the Land Use Map.

- LUE 3.12 **Industrial and Business Park Development.** Accommodate the continuation of existing and the development of new industrial, manufacturing, research and development, and professional offices in areas designated by the General Plan, specific plans, community and village plan land use maps.
- LUE 3.13 **Commercial Trucks.** Manage commercial truck traffic, access, loading, and parking to minimize potential impacts on adjacent residential and commercial properties.
- LUE 3.14 **Encroachment.** Protect industrial and business park designated areas from encroachment by incompatible or noise-sensitive uses that could be impacted by industrial activity, such as housing and schools.
- LUE 3.15 **Locations.** Concentrate industrial and business park uses near major transportation facilities and utilities and along public transit corridors. Avoid siting such uses close to residentially zoned neighborhoods or where truck traffic will be routed through residential neighborhoods.
- LUE 3.16 **Employee Facilities.** Encourage the inclusion of daycare, on-site lunch areas, showers, meeting rooms, and other employee-oriented facilities for new industrial and business park development.

- LUE 3.17 **Toxic Materials.** Prohibit the development of industrial and business park uses that use, store, produce, or transport toxic substances, or that generate unacceptable levels of noise or air pollution.
- LUE 3.18 **Infrastructure.** Require that new industrial and business park developers provide adequate parking, transportation facilities, including sidewalks and trails, street trees, water resources, sewer facilities, and other utilities to serve new industrial and business park businesses in addition to meeting the needs of existing residents and businesses.
- LUE 3.19 **Architectural Compatibility.** Ensure that new industrial and business park development is designed to enhance and be architecturally compatible with its surroundings and with designated scenic highways or public view corridors by providing high quality architecture, landscaping, and site improvements.

Programs

[TBA]

Figure 2-17: Louis Rubidoux Regional Library, Jurupa Valley

LUE 4 – Public Facility/Institutional

The Public Facility/Institutional (PF) land use designation provides for the development of various public, quasi-public, and private uses with similar characteristics, such as governmental facilities, utility facilities including public and private electric generating stations and corridors, landfills, airports, educational facilities, and maintenance yards.

Uses within the Public Facility/Institutional land use designation provide essential support services to City residents and are typically operated by a government entity, a public utility, or a community service district. These uses include City Hall and other public buildings, flood control facilities, utilities, schools, libraries, and other such facilities. Due to the intense nature of many of these activities, potential conflicts with surrounding land uses can occur. Privately owned facilities providing public services, such as Flabob Airport, may also be included in the Public Facility/Institutional designation. The intent of these policies is to provide for adequate public facilities within the City to serve the public and to ensure compatibility with surrounding land uses.

Due to the varied nature of Public Facility/Institutional land uses, building intensity and design criteria for uses in this designation

shall generally comply with those standards and policies in other land use designations that are most similar to the intended use. Airports, utility facilities other than electric generating stations, and landfills generally have low FARs. Building intensities for civic uses such as government buildings and schools, however, are comparable to other employment-generating land use designations. The maximum intensity allowed for civic uses within the Public Facility/Institutional designation is 0.60 FAR. Actual FAR will vary for other uses, and the appropriate FAR will therefore be determined in the zoning ordinance.

Policies

The following policies apply to Public Facility/Institutional designated properties, as shown on the Land Use Map and on the Community Plan land use maps.

- LUE 4.1 **Public Facility Development.** Accommodate the development of public facilities and services in areas designated by the General Plan, specific plans, and community and village plan land use maps.
- LUE 4.2 **Encroachment.** Protect major public facilities, such as Flabob Airport, publicly owned buildings, landfill, and solid waste disposal sites, from the encroachment of incompatible uses.
- LUE 4.3 **Locations.** Locate and design new public facilities to protect sensitive uses, such as schools and housing, from impacts due to noise, vibration, light, fumes, odors, and vehicular traffic, parking and safety hazards.
- LUE 4.4 **Infrastructure.** Require new Public Facility/Institutional development to provide adequate parking, transportation facilities, including sidewalks and trails, street trees, water resources, sewer facilities, and other utilities to serve new and existing Public Facility/Institutional businesses and tenants in addition to meeting the needs of existing residents and businesses.
- LUE 4.5 **Architectural Compatibility.** Public Facility/Institutional development shall be designed to enhance and be architecturally compatible with its surroundings and with designated scenic highways or public view corridors by providing high-quality architecture, landscaping, and site improvements.
- LUE 4.6 **Public Utilities, Easements, and Rights of Way.** New development and conservation land uses shall not infringe upon existing public utility corridors, including fee owned rights of way and permanent easements

whose true land use is that of public facilities. This policy will ensure that the “public facilities” designation governs what otherwise may be inferred from large-scale General Plan maps.

- LUE 4.7 **Consideration of Scale.** Due to the scale of General Plan maps and the area of the City, utility easements and linear rights of way may not be shown on General Plan, specific plan, and community plan maps. These features need to be taken into consideration in the review of applications to develop land and proposals to preserve land for conservation.
- LUE 4.8 **Impact Mitigation of New Public Facilities.** Planning and development of new public facilities, such as public buildings, utility transmission lines (water, sewer, communications and power), roads, bridges, storage and equipment yards, and flood control channels, shall avoid adverse impacts to prime residential or commercial properties, or areas with residential and commercial development potential, and shall not adversely affect the character and quality of life in the City’s residential neighborhoods.

Programs

[TBA]

LUE 5 – Land Use Overlays

Land Use Overlays are land use designations that give the City Council greater control in achieving land use planning goals or to address specific community issues or needs. The Overlay designations are shown in *Figure 2-7* (page [2-14](#)) and in more detail in *Figure 2-18* below. The Overlays address a particular land use characteristic or process and can be applied to any base land use designation. Generally, overlays are applied as part of a General Plan amendment to provide another layer of land use guidance or a variety of land use and/or development options. For example, the underlying land use designation might be Retail-Commercial; however, the application of the Community Development Overlay allows the opportunity to develop Residential and Retail Commercial uses where they are compatible and to give an incentive for development or redevelopment with new uses that better meet City goals than the previous uses and that remove non-conforming or dilapidated land uses. Where an overlay is applied, the more specific provisions of the overlay shall apply to the base land-use designation.

DRAFT

Land Use

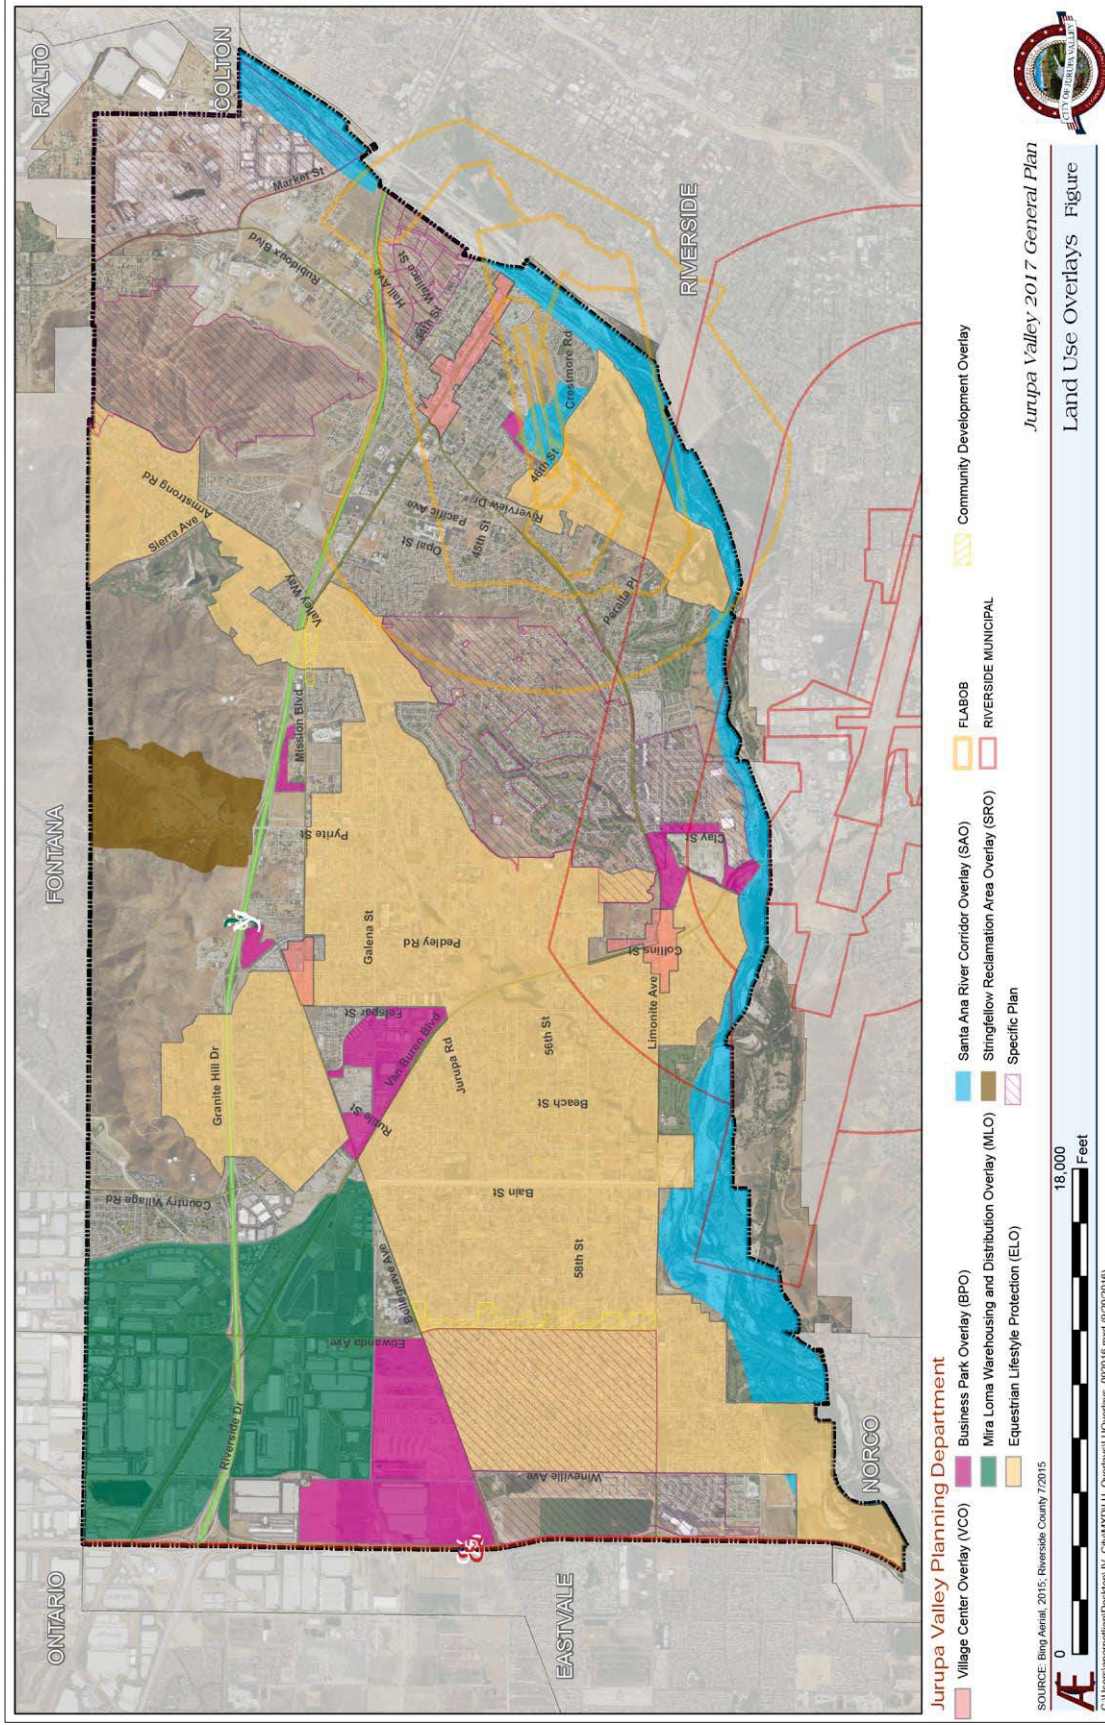

Figure 2-19: Equestrian “parking,” Jurupa Valley

Equestrian Lifestyle Protection Overlay (ELO)

The Equestrian Lifestyle Protection Overlay preserves Jurupa Valley’s equestrian heritage and lifestyle, and ensures the keeping of horses and other farm animals can continue, subject to regulations specified in the Zoning Ordinance. All new developments within this Overlay must meet equestrian-friendly requirements, such as minimum parcel area and building setback requirements, and provide community and local trails and accommodate equestrian use in accordance with the City’s trail planning.

Jurupa Valley’s equestrian lifestyle is one of the community’s most closely held values. In particular, Mira Loma, Sunnyslope, Crestmore Heights, Pedley, Glen Avon, and areas between Riverview and the Santa Ana River are centers of equestrian activities where horses and riders can often be seen in yards and riding along local streets. While not all of Jurupa Valley is suited for animal keeping and equestrian activities, those areas that are generally suited for equestrian use are shown in *Figure 2-20* below.

Jurupa Valley’s equestrian focus is more than a recreation activity or a shared value. It is a lifestyle choice and considered by many to be the essence of what makes Jurupa Valley unique. It also offers important benefits for community health, environmental preservation, land use, and the local economy. Jurupa Valley is well suited for equestrian use due to its many large residential lots in semi-rural neighborhoods, equestrian and animal-keeping goods and services, corrals and stables, and a growing network of multi-purpose trails linking the Santa Ana River with neighborhoods and large open space areas. Moreover, equestrian uses bring people together. Horse facilities such as trails, show arenas and staging areas, as well as competition and recreational riding venues can attract residents and visitors and be a major source of local pride, increased property values, and economic activity.

These factors contribute to Jurupa Valley’s desirability as a place to live, visit, or do business—both for equestrians and for those who love equestrian-oriented communities. While horse keeping and riding bring many benefits and enhance Jurupa Valley’s quality of life, they require special land use and circulation planning to ensure community safety and a balanced network of trails and compatible land uses. The Equestrian Lifestyle Protection Overlay is intended to ensure that this planning takes place and that equestrian uses continue to be a defining value of Jurupa Valley.

DRAFT

Land Use

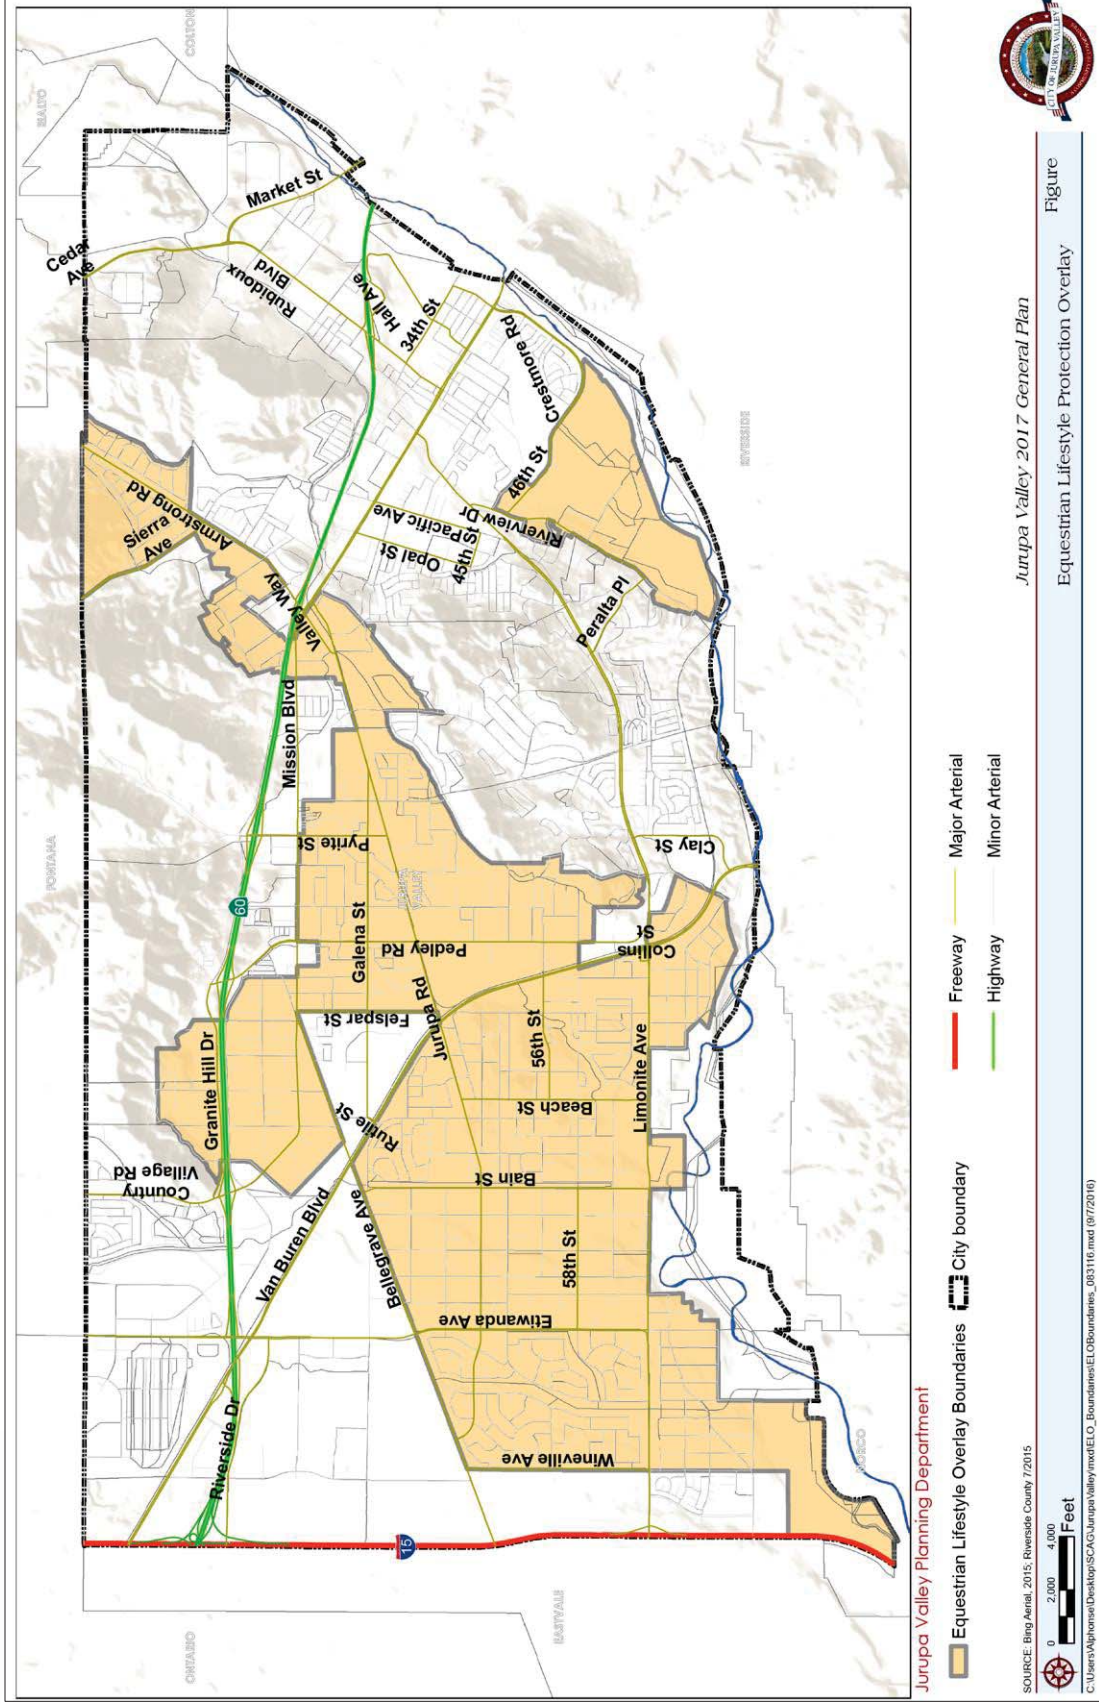

Figure 2-20: Equestrian Lifestyle Protection Overlay

Policies

The following policies apply within the Equestrian Lifestyle Protection Overlay:

- LUE 5.1 **Application.** Apply the Equestrian Lifestyle Protection Overlay to those areas where equestrian uses, facilities, trails, and accessory uses are encouraged, as shown in *Figure 2-20* above, and include equestrian core and support areas.
- LUE 5.2 **Land Use and Circulation Planning.** Within the Overlay, give priority to preserving, facilitating, and improving equestrian uses, access, and safety, trails and other equestrian-serving facilities when planning public transportation, utilities, public buildings, and other public facilities.
- LUE 5.3 **Land Use Compatibility.** Within the core area, equestrian uses and facilities shall be allowed by right, subject to appropriate standards for horse density and well-being, setbacks, access, sanitation, and safety. Horse-keeping and equestrian activities shall be conditionally allowed in land use designations where it is compatible and can meet appropriate standards. New land use entitlement applications, whether for residential, commercial, industrial, or institutional uses, shall be designed such that there will be no interference with surrounding equestrian neighborhoods.
- LUE 5.4 **Residential Development.** Require that residential development proposed near existing equestrian neighborhoods shall be designed to be equestrian friendly and integrate the new neighborhoods with the existing equestrian lifestyle as an asset to future residents. Land within the Equestrian Lifestyle Protection Overlay shall be developed to promote and protect the semi-rural equestrian lifestyle within it.
- LUE 5.5 **Development Review.** New development in the core area should accommodate horse keeping, horse facilities and equestrian activities, where feasible and appropriate. Within the support area, equestrian uses, trails, and facilities are encouraged.

LUE 5.6 **Special Mobility Considerations.** In mobility and streets planning, the City will do the following:

- a. Designate local streets within the Overlay as “equestrian streets,” provide attractive signs that designate semi-rural neighborhood streets as equestrian-priority over motor vehicles, require waste bins to be removed from the street right of way, and allow equestrians to use entire street rights of way, where appropriate, to link key trails, facilities, or open spaces, as designated in the City’s Streets Master Plan and Trail Plan.
- b. Provide grade-separated crossings where equestrian routes and equestrian trails meet arterial streets, wherever feasible. Where this is not feasible, equestrian crossings shall be signalized and use two-tiered signal activation and special signage and pavement markings, overhead lighting, and/or paving annunciators.
- c. *Primary Equestrian Trails* along and within public rights of way shall include appropriate railing, signage, lighting and trail surface material to protect public and equestrian safety.
- d. *Secondary Equestrian Trail Routes* shall include safe, level areas within street or utility rights of way that provide equestrian route signage and minimal improvements to accommodate equestrian use.

LUE 5.7 **Incentives.** Provide development incentives to encourage equestrian-friendly development and to help preserve communities’ equestrian lifestyle, which may include residential cluster development or planned unit developments, density transfer programs, density bonuses associated with innovative land use planning, and expedited planning application and permit processing.

LUE 5.8 **Residential Density.** Allow development of Rural Residential, Estate Density Residential, Very-Low and Low-Density Residential housing in the Overlay. Higher densities may be allowed if equestrian friendly and if the City Council finds that the project will provide significant overall benefits to equestrian uses and lifestyle.

LUE 5.9 **Incompatible Uses.** Discourage the encroachment of incompatible land uses that impact the feasibility or safety of equestrian trails and lifestyle in the core area.

Programs

- LUE 5.1.1 **Zoning Update.** Update the Zoning Ordinance to protect and encourage equestrian uses and facilities within the ELO and to remove obstacles and disincentives.
- LUE 5.1.2 **Density Transfer.** Consider adopting a density transfer program to provide incentives for open space preservation and equestrian uses.
- LUE 5.1.3 **Public Awareness.** Work with community service districts, equestrian groups, and non-profit agencies to improve public awareness of equestrian uses, rules, responsibilities, routes, and activities and to help improve public safety, enjoyment, and sense of community.
- LUE 5.1.4 **Funding.** Consider an assessment district, joint-powers agreement with the Jurupa Area Recreation and Park District (JARPD) or the County, or other funding mechanism for the acquisition of rights of way and the construction and maintenance of multi-purpose trails within the Overlay Area.
- LUE 5.1.5 **Acquire Easements.** Work with other agencies, utility providers and private landowners to acquire access easements for equestrian trail use where appropriate, such as along utility easements or along flood control channels.

Community Development Overlay (CDO)

The General Plan previously included a “Community Development Overlay” designation, which was part of Riverside County’s General Plan adopted by the City upon incorporation. The Community Development Overlay has been redefined to meet the City’s specific needs. Its purpose is to provide planning flexibility in meeting localized needs or issues, such as along major street corridors where prevailing land uses may no longer make sense and need strategic changes. Generally, overlays are applied to areas, neighborhoods, or groups of parcels, not small, individual properties. Etiwanda Avenue and Mission Boulevard are examples of streets with a seemingly random mix of residential, retail-commercial, and service-commercial/light industrial uses in some areas. This somewhat random land use pattern has resulted in the development of potentially conflicting land uses with the potential to cause blight and a lack of property maintenance or reinvestment. The CDO designation can address these issues by: 1) identifying specific areas that need local consideration of land use changes to

address special factors, 2) establishing incentives to encourage more logical, orderly development, and 3) setting a process in which property owners and the public can become better informed and participate in land use deliberations. Two Community Development Overlay areas are included as a part of the 2017 Land Use Element (*Figure 2-8*, page [2-20](#)). These two overlay areas are commercial corridors on major segments of Etiwanda and Mission.

1. **Etiwanda Avenue Commercial Corridor.** This overlay is applied to the east side of Etiwanda between Limonite Avenue and Bellegrave Avenue. The properties that abut the street are designated for retail commercial land use. The Etiwanda Commercial Corridor overlay will provide for the City Council to change the zoning to low or medium density residential for mid-block properties consistent with the General Plan. This option creates the opportunity to generate an economic stimulus for the existing and future retail along the corridor.
2. **Mission Boulevard Commercial Corridor.** This overlay is applied to the commercial area along both sides of Mission Boulevard between Country Village Road and Valley Way. Properties that abut the street are designated for retail commercial land use. The Mission Commercial Corridor overlay will provide the opportunity for the City Council to change the zoning to low or medium density residential for mid-block properties consistent with the General Plan. This option creates the opportunity to generate an economic stimulus for the existing and future retail along the corridor.

Policies

- LUE 5.10 **Purpose.** The purpose of the Community Development Overlay is to encourage new development and strategic land use changes through additional planning studies and public participation in future General Plan amendments and/or Zoning Map changes.
- LUE 5.11 **Application.** Apply the Community Development Overlay to sites, corridors, or areas where land use changes are anticipated or encouraged that cannot be accommodated under existing General Plan land use designations. The specific goals, issues, and incentives, where applicable, shall be described when the Community Development Overlay is applied.
- LUE 5.12 **Incentives.** Consider allowing incentives within the Community Development Overlay, including development incentives, such as expedited planning application and permit processing, and the ability to apply for residential development and lot mergers in advance of

a General Plan amendment provided that certain minimum standards (e.g., minimum lot area) and procedures are met.

Village Center Overlay (VCO)

The City of Jurupa Valley covers about 45 square miles. Most of this area is either semi-rural equestrian properties or suburban in character. However, specific areas, due to their history and location, began as small centers of commerce and should be preserved and enhanced as pedestrian-oriented, small village centers. The Land Use Plan identifies specific areas within the communities of Rubidoux, Glen Avon, and Pedley as village centers. These centers are designated with the Village Center Overlay to encourage development of traditional, pedestrian-oriented town centers with characteristics that distinguish them from surrounding areas. These village centers promote walkability, equestrian accessibility, civic, cultural, entertainment, retail, and service uses. Mixed residential and commercial uses may also contribute to the village centers' energy and distinctive characters. To promote village centers as magnets for local residents and local services and restaurants, the City may offer voluntary incentives to promote this form of small-town development. Village centers also serve adjacent and nearby residential neighborhoods and are intended to reflect a village, or small downtown atmosphere. They are also places that attract residents from adjacent areas to socialize, shop, and dine.

To address potential land use compatibility issues, and to enhance village centers' historic and architectural character, design guidelines are applied to each village center within the Overlay. Allowable land uses within the Village Center Overlay include:

- High, Very High, and Highest Density Residential in the core area
- High Density Residential in the surrounding core support area
- Commercial Retail
- Commercial Office
- Public Facilities
- Open Space-Recreation

A typical mix of uses may include public or quasi-public uses (schools, plazas, theaters, cultural centers, offices, and parks), traditional residential neighborhood- or community-serving retail centers, recreational uses, offices, and where appropriate, courtyard-style or attached residential neighborhoods. Land use emphasis is generally on uses within the Commercial Retail

designation such as a grocery store, a drug store, and other retail outlets, and the Commercial Office designation such as professional services and financial institutions. Residential densities range from 5.0 to 25.0 dwelling units per acre, while non-residential intensities range from 0.2 to 0.5 FAR.

Policies, General

- LUE 5.13 **Village Center Development.** Require development within the Village Center Overlay, to be compact, pedestrian-oriented, and designed to accommodate a broad range of uses, including commercial, residential, and public facility uses, consistent with the Community's historic character.
- LUE 5.14 **Locations.** Apply the Village Center Overlay to the historic community centers of downtown Rubidoux, downtown Glen Avon and downtown Pedley as shown in *Figure 2-12* (page [2-28](#)). The City Council may consider applying the Village Center Overlay to other areas determined to be consistent with the intent and policies of this section.
- LUE 5.15 **Development Standards.** Require areas within Village Center Overlay designations to develop in accordance with the land use standards for Village Centers as detailed in the Village Center Design Standards and Rubidoux Area Design Standards of the Zoning Regulations.
- LUE 5.16 **Incentives.** Provide incentives, such as density bonuses and relaxation of development standards, as appropriate, to facilitate the development of village centers as designated on the Land Use Plan, *Figure 2-7* (page [2-14](#)).
- LUE 5.17 **Mixed Uses.** Accommodate the development of structures and sites with a mix of housing, retail, commercial office, cultural, public/quasi-public, and recreational uses in areas designated as "Village Centers" on the General Plan, the specific plan, and community and village plan land use maps.
- LUE 5.18 **Allowed Uses.** Areas within the Village Center Overlay shall be planned and designed with a list of allowed and conditionally allowed land uses that are appropriate to the specific village area.
- LUE 5.19 **Open Space.** Provide open space areas within village centers, such as plazas or parklets, to provide visual relief from the urban environment, to form linkages to

other portions of the City, and to serve as buffers from incompatible uses.

- LUE 5.20 **Community-Oriented Uses.** Accommodate community-oriented facilities, such as public meeting rooms, daycare facilities, public transit, public buildings (e.g., government-owned buildings, community-service district facilities with public services), public art, and cultural uses in village centers.
- LUE 5.21 **Public Transit.** Locate village centers along public transit routes and other major circulation facilities, where possible, to enhance accessibility and promote transit ridership.
- LUE 5.22 **Infrastructure.** Adequate parking, transportation facilities, including sidewalks and trails, street trees, water resources, sewer facilities, and other utilities shall be available to serve Village Center development in addition to meeting the needs of existing residents and businesses.
- LUE 5.23 **Public Entrances.** Orient public building entrances in village centers to the public street and locate parking in the rear or to the side of the building.
- LUE 5.24 **Shared Parking.** Allow shared or joint use parking and reduced parking standards in village centers, where appropriate.
- LUE 5.25 **Connectivity.** Integrate pedestrian-, equestrian-, and bicycle-friendly street and trail networks connecting village centers with surrounding land uses.
- LUE 5.26 **Compatibility.** Require that mixed-use developments be designed to enhance compatibility with adjacent uses, and mitigate potential conflicts between uses, considering such issues as noise, lighting, security, trash and recycling storage, deliveries, truck and automobile access, and parking.
- LUE 5.27 **Architectural Compatibility.** Require that village center development be designed to be architecturally compatible with its surroundings and visually enhance the character of the surrounding neighborhood and designated scenic highways or public view corridors.

Program, General

LUE 5.1.6 Village Center Area Plans. The City will prepare an area plan for each of its three village centers to establish a consensus and a vision that is shared by the stakeholders and the City Council. The master plans will be prepared in the following order of priority:

1. Pedley Village Center
2. Glen Avon Village Center
3. Rubidoux Village Center

LUE 5.1.7 Village Center Standards. The City will prepare Village Center Standards and update the Zoning Ordinance to include them and to integrate the Rubidoux Design Standards with the new Standards.

Policies, Pedley Village Center

Pedley Village Center is the location of City Hall, the Pedley train station, and the relocated Post Office, as shown in *Figure 2-22*. Its potential as a key component of the City's identity, its ability to preserve its historical heritage and establish a downtown environment that attracts locals to shop, dine and socialize is critical. A master plan for Pedley Village Center will guide development to create a cohesive center that will anchor the new City and help solidify its internal identity with its citizens. The master plan will be the basis for future land use decisions and capital improvements and may ultimately take the form of a specific plan.

LUE 5.28 Semi-Truck Traffic. Limit semi-truck traffic generated by uses to a maximum of 15 trucks per day, Monday through Friday.

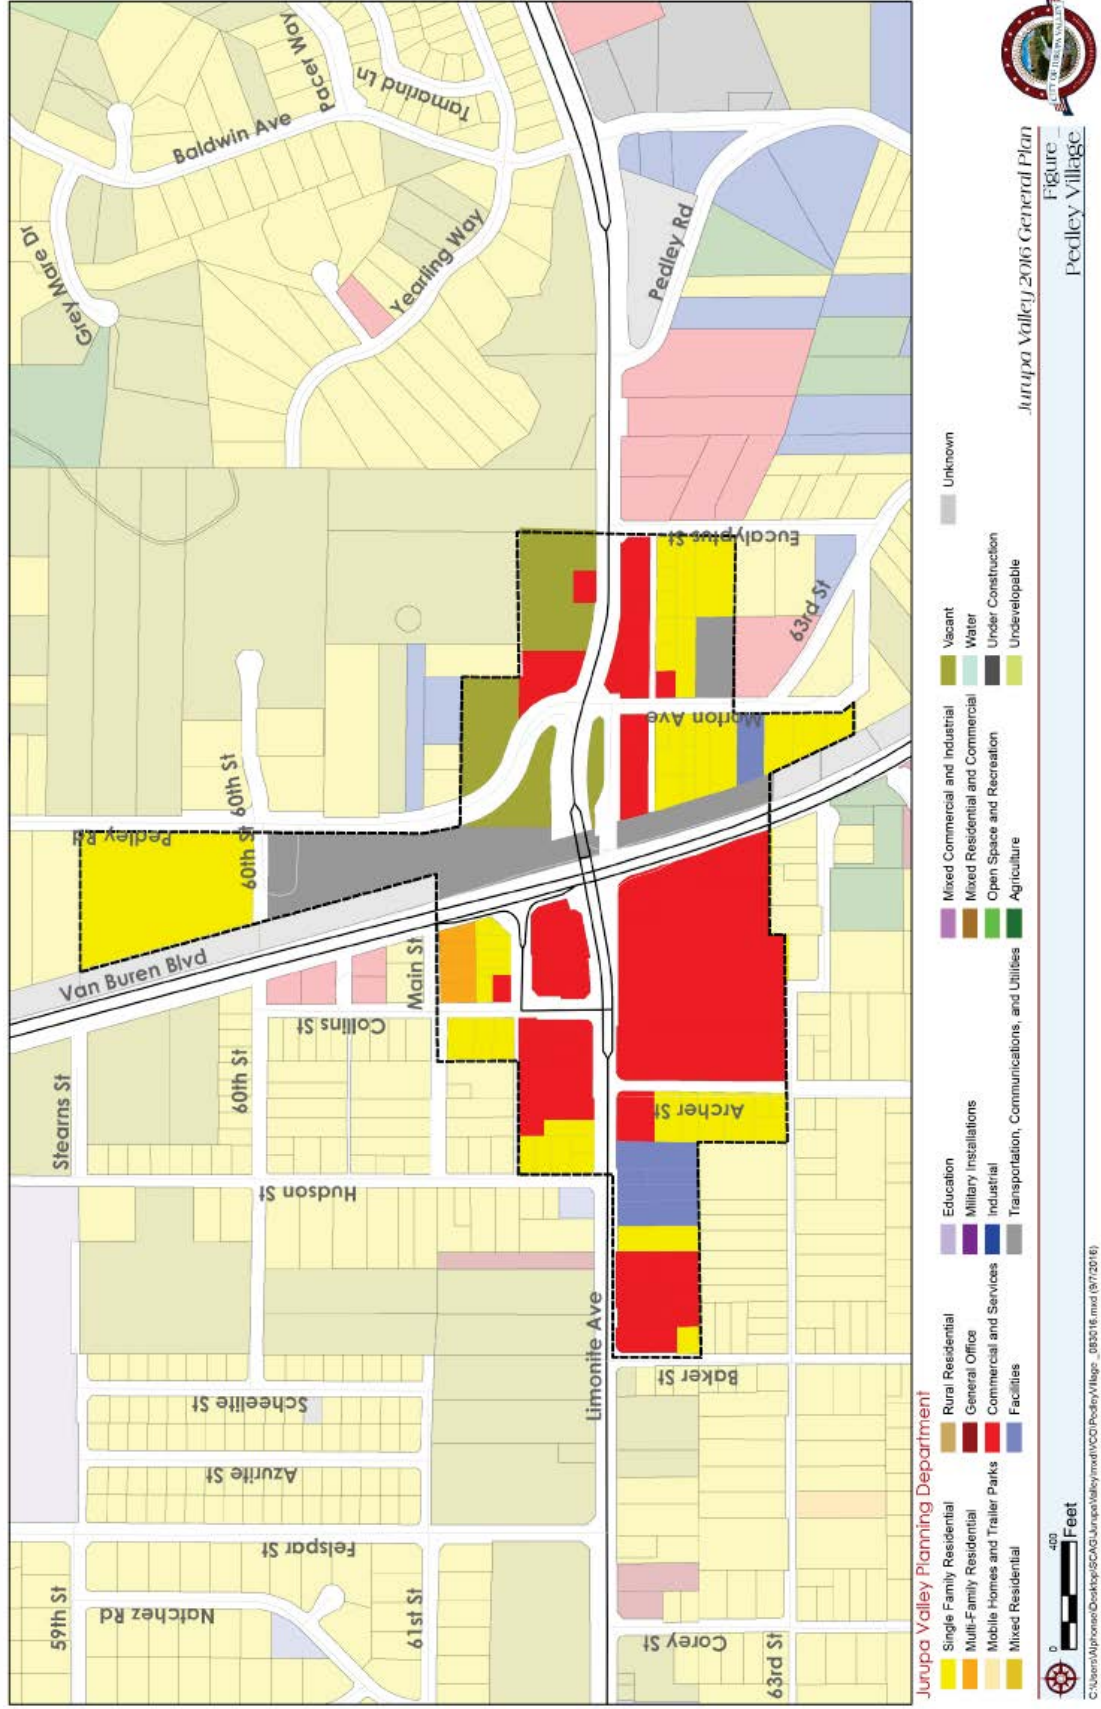

LUE 5.29 Limonite Avenue Improvements. Proposed development applications, or applications to bring existing uses into conformity with City requirements, shall provide for improvements to Limonite Avenue, which may include, but are not limited to, street widening in accordance with General Plan right of way width, access limitations (not more than one driveway), provision of right of way for an access/deceleration lane, and pavement improvements.

Figure 2-21: Pedley Village area, looking south towards the Santa Ana River

DRAFT

Land Use

Programs, Pedley Village Center

(TBA)

Policies, Glen Avon Village Center

The Glen Avon Village Center is shown in *Figure 2-24*. This small center has excellent visibility and access, and is located near the intersection of Jurupa Road and Van Buren Boulevard. An area plan for Glen Avon Village Center is needed to establish a consensus for its boundaries and define the desired character of new development such that the area's scale and historical character are preserved and enhanced. This village center is expected to be smaller in size than Rubidoux or Pedley, yet still embrace the small town commercial and traditional neighborhoods that are served by equestrian- and pedestrian-friendly connections.

Programs, Glen Avon Village Center

(TBA)

Policies, Rubidoux Village Center

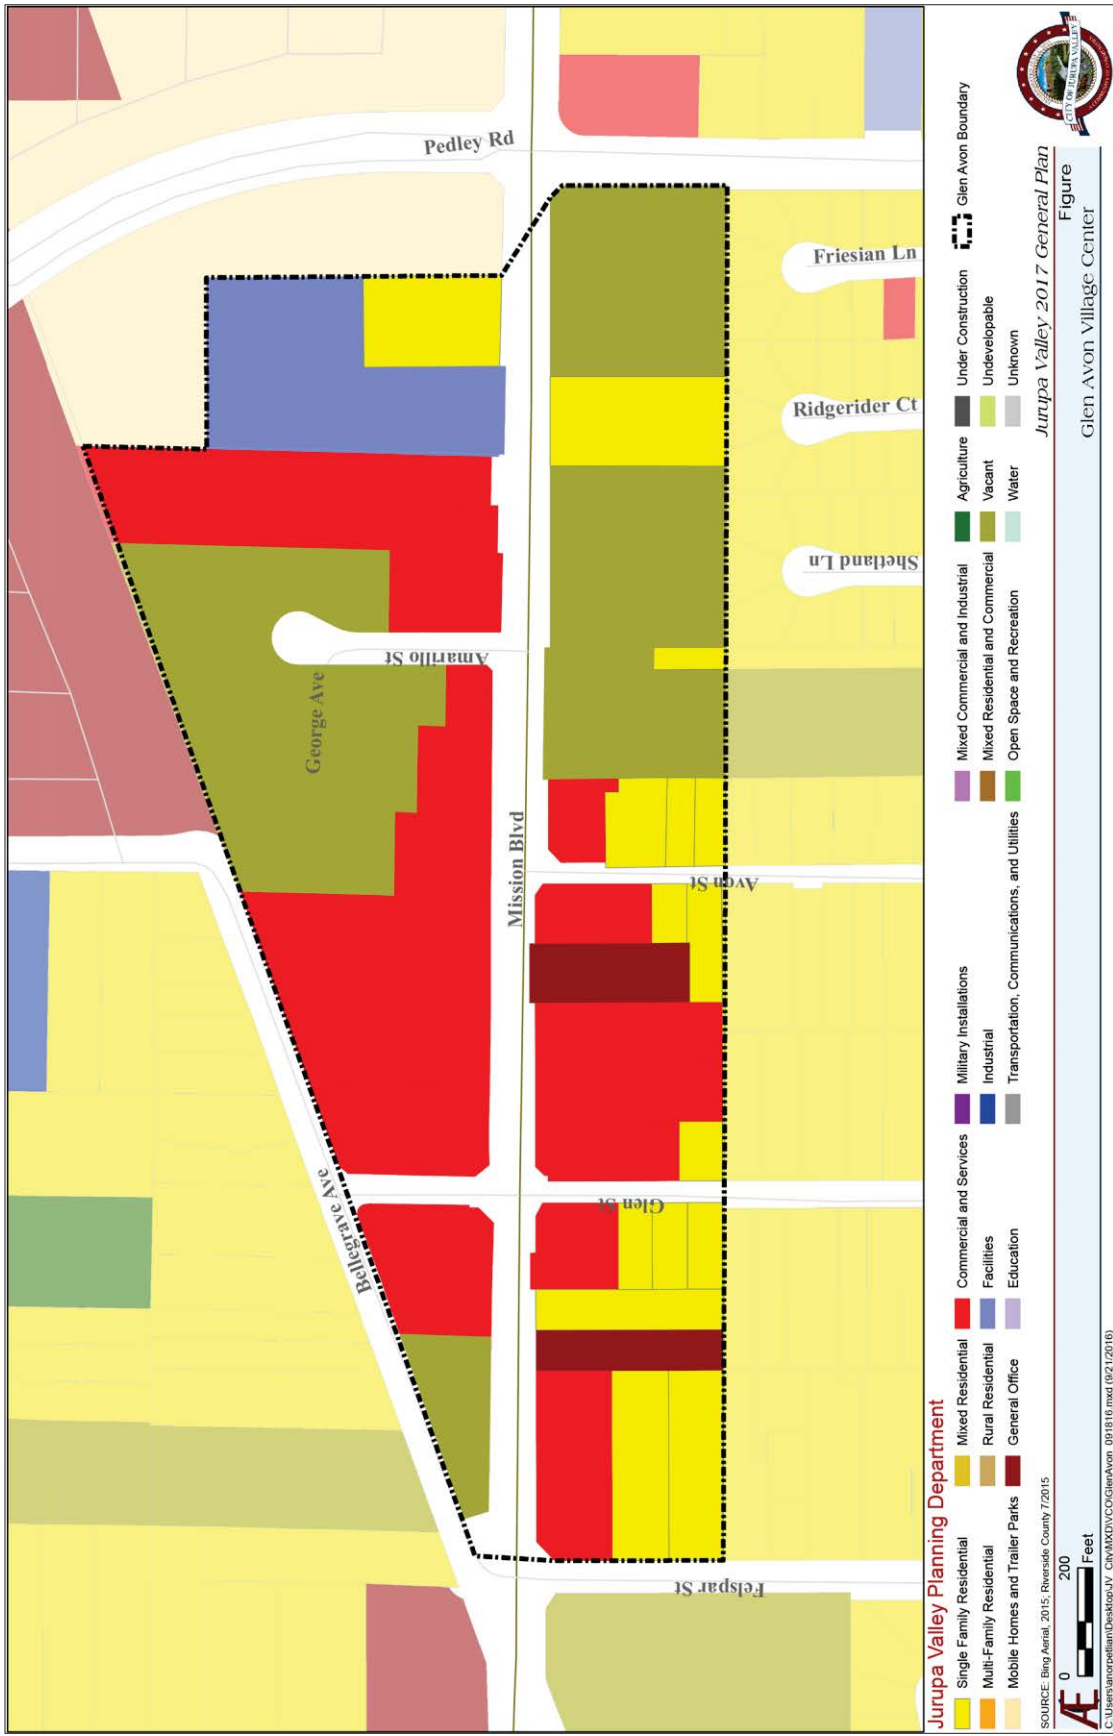

Much work has already been done by the County of Riverside to establish a general consensus and vision for Rubidoux Village, as shown in *Figure 2-25* (page [2-63](#)). Although in 2017, no area plan or specific plan has yet been adopted by the City, a Workbook containing architectural and site development guidelines for the Rubidoux Village Area were prepared by the County and have been adopted by the City Council, as well as zoning specific to the desired form and character of Rubidoux Village. Upon completing the area plans for Pedley and Glen Avon village centers, the City will prepare an area plan for Rubidoux Village that is consistent with existing policy and zoning, while updating and clarifying existing policies and programs.

Figure 2-23: Mission Boulevard in Rubidoux Village Center, looking south toward the City of Riverside

DRAFT

Land Use

DRAFT

Land Use

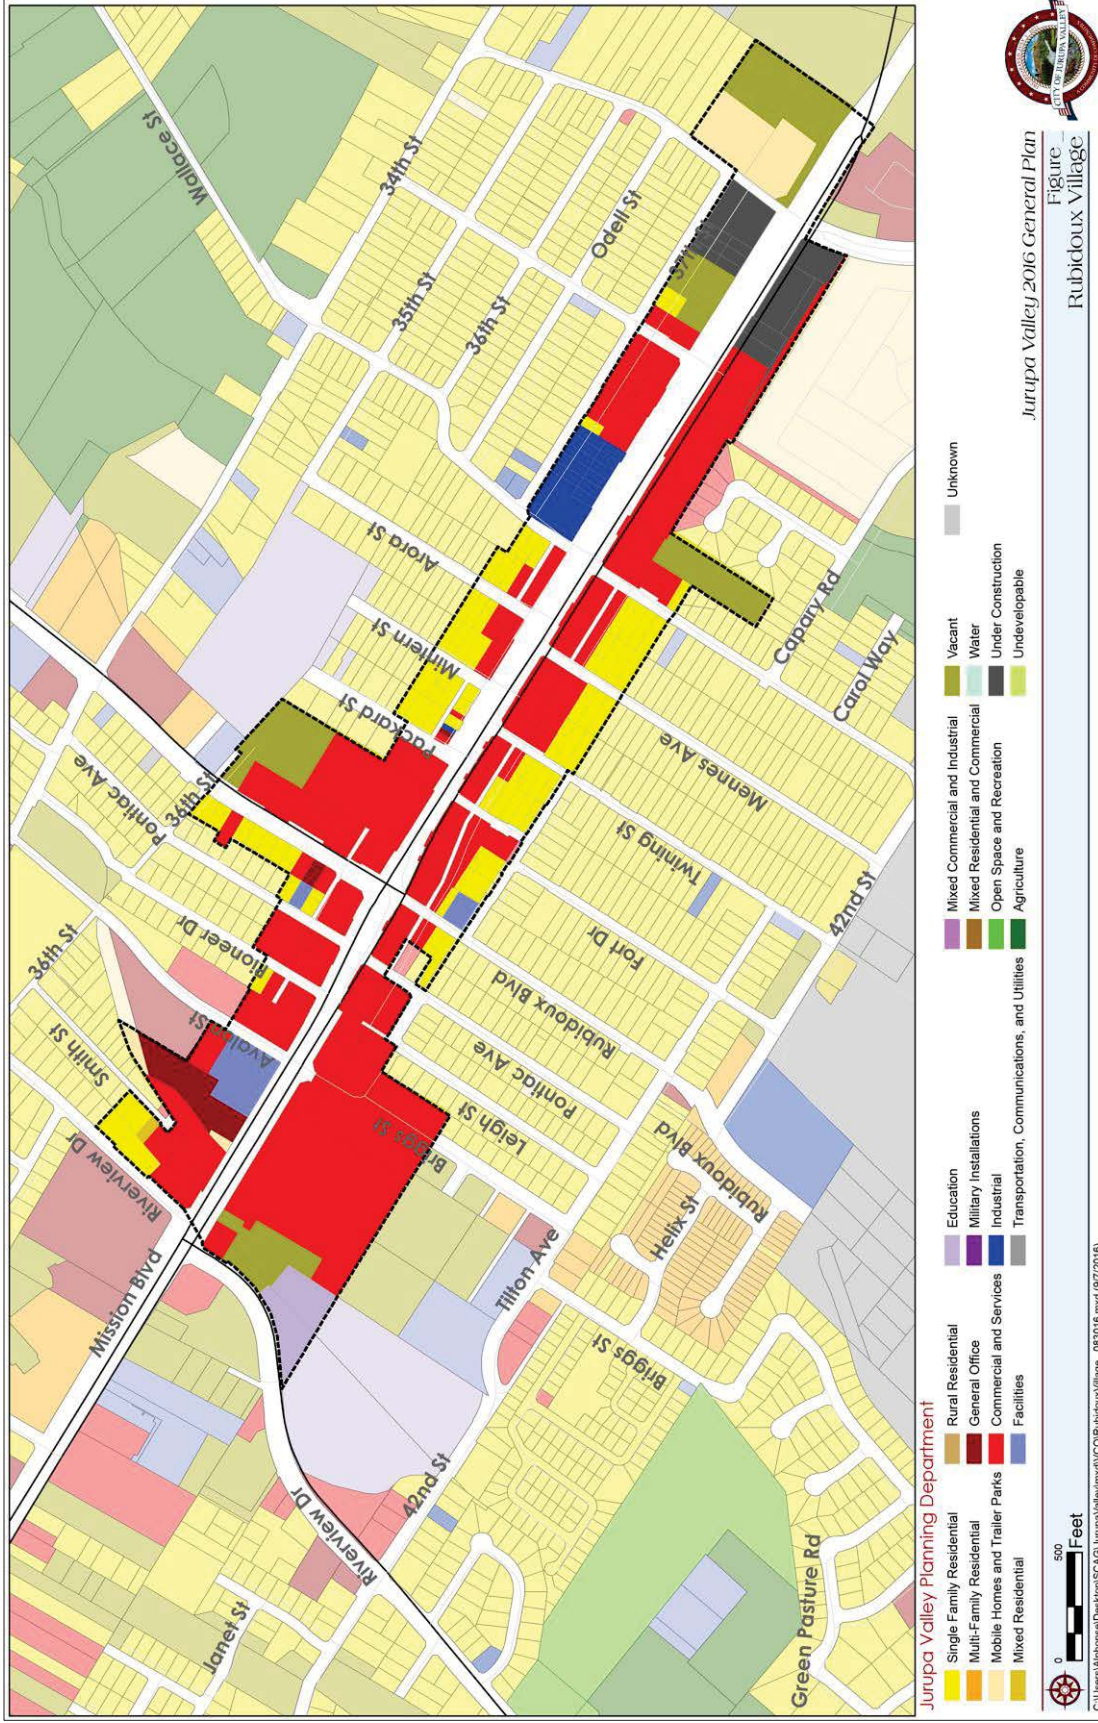

Figure 2-25: Rubidoux Village Center Overlay

The Rubidoux Village Center Overlay area has been the focus of special assistance in terms of redevelopment funding and public improvements. To continue the improvements begun under the County of Riverside's Jurupa Valley Redevelopment Plan (JVRP), the following land use policies are established. To implement the policies further, the Rubidoux Village Commercial Zone, a Rubidoux Village Sign Program, and shared parking provisions have been established for this Area. In addition, the Rubidoux Village Design Workbook provides a set of guidelines intended to improve the architectural aesthetics of the downtown Rubidoux area in support of the economic development strategy as outlined in the JVRP.

- LUE 5.30 **Allowed Uses.** Allow a variety of pedestrian-oriented, compact residential, retail commercial, and service uses appropriate for a village center.
- LUE 5.31 **Architectural Theme.** The entire Rubidoux Village Policy Area shall be subject to an architectural theme, as illustrated in the Rubidoux Village Design Workbook.
- LUE 5.32 **Infill Development Priority.** To help revitalize the commercial area, give high priority to infill development of vacant and deteriorated properties and the expansion and improvement of existing businesses.

The concept of the Rubidoux Village Overlay as a downtown center has been further developed by dividing the area into three distinct planning sub-areas (East Village, Village Center, and West Village). Each planning sub-area has been determined to be suitable for specific uses given the intent of the Jurupa Valley Redevelopment Plan. The types of community characteristics that have been used to define the sub-areas are as follows:

- The intensity of development in adjoining areas;
- The nature of the Mission Boulevard landscaping;
- The nature and intensity of traffic flows;
- The availability of alleys; and
- The uses and facilities existing in the area.

(Refer to the Zoning Ordinance and the Rubidoux Village Design Workbook for further specific design requirements.)

- LUE 5.33 **Signage.** All signage within the Rubidoux Village Policy Area shall be subject to the Rubidoux Village Sign Program prepared specifically for the area. The sign program shall be implemented through the Zoning Ordinance.
- LUE 5.34 **Shared Parking.** Provide special consideration for parking by establishing a shared parking program

designed specifically for the Rubidoux Village Policy Area as outlined in the County Land Use Ordinance.

- LUE 5.35 Residential Buffering.** Require projects adjacent to residential lots to provide mitigation measures so as to buffer the impacts of the commercial development from the residential uses. These mitigation measures shall include, but not be limited to, landscaping, noise berms, and operation hours.
- LUE 5.36 Flexible Development Standards.** Permit modification of development standards stated in the design workbook for architectural features when a project applicant can demonstrate that, due to the design of the existing building(s) and/or structure(s), it would be architecturally infeasible to incorporate the specific architectural design(s). Modifications shall be subject to the approval of the Planning Commission or City Council.

Programs, Rubidoux Village Center

- LUE 5.1.8 Village Center Standards.** Prepare Village Center Standards and update the Zoning Ordinance to include them and to integrate the Rubidoux Design Standards with the new Standards.

Specific Plan Overlay (SPO)

Specific plans are highly customized policy or regulatory tools that provide a bridge between the General Plan and individual development projects in a more localized, specific manner than is possible with community-wide zoning ordinances. Specific plans are not part of the General Plan but apply in addition to, and consistent with, the General Plan. The specific plan is a tool that provides land use and development standards that are tailored to respond to special conditions and aspirations unique to the area being proposed for development and conservation. These tools are a means of addressing detailed concerns that conventional zoning cannot do.

Specific plans are identified in this section because detailed study and development direction are provided in each plan. Policies related to any listed specific plan can be reviewed at the City's Planning Department. The six specific plans located in the Jurupa planning area are listed in *Table 2.5* below.

Figure 2-26: Thoroughbred Farms Business Park Specific Plan, November 2012

Table 2.5: Adopted Specific Plans in Jurupa Valley

| Specific Plan | Specific Plan Number |
|-----------------------|----------------------|
| Mission de Anza | 123 |
| Sky Country | 125 |
| Agua Mansa | 210 |
| Rio Vista | 243 |
| Emerald Meadows Ranch | 337 |
| Thoroughbred Farms | 376 |

Where the Specific Plan Overlay is placed on the Land Use Map, properties within its boundary shall not receive new land use or development entitlements until a specific plan has been adopted (or amended) by the City Council. The specific plan shall apply to all property within the overlay boundary and shall supersede prior land use designations and zoning.

Policies

- LUE 5.37 Specific Plan Content.** Require that all specific plans must meet the requirements of state law and include four planning frameworks: Land Use, Design, Circulation, and Infrastructure/Public Facilities. Within each framework, the specific plan will provide the goals and policies that will guide future decisions on projects within the specific plan area. The plan will also include a detailed implementation plan that will identify responsibilities, financing requirements, and phasing/timing.
- LUE 5.38 Application of New Specific Plan Overlays.** The 2017 General Plan designates several large key undeveloped areas of the City with the Specific Plan Overlay. These areas are shown in *Figure 2-8* (page [2-20](#)), and include industrial and business park property along I-15 and in the Agua Mansa industrial area.

Figure 2-27: Mixed Use Senior Housing over Retail Commercial, Riverside County (KTY Architects)

Mixed Use Overlay (MUO)

This overlay is applied to areas where the City seeks to encourage a vibrant mix of residential, commercial, office, entertainment, educational, and/or recreational or other uses, allowing either a vertical or horizontal mix of uses. The MUO allows a greater range of flexibility of land use than would otherwise be allowed by the base designation.

Policies

- LUE 5.39 **Horizontal and Vertical Mix.** Permit a range of horizontally and vertically mixed uses appropriate to key areas of the City.
- LUE 5.40 **Flexibility.** Apply flexible development standards where it can be demonstrated that by doing so, the proposed development or land use will help achieve General Plan goals.
- LUE 5.41 **Ground Floor Retail.** In pedestrian-oriented environments, require retail uses to be located on the ground floor to provide convenience and good visibility for shoppers. Whenever possible, require off-street parking to be screened and located on the side or at the rear of buildings.

Program

- LUE 5.1.9 **Zoning Ordinance Update.** Update the Zoning Ordinance, the Zoning Map, and specific plans to ensure consistency with the Mixed Use Overlay and to establish flexible development standards.

Business Park Overlay (BPO)

The Business Park Overlay is to be applied to areas where a clear differentiation of industrial and business park uses from residential uses is desired. It denotes those areas where uses allowed under Heavy Industrial and, in some cases, Light Industrial designations are likely to be incompatible with adjacent residential uses and where business park uses would be more appropriate. The Business Park Overlay is intended to maintain the integrity of business park uses and protect the residential areas that surround these industrial and business park uses from the introduction of new incompatible industrial uses, industrial truck traffic, and dangerous traffic congestion at railroad grade crossings. Besides ensuring compatibility between residential and industrial uses, the additional landscaping requirements for new development or expansion of existing uses are intended to enhance community identity within the area, particularly along I-15 and SR 60, the former Riverside Cement property, Van Buren Boulevard, Bellegrave Avenue, Galena Street, the south side of Jurupa Road, Felspar Street, and Clay Street. The overlay allows the application of special use standards or buffering to be specified at the time the BPO is applied.

Policies

LUE 5.42 **Prohibited Uses.** Prohibit truck terminals, draying, freight, and other trucking operations or industrial/manufacturing uses that could generate substantial heavy truck traffic, air quality, or noise impacts in areas designated Business Park on the General Plan Land Use Map.

Programs

(TBA)

Figure 2-28: Heavy commercial traffic in Mira Loma

Mira Loma Warehouse and Distribution Center Overlay

The Mira Loma Warehouse and Distribution Center Overlay is located in the northwest section of the City and consists primarily of large logistics warehouses with storage, loading, and shipping facilities and industrial/manufacturing properties. The area has a high concentration of commercial and industrial truck traffic, and includes some small-scale retail commercial and services adjacent to a small residential neighborhood.

This overlay is designed to limit the locations of logistics and other similar supply-chain uses to the Mira Loma Warehouse and Distribution Center Overlay area. Its boundaries are shown in Figure 2-9 (page 2-26). These uses generate a greater concentration of heavy commercial truck traffic than other typical manufacturing uses and thus, generate significant environmental impacts on air quality, noise, and traffic.

Policies

LUE 5.42 **Permitted Uses.** Permit warehousing and distribution uses, logistics, and other goods storage facilities in the Business Park, Light Industrial, and Heavy Industrial land use designations only in the following area:

The area in Mira Loma defined and enclosed by these boundaries: San Sevaine Channel from Philadelphia Street southerly to Galena Street on the east, Galena Street from the San Sevaine Channel westerly to Wineville Road on the south, Wineville Road northerly to Riverside Drive, then Riverside Drive westerly to Milliken Avenue, then Milliken Avenue north to Philadelphia Street on the west, and Philadelphia Street easterly to the San Sevaine Channel on the north.

This policy shall not apply to firms that only store goods that are manufactured or assembled on-site. In such a case, the use shall be evaluated based on the underlying general plan land use designation, and any potential impacts on the community from diesel and other hazardous emissions, traffic generation, local existing land use compatibility, and other environmental and socioeconomic concerns. Any manufacturing project proposal outside the aforementioned area that is in excess of 200,000 square feet in size shall be required to obtain a Conditional Use Permit from the City. No warehouses, distribution centers, intermodal transfer facilities (railroad to truck), trucking terminals, or cross dock facilities shall be allowed outside the aforementioned area.

Stringfellow Remediation Site and Pyrite Canyon (SRO)

The area, formerly known as the Stringfellow Acid Pits, is recognized as a federal Superfund site (hazardous waste disposal site), which is subject to an abatement plan administered by State of California authorities.

The Open Space-Mineral Resources designation was selected for this site because it does not allow residential uses (except for on-site caretakers).

The remainder of the overlay area is designated for commercial or industrial uses, or Open Space-Rural. When all significant hazards have been abated, the City will determine if a re-designation to a different land use is appropriate.

Figure 2-29: Stringfellow Remediation Site and Pyrite Canyon, looking north

Policies

LUE 5.43 Special Development Requirements. In addition to the commercial and industrial development policies within this text, development proposals within the Policy Area must meet the following requirements:

- a. Piped water and domestic sewer service shall be provided.
- b. Clearance from the appropriate state authorities must be provided and must indicate that all significant hazards have been abated and the proposed project can occur without jeopardizing public health and safety, or that any proposed clean-up plans have been determined adequate by the state to permit development of the site.

- c. In general, only commercial and industrial uses, which do not consist of a high concentration of people, shall be permitted within this area. A residence for an on-site caretaker shall not be permitted without clearance from the state.

Santa Ana River Corridor (SAO)

Figure 2-30: Santa Ana River, Jurupa Valley

The Santa Ana River is an integral part of the City's and the region's multi-purpose open space and trail systems. It includes the Santa Ana River Trail, a national recreation trail designated within this corridor that, upon completion, will incorporate 110 miles of trail system from San Bernardino County in the north to Orange County in the south. Beyond that, the Santa Ana River is the centerpiece of a massive 2,650-square-mile watershed that involves major portions of three counties. The river drains southwest toward Prado Dam, and serves as a prominent natural buffer between Jurupa and the cities of Riverside and Norco. Several natural and channelized drainage courses connect with the river. In addition to their fundamental water-related functions, these watercourses provide corridors through developed land and link open spaces together. Among other things, this creates biologically essential wildlife corridors that allow wildlife to move from one open space to another without crossing streets, highways, or developed land. The following policies preserve and protect this important natural and recreational feature.

Policies

- LUE 5.44 **Development Setbacks.** Require development, where allowable, to be set back an appropriate distance from the top of bluffs, to protect the natural and recreational values of the river and to avoid public responsibility for property damage that could result from soil erosion or future floods.
- LUE 5.45 **Common Access and Views.** Encourage future development that borders the Policy Area to design for common access and views to and from the Santa Ana River.
- LUE 5.46 **Sensitive Habitat and Species.** Public and private development, operations, and maintenance shall avoid damaging sensitive habitat or species, including significant native trees, species of local significance, and threatened and endangered species.
- LUE 5.47 **Protect Flood Areas.** Preserve areas subject to erosive flooding in a natural state and encourage recreation

development, such as parks and golf courses, along the riverbanks above and outside of flood areas.

- LUE 5.48 **Interconnected Trails.** Develop and maintain trails and related facilities for riding, hiking, and bicycling for the entire reach of the river connecting to the state- and nationally designated Orange County and San Bernardino Santa Ana River trails and connected with the countywide system of trails.
- LUE 5.49 **Trail Crossings.** Provide for recreational trail crossings under bridges crossing the river and along flood channels crossing under roadways, where feasible.
- LUE 5.50 **Connectivity.** Require private developments along the Santa Ana River to provide riding, hiking, and biking trails to ensure connectivity to the Riverside County-wide trails system.
- LUE 5.51 **Caltrans Coordination.** Coordinate with the California Department of Transportation (Caltrans) on future freeway expansions to ensure compatibility with the natural character of the river corridor.
- LUE 5.52 **Roads and Bridges.** Discourage the addition of local road crossings over the Santa Ana River. If an additional crossing is allowed, careful consideration shall be given to location, design, and landscaping to take advantage of the scenic character of the river and to avoid damage to or destruction of natural systems.
- LUE 5.53 **Utilities.** Discourage utility lines within the river corridor and floodplain. If approved, lines shall be placed underground where feasible and shall be located and designed in a manner to harmonize with the natural environment and to be visually unobtrusive.

Flabob and Riverside Municipal Airports Overlay (FLO)

Flabob and Riverside Municipal Airports provide valuable commercial and recreational air services and play an important role in local and regional economies. Future development in Jurupa Valley is likely to create additional pressure to expand air services at these locations. To allow the continued, orderly operation and, where appropriate, expansion of airports, the City and the County have adopted land use measures that minimize the public's exposure to excessive noise and safety hazards. These land use standards apply to significant areas in Jurupa Valley.

To accomplish this, the State of California adopted the Airport Land Use Law, *California Public Utilities Code* §§21670-21679.5. This General Plan is intended to implement and be consistent with the

Figure 2-31: Historic Flabob Airport

purposes of the Airport Land Use Law. The Airport Land Use Law provides for the creation of the Riverside County Airport Land Use Commission (ALUC or Commission) and the adoption of airport land use compatibility plans by the Commission to assist the County and affected cities in land use planning in the vicinity of airports. The Commission has adopted an Airport Land Use Compatibility Plan for Western Riverside County (ALUP), which applies to all cities in Western Riverside County and includes policies and compatibility criteria for Flabob and the Riverside Municipal airports. Relevant excerpts of the ALUP are included in *Appendix 4.0* and are summarized in *Figure 2-32: Airport Land Use Compatibility Criteria*. The Plan, including the Policy Framework, Plan Implementation measures, and Compatibility Criteria are incorporated into this General Plan by reference.

Flabob Airport

Flabob Airport enjoys a long and storied history in the Jurupa area and continues to serve an important role in providing aviation services, education, and community events for residents. To minimize land use conflicts with adjacent uses, much of the remaining undeveloped area adjacent to the airport is designated as Estate Density Residential, with most of the developed land designated and used for Medium Density Residential. The Airport Compatibility Areas are shown in *Figure 2-33* below. Potential land use conflicts can occur primarily in Safety Zone C, new residential development is limited to one dwelling per 5 acres, gross; and in Zone D, residential densities are limited to a prescribed density range. Residential density must be no greater than one dwelling per 5 acres or at least five dwellings per acre.

Riverside Municipal Airport

The boundary of the Riverside Municipal Airport Influence Area is shown on *Figure 2-33* below. There are four safety zones associated with the Riverside Municipal Airport Influence Area. These safety zones are shown in more detail in *Appendix 4.0*. Within land-use compatibility zones, new development is subject to regulations governing such issues as development intensity, density, height of structures, and noise.

| Zone | Locations | Maximum Densities / Intensities | | | | | Additional Criteria | |
|-----------|---|--|--|-----------------------------|----------------------------|------------------------------------|--|---|
| | | Residential (d.u./ac.) ¹ | Other Uses (people/ac) ² | | | Req'd Open Land ³ | Prohibited Uses ⁴ | Other Development Conditions ⁵ |
| | | | Average ⁶ | Single Acre ⁷ | with Bonus ⁸ | | | |
| A | Runway Protection Zone and within Building Restriction Line | 0 | 0 | 0 | 0 | All Remaining | <ul style="list-style-type: none"> › All structures except ones with location set by aeronautical function › Assemblages of people › Objects exceeding FAR Part 77 height limits › Storage of hazardous materials › Hazards to flight⁹ | <ul style="list-style-type: none"> › Aviation easement dedication |
| B1 | Inner Approach/Departure Zone | 0.05 (average parcel size ≥20.0 ac.) | 25 | 50 | 65 | 30% | <ul style="list-style-type: none"> › Children's schools, day care centers, libraries › Hospitals, nursing homes › Places of worship › Bldgs with >2 aboveground habitable floors › Highly noise-sensitive outdoor nonresidential uses¹⁰ › Aboveground bulk storage of hazardous materials¹¹ › Critical community infrastructure facilities¹² › Hazards to flight⁹ | <ul style="list-style-type: none"> › Locate structures maximum distance from extended runway centerline › Minimum NLR of 25 dB in residences (including mobile homes) and office buildings¹³ › Airspace review required for objects >35 feet tall¹⁴ › Aviation easement dedication |
| B2 | Adjacent to Runway | 0.1 (average parcel size ≥10.0 ac.) | 100 | 200 | 260 | No Req't | Same as Zone B1 | <ul style="list-style-type: none"> › Locate structures maximum distance from runway › Minimum NLR of 25 dB in residences (including mobile homes) and office buildings¹³ › Airspace review required for objects >35 feet tall¹⁴ › Aviation easement dedication |
| C | Extended Approach/Departure Zone | 0.2 (average parcel size ≥5.0 ac.) | 75 | 150 | 195 | 20% | <ul style="list-style-type: none"> › Children's schools, day care centers, libraries › Hospitals, nursing homes › Bldgs with >3 aboveground habitable floors › Highly noise-sensitive outdoor nonresidential uses¹⁰ › Hazards to flight⁹ | <ul style="list-style-type: none"> › Minimum NLR of 20 dB in residences (including mobile homes) and office buildings¹³ › Airspace review required for objects >70 feet tall¹⁵ › Deed notice required |
| D | Primary Traffic Patterns and Runway Buffer Area | (1) ≤0.2 (average parcel size ≥5.0 ac.) or ¹⁶ (2) ≥5.0 (average parcel size ≤0.2 ac.) | 100 | 300 | 390 | 10% | <ul style="list-style-type: none"> › Highly noise-sensitive outdoor nonresidential uses¹⁰ › Hazards to flight⁹ | <ul style="list-style-type: none"> › Airspace review required for objects >70 feet tall¹⁵ › Children's schools, hospitals, nursing homes discouraged¹⁷ › Deed notice required |
| E | Other Airport Environs | No Limit | No Limit ¹⁸ | | | No Req't | <ul style="list-style-type: none"> › Hazards to flight⁹ | <ul style="list-style-type: none"> › Airspace review required for objects >100 feet tall¹⁵ › Major spectator-oriented sports stadiums, amphitheaters, concert halls discouraged beneath principal flight tracks¹⁸ |
| * | Height Review Overlay | Same as Underlying Compatibility Zone | | | | Not Applicable | Same as Underlying Compatibility Zone | <ul style="list-style-type: none"> › Airspace review required for objects >35 feet tall¹⁴ › Aviation easement dedication |

See Chapter 3 for airport-specific additions or exceptions to these policies

Figure 2-32: Airport Land Use Compatibility Criteria

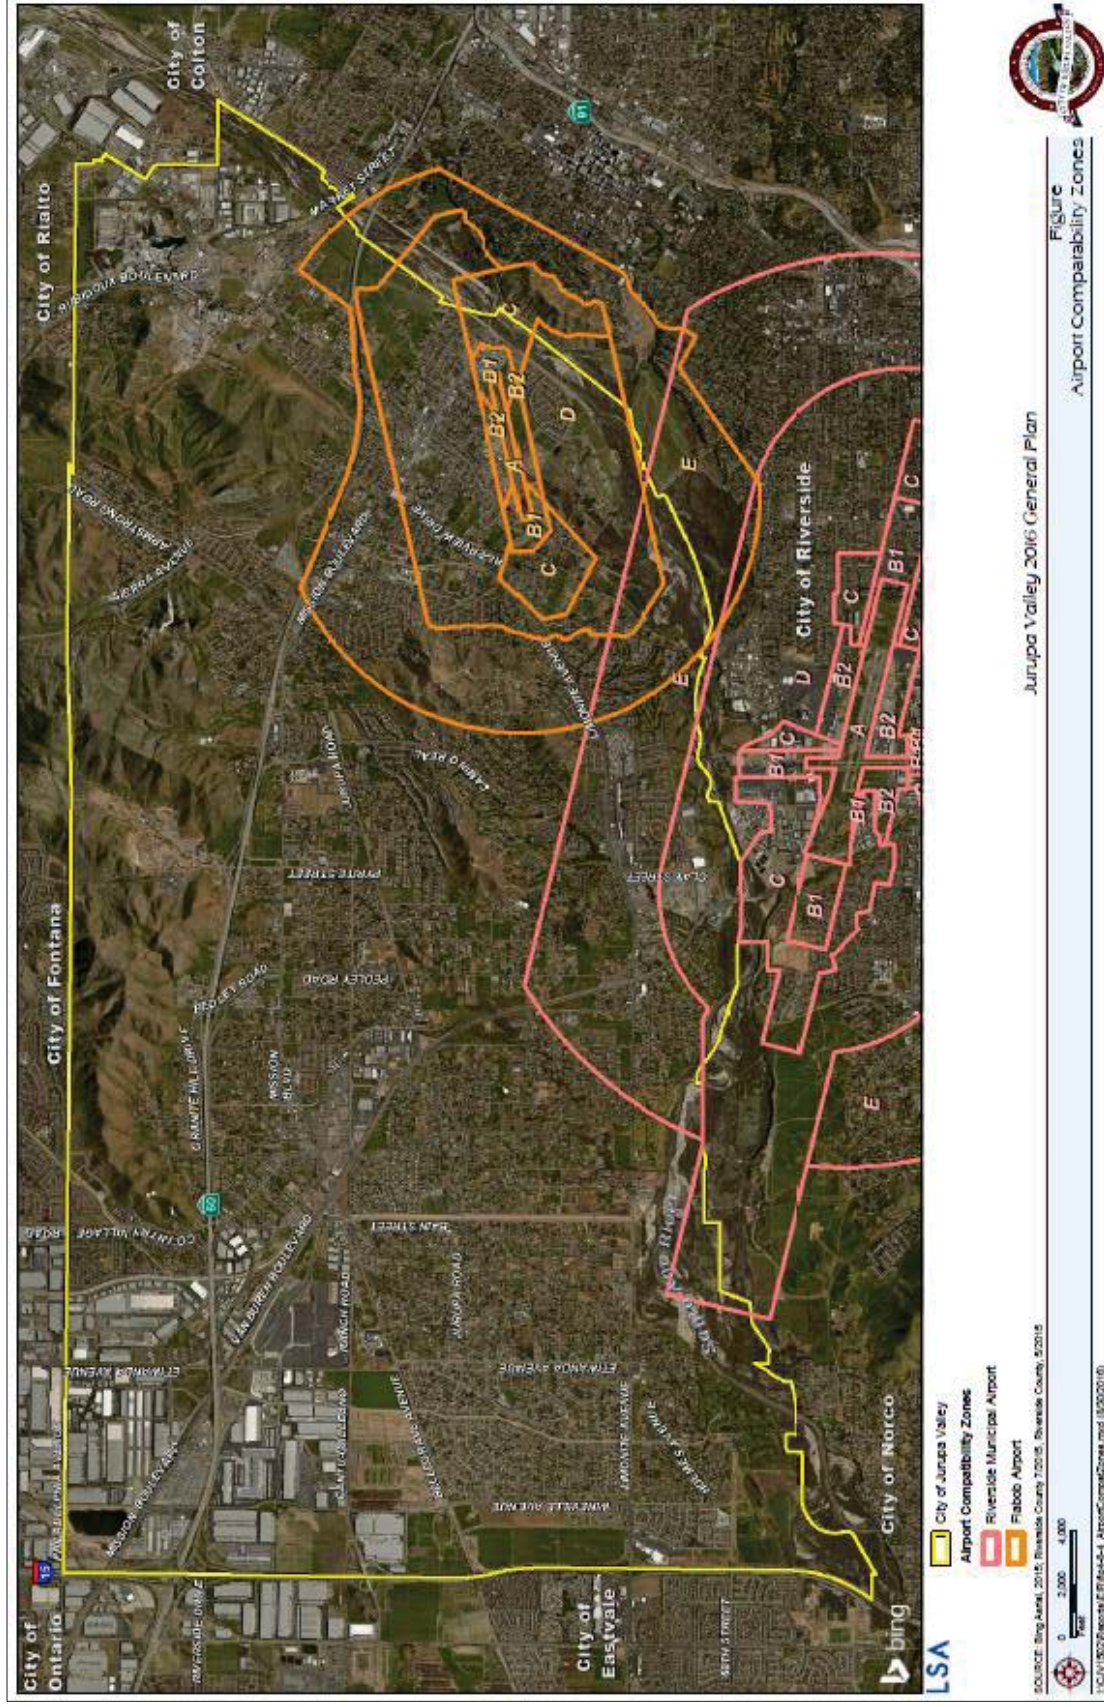

Figure 2-33: Airport Safety Zones, Flabob and Riverside Airports

Policies

- LUE 5.54 **ALUP Compliance.** Provide for the orderly operation and development of Flabob and Riverside Municipal Airports and the surrounding area by complying with the Airport Land Use Compatibility Plan as fully set forth in *Appendix 4.0* and as summarized in *Figure 2-32*, as well as any applicable policies related to airports in the Land Use, Circulation, Safety, and Noise Elements of the 2017 General Plan, unless the City Council overrides the Plan as provided for in state law.
- LUE 5.55 **Development Review.** Refer all major land use actions to the Airport Land Use Commission for review, pursuant to Policy 1.5.3 of the ALUP until: 1) the Commission finds the City's General Plan to be consistent with the ALUP, or 2) the City Council has overruled the Commission's determination of inconsistency, or 3) the Commission elects not to review a particular action.
- LUE 5.56 **Continued Airport Operation.** Support the continued operation of Flabob and Riverside Municipal Airports to help meet airport services needs within the land-use compatibility criteria with respect to potential noise and safety impacts.
- LUE 5.57 **Consistency Requirement.** Review all proposed projects and require consistency with any applicable provisions of the Riverside County Airport Land Use Plan as set forth in *Appendix A-4.0*, and require General Plan and/or Zoning Ordinance amendments to achieve compliance, as appropriate.
- LUE 5.58 **ALUP Amendments.** Review all subsequent amendments to any airport land-use compatibility plan and either adopt the plan as amended or overrule the Airport Land Use Commission as provided by law (*California Government Code §65302.3*).
- LUE 5.59 **General Plan Adoption or Amendment.** Prior to the amendment of this General Plan or any specific plan, or the adoption or amendment of a zoning ordinance or a building regulation within the planning boundary of any airport land use compatibility plan, the City will refer such proposed actions for determination and processing as provided by the Airport Land Use Law.
- LUE 5.60 **Cluster Development.** Allow the use of development clustering and/or density transfers to meet airport

compatibility requirements as set forth in the applicable Airport Land Use Compatibility Plan.

- LUE 5.61 **Bird-attracting Uses.** In accordance with FAA criteria, avoid locating sanitary landfills and other land uses that attract birds within 10,000 feet of any runway used by turbine-powered aircraft and within 5,000 feet of other runways. Also, avoid locating attractors of other wildlife that can be hazardous to aircraft operations in locations adjacent to airports.
- LUE 5.62 **Encroachment.** Ensure that no structures or activities encroach upon or adversely affect the use of navigable airspace.
- LUE 5.63 **Voluntary Review.** The City, from time to time, may elect to submit proposed actions or projects voluntarily that are not otherwise required to be submitted to the ALUC under the Airport Land Use Law in the following circumstances:
- Clarification: If there is a question as to the purpose, intent, or interpretation of an Airport Land Use Compatibility Plan (ALUCP) or its provisions; or
 - Advisory: If assistance is needed concerning a proposed action or project relating to Airport Land Use matters.
- LUE 5.64 **Airport Referrals.** Submit all development proposals located within an Airport Influence Area to the affected airport for review.

Programs

[TBA]

Historic Resource Overlay (HRO)

Figure 2-34: Historic Jensen-Alvarado Ranch and Museum, Jurupa Valley

The Historic Resource Overlay is applied to sites, buildings, or other resources of historical, archaeological, or paleontological merit, including Native American sacred places or other areas of special cultural merit. Development and land use changes within the HRO require special review to evaluate potential adverse impacts on the resource and to establish measures or conditions to protect the resource. The HRO allows the use of flexible development standards, incentives, and building codes to encourage preservation of historically designated properties and districts, such as the Mills Act and the Historic Building Code. The overlay is being applied to several historic and potentially historic properties listed in Table

4.1: Historic and Potentially Historic Resources in Jurupa Valley (page [4-40](#)), concurrent with adoption of the 2017 General Plan.

Policies

- LUE 5.65 **Resource Preservation.** Within the HRO, require the preservation of designated historic structures in compliance with the Secretary of the Interior's Standards for the Treatment of Historic Properties and other standards and guidelines as adopted by the City.
- LUE 5.66 **Property Maintenance.** Encourage owners of historic resources to maintain their property in a manner that preserves the property's historic integrity.
- LUE 5.67 **CEQA Compliance.** Require mitigation of significant, adverse impacts to on-site and adjacent, designated historic, or other cultural resources as a condition of approval of any project requiring California Environmental Quality Act (CEQA) review.
- LUE 5.68 **Adaptive Reuse.** Encourage adaptive reuse of historic resources to preserve them and prevent architecturally inappropriate changes or loss through disrepair and demolition.
- LUE 5.69 **New Development.** Encourage developers of residential and commercial developments within a 300-foot radius from a historic resource to be compatible with the historic resource in terms of scale, massing, building materials, and general architectural treatment.
- LUE 5.70 **Preservation.** Encourage the continued preservation and operation of the Jensen-Alvarado Historic Ranch and Museum and avoid municipal actions, such as capital improvements and development approvals that would detract from its historic significance and setting, or otherwise affect its long-term viability as a public historic park and museum.
- LUE 5.71 **Flexible Standards.** Apply flexible development standards where appropriate and necessary to help preserve historic buildings and sites. In the event of an earthquake, flood, or other natural disaster, or in the event of arson, encourage property owners to preserve, repair, and restore damaged historic structures. If a historic building is damaged so that it is physically infeasible to restore, the replacement building should reflect the former building's architectural character.
- LUE 5.72 **Wayfinding Signs and Historic Plaques.** Encourage the placement of attractive and historically appropriate City "wayfinding" or directional signage, including electronic

or web-based interpretive information, and the installation of historic plaques that identify and celebrate historic buildings and other cultural resources.

Programs

- LUE 5.1.10 **Historic Resource Criteria.** Prepare eligibility criteria and procedures for the designation of potential historic resources (e.g., Galleano Winery; Jensen-Alvarado Ranch) and potential historic districts (e.g., Downtown Rubidoux).
- LUE 5.1.11 **Historic Survey.** Prepare a historic resources survey to identify historic buildings, sites, and other important cultural landmarks to be preserved.
- LUE 5.1.12 **Zoning Ordinance Amendment.** Amend the Zoning Ordinance to require an assessment of potential impacts to on-site and nearby historic resources as part of planning applications for general plan amendments, rezoning, and conditional use permits.
- LUE 5.1.13 **Demolition.** Amend the Zoning Regulations to include Historic Resource demolition procedures.

LUE 6 – Distinct Communities

One of the most unique and delightful aspects of Jurupa Valley is the variety and number of distinct communities located here. The City's motto, "A Community of Communities," is an apt description, since residents strongly identify with these nine different communities. Each community varies in size, visual character, and focus. While separate, residents in each community unite in a commitment to preserving their uniqueness and to working together to create a prosperous and healthy future for the City as a whole.

Belltown

Belltown is a small community located north of SR 60, between Rattlesnake Peak and the Santa Ana River. This community is characterized by low-density single-family residences, a large industrial area and, scattered commercial uses.

Figure 2-35: Belltown, looking northeast, with Market Street in center of photo

Crestmore Heights

Crestmore Heights has a mix of mostly older, suburban, and semi-rural properties at the base of the Jurupa Mountains and near the Agua Mansa Industrial Area. The area offers opportunities for animal keeping and has good access to open space and equestrian and hiking trails.

Figure 2-36: Crestmore Heights, looking north, with Rubidoux Boulevard in center of photo

Glen Avon

The largely low-density community of Glen Avon is located in the central portion of Jurupa, just south of SR 60. The rural community area southerly of Jurupa Road affords an opportunity to maintain an equestrian friendly place and serve as an historic village center. Yet, Mission Boulevard and Van Buren Boulevard cut through this community, accommodating scattered commercial, industrial, and higher-intensity residential development. The Jurupa Mountains and Pedley Hills offer a scenic natural backdrop for this community, as well as the traveling public.

Figure 2-37: Glen Avon, looking north, with SR 60 crossing left to right

Indian Hills

Indian Hills is a picturesque, golf-course-oriented residential enclave located in the foothills between the Pedley Hills and the community of Rubidoux, northerly of the Santa Ana River. Much of this area is included within, and has been developed pursuant to, Specific Plan No. 123.

Figure 2-38: Indian Hills, looking north, toward Pedley Hills

Jurupa Hills

Jurupa Hills is a mostly suburban area located between Limonite Avenue and the Santa Ana River. The community is characterized by gently rolling hills and easy access to the Santa Ana River and trails.

Figure 2-39: Jurupa Hills, looking north, with the Santa Ana River along the bottom of the photo

Figure 2-40: Mira Loma, looking north, with Bain Street and San Sevaine Channel to the right of center of the photo

Mira Loma

The largely rural community of Mira Loma is located in the western portion of Jurupa. The presence of several trails throughout the community reflects the importance of equestrian uses in the area. A significant amount of land in the northwestern Mira Loma area near the I-15/SR 60 junction is converting from dairy to industrial, warehousing, and truck distribution uses to capitalize on direct access to the freeway system and to tap into the rapidly expanding pattern of goods movement throughout the entire region. The proximity of the warehousing uses to the residential areas has generated considerable concern in the community relating to air pollution impacts from the many diesel-powered vehicles and heavy trucks associated with the warehousing and distribution uses.

Figure 2-41: Pedley, looking north, with Limonite Boulevard along the bottom and Van Buren in the center of the photo

Pedley

The community of Pedley is nestled among the rolling foothills and canyons of the Pedley Hills in the southern portion of Jurupa. It contains a variety of rural and suburban-style residential neighborhoods, as well as a thriving commercial district along Limonite Avenue. Industrial uses are located along the banks of the Santa Ana River. Due to its location, history, and mix of uses, the Pedley community includes one of three historic “village centers” in Jurupa Valley. The Metrolink station in Jurupa Valley is located along Limonite Avenue and Van Buren Boulevard, making the Pedley community particularly important in terms of regional connections.

Figure 2-42: Rubidoux, looking north, with Mission Street crossing from the upper left corner

Rubidoux

The historic community of Rubidoux is the most intensely developed of all the communities in Jurupa. Bordered roughly by the Pedley Hills, the Santa Ana River, and SR 60, Rubidoux comprises a variety of land uses, including residential, commercial, industrial, and several public uses. Historic Mission Boulevard serves as the spine for Rubidoux Village Center, one of three such centers in Jurupa Valley where pedestrian-oriented, mixed-use development is encouraged. The Jensen Alvarado Historic Ranch and Museum, and Flabob Airport are prominent features of the Rubidoux community.

Sunnyslope

Nestled at the base of the Jurupa Mountains north of SR 60, Sunnyslope is a mostly low-density community consisting of older, single-family residences and mobile homes. The community's location provides opportunities for equestrians and hikers to explore open space areas along the City's northerly border. Its visibility from the highway also provides opportunities for the development of visitor-serving uses such as hotels, motels, restaurants, and travel centers.

Figure 2-43: Sunnyslope, looking north, toward the Jurupa Mountains

LUE 7 – General Plan Administration

Policies

- LUE 7.1 **Existing, Non-Conforming Uses.** Allow for the continued occupancy, operation, and maintenance of land uses and structures that existed legally at the time of the adoption of the 2017 General Plan and became non-conforming due to use, density, and/or other development standards, and provide for their abatement where appropriate.
- LUE 7.2 **Achieving Conformance.** Encourage existing non-conforming uses to transition into conformance with the new land use designations and/or policies by enacting incentives, facilitating entitlement processing for new conforming land uses and, where necessary, establishing a fair abatement program.
- LUE 7.3 **Regional Planning.** Participate in regional efforts to address issues of mobility, transportation, traffic congestion, economic development, air and water quality, and watershed and habitat management with cities, local and regional agencies, stakeholders, Indian nations, and surrounding jurisdictions.
- LUE 7.4 **Agency Coordination.** Coordinate with local agencies, such as community service districts (CSDs), school districts, Riverside County Fire and Sheriff Departments, and others to ensure adequate service provision for development.
- LUE 7.5 **Development Intensity.** The zoning, development, and use of properties may not exceed the maximum level of residential density specified in the General Plan, a specific plan, or a village plan. If an existing property is smaller in area than would be required by the General Plan, zoning that recognizes the existing lot size may be applied.

- LUE 7.6 **Population Density.** Pursuant to state law, each land use designation that provides for residential development (other than caretaker's dwellings) is assigned a population density standard for the purposes of projection and infrastructure planning. These population density standards are relevant only for general planning purposes and shall not be interpreted as constituting legal limitations on the number of persons who may reside at any particular location or parcel.

LUE 8 – General Plan Land Use Implementation

Policies

- LUE 8.1 **Land Use Map.** Accommodate land development and uses in accordance with the patterns and distribution of uses and density depicted on the *2017 General Plan Land Use Plan, Figure 2-7* (page [2-14](#)), specific plans, and community and village land use maps.
- LUE 8.2 **Consistency with Community Values Statement.** Provide a land use mix at Citywide and village plan levels that is consistent with the Community Values Statement, is based on projected need, and is supported by evaluation of impacts to the environment, the economy, infrastructure, and public services.
- LUE 8.3 **Community Character.** Accommodate a range of community types and character, from semi-rural equestrian properties, agricultural, and rural enclaves to traditional village and suburban communities with a small-town "feel."
- LUE 8.4 **Multimodal Orientation.** Provide for a broad range of land uses, intensities, and densities, including a range of residential, commercial, business, industry, open space, recreation, and public facilities uses and locate them to capitalize on multimodal transportation opportunities and to promote compatible land use patterns that reduce reliance on the automobile.
- LUE 8.5 **Residential Growth Areas.** Locate residential growth in areas near major transportation or where well served by rail or public transit and within easy walking or biking distance from schools, parks and neighborhood-serving uses, to the greatest extent possible.
- LUE 8.6 **Retail and Office Growth Areas.** Locate retail commercial and professional office growth near or

within existing and planned village centers and commercial nodes to the greatest extent possible.

- LUE 8.7 **Industrial, Warehousing and Service-Commercial Growth Areas.** Limit industrial, warehousing and service-commercial uses to the *Mira Loma Warehouse and Distribution Center Overlay, Figure 2-9* (page [2-26](#)), and to other areas readily accessible from major highways or rail traffic, and sufficiently separated and buffered to protect residential uses.
- LUE 8.8 **Environmentally-Sensitive Areas.** Prevent inappropriate development in areas that are environmentally sensitive or subject to severe natural hazards.

LUE 9 – Land Use Compatibility

Policies

- LUE 9.1 **Land Use Compatibility.** Require land to be developed and used in accordance with the General Plan, specific plans, and community and village plans to ensure compatibility and minimize impacts.
- LUE 9.2 **High Quality Development.** Require that all development be of high quality and enhance the positive characteristics and unique features of the project site, neighboring properties and the surrounding community.
- LUE 9.3 **Protect Existing Legal Uses.** Retain and enhance the integrity of legal, existing residential, commercial, agricultural, and open space areas by protecting them from encroachment of land uses that would result in significant, adverse impacts from noise, vibration, noxious fumes, glare, shading, and traffic.
- LUE 9.4 **Buffering.** Require buffering between urban uses and adjacent rural/equestrian oriented land uses to the maximum extent feasible. New development shall be responsible for providing the buffering on its own site or off-site, where appropriate, and acceptable to affected property owners.

LUE 10 – Hillside Development

Policies

- LUE 10.1 **Hillside Development Limitations.** Limit development in areas that contain natural slopes, canyons, ravines, or other significant elevation changes, regardless of land use designation, and apply the following policies:

- LUE 10.2 **Natural Landforms.** Require that hillside development preserve and protect the site's natural landforms and native vegetation, and preserve established trails.
- LUE 10.3 **Cluster Development.** Require that development clustering be used, where appropriate, to retain natural slopes, protect native trees, vegetation, wildlife corridors, riparian areas and springs, cultural resources, and open space, and preserve scenic views.
- LUE 10.4 **Hillside Grading.** Ensure that hillside structures, site improvements, landscaping and drainage, and public facilities (including but not limited to public streets, utilities, grading and drainage, signs and other features) are developed in a manner that minimizes hazards from erosion and slope failures.
- LUE 10.5 **Visually Sensitive Areas.** Development on visually significant ridgelines, canyon edges, and hilltops shall use sensitive siting, architectural design, and appropriate landscaping to ensure that development is visually unobtrusive and compatible with its setting.
- LUE 10.6 **Specialized Construction.** Use adaptive construction techniques, such as post and beam construction, and special foundations when the need is identified in a soils and geology report accepted by the City.
- LUE 10.7 **Grading.** Limit grading, cut, and fill to the minimum quantities necessary to provide stable areas for structural foundations, street rights of way, parking facilities, and other intended uses.

LUE 11 – Community Design and Aesthetics

Policies

- LUE 11.1 **Land Use Balance.** Encourage communities that provide a balanced mix of land uses, including open space, employment, recreation, shopping, and housing.
- LUE 11.2 **Infill Development.** Assist in and promote the development of infill and underutilized parcels, which are located in Opportunity and specific plan areas, as identified on the General Plan Land Use Map.
- LUE 11.3 **Parcel Consolidation.** Promote parcel consolidation or coordinated planning of adjacent parcels through incentive programs and planning assistance, where appropriate.

- LUE 11.4 **Street and Trail Connectivity.** Create street and trail networks that directly connect local destinations and that promote use by pedestrians, equestrians, and bicyclists.
- LUE 11.5 **Residential/Commercial Connectivity.** Maintain and/or provide connectivity between residential and commercial developments where appropriate.
- LUE 11.6 **Complete Streets.** Promote compact growth and complete streets that promote pedestrian, equestrian and bike trails, and that takes advantage of public transit routes and facilities.
- LUE 11.7 **Community Linkages.** Create opportunities to link communities through access to multimodal transportation systems.
- LUE 11.8 **City Buffer Areas.** Use open space, hills, greenways, agricultural lands, parks, and riparian areas to help define the City's character and views and to serve as land use buffers from adjacent cities.
- LUE 11.9 **Promote Unique Community Character.** Use community plans to promote the development and preservation of unique communities in which each community exhibits a special sense of place and quality of design.
- LUE 11.10 **Development Incentives.** Allow techniques such as development incentives, density transfer programs, or other mechanisms to achieve broad community or preservation goals.

Program

- LUE 11.1.1 **Distinctive Communities Map.** Prepare a Distinctive Communities Map that reflects the intent of the General Plan and its residents that the unique qualities and characteristics of each of the City's distinctive communities will be maintained and not be absorbed into continuous suburban development. The map should be a "bubble" diagram rather than attempting to delineate precise community boundaries. Topographic features such as hills, watercourses, floodplains, and manmade features, such as streets and landmarks, should constitute the community definers or approximate boundaries.

LUE 12 – Project Design

New developments shall be located and designed to visually enhance and not degrade the character of the surrounding community. Development projects shall consider and where appropriate, address the following.

Policies

- LUE 12.1 **Small-Town Character.** Protect and enhance Jurupa Valley's small-town character, maintain or improve walkability, provide bike and equestrian trails, and social connectivity and "sense of place."
- LUE 12.2 **Design Standards.** Comply with the design standards of the appropriate General Plan and community plan land use category.
- LUE 12.3 **Construction.** Require that public and private structures be constructed in accordance with the requirements of the City's zoning, building, and other pertinent codes and regulations.
- LUE 12.4 **Landscape and Irrigation Plans.** Require landscape and irrigation plans to be submitted and implemented for development projects subject to discretionary review, as required by City Landscape Standards.
- LUE 12.5 **Water Conservation Techniques.** Require water conservation techniques, such as groundwater recharge basins, use of porous pavement, cisterns for non-potable water uses, drought-tolerant landscaping, drought-conscious irrigation systems, water recycling, and other water conservation methods to be included in new public and private development, as appropriate.
- LUE 12.6 **Energy Efficiency.** Require development projects to use energy efficient design features in their site planning, building design and orientation, and landscape design that meet or exceed state energy standards.
- LUE 12.7 **Public Art.** Encourage property owners, developers, and designers to incorporate innovative and creative design and development concepts into new development, including provisions for public art.
- LUE 12.8 **Signage.** Require development projects to use high quality, well-designed signage that is architecturally integrated with and complementary to the proposed building(s) and adjacent development.
- LUE 12.9 **Commercial Vehicle Access.** Use safe and convenient vehicular access and reciprocal access between adjacent commercial uses and properties.

- LUE 12.10 **Residential Compatibility.** Require non-residential uses to be designed so that site and building entries, drive-ways, parking and loading areas, trash and recycling areas, drive-through uses, and storage bays are located and designed to minimize conflicts with adjacent residential neighborhoods due to traffic, noise, vibration, odor, lighting, and other impacts on surrounding properties. Any potential impacts shall be mitigated to a level of non-significance, to the approval of the City.
- LUE 12.11 **Landscape Maintenance.** Require development projects to include landscaping in all site areas, including street trees, parking lots, setback areas, open spaces, and other exterior use areas. Landscaping shall include trees, shrubs and ground covers, and an automatic, water-conserving irrigation system, and shall be designed and maintained in accordance with City Landscape Standards.
- LUE 12.12 **Natural Features.** Require development projects, including public projects, utilities, and earthworks/grading, to protect and preserve natural features, such as unique natural terrain, rocky outcrops, ridgelines, drainage ways, mature trees, and native vegetation, wherever possible, particularly where they provide continuity with more extensive regional systems.
- LUE 12.13 **Connectivity.** Require development projects to be designed to provide adequate space for pedestrian connectivity and access, recreational trails, vehicular access and parking, supporting functions, open space, and other amenities.
- LUE 12.14 **Parking Lots.** Design parking lots and structures to be functionally and visually integrated and connected, with parking adequately screened from public streets by a 3-foot-tall landscape planting, earth berm or wall, and located behind or on the side of the building(s) served.
- LUE 12.15 **Accessibility.** Require building entries to be accessible from the public sidewalk, parking and pedestrian areas, and equestrian and bicycle routes where appropriate, and include amenities that encourage accessibility, such as low-scale entry signage, bicycle parking, equestrian hitching posts, down lighting, and waiting areas, where appropriate.
- LUE 12.16 **Street Crossings.** Require new development to provide safe and frequent pedestrian, bicycle and, where

appropriate, equestrian street crossings, including over- or underpasses where necessary.

LUE 12.17 Screened Trash and Recycling Areas. Require new development to provide clean, safe, secure, visually screened trash and recycling enclosures that are architecturally compatible with the development. Existing development and uses are encouraged to provide safe, secure, and visually screened trash and recycling enclosures.

LUE 12.18 Crime Prevention. Require that development projects consider public safety and “defensible space” in their design through the appropriate use of building windows, entries, landscaping, and site lighting that is designed for efficiency and to reduce glare and “light spillage” across property lines.

LUE 12.19 Property Maintenance. Property owners shall maintain their sites, structures and landscaping in a safe, healthy, and attractive condition through the following:

- a. Provide proactive code enforcement activities.
- b. Promote programs and work with local service organizations and educational institutions to inform residential, commercial, and industrial property owners and tenants about property maintenance methods.
- c. Promote and support community and neighborhood based efforts for the maintenance, upkeep, and renovation of structures and sites.
- d. Promptly clean up and remove graffiti, trash, animal waste, toxic materials, or other materials or substances that have the potential to detract from residential and neighborhood safety, health or environmental quality. Inoperable appliances and vehicles, and abandoned or unsafe structures should be removed, repaired, or properly stored and visually screened.

Program

12.1.1 Architectural Guidelines. Within 18 months of adopting the 2017 General Plan, adopt Architectural Guidelines addressing site planning, building and landscape design, and signage. The Guidelines shall update and, where appropriate, merge and integrate community design standards developed by the County of Riverside and applied to various areas within Jurupa Valley.

LUE 13 – Infrastructure, Public Facilities, and Services

Policies

- LUE 13.1 **Service Capacity.** Ensure that development does not exceed the City's or the community services districts' ability to adequately provide supporting infrastructure and services, such as water, wastewater treatment, energy, solid waste and public services such as police/fire/emergency medical services, recreational facilities, and transportation systems.
- LUE 13.2 **Monitoring.** Monitor the capacities of infrastructure and services in coordination with service providers, utilities, and outside agencies and jurisdictions to ensure that housing and population growth does not reduce levels of service below acceptable levels.
- LUE 13.3 **Urban Water Management Plans.** Review all projects for consistency with the appropriate community services district's urban water management plans.

LUE 14 – Fiscal Impacts

- LUE 14.1 **Fair Share Infrastructure Funding.** Require that new development contribute its fair share to fund infrastructure and public facilities, such as police and fire facilities, parks, streets, and trail improvements.
- LUE 14.2 **Fiscal Analysis.** Require a fiscal impact analysis for specific plans and major development proposals to reduce or prevent fiscal impacts to the City.

###

3 – MOBILITY ELEMENT

A. INTRODUCTION

This Mobility Element guides the long-term mobility system of the City. Its goals and policies are closely linked with the Land Use Element and are intended to provide the best possible balance among the Jurupa Valley's transportation needs, community character, roadway size, traffic service levels, bicycle, equestrian and pedestrian amenities, public transit opportunities and resources. This Mobility Element represents a new approach to transportation planning in Jurupa Valley. It focuses on *mobility corridors* rather than focusing primarily on streets and roadways. Mobility corridors are transportation pathways that provide for the movement of people and goods between and within cities. They are more than simply a street or roadway. They encompass single or multiple transportation routes and facilities (such as thoroughfares, sidewalks, trails, parkways, public transit, and railroads), the adjacent land uses and the connecting network of streets. As further discussed in the section below on Mobility Corridor Planning, this approach offers several important advantages over conventional transportation and street circulation planning. It:

- Links corridor planning and design to surrounding land uses;
- Coordinates and implements multiple modes of transportation within the corridor, such as pedestrian, bicycle and equestrian facilities;
- Establishes the basic function and design criteria for facilities within each corridor type; and
- Emphasizes *context-sensitive* right of way planning and design which maintains and enhances maintain compatibility with the adjacent neighborhood and protects the City's semi-rural character and quality of life.

One fundamental challenge that cities face is the tension between the desire of local residents to address community character in thoroughfare design, and the desires of a broad range of stakeholders to focus on roadway capacity and to accommodate regional traffic demands. This tension is best addressed through a more holistic approach to corridor planning which sets the framework for detailed, site-specific design of individual thoroughfares. Specific thoroughfare designs tailored to community context and transportation needs are contained in the City's Master Plan of Streets and Trails, to be prepared pursuant to this Element and consistent with its goals and policies.

Local roadways are the most heavily used transportation mode in Jurupa Valley; however, sidewalks, public transit, the Citywide trail system, and bicycle facilities provide opportunities for alternative modes of travel that could relieve pressure on roadways by reducing vehicle miles traveled (VMT). Furthermore, alternative travel modes, such as walking and cycling, have valuable secondary benefits that enhance the overall quality of life in Jurupa Valley. These benefits include traffic calming, walkability, improved health, improved air quality improvement and more neighborly communities.

How we approach transportation is critical to Jurupa Valley's prosperity and closely linked to land use and community character and quality of life. In the Mobility Element addresses all aspects of the movement of goods and people, including pedestrians, bicycles, transit, light rail and commuter rail, air, and automobile traffic within and through the community. In compliance with state law, all city and county general plans must contain a circulation or "mobility" Element that designates future road improvements and extensions, addresses non-motorized transportation alternatives, and identifies funding options. The Mobility Element also identifies transportation routes, terminals, and facilities.

General Plan Advisory Body (GPAC) Recommendations

Mobility and circulation issues were discussed in detail by the GPAC. Committee members discussed circulation and mobility in terms of pedestrian, equestrian, bicyclists and motor vehicle needs. Mobility was considered a key component of the City's quality of life and of overarching importance to Jurupa Valley's residents, as described in the following excerpt from the Community Values Statement.

Mobility. *We support the creation and maintenance of transportation networks (e.g., multi-use equestrian, pedestrian and bicycle trails, complete streets, sidewalks, airport, rail, and public transit) that are safe, attractive, and efficient and provide connectivity to meet the diverse needs for the movement of people and goods.*

There was detailed discussion of specific streets, intersections, modes of travel, and geographic areas needing attention and/or improvements, as discussed in the Final GPAC Report, *Appendix 5.0*. There was broad Committee support for more and safer sidewalks, bicycle paths and multi-use trails, especially in terms of safe routes to schools. Primary issues discussed were: 1) the need for street improvements at key intersections and along major arterial streets,

including repaving and enhanced crosswalks; 2) traffic congestion at several specific intersections; 3) the need for bikeway improvements and bike lane connectivity near schools, parks, community centers, multi-family housing, neighborhood commercial uses, and along common bike routes; and 4) beautification of street rights-of-way, including street trees, drought-tolerant landscaping, trash and graffiti removal, decorative signs and crosswalk paving, transit shelters, street furniture and landmarks and/or public art.

Additional issues important to the Committee were: 5) improved street, intersection and walkway lighting, 6) parked “big rigs” and other vehicles along streets and curbs, 7) undergrounding existing overhead utility lines, 8) “soft edges” between street and sidewalks and equestrian or multi-use trails; and 9) use of flood control channels for trails. These issues and needs are addressed in the Mobility policies and programs in this Element.

Primary Mobility Goal

To create a multi-modal mobility network which protects Jurupa Valley’s semi-rural character and lifestyle, is attractive and provides all users with safe connections to homes, jobs, schools, commercial areas, public facilities and recreation areas, and which reduces dependence on the use of single-occupant automobiles.

B. BACKGROUND

Setting and Regional Context

The City's regional transportation setting is shown in *Figure 3-1*. Jurupa Valley's transportation system is composed of numerous state highways (both freeways and highways), as well as numerous local city routes. The transit system includes common bus carriers, paratransit services and Metrolink (commuter rail service), and other local agency transit and paratransit services. In addition, the City transportation system includes private aviation facilities, limited passenger air service within the City, freight rail service, bicycle facilities, and other services for non-motorized forms of transportation (multi-purpose trails).

An Overall Mobility Vision

As stated in the Land Use Element, the City is moving away from its historic growth patterns that relied heavily on industrial development. It seeks to move toward a pattern of more orderly, balanced growth with preservation of the equestrian lifestyle and more retail shopping, housing choices and local job growth. In Jurupa Valley, the circulation system is intended to accommodate a pattern of managed growth, providing both regional and local links among Jurupa Valley's eight distinct communities. The circulation network will focus on *mobility corridors* and be multi-modal, in that it will promote and accommodate a range of travel options in addition to motor vehicles. These include walking, biking, public transit and commuter rail use, and equestrian trail riding so that citizens and visitors can readily access all parts of the City and move safely within it by utilizing a number of transportation options.

Internal and external links using vehicular, pedestrian, public transit, equestrian, bicycle, and air transportation facilities are essential to meet Jurupa Valley's existing and future needs. The intent of the City's new approaches to growth and mobility is to provide mobility options that help reduce VMT and the need to use automobiles for short, in-City trips. The planned mobility system is designed to fit into the fabric of the City's overall land use pattern and avoid adversely affecting open space systems. A key component to this objective is to manage regional vehicular traffic that is using local arterials for trips that begin and end outside of Jurupa Valley. The Mobility Element promotes strategies and techniques to mitigate the need to create six lane arterials through our small-town communities that would primarily serve "pass-through" traffic.

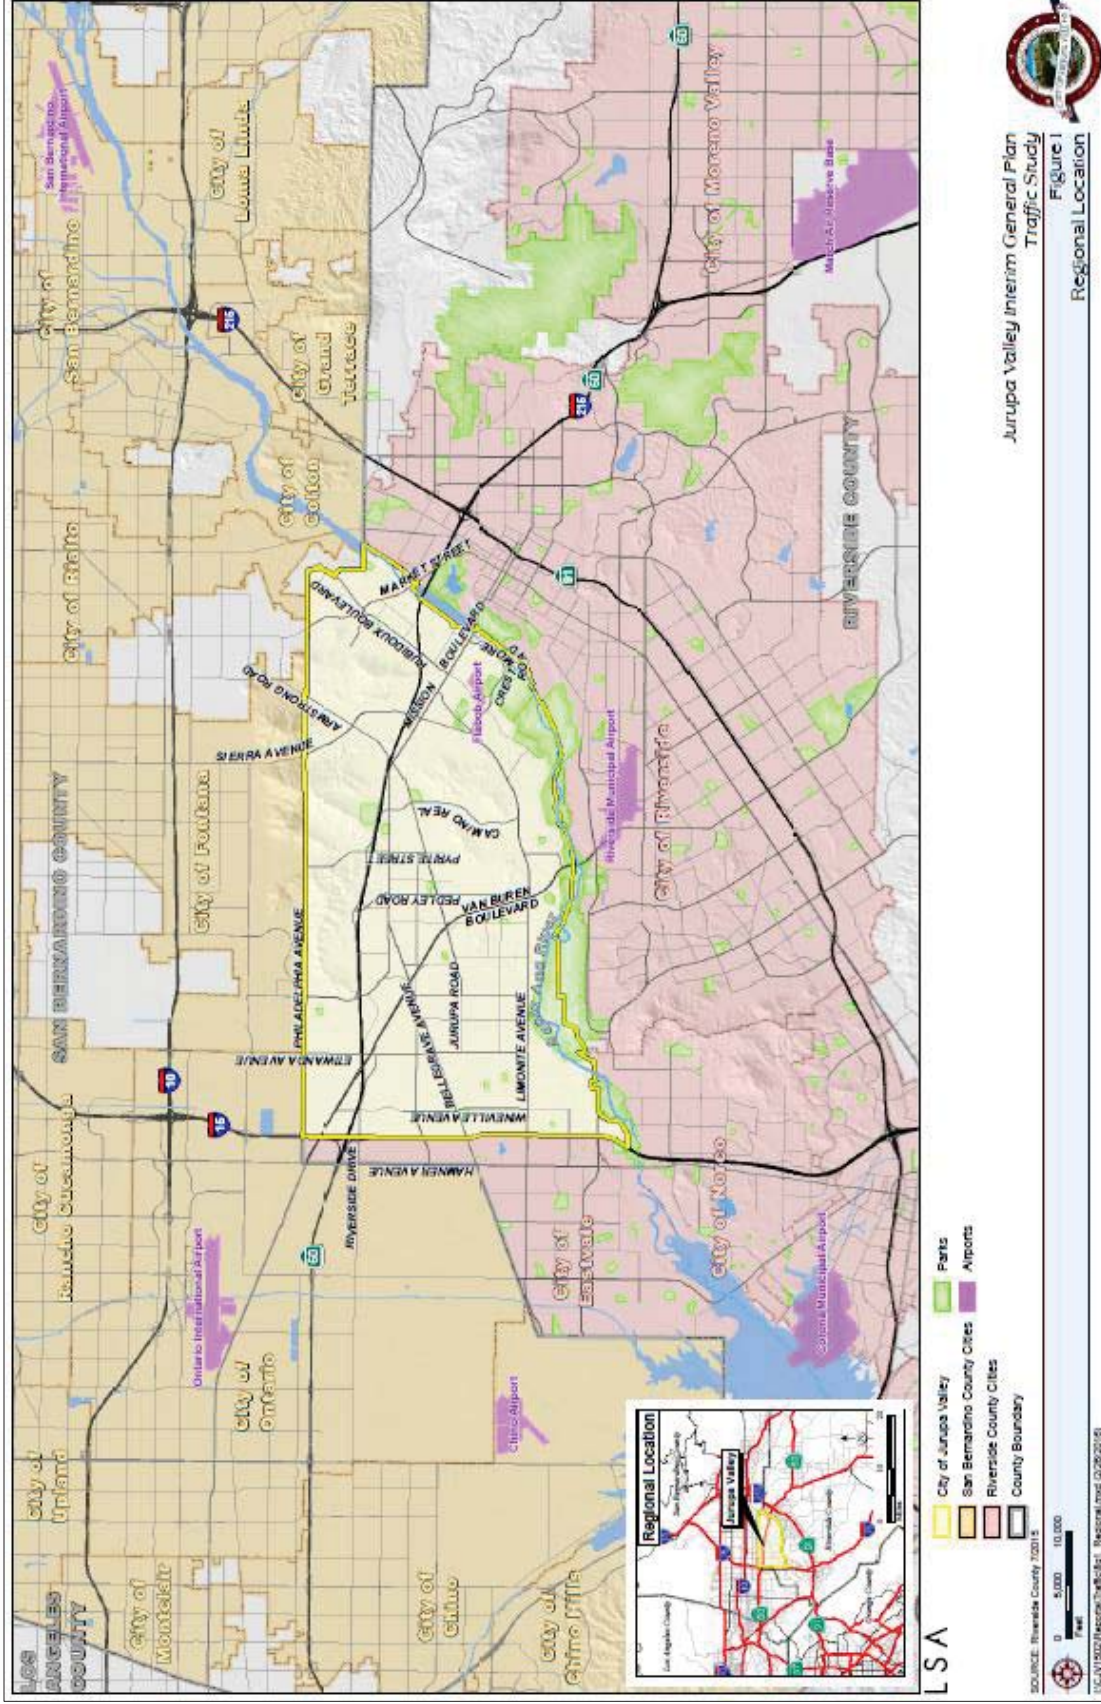

Figure 3-1: Regional transportation setting

In addition to the General Plan, the City supports several transportation plans and programs that are necessary to manage current traffic demands in and plan for the City's future transportation needs, including the Southern California Area Government's (SCAG) 2012-2035 Regional Transportation Plan/Sustainable Communities Strategy, Caltrans' District 8 Highway Plan and County of Riverside Transportation Plan.

Public Participation/Intergovernmental Coordination

The Mobility Element was created in a public forum with input from numerous interest groups, citizens, jurisdictions, and agencies. Extensive efforts were made to involve the public, including: eight public workshops on community assets, issues and needs, and monthly meetings of the General Plan Advisory Committee (GPAC) over 1 year, as described in the GPAC Final Report (see *Appendix 5.0*). City staff also met with staff from community service districts and surrounding jurisdictions to discuss regional issues, including regional transportation, connectivity and trails. As stated in the Land Use Element, the City is moving away from a growth pattern of random sprawl toward a pattern of managed growth and increased job creation that preserves community character. The intent of managing the new growth patterns and the new mobility systems is to accommodate the transportation demands created by Jurupa Valley's growth and to provide mobility options that help reduce the need to utilize the automobile. The circulation system is designed to be "context-sensitive." That is, streets and other improvements within the public right of way are purposefully located and designed to visually "fit" into and enhance the community or neighborhood in which they are located, and to logically serve the adjacent land uses and open space areas.

C. MOBILITY ELEMENT GOALS, POLICIES, AND PROGRAMS

The City's network of roads, streets, sidewalks, trails, rails and other transportation infrastructure is critical to its safety, economic sustainability, and overall quality of life. Key issues include: Roadway System, Non-Automotive System, Trails, Freight Movement, Airports, Scenic Corridors and Street Character and Design, and System Operation, Maintenance and Funding. Each of these issues is discussed separately below, followed by goals, policies and programs for each of these topic areas.

Goals

To be a City that establishes and maintains a balanced, multi-modal mobility network that:

- ME 1 Provides mobility corridors for all modes of travel, including transit, bicyclists, pedestrians, equestrians, rail traffic and motor vehicles, and that helps reduce locally-generated VMT.
- ME 2 Maintains an interconnected network of bicycle, pedestrian, equestrian and public transit facilities that encourage non-automotive travel.
- ME 3 Promotes trails for pedestrian, bicycle and equestrian use for recreational as well as local travel needs.
- ME 4 Establishes policies that coordinate the circulation system with the General Plan, specific plans and village center plans, and Land Use Element, and that provide direction for future decision-making.
- ME 5 Creates a comprehensive, interconnected and economical system of public transportation options that help reduce traffic congestion and vehicle emissions, and that help reduce dependence on the personal automobile.
- ME 6 Accommodates and manages *commercial* truck traffic to promote local jobs and economic growth and protect public safety, health and welfare.
- ME 7 Accommodates continued, safe freight railroad operations in Jurupa Valley.
- ME 8 Helps preserve, protect and enhance safety and land use compatibility at Flabob Airport.
- ME 9 Preserves and where possible, enhances scenic corridors and communities' visual character through context-sensitive street and roadway design that removes blight, preserves scenic views, retains mature trees, protects sensitive environments and wildlife habitats, and enhances neighborhood safety and character.
- ME 10 Develops implementation strategies and identifies funding sources to provide for the timely implementation of the Mobility Element's goals, policies and program.
- ME 11 Provides strategies to manage "pass-through" regional traffic such that the character of the community is preserved.

Policies and Programs

1.0 – Mobility Corridors

Mobility Corridor Planning

The Mobility Element approaches long range transportation planning holistically. That is, it focuses on planning mobility corridors rather than focusing primarily on streets and roads. Mobility planning requires pathways or conduits for movement of people and goods. In the City of Jurupa Valley, the character of the community demands that these pathways accommodate numerous forms of mobility without altering the semi-rural, small town character of the City's distinctive communities. Thus, rather than construct the City's mobility system around streets as the primary factor, this element takes an unconventional approach in identifying the major community-wide travel routes as Mobility Corridors with multiple travel choices.

As provided in *Table 3.1*, the right of way widths for the various corridor types will be standardized, based on classifications that relate to expected volume of use. When a segment of a corridor is to be designed or developed, the following principles shall apply.

Roadway Components Within a Mobility Corridor

1. Roadway designs shall maintain no more than two through travel lanes wherever possible and shall not exceed four through travel lanes except within Express Mobility Corridors, or where a transition is required for roadways that connect to roads in other jurisdictions at the City boundaries.
2. Existing improvements and rights of way within mobility corridors may establish the general design criteria for the relevant segment in order to avoid replacing existing street improvements or right of way acquisitions for street widening.
 - a. Where sidewalks are appropriate, they should be detached and separated from the roadway by landscaped parkways. Where sidewalks are adjacent to curb on an existing roadway within a mobility corridor, sidewalks on either side of the relevant segment may be continued to a reasonable transition point.
 - b. Where two-lane roadways exist within a mobility corridor in low density, semi-rural areas, widening the existing through lanes for safety may be determined appropriate by the City Council on a case-by-case basis. Adding lanes to accommodate additional vehicular traffic shall require a finding by the City Council that the need for additional capacity takes precedence over preserving the existing corridor character.

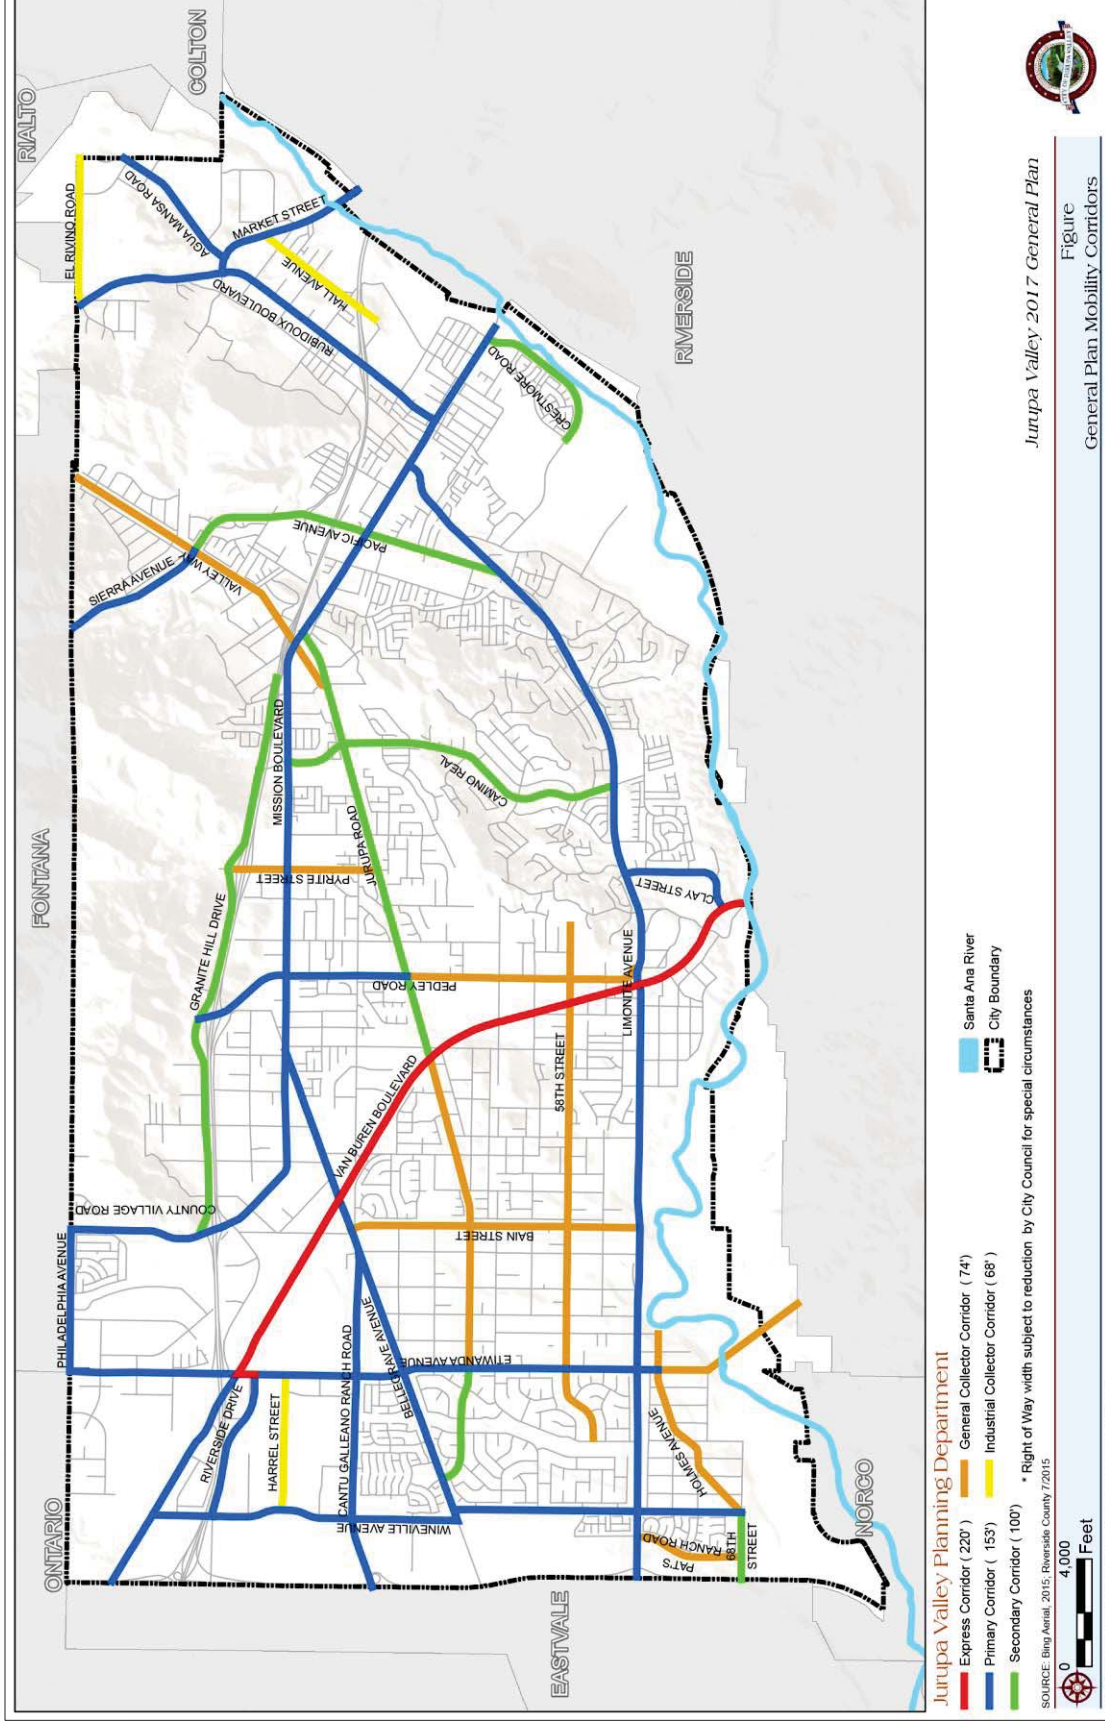

Figure 3-2: Mobility corridors map

Table 3.1: Mobility Corridor Classifications

| Mobility Corridor Classifications | Right of Way Width ¹ (feet) | Roadway Classification and Number of Lanes | Applicable Streets ² |
|-----------------------------------|--|--|--|
| Express Corridor | 220 | Expressway (6-8) | Van Buren |
| Primary Corridor | 153 | Urban Arterial (4-6) | Mission, Limonite, Rubidoux, Cantu-Galleano, Etiwanda, Country Village |
| | 128 | Arterial (2-4) | Country Village, Pedley north of Mission |
| | 118 | Major (2-4) | Wineville, Pedley, Clay, Philadelphia, Bellegrave, Riverside Drive, Sierra, Market, and Limonite |
| Secondary Corridor | 100 | Secondary (2) | Pedley, Camino Real, Granite Hill, Crestmore, Pacific |
| General Collector Corridor | 74 | Collector (2) | Jurupa Road, Pat's Ranch Road, Bain, Granite Hill, Valley Way, Holmes, 58th |
| Industrial Collector Corridor | 68 | Industrial Collector (2) | Hall, El Rivino, Pyrite, Harrel |
| Local Corridor | 64 | Local | Most residential streets |

¹Right of way width subject to reduction by City Council for special circumstances.

²Partial street listing to show types and range of existing streets; subject to modification in the *Master Plan of Streets and Trails*.

Preservation of Community Character Within a Mobility Corridor

1. Mobility corridors shall include pathways for non-vehicular travel, including equestrian trails, sidewalks, off-street bikeways, multi-purpose paved trails, etc.
2. Mobility corridors shall include provisions for bus turnouts.
3. Mobility corridors shall provide for connectivity to the Pedley train station.
4. Mobility corridors shall include parkways, street trees and where appropriate, medians that include substantial landscape treatments and that separate pedestrians and equestrians from vehicle traffic and provide a pleasant and inviting traveling experience for non-vehicular travel.
5. Express and Primary Mobility Corridors shall include a landscaped raised median wherever possible.
6. All mobility corridors shall be designed to produce an attractive, safe and high-quality environment of a tree lined streets within a semi-rural, small town community.

As part of the 2017 General Plan, the City has adopted new street classifications that use "Mobility Corridors" to emphasize the multi-modal character of Jurupa Valley's transportation system. Mobility Corridors include a range of transportation uses possible in the entire right of way, not just the paved roadway. For example, a Primary Mobility Corridor may include a Class III bikeway, public sidewalk, and an equestrian trail in addition to four travel lanes for motor vehicles. The general relationships between the previous

street classifications and the mobility corridors are shown in *Table 3.1*. The corridor descriptions assume narrower rights-of-way than shown in the Conventional Roadway Cross Sections, *Figure 3-5* (page [3-20](#)). They reflect “complete streets” design goals and seek to minimize the need and community impacts of street widening; however, they are not inflexible standards. The City Council may modify the right of way width and number of lanes in specific circumstances where warranted by special corridor conditions, such as the trails and sidewalk requirements, special pedestrian and parking needs, grading and landscaping requirements and the need for regional connectivity at City limits.

Mobility Corridors Policies and Programs

Policies

- ME 1.1 Mobility Corridors.** Require that the City’s mobility corridors:
- a. Accommodate public transit, motor vehicles, bicyclists, equestrians and pedestrians within the public right of way wherever feasible, using multi-modal, “complete streets” design strategies.
 - b. Maintain at least a Level of Service (LOS) D or better at all intersections, except where flexibility is warranted based on a multi-modal LOS evaluation, or where LOS E is deemed appropriate to accommodate complete streets/multi-modal facilities.
 - c. Be designed to meet the needs of the existing population and business activities, as designated by the Land Use Element and in accordance with the Mobility Corridor concept and to maintain consistency with the *Master Plan of Streets and Trails* (to be developed).
 - d. Be designed so that new roadways, ramps, traffic control devices, bridges or similar facilities, and significant changes to such facilities, are designed to accommodate multi-modal facilities in a balanced manner.
 - e. Be maintained in accordance with best practices and the City’s Street Improvement Program.

ME 1.2 Corridor Design. When existing mobility corridors require modification or new corridors are established, their design shall be consistent with the following standards:

- a. Roadway designs shall maintain no more than two through travel lanes wherever possible and shall not exceed four through travel lanes except within Express Mobility Corridors, or where a transition is required for roadways that connect to roads in other jurisdictions at the City boundaries.
- b. Existing improvements and rights of way within mobility corridors may establish the general design criteria for the relevant segment in order to avoid replacing existing street improvements or right of way acquisitions for street widening.
- c. Where sidewalks are appropriate, they should be detached and separated from the roadway by landscaped parkways. Where sidewalks are adjacent to curb on an existing roadway within a mobility corridor, sidewalks on either side of the relevant segment may be continued to a reasonable transition point.
- d. Where two lane roadways exist within a mobility corridor in low density, semi-rural areas, widening the existing through lanes for safety may be determined appropriate by the City Council on a case-by-case basis. Adding lanes to accommodate additional vehicular traffic shall require a finding by the City Council that the need for additional capacity takes precedence over preserving the existing corridor character.
- e. Provisions for bus turnouts, bus shelters and connectivity to the Pedley Metrolink Station.

ME 1.3 Preserving Community Character in Mobility Corridors. Mobility corridors shall be designed to consider the land use and aesthetic contexts of their surroundings and shall include the following features unless determined infeasible or inconsistent with General Plan goals and policies:

- a. Mobility corridors shall include parkways, street trees and where appropriate, medians that include substantial landscape treatments and that separate pedestrians and equestrians from vehicle traffic and provide a pleasant and inviting traveling experience for non-vehicular travel.

- b. Express and Primary Mobility Corridors shall include a landscaped raised median wherever possible and shall include substantial setbacks and landscape buffers to protect adjacent noise-sensitive uses.
- c. Mobility corridors shall be designed to produce an attractive, safe and high-quality environment of a tree lined streets within a semi-rural, small town community.

Programs

(TBA)

2.0 – Roadway Network

Jurupa Valley's roadway network must meet multiple goals. It must be safe, convenient, efficient and well-balanced to address all roadway users' needs and compatible with its surroundings. The roadway network must be planned and designed to meet existing and future transportation needs, yet be designed to preserve and enhance the character and quality of life that Jurupa Valley residents cherish. At the same time, the roadway system must meet or exceed adopted performance standards. When feasible and where appropriate, the public rights-of-way must accommodate multiple travel "modes", including motor vehicles, pedestrians, equestrians, bicyclists, landscaping, street furniture, utilities and traffic control devices, all in safe and aesthetically pleasing ways. This concept is known as "complete streets."

Existing Roadway Network

Access and mobility in Jurupa Valley relies on several integrated transportation systems, namely automotive-based systems characterized by conventional streets and highways; a non-automotive system characterized by equestrian, bicycle and pedestrian facilities, both on- and off-street; a trail system, accommodating multiple users such as pedestrians and equestrians and staging areas; facilities for freight movement, including commercial trucks and rail traffic; and airport facilities. These modes, and their relevant policies and programs, are discussed below.

A well-designed roadway network is essential for safe and efficient surface transportation. Such a network can cut down travel times, reduce accidents on certain facilities, assist in emergency operations, and help in allocating roadway funding. These facilities also serve as the primary thoroughfares for freight and goods movement that supply the local and regional economies. The City's existing Street Network is shown in *Figure 3-3*.

Street Classifications

Streets and highways are classified according to the type of service they are intended to provide. Fundamental to this process is the recognition that individual streets and highways usually do not function independently, but rather, most travel involves movement through a network of streets.

The City's streets are classified in terms of their operational characteristics, right of way width, and land use/transportation function, as described below. *Figure 3-3* shows the circulation network in 2017, using the previous classifications of the City's major streets, based on the County of Riverside's street classification system. A similar classification system is used for many cities within the SCAG region. That classification system has been modified in the 2017 General Plan by applying mobility corridor classifications that address multi-modal, complete streets considerations while incorporating the various County of Riverside classifications.

The City's *original* eight major roadway classifications, plus Local Streets, are briefly described below. In general, they assumed wider ultimate street sections than are anticipated in the 2017 General Plan:

1. **Freeway.** A highway upon which the abutter's rights of access are controlled and that provides separated grades at intersecting streets. The minimum right of way width and number of lanes is determined by the California Department of Transportation (Caltrans).
2. **Expressway.** An Expressway is a multimodal roadway corridor for through traffic. Access from abutting property is restricted. Intersections with other streets or roadways are limited to approximately one-half mile intervals. The minimum right of way is 184 feet to 220 feet. The number of lanes is 6 or 8 and additional right of way may be needed at intersections. *Figure 3-5, Conventional roadway cross sections* illustrates the cross-section for an Expressway. Segments of Van Buren Boulevard are currently designated as an Expressway.

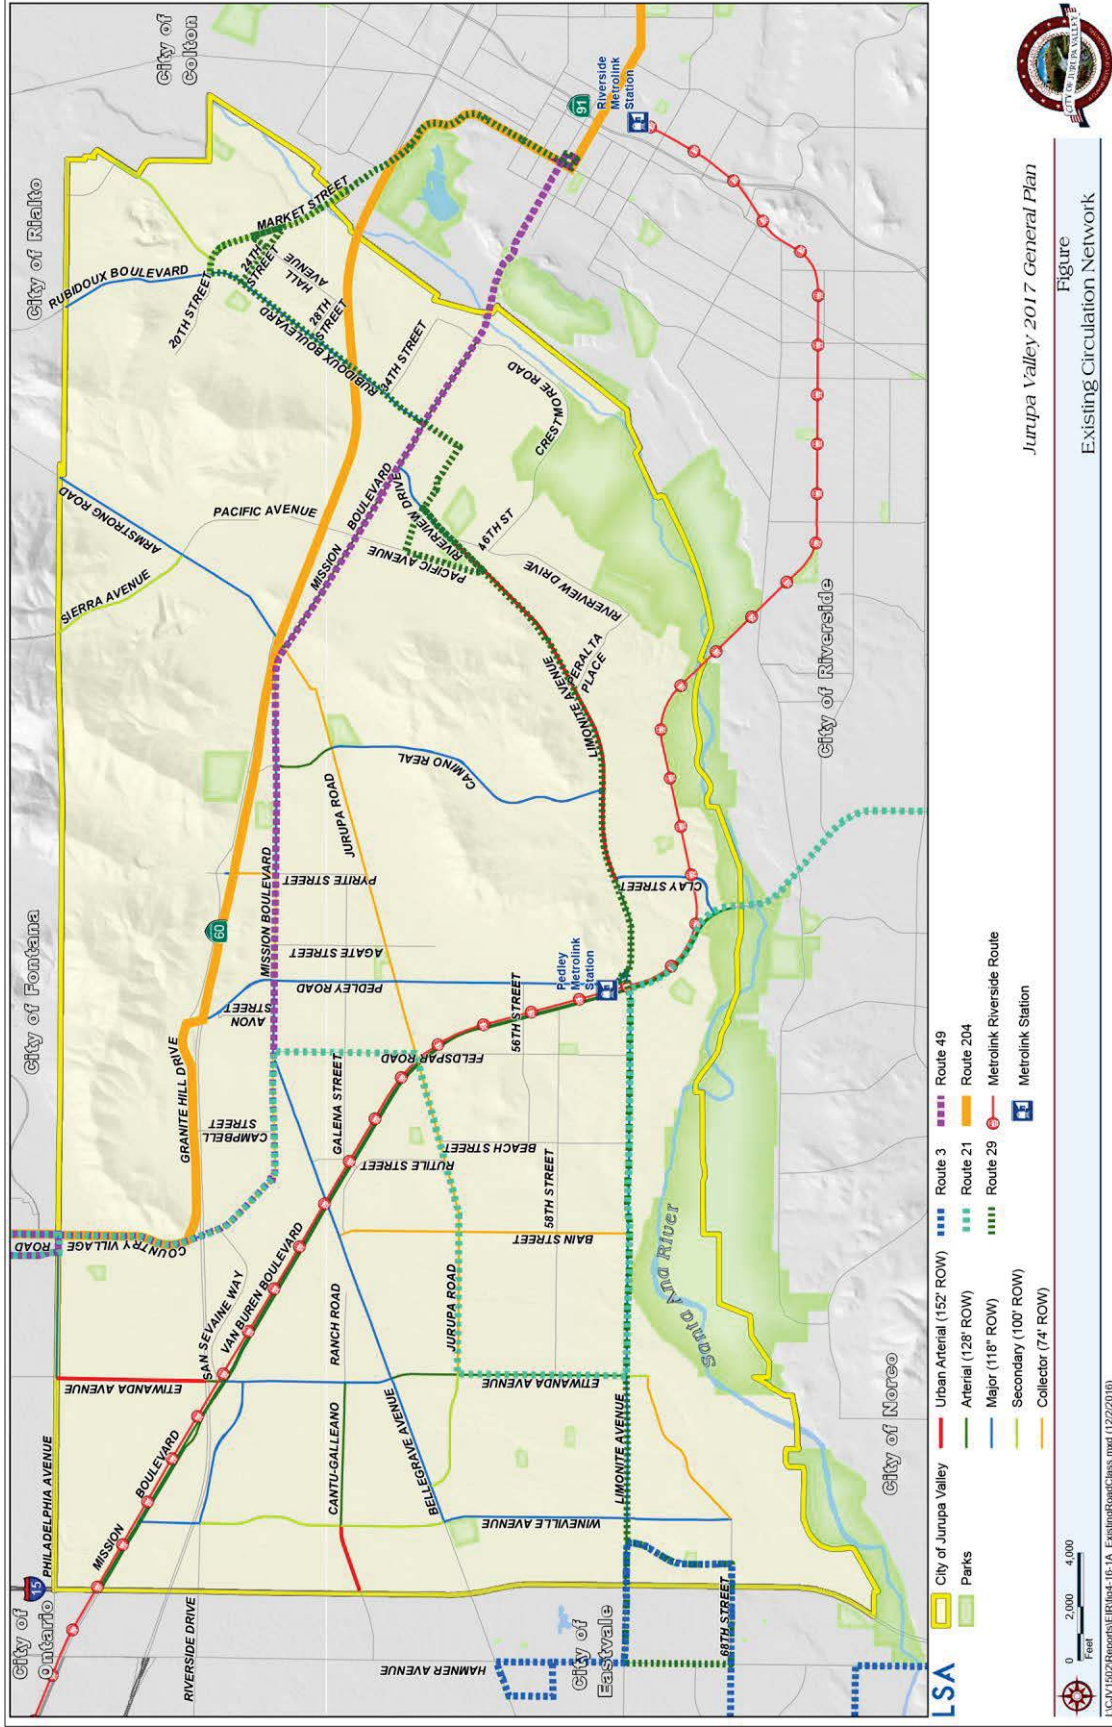

Figure 3-3: Existing circulation network

3. **Urban Arterial.** An Urban Arterial is a roadway primarily for through traffic where access from other streets or roadways is limited to approximately one-quarter mile intervals. The minimum right of way is 152 feet. The number of lanes is 6 or 8 and additional right of way may be needed at intersections. *Figure 3-5, Conventional roadway cross sections* illustrates the cross-section for an Urban Arterial roadway. Segments of Limonite Avenue are currently designated as an Urban Arterial roadway (*Figure 3-4*).
4. **Arterial.** An Arterial is a divided roadway primarily for through traffic to which access from abutting property is kept at a minimum. Intersections with other streets or roadways are limited to approximately one-quarter mile intervals. The minimum right of way is 128 feet. The number of lanes is 2 or 4 and additional right of way may be needed at intersections. *Figure 3-5* shows the cross-section for an Arterial roadway. Segments of Etiwanda Avenue are currently designated as an Arterial roadway.
5. **Major.** A Major roadway serves property zoned for major industrial and commercial uses or serves through traffic. Intersections with other streets or roadways may be limited to approximately 660-foot intervals. The minimum right of way is 118 feet. The number of lanes is 4 and additional right of way may be needed at intersections. *Figure 3-5* illustrates the cross-section for a Major roadway. Limited segments on Pedley Road are currently designated as a Major roadway.
6. **Secondary.** A Secondary roadway serves through traffic along longer routes between major traffic-generating areas or serves property zoned for multiple residential, secondary industrial, or commercial uses. Intersections with other streets and roadways may be limited to 330-foot intervals. The minimum right of way is 100 feet. The number of lanes is 4 with no turn lanes and additional right of way may be needed at intersections. *Figure 3-5* shows the cross-section for a Secondary roadway. Segments on Pacific Avenue are currently designated as a secondary roadway.
7. **Collector Street.** Collector streets are intended to serve intensive residential land uses, multiple-family dwellings, or to convey traffic through an area to roads of equal or similar classification or higher. A collector street may also serve as a cul-de-sac in industrial or commercial use areas but shall not exceed 660 feet in length when so used. The minimum right of way is 74 feet and the number of lanes is 2. *Figure 3-5* shows the cross-section for a Collector roadway. Segments on 58th Street are currently designated as a Collector roadway.

Figure 3-4: Segment of Limonite Avenue near the Spectrum Center

Figure 3-5: Conventional roadway cross sections

8. **Industrial Collector Street.** Industrial collector streets are intended to serve the intensive needs of commercial/ industrial truck traffic. The minimum right of way width is 78 feet, typically allowing two travel lanes, center median and parking lanes, plus pedestrian, bicycle and pedestrian facilities where appropriate (*Figure 3-5*).
9. **Local Street.** Local streets consist of public rights-of-way serving residential neighborhoods and are primarily two-lane, low-volume roadways with rights-of-way typically ranging from 44 to 60 feet wide. In Jurupa Valley, local streets are intended to safely accommodate equestrians, pedestrians, bicyclists and motor vehicles in a manner that preserves and enhances the character of the community in which they are located.

The functionality of a street is related to traffic mobility and accessibility. Freeways and expressways have restricted access, which allows for higher speeds and capacities. Conversely, local streets and minor arterials allow for greater access but have reduced speeds and capacities. The relationship can be seen in *Figure 3-6*.

Generalized cross-sections for the different functional street classifications are shown in *Figure 3-6*. These sections depict general street section guidelines adopted by the County of Riverside. They are the City's official street sections as shown in the City's adopted Engineering Standards.

Master Plan of Streets and Trails

The Master Plan of Streets and Trails (MPST) more precisely describes the corridor type, right of way widths, designs, locations character, multi-modal features, and amenities for all of the City's mobility corridors. The Mobility corridors will be "complete streets" and identified as to specific right of way widths which are sufficient to accommodate multiple corridor users, as more generally described herein.

As called for by Program ME 2.1.5, the first phase of the MPST will be prepared within one year of adoption of the 2017 General Plan and fully completed and adopted, including Local Streets, Collectors, and trails within two years of 2017 General Plan Adoption. Phase 1 shall address the mobility corridors and major roadways. The MPST is both an engineering and urban design plan that integrates innovative engineering design, land use planning and aesthetic considerations and will, as a minimum, address the following factors for all mobility corridors:

Source: Federal Highway Administration

Figure 3-6: Relationship between mobility and access on roadways

1. Mobility corridor classification
2. Number of roadway lanes, dedicated turn lanes, and on-street parking (where appropriate)
3. Primary equestrian trail designations for one side of a roadway
4. Multi-purpose and bikeway designations for one side of a roadway

Major City Roadways

The City's major roadways, as existing in 2017, are described below:

Bain Street is oriented in a north-south direction and is a 2-lane Collector. Additional right of way is available for a 4-lane Major. The speed limit on Bain Street is 45 miles per hour.

Bellegrave Avenue is oriented in an east-west direction and is a three to 4-lane Major from Wineville Avenue to Bain Street, and transitions to a 2-lane Major east of Bain Street. Bellegrave Avenue has a speed limit of 25 to 45 miles per hour.

Camino Real is oriented in a north-south direction and is a two-lane Secondary from Granite Hill Drive to Mission Boulevard. The segment from Mission Boulevard to Jurupa Road is a 4-lane Arterial, from Jurupa Road to Whitney Drive is a 2-lane Collector, from Whitney Drive to Limonite Avenue is a 4-lane Major. The speed limit on Camino Real is 25 to 40 miles per hour.

Cantu-Galleano Ranch Road is oriented in an east-west direction and is a 6-lane Urban Arterial from the I-15 northbound ramps to Wineville Avenue/Road. The segment from Wineville Avenue/ Road to Etiwanda Avenue is a 2-lane Arterial, and from Etiwanda Avenue to west of Dodd Street is a 4-lane Major. The speed limit on Cantu-Galleano Ranch Road is 45 miles per hour.

Clay Street is oriented in a north-south direction from Limonite Avenue to General Road and transitions to an east-west direction from General Road to Van Buren Boulevard. Clay Street is a 4-lane Major with a speed limit of 35 miles per hour.

Country Village Road is oriented in a north-south direction and is a 3-lane Major from Philadelphia Avenue to Country Club Drive. The

segment from Country Club Drive to Ben Nevis Boulevard is a 4-lane Major. The speed limit on Country Village Road is 45 miles per hour.

Etiwanda Avenue is oriented in a north-south direction and is a 6-lane Urban Arterial from the northern City limits to State Route 60 (SR 60) and transitions to a 4-lane Arterial from SR 60 to Van Buren Boulevard. The segment from Van Buren Boulevard to Cantu-Galleano Ranch Road is a four-lane Major, from Cantu-Galleano to Bellegrave Avenue is a 3-lane Major, from Bellegrave Avenue to Limonite Avenue is a 4-lane Major, and from Limonite Avenue to Holmes Avenue is a 2-lane Secondary. Etiwanda Avenue has a speed limit of 45 to 55 miles per hour.

Jurupa Road is oriented in an east-west direction and is 2-lane Secondary roadway from Bellegrave Avenue to Etiwanda Avenue and from Etiwanda Avenue to Valley is a 2-lane Collector. The speed limit on Jurupa Road is 40 to 45 miles per hour.

Limonite Avenue is oriented in an east-west direction and is a 4-lane Major from I-15 SB Ramps to I-15 NB Ramps, from I-15 NB Ramps to Wineville Avenue is a 4-lane Arterial, from Wineville Avenue to Etiwanda Avenue is a 4-lane Major, from Etiwanda Avenue to Collings Street is a 2-lane Major, from Collins Street to Pedley Road is a 4-lane Major, from Pedley Road to Clay Street is a 4-lane Arterial, from Clay Street to Camino Real is a 5-lane Urban Arterial, and from Camino Real to Riverview Drive is a 4-lane Major. The speed limit on Limonite Avenue is generally 45 to 50 miles per hour.

Mission Boulevard is oriented in an east-west direction and is a 4-lane Secondary from SR 60 EB Ramps to Bellegrave Avenue, from Bellegrave Avenue to Pedley Road is a 4-lane Major, from Pedley Road to Pyrite Street is a 4-lane Secondary, from Pyrite Street to SR 60 EB Ramps is a 4-lane Major, from SR 60 EB Ramps to Valley Way is a 4-lane Secondary, and from Valley Way to east of Rubidoux Boulevard is a 4-lane Arterial. The speed limit on Mission Boulevard is generally 35 to 45 miles per hour.

Pedley Road is oriented in a north-south direction and is a 2-lane Major from Granite Hill Drive to Francisco Junior Avenue. The segment from Francisco Junior Avenue to Mission Boulevard is a 4-lane Major, from Mission Boulevard to Jurupa Road is a 3-lane Major, from Jurupa Road to 60th Street is a 2-lane Collector, and from 60th Street to Limonite Avenue is a 2-lane Major. The speed limit on Pedley Road is 45 miles per hour.

Philadelphia Avenue is oriented in an east-west direction from the western City limits to Rochester Avenue. From Rochester Avenue to Wineville Avenue it is a 2-lane Major, from Wineville Avenue to Etiwanda Avenue it is a 3-lane Major, and from Etiwanda Avenue to

Country Village Road it is a 2-lane Major. The speed limit on Philadelphia Avenue is 45 miles per hour.

Pyrite Street is oriented in a north-south direction and is a 2-lane Collector north of Granite Hill Drive. The segment from Granite Hill Drive to SR 60 EB Ramps is a 2-lane Secondary, from SR 60 WB Ramps to Mission Boulevard is a 2-lane Collector, from Mission Boulevard to Galena Street is a 2-lane Major, and from Galena Street to Jurupa Road is a 2-lane Collector. The speed limit on Pyrite Street is 40 miles per hour.

Riverside Drive is oriented in an east-west direction and is a 3-lane Major. The speed limit on Riverside Drive is 50 miles per hour.

Rubidoux Boulevard is oriented in a north-south direction and is a 2-lane Collector from Tilton Avenue to Mission Boulevard, a 4-lane Major from Mission Boulevard to 20th Street, a 4-lane arterial from 20th Street to Production Circle, and a 4-lane Major from Production Circle to the northern City limits. The speed limit on Rubidoux Boulevard is 40 to 50 miles per hour.

Valley Way is oriented in a north-south direction and is 2-lane Collector from Jurupa Road to Mission Boulevard, from Mission Boulevard to SR 60 is a 4-lane Arterial, from SR 60 to Sierra Avenue is a 4-lane Major, and north of Sierra Avenue is a 2-lane Major. The speed limit on Valley Way is 30 to 45 miles per hour.

Van Buren Boulevard is oriented in a north-south direction and is a 4-lane Arterial from the western City limits to the southern City limits. The speed limit on Van Buren Boulevard is generally 55 miles per hour.

Wineville Avenue is oriented in a north-south direction and from Mission Boulevard to Riverside Drive is a 4-lane Major, from Riverside Drive to Cantu-Galleano Ranch Road is a 4-lane Secondary, from Cantu-Galleano Ranch Road to Bellegrave Avenue is a 3-lane Secondary, from Bellegrave Avenue to Elba Drive is a 4-lane Major, from Elba Drive to Boca Place is a 2-lane Collector, from Boca Place to Limonite Avenue is a 4-lane Major, and from Limonite Avenue to 68th street is a 3-lane Major. The speed limit on Wineville Avenue varies from 45 to 50 miles per hour.

2015-16 Traffic Study

As part of its General Plan update, the City conducted traffic studies to evaluate existing traffic conditions, and future traffic conditions and needs based on anticipated local and regional growth and anticipated General Plan land use changes. The results of those studies are summarized below and described in more detail in the Traffic Report, Appendix 3C. The traffic study area is shown in *Figure 3-7*. The study area includes all roadway segments and intersections necessary to analyze the impacts of the future Land Use plan, as shown in the *General Plan Land Use Element Figure 2-7* (page [2-14](#)).

The Existing Conditions analysis identifies potential and chronic traffic “bottlenecks”, safety or circulation deficiencies and needed mobility improvements. The existing conditions analysis also includes a level of service analysis at study area intersections and roadway segments, summary of existing transit service, truck routes, bicycle and pedestrian facilities, trails, and transit within the City of Jurupa Valley and a discussion of vehicle miles traveled (VMT) and how this relates to other General Plan elements.

The City’s street major street network has been analyzed based on traffic volumes, peak traffic periods, and street segment and intersection level of service (“LOS”), as explained below. The Countywide RivTam traffic model was used to quantify traffic volumes, congestion delay and the amount of “pass through” vehicle traffic originating outside of Jurupa Valley. The purposes of this analysis were to 1) identify problem areas, 2) quantify levels of service, 3) evaluate results of alternatives motor vehicle traffic flow or facilities due to congestion and 4) identify transportation system improvements or CEQA mitigation measures.

“LOS” Versus “VMT”

Level of Service (LOS) has been the standard used to measure transportation impacts of major developments and road system changes. Level of Service is basically a measurement of how many cars can pass through an intersection in a given time. However, in recent years, LOS has been criticized as being an inadequate measure of a roadway’s performance because if a project reduced a road’s LOS, the result was generally considered an adverse or undesirable project effect, no matter how many other benefits the project might create. Further, increasing level of service by widening streets is often growth-inducing and invites additional traffic, yielding only short-term benefits and leading to eventual decreases in LOS. Since LOS is based on peak hour traffic volumes, it can generate the need for costly improvements that are not needed during most of a 24-hour period.

DRAFT

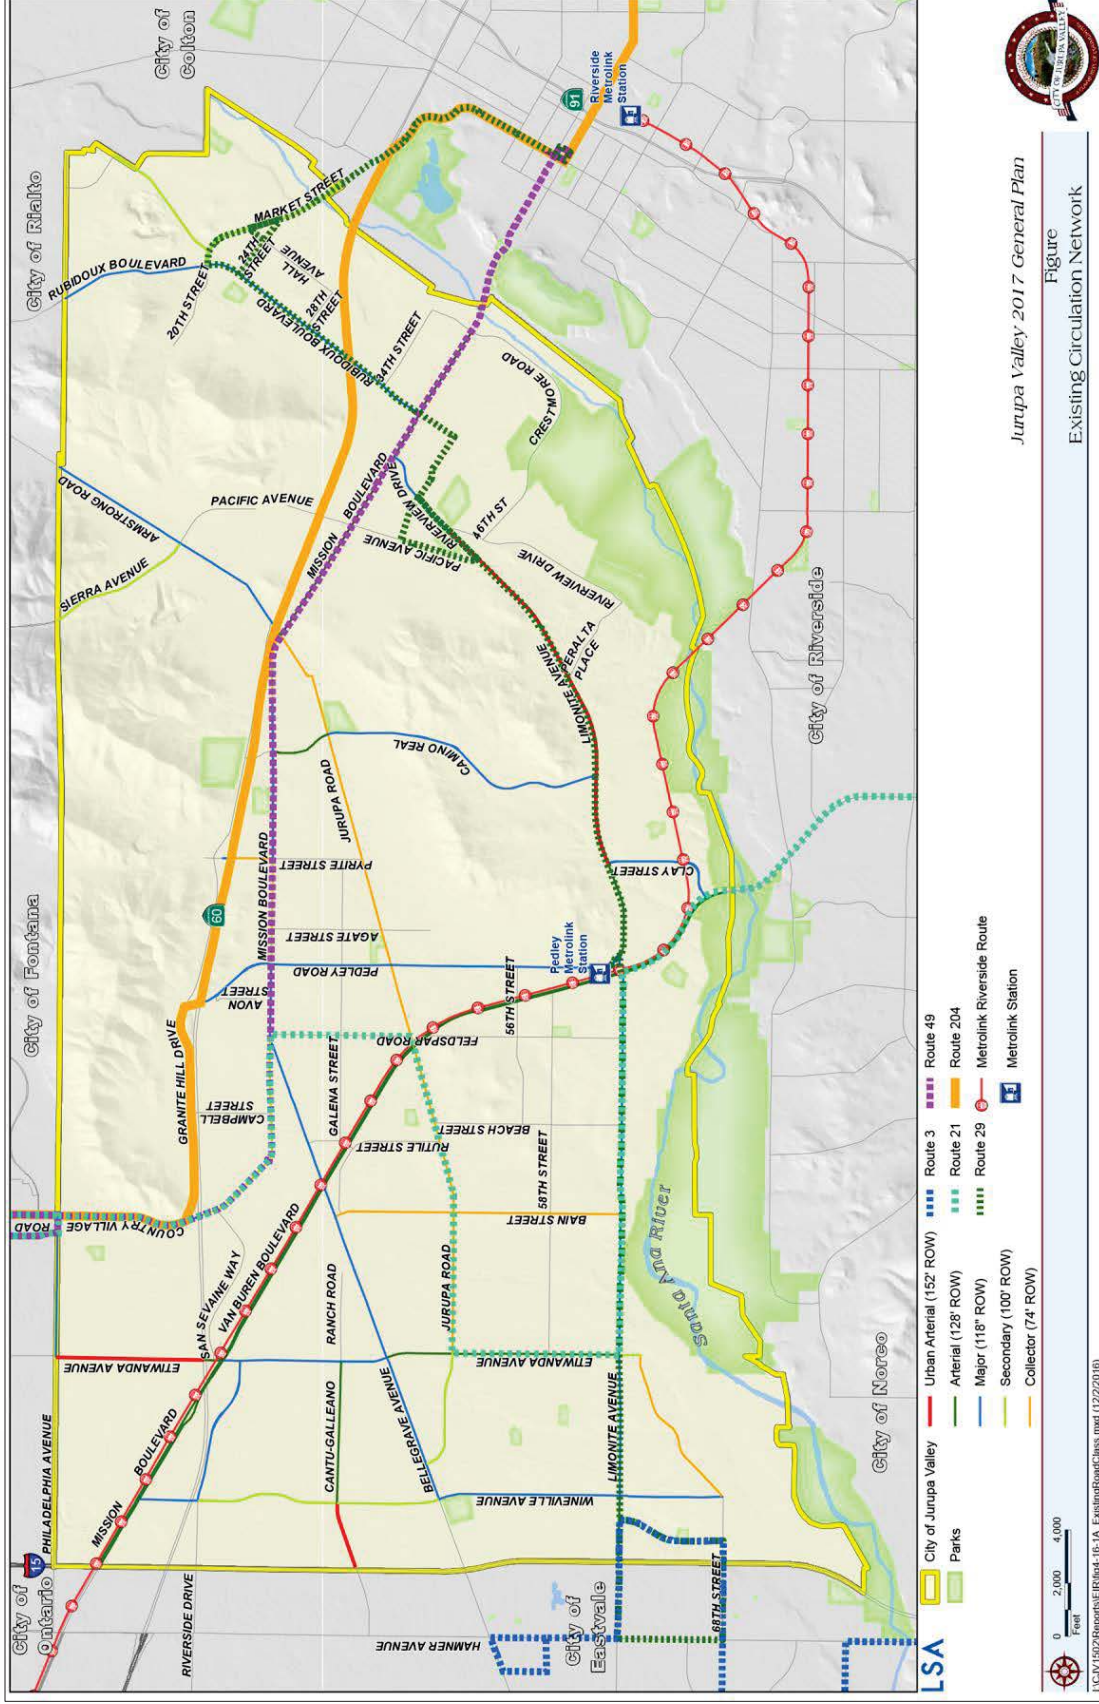

Figure 3-7: Traffic study area

LOS is not the only tool to measure traffic congestion. In 2016, California enacted SB 743, a law which is expected to change how traffic congestion is measured. Under the new law, the Governor's Office of Planning and Research (OPR) is tasked with developing a replacement metric for LOS which is based on Vehicle Miles Traveled "VMT" and considers the needs of all road users, including bicyclists, pedestrians and others.

The Governor's Office of Planning and Research is working with local agencies to develop guidelines to help local governments implement AB 743. In the interim, cities must take into account VMT as part of environmental review, but may also continue to use LOS to evaluate roadway performance. Jurupa Valley's VMT performance is evaluated in the Traffic Study, Appendix 3C.

Levels of Service

Historically, the primary tool used to measure roadway performance has been level of service, or LOS. At its most basic, LOS is a measure of a roadway's ability to carry a given traffic volume with minimal delays –that is, with little or no traffic congestion. Congestion results when traffic demand approaches or exceeds the available capacity of the system. And while this is a simple concept, it is not constant. Traffic demands vary significantly depending on the season of the year, the day of the week, and even the time of day. Also, the capacity can change because of weather, work zones, traffic incidents, or special events. LOS is often measured at "peak hours" of the day to express worst case conditions. Peak hours are typically 7:00 to 9:00 a.m. and 4:00 to 6:00 p.m.

Congestion can be classified as either recurring or non-recurring. Recurring congestion most often occurs when the volume of traffic on a facility becomes more than that facility can handle. Non-recurring congestion is usually short in duration and is caused by such things as weather, construction, or special events. One way to gauge the level of congestion is grading a facility on its level of service.

With the development of this General Plan Mobility Element, the City of Jurupa Valley is establishing its own LOS standard for intersections and roadways, tailored to meet the City's own needs and values. This set of standards will balance the need for safe and efficient mobility with preservation of the City's semi-rural character and quality of life.

Level of Service is generally expressed by using the letter grades A through F, as shown in *Table 3.2* and symbolically in *Figure 3-8*. These levels recognize that, while an absolute limit exists as to the amount of motor vehicle traffic traveling through a given intersection, the conditions that motorists experience rapidly deteriorate as traffic approaches the maximum capacity. Under

such conditions, congestion is experienced. There is general instability in the traffic flow, which means that relatively small incidents (e.g., momentary engine stall) can cause considerable fluctuations in speeds and delays. This near-capacity situation is labeled Level of Service (LOS) E. Beyond LOS E, capacity has been exceeded, and arriving traffic will exceed the ability of the intersection to accommodate it. An upstream queue will then form and continue to expand in length until the demand volume declines.

Table 3.2: Level of Service Definitions

| LOS | Description |
|-----|--|
| A | No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily and nearly all drivers find freedom of operation. |
| B | This service level represents stable operation, where an occasional approach phase is fully utilized and a substantial number are approaching full use. Many drivers begin to feel restricted within platoons of vehicles. |
| C | This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted, but not objectionably so. |
| D | This level encompasses a zone of increasing restriction approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups. |
| E | Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand. |
| F | This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero. |

Figure 3-8: Levels of Service

Many cities within Riverside County maintain LOS D as their minimum threshold for their roadway systems. The County of Riverside maintains an LOS standard of D; therefore, for this particular analysis, LOS D was used as the standard for both intersection and roadway segment LOS analysis. Intersections or roadway segments operating at LOS E or F exceed the minimum LOS standard D—that is, they are more congested with more traffic delays. This threshold may be modified based on a balancing of overall community objectives.

Existing Intersection Traffic Volumes and Levels of Service

In 2015, a level of service analysis was conducted to determine intersection performance at peak morning and afternoon hours. The major street intersections evaluated are shown in *Figure 3-9*. Level of service criteria used to evaluate signalized and unsignalized intersections are shown in *Table 3.3*. Existing intersection traffic volumes are based on a.m. and p.m. peak hour intersection turn movement counts collected in June and September 2015. For several intersections, counts were conducted between 2012 and 2014.

Table 3.3: Level of Service Criteria for Signalized and Unsignalized Intersections

| Level of Service | Unsignalized Intersection Average Delay per Vehicle (seconds) | Signalized Intersection Average Delay per Vehicle (seconds) |
|------------------|---|---|
| A | ≤ 10 | ≤ 10 |
| B | > 10 and ≤ 15 | > 10 and ≤ 20 |
| C | > 15 and ≤ 25 | > 20 and ≤ 35 |
| D | > 25 and ≤ 35 | > 35 and ≤ 55 |
| E | > 35 and ≤ 50 | > 55 and ≤ 80 |
| F | > 50 | > 80 |

Source: Highway Capacity Manual, 2010

Surveys were conducted at the study area intersections to observe the intersection geometrics, turn pocket lengths, and existing signal cycle lengths. The results of the survey were included as input into the City's General Plan traffic model. The survey results are summarized in *Table 3.4* and show that all intersections are currently operating at satisfactory levels of service, with the exception of the following:

Existing Roadway Segment Traffic Volumes

The existing daily traffic volumes at study area roadway segments are based on traffic counts conducted by the City of Jurupa Valley between 2012 and 2014. A growth rate of 1% per year was then applied to the counts. A level of service analysis was conducted on existing roadway segments to determine roadway segment performance. Level of service and roadway capacity criteria used to evaluate roadway segments are shown in *Table 3.5*. The level of service criteria are based on the daily capacity for each street classification; the daily traffic volume represents the total vehicles (both directions) traveling on a roadway segment within 24 hours. *Table 3.6* shows the existing daily traffic volumes and levels of service at study area roadway segments.

As shown on *Table 3.6* and *Figure 3-12*, all roadway segments in the City are operating at satisfactory levels of service (C or better), with the exception of the following roadway segments:

1. Country Village Road from Philadelphia Avenue to SR 60 Westbound Ramps
2. Country Village Road from SR 60 Westbound Ramps to SR 60 Eastbound Ramps
3. Van Buren Boulevard from Etiwanda Avenue to Bellegrave Avenue
4. Van Buren Boulevard from Bellegrave Avenue to Jurupa Road
5. Van Buren Boulevard from Jurupa Road to Limonite Avenue
6. Van Buren Boulevard from Limonite Avenue to Clay Street
7. Limonite Avenue from I-15 Southbound Ramps to I-15 Northbound Ramps
8. Limonite Avenue from Etiwanda Avenue to Bain Street
9. Limonite Avenue from Bain Street to Collins Streets
10. Market Street east of Rubidoux Boulevard

Table 3.6: Existing Roadway Segment Traffic Volumes and LOS

| Roadway Segment | | Functional Classification | Existing Conditions | | |
|--|--|---------------------------|---------------------|------|-----|
| | | | Daily Volume | V/C | LOS |
| Segments on Wineville Avenue/Road | | | | | |
| 1 | East Mission Boulevard to Riverside Drive | 4-Lane Major | 4,443 | 0.13 | C |
| 2 | Riverside Drive to Cantu-Galleano Ranch Road | 4-Lane Secondary | 3,995 | 0.15 | C |
| 3 | Cantu-Galleano Ranch Road to Bellegrave Avenue | 3-Lane Secondary | 4,326 | 0.22 | C |
| 4 | Bellegrave Avenue to Limonite Avenue | 3-Lane Major | 4,340 | 0.17 | C |
| 5 | Limonite Avenue to 68 th Street | 3-Lane Major | 2,600 | 0.10 | C |
| Segments on Etiwanda Avenue | | | | | |
| 6 | Philadelphia Avenue to SR-60 WB Off-Ramp | 6-Lane Urban Arterial | 32,607 | 0.60 | C |
| 7 | SR-60 WB Off-Ramp to SR-60 EB On-Ramp | 4-Lane Arterial | 30,196 | 0.84 | D |
| 8 | SR-60 EB On-Ramp to Van Buren Boulevard | 4-Lane Arterial | 22,794 | 0.63 | C |
| 9 | Van Buren Boulevard to Riverside Drive | 4-Lane Major | 16,803 | 0.49 | C |
| 10 | Riverside Drive to Cantu-Galleano Ranch Road | 4-Lane Major | 12,059 | 0.35 | C |
| 11 | Cantu-Galleano Ranch Road to Bellegrave Avenue | 3-Lane Major | 11,130 | 0.44 | C |

Shaded Rows Exceed LOS Standard

Pass-Through Traffic

A significant portion of Jurupa Valley's motor vehicle traffic is "pass-through" or "cut-through" traffic; that is, motor vehicle trips where the origin and destination are both outside of the City limits. Jurupa Valley streets do not connect well with streets in adjacent communities. Historically, Jurupa Valley roads followed the railroad tracks and were constrained by geography, particularly the hills and the Santa Ana River. Consequently, two of the main roads, Bellegrave Avenue and Jurupa Road, are not aligned true to north and south, but are aligned northeast to southwest. Motorists intending to travel from the I-15 to Van Buren Boulevard and the City of Riverside find it most convenient to use Limonite, resulting in significant traffic congestion in Pedley. Similarly, access to and from the SR 60 takes motorists through Rubidoux, Glen Avon and Pedley to access areas south of the Santa Ana River.

Table 3.7 shows the percentage of the future traffic volumes on major streets attributable to pass-through traffic. Up to 79% of motor vehicle trips—and in many cases almost one-half, consist of pass-through trips that use local streets and bypass the main highways I-15, SR 60 and the Van Buren expressway. These pass-through trips are largely the result of motorists seeking "shortcuts" to avoid freeway congestion or reduce travel time. This situation creates a significant challenge for the City to meet local circulation needs first—within available resources—while managing regional pass-through trips so as to reduce traffic congestion and impacts.

Generally, strategies to reduce pass-through traffic involve capital improvements to slow, divert, or dissuade motorists from traveling along particular corridors. This could, in some areas, have the initial effect of creating greater congestion until a new equilibrium is established. That new equilibrium may in fact create congestion on new routes. Road diets, chokers, speed tables, and other devices/strategies can affect vehicular traffic flow, decreasing speed and increasing congestion. Strategies to address pass-through traffic may be contradictory to a goal of mobility congestion relief. However, the objective of congestion relief and achieving LOS D conditions must be balanced with other important community objectives, such as maintaining the small town, semi-rural character of the community.

Table 3.7: Select Link Analysis for Roadway Segments Operating at LOS D, E, or F (Year 2035)

| Roadway Segment | Functional Classification | Year 2035 Conditions | | | % of Traffic Internal to the City | % of Traffic External to the City (Cut-Thru Traffic) |
|--|-------------------------------|----------------------|------|-----|-----------------------------------|--|

Notes:

LOS = Level of Service, V/C = Volume to Capacity

Capacity based on County of Riverside Link Volume Capacities, March 2001.

* Exceeds LOS Standard

The balance between eliminating vehicular congestion during two peak traffic periods on each weekday to accommodate pass-through traffic and the need to avoid large, urban-style multi-lane roadways is a difficult one and ultimately, must be a policy decision by the City Council which is reflected in the MPST. This General Plan outlines a strategy to help achieve that balance by: 1) managing traffic to optimize benefits to City residents, 2) maintaining communities' semi-rural character, and 3) providing future options, if the need arises.

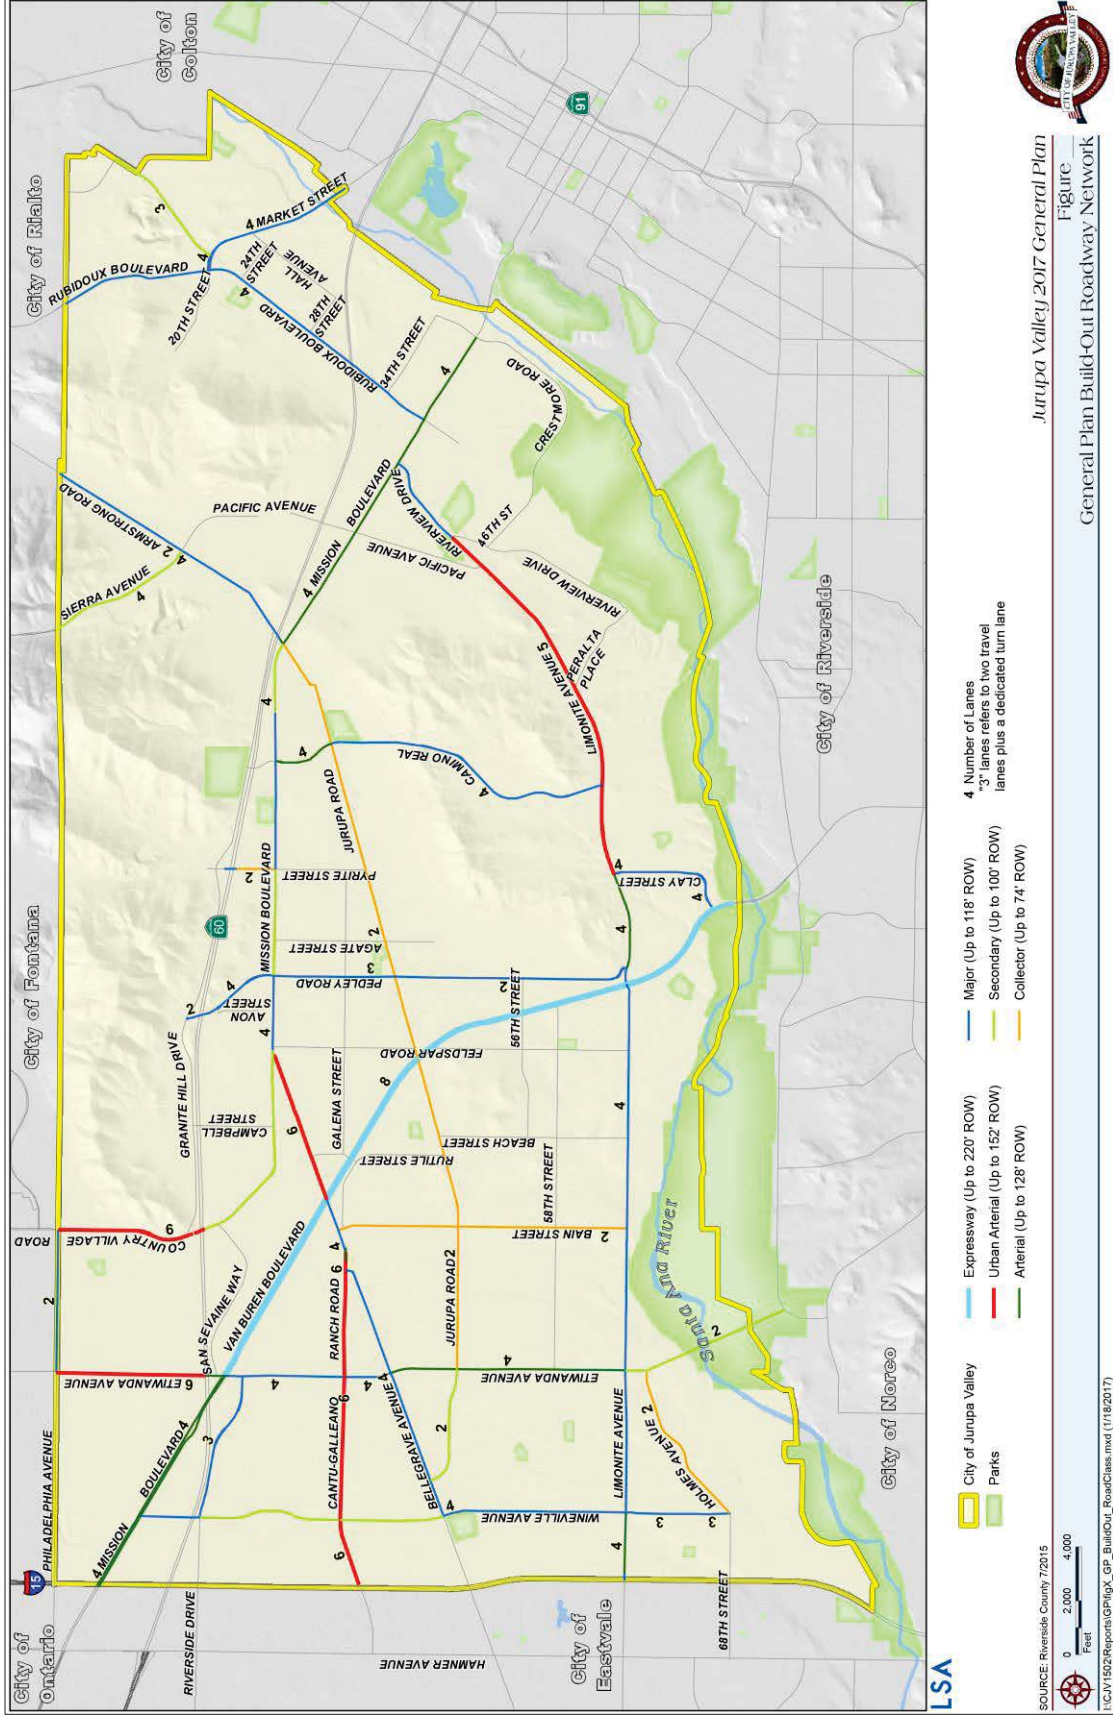

Future Conditions and Traffic Management Strategies

Planned Roadway Network

Based on the threshold of acceptability for levels of service within the City of Jurupa Valley, 10 roadway segments and 13 intersections will not meet the minimum level of service standard at General Plan buildout (2035). These intersections and roadway segments will fail gradually over the 20-year time frame of this projection. As new modes of transportation and traffic management technologies emerge, there will be ample opportunity to make adjustments along the way to manage congestion to acceptable levels and to route cut-through traffic to appropriate transportation corridors. No additional improvements are recommended other than those discussed in Anticipated Level of Service at General Plan Buildout conditions. This is due to right-of-way constraints and the City's efforts to maintain its rural character as well as to discourage pass-through traffic on local streets.

The General Plan Buildout Major Street Network, *Figure 3-13*, shows the major corridors that are planned to accommodate the existing and planned land uses, and existing and expected vehicle traffic demand. The planned network will help accomplish the City's mobility goals and minimizes the need to acquire additional street right-of-way to help maintain Jurupa Valley's semi-rural character. It will also help reduce local traffic congestion while discouraging pass-through traffic. Street improvements are anticipated to be constructed as development occurs, and where improvements are not associated with specific development, as City, County or State funding becomes available. The City has responsibility for the planning, building and maintaining local streets; the county and state have responsibility for maintaining highways and County roads that connect with Jurupa Valley's transportation corridors.

DRAFT

Roadway and Intersection Improvements

The existing land uses and new uses that will be built under the 2017 General Plan will contribute additional traffic on local roadways and intersections. Much of the existing and projected future congestions is the result of “pass-through” traffic from regional (i.e., non-City) sources that will also increase in the future. The General Plan Program EIR indicates that 10 roadway segments and 13 intersections are already deficient in terms of the City’s Level of Service (LOS) standard of LOS D or better during peak hours. As pass-through traffic increases due to regional growth and new land uses build out, additional traffic will be added to the local circulation network. As more roadways and intersections exceed City LOS standards, strategic modifications to the existing roadways will be needed to manage traffic and keep LOS within acceptable levels.

General Plan Buildout includes implementation of limited changes to the existing roadway network, as summarized below. These improvements are based on input from the General Plan Advisory Committee, residents and the City of Jurupa Valley and reflect the City of Jurupa Valley’s Mobility goals.

Roadway Segments

1. **Etiwanda Avenue:** The roadway segment south of Limonite Avenue is proposed to include a two-lane Collector roadway bridge extension from 66th Street over the Santa Ana River to Arlington Avenue. Upon implementation of this facility, motorists will be able to bypass Limonite through Pedley in order to reach the City of Riverside area south of the Santa Ana River.
2. **Van Buren Boulevard:** The roadway segments from Etiwanda Avenue to Clay Street are proposed to be widened from a four-lane Urban Arterial to an eight-lane Expressway. The intersection of Van Buren Boulevard/Bellegrave Avenue is proposed to realign to the south with a new connector at Van Buren Boulevard/Van Buren Connector. Also, the intersection of Van Buren Boulevard/Jurupa Road is proposed to realign to the north with a new connector at Van Buren Boulevard/Van Buren Connector. These improvements will facilitate pass-through traffic between the Fontana/Ontario area and the City of Riverside.
3. **Cantu-Galleano Ranch Road:** The roadway segments between Etiwanda Avenue and Van Buren Boulevard are proposed to be widened from four-lane Major roadways to six-lane Urban Arterials. The roadway segment east of Etiwanda Avenue is

proposed to align with Bellegrave Avenue and create a new intersection at Bellegrave Avenue/Cantu-Galleano Ranch Road. These improvements will facilitate pass-through traffic between I-15 and Van Buren Boulevard.

4. **Bellegrave Avenue:** The roadway segment between Marlatt Street and Dodd Street is proposed to realign with Cantu-Galleano Road and end at the new intersection of Bellegrave Avenue/Cantu-Galleano Ranch Road. A new intersection west of Bain Street is proposed to connect at Van Buren Connector/Bellegrave Avenue. This change is to be implemented concurrently with Cantu-Galleano Ranch Road improvements (No. 3 above) to facilitate pass-through traffic and reduce congestion on Mission Boulevard and Limonite Avenue.
5. **Market Street:** The roadway segment east of Rubidoux Boulevard is proposed to be widened from a two-lane Arterial to a four-lane Major Roadway. This improvement is needed to manage industrial traffic and to create an alternate route between Agua Mansa and the City of Riverside.
6. **Sierra Way:** The roadway segment north of Armstrong Road is proposed for widening from a two-lane secondary to a four-lane Major Roadway to provide enhanced regional connectivity.
7. **Country Village Road:** The number of lanes from Philadelphia Avenue to SR 60 is proposed to be increased from three- and four-lane segments to six lanes for its entire length, within the right of way existing in 2016. No added right of way is proposed.

Intersection Improvements

Based on the threshold of acceptability for levels of service within the City of Jurupa Valley, 38 intersections will not meet the minimum level of service standard. To support the 2017 General Plan Land Use Element implementation, the following improvements to the intersections are planned:

1. **I-15 Southbound Ramps/Limonite Avenue:** Optimize the signal timing.
2. **I-15 Northbound Ramps/Limonite Avenue:** Optimize the signal timing.
3. **Wineville Road/Mission Boulevard:** Install a traffic signal.
4. **Wineville Road/Riverside Drive:** Install a traffic signal.
5. **Wineville Road/Cantu-Galleano Ranch Road:** Optimize the signal timing.

6. **Mission Boulevard/SR 60 Eastbound Off-Ramp:** Optimization of the signal timing improves operations. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
7. **Etiwanda Avenue/Philadelphia Avenue:** Stripe eastbound right-turn lane and add overlap phasing. Add westbound right-turn lane with overlap phasing. Add a second northbound left-turn lane. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the p.m. peak hour.
8. **Etiwanda Avenue/SR 60 Eastbound On-Ramp:** Install a traffic signal. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the p.m. peak hour.
9. **Etiwanda Avenue/Van Buren Boulevard:** Southbound right-turn lane with overlap phasing and optimization of signal timing improves operations. No additional feasible mitigation is possible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
10. **Etiwanda Avenue/Bellegrave Avenue:** Optimize the signal timing.
11. **Etiwanda Avenue/Limonite Avenue:** Add an eastbound left-turn lane and westbound left-turn lane. Add protected phasing to the eastbound/westbound approaches.
12. **Country Village Road/Philadelphia Avenue:** Optimize the signal timing.
13. **Country Village Road/SR 60 Westbound Ramps:** Add a second westbound right-turn lane; this will require modification of the westbound off-ramp. Stripe a southbound right-turn lane, and restripe the southbound through lane to a through/right-turn lane.
14. **Van Buren Boulevard-Bellegrave Connector/Bellegrave Avenue:** Install a traffic signal. Add a westbound left-turn lane and restripe the southbound approach to include a southbound left-turn lane and through/right-turn lane. Restripe the northbound approach to include a northbound left-turn lane and a through/right-turn lane.

15. **Van Buren Boulevard/Van Buren-Bellegrave Connector:** Install a traffic signal, add two northbound left-turn lanes, a second eastbound right-turn lane, and a southbound right-turn lane.
16. **Pedley Road/SR 60 Westbound Ramps:** Install a traffic signal.
17. **Pedley Road/SR 60 Eastbound Ramps:** Install a traffic signal. Although this intersection operates satisfactorily, a signal has been added due to the addition of a signal at Pedley Road/SR 60 Westbound Ramps.
18. **Jurupa Road/Van Buren-Jurupa Connector:** Install a traffic signal. Add an eastbound left-turn lane.
19. **Van Buren Boulevard/Van Buren-Jurupa Connector:** Install a traffic signal. Add two northbound left-turn lanes.
20. **Pedley Road/Jurupa Road:** Install a traffic signal.
21. **Pedley Road-Morton Avenue/Limonite Avenue:** Optimize the signal timing.
22. **Pyrite Street/SR 60 Westbound Ramps:** Install a traffic signal.
23. **Pyrite Street/SR 60 Eastbound Ramps:** Install a traffic signal.
24. **Clay Street/Limonite Avenue:** Add overlap phasing to the northbound right-turn lane.
25. **Van Buren Boulevard/Clay Street:** Optimize the signal timing.
26. **Camino Real/Jurupa Road:** Add a northbound right-turn lane with overlap phasing.
27. **Camino Real/Limonite Avenue:** Add overlap phasing to the southbound right-turn lane.
28. **Byrne Road-SR 60 Eastbound Ramps/Mission Boulevard:** Add a southbound left-turn lane. This improvement will require modification to the off-ramp.
29. **Valley Way/Jurupa Road:** Install a traffic signal. Add an eastbound left-turn lane.
30. **Armstrong Road/Sierra Avenue:** Add overlap phasing to the eastbound right-turn lane. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
31. **Valley Way/SR 60 Westbound Off-Ramp-Granite Hill Drive:** Restripe the north leg to separate the southbound left-turn lane and right-turn lane. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.

32. **Valley Way/SR 60 Westbound On-Ramp:** This intersection may be combined with Valley Way/SR 60 Westbound Off-Ramp-Granite Hill Drive as a five-legged intersection with one signal controller. This will require Caltrans review. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
33. **Valley Way/Mission Boulevard:** Optimize the signal timing. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the a.m. and p.m. peak hours.
34. **Riverview Drive/Mission Boulevard:** Add a second northbound right-turn lane and add overlap phasing to the northbound right-turn lane and eastbound right-turn lane. Restripe the north leg approach to the southbound left-turn lane and through/right-turn lane. Change the northbound/southbound signal phasing from split-phasing to protected phasing. No other improvements are feasible due to right-of-way constraints.
35. **Rubidoux Boulevard/Market Street:** Add overlap phasing to the northbound right-turn lane and reduce the median on the east leg to accommodate a separate westbound left-turn lane. Restripe the westbound through/left-turn lane to a through lane. Change the eastbound/westbound signal phasing from split phase to protected phasing. No other improvements are feasible due to right-of-way constraints. Therefore, this intersection is forecast to continue operating at a deficient Level of Service in the p.m. peak hour.
36. **Rubidoux Boulevard/SR 60 Eastbound Ramps:** Add a northbound right-turn lane and an eastbound left-turn lane. The eastbound left-turn lane will require widening of the eastbound off-ramp and will require Caltrans review.
37. **Rubidoux Boulevard/Mission Boulevard:** Restripe the south leg to accommodate separate northbound left-turn lane and through-right-turn lane. Change the northbound/southbound signal phasing from split phase to protected phasing. Add overlap phasing to the southbound and westbound right-turn lane.
38. **Bellegrave Avenue/Cantu-Galleano Ranch Road:** Install a traffic signal. Add a westbound left-turn lane and overlap phasing to the northbound right-turn lane.

Anticipated Level of Service at General Plan Buildout

Even with the above improvements, it is anticipated that some City streets and intersections will continue to experience significant congestion and at times, fall below acceptable LOS standards, as shown in *Figure 3-14*, *Figure 3-15*, and *Figure 3-16*. However, this outcome is not inevitable. Traffic volume projections rely on many regional and local factors that are difficult to predict. Further, the projections predict LOS failure at 20 years, providing adequate time to monitor and adjust to changing conditions. In 2017, existing rights-of-way are not wide enough to accommodate all roadway widening or improvements that may be needed in the future. Moreover, extensive street widening throughout the City would irreversibly change the semi-rural character in many areas that the City intends to preserve. Consequently, the City chooses to consider a broad range of transportation system improvements to facilitate all transportation modes and balance the needs of all users rather than rely on extensive street widening or right of way acquisition projects. A “menu” of possible transportation system improvements, including both design and operational measures, is described below.

Transportation System Improvement Options

During eight public workshops and General Plan Advisory Committee meetings, two of the most commonly expressed mobility concerns were 1) lack of safe pedestrian facilities, especially crosswalks, and 2) speeding traffic in residential areas and in areas with high pedestrian traffic (e.g., around schools). The options presented below provide a “menu” of roadway improvements that address these specific concerns while giving the City a wide range of cost-effective roadway improvements. Many can be accomplished for relatively low cost, such as high visibility crosswalk markings and bulbouts. These options are not intended as mandatory standards, but rather tools that can be applied where appropriate to suit local conditions and can enhance neighborhood character with landscaping, decorative paving and public art. All require engineering studies and analysis to determine suitability and site-specific designs.

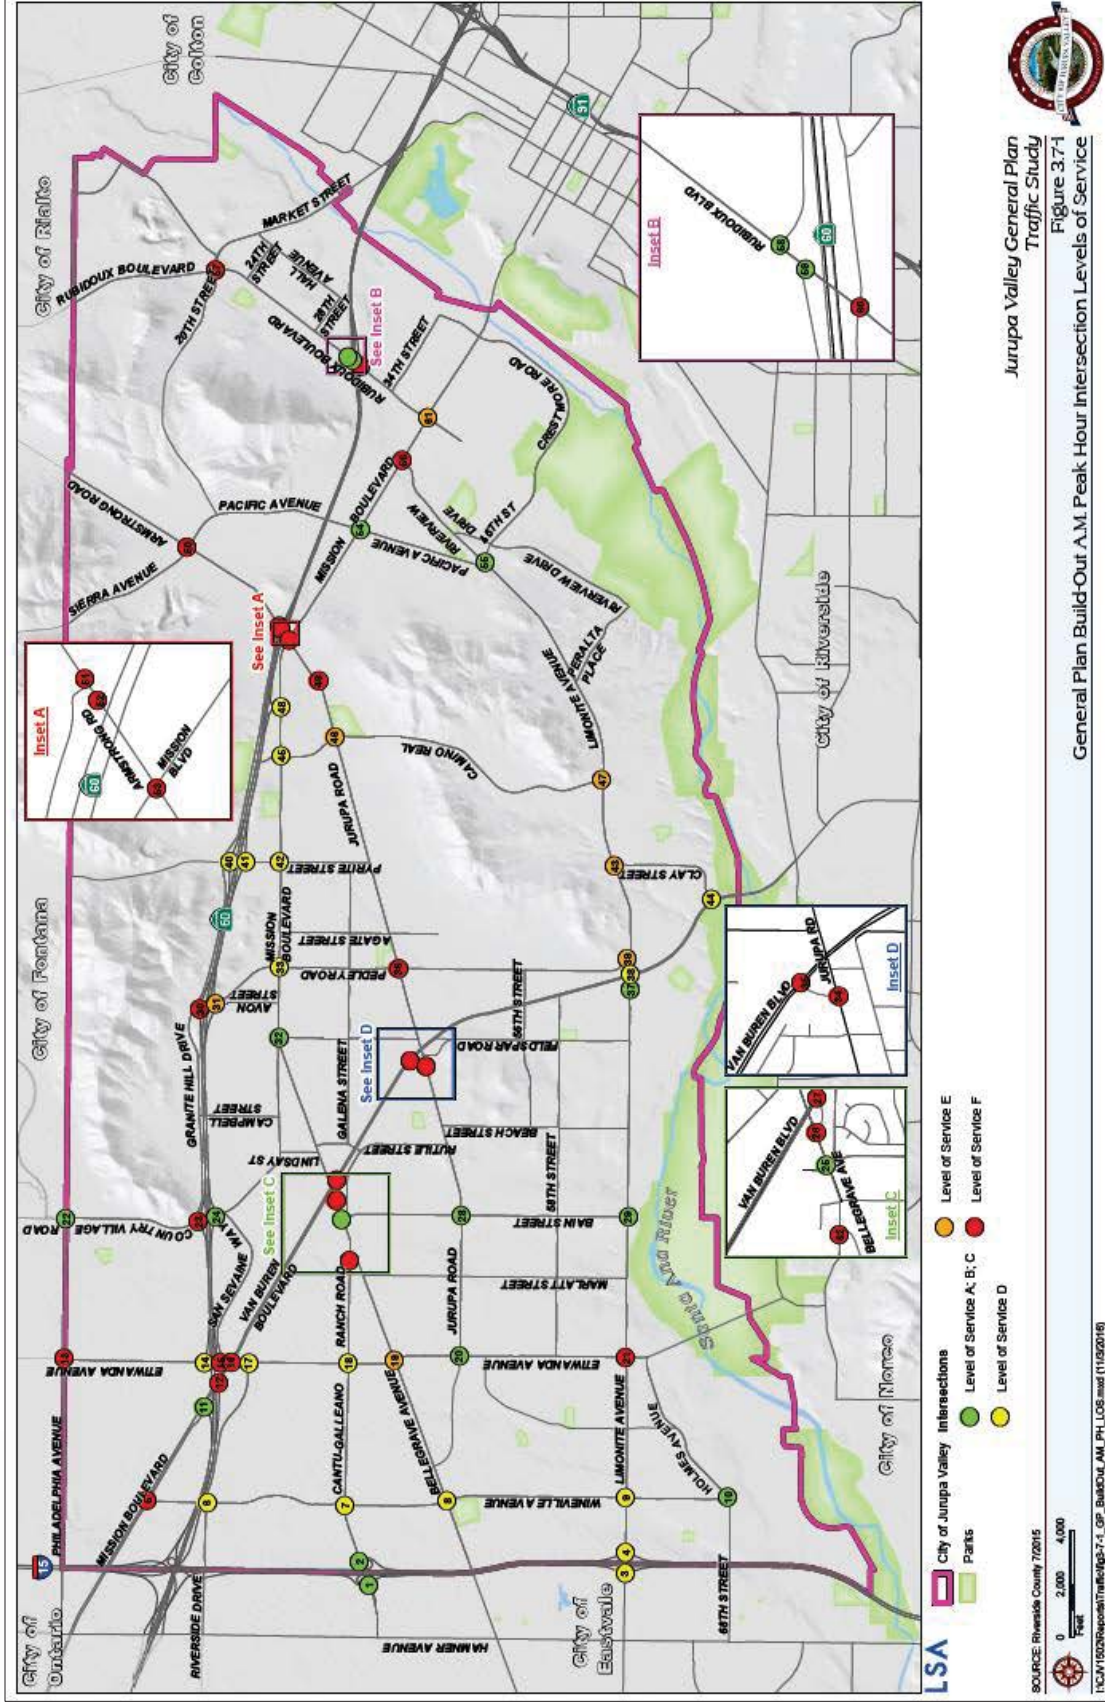

Figure 3-15: Future (2035) Intersections AM Peak Hour Levels of Service with General Plan Buildout

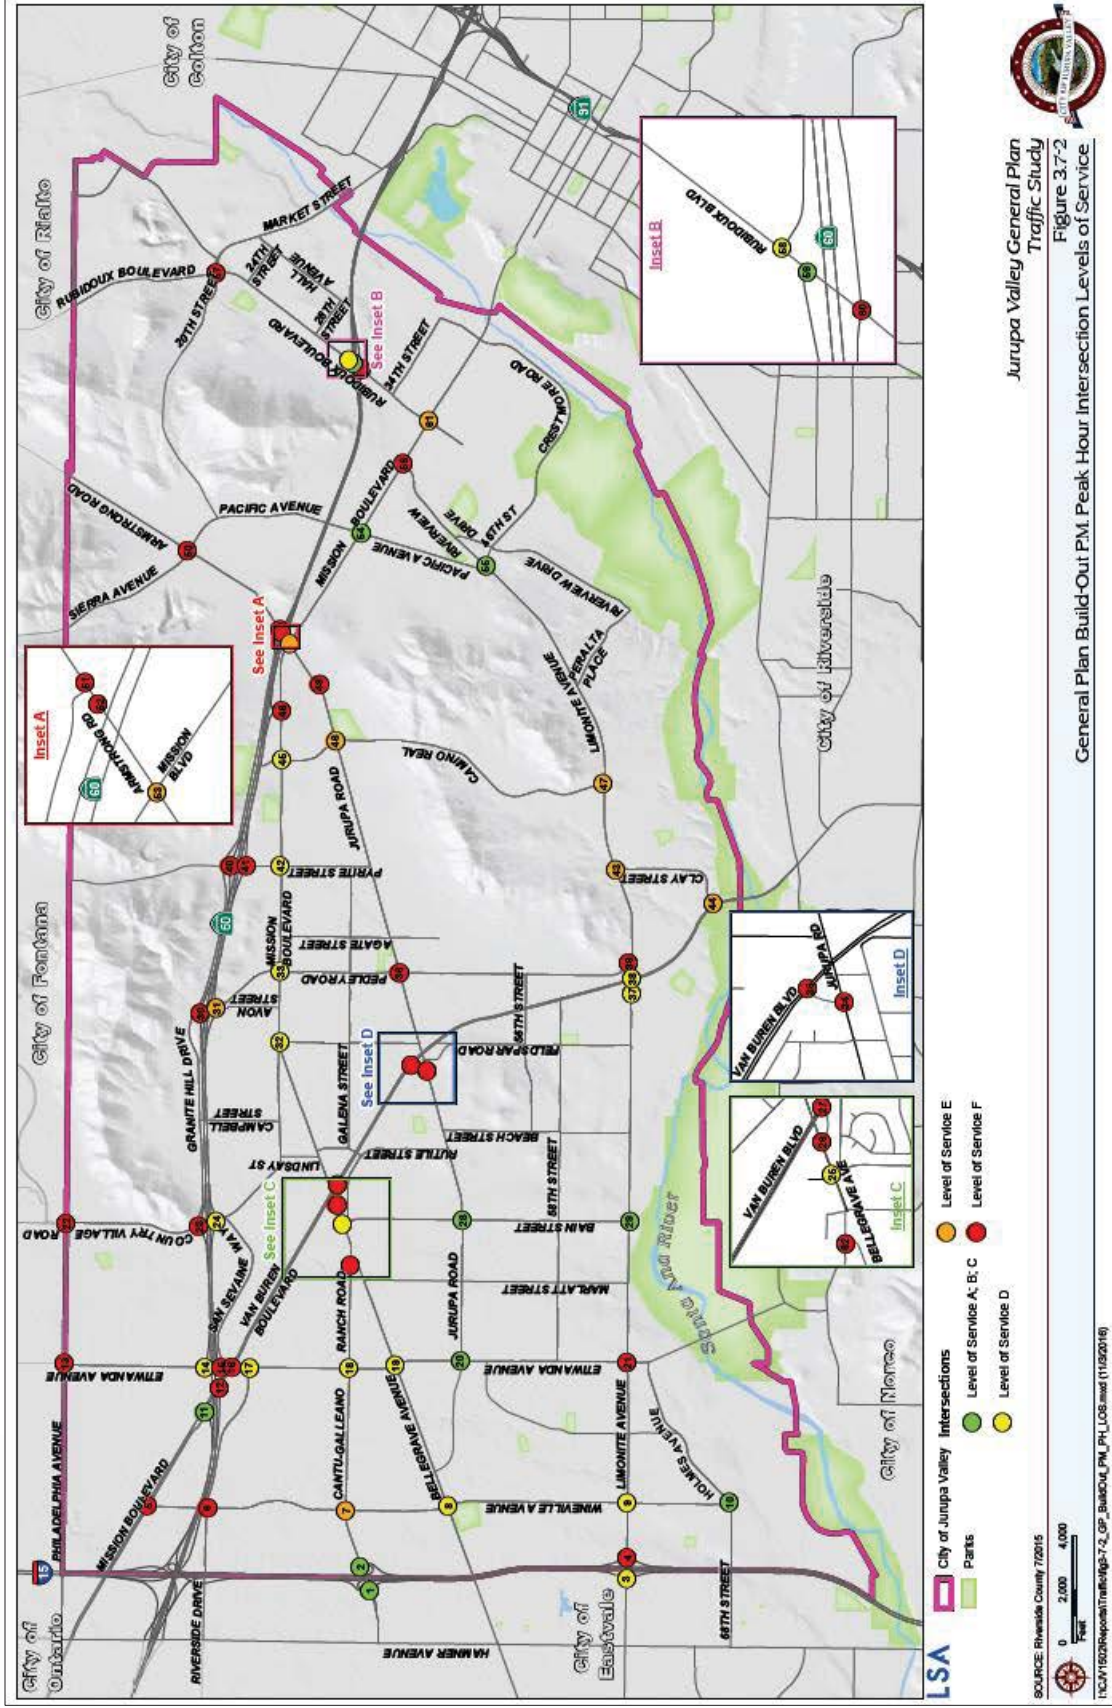

Figure 3-16: Future (2035) Intersections PM Peak Hour Levels of Service with General Plan Buildout

One of the City's primary mobility goals is "To create a multi-modal mobility network which is attractive and provides all users with safe connections to homes, jobs, schools, commercial areas, public facilities and recreation areas, and which protects Jurupa Valley's semi-rural character and lifestyle, and reduces dependence on the use of single-occupant automobiles." To augment the planned roadway system improvements, the City may also consider various innovative actions to help achieve the goal of a "multi-modal" transportation system and to better manage increased traffic and meet a wide range of other community objectives.

To achieve this goal, it is important to design and implement a multi-modal transportation system that will minimize congestion, minimize pass-through traffic, and maintain the semi-rural character of the City while accommodating a reasonable amount of growth and development. Therefore, this section describes the innovative strategies that could help reduce congestion, minimize pass-through traffic on major streets and redirect regional traffic to highways and major expressways. Traffic studies show that the benefits of street widening are often short-lived, as they both accommodate and attract higher traffic volumes, including added pass-through traffic. In addition, City residents have expressed opposition to extensive street widenings as they believe it will change the City's semi-rural, equestrian-oriented nature and adversely affect quality of life. Consequently, in Jurupa Valley, street widening is generally not a recommended option except for a limited number of high volume roadways.

The City of Jurupa Valley places high importance on maintaining its semi-rural character, promoting walking, biking and equestrian uses, and enhancing residents' quality of life. Consequently, the City seeks to avoid conventional street or intersection widening, and instead, supports using a number of innovative transportation actions, as summarized below. These options may be used singly or in combination, for potential changes or improvements to local roadways and intersections to help reduce congestion in a manner that is compatible with their surroundings. Traffic impacts and additional system improvement options are more fully discussed in the General Plan Program EIR, and in the General Plan Traffic Study, Appendix 3C.

There are a wide range of transportation improvements that provide innovative and effective alternatives to conventional street widening. Many of these improvements can be accomplished within existing rights-of-way and can be designed to complement Jurupa Valley's semi-rural character. The improvements described and pictured below are considered to have potential applications in the City, although detailed engineering studies and analysis will be

needed to determine where one or more of the options may be appropriate and to ensure their design is tailored for Jurupa Valley.

Street Design Alternatives

Figure 3-17: High visibility crosswalk

Figure 3-18: Pavement striping

Figure 3-19: Gateways

1. **High Visibility Crosswalks.** High Visibility Crosswalks include striped patterns, pavement lights, improved signing, and/or advance flashing beacons to improve the visibility of the crosswalk. They can also feature artistic colors and patterns that borrow local themes and culture. These crosswalks are applicable on local streets where speed control and pedestrian crossing designation are desired. The benefits can include discouraging cut-through traffic since they may slow traffic and increase driver awareness of crosswalks, and require minimal cost to install and maintain.
2. **Pavement Striping.** Pavement Striping is used to create narrow lanes, which gives the impression of a narrow street. This makes motorists feel restricted, which helps reduce speeds. Striping can be at curb end or in the middle of the street to create a median. It is most applicable to long, wide residential streets where speeding traffic could occur. Pavement striping is easy to install and modify with relatively low cost implementation.
3. **Gateways.** Gateways are special entrances that reduce the width of the travel way through the use of islands and are usually placed on roadways to narrow each direction of travel and interrupt the path along the center of the roadway. Gateways tend to be highly visible to motorists to notify a change in the roadway, may discourage cut-through traffic, can help slow traffic and provide attractive neighborhood or village entries by including public art and/or low maintenance landscaping.

4. **Bulbouts** can reduce traffic speed and improve pedestrian safety. They are simply intersection curb extensions that extend into parking lanes, but not into the bicycle or through lanes. Bulbouts often have high visibility pavement color, texture or other markings and provide a highly visible entry or gateway statement into activity areas or where significant numbers of pedestrians are present. Entering an area where a bulbout is present gives greater visibility to pedestrians, reduces unprotected pedestrian crossing time and tends to slow traffic.

Figure 3-20: Intersection bulbouts (City of San Luis Obispo, California)

5. **Roundabouts.** The use of roundabouts as an alternative to conventional stop and signal control intersections is becoming increasingly popular in California and the U.S. Studies conducted by the insurance industry have determined that these types of intersections result not only in a significant decrease in automobile traffic at an intersection, but also a reduction in pedestrian accidents as well. At a conventional intersection, the pedestrian faces four potential vehicle conflicts:

- Crossing movements on red (typically high-speed, illegal);
- Right turns on green (legal);
- Left turns on green (legal for protected-permitted or permitted left turn phasing); and
- Right turns on red (typically legal).

Pedestrians at roundabouts, on the other hand, face two conflicting movements on each approach:

- Conflict with entering vehicle; and
- Conflict with exiting vehicle.

Figure 3-21: Roundabout (City of Bend, Oregon)

Figure 3-22: Roundabout crosswalk treatment

The crossing of the roundabout is relatively simple. The pedestrian waits for a gap in traffic and crosses from the curb to the splitter island that provides protection, and then crosses from the splitter island to the far curb when another gap in traffic occurs. Crossing in two steps halves the vehicle exposure for each segment. In addition, safety is improved because the vehicles are forced to go slower through the roundabout than at a conventional intersection.

Figure 3-23: Mid-block bulbouts

Figure 3-24: Chicanes

Figure 3-25: Partial street closures

6. **Mid-Block Bulbouts.** Crossings are raised islands in the parking zone that can be detached from the curb line to allow for drainage and to provide enhanced visibility crosswalks. Mid-block bulbouts provide pedestrians with additional opportunities for crossing streets with infrequent intersections or where a direct route is needed for a popular destination, such as transit stop or shopping center. They may be most appropriate in the City's Village Plan areas as designated in the Land Use Element, where the City seeks more pedestrian-oriented development and small-scale commercial areas. Locations for mid-block crossings and related improvements require detailed engineering studies and analysis to provide maximum visibility of pedestrians to motorists and reasonable opportunities for pedestrians to cross safely.
7. **Chicanes** are curb extensions that alternate from one side of the street to the other, forming S-shaped curves. To prevent drivers from taking a straight line through the feature, it is recommended to shift the alignment of at least one lane width and to have deflection angles of at least 45 degrees. This type of alignment is best applied to local streets where speed control is desired, provided the street is wide enough to accommodate the curvilinear design.
8. **Partial Street Closures** are barriers that block travel in one direction for a short distance on otherwise two-way streets. They are used in sets to make travel through neighborhoods with gridded streets circuitous rather than direct. That is, they are not lined up along a border that would preclude through movement, but instead are staggered, which leaves through movement possible but less attractive than alternative routes.

Traffic Management Alternatives

1. **Intelligent Transportation Systems (ITS)** are technology improvements that improve traffic flow and minimize disruptions to travel. ITS type projects can include sophisticated traffic signal systems designed to manage speed and enhance traffic flow, dynamic message signs, incident management cameras, weather stations, highway advisory radio, transit automatic vehicle location, and video surveillance.
2. **Adaptive Traffic Control Systems (ATCS)**. Improving traffic operations on major thoroughfares within the City of Jurupa Valley through implementation of ATCS could help alleviate traffic congestion. ATCS attempts to modify the coordination of many traffic signals to prevailing traffic conditions in real-time. All techniques rely on traffic-detection equipment and a central computer monitoring station that uses the collected data to optimize traffic signal coordination and timings to provide more efficient cycle-lengths and green-times.

Several jurisdictions nationwide have implemented their own ATCS in recent years. The most notable implementation in Southern California is the system developed by Los Angeles Department of Transportation (LADOT) for the City of Los Angeles. The ATCS automatically adjusts traffic signal timing at 375 intersections within the City of Los Angeles in response to real-time traffic demands. The evaluation results published by LADOT show that the ATCS reduced travel time by 12.7%, decreased average stops by 31%, and lowered average delay by 21.4% (Preliminary Evaluation Study of Adaptive Traffic Control System, Banerjee, Frances T, City of Los Angeles Department of Transportation, July 2001). ATCS can be used by the City of Jurupa Valley for improvement of traffic congestion along major thoroughfares within the City.

3. **Transportation Demand Management (TDM)** is a strategy to increase the efficiency of a transportation system by encouraging a shift from single-occupant vehicle (SOV) trips to non-SOV modes, or shifting auto trips out of peak periods. The goal of TDM is to reduce auto trips by increasing travel options through incentives to encourage individuals to modify their travel behavior. The cumulative impact of TDM strategies can have an impact on travel behavior, system efficiency, and SOV rates. TDM programs can be implemented by employers or public agencies. Employer based TDM strategies can reduce vehicle trips by providing employees with incentives, information, and additional transportation options to commute through other modes than SOV, to commute during off-peak

times of day, or eliminate certain work trips altogether. Employer based strategies may include:

- Instituting parking charges;
- Unbundling free or subsidized parking from employee benefits;
- Providing free days of parking for employees who carpool/vanpool;
- Transit Subsidies: Provision of subsidized transit passes/vanpool fares, or shuttle services;
- Bike/Walk Facilities: Secure workplace parking for bikes, and shower and locker facilities;
- Preferred Parking for Carpools: Provision of preferred parking spaces for Carpool/Vanpool vehicles;
- Vanpools, Shuttles, and Car-sharing: Provision of free vanpool vehicles, shuttle services, or car sharing programs for employees to reduce private vehicles;
- Telecommuting: Allow employees to work from home or a non-office location one or more days a week;
- Compressed Workweek: Enabling employees to compress regularly scheduled hours into fewer work days per week; and
- Flexible Schedule: Allowing employees to offset work hours from the typical 9:00 to 5:00 standard and shift commute travel to off-peak hours.

Establishment of a trip reduction ordinance by the City could encourage non-SOV modes such as public transit, vanpools, carpools, and bicycles, rather than SOV. Also, a trip reduction ordinance could encourage alternate work hours that serve to reduce the typical peak demand upon the street network, parking facilities, and transit systems. The trip reduction ordinance could apply to large, non-residential development projects, which would be required to reserve and designate preferential parking spaces for carpool vehicles, provide employees with commuter matching services and trip reduction information, and provide bicycle parking facilities and other non-automobile enhancements.

4. **Transit Pass Programs.** A growing number of transit agencies have been teaming with employers, universities, developers, and residential neighborhoods to provide universal transit passes. These passes provide unlimited rides on local or regional transit providers for low monthly fees, often absorbed by employers, schools, or developers. This strategy could increase the number of transit ridership and reduce SOV and congestion.

5. **Safety Education Programs.** Safety education programs are an important component of a traffic calming program because they include efforts to make the public more aware of its own driving behavior and the impact it has on others. Pedestrian and bicycle safety programs alert and educate pedestrians and bicyclists on road safety. Driver safety information and education can help improve driver behavior.

Figure 3-26: Bicycle safety programs

Roadway Network Policies and Programs

General

Policies

- ME 2.1 **Roadway system.** Require that the City's mobility corridors:
- a. Accommodate public transit, motor vehicles, bicyclists, equestrians and pedestrians within the public right-of-way wherever feasible, using multi-modal, "complete streets" design strategies.
 - b. Maintain at least a Level of Service (LOS) D or better at all intersections, except where flexibility is warranted based on a multi-modal LOS evaluation, or where LOS E is deemed appropriate to accommodate complete streets/multi-modal facilities.
 - c. Be designed to meet the needs of the existing population and business activities, as designated by the Land Use Element and in accordance with the Mobility Corridor concept and to maintain consistency with the Master Plan of Streets and Trails (to be developed).
 - d. Be designed so that new roadways, ramps, traffic control devices, bridges or similar facilities, and significant changes to such facilities, are designed to accommodate multi-modal facilities in a balanced manner.
 - e. Be maintained in accordance with best practices and the City's Street Improvement Program.
- ME 2.2 **Transportation Infrastructure.** Traffic control devices and transportation infrastructure shall operate to serve the needs of all roadway users, including motorists, public transit, pedestrians, equestrians and cyclists.
- ME 2.3. **Development Project Impacts.** Require development projects to analyze potential off-site traffic impacts and related environmental impacts through the CEQA

process and to mitigate adverse impacts to less-than-significant levels.

- ME 2.4 **Transportation Options.** Support development of a variety of transportation options for major employment and activity centers, including direct access to transit routes, primary highways, bikeways, park-n-ride facilities, and pedestrian facilities.
- ME 2.5 **Public Transit Connections.** Support the development of transit connections that link the village centers located throughout the City and as identified in the Land Use Element and in the specific, community and village plans.
- ME 2.6 **Efficient Use.** Utilize existing infrastructure and utilities to the maximum extent practicable and provide for the logical, timely, and economically efficient extension of infrastructure and services.
- ME 2.7 **System Evaluation.** Evaluate the planned circulation system as needed to enhance the street network to respond to anticipated growth and mobility needs.
- ME 2.8 **Interagency Cooperation.** Cooperate with local, regional, state, and federal agencies to establish an efficient circulation system.
- ME 2.9 **Project Integration.** Encourage development of projects that facilitate use of alternative modes of transportation, including public transit, light rail, pedestrian-oriented retail and activity centers, equestrian trails and related facilities, and bicycle facilities.
- ME 2.10 **Transportation Projects.** Consider the following regional and community wide transportation projects when developing transportation improvement plans in Jurupa Valley:
- Construct new interchanges on SR 60 at Camino Real and Sierra Avenue/Pacific Avenue.
 - Support the development of regional transportation facilities and services (such as high-occupancy vehicle lanes, express bus service, and fixed transit facilities) to encourage the use of public transportation and ridesharing for longer distance trips.
 - Construct new grade separated interchanges on Van Buren Boulevard and parallel rail lines at Jurupa Road, Limonite Avenue and Galena/ Bellegrave Avenue.

Programs

- ME 2.1.1 **Mitigation Measures.** As necessary to mitigate potential impacts, the City will implement improvements identified as mitigation measures in the Final Environmental Impact Report for the 2017 General Plan.
- ME 2.1.2 **School Planning.** Provide assistance to school districts in facility planning and transportation operations to ensure safety for users of all modes during school pick-up, drop-off and other special events.
- ME 2.1.3 **Sidewalks.** Prepare and maintain an inventory of sidewalk facilities to determine where pedestrian improvements are most needed to provide a continuous safe route for pedestrians.
- ME 2.1.4 **Barrier-free Access.** Retrofit streets and require developments to install public improvements that provide disabled access and mobility on public streets, as required by State or Federal law.
- ME 2.1.5 **Master Plan of Streets and Trails.** Within 2 years of adopting the 2017 General Plan, prepare a Master Plan of Streets and Trails, including specific plans for future major capital projects such as the Cantu-Galleano/Bellegrave connection, cross sections for unimproved linkages to be developed through land development, design standards for mobility corridors to address all transportation needs, including rural and local streets, industrial collector streets, etc. Phase 1 of the Plan shall address mobility corridors and major roadways and shall be prepared within one year of 2017 General Plan adoption. Phase two shall include Local Streets, Collectors and the trails network as described in Policies and Programs Sections 3.0 and 4.0. The Plan shall be consistent with this Mobility Element.

Levels of Service

Policies

- ME 2.11 **Target Levels of Service.** Until a multi-modal based metric is adopted, City will maintain the following target Levels of Service, or “LOS”:
- LOS C along all City maintained roads and conventional state highways. As an exception, LOS D may be allowed in designated areas, only at intersections of any combination of Secondary Highways, Major Highways, Arterials, Urban Arterials, Express ways, conventional state highways or freeway ramp intersections.
 - LOS E may be allowed in designated village centers to the extent that it would support transit-oriented development and walkable communities. LOS F is not considered an acceptable level of service.

Planned Circulation Systems

Policies

- ME 2.12 **Multi-Modal Level of Service.** When the City determines there is a suitable tool available, we will measure and evaluate roadway performance and CEQA compliance and mitigation from a multi-modal, “complete streets” perspective using Vehicle Miles Traveled (VMT), consistent with SB 743 and state guidelines.
- ME 2.13 **Traffic Study Guidelines.** Apply level of service and/or VMT standards to new development, consistent with State law, based on new Traffic Study Guideline, to be developed by City to evaluate traffic impacts and identify appropriate mitigation measures for new development.
- ME 2.14 **Traffic Impact Evaluation.** New developments shall be reviewed to identify project-related impacts to circulation facilities and shall provide site improvements necessary to mitigate such impacts. The Engineering Department may require developers and/or subdividers to provide traffic impact studies prepared by qualified professionals to identify the impacts of a development.

- ME 2.15 **Traffic Impacts.** Traffic studies prepared for development entitlements (e.g., tracts, plot plans, public use permits, conditional use permits) shall identify project-related traffic impacts and determine the “significance” of such impacts in compliance with CEQA.
- ME 2.16 **Impact Mitigation.** Mitigate direct project related traffic impacts by requiring street improvements as a condition of approval, or for indirect and cumulative impacts, through the payment of mitigation fees to fund improvement of streets and other transportation facilities.

Programs

- ME 2.1.6 **Traffic Study Guidelines.** City will prepare and adopt Traffic Study Guidelines to aid in the evaluation of transportation-related impacts to circulation facilities, residential neighborhoods, environmental conditions and open space, and to identify the appropriate mitigation for such impacts.
- ME 2.1.7 **Planned Network Improvements.** City will evaluate and where appropriate, include the planned intersection and roadway segment improvements as described in the 2017 General Plan Mobility Element in its Capital Improvement Program. City will implement the improvements as resources allow.

3.0 – Pedestrian and Bicycle Facilities

To meet a wide range of community needs, the City’s transportation system must also include facilities for bicycles, pedestrians, equestrians, rail and public transit facilities. In addition to providing more travel options, these alternative transportation modes have other significant benefits, including reduced fuel usage and emissions, health and recreation opportunities, reduced traffic congestion and an improved quality of life. Increasing the community’s use of non-motorized travel modes can mean changes to long-standing habits or behaviors. Thus, it requires more effort than merely building new facilities or expanding existing ones. It requires public outreach and education to promote these modes and their safe use.

Pedestrian Facilities

Pedestrian facilities include sidewalks, walkways, bridges, crosswalks, signals, illumination, and other amenities (e.g., benches, bus shelters), among other items. These facilities are an important part of the City’s non-motorized transportation network. Pedestrian facilities provide a vital link between many other modes

of travel and can make up a considerable portion of short-range trips made in the community. Where such facilities exist, people will be much more likely to make shorter trips by walking rather than by vehicle. Equestrian facilities can also include some of these features, or be designed with a more rural character, as is typical in Jurupa Valley. Equestrian facilities are discussed here due to their connections to streets and sidewalks, and also in the Conservation and Open Space Element in relationship to recreation and open space trails.

Pedestrian facilities also provide a vital link for commuters who use other transportation facilities such as rail, bus, and park-n-rides. Without adequate pedestrian facilities, many commuters may be forced to utilize an automobile because of difficult or unsafe conditions that exist at their origin or destination. Pedestrian facilities within the immediate vicinity of schools and recreational facilities are important components of the non-motorized transportation system and essential to provide Safe Routes to Schools. Such facilities, typically in the form of sidewalks and trails, are provided where they are appropriate and enhance the safety of those who choose to walk to and from their destination. Pedestrian facilities may be warranted when any one or combination of the following conditions is present: any type of residential development; any type of activity center; any type of commercial center; downtown business districts; any type or combination of parks and recreation facilities; along or near transit routes and/or facilities; any type of business or office center; and, along or near any type of watercourse or body of water.

For the most part, sidewalks are installed in most urban environments when the roadway frontage is developed. Because development occurs in stages, numerous missing links can occur in the sidewalk system. Eventually these are filled in, but this can take many years.

Sidewalks provide safe passage for pedestrians by creating a right-of-way that is separate from vehicular traffic. They are particularly important in, to, and from activity areas around the City, such as shopping districts, schools, recreation centers, and government buildings. Sidewalks encourage pedestrian activity, which is a defining element of community and neighborhood identity. In addition, good pedestrian connections are imperative for transit service because most transit trips begin and end with a pedestrian trip. Lack of sidewalks discourages pedestrian transportation.

The typical pedestrian system could be described as a grid system of streets with sidewalks on both sides that provide easy and direct connections between the trip origin and destination. It should also provide for convenient and safe street crossings and include sidewalks separated from streets and provide shade from trees.

As part of its overall General Plan mobility studies, the City evaluated pedestrian facilities using five pedestrian measurements described below.

1. **Directness:** The directness measure represents the actual pedestrian distance from trip origin to destination. Since pedestrian trips are highly dependent on trip length, the pedestrian infrastructure's ability to provide the shortest and most direct route is critical. The ideal pedestrian network is the grid system, since curve linear street patterns add distance to the potential trip. Barriers can also affect pedestrian travel. Freeways, rivers, and railroads can divide a community and restrict direct connections between one another except at a limited number of street over/under crossings.
2. **Continuity:** Continuity measures the completeness of the pedestrian system. A continuous sidewalk system not only allows the pedestrian to make an uninterrupted trip, it may also be required for a stroller or wheelchair user to utilize the sidewalks. Gaps in continuity can come in the form of missing segments, broken or overgrown vegetation, or physical barriers such as discontinuous streets or fences. Continuity is measured by the completeness of the sidewalk/walkway system and by identifying whether gaps exist. Other aspects of continuity are whether there are sidewalks along one or both sides of the street and whether there exists an overall continuity of sidewalk that provides a line of sight from block to block.
3. **Street Crossings:** The Achilles heel of pedestrian and equestrian systems is the intersections where they must cross. Intersections are where the pedestrian and equestrian must interface with automobiles, which can be especially dangerous for equestrians, since response times may be slower, which can result in safety concerns. As streets get wider and carry higher volumes of traffic, potential uses by pedestrians are avoided as safety becomes a concern. There are many factors that affect the pedestrian's real and perceived comfort and safety in crossing the street ranging from traffic control, crosswalks, number and width of travel lanes, travel speeds, and traffic volumes. Major arterial roadways can significantly affect a pedestrian's safety in crossing a street.

4. **Visual Interest and Amenities:** This measure of the pedestrian system's attractiveness and appeal is the most difficult to quantify and compare, and the most likely to change as an area matures. Some aspects of this measure are related to facilities that enhance the comfort of the user. These include elements such as shade trees, street lighting, benches, distance from sidewalk or trail to traffic lanes, relationship to buildings and street furniture, existence of curbside parking, speed of traffic, may be particularly important to pedestrians with mobility or visual impairments. To encourage pedestrian travel, sidewalk areas should be attractive and separated from the curb or roadway with landscaped parkways including canopy shade trees, especially on heavily-travelled arterial streets. Other elements that add visual appeal for pedestrians include landscape planters, trash receptacles, and public art.
5. **Pedestrian Safety and Security:** The pedestrian environment must feel like a safe place for people to walk. The key pedestrian security facility element is whether the pedestrian is clearly visible to other pedestrians or activities. Whereas this measurement is more appropriate at a site level, one can begin to identify areas where security might be an issue at the neighborhood level. Pedestrians require a sense of security, both through visual line of sight with others and separation from vehicles. Pedestrians feel safer if there is adequate distance from adjacent travel lanes, curbside parking, and minimal conflicts with vehicles exiting out of driveways. They also require well-lighted pathways. *Figure 3-27* shows the locations of the existing sidewalks within the City. There are many gaps in continuity of sidewalks that would prevent pedestrians from making uninterrupted trips in the east-west and north-south directions within the City. Also, Van Buren Boulevard, Jurupa Road, Camino Real, Limonite Avenue, and Mission Boulevard have curves that add distance to potential pedestrian trips. Major street amenities such as shade trees, low-level shielded pedestrian lighting and benches occur on few segments and have many gaps in continuity. Therefore, the City lacks a comprehensive pedestrian network that connects all areas of the City to parks, libraries, schools, and other local destinations.

Pedestrian Crossings

The following principles should be incorporated into every pedestrian crossing improvement:

1. Pedestrians must be able to cross roads safely. Cities have an obligation to provide safe and convenient crossing opportunities.

2. The safety of all street users, particularly more vulnerable groups, such as children, the elderly, and those with disabilities, and more vulnerable modes, such as walking and bicycling, must be considered when designing streets.
3. Pedestrian crossings must meet accessibility standards and guidelines.
4. Real and perceived safety must be considered when designing crosswalks—crossing must be “comfortable.” A “safe” crossing that no one uses serves no purpose.
5. Crossing treatments that have the highest crash reduction factors (CRFs) should be used when designing crossings.
6. Safety should not be compromised to accommodate traffic flow.
7. Good crossings begin with appropriate speed. In general, urban arterials should be designed to a maximum of 30 mph or 35 mph (note: 30 mph is the optimal speed for moving motor vehicle traffic efficiently).
8. Every crossing is different and should be selected and designed to fit its unique environment.
9. Sidewalks should be separated from the roadway by a landscaped parkway, including canopy shade trees.

Figure 3-28: Curb extensions and median crossings make four-lane streets safer (credit: Dan Burden)

The following issues should also be considered when planning and designing street crossings:

1. Ideally, uncontrolled crossing distances should be no more than 21 feet, which allows for one 11-foot lane and one 10-foot lane. Ideally, streets wider than 40 feet should be divided (effectively creating two streets) by installing a median or two crossing islands.
2. The number of lanes should be limited to a maximum of three lanes per direction on all roads (plus a median or center turn lane).
3. There must be a safe, convenient crossing at every transit stop.
4. Double (or triple) left or right turns concurrent (permissive) with pedestrian crossings at signalized intersections must never be allowed.
5. Avoid concurrent movements of motor vehicles and pedestrians and equestrians at signalized intersections.
6. People and horses should never have to wait more than 90 seconds to cross at signalized intersections.
7. Self-actuated crossing buttons and pedestrian signals should be provided at all signalized crossings where pedestrians and equestrians are allowed.

Pedestrian Crossing Design Tools and Techniques

For improved safety, many different street design tools and techniques measures may be used successfully at a pedestrian crossing, depending on site conditions and potential users. Marked crosswalks are commonly used at intersections and sometimes at mid-block locations. Marked crosswalks are often the first measure in the toolbox followed by a series of other measures that are used to enhance and improve marked crosswalks. The decision to mark a crosswalk should not be considered in isolation, but rather in conjunction with other measures to increase awareness of pedestrians. Without additional measures, marked crosswalks alone may not increase pedestrian safety, particularly on multi-lane streets. Following are several “tools” that have been used successfully in Southern California and adapted to a wide range of community types and individual right-of-way situations. Many of these solutions would also be applicable to equestrian street crossings and should be considered for same.

Marked Crosswalks. Crosswalks are present by law at all intersections, whether marked or unmarked, unless the pedestrian crossing is specifically prohibited. At mid-block locations, crosswalks only exist where marked. At these non-intersection locations, the crosswalk markings legally establish the crosswalk. Crosswalks should be considered at mid-block locations where there is strong evidence that pedestrians want to cross there, due to origins and destinations across from each other and an overly long walking distance to the nearest controlled crossing. Marked crosswalks alert drivers to expect crossing pedestrians and direct pedestrians to desirable crossing locations. Although many motorists are unaware of their precise legal obligations at crosswalks, the California Vehicle Code requires drivers to yield to pedestrians in any crosswalk, whether marked or unmarked. Marking crosswalks at every intersection is not necessary or desirable.

Crosswalk Markings. According to the MUTCD, the minimum crosswalk marking shall consist of solid white lines. They shall not be less than 6 inches or greater than 24 inches in width. The best locations to install marked crosswalks are:

1. All signalized intersections
2. Crossings near transit locations
3. Trail crossings
4. High land use generators
5. School walking routes
6. When there is a preferred crossing location due to sight distance

7. Where needed to enable comfortable crossings of multi-lane streets between controlled crossings spaced at convenient distances

Controlled Intersections. Intersections can be controlled by traffic signals, YIELD or STOP signs. Marked crosswalks should be provided on all intersection legs controlled by traffic signals, unless the pedestrian crossing is specifically prohibited. Marked crosswalks may be considered at STOP-controlled intersections. Factors to be considered include high pedestrian volumes, high vehicle volumes, school zone location, high volume of elderly or disabled users, or other safety related criteria.

Uncontrolled Intersections and Mid-Block Crosswalks. Intersections without traffic signals or STOP signs are considered uncontrolled intersections. The decision to mark a crosswalk at an uncontrolled location should be guided by an engineering study. Factors considered in the study should include vehicular volumes and speeds, roadway width and number of lanes, stopping sight distance and triangles, distance to the next controlled crossing, night time visibility, grade, origin-destination of trips, left turning conflicts, and pedestrian volumes. The engineering study should be based on the FHWA study, Safety Effects of Marked Versus Unmarked Crosswalks at Uncontrolled Locations.

The following list provides some of the key recommendations from the study:

1. It is permissible to mark crosswalks on 2-lane roadways.
2. On multi-lane roadways, marked crosswalks alone are not recommended under the following conditions (the other tools listed in this section can be considered to enhance the crosswalk):
 - ADT > 12,000 w/o median
 - ADT > 15,000 w/ median
 - Speeds greater than 40 mph
3. Raised medians can be used to reduce risk.
4. Signals or other treatments should be considered where there are many young and/or elderly pedestrians.

Frequency of Marked Crosswalks at Uncontrolled Locations. Marked crosswalks should be spaced so people can cross at preferred locations. If people are routinely crossing streets at non-preferred locations, consideration should be given to installing a new crossing. Pedestrians need crossings with appropriate devices (islands, curb extensions, advanced yield lines, etc.) of multi-lane streets where there are strong desire lines. Along urban streets, a well-designed crossing should be provided at least every one-eighth mile.

High-Visibility Crosswalks. Because of the low approach angle at which pavement markings are viewed by drivers, the use of longitudinal stripes in addition to or in place of transverse markings can significantly increase the visibility of a crosswalk to oncoming traffic. While research has not shown a direct link between increased crosswalk visibility and increased pedestrian safety, high-visibility crosswalks have been shown to increase motorist yielding and channelization of pedestrians, leading the Federal Highway Administration to conclude that high-visibility pedestrian crosswalks have a positive effect on pedestrian and driver behavior.

Colored and stamped crosswalks should only be used at controlled locations. Staggered longitudinal markings reduce maintenance since they avoid vehicle wheel paths.

Raised Crossing Islands and Medians. Raised islands and medians are the most important, safest, and most adaptable engineering tool for improving street crossings. *Note on terminology: a median is a continuous raised area separating opposite flows of traffic. A crossing island is shorter and located just where a pedestrian crossing is needed.* Raised medians and crossing islands are commonly used between intersections when blocks are long (500 feet or more in downtowns) and in the following situations:

- Speeds are higher than desired
- Streets are wider than necessary for planned traffic volumes
- Traffic volumes are high
- Sight distances are poor

As a general rule, crossing islands are preferable to signal-controlled crossings due to their lower installation and maintenance cost, reduced waiting times, and their safety benefits. Crossing islands are also used with road diets, taking four-lane undivided, high-speed roads down to better performing three-lane roadways (two travel lanes and a center turn lane); portions of the center turn lane can be dedicated to crossing islands. Crossing islands can also be used with signals. Crossing islands are often used for trails, high pedestrian flow zones, transit stations, schools, work centers, and shopping districts.

Figure 3-29: Longitudinal crosswalk markings are more visible than lateral crosswalk markings (credit: Michele Weisbart)

Figure 3-30: Typical crosswalk markings: Continental, Ladder, and Staggered Continental (credit: Michele Weisbart)

Figure 3-31: Staggered median crossing (credit: Marcel Schmaedick)

Crossing Island Design. Crossing islands, like most traffic calming features, perform best with tall trees (no or minimal branching near base) and low ground cover. This greatly increases their visibility, reduces surprise, and lowers the need for a plethora of signs. When curves or hill crests complicate crossing locations, median islands are often extended over a crest or around a curve to where motorists have a clear (six second or longer) sight line of the downstream change in conditions. Lighting of median islands is essential. The suggested minimum width of a crossing island is 6 feet. When used on higher speed roads, and where there is space available, inserting a 45-degree bend to the right helps orient pedestrians to the risk they encounter from motorists during the second half of their crossing.

Figure 3-32: Raised crosswalk: University of North Carolina Campus, Chapel Hill, NC (credit: Ryan Snyder)

Raised Crosswalks. Raised crosswalks slow traffic and put pedestrians in a more visible position. These may be most appropriately used in Jurupa Valley's village centers and other areas with significant pedestrian traffic; or where motor vehicle traffic should move slowly, such as near schools, sports fields or entertainment/tourist centers. They are especially effective near elementary schools where they raise small children by a few inches and make them more visible.

They are trapezoidal in cross section and have a flat top where the pedestrians cross. The level crosswalk area must be paved with smooth materials; any texture or special pavements used for aesthetics should be placed on the beveled slopes for enhanced visibility.

Figure 3-33: Curb extensions or "bulbouts" (credit: Michele Weisbart)

Curb Extensions or "Bulbouts". Curb extensions extend the sidewalk or curb line out into the parking lane, which reduces the effective street width. Curb extensions significantly improve pedestrian crossings by reducing the pedestrian crossing distance, visually and physically narrowing the roadway, improving the ability of pedestrians and motorists to see each other, and reducing the time that pedestrians are in the street. Reducing street widths improves signal timing since pedestrians need less time to cross.

Motorists typically travel more slowly at intersections or mid-block locations with curb extensions, as the restricted street width sends a visual cue to slow down. Turning speeds are lower at intersections with curb extensions (curb radii should be as tight as is practicable). Curb extensions also prevent motorists from parking too close to the intersection.

Curb extensions also provide additional space for two curb ramps and for level sidewalks where existing space is limited, increase the pedestrian waiting space, and provide additional space for pedestrian push button poles, street furnishings, plantings, bike

and motorcycle parking and other amenities. A benefit for drivers is that extensions allow for more visible traffic sign placement.

Curb extensions are generally only appropriate where there is an on-street parking lane. Where street width permits, a gently tapered curb extension can reduce crossing distance at an intersection along streets without on-street parking, without creating a hazard. Curb extensions must not extend into travel lanes or bicycle lanes. Curb extensions must be designed and installed with several other aspects of roadway design and operation kept in mind:

1. May impact street drainage and require catch basin relocation
2. May impact underground utilities
3. May require loss of curbside parking, though careful planning often mitigates this potential loss, for example by relocating curbside fire hydrants, where no parking is allowed, to a curb extension
4. May complicate delivery access and garbage removal
5. May impact snow plows and street sweepers
6. May affect the turning movements of larger vehicles such as school buses and large fire trucks

Advanced Yield/Stop Lines. Stop lines are solid white lines 12 to 24 inches wide, extending across all approach lanes to indicate where vehicles must stop in compliance with a stop sign or signal. Advance stop lines reduce vehicle encroachment into the crosswalk and improve drivers' view of pedestrians. At signalized intersections, a stop line is typically set back between 4 and 6 feet.

At uncontrolled crossings of multi-lane roads, advance yield lines can be an effective tool for preventing multiple threat vehicle and pedestrian collisions. Placing traffic stop lines 20 to 50 feet in advance of crosswalks, depending upon location-specific variables such as vehicle speeds, traffic control, street width, on-street parking, potential for visual confusion, nearby land uses with vulnerable populations, and demand for queuing space. Thirty feet is the preferred setback for effectiveness at many locations. This setback allows a pedestrian to see if a car in the second (or third) lane is stopping after a driver in the first lane has stopped.

Bicycle Facilities

The City of Jurupa Valley has expressed a vision that encourages choice in travel modes and accommodates those without automobiles for safe mobility and healthy outcomes. A planned bicycle route system within the City of Jurupa Valley provides an important alternative to driving an automobile. A planned system

Figure 3-34: Advanced yield markings
(credit: Sky Yim)

Figure 3-35: Advanced yield markings, Plan View
(credit: Michele Weisbart)

guides the City and development on the orderly and planned implementation of the City's multi-modal transportation system.

The key to successful bicycle mobility is connectivity. Bicyclists need to be able to travel seamlessly on the bicycle network and get to where they need to go. They also need to feel secure and safe when using the facilities by having sufficient separation from vehicles. The "Three Feet for Safety Act," which was incorporated into the California Vehicle Code in September 2014, requires motorists overtaking or passing a bicycle in the same direction to leave a minimum distance of three feet between the motor vehicle and bicyclist.

Bikeway Types

Bicycle classifications include Class I bike paths, Class II bike paths, Class III bike paths and Combination Trails (Regional/Class I bike paths). Each type of facility has certain characteristics and offers varying levels of safety, perceived or otherwise. These bikeway types are shown graphically below, along with other bikeway designs that can meet specialized needs or conditions, such as Bicycle Boulevards and Shoulder Bikeways.

Class I Bikeways, or Shared Use Paths

Shared use paths are facilities separated from motor vehicle traffic by an open space or barrier, either within the highway right-of-way or within an independent right-of-way. Bicyclists, pedestrians, joggers, and skaters often use these paths. Shared-use paths are appropriate in areas not well served by the street system, such as in long, relatively uninterrupted corridors like waterways, utility corridors, and rail lines. They are often elements of a community trail plan. Shared use paths may also be integrated into the street network with new subdivisions.

Figure 3-37: Shared-use path

Figure 3-36: Example of a shared-use path:
Burbank, CA (credit: Ryan Snyder)

Class II, or Bike Lanes

Portions of the traveled way designated with striping, stencils, and signs for preferential use by bicyclists, bike lanes are appropriate on avenues and boulevards. They may be used on other streets where bicycle travel and demand is substantial. Where on-street parking is provided, bike lanes are striped on the left side of the parking lane. In California bike lanes are designated as Class II bikeways.

Figure 3-39: Class II Bike Lane (credit: Marty Bruinsma)

Figure 3-38: Bicyclist using bike lane (credit: Dan Burden)

Class III, or Shared Roadways

A shared roadway is a street in which bicyclists ride in the same travel lanes as other traffic. There are no specific dimensions for shared roadways. On narrow travel lanes, motorists have to cross over into the adjacent travel lane to pass a cyclist. Shared roadways work well and are common on low-volume, low-speed neighborhood residential streets, rural roads, and even many low-volume highways. In California shared roadways are known as Class III bikeways.

Figure 3-40: Class III Bicycle route (credit: Marty Bruinsma)

Class IV, or Separated Bikeways

A Class IV Bikeway (separated bikeway or “cycle track”) is for the exclusive use of bicycles and includes a separation required between the bikeway and through vehicle traffic, as shown in Figure 3-41. This separation may include grade separation, flexible posts, inflexible barriers, or on-street parking, as shown below. Separated bikeways typically operate as one-way bikeway facilities in the same direction as vehicular traffic on the same side of the roadway. Where off-street bikeways are not feasible, separated bikeways provide bicyclists a greater sense of comfort and usability, thereby increasing the likelihood of their use.

Figure 3-41: One-way, Class IV Bikeway

Figure 3-42: Combination Class I Bikeway/Regional Trail

Figure 3-43: Bicycle boulevard: Portland, OR (credit: Ryan Snyder)

Combination Class I Bikeway/Regional Trails

Regional collectors linking the urban and rural communities and major water bodies and regional parks in the County and provide opportunities for long-distance users to take advantage of this system for long one-way or loop-type trips. These facilities may also include pedestrian and equestrian uses.

Bicycle Boulevards

A bicycle boulevard is a street that has been modified to prioritize through bicycle traffic but discourage through motor vehicle traffic. Traffic calming devices control traffic speeds and discourage through trips by automobiles. Traffic controls limit conflicts between automobiles and bicyclists and give priority to through bicycle movement at intersections.

Shoulder Bikeways

This facility accommodates bicycle travel on rural highways and country roads by providing a suitable area for bicycling and reducing conflicts with faster moving motor vehicles.

A designated bikeway network provides a system of facilities that offers enhanced bicyclist safety or priority when compared to other roadways in the City. However, all public streets should safely and comfortably accommodate bicyclists, regardless of whether the street is designated as a bikeway. Several general types of bikeways are listed below. In California, cities should follow minimum width and geometric criteria in the Highway Design Manual Chapter 1000, or follow proper procedures for exemptions and experiments. Chapter 1000 contains *minimum standards*. Some jurisdictions read this to mean exact dimension. In many circumstances, exceeding these minimums provides for a more desirable bicycling environment.

Existing Need

Based upon a recent survey of major streets, existing designated bike facilities are very limited within the City. This deficiency of bicycle facilities poses a safety concern for bicyclists because they share the road with motor vehicles without the proper separation to feel secure. Bicyclists also use sidewalks, which can increase the risk of accidents with pedestrians.

As of 2017, preparation of the City's first Comprehensive Master Plan for Bicycles and Pedestrians is underway. The Plan will help promote a safe and efficient bicycle network that provides connectivity within the City and to the networks of adjacent jurisdictions. This connectivity may be developed with bikeway "nodes" connected by paths. These nodes may include bike parking, signage, information stations, water facilities and other desirable amenities for bicyclists. Bicyclist and pedestrian safety will be key considerations of the Plan, along with public education and enforcement efforts. The Plan will also include intermediate rest points, multi-modal connections and destinations to encourage commuter travel by bicycle.

Pedestrian and Bicycle Facilities Policies and Programs

General Provisions

Policies

- ME 3.1 **Bicycle and Pedestrian Trail Network.** Plan, develop and maintain a bikeway and pedestrian network according to a Bicycle and Pedestrian Plan, to be prepared following General Plan adoption. Bicycle facilities should be located off-road to the greatest extent possible, such as along flood control channels, the Santa Ana River banks, regional parks and within residential developments and greenbelts.
- ME 3.2 **Bicycle- and Pedestrian-Oriented Site Design.** Encourage bicycle- and pedestrian-oriented site design in commercial areas.
- ME 3.3 **Design Standards.** In determining the appropriate street or intersection design standard to apply, the City will seek to balance cyclists' and pedestrians' safety and convenience with that of other roadway users.
- ME 3.4 **Intersections and Crossing Locations.** Use federal, state, and local guidelines and standards for traffic operations, signal timing, geometric design, Universal Access (ADA) and roadway maintenance that facilitate walking and bicycling at intersections and other key crossing locations.

Figure 3-44: Santa Ana River Bicycle Trail

- ME 3.5 **Grant Funding.** Pursue Federal, State, County, regional and other funding opportunities to increase non-motorized mode share percentages, improve transportation system performance, and to increase user safety
- ME 3.6 **Internal Linkages.** Bicycle and pedestrian trails networks should be located and designed to link to retail and commercial centers.
- ME 3.7 **External Linkages.** Link on-road and off-road bicycle and pedestrian facilities to existing and planned bicycle and pedestrian facilities in adjacent and regional jurisdictions.
- ME 3.8 **Traffic Control Devices.** Traffic control devices and transportation infrastructure will be operated to serve the needs of all users of the roadway and pedestrians.

Program

- ME 3.1.1 **Pedestrian and Bikeway Plan.** Prepare a comprehensive Master Pedestrian and Bikeway Plan within 2 years of adoption of this General Plan Update.

Pedestrian Facilities

Policies

- ME 3.9 **Pedestrian Facilities.** Public streets shall provide pedestrian facilities in accordance with adopted City standards. Sidewalks shall be separated from the roadway by a landscaped parkway, except where the Planning Director determines that attached sidewalks are appropriate due to existing sidewalk location, design or other conditions.
- ME 3.10 **Accessible Pedestrian Facilities.** All new streets shall have provisions for the adequate and safe movement of pedestrians, including improvements for the elderly and disabled.
- ME 3.11 **Pedestrian Connectivity.** Require development projects and site plans to be designed to encourage pedestrian connectivity among buildings within a site, while linking buildings to the public bicycle and pedestrian network.
- ME 3.12. **Pedestrian Facility Improvements.** As funding permits, the City will install, or require as a condition of development approval, pedestrian facility improvements such as installation of signs, signals, sidewalks, street crosswalks, proper lighting, pedestrian- and equestrian-activated signals, street trees, benches, transit shelters, trails, landscaping, and other ancillary pedestrian features.
- ME 3.13 **Sidewalk Repair or Replacement.** Repair or replace substandard public sidewalks and paving in public areas, in accordance with a Sidewalk Repair Program.
- ME 3.14 **Public Pedestrian Improvements.** Encourage public pedestrian improvement projects such as public art, fountains, street trees, lighting and directional signs.
- ME 3.15 **Pedestrian Facilities.** Provide facilities for the safe movement of pedestrians within new developments, as specified in the General Plan and City Engineering and trail standards.
- ME 3.16 **Removal of Barriers.** Maximize visibility and access and encourage the removal of barriers (walls, easements, and fences) for safe and convenient movement of pedestrians within and between adjacent developments, where appropriate. Special emphasis should be placed on the needs of disabled persons considering Americans with Disabilities Act (ADA) regulations.

- ME 3.17 **Public Transit Connections.** Ensure safe pedestrian access from developments to existing and future transit routes and terminal facilities through project design.
- ME 3.18 **Safe Crossings.** City will plan for and implement pedestrian access facilities improvements that are consistent with road design standards, including provisions for interconnected pedestrian and equestrian paths, sidewalks, crosswalks, timing and actuation of traffic signals, in-street annunciators or other features necessary for safe street crossing.
- ME 3.19 **Safe Routes to Schools.** Collaborate with school districts and other agencies to provide and designate safe routes to schools, consisting of sidewalks, bicycle facilities or improved trails.
- ME 3.20 **Development Review.** Consult the Engineering Department as part of the development review process regarding any development proposals where pedestrian facilities may be warranted. City may require both the dedication and improvement of pedestrian facilities as a condition of development approval.
- ME 3.21 **ADA Compliance.** Require safe pedestrian walkways that comply with the Americans with Disabilities Act (ADA) requirements within commercial, office, industrial, mixed use, residential, and recreational developments.
- ME 3.22 **Trail Crossings.** Require, where appropriate and feasible, the construction of overpasses or under crossings where pedestrian, bicycle, and equestrian facilities intersect freeways, expressways, urban arterials, and primary roadways.
- ME 3.23 **Facility Improvements.** Review all existing roadways without pedestrian facilities when they are considered for improvements (whether maintenance or upgrade) to determine if new or improved facilities are warranted.

Programs

(TBA)

Bicycle Facilities

Policies

- ME 3.24 **Integration of Bicycle Planning.** Integrate development of the bicycle facilities network into larger land use planning and development projects.
- ME 3.25 **Bicycle-Friendly Infrastructure.** Require bicycle-friendly infrastructure design using new technologies and innovative treatments, where necessary to improve bicyclists' safety and convenience.
- ME 3.26 **Bicycle Facilities.** In preparing City land use plans and applicable Capital Improvement Programs, the City will address bicycle needs, including:
- Attractive destination facilities, such as secure bicycle lockers, showers, and changing rooms that are conveniently located for bicyclists, i.e., a bike station);
 - Facilities for bicycle parking within newly-built and renovated multi-family residential developments, residential condominiums and apartment conversions to condominiums, multi-use and non-residential sites;
 - Safe, secure, attractive and convenient bicycle parking; and
 - Wayfinding systems and traffic control signage or markings for all bicycle facilities.
- ME 3.27. **Bicycle and Pedestrian Wayfinding.** Bicycle and pedestrian network wayfinding and information shall be provided through signs, street markings or other technologies.
- ME 3.28 **Regional Bicycle and Pedestrian Coordination.** Coordinate regional trail and bicycle planning, acquisition and development efforts with adjacent jurisdictions.
- ME 3.29. **Off-Road Trail Linkages.** Where feasible, the City connects off-road trails with the on-road transportation network.
- ME 3.30. **Bicycle and Pedestrian Facility Design Standards.** City shall utilize the Caltrans Highway Design Manual and other infrastructure guidelines as appropriate to design and maintain bicycle and pedestrian facilities to high safety standards.

- ME 3.31. **Safety Awareness.** Encourage and support the creation of comprehensive safety awareness programs for pedestrians, equestrians, cyclists and drivers.
- ME 3.32 **Improvements along Bicycle and Pedestrian Routes.** Improve and maintain alternative transportation infrastructure and assign a high priority to improvements along primary pedestrian and bicycle routes to schools.
- ME 3.33 **Roadway Repairs.** When roadway repairs are done by the City or other agencies, such as utility companies, the roadway shall be restored in accordance with City standards, with restriping suitable for bicycle use, as appropriate.
- ME 3.34 **Bikeway Width.** Where feasible, design bikeways beyond the minimum required widths, but within federal, state or local standards (for example, Class 2 lanes should not exceed eight feet in width to avoid confusion with driving lanes).
- ME 3.35 **Bicycle Parking.** Require convenient, secure, attractive and easy to use bicycle parking to be provided at public buildings, commercial areas, multi-family residential development projects, and at schools and parks, and encourage other agencies to provide bicycle parking for rail transit and Park-n-Ride facilities.
- ME 3.36 **Bicycle Improvements Conditionally Required.** Require the construction or rehabilitation of bicycle facilities and/or “bicycle-friendly” improvements as a condition of approving new development, in accordance with Zoning Ordinance standards.

Programs

- ME 3.1.2 **Zoning Ordinance Update.** Update the Zoning Ordinance to require end of trip bicycle facilities, as appropriate to the scale and use of the project, such as bicycle parking, lockers, and showers in new or major remodels of multi-family residential and non-residential uses.
- ME 3.1.3. **Class II Bike Lanes.** Identify and designate Class II bike lanes where considered appropriate and there is sufficient curb-to-curb street paveout width.
- ME 3.1.4 **Education.** Promote Bicycle and Walking Safety lessons in local recreation programs and collaborate with local schools and law enforcement to offer bicycle and pedestrian skills and safety education programs.

- ME 3.1.5 **Safe Routes to Schools.** Expand the Safe Routes to School program, including City sponsorship of bicycle safety training, International Walk/Bike to School events, cyclovias and similar events and encourage all Jurupa Valley schools to get involved.
- ME 3.1.6 **Bicycle-Friendly Businesses.** Establish a bicycle-friendly business program to incentivize and facilitate use of alternative modes of transportation by employees and customers.

4.0 – Equestrian and Multi-Purpose Trails Network

The City of Jurupa Valley has a strong equestrian heritage that dates back hundreds of years. In 1742, the Anza Party travelled on trails through Jurupa Valley on its historic journey to Alta California, prior to the development of California's 21 missions. Trails continue to be an important part of both the heritage, and the transportation system, of Jurupa Valley. They are part of what gives the City its unique character and help promote its casual, healthy equestrian lifestyle.

Jurupa Valley's Trail System

Jurupa Valley offers pedestrian, bicycle, equestrian and multi-purpose trails that link urban, rural, and natural areas. These trails accommodate hikers, bicyclists, equestrians and others as an integral part of the County's circulation system. These trails serve both as a means of connecting the unique communities and activity centers within the City to adjacent communities, and as an effective alternate mode of transportation. In addition to transportation, the trail system also serves as a community amenity by providing recreation and leisure opportunities.

The presence of trails throughout the community, particularly within the Equestrian Lifestyle Protection Overlay, as shown in General Plan Land Use Element *Figure 2-20* (page [2-51](#)), reflects the importance of the equestrian heritage to Jurupa residents. Protection of the existing equestrian character of the community and planning for new trails is a high City priority. Trails also provide connections to activity centers within the City and to adjacent communities and provide recreation and leisure opportunities for residents.

Figure 3-45: Equestrians at Mary Tyo Equestrian Staging Area

Figure 3-46: Bain Street primary equestrian trail, along San Sevaine Flood Channel

A well-planned and built trail system can provide for an improved quality of life for City residents and visitors by providing a recreational amenity and by providing a viable alternative to the automobile. Ideally, this system would connect community centers, residential neighborhoods, recreational amenities, employment centers, shopping areas and activity areas. Providing a safe user environment can encourage utilization of trails within commercial, office, and residential areas. The trails proposed for the City are designed to serve several different groups. They are intended for the use of equestrians, hikers, joggers, non-motorized bikers, as well as the casual walker. Depending on where the trail is located will affect the type of use the trail gets, but many trails are open to all of these uses.

Historically, the trails network was planned under the auspices of Riverside County, supplemented by the Jurupa Area Parks and Recreation District (JARPD) and mostly implemented using street rights-of-way along major streets. When new developments are constructed, they are required to fill in missing linkages along the street edge. To date, there has been no initiative by any public agency to build a true off road trails network. In 2016, JARPD prepared a plan to identify and show connectivity for the key segments in the network. This plan served as the basis for the policies and programs in the 2017 General Plan.

The City's trail network is currently planned and implemented through the City's development review process in coordination with the Jurupa Valley Community Recreation and Parks District. Existing trails in Jurupa Valley are located along the:

1. east side of Bain Street, between Bellegrave Avenue and Limonite Avenue
2. west side Etiwanda Avenue between Bellegrave Avenue and Limonite Avenue
3. north and south sides of Bellegrave Avenue, from Etiwanda Avenue to Wineville Street
4. east side of Wineville Street, between Limonite Avenue and 68th Street
5. east side of Wineville between Bellegrave Avenue and Redbud Street.
6. south side of Cantu-Galleano Boulevard between Calle Del Sol and Etiwanda
7. north side of Limonite Avenue, between Wineville Street and Etiwanda Avenue
8. south side of 68th Street between the I-15 freeway and Lucretia Street

9. east side of Lucretia Street between 66th and 68th Streets
10. south side of 66th Street between Lucretia Street and Etiwanda Avenue.

In 2017, the City has a developed trail that extends along the Santa Ana River Trail, linking Jurupa Valley with the cities of Riverside and Eastvale. The Santa Ana River Trail is part of a planned regional trail extending across multiple jurisdictions from the Pacific Ocean in Orange County to the San Bernardino Mountains in San Bernardino County. Some communities have trails which are built and are maintained by another entity such as a homeowners' association, a community service area, or a local park and recreation district. These trails lack connectivity to other parts of the County trail system, resulting in a fragmented system. Providing connectivity between City trails and between County trails and State and Federal trails, historic trails, and trails in other jurisdictions will be instrumental in creating a usable trail system. The City has four general types of multi-use, recreational trails:

Figure 3-47: Santa Ana River trailhead

Parkway Trails are located in, along, or adjacent to a stream's floodplain. Ordinarily it extends the length of the stream but may be broken into segments. Road and trailside parks are part of a parkway.

Regional Trails - These are the main trails within the County, generally maintained and operated by the County of Riverside's Parks and Open Space District. They are designed to eventually provide linkages between areas which could be quite distant from each other. They are also designed to connect with State and Federal trails as well as trails within Jurupa Valley, other cities and unincorporated areas. Regional trails will have an easement of 14 to 20 feet wide and a trail width of 10 feet.

Community Trails - These trails are designed to link areas of a community to the regional trail system and to link areas of a community with each other, as further described below. Such trails are typically maintained and operated by a local parks and recreation district. Typically, Community Trails have an easement width of 10 to 14 feet wide and a trail width of 4 to 8 feet.

Historic Trails - These are designated historic routes that recognize the rich history of Jurupa Valley and Riverside County. In Jurupa Valley, the Juan Bautista de Anza National Historic Trail is one segment of a planned 1,200-mile trail connecting historic, cultural, and recreation sites from Nogales, Arizona to the San Francisco Bay Area. Historic Trail routes designations are graphical representations of the general location of these historic routes and do not necessarily represent a planned Regional or Community Trail. In some cases, the trails have more detailed planning

documents which describe interpretive routes for autos and/or non-motorized modes of Transportation. There generally are Regional or Community Trail designations that either follow or parallel these routes, thus providing opportunities to recognize the historic significance of these routes and allowing the possibility of developing interpretive signage and visitor facilities.

Equestrian Trail Routes

Within the Equestrian Life Style Protection Overlay and in selected areas outside the Overlay, the General Plan establishes three different types of equestrian trail routes to serve Jurupa Valley. Specific trail designs and facilities within the routes will vary, depending upon right-of-way width, sight distance, land use, existing improvements, safety and budget considerations. Specific trail locations and designs will be shown in the City's Trails Master Plan. These trail routes are generally described below:

Primary Equestrian Trail Routes connect Jurupa Valley's equestrian-oriented communities and secondary equestrian routes, and provide regional connections to surrounding communities adjacent trail systems. These routes consist of improved equestrian trails located behind a curb along one side of the public right-of-way, and typically include a compacted, all-weather trail surface (e.g., decomposed granite, compacted natural grade, gravel), three-rail running fencing, equestrian street crossings, lighting and safety signage. Primary Equestrian Trail routes generally follow major streets and designated flood control channels, such as Limonite, Bellegrave Road, Etiwanda and Pedley Road and San Sevaine Channel.

Secondary Equestrian Routes connect residential neighborhoods with the Santa Ana River, Jurupa Mountains, schools, parks, neighborhood markets, cultural facilities and other important local destinations. These routes along one side of a public right-of-way consist of mostly unimproved equestrian trails located on the unpaved shoulder and behind drainage swales or catch basins. Secondary Equestrian Routes may include low-level, downlighting (such as bollards), safety crossings and signage, and are typically located on connector streets or minor arterials, such as 58th Street, Holmes Avenue, Riverview Drive, 46th Street/Crestmore Drive, 51st Street between Beach Street and Felspar Street, and Jurupa Road.

Equestrian Streets consist of an interconnected network of local streets located within rural, large lot residential neighborhoods in the "Equestrian Lifestyle Protection Overlay", *Figure LU-20*. These streets have right-of-way widths of 60 feet or less, with asphalt paving, soft dirt shoulders, and typically lack curbs, sidewalks or

other public frontage improvements. On these streets, the entire right-of-way, including paved roadway and unimproved shoulders, serves as an equestrian route where equestrians have priority over motor vehicles. Equestrian streets are intended to maintain and protect the semi-rural, equestrian lifestyle, slower pace of life, recreational opportunities and visual character that exists in much of semi-rural Jurupa Valley, including parts of the Mira Loma, Pedley, Glen Avon, Belltown and Sunnyslope communities. Examples of Equestrian Streets include: 63rd Street between Van Buren and Downey Street, 65th Street, Scenic Drive, Troth and Marlatt Streets.

The Generalized Equestrian Trails Plan, *Figure 3-48*, guides the general location and improvement of equestrian trails in Jurupa Valley, until a more detailed Master Trails Plan is adopted by the City.

Multi-Purpose Trails Vision

Due to need for a Citywide, regionally-integrated trails system, the City intends to prepare a Master Trails Plan following General Plan adoption. This effort will involve a broad cross-section of the community, including other key agencies, such as Riverside County, JARPD, Riverside County Flood Control, and the National Park Service. It will build upon an existing vision for a citywide trails system.

A vision has been developed for a Jurupa Valley Multi-Purpose Community Trails System. The system is anticipated to be a network of pedestrian, equestrian and bicycle trails that link Jurupa Valley's eight distinct communities and its many neighborhoods with open space areas, schools, recreation facilities, regional trail connections and local landmarks (e.g., The Discovery Center, Mt. Rubidoux). This vision has been shaped by many community groups and individuals, including the GPAC, Jurupa Valley residents and property owners, the City of Jurupa Valley decision-makers and staff, Jurupa Area Recreation and Parks District (JARPD), Riverside County Regional Park and Open-Space District, Riverside County Flood Control and Water Conservation District, Inland Empire Resource Conservation District and others. This vision was initially described by the JARPD, as shown in *Appendix 16.0* and includes the following general goals as identified by the JARPD:

DRAFT

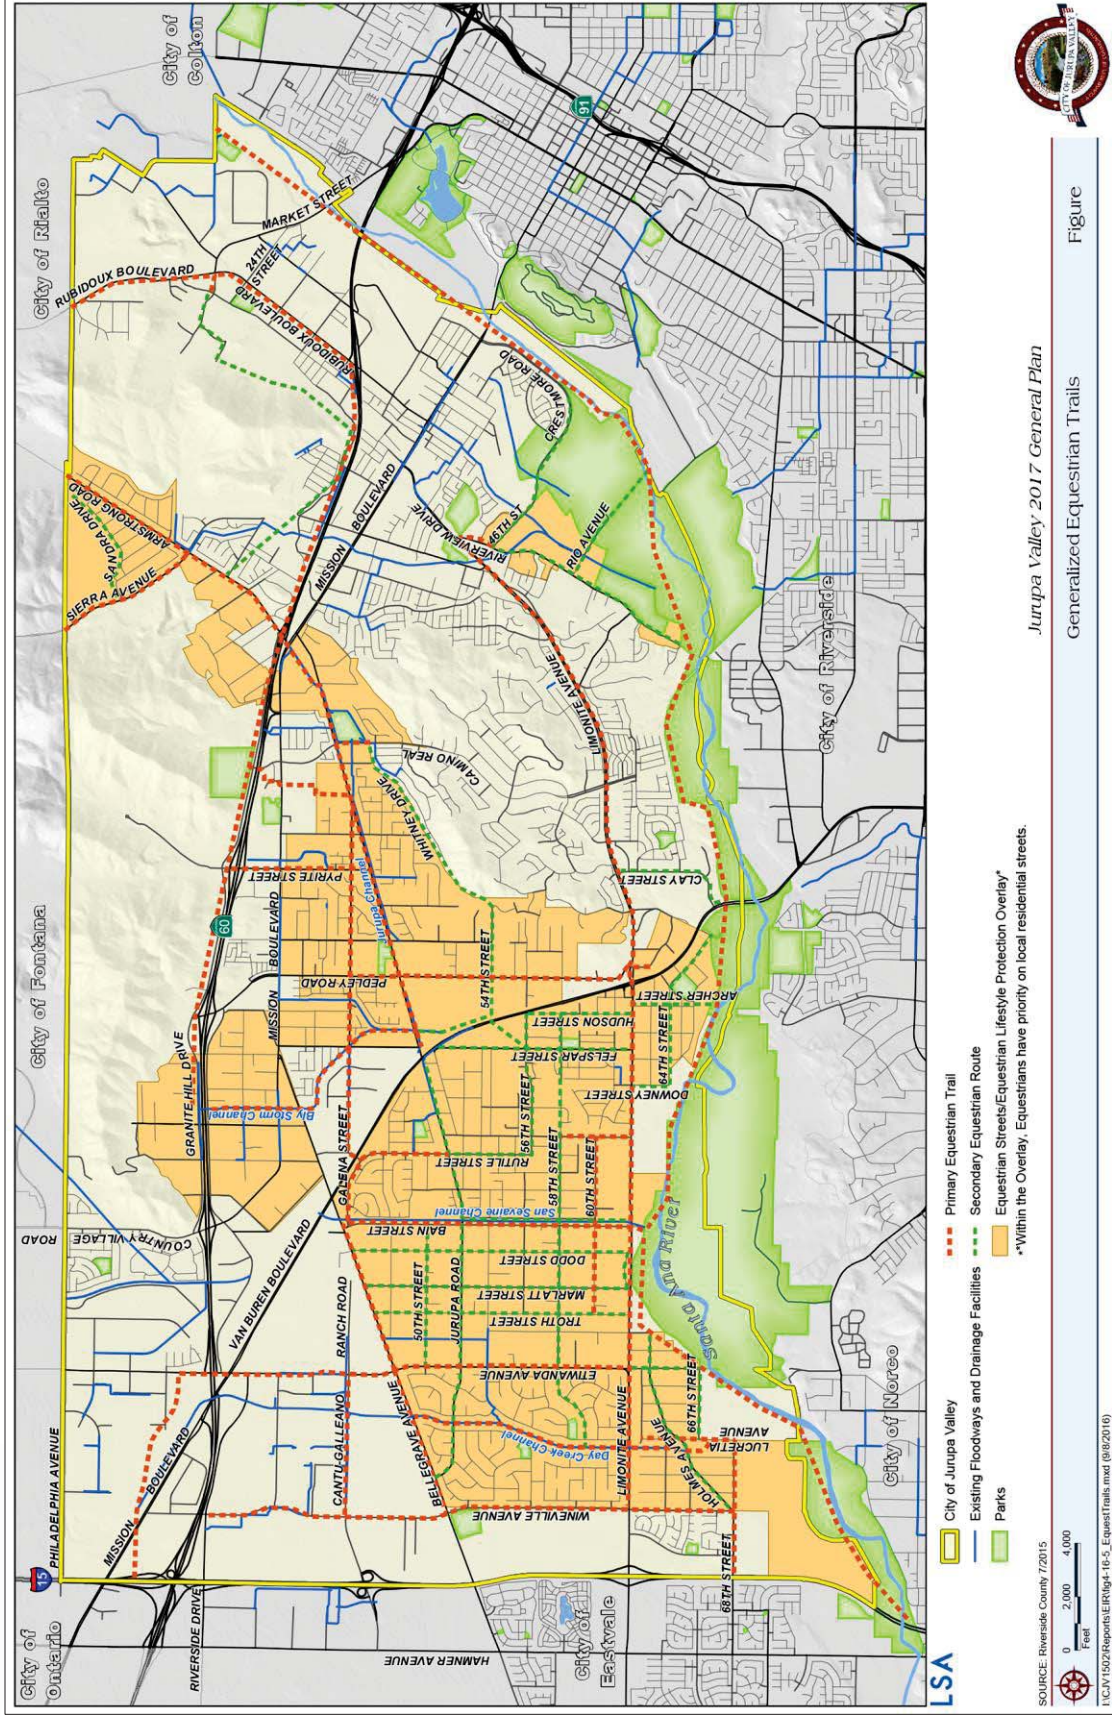

Figure 3-48: Generalized equestrian trails plan

1. Review, maintain, and expand community multi-purpose trails system;
2. Develop a safe and interconnected area-wide network of trails that link together destinations and people both locally and regionally;
3. Develop a trails network that provides facilities and programs designed to expand and encourage active recreation and alternative transportation;
4. Enhance, protect, and preserve the environmental quality of open space, waterways, and wildlife habitats;
5. Conserve and tell the story of local culture, history, and heritage through interpretive signage;
6. Stimulate economic growth through increased tourism and real property value by developing a region-wide trails network;
7. Promote agency coordination among JARPD and the cities of Jurupa Valley and Eastvale;
8. Identify street intersections where vehicular traffic and trail user (equestrian / hiking / trail biking) conflicts are present;
9. Coordinate safety solutions for trail street crossings with City of Jurupa Valley Traffic Engineering and Planning Departments;
10. Create an “equestrian friendly” environment the maintains Jurupa Valley’s “equestrian lifestyle”;
11. Identify residential neighborhoods where streets are narrow with equestrian trails, and designate them as “equestrian routes” where horses have priority and utilize the street as a trail;
12. Designate trails as two (2) types, Recreational Use trails owned by public agencies and Equestrian Routes which are not developed trails but have been historically used as one;
13. Establish public trail designation through onsite signage program that identifies trail alignments throughout the community by posting signs for all multi-purpose trails, as appropriate;
14. Establish natural trails interpretive signage program;
15. Adopt a Community Multi-Purpose Trails Development Ordinance;
16. Create a trail maintenance and operations program; and
17. Establish a separate funding account for Multi-Purpose Community Trails development.

Equestrian and Multi-Purpose Trail Facilities Network Policies and Programs

Equestrian and Multi-Purpose Trail Facilities

Policies

Figure 3-49: Primary equestrian trail looking north on El Camino Real

- ME 4.1 **Equestrian and Multi-Purpose Trails.** Provide trails for the safe movement of pedestrians and equestrians within and between new developments where appropriate, and as specified in the General Plan and City Engineering and trail standards.
- ME 4.2 **Removal of Barriers.** Maximize visibility and access and encourage the removal or modification of barriers (e.g., walls, fences, utilities, drainage ditches, refuse bins) for safe and convenient equestrian movement. Special emphasis should be placed on creating and maintaining safe and convenient trail linkages with the Equestrian Lifestyle Protection Overlay.
- ME 4.3 **Development Review.** Consult the Engineering Department as part of the development review process regarding any development proposals where trail facilities or improvements may be warranted. City may require both the dedication and improvement of pedestrian and equestrian facilities as a condition of development approval.
- ME 4.4 **Safe Crossings.** City will plan for and implement pedestrian and equestrian access that is consistent with road design standards, including provisions for interconnected pedestrian and equestrian paths, sidewalks, crosswalks, timing and actuation of traffic signals, in-street annunciators or other features necessary for safe street crossing.
- ME 4.5 **Facility Improvements.** Review all existing roadways without pedestrian facilities when they are considered for improvements (whether maintenance or upgrade) to determine if new or improved facilities are warranted.

Programs

- ME 4.1.1 **Equestrian and Multipurpose Trails Implementation.** Implement the Equestrian Trails Plan as shown in *Figure 3-48* (page [3-88](#)) and implement the City Multi-Purpose Trail System Plan, to be developed.

- ME 4.1.2 **Trail Linkages.** Locate and design trails to provide access to or link scenic corridors, schools, parks, and other natural areas.
- ME 4.1.3 **Trail Access.** Require that all development proposals located along a planned trail or trails provide access to the trails system.
- ME 4.1.4 **Gated Communities.** Ensure that existing and proposed gated communities with dedicated trails and new gated communities do not preclude trails from traversing their properties.
- ME 4.1.5 **Trail Siting and Design.** Adhere to the following guidelines when siting or designing a trail:
1. Permit urban trails to be located in or along transportation rights-of-way in fee, utility corridors, and along irrigation and flood control waterways so as to take advantage of existing rights-of-way, separate traffic and noise, and provide more services at less cost in one corridor.
 2. Secure separate rights-of-way for non-motorized trails when physically, financially and legally feasible.
 3. Where a separate right-of-way is not feasible, maintain recreation trails within the City right-of-way.
 4. Use trail design standards which will minimize maintenance due to erosion or vandalism.
 5. When a trail is to be reserved through the development approval process, base the precise trail alignments on the physical characteristics of the property, assuring connectivity through adjoining properties.
 6. Place all recreation trails a safe distance from the edge of active aggregate mining operations and separate them by physical barriers.
 7. Install warning signs indicating the presence of a trail at locations where regional or community trails cross public streets with high amounts of traffic.
 8. Take into consideration such issues as sensitive habitat areas, flood potentials, access to neighborhoods and open space, safety, alternate land uses, and usefulness for both transportation and alternate land uses when designing and constructing trails.

9. Coordinate with other agencies and/or organizations (such as the U.S. Fish and Wildlife Service and the Department of Transportation) to encourage the development of multi-purpose trails. Potential joint uses may include historic and environmental interpretation, access to fishing areas and other recreational uses, opportunities for education, and access for the disabled.
10. Work with landowners to address concerns about privacy, liability, security, and trail maintenance.

ME 4.1.6 **Rail Fencing.** Install, or require the installation where appropriate, of a rail type fence separating road rights-of-way from adjacent trail easements and designed with two to three rails constructed of white PVM material

Trail Acquisition, Maintenance, and Funding

Policies

- ME 4.6 **Acquisition of Right-of-Way.** To expand its trails network, the City will:
1. Promote public/private partnerships for trail acquisition.
 2. Determine which public and/or private agencies have easements or existing, unused rights-of-way which could be incorporated as trail linkages. Such agencies may include the Riverside County Flood Control District, community service districts, utilities, and railroads.
 3. Evaluate the potential use of private-landowner tax credits for acquiring necessary trail easements and/or rights-of-way. A system such as this would allow a landowner to dedicate an easement for trail purposes in exchange for having that portion of the property assessed as open-space instead of a higher land-use category.
- ME 4.7 **Alternative Trail Locations.** Examine the use of utility easements and rights-of-way for use as public trail linkages to the regional trails system and/or other open space areas. Potential corridors include the right-of-way easements for:

1. water and wastewater mains
2. water storage project aqueducts
3. flood control channels and maintenance access ways
4. overhead utilities, and
5. unused or abandoned rail rights-of-way

ME 4.8 **Trail Maintenance.** To help maintain its trails, the City will:

1. Consider the use of volunteers, associations, or private landowner maintenance agreements, and/or adopt-a-trail programs sponsored by various groups,
2. Discourage unauthorized use of trails by motorized vehicles, which may cause trail deterioration, create an unsafe environment, and/or disrupt the enjoyment of the trails by intended trail users. These methods may include the installation of gates and motorcycle barriers, posting signs prohibiting unauthorized activities, or implementing educational programs to encourage the proper use of trails.

ME 4.9 **Trails Program Funding.** Consider all possible sources of funding to plan, acquire, and construct trails. Sources can include, but not be limited to, development mitigation fees, private foundation grants, and/or funds from local, regional, State, and Federal government entities.

Programs

ME 4.1.7 **Grants.** Working with other agencies, the City will seek grants to help develop, operate and maintain a comprehensive trail system through Jurupa Valley's designated open spaces, trails is a priority of the City. Trails also provide connections to activity centers within the City and to adjacent communities and provide recreation and leisure opportunities for residents.

Figure 3-50: Riverside Transit Authority Bus

5.0 – Public Transit

The City encourages the development of a safe, efficient, and economical community, intercommunity and countywide public transportation system. Public Transit includes busses, taxis, commuter rail (Metrolink), and all other forms of transportation meets public transportation needs. Due to the interrelationship of urban and rural activities (employment, housing and services), and the low average density of existing land uses, the private automobile is the dominant mode of travel within Jurupa Valley and surrounding areas.

As the population grows in Jurupa Valley and the region, the street and highway network will become increasingly congested. Hence, the City intends to encourage increased ridership on public transit systems and increased use of alternative modes of transportation, including bicycles and walking. The Riverside Transit Agency (“RTA”) provides numerous public transportation opportunities for residents and visitors in Jurupa Valley. These public transportation opportunities include fixed-route transit, intercity transit, paratransit, senior transit, rural transit, and private transit services.

Fixed-Route and Demand-Response Services

Transit, paratransit, and private provider services are characterized as being either a fixed-route or demand-response systems. The Community Transit Association of America (CTAA) defines fixed-route service to include any transit service in which vehicles run along an established path at preset times. Demand-response service is any non-fixed-route system of transporting individuals that requires advanced scheduling by the customer including services provided by public entities, non-profits, and private providers.

The Riverside Transit Agency (RTA) operates fixed routes providing public transit service throughout western Riverside County and coordinates transit services throughout a 2,500-square mile service area. RTA provides local and regional services throughout the region with 35 fixed routes, eight Commuter Link routes, and Dial-A-Ride services.

Commuter Link routes provide express bus routes to Riverside, Orange, San Diego, and San Bernardino Counties and include RTA’s newest generation of express buses. Dial-A-Ride is an origin to destination reservation transportation service for seniors and persons with disabilities. Dial-A-Ride vehicles travel to areas within three-quarters of a mile of an RTA local fixed-route.

Figure 3-53 illustrates the fixed-route transit services. In 2017, RTA currently provides five fixed routes that operate within and through the City on most major roadways. Adequate connectivity exists on most major roadways in the east-west and north-south directions, however, there are existing deficiencies located on Van Buren Boulevard from Limonite Avenue to the northwestern City limits, Bellegrave Avenue from the western City limits to Mission Boulevard, Jurupa Road from Van Buren Boulevard to Mission Boulevard, Camino Real from Mission Boulevard to Limonite Avenue, and Etiwanda Avenue from Jurupa Road to the northern City limits.

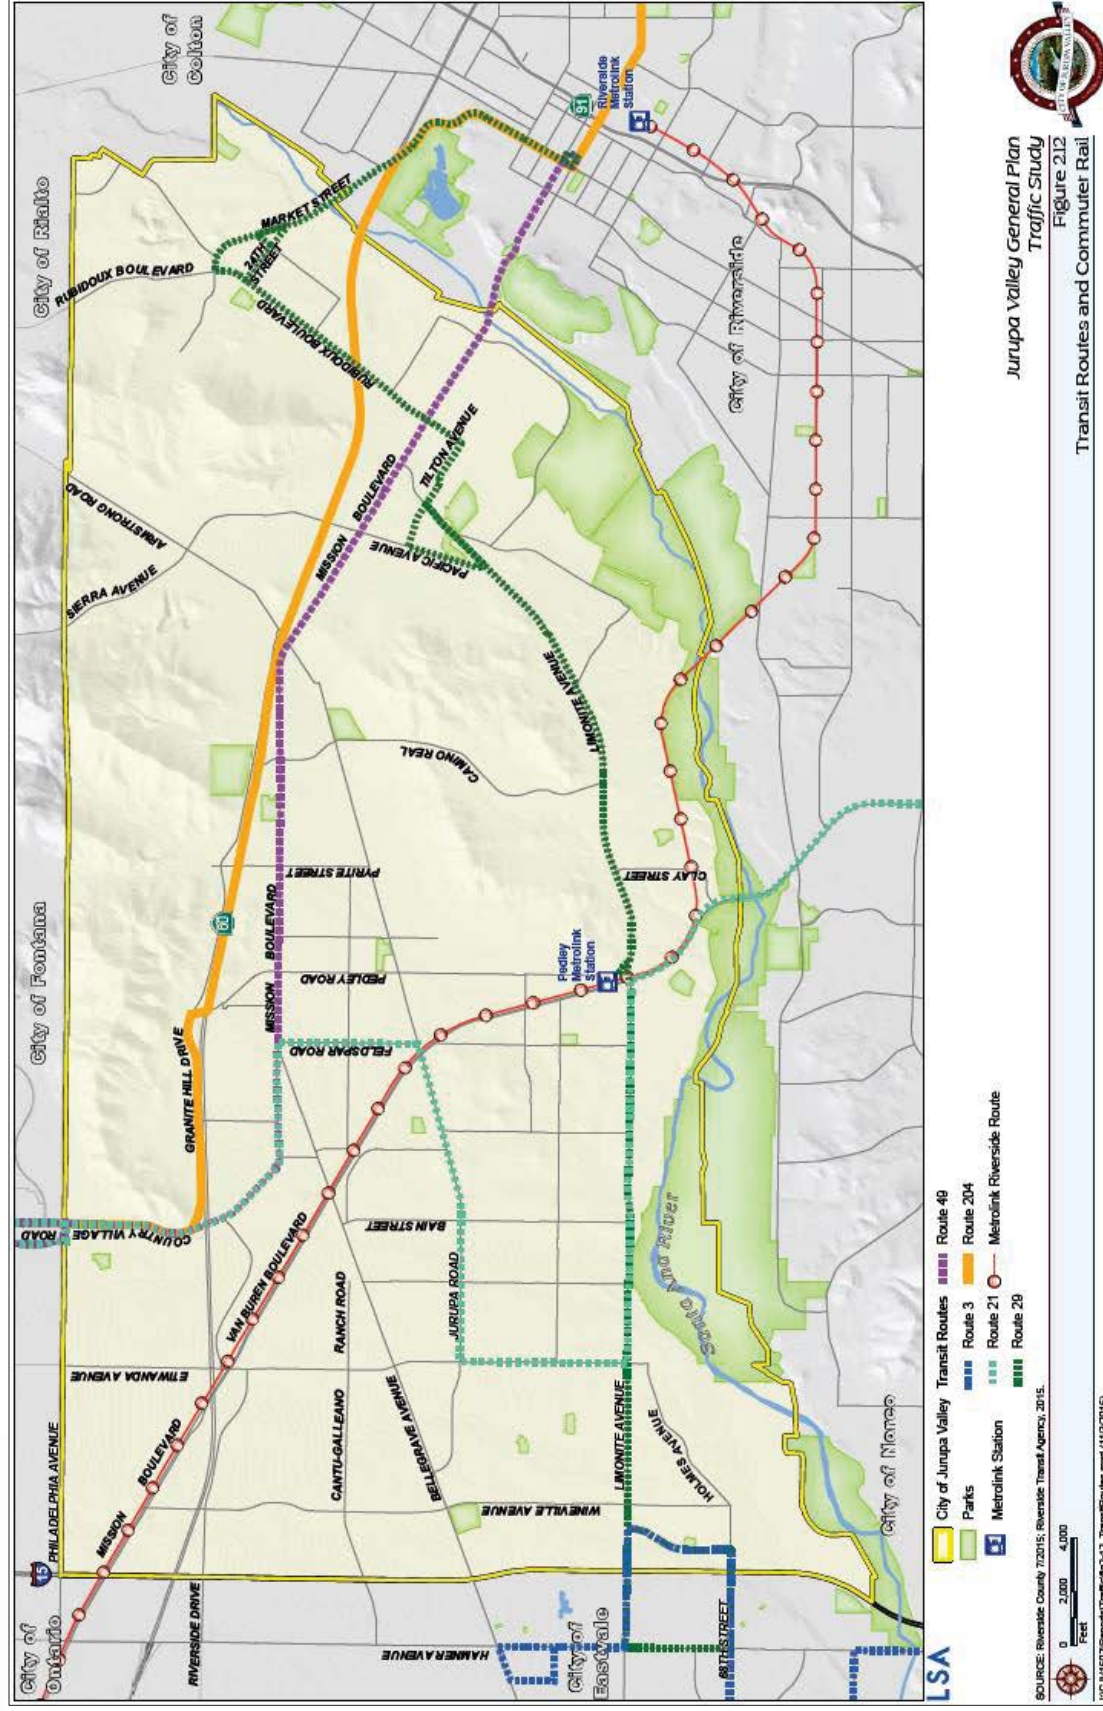

Commuter rail service through the City of Jurupa Valley is provided by Metrolink and is illustrated in Figure 3-52. The Jurupa Valley/Pedley Metrolink Station is located on Pedley Road in Jurupa Valley and connects to the Riverside-Downtown station to the east and the East Ontario station to the west. RTA fixed route 29 provides a transit connection to the Pedley Metrolink station. The Pedley Metrolink Station is served by Metrolink's Riverside Line which provides rail service from Riverside to Downtown Los Angeles.

Figure 3-51: Metrolink Station in Jurupa Valley

Figure 3-52: Metrolink Commuter Rail System

Principles to Promote Public Transit

Public transit should be planned and designed as part of the street system. It should interface seamlessly with other modes, recognizing that successful transit depends on customers getting to the service via walking, bicycling, car, taxi, or paratransit. Transit should be planned and accommodated following these principles:

1. Transit has a high priority on City streets. On some streets, transit vehicles should have higher priority than private vehicles.
2. Technology should be applied to increase average speeds of transit vehicles where appropriate.
3. Transit stops should be easily accessible, with safe and convenient crossing opportunities.
4. Transit stops should be active and attractive public spaces that attract people on a regular basis, at various times of day, and all days of the week.
5. Transit stops function as community destinations. The largest stops and stations should be designed to facilitate programming for a range of community activities and events.
6. Transit stops should include amenities for passengers waiting to board.
7. Transit stops should provide space for a variety of amenities in commercial areas, to serve residents, shoppers, and commuters alike.
8. Transit stops should be attractive and visible from a distance.
9. Transit stop placement and design influences accessibility to transit and network operations, and influences travel behavior/mode choice.
10. Zoning codes, local land use ordinances, and design guidelines around transit stations should encourage walking and a mix of land uses.
11. Streets that connect neighborhoods to transit facilities should be especially attractive, comfortable, and safe and inviting for pedestrians and bicyclists.

Figure 3-54: Riverside County transit shelter

Access to Transit

Transit depends primarily on walking to function well; most transit users walk to and from transit stops. Sidewalks on streets served by transit and on streets that lead to transit corridors provide basic access. Bicycle-friendly streets do the same for those who access transit by bicycle. Every transit trip also requires a safe and convenient street crossing at the transit stop; a disproportionately high number of pedestrian crossing crashes occur at transit stops. Every transit stop should be evaluated for its crossing opportunities. If the crossing is deemed unsafe, mitigation can occur in two ways: a crossing should be provided at the existing

stop, or the stop can be moved to a location with a safer crossing. The following sections provide guidance for designing bus stops.

A well placed and configured transit stop offers the following characteristics:

- Clearly defines the stop as a special place
- Provides a visual cue on where to wait for a transit vehicle
- Does not block the path of travel on the adjacent sidewalk
- Allows for ease of access between the sidewalk, the transit stop, and the transit vehicle

Layout guidelines include the following:

- Consolidate streetscape elements to create a clear waiting space and minimize obstructions between the sidewalk, waiting area, and boarding area
- Consider the use of special paving treatments or curb extensions (where there is on-street parking) to distinguish transit stops from the adjacent sidewalks
- Integrate transit stops with adjacent activity centers whenever possible to create active and safe places
- Avoid locating bus stops adjacent to driveways, curb cuts, and land uses that generate a large number of automobile trips (gas stations, drive-thru restaurants, etc.)

Public Transit Policies and Programs

Policies

- ME 5.1. **Transit Funding.** Support transit operator efforts to maximize revenue sources for short- and long-range transit needs, including the operators' use of federal grants, state enabling legislation, and fare box revenue, and other appropriate funding sources. This can be accomplished through the Riverside County Transportation Commission (RCTC) and development of Short- and Long-Range Transit Plans.
- ME 5.2 **Transit Usage.** Support transit operators' programs to foster transit usage.
- ME 5.3 **"Clean" Transit.** Demand that local and regional public transit providers operate and maintain fleet vehicles so as to not generate significant noise and air quality impacts.
- ME 5.4 **Paratransit Service.** Support appropriate and cost-effective transit services for seniors, disabled persons and those who are unable to drive motor vehicles by coordinating with regional transit providers, non-profit

service providers, private services, and community-based services.

- ME 5.5 **Transit Right-of-Way.** Reserve sufficient right-of-way to plan for and accommodate public transit service.
- ME 5.6 **Village Centers.** Incorporate the potential for public transit service in the design of developments that are identified as major trip attractions (i.e., village centers, tourist attractions and employment centers).
- ME 5.7 **Street Design for Transit.** Design the physical layout of major streets and collector highways to facilitate transit operations. Locations of bus turnouts and other transit features should be considered.
- ME 5.8 **Transit Oriented Development.** Consider offering developer incentives to locate new development near transit-oriented areas such as village centers, mixed use areas or along a designated transit corridor near a transit station. Incentives could include density bonuses, parking reductions or fast-track development review and/or permit processing.
- ME 5.9 **Public Transit Planning.** Encourage public transit development and expanded use through higher densities where appropriate, innovative street and building design, street improvements, and right-of-way dedication.
- ME 5.10 **Transit-Only Lanes.** Advocate the designation of exclusive transit-only lanes on freeways.
- ME 5.11. **Transit Centers and Park-N-Rides.** Encourage the development of transit centers and park-n-rides for use by all transit operators, including development of multi-modal facilities.
- ME 5.12 **Bus Shelters.** Coordinate with transit operators to ensure that bus shelters are provided along and/or near all transit routes, whenever feasible. New developments may be required to provide bus shelters due to existing or future planned transit routes, even if demand for pedestrian facilities are not immediately warranted.
- ME 5.13 **Accessible Transit.** Require bicycle, pedestrian and wheelchair access to all transit facilities and maintain bicycle, pedestrian and wheelchair facilities so that they are safe, attractive and well lit.
- ME 5.14 **Metrolink Facilities and Services.** Encourage continued improvements to the Pedley Metrolink Station facilities and services.

ME 5.15 **Linkage.** Design and improve street and trails to link all transportation modes, including public transit, with the Metrolink station, park-n-ride facilities and other transit centers.

Program

ME 5.1.1. Work with RTA to identify shelter options to ensure adequate safety and comfort for transit users and encourage RTA to provide bus shelters at all bus stops along Limonite, Mission, and Jurupa Road.

6.0 – Freight Movement and Airports

Commercial Trucks

Figure 3-55: Commercial semi-truck/trailer in Jurupa Valley

Due to its location relative to major highways and urban centers, Jurupa Valley serves as a major logistics shipping and receiving center for Southern California. Along with that regional role comes significant commercial truck traffic using highway off-ramps and City Streets. This has been part of an important economic stimulus in Jurupa Valley, but has also resulted in significant traffic congestion in certain areas and increased wear and damage to City streets, particularly in areas where logistics and other warehouse and industrial uses are concentrated. Most commercial truck traffic is concentrated in the northwestern and northeastern areas of the City, near the SR 60 corridor, as shown in *Figure 3-56*.

In 2017, the City does not have designated truck routes, per se. Based on information received from the City's Engineering Staff, there are, however, truck restrictions on designated roadways within the City, as shown in *Figure 3-57*. The following roadway segments restrict truck access:

- Etiwanda Avenue from Riverside Drive to Cantu-Galleano Ranch Road
- Etiwanda Avenue from Cantu-Galleano Ranch Road to Bellegrave Avenue
- Jurupa Road from Camino Real to Valley Way
- Valley Way-Armstrong Road from Jurupa Road to Mission Boulevard
- Holmes Avenue from Wineville Avenue to Etiwanda Avenue
- Etiwanda Avenue between Riverside Drive to Cantu-Galleano Ranch Road

DRAFT

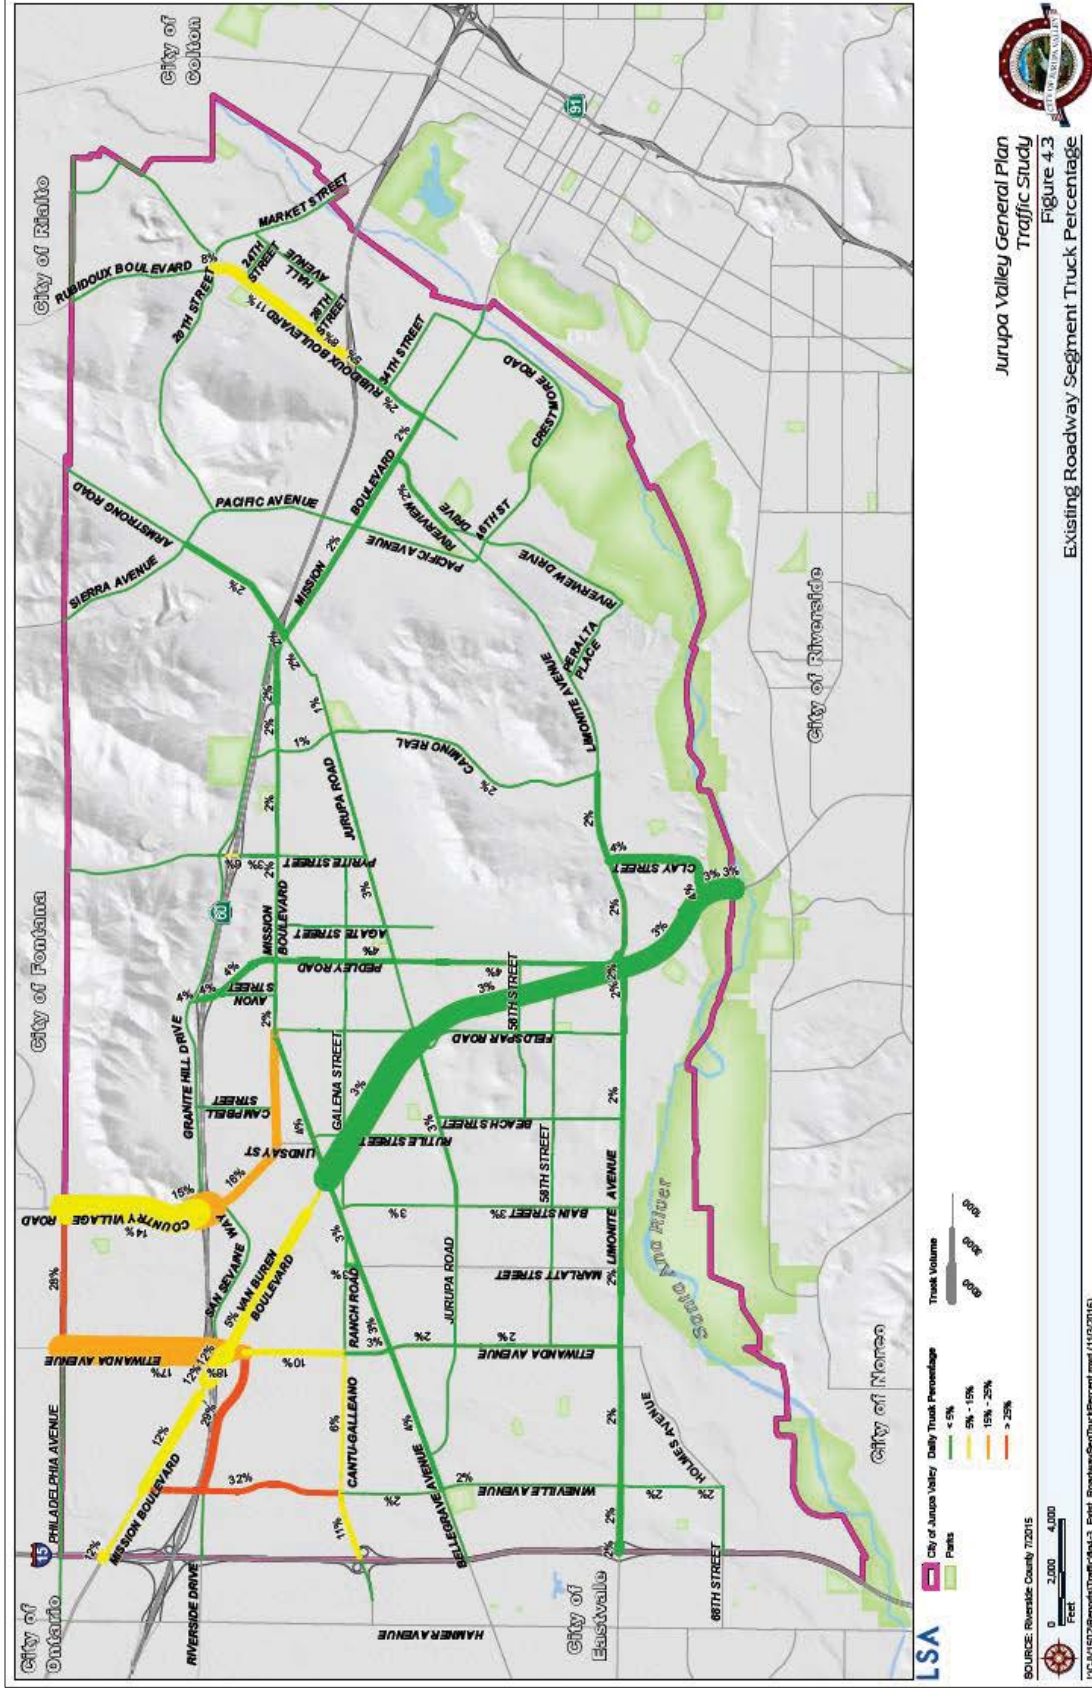

Figure 3-56: Commercial truck traffic, 2016

DRAFT

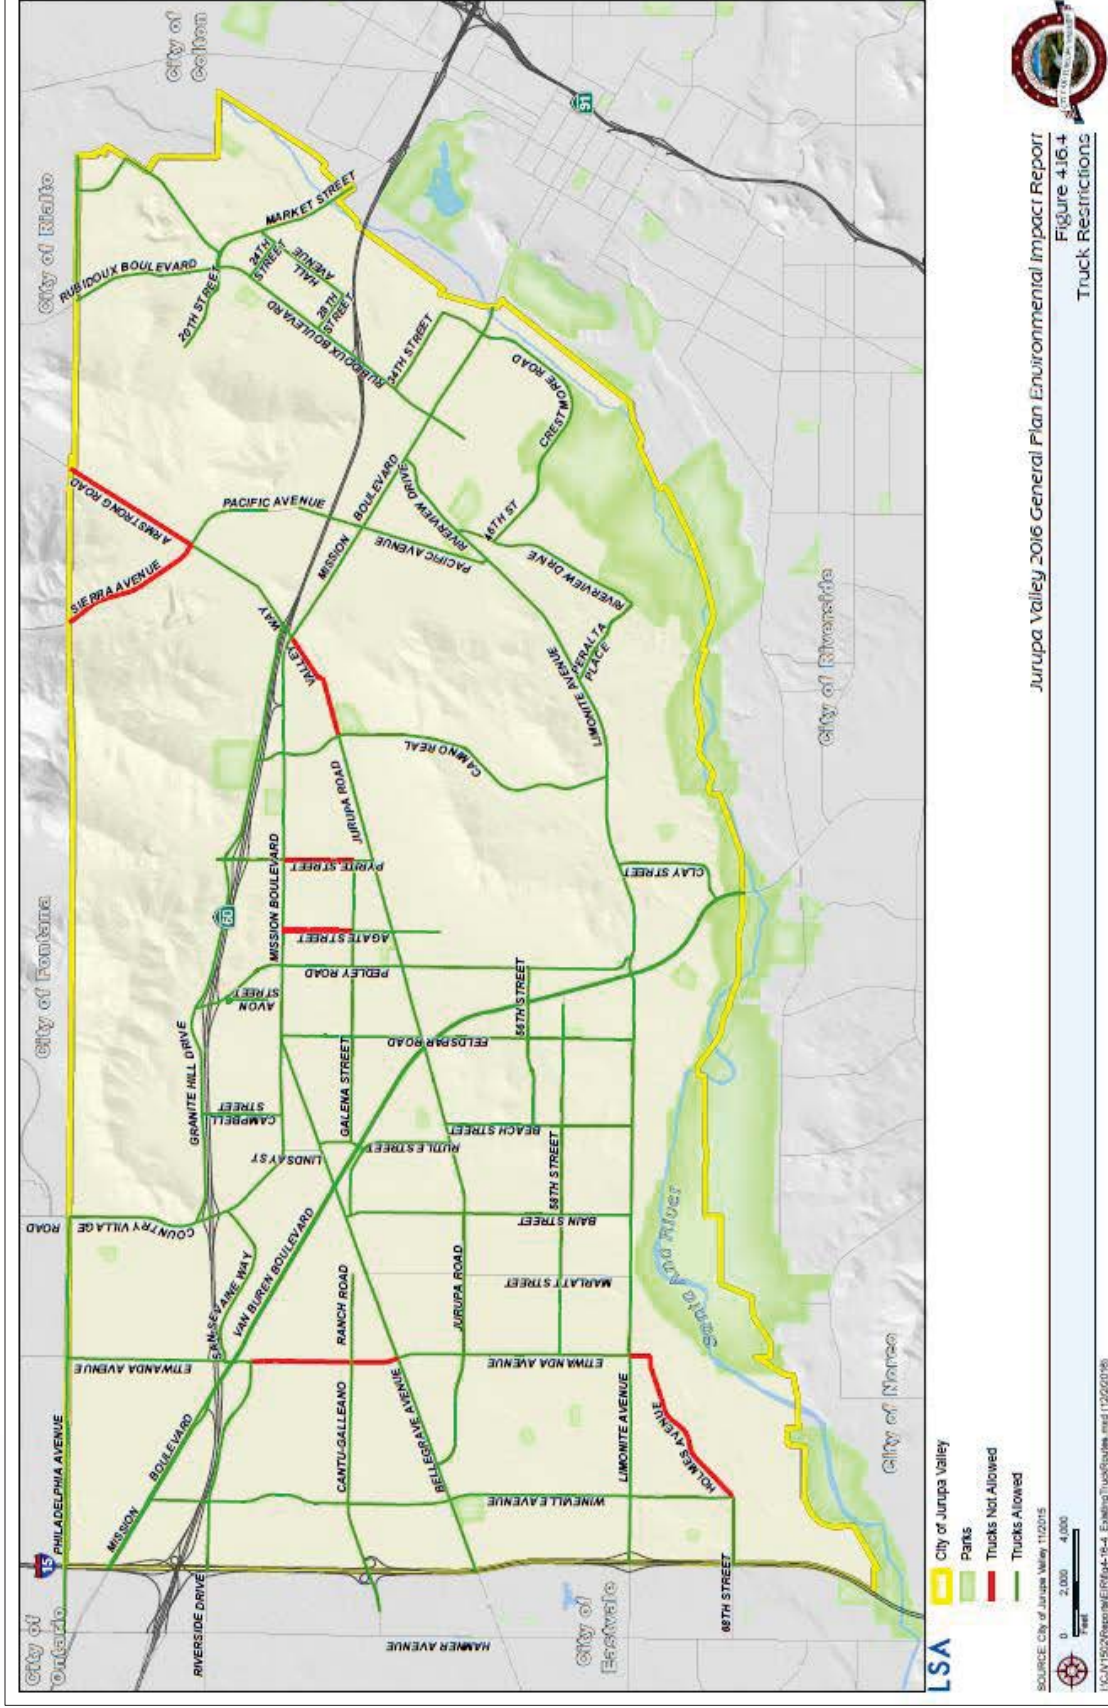

Figure 3-57: Commercial truck restrictions, 2016

The efficient movement of goods is vital to the City and Inland Empire's economy and transportation system safety. The ability of the County to compete domestically and internationally on an economic basis requires an efficient and cost-effective method for distributing and receiving products. This can be accomplished through proper planning, design, construction, and maintenance of the regional and local street and highway system. The City's industrial and commercial sectors depend on safe and efficient goods movement.

The City is responsible for maintaining an extensive network of low-volume streets and roads in industrial and semi-rural areas to accommodate the transport and delivery of goods, and to a lesser degree, agricultural products and services. Large trucks are the primary means of transporting such goods and are essential to the intra-regional distribution of consumer products.

Truck routes can provide freight haulers with a network of efficient and least impactful locations for traveling through the City. Designated truck routes can also protect residential neighborhoods from high volumes of truck traffic, and support connectivity with truck routes within the City to regional truck routes and access to freeways provides for an efficient, safe movement of goods. It is generally best practice not to include truck routes within general plans, as these routes may change and flexibility is needed to allow modifications without requiring a general plan amendment. Program *ME 6.1.2* calls for the City to adopt truck routes separately, subject to City Council approval and modification on an as-needed basis.

The City must follow sound planning principles in determining the location and design of truck routes. Truck routes shall:

1. Be compatible with land use along the route and shall not be located in areas designated by the General Plan for Residential Use or in Village areas.
2. Be located on primary transportation corridors that provide connectivity to industrial centers and to freeways and that are suitably designed and sized for the intended purpose.
3. Mitigate traffic congestion, noise, engine idling and air pollution.
4. Be located where they would not impact noise- and vibration-sensitive land uses, including but not limited to schools, public parks and sports fields, convalescent facilities, libraries and medical facilities.

Freight Trains

Figure 3-58: Union Pacific Freight Locomotive

Commercial rail operations, while not as prevalent as they once were, are still common in Jurupa Valley. The Union Pacific (UP) and the Burlington Northern Santa Fe (BNSF) Railroads provide freight service in Riverside County, connecting the County with major markets within California and other destinations north and east. A railroad spur track traverses several large areas of Jurupa Valley and still provides valuable railroad access for a wide variety of commercial and industrial uses, there reducing dependence on trucking and air transport. With the increase of residential development in Jurupa Valley, railroad compatibility with adjacent uses is a key land use issue. Stack and rail noise, vibration and the potential for derailling calls for special planning and design considerations where development is proposed adjacent to or near railroads.

Airports

Local Aviation Facilities

Figure 3-59: Historic Flabob Airport

The historic Flabob Airport and the nearby Riverside Municipal Airports serve primarily local commuter and recreational flying needs, and are part of the City's wider community assets and recreation opportunities. In addition, the airports can help meet emergency operation needs for law enforcement agencies and provide a valuable educational and training resource.

The availability of general aviation facilities and services that meet the needs of the residents is an important component of the City's

Figure 3-60: Historic Airliner, Flabob Airport

transportation system. To meet these needs, the City must coordinate Flabob Airport plans and land use with aviation planning conducted by the State, the West Riverside Airport Land Use Commission and other local agencies related to transportation, land use, and financing. It is necessary for the City to encourage retention of Flabob Airport for general aviation and emergency purposes, and to protect airports from encroachment of future development within areas that would be subject to extreme noise from aircraft as defined in the Noise Element.

Regional Aviation Facilities

There are five major commercial airports in southern California available to Jurupa Valley residents for passenger service: Ontario International Airport (San Bernardino City), Orange County - John Wayne Airport, Los Angeles International Airport, Palm Springs International Airport, and Lindbergh Field (San Diego City). In addition to these regional airport facilities, the March Inland Port/Air Reserve Base is located in the City of Riverside along Interstate 215 near Perris. This airport provides regional air cargo service and also continues to function as a U.S. Air Force Reserve Base.

Freight Movement and Airports Policies and Programs

Commercial Trucks

Policies

- ME 6.1 **Commercial Truck Roadway Standards.** Implement commercial truck roadway standards, where practicable, to accommodate large trucks where extensive truck travel involving regional movement of bulk goods is anticipated.
- ME 6.2 **Freight Rail System.** Support continued operation of the regional freight rail system, which offers safe, convenient, and economical transport of commodities.
- ME 6.3 **Rail Separation.** Support provisions to physically separate heavily traveled rail lines from heavily traveled streets and roads.
- ME 6.4 **Intermodal Freight Facilities.** Encourage intermodal freight facilities and a shift of a portion of the goods previously moved by trucks onto the rail freight system.

Programs

- ME 6.1.1 **Identify Street Improvements.** Identify and where feasible, help Implement street and highway

improvements and maintenance projects to provide convenient and economical goods movement, particularly where heavy commercial truck traffic or congestion exists.

ME 6.1.2 **Establish Truck Routes.** Study commercial truck movements and operations in the City and establish weight-restricted truck routes away from noise-sensitive areas, where feasible.

ME 6.1.3 **Implement Truck Routes.** Limit truck traffic in residential and commercial areas to designated truck routes; limit construction and commercial truck through-traffic to designated routes; and include truck routes on City's Master Plan of Streets and Trails.

Railroad Freight Movement

Policies

ME 6.5. **Railroad Buffers.** Require sufficient buffers and physical safety barriers between railroad tracks and new noise-sensitive development, such as residential uses, schools, and public facilities.

ME 6.6 **Grade Separations and Crossings.** As resources allow, support construction of grade separations and crossings; or reconstruct existing grade separations and crossings as necessary for the smooth flow of traffic within the City, consistent with plans developed by the Western Riverside Council of Governments (WRCOG) and other responsible agencies.

ME 6.7. **Rails-To-Trails.** Reserve, where warranted, the repurposing of abandoned rail right-of-ways for public trail use or for alternative transportation purposes.

ME 6.8. **Transit Center Dedications.** Dedicate right-of-way and land for future transit centers in village centers and major activity areas (high concentrations of employment and residential uses) and away from noise-sensitive and land uses.

Programs

TBA

Airports

Policies

- ME 6.9. **Interagency Coordination.** Promote coordinated long-range planning between the City, County of Riverside, Airport Land Use Commission, Flabob airport authorities, businesses and the public to meet City, County and the region's aviation needs.
- ME 6.10. **Airport Land Use Planning.** Apply a variety of land use planning techniques to maintain the viability of Flabob airport. (See Land Use Element, Flabob and Riverside Municipal Airports Overlay)
- ME 6.11. **Noise Reduction Measures.** Encourage the use of noise-reducing flight procedures for airplanes and helicopters, such as maintaining flight altitudes or using take-off, landing and general flight patterns that avoid noise-sensitive neighborhoods to the extent permitted by Federal Aviation Administration regulations.

Programs

TBA

7.0 – Scenic Corridors, Street Character and Design

Streets, sidewalks, street lights and other aspects of a city's transportation network have a major, if not dominant influence on the appearance and "feel" of a community. As a young city, Jurupa Valley still retains much of the visual character of a smaller, slower-paced rural community. Moreover, the community is blessed with outstanding views of nearby mountains and Santa Ana River plain. There is deep and abiding community support for preserving Jurupa Valley's semi-rural, equestrian-oriented character. Consequently, the City's transportation facilities should be designed to enhance these qualities for the enjoyment of residents, visitors and for generations to come.

Many streets and highways in Jurupa Valley provide outstanding views of its scenic resources. Enhancing aesthetic experiences for residents and visitors to the County has a significant role in promoting tourism, which is important to the City's overall economic future. Due to the visual significance of some of these areas, several roadways have been officially recognized as either state or county designated or eligible scenic highways.

Figure 3-61: Jurupa Valley Vista

Enhancement and preservation of the City's scenic streets and byways will require careful application of scenic highway standards along designated scenic routes. The roadways designated as Local Scenic Corridors are shown in *Figure 3-62*. Policies that seek to protect and maintain resources along Scenic Corridors are incorporated into this section. Also refer to policies outlined in Section 4, – Conservation and Open Space Element and Section 2, – Land Use Element (Scenic Corridors subsection).

Scenic Corridors, Street Character and Design Goals, Policies and Programs

Scenic Corridors

Policies

- ME 7.1. **Scenic Corridors Designated.** The route segments shown in *Figure 3-62* designated as Local Scenic Corridors.
- ME 7.2. **Scenic Corridor Preservation.** Protect and where possible, enhance views of important scenic resources from highways, streets and roads designated as local scenic corridors, in accordance with City policies.
- ME 7.3. **Development along Scenic Corridors.** Public and Private development along and within local scenic corridors shall comply with the following:
1. Public and private development projects, including noise walls, shall not wall off scenic roadways or block views of scenic resources, such as Santa Ana River or the Jurupa Mountains.
 2. Development projects, including signs, visible from and located 500 feet of a scenic roadways shall be considered "sensitive" and require architectural review.
 3. As part of the city's environmental review process, blocking of views along scenic roadways should be considered a significant environmental impact.
 4. Signs along scenic roadways should not obstruct or detract from scenic vistas or views.
 5. Street lights should be low scale and focus light at intersections where it is needed most. Tall light standards should be avoided. Street lighting should be integrated with other street furniture at locations where views are least disturbed.

- ME 7.4. **Public Equipment and Facilities.** The City and other agencies should locate and design utility and circulation-related equipment and facilities to avoid blocking or cluttering views of scenic resources from scenic roadways, consistent with the following standards:
1. Whenever possible, signs in the public right-of-way should be consolidated onto a single low-profile standard.
 2. Public utilities along scenic highways should be installed underground.
 3. The placement and design of fencing, walls, landscaping and street trees should not block views of scenic resources from Scenic Routes. Clustering of street trees along scenic roadways should be considered as an alternative to uniform spacing.
 4. Traffic signals with long mast arms should be discouraged along scenic roadways.
- ME 7.5. **Creation of Scenic Highways.** The City will encourage the creation of state-designated (Caltrans) Scenic Highways within Jurupa Valley and adjoining Riverside, San Bernardino and Orange County areas when:
1. Reviewing draft county general plan elements or major revisions to them.
 2. Reviewing changes to the Regional Transportation Plan (RTP) as a member agency of the Southern California Association of Governments (SCAG).
 3. Reviewing development projects that are referred to the city by state or county agencies and that are located along locally designated scenic routes.

Transportation System Landscaping

Landscaping plays an important role in the aesthetics and noise mitigation of highways and major streets. Landscaping softens the otherwise harsh visual impacts that a roadway can create and can be used as a buffer to protect noise sensitive areas such as residential properties.

Policies

- ME 7.6 **Highway Landscaping.** Encourage Caltrans to install and maintain landscaping and other mitigation elements along freeways and highways, especially when they are adjacent to existing residential or other noise sensitive uses.

- ME 7.7. **Use of Native Plants and Recycled Water.** Encourage the use of drought-tolerant California native plants and the use of recycled water for roadway landscaping.
- ME 7.8. **Landscape Buffers.** Require parking areas of all commercial and industrial land uses that abut residential areas to be buffered and shielded by adequate landscaping and/or other effective visual screens.

Programs

TBA

8.0 – System Operation, Maintenance, and Funding

It's becoming clear that cities cannot simply build more highways or widen streets in hopes of solving all traffic safety and congestion problems. Innovative transportation solutions will be key in managing Jurupa Valley's circulation needs while addressing economic and environmental factors. One of Jurupa Valley's key transportation strategies is to design, improve and maintain its transportation systems for cost efficiency based on City Council and community priorities. The following goals, policies and programs help guide that process and identify community priorities.

Transportation comprises a significant part of any city's planning, operations and capital improvement program. Cities must prioritize resources to meet a wide range of community transportation needs, and safety, convenience, cost and maintenance are all issues that must be considered when a system is created. Rights-of-way need to be dedicated or otherwise acquired, typically as a condition of new development, to allow sufficient room to accommodate landscaping, utilities, pedestrian, equestrian (where appropriate) and bicycle facilities, and to accommodate eventual widening if needed for long-term traffic growth. A consistent and uniform street network that meets the needs of current and future residents can be accomplished by implementing a functional classification system as shown in *Figure ME-6*, with right-of-way and design standards and by identifying needed roadway improvements.

System Funding

One of the most important considerations to achieve a viable multi-modal transportation system is financing. Funding priorities must be developed and innovative financing must be designed to ensure that the transportation system is implemented. Discretionary

Figure 3-63: City entry monument

roadway improvement funds should be allocated to enhance mobility and promote convenient, safe, and efficient transport of people, goods and materials. This can be accomplished through continued development of a "Transportation Improvement Program" for local road and bridge improvements and the City's participation in voter-approved local tax measures and Regional Transportation Plans that meet state and federal guidelines.

Investment in, preservation of and expansion of the existing freeway and street network is critical to the provision of a viable transportation system necessary to sustain a healthy local economy. Innovative options, such as the application of "toll-way fares," should be explored as a means of controlling demand in critical corridors. The City and Riverside County must consider these and other innovative funding mechanisms to ensure that the future transportation system is financially supported and can be adequately maintained.

Transportation Demand Management

Transportation demand management (TDM) strategies reduce dependence on the single-occupant vehicle, increase the ability of the existing transportation system to carry more people, and enhance mobility along congested corridors. A reduction in peak hour trips, overall roadway congestion, and improved air quality can be achieved through the implementation of TDM strategies. Examples of these strategies include: telecommuting, flexible work hours, and electronic commerce that enables people to work and shop from home.

As the City continues to grow, transportation demand management and systems management will be necessary to preserve and increase available roadway "capacity." Level of Service (LOS) standards are used to assess the performance of a street or highway system and the capacity of a roadway. An important goal when planning local transportation system is to maintain acceptable levels of service along local streets and at intersections, and while encouraging the California Department of Transportation (Caltrans), County of Riverside and the Southern California Association of Governments (SCAG) to determine future infrastructure needs for federal and state highways.

According to the Southern California Association of Governments (SCAG), vanpools will become more prevalent for short-to-medium range commute trips, and will supplement the traditional long-distance usage. Park-n-ride facilities and carpooling will also continue to be a significant link between highway and transit modes. In the last decade, the region's number of trips and amount

of travel have grown at a much faster rate than the population growth. TDM strategies are designed to counter this trend. The region cannot build its way out of congestion; it has neither the financial resources nor the willingness to bear the environmental impacts of such a strategy. TDM is one of the many approaches that will be used to maintain mobility and access as the region continues to grow and prosper. The County has established TDM Guidelines to reduce single occupant motor vehicle trips during peak hours and modify the vehicular demand for travel to increase the ability of the existing system to carry more people; the City may choose to adopt similar guidelines.

Driveways and System Access

Driveways and other local street access connections (driveways, freeway off-ramps and private roads) to the City's roadway system must be planned, constructed, and maintained in a manner that is consistent with the basic mobility and safety needs of the street classification to which access is being provided. For instance, streets intended to carry large volumes of traffic at high speeds should have minimal access points to reduce vehicular conflicts. Access points that are carefully located on a property can reduce the levels of conflict that can affect vehicular and non-vehicular traffic. The uniform application of access standards for the street system will contribute to its successful operation.

System Access

Policies

- ME 8.1 **Dedicated Access.** All developments shall provide dedicated and recorded public access, except as provided for under the statutes of the State of California.
- ME 8.2 **Driveway Location and Number.** Limit driveway locations and/or number based upon the street's General Plan classification and function. Driveways shall be located a sufficient distance away from major intersections and designed to allow for safe, efficient operation and minimize traffic conflicts.
- ME 8.3 **Driveways along Highways.** Discourage driveways taken directly off General Plan designated highways. Access may be permitted off of General Plan designated highways only if such access poses no traffic hazards or impacts to local streets.
- ME 8.4 **Common Access Driveways.** Provide common access via shared driveways and/or reciprocal access easements whenever access must be taken directly off a General

Plan designated arterial street or highway. Parcels on opposite sides of a highway shall have access points located directly opposite each other, whenever possible, to allow for future street intersections and increased safety.

Programs

TBA

Design, Construction and Maintenance

Policies

- ME 8.5 **City Standards.** Design, construct, and maintain streets as specified in the City Street Improvement Standards and Engineering Specifications.
- ME 8.6 **Facilities Maintenance.** Maintain the transportation network while providing for future expansion and improvement based on travel demand and the development of alternative travel modes.
- ME 8.7 **Design Guidelines.** Develop and implement street and intersection design guidelines and update City Engineering Standards for consistency with the design guidelines.
- ME 8.8 **Residential Neighborhood Streets.** Streets in residential neighborhoods shall be designed to enhance and be compatible with neighborhood character, circulation patterns and modal choices and to provide safe access to neighborhood-serving commercial uses, schools, churches, parks and recreational areas.
- ME 8.9 **Equestrian Streets.** In the Equestrian Lifestyle Protection Overlay, local residential streets shall also serve as equestrian routes for the entire right-of-way width and shall be posted to require motor vehicles to yield to equestrians.
- ME 8.10 **Right-of-Way Improvements.** Developers shall be responsible for right-of-way dedication and improvements that provide access to and enhance new developments. Improvements include street construction or widening, new paving, frontage improvements like curb, gutter, sidewalks, street trees, trails and parkways, installation of traffic signals, pavement markings and annunciators, and other

facilities needed for the safe and efficient movement of pedestrians, bicyclists, equestrians, and motor vehicles.

- ME 8.11 **Street Design for Heavy Trucks.** Design interior collector street systems for commercial and industrial subdivisions to accommodate the movement of heavy trucks.
- ME 8.12 **Heavy Truck Restrictions in Residential Neighborhoods.** Restrict heavy truck through-traffic and parking in residential and village center areas and plan land uses so that trucks do not need to traverse these areas.
- ME 8.13 **Off-Street Loading Facilities.** Design off-street loading facilities for new commercial and industrial developments so that they do not face surrounding roadways or residential neighborhoods. Truck backing and maneuvering to access loading areas shall not be permitted on public streets, except when specifically permitted by the City Engineer.
- ME 8.14 **Driveway Access.** Locate and design commercial and industrial land uses so that they take driveway access from streets with a General Plan classification of arterial or greater, and limit the number of such commercial access points by encouraging shared access. Exceptions may be considered for isolated convenience commercial uses, such as standalone convenience stores or gas stations. Industrial or business park type developments may be served via an internal network of Industrial Collector streets.
- ME 8.15 **Intersection Design.** Design street intersections, where appropriate, to ensure the safe, efficient passage of pedestrians, bicyclists, equestrians and vehicles.
- ME 8.16 **Roadway Design.** Design curves and grades to permit safe movement of vehicular traffic at the road's target speed. Target speed should be consistent with and complement the character of the adjacent area.
- ME 8.17 **Sight Distance.** Provide adequate sight distances for safe pedestrian, equestrian and vehicular movement at all intersections.
- ME 8.18 **Additional Right-of-Way.** Require additional right-of-way or easements where needed for utilities, noise mitigation, trails, bikeways, street trees, slope landscaping or stabilization, or drainage facilities.
- ME 8.19 **Right-of-Way Alignment.** Align right-of-way dedications with existing dedications along adjacent parcels and

maintain widths consistent with the ultimate design standard of the road, including required turning lanes.

- ME 8.20 **Pass-Through Traffic.** To the maximum extent feasible, design and maintain roadways to direct “pass through” traffic to use Regional Routes and Highways, Highway Arterials, and Parkways, not Arterials, Collectors or Local streets.
- ME 8.21 **Traffic Calming.** Consider using innovative traffic-calming techniques, such as roundabouts, road “diets”, raised cross walks, stop signs, speed tables, bulbouts, planters, textured street paving, curbside parking, offset intersections and other traffic control measures designed to slow traffic speeds where appropriate to reduce speed and increase safety.
- ME 8.22 **Emergency Response Routes.** Provide a street network with quick and efficient routes for emergency vehicles, meeting necessary street widths, turn-around radii and other factors as determined by the City Engineer in consultation with emergency responders.
- ME 8.23 **On-Street Parking.** Design and manage on-street parking, where appropriate, to reduce traffic congestion, meet parking needs and improve pedestrian and equestrian safety.
- ME 7.24 **Off-Street Parking.** Design off-street parking facilities to support and enhance the concept of walkable and transit-oriented communities by including separated walkways, bicycle and motorcycle parking, landscaping including trees with overhead canopies, shielded down lighting for safety and other amenities, as appropriate.
- ME 8.25 **Street and Highway Widening or Extensions.** Evaluate proposed street and highway extensions or widening projects for potential noise, air quality and aesthetic impacts on existing and future land uses. Require that the effects of truck routes, speed limits, and motor vehicle volumes on noise levels are evaluated and mitigated during the environmental review process.
- ME 8.26 **Transportation Noise.** Control transportation noise and speeds through proper roadway design and coordination of truck and vehicle routing and speed.
- ME 8.27 **Wildlife Corridors.** Design roadways to accommodate wildlife crossings or established corridors whenever necessary and physically feasible.
- ME 8.28 **Dirt Roads.** Identify dirt roads serving residential areas which may be impacted by traffic from new

developments and design new developments to discouraged traffic from using existing dirt roads. When this is unavoidable, require that new developments participate in the improvement of the affected dirt roads.

- ME 8.29 **TDM in Development Review.** Encourage on-site features in all new non-residential developments that support Transportation Demand Management (TDM). Potential features may include preferred rideshare parking, car sharing vehicles, on-site food service and exercise facilities.

Programs

TBA

Regional Coordination

Policies

- ME 8.30 **Interagency Coordination.** Coordinate with transportation planning, programming and implementation agencies such as Caltrans, Southern California Association of Governments, Riverside County Transportation Commission, Western Riverside Council of Governments, and the cities adjacent to the City of Jurupa Valley on various studies relating to freeway design, high occupancy vehicle/high occupancy toll lanes and transportation corridor planning, construction, and improvement.
- ME 8.31 **Joint Funding and Improvements.** Partner with government agencies and authorities to secure funding and encourage transportation corridor improvements between Jurupa Valley and Los Angeles and Orange counties.

Programs

TBA

System Funding

Policies

- ME 8.32 **Balanced Funding.** Implement a mobility plan that balances transportation facility needs with City fiscal capabilities. Supplement City funding with grant funding whenever possible.
- ME 8.33 **Spread Costs.** Develop funding tools that help equitably spread costs of transportation system improvements among the users of the systems, including developers, property owners, community service districts, City and County, State and Federal agencies.
- ME 8.34 **Funding Tools.** Use annexations, redevelopment agreements, tax-increment financing, revenue-sharing agreements, tax allocation agreements and/or the CEQA process as tools to ensure that new development pays a fair share of costs to provide local and regional transportation improvements and to mitigate cumulative traffic impacts.
- ME 8.35 **Capital Improvement Program.** Prepare a multi-year Capital Improvement Program (CIP) that establishes improvement priorities and scheduling for transportation project construction over a period from five to ten years. The CIP will be reviewed and updated annually.
- ME 8.36 **Regional Traffic Mitigation Fees.** Participate in the establishment of regional traffic mitigation fees and/or road and bridge benefits districts to be assessed on new development. The fees shall cover a reasonable share of the costs of providing local and subregional transportation improvements needed for serving new development.

Programs

TBA

Environmental Considerations

Policies

- ME 8.37 **Tree Preservation in Rights-of-Way.** Preserve mature trees with street or highway rights-of-way that are identified as superior examples of California native species or naturalized tree species.

- ME 8.38 **Flood Protection.** Provide all roadways located within identified flood areas with adequate flood control measures and locate roadways outside identified flood plains whenever possible.
- ME 8.39 **Impact Mitigation.** Control dust and mitigate other environmental impacts during all stages of roadway maintenance, repair or construction.
- ME 8.40 **Noise Mitigation.** Protect residents from transportation generated noise hazards through the use of increased setbacks, landscaped berms, walls or other sound absorbing barriers, or a combination of these measures along freeways, expressways, and four-lane highways to protect adjacent noise-sensitive land uses from traffic- and rail-generated noise impacts.
- ME 8.41 **Habitat Conservation Planning.** Incorporate specific requirements of the Western Riverside County Multiple Species Habitat Conservation Plan into transportation plans and development proposals.
- ME 8.42 **Habitat Protection.** Avoid disturbance of plant and animal communities, wildlife corridors and biotic resource areas when identifying alignments for new roadways, or for improvements to existing roadways and other transportation system improvements.
- ME 8.43 **Hazardous Materials Transport.** Review and monitor proposals for expansion of pipelines for the transport of suitable products and materials, and require mitigation of environmental impacts. In particular, require mitigation of the potential for hazardous chemical or gas leakage and explosion.
- ME 8.44 **Air Quality.** Incorporate specific requirements of the General Plan Air Quality Element into transportation plans and development proposals where applicable.
- ME 8.45 **Non-Motorized Transportation.** Encourage the use of alternative non-motorized transportation and the use of non-polluting vehicles.
- ME 8.46. **Runoff Control.** Implement National Pollutant Discharge Elimination System Best Management Practices relating to construction of roadways to control runoff contamination from affecting the groundwater supply.

Programs

TBA

Transportation Systems Management

Policies

- ME 8.47 **TSM Strategies.** Give priority to Transportation System Management (TSM) strategies to improve level of service, particularly in areas that are fully developed.
- ME 8.48 **Traffic Signal Synchronization.** Construct and improve traffic signals at appropriate intersections. Whenever possible, traffic signals should be spaced and operated as part of coordinated systems to optimize traffic operation.
- ME 8.49 **Street Widening.** Consider roadway widening or extension at public expense to relieve congestion only after the determination has been made that TSM measures will not be effective and that widening would be consistent with and contribute to the character of the community.
- ME 8.50 **Turn Lanes.** Install special turning lanes whenever necessary to relieve congestion and improve safety for all users.
- ME 8.51 **Bus Turnouts.** Encourage development of bus turnouts, bus stop signage and other features to improve traffic flow and safety, and to encourage use of public transit.
- ME 8.52 **ITS.** Encourage the integration of Intelligent Transportation Systems (ITS), consistent with the principles and recommendations referenced in the Inland Empire ITS Strategic Plan, as the transportation system is improved and maintained.

Programs

- ME 8.1.1 **New Interchanges on State Route 60.** Construct new interchanges on SR 60 at Camino Real and Sierra Avenue/Pacific Avenue.
- ME 8.1.2 **Regional Transportation Facilities and Services.** Support the development of regional transportation facilities and services (such as high-occupancy vehicle lanes, express bus service, and fixed transit facilities),

DRAFT

which will encourage the use of public transportation and ridesharing for longer distance trips.

- ME 8.1.3 **New Interchanges on Van Buren Boulevard.** Construct new interchanges on Van Buren Boulevard at Jurupa Road and Galena/Bellegrave Avenue.

###

DRAFT

4 – CONSERVATION AND OPEN SPACE ELEMENT

Figure 4-1: Sunset over Indian Hills Reservoir

A. INTRODUCTION

State law requires that general plans include two different but complementary sections addressing natural resources: the Conservation Element and the Open Space Element. In this General Plan, these sections are combined into the Conservation and Open Space Element. Other sections that also address natural resources include the Land Use Element and the Community Safety, Services, and Facilities Elements. The Conservation and Open Space Elements are combined because they both address environmental resources. They address the conservation, development, and use of energy and natural resources, and the preservation of open space for protection of natural resources such as wildlife habitat, wetlands, recreation trails, and facilities, cultural, and historic resources. From the input received at many general plan outreach and GPAC meetings, it is clear that preserving open spaces and protecting Jurupa Valley's semi-rural, equestrian lifestyle are very important to residents. These environmental qualities attract residents and visitors, and enhance Jurupa Valley's quality of life. The importance of open space is reflected in the City's Community Values Statement.

City of Jurupa Valley Community Values Statement

Open Space and Visual Quality. We value and protect the Santa Ana River and river plain, ridgelines, and hillsides for their exceptional value for recreation, watershed, wildlife habitat, environmental health, and as scenic backdrops for the City. As part of our values, we support prevention and removal of visual blight, protection of public vistas, and community awareness and beautification activities. Jurupa Valley's special places will be protected, maintained, and promoted to preserve our unique character, instill local pride, and encourage tourism.

The Conservation and Open Space Element promotes public health and safety by redirecting development away from areas subject to geologic hazards, flooding, and fires. Jurupa Valley contains a variety of open spaces that serve many functions—hence the often-used label of “multi-purpose.” The City’s quilted pattern of hills, valleys, and slopes provides a variety of habitats including riparian corridors, oak woodlands, and chaparral habitats. Examples include the Jurupa Mountains, the Santa Ana River, and the Pedley Hills. In particular, the Santa Ana River borders the City on its eastern and southern flanks and includes many native plant species, some of which grow only in the habitat this river provides.

Open Space is a critical part of what gives the City of Jurupa Valley its unique visual character. With Jurupa Valley poised to continue experiencing significant growth pressure in the next 10 to 15 years, protected open spaces ensure that future generations can continue to enjoy these visual and recreational amenities. In 2017, about 11%, or 6,500, acres remain undeveloped, or essentially so, in the forms of parkland, open space, and to a lesser degree, agricultural use. Thus, open space and related land uses can play a key role in maintaining distinct community boundaries or “edges” (i.e., between Sunnyslope and Belltown), and by buffering the City from adjacent, more urbanized areas. The City is literally “shaped,” in terms of both geography and scenic character, by its open spaces.

Regional resource planning to protect threatened or endangered species, such as the Stephens Kangaroo Rat, has occurred in various locales for many years. Privately and publicly owned lands have served as habitat for many different species. In some cases, this method of land and wildlife preservation proved to be piecemeal and disjointed, resulting in islands of reserve land without corridors for species migration and access. To address these issues of wildlife health and habitat sustainability, the Western Riverside County Regional Conservation Authority (RCA) Multiple Species Habitat Conservation Plan (MSHCP) was developed and adopted by the County and other jurisdictions within the County, including the City

of Jurupa Valley. The MSHCP comprises a reserve system that encompasses core habitat, habitat linkages, and wildlife corridors outside of existing private and public reserve lands into a single comprehensive plan that can accommodate the needs of species and habitat in the present and future.

Primary Goal

Within the urban area, the City will secure and maintain a diverse network of open land encompassing particularly valuable natural and agricultural resources, connected with the landscape around the urban area. Particularly valuable resources are the following:

1. Santa Ana River and adjacent riparian corridors with natural banks and vegetation.
2. Natural and manmade creeks, lakes and other water bodies.
3. Wetlands and vernal pools.
4. Jurupa Mountains and Pedley Hills.
5. Undeveloped land within the City's limits not intended for urban uses.
6. Grassland communities and woodlands.
7. Wildlife habitat and corridors for the health and mobility of individuals and of the species.
8. Habitats of species listed as threatened or endangered by state or federal governments.
9. Prime agricultural soils and economically viable farmland.
10. Hills, ridgelines, box canyons, scenic rock outcroppings, and other significant land features.
11. Unique plant and animal communities, including "species of local concern."

B. KEY FINDINGS AND RECOMMENDATIONS

The City's conservation and open space resources are preserved and managed to protect and enhance the quality of life for all Jurupa Valley residents. It is the City's intent to protect and, where possible, enhance natural systems and cycles. This enables the natural diversity of plants and animals to sustain themselves because of the critical relationships between them. Land areas will be preserved, set-aside for this purpose, and linked by corridors of various designs to allow wildlife movement within and between habitat areas. In addition, the public's access to the open space system is ensured through a network of public and private trails for recreation purposes, enabling a variety of active and passive recreation pursuits. Trails provide a means of recreation in themselves, as well as access for less intensive recreation. Creative and effective means of acquiring open space have enabled establishment of this system so that private property rights are respected and open space acquisition is feasible. This system also provides an effective approach that reduces conflicts over development activities because of the City's commitment to permanently preserving critical open space resources.

Figure 4-2: Headwaters of the Santa Ana River, San Bernardino Mountains

In developing conservation and open space policies, the City Council finds that:

1. Multi-purpose open space is a critical part of the City's system of public facilities and services necessary to improve the quality of life and to accommodate new residents and visitors.
2. The open space system and the methods for its acquisition, maintenance, and operation are related to how it is to be used, including its value for community vistas, visual relief, natural resource protection, habitat preservation, passive and active recreation, and protection from natural hazards, and combinations of these purposes.
3. A primary purpose of the City's open space system is the preservation of components of the ecosystem and landscape that embody the historic character and diverse landscapes of the City, even though some areas have been impacted by human-caused changes.
4. Native habitat for plants and animals endemic to Jurupa Valley must have interconnected spaces, or "corridors," that allow these natural communities to prosper and be sustained.
5. Incentive-based systems for habitat protection are available to help preserve and, where appropriate, expand open space resources, including the use of density averaging, conservation

credits, and management programs to achieve equitable sharing of costs and benefits.

6. Lands identified for habitat preservation are based on the best available scientific information regarding species and habitat requirements, and that information is updated as better methods emerge.
7. Strategies and incentives for voluntary conservation on private land are an integral part of the City's policy/ regulatory system.
8. Where natural streams and watercourses are located within designated open space areas, they are to be preserved as natural living systems. Where they pass through areas that are developed or designated for development, to the extent allowed by existing conditions, their continuity is maintained and protected as environmental corridors linking open space areas. In addition, where possible, their viability is enhanced in numerous cases by being included in publicly maintained open spaces rather than in narrow concrete channels.

C. CONSERVATION AND OPEN SPACE ELEMENT GOALS, POLICIES AND PROGRAMS

Goals

To be a good steward of Jurupa Valley's natural resources, and protect and enhance open space by:

- | | |
|-------|---|
| COS 1 | Working to protect, preserve, and create the conditions that will promote the preservation of significant trees and other vegetation, particularly native California species. |
| COS 2 | Seeking to achieve self-sustaining populations of the native birds, fish, and other wildlife and avoid actions that remove or damage habitat for native plants and animals. |
| COS 3 | Working with the Jurupa Community Services District (JCSD), Rubidoux Community Services District (RCSD) and other community services districts and agencies to help meet Jurupa Valley's urban water needs without substantial harm to the natural environment or to agriculture, to help meet water needs including requiring conservation measures such as drought-tolerant landscaping and water-saving fixtures in new homes, and to: |

- a. Protect and maintain water quality in aquifers, the Santa Ana River, streams, and wetlands that help support beneficial uses, including domestic and commercial/industrial uses, agricultural uses, and wildlife habitat.
 - b. Protect and improve the quality of local water sources, including groundwater and the Santa Ana River.
 - c. Encourage JCSD and RCSD to retain and, where possible, expand the capacity of wells, aquifers, and other groundwater reserves.
 - d. Preserve natural floodways, floodplains, and wetlands, and avoid actions that adversely affect waterways or riparian areas, or that increase flood hazards to urban uses.
- COS 4 Continuing to accommodate agricultural uses and encourage its expansion, where appropriate.
- COS 5 Increasing use of sustainable energy sources such as solar, wind, and thermal energy, and reduce reliance on non-sustainable energy sources to the extent possible with available technology and resources.
- COS 6 Reducing consumption of non-renewable energy sources and ensuring efficient use, development, and conservation of sustainable, non-polluting energy sources.
- COS 7 Ensuring the preservation of cultural, historical, archaeological, and paleontological resources.
- COS 8 Securing and maintaining a diverse network of open lands including valuable natural and recreational resources, including:
 - a. Santa Ana River floodway and riparian areas
 - b. Jurupa Mountains
 - c. Wetlands and vernal pools
 - d. Wildlife habitat and corridors, particularly for species of local concern or for species that are officially listed as threatened or endangered.
 - e. Parks and natural areas with significant recreational opportunities
 - f. Encourage public access to open space without harming the resource and without exposing the public or the property owners to unacceptable risk.
 - g. Preserve open space and wildlife habitat and help provide trails and other recreation opportunities where they will not harm the environment.

- h. Avoid actions that will result in the loss of designated open space resources and, when feasible, require mitigation for their loss.

- COS 9 Preserving the City's scenic resources, including mountains, hills, ridgelines, rock outcroppings, canyons, mature trees, the Santa Ana River and floodplain, riparian corridors, agricultural fields, and other landscape features deemed significant by the City Council.
 - Preserve views of scenic resources from vista points or along scenic street or highway corridors.
- COS 10 Minimizing light trespass and pollution caused by public and private structures, new development, and public facilities to ensure safety, protection of the natural environment, and preservation of dark nighttime skies.

Policies and Programs

Policies within the Conservation and Open Space section of this element seek to guide decision-making related to renewable and non-renewable resources. These types of resources require conservation—a conscious effort to consume less of scarce resources so that they can be sustained for future generations. By conserving resources, we prevent degradation of the environment through pollution or the loss of sustainable resources and environments for future generations.

COS 1 – Biological Resources

Figure 4-3: Hidden Valley Wildlife Area, school tour (Riverside County Parks)

Jurupa Valley provides diverse habitats for a variety of native plant and animal species. The pattern of hills, valleys, and river basins supports diverse vegetation, which in turn, provides varied wildlife habitats, including riparian corridors, oak woodlands, and chaparral, as shown in *Figure 4-4* and *Figure 4-5*. Examples include features such as the Jurupa Mountains, the Santa Ana River, and the Pedley Hills. Located along Jurupa Valley's eastern and southern boundary, the Santa Ana River is a significant ecological, recreational, and visual resource. Many native and endangered species thrive there, including the least Bell's vireo, the Santa Ana River woollystar, and the San Bernardino kangaroo rat. The Santa Ana River Wildlife Area and the Jurupa Nature Center provide nature study, conservation and outdoor education, and hiking and equestrian activities. Throughout the area, interconnecting trails provide access to outstanding scenery.

DRAFT

Conservation and Open Space

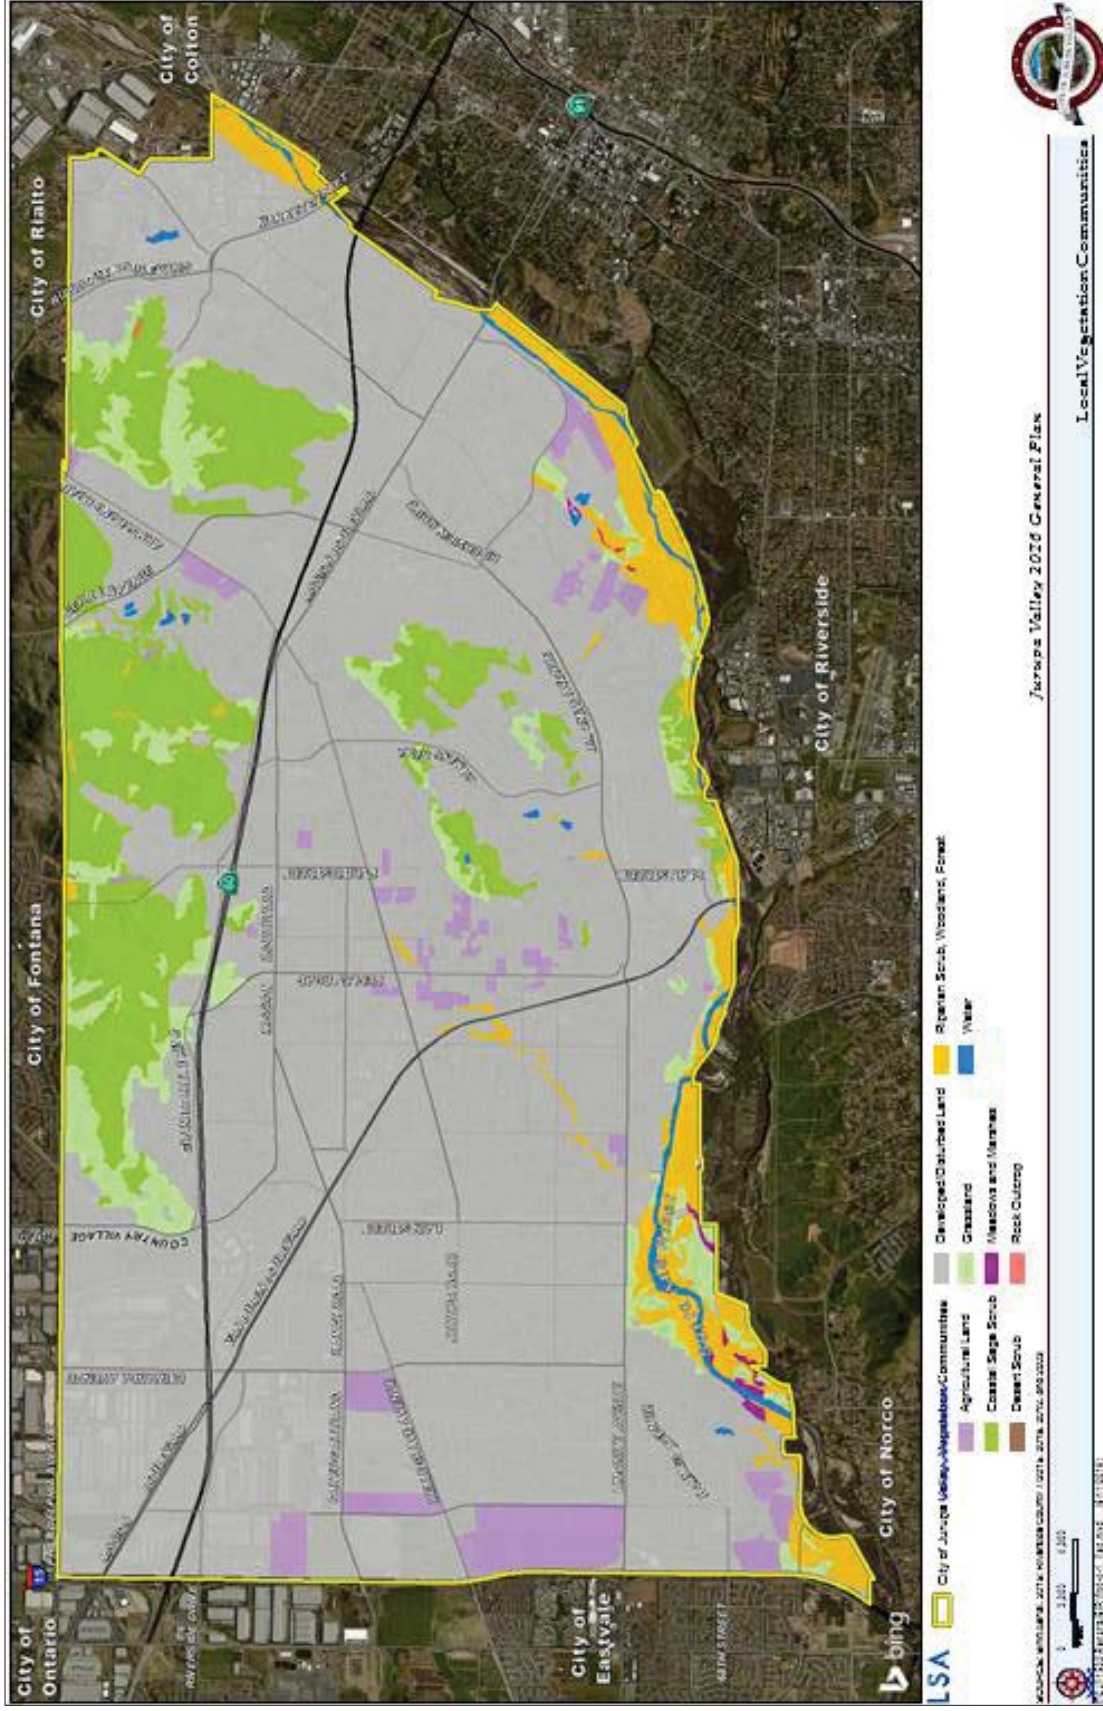

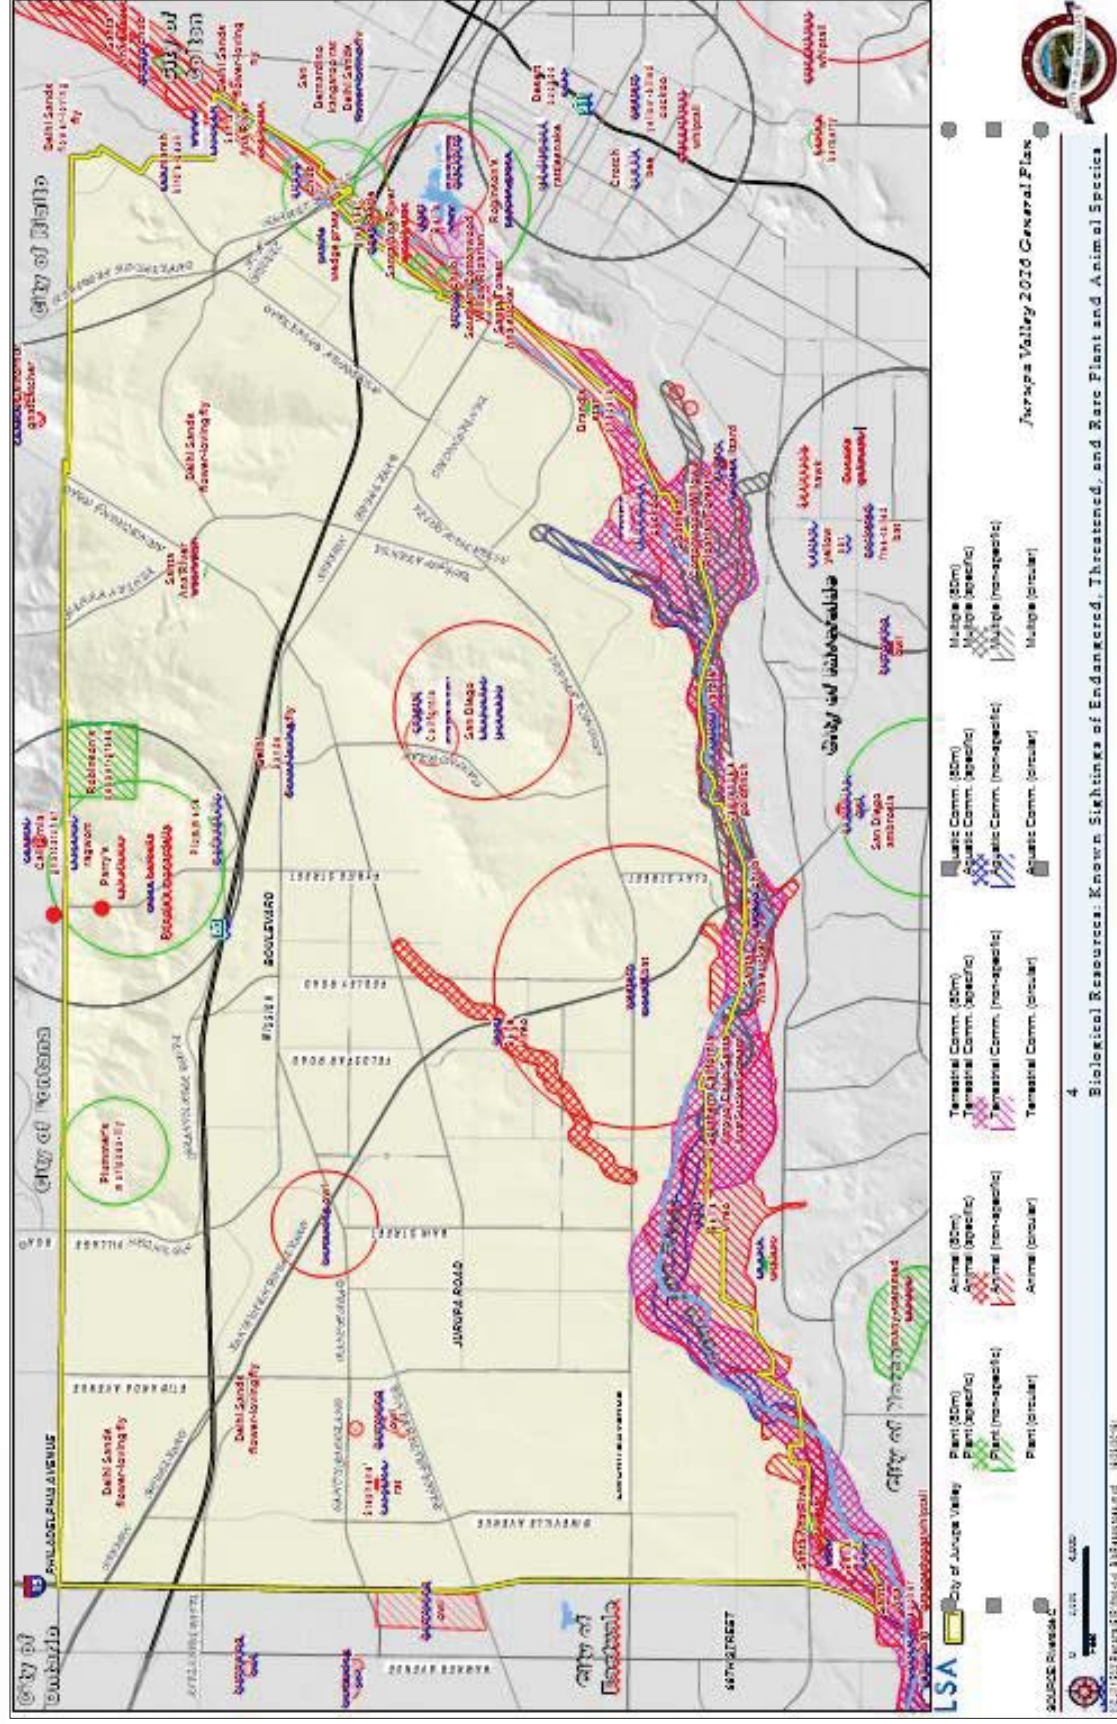

Figure 4-4: Local vegetation communities

The Jurupa Mountains are the dominant visual resource in the northern portion of the City. The highest peak, Mount Jurupa, stands at an elevation of 2,217 feet. Substantial portions of the mountains are identified as potential habitat for the endangered Delhi Sands Flower-loving Fly. (See Appendix 12.0.)

The vegetation of Jurupa Valley is diverse in its size, shape, and form, yet various species share similar adaptations to climatic and environmental conditions. Further, habitat areas are associated with the dominant natural vegetation that thrives in the City. Although ecological conditions fluctuate in the various plant communities, these natural changes occur gradually, with most species adapting to the habitat and climate changes. However, with development, changes occur that can adversely affect wildlife habitats, local microclimates, water percolation, soil erosion, fires, and aesthetics quality.

To address the important issues of biological resources health and habitat sustainability, the Western Riverside County Regional Conservation Authority (RCA) Multiple Species Habitat Conservation Plan (MSHCP) was developed by the County of Riverside in cooperation with state and federal agencies (see MSHCP, Appendix 12.0). The Plan applies to unincorporated and incorporated Riverside County land, including Jurupa Valley west of the crest of the San Jacinto Mountains to the Orange County line. It applies to a total area of approximately 1.26 million acres (approximately 1,997 square miles) and is one of the largest conservation plans in the U.S. The Plan covers multiple species and multiple habitats within multiple jurisdictions.

The 2017 General Plan includes goals and policies that aim to protect the biological resources of Jurupa Valley in conjunction with the MSHCP. It is of the utmost importance to maintain a balance between growth and natural resources preservation throughout Jurupa Valley to preserve the ecological health and overall character of this special environment. The habitat requirements of sensitive and listed species, combined with sound habitat-management practices, help shape the following policies and guide the City's conservation efforts.

Policies

COS 1.1 Habitat Conservation. Conserve key habitats, including existing wetlands and California native plant communities, with a focus on protecting and restoring the following endangered species habitats:

- a. Conserve alluvial fan sage scrub associated with the Santa Ana River to support key populations

- of Santa Ana River woollystar (*Eriastrum densifolium sanctorum*).
- b. Conserve clay soils to support key populations of many-stemmed liveforever plants (*Dudleya multicaulis*) known to occur along the Jurupa Valley portion of the Santa Ana River.
- c. Conserve known populations of least Bell's vireo (*Vireo bellii pusillus*) and southwestern willow flycatcher (*Empidonax traillii extimus*) along the Santa Ana River.
- d. Conserve large intact habitat areas consisting of coastal sage scrub, chaparral, and grasslands to support known locations of coastal California gnatcatcher (*Polioptila californica*).
- e. Conserve grassland and coastal sage scrub supporting known populations of San Bernardino kangaroo rat (*Dipodomys merriami parvus*) in the Jurupa Mountains.
- f. Conserve grasslands adjacent to sage scrub for foraging habitat for raptors.

COS 1.2 Protection of Significant Trees. Protect and preserve significant trees, as determined by the City Council upon the recommendation of the Planning Commission. Significant trees are those trees that make substantial contributions to natural habitat or to the urban landscape due to their species, size, or rarity. In particular, California native trees should be protected.

COS 1.3 Other Significant Vegetation. Maintain and conserve superior examples of vegetation, including: agricultural wind screen plantings, street trees, stands of mature native and non-native trees, and other features of ecological, aesthetic, and conservation value.

COS 1.4 Soil Conservation and Landform Modification. Public and private development projects shall be designed to prevent soil erosion, minimize landform modifications to avoid habitat disturbance, and conserve and reuse on-site soils.

Programs

COS 1.1.1 Riparian Corridors. Identify and protect riparian corridors through zoning, easements, or other measures that ensure effective, long-term conservation.

- COS 1.1.2 **Public Information.** Provide public information materials regarding the City's sensitive habitats, the values of watershed, biological resources, and sensitive habitats, and how to protect them.
- COS 1.1.3 **Nature Trail Signage.** Working with Community Services Districts and other agencies, help create minimal and appropriate signage along major trails (e.g., Santa Ana River and Jurupa Mountains) for educational outreach about critical habitats and native plant and animal species.
- COS 1.1.4 **Urban Encroachment.** Amend the Municipal Code to regulate the establishment or encroachment of non-compatible land uses or activities in habitat areas and passive open space, such as commercial uses, off-road motorized vehicle use, off-trail, non-motorized vehicle use, hang gliding, grading, or other activities that conflict with biological resource conservation goals or policies.
- COS 1.1.5 **Volunteer Conservation Programs.** Working with community volunteers, conservation clubs, youth groups, and recreation and conservation agencies, help plan and support conservation activities such as habitat restoration, interpretive signage and tours, trail building, erosion control, and litter removal.
- COS 1.1.6 **Tree Protection Ordinance.** Develop a Tree Protection Ordinance.

COS 2 – Wildlife Habitats

The following policies seek to preserve wildlife habitat that supports many wildlife species in Jurupa Valley, including some that are listed as threatened, endangered, and species of concern. These resources deserve special protection to ensure the continued viability of natural systems and ecological values that enhance the quality of life for all citizens.

Open space preservation serves many purposes, including the preservation and enhancement of ecological and recreational resources, and the reduction or avoidance of environmental hazards. As urbanization has spread into Western Riverside County, community development has not only involved the local land use planning process, but also required coordination with state and federal wildlife agencies to manage and protect threatened and endangered species and other wildlife species. To accomplish this, the County of Riverside, cities in Riverside County, the United States Fish and Wildlife Service, and the California Department of Fish and Wildlife prepared and

Figure 4-6: Bobcat, Riverside County

adopted the Multiple Species Habitat Conservation Plans (MSHCPs) that address local biological and ecological needs and establish appropriate mitigation for the impacts of development in Jurupa Valley and other areas within Riverside County.

Policies

- COS 2.1 **MSHCP Implementation.** Implement provisions of the MSHCP when conducting review of development applications, General Plan amendments/zoning changes, transportation, or other infrastructure projects that are covered activities in the MSHCP.
- COS 2.2 **Wildlife Corridors.** Identify and maintain a continuous wildlife corridor along the City's northern boundary through the Jurupa Mountains and along the Santa Ana River from the northern boundary to the City's western boundary. Condition development approvals to ensure that important corridors for wildlife movement and dispersal are protected. Features of particular importance to wildlife include riparian corridors, wetlands, streams, springs, and protected natural areas with cover and water. Linkages and corridors shall be provided to maintain connections between habitat areas.
- COS 2.3 **Biological Reports.** Require the preparation of biological reports to assess the impacts of development and provide mitigation for impacts to biological resources when reviewing discretionary development projects with the potential to affect adversely wildlife habitat.

Programs

- COS 2.1.1 **Preservation Incentives.** Develop and provide incentives to private landowners that will encourage the protection of significant wildlife habitat resources, such as density averaging, tax incentives, and grants.
- COS 2.1.2 **Regulation and Prevention of Destructive Practices.** Develop and adopt regulations that effectively regulate dumping, camping, off-road vehicle use, illegal entry, and polluting within protected conservation areas such as the Santa Ana River corridor and the Jurupa Hills along the north City boundary.

COS 3 – Water Resources

Riverside County includes four major watershed areas in which river systems, numerous lakes and reservoirs, and natural drainage areas are located. Local water resources are shown in *Figure 4-8* below, and discussed further in the Community Safety, Services, and Facilities Element. The City's and the County's water supplies are affected by the area's arid climate, agricultural practices, projected population growth and its associated demand and development, and the dependence on low-quality imported water. Further, the availability of imported surface water has been reduced due to an extended period of drought in California, and changing regulations, despite an ever-increasing water demand. In Jurupa Valley, contamination from the Stringfellow Acid Pits, mining, and other human activities has affected groundwater quality such that its use requires treatment. Management of the amount of water available (local and imported) and its quality, is an important response to the gap between supply and demand. Policies in this section seek to protect and enhance Jurupa Valley's water resources and to meet future water needs. These policies also address broad water planning issues and their relationship to land use decisions.

Figure 4-7: Great blue heron, Santa Ana River restoration area in Jurupa Valley

DRAFT

Conservation and Open Space

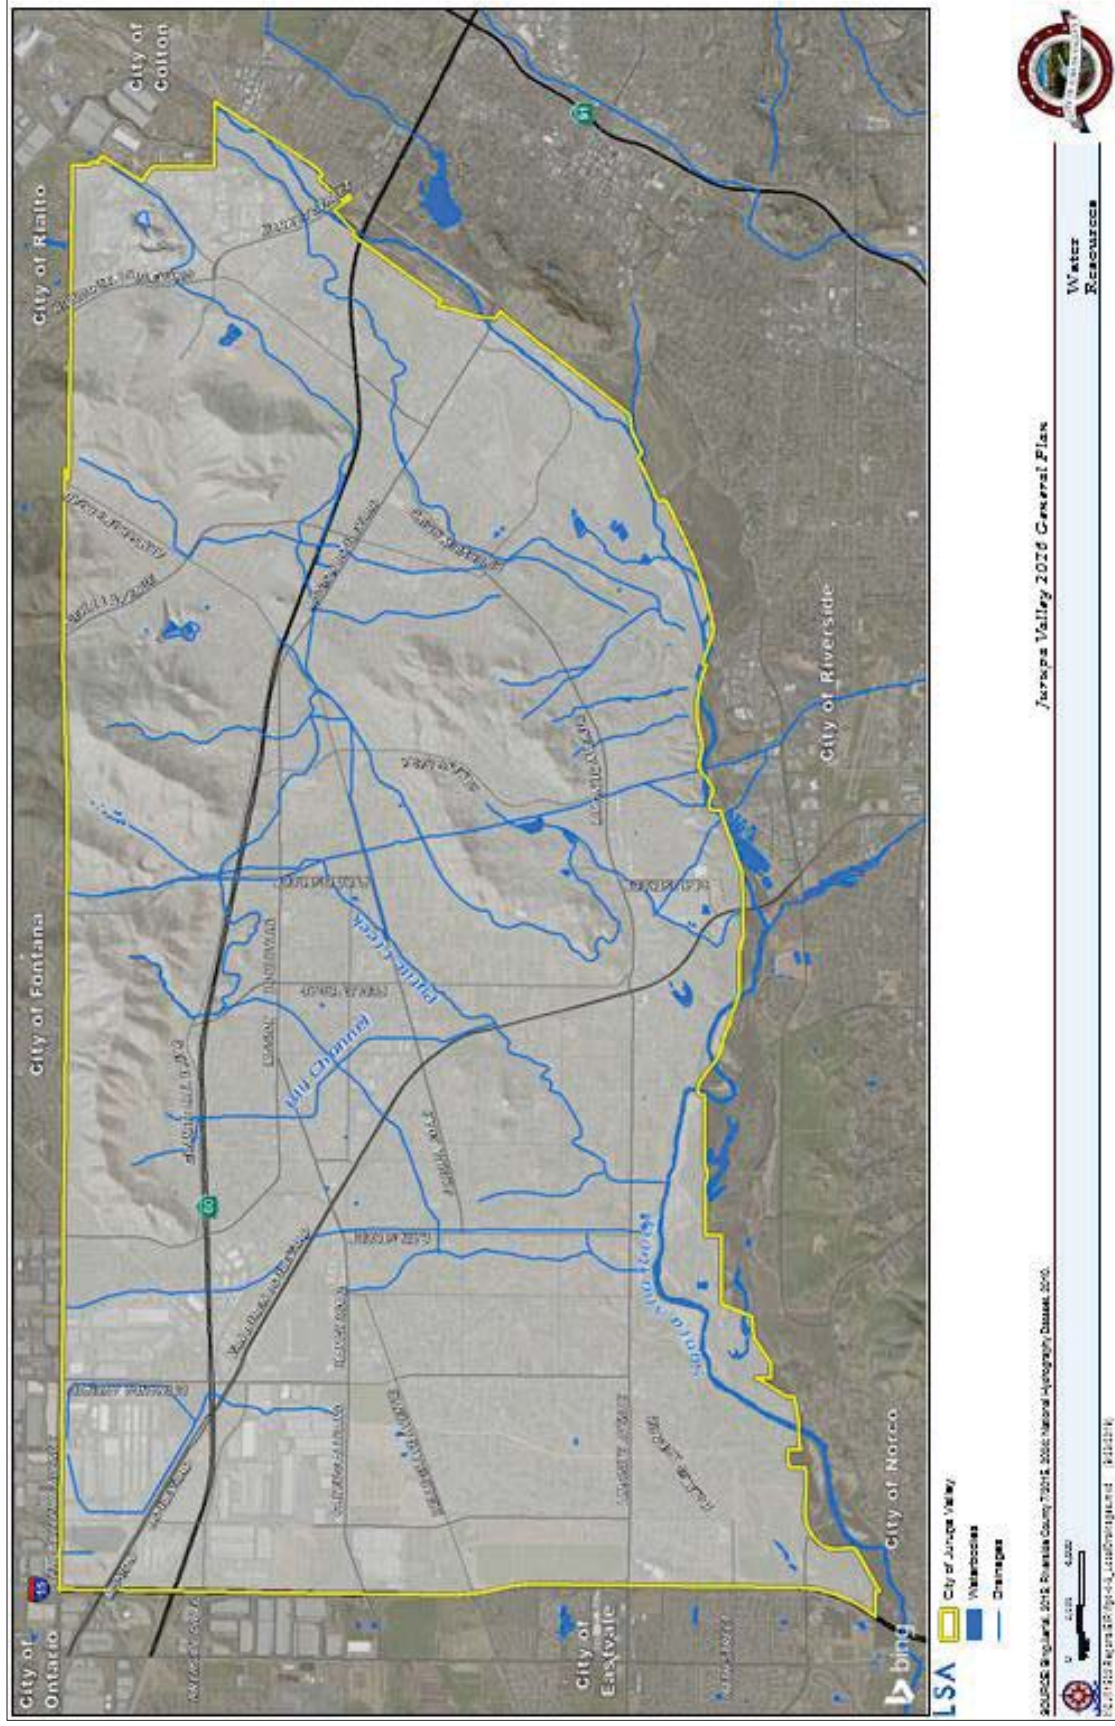

Figure 4-8: Water resources, Riverside County

Although Jurupa Valley receives all of its potable water from groundwater supplies, regional and statewide water demands and ongoing drought conditions require continued conservation efforts and careful monitoring of water supplies to ensure adequacy for future growth. The overall County water supply is uncertain for two reasons: water apportionments from northern California have been reduced as part of the CALFED Bay-Delta Program, as well as decreased supplies to California from the Colorado River. Additionally, most of the County's sources of water are currently at capacity. Water storage to meet peak demand, or a two-day to one-day supply, is provided by many local water agencies within Riverside County. However, long-term storage of large quantities of water is provided only in the Metropolitan Water District (MWD) and California Department of Water Resources (DWR) facilities. Total storage capacity in the existing reservoir system is 871,000 acre-feet (AF). Three of these storage facilities are located in Riverside County: Lake Mathews, Lake Skinner, and Lake Perris. Together, these facilities have 342,300 AF of storage capacity. Diamond Valley Lake triples this capacity with an additional 800,000 AF of storage, bringing the total storage capacity available within Riverside County to 1,142,300 AF. Even though the creation of Diamond Valley Lake has allowed for three times the current storage of water, no increase in the total amount of water available to the County can be identified.

This increase in water storage will benefit the whole South Coast region, which includes other significant jurisdictional water users, such as San Diego County, as well as Riverside County. Currently, approximately 3/8 of existing storage capacity may be used to meet seasonal demand. The remaining 5/8 is reserved for emergency needs such as severe droughts and/or use when a natural disaster, such as an earthquake, makes it impossible to meet demand through usual supply facilities. Projected 2020 water use and population levels indicate an expected water shortage for the two hydrologic regions that comprise Riverside County: the South Coast and Colorado River regions. Though these regions include most of southern California, and not just Riverside County, they are each representative of the types of supply and demand within the County. The two regions are described as follows:

- South Coast Region: Basins draining into the Pacific Ocean from the southeastern boundary of Rincon Creek Basin in western Ventura County, south to the Mexican border. Jurupa Valley is part of the South Coast Region.

- Colorado River Region: Basins south and east of the South Coast and South Lahontan regions; areas that drain into the Colorado River, the Salton Sea, and other closed basins north of the Mexican border.

Figure 4-9: Rancho Jurupa Lake

The California Department of Water Resources (DWR) produces a California Water Plan every 5 years that not only includes a statewide water budget but also regional watershed water budgets. These water budgets are based on California Department of Finance population projections and indicate clearly that demand for water will exceed supply in 2020 whether or not a drought condition exists at that time. Most of the state's regions, except for the North Coast and San Francisco Bay Regions, experience average-year and drought-year shortages now, and are forecasted to experience increased shortages in 2020. The largest average-year shortages are forecasted for the South Coast Region, which heavily relies on imported water. Future average-year shortages in the South Coast Region reflect forecasted population growth plus lower Colorado River supplies as California reduces its use of Colorado River water to the state's basic apportionment.

To help bridge the projected gap between water supply and demand, water conservation must be a priority. Following are water conservation policies and programs to help manage water supplies by promoting conservation and efficient water use.

Policies

- COS 3.1 **Water Use Planning.** Adopt and strive for the most efficient available water conservation practices in the City's operations and planning, and encourage community services districts and other agencies to do the same. "Most efficient available practices" means actions and equipment that use the least water for a desired outcome, considering available equipment, life-cycle costs, social and environmental side effects, and the regulations of other agencies.
- COS 3.2 **Multi-Use Consideration.** Consider, in planning, land use decisions, and municipal operations, the effects of water supply on urban growth, wildlife habitat, agriculture, and stream flows, and seek to ensure continued water availability for these uses in planning for long-term water supplies. The City will encourage individuals, organizations, and other agencies to follow this policy.

- COS 3.3 **Water Quality.** Employ the best available practices for pollution avoidance and control and encourage others to do the same. “Best available practices” means actions and equipment that result in the highest water quality, considering available equipment, life-cycle costs, social and environmental side effects, and the regulations of other agencies.
- COS 3.4 **Water Conservation Systems.** Encourage the installation of water-conserving systems such as dry wells and graywater systems, where feasible, especially in new developments. The installation of cisterns or infiltrators shall also be encouraged to capture rainwater from roofs for irrigation in the dry season and to reduce runoff during heavy storms.
- COS 3.5 **Site Water Collection and Retention.** Consider requiring design practices such as permeable parking bays and porous parking lots with bermed, landscaped storage areas for rainwater detention as a condition of development approval,
- COS 3.6 **Landscaping with California Native Plants.** Encourage the use of California native plants for drought-resistant landscape planting.
- COS 3.7 **Edible Landscaping.** Encourage the use of edible landscaping in residential areas, streetscapes, public spaces, and parks, including vegetable gardens, herbs, and fruit trees in lieu of large expanses of lawn or other more water-demanding plantings.

Programs

- COS 3.1.1 **Public Information.** Promote and support educational outreach programs that provide information services to the public about water conservation techniques, benefits, and water-saving technologies in conjunction with water providers, Riverside County, community services districts, and other entities.
- COS 3.1.2 **Regional Cooperation.** Monitor and participate in regional activities addressing water resources, groundwater, and water quality to help ensure adequate and safe water supplies for existing and future residents and businesses.

Water Quality

Water quality problems that have occurred in Jurupa Valley have related to Stringfellow runoff, inadequate subsurface sewage disposal, waste disposal management in the Santa Ana River and floodway, and pollution due to urban storm water system runoff. The Regional Water Quality Control Board for Region 8 provides state-level water quality policy for the City and Riverside County. Further, the National Pollutant Discharge Elimination System mandates Best Management Practices to effectively minimize the adverse effects of pollution and protect water quality and groundwater resources.

Groundwater resources, or “aquifers,” are defined by their quality as well as quantity. Most groundwater basins store local and imported water for later use to meet seasonal and drought-year demands. Under current groundwater recharge programs, groundwater is artificially replenished in wet years with surplus imported water. Water is then extracted during drought years or during emergencies. Groundwater recharge that may also involve the recharge of reclaimed water enhances the City's ability to meet water demand during years of short supply and increases overall local supply reliability. The following policies are intended to provide local guidance for the protection and maintenance of water quality and groundwater resources.

Policies

- COS 3.8 **Wastewater Treatment.** Encourage the use of innovative and creative techniques for wastewater treatment.
- COS 3.9 **Pollution Discharge.** Minimize pollutant discharge into storm drainage systems and natural drainage and aquifers.
- COS 3.10 **Regional Cooperation.** Support efforts to create additional water storage where needed, in cooperation with federal, state, community services districts, the Riverside County Flood Control District, and other water authorities. Additionally, support and/or engage in water banking in conjunction with these agencies where appropriate, as needed.
- COS 3.11 **Aquifer Protection.** Require that aquifer water-recharge areas are preserved and protected.
- COS 3.12 **Drainage Systems in Development Projects.** Require that developers and designers incorporate natural drainage systems into development projects where appropriate and feasible.

- COS 3.13 **Storm Water Retention.** Retain storm water at or near the site of generation for percolation into the groundwater to conserve it for future uses and to mitigate adjacent flooding.
- COS 3.14 **Natural Channels.** Collaborate with the Riverside County Flood Control District to promote natural approaches to managing streams and avoid lined, non-porous channels to the maximum extent possible where groundwater recharge is likely to occur.
- COS 3.15 **Water Retention Incentives.** Consider granting incentives to landowners to preserve natural ground water recharge areas, through measures such as density averaging.

Program

- COS 3.1.3 **Aquifer Recharge.** Participate in the development, implementation, and maintenance of a program to recharge the aquifers underlying the City and Western Riverside County, where feasible and appropriate. The program shall make use of flood and other waters to offset existing and future groundwater pumping, except where:
- Groundwater quality would be reduced;
 - Available groundwater aquifers are full; or
 - Rising water tables threaten the stability of existing structures.

Floodplain and Riparian Area Management

Watercourses and their floodways are usually the focus of construction and control; while fertile, flat and “reclaimed” floodplain lands are typically used for other activities, such as agriculture, commerce, and residential development. These areas form a complex physical and biological system that not only supports a variety of natural resources, but also provides natural flood and erosion control. In addition, the floodplain represents a natural filtering system, with water percolating back into the ground and replenishing groundwater. When a watercourse is separated from its floodplain with levees and other flood control facilities, natural, built-in benefits are lost, altered, or significantly reduced. The floodway fringe is that portion of the floodplain between the floodway and the limits of the existing 100-year floodplain. Floodways and drainage facilities are shown in *Figure 4-10* below.

DRAFT

Conservation and Open Space

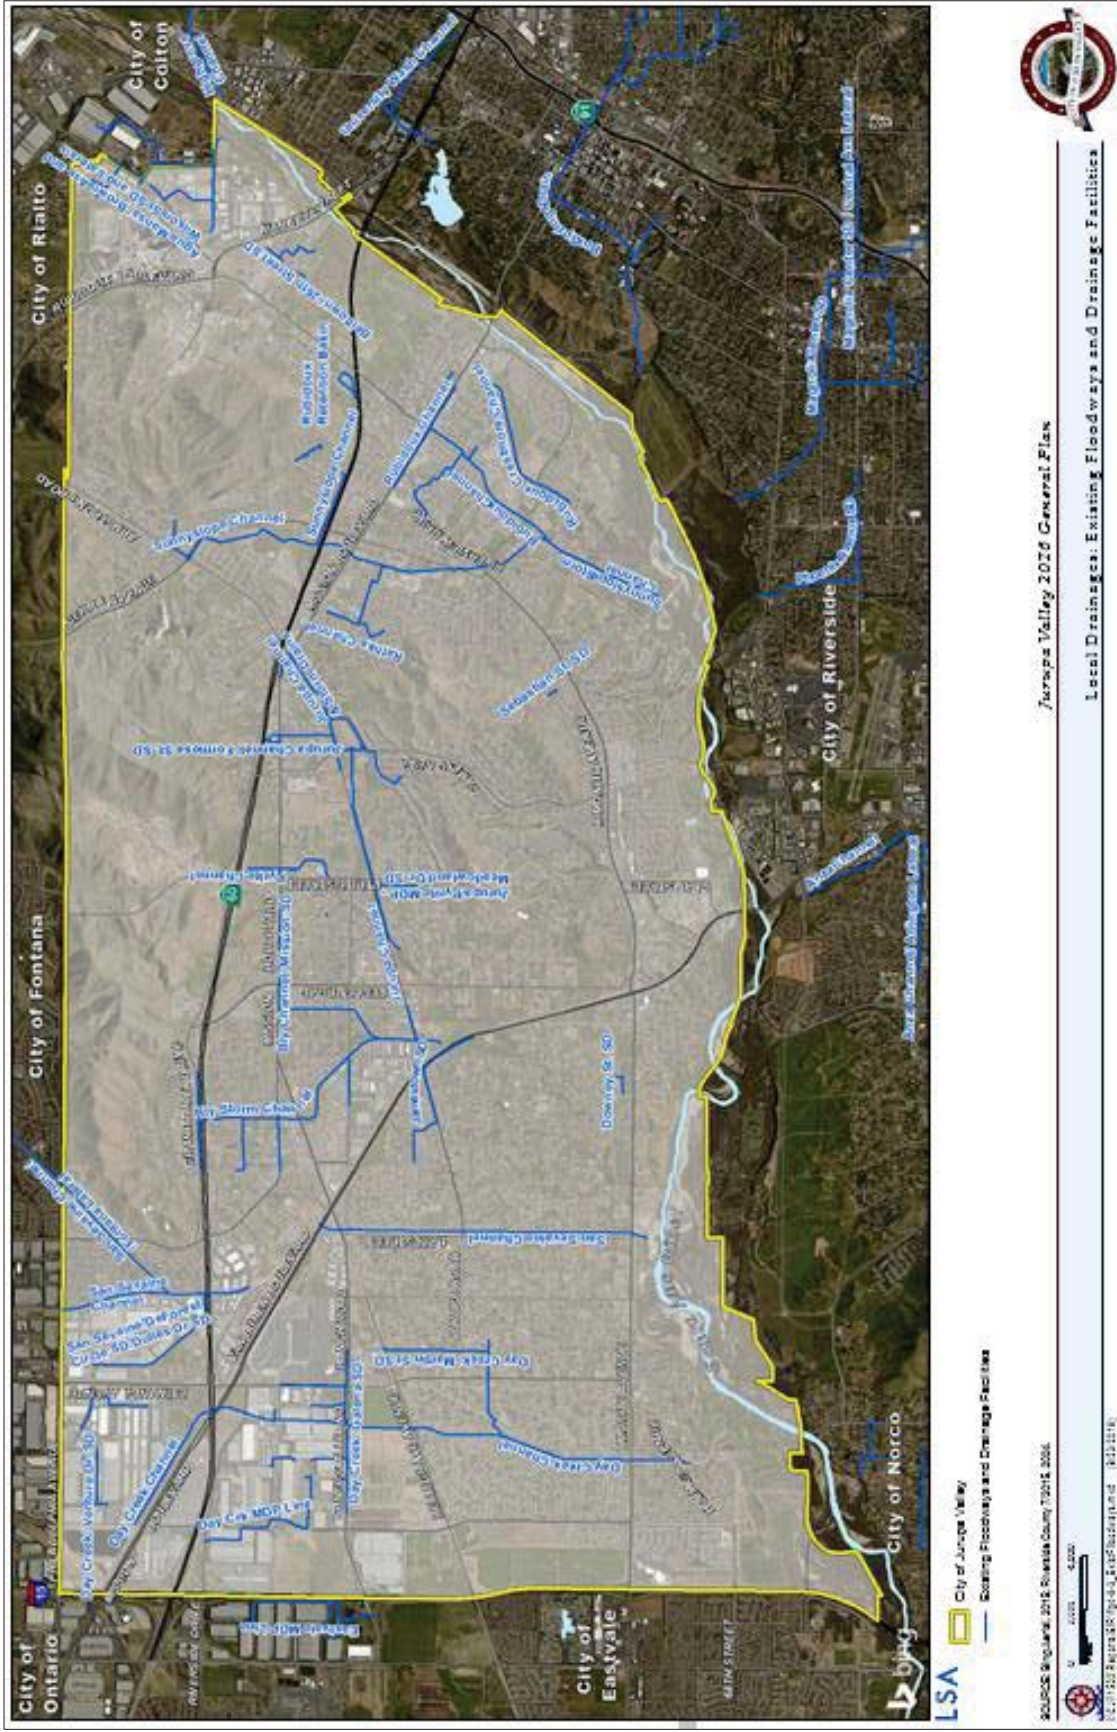

Figure 4-10: Existing Floodways and Drainage Facilities

The City follows Riverside County's adopted methods of using the USGS "blue line stream" overlay as its major form of mapping watercourses in its boundaries. The conventional assumption that flooding can be completely eliminated has meant not only an unrealistic reliance on manufactured flood protection, but also the development of a flood control system that squeezes rivers into artificially narrow channels, adds steeply sloped levees (devoid of riparian vegetation), and eliminates historic floodplains, all in the interest of reclamation, flood protection and urban growth. Unfortunately, this highlights the fact that floods have been viewed for far too long as everything except part of the natural life cycle of rivers and floodplains.

Flooding is part of the dynamic nature of healthy rivers and ecosystems. High flows and floodwaters are needed to cleanse the channels of accumulated debris, build stream banks, import gravels for aquatic life, thin riparian forests, and create riparian habitat.

The open space of floodplains adjacent to rivers and streams helps store and slowly release floodwaters, thus reducing flood flow, peaks, and their subsequent impacts during small and frequent flood events. Further, riparian habitat within floodplains is of great value to resident and migratory animal species, as it provides corridors and linkages to and from the City's wildlife corridors. The following policies address floodways, the floodplain fringe, and riparian areas (also refer to the Community Safety, Services, and Facilities Element).

Wetlands typically occur in low-lying areas that receive fresh water at the edges of lakes, ponds, streams, and rivers. Wetlands provide habitat for a wide variety of plants, invertebrates, fish, and larger animals, including many rare, threatened, or endangered species. The plants and animals found in wetlands include both those that are able to live on dry land or in the water and those that can live only in a wet environment. Wetlands in Jurupa Valley may include riverbanks, vernal springs and pools, and desert washes.

Figure 4-11: Van Buren Bridge Collapse during 1969 Santa Ana River Flooding

Policies

- COS 3.16 Floodway Modification.** Encourage other agencies to limit floodway modification or channelization only as a "last resort," and limit the alteration to:
- a. That necessary for the protection of public health and safety, only after all other options are exhausted,

- b. Essential public service projects where no other feasible construction method or alternative project location exists,
- c. Projects where the primary function is improvement of fish and wildlife habitat, or
- d. Private development entitlements shall be required to design floodplain and river edge treatments to simulate and ultimately regenerate natural terrain and riparian habitat, using techniques such as covering and re-planting over rip-rap embankments, and utilizing gentle contoured slopes that do not exceed 8:1 slope ratio.

COS 3.17 Environmental Mitigation. Encourage and, where possible, require substantial modifications of a floodplain to be designed to reduce adverse environmental effects to the maximum extent feasible, considering the following factors:

- a. Stream scour
- b. Erosion protection and sedimentation
- c. Wildlife habitat and linkages
- d. Groundwater recharge capability
- e. Adjacent property
- f. Designed to achieve a natural effect. Examples could include soft riparian bottoms, riparian corridors within the floodway, and gentle and modulating bank slopes, wide and shallow floodways, minimization of visible use of concrete, and landscaping with California native plants to the maximum extent possible. A site-specific hydrologic study may be required.

COS 3.18 Setbacks. Based upon site-specific study, all development shall be set back from the designated floodway boundary or top of bank, whichever is most appropriate, a distance adequate to address the following issues:

- a. Public safety,
- b. Erosion,
- c. Riparian or wetland buffer,
- d. Wildlife movement corridor or linkage, and
- e. Slopes

COS 3.19 Trails. Consider designating floodway setbacks to accommodate greenways, trails, and recreation

opportunities and allowing such uses within floodways, where appropriate.

COS 3.20 Riparian Area Preservation. Require development projects to preserve and enhance native riparian habitat and prevent obstruction of natural water-courses. Zoning incentives, such as averaging of development rights, should be used to the maximum extent possible.

COS 3.21 Ecotones. Identify and, to the maximum extent possible, conserve remaining upland habitat areas, or “ecotones” adjacent to wetland and riparian areas that are critical to the feeding, hibernation, or nesting of wildlife species.

Programs

COS 3.1.4 Floodway Protection and Enhancement. Working with other responsible agencies, help implement the following actions:

- a. Encourage preparation of an inventory of natural areas that have been degraded and list sites in priority order, for restoration efforts.
- b. Encourage revegetation of disturbed areas using native plants.
- c. Eliminate sources of water pollutants and improper water diversions.
- d. Remove invasive, non-native species in natural habitat areas, and prevent the introduction or spread of invasive, non-native species.
- e. Discourage the placement and, where possible, remove man-made elements such as buildings, paving, structural elements, concrete lining of waterways, signs, streets, and utilities within floodways or floodplains, unless they are needed for public health or safety, or for implementation of City plans.
- f. Require that suitably sized access corridors be provided and/or maintained through or under new and previously established, man-made obstacles to wildlife movement (such as appropriately sized culverts under arterial streets, highways, and other major roads).
- g. Discourage or prevent camping, off-road vehicles, hunting and other activities that are not compatible with floodplain health and preservation.

- h. Remove trash, debris, and contaminants, using methods that minimally disrupt the open-space resources.
- i. Provide continuing community education and outreach for all citizens, youth, and youth groups, and property owners on open space and natural resource values, programs, and responsibilities.
- j. Enlist the help of volunteers, youth and service groups, and academic programs in restoring and monitoring habitat health.

COS 4 – Agricultural Resources

Agriculture was once the dominant land use and economic activity in Jurupa Valley. Over time, land use and economic changes have largely displaced farming, grazing, vineyards, dairies, orchards, and other agricultural activities with less urbanized areas. Reflecting this change, the last dairy in Jurupa Valley closed in 2015. However, the City continues to have areas in agricultural use, particularly along the I-15 corridor and near the Santa Ana River, as shown in *Figure 4-12* below. Countywide, agriculture continues to contribute significantly to the overall economy. In Jurupa Valley, agriculture continues to be important as a contributor to the local economy, a key open space resource, and a defining feature of the communities' overall visual character and rural heritage. Moreover, agriculture is fundamental to the notion of "sustainability"—it helps preserve productive soils and Jurupa Valley's capacity to grow food for local use.

Policies

- COS 4.1 **Support Agricultural Uses.** Employ a variety of agricultural land conservation programs to improve the viability of farms and ranches and thereby ensure the long-term conservation of viable agricultural uses in cooperation with individual farmers, farming organizations, farmland conservation organizations, and the County.
- COS 4.2 **Agricultural Land Conversion.** Discourage the conversion of productive agricultural lands to urban uses unless the property owner can demonstrate overarching Community-wide benefits or need for conversion.

DRAFT

Conservation and Open Space

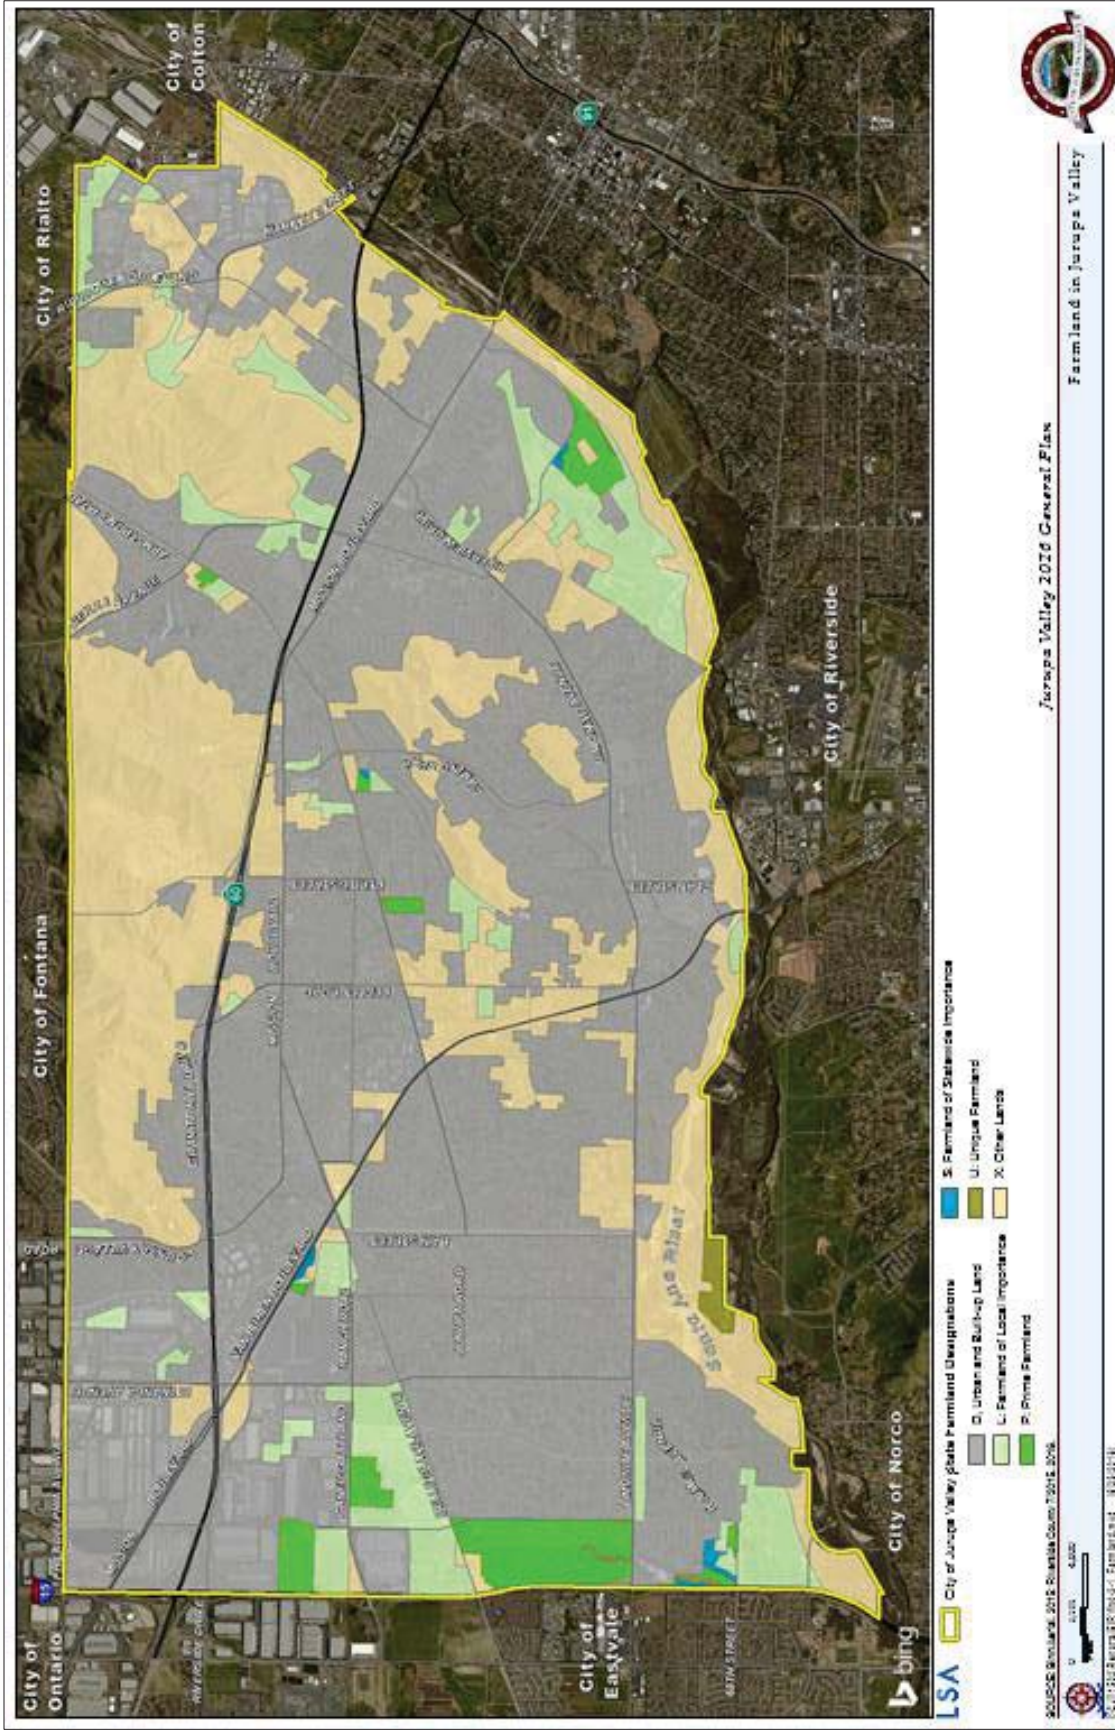

Figure 4-12: Farmland in Jurupa Valley

- COS 4.3 **Compatible Uses.** Encourage the combination of agriculture with other compatible uses to help with the production of food, fiber, and support uses incidental to the on-site agricultural operation, provide an economic advantage to agriculture. In areas designated for agricultural uses, allow activities such as farm stores, retail sales of produce or wares, and related accessory uses.

Programs

- COS 4.1.1 **Farmland Conservation.** Encourage individuals, non-profit agencies, and the County to seek out grants and programs that promote farmland conservation. Such measures may include land trusts, conservation easements, Williamson Act designation, Land Conservation Contracts, Farmland Security Act contracts, the Agricultural Land Stewardship Program Fund; agricultural education programs, density averaging and development standards, and/or incentives (e.g., clustering and density bonuses) to encourage conservation of productive agricultural land.
- COS 4.1.2 **Sustainable Agriculture.** Encourage sustainable agricultural practices to protect the health of human and natural communities and to minimize conflicts between agriculture and urban neighbors.

COS 5 – Renewable Energy Resources

Conservation policies in this element protect the City's physical resources as well as its energy resources, including renewable energy. This category of renewable energy resources includes wind, solar, geothermal, and biomass resources. Although the use of these resources is not widespread in Jurupa Valley at the time of General Plan adoption, there is potential for their use and development, particularly solar generation. Renewable energy can be developed as a substitute for oil, natural gas, and other limited energy supplies used for electricity generation, and to reduce consumption of these supplies.

Energy Conservation

For a sustainable economy and environment, and continued quality of life, we must reduce our dependence on fossil fuels. A key strategy in that effort is to use energy more efficiently and to shift to cleaner, renewable, locally generated, and/or controlled energy sources. While local governments have made significant progress in energy conservation, more can be done through emerging technologies and increased emphasis on "sustainable" practices

Figure 4-13: Residential roof-mounted photovoltaic solar collectors

and building design in public and private development. Conservation is an important component of using energy resources in an efficient manner. Sensible energy conservation and design practices can help mitigate the “heat island” effects of urban development that increase local temperatures and result in increased energy demand. The following policies address energy conservation.

Policies

- COS 5.1 Best Available Practices.** Employ the best available practices in energy conservation, procurement, use, and production, and encourage individuals, organizations and other agencies to do likewise. “Best available practices” means behavior and technologies that reflect recommendations of specialists and that use the least energy for a desired outcome, considering available equipment, life-cycle costs, social and environmental side effects, and the regulations of other agencies. Best available practices include use of sustainable energy sources. Sustainable energy sources are naturally renewed in a relatively short time and avoid substantial undesirable side effects, and include:
- a. Space heating and cooling using earth, plantings, and/or building thermal mass to moderate temperature changes.
 - b. Space cooling through natural ventilation.
 - c. Space cooling through reflectivity and shading.
 - d. Indoor illumination by natural light.
 - e. Solar space and water heating.
 - f. Wind electricity generation.

- COS 5.2 **Energy-Efficient City Facilities.** Operate and maintain City facilities in the most energy-efficient manner, without reducing public safety or service levels, as budget resources allow.
- COS 5.3 **Energy-efficiency improvements.** Identify energy efficiency improvement measures to the greatest extent possible, undertake all necessary steps to seek funding for their implementation, and upon securing availability of funds, implement the measures in a timely manner, as budget resources allow.
- COS 5.4 **Agency Cooperation.** Cooperate with federal, state, and local governments and other appropriate entities to accomplish energy conservation objectives when consistent with the City's General Plan goals and policies.
- COS 5.5 **Energy Efficiency and Green Building.** Encourage energy-efficient "green buildings" as certified by the U.S. Green Building Council's LEED® (Leadership in Energy and Environmental Design) Program or equivalent certification.
- COS 5.6 **Energy Efficiency Incentives.** Support standards and incentives that encourage developers, designers, and property owners to design, build, and operate buildings to achieve energy savings that exceed Title 24 requirements of the California Building Code.
- COS 5.7 **Energy Efficient Materials.** Specify and use energy-efficient materials and systems for City facilities as budget resources allow.
- COS 5.8 **Reduce "Heat Island" Effect.** Encourage the conversion of asphalt and concrete paving to porous surfaces that help reduce surface runoff and the "heat island" effect.
- COS 5.9 **Renewable Energy Projects.** Encourage and accommodate applications for projects that will produce renewable energy for the grid, such as solar generating stations.

Programs

- COS 5.1.1 **Energy-Efficient Operations.** Budget for and manage City operations, capital improvements, and facilities for energy efficiency, including purchase and use of fleet vehicles, equipment, and materials.
- COS 5.1.2 **Sustainable Design.** Incorporate sustainable design and sustainable energy sources and features in existing and new City facilities.

- COS 5.1.3 **Zoning Ordinance Update.** Update the Zoning Ordinance to further the energy conservation goals, policies, and implementations actions, and reduce impediments or disincentives to it.
- COS 5.1.4 **Encourage Public Information Programs.** Encourage private utility programs for public information programs and energy audits to promote energy conservation.
- COS 5.1.5 **Energy Grants.** Solicit state and federal grants to implement the City's energy conservation programs as such funding becomes available.

Wind Energy

Because of its valley location and pattern of development, Jurupa Valley is generally not suitable for efficient, large-scale wind energy generation. Small-scale, non-commercial wind energy generation, and "windmotors" historically associated with agricultural uses may be appropriate in connection with residential, institutional, recreational, and agricultural uses.

Policy

- COS 5.10 **Wind Energy.** Where appropriate, allow non-commercial wind energy generation in a manner that maximizes beneficial uses and minimizes detrimental effects to residents and the environment.

Solar Energy

Due to Jurupa Valley's location and climate, solar energy generation has important applications for residential, commercial, and institutional applications. Sunlight can be utilized for energy production in two ways: active solar systems involve the use of electronic and mechanical devices to convert solar energy to heat or electricity; passive solar systems utilize natural heating and cooling from the sun through building orientation and building design techniques.

Policies

- COS 5.11 **Solar access.** Encourage the provision for and protection of solar access.
- COS 5.12 **Solar Energy Use.** Use solar energy in City facilities and operations, as budget resources allow, and encourage the use of active and passive solar energy by homeowners, business owners, developers, government, and public agencies.

Programs

COS 5.1.6 Update City Regulations. Update development and subdivision standards to include clear, specific standards to ensure that desirable solar access is provided for all new development.

Biomass Resources

Biomass resources refer to organic materials—waste products, residues, or specific crops—that can be converted to energy fuel to replace conventional sources or directly used in combustion processes. Due to agricultural production in the County, resources exist that enable this technology to be more widely employed.

Policies

COS 5.13 Biomass Conversion. Encourage economic biomass conversion under sensible environmental controls, and where compatible with adjacent uses.

COS 6 – Non-Renewable Resources

The non-renewable resources discussed in this element are mineral resources and certain energy resources. Mineral Resources are classified under the State Mining and Reclamation Act of 1975 (SMARA). The Energy Resources section addresses petroleum resources as well as energy conservation.

Figure 4-14: Former Jensen Quarry (last active mining 1974-79); now the Oak Quarry Golf Club

Policy

COS 6.1 Efficient Use of Non-Renewable Resources. Utilize non-renewable resources efficiently in City buildings and facilities, services and operations, and encourage others to do the same.

Mineral Resources

Historically, mineral extraction has been an important component of Jurupa Valley's economy. Western Riverside County has extensive deposits of clay, limestone, iron, sand, and aggregates. Classification of land within California takes place according to a priority list that was established by the State Mining and Geology Board (SMGB) in 1982, or when the SMGB is petitioned to classify a specific area. The SMGB has also established Mineral Resources Zones (MRZ) to designate lands that contain mineral deposits. The State of California has designated Aggregate Mineral Resource areas within the County. These mineral resource zones are shown in *Figure 4-15* below.

DRAFT

Conservation and Open Space

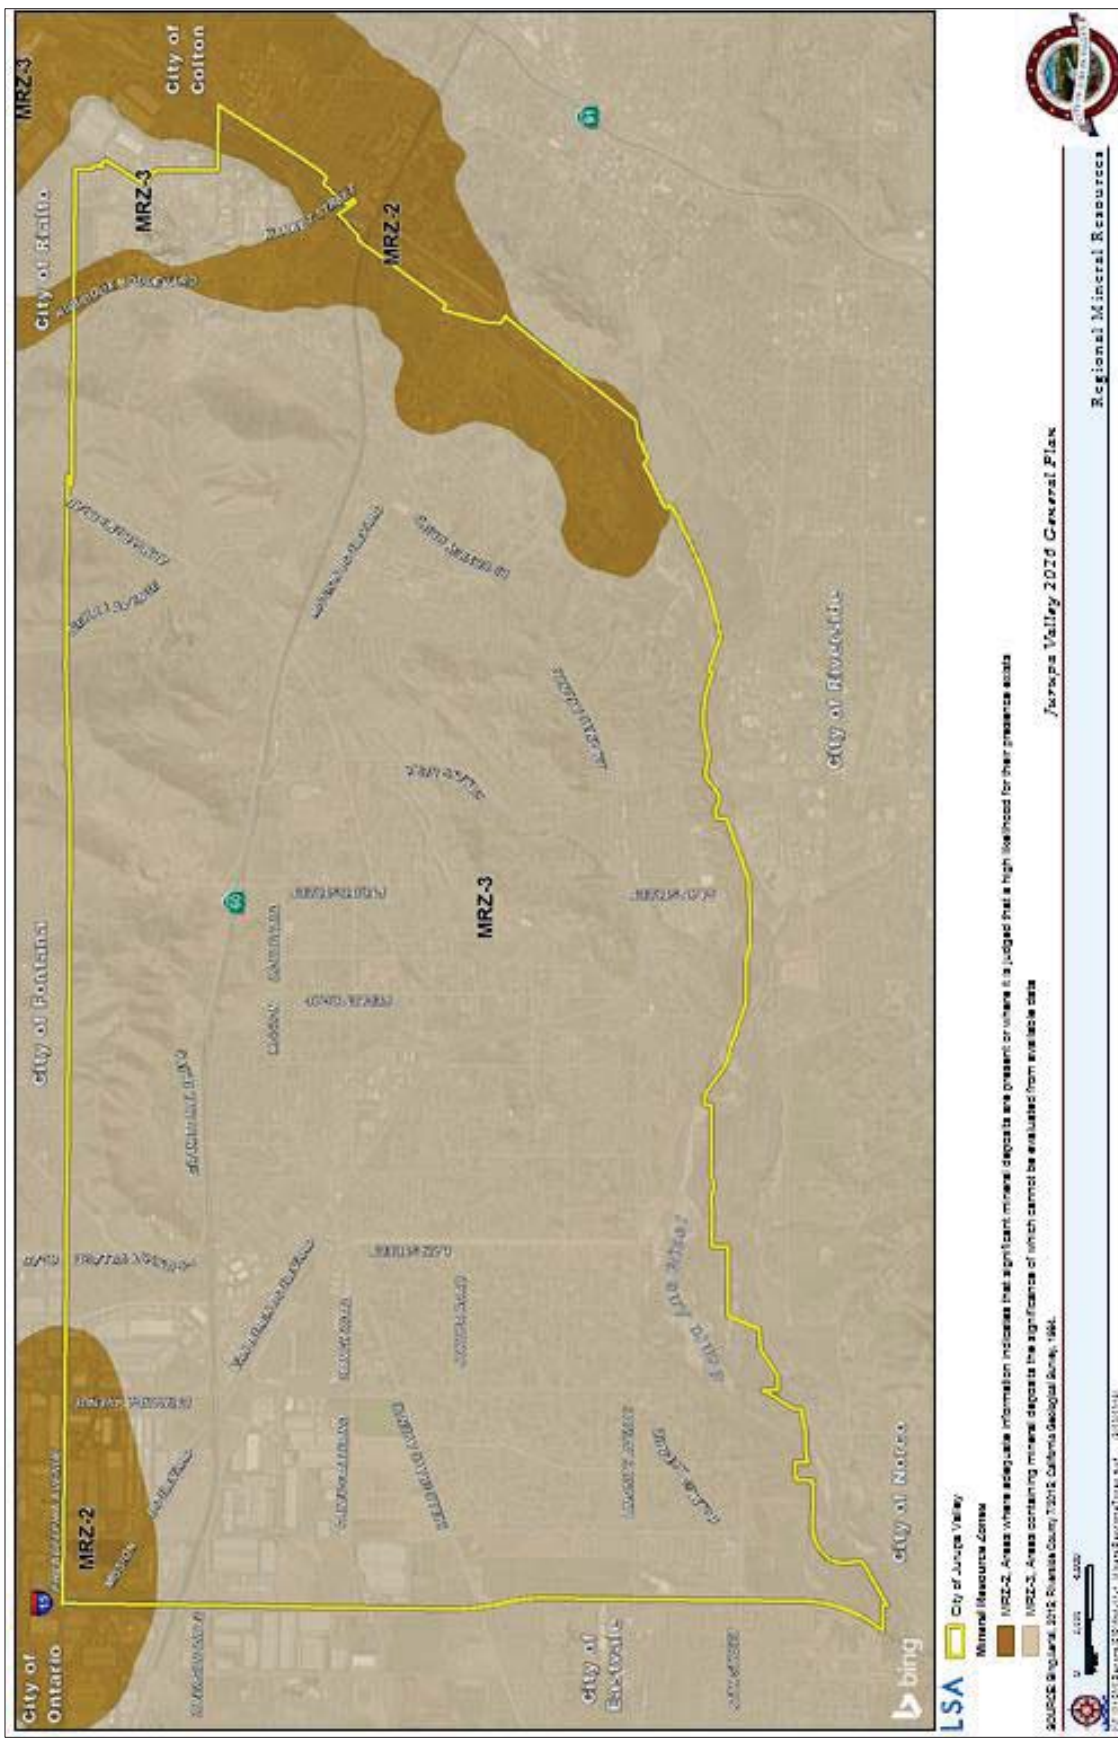

Figure 4-15: Figure COS-15: Jurupa Valley mineral resources

Mineral deposits are important to many industries, including construction, transportation, and chemical processing. The value of mineral deposits is enhanced by their proximity to urban areas. However, these mineral deposits are endangered by the same urbanization that enhances their value. The non-renewable characteristic of mineral deposits necessitates the careful and efficient development of mineral resources to prevent their premature depletion or adverse impacts due to their extraction and use.

Policies in this section seek to conserve areas identified as containing significant mineral deposits and oil and gas resources for potential future use, while promoting the reasonable, safe, and orderly operation of mining and extraction activities within areas designated for such use, where environmental, aesthetics, and adjacent land use compatibility impacts can be adequately mitigated.

Policies

- COS 6.2 **Compliance with SMARA.** Require that the operation and reclamation of surface mines be consistent with the California Department of Conservation's Surface Mining and Reclamation Act (SMARA) and with the Municipal Code.
- COS 6.3 **Incompatible Uses.** Restrict incompatible land uses within the impact area of legal existing or potential surface mining uses and within areas designated in the General Plan as Open Space-Mineral Resources.
- COS 6.4 **Approval Conditions.** Impose conditions as necessary on mining operations to minimize or eliminate the potential adverse impact of mining operations on surrounding properties and environmental resources.
- COS 6.5 **Buffers.** Require that new non-mining land uses adjacent to existing mining operations be designed to provide a buffer between the new development and the mining operations. The buffer distance shall be based on an evaluation of noise, aesthetics, drainage, operating conditions, biological resources, topography, lighting, traffic, operating hours, and air quality.

Programs

- COS 6.1.1 **Minerals Inventory.** Maintain up-to-date information regarding the location of mineral resource zones in the City.

COS 6.1.2 City Review. Update City ordinances to require that all proposals for mineral extraction and reclamation be reviewed by the Planning Commission and City Council.

Energy Resources

Energy resources provide the power necessary to maintain the quality of life enjoyed by City residents. Many of the energy resources used within the City are non-renewable. For example, electricity and natural gas are the primary sources of household energy, while fossil fuels are the primary source of energy for most modes of transportation. Energy conservation and the substitution of renewable resources should be encouraged if these resources are to be preserved for future generations.

Petroleum Resources

Riverside County's petroleum resources are deposited in the form of oil and gas seeps. The State Division of Oil and Gas does not report significant or active petroleum extraction in Jurupa Valley or the County. If extraction activities are undertaken in the future, the following policy provides direction for the siting of oil and gas facilities.

Policies

- COS 6.6 City Operations.** Seek ways to improve the energy efficiency of City operations to save energy, reduce consumption of non-renewable materials, reduce municipal costs, and set a positive example for the community.
- COS 6.7 City Vehicles and Equipment.** Purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use no- or low-emission sources of energy, if economically feasible.
- COS 6.6 Renewable Energy Resources.** Work with other agencies and utility providers to encourage safe, economical, and renewable energy resources, and to reduce non-renewable energy use through public education and participation in energy conservation programs.

COS 7 – Cultural and Paleontological Resources

Jurupa Valley is rich in history dating back hundreds of years. Jurupa Valley derives its name from the first inhabitants of the area, Native Americans who called "Jurupa" their home. The Jurupa Valley area

lies at the territorial boundaries of two different Tribes, the Gabrieliño Tribe and the Serrano Tribe. Over the years, there have been various interpretations of the meaning of “Jurupa,” from a greeting meaning “peace and friendship” to the first padre to visit the area, to a more widely recognized origination that “Jurupa” is believed to refer to the California sagebrush common to the area. In 1838, the area became known as Rancho Jurupa under a land grant to Señor Don Juan Bandini by the Mexican government. By the late 1800’s the Jurupa Valley area began to live in the shadow of the more popular City of Riverside. Much of Jurupa Valley area has what once was a Riverside mailing address. Yet, settlement of the area in and around what is now the City of Riverside actually began in the Jurupa Valley many years before Riverside’s founding.

Figure 4-16: Historic Jensen-Alvarado Ranch House, 1870

Figure 4-16 shows an historic Mexican-era style ranch house— the Historic Jensen-Alvarado Ranch House, dating from 1870. This house and the surrounding park were part of early Mexican land grants in the Jurupa Valley: Rancho Jurupa (1838) and Rancho El Rincon (1839) that pre-existed California statehood (1850) and the formation of Riverside County (1893).

Cultural resources consist of places (historic and prehistoric archaeological sites), structures, or objects that provide evidence of past human activity. They are important for scientific, historic, and/or religious reasons to cultures, communities, groups, or individuals. The cultural history of Riverside County and Jurupa Valley can be divided chronologically into three periods: prehistory, ethno-history, and history. Native American cultures predominate in the prehistorical and ethno-historical periods.

The paleontological sensitivity of areas within Jurupa Valley is shown *Figure 4-17*. Three sensitivity classifications have been used to reflect the potential of containing historical or archaeological resources: high, undetermined, and low. Properties with high potential include those listed or determined eligible for listing in the National Register of Historic Places. The historical period includes settlement from 1774, with the expedition of Juan Bautista de Anza into the region, to 45 years before the present as defined by the California Environmental Quality Act (CEQA). Historic and Potentially Historic Resources are shown in *Figure 4-18* below and listed in *Table 4.1* (page [4-40](#)).

DRAFT

Conservation and Open Space

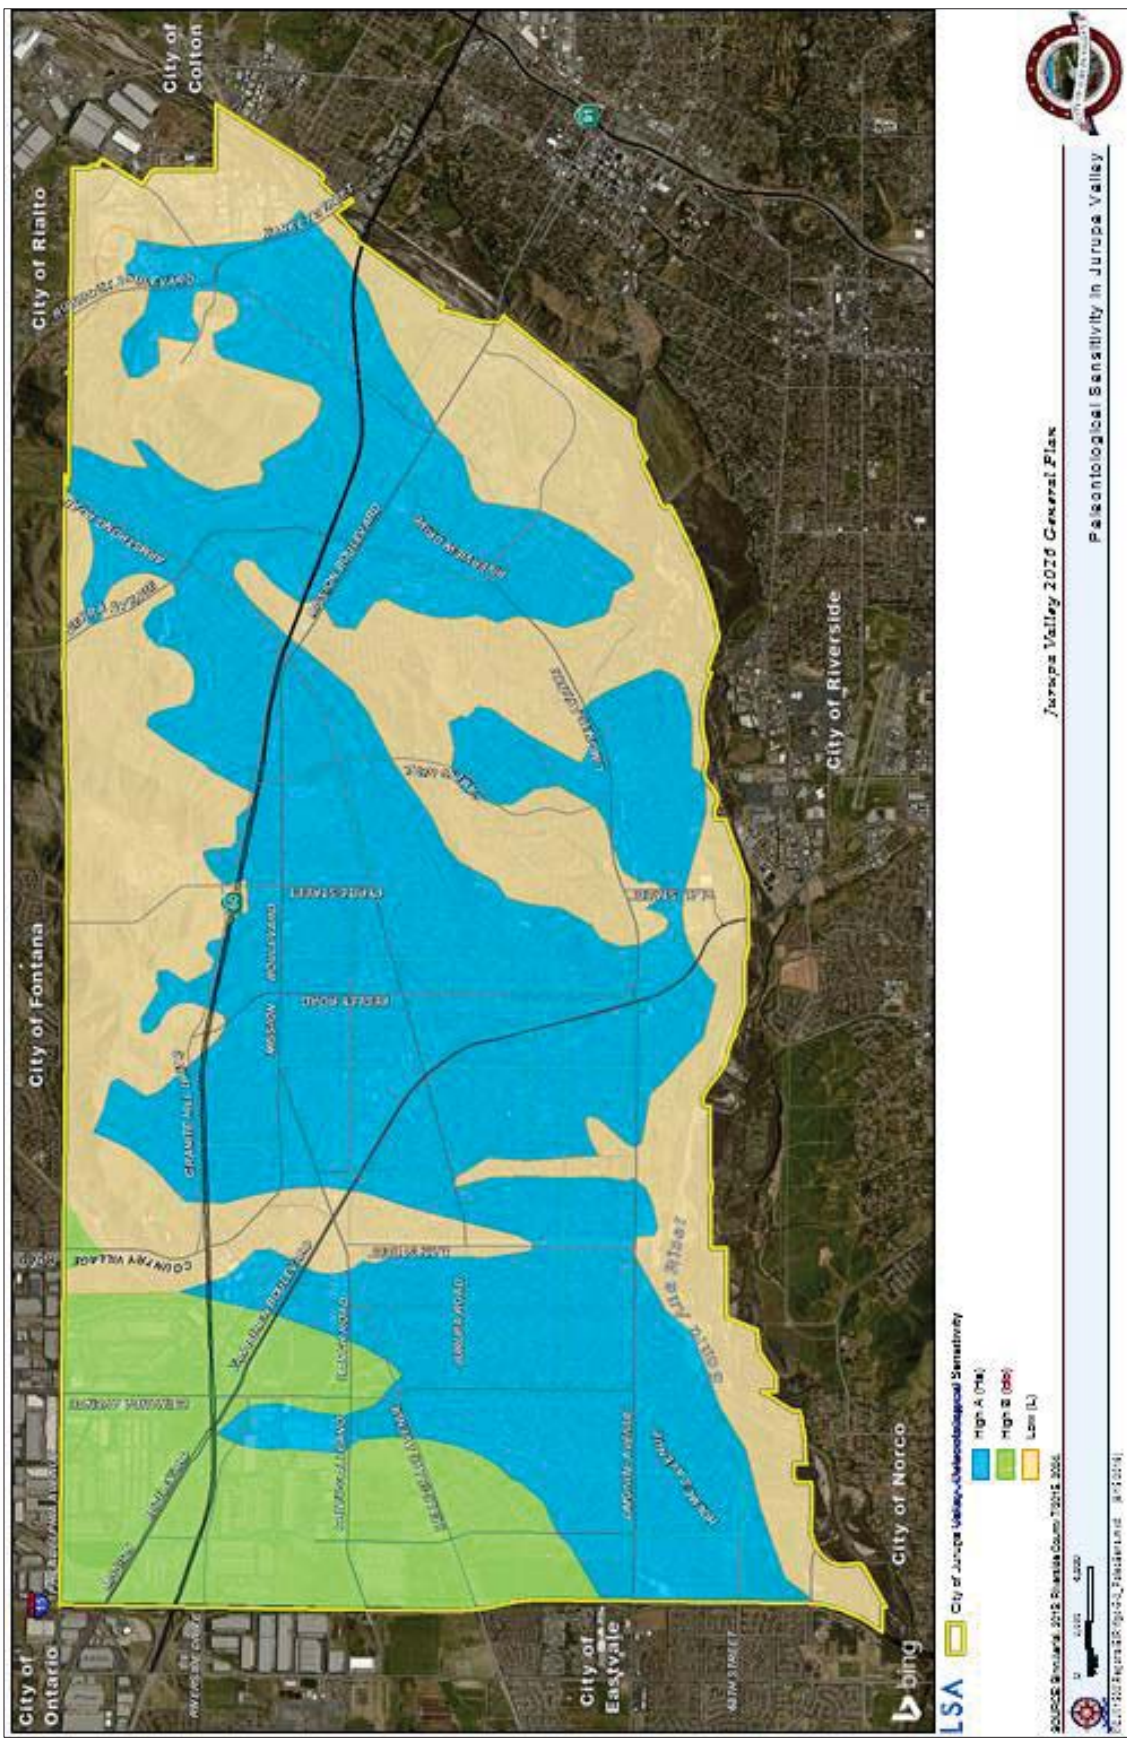

Figure 4-17: Paleontological sensitivity in Jurupa Valley

DRAFT

Conservation and Open Space

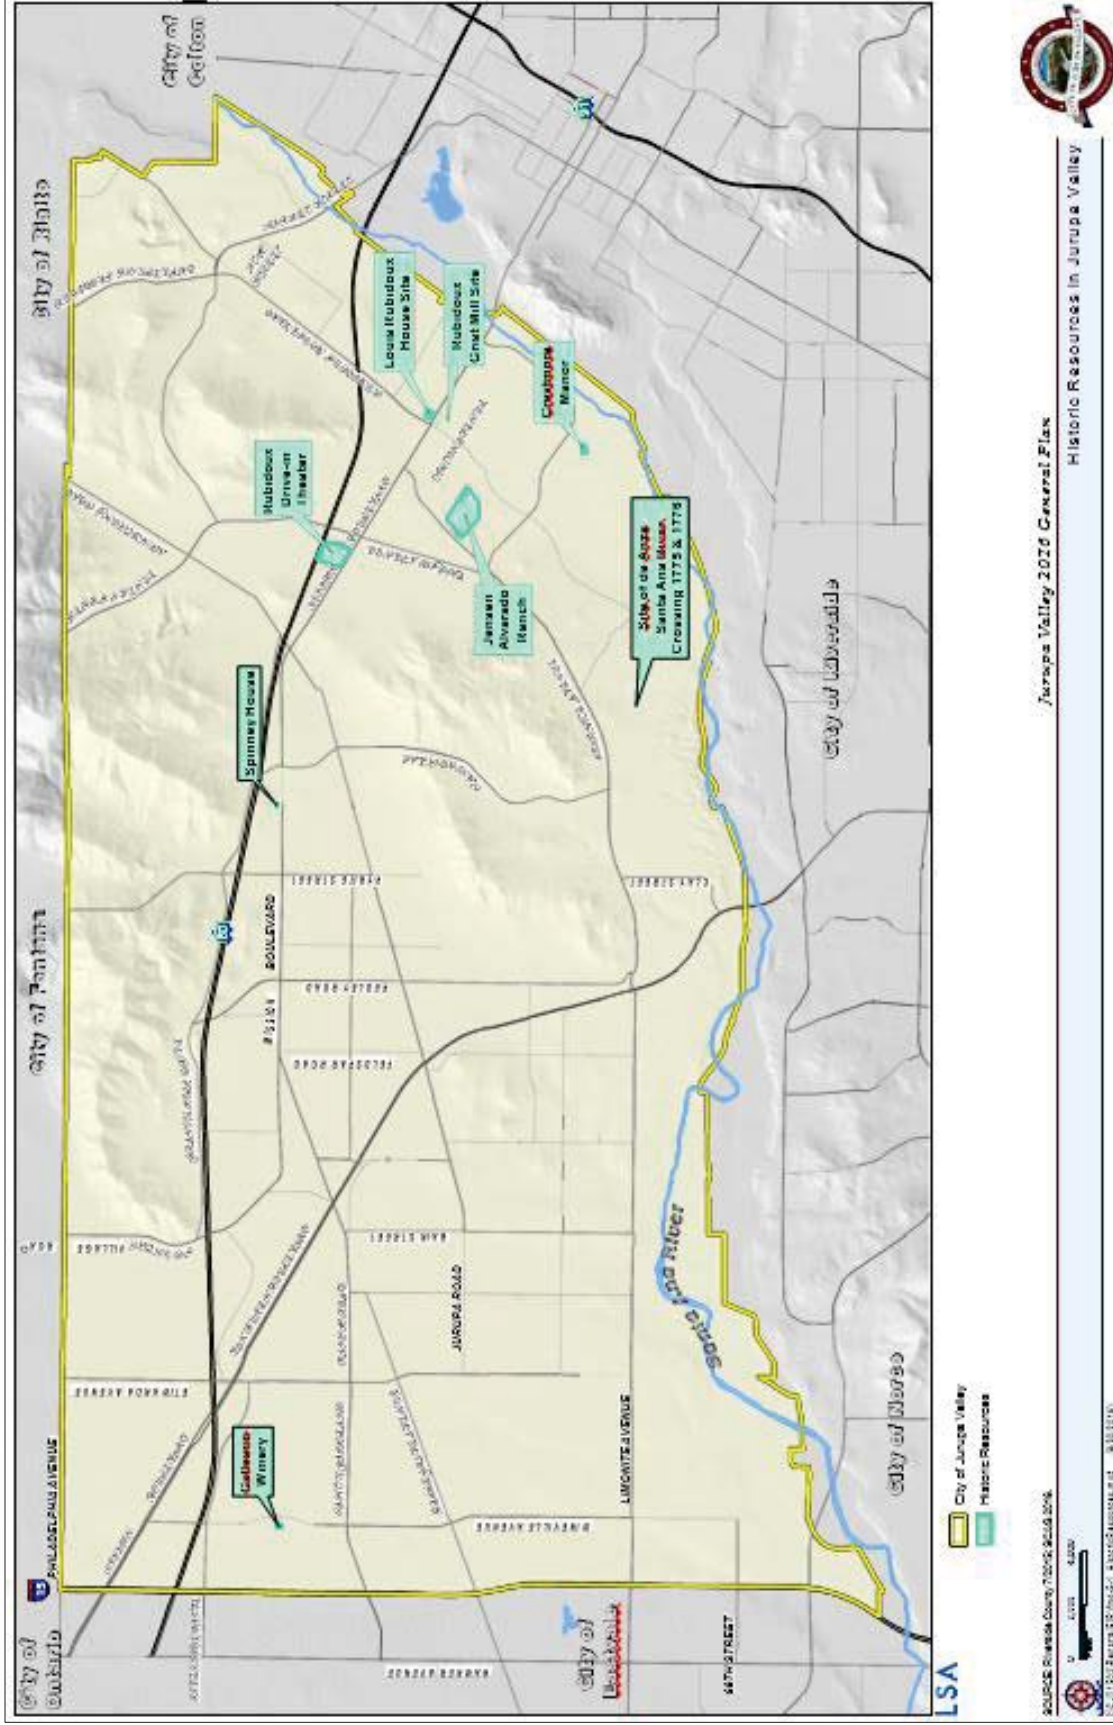

Figure 4-18: Historical resources in Jurupa Valley

The area has also been inventoried for geologic formations known potentially to contain paleontological resources. Paleontological resources are the fossilized biotic remains of ancient environments. They are valued for the information they yield about the history of the earth and its past ecological settings. Lands with low, undetermined, or high potential for finding paleontological resources are mapped in *Figure 4-17* above. This map is used in the environmental assessment of development proposals and the determination of required impact mitigation. Riverside County has an extensive record of fossil life starting in Jurassic time, 150 million years ago.

Policies

- COS 7.1 **Preservation of Significant Cultural Resources.** Identify, protect, and, where necessary, archive significant paleontological, archaeological, and historical resources.
- COS 7.2 **Public Information.** Encourage programs that provide public information on the City's history and cultural heritage, and participate with other agencies to help educate students about the City's rich natural and man-made environment.
- COS 7.3 **Development Review.** Evaluate project sites for archaeological sensitivity and for a project's potential to uncover or disturb cultural resources as part of development review.
- COS 7.4 **Site Confidentiality.** Protect the confidentiality and prevent inappropriate public exposure or release of information on locations or contents of paleontological and archaeological resource sites.
- COS 7.5 **Native American Consultation.** Refer development projects for Native American tribal review and consultation as part of the environmental review process, in compliance with state law.
- COS 7.6 **Non-Development Activities.** Prohibit activities other than private development projects that could disturb or destroy cultural resource sites, such as off-road vehicle use, site excavation or fill, mining, or other activities on or adjacent to known sites, or the unauthorized collection of artifacts.
- COS 7.7 **Qualified archaeologist present.** Cease construction or grading activities in and around sites where substantial archaeological resources are discovered until a qualified archaeologist knowledgeable in Native American

cultures can determine the significance of the resource and recommend alternative mitigation measures.

- COS 7.8 Native American Monitoring.** Include Native American participation in the City's guidelines for resource assessment and impact mitigation. Native American representatives should be present during archaeological excavation and during construction in an area likely to contain cultural resources. The Native American community shall be consulted as knowledge of cultural resources expands and as the City considers updates or significant changes to its General Plan.
- COS 7.9 Archaeological Resources Mitigation.** Require a mitigation plan to protect resources when a preliminary site survey finds substantial archaeological resources before permitting construction. Possible mitigation measures include presence of a qualified professional during initial grading or trenching; project redesign; covering with a layer of fill; and excavation, removal and curation in an appropriate facility under the direction of a qualified professional.
- COS 7.10 Historically significant buildings.** Prohibit the demolition or substantial alteration in outward appearance of historically significant buildings and structures unless doing so is necessary to remove a threat to health and safety and other means to eliminate or reduce the threat to acceptable levels are infeasible. (See *Table 4.1* below for a list of Historic and Potentially Historic Structures.)

Table 4.1: Historic and Potentially Historic Resources in Jurupa Valley

| Historic Name | Location | Category/Status | Significance |
|-----------------------|--|---|--|
| Jensen-Alvarado Ranch | 4307 Briggs Street Jurupa Valley, CA 92509 | California Historical Landmark (Cornelius and Mercedes Jensen Ranch, No. 943), https://en.wikipedia.org/wiki/Jensen_Alvarado_Ranch_-_cite_note-OHP-2 listed on the National Register of Historic Places on September 6, 1979. | First kiln-fired brick building built in Riverside County and the oldest non-adobe structure in the Inland Empire. Ranch house and grounds serve as an 1880s living history interpretive museum administered by Riverside County Parks |
| Crestmore Manor | 4600 Crestmore Road Jurupa Valley, CA 92509 | Potentially significant, architecture and commerce. | Crestmore Manor, a 10,830 sq. ft. colonial-style mansion, built in mid-1950s by W.W. "Tiny" Naylor, a restaurateur and the state's then second-leading thoroughbred horse breeder. |
| Galleano Winery | 4231 Wineville Road Jurupa Valley, CA | Listed, National Register of Historic Places, architecture and commerce. | Early example of Southern California vineyard and winery. |

| Historic Name | Location | Category/Status | Significance |
|---|--|--|---|
| Robidoux [sic] Grist Mill Site | 5540 Molina Way Rubidoux | California State Historic Landmark #303; marker. | One of the first grist mills in this part of Southern California, built by Jurupa Valley pioneer Louis Rubidoux on the Rancho Jurupa in 1846-47. |
| Site of Louis Robidoux [sic] House | 5575 block, Mission Boulevard, Rubidoux | California State Historic Landmark and Riverside County Historic Landmark; marker. | Location of former home of Louis Rubidoux (nee' Robidoux). |
| Site of de Anza crossing of the Santa Ana River, 1775 and 1776. | Jurupa Hills Country Club. Site is near Union Pacific Bridge, Jurupa Heights; plaque is located between the clubhouse and No. 1 tee, Jurupa Hills Country Club Golf Course, 6161 Moraga Avenue | California State Historic Landmark; marker. | On January 1, 1776, the first party of colonists to come overland to the Pacific Coast, led by Early California explorer Juan Bautista de Anza, crossed the Santa Ana River south of this marker and camped between here and the River. |
| Spinney House | 7811 Mission Boulevard | Potentially significant, architecture and commerce. | Two-story Victorian farmhouse, pre-1900. |
| Rubidoux Drive-in Theater | 3770 Opal Street | Potentially significant, architecture and entertainment/cultural. | Vintage 1948 drive-in movie theatre, one of the oldest drive-in theaters in continuous operation; only about 20 drive-in theaters remaining in California. |

Programs

COS 7.1.1 Historic Resources, Districts, and Neighborhoods.

Identify historic resources, districts and neighborhoods, such as the historic city areas or Rubidoux, Glen Avon, and Pedley with the Historic Resources Overlay and protect and, where possible, enhance their historic character through appropriate district signage, public improvements, and development incentives.

COS 7.1.2 Historical Preservation Incentives. Consider offering preservation incentives, such as the Mills Act Tax Reduction program to encourage maintenance and restoration of historic properties.

COS 7.1.3 Construction in Historic Districts. Prepare (or update, where guidelines already exist) architectural design guidelines to provide specific guidance on the construction of new buildings and public improvements within areas designated in the General Plan with the Historic Resource Overlay, such as village centers, historic districts, and historic neighborhoods.

COS 7.1.4 Public Information Programs. Foster public awareness and appreciation of cultural resources by sponsoring educational programs or by collaborating with agencies, nonprofit organizations, and citizens groups to provide public information on cultural resources and display artifacts that illuminate the City's history. The City will encourage private development to include historical

and archaeological displays where feasible and appropriate.

COS 8 – Open Space and Recreation Resources

Figure 4-19: Mount Jurupa Trail overlooking Jurupa Valley

In partnership with other agencies, such as the Riverside County Regional Park and Open Space District, the Jurupa Community Services District, and the Jurupa Area Recreation and Park District, the City of Jurupa Valley offers a wide range of protected open spaces, parks, recreational areas, and trails, as shown in *Figure 4-20* below. Open space and recreation facilities provide a variety of recreational opportunities and help maintain a distinct urban boundary and buffer between the City and adjacent urbanized areas. The following policies relate to the preservation, use, and development of a comprehensive open space system consisting of passive open space areas, and parks and recreation areas that have recreational, ecological, and scenic value.

Policies

- COS 8.1 **Environmental Resource Protection.** Preserve and maintain open space that protects environmental resources and protects public health and safety.
- COS 8.2 **Extension of Public Facilities.** Avoid the extension of public streets, facilities, services, and utilities for urban uses into areas designated as Open Space in the General Plan.
- COS 8.3 **Conversion of Recreation and Open Space Uses.** Discourage the conversion of dedicated parklands and designated open space to non-recreational or non-open space uses. Where conversion is unavoidable, require developers or responsible agencies to replace parklands that are converted to other uses with similar or improved facilities and programs, and open space with land of equivalent open space value.
- COS 8.4 **Equal Access to Recreation and Open Space Resources.** Ensure that the City's open space and recreational network accommodates the needs of all residents, regardless of their income, ethnicity, physical capabilities, or age.
- COS 8.5 **Parkland Implementation Strategies.** Require new development to provide funding and/or long-term implementation strategies for the acquisition and improvement of active and passive parks, open space, and recreational sites, when appropriate.

DRAFT

Conservation and Open Space

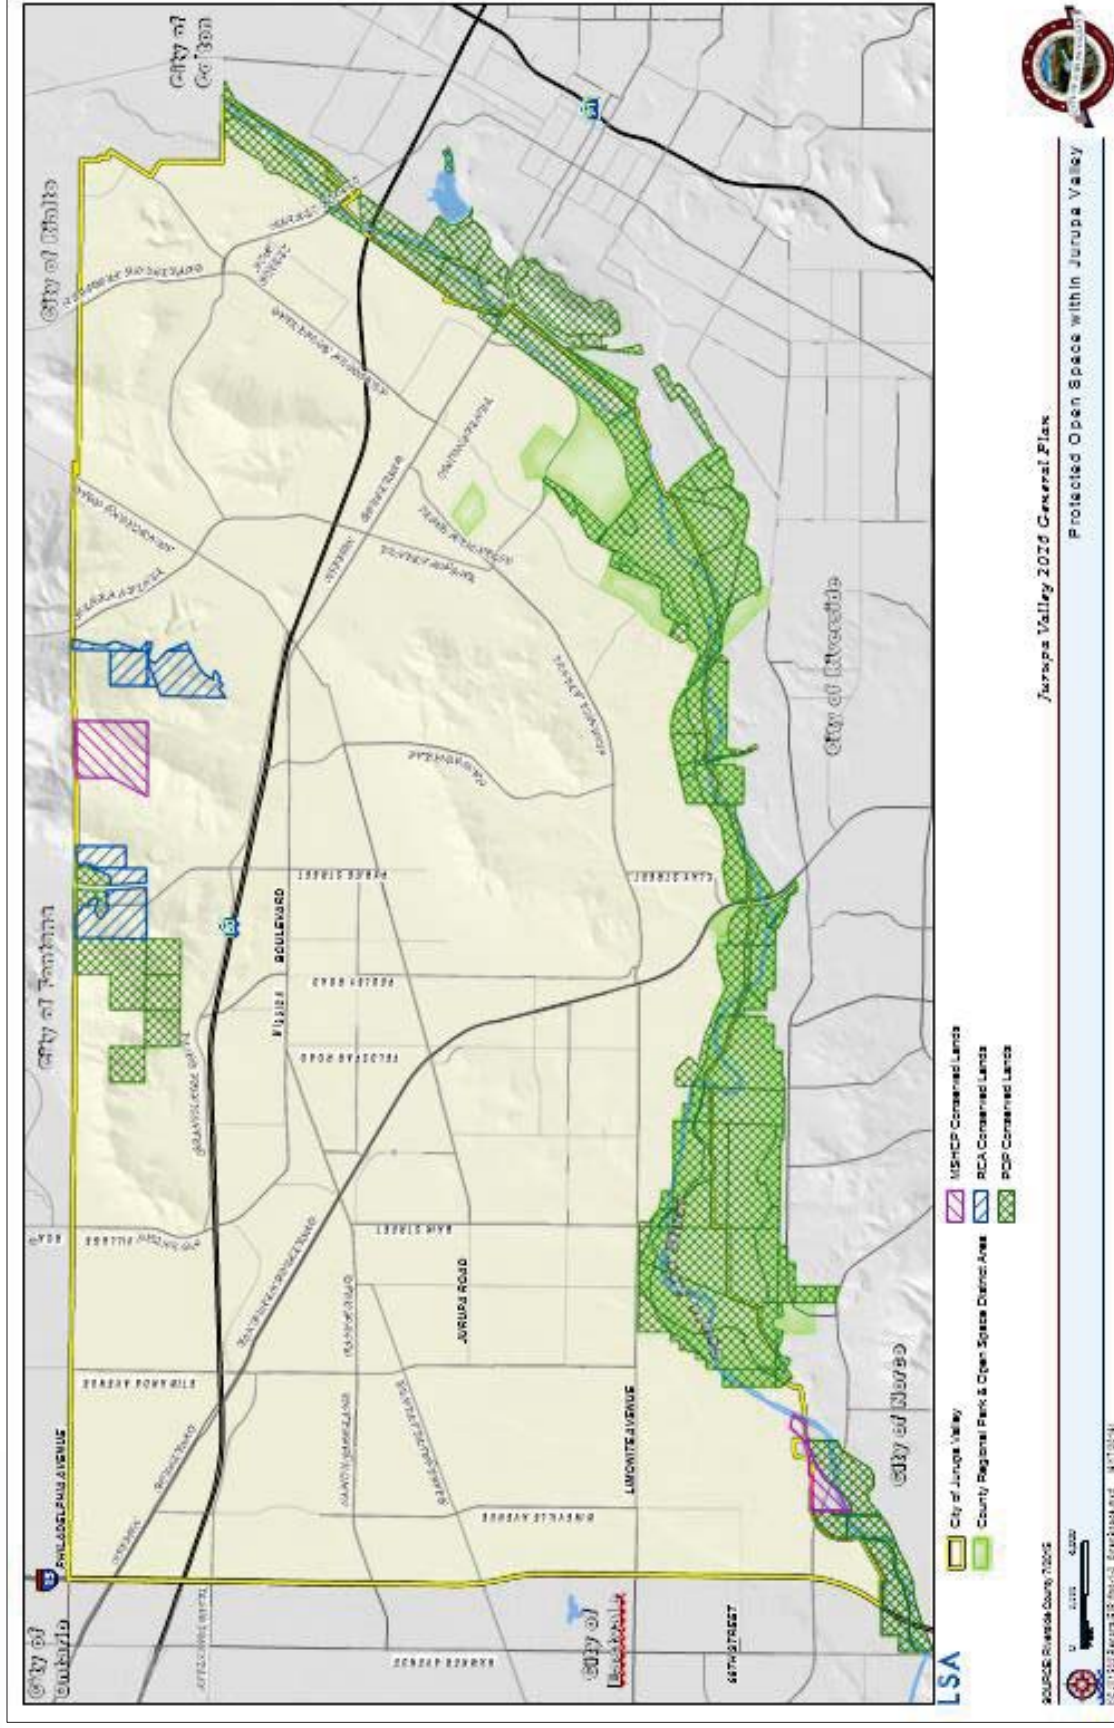

Figure 4-20: Protected Open Space in Jurupa Valley

- COS 8.6 Provision of Recreation Facilities.** Require that parkland or open space dedication and improvement occur prior to, or concurrent with, construction, as a condition of approval of new residential subdivisions (*Figure 4-21*).
- COS 8.7 Public access.** Provide public access to open space resources when doing so is consistent with protection of the resources, and with the security and privacy of affected landowners and occupants. Access will generally be limited to non-vehicular movement, and may be restricted in sensitive areas.
- COS 8.8 Trails Network.** Establish an off-street trails network, linking residential/equestrian areas, local open space attractions, staging areas, and regional trail connections, integrating elements of the Vision for Master Trails Plan, *Figure 4-22*, as determined appropriate by the City Council.
- COS 8.9 Open Space Enhancement and Restoration.** Encourage, and, as budget resources allow, support the enhancement and restoration of permanently dedicated open space and trail easements. Enhancements may include trail clearing, erosion protection, drainage, fencing, revegetation, trash clean up, directional and interpretative signage, and other improvements the City Council determines necessary for public health and safety.

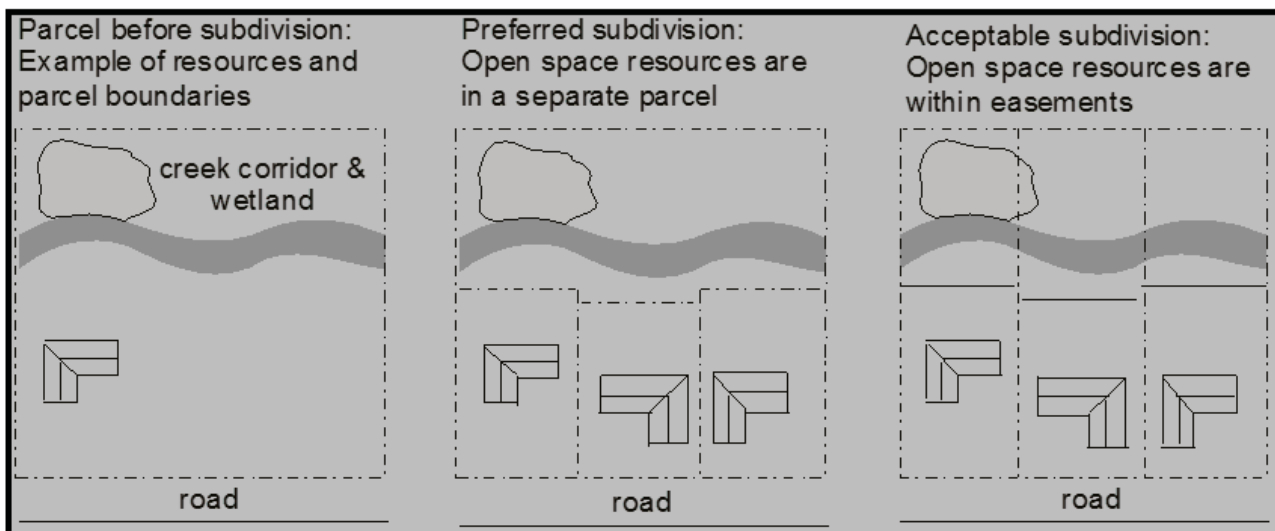

Figure 4-21: Open Space resources in a subdivision (City of San Luis Obispo, California)

DRAFT

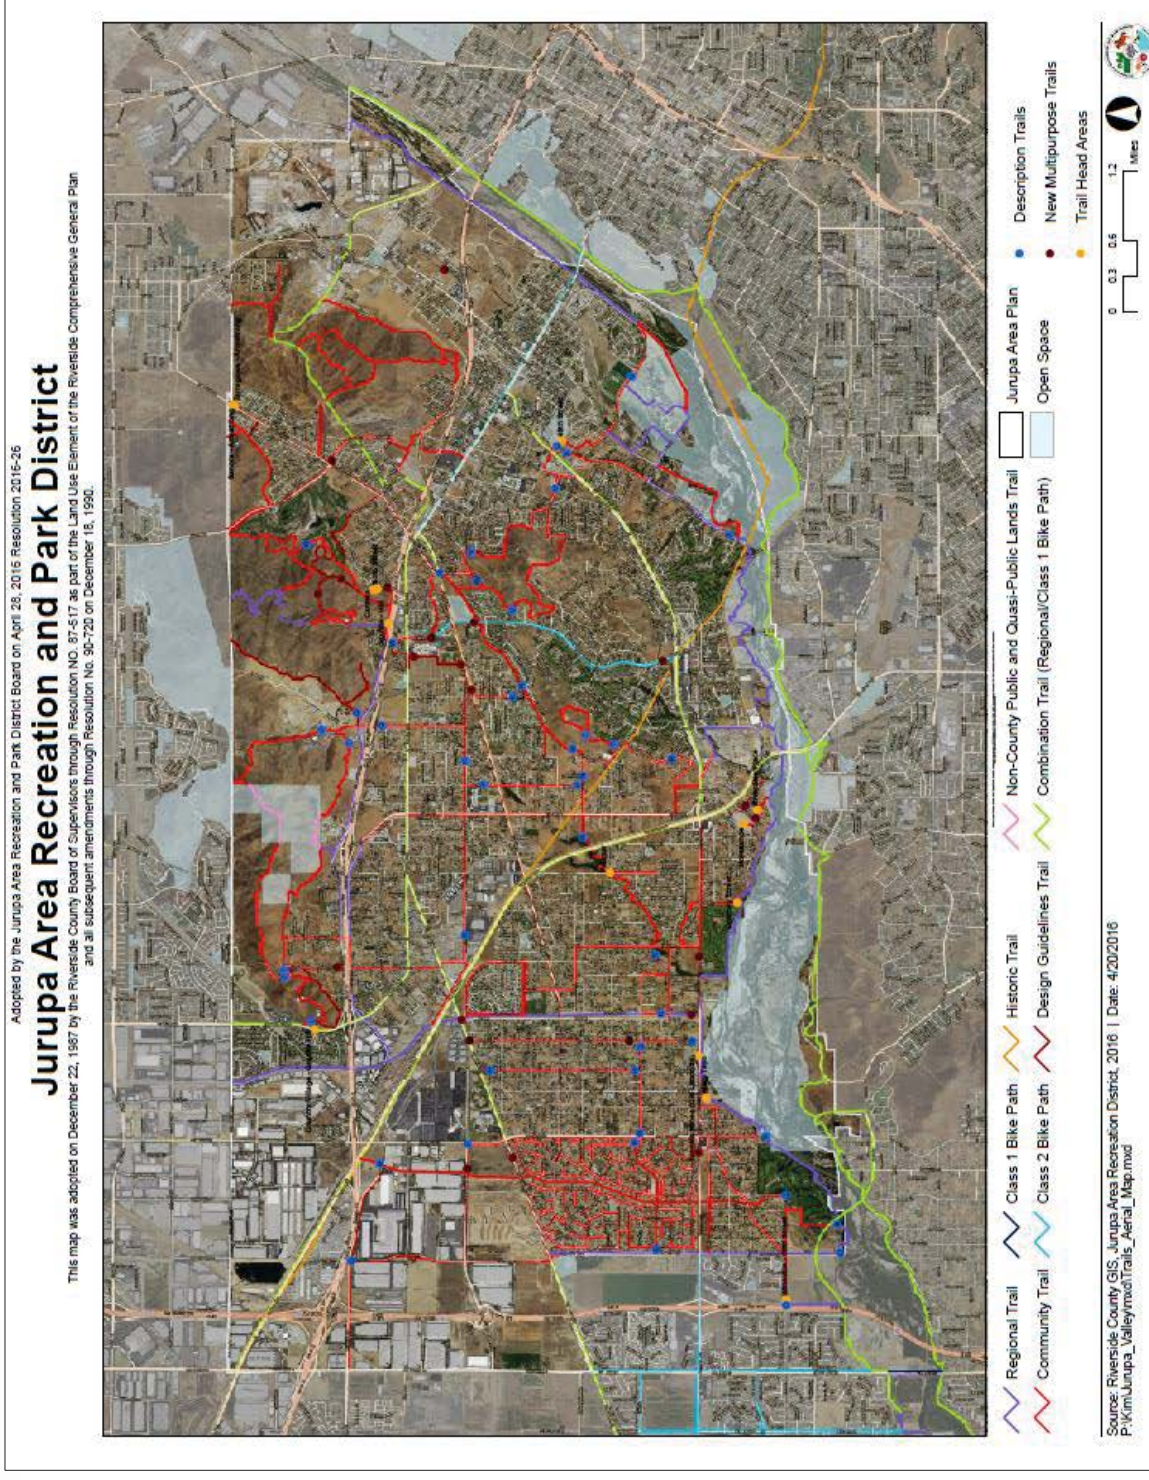

Figure 4-22: Vision for Master Trails Plan, Jurupa Area Recreation and Park District

COS 8.10 Fire Prevention Activities. Conduct fire prevention activities such as fuel clearance or thinning, grading, prescribed burns, or other activities pursuant to an approved Conservation Plan, and under the supervision of state and local wildlife authorities and CAL FIRE representatives, except in an emergency. Habitat preservation shall be given equal priority with fire prevention.

Programs

COS 8.1.1 Protect Open Space Resources. Take the following actions to protect open space, and encourage individuals, organizations, and other agencies to take the same actions within their areas of responsibility and jurisdiction:

- a. **Open Space Designation.** Apply Open Space or Agriculture zoning to private property where equitable development potential is granted to the property owner for the remainder of the land, as appropriate and consistent with General Plan goals and policies.
- b. **Open Space and Trails Dedication.** Preserve or enhance open space and trails resources through application of conditions of subdivision and development approvals, consistent with General Plan goals and policies, including dedications of fee ownership or easements where necessary and appropriate.
- c. **Donations and Grants.** Seek and use grants, donations, other revenue sources, and long-term financing mechanisms to purchase fee ownership or easements. The City will consider allocating funding for open space acquisition and protection, and will explore all potential funding sources and other creative incentive programs, including general obligation bonds, sales tax increase, property transfer tax, assessment districts, tax incentives, and state and federal loans and grants.
- d. **Interagency Cooperation.** Promote interagency cooperation for open space acquisition, greenbelt, creeks, wetlands, and wildlife habitat protection in open space areas by coordinating with other government agencies and organizations having interest or expertise in resource protection.

- e. **Taxes and Fees.** Avoid imposing taxes or fees that discourage dedication, improvement and retention of open space, trails, or agricultural uses.

COS 9 – Scenic Resources

Jurupa Valley’s outstanding scenic resources give the City its distinctive character and appeal, and contribute to its residents’ quality of life. In general, scenic resources include natural areas that are visible to the public and include natural landmarks, hills and mountain peaks, ridgelines, floodplains and stream channels, agricultural fields, mature trees and agricultural windbreaks, riparian woodlands, and other prominent or unusual landscape features. Scenic backdrops include hillsides and ridges that rise above or adjacent to urban or rural areas or highways. Scenic vistas are points or corridors that are accessible to the public and that provide a view of scenic areas and/or landscapes. Following are policies to protect these resources and ensure that development enhances and does not obscure them or detract from their beauty.

Several roadways in Jurupa Valley provide outstanding views of surrounding scenic resources. Enhancing aesthetics experiences for residents and visitors to the City and County is essential to preserving the aesthetics qualities and character of Jurupa Valley. It may also help to promote tourism, a small but potentially significant contributor to the City’s economic health. Enhancement and preservation of these scenic resources requires careful application of scenic highway standards along officially designated scenic routes. City policies that seek to protect and maintain resources in corridors along scenic highways are provided below.

Policies

- COS 9.1 Protect scenic resources, especially skylines, undeveloped ridgelines, rocky hillsides, river view corridors, and outstanding scenic vistas not designated for urban uses from development, and maintain those resources in their current patterns of use.

Figure 4-23: San Bernardino Mountains in snow, looking northeast from Jurupa Valley

COS 9.2 Ensure that development in areas with scenic values, including natural or agricultural landscapes, is visually subordinate to and compatible with the dominant landscape features, colors, and textures. Development includes, but is not limited to buildings, signs (including billboard signs), roads, utility and telecommunication lines, and structures. Such development shall:

1. Avoid visually prominent locations such as ridgelines, and slopes exceeding 20%.
2. Avoid unnecessary grading, vegetation removal, and site lighting.
3. Incorporate building forms, architectural materials, and landscaping, that respect the setting, including the historical pattern of development in similar settings, and avoid stark contrasts with its setting.
4. Preserve scenic or unique landforms, significant trees in terms of size, age, species or rarity, historical features, and rock outcroppings.

COS 9.3 **Urban development.** Implement the following aesthetic principles and encourage other agencies with jurisdiction to do so:

1. **Design Context.** Urban development should be designed to reflect its architectural, environmental, and historical context. This does not necessarily prescribe a specific style, but requires deliberate design choices that acknowledge human scale, natural site features, and neighboring urban development, and that are compatible with historical and architectural resources. Plans for sub-areas of the city and within the three village centers may require certain distinctive architectural styles.
2. **Utilities and Signs.** In and near public streets, public spaces and parks, and important scenic resources, features that clutter, degrade, intrude on, or obstruct views should be avoided. Necessary features, such as utility and communication equipment, and traffic equipment and signs should be designed and placed to not impinge upon or degrade scenic views, consistent with the primary objective of safety. New billboard signs within scenic corridors should be avoided, and existing billboard signs should be removed when possible.

3. **Streetscapes and Major Roadways.** In the acquisition, design, construction, or significant modification of major roadways (highways/ regional routes and arterial streets), the City will promote the creation of “streetscapes” and linear scenic parkways or corridors that promote the City’s visual quality and character, enhance adjacent uses, and integrate roadways with surrounding districts. To accomplish this, the City will:

- Establish streetscape design standards for major roadways.
- Encourage the creation and maintenance of planted medians and widened parkway landscaping.
- Retain mature trees in the public right of way.
- Emphasize the planting and maintenance of California native tree species of sufficient height, spread, form, and horticultural characteristics to create the desired streetscape canopy, shade, buffering from adjacent uses, and other desired streetscape characteristics.
- Encourage the use of water-conserving landscaping, street furniture, decorative lighting and paving, arcaded walkways, public art, and other pedestrian-oriented features to enhance streetscape appearance, comfort, and safety.
- Encourage and, where possible, require undergrounding of overhead utility lines and structures.

COS 9.4 **View Protection in New Development.** The City will include in all environmental review and carefully consider effects of new development, streets and road construction, grading and earthwork, and utilities on views and visual quality.

COS 9.5 **Views to and from Public Places, Including Scenic Corridors.** The City will preserve and improve views of important scenic resources from public places, and encourage other agencies with jurisdiction to do so. Public places include parks, plazas, the grounds of civic buildings, streets and roads, and publicly accessible open space. In particular, the route segments shown in *Figure 4-24* below are designated as local scenic corridors.

DRAFT

Conservation and Open Space

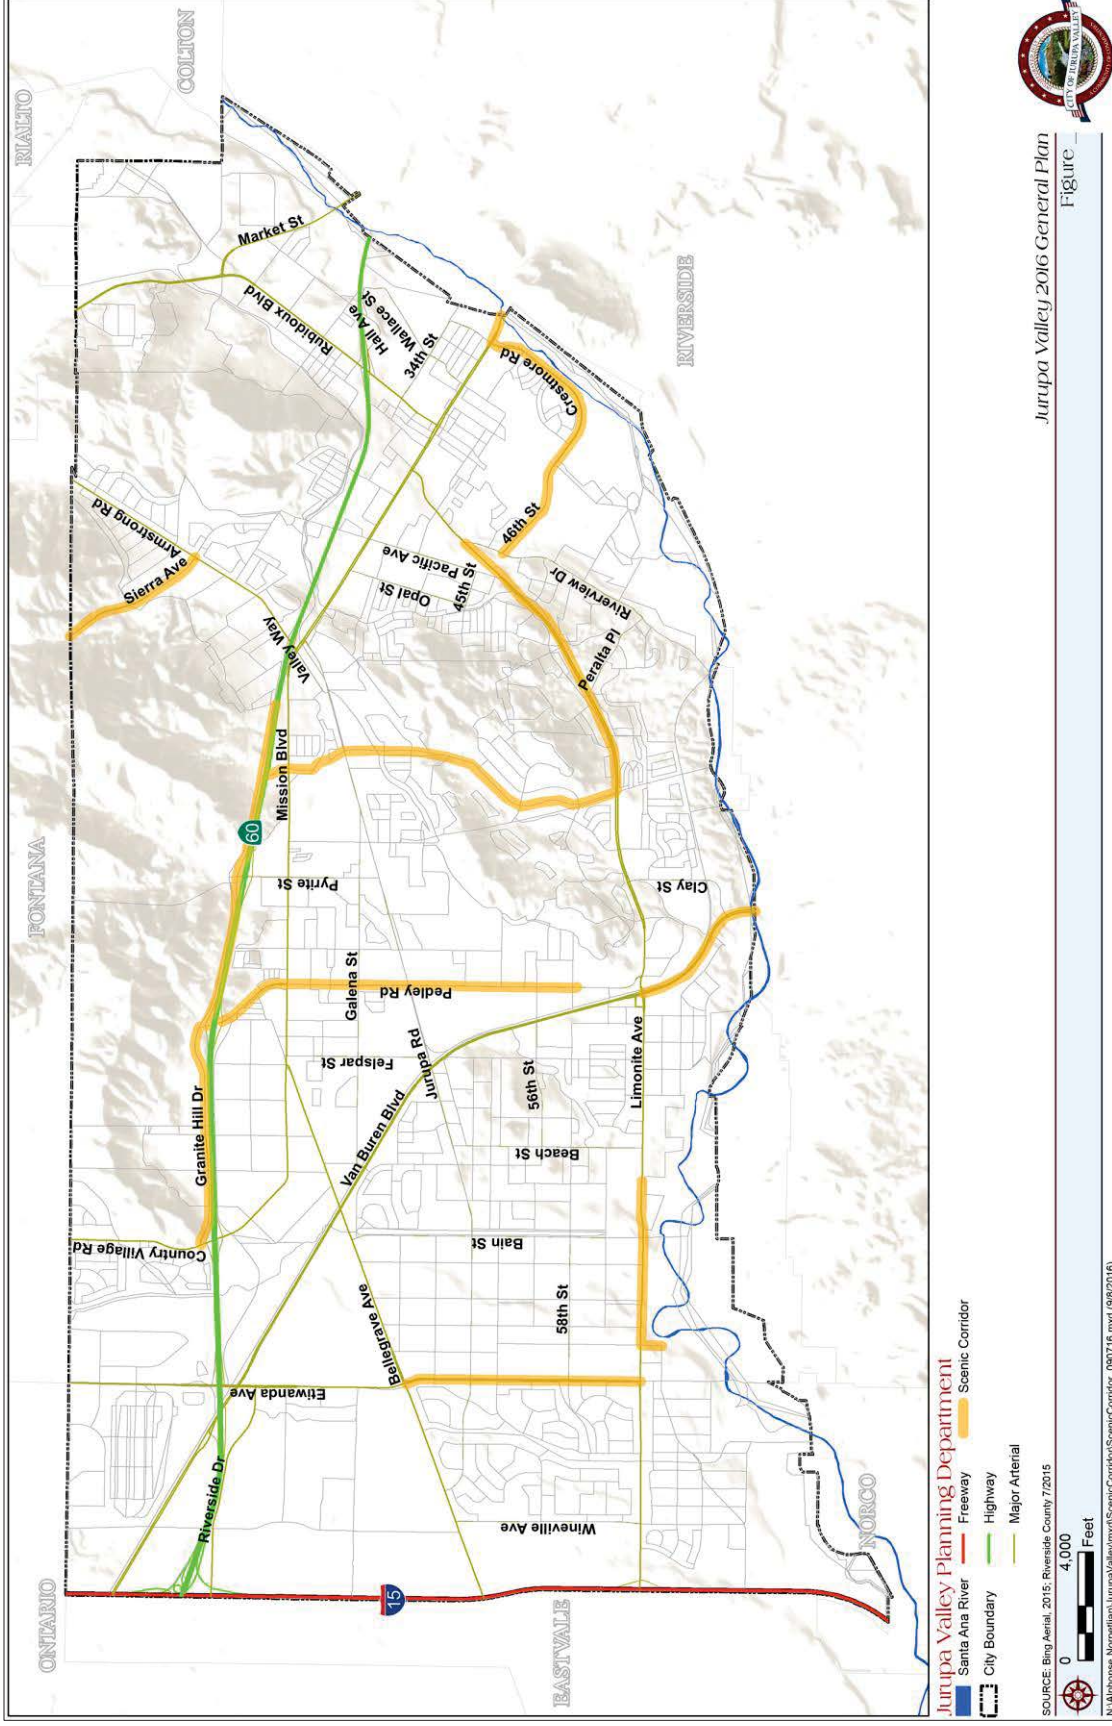

Figure 4-24: Jurupa Valley Scenic Corridors and Roadways

- COS 9.6 **Scenic Corridors and Roadways.** Development projects along and within scenic corridors, including state highway projects, noise walls, and new private or public construction, shall not wall off scenic roadways and block views of scenic resources. The following measures shall be implemented:
- Utilities, traffic signals, and public and private signs and lights shall not intrude on or clutter views, consistent with safety needs.
 - Where important vistas of distant landscape features occur along local streets, street trees shall be clustered to facilitate viewing.

Programs

- COS 9.1.1 **Visual assessments.** Require evaluations and/or visual simulations for development projects that could affect scenic resources and scenic vistas.
- COS 9.1.2 **Scenic Highway Designation.** Advocate state and county scenic highway designations and protective programs for highways and other roads connecting Jurupa Valley with other communities.
- COS 9.1.3 **Undergrounding Utilities.** Place existing overhead utilities underground, with highest priority for scenic roadways and entries to the City, and require utilities, community services districts, and other responsible agencies to do likewise.
- COS 9.1.4 **Billboards.** Amend the Municipal Code as needed to discourage and, where necessary and appropriate, control the installation of new billboard signs along scenic corridors and roadways and to provide for the eventual removal of existing billboards through amortization, conditions of development approval, and grants for enhancing open space and transportation corridors. The highest priority for billboard limitations removal shall be along scenic roadways and at City gateways.
- COS 9.1.5 **New Development.** Ensure that new development within designated scenic highway corridors are designed with adequate site planning, setbacks, non-structural noise buffers, and construction assemblies to avoid the need for sound attenuation walls, while balancing the objectives of maintaining scenic resources with accommodating compatible land uses.
- COS 9.1.6 **Grading.** Utilize contour grading and slope rounding to gradually transition graded roads slopes, utilities, and

development sites within and adjacent to scenic highway corridors to create natural landscape forms that follow the area's natural topography.

COS 10 – Dark Skies

Figure 4-25: Dark sky preservation in Borrego Springs

A dark sky is the night sky with minimal light impact from urban land uses or structures. Light intrusion into the night sky obstructs views of astrological features, has been shown to disrupt animal behavior and natural plant cycles, and to negatively affect human health. Focusing lights where they are needed reduces light glare and light pollution, allowing the sky to be observed and enjoyed in a more natural state. Furthermore, strategies to reduce light impacts can also help conserve energy, lower energy costs and improve safety.

The International Dark Sky Association (IDA) is a nonprofit, 501(c)(3) organization with chapters forming in many parts of the world. It is one of many such organizations dedicated to reducing the environmental and health effects of unwanted light. Its mission is to preserve and protect the nighttime environment and our heritage of dark skies through environmentally responsible outdoor lighting. IDA provides information and resources to communities to help them.

Improve the nighttime environment by reducing light pollution through better lighting practices that provide:

- *Energy savings resulting in economic benefits*
- *Superb nighttime ambience and quality of life*
- *Conservation of nocturnal wildlife and ecosystems*
- *Safeguarding of scientific and educational opportunities, such as astronomy*
- *Increased visibility, safety, and security at night by reducing glare*
- *Preservation of cultural heritage and inspiration for the arts*

Many cities throughout California and the U.S. have become International Dark Sky Communities, such as Borrego Springs, pictured above. An IDA International Dark Sky Community is a town, city, municipality or other legally organized community that has shown exceptional dedication to the preservation of the night sky through the implementation and enforcement of a quality outdoor lighting ordinance, dark sky education, and citizen support of dark skies. Dark Sky Communities excel in their efforts to promote responsible lighting and dark sky stewardship, and set good examples for surrounding communities.

Policies

- COS 13.1 **Outdoor Lighting.** Avoid outdoor lighting that:
- Operates at unnecessary locations, levels, and times
 - Spills onto areas offsite or to areas not needing or wanting illumination
 - Produces glare (intense line-of-site contrast)
 - Includes lighting frequencies (colors) that interfere with astronomical viewing
- COS 13.2 **New Residential Development and Remodeling Projects.** Require development projects and major remodel projects to minimize light pollution and trespass while enhancing safety and aesthetics.
- COS 13.3 **Public Facilities, Buildings, and Streets.** Use outdoor light-shielding measures to minimize light trespass and glare while enhancing safety and aesthetics.
- COS 13.4 **Commercial and Industrial Buildings.** Require that site lighting for commercial and industrial uses is unobtrusive and constructed or located so that only the intended area is illuminated, off-site glare is prevented, and adequate safety is provided.
- COS 13.5 **Public Education and Outreach.** Support programs that provide public education on the importance of dark skies and how to protect them. Collaborate with nonprofit and other public agencies to help achieve our goals.

Programs

- COS 13.1.1 **Lighting Standards.** Develop lighting standards based on the International Dark-Sky Association's (IDA's) Model Lighting Ordinance, with emphasis on preserving the City's equestrian, semi-rural character.
- COS 13.1.2 **Retrofit Plan.** Establish a retrofitting plan for outdoor lighting on City streets and at City facilities, and encourage community service districts to do the same.
- COS 13.1.3 **Grant Funding.** Seek grant funding for City lighting upgrades, incentive programs, and new fixtures.
- COS 13.1.4 **Public Awareness.** Develop a dark sky public awareness campaign (e.g., April is Dark Sky Month, dark sky page on City's website, City Council proclamation).
- COS 13.1.5 **Regional Collaboration.** Collaborate with neighboring jurisdictions to identify the appropriate location and night lighting standards for a dark sky park.

COS 13.1.6 **Engineering Standards.** Review City engineering standards for possible changes to public street lighting locations, design and spacing to reduce light pollution, improve energy efficiency and maintain safety.

###

Figure 5-1: New housing construction in Jurupa Valley

A. INTRODUCTION

This Housing Element identifies the housing needs and goals, policies, and programs for Jurupa Valley, and promotes expanded housing opportunities, community safety, prosperity, and quality of life for all, consistent with Jurupa Valley's adopted Community Values Statement, included in *Appendix 5.0*.

This Housing Element was prepared to establish a strategy to meet this young City's housing needs for all income levels, including affordable and market-rate housing. This Housing Element was prepared to meet the State of California's 5th Cycle Housing Element Update Planning Period from October 15, 2013 to October 15, 2021. The primary issues addressed include: 1) the provision of a decent housing in a healthy environment for all income levels, 2) affordable housing for special needs populations, 3) implementation of housing programs, 4) rehabilitation and preservation of existing affordable housing, and 5) removal of blight. Housing is a key part of the City's overall economic development efforts to improve and expand its housing stock, improve property values, diversify the employment base, and improve the quality of life for all residents.

This update is part of a larger effort to prepare Jurupa Valley's inaugural General Plan. The City intends to update this element no

later than October 2021, or as required by law. All elements must remain consistent when revisions to the General Plan are complete. To ensure consistency, elements to be updated will be made consistent with the Housing Element, and any needed changes will be made to this document. In addition, as portions of the 2017 General Plan are amended following adoption, the City will periodically review all the elements to ensure that internal consistency is maintained. Housing Elements are to be reviewed and updated every 7 years, or as otherwise required under state law.

Primary Goals

- HE 1: Encourage and where possible, assist in the development of quality housing to meet the City's share of the region's housing needs for all income levels and for special needs populations.
- HE 2: Conserve and improve the housing stock, particularly housing affordable to lower income and special needs households.
- HE 3: Promote equal housing opportunities for all persons.
- HE 4: Maintain and enhance residential neighborhoods and remove blight.
- HE 5: Reduce residential energy and water use.

B. WHAT'S NEW IN THIS HOUSING ELEMENT?

The following key findings and policy recommendations address comments received from the General Plan Advisory Body (GPAC), residents and property owners, and City decision-makers:

Continuance of the Inclusionary Housing Program

Since the last Housing Element update, housing costs in western Riverside County have risen dramatically. Inclusionary housing is a policy ensuring that a portion of new housing units are reserved for working persons of modest means who already live in or wish to move to the community, such as teachers, police and fire personnel, health care workers, sales clerks, and administrative support staff. Jurupa Valley intends to continue and update an existing Inclusionary Housing Program (IHP) previously administered by the County of Riverside.

The IHP will help ensure that a portion of new housing units are affordable to working-class residents with incomes up to 80% of the area-wide median income (AMI), which is about \$65,000 per year in Riverside County in 2017. This program requires that 1 out of every 25 new units (4%) be reserved for households at the 50% AMI income level. Projects of six or more units are required to participate in the program. These affordable units must be provided on-site, off-site, or through the payment of an in-lieu fee. These fees are combined with other sources of funds, such as Low Income Tax Credit funding, and are used to assist in providing additional affordable housing opportunities in the City. The program is not expected to significantly affect market rate housing projects and will, at the same time, allow the City to address its Regional Housing Needs Allocation (RHNA).

Emphasis on Incentives and Grants Rather than Regulations

Generally, incentives are preferable to regulations as the means to facilitate the production of housing for all income levels. Although state law requires cities to regulate development in many respects, this Housing Element emphasizes incentives to encourage the production of lower-cost housing. Among these possible incentives are modifications to development standards, reduced development fees, expedited permit processing and direct financial assistance from in-lieu IHP fees, non-profit housing developers, and state or federal grants.

Figure 5-2: Subdivision under construction, Jurupa Valley

Neighborhood Improvements and Removal of Blight

Jurupa Valley includes nine distinct communities with varied settings, housing types, and housing needs. Some neighborhoods in the older communities of Rubidoux, Mira Loma, Belltown, and Glen Avon consist mostly of pre-1980s houses, many with deferred maintenance and code compliance issues; a lack of storm water drainage and other public improvements; and localized blighted areas caused by accumulated trash, illegal dumping, and graffiti. These conditions can discourage reinvestment in these areas, lower property values, and detract from neighborhoods' safety and appearance. It is a primary goal of this young city to reverse urban blight and improve residential neighborhood quality and pride through code enforcement, public and private capital investment, and heightened awareness and attention to community needs.

Reduce Homelessness

In the 2015 Point-In-Time Count conducted by Riverside County, 168 unsheltered, homeless individuals were documented in the City of Jurupa Valley. After the City of Riverside, this is the second highest number of homeless persons among incorporated and unincorporated areas in Riverside County. Most of the homeless persons are residing in and near the Santa Ana River Basin, which runs along the City's east and south boundaries. As described in *Appendix 13.0*, the causes of homelessness are varied and complex, and not readily resolved. In addition to complying with SB 2 regarding suitable zoning for a homeless shelter (the City has already set aside a zone that allows homeless shelters without discretionary review), the Housing Element includes a program calling for the City to actively work with neighboring jurisdictions to achieve regional cooperation to reduce homelessness.

Increased Emphasis on Energy-Efficient Development

In the years since the last Housing Element update, energy costs have risen dramatically, and it has become clear that we must take steps as a society to make more efficient use of our natural resources. While local governments are limited in the impact they can have in this area, there are some significant steps cities can take to support this goal. The Housing Element contains new policies encouraging sustainable design and resource conservation in both new construction and remodeling projects.

C. BACKGROUND

The Housing Element of the General Plan is only one facet of a City's planning program. The *California Government Code* requires that General Plans contain an integrated, consistent set of goals and policies. This Housing Element helps shape and is influenced by policies contained in the other nine Elements of this General Plan; particularly the Land Use Element, which establishes the location, type, intensity, and distribution of land uses throughout the City, and by the Mobility Element, which establishes policies for the movement of people, goods, and services throughout the City.

State Housing Element Requirements

State law requires the preparation of a Housing Element as part of a jurisdiction's General Plan (*California Government Code* §65302(c)). It is the primary planning guide for local jurisdictions to identify and prioritize housing needs and to determine ways to meet these needs best while balancing community objectives and resources. The 2017 Housing Element consists of ten sections, including: 1) Introduction, 2) Housing Inventory and Market Conditions, 3) Housing Needs, 4) Housing Constraints, and 5) Housing Action Plan. In addition, the evaluation of the previous Housing Element is found in Appendix A to this Housing Element, while Appendix B in this Housing Element contains background details regarding the City's inventory of sites for housing development.

The California State Housing Law (*California Health and Safety Code*, Division 13, Part 1.5) and guidelines adopted by the Department of Housing and Community Development (HCD), were used in the preparation of the element (*California Government Code* §65585). Periodic review of the element is required to evaluate 1) the appropriateness of its goals, objectives, and policies in contributing to the attainment of the state housing goals, 2) its effectiveness in attaining the City's housing goals and objectives and 3) the progress of its implementation (*California Government Code* §65588).

The preparation of the Housing Element is regulated by Title 7, Chapter 3, Article 10.6, §65580 through §65589.8 of the *California Government Code*. The law governing the contents of Housing Elements is among the most detailed of all elements of the General Plan. According to Section 65583 of the *Government Code*, "The Housing Element shall consist of an identification and analysis of existing and projected housing needs and a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of

housing. The housing element shall identify adequate sites for housing, including rental housing, factory-built housing, mobile homes, and emergency shelters, and shall make adequate provision for the existing and projected needs of all economic segments of the community.”

Consistency with Other Elements of the General Plan

This Housing Element builds upon the other General Plan elements and is consistent with the policies and proposals set forth in them. By law, general plans must be internally consistent. Therefore, proposed amendments to any element must be evaluated against the other General Plan elements to ensure that no conflicts occur.

The Housing Element was last updated as part of the Riverside County General Plan in 2008. When the City of Jurupa Valley incorporated in 2011, the new City adopted the County’s General Plan, including the Housing Element. The 2017 Housing Element is the City’s first locally prepared housing element and is being developed as part of its new 2017 General Plan.

Housing must be viewed in a context that includes more than the availability of adequate shelter. External factors affecting the adequacy of housing include the quality of public services, aesthetics and visual characteristics, and proximity to related land uses. For example, the location of housing often determines the extent of school, park, library, police, fire, and other services associated with housing.

Housing Element Organization

The Housing Element is divided into ten sections. The first two sections provide an overview of the contents, scope, and purpose of the Housing Element. The third and fourth sections summarize the City’s Action Plan to address housing needs and issues and lay out the City’s housing construction objectives. The fifth section contains the City’s housing goals and policies and the programs to implement these goals and policies. The sixth and seventh sections contain the Community profile and the Housing Inventory and Profile, which provides an overview of population, employment, and housing characteristics in Jurupa Valley. The eighth and ninth sections describe the City’s housing needs, opportunities, and constraints.

In addition, this element addresses the mandatory housing element sections required under state law, as summarized below. A review of the previous element’s goals, policies, and programs is included in the Appendix.

- A review of the previous element's goals, policies, programs, and objectives to ascertain the effectiveness of each of these components, as well as the overall effectiveness of the Housing Element. (*Appendix A of this Housing Element*)
- An assessment of housing needs and an inventory of resources and constraints related to meeting these needs.
- An analysis and program for preserving assisted housing developments.
- A statement of community goals, quantified objectives, and policies relative to the maintenance, preservation, improvement, and development of housing.
- A program that sets forth a 5-year schedule of actions that the City is undertaking, or intends to undertake, in implementing the policies set forth in the Housing Element.

Public Participation

Public participation was an essential part of the preparation of the Housing Element update. The update process provided residents and other interested parties numerous opportunities for review and comment. During preparation of this element, public participation and input was actively encouraged in a number of ways. The outreach effort included:

- Early in the update process, the City held eight public workshops to solicit community ideas, concerns, and perspectives on planning issues in Jurupa Valley, including housing. Workshops were held throughout the City at various times to reach a wide audience, and a broad cross section of residents was represented. A summary of the input received is included in *Appendix 7.0*.
- The City Council appointed an ad hoc General Plan Advisory Committee (GPAC) to work with staff and consultants in developing the 2017 General Plan. During that 1-year-long effort, the 31-member Committee reviewed a wide range of general plan issues, including housing—during its monthly public meetings. The Final Report of GPAC's findings and recommendations is included as *Appendix 5.0*.
- The Planning Commission conducted a study session to review existing policies in the 2011 Housing Element and identified those that should remain, should be modified, or were no longer relevant to the City and should be deleted.
- On February 18, 2016, the City Council and the Planning Commission held a joint study session on the Housing Element. The public meeting included an introduction to the Housing Element and key housing issues in Jurupa

Figure 5-3: Community planning meeting

Valley. Minutes from the meeting are included as *Appendix 14.0*.

- A public workshop on the City's housing conditions, issues, and needs was held on March 10, 2016. Over 150 housing agencies, advocates, non-profits, business and real estate groups, and interested citizens received direct mail notice. A summary of topics discussed and input received is included as *Appendix 14.0*.

Announcements of all Housing Element committee meetings and public hearing notices were published in the local newspaper in advance of each meeting, typically in Spanish and English, as well as posting the notices on the City's website. The draft Housing Element was made available for review at City Hall, and posted on the City's website. The document was also circulated to housing advocates and nonprofit organizations representing the interests of lower-income persons and special needs groups. After receiving comments on the draft Housing Element from the California Department of Housing and Community Development a proposed final Housing Element was prepared and made available for public review prior to adoption by the City Council.

D. HOUSING ACTION PLAN

Goals, Policies, Programs and Quantified Housing Objectives

Figure 5-4: Housing construction in Jurupa Valley

An important component of the Housing Element is the City's description of what it hopes to achieve during the current planning period. This is accomplished with a statement of goals, policies, actions, and quantified objectives on the maintenance, preservation, improvement, and development of housing to help meet the housing needs of all residents. The legislative requirements for what must be included in the Action Plan are as follows:

- Improvement and conservation of housing, including affordable housing stock [§65583(b) and §65583(c)(4)];
- Production of housing as set forth in the goals and quantified objectives [§ 65583(b)];
- Assist in the development of housing to meet the needs of very low, low and moderate income households [§65583(c)(2)];
- Address, and where possible, remove governmental constraints [§65583(c)(3)];
- Adequate sites for housing [§65583(c)(1)];

- Adequate provision of housing for existing and projected needs, including regional share, for all economic segments of the community [§65583(c)];
- Promotion of equal housing opportunities for all persons [§65583 (c)(6)];
- Preserve assisted housing at risk of converting to non-low income uses [§65583(c)(6)].

This section of the Housing Element presents the City's Housing Action Plan for the period 2014-2021. The objectives and actions described in *Table 5.2* below reflect the assessment of the City's housing needs and summarize Housing Element programs, responsible parties, and anticipated time frames for their implementation.

It is the City's overarching objective to ensure that all residents have decent, safe, sanitary, and affordable housing, regardless of income, and that their neighborhoods are protected from conditions that lead to blight. This element's goals, policies, and programs are the City's primary tools to help meet housing and neighborhood quality needs and to achieve the City's Quantified Objectives – 2014-2021 (*Table 5.1* below).

E. QUANTIFIED HOUSING OBJECTIVES

The City's quantified objectives for new construction, rehabilitation and conservation are presented in *Table 5.1*.

Table 5.1: Quantified Objectives – 2014-2021

| Category | Income Category | | | | | Totals |
|-------------------|-----------------|--------|-----|-----|-------|--------|
| | Ex. Low | V. Low | Low | Mod | Upper | |
| New Construction* | 10 | 126 | 103 | 116 | 239 | 584 |
| Rehabilitation | 30 | 30 | 20 | | | 80 |
| Conservation | 30 | 30 | | | | 60 |

*Quantified objective for new construction is for the period 1/1/2014 - 10/1/2021 per the RHNA

Table 5.2: Housing Action Plan Summary

| Objective | Action | Responsible Party | Time Frame |
|--|---|--|------------|
| Goal HE 1: Encourage and where possible, assist in the development of quality housing to meet the City's share of the region's housing needs for all income levels and for special needs populations. | | | |
| 1. Ensure that the General Plan and Zoning Ordinance and Map designate sufficient land at appropriate densities and in appropriate locations to accommodate the City's fair share of regional housing needs. | HE 1.1.1. General Plan and Zoning Amendments. Amend General Plan and Zoning Ordinance and Map to designate at least 32.4 acres for residential use at HHDR density (up to 25 du/A) to help meet Lower Income RHNA needs. The Land Use Map will be amended concurrently with the 2016 General Plan update. Zoning Ordinance amendments shall be initiated within one year of adopting the new General Plan. | Planning Department Advanced Planning | 2016-2017 |
| 2. Provide incentives to encourage development of Opportunity Sites and adaptive reuse of properties in all Residential Zones, with emphasis on Medium-High, High, Very High, and Highest Density Residential zones. | <p>HE 1.1.2. Housing Authority Coordination. Coordinate with the Riverside County Housing Authority to pursue grant funding and other incentives to promote and assist the non-profit and/or private production of housing affordable to lower income households. Utilize public financing tools when available, including revenue bonds, Community Development Block Grant (CDBG), HOME, and Low-Income Housing Tax Credit (LIHTC) program funds.</p> <p>HE 1.1.3. Tax-exempt Bonds. Consider using tax-exempt revenue bonds to help finance new multi-family construction.</p> <p>HE 1.1.4. Mobile Homeowner Assistance. As resources allow, use federal and state grant funds, when available, to assist seniors, veterans and other lower income households purchase and/or improve mobile homes.</p> <p>HE 1.1.5. Affordable Housing Incentives. Consider establishing incentives for developers of new housing that is affordable to lower income households and special needs groups, such as: fast track/priority application and permit processing, density bonuses and/or fee waivers, assist affordable housing developers with right-of-way acquisition, off-site infrastructure improvements and other development costs, and assist in securing federal or state housing financing resources. Incentives should be considered for new housing developments of 100 or more units in which at least 15% of total units are sold or rented at prices affordable to households with incomes below 80% of the Riverside County Area Median Income (AMI).</p> | | 2016-2021 |

| Objective | Action | Responsible Party | Time Frame |
|-----------|--|-------------------|------------|
| | <p>HE 1.1.6. Density Provisions. Update the Jurupa Valley Municipal Code and General Plan density provisions to ensure consistency with State law and apply density bonuses where necessary to assist in the production of affordable housing, particularly in Village Centers and in higher density, mixed-use and other areas where appropriate and compatible with adjacent development.</p> <p>HE 1.1.7. City Development Fees. Develop a sliding scale Fee Assistance program where the amount and type of City development fees may be waived by the City Council based on the number of affordable units proposed (i.e., as the number of affordable units increases, the amount of fee waiver increases).</p> <p>HE 1.1.8. CDBG and HOME Funds. When available, use CDBG; HOME and other grant or housing trust funds to write down costs of acquiring sites and to offset infrastructure and construction costs for residential developments in which at least 15% of total units are sold or rented at prices affordable to households with incomes below 80% of the Riverside County Area Median Income (AMI).</p> <p>HE 1.1.9. Site Identification. Work with public, private and non-profit housing entities to identify candidate sites for new construction of rental housing for seniors and other special housing needs, and take all actions necessary to expedite processing and approval of such projects.</p> <p>HE 1.1.10. Residential Incentive Zone (R-6). Update and continue to encourage development of affordable housing in the R-6 zone, and other multi-family residential zones, where appropriate.... Utilize incentives for development as established in Ordinance 348, or in the 2016 General Plan.</p> <p>HE 1.1.11. Updated Land Use Inventory and Map. Establish and maintain a Land Use Inventory and map which provide a mechanism to monitor a) acreage and location by General Plan designation, b) vacant and underutilized land, and c) build-out of approved projects utilizing the City's GIS system and supported by mapping. Maintain the Land Use Inventory on a regular basis, as frequently as budget allows.</p> <p>HE 1.1.12. Candidate Sites. Encourage developers to identify vacant and underutilized properties as candidate sites for affordable or mixed market rate/affordable housing development and identify them in the Land Use Inventory.</p> | | |

| Objective | Action | Responsible Party | Time Frame |
|-----------|--|-------------------|------------|
| | <p>HE 1.1.13. Homeless Shelter. In cooperation with non-profit organizations, adjacent cities, and with Riverside County, encourage the development of a homeless shelter to meet Jurupa Valley's and adjacent communities' homeless shelter needs.</p> <p>HE 1.1.14. Homelessness Strategy. Until a permanent shelter or shelters can be established, City shall work with Riverside County and local housing agencies to help prepare a homelessness strategy to address immediate needs dealing with safety, health and sanitation, environmental health, temporary housing and access to homeless services.</p> <p>HE 1.1.15. Creative Housing Solutions. Consider supporting a range of creative housing types to accommodate homeless persons and other extremely low-income populations, such as single room occupancy dwelling (SROs), pre-fabricated housing, so-called "tiny houses," and other emerging housing products.</p> <p>HE 1.1.16. Coordination with Non-Profit Housing Providers. Continue to work with non-profit organizations, such as National Community Renaissance, Mary Erickson Housing and Habitat for Humanity, in the production of affordable and self-help housing for Moderate and Lower Income households.</p> <p>HE 1.1.17. Flexible Standards. Continue to provide for flexibility in the design of residential development through the processing of planned unit developments (PUDs), area and specific plans, and village plans, and through the application of Zoning Ordinance provisions allowing flexible lot sizes and development standards.</p> <p>HE 1.1.18. Second Dwelling Units. Maintain Municipal Code provisions that allow second dwelling units or "granny flats" under specific conditions.</p> <p>HE 1.1.19. Mobile and Manufactured Homes. Continue to allow mobile homes, modular and manufactured homes in single-family residential zones "by right," and mobile home parks subject to a CUP, and encourage construction of new mobile home parks and manufactured housing to increase the supply of affordable dwelling units, where appropriate.</p> <p>HE 1.1.20. Mixed Housing Types and Densities. Encourage residential development proposals to provide a range of housing types and densities for all income levels, including market rate housing, using creative planning concepts such as traditional neighborhood design, planned unit developments, area and specific plans and mixed-use development.</p> | | |

| Objective | Action | Responsible Party | Time Frame |
|--|---|--|------------|
| | <p>HE 1.1.21. Accessible Housing for Disabled Persons. Encourage single- and multi-family housing developers to designate accessible and/or adaptable units already required by law to be affordable to persons with disabilities or persons with special needs.</p> <p>HE 1.1.22. Universal Design. Encourage "universal design" features in new dwellings, such as level entries, wider paths of travel, larger bathrooms, and lower kitchen countertops to accommodate persons with disabilities.</p> <p>HE 1.1.23. Affordable Housing for Disabled Persons. Encourage, and as budget allows, help support programs providing increased opportunities for disabled persons in affordable residential units rehabilitated or constructed through City or County programs.</p> | | |
| GOAL HE 2: Conserve and improve the housing stock, particularly housing affordable to lower income and special housing needs households. | | | |
| Objective: Maintain and improve the overall quality, safety and appearance of Jurupa Valley's housing stock. | HE 2.1.1. Infrastructure. As budget allows, City shall include sufficient resources for adequate maintenance of public facilities such as streets, sidewalks, and drainage in the City's capital improvement program and encourage community services districts to do likewise. | Engineering and Public Works Community Services Districts | 2016-2021 |
| | HE 2.1.2. Adaptive Housing Strategies. Support creative strategies for the rehabilitation and adaptive reuse of residential, commercial, and industrial structures for housing, if appropriate. | | 2016-2021 |
| | HE 2.1.3. Code Enforcement. Ensure that housing is maintained through code enforcement activities. Continue to administer the Code Enforcement Program to eliminate unsafe, illegal, and substandard conditions in residential neighborhoods and residential properties. | Building and Code Enforcement | 2016-2021 |
| | HE 2.1.4. Affordable Mobile Homes Conservation. Conserve affordable mobile home housing stock to bring such housing up to code through mobile home loan and improvement grants funded by CDBG and other funds, as available. | | 2016-2021 |
| | HE 2.1.5. Bilingual Outreach. As resources allow, provide bilingual outreach materials and activities to educate and inform the community about available housing rehabilitation programs and resources. | | 2016-2021 |
| | HE 2.1.6. Monitor Assisted Units. Help ensure that affordable housing assisted with public funds remains affordable for the required time through maintenance of an inventory of assisted units which is monitored for expiration of assisted housing. | | 2016-2021 |

| Objective | Action | Responsible Party | Time Frame |
|---|--|-------------------|------------|
| | HE 2.1.7. At-risk Housing Preservation. Support efforts to generate and/or preserve grant-assisted, bond financed, density bonus or other types of affordable units at risk of conversion to market rate during the planning period by 1) working with the Riverside County Housing Authority or a non-profit housing organization to encourage purchase of the units, 2) assisting with low or no interest loans for rehabilitation as budget allows, 3) supporting bond refinancing, and 4) referring the project sponsor to other federal or local sources of below-market financing. | | 2016-2021 |
| | HE 2.1.8 Affordability Covenants. As a condition of project approval, require new affordable housing projects to remain affordable for a specific time, consistent with and as required by the funding program(s) in which they participate, through covenants with the project proponent, Housing Authority or other housing agency. | | 2016-2021 |
| GOAL HE 3: Promote equal housing opportunities for all persons. | | | |
| Objective: Help ensure that all persons are treated fairly and have access to housing which meets their needs and budget. | HE 3.1.1. Fair Housing Council. Utilize the services of the Fair Housing Council of Riverside County to implement a number of programs, including: 1) audits of lending institutions and rental establishments, 2) education and training of City staff, and 3) fair housing outreach and education regarding fair housing laws and resources. | Planning | 2016-2021 |
| | HE 3.1.2. Education and Outreach. Continue to use the services of the Fair Housing Council to provide education and outreach services to the public in both Spanish and English (Also see 3.1d). | | |
| | HE 3.1.3. Public Housing and Rental Assistance. Encourage Riverside County to continue to maintain 300+ public housing units and continue to assist very low-income recipients in Jurupa Valley with Section 8 rental assistance vouchers. | | |
| | HE 3.1.4. First-Time Homebuyers Assistance. Explore the feasibility of developing a new First Time Home Buyer Down Payment Assistance Program, utilizing tax-exempt mortgage revenue bonds to finance mortgages and down payment assistance for single family homes for very low and low income first time homebuyers. | | |

| Objective | Action | Responsible Party | Time Frame |
|---|---|-------------------|------------|
| | HE 3.1.5. Lease/Purchase Home Ownership Program. Encourage the Housing Authority to continue the Lease/Purchase Home Ownership Assistance Program, which assists potential homeowners in leasing a property while moving towards ownership at the end of 3 years. | | |
| Objective: Accommodate new market rate housing in order to diversify the housing stock, increase property values, increase median income and create the elements for prosperity for all households. | HE 3.1.6. Housing Variety. Facilitate new market rate residential projects that provide a variety of housing types and densities | | Ongoing |
| Objective: Provide safe pedestrian, equestrian and bicycle linkages between neighborhoods; promote walkability. | HE 3.1.7. Neighborhood Connectivity. Require new residential neighborhoods to interconnect with existing neighborhoods to provide for social interaction, assure pedestrian-friendly connectivity and minimize vehicle trips. | | Ongoing |
| Objective: Ensure new housing to meet the same standards for all income levels. | HE 3.1.8. Multi-Family Dwellings Standards. Establish standards for multiple-family dwellings that will achieve comparable recreation and open space opportunities, protection from sources of noise and degraded air quality, adequate access to public services and facilities and parking that apply to single-family housing. | | |
| GOAL HE 4: Maintain and enhance residential neighborhoods and remove blight. | | | |
| Objective: Enhance the quality of life in all residential area and promote residents' active involvement in neighborhood pride and improvement activities. | HE 4.1.1. Neighborhood Participation. Implement varied strategies to ensure residents are aware of and able to participate in planning decisions affecting their neighborhoods early in the planning process, such as neighborhood meetings, City Council member visits, and town hall meetings. | Planning | 2016-2021 |
| | HE 4.1.2. Neighborhood Needs. Identify specific neighborhood needs, problems, trends, and opportunities for improvements. Work directly with neighborhood groups and individuals to address concerns. | | |
| | HE 4.1.3. Neighborhood Improvements. As budget allows, help fund neighborhood improvements, such as street paving or repairs, sidewalks, pedestrian and equestrian trails, crosswalks, parkways, street trees and other public facilities to improve aesthetics, safety, and accessibility. | | |

| Objective | Action | Responsible Party | Time Frame |
|---|---|--|------------|
| Objective: To establish a pro-active code enforcement program to identify housing in need of repair and make owners aware of resources for financial assistance | HE 4.1.4. Neighborhood Pride. Working with Riverside County, CSDs and non-profit housing entities, develop and promote a Neighborhood Pride Program including cooperative projects with Code Enforcement staff, and Public Works projects in target areas, as funding allows. | Planning Code Enforcement Public Works | 2018-2021 |
| GOAL HE 5: Reduce residential energy and water use. | | | |
| Objectives: Conserve resources, reuse and recycle solid waste, and improve environmental sustainability. | HE 5.1.1. Incentives. Consider establishing incentives for energy conservation above and beyond the requirements of Title 24, such as priority permit processing or reduced permit fees on a sliding scale Fee Assistance Program, as budget allows. | Building, Planning and Engineering | 2016-2021 |
| | HE 5.1.2. Energy Programs for Lower Income Households. Encourage and participate in Riverside County's and utility providers' programs to reduce maintenance and energy costs for households with low incomes, and increase efforts to inform the public about available cost-saving, energy conservation programs. | | |
| | HE 5.1.3. Energy Conservation Grants. Pursue grant funds for energy rehab costs and consumer education. | | |
| | HE 5.1.4. City Requests for Proposals. City RFPs, contracts, and bidding procedures capital projects and programs shall incorporate energy conservation and sustainability measures. | | |
| | HE 5.1.5. City Facilities. Utilize energy/water saving measures in City-owned buildings and facilities, including landscaping, to meet industry sustainable design standards. | | |
| | HE 5.1.6. Sustainable Design. Adopt sustainable design policies, standards and codes that result in attractive, energy efficient, neighborhoods. | | |

F. HOUSING GOALS, POLICIES, AND PROGRAMS

The condition, availability, and cost of Jurupa Valley's housing stock are of vital importance to its residents and employers, and the City's economy as a whole. The primary housing goals are meeting housing needs for all income groups, including market rate housing needs, housing conservation and improvement, equal housing opportunity, neighborhood improvement and removal of blight, energy conservation, and housing policy implementation. Policies and programs for each goal are described below.

Goals

- HE 1 Encourage and, where possible, assist in the development of quality housing to meet the City's share of the region's housing needs for all income levels and for special needs populations.
- HE 2 Conserve and improve the housing stock, particularly housing affordable to lower income and special housing needs households.
- HE 3 Promote equal housing opportunities for all persons.
- HE 4 Maintain and enhance residential neighborhoods and remove blight.
- HE 5 Reduce residential energy and water use.
- HE 6 Accommodate and facilitate the development of new market rate housing of varying densities to diversify the City's housing stock.

Policies and Programs

HE 1 – Encourage Development of Quality Housing That Meets the City's Affordable Housing Needs

Policies

- HE 1.1 **Regional Housing Needs Allocation.** Changes to the General Plan and the Zoning Ordinance and Map shall provide and/or maintain sufficient land at appropriate densities to meet the City's Regional Housing Needs Allocation for the 2014-2021 Planning Period.
- HE 1.2 **Affordable Housing.** To encourage affordable residential development on sites zoned to allow multi-family residential uses and identified in the vacant land inventory, the City will adopt development incentives and standards to encourage lot consolidation and to

allow residential development at a density of up to 25 dwelling units per acre in the Highest Density Residential (HHDR) designation, where appropriate.

- HE 1.3 **Preservation of Affordable Housing.** All residential development projects that receive City financial incentives shall be required to remain affordable, in compliance with the specific requirements of the program in which they participate.
- HE 1.4 **Availability of Suitable Sites.** Ensure the availability of suitable sites for the development of affordable housing to meet the needs of all household income levels, including special needs populations.
- HE 1.5 **Housing for Mentally Disabled.** Encourage the development of additional housing for the mentally disabled.
- HE 1.6 **Housing for Homeless Persons.** In cooperation with other cities and/or the County of Riverside, assist in the development of emergency, transitional, and permanent supportive housing for homeless persons and families.
- HE 1.7 **Self-Help Housing.** City will promote self-help housing programs (e.g., Habitat for Humanity) and, as budget allows, provide financial assistance
- HE 1.8 **Innovative Housing.** Encourage innovative housing, site plan design, and construction techniques to promote new affordable housing, improve energy efficiency, and reduce housing costs.

Programs

- HE 1.1.1 **RHNA Needs.** The City will amend the General Plan Land Use Map and the Zoning Map to designate at least 32.4 acres of land for residential use at 25 dwelling units per acre (Highest Density Residential) to help meet RHNA Lower Income housing needs. The Land Use Map amendment shall be amended concurrently with the 2017 General Plan update, and the rezoning will be accomplished within 1 year of adopting the new General Plan.
- HE 1.1.2 **Housing Authority Coordination.** Through coordination with the Riverside County Housing Authority, pursue grant funding and other incentives to promote and assist the nonprofit and/or private production of housing affordable to lower income households. Utilize public financing tools when available, including but not limited to: multi-family revenue bonds, the Community

Development Block Grant (CDBG) Housing Loan Fund, HOME funds, and, where feasible, leverage other state and federal financing obtained by the developer (e.g., Low-Income Housing Tax Credits (LIHTC), California Housing Finance Agency (CHFA) multi-family housing assistance programs, Department of Housing and Community Development (HCD) Multi-family Housing Loans), and other financing tools.

- HE 1.1.3 **Tax Exempt Bonds.** Consider utilizing tax-exempt revenue bonds to help finance new multi-family construction.
- HE 1.1.4 **Mobile Homeowner Assistance.** As resources allow, use federal and state funds, when available, to assist lower income households to purchase or improve mobile homes.
- HE 1.1.5 **Affordable Housing Incentives.** Consider offering the following incentives to developers of new housing that is affordable to lower income households and special needs groups: fast track/priority application and permit processing, density bonuses and/or fee waivers, assist affordable housing developers with right of way acquisition, off-site infrastructure improvements and other development costs, and assist in securing federal or state housing financing resources. Incentives should be considered for new housing developments of at least 100 units in which at least 15% of total units are sold or rented at prices affordable to households with incomes below 80% of the Riverside County Area Median Income (AMI).
- HE 1.1.6 **Density Bonus.** Update the Municipal Code and the General Plan to ensure consistency with state law and apply density bonuses where necessary to assist in the production of affordable housing, particularly in Village Centers and in higher density, mixed-use, and other areas where appropriate and compatible with adjacent development.
- HE 1.1.7 **City Development Fees.** Develop a sliding scale Fee Assistance program where the amount and type of City fees may be waived by the City Council based on the number of affordable units proposed (i.e., as the number of affordable units increases, the amount of fee subsidy or waiver increases).
- HE 1.1.8 **CDBG and HOME Funds.** When available, use CDBG; HOME, and other grant or housing trust funds to write down costs of acquiring sites and to offset infrastructure and construction costs for residential developments in

which at least 15% of total units are sold or rented at prices affordable to households with incomes below 80% of the Riverside County Area Median Income (AMI).

- HE 1.1.9 **Site Identification.** Work with public, private and non-profit housing entities to identify candidate sites for new construction of rental housing for seniors and other special housing needs, and take all actions necessary to expedite processing and approval of such projects.
- HE 1.1.10 **Residential Incentive Zone (R-6).** Update and continue to encourage development of affordable housing in the R-6 zone. Utilize incentives for development within this zone as established in Ordinance 348, or in the 2016 General Plan.
- HE 1.1.11 **Updated Land Use Inventory and Map.** Establish and maintain a Land Use Inventory and map which provide a mechanism to monitor a) acreage and location by General Plan designation, b) vacant and underutilized land, and c) build-out of approved projects utilizing the City's GIS system and supported by mapping. Maintain the Land Use Inventory on a regular basis, as frequently as budget allows.
- HE 1.1.12 **Candidate Sites.** Encourage developers to identify vacant and underutilized properties as candidate sites for affordable or mixed market rate/affordable housing development and refer them to the Land Use Inventory.
- HE 1.1.13 **Homeless Shelter.** In cooperation with nonprofit organizations and adjacent cities, and with Riverside County, support the development of a homeless shelter to meet Jurupa Valley's and adjacent communities' homeless shelter needs.
- HE 1.1.14 **Homelessness Strategy.** Until a permanent shelter or shelters can be established, the City shall work with Riverside County and local housing agencies to prepare a homelessness strategy to address immediate needs dealing with safety, health and sanitation, environmental health, temporary housing, and access to homeless services.
- HE 1.1.15 **Creative Housing Solutions.** Prepare and consider supporting a range of creative housing types to accommodate homeless persons and other extremely low-income populations, such as single room occupancy dwelling (SROs), pre-fabricated housing, so-called "tiny houses," and other emerging housing products.
- HE 1.1.16 **Coordination with Non-Profit Housing Providers.** Continue to work with nonprofit organizations, such as

National Community Renaissance, Mary Erickson Housing, and Habitat for Humanity, in the production of affordable and self-help housing for Moderate and Lower Income households.

- HE 1.1.17 **Flexible Standards.** Continue to provide for flexibility in the design of residential development through the processing of planned unit developments (PUDs), area and specific plans, and village plans, and through the application of Zoning Ordinance provisions allowing flexible lot sizes and development standards for residential districts.
- HE 1.1.18 **Second Dwelling Units.** Maintain provisions of County of Riverside Zoning Ordinance No. 348, as amended, that allow second dwelling units or “granny flats.”
- HE 1.1.19 **Mobile and Manufactured Homes.** Continue to allow mobile homes, modular and manufactured homes in single-family residential zones “by right,” and mobile home parks subject to a Conditional Use Permit (CUP), and encourage construction of new mobile home parks and manufactured housing to increase the supply of affordable dwelling units.
- HE 1.1.20 **Mixed Housing Types and Densities.** Encourage residential development proposals to provide a range of housing types and densities for all income levels, including market rate housing, using creative planning concepts such as traditional neighborhood design, planned unit developments, area and specific plans, and mixed-use development.
- HE 1.1.21 **Accessible Housing for Disabled Persons.** Encourage single- and multi-family housing developers to designate accessible and/or adaptable units already required by law to be affordable to persons with disabilities or persons with special needs.
- HE 1.1.22 **Universal Design.** Encourage “universal design” features in new dwellings, such as level entries, wider paths of travel, larger bathrooms, and lower kitchen countertops to accommodate persons with disabilities.
- HE 1.1.23 **Affordable Housing for Disabled Persons.** Encourage, and as budget allows, help support programs providing increased opportunities in affordable residential units rehabilitated or constructed through City or County programs.

HE 2 – Conserve and Improve the Housing Stock, Particularly Housing Affordable to

Lower Income and Special Housing Needs Households

Policies

- HE 2.1 **Retain Housing.** Where feasible and appropriate, older, sound housing should be retained, rehabilitated, and maintained as a significant part of the City's affordable housing stock, rather than demolishing it. Demolition of non-historic housing may be permitted where conservation of existing housing would preclude the achievement of other housing objectives or adopted City goals.
- HE 2.2 **Removal of Affordable Housing.** Discourage the removal or replacement of sound housing that is affordable to extremely low, very-low, low- and moderate income households, and avoid discretionary approvals or other municipal actions that remove or adversely impact such housing unless: 1) it can be demonstrated that rehabilitation of lower-cost units at risk of replacement is financially or physically infeasible, or 2) an equivalent number of new units comparable or better in affordability and amenities to those being replaced is provided, or 3) the project will remove substandard, blighted, or unsafe housing.
- HE 2.3 **Public Housing.** Encourage the Riverside County Housing Authority to pursue federal and state funds to modernize public housing affordable to very low and low-income households.
- HE 2.4 **Tax-Exempt Bonds.** Consider using tax-exempt private activity bonds for the financing of multi-family housing rehabilitation.
- HE 2.5 **Historic Residential Properties.** Consider adopting incentives for the preservation of historic residential structures, such as the Mills Act Program, which provides property tax relief for rehabilitation of historic properties, as well as grants for the identification of historic structures.
- HE 2.6 **Housing Rehabilitation Funding.** Pursue all available federal, state, and local funds to assist housing rehabilitation.
- HE 2.7 **Neighborhood Quality.** The condition and quality of residential neighborhoods is a key measure of a community's housing health. The City will consider and promote the safety, appearance, and quality of residential neighborhoods by preserving the fabric,

amenities, spacing (i.e., building heights and setbacks), and overall character and quality of life in established neighborhoods.

- HE 2.8 **At-Risk Housing Preservation.** Work with Riverside County Housing Authority and other housing agencies to help preserve the affordability of federal, state, and County-subsidized units or other affordable housing resources at risk of conversion to market rate housing, as budget allows.

Programs

- HE 2.1.1 **Infrastructure.** As budget allows, the City shall include sufficient resources for adequate maintenance of public facilities such as streets, sidewalks, and drainage in the City's capital improvement program, and encourage community services districts to do likewise.
- HE 2.1.2 **Adaptive Housing Strategies.** Support creative strategies for the rehabilitation and adaptive reuse of residential, commercial, and industrial structures for housing, if appropriate.
- HE 2.1.3 **Code Enforcement.** Ensure that housing is maintained through code enforcement activities. Continue to administer the Code Enforcement Program to eliminate unsafe, illegal, and substandard conditions in residential neighborhoods and residential properties.
- HE 2.1.4 **Affordable Mobile Homes Conservation.** Conserve affordable mobile home housing stock to bring such housing up to code through mobile home loan and improvement grants funded by CDBG, and other funds as available.
- HE 2.1.5 **Bilingual Outreach.** As resources allow, provide bilingual outreach materials and activities to educate and inform the community about available housing rehabilitation programs and resources.
- HE 2.1.6 **Monitor Assisted Units.** Help ensure that affordable housing assisted with public funds remains affordable for the required time through maintenance of an inventory of assisted units which is monitored for expiration of assisted units.
- HE 2.1.7 **At-Risk Housing Units.** Support efforts to generate and/or preserve grant-assisted, bond-financed, density bonus or other types of affordable units at risk of conversion to market rate during the planning period by 1) working with the Riverside County Housing Authority or a nonprofit housing organization to encourage

purchase of the units, 2) assisting with low or no interest loans for rehabilitation as budget allows, 3) supporting bond refinancing, and 4) referring the project sponsor to other federal or local sources of below-market financing.

- HE 2.1.8 **Affordability Covenants.** As a condition of project approval, require new affordable housing projects to remain affordable for a specific time, consistent with and as required by the funding program(s) in which they participate, through covenants with the project proponent, the Housing Authority or other housing agency.

HE 3 – Promote Equal Housing Opportunities for All Persons

Policies

- HE 3.1 **Fair Housing Program.** Continue to support fair housing laws and organizations that provide fair housing information and enforcement.
- HE 3.2 **Housing Information.** Provide referrals to low-income households and households with special housing needs on how to obtain housing counseling, financing, and other housing information.
- HE 3.3 **Housing Opportunities for Seniors, Disabled Persons and Veterans.** Encourage and, as budget allows, help support programs and activities that promote affordable housing opportunities for seniors, disabled persons, and veterans.

Programs

- HE 3.1.1 **Fair Housing Council.** Utilize the services of the Fair Housing Council of Riverside County to implement a number of programs, including: 1) audits of lending institutions and rental establishments, 2) education and training of City staff, and 3) fair housing outreach and education regarding fair housing laws and resources.
- HE 3.1.2 **Education and Outreach.** Continue to use the services of the Fair Housing Council to provide education and outreach services to the public in both Spanish and English (also see HE 3.1.1 above).
- HE 3.1.3 **Public Housing and Rental Assistance.** Encourage Riverside County to continue to maintain 300+ public housing units as provided by the previous Housing Element, and continue to assist very low-income

recipients in Jurupa Valley with Section 8 rental assistance vouchers.

- HE 3.1.4 **First-Time Homebuyers Assistance.** Explore the feasibility of developing a new First Time Home Buyer Down Payment Assistance Program, utilizing tax-exempt mortgage revenue bonds to finance mortgages and down payment assistance for single-family homes for very low and low income first time homebuyers.
- HE 3.1.5 **Lease/Purchase Home Ownership Program.** Encourage the Housing Authority to continue the Lease/Purchase Home Ownership Assistance Program, which assists potential homeowners in leasing a property while moving towards ownership at the end of 3 years.
- HE 3.16 **Housing Variety.** Facilitate new market rate residential projects that provide a variety of housing types and densities.
- HE 3.17 **Neighborhood Connectivity.** Require new residential neighborhoods to interconnect with existing neighborhoods to provide for social interaction, assure pedestrian-friendly connectivity, and minimize vehicle trips.
- HE 3.18 **Multi-Family Dwellings Standards.** Establish standards for multiple-family dwellings that will achieve comparable recreation and open space opportunities, protection from sources of noise, and degraded air quality, adequate access to public services and facilities, and parking that apply to single-family housing.

HE 4 – Maintain and Enhance Residential Neighborhoods and Remove Blight

Policies

- HE 4.1 **Removal of Blight.** As part of development approvals, City budget and Capital Improvement Plan (CIP) program and other municipal actions, give high priority to removing and reversing the effects of blight, particularly in residential neighborhoods and highly visible locations along major street and highway corridors. Within established neighborhoods, new residential development shall be of a character, scale, and quality that preserve the neighborhood character and maintain the quality of life for existing and future residents.
- HE 4.2 **Design Compatibility.** Higher density housing should maintain high quality standards for unit design, privacy, security, on-site amenities, and public and private open space. Such standards should be flexible

enough to allow innovative and affordable design solutions and shall be designed to enhance prevailing neighborhood architectural and site character.

- HE 4.3 **Neighborhood Integration.** New neighborhoods should be an integral part of an existing neighborhood or should establish pedestrian, bicycle, and, where appropriate, equestrian linkages that provide direct, convenient, and safe access to adjacent neighborhoods, schools, parks and shopping.

Programs

- HE 4.1.1 **Neighborhood Participation.** Implement varied strategies to ensure that residents are aware of and able to participate in planning decisions affecting their neighborhoods early in the planning process, such as neighborhood meetings, City Council member visits, and town hall meetings.
- HE 4.1.2 **Neighborhood Needs.** Identify specific neighborhood needs, problems, trends, and opportunities for improvements. Work directly with neighborhood groups and individuals to address concerns.
- HE 4.1.3 **Neighborhood Improvements.** As budget allows, help fund neighborhood improvements, such as street paving or repairs, sidewalks, pedestrian and equestrian trails, crosswalks, parkways, street trees, and other public facilities to improve aesthetics, safety, and accessibility.
- HE 4.1.4. **Neighborhood Pride.** Working with Riverside County, community services districts, and nonprofit housing entities, develop and promote a Neighborhood Pride Program including cooperative projects with Code Enforcement staff, and Public Works projects in target areas, as funding allows.

HE 5 – Reduce Residential Energy and Water Use

Policies

- HE 5.1 **New Construction.** Encourage the development of dwellings with energy-efficient designs, utilizing passive and active solar features and energy-saving features that exceed minimum requirements in state law.
- HE 5.2 **Sustainable Design.** Residential developments should promote sustainability in their design, placement, and use. Sustainability can be promoted through a variety of housing strategies, including the following:

- a. Maximize use of renewable, recycled-content and recycled materials, and minimize use of building materials that require high levels of energy to produce or that cause significant, adverse environmental impacts.
- b. Incorporate renewable energy features into new homes, including passive solar design, solar hot water, solar power, and natural ventilation and cooling.
- c. Minimize thermal island effects through reduction of heat-absorbing pavement and increased tree shading.
- d. Avoid building materials that may contribute to health problems through the release of gases or glass fibers into indoor air.
- e. Design dwellings for quiet, indoors and out, including appropriate noise mitigation for residential uses near noise sources such as highways, major streets, railroad tracks, and industrial uses.
- f. Design dwellings to be economical to live in due to reduced energy or resource use, ease of maintenance, floor area, or durability of materials.
- g. Help inform residents, staff, and builders of the advantages and methods of sustainable design, and thereby develop consumer demand for sustainable housing.
- h. Consider adopting a sustainable development rating system, such as the LEED® or Green Globes program.

HE 5.3 **Site and Neighborhood Design.** Residential site, subdivision, and neighborhood designs should consider sustainability. Some ways to do this include:

- a. Design subdivisions to maximize solar access for each dwelling and site.
- b. Design sites so residents have usable outdoor space with access to sun and shade.
- c. Streets and access ways should minimize pavement devoted to vehicular use.
- d. Use multi-purpose neighborhood “pocket parks”/ retention basins to purify street runoff prior to its entering creeks. Retention basins shall be designed to be visually attractive as well as functional. Fenced-off retention basins should be avoided.
- e. Encourage cluster developments with dwellings grouped around significantly sized, shared open

space in return for City approval of smaller individual lots.

- f. Treat public streets as landscaped parkways, using continuous plantings at least 6 feet wide and, where feasible, median planters to enhance, define, and buffer residential neighborhoods of all densities from the effects of vehicle traffic.

Programs

- HE 5.1.1 **Incentives.** Consider establishing incentives for energy conservation above and beyond the requirements of Title 24, such as priority permit processing or reduced permit fees on a sliding scale Fee Assistance Program, as budget allows.
- HE 5.1.2 **Energy Programs for Lower Income Households.** Encourage and participate in Riverside County's and utility providers' programs to reduce maintenance and energy costs for households with low incomes, and increase efforts to inform the public about available cost-saving, energy conservation programs.
- HE 5.1.3 **Energy Conservation Grants.** Pursue grant funds for energy rehab costs and consumer education.
- HE 5.1.4 **City Requests for Proposals.** City RFPs, contracts, and bidding procedures capital projects and programs shall incorporate energy conservation and sustainability measures.
- HE 5.1.5 **City Facilities.** Utilize energy/water-saving measures in City-owned buildings and facilities, including landscaping, to meet industry sustainable design standards.
- HE 5.1.6 **Sustainable Design.** Adopt sustainable design policies, standards, and codes that result in attractive, energy efficient, neighborhoods.

G. COMMUNITY PROFILE

This section analyzes demographic and housing characteristics that influence the demand for and availability of housing in the City of Jurupa Valley. These analyses form a foundation for community-based housing programs.

Data and Methodology

The 2013-2021 Housing Element is the first Housing Element prepared for the City of Jurupa Valley since its incorporation. Preparation of this Housing Element requires the assemblage and presentation of relevant demographic and housing data for Jurupa Valley as an individual jurisdiction. The following key data sources

were used to complete this Housing Element. Sources of specific information are identified in the text, tables, and figures.

- Census data (2000-2010) and American Community Surveys
- California Department of Finance (2015)
- U.S. Department of Housing and Urban Development (HUD) Comprehensive Housing Affordability Strategy (CHAS) Data, 2008-2012

The City of Jurupa Valley was incorporated on July 1, 2011, after the 2010 Census had been conducted. As such, the City of Jurupa Valley was not identified as a city in the decennial censuses. While the City was not recognized as an incorporated city in the decennial census, demographic and housing data for Jurupa Valley is extracted from the decennial censuses (2000 and 2010 U.S. Census) by retrieving the data for the block groups and census tracts that generally describe the boundaries of the City of Jurupa Valley. See Appendix 3.0 for the 2000 and 2010 Census Tracts and Block Groups, and 2009-2013 American Community Survey Census Tracts and Block Groups.

Another method of compiling decennial census data for the City of Jurupa Valley is using data for the Census Designated Places (CDPs) that comprise the City of Jurupa Valley. Six CDPs generally form the boundaries of Jurupa Valley, Crestmore Heights, Glen Avon, Mira Loma, Pedley, Rubidoux, and Sunnyslope.

Since the 2010 Census, the Bureau of Census has been conducting sample surveys, known as the American Community Surveys (ACS), on specific demographic and housing variables. ACSs are conducted every 1, 3, or 5 years, depending on the specific variables in question and the population size of the community. Some ACSs do contain data for the City of Jurupa Valley as an incorporated city. Therefore, by necessity, this report draws from multiple ACS data sets that depend upon the availability of data for the City. The ACS data gives us an opportunity to analyze demographic and housing data in the City as recent as 2012. When data is not available at the city-level, this report applies the same method used above for retrieving data from the decennial censuses, and extracts data at the block-group or tract-level.

Population Trends and Characteristics

Housing needs are influenced by population and employment trends. This section provides a summary of the changes to the population size, age, and racial/ethnic composition of the City of Jurupa Valley since 2000.

Historical, Existing, and Forecast Growth

The City of Jurupa Valley is a recently incorporated city in Riverside County. The City covers a 44-square-mile area and encompasses the

neighborhoods of Jurupa Hills, Mira Loma, Glen Avon, Pedley, Indian Hills, Belltown, Sunnyslope, Crestmore Heights, and Rubidoux.

Jurupa Valley is located in a region that, since 1990, has experienced robust population growth. According to the U.S. Census, Riverside County had a population of just over 2.1 million persons in 2010. Overall, the County has experienced steady population growth over the last two decades, with the total number of residents increasing by 87% since 1990. *Table 5.3* compares the population of Riverside County with neighboring counties.

Table 5.3: Regional Population Trends (1990-2010)

| County | 1990 | 2000 | 2010 | Percent Change 1990-2000 | Percent Change 2000-2010 |
|----------------|-----------|-----------|-----------|--------------------------|--------------------------|
| Riverside | 1,170,413 | 1,545,387 | 2,189,641 | 32.0 | 41.7 |
| San Bernardino | 1,418,380 | 1,709,434 | 2,035,210 | 20.5 | 19.1 |
| Imperial | 109,303 | 142,361 | 174,528 | 30.2 | 22.6 |

Source: Bureau of the Census, 1990 - 2010

According to the U.S. Census, Jurupa Valley experienced a 16% population increase between 2000 and 2010. During the same period, Riverside County's population increased by more than 40% (Table 5.4). Compared with other larger CDPs (more than 10,000 in population in 2010), growth in Jurupa Valley was also considered moderate.

In 2010, the population of Jurupa Valley accounted for 4% of Riverside County's population. As indicated in *Figure 5-5*, SCAG forecasts steady population growth for Jurupa Valley during the next 20 years with a projected population of approximately 126,000 persons by 2035, as shown in *Figure 5-5*.

Table 5.4: Population Growth in Unincorporated Areas

| City ^{1/} Unincorporated Area ² | 2000 | 2010 | 2013 | Percent Change 2000-2010 | Percent Change 2010-2013 |
|--|-----------|-----------|-----------|--------------------------|--------------------------|
| Jurupa Valley | 80,596 | 93,817 | 95,679 | 16.4 | 2.0 |
| French Valley CDP | -- | 23,067 | 24,746 | -- | 7.3 |
| Temescal Valley CDP | -- | 22,535 | 23,397 | -- | 3.8 |
| Mead Valley CDP | -- | 18,510 | 18,751 | -- | 1.3 |
| East Hemet CDP | 14,823 | 17,418 | 17,684 | 17.5 | 1.5 |
| Valle Vista CDP | 10,488 | 14,578 | 15,131 | 38.9 | 3.8 |
| Woodcrest CPD | 2,624 | 14,347 | 16,559 | 446.8 | 15.4 |
| El Sobrante CPD | 4,803 | 12,723 | 13,900 | 164.9 | 9.3 |
| Home Gardens CPD | 2,365 | 11,570 | 11,151 | 389.2 | -3.6 |

Figure 5-5: Population Growth Forecast (2000-2035), City of Jurupa Valley

Age Composition

To estimate the age profile of Jurupa Valley residents, census tract level data from the 2000 and 2010 Census was used. *Table 5.5* presents the median age for those Census Designated Places (CDPs) within the City of Jurupa Valley. Between 2000 and 2010, the Jurupa Valley population experienced growth in all age groups, but overall, the City's population is getting older. The "prime working" population, residents between the ages of 25 and 54 years, remains the largest age group in the City. The "school age" population, those between the ages of 5 and 17 years, makes up the next largest segment of the City's residents. The percentage of residents over age 45 increased during the previous decade, while the City's younger population decreased proportionally. The State of California, Riverside County, and most CDPs comprising the City of Jurupa Valley saw slight increases in median age from 2000 to 2010, as shown in *Table 5.6*.

Table 5.5: Median Age by Community, County, and State (2000-2010)

| Jurisdiction | Median Age | |
|------------------------------------|------------|------|
| | 2000 | 2010 |
| Crestmore Heights CDP ¹ | -- | 33.7 |
| Glen Avon CDP | 33.3 | 31.7 |
| Mira Loma CDP | 30.3 | 30.4 |
| Pedley CDP | 31.7 | 33.4 |
| Rubidoux CDP | 27.9 | 29.2 |
| Sunnyslope CDP | 30.7 | 31.1 |
| Riverside County | 33.1 | 33.7 |
| California | 33.3 | 35.2 |

Table 5.6: Age Distribution (2000-2010), Percent of Total Population

| Age Group | 2000 | | 2010 | |
|---------------|------------------------------------|-------------------------------|------------------------------------|-------------------------------|
| | City of Jurupa Valley ¹ | Riverside County ² | City of Jurupa Valley ¹ | Riverside County ² |
| 0 - 4 Years | 8.2 | 7.9 | 8.0 | 7.4 |
| 5 - 17 Years | 29.2 | 25.4 | 26.2 | 24.3 |
| 18 - 24 Years | 6.5 | 6.2 | 8.0 | 7.1 |

Source: Bureau of the Census, 2000 and 2010 (DP1).

Ethnicity/Cultural Identity

In terms of ethnicity and cultural identity, most Jurupa Valley residents are Hispanic. As of 2010, 67% of Jurupa Valley residents were of Hispanic origin (*Table 5.7*). Between 2000 and 2010, the Non-Hispanic White population of Jurupa Valley declined by almost 16%, while persons of Hispanic origin increased by 18%. The Black/African American population represented the third largest ethnic group in the City (3% in 2010).

Table 5.7: Racial and Ethnic Composition (2000-2010)

| Ethnic Group | 2000 | | | | 2010 | | | |
|-----------------------------|------------------------------------|------|-------------------------------|------|------------------------------------|------|-------------------------------|------|

Source: Bureau of the Census, 2000 (P004) and 2010 (DP1)

Employment Trends

Housing needs are influenced by employment trends. Significant employment opportunities within the City can lead to growth in demand for housing in proximity to jobs. The quality (including job security, and stability) and/or pay of available employment can determine the need for various housing types and prices.

As shown in *Table 5.8*, between 2009 and 2013, over 16% of Jurupa Valley's residents were employed in educational, health, and social services industries. About 14% were employed in retail trade; 13% were employed in manufacturing; 10% were employed in construction; 9% were employed in arts, entertainment, recreation, accommodation and food services; and another 9% were employed in professional, scientific, management, administrative, and waste management services. There is no data to show that these percentages are based on job sectors within the City of Jurupa Valley.

Table 5.8: Employment by Industry (2009-2013)

| Industry | Jurupa Valley* | | Riverside County | |
|---|----------------|------------|------------------|------------|
| | Employees | % | Employees | % |
| Agriculture, Forestry, Fishing and Hunting, and Mining | 606 | 1.6 | 13,722 | 1.6 |

Table 5.9 shows Jurupa Valley's labor force, which increased from 45,200 in 2000 to 45,900 in 2014. According to the California Employment Development Department (EDD), the unemployment rate in Jurupa Valley has steadily declined since 2010. In 2014, the City's unemployment rate was recorded at 10.7%, higher than the County's unemployment rate of 8.1%.

**Table 5.9: Labor Force Trends in the City, County and State
(2010-2014)**

Household Characteristics

This section describes Jurupa Valley's household characteristics. The Census Bureau defines a household as all persons living in a single housing unit, whether or not they are related. One person living alone is considered a household, as is a group of unrelated people living in a single housing unit.

Household Growth

In 2010, the Census reported 24,787 households in Jurupa Valley, an 11% increase from 2000, as shown in *Table 5.10*. According to the Census, however, the number of households in Jurupa Valley is growing at a significantly slower pace than Riverside County, but at a rate similar to the State of California overall. Between 2000 and 2010, the total number of households in Riverside County increased by 36%, more than triple the rate of increase in Jurupa Valley (11%) and almost four times the rate in California (9%). During the same period, the number of dwelling units in the City grew by almost 11%, as shown in *Table 5.10*.

Table 5.10: Total Households and Household Growth (2000-2010)

| Area | 2000 | 2010 | Percent Increase 2000-2010 |

Source: Bureau of the Census, 2000 and 2010 (H16)

Household Characteristics and Size

As shown in *Table 5.11*, the majority of households in Jurupa Valley in 2010 were family households (81%), at a higher proportion than the County as a whole (74%). About 41% of all households in the City were families with children and more than 23% of households had at least one elderly member (65+ years). About 6% of all households were made up of an elderly person living alone.

The average household size for each Census Designated Place (CDP) within Jurupa Valley is listed below in *Table 5.12*. In 2010, all of these CDPs had a larger average household size than Riverside County (3.14 persons per household) and the state (2.90 persons per household).

Tenure

Tenure refers to whether housing is rented or owned. Housing tenure is, in turn related to household income, composition (household size

and relationships), and age of the householder. Communities need to have an adequate supply of units available both for rent and for sale to accommodate a range of households with varying incomes, family sizes, composition (individuals living together and their relationships to one another), and life styles. Approximately 67% of Jurupa Valley households owned their homes, and 33% of households rented their homes in 2010. As shown in *Table 5.13*, the homeownership rate in Jurupa Valley was only slightly lower than in Riverside County but noticeably higher than in the State of California as a whole.

Table 5.13: Occupied Units by Tenure (2010)

| | Owner-Occupied | | Renter-Occupied | | Total | |
|-------------------------------|----------------|------|-----------------|------|------------|-----|
| | Number | % | Number | % | Number | % |
| Jurupa Valley ¹ | 16,526 | 66.7 | 8,261 | 33.3 | 24,787 | 100 |

Riverside County: 2000 and 2010 Census data aggregated at the County level.

Source: Bureau of the Census 2010 (H16 -SF1)

As shown in *Table 5.14* and *Table 5.15* households of three or more persons made up the majority of households in 2000 and 2010, and the number of larger households increased between 2000 and 2010. Larger renter-households (with five or more persons) had the greatest relative increase between 2000 and 2010, while owner-occupied households with three to four persons had the greatest decrease. This trend may reflect that ownership housing has become increasingly unaffordable to larger households.

Household Income

Table 5.16 shows the median household incomes, according to the 2007-2011 ACS, for the CDPs generally comprising the City of Jurupa Valley. Median incomes in Jurupa Valley varied considerably by tenure. During this time, the median incomes for owner-occupied households in the CDPs were consistently nearly double those of renter-occupied households. According to 2000 Census and 2011 ACS data, in absolute terms and when inflation is factored in, the median incomes recorded in the different CDPs have risen since 2000).

About 47% of Jurupa Valley households are lower-income. Between 2009 and 2013, about one-third (31%) of Jurupa Valley households earned less than \$35,000 and only 19% of households earned more than \$100,000, as shown in *Table 5.16* and *Table 5.17*, and in *Figure 5-6*.

Figure 5-6: Household Income

The relatively high percentage of lower income persons residing in Jurupa Valley is one of several indicators showing a concentration of low-cost rental or sale housing in the City, particularly in several older neighborhoods in Mira Loma, Sunnyslope, Belltown and Rubidoux.

Jurupa Valley: 2009-2013 ACS data aggregated at the census tract level.

Source: American Community Survey, 2009-2013 (B25118)

For the purposes of the Housing Element, the California Department of Housing and Community Development (HCD) has established five income groups based on Area Median Income (AMI):

- Extremely Low Income: up to 30% of AMI
- Very Low Income: 31% to 50% of AMI
- Low Income: 51% to 80% of AMI
- Moderate Income: 81% to 120% AMI
- Above Moderate Income: >120% AMI
- County Median Income as published by HCD must be used to establish income groups for the purpose of the Housing Element.

The U.S. Department of Housing and Urban Development (HUD) periodically receives “custom tabulations” of Census data from the Census Bureau that are largely not available through standard Census products. The most recent estimates are derived from the 2008-2012 ACS. This dataset, known as the “CHAS” data (Comprehensive Housing Affordability Strategy), provides insight on the extent of housing problems experienced by lower-income households. The Jurupa Valley CHAS data in this report was extracted at the census tract level (using the same census tracts as those used to aggregate Jurupa Valley data from the 2010 U.S. Census).

According to the CHAS data presented in Table 5.18, approximately 27% of Jurupa Valley households can be considered extremely low

or very low income (50% or less of the AMI) and an additional 20% can be classified as low income (51% to 80% AMI). The majority of the City's households (53%), however, were within the moderate and above moderate-income category (greater than 80% AMI). By comparison, about 58% of Riverside County households were moderate or above moderate-income households.

Table 5.18: Distribution by Income Group, Percent of Total Households

| Jurisdiction | Total Households | Extremely Low Income (0-30% of AMI) | Very Low Income (31-50%) | Low Income (51-80%) | Moderate/ Above Income (80%+) |
|----------------------------|------------------|-------------------------------------|--------------------------|---------------------|-------------------------------|

¹Jurupa Valley: 2008-2012 CHAS data aggregated at the census tract level.

²Data presented in this table is based on special tabulations from sample Census data. The number of households in each category usually deviates from the 100% count due to the need to extrapolate sample data out to total households. Interpretations of this data should focus on the proportion of households rather than on precise numbers. Furthermore, because HUD programs do not cover households with incomes above 80% of the County AMI, CHAS data does not provide any breakdown of income groups above 80% AMI.

H. HOUSING INVENTORY AND MARKET CONDITIONS

This section describes housing stock and market conditions in the City of Jurupa Valley.

Housing Growth

According to the 2000 and 2010 Census counts, only a small percentage of Riverside County's over 500,000 new housing units were located within the City of Jurupa Valley. The number of housing units in Jurupa Valley, both existing and new, comprised just 3% of the County's total existing housing stock in 2000 and 4% in 2010, as shown in *Table 5.19*.

³Department of Finance estimates are corrected for demolition; therefore, housing growth in this table presents net increases in the housing stock; data available at City, County or State level for all jurisdictions (including Jurupa Valley).

Sources: Bureau of the Census 2000 (H001) and 2010 (QT-H1), State Department of Finance, Housing Estimates, May 2015.

Historically, housing growth in Jurupa Valley lagged behind the County and other neighboring jurisdictions, but experienced growth similar to the state as a whole. Between 2000 and 2010, Jurupa Valley's housing stock increased at a significantly slower rate than the County's and other nearby cities. However, housing growth in the region was severely impacted by the recent recession and, since 2010, the City's housing stock has grown at rates similar to the rest of the County and at a higher rate compared to the state average. According to the California Department of Finance, the housing stock in Jurupa Valley was estimated at 26,874 units as of January 1, 2015, representing a 3% increase from 2010; compared to the County's 3% increase and the state's 2% increase during the same interval. Among the most populous unincorporated areas (with population over 10,000 in 2010) in Riverside County, Jurupa Valley had moderate housing production rate between 2000 and 2013, as shown in *Table 5.20*.

Unit Type and Size

Composition of Housing Stock

The composition of the City's housing stock, specifically in regards to its available housing inventory by unit type, has remained fairly stable since 2000, which is to be expected given the City's limited housing growth during this time. The California Department of Finance, which records building permit data submitted by local jurisdictions, estimates that single-family detached units comprise the vast majority of the City's housing stock (77%) while multi-family units make up about 12% of the housing stock (*Table 5.21*). Countywide, in 2015, 68% of housing units were single-family detached units compared to 58% in the state. In Riverside County,

multi-family units represented about 16% of the housing stock in 2015; compared to 31% in the state.

As shown in *Table 5.22*, owner-occupied housing units were predominately single-family detached, comprising 87% of all owner-occupied units. The majority of renter-occupied units were also single-family detached housing units (58%).

Table 5.22: Unit Type by Tenure (2009-2013)

Jurupa Valley: 2009-2013 ACS data aggregated at the block group level.

Source: American Community Survey 2009-2013, (B25032).

As shown in *Table 5.15* (page [5-39](#)), Jurupa Valley has a significant number of large households (i.e. households with five or more bedrooms). Approximately 28% of all Jurupa Valley are larger households, compared with about 21% in the County and 16% in the state. Between 2009 and 2013, about 34% of renter-occupied units were two-bedroom units, and about 30% were three-bedroom units, as shown in *Table 5.23*. Over 43% of owner-occupied units had three bedrooms and 35% had four bedrooms. Generally, housing units with three or more bedrooms are the most suited for large households, indicating that adequately sized rental units may be in limited supply in Jurupa Valley considering that the majority (57%) of the City's rental units have two bedrooms or less.

Table 5.23: Unit Size by Tenure (2009-2013)

| | Owner-Occupied | | Renter- Occupied | | Total Occupied Housing Units | |

Vacancy Rates

A certain number of vacant units are needed in the housing market to moderate the cost of housing and allow sufficient housing choice. Vacancy rates are generally higher among rental properties, as rental units have greater attrition than owner-occupied-units do. A healthy vacancy rate (one that permits sufficient choice and mobility among a variety of housing units) is considered to be 2% to 3% for ownership units and 5% to 6% for rental units. In 2000, the vacancy rate in Jurupa Valley was 4.3%, as shown in *Table 5.24*. By 2010, the overall vacancy rate for the City was determined to be 6.3%. This overall rate, however, includes housing units that were vacant due to foreclosures, seasonal occupancy, or other reasons. The actual vacancy rate (actual number of unoccupied dwelling units at any given time) for the City is likely to be lower than the listed rate. According to the 2010 Census, only about 59% of the City's 1,650 vacant units were actually available for rent or sale, which reflects a relatively high number of seasonably occupied and possibly abandoned units.

Table 5.24: Household Occupancy Status (2000-2010)

| Occupancy Status | 2000 | Percent of Total | 2010 | Percent of Total |
|----------------------------|---------------|------------------|---------------|------------------|

Housing Conditions

Age of Housing Stock

The age of a housing unit is often an indicator of housing conditions. In general, housing that is 30 years or older may exhibit a need for repairs based on the useful life of materials. Housing more than 50

years old is considered aged and is more likely to exhibit a need for major repairs.

Jurupa Valley's housing stock is older. Approximately 52% of the owner-occupied units in the City were built before 1980, and 20% were built before 1960. Of the City's renter-occupied units, 61% were built before 1980, and 28% were built before 1960. *Table 5.25* summarizes the age of the City's housing stock by tenure. Based on housing age alone, a significant portion of Jurupa Valley's housing stock could require rehabilitation in the upcoming decade.

Table 5.25: Tenure by Age of Housing Stock (Occupied Units)

| Year Built | Owner-Occupied | | Renter- Occupied | | Total Occupied Housing Units | |
|-----------------|----------------|----------------|------------------|----------------|------------------------------|----------------|
| | Units | % ¹ | Units | % ¹ | Units | % ¹ |
| 2000 or later | 1,786 | 11.0 | 1,175 | 13.5 | 2,962 | 8.8 |

Housing Conditions

Housing condition refers to the ability of various systems in a house to meet adopted building codes for health and safety, including plumbing, heating, electrical, and structural systems. Housing conditions are considered substandard when one or more systems are found to be below the minimum standards required by Section 1001 of the Uniform Housing Code. Households living in substandard conditions are considered to be in need of housing assistance, even if they are not seeking alternative housing arrangements, due to the threat to residents' health and safety that substandard housing poses.

In addition to structural deficiencies and standards, the lack of infrastructure and utilities often serves as an indicator for substandard conditions. According to the 2009-2013 ACS, 68 occupied units in Jurupa Valley (0.3% of all units) lacked complete plumbing facilities and 221 units lacked complete kitchen facilities (0.9% of all units), as shown in *Table 5.26*. This may be due to the fact that in Jurupa Valley, "substandard" dwellings such as tack rooms, storage or other outbuildings are often used illegally as

guest quarters or as separate dwelling units. Under the City's Zoning Code, guest quarters are not permitted to have kitchens.

One possible reason for the common use of substandard dwellings in the City is the relatively high number of lower income/large households and overcrowding in some residential areas. It should be noted that there might be some overlap in the number of substandard housing units, as some units may lack both complete plumbing and kitchen facilities. Similar to the County and the state, housing units lacking appropriate infrastructure and utilities comprise a very small proportion of the City's housing stock.

Table 5.26: Number of Dwellings Lacking Plumbing or Complete Kitchen Facilities, 2009-2013

| Units | Owner Occupied | Renter Occupied | Total | % of Total Housing Units |
|-------------------------------------|----------------|-----------------|---------|--------------------------|

Code Enforcement Activities

The City of Jurupa Valley has established a Code Enforcement program to ensure a high quality of life throughout the communities and maintain property values. Code compliance in the City is a responsive program under which property inspections are done only when inspection requests and complaints are received. Such a system may result in underreporting of code compliance issues, particularly with regard to the rental housing stock. Often, tenants fear retaliation from the landlords and are therefore less willing to report an issue. Legal residency issues or language barriers may be another obstacle for reporting code compliance issues. According to the Code Enforcement staff, Jurupa Valley currently (January 2016) has 776 active code enforcement cases dealing with housing conditions and/or safety issues, and the City has closed 815 such cases since incorporation. Therefore, as a general estimate, less than 0.5% of the City's housing stock (or approximately 1,300 units) may be considered substandard in the City.

Housing Costs and Affordability

Home Prices and Rents

Realtor.com® was used to provide housing market data for Jurupa Valley. This information is sourced daily from listings and property data on the realtor.com website, which includes an up-to-date and accurate aggregation of real estate listings from approximately 800 regional listings from Multiple Listing Service (MLS). According to realtor.com, in November 2015, the average home listing price in Jurupa Valley was \$379,000. The average selling price for homes in the City was slightly lower at \$343,500. These figures are based on the City's 24,412 property records and a realtor.com search of 510 listings of recently sold homes and 293 listings of homes available for sale.

Information on current rental rates in the City was obtained through a review of advertisements on Craigslist during October 2015. Available rental housing ranged from single-room studios to four- or more bedroom units. Most of the available units in the City were two-bedroom, three-bedroom, and four-bedroom units. *Table 5.27* summarizes average rents by unit size. Overall, 81 units of varying sizes were listed as available for rent in October 2015 with an average rent of \$1,517.

Table 5.27: Average Rent by Unit Size

| Studio | 1-Bedroom | 2-Bedroom | 3-Bedroom | 4+ Bedroom |
|--------|-----------|-----------|-----------|------------|
| \$808 | \$1,146 | \$1,203 | \$1,694 | \$1,943 |

Source: www.craigslist.org, accessed October 16, 2015

Affordability Gap Analysis

To determine overall housing affordability, the costs of homeownership and renting are compared to a household's ability to pay these costs. Housing affordability is defined as spending no more than 30% to 35% of gross household income (depending on tenure and income level) on housing expenses. Table 5.28 summarizes affordable rents and purchase prices by income category based on the 2015 HCD median income of \$65,000 for Riverside County. General cost assumptions for utilities, taxes, and property insurance are shown. Affordable purchase price assumes a 4% interest rate with a 30-year fixed rate mortgage loan and a 10% down payment. Given the need for a down payment and the high costs of homeownership, lower income households lacking sufficient savings or transferable equity must usually occupy rental housing. The affordability problem also persists in the rental market. The situation is exacerbated for large households and seniors with lower and moderate incomes given the limited supply of large units.

Table 5.28: Housing Affordability Matrix, Riverside County (2015)

| | | Affordable Monthly Housing Costs | | Utilities | | Taxes and Ins. | Maximum Affordable Price | |
|----------------------------------|---------------|----------------------------------|---------|-----------|-------|----------------|--------------------------|-----------|

I. EXISTING HOUSING NEEDS

This section provides an overview of existing housing needs in Jurupa Valley. It focuses on four types of housing need:

- Housing need resulting from housing cost burden;
- Housing need resulting from overcrowding;
- Housing need resulting from population growth; and,
- Housing needs of special needs groups such as elderly persons, large households, persons with disabilities, female-headed households, homeless persons, and farm workers.

Housing Cost Burden

Housing cost burden is generally defined as households paying more than 30% of their gross income on housing-related expenses, including rent or mortgage payments and utilities. High housing costs can cause households to spend a disproportionate percentage of their income on housing. This may result in payment problems, deferred maintenance, or overcrowding.

This section uses data from the Comprehensive Housing Affordability Strategy (CHAS) provided by HUD. The CHAS provides information related to households with housing problems, including cost burden, overcrowding, and/or without complete kitchen facilities and plumbing systems. The most recent estimates are derived from the 2008-2012 ACS and include a variety of housing need variables, further broken down by HUD-defined income limits and HUD-specified housing types. It should be noted that HUD-defined income limits differ slightly from the income limits established by the state, as shown in *Table 5.29*.

Table 5.29: Income Limits

| HUD Income Limits | State HCD Income Limits |
|---|-----------------------------------|
| Extremely Low Income (0-30% AMI) | Extremely Low Income (0-30% AMI) |
| Very Low Income (31-50% AMI) | Very Low (31-50% AMI) |
| Low Income (51-80% AMI) | Low Income (51-80% AMI) |
| Moderate/Above Moderate Income (81%+ AMI) | Moderate Income (81-120% AMI) |
| | Above Moderate Income (>120% AMI) |

Source: U.S. Department of Housing and Urban Development, 2015; Department of Housing and Community Development, 2015.

Overcrowding

Dwelling units with more than 1.5 persons per room are considered overcrowded. Overcrowding increases health and safety concerns and stresses the condition of the housing stock and infrastructure. Overcrowding is strongly related to household size, particularly for large households and especially very large households and the availability of suitably sized housing. Overcrowding impacts owners

and renters; however, renters are generally more significantly impacted. Some households may not be financially able to purchase adequately-sized housing and may instead accept smaller housing or reside with other individuals or families in the same home in an effort to lower costs.

Household overcrowding reflects various living situations: 1) a family lives in a home that is too small; 2) a family chooses to house extended family members; or 3) unrelated individuals or families are “doubling up” to afford housing. However, cultural differences also contribute to the overcrowded conditions. Some cultures tend to have larger household sizes than others do, due to the preference of sharing living quarters with extended family members as a way of sharing living costs among family members. Overcrowding can strain physical facilities and the delivery of public services, reduce the quality of the physical environment, contribute to a shortage of parking, and accelerate the deterioration of homes and neighborhoods.

Approximately 11% of all households in Jurupa Valley were overcrowded, and 6% were severely overcrowded, according to the 2009-2013 ACS. As shown in *Table 5.30*, overcrowding is significantly more common among the City’s renter-households than owner-households. By comparison, the incidence of overcrowding in Riverside County is much lower.

Table 5.30: Overcrowding by Tenure, Percent of Total Households

| | Overcrowded (1+ occupants per room) | | | Severely Overcrowded (1.5+ occupants per room) | | |

Projected Housing Needs – 2014-2021

The State of California determines the housing need for the counties that make up the Southern California Association of Governments (SCAG) region. SCAG is responsible for allocating housing needs to each jurisdiction in its region. A local jurisdiction’s share of regional housing need is the number of additional housing units needed to accommodate the forecasted growth in the number of households, to replace expected demolitions and conversion of housing units to non-housing uses, and to achieve a future vacancy rate that allows for healthy functioning of the housing market. The allocation is divided into the four income categories addressed in the RHNA: Very Low, Low, Moderate, and Above Moderate. The allocation is further adjusted to avoid an

over-concentration of lower income households in any one jurisdiction. *Table 5.31* shows the Regional Housing Needs Allocation (RHNA) for the City of Jurupa Valley, as determined by SCAG. This RHNA covers a planning period of January 1, 2014 through October 31, 2021.

Table 5.31: Regional Housing Needs Allocation (2014-2021)

| | Total Construc- tion Need ² | Extremely Low Income ¹ | Very Low Income | Low Income | Moderate Income | Above- Moderate Income |
|---|--|---|--------------------|---------------|--------------------|------------------------------|
| Number of Housing Units ² | 1,712 | 204 | 205 | 275 | 307 | 721 |

¹The City's RHNA allocation for very low-income units is 409 units; this allocation is evenly split between extremely low and very low income groups.

²Jurupa Valley: SCAG RHNA available at the city level

Source: Regional Housing Needs Allocation, SCAG 5th Cycle RHNA Allocation Plan

Special Needs Groups

Certain households, because of their special characteristics and needs, may require special accommodations and may have difficulty finding housing due to special needs. Special needs groups include seniors, persons with disabilities, families with children, single-parent households, large households, homeless persons and persons at-risk of homelessness, farm workers, and persons with HIV/AIDS.

Seniors

Seniors (persons age 65 and above) are gradually becoming a more substantial segment of a community's population. Americans are living longer and having fuller lives than ever before in our history and are expected to continue to do so. Elderly persons are vulnerable to housing problems due to limited income, prevalence of physical or mental disabilities, limited mobility, and high health care costs. The elderly, particularly those with disabilities, may face increased difficulty in finding housing accommodations. A senior on a fixed income can face great difficulty finding safe and affordable housing. Subsidized housing and federal housing assistance programs are increasingly challenging to secure and often involve a long waiting list.

According to the 2010 Census, about 8% of all residents in Jurupa Valley were age 65 or older, 23% of the City's households included at least one elderly member (*Table 5.2*, page [5-12](#)) and 18% of households were headed by a senior resident. Between 2009 and 2013, a little over 11% of all seniors in Jurupa Valley were living in poverty. The 2009-2013 ACS also estimated that about 16% of Jurupa Valley's elderly population had at least one disability and 25% had two or more disabilities, as shown in *Table 5.32*. This is comparable to the elderly population in the County (16%) and the

Figure 5-7: Senior housing, Country Village Apartments, Jurupa Valley

state (15%) with one disability; and similar to the elderly population in the County (20%) and State (22%) that report two or more disabilities.

Table 5.32: Elderly with Disabilities Limiting Independent Living, 2000 and 2009-2013

| Disability Status | 2000 | | 2009-2013 ² | |
|--------------------------------------|--------------------|-----------------|------------------------|-----------------|
| | Total ³ | % of People 65+ | Total ⁴ | % of People 65+ |
| With one type of disability | 1,356 | 23.1 | 1,218 | 16.0 |
| With two or more types of disability | 967 | 16.5 | 1,894 | 24.9 |
| Total with a disability | 2,323 | 39.6 | 3,112 | 40.9 |

Source: Bureau of the Census 2000 (PCT 26-SF3); ACS 2009-2013 (C18108).

Table 5.33 summarizes the 2007-2011 ACS estimates of median household incomes for senior householders in the various CDPs comprising Jurupa Valley. Generally, the median income for a senior household was about one-third of that for an average household (**Table 5.16**), except within Crestmore Heights, where the senior household median income was nearly double that of an average household in most of Jurupa Valley. Data from the County's 2008-2012 Comprehensive Housing Affordability Strategy (CHAS) supports the information presented below. According to CHAS, in Jurupa Valley 70% of elderly, renter-occupied households and 38% of elderly owner-occupied households suffered from housing cost burden (i.e., total housing costs exceeded 30% of total income). Similarly, in the County, 62% of elderly-renter occupied households and 36% of elderly owner-occupied households suffered from housing cost burden. Furthermore, the majority of elderly headed households in both Jurupa Valley and Riverside County were homeowners. Many may need financial assistance in making necessary repairs or accessibility improvements.

Resources

The Riverside County Office on Aging is a planning and advocacy entity that serves as the official Area Agency on Aging (AAA) throughout Riverside County. It is charged to provide leadership in developing a system of care services for older persons and adults with disabilities in the County. Area Agencies on Aging (AAAs) are local aging programs that provide information and services on a

range of assistance for older adults and those who care for them. Some of the programs and services provided by AAA include:

- Aging and Disability Resource Connection Program
- Care Coordination
- Caregiving
- Care Transitions Intervention (CTI)
- Community Outreach and Education
- Legal Assistance
- Transportation

Some senior programs in the City of Jurupa Valley have been offered in partnership with Jurupa Valley Adopt a Family program, a community-based 501(c)(3) organization, and Healthy Jurupa Valley. Services and programs provided include assistance to senior households during the holiday seasons, and workshops catering to senior residents; recent workshop topics include returning to work after retirement. Through Healthy Jurupa Valley, seniors are also invited to attend senior health fairs. Additionally, the Jurupa Community Services District Recreation and Parks Department provides a Senior Mentoring Program that focuses on providing enrichment and/or general assistance to senior citizens, including assistance with everyday tasks and exposing seniors to new activities.

Seniors in Jurupa Valley may also benefit from programs offered through the County of Riverside Economic Development Agency (EDA). Through the Senior Home Repair Grant (SHRG) Program, EDA may be able to cover up to \$6,000 of cost of repairs with no loan or payback requirement.

In terms of affordable housing resources, there are 357 affordable rental units in 4 rental properties throughout Jurupa Valley that are restricted for seniors, with renter qualifications not to exceed anywhere from 50% to 80% of median income. In addition to the senior housing developments listed in *Table 5.35*, seniors in the City are also served by 11 state-licensed residential care facilities for the elderly and 15 adult residential facilities with a combined capacity to serve 379 persons. In addition, Country Village Apartments provides 1,238 senior apartments, with rents affordable to low- and moderate income households.

Table 5.35: Senior Housing Development

Persons with Disabilities

Federal laws define a person with a disability as “any person who has a physical or mental impairment that substantially limits one or more major life activities; has a record of such impairment; or is regarded as having such impairment.” In general, a physical or mental impairment includes hearing, mobility and visual impairments, chronic alcoholism, chronic mental illness, AIDS, AIDS Related Complex, and mental retardation that substantially limit one or more major life activities. Major life activities include walking, talking, and hearing, seeing, breathing, learning, performing manual tasks, and caring for oneself.

The U.S. Census Bureau classifies disabilities into the following categories:

- **Hearing difficulty:** Deaf or having serious difficulty hearing
- **Vision difficulty:** Blind or having serious difficulty seeing, even when wearing glasses
- **Cognitive difficulty:** Because of a physical, mental, or emotional problem, having difficulty remembering, concentrating, or making decisions
- **Ambulatory difficulty:** Having serious difficulty walking or climbing stairs
- **Self-care difficulty:** Having difficulty bathing or dressing
- **Independent living difficulty:** Because of a physical, mental, or emotional problem, having difficulty doing errands alone such as visiting a doctor’s office or shopping

According to the 2009-2013 ACS, approximately 11% of the Jurupa Valley population had one or more disabilities. Of the disabilities tallied during that time, as shown in *Table 5.36*, ambulatory and cognitive disabilities were the most prevalent. The City’s elderly population, in particular, seemed to be the most affected by disabilities with about 41% of Jurupa Valley seniors affected by at least one disability.

*Figure 5-8: Dwelling with universal access design*

Jurupa Valley: 2009-2013 ACS data aggregated at the census tract level.

*Tallied only for persons 18 years and over

Source: American Community Survey (ACS), 2009-2013, (S1810).

The City's homeless population also appeared to be disproportionately affected by disabilities and health issues. The County of Riverside's 2015 Point-In-Time Homeless Report found that 29% of Jurupa Valley's homeless had a physical disability, 34% reported a mental illness, 48% had a substance abuse disorder, and 27% reported a chronic health condition. Among those persons who are marginally housed, dual diagnoses have been noted as a problem, i.e., cognitive difficulty connected to chemical dependency/addiction.

The elderly population is expected to grow substantially in the next 20 years. Since seniors have a much higher probability of being disabled, the housing and service needs for persons with disabilities should grow considerably commensurate with senior population growth. Special housing needs for persons with disabilities fall into two general categories: physical design to address mobility impairments; and in-home social, educational, and medical support to address developmental and mental impairments.

Persons with Developmental Disabilities

As defined by state law, "developmental disability" means a severe, chronic disability of an individual who:

- Is attributable to a mental or physical impairment or combination of mental and physical impairments;
- Is manifested before the individual attains age 18;
- Is likely to continue indefinitely;
- Results in substantial functional limitations in three or more of the following areas of major life activity: a) self-care; b) receptive and expressive language; c) learning; d) mobility; e) self-direction; f) capacity for independent living; or g) economic self-sufficiency; and
- Reflects the individual's need for a combination and sequence of special, interdisciplinary, or generic services,

individualized supports, or other forms of assistance that are of lifelong or extended duration and are individually planned and coordinated.

The Census does not record developmental disabilities. According to the U.S. Administration on Developmental Disabilities, an accepted estimate of the percentage of the population that can be defined as developmentally disabled is 1.5%. This equates to approximately 1,407 persons in the City of Jurupa Valley, based on the 2010 Census population.

The Inland Regional Center is a community-based, private nonprofit corporation funded by the State of California to serve people with developmental disabilities, as required by the Lanterman Developmental Disabilities Services Act (aka Lanterman Act). The Lanterman Act is part of California law that sets out the rights and responsibilities of persons with developmental disabilities. The Inland Regional Center is one of 21 regional centers throughout California and serves individuals and their families who reside within Riverside County. The Regional Center provides diagnoses and assessments of eligibility, and helps plan, access, coordinate, and monitor the services and supports that are needed because of a developmental disability. As of September 2015, the Regional Center had over 3,200 clients living in Jurupa Valley. Among these clients, approximately 74% are residing at home with other family members or guardians. Only about 5% are living independently, and another 12% are in community care facilities.

Resources

A number of non-profit agencies provide supportive services to persons with disabilities living in Jurupa Valley. ARC of Riverside County is a private, non-profit corporation serving adults with intellectual and other developmental disabilities. ARC operates six facilities in Western Riverside County providing services for those in need of full-time programming to ensure the development and maintenance of functional skills required for self-advocacy, community integration, and self-care. In addition, the Community Access Center (CAC), an independent living center located in the City of Riverside, has been providing services to people with disabilities in the County since 1995. CAC provides information, supportive services, and independent living skills training.

Families with Children and Single Parent Households

According to the 2010 Census, approximately 41% of all households in Jurupa Valley have children under the age of 18, as shown in *Table 5.13* (page [5-38](#)). Single-parent households often require special consideration and assistance because of their greater need for affordable housing, as well as accessible daycare, health care, and other supportive services. Due to their generally lower income and higher living expenses such as daycare, single-parent households have limited opportunities for finding affordable, decent, and safe housing.

In 2010, approximately 2,705 single-parent households resided within Jurupa Valley, representing 11% of the City's households. An estimated 62% (1,684 households) of these single-parent households with children under age 18 were headed by females, representing approximately 7% of all households in the City. Of particular concern are single-parent households with lower incomes. The 2011-2013 ACS shows that approximately 33% (727 households) of the City's female-headed households with children had incomes below the poverty level. By comparison, about 13% of all households had incomes below the poverty level.

Resources

Limited household income constrains the ability of single-parent households to afford adequate housing, childcare, health care, and other necessities. Several agencies that serve Jurupa Valley residents offer various programs for families with children. The Jurupa Community Services District's Parks and Recreation Department offers programs and recreational classes for the City's youth, including health fairs, youth sports, special events, help with homework, and volunteer programs. Additional community and family resources are available through Healthy Jurupa Valley, as part of a national Healthy Cities movement to improve the health and quality of life for City residents. Healthy Jurupa Valley efforts are carried out through Action Teams, including the Jurupa Valley Family Resource Network, and include the organization of special community events such as the Healthy Jurupa Valley Extravaganza Health Fair that provides access to community services and children activities.

Single-parent households in Jurupa Valley can also benefit from general programs and services for lower-and moderate-income persons, including the Housing Authority of the County of Riverside Housing Choice Voucher and Public Housing programs, the County of Riverside Economic Development Agency's (EDA) First Time Homebuyer and Home Repair Loan Program (HRLP) Programs, and

various community and social services provided by non-profit organizations in the region such as the Food Bank.

Large Households

Large households are defined as those with five or more members. These households are usually families with two or more children or families with extended family members such as in-laws or grandparents. It can also include multiple families living in one housing unit to save on housing costs. Large households are a special needs group because the availability of adequately sized, affordable housing units is often limited. To save for necessities such as food, clothing, and medical care, lower- and moderate-income large households may reside in smaller units, resulting in overcrowding.

As indicated in *Table 5.11* (page [5-37](#)), in 2010, 33% of all households in Jurupa Valley had five or more members. The proportion of large households in Jurupa Valley was higher than in the County (21%). Generally, areas with higher proportions of large households also tend to have a high proportion of family households and non-White populations, and have higher rates of overcrowding and cost burden. Cultural differences can also contribute to overcrowded conditions. Some cultures tend to have larger households or more open attitudes about intergenerational living, shared costs, and living arrangements, even in small housing units. In addition, recently arrived immigrants may stay with relatives on a temporary basis until they are established.

Figure 5-9: Large families and multi-generational households

Table 5.37: Large Households by Tenure (2010)

| Number of Persons in Unit | Owner Occupied | Renter Occupied | Total |
|-----------------------------|----------------|-----------------|--------|

Jurupa Valley: 2010 Census data aggregated at the census tract level.
Source: U.S. Census 2010 (QT-H2)

Resources

Large households in Jurupa Valley can benefit from general programs and services for lower-and moderate-income persons, including The Housing Authority of the County of Riverside Housing Choice Voucher and Public Housing programs, the County of Riverside Economic Development Agency's (EDA) First Time Home Buyer (FTHB) and Home Repair Loan Program (HRLP) Programs, and various community and social services provided by non-profit organizations in the region.

Figure 5-10: Jurupa Valley homeless camp

Homeless Persons

On January 4, 2012, final regulations went into effect to implement changes to the U.S. Department of Housing and Urban Development's (HUD) definition of homelessness contained in the Homeless Emergency Assistance and Rapid Transition to Housing (HEARTH) Act. The definition affects who is eligible for various HUD-funded homeless assistance programs. The new definition includes four broad categories of homelessness:

- People who are living in a place not meant for human habitation, in emergency shelter, in transitional housing, or who are exiting an institution where they temporarily resided.
- People who are losing their primary nighttime residence, which may include a motel or hotel or a doubled up situation, within 14 days and lack resources or support networks to remain in housing.
- Families with children or unaccompanied youth who are unstably housed and likely to continue in that state.
- People who are fleeing or attempting to flee domestic violence, have no other residence, and lack the resources or support networks to obtain other permanent housing.

This definition demonstrates the diversity of people experiencing homelessness. The numerous locations in which people experiencing homelessness can be found complicate efforts to accurately estimate their total population. For example, an individual living with friends on a temporary basis could be experiencing homelessness, but would be unlikely to be identified in a homeless count.

The most recent point-in-time count conducted in 2015 identified 168 unsheltered homeless individuals in the City of Jurupa Valley. This figure is three times higher than the 2013 estimate and makes up about 11% of the total homeless population for Riverside County, as shown in *Table 5.38*. The point-in-time count is a snapshot of how many homeless people are on streets and in emergency and transitional shelters on any given day in Riverside County and Jurupa Valley, although numbers can vary significantly by season.

Table 5.38: Homeless Population in Jurupa Valley and Riverside County, 2011-2015

| | Unsheltered | Sheltered | Total |
|-------------------------|-------------|-----------|-------|

Resources

The resources and services described in *Table 5.39* serve low income and special needs populations in Jurupa Valley—not just the homeless. While some of the programs and services identified below are not located within the City’s boundaries, the services they provide are available to persons residing in Jurupa Valley.

Farm Workers

As traditionally defined, farm workers are persons whose primary incomes are earned through permanent or seasonal agricultural labor. Permanent farm workers tend to work in fields or processing plants. During harvest periods when workloads increase, the need to supplement the permanent labor force is satisfied with seasonal workers. Often these seasonal workers are migrant workers, defined by the inability to return to their primary residence at the end of the workday. The agricultural workforce in Riverside County does many jobs, including weeding, thinning, planting, pruning, irrigation, tractor work, pesticide applications, harvesting, transportation to the cooler or market, and a variety of jobs at packing and processing facilities, as described in *Table 5.40*. Much of this employment is located in eastern and southern portions of Riverside County.

Jurupa Valley was once primarily a farming area, with dairies, orchards, row crops, and small farms. With urbanization, most agricultural uses have moved out of the City and therefore, agricultural employment within the City of Jurupa Valley is minimal. According to the 2014 American Fact Finder, only about one-tenth of 1% of the City’s civilian workforce (or 390 persons) works in agriculture and related occupations. It follows that few farm workers live and work in the City.

Table 5.39: Homeless Population Resources

| Agency/Program | Description | Location |
|--|---|---|
| Emergency Shelter | | |
| Path of Life Ministries - Community Shelter Program | An emergency homeless shelter that serves adults by providing temporary housing along with assistance in obtaining important documents, job readiness, computer workshops, counseling, meals, hygiene supplies and various other forms of support. This program provides beds for up to 64 qualified single men and women. | 2840 Hulen Place Riverside, CA 92507 |
| Path of Life Ministries - Family Shelter Program | This program is offered to single parents with children, couples with children and single women. Support services focus on rapid re-housing, employment and increased income. It is a dormitory setting with 50 beds. | 2530 Third Street Riverside, CA 92507 |
| Path of Life Ministries - Emergency Cold Weather Shelter | The Path of Life Community Emergency Shelter provides an additional 72 beds from December to mid-April. These beds are provided on a night-by-night basis under the federal cold weather shelter initiative in cooperation with the County of Riverside. | 6216 Brockton Avenue, #211 Riverside, CA 92506 |
| Community Kitchens | | |
| Calvary Chapel | Food assistance is provided on the 1st and 3rd Sunday of every month. | 5383 Martin Street Jurupa Valley, CA 95168-11092 |
| Eagle Food Ministries | Provides food boxes for individuals and families on Thursdays. | 5410 Beach Street Riverside, CA 92509 |
| Manna Ministries | Food assistance is provided on the 1st and 3rd Sunday of every month. | 4318 Pyrite Street Jurupa Valley, CA 92509 |
| Rubidoux Missionary Baptist Church | Groceries are provided to families and individuals on the 2nd and 4th Saturday of each month. | 2890 Rubidoux Blvd. Jurupa Valley, CA 92509 |
| Jurupa Valley Community Resource Center | Provides groceries and food, and also provides referrals to resources such as thrift stores, clothing etc. | 5473 Mission Blvd. Rubidoux, CA |
| Transitional Housing | | |
| The Place | Jefferson Transitional Programs (JTP) is a non-profit 501c3 offering vocational, supported living, and educational programs for individuals with chronic mental illness and/or addictions. | 3839 Brockton Avenue Riverside, CA 92501 |
| Safe House Transitional Living | A 15-bed apartment complex in downtown Riverside. Services are available to older homeless youth ages 18-22 for up to 18-months. Five apartments are set aside for Permanent Supportive Housing for youth ages 18-24. | 9685 Hayes Street Riverside, CA 92503 |
| Permanent Supportive Housing | | |
| Path of Life Ministries | Provides immediate housing to chronically homeless individuals and some families, in scattered privately owned homes and apartments throughout Riverside County. | 6216 Brockton Avenue, #211 Riverside, CA 92506 |
| Rental and Support Services | | |
| Path of Life Ministries | <u>Rapid-Rehousing Program:</u> provides assistance for the most immediate housing possible for homeless families with children and provides temporary rental subsidies. <u>Rental Assistance Program:</u> when available, provides one-time rental assistance (up to \$1000.00) to those exiting from homelessness or at risk of becoming homeless. | 6216 Brockton Avenue, #211 Riverside, CA 92506 |
| Foothill AIDS Project | Provides housing assistance, including help in locating and paying for emergency, transitional, or permanent housing, funds for paying rent, mortgage, and utility assistance. Referrals are available to other government and private subsidized housing programs and the state's homeless prevention program. | 3576 Arlington Avenue, #206 Riverside, CA, 92506 |

DRAFT

Housing

| Agency/Program | Description | Location |
|------------------------------------|---|--|
| Inland Empire Veterans Stand Down | Reunites homeless veterans with their families and communities through restorative resources and services. Some services provided include VA Claim assistance, legal clinics/seminars, transportation, food, blankets/sleeping bags, and care counseling. | 6185 Magnolia Avenue, # 338 Riverside, CA 92506 |
| Disabled American Veterans Charity | Provides free, professional assistance to veterans and their families in obtaining benefits and services. | 4351 University Avenue Riverside, CA 92501 |
| Lutheran Social Services | Some emergency services provided include food pantry, grocery packs, clothes, lunches, motel vouchers, eviction prevention, and rental assistance. | 3772 Taft Street Riverside, CA 92503 |

Source: City of Jurupa Valley, 2015

In addition, the City's housing costs are generally lower than surrounding, more urbanized communities such as the cities of Riverside, Eastvale, and Fontana; hence, the City's housing stock already provides a substantial portion of the area's affordable housing needs, including what little need for farm worker housing still exists. Most of the County's agricultural employment is located in unincorporated areas in central and southeastern Riverside County.

Table 5.40: Farm Worker Employment Profile, Riverside-San Bernardino-Ontario Metropolitan Statistical Area (MSA)

| Occupation Title | Employment | Mean Hourly Wage | Annual Mean Wage |
|--|------------|------------------|------------------|
| Farming, Fishing, and Forestry Occupations | 5,410 | \$10.30 | \$21,410 |
| First-Line Supervisors of Farming, Fishing, and Forestry Workers | 170 | \$19.78 | \$41,150 |
| Agricultural Inspectors | 100 | \$24.98 | \$51,950 |
| Graders and Sorters, Agricultural Products | 340 | \$8.90 | \$18,520 |
| Agricultural Equipment Operators | 210 | \$11.70 | \$24,330 |
| Farm workers and Laborers, Crop, Nursery, and Greenhouse | 4,320 | \$9.41 | \$19,570 |

Resources

A number of service providers in Riverside County provide assistance and services to farmworkers. The Family Resource Center Program at Mecca Family and Farm Workers Service Center (91-275 66th Avenue, Suite 100, Mecca, CA 92254) provides seven core service types: parenting skills, self-sufficiency, community action, child-abuse prevention services, information and referral services, education and literacy, and life skills. There are also two farm worker housing projects located in Riverside County: Chapultepec Apartments (62-600 Lincoln Street, Mecca, CA 92254; 31 units) and Las Mañanitas (91-200 Avenue 63 Mecca, CA 92254; 128 beds).

Publicly Assisted Housing

The availability and location of publicly assisted housing may be a fair housing concern. If such housing is concentrated in one area of a community or of a region, a household seeking affordable housing is limited to choices within the area. In addition, public/assisted housing and Housing Choice Voucher (Section 8) assistance should be accessible to qualified households regardless of race/ethnicity, disability, or other protected class status.

Public Housing

The Housing Authority of the County of Riverside (HACR) owns and operates 38 conventional public housing units in Jurupa Valley and a total of 469 units in Riverside County. Eligible residents must be seniors or disabled, or have an annual gross income at or below 80% of the AMI. As of October 2015, 38 Jurupa Valley households were living in public housing units managed by the HACR, and there were 1,443 Jurupa Valley households on the waiting list for public housing. However, HACR plans to convert the Public Housing units in Jurupa Valley to Project-Based Vouchers (PBV).

Housing Choice Vouchers Program

HACR administers the Housing Choice Voucher Program (HCV) for Jurupa Valley residents. As of October 2015, 359 Jurupa Valley households were receiving Housing Choice Vouchers. For the distribution of Voucher assistance within the City, HACR has established local preferences such as families who have lost HCVs due to funding cuts, working families, elderly or disabled, and veterans. As of October 2015, 381 households were on the waiting list for the HCV program.

As an extension of the HCV program, HARC assists eligible families who purchase a home by applying their existing HCV towards a monthly mortgage payment. Eligible families may qualify for a maximum period of 10 or 15 years (depending on the mortgage terms).

Other Affordable Housing Developments

Housing developments utilizing federal, state, and/or local programs, including state and local bond programs, Low-Income Housing Tax Credits (LIHTC), density bonus, or direct assistance programs, are often restricted for use as low-income housing and provide another source of affordable housing for a jurisdiction. *Table 5.41* summarizes housing developments in Jurupa Valley in which some or all of the units are designated as affordable for low to moderate-income households. Together these projects provide 382 units of affordable housing.

Table 5.41: Non-Public Housing Affordable Units in Jurupa Valley

| Property Name | Property Address | Funding Source | Unit Size | Total Affordable Units | Total Project Units | Expiration of Affordability |
|---|---|-------------------------|------------------------------------|------------------------|---------------------|-----------------------------|

Units at Risk of Converting to Market-Rate Housing

Projects at Risk

State law requires that the City identify, analyze, and propose programs to preserve existing multi-family rental units that are eligible to convert to non-low-income housing uses due to termination of subsidy contract, mortgage prepayment, or expiring use restrictions during the next ten years. Thus, this at-risk housing analysis covers a ten-year period from October 15, 2013 and October 15, 2023 (ten years from the statutory deadline of the Housing Element). Consistent with state law, this section identifies publicly assisted housing units in Jurupa Valley, analyzes their potential to convert to market rate housing uses, and analyzes the cost to preserve or replace those units.

Within the at-risk analysis period, only one project is considered to be at-risk of converting to market-rate housing—54-unit Mission Villas senior housing, funded with Section 202 financing and Section 8 project-based rent subsidies. The Section 8 contract for Mission Villas is due to expire on January 31, 2018. However, HUD has prioritized funding for Section 8 renewals for senior housing projects (Section 202) and therefore, this project is at low risk of converting to market-rate housing.

Preservation and Replacement Options

To preserve the existing affordable housing stock, the City must either preserve the existing assisted units or facilitate the development of new units. Depending on the circumstances of the at-risk projects, different options may be used to preserve or replace the units. Preservation options typically include: 1) transfer of project to nonprofit ownership; 2) provision of rental assistance to tenants; and 3) purchase of affordability covenants. For example, CDBG and HOME funds may be used to acquire and rehabilitate the affordable units in exchange for an extended affordability covenant on the assisted units. In terms of replacement, the most direct option is the development of new assisted multi-family housing units. These options are described below. Due to the City's significant financial constraints, all options would require a collaborative effort between the City and the Riverside County Housing Authority or nonprofit housing agency to pursue.

1. Transfer of Ownership

Transferring ownership of an at-risk project to a nonprofit housing provider is generally one of the least costly ways to ensure that the at-risk units remain affordable for the long term. Transferring property ownership to a nonprofit organization would secure low-income restrictions, and the project would become potentially eligible for a greater range of governmental assistance. Mission Villas is Section 202 senior housing project, which is nonprofit-owned. Therefore, transferring ownership to another nonprofit is not a necessary preservation option.

2. Rental Assistance

Table 5.42 shows rental subsidies required for a typical 25 unit below-market apartment project in Jurupa Valley in 2015. Rental subsidies can be used to maintain affordability of the 54 at-risk affordable units at Mission Villas. All 54 units are one-bedroom assisted living units for seniors. Should the Section 8 contract not be renewed, other funding sources could be used to structure the rent subsidies to reflect the Section 8 program. According to HUD records, the units at Mission Villas are renting at \$676 monthly, significantly below Fair Market Rents for comparable units. Should these units convert to market rate, the tenants should expect to pay at least \$908 per month, resulting in an affordability gap of \$232. As indicated in *Table 5.42*, the total cost of subsidizing the rents of all 54 at-risk units is estimated at \$12,528 per month or \$150,336 annually. Providing this level of subsidies for at least 55 years would require over \$17 million, assuming an annual inflation rate of 2.5% over 55 years. The feasibility of this alternative is highly dependent upon the availability of reliable funding sources necessary to make

rent subsidies and the willingness of property owners to participate in the program.

Table 5.42: Rental Subsidies Required

| Unit Size | Total Units | Fair Market Rent ¹ | Household Size | Contract Rent ² | Monthly per Unit Subsidy | Total Monthly Subsidy |
|-----------|-------------|-------------------------------|----------------|----------------------------|--------------------------|-----------------------|
| 1-bedroom | 25 | \$908 | 1 | \$676 | \$232 | \$12,528 |

¹Fair Market Rent (FMR) is determined by HUD, 2015.

²2015 contract rent for unit at Mission Villas per HUD records.

3. Purchase of Affordability Covenants

Another option to preserve the affordability of the at-risk project is to work with Riverside County's Housing Authority or nonprofit housing agencies and developers to provide incentives to the property owner to maintain the project as affordable housing. Incentives could include writing down the interest rate on the remaining loan balance, providing a lump-sum payment, and/or supplementing the rents to market levels. The feasibility of this option depends on whether the complex has a high level of debt-to-equity ratio. By providing lump sum financial incentives or ongoing subsidies in rents or reduced mortgage interest rates to the owner, the City can ensure that some or all of the units remain affordable. Funding available for purchase of affordability covenants is also limited. Typically, HUD funds cannot be used for this purpose.

4. Construction of Replacement Units

The construction of new low-income housing units is a means of replacing the at-risk units if they are converted to market-rate units and is eligible for HUD funds. The cost of developing housing depends upon a variety of factors, including density, size of the units (i.e., square footage and number of bedrooms), location, land costs, and type of construction. Assuming an average construction cost of approximately \$150,000 per unit, it would cost over \$8.1 million (excluding land costs) to construct 54 new assisted units. Including land costs, the total cost to develop replacement units would be higher.

5. Cost Comparisons

The above analysis attempts to estimate the cost of preserving the at-risk units under various options. These cost estimates are general estimates and are intended to demonstrate only the relative magnitude of funding required. Actual costs of preservation would depend on the individual circumstances of the at-risk property and market conditions at the time.

The transferring of ownership of the at-risk units to a nonprofit housing organization is not an effective option, since Mission Villas is already nonprofit-owned. The annual costs of providing rental subsidies to preserve the 54 assisted units are relatively low (\$150,336); however, long-term provision of rental subsidies for at least 55 years would cost over \$17 million. New construction of 54 replacement units has highest upfront costs (\$8 million, excluding land costs) but the new units would typically be subject to long-term affordability restrictions and high housing quality standards. In evaluating the various options, the City or the responsible housing agency must consider the available funding sources and the willingness of property owners to participate in preservation, among other factors. With the dissolution of redevelopment in California and as a “young” city, Jurupa Valley has virtually no financial capacity to support affordable housing development. The City is struggling to maintain economic stability given the loss of state pass-thru and tax increment funds.

J. HOUSING CONSTRAINTS

Governmental Constraints

Governmental constraints are policies, standards, requirements, and actions imposed by the government that affect the development and provision of housing. These constraints may include building codes, land use controls, growth management measures, development fees, processing and permit procedures, and site improvement costs. State and federal agencies play a role in the imposition of governmental constraints; however, these agencies are beyond the influence of local government and are therefore not addressed in this analysis.

Land Use Element

The Land Use Element of a General Plan designates the general distribution, location, and extent of uses for land planned for housing, business, industry, open space, and public or community facilities. As it applies to housing, the Land Use Element establishes a range of residential land use categories, specifies densities (typically expressed as dwelling units per acre), and suggests the types and locations of housing appropriate in a community. Residential development is implemented through the zoning districts, use classifications, development regulations, and design standards specified in the jurisdiction’s zoning code.

The City of Jurupa Valley adopted the County of Riverside General Plan upon the City’s incorporation in 2011. In 2016, the City is preparing its first General Plan. The Plan is considered “interim” in

recognition of the fact that it is a focused General Plan update intended to meet community needs until the City's budget allows a more extensive update. A series of eight public workshops on community planning issues and needs were held in January and February of 2015, and the City Council appointed a 31-member General Plan Advisory Committee (GPAC) that developed a Community Values Statement and identified Community Assets, Issues and Needs during public meetings held between January and December of 2015, and adoption of the General Plan is anticipated in early 2017.

The 2017 General Plan Land Use Element includes designating certain sites for medium, high, and highest density as a part of this process. Several such sites are shown on the 2011 Land Use Element as industrial and are located within existing residential neighborhoods. These changes to the Land Use Element facilitate residential development by removing the need for private developers to seek General Plan Amendments for several specific sites (*Figure LUE-11*), thus removing a potential barrier to housing production. Further, the City's initiative serves as an incentive to attract new multiple-family dwelling projects.

Types of Residential Communities

The governmental factor that most directly influences the types and character of residential communities, as well as market conditions, is the allowable density range of residentially designated land. In general, higher densities allow developers to take advantage of economies of scale, reduce the per-unit cost of land and improvements, and reduce developments costs associated with new housing construction. Reasonable density standards ensure the opportunity for higher-density residential uses to be developed within a community, increasing the feasibility of producing affordable housing, and offer a variety of housing options that meet the needs of the community.

Table 5.43 summarizes the City's 2017 2016 General Plan land use designations that will allow residential uses, as well as their permitted net densities (without density bonus). The 2017 2016 General Plan provides a range of densities for single-family (up to 14 units per acre) and multi-family (14-25 units per acre) housing development to accommodate a wide range of housing options. Maximum allowed densities are established for all residential designations and minimum "target" densities will strongly encourage that land zoned for multi-family use will be developed as efficiently as possible.

Table 5.43: 2016 Jurupa Valley General Plan Residential Land Use Designations

| Designation | Description | Permitted Density (du/acre) | |
|--|--|-----------------------------|--------------------|
| | | Minimum "Target" | Maximum Allowed |
| Rural Residential (RR) | <ul style="list-style-type: none"> Single-family detached residences on large parcels of at least 5 acres. | -- | 1 unit per 5 acres |
| Estate Density Residential (EDR) | <ul style="list-style-type: none"> Single-family detached residences on large parcels of at least 2 acres. | -- | 1 unit per 2 acres |
| Very Low Density Residential (VLDR) | <ul style="list-style-type: none"> Single-family detached residences on large parcels of 1 to 2 acres. | -- | 1 unit per 1 acre |
| Low Density Residential (LDR) | <ul style="list-style-type: none"> Single-family detached residences on large parcels of ½ to 1 acre. | -- | 1 unit per ½ acre |
| Medium Density Residential (MDR) | <ul style="list-style-type: none"> Single-family detached and attached residences with a density range of 2 to 5 dwelling units per acre. | 2 | 5 |
| Medium High Density Residential (MHDR) | <ul style="list-style-type: none"> Single-family attached and detached residences with a density range of 5 to 8 dwelling units per acre. | 5 | 8 |
| High Density Residential (HDR) | <ul style="list-style-type: none"> Single-family attached and detached residences, including townhouses, stacked flats, courtyard homes, patio homes, and zero lot line homes. | 8 | 14 |
| Very High Density Residential (VHDR) | <ul style="list-style-type: none"> Single-family attached residences and all types of multi-family dwellings. | 14 | 20 |
| Highest Density Residential (HHDR) | <ul style="list-style-type: none"> Multi-family dwellings, includes apartments and condominium. Multi-level (3+) structures are allowed. | 20 | 25 |
| Mixed Use Overlay (MU) | <ul style="list-style-type: none"> Allows a mix of residential, commercial, office and other compatible uses. Flexible residential density and development standards are applied to encourage compatible, attractive, high-quality development. | 8 | 20 |
| *Village Center Overlay (VCO) | <ul style="list-style-type: none"> Applied to three historic core areas, namely Rubidoux Village, Pedley Village, and Glen Avon Village. Promotes infill and improvement of established town centers a more urbanized, pedestrian-oriented mix of residential, commercial, office, entertainment, civic, transit, educational, and/or recreational uses, or other uses is encouraged. Special Design Guidelines apply to the Pedley, Rubidoux and Glen Avon Village Centers | 5 | 25 |

Zoning Code

The Zoning Code is the primary tool for implementing the General Plan Land Use and Housing elements. It is designed to protect and promote public health, safety and welfare, as well as to promote quality design and quality of life. The City of Jurupa Valley's residential zoning districts control both the use and development standards of each residential site or parcel, thereby influencing the location, design, quality, and cost of housing.

Variety of Housing Opportunity

The Zoning Code provides for a range of housing types, including single-family, multi-family, second dwelling units, manufactured homes, mobile home parks, licensed community care facilities, employee housing for seasonal or migrant workers as necessary, assisted living facilities, emergency shelters, supportive housing, transitional housing, and single room occupancy (SRO) units. *Table 5.44* summarizes the types of housing allowed by Jurupa Valley's Zoning Code to ensure a variety of housing opportunities continues to be available.

Single- and Multi-Family Uses

One-family dwellings are permitted uses in most residential zones. Multi-family dwellings are permitted in the R-4 zone, as well as the R-2, R-3, and R-6 zones with the approval of a Site Development Permit. The Site Development Permit process is a discretionary review process that differs from conditional use permit review in that it is strictly concerned with design and the application of conditions to address traffic safety, parking, noise and other standards, not land use or compatibility. Conditions of approval may be imposed that must be met prior to or concurrent with project development. However, Site Development Permits are less costly and processed more quickly than conditional use permits. Site Development Permits for residential projects are typically acted upon by the Planning Director and generally do not require Planning Commission approval, except for special cases such as cellular sites and detached accessory structures.

Second Dwelling Units

Second dwelling units are attached or detached dwelling units that provide complete independent living facilities for one or more persons, including permanent provisions for living, sleeping, cooking, and sanitation. Second dwelling units may be an alternative source of affordable housing for lower income households and seniors. These units typically rent for less than apartments of comparable size.

California law requires local jurisdictions to adopt ordinances that establish the conditions under which second dwelling units are permitted (*California Government Code*, §65852.2). A jurisdiction cannot adopt an ordinance that totally precludes the development of second dwelling units unless the ordinance contains findings acknowledging that allowing second dwelling units may limit housing opportunities of the region and result in adverse impacts on public health, safety, and welfare.

Notes: 1. Transitional and Supportive housing subject to same requirements that apply to standard residential uses.

2. Employee housing for six or fewer persons is treated as a single-family structure and residential use.

Source: City of Jurupa Valley Zoning Code, 2016

An amendment to the state's second unit law in 2003 requires local governments to use a ministerial, rather than discretionary process for approving second dwelling units and allows jurisdictions to count second dwelling units towards meeting their regional housing needs goals. A ministerial process is intended to reduce permit processing periods and development costs, because proposed second dwelling units that comply with local zoning regulations and standards can be approved without a public hearing.

Jurupa Valley permits second units on parcels that have at least one acre of usable land and that have a legal, single-family dwelling existing on the site, subject to additional development standards and the approval of a Second Unit Permit. Second Unit Permits are reviewed by the Planning Director and do not require discretionary review or a hearing.

Manufactured Housing

State law requires local governments to permit manufactured and mobile homes meeting federal safety and construction standards on a permanent foundation (and permanently connected to water and sewer utilities, where available), in all single-family residential zoning districts (§65852.3 of the *California Government Code*).

For purposes of permit issuance, Jurupa Valley permits mobile homes on a foundation system on all lots zoned to permit single-family dwellings. The installation of manufactured homes not on foundations is allowed whenever it is specifically provided for in the various zone classifications, and is subject to the requirements and standards set forth in those zones. A mobile home permitted in the R-R and R-A zones, however, is subject to additional development standards regarding minimum floor area and lot size. These requirements are standard for most California jurisdictions and are similar to those of Riverside County.

Residential Care Facilities

The Lanterman Developmental Disabilities Services Act (Sections 5115 and 5116 of the *California Welfare and Institutions Code*) declares that mentally and physically disabled persons are entitled to live in normal residential surroundings. The use of property for the care of six or fewer mentally disordered or otherwise handicapped persons is required by law. A state-authorized, certified, or authorized family care home, foster home, or group home serving six or fewer persons with disabilities or dependent and neglected children on a 24-hour-a-day basis is considered a residential use to be permitted in all residential zones. No local agency can impose stricter zoning or building and safety standards on these homes (commonly referred to as "group" homes) for six

or fewer persons than are required of other permitted residential uses in the zone. The Lanterman Act covers only licensed residential care facilities. California Housing Element law also addresses the provision of transitional and supportive housing, which covers non-licensed housing facilities for persons with disabilities.

The City of Jurupa Valley defines congregate care facilities as “a housing arrangement, developed pursuant to Article XIX of the Zoning Code, where nonmedical care and supervision are provided, including meals and social, recreational, homemaking and security services.” Congregate care facilities are permitted in the R-2 and R-3 zones, with the approval of a Conditional Use Permit. The City does not currently comply with the Lanterman Act. However, in 2017, Jurupa Valley is developing its first General Plan, to be followed up with a comprehensive Zoning Code update. As part of this Zoning Code update, the City’s provisions for licensed residential care facilities will be amended as needed to ensure consistency with the Lanterman Act.

Emergency Shelters

An emergency shelter is a facility that provides temporary shelter and feeding of indigents or disaster victims, operated by a public or non-profit agency. State law requires jurisdictions to identify adequate sites for housing that will be made available through appropriate zoning and development standards to facilitate and encourage the development of a variety of housing types for all income levels, including emergency shelters and transitional housing (§65583(c)(1) of the *California Government Code*). State law (SB 2) requires that local jurisdictions make provisions in their zoning codes to permit emergency shelters by right in at least one zoning district where adequate capacity is available to accommodate at least one year-round shelter. Local jurisdictions may establish standards to regulate the development of emergency shelters.

The City of Jurupa Valley permits emergency shelters in its Industrial Park (I-P) zone, subject to the development standards allowed under SB 2, such as minimum floor area for each client, minimum interior waiting and client intake areas, off-street parking and outdoor lighting requirements, and the requirement for an on-site manager and at least one additional staff member to be present on-site during hours of operation.

The City has a number of large, vacant I-P zoned sites totaling 290 acres. Upon incorporation, the City adopted the Riverside County Zoning Code by reference. The County Zoning Code contains distance requirements for emergency shelters that are above and beyond the basic 300-foot distance between two shelters as

permitted by SB 2. As part of the development of the City's first General Plan, and accompanying comprehensive Zoning Code update, the City will remove the distance requirement between emergency shelters and airports. With this amendment, the City's provisions for emergency shelters will fully comply with SB 2.

Transitional and Supportive Housing

State law (SB 2) requires local jurisdictions to address the provisions for transitional and supportive housing. Under Housing Element law, transitional housing means buildings configured as rental housing developments, but operated under program requirements that require the termination of assistance and reassignment of the assisted unit to another eligible program participant at a predetermined future point in time that shall be no less than 6 months from the beginning of the assistance (*California Government Code* §65582(h)). For example, a multi-family dwelling that is designated as a temporary (typically 6 months to 1 year) residence for abused women and children, pending relocation to more permanent housing.

Supportive housing means housing with no limit on length of stay, that is occupied by the target population, and that is linked to an on-site or off-site service that assists the supportive housing resident in retaining the housing, improving his or her health status, and maximizing his or her ability to live and, when possible, work in the community. Target population means persons with low incomes who have one or more disabilities, including mental illness, HIV or AIDS, substance abuse, or other chronic health condition, or individuals eligible for services provided pursuant to the Lanterman Developmental Disabilities Services Act (Division 4.5 commencing with §4500 of the *Welfare and Institutions Code*) and may include, among other populations, adults, emancipated minors, families with children, elderly persons, young adults aging out of the foster care system, individuals exiting from institutional settings, veterans, and homeless people (*California Government Code* §§65582(f) and (g)).

Accordingly, state law establishes transitional and supportive housing as residential uses and therefore, local governments cannot treat these uses differently from other similar types of residential uses (e.g., requiring a use permit when other residential uses of similar function do not require a use permit). The City of Jurupa Valley's Zoning Code does not include provisions for transitional or supportive housing. As part of the development of the City's first General Plan, and accompanying comprehensive Zoning Code update, the City will include provisions for transitional and supportive housing, pursuant to SB 2.

Single Room Occupancy (SRO)

AB 2634 mandates that local jurisdictions address the provision of housing options for extremely low-income households, including Single Room Occupancy units (SRO). SRO units are typically one-room units intended for occupancy by a single individual. It is distinct from a studio or efficiency unit, in that a studio is a one-room unit that must contain a kitchen and a bathroom. Although SRO units are not required to have a kitchen or bathroom, many SROs have one or the other. There are minimum standards for SROs (including a minimum floor area requirement) under the *California Health and Safety Code*.

The City of Jurupa Valley's Zoning Code does not specifically address SROs. As part of the development of the City's first General Plan and accompanying comprehensive Zoning Code update, the City will include provisions to address SRO housing.

Farm Worker and Employee Housing

The California Employee Housing Act requires that housing for six or fewer employees be treated as a regular residential use. In general, the *California Health and Safety Code* (H&S Code) defines "employee housing" as "any portion of any housing accommodation, or property upon which a housing accommodation is located, if all of the following factors exist:

- (1) The accommodations consist of any living quarters, dwelling, boardinghouse, tent, bunkhouse, maintenance-of-way car, mobilehome, manufactured home, recreational vehicle, travel trailer, or other housing accommodations, maintained in one or more buildings or one or more sites, and the premises upon which they are situated or the area set aside and provided for parking of mobile homes or camping of five or more employees by the employer.
- (2) The accommodations are maintained in connection with any work or place where work is being performed, whether or not rent is involved."

Section 17005 of the *California Health and Safety Code* identifies the few types of employees excluded, and Section 17008 provides a detailed definition of employee housing. The Employee Housing Act further defines housing for agricultural workers consisting of 36 beds or 12 units be treated as an agricultural use and permitted where agricultural uses are permitted.

The City of Jurupa Valley permits agricultural uses in a number of its residential zones, although there are no large scale agricultural properties or businesses in the City at this time. The Zoning Code does not specifically address farm worker housing in residential

zones, but does allow farm worker housing in the City's agricultural zones (A-1 and A-2) with Site Development Permit approval, and single-family dwellings are permitted by right in these zones. As part of the implementation of the 2017 General Plan and related comprehensive Zoning Code update, the City will amend the Zoning Code to address the requirements of the Employee Housing Act.

Development Requirements

Upon incorporation as a city, Jurupa Valley adopted the Riverside County Zoning Code by reference. *Table 5.45* summarizes the City's residential zoning districts and their development standards, as established in the County Zoning Code adopted by the City. The City will be comprehensively updating its Zoning Code to implement the 2017 General Plan.

Table 5.45: Summary of Residential Zoning Districts Development Standards

| Zoning District | Minimum Lot Size (sq. ft.) | Minimum Lot | | | Maximum Building Height (stories/feet) | Minimum Front Yard (feet) | Minimum Interior Side Yard (feet) | Minimum Corner Side Yard (feet) | Minimum Rear Yard (feet) | Lot Coverage |
|-----------------|----------------------------|--------------|--------------|-----------------|--|---------------------------|-----------------------------------|---------------------------------|--------------------------|--------------|
| | | Width (feet) | Depth (feet) | Frontage (feet) | | | | | | |
| RR | 21,780 | 80 | -- | -- | 40-50 | -- | -- | -- | -- | -- |
| R-1/ R-1A | 7,200 | 60 | 100 | 60 | 3-story/40 | 20 | 10% of lot width | 10 | 10 | 50% |
| R-A | 20,000 | 100 | 150 | -- | 40-50 | 20 | -- | -- | -- | -- |
| R-2 | 7,200 | -- | -- | -- | 3-story/40 | 20 | 10% of lot width | 10 | 10 | 60% |
| R-2A | 7,200 | -- | -- | -- | 2-story/30 | 20 | 5 | -- | 10 | 60% |
| R-3 | 7,200 | 60 | 100 | -- | 50-75 | 10 | 5 | 10 | 10 | 50% |
| R-3A | 9,000 | -- | -- | -- | 50-75 | 10 | 5 | 10 | 10 | 50% |
| R-4 | 3,500 | 40 | 80 | -- | 40-50 | 20 | 5 | 10 | 10 | -- |
| R-5 | None | n/a | n/a | n/a | 50-75 | 50 | 50 | 50 | 50 | -- |
| R-6 | 5,000 | -- | -- | 30 | 35-50 | 10 | -- | -- | 10 | -- |
| R-T | 3,600/7,200 | 40/60 | 100 | 30/45 | 40 | 20 | 5 | 5 | 5 | -- |
| PUD | -- | -- | -- | -- | -- | 10 | 5 | 10 | 10 | varies |

Parking Requirements

Table 5.46 summarizes the residential parking requirements in Jurupa Valley. Parking requirements do not constrain the development of housing directly. However, parking requirements may reduce the amount of available lot areas for residential development. The City determines the required number of parking spaces based on the type and size of the residential unit and has found the required parking spaces to be necessary to accommodate the number of vehicles typically associated with each residence.

Table 5.46: Residential Parking Requirements

| Type of Residential Development | Required Parking Spaces (off street) |
|---------------------------------|---|
| Single-Family | 2 spaces per dwelling |
| Multi-family | Studio or 1 BR: 1.25 spaces per unit |
| | 2 BR: 2.25 spaces per unit |
| | 3 BR: 2.75 spaces per unit (add 1 space per employee) |
| | PRD: 1.5 spaces per unit |
| Planned Residential Development | 1 BR: 1.5 space per unit; 2 BR or more: 2.5 spaces per unit |
| Senior Housing | See Single-Family and Multi-Family requirements |
| Mobile Home Parks | 2 spaces per trailer or mobile home space* (add 1 guest space per 8 mobile home spaces) |
| Second Units | 1 BR: 1 space* per unit |
| | 2 BR: 2 spaces* per unit |

Source: Jurupa Valley Municipal Code, 2015.

* Indicates parking spaces may be tandem.

Density Bonus Ordinance

California Government Code §65915 requires local governments to grant a density bonus of at least 20% (5% for condominiums) and an additional incentive, or financially equivalent incentive(s), to a developer of a residential project that agrees to provide at least:

- 10% of the units for lower income households;
- 5% of the units for very low income households;
- 10% of the condominium units for moderate income households;
- A senior citizen housing development; or
- Qualified donations of land, condominium conversions, and childcare facilities.

The density bonus law also applies to senior housing projects and projects that include a childcare facility. In addition to the density bonus stated above, the statute includes a sliding scale that requires:

- An additional 2.5% density bonus for each additional increase of 1% in the number of Very Low income units above the initial 5% threshold;
- A density increase of 1.5% for each additional 1% increase in the number of Low income units above the initial 10% threshold; and
- A 1% density increase for each 1% increase in the number of Moderate income units above the initial 10% threshold.

These bonuses reach a maximum density bonus of 35% when a project provides 11% very-low income units, 20% low-income units, or 40% moderate income units. In addition to a density bonus, at

the discretion of the approving jurisdiction, developers may also be eligible for one of the following concessions or incentives:

- Reductions in site development standards and modifications of zoning and architectural design requirements, including reduced setbacks and parking standards;
- Mixed used zoning that will reduce the cost of the housing, if the non-residential uses are compatible with the housing development and other development in the area; and
- Other regulatory incentives or concessions that result in “identifiable, financially sufficient, and actual cost reductions.”

Jurisdictions may not impose any development (or density) standard that, by itself, would preclude the construction of a project with the density bonus and the incentives or concessions to which the developer is entitled. To achieve compliance with the State density bonus law, jurisdictions must reevaluate their development standards in relation to the maximum achievable densities for multi-family housing.

Building Codes and Enforcement

Building and safety codes are adopted to preserve public health and safety, and ensure the construction of safe and decent housing. These codes and standards also have the potential to increase the cost of housing construction or maintenance.

The City of Jurupa Valley has adopted the 2013 California Building Standards Code. Other codes commonly adopted by reference within the region include the California Mechanical Code, the California Plumbing Code, the California or National Electric Code, the Uniform Housing Code, and the California Fire Code. Less common are the California Uniform Code for the Abatement of Dangerous Buildings, the Urban-Wildland Interface Code, and the Uniform Code for Building Conservation. The City has not adopted any local amendments that constrain the development, maintenance, or preservation of housing.

Housing for Persons with Disabilities

Land Use Controls

As previously noted, the City will address the provision of residential care facilities as part of the comprehensive Zoning Code update.

Reasonable Accommodation

Building and development standards may constrain the ability of persons with disabilities to live in housing units that are suited to their needs. Currently, the City considers requests for reasonable accommodation when requests are made, without a formal application and approval process. As part of the development of the comprehensive Zoning Code update, the City will adopt a formal reasonable accommodation ordinance.

Definition of Family

The City's Zoning Code defines family as "an individual or two or more persons related by blood or marriage, or a group of not more than five persons, excluding servants, who are not related by blood or marriage, living together as a single housekeeping unit in a dwelling unit." This definition will be amended to remove: 1) any reference to the number of persons that can be considered a "family," and 2) any reference to how members of a "family" are to be related. This amendment will be processed as part of the comprehensive Zoning Code update.

Building Code

As indicated above, the City of Jurupa Valley has adopted the 2013 California Building Standards Code and routinely adopts updates as they become available. The City has not adopted any special amendments to this Code that would impede housing for persons with disabilities.

Planning and Development Fees

Housing construction imposes certain short- and long-term costs upon local government, such as the cost of providing planning services and inspections. The City of Jurupa Valley relies upon various planning and development fees to recoup costs and ensure that essential services and infrastructure are available when needed. Planning fees for Jurupa Valley are summarized in Table 5.47.

Table 5.47: Planning Fees

| Application | Initial Deposit Fee |
|---|---|
| General Plan Amendment | \$7,479.66 |
| Conditional Use Permit | \$9,646.14+\$5.10 per lot or site |
| Variance (filed alone) | \$2,625.48 |
| Site Development Permit (Plot Plan) | \$4,791.96 |
| Tentative Tract Map (Single-Family Residential) | \$11,368.92 + \$102 per unit |
| Tentative Tract Map (Multi-Family Residential) | \$11,368.92 + \$102.00 per lot + \$19.38 per acre |
| Tentative Parcel Map (without waiver of Final Parcel Map) | \$5,621.22 + \$104.04 per lot |
| Zone Change | \$3,648.54 |

Fees vary due to location of the units.

Source: City of Jurupa Valley, January 1, 2012.

Until 1978, property taxes were the primary revenue source for most local governments, supporting municipal operations and, when needed, funding the costs of capital improvements such as streets, drainage, and other public improvements. The passage of Proposition 13 in 1978 limited a local jurisdiction's ability to raise property taxes and significantly lowered the ad valorem tax rate, increasing reliance on other funding sources to provide infrastructure, public improvements, and public services. More recently, the loss of redevelopment funds and State Vehicle License Fees has dramatically affected California cities' ability to fund public improvements. An alternative funding source widely used among local governments in California is the development impact fee, which is collected for a variety of improvements including street and drainage improvements.

The City of Jurupa Valley collects development impact fees from developers of new housing units, as well as commercial, office, retail, and industrial development. These fees are used to offset costs primarily associated with traffic impacts and City street improvements. *Table 5.48* summarizes the development impact fees required by the City and by other relevant agencies in 2017 for residential developments. Based on recent development applications, development impact fees are in the order of \$15,500 per unit for a market-rate single-family home and \$12,000 per unit for market-rate multi-family apartment projects.

Table 5.48: Residential Development Impact Fees (Per Unit)

| Fee Type | Area 1: Jurupa | | | |
|---|---|--------------------------------|------------------------------------|------------------------------------|
| | Single Family | | Multi-Family | |
| Public Facilities Fee | \$1,207 | | \$1,011 | |
| Fire Facilities Fee | \$705 | | \$590 | |
| Transportation (Roads, Bridges) Fee | \$1,001 | | \$ 791 | |
| Transportation (Signals) Fee | \$420 | | \$378 | |
| Regional Parks | \$563 | | \$472 | |
| Regional Trails Fee | \$316 | | \$264 | |
| Libraries Fee | \$341 | | \$286 | |
| Program Administration Fee | \$60 | | \$50 | |
| Transportation Uniform Mitigation Fee (TUMF) | Single-Family: \$8,873 | | Multi-Family: \$6,231 | |
| Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Fee | Less than 8.0 units per acre: \$1,952/unit Between 8.0-14.0 units per acre: \$1,250/unit Greater than 14.0 units per acre: \$1,015/unit | | | |
| Mira Loma Road and Bridge Benefit District (RBBB) Fee | Zone A: \$1,667 MF*: \$417 | Zone B: \$884 MF*: \$612 | Zone D: \$2,681 MF*: \$1,857 | Zone E: \$1,644 MF*: \$1,139 |

Notes: Fees for senior single-family units are reduced by 33%.

Local Processing and Permit Procedures

Considerable holding costs are associated with delays in processing development applications and plans. At times, these holding costs are passed through to renters and homeowners in the price/rent of housing, thus affecting the affordability. The City of Jurupa Valley's development review process is designed to accommodate housing development applications of various levels of complexity and requiring different entitlements. Processing times vary with the complexity of the project.

Building permit applications for new single-family houses typically take 3 to 6 months to complete the building permit plancheck process, sometimes longer depending upon the size of the project. Processing multi-family development applications, which often require general plan amendments, rezoning, and CEQA review, typically requires 6 months to 1 year—depending upon the number of dwellings—to complete discretionary planning review. The City's permit procedures expedite planning and building approvals where possible and are not likely to unduly constrain housing development. The following discussion describes in detail the City's administrative development review procedures (such as Site Development Plan Review) as well as discretionary review and approval processes.

Pre-Application Review

Prospective applicants are encouraged to meet with a City Planner prior to submitting an application. This preliminary meeting will help expedite the development process. Applicants may also

request a more detailed, formal pre-application review. This type of review can be helpful for large or more complex projects, and when the applicant desires review by multiple City departments, such as Engineering, Building, and Public Works. Pre-Application Review requires submittal of an application, fee, plans, and background information and can take from 3 to 5 five weeks to process.

Following submittal, the application is routed to all City departments and outside agencies that would review the formal entitlement application. For example, a Tentative Tract Map would be transmitted to utility companies (e.g., Southern California Edison, SoCal Gas), special districts (JCSD/RCSD/JARPD) and the County of Riverside.

Site Development Permit (SDP)

As previously indicated, the City of Jurupa Valley requires a Site Development Permit for all multi-family residential projects, except those within the R-4 zone. Site Development Permits (SDPs), at a minimum, require submittal of an application, fee, checklist, site plan and other exhibits, and supporting information to the Planning Department. Minor Site Development Permits, such as for accessory structures, are exempt from environmental review and can be acted upon by the Planning Director without a public hearing. SDPs requiring environmental review under CEQA require a public hearing held by the Planning Director. All SDPs require written notice to owners of property located within at least 300 feet of the proposed project boundaries. The time for processing an SDP varies with the complexity of the proposal. However, the review process for a minor SDP that is exempt from CEQA can usually be accomplished within 90 to 120 days.

Conditional Use Permits (CUP)

A CUP is required for certain limited residential uses that are conditionally permitted in non-residential districts (e.g., General Commercial “C-1/C-P” zone district), such as congregate care residential facilities. CUPs can be approved, approved with conditions, or denied based on specific findings. Typically, the Planning Commission reviews and takes final action on CUPs, and appeals are considered by the City Council, who would then take final action on the matter. Any permit that is granted is subject to such conditions of approval as may be necessary to protect the health, safety, or general welfare of the community. Conditions of approval may include, but are not limited to, hours of operation, duration, site improvements (e.g., access, parking, landscaping, fencing, signage), off-site improvements (e.g., trails, frontage improvements, street trees), and architectural design. The City’s

CUP process typically allows the Planning Commission to consider conditional uses within approximately 90 to 150 days.

Environmental Constraints

Potential environmental constraints to future development in the City include seismic and liquefaction hazards, urban and limited wildland fire hazards, and historical contamination by hazardous materials such as the Stringfellow property in the northern portion of the City. All sites identified in the Sites Inventory that are intended to meet the City's RHNA needs are not within these areas that have development restrictions due to risk of damage from disasters (such as floods, wildfires, seismic events, or hazardous material contamination).

The sites inventory has land use designations that were determined based on surrounding land uses and has already examined potential environmental constraints. Aside from the typical constraints mentioned above, there are no additional constraints that would impede the development of new housing units in the future on the identified sites.

Seismic Hazards

As stated in the General Plan Community Safety, Services and Facilities Element, the entire City, as well as all of Southern California, is a seismically active region that has been subject to major earthquakes in the past. There are no known active faults in Jurupa Valley. However, the Rialto-Colton, San Jacinto, and Chino Faults are all located in close proximity to the City (i.e., within 5 miles). The greatest damage from earthquakes results from ground shaking. Although ground shaking is generally most severe near a quake epicenter, property not immediately adjacent to the epicenter may be subject to extreme damage due to liquefaction. The greatest potential danger is the collapse of older residential units constructed from unreinforced masonry, and explosions of petroleum and fuel lines. Some parts of the City have a combination of silts and sandy soil types and a relatively high water table that are conducive for liquefaction to occur during intense ground shaking. The State Division of Mines and Geology has designated some areas in the City within a liquefaction zone. Most of these areas are along the Santa Ana River, but the far eastern and southwestern portions of the City are also susceptible to liquefaction. Much of the northern portion of the City, north of the SR 60 freeway, has moderate to very high susceptibility to landslides and soil slumps. There are also areas in the central portion of the City with steeper slopes that may be subject to soil block slides.

Development in much of the City will require geotechnical or soil constraints reports to mitigate the potential undermining of structural integrity during earthquakes or due to geologic or soil limitations.

Flooding

The Federal Emergency Management Agency (FEMA) publishes maps that identify areas of the City subject to flooding in the event of a major storm. These Flood Insurance Rate Maps (FIRMs) indicate areas that may be inundated in the event of a 100-year or a 500-year storm. In addition, the maps indicate the base flood elevations at selected intervals of the floodway. The City had been subject to periodic and historic flooding and flood insurance requirements imposed by FEMA until improvements were constructed by the Army Corps of Engineers on the Santa Ana River and other major flood control channels within the City. FEMA Flood Maps show that the City's main flood hazard zone lies in the southern portions of the City near the Santa Ana River, along Pyrite Creek, and in the far northwestern and western portions of the City just east of the I-15 freeway.

Some areas of the City that are designated for future residential development fall within the 100-year floodplain and would be subject to specialized flood construction requirements.

Fire Hazards

The most serious fire threat within the City is building and structure fires. However, like most southern California cities adjacent to wildland areas (e.g., steep hills in the northern portion of the City), the late summer fires that result from the accumulation of this brush have the potential to spread into the City proper. Since the City center is largely developed, there is less potential for wildland fires in the more central portions of the City. Other fire hazards within the City may be associated with heavy industrial uses, older commercial and residential structures, the presence of hazardous materials, and arson. Only a small portion of the City is located within a designated Very High Fire Hazard Zone; and the sites identified to accommodate the City's 2013-2021 RHNA allocation are located outside of the high fire hazard zone and in largely developed urban or suburban areas that are not generally prone to wildland fire hazards.

Noise

Noise generated from mobile sources such as traffic will continue to have the greatest potential impact on land use (e.g., I-15 and SR 60 freeways, Van Buren Boulevard). In addition, noise from rail

and aviation sources will also affect some community residents. The General Plan Noise Element describes the existing noise environment using maps that indicate high levels of noise and also contains goals and policies to reduce the effects of noise, if not the actual intensity of noise. Land use policy discourages the placement of noise-sensitive land uses in areas that are subject to high noise levels. The City regulates noise through the Jurupa Valley Ordinance No. 2012-01: Noise Regulations, under the authority of Section 50022.9 of the *California Government Code*.

Each potential development that would occur as a result of the Housing Element and subsequent implementation would be evaluated on a case-by-case basis and be required to adhere to the noise regulations set forth in the General Plan, and when applicable, mitigation measures as part of the CEQA documentation process, which would identify potentially significant impacts and appropriate mitigation measures at the individual project level.

Hazardous Materials

The City contains a number of industrial uses that produce, handle, store, or transport various hazardous materials at various times. However, the use and handling of these materials are governed by a variety of federal, state, and local laws and regulations, and should not pose a significant impediment to development in non-industrial portions of the City.

Portions of the City overlie an historical plume of groundwater contamination from the Stringfellow Class I Site located in Pyrite Canyon in the northern portion of the City at the headwater of Pyrite Creek. The Pyrite Channel runs through the central portion of the City in a northeast-southwest direction toward the Santa Ana River. The Stringfellow site is a major historical regional source of contamination in the Jurupa Valley, and was one of the first designated federal “Superfund” sites. It is listed on many governmental databases regarding hazardous materials (e.g., NPL, CERCLIS, US ENG CONTROLS, ROD, RCRA-SQC, CONCENT, and, PRP databases). According to the Chino Basin Watermaster, the Stringfellow groundwater contamination plume consists primarily of volatile organic compounds (VOCs) and perchlorate; however, the VOCs extend approximately 1 mile from the source area in the down-gradient direction with the remainder of the plume consisting of perchlorate. The presence of perchlorate represents a potential health hazard if the public were to come in contact with the contaminated Stringfellow groundwater plume; however, none of the sites identified to accommodate the City’s 2013-2021 RHNA allocation would be directly affected by the Stringfellow groundwater plume.

Infrastructure Constraints

The 2013-2021 Housing Element promotes the production of housing, which in turn may result in population growth. The Southern California Association of Governments (SCAG) is responsible for producing socioeconomic projections and developing, refining, and maintaining the SCAG regional and small area forecasting models. These forecast numbers are used to forecast travel demand and air quality for planning activities such as the Regional Transportation Plan (RTP), the Air Quality Management Plan, and the Regional Housing Needs Assessment (RHNA) allocations. The U.S. Census as reported by the California Department of Finance estimates the City's 2014 population was 97,774 persons. SCAG projects that the City's population will grow to 103,700 persons by the year 2020 and 126,000 persons by the year 2035. The City understands that improvements to infrastructure can be achieved with a comprehensive approach that includes reviewing infrastructure plans for each application for discretionary approval of General Plan amendments, tentative parcel or tentative tract maps, or development proposals that include extension of an existing street or construction of a new street. The City requires that project applications for new development be reviewed for adequate infrastructure. Applications are evaluated on a case-by-case basis to ensure there is enough capacity to service new developments.

The City has established standard street widths for different road types and *Table 5.49* summarizes these requirements. In addition to requiring improvements to public streets, the City may also require on- and off-site improvements related to water supply, fire protection, sewage disposal, fences, and electrical and communication facilities.

Table 5.49: Street Design Standards

| Street Type | Street Width (feet) | Number of Lanes |
|----------------|------------------------|-----------------|
| Expressway | 184 to 220 | 6 to 8 |
| Urban Arterial | 152 min. | 6 to 8 |
| Arterial | 128 min. | 4 to 6 |
| Major | 118 min. | 4 |
| Secondary | 100 min. | 4 |
| Collector | 74 min. | 2 |
| General Local | 44-60 | 2 |

Source: City of Jurupa Valley Municipal Code, (2015).

¹Schedule A Subdivision: Any division of land into five or more parcels, where any parcel is less than eighteen thousand (18,000) square feet in net area.

²Schedule B Subdivision: Any section of land into five or more parcels, where any parcel is not less than eighteen thousand (18,000) square feet in net area up to two acres in gross area.

³Schedule C Subdivision: Any division of land into five or more parcels where any parcel is not less than two acres in gross area up to five acres in gross area.

⁴Schedule D Subdivision: Any division of land into five or more parcels, where any parcel is not less than five acres in gross area up to twenty (20) acres in gross area.

⁵Schedule E Subdivision: Any division of land into two or more parcels in commercial or industrial zones.

⁶Schedule F Subdivision: Any division of land into four or less parcels, where any parcel is less than eighteen thousand (18,000) square feet in net area.

⁷Schedule H Subdivision: Any division of land into four or less parcels, where all parcels are not less than one acre in gross area.

Water Supply

Jurupa Valley's domestic water is supplied primarily by two local agencies: Jurupa Community Services District (JCSD) and Rubidoux Community Services District. The JCSD service area comprises about 26,000 acres within Jurupa Valley and the eastern portion of the City of Eastvale. The District's recorded potable water production was 24,285 acre-feet (AF) or 21.7 million gallons per day (MGD) in 2009. Water sources for the JCSD come primarily from the Chino Groundwater Basin and the Chino Basin Desalter Authority, with the remainder made up of transfers from the Rubidoux Community Services District.

In May 2011, the JCSD adopted its 2010 Urban Water Management Plan (UWMP), which details the JCSD's current and future water supply. The UWMP found that with all of its existing and planned supplies, the JCSD can meet 100% of projected demand of growth in the City through 2035 under normal year, single dry year, and multiple dry year demand conditions for expected growth (i.e., even with a repeat of a severe drought conditions). It should be noted that on April 1, 2015, the Governor issued Executive Order B-29-15. Key provisions include ordering the State Water Resources Control Board to impose restrictions to achieve a 25% reduction in potable urban water usage through February 28, 2016. The Governor's drought declaration also calls upon local urban water suppliers and municipalities to implement their local water

shortage contingency plans immediately to avoid or forestall outright restrictions that could become necessary later in the drought season. The JCSD is evaluating the state's additional emergency drought restrictions to determine its impact on our service area and the community. JCSD is currently in Level 2 (Drought Caution) of its Water Shortage Contingency Plan. JCSD is evaluating whether amendments to the plan are necessary to meet the state's mandates and to help increase water efficiency. As a result of the Governor's Executive Order issued on April 1, 2015, the State Water Resources Control Board's updated Emergency Water Conservation regulations went into effect on May 18, 2015. JCSD and its customers are mandated to meet a total 28% district-wide reduction in potable water usage.

Some properties within the City do not have piped water systems immediately available to them. As development occurs within the City, water supplies and distribution systems may have to be expanded to adequately serve future development.

Established in 1952, Rubidoux Community Services District (RCSD) was the first community services district to be formed in California. RCSD provides water and wastewater services to over 6,500 homes, with the capacity to serve an additional 3,000 new homes with existing wells and water treatment facilities. Additional services include trash collection and disposal, street lighting, weed abatement and fire prevention programs. The District's water supply and distribution system can produce over 8.0 million gallons of potable water per day from groundwater sources in six wells. The District delivers 2.0 million gallons a day to the Regional Wastewater Treatment Plant located in the City of Riverside and supplies a portion of JCSD's water needs. All of RCSD's water production comes from 11 active wells (6 potable and 5 non-potable), with a distribution system consisting of approximately 50 miles of pipeline, four storage reservoirs, and two booster stations. Average day water use for retail customers is approximately 10.8 acre-feet or 3.5 million gallons.

Wastewater Treatment

The Jurupa Community Services District and the Rubidoux Community Services District provide wastewater service to most of Jurupa Valley. However, some areas in the City, particularly in Old Mira Loma and Sky Country, still rely on private septic systems. JCSD's Sewer System serves the residents of the western portion of the City of Jurupa Valley and the adjacent City of Eastvale. The City of Riverside, the Western Riverside County Regional Wastewater Authority, and the Orange County Sanitation District are responsible for treatment of wastewater in the JCSD service area.

Wastewater from the project will be conveyed to the City of Riverside Water Quality Control Plant (RWQCP), located in the City of Riverside at 5950 Acorn Street. Currently, the RWQCP treats 40 million gallons per day. A plant-wide expansion, completed in 2015, increased treatment capacity by approximately 46 million gallons per day.

Rubidoux Community Services District's wastewater treatment capacity is 3 million gallons per day; current need is 2 million gallons per day. Total treatment capacity of the two districts is believed adequate to meet wastewater treatment needs for 100% of the City's anticipated housing and population growth. Some properties in the City are on septic systems and are not connected to a piped sewage collection system. To protect regional water quality objectives, it is likely that future development, even larger individual lots and especially larger residential projects, may be required to connect to piped wastewater collection systems. This will require coordination with the JCSD and the City of Riverside to assure adequate sewage collection, and treatment services will be available as growth occurs in the City.

Market Constraints

Land Prices

Land costs have a demonstrable influence on the cost and availability of affordable housing. Land prices are determined by a number of factors, most important of which are land availability and permitted development density. As land becomes less available, the price of land increases.

According to Lennar Homes, in 2016 unentitled multi-family land in the region typically sells for about \$300,000 per acre. By comparison, unentitled single-family land costs between \$200,000 and \$400,000 per acre. However, land cost is very site-specific; many factors such as location, size, shape, entitlement processes required, and environmental factors can impact land cost significantly.

Construction Costs

Construction costs are primarily determined by the costs of materials and labor. They are also influenced by market demands and market-based changes in the cost of materials. Construction costs depend on the type of unit being built and the quality of the product being produced. However, construction costs are set by regional and national factors that rarely impede housing development in specific localities.

Financing

Mortgage interest rates have a large influence over the affordability of housing. Higher interest rates increase a homebuyer's monthly payment and decrease the range of housing that a household can afford. Lower interest rates result in lower monthly payments for the homebuyer and can increase the buyer's purchasing ability.

The availability of financing affects a person's ability to purchase or improve a home. Under the Home Mortgage Disclosure Act (HMDA), lending institutions are required to disclose information on the disposition of loan applications by the income, gender, and race of the applicants. This applies to all loan applications for home purchases, improvements, and refinancing, whether financed at market rate or with government assistance.

Table 5.50 summarizes the disposition of loan applications submitted to financial institutions in 2014 for home purchase, refinance, and home improvement loans in Jurupa Valley and the County of Riverside. Included is information on loan outcomes (i.e., the number of applications that were approved and originated, denied, withdrawn by the applicant, and incomplete).

Table 5.50: Disposition of Home Loans (2014)

| Loan Type | Total Applicants | Percent Approved | Percent Denied | Percent Other |
|-------------------------|------------------|------------------|----------------|---------------|
| Jurupa Valley | | | | |
| Government-backed | 601 | 49.6 | 9.7 | 9.8 |
| Conventional | 484 | 58.9 | 14.9 | 12.0 |
| Refinance | 1,747 | 49.7 | 20.8 | 17.3 |
| Home Improvement | 178 | 43.8 | 34.3 | 11.2 |
| Total | 3,010 | 50.8 | 18.4 | 14.6 |
| Riverside County | | | | |
| Government-backed | 16,681 | 74.3 | 12.3 | 13.4 |
| Conventional | 20,774 | 74.0 | 12.5 | 13.4 |
| Refinance | 50,825 | 56.2 | 22.9 | 20.9 |
| Home Improvement | 5,763 | 46.6 | 40.5 | 12.9 |
| Total | 94,043 | 62.7 | 19.8 | 17.5 |

Source: www.LendingPatterns.comTM, 2015.

¹Approved* includes loans approved by the lenders whether or not accepted by the applicant.

²Other* includes loan applications that were either withdrawn or closed for incompleteness.

³Total Applicants* also includes pre-approvals and purchased loans.

⁴A custom geography using the following census tracts were used to estimate lending data for Jurupa Valley: 401.01, 401.02, 402.01, 402.02, 402.03, 402.04, 403.01, 403.02, 403.03, 404.02, 404.03, 404.04, 404.05, 405.01, 405.02, 405.03, 406.03, 406.04, 406.05, and 406.06.

Home Purchase Loans

In 2014, 484 Jurupa Valley households applied for conventional loans to purchase homes, as shown in *Table 5.50*. Approximately 59% of these applications were approved and 15% were denied. The City's approval rate was significantly lower than the overall approval rate for Riverside County. By comparison, 74% of conventional home loan applications countywide were approved while 13% were denied.

601 applications were submitted for the purchase of homes in Jurupa Valley through government-backed loans (e.g., FHA, VA) in 2014. Among applications for government-backed home purchase loans in the City, 50% were approved and 10% were denied. Again, the City's approval rate for this loan type was much lower than that of Riverside County's. Countywide, the approval rate for government-backed home purchase loans was 74%.

Refinance Loans

The vast majority of loan applications filed by Jurupa Valley residents in 2014 were for home refinance loans (1,747 applications). About 50% of these applications were approved, while 21% were denied. Countywide, 56% of refinancing applications were approved.

Home Improvement Loans

Within the City of Jurupa Valley, home improvement loans were the least likely to be approved. Approximately 34% of home-improvement loan applications were denied and 44% were approved by lending institutions in 2014. The high proportion of denials may be explained by the nature of these loans. Most home improvement loans are second loans and therefore more difficult to qualify for due to high income-to-debt ratio requirements. Countywide, home improvement loan applications had an approval rate (47%) comparable to that of the City's.

Energy Conservation

The City of Jurupa Valley is committed to conserving energy and reducing pollution associated with the production of electricity. The City continues to require compliance with Title 24 of the *California Administrative Code* on the use of energy efficient appliances and insulation. Through compliance with Title 24, new residential development has produced reduced energy demands.

To further its energy conservation objectives, in September 2015, the City adopted an ordinance that establishes an expedited, streamlined permitting process for small residential rooftop solar

energy systems. The Jurupa Unified School District improved the energy efficiency of school campuses by implementing a comprehensive organizational behavior-driven energy conservation program in partnership with Energy Education starting in December of 2009.

Southern California Edison, which provides electrical service in Jurupa Valley, offers public information and technical assistance to developers and homeowners regarding energy conservation. Southern California Edison also provides a number of rebate programs for energy efficient new construction and home improvements.

###

DRAFT

6 – AIR QUALITY ELEMENT

Figure 6-1: San Bernardino Mountains from Agua Mansa

A. INTRODUCTION

The quality of the air we breathe directly affects our health, environment, economy, and quality of life. Poor air quality causes or contributes to asthma and other respiratory diseases, lung damage, cancer, birth defects, difficulty in exercising, and even a reduction in life span. Poor air quality also affects our economy through workdays lost due to illness, increased expenses from medical costs, and businesses that choose to locate in areas with a healthier environment.

Air quality is a regional issue of which every city and county in the area feels the effect. Although Jurupa Valley, and Riverside County as a whole generate the lowest emissions of any area in the South Coast Air Basin, air quality in the region is among the Basin's worst due to onshore winds transporting vast amounts of pollutants from Los Angeles and Orange counties into the Inland Empire. However, due to a variety of regulations and programs, air quality in the region is improving. Continued diligence is needed to ensure that the quality of the air we breathe continues to improve for the safety and healthfulness of our community.

A closely related issue to air quality is the adverse effects of climate change. Although the cause is the subject of debate, we are

experiencing increased concentrations of greenhouse gases (GHG), which in turn contribute to warming temperatures, sea level rise, and altered weather patterns that affect rainfall and air quality. General Plan policies, particularly those related to housing and transportation, can have a profound effect on minimizing the factors that contribute to the production of GHG. In the 2017 General Plan, the term “climate change” refers to the result of human activity that produces air-polluting greenhouse gases, and does not imply that the causes of worldwide climate change are fully understood.

While state law mandates that cities address air quality in the General Plan, it allows flexibility for whether to incorporate air quality into other elements, or prepare a separate Air Quality Element. The City’s desires to highlight the importance of air quality in Jurupa Valley by adopting a stand-alone Air Quality Element. This element provides background information on the physical and regulatory environment affecting air quality and climate change in the City. This element also identifies goals, policies, and programs that are meant to balance the City’s actions regarding land use, circulation, and other issues with their potential effects on air quality and climate change.

Primary Goal

To be a city that actively works to improve its air quality and minimize the effects of climate change to protect the health, safety, and quality of life of all of its constituents.

B. BACKGROUND

Jurupa Valley is located within the South Coast Air Basin, which includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties. Air quality conditions in the South Coast Air Basin are under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). According to SCAQMD, the worst air quality problem in the nation occurs in the South Coast Air Basin. With very light average wind speeds, the Basin's atmosphere has a limited capability to disperse air contaminants horizontally. The dominant daily wind pattern is a daytime sea breeze (onshore breeze) and a nighttime land breeze (offshore breeze), broken only occasionally by winter storms and infrequent strong Santa Ana winds from the northeast.

In spring and early summer, most of the pollution is moved out of the Basin through mountain passes, or is lifted by the warm, vertical currents produced by the heating of mountain slopes. However, from late summer through winter, flushing is less pronounced because of lower wind speeds and the earlier appearance of offshore winds. Remaining pollutants accumulate during the night, and a low average-morning wind speed creates the potential for air stagnation, as shown in *Figure 6-2* and *Figure 6-3*. In a normal situation, as temperatures decrease with altitude, air rises. In the South Coast Air Basin, dispersion is hampered by the presence of a

Figure 6-2: Smoggy day in Jurupa Valley

temperature inversion in the layers of the atmosphere near the surface of the earth. With an inversion layer, pollution becomes concentrated as the warmer air above it traps the air.

The combination of low wind speeds and low-level inversions produces the greatest concentration of pollutants. On high wind days, other air pollutants, including particulate matter such as dust and soil, are swept up and carried in the air. On days of no inversion or on days of winds averaging over 15 miles per hour, there will be no important smog effects, during either summer or winter. Smog levels are much lower in the winter due to the lack of strong inversion during the daylight hours and the lack of intense sunlight, which is needed to produce photochemical reactions.

Figure 6-3: Temperature inversion process

Air quality in the South Coast Air Basin has continually improved despite an enormous increase in population and cars. For example, maximum levels of ozone, one of our worst smog problems, have been cut to less than one-quarter of what they were in the 1950s, even though today we have nearly three times as many people and four times as many vehicles. SCAQMD monitors air quality at 34 permanent stations throughout the region, providing hourly and daily readings. This provides information on how well our region is meeting its clean air goals. It also enables the District to notify the public whenever air quality is unhealthy.

Regulatory Restrictions

The agencies designated to develop regional air quality plans in the South Coast Air Basin are SCAQMD, the California Air Resources Board (CARB), the Southern California Association of Governments (SCAG), and the U.S. Environmental Protection Agency (US EPA). These agencies prepared the Final 2012 Air Quality Management Plan (AQMP) for the South Coast Air Basin, which was adopted by the SCAQMD Board in 2013. The Plan includes a comprehensive strategy aimed at controlling pollution from all sources, including stationary sources, on- and off-road mobile sources and area sources.

In 1998, the California Legislature enacted the California Clean Air Act (CCAA). The CCAA requires regional emissions to be reduced by 5% per year, averaged over a 3-year period, until attainment can be demonstrated. Each region that did not meet a national or state air-quality standard was required to prepare a plan that demonstrated how the 5% reductions were to be achieved. In response, the SCAQMD revised its air quality plan to meet CCAA requirements.

To achieve the goals and objectives of the air quality plans at the local level, cities and counties must adopt air quality elements or other elements/plans that address air quality as well as implement

these plans for achieving compliance with state and federal standards. Local responsibilities for achieving compliance primarily focus on measures that reduce emissions from mobile sources as well as those that limit emissions from “indirect sources” such as facilities, buildings, structures, installations, real property, roads, or highways that attract mobile sources of pollution.

Ambient Air Quality Standards

Six criteria air pollutants have been established for every air basin within the State of California. These are pollutants for which acceptable levels of exposure can be determined and for which an ambient air quality standard has been set. Federal primary standards for air pollutants have been established to protect the health of the public, while secondary standards protect the public welfare by preventing diminishing visibility and damage to vegetation and property.

The South Coast Air Basin has made great strides in achieving state and federal air quality standards (SCAQMD 2012 Air Quality Management Plan). *Table 6.1* provides a description of the six criteria air pollutants and their attainment status in the South Coast Air Basin.

Climate Change

Climate change is one of the most widely debated scientific, economic, and political issues in the United States. Climate change refers to prolonged changes in temperature, precipitation, and wind patterns attributed to increased concentrations of greenhouse gases caused by human and other activities. The burning of fossil fuels, industrial processes, and deforestation emit large amounts of carbon dioxide and other greenhouse gases (GHGs) into the atmosphere, which trap energy and warm the earth. The resulting changes in weather patterns can lead to flooding and drought and can affect air quality, water supplies, power, and transportation systems, as well as public health and safety. (US EPA, Climate Change: Basic Information, Updated 2/23/16).

California has been a leader in addressing climate change. The state has adopted a number of important policies, guidelines, and regulations to address climate change, including the key initiatives below.

Table 6.1: South Coast Air Basin 2016 Attainment Status – Six Criteria Pollutants

| Pollutant | Description | Attainment of State and Federal Air Pollutant Standards* |
|------------------------------------|--|--|
| Ozone (O ₃) | A pungent, colorless gas typical of southern California smog. Elevated ozone concentrations result in reduced lung function, particularly during vigorous physical activity. Ozone levels peak during the summer and early fall months. | Non-attainment (state and federal) |
| Carbon Monoxide (CO) | Formed by the incomplete combustion of fossil fuels, almost entirely from automobiles. This colorless, odorless gas can cause dizziness, fatigue, and impairments to central nervous system functions. | Attainment (state and federal) |
| Nitrogen Oxides (NO _x) | Nitrogen dioxide (NO ₂), a reddish brown gas, and nitric oxide (NO), a colorless odorless gas, are jointly referred to as nitrogen oxides or NO _x . NO _x is a primary component of smog and contributes to other pollution problems such as high concentration of fine particulate matter, poor visibility, and acid deposition. NO ₂ decreases lung function and may reduce resistance to infection. | Attainment (state and federal) |
| Sulfur Dioxide (SO ₂) | A colorless irritating gas created mainly by industrial facilities. SO ₂ irritates the respiratory tract, injures lung tissue when combined with fine particulate matter, and reduces visibility and the level of sunlight. | Attainment (state and federal) |
| Lead | A gray-white metal that is soft, malleable, and resistant to corrosion. Sources of lead resulting in concentrations in the air include industrial sources and weathering of soils, followed by fugitive dust emissions. Health effects from exposure to lead include brain and kidney damage, learning disabilities, seizures, and death. Fetuses, infants, and children are more sensitive than others to the adverse effects of lead exposure. Exposure to low levels of lead can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and a lower intelligence quotient. The Air Resources Board (ARB) has identified lead and vinyl chloride as "toxic air contaminants" with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants. | Attainment (state and federal) |
| Particulate Matter | The term used for a mixture of solid particles and liquid droplets found in the air. Coarse particles (larger than 2.5 but smaller than 10 micrometers, or PM ₁₀) come from a variety of sources, including windblown dust and grinding operations. Fine particles (less than 2.5 micrometers, or PM _{2.5}) often come from fuel combustion, power plants, and diesel buses and trucks. Fine particles can also be formed in the atmosphere through chemical reactions. | Non-attainment (state and federal) |

Source: SCAQMD, February 2016

Executive Order S-3-05: In 2005, the California Governor issued Executive Order S-3-05, which established the following greenhouse gas (GHG) emissions reduction targets for the state:

- By 2010, reduce GHG emissions to 2000 levels,
- By 2020, reduce GHG emissions to 1990 levels, and
- By 2050, reduce GHG emissions to 80% below 1990 levels.

This order directed the California EPA; the Business, Transportation, and Housing Agency; the California Air Resources Board (CARB); the California Energy Commission; and the Public Utilities Commission to work together to develop a Climate Action Plan and report back on progress on meeting the statewide targets.

Assembly Bill 32 (AB 32): In 2006, California adopted AB 32, the Global Warming Solutions Act. AB 32 required CARB to develop a Scoping Plan to outline how the state will reduce statewide GHG emissions to 1990 levels by the year 2020. This bill also directed the California EPA; the Business, Transportation, and Housing Agency; the California Air Resources Board (CARB); the California Energy Commission, and the Public Utilities Commission to work together to develop a Climate Action Plan and report back on progress on meeting the statewide targets. CARB's Scoping Plan identifies California's cities and counties as "essential partners" within the overall statewide effort and recommends that local governments set a GHG reduction target of 15% below 2005-2008 levels by the year 2020.

Senate Bill 375 (SB 375): In 2008, California adopted SB 375, the Sustainable Communities and Climate Protection Act. The bill builds on AB 32 by setting regional GHG emissions targets and calls for regional planning agencies to prepare a "sustainable communities strategy" (SCS) as an integral part of its regional transportation plan. The bill recognizes that land use decisions, such as where to place housing and whether to promote transit, can play a significant role in reducing GHG emissions. The SCAQMD works with federal and state agencies to improve air quality in Southern California and to reduce sources of ozone and other pollutants. SCAQMD has documented long-term success in reducing ozone levels, as shown in Figure 6-4.

Figure 6-4: Long-term ozone reductions in Southern California

Figure 6-5: Baseline greenhouse gas emissions by jurisdiction (MT CO₂e)

In 2014, the Western Regional Council of Governments (WRCOG) adopted a Subregional Climate Action Plan for Western Riverside County. The Subregional CAP establishes policies and priorities to enable member jurisdictions, including Jurupa Valley, to implement strategies that successfully address state legislation AB 32 and SB 375. The CAP addresses the overall GHG emissions in Western Riverside County by preparing GHG inventories, identifying emissions reduction targets, and developing and evaluating GHG emissions reduction measures or strategies. Implementation of the CAP is projected to reduce GHG emissions to 80% below 1990 levels by 2050 in accordance with Executive Order S-3-05, AB 32, and SB 375. Jurupa Valley's GHG emissions, along with other Inland Empire communities, are quantified in the Subregional CAP and shown in Figure 6-5.

C. AIR QUALITY GOALS, POLICIES, AND PROGRAMS

Goals

To be a City that:

- AQ 1 Works with regional, sub-regional, and state agencies to protect and improve air quality and reduce greenhouse gas emissions.
- AQ 2 Helps protect its residents, and especially senior citizens, youth and other sensitive receptors, from toxic air pollution.
- AQ 3 Works to reduce emissions from stationary and mobile sources.
- AQ 4 Employs measures to improve the jobs/housing balance and reduce commuting time.

Policies and Programs

AQ 1 – Multi-Jurisdictional Cooperation

The City of Jurupa Valley recognizes the regional context of the policies it creates. Because air pollution does not recognize municipal boundaries, the policies of one community may affect the residents of another. This is particularly true with respect to pollution emitted by motor vehicles, which underscores the importance of multi-jurisdictional cooperation.

Policies

- AQ 1.1 **Regional Participation.** Promote and participate with regional, subregional, and state agencies, both public

Figure 6-6: Children playing in Jurupa Valley

and private, in all areas to protect and improve air quality, including enforcement of all regulations.

- AQ 1.2 **Air Quality Measures.** Establish and implement air quality, land use, and mobility measures that improve not only the City's environment but also that of the entire region.

Programs

- AQ 1.1.1 **Regional Committees.** Actively participate on regional committees that can influence regulations affecting air quality.

AQ 2 – Sensitive Receptors

In terms of air quality, sensitive receptors are those people who are particularly susceptible to adverse health effects due to exposure to air contaminants. Sensitive receptors include residents, retirement homes, schools, hospitals, and other people and uses. Special care must be taken in the land use planning process to ensure that sensitive receptors are protected from unhealthy levels of air pollution.

Policies

- AQ 2.1 **Site Plan Designs.** Require City land use planning efforts and site plan designs to protect people and land uses sensitive to air pollution, using barriers and/or distance from emissions sources, and protect sensitive receptors from polluting sources, wherever possible.
- AQ 2.2 **Pollution Control Measures.** Strongly encourage the use of pollution control measures such as landscaping, vegetation and other materials that trap particulate matter or control pollution.
- AQ 2.3 **Tree Planting.** Consider creating a citywide program to plant trees that help to filter pollutants from the air, provide shade, and add oxygen to the atmosphere.

Programs

- AQ 2.1.1 **Best Practices.** Establish a program to monitor adherence to best practices in distance and setbacks as recommended by CARB and SCAQMD.

Figure 6-7: Jurupa Valley warehouse development and housing

Figure 6-8: Former Riverside Cement Company Plant, Jurupa Valley

AQ 3 – Stationary Source Pollution

Stationary source pollution is generally divided into two subcategories: point sources (such as power plants and refineries) and area sources (including small emission sources such as residential water heaters and architectural coatings). Agricultural and industrial land uses are generally the main stationary pollution sources in Jurupa Valley, though most urbanized land areas and their associated activities contribute to poor air quality in the region.

Policies

- AQ 3.1 **Efficient Building Materials/Equipment.** Encourage the use of building materials/methods and heating equipment that are efficient and reduce emissions.
- AQ 3.2 **Centrally-Heated Facilities.** Encourage centrally heated facilities to utilize automated time clocks or occupant sensors to control heating.
- AQ 3.3 **Stationary Pollution Reduction.** Require stationary pollution sources to minimize the release of toxic pollutants through the following:
- a. Design features;
 - b. Operating procedures;
 - c. Preventive maintenance;
 - d. Operator training; and
 - e. Emergency response planning
- AQ 3.4 **Emissions Mitigation.** Require every project to mitigate any of its anticipated emissions that exceed allowable levels as established by the SCAQMD, the US EPA, and CARB, to the greatest extent possible.
- AQ 3.5 **Fugitive Dust Reduction Measures.** Apply, as appropriate, measures contained in the County's Fugitive Dust Reduction to the entire City.
- AQ 3.6 **Grading in High Winds.** Suspend all grading when wind speeds exceed 25 miles per hour.

AQ 4 – Particulate Matter

The US EPA defines particulate matter (PM) as either airborne photochemical precipitates or windborne dust. Consisting of tiny solid or liquid particles of soot, dust, smoke, fumes, and aerosols, common sources of PM are manufacturing and power plants, agriculture, diesel trucks and other vehicles, construction sites, fire, and windblown dust. Generally, PM settles from atmospheric

suspension as either particulate or acid rain and fog that has the potential to damage health, crops, and property.

While Jurupa Valley is dedicated to implementing policies to limit particulate matter produced within its own boundaries, it has no control over particulate imported from other areas. The solution is the adoption of adequate control measures by responsible jurisdictions in San Bernardino, Riverside, Los Angeles, and Orange counties. By adhering to the control measures contained in the Air Quality Management Plan, these jurisdictions can have a positive impact on particulate matter pollution in Jurupa Valley.

Policies

- AQ 4.1 **State and Federal Legislation.** Encourage stricter state and federal legislation on bias-belted tires, smoking vehicles, and vehicles that spill debris on streets and highways, to better control particulate matter.
- AQ 4.2 **Particulate Matter.** Reduce particulate matter from agriculture, construction, demolition, debris hauling, street cleaning, utility maintenance, railroad rights of way, and off-road vehicles to the maximum extent possible.
- AQ 4.3 **Electric Service Units.** Require the installation and use of electric service units at truck stops and distribution centers for heating and cooling truck cabs, and particularly for powering refrigeration trucks, in lieu of idling of engines for power.
- AQ 4.4 **Natural Gas/Electric Vehicles.** Support efforts to encourage the use of natural gas and electric vehicles in distribution centers.

Programs

- AQ 4.1.1 **Truck Parking in Residential Areas.** Amend the Municipal Code to prohibit the parking of large commercial trucks, trailers, and truck cabs in residential areas, except for loading or unloading.
- AQ 4.1.2 **Diesel Fumes.** Collaborate with the US EPA, SCAQMD, and warehouse owners and operators to create regulations and programs to reduce the amount of diesel fumes released due to warehousing operations.
- AQ 4.1.3 **Commercial Truck Parking Lots.** Research funding and establish a program to provide incentives and opportunities for commercial truck parking lots to prevent the need for parking trucks, trailers, and truck cabs in residential and other restricted areas.

Figure 6-9: House with photovoltaic solar panels

AQ 5 – Energy Efficiency and Conservation

Recycling and conservation efforts established and encouraged by the City can reduce the amount of pollutants emitted within the City. Efforts to recycle wastes can reduce the amount of pollution emitted from the production of new materials while preserving raw materials. Conservation measures minimize the impacts of not only the consumption of, but also the production of, energy sources.

Policies

- AQ 5.1 **Reduce Solid Waste.** Utilize source reduction, recycling, and other appropriate measures to reduce the amount of solid waste disposed of in landfills.
- AQ 5.2 **Energy Conservation.** Encourage advanced energy conservation techniques and the incorporation of energy-efficient design elements for private and public developments, including appropriate site orientation and the use of shade and windbreak trees to reduce fuel consumption for heating and cooling, and offer incentives, as appropriate.

Program

- AQ 5.1.1 **Waste Management.** Establish incentives and programs to encourage the use of recycling and waste management.

AQ 6 – Jobs and Housing

To help reduce traffic and emissions, many cities seek to reduce single-motorist commuting by increasing the number and availability of jobs closer to existing and new housing. According to SCAG, 11.2% of Jurupa Valley workers are employed within the City. The remaining 88.8% of workers commute to other places including the cities of Riverside (13.2%), Ontario (6.8%), San Bernardino (4.3%), and Corona (4.1%) (SCAG, Jurupa Valley Profile, 2015).

Whenever possible, the City should offer incentives to businesses and individuals to create jobs in Jurupa Valley to bolster the economy, control emissions, and implement the Air Quality Management Plan. Among the positive approaches available to the City to encourage job creation in job-poor areas are education, job training and placement services, technical assistance to incoming businesses, reducing regulation and paperwork on businesses, fast tracking and reduced fees, and low interest loans. In addition to providing incentives for businesses to locate within Jurupa Valley, it is important to consider the relationship of jobs to housing when approving the construction of new development, including the

Figure 6-10: Mixed use housing near jobs and Metrolink Station, Inland Empire (KTGY.com)

development of residential and commercial land uses in close proximity and the strategic placement of new public facilities.

Policies

- AQ 6.1 **Small Business Assistance.** Assist small businesses by supporting organizations that develop education and job training programs.
- AQ 6.2 **Educational Programs.** Collaborate with local colleges and universities to develop appropriate educational programs to assist residents in obtaining job skills to meet market demands.
- AQ 6.3 **Business Incentives.** Provide incentives to encourage new firms to locate within the City and existing firms to expand operations.
- AQ 6.4 **Small Business Loan Programs.** Encourage loan programs to induce small businesses to locate or expand within the City.
- AQ 6.5 **Small Business Emissions Control.** Offer incentives to businesses to control emissions and implement the Air Quality Management Plan.
- AQ 6.6 **Regulation Relief.** Reduce regulations on small businesses wherever possible and thereby encourage small business development and job creation. The City shall set performance standards as well as design standards, thus giving small business owners as many options as possible to comply with City regulations.
- AQ 6.7 **Job Creation.** Emphasize job creation and reductions in vehicle miles traveled to improve air quality over other less efficient methods.
- AQ 6.8 **Public Facilities/Services.** Time and locate public facilities and services so that they help create new jobs.
- AQ 6.9 **Mixed-Use Land Use.** Support new mixed-use land use patterns with employment centers and community centers, which encourage community self-sufficiency and containment, promote efficient modes of travel, and help reduce automobile dependency.
- AQ 6.10 **Community Centers / Telecommuting / Home-Based Businesses.** Implement zoning code provisions that encourage community centers, telecommuting, and home-based businesses.
- AQ 6.11 **Non-Polluting Transportation.** Encourage and promote the use of non-polluting alternative modes of transportation such as natural gas and electric vehicles and bicycles.

- AQ 6.12 **Housing Types.** Provide for a variety of housing types that support a local market for a skilled professional and management labor pool when approving new residential developments.

Programs

- AQ 6.1.1 **Job-Skill Training Opportunities.** Actively seek and incentivize educational opportunities and institutions such as community colleges and trade schools to locate within Jurupa Valley to provide local job-skill training opportunities.
- AQ 6.1.2 **Funding Programs.** Actively seek funding programs to incentivize businesses that meet community needs.

AQ 7 – Transportation

Figure 6-11: Inland Empire Freeway with heavy traffic

Vehicles are an essential part of life in California. People use them to go to work, run errands, and transport goods all across the state and the nation. However, while vehicles serve a valuable function, many streets and freeways are increasingly overburdened with traffic. Seventy-seven percent of commuters drive alone, adding to the congestion and smog. Many Jurupa Valley residents drive long distances to work and have some of the longest commute times in all of Southern California. Transportation Demand Management, Transportation Systems Management, and Transportation Development Management can help improve air quality by reducing overall motor vehicle trips and managing vehicular travel.

Transportation Demand Management

Transportation Demand Management (TDM) can help unclog freeways and reduce commute times, thereby improving air quality. TDM strategies work to reduce traffic overall and divert the remaining traffic to non-peak periods. Examples include reducing work-related trips by encouraging individuals who drive alone to form carpools and vanpools, or take the bus or light rail. Other options include fewer workdays with longer work hours per day to eliminate one or two trips a week as well as telecommute and work-at-home programs. When individuals must drive, TDM strategies call for work schedules that avoid peak traffic periods and large trucks to operate at night.

TDM strategies for reducing trips that are not work related are also important. Merchant transportation incentives, such as discounts to customers who use public transit and free bus passes, help incentivize transit and take people out of single-occupancy vehicles. Other measures, such as providing convenient parking for people

who rideshare, can also reduce trips to merchants and help improve air quality.

Transit improvements and facility development must accompany the implementation of TDM strategies. Efforts to encourage a shift to transit will fail unless transit operators make convenient, safe, and reliable transit service available. Similarly, a lack of work centers impedes the ability to implement telecommute and work-at-home programs. The City can support the provision of transit services and foster the development of work centers. Changing transportation demand will also require facility development, such as park-n-ride lots, bus turnouts, off-site parking, electric vehicle charging stations, and facilities for bicycles and pedestrians.

Transportation Systems Management

Transportation systems management improves traffic flow through modification in the operation of existing transit facilities and fleets. The increased mobility improves air quality. Commerce, industry, and public welfare require adequate mobility. Poor transportation systems management, on the other hand, creates congested highways, perpetuates poorly maintained and polluting fleets, weakens the City's economy, and diminishes citizens' health and well-being. City management of its transportation systems in a manner that enhances mobility and efficiency is important. Improving the flow of traffic promotes mobility on our streets, resulting in decreased impacts on air quality.

Transportation Facilities Development

Regionally, transportation facilities development means increasing capacity through the expansion of highway and transit systems to meet population and land use demand. Though major construction projects often require massive capital investment, mobility and capacity are increased. These projects include major highways in high growth regions, construction of high occupancy vehicle (HOV) lanes where severe traffic problems occur, and construction of rapid transit corridors and facilities. Unfortunately, this strategy responds slowly to changing demands on the transportation system and may burden the region with debt.

Although often necessary to keep traffic moving, regional and local transportation facility development can contribute toward a growth in population and housing, and the need for public services and facilities (FHWA/Planning, Induced Travel Frequently Asked Questions, 2016). By increasing capacity, new or expanded transportation facilities can make longer commutes easier and outlying land more attractive for development. Additional development can contribute to poor air quality through increased

vehicular emissions, fossil fuel consumption, etc. The City intends to consider the benefits and costs of large transportation facilities development and balance it with other, less expensive alternatives that can improve multi-modal mobility.

Policies

- AQ 7.1 **Cooperative Relationships.** Seek new cooperative relationships between employers and employees to reduce vehicle miles traveled such as creating Transportation Management Associations.
- AQ 7.2 **Transit Incentives.** Encourage employee rideshare and transit incentives for employers with more than 25 employees at a single location and coordination with City incentives programs.
- AQ 7.3 **Trip-Reduction Programs.** Encourage workplace trip-reduction programs and cooperate with surrounding jurisdictions to reduce vehicle trips.
- AQ 7.4 **Traffic Flow Management.** Manage traffic flow through signal synchronization, while coordinating with and permitting the free flow of mass transit vehicles, when possible.
- AQ 7.5 **Traffic Hazards/Delays.** Eliminate traffic hazards and delays through street maintenance, rapid emergency response, debris removal, and elimination of at-grade railroad crossings, as City resources allow.
- AQ 7.6 **City Transportation Fleet.** Manage the City's transportation fleet to achieve energy savings.
- AQ 7.7 **Pedestrian and Bicycle Facilities.** Emphasize the use and improvement of pedestrian and bicycle facilities when funding transportation improvements.
- AQ 7.8 **Transportation Corridor Expansion.** Preserve transportation corridors with the potential of high demand or of regional significance for future expansion to meet project demand.

Programs

- AQ 7.1.1 **Trip Reduction Programs.** Pursue grant funding to establish an incentive program to encourage the use of trip reduction programs to decrease automotive vehicle miles traveled.
- AQ 7.1.2 **Traffic Signal Improvements.** Construct and improve traffic signals with channelization and Automated Traffic Monitoring and Control systems at appropriate intersections.

- AQ 7.1.3 **Transportation Management.** Consider measures such as Transportation Demand Management, Transportation Systems Management, or jobs/housing balance strategies when developing capital facilities improvement plans.
- AQ 7.1.4 **Congestion Monitoring.** Develop a program to monitor traffic and congestion to determine when and where the City needs new transportation facilities to achieve increased mobility efficiency.

AQ 8 – Special Events

Temporary special events provide recreational and retail opportunities for residents. However, these events may also result in traffic congestion on roadways adjacent to the event. The following policies are designed to alleviate traffic congestion and the accompanying pollution caused by excess vehicle travel times.

Policies

- AQ 8.1 **Parking/Park-N-Ride.** Establish requirements for special event centers to provide off-site parking and park-n-ride facilities at remote locations. Remote parking should be as close to practicable to the event site, and the operator should supply shuttle services.
- AQ 8.2 **Transit/Carpooling.** Encourage special event center operators to advertise and offer discounted transit passes and discount parking incentives to carpooling patrons with event tickets.

AQ 9 – Climate Change

As outlined in earlier in this element, human activities contribute to increasing concentrations of GHG in the atmosphere. Measures to reduce potential impacts of GHG are included throughout the General Plan. In addition to this Air Quality Element, the Land Use; Housing; Mobility; Conservation and Open Space; and Community Safety, Services, and Facilities Elements include policies and programs to reduce GHG emissions and help slow the progression of climate change.

Policies

- AQ 9.1 **State and Regional Plans and Programs.** Monitor federal, state, and regional plans and programs to stay abreast on emerging information, practices, and strategies to address climate change.

- AQ 9.2 **Critical Infrastructure.** Locate critical infrastructure in areas not subject to severe climate change impacts, such as flooding.
- AQ 9.3 **Climate Action Plan.** Work with WRCOG to periodically monitor and update the Subregional Climate Action Plan.
- AQ 9.4 **Vulnerability.** Develop strategies to reduce the City's vulnerability to climate change impacts.

###

A. INTRODUCTION

Jurupa Valley values its semi-rural character and diversity of land uses where individual expression is appreciated. However, the mix of land uses also generates a surprising amount of noise, which can adversely affect area residents and other sensitive receptors. Train whistles, aircraft overflights, motor vehicle traffic, barking dogs, and loud parties are a part of daily life that sometimes create a disruptive noise environment. In addition, vibration generated by construction equipment, idling trucks, and other sources can be annoying.

This Noise Element is a mandatory component of the General Plan pursuant to *California Government Code §65302(f)*. It is closely related to the Land Use, Mobility, Healthy Communities, and Environmental Justice Elements of the General Plan. The element identifies noise issues within the community, quantifies existing and projected noise levels, addresses excessive noise exposure, and provides goals, policies, and programs to reduce noise to acceptable levels. In the Noise Element, the City describes how it intends to prevent and mitigate the adverse impacts of excessive noise exposure on its residents, employees, visitors, and other persons.

Primary Goal

To be a City that actively works to minimize the effects of noise and vibration on sensitive receptors.

Policy and Program Sections

1. *Land Use Compatibility*
2. *Mobile Noise Sources*
3. *Stationary Noise Sources*
4. *Ground-Borne Vibration*

B. BACKGROUND

Figure 7-1: Rural setting, Jurupa Valley

Noise can significantly affect community character, quality of life, and human health. Noise is defined as any unwanted sound; however, the determination of what is considered excessive noise can be difficult and subjective. Sources of noise in the City include mobile sources, such as motor vehicles, rail, and aircraft, and stationary sources such as construction activities, truck transfer facilities, and generators. Managing noise involves balancing quality of life issues with the needs of transportation facilities and residential, commercial, and industrial activities. Noise standards should not be so stringent that they discourage business or development, but also not so lenient that the quality of life of the community suffers.

One of the General Plan Advisory Committee's key findings was the need to identify areas and sources of excessive noise, "noise sensitive uses," and measures to reduce noise impacts. Existing noise sources in the City include transportation or traffic-related impacts, rail noise, aircraft noise, and noise impacts associated with operations at commercial and industrial sites. Currently, one of the main issues in the City related to noise is the existence of incompatible land uses. Typically, when commercial or industrial operations are located close to residential or other noise-sensitive uses, complaints from residents are more likely to occur.

In coordination with City staff, specific locations at which potentially noise-incompatible uses existed in 2015 were identified. These locations were chosen to represent some of the noise monitoring locations presented in *Figure 7-2*. In addition to the noise-incompatible locations, noise monitoring locations, both long-term (24-hour) and short term (15-minute), were chosen to assess noise impacts from the existing rail operations and traffic noise impacts from major roadways within the City. *Figure 7-2* shows the location of the measurement sites.

Noise monitoring measurements, along with the modeling results of existing traffic noise contours, were used to determine existing noise conditions throughout the City. Future noise conditions were then modeled and compared to 2016 conditions. Future conditions include airport operations, proposed haul routes along the City streets, future rail activities, and expected continued/future incompatible land use noise issues. Noise goals, policies, and programs have been included in this element to address existing and future conditions in conformance with the City's overall goals.

Land Use Compatibility

The Noise Element of the General Plan directly relates to the Land Use Element in that noise can adversely affect sensitive land uses such as residential uses, schools, hospitals, assisted living facilities, mental care facilities, and places of worship, libraries, and passive recreation areas. Many of these uses depend on low levels of sound to promote the health and well-being of their occupants. Land uses that generate significant mobile or stationary noise must be compatible with adjacent uses in order for the land use plan to be successful. If existing land uses emit noise above a certain level, they may not be compatible with adjacent land uses, and should not be allowed unless attenuation measures are used to reduce indoor and outdoor noise to acceptable levels. In cases of new development, the placement of noise-sensitive land uses is integral to the safety and success of the community. *Table 7.1* lists common sound levels for familiar locations and activities.

Table 7.1: Typical A-Weighted Sound Levels

| Noise Source | A-Weighted Sound Level in Decibels | Noise Environments | Subjective Evaluations |
|--|------------------------------------|----------------------|------------------------|
| Near Jet Engine | 140 | Deafening | 128 times as loud |
| Civil Defense Siren | 130 | Threshold of Pain | 64 times as loud |
| Hard Rock Band | 120 | Threshold of Feeling | 32 times as loud |
| Accelerating Motorcycle at a Few Feet Away | 110 | Very Loud | 16 times as loud |
| Pile Driver; Noisy Urban Street/Heavy City Traffic | 100 | Very Loud | 8 times as loud |
| Ambulance Siren; Food Blender | 95 | Very Loud | — |
| Garbage Disposal | 90 | Very Loud | 4 times as loud |
| Freight Cars; Living Room Music | 85 | Loud | — |
| Pneumatic Drill; Vacuum Cleaner | 80 | Loud | 2 times as loud |
| Busy Restaurant | 75 | Moderately Loud | — |
| Near Freeway Auto Traffic | 70 | Moderately Loud | — |
| Average Office | 60 | Quiet | One-half as loud |
| Suburban Street | 55 | Quiet | — |
| Light Traffic; Soft Radio Music in Apartment | 50 | Quiet | One-quarter as loud |
| Large Transformer | 45 | Quiet | — |
| Average Residence without Stereo Playing | 40 | Faint | One-eighth as loud |
| Soft Whisper | 30 | Faint | — |
| Rustling Leaves | 20 | Very Faint | — |
| Human Breathing | 10 | Very Faint | Threshold of Hearing |
| — | 0 | Very Faint | — |

Noise Measurement

When discussing noise policy, it is helpful to have a basic understanding of the primary tools used to measure the effect of noise on the community. The decibel is a basic unit of noise that measures the intensity of sound. The A-weighted decibel, also referred to as dB(A), measures the intensity of sound as it relates to the hearing frequency of the human ear. The Day Night Average Sound Level, or Ldn, is a 24-hour average sound level with a penalty added to nighttime hours to reflect increased hearing sensitivity during that time. The Community Noise Equivalent Level, or CNEL, mirrors Ldn but with an additional penalty added to evening hours. Figure 7-2 shows location where existing noise levels were measured in 2015 as part of the 2017 General Plan technical studies.

Noise Attenuation

Noise attenuation refers to measures undertaken to reduce the volume of sound and lessen its harmful or disruptive effects. There are three primary ways to attenuate noise: at the source, along the path, and at the receiver. Examples of attenuation at the source include reducing vehicular speeds, implementing truck restrictions, and enforcing noise ordinance restrictions on amplified music. Attenuation along the path includes increasing the distance between the noise source and the receiver and installing walls, berms, or landscaping to reduce the noise reaching the receiver. Finally, measures undertaken at the receiver to reduce noise include site design to buffer sensitive receptors and the use of construction soundproofing techniques such as double-pane window glazing and roof treatments. *Table 7.2* lists state and federal noise standards used to set maximum noise exposure limits for interior and exterior areas of various land uses.

Table 7.2: State of California and Federal Interior and Exterior Noise Standards

| Land Use | | State Standard | | FHWA |
|--------------------------|---|----------------|--------------|--------------|
| Categories | Land Uses | Interior dBA | Exterior dBA | dBA Standard |
| Residential | Single- and multiple-family homes, duplex | 45 | 65 | 55 interior |
| | Mobile homes and trailer parks | 45 | 65 | 55 interior |
| Institutional/ Public | Hospital, school classrooms/ playground | 45 | 65 | 55 interior |
| | Church, library | 45 | – | 55 interior |
| Open Space | Parks | – | 65 | 70 interior |
| Commercial | Hotel, motel, transient housing | 45 | – | 55 interior |

Ground-Borne Vibration

Another community concern related to noise is ground-borne vibration from construction activities, blasting, rail operations, and trucking. Vibration normally falls within the disruptive category, where it can cause such things as window shaking and floor trembling and generally interfere with quality of life. At higher levels, vibration can actually cause structural damage. Vibration can be felt outdoors, but the perceived intensity of vibration impacts is

much greater indoors due to structural shaking. *Table 7.3* lists vibration levels common in urban areas and human sensitivity.

Table 7.3: Human Sensitivity to Typical Vibration Levels

| Vibration Level Peak Particle Velocity (inches/second) | Human Reaction |
|--|---|
| 0.0059–0.0188 | Threshold of perception, possibility of intrusion. |
| 0.0787 | Vibrations readily perceptible. |
| 0.0984 | Level at which continuous vibrations begin to annoy people. |
| 0.1968 | Vibrations annoying to people in buildings. |
| 0.3937–0.5905 | Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges. |

C. NOISE ELEMENT GOALS, POLICIES AND PROGRAMS

Goals

To be a City that effectively manages noise in order to:

- NE 1 Protect individual freedoms while preventing noise and vibration from degrading the safety and well-being of our community.
- NE 2 Ensure adjacent land uses are compatible, and protect sensitive receptors from outside sources of noise and vibration.
- NE 3 Minimize excessive noise levels and community health risks due to mobile noise sources.
- NE 4 Minimize excessive noise levels and community health risks due to stationary noise sources.
- NE 5 Minimize excessive noise levels and community health risks due to ground-borne vibration.

Policies and Programs

NE 1 – Land Use Compatibility

As previously identified, noise-producing land uses must be compatible with adjacent land uses in order for the land use plan to be successful. *Figure 7-3*, Land Use/Noise Compatibility Matrix, outlines the noise acceptability levels of different land uses. Areas around airports may have different or more restrictive noise standards than those cited in *Figure 7-3*, and the Airport Land Use Compatibility Plan for Western Riverside County should be consulted.

The following policies are designed to protect noise-sensitive land uses from noise emitted by outside sources, and prevent new projects from generating adverse noise levels on adjacent properties.

Policies

- NE 1.1 **Land Use/Noise Compatibility.** Utilize the Land Use/Noise Compatibility Matrix, *Figure 7-3*, to determine the compatibility of proposed development, including General Plan amendments, specific plan amendments, village plans, and rezonings, with existing land uses and/or noise exposure due to transportation sources.
- NE 1.2 **New Development and Stationary Noise Sources.** New development of noise-sensitive land uses near existing stationary noise sources may be permitted only where their location or design allows the development to meet the standards listed in *Figure 7-3*.
- NE 1.3 **New or Modified Stationary Noise Sources.** Noise created by new stationary noise sources, or by existing stationary noise sources that undergo modifications that may increase noise levels, shall be mitigated so as not exceed the noise level standards of *Figure 7-3*. This policy does not apply to noise levels associated with agricultural operations existing in 2017.
- NE 1.4 **Acoustical Assessment.** Require an acoustical assessment for proposed General Plan amendments and rezones that exceed the “Normally Acceptable” thresholds of the Land Use/Noise Compatibility Matrix.
- NE 1.5 **Noise-Sensitive Uses.** Consider the following uses noise-sensitive and discourage these uses in areas in excess of 65 CNEL: schools, hospitals, assisted living facilities, mental care facilities, residential uses, libraries, passive recreational uses, and places of worship.
- NE 1.6 **Protection of Noise-Sensitive Uses.** Protect noise-sensitive land uses from high levels of noise by restricting noise-producing land uses from these areas. If the noise-producing land uses cannot be relocated, then measures such as building techniques, setbacks, landscaping, and noise walls should be considered.

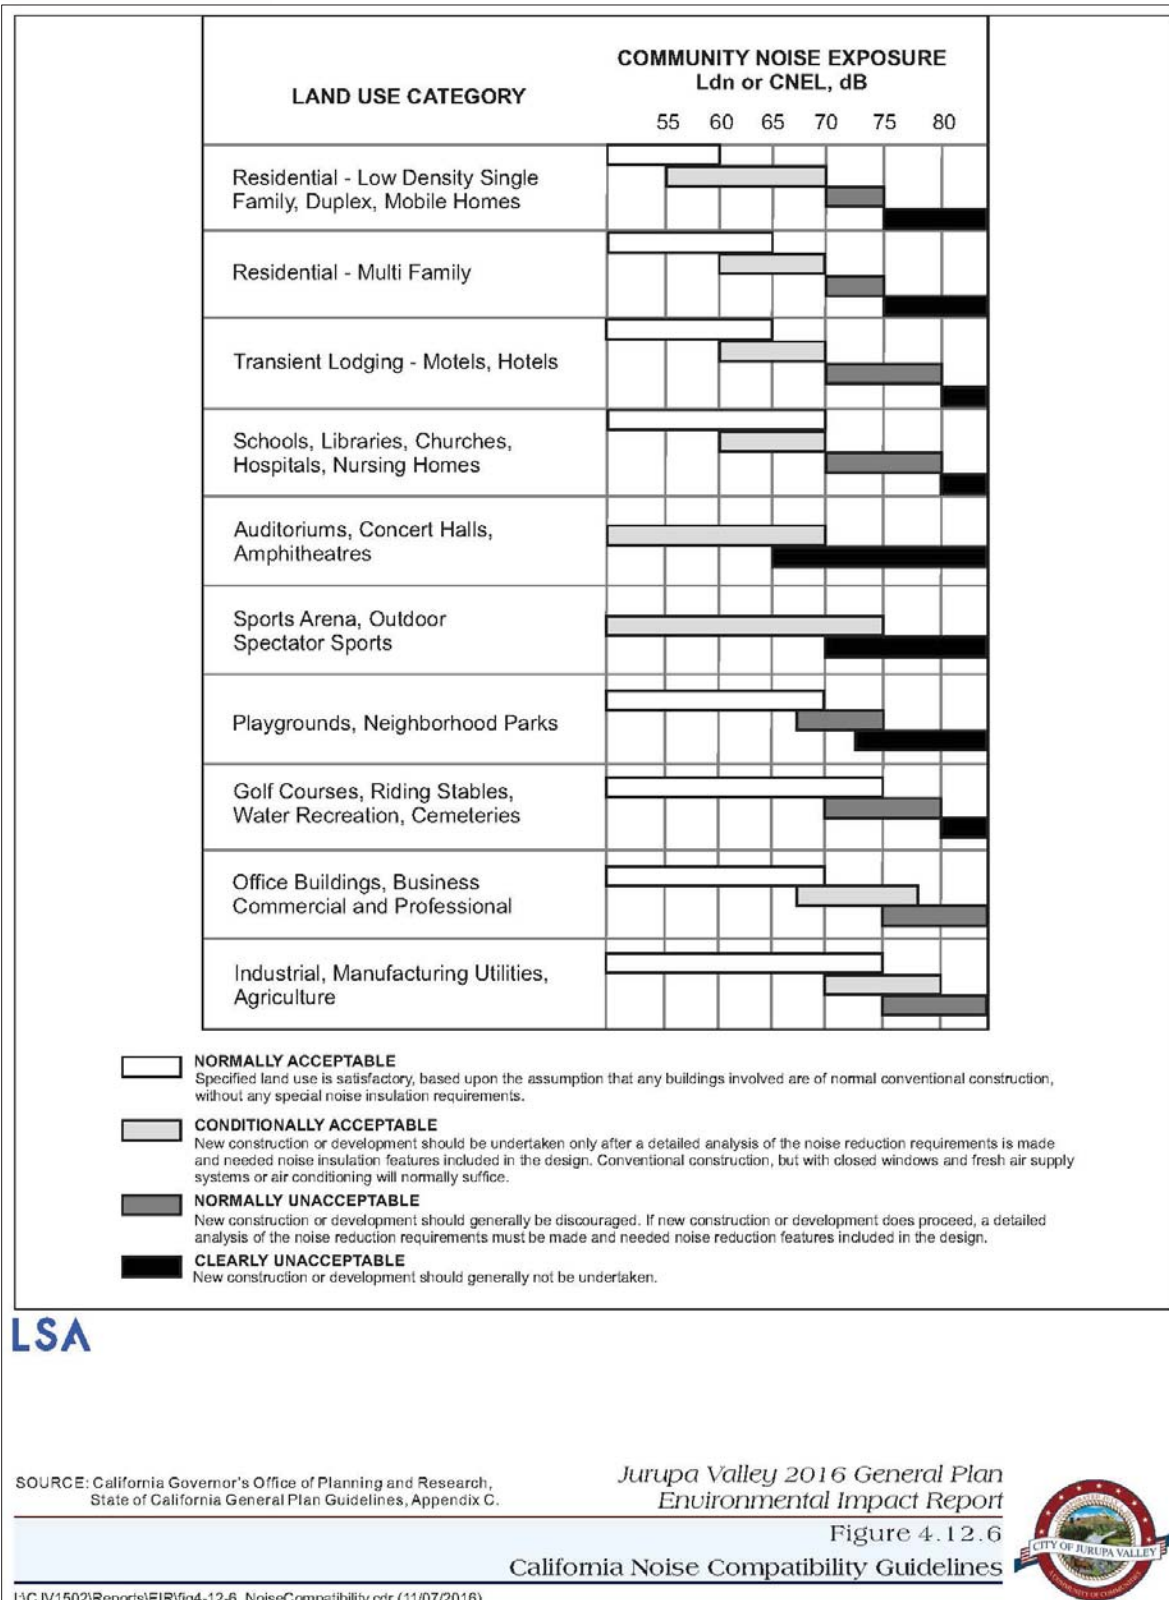

Figure 7-3: Land Use/Noise Compatibility Matrix

- NE 1.7 **Noise-Tolerant Uses.** Guide new or relocated noise-tolerant land uses into areas irrevocably committed to land uses that are noise producing, such as along major transportation corridors or within the projected noise contours of area airports.
- NE 1.8 **Airport Noise Compatibility.** Ensure that new land use development within Airport Influence Areas complies with airport land use noise compatibility criteria contained in the applicable Airport Land Use Compatibility (ALUC) plan for the area.
- NE 1.9 **Acoustic Site Planning and Design.** Incorporate acoustic site planning into the design and placement of new development, particularly large scale, mixed-use, or master-planned development, including building orientation, berming, special noise-resistant walls, window and door assemblies, and other appropriate measures.
- NE 1.10 **Mixed Uses.** Require that mixed commercial and residential development minimizes the transfer or transmission of noise from the commercial land use to the residential land use.

Programs

- NE 1.1.1 **Municipal Code:** Amend the Municipal Code to require that development entitlements (e.g., tract maps, site development plans, conditional use permits) comply with the Land Use/Noise Compatibility Matrix, *Figure 7-3*, and with other noise requirements of the General Plan.
- NE 1.1.2 **Noise Guide.** The Planning Department shall prepare and maintain a Noise Guide containing “Good Neighbor” guidelines and rules for neighborhood noise reduction and procedures for mitigating noise, and make the Guide available to the public, property owners, and developers.
- NE 1.1.3 **Homeowner Assistance.** Assist homeowners living in high noise areas to reduce noise levels in their homes through funding assistance and retrofitting program development, as City resources allow.

NE 2 – Mobile Noise Sources

As previously addressed, mobile noise sources in Jurupa Valley include motor vehicles, rail, and aircraft. Each of these sources presents a unique challenge in minimizing the adverse effects of their noise on sensitive land uses.

Motor Vehicles. Motor vehicles are one of the most pervasive sources of noise in the City. Motor vehicle noise varies in how it affects land uses depending upon the type of roadway and the distance of the land use from that roadway. Some variables that affect the amount of noise emitted from a road are speed of traffic, flow of traffic, and type of traffic (i.e., automobile versus truck). Another variable affecting the overall measurement of noise is an increased sensitivity to vehicular noise at night. *Figure 7-5* illustrates the existing noise contours from major roads and highways in and near the City. *Figure 7-6* illustrates future noise conditions with anticipated 2017 General Plan buildout.

Rail. As outlined in the Mobility Element, the rail system within Jurupa Valley includes the Union Pacific freight railroad and the Metrolink light rail transit that transports commuters to Riverside, Pomona, and Los Angeles. A Burlington Northern Santa Fe (BNSF) freight line also runs through Agua Mansa, Belltown and Glen Avon. Noise from rail operations may disrupt activities in proximity to the railroad tracks. For instance, trains are required to sound their horns at all at-grade crossings, and they may be required to slow their speed through residential areas. These types of noise disturbances can interfere with activities conducted at noise-sensitive land uses. *Figure 7-7* and *Figure 7-8* show existing and future commuter and freight noise contours from rail traffic in the City.

Aircraft. Jurupa Valley is subject to aircraft noise from Flabob Airport and the Riverside Municipal Airport, as shown in *Figure 7-9*. In addition, the community is subject to aircraft noise from the LA/Ontario International Airport, especially when Santa Ana winds force planes to take off in an easterly direction.

Figure 7-8: Rail Noise Contour Map, Freight Train

DRAFT

Noise

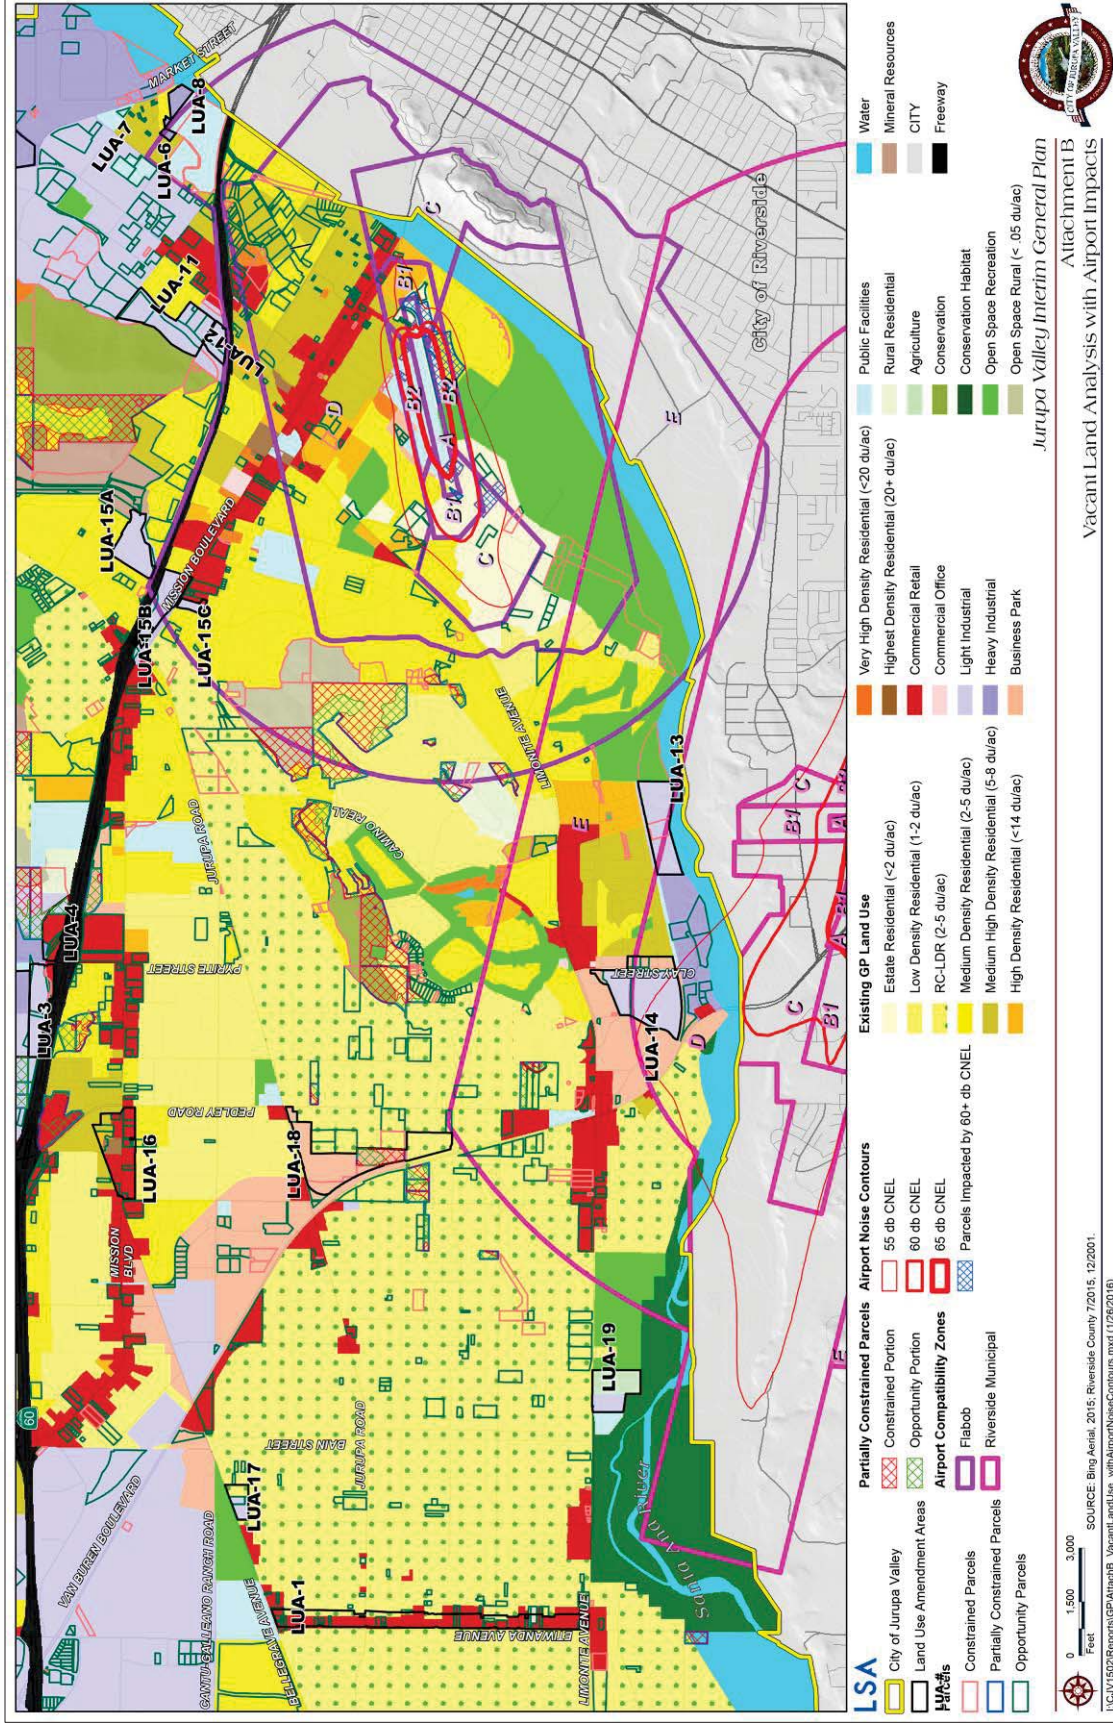

Figure 7-9: Airport Land Use Constraints

Aircraft noise tends to generate the greatest community anti-noise response, although the duration of noise from a single airplane is much less, for example, than that from a freight train. There is great economic benefit to be gained from airports of any size, although living in proximity to an airport can expose residents to aircraft noise. An Airport Land Use Compatibility Plan has been created for each of the airports and includes noise contours and guidelines for compatible land uses, included in the Noise Handbook, Appendix 4.0.

Policies

- NE 2.1 **Roadway Projects.** Include noise mitigation measures in the design and construction of new roadway projects in the City. Noise mitigation may include speed reduction, roadway design, noise-reducing materials or surfaces, edge treatments and parkways with berms and landscaping, and other measures.
- NE 2.2 **Commercial Truck Deliveries.** Require commercial or industrial truck delivery hours be limited to least-sensitive times of the day when adjacent to noise-sensitive land uses, unless there is no feasible alternative or there are overriding transportation benefits, as determined by the Planning Director.
- NE 2.3 **Off-Road Vehicles.** Restrict the use of motorized trail bikes, mini-bikes, and other off-road vehicles except where designated for that purpose. Enforce strict operating hours for these vehicles where they are located to minimize noise impacts on sensitive land uses adjacent to public trails and parks.
- NE 2.4 **Rail Noise.** Minimize the noise effect of rail transit (freight and passenger) on residential uses and other sensitive land uses through the land use planning and discretionary approval process.
- NE 2.5 **Rail Noise Mitigation.** Encourage and, where possible, require the rail service provider to install noise mitigation features where rail operations impact existing adjacent residential or other noise-sensitive uses.
- NE 2.6 **Noise Contours.** Check all proposed development projects for possible location within roadway, railroad, and airport noise contours.
- NE 2.7 **Airport Compatibility.** Comply with applicable noise mitigation policies contained in the Airport Land Use Compatibility (ALUC) Plans for Flabob Airport, Riverside Municipal Airport, and the LA/Ontario International Airport.

NE 2.8 Preferred Noise Mitigation Methods. When approving new development of noise-sensitive uses or noise-generating uses, the City will require noise mitigation in the order of preference, as listed below, with “1” being most preferred. For example, when mitigating outdoor noise exposure, providing distance between source and recipient is preferred to providing berms and walls. Before approving a less desirable approach, the City approval body must make a finding that more desirable approaches are not effective or that it is not practical to use the preferred approaches consistent with other design criteria based on the General Plan.

A. Mitigating Noise Generation

1. Design the site of the noise-producing project so that buildings or other solid structures shield neighboring noise-sensitive uses;
2. Limit the operating times of noise-producing activities;
3. Provide features, such as walls, with a primary purpose of blocking noise.

B. Mitigating Outdoor Noise Exposure

1. Provide distance between noise source and recipient;
2. Provide distance plus planted earthen berms;
3. Provide distance and planted earthen berms, combined with sound walls;
4. Provide earthen berms combined with sound walls;
5. Provide sound walls only;
6. Integrate buildings and sound walls to create a continuous noise barrier.

NE 2.9 Noise Walls. Noise mitigation walls (sound walls) should be used only when it is shown that preferred approaches are not effective or that it is not practical to use the preferred approaches consistent with other design criteria in the General Plan. Where noise walls are used, they should be designed to enhance community character, protect significant views, discourage graffiti, and help create an attractive pedestrian-friendly residential setting through features such as setbacks, changes in vertical and horizontal alignment, detail and texture, public art, walkways or trails, and landscaping. The height of such walls should be minimized, and where sound attenuation requires that a buffer that exceeds 10 feet in height, the sound buffer should consist of a combination of berms and a

wall, or two or more retaining walls stepped back to allow intervening landscaping.

Programs

- NE 2.1.1 **Truck Routes.** Prepare and adopt truck routes to direct commercial trucks away from sensitive noise receptors.
- NE 2.1.2 **City Actions.** The City will consider implementing one or more of the following measures where existing or cumulative increases in noise levels from new development significantly affect noise-sensitive land uses or residential neighborhoods:
- Rerouting traffic onto streets that can maintain desired levels of service, consistent with the Mobility Element, and that do not adjoin noise-sensitive land uses.
 - Rerouting commercial trucks onto streets that do not adjoin noise-sensitive land uses.
 - Constructing noise barriers.
 - Reducing traffic speeds through street or intersection design methods (also refer to the Mobility Element).
 - Retrofitting buildings with noise-reducing features.
 - Establishing financial programs, such as low cost loans to owners of noise-impacted property, or requiring noise mitigation or trip reduction programs as a condition of development approval.
 - Encourage and support stepped up enforcement of traffic laws and the *California Vehicle Code*.
- NE 2.1.3 **City Operations and Purchasing.** The City will pursue alternatives to the use of noisy equipment and vehicles, and will purchase equipment and vehicles only if they incorporate the best available noise reduction technology.

NE 3 – Stationary Noise Sources

A stationary noise source is a land use, building, or activity in a relatively fixed location that emits noise. The noise may be temporary, intermittent, or continuous. Stationary noise sources are common in many noise-sensitive areas. Motors, appliances, air conditioners, lawn and garden equipment, power tools, generators, and amplified sounds are often found in residential neighborhoods, as well as on or near the properties of schools, hospitals, and parks. Industrial, commercial, and manufacturing facilities can also generate stationary noise that may affect sensitive land uses.

The emitted noise can usually be reduced to acceptable levels either at the source or on the adjacent property through the use of

Figure 7-10: Leaf blower use in residential neighborhood

proper planning, setbacks, block walls, acoustic-rated windows, dense landscaping, or by changing the location of the noise producer. In Jurupa Valley, some of the stationary noise producers include truck transfer stations, construction activities, idling trucks, and a go-kart racetrack. Maximum noise exposure levels from stationary sources for noise-sensitive uses are regulated by the Municipal Code.

Nuisance noise, such as amplified music from bars and private parties, dog barking, and illegal firework use, is another type of stationary source noise that has been identified by area residents as creating a problem within the City. The effects or significance of nuisance noise can be compounded by the time of day, volume, and proximity to sensitive receptors. For instance, a loud party might be tolerated by neighbors in the early evening hours but be considered a nuisance after 10:00 p.m. The City's Noise Ordinance contains regulations limiting the allowable noise generated by private parties and other events.

Policies

- NE 3.1 **Noise Analysis.** Require that a noise analysis be conducted by an acoustical specialist for all proposed development projects that have the potential to generate significant noise near a noise-sensitive land use, or on or near land designated for noise-sensitive land uses, and ensure that recommended mitigation measures are implemented.
- NE 3.2 **Truck Loading, Shipping, and Parking.** Require that the loading, shipping or parking facilities of commercial and industrial land uses that abut or are within 200 feet of residential parcels, be located and designed to minimize potential noise impacts upon residents. Overnight commercial truck parking areas shall be regulated in the Zoning Ordinance as a commercial use.
