RE: Santa Monica and Orange Grove Mixed-Use Project: Civil Engineering Initial Study Data

This memo summarizes the civil related technical studies needed to evaluate the Santa Monica and Orange Grove Mixed-Use project's impacts relating to surface hydrology, water supply, wastewater, and groundwater.

General

Existing Conditions

The existing site consists of six lots at 7811 Santa Monica Blvd, 1114 North Orange Grove Ave, and 1125 North Ogden Drive in the City of West Hollywood, California. The project site currently consists of existing commercial buildings, residential buildings, and parking lots. The project site is approximately 44,200 square feet (0.92 acres) and appears to be 100% impervious.

Proposed Conditions

The site will be developed into a mixed-use building consisting of two subterranean parking levels, ground level restaurant space, an 82 unit apartment complex, and a 74 room hotel. The development will span approximately to the property line and be six stories above grade.

Excavation Depths and Earthwork Volumes

The estimated depths of excavation expected for the subterranean parking and building foundations depths are approximately 27-34 feet below the finished surface on Santa Monica Boulevard. The assumed floor slab thickness is 5" with a 2" sand barrier per the Geotechnical Engineering Investigation report dated November 17, 2014 by Geotechnologies, Inc. The combined parking structure footprint is approximately 37,430 sq. ft.

The earthwork volume for the project was determined using Civil 3D software for AutoCAD. The net site earthwork as a result of the subterranean parking excavation will be approximately 44,300 cubic yards of cut/export. Assuming a 25 percent expansion factor, this equates to a hauled volume of 55,375 cubic yards. See rough grading plan and sections in Attachment A.

The soil export will be hauled to an acceptable location per local jurisdictions' Haul Route requirements. Since the project is in West Hollywood and adjacent to Los Angeles, it is likely that each jurisdiction will have haul route requirements.

Surface Hydrology

Existing Hydrology

Existing storm water runoff from the project site is conveyed via sheet flow and curb drains to the adjacent streets. The existing site is generally flat with a 1% slope to the west and a 3% slope to the south. The site is located within the Federal Emergency Management Agency (FEMA) Flood Zone X, which denotes an area where the potential for flooding is minimal. There are no surface water bodies in the project vicinity.

The existing site's total peak flow generated from a 50-year storm event is approximately 2.95 cubic feet per second (cfs) with 0.93 cfs flowing to Santa Monica Boulevard, 1.51 cfs flowing to North Orange Grove Ave, and 0.51 cfs flowing to North Ogden Drive. See Existing Hydrology Exhibit in Attachment B.

Proposed Hydrology

Storm water runoff from the Project site will be conveyed to the public streets via roof downspouts and site area and podium drains. The proposed development will decrease the existing impervious area by adding planting and landscaping around the site and upper levels. The existing peak flow of 2.95 cfs generated from a 50-year storm will be reduced by the proposed development to 2.87 cfs.

Existing Water Quality Management

Based on our research and existing records, there are currently no stormwater BMPs on the existing site.

Proposed Water Quality Management - Construction

Within the State of California, the National Pollutant Discharge Elimination System (NPDES) requirements mandate that stormwater Best Management Practices (BMPs) be implemented during project construction. These stormwater BMPs may include, but are not limited to: sandbag barriers, shaker plates, silt fences, fiber rolls, and street sweeping.

Proposed Water Quality Management-Project Implementation

Permanent post-construction stormwater management mitigation will be implemented per the County of Los Angeles Department of Public Works Low Impact Development Standards Manual, dated February 14, 2014.

LID (Low Impact Development) is a storm water management strategy with goals to mitigate the impacts of increased runoff and storm water pollution as close to its source as possible.

Considering the proposed development's subterranean footprint and lack of setbacks, we expect infiltration to be infeasible. Capture and reuse may be feasible to treat a portion of the stormwater, but will depend on overall landscaping. This option should be explored with the Architect and Landscape Architect. Preliminary calculations show the 85th Percentile rainfall flow and volume for the project site will be approximately 0.34 cfs and 2,580 cubic feet (cf), respectively. Based on these approximate values, 100% of the required treatment flow could be treated using biofiltration per the LA county LID manual. Biofiltration systems could be located throughout the project site where feasible. The design team should engage early in satisfying stormwater mitigation requirements.

Groundwater

Existing Groundwater

Existing Groundwater conditions are to be verified pending the completion of the project Geotechnical Investigation Report.

Proposed Groundwater Impacts

Impacts on groundwater due to subterranean parking excavation, including temporary and permanent dewatering will be confirmed pending the completion of the project Geotechnical Investigation Report.

Water Supply

There is an existing 12-inch water main on Santa Monica Blvd, which is owned and operated by the Los Angeles Department of Water and Power (LADWP). A flow and pressure report has been conducted by the LADWP, and is attached to this report. We anticipate a 6-inch fire water service, capable of delivering 1,400 gpm, and 6-inch domestic water service, capable of delivering 700 gpm, to serve the project. Based on the flow report, the 12-inch main has a static pressure of 93 psi and a residual pressure of 88 psi at a flow of 1400 gpm. See the LADWP Flow Test Results in Attachment C.

Currently there are no existing fire hydrants along the proposed project site's property frontage. This includes the north side of Santa Monica Blvd, the east side of Orange Grove Ave, and the west side of Ogden Drive. The project Architect and Civil Engineer should engage the County of Los Angeles Fire Department to determine if public or private fire hydrants are required to be installed as part of this project. If hydrants are required, the proposed hydrants must meet a minimum flow of 1,750 gpm at 20 psi per the LA County Fire Code requirement for a Type 1A building (assumed) with a proposed fire sprinkler system and the three largest successive building floors equating to 108,642 square feet.

For the purposes of this report we are assuming the total water usage per day will be equal to the total sewage discharge per day for the project. Based on the sewage discharge estimates in the next section we anticipate the daily water demand to be approximately 28,049 GPD.

Wastewater (Sewer)

There is an existing 8-inch public sewer main that runs north to south on North Orange Grove Ave, and a 12-inch public sewer main that runs east to west on Santa Monica Blvd. A separate Sewer Capacity Study has been prepared for submittal and approval through West Hollywood Public Works. See separate "Sewer Capacity Study" report dated 04/05/2019.

Using the Sanitation District No. 4 Sewer Load Table and the proposed uses of the project, the following table was created outlining the total estimated proposed sewer load.

Anticipated Sewer Generation and Demand						
Facility Description	Building Program	Units	Flow (gpd) per unit	Avg Load, Q _{AF} (gpd)	Avg Load, Q _{AF} (cfs)	Peak Flow, Q _{PF} (cfs)
Restaurant (Indoor)	230	Seat	30	6,900	0.011	0.0267
Restaurant (Outdoor)	21	Seat	18	378	0.001	0.0015
Hotel Amenity Space	2066	SF	0.5	1,033	0.002	0.0040
Art Galley	1381	SF	0.02	28	0.000	0.0001
Residential Lobby	1850	SF	0.08	148	0.000	0.0006
Studio Apartments	38	Unit	80	3,040	0.005	0.0118
1-Bedroom Apartments	23	Unit	120	2,760	0.004	0.0107
2-Bedroom Apartments	9	Unit	160	1,440	0.002	0.0056
Hotel Lobby	1567	SF	0.08	125	0.000	0.0005
Hotel Rooms	86	Room	130	11,180	0.017	0.0432
Hotel Back-of-House	6211	SF	0.08	497	0.001	0.0019
Fitness Area	650	SF	0.8	520	0.001	0.0020
TOTAL				28,049	0.043	0.108

Existing sewer loads and capacity were generated based on City of West Hollywood Requirements as laid out in the Sewer Flow Report (Appendix D). The following table summarizes the Sewer Capacity Study Results:

Sewer Analysis Summary Table		
	Orange Grove Ave	Santa Monica Blvd
Pipe Diameter	8-inch	12-inch
Slope	3.32%	0.32%
Manning N	0.013	0.013
50% Full Capacity	1.10 cfs	1.00 cfs
Monitored Daily Flow	0.020 MGD / 0.031 cfs	0.150 MGD / 0.232 cfs
Existing Peak Flow	0.077 cfs	0.580 CFS
Existing % Pipe Full	12.80%	36.70%
Additional Generated Peak Flow(cfs)	0.108	0.108
Total Proposed Peak Flow (cfs)*	0.186	0.689
Proposed % full*	19.60%	40.30%

*assuming entire project sewer load connects to single sewer

Both the 8" sewer main in North Orange Grove Ave and the 12" sewer main in Santa Monica Blvd are below 50% full with the addition of the project's proposed sewer loads, which meets City of West Hollywood requirements. The 8" sewer main in North Orange Grove Ave and the 12" sewer main in Santa Monica Blvd have adequate capacity for this project. See Attachment D for the complete Sewer Capacity Study.

Gas and Power

Gas for the project will be supplied by Southern California Gas. A will-serve letter from Southern California Gas Company can be found in Attachment F. Specific gas demands will need to be determined by the project plumbing engineer.

Electrical service will be supplied by Southern California Edison. A letter from Southern California Edison can be found in Attachment E. Specific electrical requirements for the project will need to be determined by the project electrical engineer.

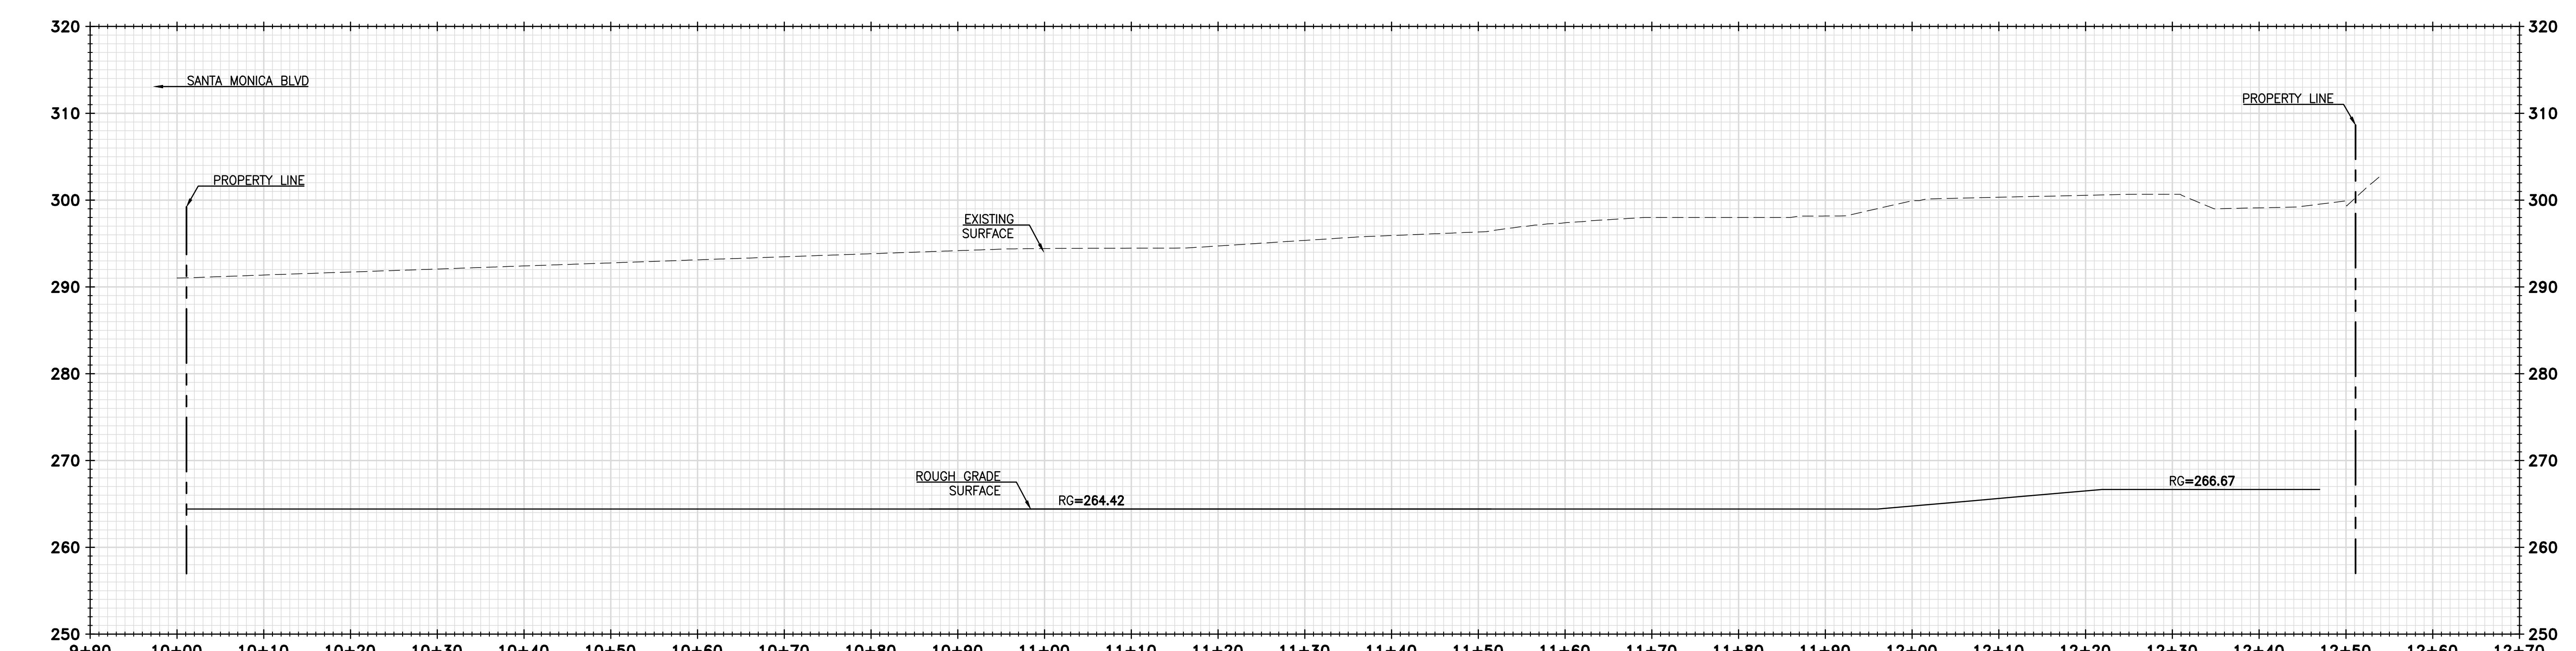

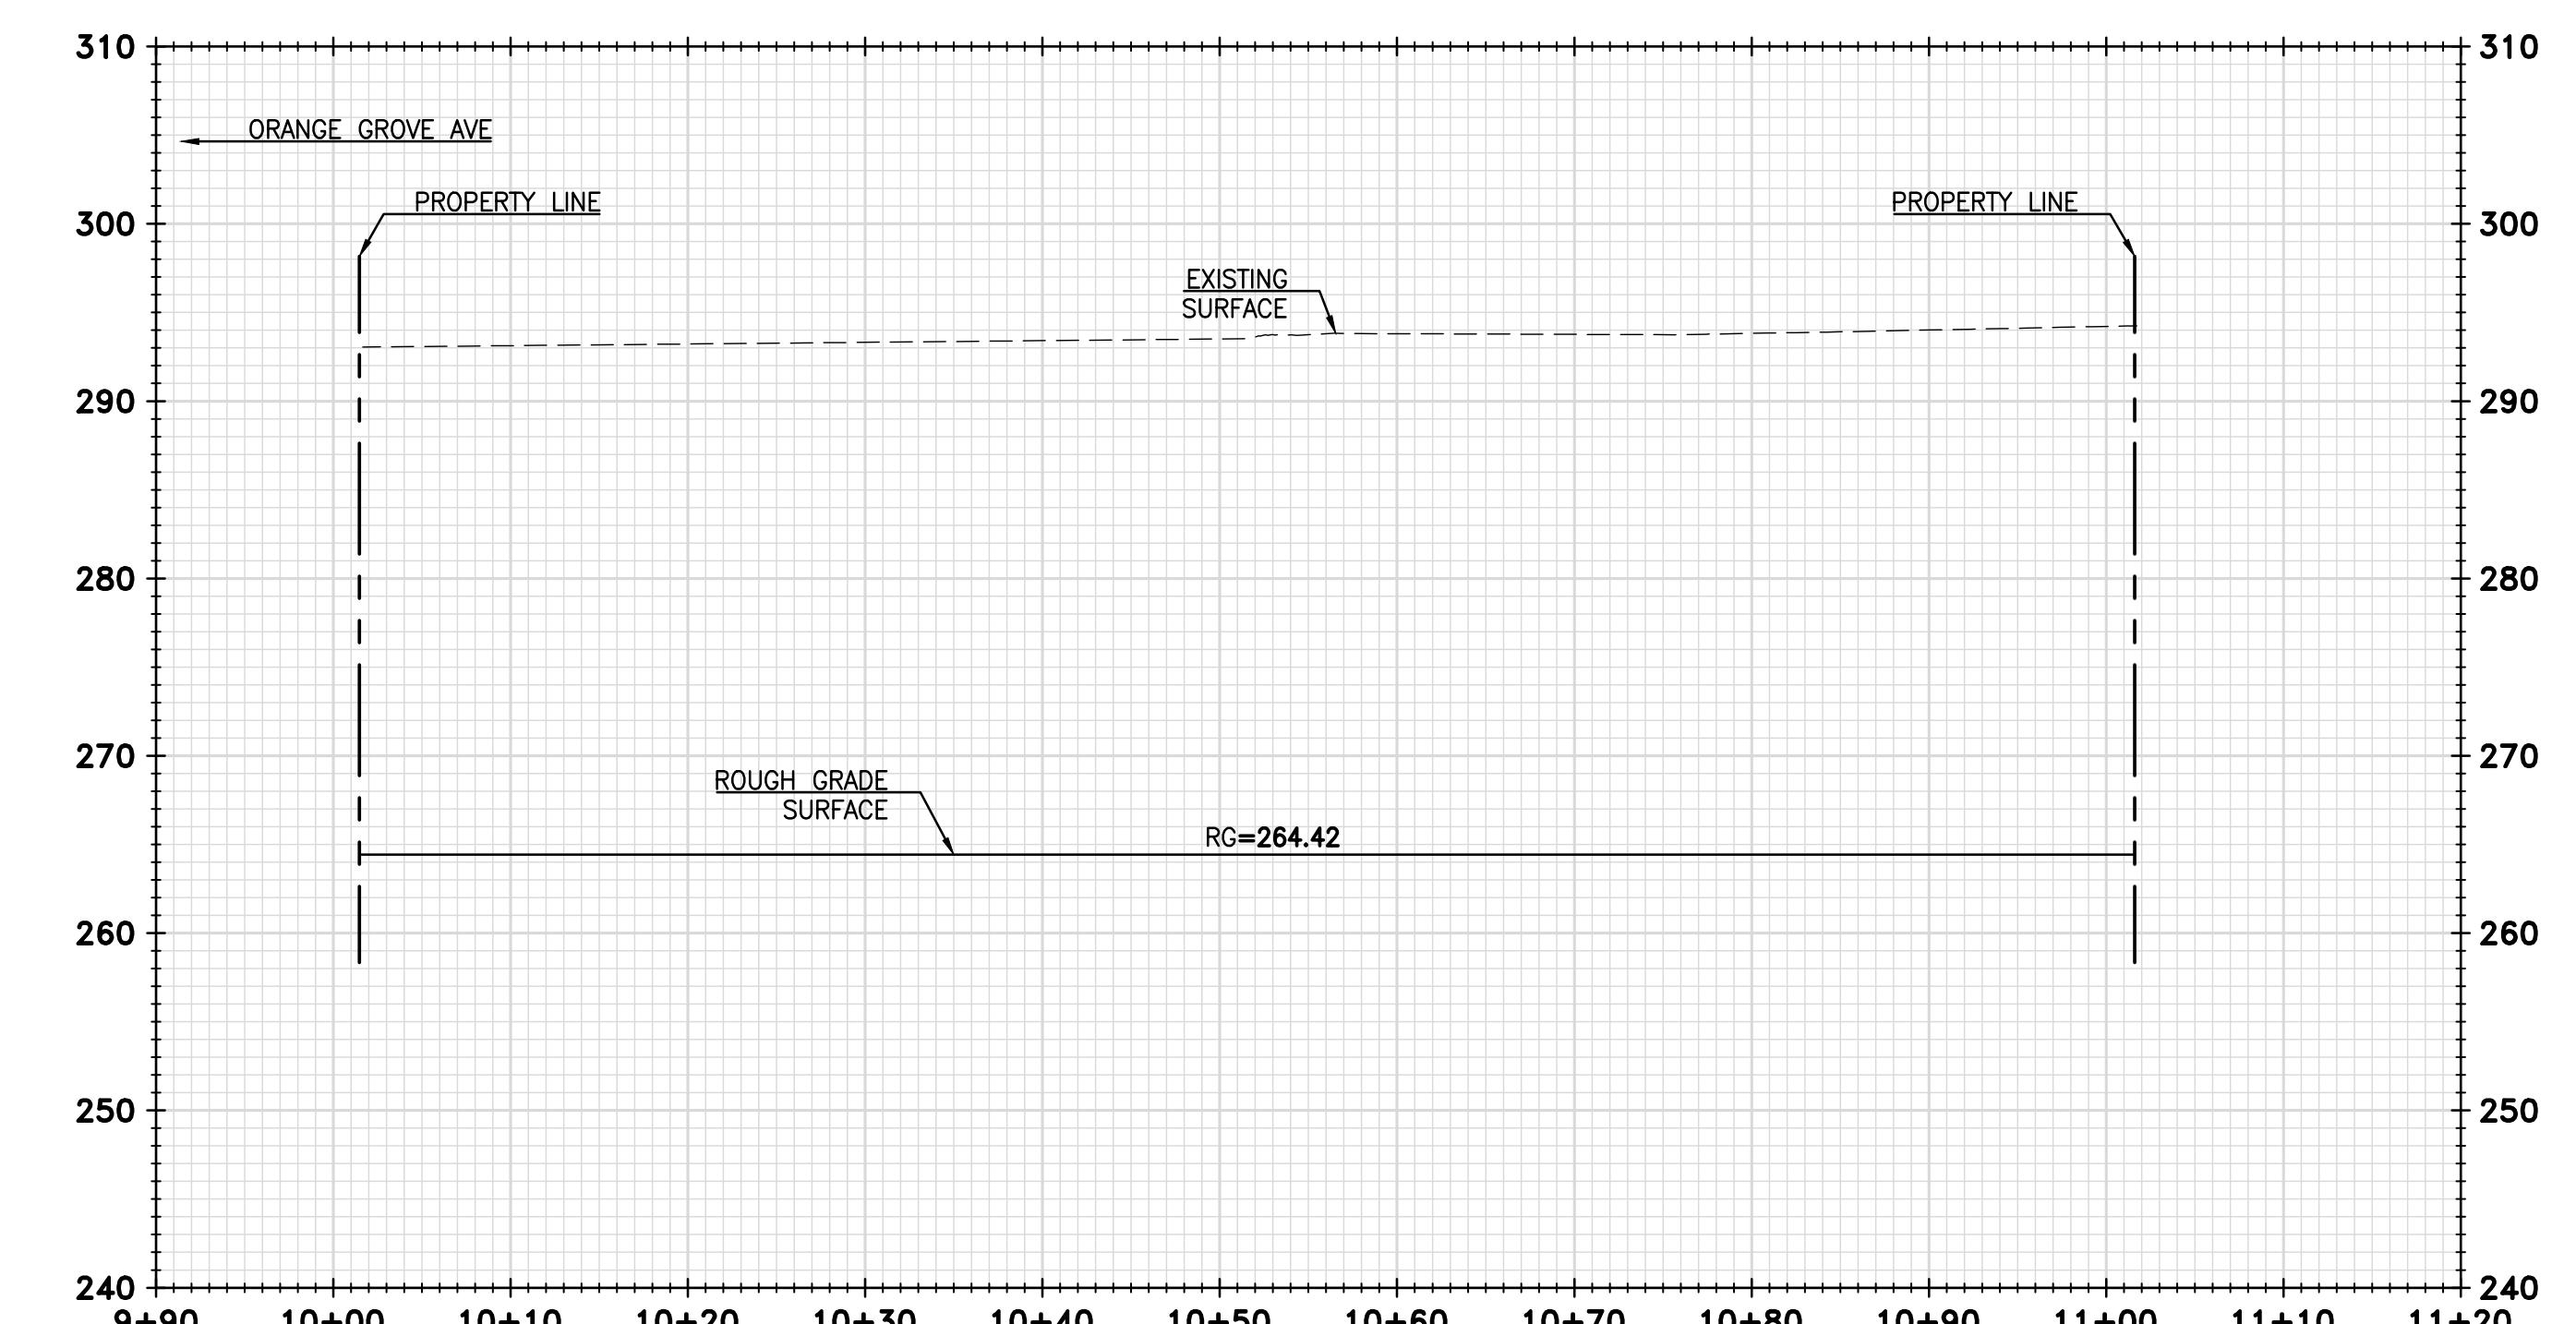

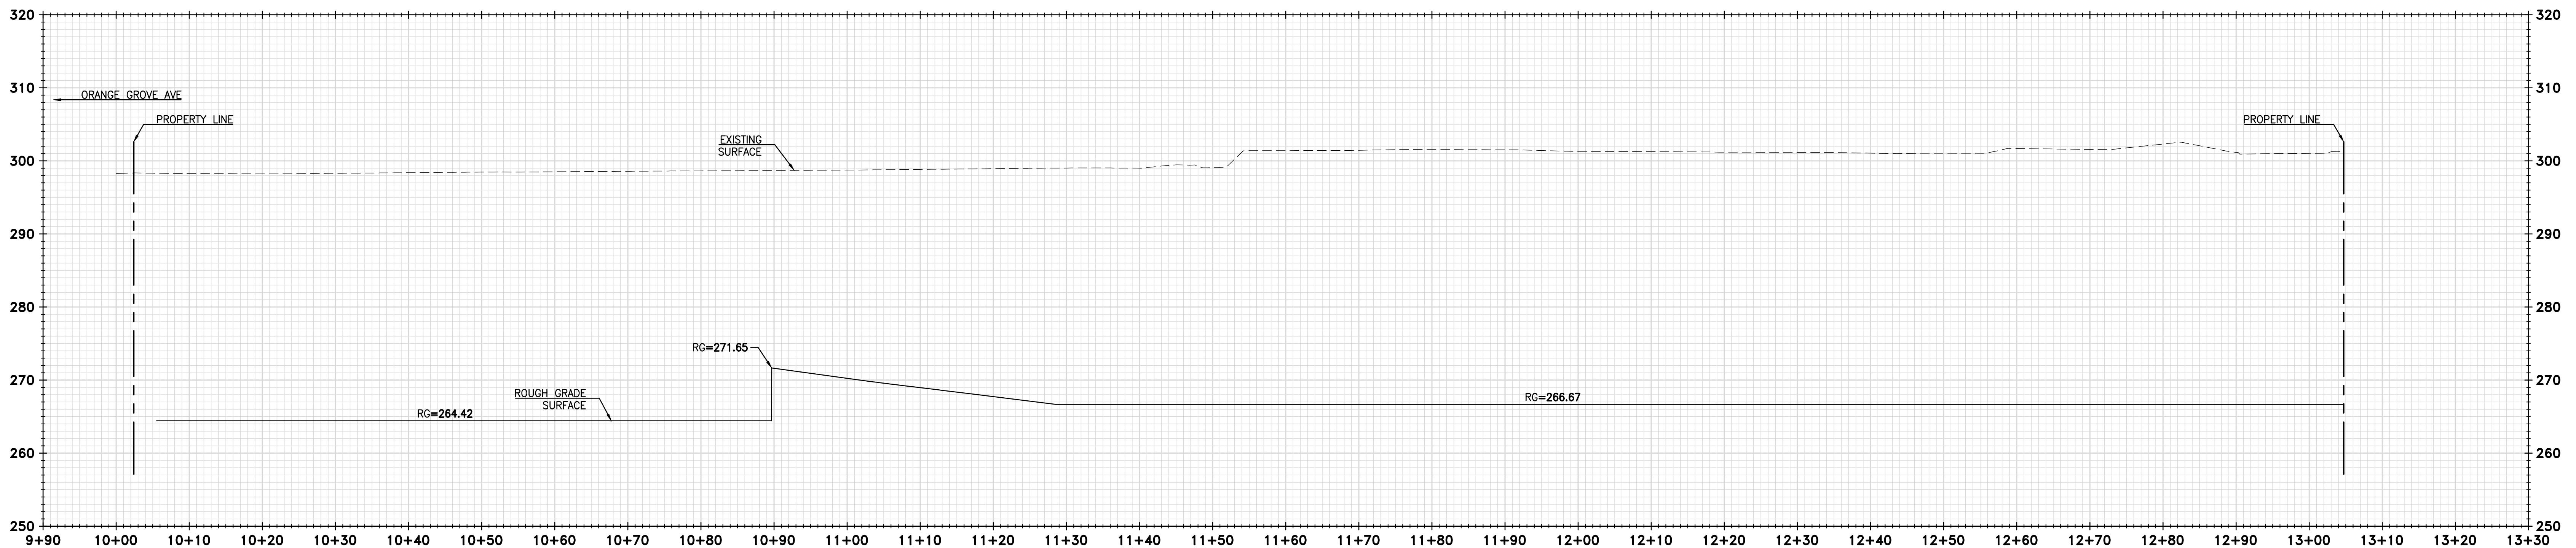

Offsite Improvements

The limit of off-site improvements will be dependent upon the City's requirements set forth in the Conditions of Approval, or similar documents. At a minimum, we expect the scope to include replacement of all curb, gutter, and sidewalk in property frontage. All offsite improvements will be handled through a separate permit with the City of West Hollywood.

APPENDICES

Appendix A	Project Vicinity Map
Appendix B	City of West Hollywood Zoning Map and General Land Use Plan
Appendix C	City of West Hollywood Master Plan of Sewers and Sewer Facilities Data
Appendix D	City of West Hollywood Sewer Capacity Study Requirements & LA County Sanitation District No. 4 Mean Loading Table
Appendix E	Hydraulic Calculations
Appendix F	Utility Systems Science & Software Sewer Flow Monitoring Report

1. Project Description

The Santa Monica and Orange Grove project consists of the design and construction of a mixed-use development at 7811 Santa Monica Blvd, 1114 North Orange Grove Ave, and 1125 North Ogden Drive in the City of West Hollywood, California. The development site currently consists of existing commercial buildings, residential buildings, and parking lots. The site is zoned Commercial, Community 2 (CC2) and Residential, Multi-Family Medium-Density (R3B) per the City of West Hollywood Zoning Map and General Land Use Plan (Appendix B). All existing buildings and hardscape will be removed as part of the proposed project, which includes two parking levels, ground level restaurant space, a 70 unit apartment, and a 86 room hotel.

2. Site Description

The existing site consists of size lots at 7811 Santa Monica Blvd, 1114 North Orange Grove Ave, and 1125 North Ogden Drive in the City of West Hollywood, California. The project site is approximately 44,200 square feet (0.92 acres) and appears to be 100% impervious. Refer to Appendix A for the Project Vicinity Map.

3. Existing Sewer Analysis

Per the City of West Hollywood Master Plan of Sewers and Sewer Facilities Data (Appendix C), there is an existing 8-inch public sewer main that runs north to south on North Orange Grove Ave and a 12-inch public sewer main that runs east to west on Santa Monica Boulevard. As requested by the City of West Hollywood, a sewer manhole on North Orange Grove Ave and Santa Monica Blvd were examined separately to ensure that the proposed project will not overload either sewer lines. Flow monitoring radars were installed in a manhole in North Orange Grove Ave and data was collected over a one-week period, from October 25, 2014 to November 2, 2014. This flow monitoring data was further collected in a manhole on Santa Monica Blvd over a one-week period from March 20, 2019 to March 28, 2019. (See Appendix F for sheets from the Sewer Flow Monitoring Report compiled by Utility Systems Science & Software.)

Pipe Capacity (Q_{CAP}) was calculated using Manning's Formula, per City of West Hollywood Sewer Capacity Study Requirements (Appendix D). See Appendix E for pipe hydraulic calculations.

8-inch sewer on North Orange Grove Ave:

$$Q_{CAP} = 1.10 \text{ CFS}$$

12-inch sewer on Santa Monica Blvd:

$$Q_{CAP} = 1.00 \text{ CFS}$$

Peak flow (Q_{PF}) rate was calculated by taking the measured average daily flowrate, multiplied by a factor of 2.5, per City of West Hollywood Requirements, (Appendix D). The average measured flow for the manhole on North Orange Grove, during the one-week period was 0.020 MGD, or 0.031 CFS:

$$Q_{PF} = 2.5 * 0.031 \text{ CFS} = 0.077 \text{ CFS}$$

The average measured flow for the manhole on Santa Monica Boulevard, during the one-week period was 0.150 MGD, or 0.232 CFS:

$$Q_{PF} = 2.5 * 0.232 \text{ CFS} = 0.580 \text{ CFS}$$

4. Proposed Flow Generation

The anticipated sewer load generation for the proposed development was calculated using the County Sanitation District No. 4 of Los Angeles Mean Loading Table (see Appendix D).

Anticipated Sewer Generation and Demand						
Facility Description	Building Program	Units	Flow (gpd) per unit	Avg Load, Q_{AF} (gpd)	Avg Load, Q_{AF} (cfs)	Peak Flow, Q_{PF} (cfs)

APPENDIX D

City of West Hollywood Sewer Capacity Study
Requirements & LA County Sanitation District No. 4
Mean Loading Table

City of West Hollywood
California 1984

**City of West Hollywood
Department of Public Works
Engineering Division**

Sewer Capacity Study Requirements

1. The sewer capacity study shall be certified by a California licensed Civil Engineer.
2. Project Description: The study should have a project description describing what is being proposed on the development site. The current land uses and proposed land uses of the development shall also be identified.
3. Site Description: The site description shall describe the project's location, the approximate acreage of the project site, and contain a vicinity map to identify the project's location.
4. Existing Sewer Pipe Capacity Analysis: This section shall identify any existing connections to the sewer system. A 7-day flow monitoring study will be required to obtain the existing flow capacity. This shall be done at the downstream sewer manhole, or at a location that makes sense to adequately determine existing flow capacity. Additional monitoring locations may be required to verify downstream capacity of the local sewer network as well as if the project will connect to a nearby trunk line. The City of Los Angeles sewers located downstream may be impacted by a proposed development project. Therefore, the sewer study may need to include monitoring locations in the City of Los Angeles. The existing average daily flow (Q_{exist}) and peak flow shall be determined in cubic feet per second.
5. Proposed Flow Generation: This section shall include the proposed land use(s). Flow generation shall be determined by the user category that most closely matches the County Sanitation District No. 4 of Los Angeles County mean loading table. This will determine your average daily flow (Q_{AF}) in gallons per day (gpd) that shall then be converted to cubic feet per second (cfs).

The City of West Hollywood was an unincorporated area of Los Angeles County until 1984; therefore the sewer system was designed to the County of Los Angeles Department of Public Works standards, where all pipes are designed for peak flow.

$$n = 0.013$$

$$D/d \leq 0.50 \text{ for } d \leq 15"$$

$$D/d \leq 0.75 \text{ for } d > 15"$$

These assumptions will determine the Q_{cap} = Sewer pipe capacity.

The peak flow (Q_{PF}) for this study shall be calculated in cubic feet per second (cfs) by $Q_{PF} = 2.5 \times Q_{AF}$ where 2.5 is the peaking factor used to determine the maximum peak flow rate for sewer diameters less than 15". The peaking factor shall be 2.0 for diameters greater than 15".

6. Conclusion: The conclusion shall identify the sewer capacity of the pipe as a flow rate (Q_{cap}). The calculations shall demonstrate that the sewer mainline has the capacity for the existing flow and the added flow at average and peak conditions. If the sewer is found to be inadequate, recommendations shall be provided to handle the increase in sewer flow. If this is a large site that has several sewer connection options, the conclusion shall address those options and make a recommendation for the project. The recommendations will be incorporated into the mitigation measures for the project.

**AN ORDINANCE PRESCRIBING THE CONNECTION FEE RATE
AND MEAN LOADINGS PER UNIT OF USAGE FOR
COUNTY SANITATION DISTRICT NO. 4 OF LOS ANGELES COUNTY**

**THE BOARD OF DIRECTORS OF COUNTY SANITATION DISTRICT NO. 4 OF LOS ANGELES
COUNTY ORDAINS AS FOLLOWS:**

SECTION 1.0 - USER CATEGORIES AND MEAN LOADINGS

Pursuant to Section 3.03(2) of the *Master Connection Fee Ordinance for County Sanitation District No. 4 of Los Angeles County*, the following shall constitute the User Categories and mean loadings per Unit of Usage for flow, Biochemical Oxygen Demand (BOD), and Suspended Solids:

<u>USER CATEGORY</u>	<u>UNIT OF USAGE</u>	FLOW (Gallons per Day)	BOD (Pounds per Day)	SUSPENDED SOLIDS (Pounds per Day)
Acupuncture Office/Clinic	1000 Sq.Ft.	150	0.16	0.10
Arcade - Video Games	1000 Sq.Ft.	80	0.10	0.10
Auditorium	Seat	4	0.01	0.01
Auto Parking	1000 Sq.Ft.	20	0.03	0.03
Auto Body/Mech. Repair Shop	1000 Sq.Ft.	80	0.12	0.19
Bakery	1000 Sq.Ft.	280	2.34	1.40
Bank: Headquarters	1000 Sq.Ft.	150	0.16	0.10
Bank: Branch	1000 Sq.Ft.	80	0.10	0.10
Banquet Room/Ballroom	1000 Sq.Ft.	800	6.67	4.00
Bar: Cocktail, Fixed Seat	Seat	18	0.03	0.03
Bar: Juice, No Baking Facilities	1000 Sq.Ft.	120	0.20	0.20
Bar: Juice, With Baking Facilities	1000 Sq.Ft.	280	2.34	1.40
Bar: Cocktail, Public Table Area	1000 Sq.Ft.	500	4.17	2.50
Barber Shop	1000 Sq.Ft.	100	0.13	0.13
Beauty Parlor	1000 Sq.Ft.	280	0.35	0.35
Bldg. Const/Field Office	Office	150	0.19	0.19
Bowling Alley: Alley, Lanes & Lobby Area	1000 Sq.Ft.	80	0.10	0.10
Cafeteria: Fixed Seat	Seat	30	0.25	0.15
Car Wash: Wand Type	1000 Sq.Ft.	700	3.00	1.58
Car Wash: Tunnel - Recycling Type	1000 Sq.Ft.	2700	11.74	6.16
Car Wash: Tunnel - Non-Recycling Type	1000 Sq.Ft.	3700	15.86	8.33
Chapel: Fixed Seat	Seat	4	0.01	0.01
Chiropractic Office	1000 Sq.Ft.	150	0.16	0.10

<u>USER CATEGORY</u>	<u>UNIT OF USAGE</u>	FLOW (Gallons per Day)	BOD (Pounds per Day)	SUSPENDED SOLIDS (Pounds per Day)
Church: Fixed Seat	Seat	4	0.01	0.01
Church School: Day Care/Elem	Occupant	8	0.01	0.01
Church School: One Day Use	1000 Sq.Ft.	200	0.22	0.17
Cocktail Lounge: Fixed Seat	Seat	18	0.03	0.03
Coffee House: No Pastry Baking & No Food Preparation	1000 Sq.Ft.	120	0.20	0.20
Coffee House: Pastry Baking Only	1000 Sq.Ft.	280	2.34	1.40
Coffee House: Serves Prepared Food	Seat	30	0.25	0.15
Cold Storage: No Sales	1000 Sq.Ft.	20	0.03	0.03
Cold Storage: Retail Sales	1000 Sq.Ft.	80	0.10	0.10
Comfort Station: Public	Fixture	100	0.13	0.13
Commercial Use	1000 Sq.Ft.	80	0.10	0.10
Community Center	Occupant	4	0.01	0.01
Counseling Center	1000 Sq.Ft.	150	0.16	0.10
Credit Union	1000 Sq.Ft.	150	0.19	0.19
Dairy: Retail Area	1000 Sq.Ft.	80	0.10	0.10
Dancing Area (of Bars or Nightclub)	1000 Sq.Ft.	600	1.00	1.00
Dance Studio	1000 Sq.Ft.	80	0.10	0.10
Dental Office/Clinic	1000 Sq.Ft.	250	0.27	0.17
Doughnut Shop	1000 Sq.Ft.	280	2.34	1.40
Drug Rehabilitation Center	1000 Sq.Ft.	150	0.16	0.10
Equipment Booth	1000 Sq.Ft.	20	0.03	0.03
Film Processing - 1 Hour Photo, Etc.	1000 Sq.Ft.	100	0.13	0.13
Gas Station: Self Service	Fixture	100	0.15	0.23
Gas Station: Four Bays Max	Station	430	0.65	1.00
Gymnasium - Basketball, Volleyball	1000 Sq.Ft.	250	0.31	0.31
Hanger (Aircraft)	1000 Sq.Ft.	80	0.12	0.19
Health Club/Spa	1000 Sq.Ft.	800	1.00	1.00

SECTION 2.0 - CONNECTION FEE RATE

Pursuant to Section 3.02 of the *Master Connection Fee Ordinance for County Sanitation District No. 4 of Los Angeles County*, the Connection Fee Rate shall be \$1,710.00 per capacity unit.

SECTION 3.0 - COST ALLOCATION FACTORS

Pursuant to Section 3.03(2) of the *Master Connection Fee Ordinance for County Sanitation District No. 4 of Los Angeles County*, the proportions of the capital improvement component of the connection fee rate which are attributable to flow, BOD, and Suspended Solids, designated as X, Y, and Z, respectively, shall be:

$$X = 0.6567$$

$$Y = 0.1992$$

$$Z = 0.1441$$

SECTION 4.0 - BASIC RESIDENTIAL UNIT

Pursuant to Section 3.03(2) of the *Master Connection Fee Ordinance for County Sanitation District No. 4 of Los Angeles County*, the loadings from a basic residential unit shall be:

Flowbru = 260 gallons per day of Wastewater flow
BODbru = 0.466 pounds per day of BOD
SSbru = 0.445 pounds per day of Suspended Solids.

SECTION 5.0 - EFFECTIVE DATE

This Ordinance shall become effective on July 1, 1999.

Chairperson, Board of Directors
County Sanitation District No. 4
of Los Angeles County

ATTEST:

Patricia S. Gerde
Clerk, Board of Directors
County Sanitation District No. 4
of Los Angeles County

**SOUTHERN CALIFORNIA EDISON
PROCESS EXPLANATION LETTER**

Will Serve Letter Only

DATE: August 06, 2019

COMPANY: KPFF

SUBJECT: 7965-7985 Santa Monica Blvd, West Hollywood, CA 90046

Your project is located in Southern California Edison (SCE) service territory. SCE will serve the above subject project's electrical requirements per the California Public Utilities Commission and Federal Energy Regulatory Commission tariffs.

SCE may need to conduct utility studies, where applicable, to assess whether additions or modifications to the existing electric infrastructure are required to serve this project. Where applicable, SCE has attached Appendix (B) which not only describes the study, and permitting, but includes a Project Information Sheet that will need to be completed by you and submitted to SCE if your project is at a point where SCE has to determine the required electrical utility work. This Will-Serve letter does not imply that either: (i) these studies have been completed, or (ii) that any required California Environmental Quality Act (CEQA) analysis of project-related electric utility impacts has been conducted.

I am the SCE Design Representative currently assigned to this project. SCE or Applicant will design and construct all required electrical infrastructure to serve this project provided you enter into the applicable contractual agreements with SCE identify scope of electrical utility work required, and supply the following information:

- Site plans as required
- Required contracts and agreements (fully executed)
- Applicable fees
- Local permits
- Required easement documents

Your project will be scheduled for construction once SCE has all the necessary information for your project and you have submitted or agreed to the applicable requirements as stated above, and paid any necessary fees.

If your project will not require SCE services, please notify us so that we can update our records.

SCE appreciates your business. If you have any questions, please feel free to call me at (310) 738-1170.

Sincerely,

SCE Design Representative

Enclosure: Appendix B, where applicable

SOUTHERN CALIFORNIA GAS WILL
SERVE LETTER

A Sempra Energy utility

1001 S. Flower Rd.
Compton, CA 90220-2000

July 25, 2019

KPFF
700 South Flower Street, Suite 2100
Los Angeles, CA 90017
Attn: James Rice

**Subject: Will Serve - 5530-002-019 & 5530-002-067 7811 Santa Monica Blvd
and 1114 North Orange Grove Ave West Hollywood, CA 90046**

Thank you for inquiring about the availability of natural gas service for your project. We are pleased to inform you that Southern California Gas Company (SoCalGas) has facilities in the area where the above named project is being proposed. The service would be in accordance with SoCalGas' policies and extension rules on file with the California Public Utilities Commission (CPUC) at the time contractual arrangements are made.

This letter should not be considered a contractual commitment to serve the proposed project, and is only provided for informational purposes only. The availability of natural gas service is based upon natural gas supply conditions and is subject to changes in law or regulation. As a public utility, SoCalGas is under the jurisdiction of the Commission and certain federal regulatory agencies, and gas service will be provided in accordance with the rules and regulations in effect at the time service is provided. Natural gas service is also subject to environmental regulations, which could affect the construction of a main or service line extension (for example, if hazardous wastes were encountered in the process of installing the line). Applicable regulations will be determined once a contract with SoCalGas is executed.

If you need assistance choosing the appropriate gas equipment for your project, or would like to discuss the most effective applications of energy efficiency techniques, please contact our area Service Center at 800-427-2200.

Thank you again for choosing clean, reliable, and safe natural gas, your best energy value.

Sincerely,

William Perez
