Midway Village Project—All Off-site Receptors Scenario

All Off-site Receptors: Exposed to Phases 1+2+3+4 Demolition and Phases 1+2+3+4 Construction
Construction Annual DPM Emissions (PM2.5 Exhaust)

Mitigated Concentrations

Annual Average Onsite DPM Rate—Demolition Area 1A (Phase 1) (grams/m2/sec):	6.24E-08
Annual Average Onsite DPM Rate—Demolition Area 2A (Part 1 of 2 Phase 2) (grams/m2/sec):	5.78E-08
Annual Average Onsite DPM Rate—Demolition Area 2A (Part 2 of 2 Phase 2) (grams/m2/sec):	5.78E-08
Annual Average Onsite DPM Rate—Demolition Area 3A (Phase 3) (grams/m2/sec):	4.96E-08
Annual Average Onsite DPM Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	6.25E-08
Annual Average Onsite DPM Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	6.25E-08
Annual Average Onsite DPM Rate—Construction Area 1B (Phase 1) (grams/m2/sec):	9.83E-08
Annual Average Onsite DPM Rate—Construction Area 2B (Part 1 of 2 Phase 2) (grams/m2/sec):	2.05E-07
Annual Average Onsite DPM Rate—Construction Area 2B and 2B/3B (Part 2 of Phase 2) (grams/m2/sec):	2.05E-07
Annual Average Onsite DPM Rate—Construction Area 3B (Phase 3) (grams/m2/sec):	6.84E-08
Annual Average Onsite DPM Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	4.70E-08
Annual Average Onsite DPM Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	4.70E-08
Annual Average Offsite DPM Emission Rate - Road Segment 1 (grams/sec):	1.40E-05
Annual Average Offsite DPM Emission Rate - Road Segment 2 (grams/sec):	1.69E-05

Construction Health Risk Assessment Files

Midway Village Project—All Off-site Receptors Scenario

All Off-site Receptors: Exposed to Phases 1+2+3+4 Demolition and Phases 1+2+3+4 Construction
Construction Annual Total PM2.5 Emissions (PM2.5 Total)

Mitigated Concentrations

Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 1A (Phase 1) (grams/m2/sec):	1.94E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 2A (Part 1 of 2 Phase 2) (grams/m2/sec):	3.12E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 2A (Part 2 of 2 Phase 2) (grams/m2/sec):	3.12E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 3A (Phase 3) (grams/m2/sec):	2.73E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	1.28E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	1.28E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 1B (Phase 1) (grams/m2/sec):	5.90E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 2B (Part 1 of 2 Phase 2) (grams/m2/sec):	3.86E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 2B and 2B/3B (Part 2 of Phase 2) (grams/m2/sec):	3.86E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 3B (Phase 3) (grams/m2/sec):	7.50E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	4.93E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	4.93E-07
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 1 (grams/sec):	4.69E-04
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 2 (grams/sec):	4.74E-04

Concentration	3.2183E-02	(ug/m3)

Existing Phase 3 Receptors—Midway Village Project

Existing Phase 3 Receptors: Exposed to Phases 1+2 Demolition and Phases 1+2 Construction
Construction Annual Total PM2.5 Emissions (PM2.5 Total)

	Mitigated Concentrations
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 1A (Phase 1) (grams/m2/sec):	1.94E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 2A (Part 1 of 2 Phase 2) (grams/m2/sec):	3.12E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 2A (Part 2 of 2 Phase 2) (grams/m2/sec):	3.12E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 1B (Phase 1) (grams/m2/sec):	5.90E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 2B (Part 1 of 2 Phase 2) (grams/m2/sec):	3.86E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 2B and 2B/3B (Part 2 of Phase 2) (grams/m2/sec):	3.86E-07
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 1 (grams/sec):	2.54E-04
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 2 (grams/sec):	2.57E-04

Construction Health Risk Assessment Files

Existing Phase 4 Receptors—Midway Village Project

Existing Phase 4 Receptors Scenario: Exposed to Phases 1+2+3 Demolition and Phases 1+2+3 Construction
Construction Annual Total PM2.5 Emissions (PM2.5 Total)

	Unmitigated Concentrations
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 1A (Phase 1) (grams/m2/sec):	1.59E-06
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 2A (Part 1 of 2 Phase 2) (grams/m2/sec):	1.13E-06
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 2A (Part 2 of 2 Phase 2) (grams/m2/sec):	1.13E-06
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 3A (Phase 3) (grams/m2/sec):	8.62E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 1B (Phase 1) (grams/m2/sec):	1.44E-06
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 2B (Part 1 of 2 Phase 2) (grams/m2/sec):	1.02E-06
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 2B and 2B/3B (Part 2 of Phase 2) (grams/m2/sec):	1.02E-06
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 3B (Phase 3) (grams/m2/sec):	1.21E-06
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 1 (grams/sec):	3.62E-04
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 2 (grams/sec):	3.66E-04

Scenario 5

Cancer Risk Calculations Using OEHHA/BAAQMD Cancer Risk Assumptions
Midway Village Project—New Phase 1 Receptors Scenario
Cancer Risk Impacts from Construction at the Maximum Impacted Sensitive Receptor - Infant
UTM: 551738.04 4172975.17

Cancer Potency Factor: 1.1 $(mg/kg\text{-}day)^{-1}$
Exposure Frequency 350 days/year
Averaging Period 25550 days

Construction Annual DPM Emissions (as PM2.5 Exhaust) Unmitigated

Age	Maximum DPM Concentration (ug/m3)	Age Sensitivity Factor	Daily Breathing Rate (L/kg-day)	Time At Home Factor	Exposure Duration (years)	Cancer Risk (/million)
3rd Trimester	0.476115369	10	361	1	0.21	5.5
0-1	0.476115369	10	1,090	1	0.78	61.3

Midway Village Project—New Phase 1 Receptors

Phase 1 Receptors: Exposed to Phases 2+3+4 Demolition and Phases 2+3+4 Construction
Construction Annual DPM Emissions (PM2.5 Exhaust)

	Mitigated Concentrations
Annual Average Onsite DPM Rate—Demolition Area 2A (Part 1 of 2 Phase 2) (grams/m2/sec):	5.78E-08
Annual Average Onsite DPM Rate—Demolition Area 2A (Part 2 of 2 Phase 2) (grams/m2/sec):	5.78E-08
Annual Average Onsite DPM Rate—Demolition Area 3A (Phase 3) (grams/m2/sec):	4.96E-08
Annual Average Onsite DPM Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	6.25E-08
Annual Average Onsite DPM Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	6.25E-08
Annual Average Onsite DPM Rate—Construction Area 2B (Part 1 of 2 Phase 2) (grams/m2/sec):	2.05E-07
Annual Average Onsite DPM Rate—Construction Area 2B and 2B/3B (Part 2 of Phase 2) (grams/m2/sec):	2.05E-07
Annual Average Onsite DPM Rate—Construction Area 3B (Phase 3) (grams/m2/sec):	6.84E-08
Annual Average Onsite DPM Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	4.70E-08
Annual Average Onsite DPM Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	4.70E-08
Annual Average Offsite DPM Emission Rate - Road Segment 1 (grams/sec):	8.50E-06
Annual Average Offsite DPM Emission Rate - Road Segment 2 (grams/sec):	1.06E-05

Midway Village Project—New Phase 1 Receptors

Phase 1 Receptors: Exposed to Phases 2+3+4 Demolition and Phases 2+3+4 Construction
Construction Annual Total PM2.5 Emissions (PM2.5 Total)

	Mitigated Concentrations
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 2A (Part 1 of 2 Phase 2) (grams/m2/sec):	3.12E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 2A (Part 2 of 2 Phase 2) (grams/m2/sec):	3.12E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 3A (Phase 3) (grams/m2/sec):	2.73E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	1.28E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	1.28E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 2B (Part 1 of 2 Phase 2) (grams/m2/sec):	3.86E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 2B and 2B/3B (Part 2 of Phase 2) (grams/m2/sec):	3.86E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 3B (Phase 3) (grams/m2/sec):	7.50E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	4.93E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	4.93E-07
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 1 (grams/sec):	3.32E-04
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 2 (grams/sec):	3.36E-04

Chronic Non-Cancer Hazard Index at the Maximum Impacted Sensitive Receptor

Reference Exposure Level (REL) for DPM: 5 ug/m3

CNCHI = DPM/REL

X (m)	Y (m)	Average DPM (ug/m3)	Max DPM (ug/m3)	CNCHI
551674.71	4172865.89	0.0430	0.0430	0.00859

Mitigated

Annual PM2.5 Total (Exhaust + Fugitive Dust)

X (m)	Y (m)	Average PM2.5 Total (ug/m3)	Max PM2.5 (ug/m3)
551684.15	4172895.89	0.3273	0.3273

Midway Village Project—New Phase 2 Receptors

New Phase 2 Receptors: Exposed to Phases 3+4 Demolition and Phases 3+4 Construction
Construction Annual DPM Emissions (PM2.5 Exhaust)

	Unmitigated Concentrations
Annual Average Onsite DPM Rate—Demolition Area 3A (Phase 3) (grams/m2/sec):	6.37E-07
Annual Average Onsite DPM Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	8.02E-07
Annual Average Onsite DPM Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	8.02E-07
Annual Average Onsite DPM Rate—Construction Area 3B (Phase 3) (grams/m2/sec):	5.32E-07
Annual Average Onsite DPM Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	3.68E-07
Annual Average Onsite DPM Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	3.68E-07
Annual Average Offsite DPM Emission Rate - Road Segment 1 (grams/sec):	5.32E-06
Annual Average Offsite DPM Emission Rate - Road Segment 2 (grams/sec):	6.57E-06

Midway Village Project—New Phase 2 Receptors

New Phase 2 Receptors: Exposed to Phases 3+4 Demolition and Phases 3+4 Construction
Construction Annual Total PM2.5 Emissions (PM2.5 Total)

	Unmitigated Concentrations
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 3A (Phase 3) (grams/m2/sec):	8.62E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	8.68E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	8.68E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 3B (Phase 3) (grams/m2/sec):	1.21E-06
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	8.14E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	8.14E-07
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 1 (grams/sec):	2.15E-04
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 2 (grams/sec):	2.17E-04

Midway Village Project—New Phase 2 Receptors

New Phase 2 Receptors: Exposed to Phases 3+4 Demolition and Phases 3+4 Construction
Construction Annual DPM Emissions (PM2.5 Exhaust)

	Mitigated Concentrations
Annual Average Onsite DPM Rate—Demolition Area 3A (Phase 3) (grams/m2/sec):	4.96E-08
Annual Average Onsite DPM Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	6.25E-08
Annual Average Onsite DPM Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	6.25E-08
Annual Average Onsite DPM Rate—Construction Area 3B (Phase 3) (grams/m2/sec):	6.84E-08
Annual Average Onsite DPM Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	4.70E-08
Annual Average Onsite DPM Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	4.70E-08
Annual Average Offsite DPM Emission Rate - Road Segment 1 (grams/sec):	5.32E-06
Annual Average Offsite DPM Emission Rate - Road Segment 2 (grams/sec):	6.57E-06

Midway Village Project—New Phase 2 Receptors

New Phase 2 Receptors: Exposed to Phases 3+4 Demolition and Phases 3+4 Construction
Construction Annual Total PM2.5 Emissions (PM2.5 Total)

Mitigated Concentrations

Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 3A (Phase 3) (grams/m2/sec):	2.73E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	1.28E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	1.28E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 3B (Phase 3) (grams/m2/sec):	7.50E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	4.93E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	4.93E-07
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 1 (grams/sec):	2.15E-04
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 2 (grams/sec):	2.17E-04

Midway Village Project—New Phase 3 Receptors Scenario

New Phase 3 Receptors: Exposed to Phases 4 Demolition and Phases 4 Construction
Construction Annual Total PM2.5 Emissions (PM2.5 Total)

	Unmitigated Concentrations
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	8.68E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	8.68E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	8.14E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	8.14E-07
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 1 (grams/sec):	1.07E-04
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 2 (grams/sec):	1.08E-04

Midway Village Project—New Phase 3 Receptors Scenario

New Phase 3 Receptors: Exposed to Phases 4 Demolition and Phases 4 Construction
Construction Annual DPM Emissions (PM2.5 Exhaust)

	Mitigated Concentrations
Annual Average Onsite DPM Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	6.25E-08
Annual Average Onsite DPM Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	6.25E-08
Annual Average Onsite DPM Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	4.70E-08
Annual Average Onsite DPM Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	4.70E-08
Annual Average Offsite DPM Emission Rate - Road Segment 1 (grams/sec):	2.59E-06
Annual Average Offsite DPM Emission Rate - Road Segment 2 (grams/sec):	3.20E-06

Midway Village Project—New Phase 3 Receptors Scenario

New Phase 3 Receptors: Exposed to Phases 4 Demolition and Phases 4 Construction
Construction Annual Total PM2.5 Emissions (PM2.5 Total) — **Mitigated Concentrations**

Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 1 of 2 Phase 4) (grams/m2/sec):	1.28E-07
Annual Average Onsite Total PM2.5 Emission Rate—Demolition Area 4A (Part 2 of 2 Phase 4 – Phase 4/5) (grams/m2/sec):	1.28E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B and Area 2B/4B (Phase 4) (grams/m2/sec):	4.93E-07
Annual Average Onsite Total PM2.5 Emission Rate—Construction Area 4B (Phase 4/5) (grams/m2/sec):	4.93E-07
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 1 (grams/sec):	1.07E-04
Annual Average Offsite Total PM2.5 Emission Rate - Road Segment 2 (grams/sec):	1.08E-04

APPENDIX E

Biological Resources Methods Memorandum

1.0 INTRODUCTION

This memorandum (memo) was prepared to support Section 4.4 Biological Resources of the SCEA for the Midway Village Redevelopment Project (Project). Specifically, this memo describes the methods and results for determining the potential for special-status species to occur onsite.

2.0 METHODS

A Stantec biologist conducted a desktop analysis based on a review of existing information about sensitive biological resources known to occur near the project site to determine whether biological resources are absent, present, and/or are likely to be present. For the purpose of this evaluation, special-status plant species include plants that are as follows: 1) listed as threatened or endangered under the California Endangered Species Act (CESA) or Federal Endangered Species Act (FESA); 2) proposed for federal listing as threatened or endangered; 3) state or federal candidate species; 4) designated as rare by the California Department of Fish and Wildlife (CDFW); or 5) California Rare Plant Rank 1A, 1B, 2A or 2B species. Special-status animal species include species that are as follows: 1) listed as threatened or endangered under CESA or FESA; 2) proposed for federal listing as threatened or endangered; 3) state or federal candidate species; or 4) identified by the CDFW as species of special concern or fully protected species.

Sensitive natural communities are those communities that are highly limited in distribution and may or may not contain rare, threatened, or endangered species. The California Natural Diversity Database (CNDDB) ranks natural communities according to their rarity and endangerment in California. Habitats are considered sensitive if they are identified on the CDFW List of Vegetation Alliances and Associations as being highly imperiled or classified by CDFW in the CNDDB as natural communities of special concern – Ranks S1 to S3.

A CNDDB and California Native Plant Society (CNPS) database search for special-status species typically includes nine U.S. Geological Survey 7.5-minute quadrangle maps for a small project located within a single quadrangle—the quadrangle that covers the study area—and the eight quadrangles that surround the project quadrangle. In this case, the *San Francisco South, San Francisco North, Oakland West,* and *Hunter's Point* topographic quadrangles within a 5-mile radius of the project site were queried.

Other information sources consulted to determine which special-status species could potentially occur in the project site included the following:

- USGS California 7.5-minute topographic quadrangles for San Francisco South, San Francisco North, Oakland West, and Hunter's Point;
- Aerial photographs of the project site and surrounding vicinity (Google Earth 2019);
- United States Fish and Wildlife Service (USFWS) list of endangered and threatened species that may occur in the project site (USFWS 2019a);
- USFWS Designated Critical Habitat (USFWS 2019a)
- USFWS National Wetlands Inventory (USFWS 2019b)
- The CDFW CNDDB plant and animal records within 5 miles of the project site (CDFW 2019a);

- Special Animals List (CDFW 2019b);
- The CNPS online Inventory of Rare and Endangered Plants (CNPS 2019)
- California Wildlife Habitat Relationships System (WHRS) (CDFW 2014).

Based on this review of existing information, a list of special-status species that have the potential to occur or are known to occur in the project site and vicinity was developed. The list was refined based on the habitat within and adjacent to the project site to determine the potential for those species to occur.

2.1 HABITAT COMMUNITIES

Habitat types within the project site were classified based on descriptions provided in *A Guide to Wildlife Habitats of California* (Mayer and Laudenslayer 1988), as well as the California Natural Community List (CDFW 2019c), which is adapted from the technical approach and vegetation alliance classification system described in *A Manual of California Vegetation* (Sawyer et al. 2009). The habitat community present in the project site includes Urban. No aquatic resources were identified in the project site. A description of the habitat within the project site is provided below.

2.1.1 Urban

The project site consists of residential and commercial structures, parking areas, landscaped areas, and an existing park. The existing park includes an open grass area, play structures, and basketball courts. Landscaped areas throughout the project site include ornamental trees and shrubs planted adjacent to roadways and walkways. Additionally, there are trees planted adjacent to the northern and eastern boundary of the project site.

2.1.2 Aquatic Habitats

No aquatic habitats occur within the project site; however, a small unnamed creek flows underneath the project site through a box culvert system that outlets approximately 50 feet east of the project limits into an open earthen channel. The project would not impact the existing culvert that flows underneath the project. Based on aerial imagery, vegetation along the unnamed creek includes unknown shrubs and herbaceous species. Approximately 650 feet downstream of the project site, there is an existing marsh adjacent to the channel. The unnamed creek continues flowing through another box culvert until it reaches an open channel and into the San Francisco Bay. The creek appears to receive runoff from the surrounding developments and roadsides.

3.0 DATABASE RESULTS

3.1 SPECIAL-STATUS SPECIES

3.1.1 Plants

A total of 65 special-status plant species were identified based on a review of pertinent literature, the USFWS species list and CNDDB and CNPS database records (Appendix A). CNNDB special-status plant species occurrences were reviewed within 5 miles of the project site. For each species, habitat requirements were assessed and compared to the habitats in the project site and immediate vicinity to determine if potential habitat occurs in the project site. The project site does not provide suitable habitat for special-status plants due to the existing development. The unnamed creek, once it outlets adjacent to the project site in an open earthen channel, has limited suitable habitat; therefore, there is low potential to support the following special-status plants within the unnamed creek channel:

- bristly sedge (*Carex comosa*) – CNPS 2B.1
- California seablite (*Suaeda californica*) – Federal Endangered (FE), CNPS 1B.1
- johnny-nip (*Castilleja ambigua* var. *ambigua*) – CNPS 4.2
- marsh sandwort (*Arenaria paludicola*) – FE, State Endangered (SE), CNPS 1B.1
- water star-grass (*Heteranthera dubia*) – CNPS 2B.2

3.1.2 Wildlife

A total of 58 special-status animal species were identified based on a review of pertinent literature, the USFWS species list, CNDDB database records (Appendix A), and a query of the California WHRS (CDFW 2014). CNNDB special-status animal species occurrences were reviewed within 5 miles of the project site. For each species, habitat requirements were assessed and compared to the habitats in the project site and the immediate vicinity to determine the species' potential to occur in or near the project site. The project site does not provide suitable habitat for special-status species due to the existing development. The unnamed creek, once it outlets adjacent to the project site in an open earthen channel, has limited suitable habitat; therefore, there is low potential to support the following special-status animals within the unnamed creek channel:

- California red-legged frog (*Rana draytonii*) – Federal Threatened (FT), Species of Special Concern (SSC)
- San Francisco gartersnake (*Thamnophis sirtalis tetrataenia*) – FE, SE, Federal Protected (FP)
- western bumble bee (*Bombus occidentalis*) – Critically Endangered (CE)
- western pond turtle (*Emys marmorata*) – SSC

3.2 CRITICAL HABITAT

The project site is not within USFWS designated critical habitat (Appendix A). There is critical habitat within the vicinity of the project site, including Franciscan manzanita (*Arctostaphylos franciscana*) critical habitat located 0.77 mile northwest and Bay checkerspot butterfly critical habitat located 1.25 miles south of the project site.

Appendix A: Database Table Results

Selected Elements by Scientific Name

California Department of Fish and Wildlife

California Natural Diversity Database

Query Criteria: Quad IS (San Francisco South (3712264) OR San Francisco North (3712274) OR Oakland West (3712273) OR Hunters Point (3712263))
 AND Taxonomic Group IS (Ferns OR Gymnosperms OR Monocots OR Dicots OR Lichens OR Bryophytes)

IPaC **U.S. Fish & Wildlife Service**

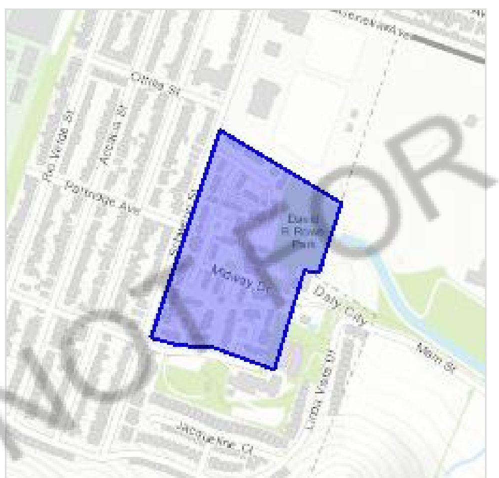
IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Location

San Mateo County, California



Local office

Sacramento Fish And Wildlife Office

(916) 414-6600
(916) 414-6713

Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population, even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information.
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Mammals

NAME	STATUS

Salt Marsh Harvest Mouse Reithrodontomys raviventris — Endangered
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/613

Southern Sea Otter Enhydra lutris nereis — Threatened, Marine mammal
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/8560

Birds

NAME	STATUS
California Clapper Rail Rallus longirostris obsoletus No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/4240	Endangered
California Least Tern Sterna antillarum browni No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8104	Endangered
Marbled Murrelet Brachyramphus marmoratus There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/4467	Threatened
Short-tailed Albatross Phoebastria (=Diomedea) albatrus No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/433	Endangered
Western Snowy Plover Charadrius nivosus nivosus There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/8035	Threatened

Reptiles

NAME	STATUS
Green Sea Turtle Chelonia mydas No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/6199	Threatened
San Francisco Garter Snake Thamnophis sirtalis tetrataenia No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/5956	Endangered

Amphibians

NAME	STATUS
California Red-legged Frog Rana draytonii There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/2891	Threatened

Fishes

NAME	STATUS
Delta Smelt Hypomesus transpacificus There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/321	Threatened
Tidewater Goby Eucyclogobius newberryi There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/57	Endangered

Insects

NAME	STATUS
Bay Checkerspot Butterfly Euphydryas editha bayensis There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/2320	Threatened
Callippe Silverspot Butterfly Speyeria callippe callippe There is **proposed** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/3779	Endangered
Mission Blue Butterfly Icaricia icarioides missionensis There is **proposed** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/6928	Endangered
Myrtle's Silverspot Butterfly Speyeria zerene myrtleae No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/6929	Endangered

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

THERE ARE NO CRITICAL HABITATS AT THIS LOCATION.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON (IF A BREEDING SEASON IS INDICATED FOR A BIRD ON YOUR LIST, THE BIRD MAY BREED IN YOUR PROJECT AREA SOMETIME WITHIN THE TIMEFRAME SPECIFIED, WHICH IS A VERY LIBERAL ESTIMATE OF THE DATES INSIDE WHICH THE BIRD BREEDS ACROSS ITS ENTIRE RANGE. "BREEDS ELSEWHERE" INDICATES THAT THE BIRD DOES NOT LIKELY BREED IN YOUR PROJECT AREA.)

Allen's Hummingbird Selasphorus sasin — Breeds Feb 1 to Jul 15

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9637

Bald Eagle Haliaeetus leucocephalus — Breeds Jan 1 to Aug 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/1626

Black Oystercatcher Haematopus bachmani — Breeds Apr 15 to Oct 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9591

Black Skimmer Rynchops niger — Breeds May 20 to Sep 15

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/5234

Black Turnstone Arenaria melanocephala — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Burrowing Owl Athene cunicularia — Breeds Mar 15 to Aug 31

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9737

Clark's Grebe Aechmophorus clarkii — Breeds Jan 1 to Dec 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Common Yellowthroat Geothlypis trichas sinuosa — Breeds May 20 to Jul 31

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/2084

Long-billed Curlew Numenius americanus — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/5511

Marbled Godwit Limosa fedoa — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9481

Nuttall's Woodpecker Picoides nuttallii — Breeds Apr 1 to Jul 20
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9410

Rufous Hummingbird selasphorus rufus — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/8002

Short-billed Dowitcher Limnodromus griseus — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9480

Song Sparrow Melospiza melodia — Breeds Feb 20 to Sep 5
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

Spotted Towhee Pipilo maculatus clementae — Breeds Apr 15 to Jul 20
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/4243

Tricolored Blackbird Agelaius tricolor — Breeds Mar 15 to Aug 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3910

Whimbrel Numenius phaeopus — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9483

Willet Tringa semipalmata — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Wrentit Chamaea fasciata — Breeds Mar 15 to Aug 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

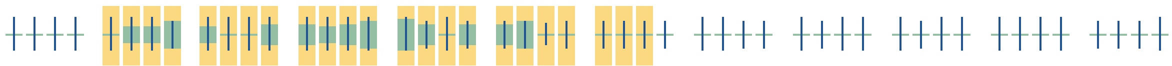
No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

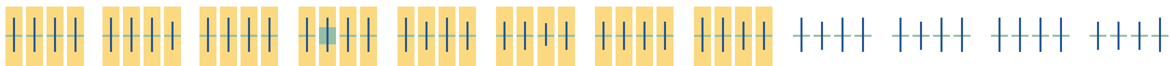
probability of presence breeding season survey effort no data

SPECIES JAN FEB MAR APR MAY JUN JUL AUG SEP OCT NOV DEC

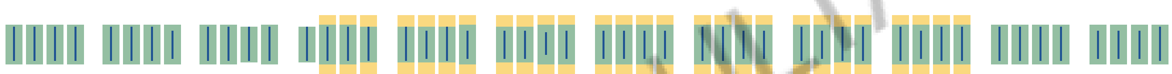
Allen's Hummingbird
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



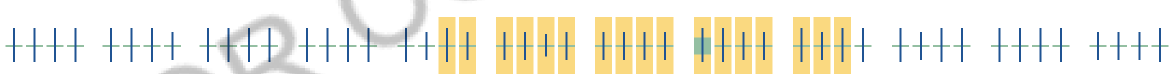
Bald Eagle
Non-BCC Vulnerable (This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.)



Black Oystercatcher
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

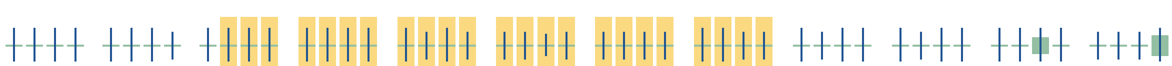


Black Skimmer
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

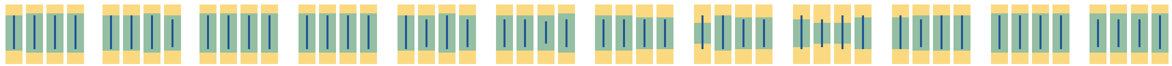


Black Turnstone
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Burrowing Owl
BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)



Clark's Grebe
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



Common Yellowthroat
BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

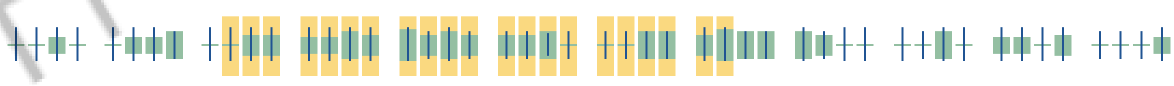
Wrentit
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures and/or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review.

Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Marine mammals

Marine mammals are protected under the Marine Mammal Protection Act. Some are also protected under the Endangered Species Act[1] and the Convention on International Trade in Endangered Species of Wild Fauna and Flora[2].

The responsibilities for the protection, conservation, and management of marine mammals are shared by the U.S. Fish and Wildlife Service [responsible for otters, walruses, polar bears, manatees, and dugongs] and NOAA Fisheries[3] [responsible for seals, sea lions, whales, dolphins, and porpoises]. Marine mammals under the responsibility of NOAA Fisheries are **not** shown on this list; for additional information on those species please visit the Marine Mammals page of the NOAA Fisheries website.

The Marine Mammal Protection Act prohibits the take (to harass, hunt, capture, kill, or attempt to harass, hunt, capture or kill) of marine mammals and further coordination may be necessary for project evaluation. Please contact the U.S. Fish and Wildlife Service Field Office shown.

1. The Endangered Species Act (ESA) of 1973.
2. The Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) is a treaty to ensure that international trade in plants and animals does not threaten their survival in the wild.
3. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following marine mammals under the responsibility of the U.S. Fish and Wildlife Service are potentially affected by activities in this location:

NAME
Southern Sea Otter *Enhydra lutris nereis* https://ecos.fws.gov/ecp/species/8560

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

THERE ARE NO KNOWN WETLANDS AT THIS LOCATION.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Preliminary Arborist Report
Midway Village
Daly City, CA

Introduction and Overview

MidPen Housing Corporation is planning redevelopment of the sites at Midway Village in Daly City, CA. The sites currently consist of a public affordable housing development with parks, interior streets, and landscaping. HortScience | Bartlett Consulting was asked to prepare a **Preliminary Arborist Report** for the sites as part of the project submittal. This report is preliminary because plans are in the conceptual phase and surveyed tree locations were not on plans

This report provides the following information:

1. An evaluation of the health and structural condition of the trees within the proposed project area based on a visual inspection from the ground.
2. A preliminary assessment of trees that will be preserved and removed based on plans provided by the client.
3. Guidelines for tree preservation during the design, construction, and maintenance phases of development.

Tree Assessment Methods

Trees were assessed on September 3, 2019. The survey included all trees (as defined by the Daly City ordinance) located within the proposed project area. The assessment procedure consisted of the following steps:

1. Identifying the tree species;
2. Tagging each tree with an identifying number and recording its location on a map;
3. Measuring the trunk diameter at a point 4.5' above grade;
4. Evaluating the health and structural condition using a scale of 1 – 5:

   5 - A healthy, vigorous tree, reasonably free of signs and symptoms of disease, with good structure and form typical of the species.
   4 - Tree with slight decline in vigor, small amount of twig dieback, minor structural defects that could be corrected.
   3 - Tree with moderate vigor, moderate twig and small branch dieback, thinning of crown, poor leaf color, moderate structural defects that might be mitigated with regular care.
   2 - Tree in decline, epicormic growth, extensive dieback of medium to large branches, significant structural defects that cannot be abated.
   1 - Tree in severe decline, dieback of scaffold branches and/or trunk; most of foliage from epicormics; extensive structural defects that cannot be abated.

5. Rating the suitability for preservation as "high", "moderate" or "low". Suitability for preservation considers the health, age and structural condition of the tree, and its potential to remain an asset to the site for years to come.

   High: Tree with good health and structural stability that have the potential for longevity at the site.

   Moderate: Tree with somewhat declining health and/or structural defects that can be abated with treatment. The tree will require more intense management and monitoring and may have shorter life span than those in 'high' category.

Low: Tree in poor health or with significant structural defects that cannot be mitigated. Tree is expected to continue to decline, regardless of treatment. The species or individual may have characteristics that are undesirable for landscapes and generally are unsuited for use areas.

Description of Trees

Two-hundred nineteen (219) trees were evaluated, including 38 different species (Table 1, next page). Overall, the trees at the site were in good condition (49%), with 34% in fair condition, and 17% in poor condition. Descriptions of each tree are found in the ***Tree Assessment*** and approximate locations are plotted on the ***Tree Inventory Map*** (see Exhibits).

The largest trees on the site were Italian stone pines and Monterey pines. Five Monterey pines were evaluated. Trunk diameters of the three largest trees ranged from 26-43 inches. Three trees were in fair (#107 & 209) and good (#148) condition. One Monterey pine in poor condition (#60) had codominant trunks of 22 and 15 inches, with the leader having been previously removed. The smallest Monterey pine #15 had a 2-inch diameter trunk.

Three Italian stone pines had trunks that ranged from 27 to 43 inches in diameter. Tree #114 had fair form and structure, while trees #115 and 116 were rated in good condition, both with dense spreading crowns (Photo 1).

Photo 1: Italian stone pines #115 and 116, both in good condition, were the largest trees evaluated.

The most common species evaluated was Chinese elm, with 39 trees (18% of the population). Most trees were located along Schwerin Street. Trees were young to semi-mature, with an average trunk diameter of 5 inches. More than half the trees (22 total) were in good condition with dense foliage and typical structure. Trees in fair condition had thinning crowns and/or some structural defects. Two trees (#68 & 70) were nearly dead.

Thirty-five (35) Australian willows were evaluated (16%). Trees were young, with an average trunk diameter of 2 inches. About half the trees (18 total) were in good condition with good structure and dense foliage. Ten (10) trees in fair condition had slightly thin crowns. Seven trees were in decline or nearly dead.

Thirteen (13) bottlebrush trees were scattered about the site (6%). They were semi-mature with trunk diameters from 5 to 12 inches and an average diameter of 9 inches. Trees had been pruned to form compact crowns. Most trees were in good condition with dense foliage. Only one tree (#203) had poor form and a thin crown.

Marina madrone was the next most common species with 12 trees (5%). Trees were young, with trunk diameters from 1 to 3 inches. Two trees were in poor condition, with thin crowns and dying leaves. Two trees in fair condition had minor twig dieback. The remaining trees were in fair and good condition.

Table 1. Condition ratings and frequency of occurrence of trees

Eleven (11) Brisbane box trees were performing very well at the site. All 11 trees were in good condition with dense, healthy foliage. Ten (10) trees were young, ranging from 3-5 inches in trunk diameter. One mature tree (27" trunk) was in good condition with minor twig dieback in portions of the crown (Photo 2).

Photo 2: Brisbane box #81, located on Martin Street., was in good condition.

Ten southern magnolias evaluated were in fair to poor condition. Crowns were small and windblown.

The remaining species were represented by five or fewer trees and included the following.

- Five each of blackwood acacia, carrotwood, and tulip tree
- Four European hornbeam
- Three each of evergreen pear and queen palm
- Two each of bronze loquat, crape myrtle, Callery pear, and Sydney golden wattle
- And one each of strawberry tree, incense cedar, lemon, red flowering gum, river red gum, fig, glossy privet, pink melaleuca, plum, peach, weeping willow, Brazilian pepper, and Mexican fan palm.

Off-site trees

Numerous trees were located off site to the north and east of Midway Village. Trees to the north were primarily comprised of mature Italian stone pines growing on a paved berm. The base elevations of trees were higher than the existing landscape elevation on the project site. Portions of tree crowns extended over the site.

Photo 3: A dense stand of trees was growing within the SFPUC easement.

The SFPUC easement on the eastern edge of the site was inaccessible. It was densely planted with mostly blackwood acacias, as well as a few southern magnolias, willows, and toyon. There were approximately 60 trees within the easement. Trees were young to semi-mature: 47 trees had smaller than 8-inch trunk diameters; 14 trees had trunk diameters from 8 to 16 inches; only one tree had a trunk diameter of 18 inches. Some trees were growing against the fence with portions of the canopies extending over the fence (Photo 3). According to plans, the boundary of 20'-wide easement appeared to be located inside the fence line.

Suitability for Preservation

Before evaluating the impacts that will occur during development, it is important to consider the quality of the tree resource itself, and the potential for individual trees to function well over an extended length of time. Trees that are preserved on development sites must be carefully selected to make sure that they may survive development impacts, adapt to a new environment and perform well in the landscape.

Our goal is to identify trees that have the potential for long-term health, structural stability and longevity. For trees growing in open fields, away from areas where people and property are present, structural defects and/or poor health presents a low risk of damage or injury if they fail. However, we must be concerned about safety in use areas. Therefore, where development encroaches into existing plantings, we must consider their structural stability as well as their potential to grow and thrive in a new environment. Where development will not occur, the normal life cycles of decline, structural failure and death should be allowed to continue.

Evaluation of suitability for preservation considers several factors:

- **Tree health**
  Healthy, vigorous trees are better able to tolerate impacts such as root injury, demolition of existing structures, changes in soil grade and moisture, and soil compaction than are non-vigorous trees. For example, the magnolias likely would not tolerate root loss from construction impacts as well as healthier trees would.

- **Structural integrity**
  Trees with significant amounts of wood decay and other structural defects that cannot be corrected are likely to fail. Such trees should not be preserved in areas where damage to people or property is likely.

- **Species response**
  There is a wide variation in the response of individual species to construction impacts and changes in the environment. For instance, Brisbane box and Chinese elm are relatively tolerant of construction impacts compared to Monterey pine, which is sensitive to root damage.

- **Tree age and longevity**
  Old trees, while having significant emotional and aesthetic appeal, have limited physiological capacity to adjust to an altered environment. Young trees are better able to generate new tissue and respond to change.

- **Species invasiveness**
  Species that spread across a site and displace desired vegetation are not always appropriate for retention. This is particularly true when indigenous species are displaced. The California Invasive Plant Inventory Database (http://www.cal-ipc.org/paf/) lists species identified as being invasive. South San Francisco is part of the Central West Floristic Province. **River red gum**, **Brazilian pepper** are listed as “limited” invasive, and **Mexican fan palm** and **fig** are listed as moderately invasive.

Table 2. Tree suitability for preservation
Midway Village, Daly City, CA

High	Trees in this category are in good health and structural stability and have the potential for longevity at the site. Forty three (43) trees were in this category.
Moderate	Trees in this category have fair health and/or structural defects that may be abated with treatment. These trees require more intense management and monitoring, and may have shorter life-spans than those in the "high" category. One hundred twenty-five (125) trees had moderate suitability for preservation.
Low	Trees in this category are in poor health or have significant defects in structure that cannot be abated with treatment. These trees can be expected to decline regardless of management. The species or individual tree may possess either characteristics that are undesirable in landscape settings or be unsuited for use areas. Fifty-one (51) trees were in this category.

We consider trees with good suitability for preservation to be the best candidates for preservation. We do not recommend retention of trees with poor suitability for preservation in areas where people or property will be present. Retention of trees with moderate suitability for preservation depends upon the intensity of proposed site changes.

Evaluation of Impacts and Recommendations for Action

Appropriate tree retention develops a practical match between the location and intensity of construction activities and the quality and health of trees. The ***Tree Assessment*** was the reference points for tree condition and quality. Impacts from the proposed project were assessed using the Civil, Architectural, and Landscape plans (dated 6/21/19). Plans were in the conceptual phase and surveyed tree locations were not included.

The plans show reconfiguration of buildings and streets across the entire site. Apartment buildings will be located on the interior of the site with smaller townhomes along Martin and Schwerin Streets. Wider sidewalks will be constructed along Martin and Schwerin (15' wide) and new interior streets (12' wide). Community amenities such as childcare center, community center, and a large public park will be constructed.

Because of the intensity of demolition, grading, and construction activity across the sites, there is very little opportunity to preserve trees. Nearly all 219 trees will be directly impacted by the above developments.

There may be an opportunity to preserve the two largest trees – Italian stone pines #115 and 116 – which appear to be located within the proposed resident park near the future community services center.

Similarly, four mature blackwood acacias (#216-219) may be preserved if surrounding bioretention basins can be relocated and grading and other impacts around trees are minimized.

In order to provide detailed preservation guidelines for these trees, H|BC requires detailed civil plans with surveyed tree locations.

Off-site trees along the north (adjacent to proposed public park) will be minimally impacted. Plans show a jogging path and landscape adjacent to off-site trees. Minor pruning may be needed for clearance. Impacts to tree health and stability are expected to be minor.

Some trees within the SFPUC easement may need to be removed if chain link fencing is relocated to actual easement boundary (closer to property line), and if adjacent improvements (e.g. EVA construction) disrupt a significant number of roots. Further evaluation of plans is necessary to determine number of trees impacted and extent of impacts.

In summary, 213 trees will be directly impacted by redevelopment and require removal. Two Italian stone pines (#215 & 216) as well as four blackwood acacias (#216-219) could potentially be preserved, if minor plan adjustments are made. Additional trees within the easement may be located within the development area and may need to be removed.

Disposition of individual trees can be found in the Tree Disposition form (see Exhibits). Preservation of trees is predicated on following the ***Tree Preservation Guidelines*** below.

Preliminary Tree Preservation Guidelines

The key to tree preservation is to establish a **TREE PROTECTION ZONE** that excludes construction activity near the tree. The following are recommendations for design and construction phases that will assist in successful tree preservation. As project plans are refined, tree protection specifications will be modified and finalized, and a tree preservation and protection plan will be prepared.

Tree Protection Zone

1. A **TREE PROTECTION ZONE** shall be identified for each tree to be preserved on the Tree Protection Plan prepared by the Project Arborist. For the proposes of this report, the **TREE PROTECTION ZONE** shall be defined as the unpaved area beneath each tree's dripline.
    a. Fence all trees to be retained to completely enclose the **TREE PROTECTION ZONE** prior to demolition, grubbing or grading. Fences shall be 6 ft. chain link with posts sunk into the ground or equivalent as approved by the City.
    b. Fences must be installed prior to beginning demolition and must remain until construction is complete.
    c. No grading, excavation, construction or storage or dumping of materials shall occur within the **TREE PROTECTION ZONE**.
    d. No underground services including utilities, sub-drains, water or sewer shall be placed in the **TREE PROTECTION ZONE**.

Design recommendations

1. Plot accurate locations of all trees to be preserved on all project plans. Identify the **TREE PROTECTION ZONE** for each tree. Focus on preserving trees that have high suitability for preservation.
2. Any changes to the plans affecting the trees should be reviewed by the consulting arborist regarding tree impacts. These include, but are not limited to, site plans, improvement plans, utility and drainage plans, grading plans, landscape and irrigation plans, and demolition plans.
3. Plan for tree preservation by designing adequate space around trees to be preserved. This is the **TREE PROTECTION ZONE**: No grading, excavation, construction or storage of materials should occur within that zone. Route underground services including utilities, sub-drains, water or sewer around the **TREE PROTECTION ZONE**. For design purposes, the **TREE PROTECTION ZONE** trees shall be defined as the tree dripline.

5. Consider the vertical clearance requirements near trees during design. Avoid designs that would require pruning more than 20% of a tree's canopy.
6. Irrigation systems must be designed so that no trenching severs roots larger than 1" in diameter will occur within the **TREE PROTECTION ZONE**.
7. **Tree Preservation Guidelines** prepared by the Consulting Arborist, which include specifications for tree protection during demolition and construction, should be included on all plans.
8. Any herbicides placed under paving materials must be safe for use around trees and labeled for that use.
9. Do not lime the subsoil within 50' of any tree. Lime is toxic to tree roots.
10. As trees withdraw water from the soil, expansive soils may shrink within the root area. Therefore, foundations, footings and pavements on expansive soils near trees should be designed to withstand differential displacement.
11. Ensure adequate but not excessive water is supplied to trees; in most cases occasional irrigation will be required. Avoid directing runoff toward trees.

Pre-demolition and pre-construction treatments and recommendations

1. The demolition and construction contractors should meet with the Consulting Arborist before beginning work to discuss work procedures and tree protection.
2. Trees may require pruning to provide construction clearance. All pruning shall be completed by a Certified Arborist or Tree Worker and adhere to the latest edition of the ANSI Z133 and A300 standards as well as the Best Management Practices -- Tree Pruning published by the International Society of Arboriculture.
3. Where demolition must occur close to trees, such as removing curb and pavement, install temporary trunk protection devices such as winding silt sock wattle or wood planks around trunks or stacking hay bales around tree trunks to a height of approximately 5'. Any low branches that are within the work zone should also be protected. Remove trunk protection after demolition is completed and install protective fence at the limits of the tree protection zone. Do not retain wattle around tree trunks for more than 2-3 weeks to avoid damaging trunks from excess moisture.
4. Apply and maintain 4-6" wood chip mulch within the **TREE PROTECTION ZONE**. Keep the mulch 2' from the base of tree trunks.
5. Trees to be removed shall be felled to fall away from **TREE PROTECTION ZONE** and avoid pulling and breaking of roots of trees to remain. If roots are entwined, the Project Arborist may require first severing the major woody root mass before extracting the trees or grinding the stump below ground.
6. All down brush and trees shall be removed from the **TREE PROTECTION ZONE** either by hand, or with equipment sitting outside the **TREE PROTECTION ZONE**. Extraction shall occur by lifting the material out, not by skidding across the ground. Brush shall be chipped and spread beneath the trees within the **TREE PROTECTION ZONE**
7. Structures and underground features to be removed within the **TREE PROTECTION ZONE** shall use equipment that will minimize damage to trees above and below ground and operate from outside the **TREE PROTECTION ZONE.** Tie back branches and wrap trunks with protective materials to protect from injury as directed by the Project arborist. The Project arborist shall be on-site during all operations within the **TREE PROTECTION ZONE** to monitor demolition activity.

8. All tree work shall comply with the Migratory Bird Treaty Act as well as California Fish and Wildlife code 3503-3513 to not disturb nesting birds. To the extent feasible tree pruning and removal should be scheduled outside of the breeding season. Breeding bird surveys should be conducted prior to tree work. Qualified biologists should be involved in establishing work buffers for active nests.

9. Any grading, construction, demolition or other work that is expected to encounter tree roots should be monitored by the Project Arborist.

10. If injury should occur to any tree during construction, it should be evaluated as soon as possible by the Project Arborist so that appropriate treatments can be applied.

11. No materials, equipment, spoil, waste or wash-out water may be deposited, stored, or parked within the **TPZ** (fenced area).

12. Any roots damaged during grading or construction shall be exposed to sound tissue and cut cleanly with a saw.

Recommendations for tree protection during construction

1. Any approved grading, construction, demolition or other work within the **TREE PROTECTION ZONE** should be monitored by the Consulting Arborist.

2. All contractors shall conduct operations in a manner that will prevent damage to trees to be preserved.

3. Tree protection devices are to remain until all site work has been completed within the work area. Fences or other protection devices may not be relocated or removed without permission of the Consulting Arborist.

4. Construction trailers, traffic and storage areas must always remain outside TREE PROTECTION ZONE.

5. Any root pruning required for construction purposes shall receive the prior approval of and be supervised by the Consulting Arborist. Roots should be cut with a saw to provide a flat and smooth cut. Removal of roots larger than 2” in diameter should be avoided.

6. If roots 2” and greater in diameter are encountered during site work and must be cut to complete the construction, the Consulting Arborist must be consulted to evaluate effects on the health and stability of the tree and recommend treatment.

7. Any brush clearing required within the **TREE PROTECTION ZONE** shall be accomplished with hand-operated equipment.

8. Prior to grading or trenching, trees may require root pruning outside the **TREE PROTECTION ZONE.** Any root pruning required for construction purposes shall receive the prior approval of, and be supervised by, the Consulting Arborist.

9. Spoil from trench, footing, utility or other excavation shall not be placed within the **TREE PROTECTION ZONE**, neither temporarily nor permanently.

10. All grading within the dripline of trees shall be done using the smallest equipment possible. The equipment shall operate perpendicular to the tree and operate from outside the **TREE PROTECTION ZONE**. Any modifications must be approved and monitored by the Consulting Arborist.

11. All trees shall be irrigated on a schedule to be determined by the Consulting Arborist (every 3 to 6 weeks is typical). Each irrigation shall wet the soil within the **TREE PROTECTION ZONE** to a depth of 30”.

12. If injury should occur to any tree during construction, it should be evaluated as soon as possible by the Consulting Arborist so that appropriate treatments can be applied.

13. No excess soil, chemicals, debris, equipment or other materials shall be dumped or stored within the **TREE PROTECTION ZONE**.
14. Any additional tree pruning needed for clearance during construction must be performed by a Certified Arborist and not by construction personnel.
15. Trees that accumulate a sufficient quantity of dust on their leaves, limbs and trunk as judged by the Consulting Arborist shall be spray-washed at the direction of the Project Arborist.

Maintenance of impacted trees

Preserved trees will experience a physical environment different from that pre-development. As a result, tree health and structural stability should be monitored. Occasional pruning, fertilization, mulch, pest management, replanting and irrigation may be required. In addition, provisions for monitoring both tree health and structural stability following construction must be made a priority. Inspect trees annually and following major storms to identify conditions requiring treatment to manage risk associated with tree failure.

Our procedures included assessing trees for observable defects in structure. This is not to say that trees without significant defects will not fail. Failure of apparently defect-free trees does occur, especially during storm events. Wind forces, for example, can exceed the strength of defect-free wood causing branches and trunks to break. Wind forces coupled with rain can saturate soils, reducing their ability to hold roots, and blow over defect-free trees. Although we cannot predict all failures, identifying those trees with observable defects is a critical component of enhancing public safety.

Furthermore, trees change over time. Our inspections represent the condition of the tree at the time of inspection. As trees age, the likelihood of failure of branches or entire trees increases. Annual tree inspections are recommended to identify changes to tree health and structure. In addition, trees should be inspected after storms of unusual severity to evaluate damage and structural changes. Initiating these inspections is the responsibility of the client and/or tree owner.

If you have any questions about my observations or recommendations, please contact me.

Tree No.	Species	Trunk Diameter (in.)	Condition 1=poor 5=excellent	Suitability for Preservation	Comments
1	Brisbane box	5	5	High	Good form and structure; dense crown.
2	Australian willow	3	4	High	Codominant trunks at 5'; compact crown.
3	Australian willow	2	4	Moderate	Good form and structure; slightly thin crown.
4	Australian willow	1	2	Low	Dead top; thin crown.
5	Australian willow	2	3	Moderate	Fair form and structure; slightly thin crown; twig dieback.
6	Australian willow	1	2	Low	Crown half dead.
7	Australian willow	3	4	High	Good form and structure; compact crown.
8	Australian willow	2	4	Moderate	Good form and structure; slightly thin crown.
9	Australian willow	2	4	Moderate	Good form and structure; slightly thin crown.
10	Australian willow	2	4	High	Good form and structure; compact crown.
11	Sydney golden wattle	6,5	2	Low	Codominant trunks at 3'; decay at attachment; asymmetrical form.
12	Sydney golden wattle	10	3	Low	Root failure with decay in roots; trunk leans 45 degrees; dense crown.
13	Australian willow	2	3	Moderate	Asymmetrical form; slightly thin crown.
14	Australian willow	2	4	High	Round, dense crown; slightly thin top.
15	Monterey pine	2	5	High	Good young tree; dense crown.
16	Australian willow	2	2	Low	Crown half dead.
17	Australian willow	1,1	3	Moderate	Codominant trunks at 4'; windblown, asymmetrical form.
18	Australian willow	3,2	4	Moderate	Codominant trunks at 3'; good form; slightly thin crown.
19	Australian willow	1	1	Low	Mostly dead.
20	Australian willow	1	1	Low	Mostly dead.
21	Australian willow	2	2	Low	Very thin crown.
22	Australian willow	3	4	High	Compact, dense crown.
23	Australian willow	2,2,1	4	High	Compact, dense crown.
24	Bottlebrush	5	4	Moderate	Compact crown; fair structure.
25	European hornbeam	1	2	Low	Compact form; basal wound; dead top; twig dieback.
26	European hornbeam	1	2	Low	Compact form; basal wound; dead top; twig dieback.
27	European hornbeam	1	2	Low	Compact form; basal wound; dead top; twig dieback.
28	Marina madrone	2	4	High	Good form, fair structure; dense crown.

Tree No.	Species	Trunk Diameter (in.)	Condition 1=poor 5=excellent	Suitability for Preservation	Comments
29	Marina madrone	2	2	Low	Multiple attachments at 4'; girdled by nursery straps; dying, drooping leaves.
30	Brisbane box	4	4	Moderate	Multiple attachments at 6'; dense crown.
31	Brisbane box	4	5	High	Good form and structure; dense crown.
32	Fig	2,2,2	3	Low	In yard, tag on fence; multiple attachments at base; against fence and crowded by adjacent tree.
33	Plum	4,4,1,1,1	3	Moderate	In yard, tag on fence; multiple attachments at base; twig dieback in upper crown.
34	Brisbane box	5	5	High	Good form and structure; dense crown.
35	New Zealand Christmas Tree	18	4	High	Multiple attachments at 5; raised crown; dense foliage.
36	Marina madrone	3	3	Moderate	Multiple attachments at 4'; girdled by nursery straps; minor twig dieback.
37	Bottlebrush	10	4	Moderate	Compact crown; fair structure.
38	Bottlebrush	10	4	Moderate	Compact crown; fair structure.
39	Brisbane box	5	5	High	Good form and structure; dense crown.
40	Brisbane box	3	4	Moderate	Good form; slightly thin crown.
41	Australian willow	1	3	Moderate	Good form and structure; thin crown.
42	Pear	1	4	Moderate	In yard; good young tree.
43	Lemon	2,1,1,1	3	Moderate	Multiple attachments at 1'; against building.
44	Australian willow	1	2	Low	Windblown, asymmetrical crown; thin crown.
45	Chinese elm	4	2	Low	Thin crown; chlorotic.
46	Chinese elm	5	4	Moderate	Good form, fair structure; dense crown.
47	Chinese elm	4	3	Moderate	Good form; slightly thin crown.
48	Chinese elm	3	2	Low	Trunk wound from stake; small, yellow leaves.
49	Marina madrone	2	4	Moderate	Multiple attachments at 4'; dense crown.
50	Marina madrone	3	2	Low	Multiple attachments at 4'; dry, dying foliage.
51	Bottlebrush	10	4	Moderate	Compact crown; fair structure.
52	Marina madrone	2	4	Moderate	Multiple attachments at 4'; dense crown.

110	Southern magnolia	4	3	Low	Crown raised to 8'; small, thinning crown.
111	Southern magnolia	4	3	Low	Crown raised to 8'; small, thinning crown.
112	Southern magnolia	5	3	Moderate	Crown raised to 8'; asymmetrical crown.
113	Incense cedar	7	5	High	Good form and structure; good young tree.
114	Italian stone pine	27	3	Moderate	Multiple attachments at 5'; dense crown; pruned on north for building.
115	Italian stone pine	43	4	Moderate	Codominant trunks at 6'; dense, spreading crown.
116	Italian stone pine	32	4	Moderate	Codominant trunks at 7' and 9'; dense, spreading crown.
117	New Zealand Christmas Tree	12	4	Moderate	Multiple attachments at 6'; fair form; slightly thin crown.
118	Red flowering gum	19	4	Moderate	Codominant trunks at 6'; asymmetrical crown.
119	Brisbane box	4	4	Moderate	Good form; slightly thin crown.
120	Australian willow	2	3	Moderate	Good form and structure; slightly thin crown.
121	Australian willow	4	4	High	Good form and structure; dense crown.
122	Brisbane box	4	5	High	Good form and structure; dense crown.
123	Brazilian pepper	11,9,8,7	3	Moderate	Multiple attachments at 1' with narrow attachment; twisted form; dense crown.
124	Peppermint tree	14	4	Moderate	Multiple attachments at 6'; thin interior crown.
125	Peppermint tree	21	4	Moderate	Multiple attachments at 6'; thin interior crown.
126	Blackwood acacia	15	4	Moderate	Codominant trunks at 14'; good form; dense crown.
127	Tulip tree	10	3	Moderate	Fair form and structure; twig dieback in upper crown.
128	Tulip tree	7	4	Moderate	Codominant trunks at 5'; good form.
129	Tulip tree	11	3	Moderate	Good form, fair structure; twig dieback in upper crown.
130	Crape myrtle	3	3	Moderate	In schoolyard, no tag; small, slightly thin crown.
131	Crape myrtle	3	3	Moderate	In schoolyard, no tag; small, slightly thin crown.
132	Carrotwood	14	3	Moderate	Good form, fair structure; tear out wound on trunk.
133	Pink melaleuca	8,6	2	Low	Partial failure at base; poor structure.
134	Carrotwood	15	3	Moderate	Multiple attachments at 6'; slightly thin crown.

Tree No.	Species	Trunk Diameter (in.)	Condition 1=poor 5=excellent	Suitability for Preservation	Comments
135	Monterey cypress	21	3	Low	Asymmetrical crown; limb failure on south; dead limbs.
136	Chinese elm	6	3	Moderate	Fair form and structure; chlorotic.
137	Queen palm	4	3	Moderate	4' brown trunk height; chlorotic.
138	Tulip tree	10	3	Low	Asymmetrical crown; windblown; trunk wound.
139	Queen palm	16	4	Moderate	10' brown trunk height; dry frond tips.
140	Weeping willow	11	2	Low	Codominant trunks at 7'; very thin crown.
141	Callery pear	6	3	Moderate	Narrow form; 4' from building; twig dieback.
142	Peppermint tree	15	3	Moderate	Codominant trunks at 6'; high, small crown.
143	Carrotwood	5	3	Moderate	Multiple attachments at 7'; small crown; trunk wound.
144	Evergreen pear	5	1	Low	Mostly dead.
145	Tulip tree	8	4	Moderate	Good form and structure; slightly thin on windward side.
146	Carrotwood	18	2	Low	Poor form and structure; thin crown; cable girdling trunk.
147	Mexican fan palm	18	4	High	In yard, no tag; 28' brown trunk height; dry frond tips.
148	Monterey pine	29	4	Moderate	Good form; dense crown; trunk wound near base.
149	Peach	3	3	Moderate	In yard; typical form and structure.
150	Carob	16	3	Low	Large trunk wound with decay; dense, spreading crown.
151	Carob	11,9	3	Low	Codominant trunks at 4'; tear out wound thinning crown.
152	Bottlebrush	12	4	Moderate	Dense, compact crown; fair structure.
153	New Zealand Christmas Tree	15	4	Moderate	Multiple attachments at 7'; dense crown; pruned for building clearance.
154	Water gum	1	2	Low	Dead top; thin crown.
155	Water gum	1	2	Low	Dead and dying foliage throughout crown.
156	Water gum	1	3	Moderate	Fair form and structure; thinning crown.
157	Water gum	1	4	Moderate	Good form, fair structure; dense crown.
158	Carrotwood	8	3	Moderate	Multiple attachments at 6'; slightly thin crown.
159	New Zealand Christmas Tree	12	3	Moderate	Multiple attachments at 6'; asymmetrical crown; pruned for building clearance.
160	New Zealand Christmas Tree	12	4	Moderate	Multiple attachments at 6'; dense crown; pruned for building clearance.

Tree No.	Species	Trunk Diameter (in.)	Condition 1=poor 5=excellent	Suitability for Preservation	Comments
161	Chinese elm	5	4	High	Good form; typical structure.
162	Chinese elm	4	4	High	Good form; typical structure; slightly thin crown.
163	Chinese elm	5	4	High	Good form; typical structure.
164	Chinese elm	4	3	Moderate	Fair form and structure; chlorotic.
165	Chinese elm	4	3	Moderate	Fair form and structure; chlorotic.
166	Chinese elm	5	4	High	Good form; typical structure; dense crown.
167	Chinese elm	6	4	Moderate	Typical form and structure; slightly thin crown.
168	Chinese elm	5	3	Moderate	Fair form and structure; slightly thin crown.
169	Chinese elm	6	4	High	Good form; typical structure; dense crown.
170	Chinese elm	5	4	High	Good form; typical structure; dense crown.
171	Carob	18	3	Moderate	Codominant trunks at 6'; limb failure on north; poor structure; asymmetrical crown.
172	Chinese elm	5	4	High	Good form; typical structure; dense crown.
173	Chinese elm	6	4	High	Good form; typical structure; dense crown.
174	Australian willow	2	4	High	Dense crown; good form.
175	Chinese elm	5	4	Moderate	Typical form and structure; slightly thin crown.
176	Chinese elm	6	4	High	Good form; typical structure; dense crown.
177	Water gum	1	2	Low	Dead top; thin crown.
178	Water gum	1	2	Low	Dead top; thin crown.
179	Water gum	2	3	Moderate	Good form; twig dieback in upper crown.
180	European hornbeam	2	3	Low	Twig dieback; dead top; compact form.
181	Brisbane box	5	5	High	Good form and structure; dense crown.
182	Brisbane box	3	4	Moderate	Good form and structure; slightly thin crown.
183	New Zealand Christmas Tree	18	4	Moderate	Multiple attachments at 9'; pruned for building clearance.
184	Australian willow	2	3	Moderate	Good form and structure; thinning crown
185	Australian willow	2	3	Moderate	Good form and structure; thinning crown
186	Australian willow	3	4	Moderate	Good form and structure; slightly thin crown.
187	Glossy privet	12	3	Moderate	In yard; dense crown; fair structure.

Tree No.	Species	Trunk Diameter (in.)	Condition 1=poor 5=excellent	Suitability for Preservation	Comments
188	Bronze loquat	7	3	Moderate	In yard; dense crown; fair structure.
189	Chinese elm	6	4	High	Good form; typical structure; dense crown.
190	Chinese elm	6	4	Moderate	Typical form and structure; slightly thin crown.
191	Chinese elm	4	4	Moderate	Typical form and structure; slightly thin crown.
192	Marina madrone	3	4	Moderate	Multiple attachments at 4'; dense crown.
193	Bottlebrush	8	4	Moderate	Dense, compact crown; fair structure.
194	Australian willow	2	4	High	Dense crown; good form; fair structure.
195	Carob	15	3	Low	Large trunk wound; asymmetrical crown.
196	Peppermint tree	13	3	Low	Codominant trunks at 6' with narrow attachment; thinning crown.
197	Peppermint tree	16	4	Moderate	Good form; fair structure; multiple attachments at 6'.
198	Peppermint tree	18	4	Moderate	Good form; fair structure; multiple attachments at 6'.
199	Peppermint tree	12	4	Moderate	Good form; fair structure; multiple attachments at 6'.
200	Peppermint tree	13	4	Moderate	Good form; fair structure; multiple attachments at 6'.
201	Peppermint tree	10	4	Moderate	Good form; fair structure; multiple attachments at 6'.
202	Peppermint tree	16	3	Moderate	Good form; fair structure; multiple attachments at 6'; asymmetrical crown.
203	Bottlebrush	7	2	Low	Poor form; thin crown.
204	Marina madrone	1	3	Moderate	Fair form and structure; twig dieback.
205	Peppermint tree	13	4	Moderate	Good form; fair structure; multiple attachments at 6'.
206	Evergreen pear	10	3	Moderate	Codominant trunks at 6'; spreading crown; typical structure.
207	Strawberry tree	15	3	Moderate	Large trunk wound; good form; thinning crown.
208	Evergreen pear	8	3	Moderate	Codominant trunks at 6'; crowded by #209; fair form and structure.
209	Monterey pine	26	3	Moderate	Typical form and structure; slightly thin crown; surface roots filling planter.
210	Queen palm	7	4	Moderate	6' brown trunk height; dry frond tips.
211	Southern magnolia	2	2	Low	Small, stunted crown.
212	Southern magnolia	2	2	Low	Small, stunted crown; major trunk sunburn.
213	Southern magnolia	2	1	Low	Small, asymmetrical crown; major trunk sunburn.
214	Southern magnolia	2	2	Low	Small, stunted crown; major trunk sunburn.
215	Southern magnolia	2	2	Low	Small, stunted crown; major trunk sunburn.

Tree No.	Species	Trunk Diameter (in.)	Condition 1=poor 5=excellent	Suitability for Preservation	Comments
216	Blackwood acacia	14	4	Moderate	Codominant trunks at 10'; crowded form; dense crown.
217	Blackwood acacia	21	4	Moderate	Good form; fair structure; dense crown.
218	Blackwood acacia	20	4	Moderate	One of two trees comprising a single crown; typical form and structure.
219	Blackwood acacia	23	4	Moderate	One of two trees comprising a single crown; typical form and structure.

PRELIMINARY GEOTECHNICAL INVESTIGATION
PROPOSED RESIDENTIAL REDEVELOPMENT
MIDWAY VILLAGE
DALY CITY, CALIFORNIA

February 5, 2020
Project No. 18-1569

February 5, 2020
Project No. 18-1569

Mr. Matthew Lewis
MidPen Housing Corporation
303 Vintage Park Drive, Suite 250
Foster City, California 94404

Subject: Final Report
Preliminary Geotechnical Investigation
Proposed Midway Village Redevelopment Project
47 Midway Drive
Daly City, California 94014

Dear Mr. Lewis:

We are pleased to present the results of our preliminary geotechnical investigation for the for the proposed Midway Village Redevelopment project in Daly City, California. Our preliminary geotechnical investigation was performed in accordance with our amended proposal dated November 14, 2019.

Midway Village is an existing residential development located on the eastern side of Schwerin Avenue and north of its intersection with Martin Street. The site consists of 33 parcels that encompass a total area of about 15.55 acres. It is bordered by a PG&E property to the north, vacant land and a single-family home subdivision under construction to the east, Schwerin Street to the west, and Martin Street to the south. The site is currently occupied by 35 multi-unit two-story residential buildings, asphalt-paved parking lots and interior streets and drive aisles, concrete flatwork and landscaping. The northeastern corner of the site is currently occupied by Bayshore Park. The ground surface across the site slopes gently down to the north and east with ground surface elevations (National Geodetic Vertical Datum) ranging from approximately 80 feet in the southwestern corner of the site (at the intersection of Schwerin and Martin streets) to 15 feet in the northeastern corner of Bayshore Park.

Current redevelopment plans for the Midway Village Redevelopment project call for demolishing the existing structures and other improvements on the site and constructing a combination of 2- to 3-story townhomes, 2- to 3-story walk-up flats, 3- and 4-story apartment buildings, a 1- to 2-story community center, and a 4-story parking structure. The redevelopment will be constructed in five phases. Except for Buildings A and A2, Parking Garage A, and Building D/Parking Garage D, the buildings will be entirely framed in wood. Building A, which will wrap around three sides of Parking Garage A, will consist of three stories of wood-framed construction above a one-story concrete podium. Parking Garage A will be four stories high. A portion of Building A2 will consist of a partial one-story podium with three stories of wood-framed residential units above the podium; the remainder of the building will consist of four stories of wood framing. Building D will consist of a two-story concrete podium with 2 to 3 stories of wood-framed residential units above the podium.

Redevelopment plans also include constructing interior roadways, new infrastructure, landscaping and courtyards, and a 3.3-acre park in the northwestern portion of the site.

Based on the results of our engineering analyses using the data from our cone penetration tests (CPTs), we conclude the primary geotechnical issues affecting the proposed redevelopment include: (1) the presence of up to about 10 feet of fill underlain by up to approximately 11 feet of a highly compressible marsh deposit in the northern portion of the site, and (2) providing uniform support for the proposed buildings.

Our investigation indicates the soils underlying the portion of the site south of Midway Drive have moderate to high strength and low to moderate compressibility. Therefore, we preliminarily conclude new buildings south of Midway Drive can be supported on conventional spread footings bottomed on well-compacted fill and/or native soil. The subsurface conditions north of Midway Drive vary significantly in both thickness of fill and the thickness of the marsh deposit. Based on our settlement analyses, we preliminarily conclude Building A, Garage A, and Building A2 should be supported on spread footings or a mat foundation bearing on improved soil to reduce differential settlements resulting from the consolidation of the marsh deposit, which varies from about 0 to 11 feet thick beneath Building A2 and 0 to 8 feet beneath Building A and Garage A. We preliminarily conclude Buildings B and B2 can be supported on mat foundations bottomed on two feet of recompacted fill.

This report presents our preliminary recommendations regarding foundation design, seismic design, and other geotechnical aspects of the project. The recommendations contained in our report are based on limited subsurface exploration and review of available data for the site, and are not intended for final design. Final geotechnical design values should be confirmed by a detailed geotechnical investigation. In addition, variations between expected and actual soil conditions may be found in localized areas during construction. Therefore, we should be engaged to observe ground improvement, foundation installation, and fill placement, during which time we may make changes in our recommendations, if deemed necessary.

We appreciate the opportunity to provide our services to you on this project. If you have any questions, please call.

Sincerely,
ROCKRIDGE GEOTECHNICAL, INC.

ROCKRIDGE GEOTECHNICAL

PRELIMINARY GEOTECHNICAL INVESTIGATION
PROPOSED RESIDENTIAL REDEVELOPMENT
MIDWAY VILLAGE
Daly City, California

1.0 INTRODUCTION

This report presents the results of the preliminary geotechnical investigation performed by Rockridge Geotechnical, Inc. for the proposed Midway Village Redevelopment project in Daly City, California. Midway Village is an existing residential development located on the eastern side of Schwerin Avenue and north of its intersection with Martin Street, as shown on the Site Location Map (Figure 1).

The site consists of 33 parcels that encompass a total area of about 15.55 acres. It is bordered by a PG&E property to the north, vacant land and a single-family home subdivision under construction to the east, Schwerin Street to the west, and Martin Street to the south. The site is currently occupied by 35 multi-unit two-story residential buildings, asphalt-paved parking lots and interior streets and drive aisles, concrete flatwork and landscaping. The northeastern corner of the site is currently occupied by Bayshore Park. The ground surface across the site slopes gently down to the north and east with ground surface elevations (National Geodetic Vertical Datum) ranging from approximately 80 feet in the southwestern corner of the site (at the intersection of Schwerin and Martin streets) to 15 feet in the northeastern corner of Bayshore Park.

Current redevelopment plans for the Midway Village Redevelopment project call for demolishing the existing structures and other improvements on the site and constructing a combination of 2- to 3-story townhomes, 2- to 3-story walk-up flats, 3- and 4-story apartment buildings, a 1- to 2-story community center, and a 4-story parking structure. The redevelopment will be constructed in five phases. Except for Buildings A and A2, Parking Garage A, and Building D/Parking Garage D, the buildings will be entirely framed in wood. Building A, which will wrap around three sides of Parking Garage A, will consist of three stories of wood-framed construction above a one-story concrete podium. Parking Garage A will be four stories high. A portion of Building A2 will consist of a partial one-story podium with three stories of wood-framed residential units above the podium; the remainder of the building will consist of four stories of wood framing. Building D will consist of a two-story concrete podium with 2 to 3 stories of wood-framed residential units above the podium.

Redevelopment plans also include constructing interior roadways, new infrastructure, landscaping and courtyards, and a 3.3-acre park in the northwestern portion of the site.

2.0 SCOPE OF SERVICES

Our preliminary geotechnical investigation was performed in accordance with our amended proposal dated November 14, 2019. Our scope of services consisted of reviewing available geotechnical and geologic data for the site and vicinity, exploring subsurface conditions for the proposed redevelopment by advancing 12 cone penetration tests (CPTs), and performing engineering analyses to develop preliminary conclusions and recommendations regarding:

- the most appropriate foundations type(s) for the proposed buildings
- design criteria for the recommended foundation type(s), including vertical and lateral capacities
- estimates of foundation settlement
- lateral earth pressures for design of retaining walls
- subgrade preparation for slab-on-grade floors and concrete flatwork
- site grading and excavation, including criteria for fill quality and compaction
- pavement sections for asphalt concrete and Portland cement concrete
- site seismicity and seismic hazards, including the potential for liquefaction and liquefaction-induced ground failure
- 2019 California Building Code (CBC) site class and design spectral response acceleration parameters
- construction considerations.

3.0 FIELD INVESTIGATION

Our subsurface investigation consisted of performing 12 CPTs, designated as CPT-1 through CPT-12, at the approximate locations shown on the attached Site Plan (Figure 2). Prior to performing the CPTs, we obtained a drilling permit from the City of Daly City and contacted Underground Service Alert (USA) to notify them of our work, as required by law. We also retained Precision Locating, LLC, a private utility locator, to check that the CPT locations were clear of buried utilities.

The CPTs were performed by Middle Earth Geo Testing, Inc. of Orange, California on January 15 and 16, 2020. The CPTs were advanced to depths of 50 to 51 feet below ground surface (bgs), except for CPT-10 which met refusal in very dense soil at a depth of 39 feet bgs. The CPTs were performed by hydraulically pushing a 1.7-inch-diameter cone-tipped probe with a projected area of 15 square centimeters into the ground. The cone-tipped probe measured tip resistance and the friction sleeve behind the cone tip measured frictional resistance. Electrical strain gauges within the cone continuously measured soil parameters for the entire depth advanced. Soil data, including tip resistance and frictional resistance, were recorded by a computer while the test was conducted. Accumulated data were processed by computer to provide engineering information such as the types and approximate strength characteristics of the soil encountered.

The CPT logs showing tip resistance, friction ratio, and pore pressure, as well as correlated soil behavior type, are presented in Appendix A on Figures A-1 through A-12. Upon completion, the CPTs were backfilled with cement grout.

4.0 SUBSURFACE CONDITIONS

A regional geologic map prepared by Graymer (2000), a portion of which is presented on Figure 3, indicates the northern portion of the site is underlain by artificial fill (af) and the southern portion of the site is underlain by Quaternary-age hillslope deposits (Qsl). Pleistocene-age alluvium is mapped along the northern edge of the site.

The area mapped as artificial fill in the northern portion of the site was formerly a marsh that extended inland from San Francisco Bay, as shown on Figure 3. The marsh was reportedly filled by the U.S. Federal Public Housing Authority after it took possession of the land in 1944. The report titled *Remedial Investigation Report for the Remedial Investigation/Feasibility Study and the Remedial Action Plan for Midway-Bayshore Site* prepared by Ecology and Environment, Inc., dated May 14, 1993, indicates the fill placed in the former marsh is up to about 10 feet thick, with the thickest fill occurring beneath the park in the northeastern portion of the site. Contours of the fill, which were shown on Figure 5-2 (Estimated Fill Thickness and Cross Section Locations) of the above-referenced report, are plotted on Figure 4. The data from CPT-1 through CPT-8, which were performed in the northern portion of the site, indicate the fill thickness is consistent with these contours. Where explored, the fill in the northern portion of the site consists predominantly of medium dense to dense sand, silty sand and clayey sand and stiff to very stiff clay. The Ecology and Environmental, Inc. report indicates the fill contains construction debris such as brick, metal, wood, glass and concrete.

The fill in the northern portion of the site is underlain by a marsh deposit consisting of soft to medium stiff clay with varying amounts of organics. We estimate the thickness of the marsh ranges from about 2 to 4 feet at the locations of CPT-1, CPT-4 and CPT-7. At the locations of CPT-2 and CPT-3, we estimate the marsh deposit is 7-1/2 and 11 feet thick, respectively. The marsh deposit was not encountered at the CPT-6 location. At the CPT-5 location, the four feet of fill is underlain by about five feet of stiff to very stiff clay. At a depth of nine feet bgs is about two feet of medium stiff clay, which may be interpreted to be the marsh deposit.

Beneath the marsh deposit at the locations of CPT-1 through CPT-5, CPT-7 and CPT-8, and below the ground surface at the CPT-6 location is heterogeneous alluvium consisting of interbedded medium dense to very dense sand with varying silt and clay content and stiff to hard clay that extends to the maximum depth explored of 50.5 feet bgs. The thickness of the sand, silty sand and clayey sand layers ranges from less than one foot up to about eight feet.

In the southern portion of the site (i.e., south of Midway Drive), there appears to be less than two feet of existing fill at the locations of the four CPTs (CPT-9 through CPT-12) performed in this area. Below depths of 0 to 2 feet bgs, the CPTs encountered alluvium consisting primarily of interbedded layers of very stiff to hard clay and medium dense to very dense clayey sand that extends to the maximum depth explored. As discussed above, CPT-10 met refusal in very dense soil (possibly bedrock) at a depth of about 39 feet bgs.

4.1 Groundwater

The depth to groundwater at the site is complex and varies both with location on the site and the depth of the water-bearing zone in which the measurements are taken. The geologic cross section (Figure 5-2) presented in the May 14, 1993 Ecology and Environmental, Inc. report referenced above shows the depth to groundwater on October 1, 1992 ranging from about one foot bgs at about the middle of the northern edge of the site to about 12-1/2 feet bgs along the western edge of the site just north of Midway Drive. The groundwater in the northeastern corner where the existing fill is thickest was about seven feet bgs. The reason for the shallow groundwater along the northern edge of the site is stated in the report as due to "groundwater mounding" due to frequent irrigation in the vicinity of the well.

We also reviewed groundwater levels measured in nearby off-site wells presented in the report prepared by Haley & Aldrich titled *Fourth Five-Year Review for Pacific Gas and Electric Company's Martin Service Center, 731 Schwerin Street, Daly City, California,* dated October 2015. The report includes groundwater-level measurements between April 24, 1987 and August 22, 2014 for wells both north and east of Midway Village. The report identifies three water-bearing zones referred to as fill, shallow and deep zones. The shallow zone refers to a 5- to 10-foot-thick layer of silty sand underlying about 10 to 15 feet of low-permeability alluvium and the deep zone refers to a sand layer below the marsh and alluvium at depths of 30 to 40 feet bgs. Based on measurements taken on August 22, 2014, the report states "the unconfined groundwater within the artificial fill is encountered at approximately 7 feet bgs, from a range of ground surface elevations". The report also states the groundwater flows from northwest to southeast in all three of the water-bearing zones. In one cluster of wells near the northeastern corner of the Midway Village site, the groundwater elevations in the shallow and deep zones were about 3 and 5 feet higher, respectively, than the groundwater elevation in the fill on August 22, 2014.

During our field investigation, Middle Earth Geo Testing attempted to obtain groundwater-level measurements at several of the CPT locations using pore pressure dissipation tests performed with the CPT probe; however, with the exception of tests performed at CPT-2 and CPT-9, the pore pressure did not equilibrate during the test due to the low permeability of the soil in which the test was performed. At the CPT-2 location, the pore pressure dissipation test was performed at a depth of 19.36 feet bgs and indicated an estimated groundwater depth of 13.9 feet bgs. At the CPT-9 location, the pore pressure dissipation test was performed at a depth of 32.81 feet bgs and resulted in an estimated groundwater depth of 2.1 feet bgs. The measurements at the CPT-2 and CPT-9 locations appear to be taken in the "shallow" and "deep" water-bearing zones, as described in the Haley & Aldrich report and, therefore, are probably not representative of the groundwater levels in the fill.

Based on our review of the groundwater data discussed above, the depth to groundwater in the existing fill blanketing the area north of Midway Drive fluctuated about 3-1/2 to 4-1/2 feet between 1987 and 2014 in the two monitoring wells closest to Midway Village. The shallowest depth to groundwater measured in the fill zone in the monitoring well closest to Midway Village was about four feet bgs in February 2000. For preliminary design, we recommend using a design groundwater depth of four feet bgs. It should be noted the monitoring well in which groundwater was measured at one foot bgs, as described above in the Ecology and Environment, Inc. report was screened in the "deep" water-bearing zone below the marsh deposit and, therefore, was not representative of the groundwater level in the fill.

5.0 SEISMIC CONSIDERATIONS

5.1 Regional Seismicity

The site is located in the Coast Ranges geomorphic province of California that is characterized by northwest-trending valleys and ridges. These topographic features are controlled by folds and faults that resulted from the collision of the Farallon plate and North American plate and subsequent strike-slip faulting along the San Andreas Fault system. The San Andreas Fault is more than 600 miles long from Point Arena in the north to the Gulf of California in the south. The Coast Ranges province is bounded on the east by the Great Valley and on the west by the Pacific Ocean.

The major active faults in the area are the San Andreas, San Gregorio, and Hayward faults. These and other faults in the region are shown on Figure 4. For these and other active faults within a 50-kilometer radius of the site, the distance from the site and estimated mean characteristic Moment magnitude[1] [2007 Working Group on California Earthquake Probabilities (WGCEP) (USGS 2008) and Cao et al. (2003)] are summarized in Table 1.

[1] Moment magnitude is an energy-based scale and provides a physically meaningful measure of the size of a faulting event. Moment magnitude is directly related to average slip and fault rupture area.

TABLE 1
Regional Faults and Seismicity

Fault Segment	Approximate Distance from Site (km)	Direction from Site	Mean Characteristic Moment Magnitude
N. San Andreas - Peninsula	6.6	West	7.23
N. San Andreas (1906 event)	6.6	West	8.05
San Gregorio Connected	14	West	7.50
N. San Andreas - North Coast	17	West	7.51
Total Hayward	22	Northeast	7.00
Total Hayward-Rodgers Creek	22	Northeast	7.33
Monte Vista-Shannon	33	Southeast	6.50
Total Calaveras	38	East	7.03
Mount Diablo Thrust	38	East	6.70
Rodgers Creek	43	North	7.07
Green Valley Connected	43	East	6.80

Since 1800, four major earthquakes have been recorded on the San Andreas Fault. In 1836, an earthquake with an estimated maximum intensity of VII on the Modified Mercalli (MM) scale occurred east of Monterey Bay on the San Andreas Fault (Toppozada and Borchardt 1998). The estimated Moment magnitude, M_w, for this earthquake is about 6.25. In 1838, an earthquake occurred with an estimated intensity of about VIII-IX (MM), corresponding to an M_w of about 7.5. The San Francisco Earthquake of 1906 caused the most significant damage in the history of the Bay Area in terms of loss of lives and property damage. This earthquake created a surface rupture along the San Andreas Fault from Shelter Cove to San Juan Bautista approximately 470 kilometers in length. It had a maximum intensity of XI (MM), an M_w of about 7.9, and was felt 560 kilometers away in Oregon, Nevada, and Los Angeles. The most recent earthquake to affect the Bay Area was the Loma Prieta Earthquake of 17 October 1989 with an M_w of 6.9. This earthquake occurred in the Santa Cruz Mountains about 88 kilometers southwest of the site.

In 1868, an earthquake with an estimated maximum intensity of X on the MM scale occurred on the southern segment (between San Leandro and Fremont) of the Hayward Fault. The estimated M_w for the earthquake is 7.0. In 1861, an earthquake of unknown magnitude (probably an M_w of about 6.5) was reported on the Calaveras Fault. The most recent significant earthquake on this fault was the 1984 Morgan Hill earthquake ($M_w = 6.2$).

The U.S. Geological Survey's 2014 Working Group on California Earthquake Probabilities has compiled the earthquake fault research for the San Francisco Bay area in order to estimate the probability of fault segment rupture. They have determined that the overall probability of moment magnitude 6.7 or greater earthquake occurring in the San Francisco Region during the next 30 years (starting from 2014) is 72 percent. The highest probabilities are assigned to the Hayward Fault, Calaveras Fault, and the northern segment of the San Andreas Fault. These probabilities are 14.3, 7.4, and 6.4 percent, respectively.

5.2 Seismic Hazards

Because the project site is in a seismically active region, we evaluated the potential for earthquake-induced geologic hazards including ground shaking, ground surface rupture, liquefaction,[2] lateral spreading,[3] and cyclic densification[4]. We used the results of our field investigation to evaluate the potential of these phenomena occurring at the project site.

---

2 Liquefaction is a phenomenon where loose, saturated, cohesionless soil experiences temporary reduction in strength during cyclic loading such as that produced by earthquakes.

3 Lateral spreading is a phenomenon in which surficial soil displaces along a shear zone that has formed within an underlying liquefied layer. Upon reaching mobilization, the surficial blocks are transported downslope or in the direction of a free face by earthquake and gravitational forces.

4 Cyclic densification is a phenomenon in which non-saturated, cohesionless soil is compacted by earthquake vibrations, causing ground-surface settlement.

5.2.1 Ground Shaking

The seismicity of the site is governed by the activity of the San Andreas and San Gregorio faults, although ground shaking from future earthquakes on other faults, including the Hayward Fault, will also be felt at the site. The intensity of earthquake ground motion at the site will depend upon the characteristics of the generating fault, distance to the earthquake epicenter, and magnitude and duration of the earthquake. We judge that strong to very strong ground shaking could occur at the site during a large earthquake on one of the nearby faults.

5.2.2 Ground Surface Rupture

Historically, ground surface displacements closely follow the trace of geologically young faults. The site is located 7 km from the San Andreas Fault; however, the site is not within an Earthquake Fault Zone, as defined by the Alquist-Priolo Earthquake Fault Zoning Act, and no known active or potentially active faults exist on the site. We therefore conclude the risk of fault offset at the site from a known active fault is very low. In a seismically active area, the remote possibility exists for future faulting in areas where no faults previously existed; however, we conclude the risk of surface faulting and consequent secondary ground failure from previously unknown faults is also very low.

5.2.3 Cyclic Densification

Seismically induced compaction or cyclic densification of non-saturated sand (sand above the groundwater table) caused by earthquake vibrations may result in differential settlement. The results of our preliminary field investigation indicate the granular soil above the groundwater table is generally not susceptible to cyclic densification due to its relative density and/or fines content. A zone of loose to medium dense sand to silty sand was encountered between depths of approximately 1-1/2 and 3-3/4 feet bgs at the CPT-6 location. We estimate ground surface settlement due to cyclic densification of this thin layer during a major earthquake would be less than 1/4 inch. The potential for settlement from cyclic densification at this location will be mitigated by overexcavating and recompacting two feet of soil below the foundation.

5.2.4 Liquefaction and Associated Hazards

Liquefaction is a phenomenon in which saturated soil temporarily loses strength from the build-up of excess pore water pressure, especially during earthquake-induced cyclic loading. Soil susceptible to liquefaction includes loose to medium dense sand and gravel, low-plasticity silt, and some low-plasticity clay deposits. Flow failure, lateral spreading, differential settlement, loss of bearing strength, ground fissures and sand boils are evidence of excess pore pressure generation and liquefaction.

A portion of the map titled *Maps of Quaternary Deposits and Liquefaction Susceptibility in the Central San Francisco Bay Region,* prepared by the USGS in cooperation with the California Geological Survey (CGS), dated 2006, is shown on Figure 6. The map indicates the area mapped as artificial fill in the northern portion of the site is highly susceptible to liquefaction while the liquefaction potential of the native alluvium in the southern portion of the site is very low.

We evaluated the liquefaction potential at the site using data collected from our CPTs. Liquefaction susceptibility was assessed using the software CLiq v3.0 (GeoLogismiki, 2019). CLiq uses measured field CPT data and assesses liquefaction potential, including post-earthquake vertical settlement, given a user-defined earthquake magnitude and peak ground acceleration (PGA). Our liquefaction analyses were performed using the methodology proposed by Boulanger and Idriss (2014). We also used the relationship proposed by Zhang, et al (2002) to estimate post-liquefaction volumetric strains and corresponding ground surface settlement; a relationship that is an extension of the work by Ishihara and Yoshimine (1992).

Our analyses were performed using an in-situ groundwater depth of four feet bgs and a “during earthquake” groundwater depth of four feet bgs. In accordance with the 2019 CBC, we used a peak ground acceleration of 0.79 gravity (g) in our liquefaction evaluation; this peak ground acceleration is consistent with the Maximum Considered Earthquake Geometric Mean (MCE_G) peak ground acceleration adjusted for site effects (PGA_M). We also used a Moment magnitude

8.05 earthquake, which is consistent with the mean characteristic Moment magnitude for the San Andreas Fault, as presented in Table 1.

Our liquefaction analyses indicate there are isolated thin layers of potentially liquefiable silty sand and sandy silt at random depths in the native alluvium underlying the site. The layers are less than about one foot thick except for a two-foot-thick layer encountered between depths of 16 and 18 feet bgs at the CPT-10 location. Based on the results of our analyses, we estimate total and differential settlements associated with liquefaction after an MCE event generating a PGA_M of 0.79g will be up to about 1/2 inch and 1/4 inch over horizontal distance of 30 feet, respectively.

Based on the depth and thickness of the potentially liquefiable soil layers, we conclude the site is not susceptible to surface manifestations from liquefaction, such as sand boils. Considering the potentially liquefiable soil layers are not continuous, we conclude the risk of lateral spreading is very low.

6.0 PRELIMINARY CONCLUSIONS AND RECOMMENDATIONS

Based on the results of our preliminary field investigation, we conclude the site may be redeveloped as proposed. The primary geotechnical concerns for the proposed redevelopment are: (1) the presence of up to about 10 feet of fill underlain by up to approximately 11 feet of a highly compressible marsh deposit in the northern portion of the site, and (2) providing uniform support for the proposed buildings. These and other geotechnical issues as they pertain to the proposed development are discussed in the remainder of this section.

6.1 Foundation and Settlement

Based on the data from our CPTs and review of existing subsurface data from the previous investigation, we have divided the site into “south of Midway Drive” and “north of Midway Drive” for the purposes of discussing foundation alternatives and providing preliminary foundations recommendations for the appropriate foundation types. Our preliminary conclusions and recommendations regarding foundations are presented in the following sections.

6.1.1 South of Midway Drive

Our investigation indicates the soil underlying the portion of the site south of Midway Drive has moderate to high strength and low to moderate compressibility. Therefore, we preliminarily conclude new buildings south of Midway Drive can be supported on conventional spread footings bottomed on well-compacted fill and/or native soil.

We preliminarily recommend that spread footings be designed using an allowable bearing pressure of 4,000 pounds per square foot (psf) for dead-plus-live loads; this pressure may be increased by one-third for total design loads, which include wind or seismic forces. Estimated total settlements will be on the order of 1/2 to 3/4 inch for wood-framed structures and 3/4 to 1 inch for Building D. We estimate differential settlements will be on the order of 1/2 to 3/4 inch over a 30-foot horizontal distance. Most of the settlement will occur during construction of the buildings. Continuous footings should be at least 18 inches wide and isolated spread footings should be at least 24 inches wide. Footings should extend at least 18 inches below the lowest adjacent soil subgrade.

Lateral loads may be resisted by a combination of friction along the base of the footing and passive resistance against the vertical faces of the footing. To compute lateral resistance, we recommend using an equivalent fluid weight of 300 pounds per cubic foot (pcf); the upper foot of soil should be ignored unless confined by a slab or pavement. Frictional resistance should be computed using a base friction coefficient of 0.30 where the footing is in direct contact with soil. The passive pressure and frictional resistance values include a factor of safety of at least 1.5 and may be used in combination without reduction.

6.1.2 North of Midway Drive

The subsurface conditions north of Midway Drive vary significantly in both thickness of fill and the thickness of the marsh deposit. Based on our settlement analyses using our CPT data, we preliminarily conclude Building A, Garage A, and Building A2 should be supported on spread footings or a mat foundation bearing on improved soil to reduce differential settlements resulting from the consolidation of the marsh deposit, which varies from about 0 to 11 feet thick beneath Building A2 and 0 to 8 feet beneath Building A and Garage A. We preliminarily conclude Buildings B and B2 can be supported on mat foundations bottomed on two feet of recompacted fill. Recommendations for both spread footings on improved soil and mat foundations are presented below.

6.1.2.1 Spread Footings on Improved Soil

We preliminarily conclude proposed Buildings A and A2 and Garage A may be supported on shallow foundations, such as spread footings or mat, bearing on soil strengthened using ground improvement techniques. Continuous footings should be at least 18 inches wide and isolated spread footings should be at least 24 inches wide. Footings should extend at least 18 inches below the lowest adjacent soil subgrade. The edge of mat foundations should extend at least 12 inches below the lowest adjacent exterior finished grade.

Ground improvement can serve to stiffen the overall soil matrix by transferring foundation loads to more competent material below the existing fill and marsh deposit, thus reducing static and seismically induced settlements and providing increased bearing capacity for shallow foundations. Based on our experience, we believe the most appropriate ground improvement method for the site conditions consists of drilled displacement columns (DDCs). Drilled displacement columns are installed by advancing a continuous flight, hollow-stem auger that mostly displaces the soil and then pumping a sand-cement mixture into the hole under pressure as the auger is withdrawn. This system results in low vibration during installation and generate relatively few drilling spoils for off-haul. DDCs are installed under design-build contracts by specialty contractors. The required size, spacing, length, and strength of columns should be determined by the contractor, based on the desired level of improvement.

For preliminary design of spread footings or a mat foundation bearing on improved ground, we recommend assuming ground improvement elements will extend a minimum of 20 feet into the alluvium below the marsh deposit, resulting in DDSC columns ranging from about 20 to 40 feet across the building footprints. We anticipate the ground improvement should be capable of increasing the allowable bearing pressure for spread footings or a mat foundation to approximately 4,000 psf for dead-plus-live-loads and limiting combined static and seismic differential total settlement to less than one inch and differential settlement to less than 3/4 inch over a horizontal distance of 30 feet. The actual design allowable bearing pressures and estimated settlements should be determined by the design-build ground improvement contractor, as they will be based on the diameter, depth, and spacing of the ground improvement elements

Lateral loads may be resisted by a combination of passive pressure on the vertical faces of the shallow foundations and friction between the bottoms of the foundations and the supporting soil and ground improvement elements. To compute lateral resistance, we preliminarily recommend using an equivalent fluid weight (triangular distribution) of 300 pcf. Passive pressure in the upper one foot of soil should be neglected unless confined by a slab or pavement. The allowable base friction coefficient between the foundation and ground improvement elements should be determined by the ground improvement contractor, as it may be higher than that recommended for foundations on native (unimproved) soil, depending on the size and spacing of the ground improvement elements. Alternatively, the frictional resistance for footings may be computed using an allowable base friction coefficient of 0.35, which is conservative. For a mat foundation, an allowable base friction value of 0.20, which assumes a vapor retarder is placed between the bottom of the mat and tops of the ground improvement elements, should be used. The passive pressure and frictional resistance values include a factor of safety of at least 1.5 and may be used in combination without reduction.

6.1.2.2 Mat Foundation

We preliminarily conclude Buildings B and B2 may be supported on mat foundations underlain by at least two feet of engineered fill. For mat design, we preliminarily recommend using a modulus of subgrade reaction of 15 pounds per cubic inch (pci) for dead-plus-live loads: this value has already been scaled to take into account the plan dimensions of the foundation and may be increased by one-third percent for total load conditions.

Considering the large area of the mat, we expect the average bearing stress under the mat to be low; however, concentrated stresses will occur at column locations and at the edges of the mat. For preliminary design, an allowable dead-plus-live bearing pressure of 2,500 psf may be used; this pressure may be increased by one-third for total load conditions.

We estimate the total settlement of a mat-supported building with an average bearing pressure of 500 psf for dead-plus-live-load conditions will be approximately 1 to 1-1/2 inches and differential settlement would be approximately 3/4 inch over a horizontal distance of 30 feet.

To compute lateral resistance, we recommend using an equivalent fluid weight of 300 pcf; the upper foot of soil should be ignored unless confined by a slab or pavement. Assuming the mat is supported on a vapor retarder, a friction factor of 0.20 may be used to compute base friction. Where the mat foundation is supported directly on soil, a friction factor of 0.30 may be used. The passive pressure and frictional resistance values include a factor of safety of at least 1.5 and may be used in combination without further reduction.

6.2 Slab-on-Grade Floors

Concrete slab-on-grade floors may be used for all the buildings south of Midway Drive and for Buildings A, Garage A, and Building A2. Where water vapor transmission through the floor slab is not desirable, we recommend installing a capillary moisture break and water vapor retarder beneath the floor slab. A capillary moisture break consists of at least four inches of clean, free-draining gravel or crushed rock. The vapor retarder should meet the requirements for Class A vapor retarders stated in ASTM E1745. For the mat foundation option for Buildings B and B2, the four inches of capillary break material is not required. The vapor retarder should be placed in accordance with the requirements of ASTM E1643. These requirements include overlapping seams by six inches, taping seams, and sealing penetrations in the vapor retarder. The particle size of the capillary break material should meet the gradation requirements presented in Table 2.

TABLE 2
Gradation Requirements for Capillary Moisture Break

Sieve Size	Percentage Passing Sieve
1 inch	90 – 100
3/4 inch	30 – 100
1/2 inch	5 – 25
3/8 inch	0 – 6

Concrete mixes with high water/cement (w/c) ratios result in excess water in the concrete, which increases the cure time and results in excessive vapor transmission through the slab. Therefore, concrete for the mat and floor slab should have a w/c ratio of less than 0.45. Water should not be added to the concrete mix in the field. If necessary, workability should be increased by adding plasticizers. In addition, the mat/slab should be properly cured. Before the floor covering is placed, the contractor should check that the concrete surface and the moisture emission levels (if emission testing is required) meet the manufacturer's requirements.

6.3 Seismic Design

For design in accordance with the 2019 CBC, we preliminarily recommend Site Class D be used. It is possible the stiffer soils south of Midway Drive may be classified as Site Class C; however, a geophysical survey would be necessary to estimate the average shear-wave velocity of the upper 100 feet of soil (and possibly bedrock) to determine the appropriate site class. This survey could be performed during the final geotechnical investigation for the project.

The latitude and longitude of the site are 37.7020° and -122.4138°, respectively. For design in accordance with 2019 CBC, we preliminarily recommend the following:

- Site Class D
- S_S = 1.66g, S_1 = 0.67g

The 2019 CBC is based on the guidelines contained within ASCE 7-16 which stipulates that where S_1 is greater than 0.2 times gravity (g) for Site Class D, a ground motion hazard analysis is needed unless the seismic response coefficient (C_s) value will be calculated as outlined in Section 11.4.8, Exception 2. Assuming the C_s value will be calculated as outlined in Section 11.4.8, Exception 2, we recommend the following seismic design parameters:

- F_a = 1.0, F_v = 1.7
- S_{MS} = 1.66g, S_{M1} = 1.14g
- S_{DS} = 1.10g, S_{D1} = 0.76g
- Seismic Design Category D for Risk Factors I, II, and III

Depending on the structural design methodology and fundamental period of the proposed building, it may be advantageous to perform a ground motion hazard analysis (the project structural engineer should confirm). We can perform a ground motion hazard analysis upon request.

6.4 Site Preparation and Grading

Site demolition should include the removal of existing pavements, foundations, and underground utilities. In general, abandoned underground utilities should be removed to the property line or service connections and properly capped or plugged with concrete. Where existing utility lines are outside of the proposed building footprint and will not interfere with the proposed construction, they may be abandoned in-place provided the lines are filled with lean concrete or cement grout to the property line. Voids resulting from demolition activities should be properly backfilled with compacted fill following the recommendations provided later in this section.

In areas that will receive improvements (i.e. building pads, exterior concrete flatwork, and new fill), the soil subgrade exposed following stripping and clearing should be scarified to a depth of at least eight inches, moisture-conditioned to above optimum moisture content, and compacted to at least 90 percent relative compaction . If the subgrade is within eight inches of finished subgrade in areas to receive vehicular traffic, it should be moisture-conditioned to near optimum moisture content and compacted to at least 95 percent relative compaction and be non-yielding. The soil subgrade should be kept moist until it is covered by fill or improvements.

Fill should consist of on-site soil or imported soil (select fill) that is free of organic matter, contains no rocks or lumps larger than three inches in greatest dimension, has a liquid limit of less than 40 and a plasticity index lower than 15, and is approved by the Geotechnical Engineer. Samples of proposed imported fill material should be submitted to the Geotechnical Engineer at least three business days prior to use at the site. The grading contractor should provide analytical test results or other suitable environmental documentation indicating the imported fill is free of hazardous materials at least three days before use at the site. If this data is not available, up to two weeks should be allowed to perform analytical testing on the proposed imported material.

Fill should be placed in horizontal lifts not exceeding eight inches in uncompacted thickness, moisture-conditioned to above optimum moisture content, and compacted to at least 90 percent relative compaction. Fill should be compacted to at least 95 percent relative compaction where the fill is greater than five feet in thickness or it consists of clean sand or gravel, defined as soil with less than five percent fines by weight. Fill placed within the upper foot of pavement subgrade should also be compacted to at least 95 percent relative compaction, and be non-yielding.

6.4.1 Utility Trench Backfill

Excavations for utility trenches can be readily made with a backhoe. All trenches should conform to the current CAL-OSHA requirements. To provide uniform support, pipes or conduits should be bedded on a minimum of four inches of sand or fine gravel. After the pipes and conduits are tested, inspected (if required) and approved, they should be covered to a depth of six inches with sand or fine gravel, which should be mechanically tamped.

Backfill for utility trenches and other excavations is also considered fill, and should be placed and compacted in accordance with the recommendations previously presented. If imported clean sand or gravel (defined as soil with less than five percent fines) is used as backfill, it should be compacted to at least 95 percent relative compaction. Fill placed in the public right-of-way should be compacted in accordance with the City of Daly City Standard Specifications. Jetting of trench backfill should not be permitted. Special care should be taken when backfilling utility trenches in pavement areas. Poor compaction may cause excessive settlements, resulting in damage to the pavement section.

6.4.2 Exterior Concrete Flatwork

Exterior concrete flatwork that will not receive vehicular traffic (i.e. sidewalk) should be underlain by at least four inches of Class 2 aggregate base compacted to at least 90 percent relative compaction. Prior to placement of the aggregate base, the upper eight inches of the subgrade soil should be scarified, moisture-conditioned to near optimum moisture content, and compacted to at least 90 percent relative compaction.

6.4.3 Drainage and Landscaping

Positive surface drainage should be provided around the buildings to direct surface water away from foundations. To reduce the potential for water ponding adjacent to the buildings, we recommend the ground surface within a horizontal distance of five feet from the buildings slope down away from the buildings with a surface gradient of at least two percent in unpaved areas and one percent in paved areas. In addition, roof downspouts should be discharged into controlled drainage facilities to keep the water away from the foundations.

6.5 Retaining Walls

Retaining walls should be designed to resist static lateral earth pressures, lateral pressures caused by earthquakes, and traffic loads (if vehicular traffic is expected within a horizontal distance equal to 1.5 times the wall height). All on-site walls, including low retaining walls in landscaped areas, should be designed in accordance with the recommendations presented in this section, although checking the walls for seismic loading is not required for walls less than six feet high. Retaining walls that are restrained from movement at the top or sides (e.g., a wall with a 90-degree turn) should be designed using the at-rest pressure presented in Table 3. Walls that are not restrained from rotation may be designed using the active pressure presented in Table 3.

TABLE 3
Lateral Earth Pressures for Retaining Wall Design

Soil Backfill Type	Active Static Condition (Unrestrained)	At-Rest Static Condition (Restrained)	Seismic Condition
On-site Soil - Drained	35 pcf[1]	55 pcf	35 pcf + 16 pcf
On-site Soil - Undrained	80 pcf	90 pcf	80 pcf + 8 pcf

1. Equivalent fluid weight (triangular distribution); pcf = pounds per cubic foot

The recommended lateral earth pressures above are based on a level backfill condition with no additional surcharge loads. If the retained soil will be sloped, we can provide additional recommendations after the degree to which the soil will be sloped has been determined. Where the below-grade walls are subject to traffic loading within a horizontal distance equal to 1.5 times the wall height, an additional uniform lateral pressure of 50 psf, applied to the entire height of the wall.

The design pressures recommended are based on fully drained walls. Although a majority of the retaining walls will be above the groundwater level, water can accumulate behind the walls from other sources, such as rainfall, irrigation, and broken water lines, etc. One acceptable method for backdraining a retaining wall is to place a prefabricated drainage panel against the back of the wall. The drainage panel should extend down to a perforated PVC collector pipe at the base of the retaining wall. The pipe should be surrounded on all sides by at least four inches of Caltrans Class 2 permeable material or 3/4-inch drain rock wrapped in filter fabric (Mirafi NC or equivalent). The pipe should be connected to a suitable discharge point; a sump and pump system may be required to drain the collector pipes.

Wall backfill material and compaction should conform to the recommendations presented above in Section 6.4 of this report. Lightweight compaction equipment should be used to reduce stresses induced on the retaining walls during fill placement unless the walls are appropriately braced.

Site retaining walls may be supported on spread footings bottomed on one foot of engineered fill compacted to at least 90 percent relative compaction. The footings should be bottomed at least 18 inches below the lowest adjacent finished grade. The allowable bearing pressure, friction factor, and passive pressure presented for mat foundation design in Section 7.2 may be used for design of site retaining walls.

6.6 Flexible (Asphalt Concrete) Pavement Design

The State of California flexible pavement design method was used to develop the recommended asphalt-concrete pavement sections. Based on our experience, we assumed an R-value of 40 for the near-surface soil, which consists mostly of silty sand. Several R-value tests should be performed on the near-surface soil during the final geotechnical investigation. Preliminary pavement design recommendations for asphalt-concrete pavements for the assumed R-value of 40 are presented below in Table 4.

TABLE 4
AC Pavement Sections

TI	Asphaltic Concrete (inches)	Class 2 Aggregate Base R = 78 (inches)
4.5	2.5	6.0
5.0	3.0	6.0
5.5	3.0	6.0
6.0	3.5	6.0
6.5	4.0	6.0
7.0	4.0	7.0

The soil subgrade beneath AC pavements should be scarified to a depth of eight inches, moisture-conditioned to near optimum moisture content, and compacted to at least 95 percent relative compaction. In addition, the subgrade should be a firm and non-yielding surface. The subgrade should be proof-rolled to confirm it is non-yielding prior to placing the aggregate base. The Class 2 aggregate base should be moisture-conditioned to near optimum moisture content and compacted to at least 95 percent relative compaction.

6.7 Portland Cement Concrete Pavement

The PCC pavement section design is based on a maximum single-axle load of 20,000 pounds and a maximum tandem axle of 32,000 pounds. The recommended PCC pavement section for these axle loads is six inches of Portland cement concrete over six inches of Class 2 aggregate base. For PCC pavement areas that will not receive truck traffic, a PCC pavement section consisting of five inches of Portland cement concrete over six inches of Class 2 aggregate base may be used. The modulus of rupture and unconfined compressive strength of the concrete should be at least 500 and 3,000 pounds per square inch (psi) at 28 days, respectively. Contraction joints should be placed at a 15-foot spacing. Where the outer edge of a concrete pavement meets asphalt pavement, the concrete slab should be thickened by 50 percent at a taper not to exceed a slope of 1 in 10.

The soil subgrade beneath PCC pavements should be scarified to a depth of eight inches, moisture-conditioned to near optimum moisture content, and compacted to at least 95 percent relative compaction to provide an unyielding surface. The Class 2 aggregate base should be moisture-conditioned to near optimum moisture content and compacted to at least 95 percent relative compaction.

7.0 ADDITIONAL GEOTECHNICAL SERVICES

The preliminary conclusions and recommendations presented within are based on a preliminary field investigation and not intended for final design. Prior to final design, we should be retained to provide a final geotechnical report based on a supplemental field investigation and the final proposed development. Additional borings and CPTs will be required to further evaluate the subsurface conditions beneath the site. Once our final report has been completed, the design team has selected a foundation system, and prior to construction, we should review the project plans and specifications to check their conformance with the intent of our final recommendations. During construction, we should observe site preparation, ground improvement installation, foundation installation, and the placement and compaction of fill. These observations will allow us to compare the actual with the anticipated soil conditions and to check if the contractor's work conforms with the geotechnical aspects of the plans and specifications.

8.0 LIMITATIONS

This preliminary geotechnical investigation has been conducted in accordance with the standard of care commonly used as state-of-practice in the profession. No other warranties are either expressed or implied. The preliminary recommendations made in this report are based on the assumption that the subsurface conditions do not deviate appreciably from those disclosed in the exploratory CPTs. If any variations or undesirable conditions are encountered during construction, we should be notified so that additional recommendations can be made. The preliminary foundation recommendations presented in this report are developed exclusively for the proposed development described in this report and are not valid for other locations and construction in the project vicinity.

Executive Summary

The purpose of this report is to analyze the transportation impacts of the proposed affordable housing development located at 45 Midway Drive in Daly City, California. The project would replace 150 existing affordable housing units and a childcare center on site with 566 new affordable housing units, a park, and expanded childcare center. Project access would be provided via four driveways on Schwerin Street and one driveway on Martin Street.

The potential impacts of the project were evaluated relative to the applicable level of service standards and methodologies in order to satisfy the requirements of the California Environmental Quality Act (CEQA), the City of Daly City, the City of San Francisco, the City of Brisbane, and the San Mateo County Congestion Management Program (CMP). The City/County Association of Governments (C/CAG) of San Mateo County administers the San Mateo County CMP. The study includes an analysis of AM and PM peak-hour traffic conditions during weekdays at 10 existing and 3 future study intersections in the vicinity of the project site, and includes an evaluation of vehicle queuing, signal warrants, bike/pedestrian/transit conditions, vehicle miles traveled (VMT), C/CAG Travel Demand Management (TDM) compliance, site access, and on-site circulation.

Based on trip generation rates recommended by the Institute of Transportation Engineers, it is estimated that the proposed project would generate 3,106 net new daily vehicle trips, with 203 net new trips occurring during the AM peak hour and 245 net new trips occurring during the PM peak hour.

The analysis showed the following significant cumulative impact:

> **Significant Impact**: Under cumulative conditions, the intersection of Bayshore Boulevard and Geneva Avenue would operate at LOS F during the PM peak hour without the proposed project. The project would add traffic to the intersection. According to the City of Daly City and San Mateo County CMP significance criteria, this would constitute a significant adverse cumulative impact at this intersection.
>
> **Mitigation**: To mitigate this impact would require an overlap traffic signal phase be added at the future northbound Bayshore Boulevard to eastbound Geneva Avenue right turn movement in conjunction with the Geneva Avenue extension to U.S. 101. Construction of this overlap phase would allow northbound right turns on Bayshore Boulevard to go concurrently with westbound left turns on Geneva Avenue. This would improve the overall intersection average delay to 58.4 seconds. Under cumulative no project conditions, the intersection delay is shown to be 80.9 seconds. Thus, this improvement would return the average delay to better than no project conditions. Because this impact does not occur under existing plus project conditions and is the result of cumulative traffic increases, the

proposed project would be responsible for a fair share monetary contribution towards the improvement. Under existing conditions, there are approximately 2,601 PM peak hour trips at the intersection. Cumulative projects (not including project traffic) would add approximately 2,995 PM peak hour trips to the intersection between 2019 and 2035. The proposed project is projected to add approximately 95 PM peak hour trips to the intersection.

The proposed project would not result in significant impacts to any other study locations, nor would it result in any significant impacts to bike, pedestrian, or transit facilities. The report also produced the following conclusions and recommendations:

Recommendation 1: Parking on the east side of Schwerin Street at the Midway Drive driveway should be restricted as needed to maintain adequate sight distance, subject to review and approval by the City's Traffic Safety Committee and City Council. In addition, the project shall maintain the landscaping near the driveway such that it doesn't obstruct the line of sight down Schwerin Street. Placement of any monument signs or other permanent fixtures would need to be located out of the line of sight of exiting drivers. The final site plan will need to be reviewed by city staff.

Recommendation 2: The project shall ensure that alignments of the drive aisles and the corner radii are adequate for the circulation of standard vehicles as well as trucks, garbage collection, and emergency vehicles, subject to review by city staff.

Recommendation 3: The project shall ensure that the garage ingress/egress, internal circulation, ramp design and other relevant design features meet the city code requirements or otherwise accord with industry standards. Final design will be subject to review by city staff.

Recommendation 4: The project should consider establishing a time limit for childcare parking. Because all streets within the development are private roadways, parking restrictions would need to be enforced by private security. In addition, the childcare facility should consider preparing an access plan to show parents how to access the designated parking areas.

Recommendation 5: Prior to final design, the project applicant shall work with City of Daly City and SamTrans staff to consider the desirability of upgrades to the existing shuttle stop along the project frontage.

Recommendation 6: The project shall provide and/or implement CMP-approved TDM measures in order to meet the CMP TDM requirements.

1. Introduction

This report presents the results of the transportation impact analysis conducted for the proposed affordable housing development located at 45 Midway Drive in Daly City, California. The project would replace 150 existing affordable housing units and a childcare center on site with 566 new affordable housing units, a park, and expanded childcare center. Project access would be provided via four driveways on Schwerin Street and one driveway on Martin Street. The project site and the surrounding study area are shown on Figure 1. The project site plan is shown on Figure 2.

Scope of Study

The potential impacts of the project were evaluated relative to the applicable level of service standards and methodologies in order to satisfy the requirements of the California Environmental Quality Act (CEQA), the City of Daly City, the City of San Francisco, the City of Brisbane, and the San Mateo County Congestion Management Program (CMP). The City/County Association of Governments (C/CAG) of San Mateo County administers the CMP.

The study includes an analysis of peak-hour intersection levels of service, vehicle queuing, signal warrants, bike/pedestrian/transit conditions, vehicle miles traveled (VMT), C/CAG Travel Demand Management (TDM) compliance, site access, and on-site circulation. The traffic analysis evaluated conditions at seven signalized intersections and six unsignalized intersections, as follows:

1. Carter Street and Martin Street
2. Carter Street and Guadalupe Canyon Parkway
3. Schwerin Street and Geneva Avenue
4. Schwerin Street and Ottilia Street*
5. Schwerin Street and Partridge Street/Project Driveway*
6. Schwerin Street and Martin Street*
7. U.S. 101 southbound off-ramp and Bayshore Boulevard (San Francisco)
8. Bayshore Boulevard and Geneva Avenue (Brisbane/Daly City/CMP)
9. Bayshore Boulevard and Main Street* (Brisbane)
10. Bayshore Boulevard and Guadalupe Canyon Parkway (Brisbane)
11. Schwerin Street and New Street A* (project driveway)
12. New Street B and Martin Street* (project driveway)
13. Linda Vista Drive and Martin Street* (planned)

* denotes unsignalized intersection

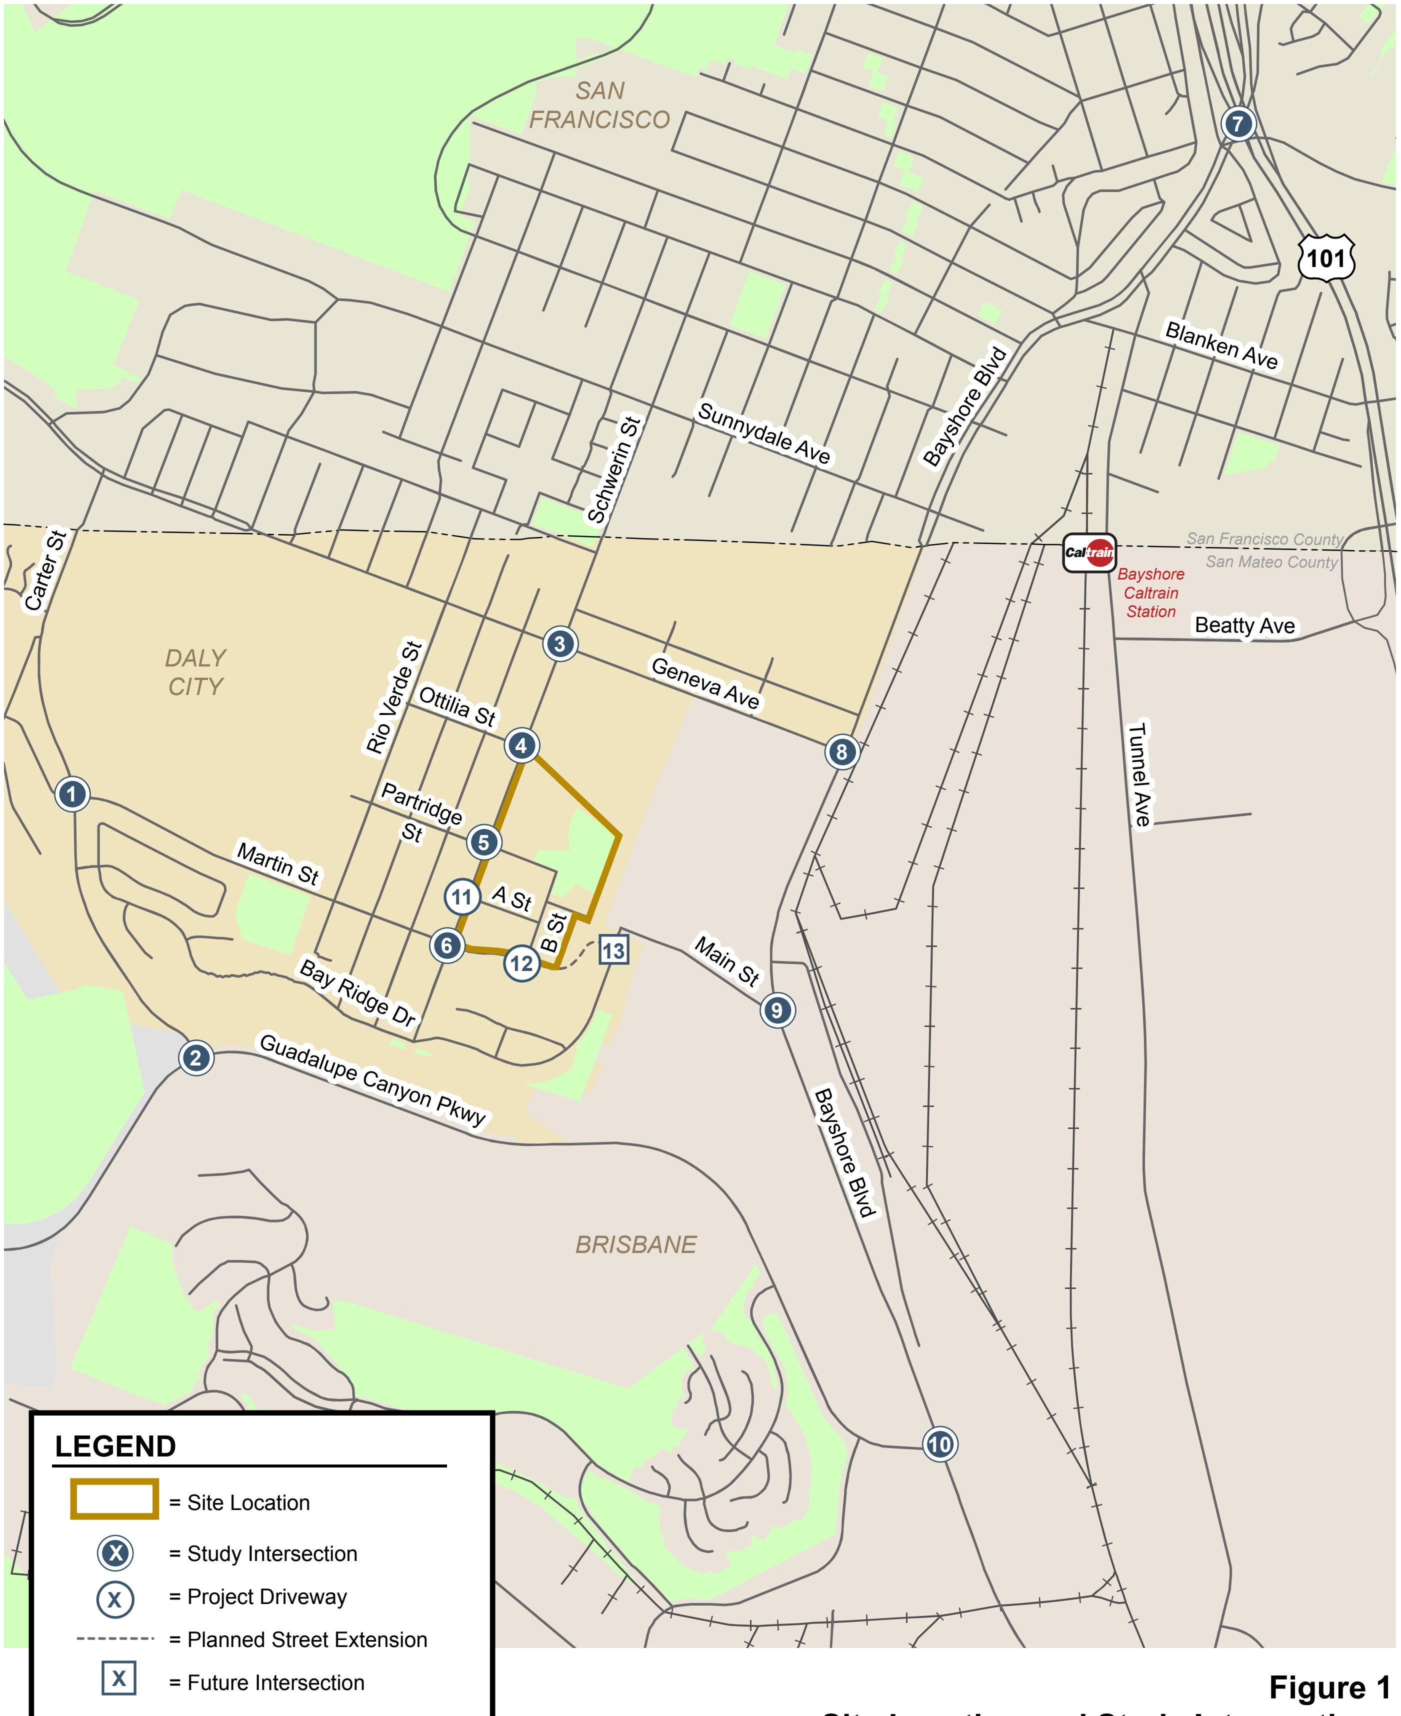

Figure 1
Site Location and Study Intersections

Figure 2
Site Plan

Traffic conditions at the study locations were analyzed for the weekday AM and PM peak hours. The AM peak hour of traffic is typically between 7:00 AM and 9:00 AM and the PM peak hour is typically between 4:00 PM and 6:00 PM. These periods represent the most congested traffic conditions on the surrounding street network during a typical weekday.

The project is anticipated to generate more than 100 trips in the peak hours. Per the County CMP requirements, a CMP analysis was required.

Traffic conditions were evaluated for the following scenarios:

Scenario 1: *Existing Conditions.* Existing conditions were represented by existing traffic volumes on the existing roadway network. Existing traffic volumes were obtained from recent traffic counts.

Scenario 2: *Existing Plus Project Conditions.* Existing plus Project conditions represent existing peak-hour traffic volumes with the addition of net project traffic resulting from the increase in number of affordable units and the increase in childcare center enrollment. Existing plus Project traffic volumes were obtained from the Daly City Travel Demand Forecast model. Existing plus project conditions were evaluated relative to existing conditions in order to identify potential impacts associated with the proposed project.

Scenario 3: *Cumulative No Project Conditions*. Cumulative No Project conditions were represented by Cumulative No Project traffic volumes on the existing roadway network with the addition of planned transportation improvements. Cumulative No Project traffic volumes were obtained from the Daly City Travel Demand Forecast model. The Cumulative No Project traffic volumes reflect all approved and pending development in the City.

Scenario 4: *Cumulative Plus Project Conditions*. Cumulative plus Project conditions were represented by Cumulative plus Project traffic volumes on the existing roadway network with the addition of planned transportation improvements. Cumulative plus Project traffic volumes were estimated using the City's Travel Demand Forecast model based on the project's proposed land use changes (increase in number of affordable units and increase in childcare center enrollment) on the site. Cumulative plus Project conditions were evaluated relative to Cumulative No Project conditions in order to determine potential cumulative project impacts.

Methodology

This section presents the methods used to determine the traffic conditions for each scenario described above. It includes descriptions of the data requirements, the analysis methodologies, and the applicable level of service standards.

Data Requirements

The data required for the analysis were obtained from traffic counts, published data, public documents, previous traffic studies, the City's traffic model, and field observations. The following data were collected from these sources:

- existing traffic volumes
- existing traffic observations
- lane configurations
- signal timing and phasing
- existing bicycle facilities
- existing transit service
- project traffic volumes
- cumulative traffic volumes

Level of Service Standards and Analysis Methodologies

Traffic conditions at the study locations were evaluated using level of service (LOS). *Level of Service* is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or congested conditions with excessive delays. The analysis methods are described in detail below.

Signalized Intersections

The City of Daly City, City of Brisbane and the San Mateo County CMP evaluate level of service at signalized intersections based on the HCM level of service methodology using Synchro software. The HCM method evaluates signalized intersection operations based on average control delay time for all vehicles at the intersection. *Control delay* is the amount of delay that is attributed to the type of traffic control device at the intersection, and includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. The correlation between average delay and level of service is shown in Table 1.

The City of Daly City and City of Brisbane have a level of service standard of LOS D or better for signalized intersections. The San Mateo CMP has a level of service standard of LOS E or better for the signalized CMP intersection evaluated in this study.

City of Daly City and San Mateo County

Significance criteria are used to establish what constitutes an impact. For this analysis, the criteria used to determine significant impacts are based on CEQA Guidelines and the LOS standards of Daly City, the City of Brisbane, and the San Mateo County CMP.

For signalized San Mateo County CMP intersections and intersections in Daly City, the project would result in a significant impact if, for any peak hour under evaluation:

- the addition of project traffic would increase peak hour traffic volumes such that signalized intersection level of service would degrade to a level of service below the adopted standard.
- the project would add traffic to a signalized intersection that operates below the adopted level of service standard.

The San Mateo County CMP has additional, separate criteria for what constitutes an impact under cumulative conditions. For a CMP intersection currently in compliance with the adopted LOS standard, a project will be considered to have a CMP impact if the cumulative analysis indicates that:

- the combination of the proposed project and future cumulative traffic demand would cause operations of the CMP intersection to degrade to a level of service below the adopted CMP standard for the intersection, AND the proposed project would increase average control delay at the intersection by four (4) seconds or more relative to cumulative conditions without the project.

City of Brisbane

For signalized intersections in the City of Brisbane, the project would result in a significant impact if, for any peak hour under evaluation:

- the addition of project traffic would increase peak hour traffic volumes such that signalized intersection level of service would degrade to a level of service below the adopted standard (LOS D), or
- at a signalized intersection that operates below the adopted level of service standard without the project, the project would increase traffic at the critical movements by 5 percent or more

A significant impact at a signalized intersection is said to be satisfactorily mitigated when measures are implemented that would restore intersection levels of service to an acceptable level of service or restore the intersection to operating levels that are equal to or better than no project conditions.

City of San Francisco and San Francisco CMP

The City and County (CMP) of San Francisco no longer define project traffic impacts on the basis of level of service, having adopted vehicle-miles-travelled (VMT) as the metric for evaluating project impacts. In addition, the one study intersection within the jurisdiction of San Francisco- U.S. southbound ramps and Bayshore Boulevard- is located within a district that has been defined as exempt from impact analysis. There are therefore no applicable criteria for determining significant impacts at this intersection. The intersection at U.S. southbound ramps and Bayshore Boulevard was analyzed for informational purposes only.

Table 1
Signalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay Per Vehicle (sec.)
A	Signal progression is extremely favorable. Most vehicles arrive during the green phase and do not stop at all. Short cycle lengths may also contribute to the very low vehicle delay.	10.0 or less
B	Operations characterized by good signal progression and/or short cycle lengths. More vehicles stop than with LOS A, causing higher levels of average vehicle delay.	10.1 to 20.0
C	Higher delays may result from fair signal progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant, though some vehicles may still pass through the intersection without stopping.	20.1 to 35.0
D	The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable signal progression, long cycle lengths, or high volume-to-capacity (V/C) ratios. Many vehicles stop and individual cycle failures are	35.1 to 55.0
E	This is considered to be the limit of acceptable delay. These high delay values generally indicate poor signal progression, long cycle lengths, and high volume-to-capacity (V/C) ratios. Individual cycle failures occur frequently.	55.1 to 80.0
F	This level of delay is considered unacceptable by most drivers. This condition often occurs with oversaturation, that is, when arrival flow rates exceed the capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes of such delay levels.	greater than 80.0

Source: Transportation Research Board, *Highway Capacity Manual* .

Unsignalized Intersections

Level of service at unsignalized intersections is also based on the Highway Capacity Manual (HCM) method. Synchro software was used to apply the HCM operations method for evaluation of conditions at unsignalized intersections. This method is applicable for one-way, two-way, and all-way stop-controlled intersections. For side-street stop-controlled intersections, the LOS is reported for the overall intersection average delay and the average delay at the worst approach. The correlation between average delay and level of service for unsignalized, stop-controlled intersections is shown in Table 2.

Unlike signalized intersections, which typically represent constraint points for the roadway network, unsignalized intersections rarely limit the potential capacity of a roadway. The determination of appropriate improvements to unsignalized intersections typically includes a qualitative and quantitative analysis of movement delay, traffic signal warrants, movement traffic volumes, availability of alternate routes, and intersection safety. For this reason, improvements to unsignalized intersections are frequently determined on the basis of professional engineering judgment.

Table 2
Unsignalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Delay Per Vehicle (Sec.)
A	Little or no traffic delay	10.0 or less
B	Short traffic delays	10.1 to 15.0
C	Average traffic delays	15.1 to 25.0
D	Long traffic delays	25.1 to 35.0
E	Very long traffic delays	35.1 to 50.0
F	Extreme traffic delays	greater than 50.0

Source: Transportation Research Board, *Highway Capacity Manual* (HCM).

The City of Daly City and the San Mateo County CMP do not apply significance thresholds to unsignalized intersections. The City of Brisbane does, however, have LOS standards and significance criteria for impacts at unsignalized intersections. As with signalized intersections, the level of service standard for unsignalized intersections in Brisbane is LOS D.

For unsignalized intersections in the City of Brisbane, the project would result in a significant impact if, for any peak hour under evaluation:

- the addition of project traffic would increase peak hour traffic volumes such that unsignalized intersection level of service would degrade to a level of service below the adopted standard, or
- at an unsignalized intersection that operates below the adopted level of service standard without the project, the project would increase traffic by 5 percent or more (a) for the critical movements of an all-way-stop-controlled intersection, or (b) on the worst approach of a side-street-stop-controlled intersection.

Signal Warrant Methodology

The level of service analysis at unsignalized intersections is supplemented with an assessment of the need for signalization of the intersections. For this study, the need for signalization is assessed, in part, on the basis of the operating conditions at the intersections (i.e., level of service) and on the peak hour volume signal warrant – warrant #3 – described in the *California Manual on Uniform Traffic Control Devices* (MUTCD). This method provides an indication of whether traffic conditions and peak hour traffic levels are, or would be, sufficient to justify installation of a traffic signal.

Freeway Segment Capacity Analysis

A freeway segment analysis was performed using City/County Association of Governments (C/CAG) Congestion Management Program (CMP) guidelines. According to the 2017 San Mateo County Congestion Management Program guidelines, a freeway segment shall be included in a traffic impact analysis if it is expected to be impacted by the proposed project.

The selected LOS method for freeway segments is based on calculating V/C ratios for each direction of travel, wherein the traffic volume for each segment is divided by the capacity of the segment. The capacity is estimated as the number of lanes multiplied by 2,200 vehicles per hour per lane for four-lane freeway segments and 2,300 vehicles per hour per lane for segments with six or more lanes. The level of service standard for the freeway segments studied is LOS E.

Freeway impacts are generally considered to occur when a project causes a traffic increase equal to or greater than one-percent of capacity. A screen-line analysis of project traffic on U.S. 101 to and from the project site showed the project would add considerably less than one percent of the segment capacity on any study segment. Table 3 shows the project's expected contribution to traffic on the freeways in the vicinity of the project site. In accordance with County CMP guidelines, since no freeway segment is expected to be impacted by the proposed project, no further analysis of freeways is required.

Vehicle Queuing

A vehicle queuing analysis was performed for intersection turning movements where the project would add a considerable number of trips. Vehicle queues were estimated using a Poisson probability distribution, which estimates the probability of "n" vehicles for a vehicle movement using the following formula:

$$P\,(x=n) = \frac{\lambda^n e^{-(\lambda)}}{n!}$$

Where:

P (x=n) = probability of "n" vehicles in queue

n = number of vehicles in the queue

λ = Average number of vehicles in the queue per lane (vehicles per hour /signal cycles per hour)

The basis of the analysis is as follows: (1) the Poisson probability distribution is used to estimate the 95th-percentile maximum number of queued vehicles per signal cycle for a particular movement; (2) the estimated maximum number of vehicles in the queue is translated into a queue length, assuming 25 feet per vehicle; and (3) the estimated maximum queue length is compared to the existing or planned available storage capacity for the movement.

Table 3
Freeway Analysis

Freeway	Segment	# of Lanes[1]	Capacity (vphpl)[2]	1% of Capacity	Project Peak Hour Trips AM	Project Peak Hour Trips PM
Southbound Direction						
US 101	north of Bayshore Blvd	5	11500	115	10	31
US 101	Bayshore Bl to Beatty Ave[3]	4	9200	92	8	23
US 101	Beatty Ave to Lagoon Rd[3]	4	9200	92	8	5
US 101	South of Lagoon Rd	4	9200	92	15	9
Northbound Direction						
US 101	South of Lagoon Rd	4	9200	92	5	15
US 101	Lagoon Rd to Beatty Ave[3]	4	9200	92	3	8
US 101	Beatty Ave to Bayshore Bl[3]	4	9200	92	23	14
US 101	north of Bayshore Blvd	5	11500	115	31	18

[1] includes mixed-flow lanes only; based on the narrowest part of the segment.
[2] capacity is based on the ideal capacity cited in San Mateo County CMP Guidelines: 2,200 vehicles per lane for 4-lane freeways, and 2,300 vehicles per lane for freeway segments with or six or more lanes.
[3] segments are applicable only under future conditions, because project traffic would use those segments only after the Geneva Avenue extension connects to the Beatty Ave (Candlestick) interchange.

Transportation Demand Management (TDM) Measures

In its role as the Congestion Management Agency (CMA) for San Mateo County, the City/County Association of Governments (C/CAG) is responsible for maintaining the performance and standards of the Congestion Management Program (CMP) roadway network. The CMP requires new developments that are projected to generate 100 or more peak-hour trips to implement TDM measures that would reduce the demand for new peak-hour trips. The project is expected to generate more than 100 peak-hour trips and therefore would be subject to the C/CAG TDM guidelines.

Report Organization

The remainder of this report is divided into five chapters. Chapter 2 describes the existing roadway network, transit service, existing bicycle and pedestrian facilities, and existing traffic conditions. Chapter 3 explains the method used to estimate project traffic. Chapter 4 describes the potential project impacts on the transportation system under Existing plus Project traffic conditions. Chapter 5 presents Cumulative traffic conditions without and with project traffic. Chapter 6 describes the evaluation of other transportation related issues, including site access and circulation, TDM measures, and VMT assessment.

2. Existing Conditions

This chapter describes the existing conditions for all of the major transportation facilities in the vicinity of the site, including the roadway network, bicycle and pedestrian facilities, and transit service.

Existing Roadway Network

The existing roadways in the project vicinity are U.S. 101, Geneva Avenue, Bayshore Boulevard, Guadalupe Canyon Parkway, Carter Street, Martin Street, Linda Vista Drive, Schwerin Street, and Partridge Street. These roadways are described below.

U.S. Highway 101 (U.S. 101) near the project site is a limited-access eight- to 10-lane freeway that connects Brisbane and the Peninsula with San Francisco and Marin Counties to the north and San Jose to the south. U.S. 101 provides direct access to the Project Site to and from the north at the Bayshore Boulevard interchange located approximately one mile north of the site. Access to and from the south is provided via interchanges at Beatty Avenue and Lagoon Road, and via ramps at Sierra Point Parkway and Bayshore Boulevard/Airport Parkway approximately 3 miles south of the site.

Geneva Avenue is a four lane, east-west primary arterial in the vicinity of the project site. It begins at Bayshore Boulevard and ends at Ocean Avenue in San Francisco. It has a center left-turn lane and parking on both sides between Schwerin Street and Bayshore Boulevard in the vicinity of the project site. It provides direct access for various commercial uses and surrounding residential properties. Access to Geneva Avenue from the project site is provided primarily via Schwerin Street. There's a mix of Class II and Class III bike facilities on Geneva Avenue between Ocean Avenue and Bayshore Boulevard.

Bayshore Boulevard is a four-lane, north-south primary arterial with Class II bike lanes on both sides in the vicinity of the project site. It parallels U.S. 101 between Caesar Chavez Boulevard in San Francisco and South San Francisco, where it becomes Airport Boulevard. It provides a direct connection to the Third Street corridor in San Francisco and also serves the surrounding light industrial and residential uses. Access to Bayshore Boulevard from the project site is provided via Geneva Avenue, Linda Vista Drive and Main Street.

Guadalupe Canyon Parkway is a four lane, east-west secondary arterial in the vicinity of the project site. It begins at Bayshore Boulevard and runs westerly through the San Bruno Mountains where it connects with East Market Street to the east. Access to the site would be provided via

Carter Street and Martin Street. It also provides access to some office and residential land uses in the City of Brisbane.

Carter Street is a two-lane, north-south collector street in the vicinity of the project site. It begins at Geneva Avenue in the north and ends at Guadalupe Canyon Parkway in the south. It provides direct access to the surrounding residential properties. Access to Carter Street from the project site would be provided via Martin Street.

Martin Street is a two-lane, east-west local roadway that directly borders the site at its southern end. It begins in the east near the eastern boundary of the project site and ends at Carter Street in the west, where it becomes Martin Trail. It would provide direct access to the site via a new driveway. As part of the City's planned improvements, Martin Street would be extended easterly from its current eastern end to intersect with Linda Vista Drive, providing project site access to Bayshore Boulevard.

Linda Vista Drive is a two-lane local roadway with parking on both sides in the vicinity of the project site. It extends from Main Street at the east end to Schwerin Street at its west end, where it becomes Bay Ridge Drive. It provides direct access to the surrounding residential properties.

Schwerin Street is a two-lane, north-south local street with parking on both sides in the vicinity of the project site. Schwerin Street borders the western boundary of the site and would provide direct access to the site via the extension of Partridge Street and a new driveway between Partridge Street and Martin Street.

Partridge Street is an east-west, two-lane local street with parking on both sides in the vicinity of the project site. Partridge Street is proposed to be extended eastward to connect to the site via a new driveway; this portion of Partridge Street will be privately maintained.

Existing Bicycle and Pedestrian Facilities

Geneva Avenue and Bayshore Boulevard have existing Class II bicycle lanes in the vicinity of the project site. Carter Street between Geneva Avenue and Guadalupe Canyon Parkway, Martin Street between Carter Street and Schwerin Street, and Schwerin Street along the site frontage between Martin Street and Geneva Avenue, are all existing Class III bike routes. On the local streets surrounding the project site, the volume and speed of vehicular traffic is generally low enough such that shared use between bikes and motor vehicles is feasible.

In addition to the existing bicycle facilities described above, the City of Brisbane has "unclassified On-Street" improvements planned for Guadalupe Canyon Parkway. Class II bicycle lanes are also planned along the planned Geneva Avenue extension east of Bayshore Boulevard. The planned bicycle facilities within the study area are shown on Figure 3.

Pedestrian facilities in the area include sidewalks along streets, curb ramps and crosswalks at intersections, pedestrian signals at controlled locations, and pedestrian paths. Direct pedestrian access to the site is provided by sidewalks along the site frontage on Schwerin Street and Martin Street. Pedestrian facilities in the project area consist of sidewalks along all previously described streets: Geneva Avenue, Schwerin Street, Partridge Street, Martin Street, and Linda Vista Drive. Bayshore Boulevard has no sidewalks south of Geneva Avenue, nor on the east side north of Geneva Avenue. According to the Daly City Pedestrian Master Plan, pedestrian access improvements are proposed at various crossings along Geneva Avenue.

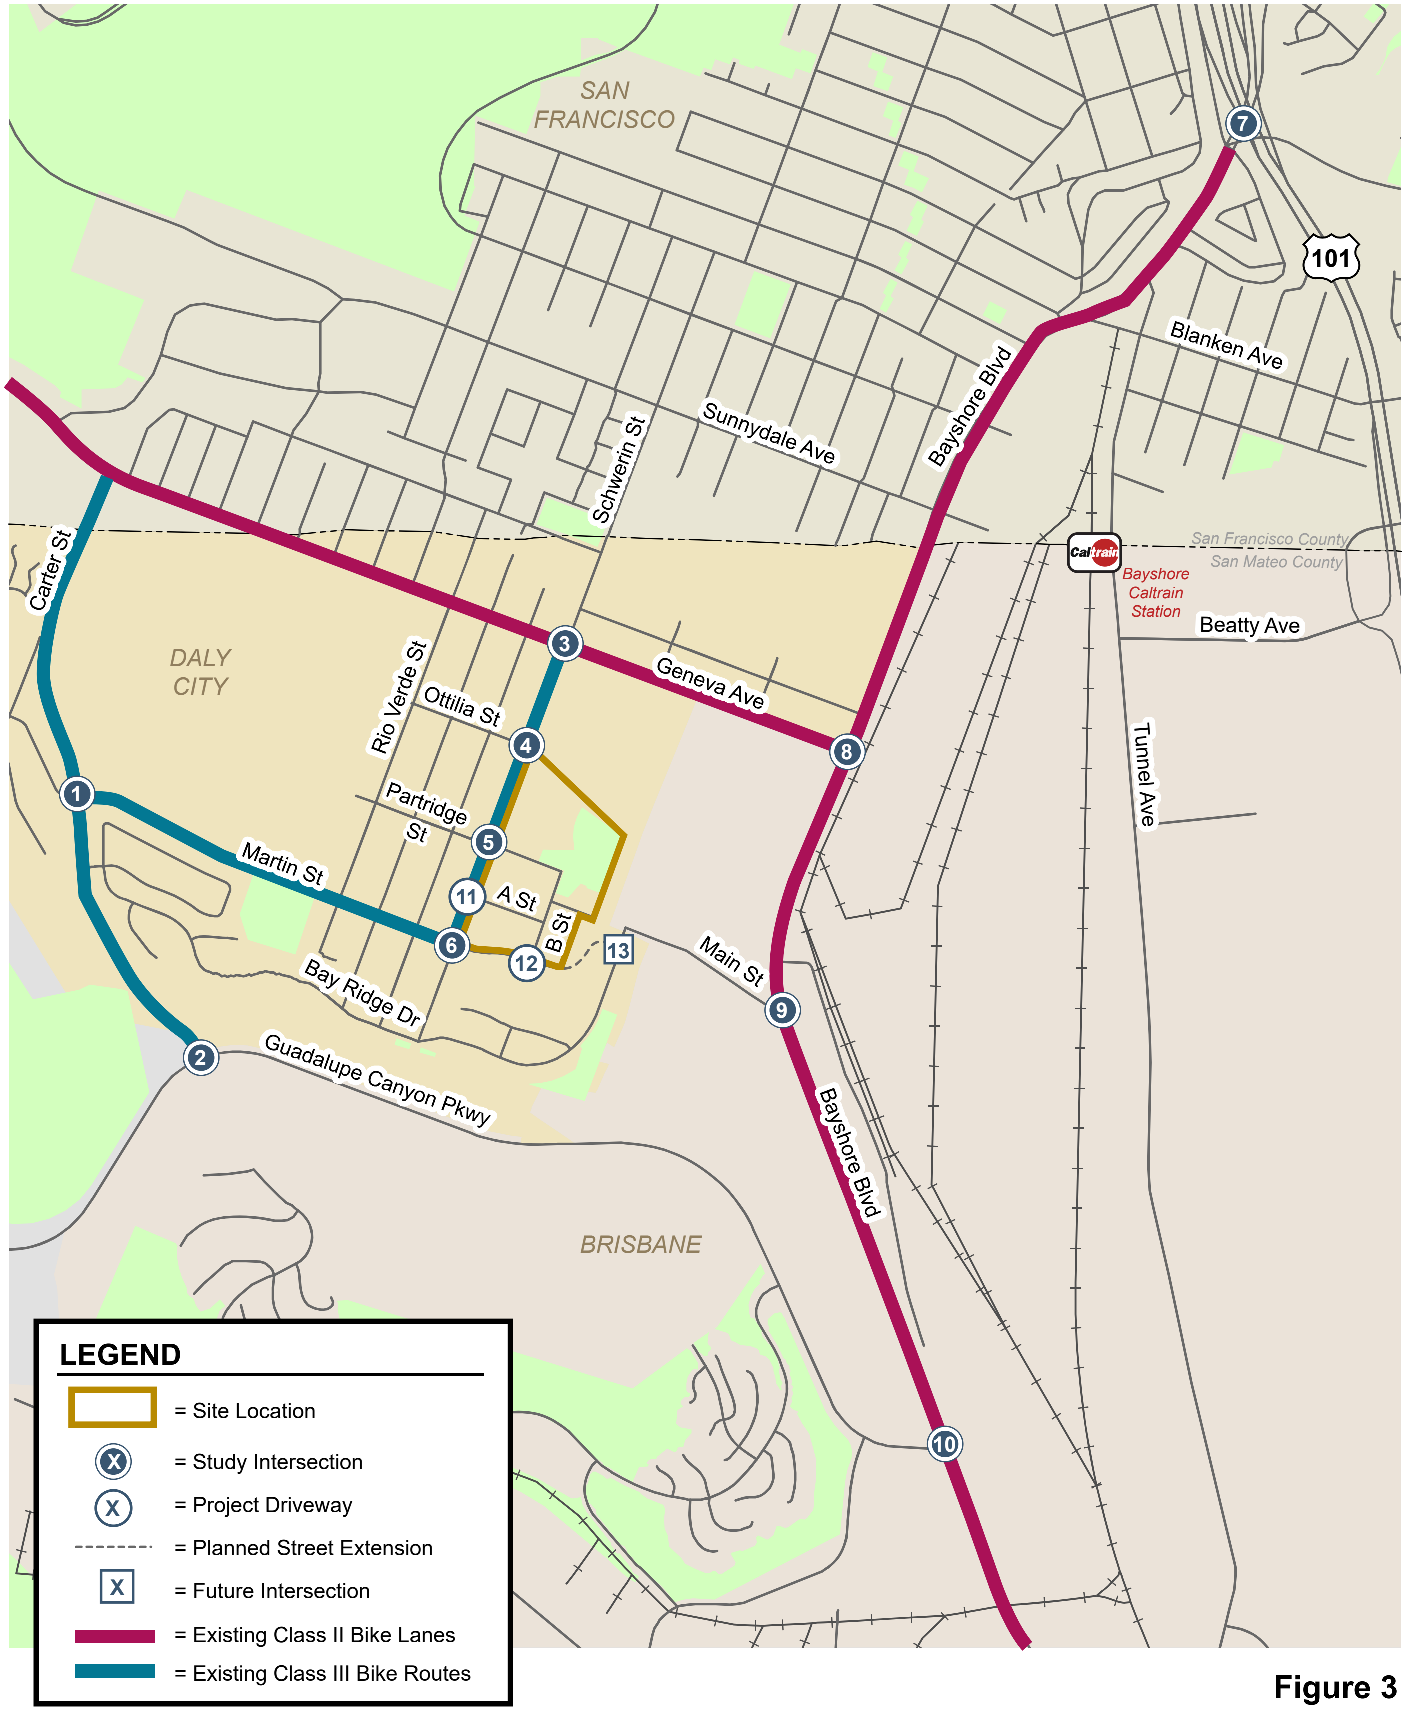

Figure 3
Existing and Proposed Bicycle Facilities

Existing Transit Service

Existing transit service to the study area is provided by the San Francisco Municipal Transportation Agency (MUNI), San Mateo County Transit District (SamTrans), Caltrain and BART. Figure 4 shows the existing transit service routes in the study area.

MUNI

MUNI provides bus service near the project site via Route 9, which travels between Daly City and San Francisco. The closest bus stop to the project site is located on Schwerin Street at MacDonalds Avenue, approximately 0.30 miles north of the site.

SamTrans

SamTrans provides bus service near the project site on Geneva Avenue via Routes 24 and 29. Route 24 operates only on school days between Brisbane and Westmoor High School in Daly City with one daily westbound AM departure and one daily eastbound PM departure. Route 29 also operates only on school days between Lipman Middle School in Brisbane and central Daly City. Route 29 has one daily eastbound AM departure and one daily westbound PM departure. For both routes, the closest bus stop from the project site is located on Geneva Avenue at the intersection with Schwerin Street, approximately 0.25 miles from the site.

Route 292 provides service between downtown San Francisco and Hillsdale Shopping Center in San Mateo, with service to San Francisco International Airport. From the Hillsdale Mall Shopping Center terminus, connections are provided to AC Transit. The route serves Daly City, with the stop at Bayshore Boulevard and Geneva Avenue, located approximately 0.65 miles away, being nearest to the project site.

SamTrans Route 397 provides limited overnight “night owl” service between downtown San Francisco and the Palo Alto transit center, with service to San Francisco International Airport. From the San Francisco terminus, connections are provided to AC Transit and Golden Gate Transit. From the Palo Alto transit center, connections are provided to VTA. The route serves Daly City, with the stop at Bayshore Boulevard and Geneva Avenue, located approximately 0.65 miles away, being nearest to the project site.

The Daly City Bayshore (DSB) Shuttle, operated by SamTrans, provides free shuttle service between the Daly City BART station and Bayshore Boulevard/Geneva Avenue, with a connection to the Balboa BART station on weekdays. The shuttle has a stop immediately fronting the site, at the Schwerin Street/Martin Street intersection.

The Bayshore/Brisbane Commuter Shuttle is a free service which runs between the Bayshore Caltrain Station and the Brisbane–Crocker Industrial Park area during commute hours on weekdays. The closest stop for the shuttle is on Bayshore Boulevard near Geneva Avenue.

The Bayshore/Brisbane Senior Shuttle is operated by SamTrans and the San Mateo County Transportation Authority. It operates similar to a paratransit service except that it circles on a fixed route between Bayshore Caltrain Station and South San Francisco (with connections to other SamTrans bus routes) until it receives a call to book a trip.

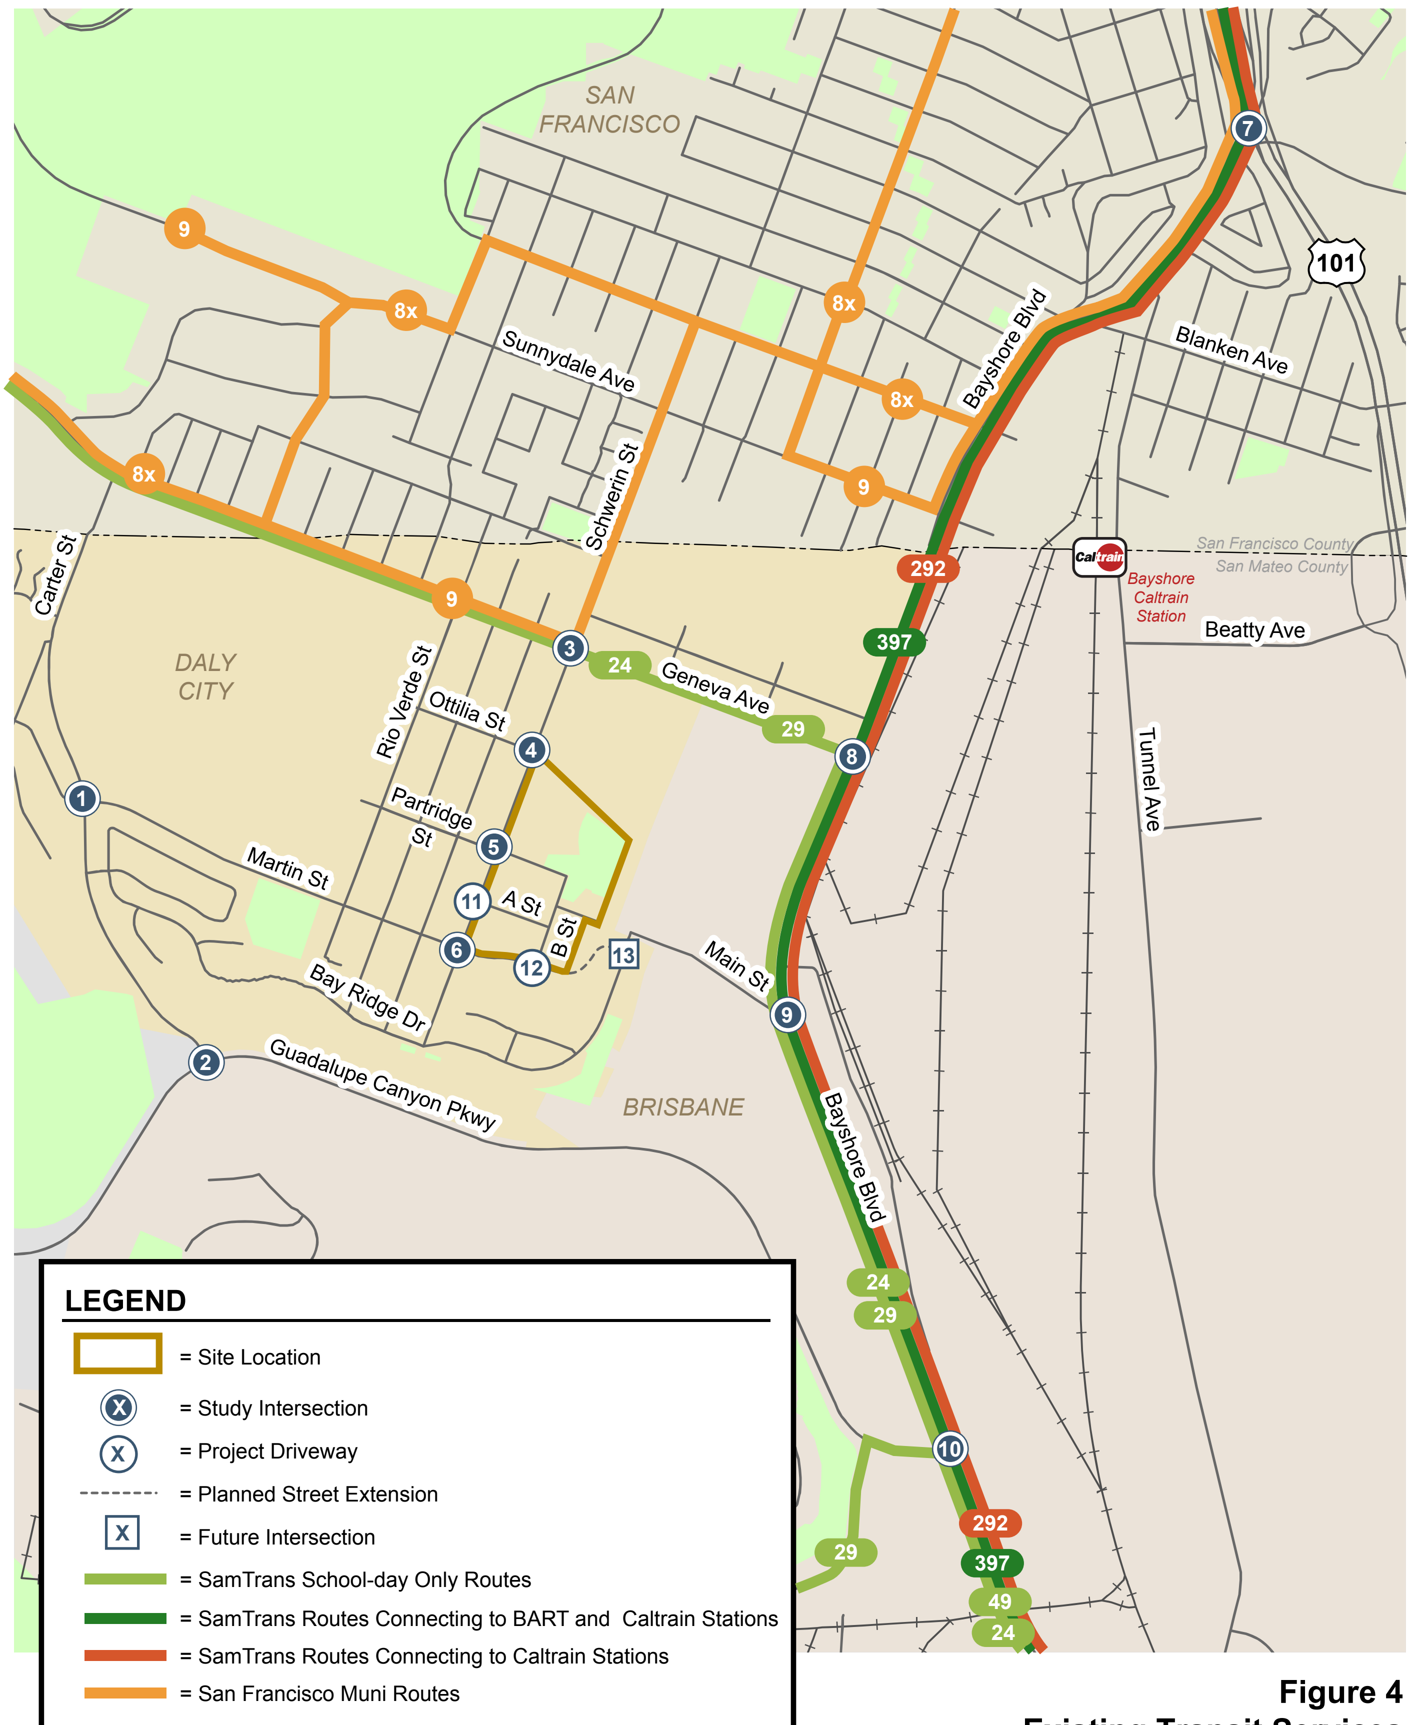

Figure 4
Existing Transit Services

Caltrain

Caltrain provides commuter rail service between Gilroy and San Francisco and most peninsula cities in between. Caltrain provides key transfer points to other transit lines in San Francisco at 4th & King, in Millbrae (to SFO via BART), Palo Alto Transit Center, Mountain View (to VTA Light Rail), and San Jose stations. The Caltrain station nearest to the project site is the Bayshore Station, which is located approximately 1.5 miles from the project site, on Tunnel Avenue at the border of Brisbane and San Francisco.

BART

The nearest BART station is the Balboa BART station, located approximately 2.25 miles northwest of the project site. From the Balboa BART station, riders can access Fremont, Pleasanton/Dublin, Richmond and Pittsburg as wells as numerous points in between. Trains run on approximately 15 minute headways during commute hours. There are also a number of bus routes and shuttles operated by SamTrans and SFMTA that stop at the Daly City BART station.

Existing Intersection Lane Configurations and Traffic Volumes

The existing lane configurations at the study intersections were obtained from field observations. The existing intersection lane configurations are shown on Figure 5. The existing peak hour traffic volumes at the study intersections were obtained from turning movement counts conducted in February 2019. The peak hour traffic volumes are shown on Figure 6. The intersection traffic count data are included in Appendix A.

Existing Signalized Intersection Levels of Service

The results of the signalized intersection level of service analysis under existing conditions are summarized in Table 4. The results indicate that, measured against the City of Daly City, City of Brisbane and San Mateo County CMP level of service standards, all of the signalized study intersections currently operate at an acceptable level of service during the AM and PM peak hours.

Existing Unsignalized Intersection Levels of Service

The results of the unsignalized intersection level of service analysis under existing conditions are summarized in Table 4. The results indicate that all of the unsignalized study intersections currently operate at LOS B or better during the AM and PM peak hours. The level of service calculation sheets are included in Appendix B.

Table 4
Existing Intersection Levels of Service

			PM	D	0.6 / 10.3	A / B
10	Bayshore Boulevard and Guadalupe Canyon Parkway	signal	AM	D	25.3	C
			PM	D	15.1	B

[1] AWSC - All Way Stop Control. SSSC = Side Street Stop Control.

[2] There is no official LOS standard for unsignalized (AWSC and SSSC) intersections, except in the City of Brisbane, which uses standard LOS D for unsignalized intersections.

[3] Signalized intersection levels of service and delays reported are for average control delay per vehicle. The intersection levels of service and delays reported for the AWSC intersections pertain to overall average delay. SSSC intersection levels of service and delays are reported for both the overall average delay / the approach with highest delay.

[4] Level of service was calculated based on the HCM methodology using Synchro software.

[5] The Bayshore Blvd & Geneva Avenue intersection operates under jurisdictions of Daly City, Brisbane and County (CMP). The CMP LOS standard at the intersection is LOS E.

[6] The planned intersection is assumed as SSSC, per the assumption in the Martin Street Residential TIA.

[7] The intersection of US 101 SB ramps and Bayshore Boulevard is exempt from the City and County CMP LOS standard because of its location within an IOZ (Infill Opportunity Zone).

Observed Existing Traffic Conditions

Traffic conditions in the field were observed in order to identify existing operational deficiencies and to confirm the accuracy of calculated levels of service. The purpose of this effort was (1) to identify any existing traffic problems that may not be directly related to intersection level of service, and (2) to identify any locations where the level of service calculation does not accurately reflect level of service in the field.

With one exception, the level of service analysis appears to accurately reflect actual existing traffic conditions. Observations at the intersection of the U.S. 101 southbound off-ramp and Bayshore Boulevard revealed heavy traffic congestion during both the AM and PM peak hours. However, these conditions are not directly related to operations at the intersection itself. The source of congestion is a vehicle queue that extends from the northbound U.S. 101 freeway mainline all the way back to the intersection, which thereby obstructs traffic flow at the intersection.

At Bayshore Boulevard and Main Street, the sight distance for the eastbound right-turn from Main Street onto southbound Bayshore Boulevard is limited due to vegetation. This vegetation needs to be trimmed back and maintained to ensure adequate sight distance.

3.
Project Characteristics

This chapter describes the method by which project traffic is estimated. The proposed project would replace 150 existing affordable housing units and a childcare center on site with 566 new affordable housing units, a park, and expanded childcare center. Project access would be provided via four driveways on Schwerin Street and one driveway on Martin Street. The streets within the project site will be privately maintained.

Project Traffic Estimates

The magnitude of traffic produced by a new development and the locations where that traffic would appear were estimated using a two-step process: (1) trip generation, and (2) trip assignment. In determining project trip generation, the magnitude of traffic entering and exiting the site was estimated for the weekday AM and PM peak hours. In the project trip assignment step, the project trips were assigned to specific streets and intersections in the study area. These procedures are described further in the following sections.

Through empirical research, data have been collected that correlate common land uses to their propensity for producing traffic. Thus, for the most common land uses there are standard trip generation rates that can be applied to help predict the future traffic increases that would result from a new development. Project trip generation was estimated by applying to the size and uses of the development the appropriate trip generation rates published by the Institute of Transportation Engineers (ITE) in *Trip Generation*, *10th Edition*.

The representative land use for the project was assumed to be low-rise multi-family housing (ITE code 220) and day-care center (ITE code 565). The proposed park use was assumed to be local-serving and generate little traffic external to the surrounding neighborhood (also note that the existing development on-site includes a park). Trip generation estimates were based on the net increase in development, which is an increase of 416 dwelling units and 15 daycare center students. Accordingly, ITE's trip generation rates for the project would generate 3,106 net new daily vehicle trips, with 203 net new trips occurring during the AM peak hour and 245 net new trips occurring during the PM peak hour. The trip generation estimates are shown in Table 5.

Table 5
Project Trip Generation Estimates

				AM Peak Hour				PM Peak Hour			
Land Use	Size[1]	Daily Rate	Daily Trips	Rate	Total Trips	In	Out	Rate	Total Trips	In	Out
Residential[2]	416 units	7.32	3,045	0.46	191	44	147	0.56	233	147	86
Child Care Center[3]	15 students	4.09	61	0.78	12	6	6	0.79	12	6	6
Total Trips			3,106		203	50	153		245	153	92

[1] Size based on increase in development levels. Residential units: 566 units planned, 150 units existing. Child care center: 124 enrollment planned, 109 enrollment existing.

[2] Rate per dwelling unit, based on ITE *Trip Generation, 10th Edition*, 2017 for Multi-family housing - low-rise (ITE land-use code 220).

[3] Rate per enrolled child, based on ITE *Trip Generation, 10th Edition*, 2017 for Day Care Center (ITE land-use code 565).

The project trip assignment was carried out directly within the Daly City travel demand model for each project condition study scenario (existing+project, cumulative+project, AM and PM peak hours). However, the general directions of approach and departure of project traffic are shown on Figure 7.

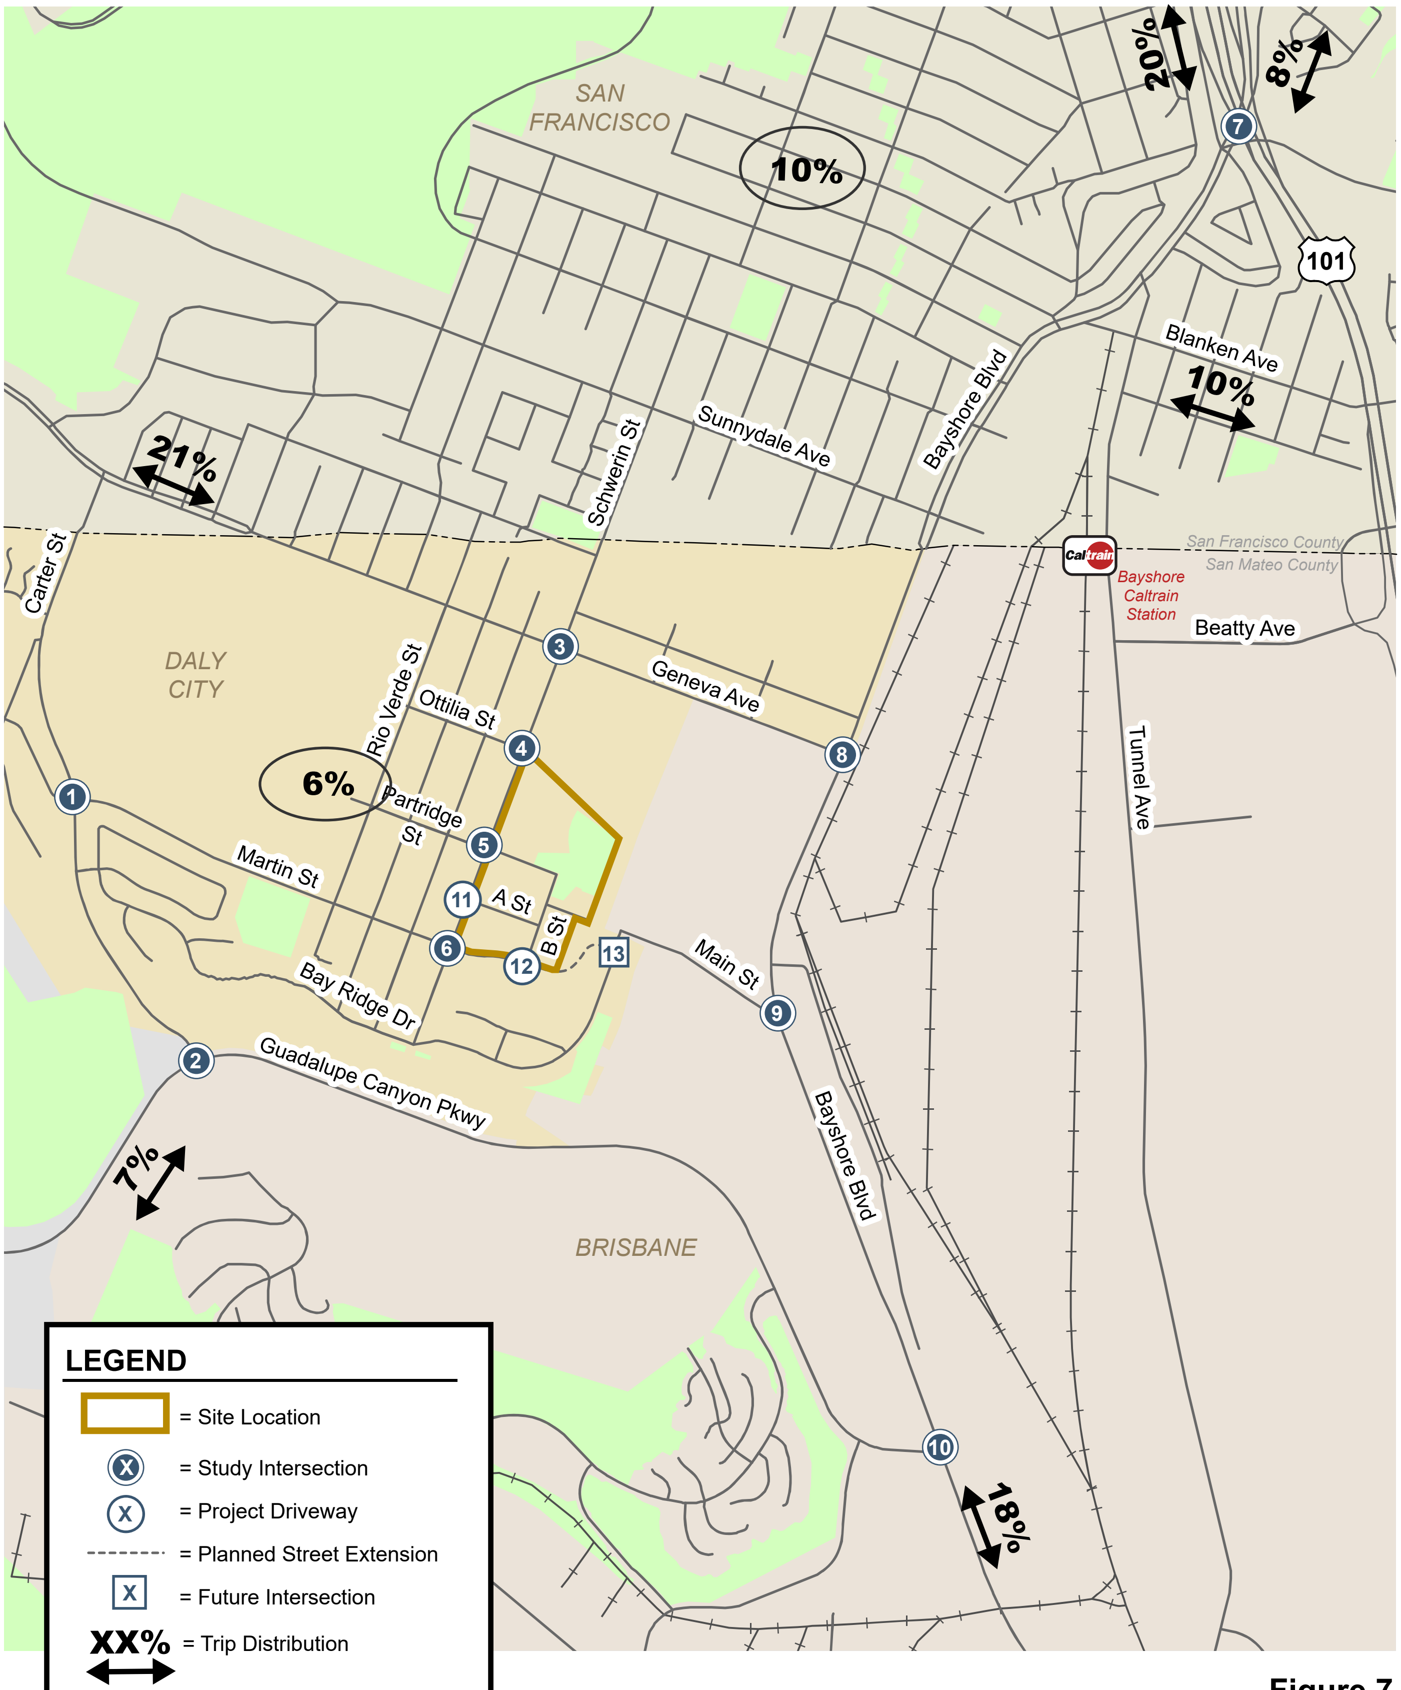

Figure 7
Project Trip Distribution

NORTH
Not to Scale

4. Existing Plus Project Conditions

This chapter describes existing plus project traffic conditions. Existing plus project traffic conditions represent the traffic conditions that would occur if the project were constructed and occupied today. This scenario is used to determine project-specific impacts.

Existing Plus Project Traffic Volumes & Transportation Network

It is assumed in this analysis that the roadway network and the study intersection lane configurations under existing plus project conditions would be the same as those described under existing conditions, with the exception of inclusion of the planned extension of Martin Street to Linda Vista Drive. Existing plus Project traffic volumes were provided by Daly City staff, via Kittelson Associates, using the Daly City Travel Demand Forecast (TDF) model. The existing plus project traffic volumes at the study intersections are shown graphically on Figure 8.

Existing Plus Project Signalized Intersection Levels of Service

The signalized intersection level of service results under existing plus project conditions are summarized in Table 6. The results show that, measured against the City of Daly City, City of Brisbane and San Mateo County CMP level of service standards, all of the signalized study intersections would operate at an acceptable level of service under existing plus project conditions during the AM and PM peak hours. Therefore, the proposed project would not create a significant impact at these locations.

Existing Plus Project Unsignalized Intersection Levels of Service

The unsignalized intersection level of service results under existing plus project conditions are summarized in Table 6. The results show that all of the unsignalized study intersections would operate at overall LOS A under existing plus project conditions during the AM and PM peak hours. All of the side-street-stop-controlled intersections would operate at LOS B or better on the worst approach in all cases.

Table 6
Existing Plus Project Intersection Levels of Service

					Existing		Existing + Project

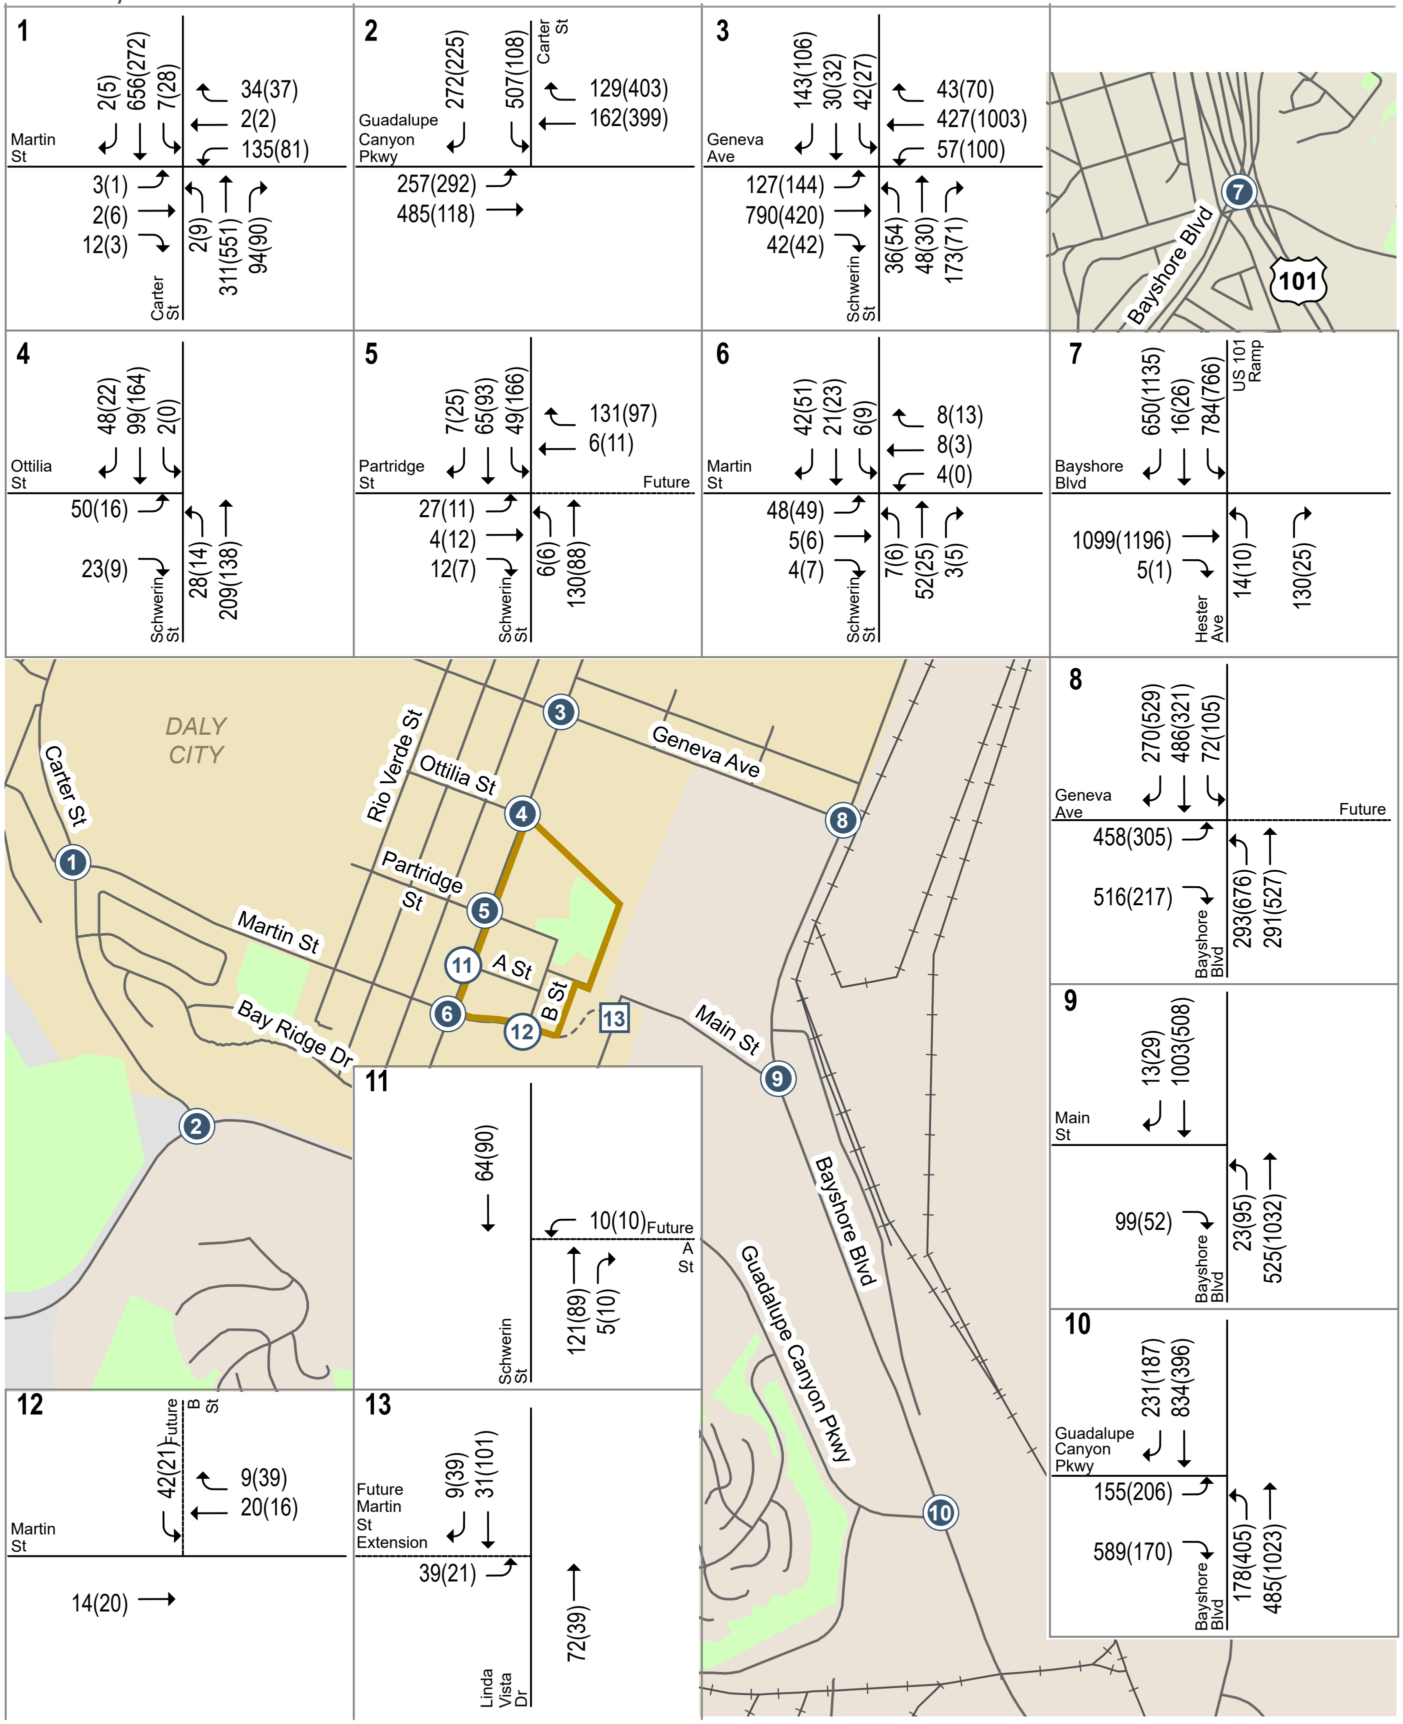
[1] AWSC - All Way Stop Control. SSSC = Side Street Stop Control.
[2] There is no official LOS standard for unsignalized (AWSC and SSSC) intersections, except in the City of Brisbane, which uses standard LOS D for unsignalized intersections.
[3] Signalized intersection levels of service and delays reported are for average control delay per vehicle. The intersection levels of service and delays reported for the AWSC intersections pertain to overall average delay. SSSC intersection levels of service and delays are reported for both the overall average delay / the approach with highest delay.
[4] Level of service was calculated based on the HCM methodology using Synchro software.
[5] The Bayshore Blvd & Geneva Avenue intersection operates under jurisdictions of Daly City, Brisbane and County (CMP). The CMP LOS standard at the intersection is LOS E.
[6] The planned intersection is assumed to be SSSC, per the assumption in the Martin Street Residential TIA.
[7] The intersection of US 101 SB ramps and Bayshore Boulevard is exempt from the City and County CMP LOS standard because of its location within an IOZ (Infill Opportunity Zone).



LEGEND

= Site Location

XX(XX) = AM(PM) Peak-Hour Traffic Volumes

Figure 8
Existing with Project Traffic Volumes

HEXAGON

NORTH
Not to Scale

The City of Daly City and San Mateo County CMP do not have a level of service threshold of significance for unsignalized intersections. An evaluation of traffic signal warrants can further guide the decision whether to install a traffic signal. Refer to Chapter 6, Other Transportation Issues, for the analysis of traffic signal warrants.

The City of Brisbane does have a level of service threshold of significance for unsignalized intersections. However, the only unsignalized study intersection located in Brisbane is the side-street-yield-controlled intersection at Bayshore Boulevard and Main Street, which would operate at LOS A overall and LOS B on the minor street approach under both existing conditions and existing conditions with the project.

5.
Cumulative Conditions

This chapter presents a summary of the traffic conditions that would occur under cumulative conditions. For this analysis, cumulative conditions represent traffic conditions assuming the buildout of the Daly City General Plan to year 2035. Cumulative no project and with project traffic volumes were provided by Daly City staff, via Kittelson Associates, using the Daly City Travel Demand Forecast (TDF) model. The Daly City TDF model includes various local and regional improvements outside of the project area. Included in this chapter is a summary of results from the cumulative conditions analysis and identification of any intersection impacts caused by the project.

Cumulative Transportation Network

While there are various regional transportation improvements planned by the year 2035, it is assumed in this analysis that the transportation network in the project vicinity under cumulative conditions would be the same as that described under existing conditions, with the following exceptions:

Daly City General Plan Improvements

- Geneva Avenue extension from Bayshore Boulevard to U.S. 101 at Beatty interchange
- Martin Avenue extension from existing terminus to Linda Vista Drive
- Pedestrian access improvements at various crossings along Geneva Avenue

Brisbane General Plan Improvements

- Geneva Avenue/Harney Way extension from Bayshore Blvd to U.S. 101 (same as Daly City)
- New U.S. 101 interchange at Geneva Avenue/Harney Way

San Mateo County CMP (C/CAG) Planned Improvements

- U.S. 101 auxiliary lanes: add northbound and southbound modified auxiliary lanes and/or HOT lanes on U.S. 101 from Oyster Point Boulevard to the San Francisco County line

- New U.S. 101 interchange at Geneva Avenue/Harney Way (same as Brisbane)

Cumulative Traffic Volumes

Cumulative No Project traffic volumes were obtained from the Daly City TDF model based on General Plan land uses. Cumulative plus Project traffic volumes were estimated using the City's model based on incorporating into the General Plan land uses the project's proposed land use changes (increase in number of affordable units and increase in childcare center enrollment) on the site. The cumulative traffic volumes without and with the proposed project are shown on Figures 9 and 10.

Cumulative Signalized Intersection Levels of Service

The signalized intersection level of service results under Cumulative with Project conditions are summarized in Table 7. The level of service calculation sheets are included in Appendix B. The results show that all but one of the signalized study intersections would operate at an acceptable level of service under Cumulative with Project conditions during the peak hours. The intersection of Bayshore Boulevard and Geneva Avenue would operate at an unacceptable LOS F in the PM peak hour under Cumulative with Project conditions. The project would add traffic to a LOS F intersection, thereby constituting a significant impact at this intersection.

Significant Impact: Under cumulative conditions, the intersection of Bayshore Boulevard and Geneva Avenue would operate at LOS F during the PM peak hour without the proposed project. The project would add traffic to the intersection. According to the City of Daly City and San Mateo County CMP significance criteria, this would constitute a significant adverse cumulative impact at this intersection.

Mitigation: To mitigate this impact would require an overlap traffic signal phase be added at the future northbound Bayshore Boulevard to eastbound Geneva Avenue right turn movement in conjunction with the Geneva Avenue extension to U.S. 101. Construction of this overlap phase would allow northbound right turns on Bayshore Boulevard to go concurrently with westbound left turns on Geneva Avenue. This would improve the overall intersection average delay to 58.4 seconds. Under cumulative no project conditions, the intersection delay is shown to be 80.9 seconds. Thus, this improvement would return the average delay to better than no project conditions. Because this impact does not occur under existing plus project conditions and is the result of cumulative traffic increases, the proposed project would be responsible for a fair share monetary contribution toward the improvement. Under existing conditions, there are approximately 2,601 PM peak hour trips at the intersection. Cumulative projects (not including project traffic) would add approximately 2,995 PM peak hour trips to the intersection between 2019 and 2035. The proposed project is projected to add approximately 95 PM peak hour trips to the intersection.

Cumulative Unsignalized Intersection Levels of Service

The unsignalized intersection level of service results under cumulative plus project conditions are summarized in Table 7. The level of service calculation sheets are shown in Appendix B. The results show that all of the unsignalized study intersections would operate at overall LOS A under cumulative plus project conditions during the AM and PM peak hours. All of the side-street-stop-controlled intersections would operate at LOS C or better on the worst approach in all cases.

The City of Daly City and San Mateo County CMP do not have a level of service threshold of significance for unsignalized intersections. An evaluation of traffic signal warrants can further guide the decision whether to install a traffic signal. Refer to Chapter 6, Other Transportation Issues, for the analysis of traffic signal warrants.

The City of Brisbane does have a level of service threshold of significance for unsignalized intersections. However, the only unsignalized study intersection located in Brisbane is the side-street-yield-controlled intersection at Bayshore Boulevard and Main Street, which would operate at LOS C (on the minor street approach) or better under cumulative conditions both without and with the project.

[1] AWSC - All Way Stop Control. SSSC = Side Street Stop Control.

[2] There is no official LOS standard for unsignalized (AWSC and SSSC) intersections, except in the City of Brisbane, which uses standard LOS D for unsignalized intersections.

[3] Signalized intersection levels of service and delays reported are for average control delay per vehicle. The intersection levels of service and delays reported for the AWSC intersections pertain to overall average delay. SSSC intersection levels of service and delays are reported for both the overall average delay / the approach with highest delay.

[4] Level of service was calculated based on the HCM methodology using Synchro software.

[5] The Bayshore Blvd & Geneva Avenue intersection operates under jurisdictions of Daly City, Brisbane and County (CMP). The CMP LOS standard at the intersection is LOS E.

[6] The planned intersection is assumed to be SSSC, per the assumption in the Martin Street Residential TIA.

[7] The intersection of US 101 SB ramps and Bayshore Boulevard is exempt from the City and County CMP LOS standard because of its location within an IOZ (Infill Opportunity Zone).

Other Transportation Issues

This chapter presents an analysis of other transportation issues associated with the project, including:

- Traffic Signal Warrants
- Vehicle Queuing Analysis
- Pedestrian, Bicycle and Transit Analysis
- Site Access and On-Site Circulation
- TDM Plan
- Vehicle Miles Travelled (VMT)

Unlike the signalized level of service impact methodology, which is adopted by the City Council, the analyses of non-LOS issues are based on professional judgment in accordance with the standards and methods employed by the traffic engineering community.

Traffic Signal Warrants

The level of service analysis for the unsignalized intersections was supplemented with an assessment of the need for signalization of the intersections. For this study, the need for signalization is assessed on the basis of the peak-hour volume signal warrant – warrant #3 – described in the *California Manual on Uniform Traffic Control Devices* (MUTCD). This method provides an indication of whether traffic conditions and peak-hour traffic levels are, or would be, sufficient to justify installation of a traffic signal. The results indicate that none of the study intersections currently meet or would meet the peak-hour volume signal warrant under any scenarios in the AM and PM peak hours. The signal warrant calculation sheets are shown in Appendix C.

Vehicle Queuing Analysis

There are no established thresholds under CEQA or policy adopted by Daly City for determining significance impacts for vehicle queuing. A vehicle queuing analysis can be useful in determining the adequacy of existing vehicle storage capacity at intersections in the vicinity of the site. Accordingly, a vehicle queuing analysis was conducted for the high demand turn movements where the project would add traffic.

Vehicle queues were estimated using a Poisson probability distribution. The basis of the analysis is as follows: (1) the Poisson probability distribution is used to estimate the 95^{th} percentile maximum number of queued vehicles per signal cycle for a particular movement; (2) the estimated maximum number of vehicles in the queue is translated into a queue length, assuming 25 feet per vehicle; and (3) the estimated maximum queue length is compared to the existing or planned available storage capacity for the movement. This analysis thus provides a basis for estimating future storage requirements at intersections.

Vehicle queuing was evaluated for the westbound left turn movement at the intersection of Schwerin Street and Geneva Avenue. The vehicle queuing estimates are shown in Table 8. The results show that, under existing and existing plus project conditions, the estimated maximum westbound left-turn vehicle queues of 100 feet in the AM peak hour and 150 feet in the PM peak hour would not exceed the 160-foot vehicle storage capacity.

Due to the low ambient traffic volumes on Schwerin Street and Martin Street, a qualitative evaluation concluded that the estimated maximum inbound and outbound vehicle queues at the site driveways would rarely exceed one or two vehicles.

Table 8
Off-Site Vehicle Queuing Analysis

[2] Assumes 25 feet per vehicle queued.

Pedestrian, Bicycle, and Transit Analysis

The potential impacts of the project on pedestrian, bicycle and transit are described below.

Pedestrian Facilities. Existing observations at the study intersections showed a moderate amount of pedestrian activity at some intersections. Pedestrian activity at the Schwerin Street/Geneva Avenue intersection is fairly heavy, with 100 or more pedestrian crossings per hour. Pedestrian volumes at the Schwerin Street/Ottilia Street intersection are moderate, ranging between 30 and 90 pedestrian crossings per hour, with the higher number occurring during the morning at the start of school at the Bayshore Elementary School.

Pedestrian volumes directly in front of the project site were fairly light, ranging from 10 to 25 pedestrian crossings per hour. Overall, the volume of pedestrian trips generated by the project is expected to be relatively low and not exceed the carrying capacity of the sidewalks and crosswalks nearby.

Bicycle Facilities. According to the City of Daly City General Plan, approximately one percent of the proposed project's users could be expected to commute to and from the project site via bike. For the proposed project, this would equate to approximately one or two new bike trips during each of the AM and PM peak hours. The low volume of bicycle trips generated by the project would not exceed the bicycle-carrying capacity of the streets surrounding the site, and the increase in bicycle trips would not, by itself, require new off-site bicycle facilities.

Transit Service. Transit service in the project vicinity is currently provided by SamTrans and San Francisco MUNI. The nearest bus service is provided by Lines 24 and 29, with bus stops located about 0.25 miles from the project site. According to the U.S. Census, bus trips comprise approximately 11 percent of the total commute mode share in the City of Daly City. For the proposed project, this would equate to 22 new transit trips during the AM peak hour and 27 new transit trips during the PM peak commute hour. This volume of riders would not exceed the carrying capacity of the existing bus service near the project site. Therefore, the proposed project would not create an adverse impact to transit service in the area.\

According to the CEQA Guidelines, a project would create an impact to bicycle, transit or pedestrians on the transportation system if it: (1) conflicts with a program, plan, ordinance or policy addressing the circulation system, including transit, bicycle and pedestrian facilities; or (2) substantially increases hazards due to a geometric design feature; or (3) would create demand in excess of capacity. The project would not alter any existing or planned offsite bicycle, pedestrian or transit facilities nor would it create demand in excess of capacity. Therefore, the proposed project would not cause a significant impact to bicycle, pedestrian, or transit operations in the study area.

Site Access and On-Site Circulation

This section describes site access and on-site circulation for the proposed project, as shown on the site plan dated September 18, 2019, by David Baker Architects (see Figure 2). The site is located on the northeast corner of the intersection at Schwerin Street and Martin Street. Schwerin Street fronts the western border of the site, and Martin Street fronts the southern border of the site.

Site Access Design

Site access would be provided by 4 driveways. The first driveway would access what the plan calls New Street 'B' (study intersection #12), and is located on Martin Street approximately 390 feet east of Schwerin Street. The second driveway would access New Street 'A', located on Schwerin Street about 200 feet north of Martin Street (study intersection #11). The third driveway, called Partridge Street, would be located directly opposite the existing Partridge Street west of Schwerin Street (study intersection #5). The driveways to all three streets have bulb-outs that narrow the driveway widths to about 21 feet on Schwerin Street and 26 feet on Martin Street.

The fourth driveway would be located on Schwerin Street at the location of the existing Midway Drive, between Partridge Street and New Street ‘A’, providing access exclusively to Garage D on site (refer to Figure 2 for locations of Garage A and Garage D). The entry to Garage D would be located approximately 80 feet east of Schwerin Street. Eastward from there, the Midway Drive right-of-way is to be closed to vehicular traffic and serve as a fire lane and on-site pedestrian walkway.

Both Schwerin Street and Martin Street are two-lane local streets that serve a low volume of traffic. Parking is permitted on both sides of Schwerin Street along the site frontage. Parking is currently permitted on the north side of Martin Street along a 400-foot segment of the site frontage between Schwerin Street and Brandon Court. Parking is currently prohibited elsewhere on Martin Street east of Schwerin Street. However, there is a housing development under construction along the south side of this segment of Martin Street. With this project, and the development on the south side, it is likely that there will be parking on both sides of Martin Street.

Site Access Operations

Site Driveway Study Intersections. The results of the level of service and signal warrant analyses for the three main site-driveway intersections analyzed were reported previously. The results showed all three site driveway intersections would operate under satisfactory conditions, as unsignalized intersections, both near-term and far-term, without and with the project.

Project traffic volumes on Martin Street are expected to be relatively low in the near term, since there is currently no direct Martin Street connection to Bayshore Boulevard and U.S. 101. Under cumulative conditions, with direct project access to Bayshore Boulevard via the Martin Street extension, project traffic patterns will shift slightly, resulting in an increase in trips on Martin Street.

All approaches to the site driveway intersections, including the approaches on Schwerin Street and Martin Street, are single lane- requiring that all movements share the same lane. Without turn pockets or separate turn lanes, all vehicles would backup behind left-turning vehicles and would be subject to the corresponding delays. However, traffic volumes on Schwerin Street and Martin Streets are low, creating lengthy gaps in traffic that provide ample time and opportunity for left turns. This is explained further in the next section.

Midway Drive to Garage D. Traffic conditions at the Midway Drive driveway to Garage D were evaluated qualitatively. Under existing conditions, the total volume of vehicles on Schwerin Street along the site frontage, in both directions, is only 211 peak hour trips during the AM peak hour and 195 peak hour trips during the PM peak hour. This equates to an average headway of 17 seconds per vehicle in the AM peak hour and 18 seconds per vehicle in the PM peak hour. Thus, there will be a gap in traffic nearly every time a vehicle exits from the Midway Drive driveway. With there being sufficient gaps in traffic on Schwerin Street, there would be minimal average delay at the driveway, both inbound and outbound. Accordingly, vehicle queues on southbound Schwerin Street at the driveway would be infrequent and typically be no more than one vehicle. Similarly for outbound traffic from the Midway Drive driveway- there would generally be no more than one vehicle queued. It can therefore be expected that the maximum vehicle queues at all four site driveways would generally not exceed one vehicle, and the delays would be relatively short. In addition, most of the stop-controlled intersections in the area operate at LOS A, so the Midway Drive driveway would not be expected to operate any differently (See Tables 6 and 7).

Sight Distance. Observations in the field showed no impediments to lines of sight (such as horizontal or vertical curves, trees or signs) for vehicles exiting the existing site driveways, other than cars parked on the street. The site frontage is designed with recessed, on-street parking and curb extensions (bulb-outs) where the main site driveways meet Schwerin Street or, in the case of New Street ‘B’, where it meets Martin Street. The on-street parking along the site frontage, adjacent to the main site driveways would thereby be set back from the curb line. This benefits the visibility of and for drivers exiting the site because their line of sight down the street is much less obstructed by vehicles parked on the street or by any obstructions on the sidewalk. Based on the layout shown on the site plan, the setback of on-street parking would provide adequate sight distance, looking both left and right down Schwerin Street and Martin Street, for vehicles exiting the three main site driveways.

The Midway Drive driveway to Garage D's entry on Schwerin Street is shown to not have curb extensions. The adjacent on-street parking is not recessed, relative to this driveway. The driver's view when exiting the site could be obstructed by vehicles parked on the street on either side of the driveway. Therefore, parking on the east side of Schwerin Street should be restricted as needed to maintain adequate sight distance at the driveway, subject to review and approval by the City's Traffic Safety Committee and City Council. In addition, landscaping near the driveway would need to be maintained such that adequate sight distance is provided.

Recommendation 1: Parking on the east side of Schwerin Street at the Midway Drive driveway should be restricted as needed to maintain adequate sight distance, subject to review and approval by the City's Traffic Safety Committee and City Council. In addition, the project shall maintain the landscaping near the driveway such that it doesn't obstruct the line of sight down Schwerin Street. Placement of any monument signs or other permanent fixtures would need to be located out of the line of sight of exiting drivers. The final site plan will need to be reviewed by city staff.

On-Site Circulation

The on-site circulation system consists of the north-south New Street 'B' east of, and parallel to, Schwerin Street. New Street 'B' extends from Martin Street at its south end to a loading area just north of Partridge Street at its north end. The south section of New Street 'B', between Martin Street and Midway Drive would be offset relative to the north section of New Street 'B', which follows an alignment slightly east of the south section. From New Street 'B', Partridge Street extends westward, on site, to Schwerin Street, connecting to the existing Partridge Street west of Schwerin Street. New Street 'A' is about 200 feet north of, and parallel to, Martin Street. It extends between New Street 'B' and Schwerin Street. The private on-site streets are shown to have the following cross-sections:

Partridge Street and *New Street 'A'* would include a 20-foot wide traveled way plus sidewalks and parking on both sides

New Street 'B' (south section) would include a 26-foot wide traveled way plus sidewalks and parking on both sides

New Street 'B' (north section) would be 26-feet wide, with set-back sidewalks and no parking or curbs on either side; New Street 'B' is identified as a "traffic-calmed" street

Midway Drive east of New Street 'B' would be 20-feet wide, with sidewalks but no parking

The existing Midway Drive, between Schwerin Street and New Street 'B' would be eliminated, except for a 20-foot wide, 80-foot long section connecting Schwerin Street to the entrance of Garage D. The section of Midway Drive between the garage entrance and New Street 'B' would be converted to a pedestrian-only walkway and fire lane. There would be a second entrance to Garage D accessed from New Street 'B'.

East of New Street 'B', Midway Drive would provide access to Garage A, and would provide fire access along the SFPUC easement between Garage A and the eastern border of the site.

The site layout provides a relatively straightforward circulation pattern with no dead-end aisles, curb radii of 8 feet at all intersecting streets on site and adequate lines of sight at corners due to building setbacks of at least 17 feet along all streets. The jog in New Street 'B' at the intersection with Midway Drive requires two sharp turns in a relatively narrow space with 8-foot turning radii. It is uncertain whether two vehicles approaching the intersection from opposite directions could safely pass through the intersection simultaneously. The narrowing of the streets at all internal intersections (due to the bulbouts), limits the area available for vehicles to turn. Turning templates will be needed to determine the adequacy of the layout to accommodate standard vehicles at the New Street 'B'/Midway Drive intersection, and to accommodate the circulation of trucks, garbage collection, and emergency vehicles throughout the site.

Recommendation 2: The project shall ensure that alignments of the drive aisles and the corner radii are adequate for the circulation of standard vehicles as well as trucks, garbage collection, and emergency vehicles, subject to review by city staff.

In addition to the streets on-site, there would be several fire lanes on site: along the Midway Drive alignment between Schwerin Street and New Street 'B'; along the SFPUC easement; along a north-south alignment bisecting Building E, connecting Martin Street with New Street 'A'; along the extension of New Street 'B' north of Building 'A' (adjacent to the park); and along the northern edge of Building A/Parking Garage A. All fire lanes are to be a minimum of 20 feet wide.

Parking on site would be provided in Garage A, located along the eastern border of the site, north of Midway Drive; Garage D, located between New Street 'A' and Midway Drive, and on the streets on site.

Garage A is shown to have one entrance, located at the southeast corner of the garage, about 60 feet north of Midway Drive. The turning radius at the garage entrance is not specified, but it appears to be less than 5 feet, which would not be adequate for two-way traffic at a ninety-degree turn for a 20-foot wide travel way. Circulation within Garage A is shown to consist of a rectangular loop serving two-way traffic in 26-foot wide parking aisles, with 90-degree perpendicular parking on both sides. The garage is shown to have more than one level.

Garage D is shown to have two entrances, as described previously, and as shown on Figure 2. The entrance on Midway Drive, located 80 feet east of Schwerin Street, is shown to be 26 feet wide. The turning radius at the garage entrance is not specified. As with Garage A, the turning radius would need to accommodate two-way traffic through the turn. Circulation within Garage D is similar to that in Garage A: consisting of a rectangular loop serving two-way traffic in 26-foot wide parking aisles, with 90-degree perpendicular parking on both sides. The garage is shown to have more than one level. The aforementioned entrance from Midway Drive is shown to access the lower level of the garage. The other entrance, located off of New Street 'B', is shown to access the upper level of the garage.

Recommendation 3: The project shall ensure that the garage ingress/egress, internal circulation, ramp design and other relevant design features meet the city code requirements or otherwise accord with industry standards. Final design will be subject to review by city staff.

Garage A is shown to provide 378 parking spaces, Garage D would provide 250 spaces, and there would be an additional 118 total parking spaces on site on New Street 'A,' New Street 'B,' Partridge Street, and in the townhomes.

The site plan shows 13 parking spaces on Partridge Street along the frontage of the childcare center designated specifically for use by the childcare center (these 13 spaces are included in the 118 on-site, on-street spaces described above). This conforms with the city code required number of spaces, which calls for one space for every ten children enrolled. The site plan also refers to the childcare center parking spaces as childcare (passenger) loading. It is anticipated that this area, which spans the entire length of the childcare center frontage, and east, would serve as a pick-up/drop-off area for loading and unloading children. Children in the 5 and under age range, which is the age range to be served by the proposed childcare center, generally would be escorted into the childcare center, therefore requiring vehicles to park briefly during drop-off and pick-up.

Because these spaces are provided primarily for loading and unloading, and for visitors during off hours, it is recommended that these childcare center parking spaces have a time limit.

Since the loading and unloading of children going to the childcare facility would primarily occur on the north side of Partridge Street, vehicles picking up and dropping off their children would be traveling westbound toward Schwerin Street. This would require that vehicles destined for the childcare center enter the site from either New Street ‘A’ or New Street ‘B’ to access westbound Partridge Street in front of the childcare center. The childcare facility should direct parents to use these roadways to access the parking area fronting the childcare facility to help prevent vehicles from making u-turns on Partridge Street.

Recommendation 4: The project should consider establishing a time limit for childcare parking. Because all streets within the development are private roadways, parking restrictions would need to be enforced by private security. In addition, the childcare facility should consider preparing an access plan to show parents how to access the designated parking areas.

The site plan shows a loading zone at the very north end of New Street ‘B’, adjacent to the park. Other loading areas are to be provided on street (in the parking lanes) at mid-block on both sides of New Street ‘A’, on the east side of the south section of New Street ‘B’, and on both sides of Partridge Street at the very eastern end.

Pedestrian circulation on site, and pedestrian access to off-site pedestrian facilities appear adequate. Most streets on-site provide sidewalks, all of which are at least 6 feet wide. The cross-sections of the on-site streets were described previously. All streets are shown to have landscape strips the full length of the street. Every intersection on site would have high-visibility crosswalks on every approach. Both New Street ‘A’ and Partridge Street would be provided with high-visibility, mid-block crosswalks. The east-west fire lane on Midway Drive is also to serve as a pedestrian path. The plan shows a direct path between the Child Care Center and the adjacent park. All buildings and residential units on site have direct access to either a sidewalk, a pathway, or both.

The site plan shows bicycle parking/storage would be provided throughout the site. The number and type of spaces are not yet specified, but the site plan shows public bicycle parking on both sides of New Street ‘A’, both sides of the south section of New Street ‘B’, both sides of Partridge Street, and on the east side of the north section of New Street ‘B’. Resident bicycle storage would be provided at or in Buildings A, A2, B, D and E. The number and type of bicycle parking spaces (e.g. short-term vs. long-term, racks vs. lockers) will need to meet the city code requirements, at a minimum.

As described previously, the Daly City Bayshore (DSB) Shuttle, operated by SamTrans, provides shuttle service between the Daly City BART station and Bayshore Boulevard/Geneva Avenue, with a stop immediately fronting the site, at the Schwerin Street/Martin Street intersection. The shuttle stop does not currently serve any other routes, and its only feature is a shuttle sign. While the project would not create a significant impact to transit operations, as part of the project’s enhancement to the site’s frontage along Schwerin Street, the project should consider installing a bus shelter or bench. Providing an upgrade to the shuttle/bus stop, be it a bench or shelter, would encourage transit usage.

Recommendation 5: Prior to final design, the project applicant shall work with City of Daly City and SamTrans staff to consider the desirability of upgrades to the existing shuttle stop along the project frontage.

TDM Plan

In accordance with CMP requirements, the project shall implement TDM measures to reduce the demand for net new peak-hour trips generated by the project. The total number of trip credits earned through the project's TDM plan are required to total, if not exceed, the number of net new AM or PM peak-hour trips (whichever is greater) generated by the project. Based on the trip generation estimates described previously, the project is expected to generate 203 AM peak hour trips and 245 PM peak hour trips. The project's TDM plan would therefore be required to provide at least 245 C/CAG trip credits. Since the project would be constructed in phases, the project applicant shall submit, to the City and C/CAG, a TDM plan demonstrating its compliance with C/CAG's TDM requirements in advance of each phase.

Recommendation 6: The project shall provide and/or implement CMP-approved TDM measures in order to meet the CMP TDM requirements.

Vehicle Miles Traveled (VMT)

According to the December 2018 Technical Advisory from the State of California Governor's Office of Planning and Research (OPR) on Evaluating Transportation Impacts in CEQA (California Environmental Quality Act), affordable housing projects are exempt from Vehicle Miles Traveled (VMT) analysis and are assumed to have a less than significant impact. Relevant excerpts from the OPR Technical Advisory are provided below.

> ***Presumption of Less Than Significant Impact for Affordable Residential Development****.* *Adding affordable housing to infill locations generally improves the jobs-housing match, in turn shortening commutes and reducing VMT. Further, "… low-wage workers in particular would be more likely to choose a residential location close to their workplace, if one is available." In areas where the existing jobs-housing match is closer to optimal, low income housing nevertheless generates less VMT than market-rate housing. Therefore, a project consisting of a high percentage of affordable housing may be a basis for the lead agency to find a less-than-significant impact on VMT. Evidence supports a presumption of less than significant impact for a 100 percent affordable residential development (or the residential component of a mixed-use development) in infill locations.*

The Metropolitan Transportation Commission (MTC) provides data on trip lengths for employment and residential uses within the nine-county Bay Area. According to the MTC ArcGIS VMT tool, the Bay Area has an average VMT per capita of 15 miles. Using the same tool, the traffic analysis zone where the proposed project is located shows a residential VMT per capita of 11.5 miles. Thus, the project VMT would be 23% lower than the regional average. Daly City does not have an adopted method or threshold to determine impacts based on VMT. For this reason, this data is presented for informational purposes only.

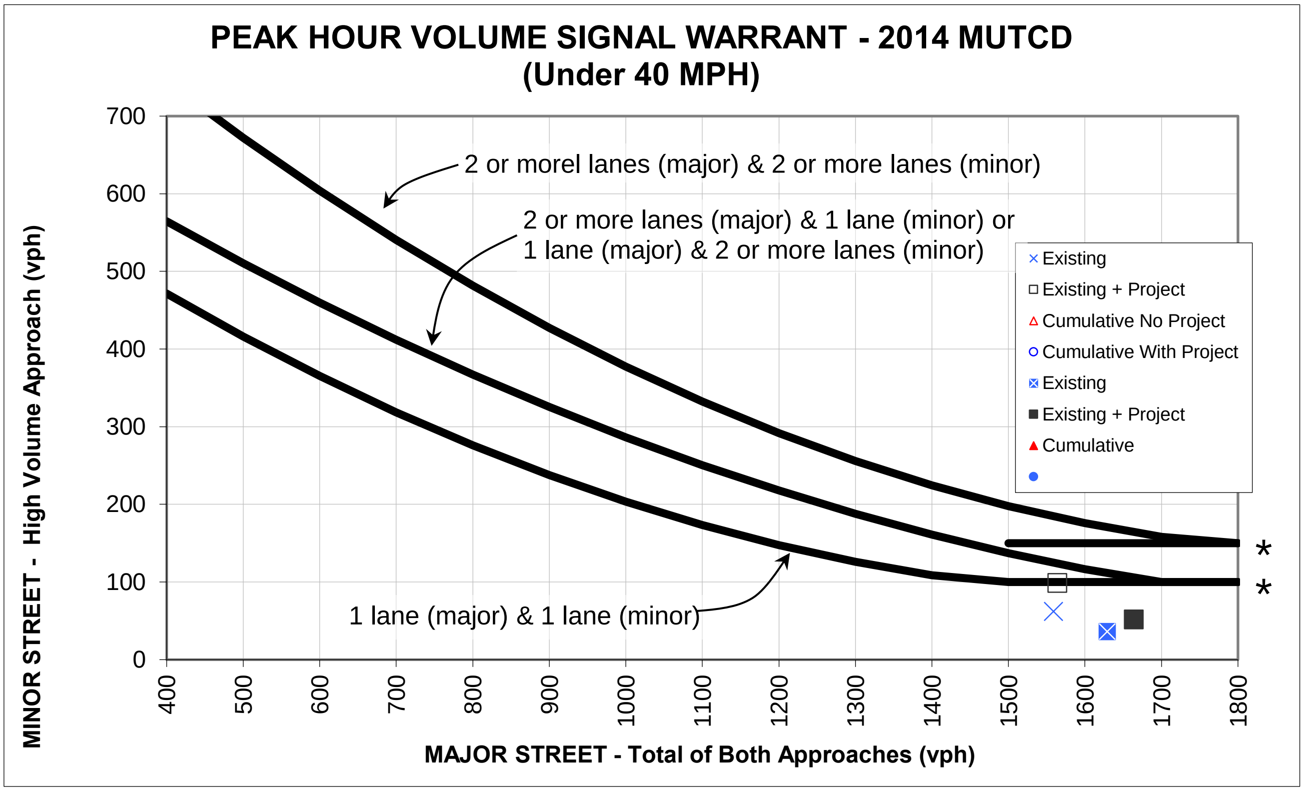
Appendix C

Traffic Signal Warrants

#9 Bayshore Boulevard & Main Street



* NOTE: 150 vph applies as the lower threshold volume for a minor street approach with 2 or more lanes and 100 vph applies as the lower threshold volume for a minor street approach with 1 lane.

Peak Hour Volume Warrant Per 2012 MUTCD- Under 40 MPH

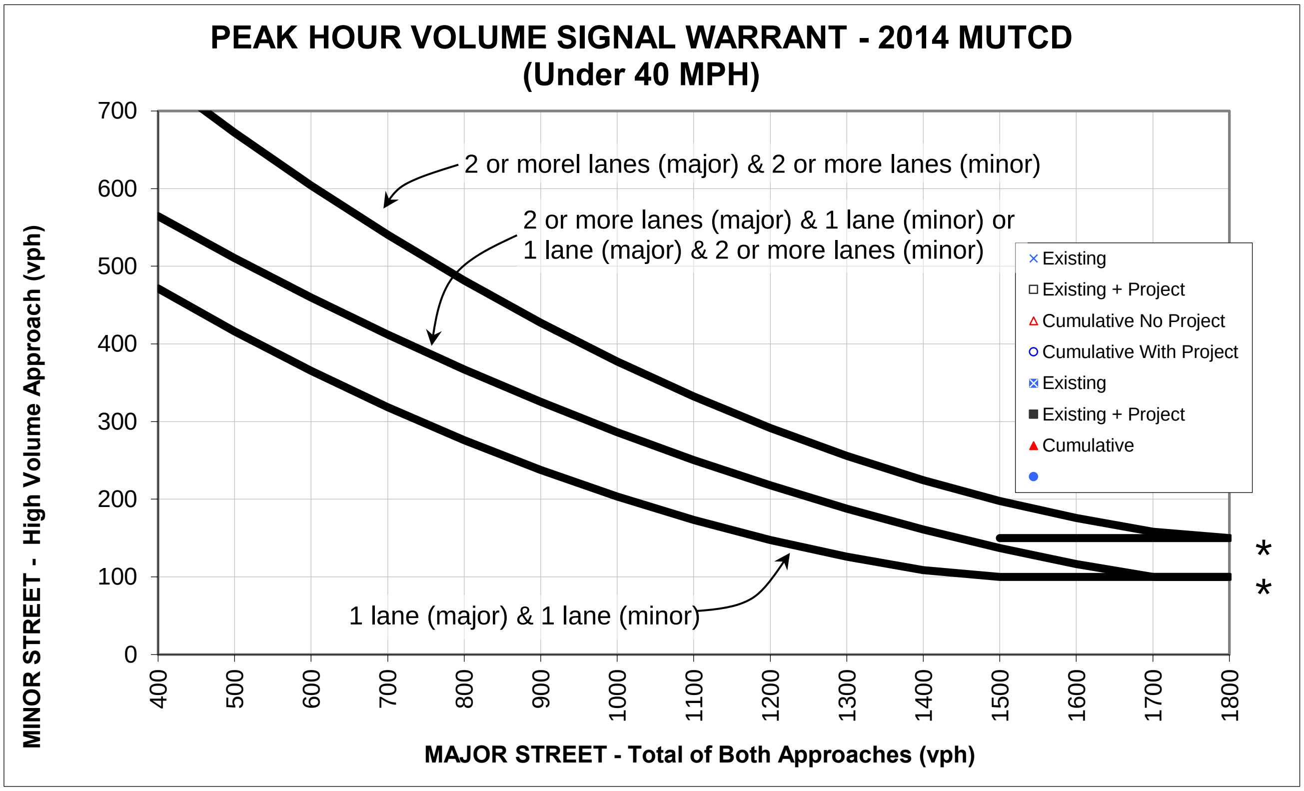
AM Peak Hour Volumes

		Approach Lanes One	Approach Lanes 2 or More	Existing	Existing + Project	Cumulative No Project	Cumulative With Project
Major Street - Both Approaches	Bayshore Blvd		x	1559	1564	2528	2529
Minor Street - Highest Approach	Main Street	x		62	99	61	91
			Warrant Met?	N	N	N	N

PM Peak Hour Volumes

		Approach Lanes One	Approach Lanes 2 or More	Existing	Existing + Project	Cumulative No Project	Cumulative With Project
Major Street - Both Approaches	Bayshore Blvd		x	1629	1664	2353	2372
Minor Street - Highest Approach	Main Street	x		36	52	23	23
			Warrant Met?	N	N	N	N

#11 Schwerin Street & New 'A' Street



* NOTE: 150 vph applies as the lower threshold volume for a minor street approach with 2 or more lanes and 100 vph applies as the lower threshold volume for a minor street approach with 1 lane.

Peak Hour Volume Warrant Per 2012 MUTCD- Under 40 MPH

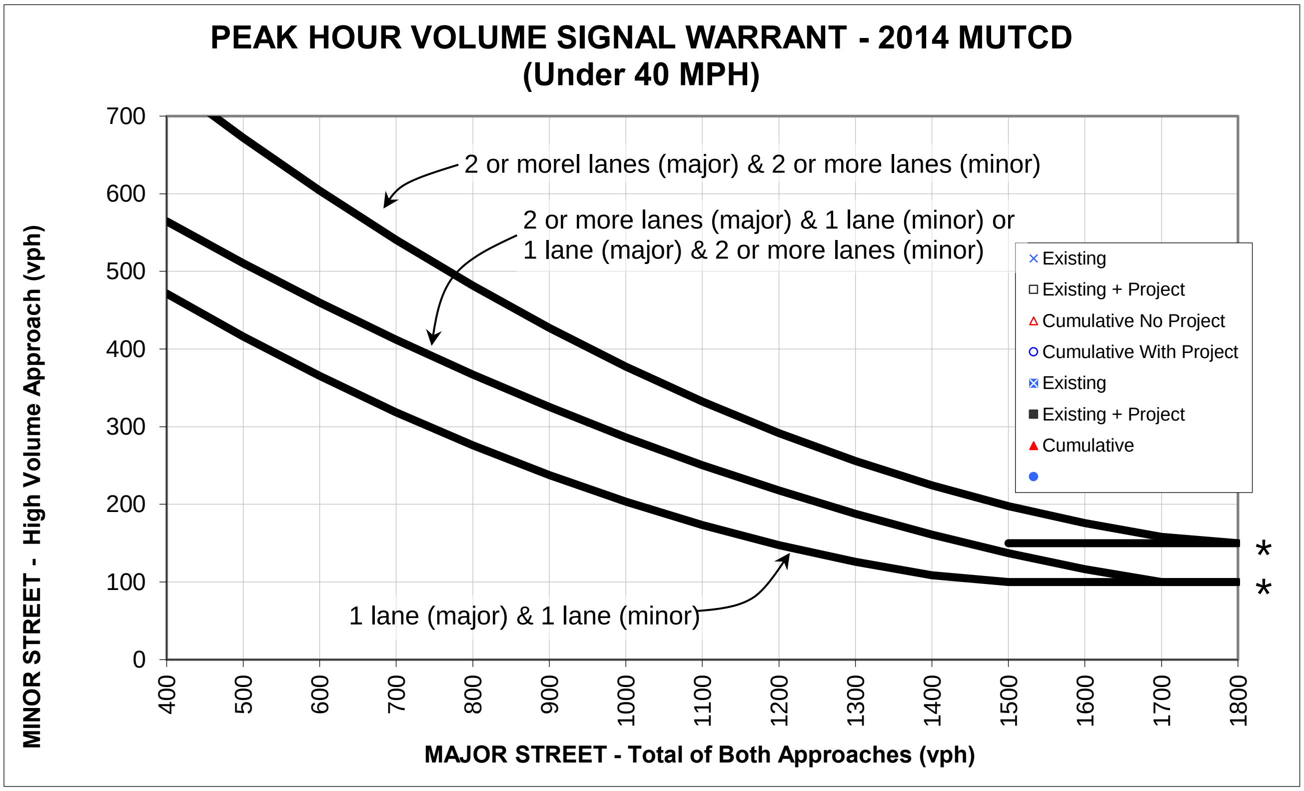
AM Peak Hour Volumes

		Approach Lanes				Cumulative	
		One	2 or More	Existing	Existing + Project	No Project	With Project
Major Street - Both Approaches	Schwerin Street	x		172	190	242	247
Minor Street - Highest Approach	New 'A' Street	x		0	10	0	10
			Warrant Met?	N	N	N	N

PM Peak Hour Volumes

		Approach Lanes				Cumulative	
		One	2 or More	Existing	Existing + Project	No Project	With Project
Major Street - Both Approaches	Schwerin Street	x		170	189	228	241
Minor Street - Highest Approach	New 'A' Street	x		0	10	0	12
			Warrant Met?	N	N	N	N

#12 New 'B' Street & Martin Street



* NOTE: 150 vph applies as the lower threshold volume for a minor street approach with 2 or more lanes and 100 vph applies as the lower threshold volume for a minor street approach with 1 lane.

Peak Hour Volume Warrant Per 2012 MUTCD- Under 40 MPH

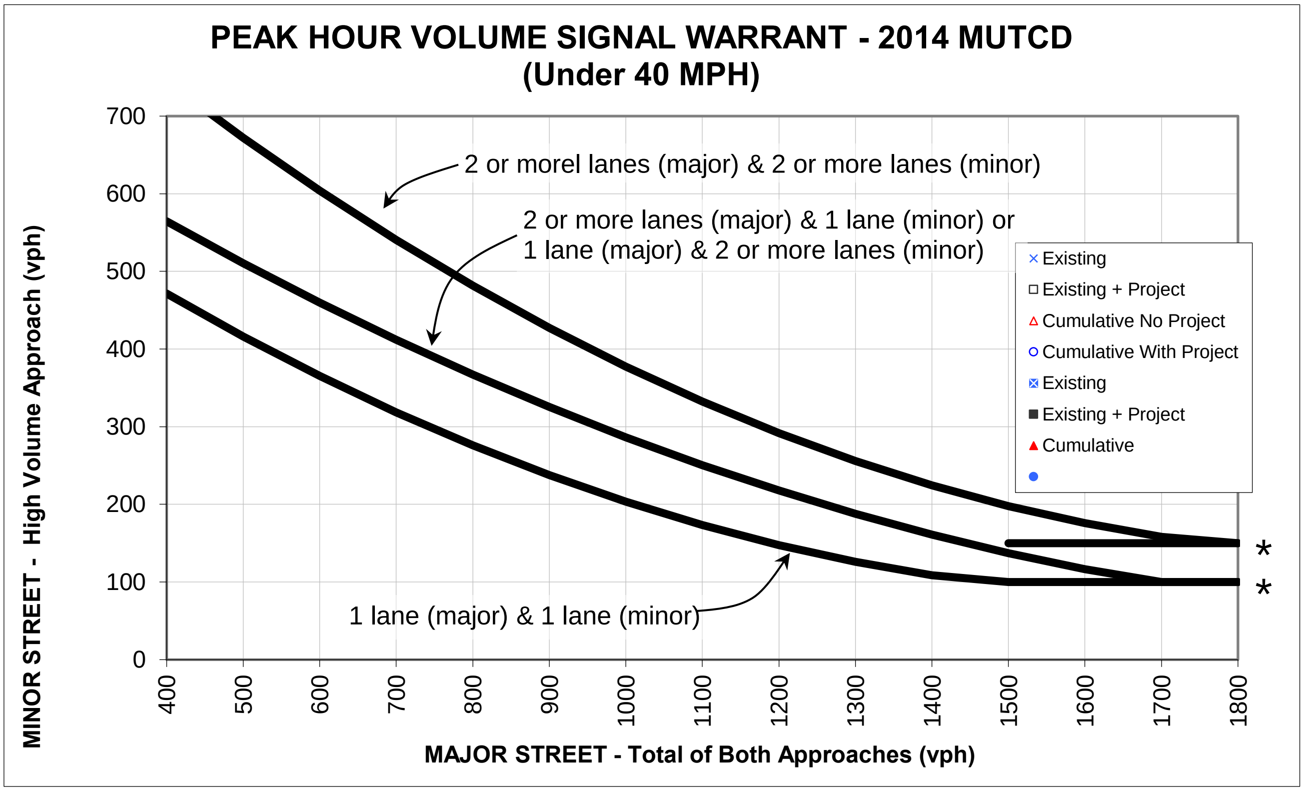
AM Peak Hour Volumes

		Approach Lanes				Cumulative	
		One	2 or More	Existing	Existing + Project	No Project	With Project
Major Street - Both Approaches	Martin Street	x		34	43	51	60
Minor Street - Highest Approach	New 'B' Street	x		0	42	0	42
			Warrant Met?	N	N	N	N

PM Peak Hour Volumes

		Approach Lanes				Cumulative	
		One	2 or More	Existing	Existing + Project	No Project	With Project
Major Street - Both Approaches	Martin Street	x		36	75	60	103
Minor Street - Highest Approach	New 'B' Street	x		0	21	0	22
			Warrant Met?	N	N	N	N

#13 Linda Vista Drive and Martin Street extension



* NOTE: 150 vph applies as the lower threshold volume for a minor street approach with 2 or more lanes and 100 vph applies as the lower threshold volume for a minor street approach with 1 lane.

Peak Hour Volume Warrant Per 2012 MUTCD- Under 40 MPH

AM Peak Hour Volumes

		Approach Lanes One	Approach Lanes 2 or More	Existing	Existing + Project	Cumulative No Project	Cumulative With Project
Major Street - Both Approaches	Linda Vista Drive	x		93	112	72	89
Minor Street - Highest Approach	Martin Street ext	x		0	39	15	43
		Warrant Met?		N	N	N	N

PM Peak Hour Volumes
