II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether or not any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, and supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

VI. LEAK INTERCEPTION AND DETECTION SYSTEM

This information is required only for motor vehicle fuel UST systems constructed per the Alternate Construction Requirements of 23 CCR §2633, and only if the Leak Interception and Detection System (LIDS) does not meet the volumetric requirements of 23 CCR §2631(d)(1) through (5) (i.e., when accounting for rainfall and backfill material, the secondary containment volume is less than 100% of primary tank volume for a single UST; or in the case of multiple USTs in shared secondary containment, 150% of the largest primary tank volume or 10% of aggregate primary tank volume, whichever is greater).

ATTACH AN ADDITIONAL PAGE TO THIS PLAN CONTAINING THE FOLLOWING INFORMATION:

- The volume of the LIDS in relation to the volume of the primary container;
- The amount of time the LIDS shall provide containment related to the time between detection of an unauthorized release and cleanup of the leaked substance;
- The depth from the bottom of the LIDS to the highest anticipated level of groundwater;
- The nature of the unsaturated soils under the LIDS and their ability to absorb contaminants or to allow movement of contaminants;
- The methods and scheduling for removal of all hazardous substances which may have been discharged from primary containment and are located in the unsaturated soils between the primary containment and groundwater, including the LIDS sump.

VII. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

Subject: **BP America, Inc. – Financial Responsibility Documentation for Petroleum Underground Storage Tank Systems (40 CFR Part 280)**

Dear Sir or Madam:

The enclosed document comprises the financial assurance mechanism by which BP America, Inc. demonstrates financial responsibility pursuant to 40 CFR 280 Subpart H for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks.

This document is believed to be complete and accurate. However, considering the number and geographic dispersion of USTs covered by BP America, Inc.'s financial responsibility, it is possible that errors of omission have occurred and the tank listings will not always be current as of the date of the review. In any case, it is the intent of BP America Inc. to provide the mandated financial responsibility requirements for all USTs subject to 40 CFR 280 Subpart H.

If you have any questions regarding the information submitted, please contact me at (714) 228-6480.

Sincerely,

Lanni N. Duong

See "Item 5. Covered Storage Tank System(s)" on policy referenced above,

for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases in accordance with and subject to the limits of liability, exclusions, conditions and other terms of the policy arising from operating the underground storage tank(s) identified above.

The limits of liability are $1,000,000 each occurrence and $2,000,000 annual aggregate, exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under UST 1904230. The effective date of said policy is January 1, 2013.

2. The Insurer further certifies the following with respect to the insurance described in Paragraph 1:

a. Bankruptcy or insolvency of the insured shall not relieve the Insurer of its obligations under the policy to which this certificate applies.

b. The Insurer is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or damaged third party, with a right of reimbursement by the insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is

demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280.102.

c. Whenever requested by a Director of an implementing agency, the Insurer agrees to furnish to the Director a signed duplicate original of the policy and all endorsements.

d. Cancellation or any other termination of the insurance by the Insurer, except for non-payment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.

e. The insurance covers claims otherwise covered by the policy that are reported to the Insurer within six months of the effective date of cancellation or non-renewal of the policy except where the new or renewed policy has the same retroactive date or a retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97 (b) (2) and that the Insurer is eligible to provide insurance as an excess or surplus lines insurer in one or more states.

USA/Tesoro Facility Number 63251
4130 W. Century Blvd.
Inglewood, CA 90304

Dear Inspector Payne:

I am sending you this letter and enclosed attachments in response to the January 15, 2013 inspection at USA/Tesoro Facility Number 63251 located at 4130 W. Century Blvd. in Inglewood, CA. The following bulleted items describe the deficiencies you noted during your inspection as well as actions taken to correct the deficiencies.

- No sticker/Tag affixed to VR 208 liquid sensor after certification on the 87 STP Sump (20K). No sticker/Tag affixed to RJ CPT (ELLD). Secondary Containment Testing Report Form C734287 Dated 12/20/12. All UST monitoring equipment must have a sticker/tag upon certification.
  Tesoro had not acquired ownership of the facility until June 2012. CE Thomas had completed the May 1, 2012 Monitoring Certification while under the ownership of BP/Arco. Fastech is the testing contractor for Tesoro and is aware of the requirement. However, Fastech will ensure all components of the UST monitoring equipment receive a sticker/tag upon completion of a passing certification during the May 2013 scheduled monitor Certification.

If you have any questions or require additional information, please call me at your convenience at (562) 495-6836.

Sincerely,

Douglas Shearer

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☒ Yes	☐ No* ☐ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g., modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e., no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? **90%**
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.

Date map was drawn: __4/17/13__.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous materials Underground Storage Tank (UST) facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HMUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HMUSP or UP Permit need not make a separate HMUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of $456 must be submitted for each addendum. Where a previously unregistered UST is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted upon completion of work.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

MagVFC

FE Petro introduced the first variable speed submersible pump for the petroleum industry in 1995. Since that time, high volume marketers around the world have realized the benefits of filling cars faster during peak business periods that only variable speed submersibles can deliver. Station size and volumes have continued to grow. To meet the needs of these high volume retailers, FE Petro offers the intelligent submersible turbine pump, the industry's highest performing 4" diameter submersible pump.

Highlights

Constant Flow

Depending on peak business requirements, marketers now have a choice of either 2 hp or 4 hp variable speed models. 2 hp provides constant 10 gpm (38 lpm) for up to eight fueling positions operating simultaneously, 4 hp for up to 12 positions.

MagVFC™ Design Highlights

The MagVFC™ features a dual seven segment display to show diagnostic faults. A serial interface is standard to connect to INCON System Sentinel™ software for remote reporting of pump alarms and sharing otherpump/ATG intelligence. TheMagVFC™ detects and displays these system conditions:

- Dry tank (initiates an immediate pump shut-down).
- Continuous pump run.
- Low incoming voltage.
- Pump motor failure.
- Short circuit detection.
- Controller faults.
- Open circuit detection.

For reduced installation cost, a shielded power cable is not required. Pump protection extends pump life and extended run fault alerts a condition that may render line leak detection ineffective. Remote reporting of pump alarms and sharing of IST and ATG intelligence further reduce station operating costs.

Meets EPA Spitback Control

The IST can be adjusted at installation to perform at maximum per nozzle flow rate of 10 gpm (38 lpm) based on the specifications of your piping and dispensing system. This eliminates overpressuring the system, which results in an unnecessarily high hydraulic hammer and need for other control devices.

Specs

Power Requirements

IST models can only be powered by a MagVFC™ controller:

2 hp models can operate with single- or three-phase incoming power supply to the MagVFC™.
4 hp models require three-phase incoming power supply to the MagVFC™ for proper operation.
Incoming power supply to the MagVFC™ can be 200-250 VAC, 50 or 60 Hz.
MagVFC™ outputs a three-phase, variable frequency signal, valid for FE Petro variable speed pumps only.
2 hp max. motor draw: 9 Amps.
4 hp max. motor draw: 15 Amps.
MagVFC™ max. line draw: 20 Amps.

Pump Motor

2 hp or 4 hp, variable speed, two-stage centrifugal type pump motor with integral, automatic, thermal overload protection.
Max. flow: 2 hp = 110 gpm, 4 hp = 140 gpm.
Max. pressure: selectable operating pressure on MagVFC™ between 24 psi and 42 psi deadhead.
Available with MagShell™, which results in 45% increased flow area around motor.

Liquid Compatibility

Max. liquid viscosity: 70 SSU at 60 °F (15 °C).
IST models imply alcohol-gasoline compatibility for fuel mixtures containing up to 85% ethanol, and 20% MTBE, 20% ETBE or 17% TAME with gasoline.
IST models can also be used with diesel fuels, fuel oils, kerosene, Avgas and jet fuels in a non-gelled pourable state.
All wetted elastomers are made of a high grade, fluorocarbon compound.

Standard Features

All IST models include variable speed, variable length options and alcohol-gasoline compatibility.
Check valve: 2¾" diameter fluorocarbon seal constructed on cast aluminum body and steel backing washer.
Pressure relief valve: available in four pressure relief settings, integral to check valve. Standard model relieves at 40 psi and resets above 35 psi.
Syphon: venturi-type syphon primer supplied with every submersible. Syphon check valve and secondary syphon sold separately.
Air eliminator: every submersible includes tank return path with one-way check valve to provide active air elimination.
Electrical disconnect: electrical yoke for positive contractor disconnect during service.

Testing Procedures – One 12-minute Test

Secondary Containment Testing, Underground Storage Tank Systems
Contractor: Fueling & Service Technologies, Inc. (FASTECH)

Jim Simeone	(714) 296-1509	ICC# 5272455-UT	ELD Cert # F0066-10

Site Safety Officer: Primary Tester
Qualifications:

- FASTECH currently holds business license number CA 794519 – A, Haz, C21
- Information regarding Worker's Compensation and Employers' Liability (available upon request).
- FASTECH provides HAZWOPR training for employees. FASTECH develops a site-specific Health and Safety Plan w/ Confined Space Permit for each testing location (available on-site, day of testing).

Test Equipment:

- FASTECH utilizes third party certified hardware and software for all hydrostatic tests (attached). The primary tester is certified, by the manufacturer of the equipment used (Enhanced Leak Detection Systems, Inc.), to test containment sumps, under dispenser containment, and spill buckets.
- Pressure Gauges, Ametek-U.S. Gauge, 0-15 psi pressure range, 4.5-inch diameter, glycerin filled, .5% span of scale, calibrated every six months.
- Vacuum Gauges, Ametek-U.S. Gauge, 0-30 in-hg vacuum range, 4.5-inch diameter, glycerin filled, .5% span of scale, calibrated every six months.
- Vacuum Pump, Gast Model 2Z866, 120 volt AC. Pump mounted greater than 18-inches (about 3.5-feet) above work surface (surface grade), with outlet tubing terminating outside the work zone.

Test Procedures:

- Local CUPA will be notified of testing schedule a minimum of 48-hours before the test is scheduled to begin. During testing, station's dispensing equipment may remain in operation providing no health and safety concerns arise for either the public or test crews. Testing will be performed within an exclusion zone. If, at any time, the site safety officer or local CUPA deems any situation unsafe, the site safety officer will shut the station's dispensing equipment down. Testing will only be conducted when all health and safety concerns are met.
- Sump Cleaning and Preparation.

  FASTECH will steam clean all turbine sumps, dispenser pans, and spill buckets. The water and waste generated during the cleaning process will be temporarily stored on-site in a labeled drum (dated, Haz Waste Label). The client will classify the drum, and provide transportation for drum disposal in a timely manner. Once the site has been cleaned, it will be ready for testing.

- Use of Test Fluid.

  FASTECH's testing fluid is comprised mostly of water with low concentrations (<2%) of surfactants and stabilizers. California Regulations allow for the transportation and reuse of water that is used as testing fluid. D.O.T. regulations mandate that the test fluid never contain more than 2% by volume of a hazardous material. Because of the extensive cleaning of the sumps prior to the introduction of the test fluid, the test fluid has never been determined to be hazardous.

- Tank Annular Space.

  For tanks less than 20,000 gallons capacity, apply a vacuum of 10" mercury to annular space. After establishing a stable vacuum, maintain this vacuum for 60 minutes. At the end of the test period, if the vacuum reading has not changed from the established test vacuum, the test is complete and has achieved a "pass".

  For tanks greater than or equal to 20,000 gallons capacity, apply a vacuum of 10" mercury to annular space. After establishing a stable vacuum, maintain this vacuum for 120 minutes. At the end of the test period, if the vacuum reading has not changed from the established test vacuum, the test is complete and has achieved a "pass".

  If the tank does not maintain the test vacuum, the contractor may re-test the annular space. If, after the second test the tank does not achieve a "pass", the secondary containment must be considered not liquid tight. Repairs may be made by the tank manufacturer or authorized representative per the requirements of the local CUPA.

- Product, Vent, and Stage II Vapor Piping Secondary Containment.

  An inert gas shall be used. The secondary containment shall be made airtight with either the rubber test boot or fiberglass test fitting installed at time of installation. If the test boot is missing or damaged, an approved replacement test boot or fiberglass test fitting may be installed.

  Pressurize secondary containment piping to 5 psig and allow to stabilize for 10 minutes. Maintain test pressure of 5 psig for 60 minutes. At the end of the test period, if the pressure reading has not changed from the established test pressure, the test is complete and has achieved a "pass".

  If the piping does not maintain the test pressure, the contractor may tighten clamps and fittings, if necessary, and re-test the piping. If, after the second test, the piping does not achieve a "pass", the secondary containment must be considered mot liquid tight. Repairs may be made by the piping manufacturer or authorized representative per the requirements of the local CUPA.

- Containment Sumps and Under Dispenser Containment.

  The containment sump shall be free of dirt, debris and residual petroleum product. Place test fluid in the sump a minimum of 2-inches above any penetration and above any non-contiguous portion of the sump (i.e., above UDC window, and for turbine/fill sumps, if constructed in sections, above the highest seam).

  After test fluid has stabilized for 30 minutes, the liquid level shall be measured using test equipment that has been third party tested. The test period shall consist of one 12-minute test. At the end of each 12-minute test period, the test equipment must confirm a hydrostatic change in level no greater than .002-inches in order to achieve a "pass".

  If the containment sump does not pass the test, the contractor may re-inspect the sump, tighten penetrations/clamps and fitting, and re-test. If after the second test the containment sump does not achieve a "pass", the secondary containment must be considered not liquid tight. Repairs may be made using the sump manufacturer's procedures per abiding by the requirements of the local CUPA.

- Spill Buckets

  The spill bucket shall be free of dirt, debris and residual petroleum product. Place test fluid in the spill bucket 1-inch below the highest portion of the bucket's containment.

  After test fluid has stabilized for 30 minutes, the liquid level shall be measured using test equipment that has been third party tested. The test period shall consist of one 12-minute test. At the end of each 12-minute test period, the test equipment must confirm a hydrostatic change in level no greater than .002-inches in order to achieve a "pass".

  If the spill bucket does not pass the test, the contractor may re-inspect the bucket, tighten drain valve fittings and re-test. If after the second test the spill bucket does not achieve a "pass", the spill bucket must be considered not liquid tight. Repairs may be made using the spill bucket's manufacturer's procedures per abiding by the requirements of the local CUPA.

Reporting:

A final report documenting secondary containment testing shall be submitted to the local CUPA within 30 days of the completion of the test. The report must include all data collected as part of the testing and indicate any deviation from the approved Work Plan. All reports shall be evaluated for the completeness and accuracy. Failure to submit a satisfactory report will result in test results not being accepted and may require additional testing. The Secondary Containment Testing Report Form shall be used.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

& NOV RESPONSE REPAIR RETEST

SUBJECT SITE: **SB 989 COMPLIANCE TESTING AT USA PETROLEUM STATION 4130 W. CENTURY BLVD. INGLEWOOD, CA 90304. SITE ID#: 63251.**

Dear Mr. Smith:

Enclosed, please find the secondary containment testing results for the above-referenced site. These results are being sent to you in response to an NOV# 753632 dated 8/12/13 as well as per the requirement of SB 989 three year compliance testing. NOV# 753632 was issued on 8/12/13 for 91 secondary product piping not being in the 6 o'clock position and for excessive sealant within the 87 Main turbine sump. Permitting was initiated by FASTECH at that time. While permit was under review, the 989 3 year test became due and was performed on 10/17/13. At that time UDC 5&6 failed testing. The repairs to UDC 5&6 were added to the existing permit application under review (permit # A754213). Permitted repairs (A754213) were completed and FASTECH returned on 11/22/13 for the retest with passing results. A summary of the results is listed below.

Agency Notification Date: 11/12/13 (#8393)

Test Results Overview:

Test performed: Secondary Product Lines-87M & 91 only	Pass☒ Fail☐
Test performed: Turbine Sumps-87M & 91 only	Pass☒ Fail☐
Test performed: Under Dispenser Containment-5&6	Pass☒ Fail☐

FASTECH was contracted by the underground storage tank system owner to insure that this facility complies with all of the rules and regulations that govern the operation of underground storage tanks and their related components.

If you have any questions please call the undersigned at (714) 523-0194, extension 8327.

Jim Simeone	(714) 296-1509	ICC# 5272455-UT	ELD Cert # F0066-10

Site Safety Officer: Primary Tester
Qualifications:

- FASTECH currently holds business license number CA 794519 – A, Haz, C21
- Information regarding Worker's Compensation and Employers' Liability (available upon request).
- FASTECH provides HAZWOPR training for employees. FASTECH develops a site-specific Health and Safety Plan w/ Confined Space Permit for each testing location (available on-site, day of testing).

Test Equipment:

- FASTECH utilizes third party certified hardware and software for all hydrostatic tests (attached). The primary tester is certified, by the manufacturer of the equipment used (Enhanced Leak Detection Systems, Inc.), to test containment sumps, under dispenser containment, and spill buckets.
- Pressure Gauges, Ametek-U.S. Gauge, 0-15 psi pressure range, 4.5-inch diameter, glycerin filled, .5% span of scale, calibrated every six months.
- Vacuum Gauges, Ametek-U.S. Gauge, 0-30 in-hg vacuum range, 4.5-inch diameter, glycerin filled, .5% span of scale, calibrated every six months.
- Vacuum Pump, Gast Model 2Z866, 120 volt AC. Pump mounted greater than 18-inches (about 3.5-feet) above work surface (surface grade), with outlet tubing terminating outside the work zone.

Test Procedures:

- Local CUPA will be notified of testing schedule a minimum of 48-hours before the test is scheduled to begin. During testing, station's dispensing equipment may remain in operation providing no health and safety concerns arise for either the public or test crews. Testing will be performed within an exclusion zone. If, at any time, the site safety officer or local CUPA deems any situation unsafe, the site safety officer will shut the station's dispensing equipment down. Testing will only be conducted when all health and safety concerns are met.
- Sump Cleaning and Preparation.

  FASTECH will steam clean all turbine sumps, dispenser pans, and spill buckets. The water and waste generated during the cleaning process will be temporarily stored on-site in a labeled drum (dated, Haz Waste Label). The client will classify the drum, and provide transportation for drum disposal in a timely manner. Once the site has been cleaned, it will be ready for testing.

- Use of Test Fluid.

  FASTECH's testing fluid is comprised mostly of water with low concentrations (<2%) of surfactants and stabilizers. California Regulations allow for the transportation and reuse of water that is used as testing fluid. D.O.T. regulations mandate that the test fluid never contain more than 2% by volume of a hazardous material. Because of the extensive cleaning of the sumps prior to the introduction of the test fluid, the test fluid has never been determined to be hazardous.

- Tank Annular Space.

  For tanks less than 20,000 gallons capacity, apply a vacuum of 10" mercury to annular space. After establishing a stable vacuum, maintain this vacuum for 60 minutes. At the end of the test period, if the vacuum reading has not changed from the established test vacuum, the test is complete and has achieved a "pass".

  For tanks greater than or equal to 20,000 gallons capacity, apply a vacuum of 10" mercury to annular space. After establishing a stable vacuum, maintain this vacuum for 120 minutes. At the end of the test period, if the vacuum reading has not changed from the established test vacuum, the test is complete and has achieved a "pass".

  If the tank does not maintain the test vacuum, the contractor may re-test the annular space. If, after the second test the tank does not achieve a "pass", the secondary containment must be considered not liquid tight. Repairs may be made by the tank manufacturer or authorized representative per the requirements of the local CUPA.

- Product, Vent, and Stage II Vapor Piping Secondary Containment.

  An inert gas shall be used. The secondary containment shall be made airtight with either the rubber test boot or fiberglass test fitting installed at time of installation. If the test boot is missing or damaged, an approved replacement test boot or fiberglass test fitting may be installed.

  Pressurize secondary containment piping to 5 psig and allow to stabilize for 10 minutes. Maintain test pressure of 5 psig for 60 minutes. At the end of the test period, if the pressure reading has not changed from the established test pressure, the test is complete and has achieved a "pass".

  If the piping does not maintain the test pressure, the contractor may tighten clamps and fittings, if necessary, and re-test the piping. If, after the second test, the piping does not achieve a "pass", the secondary containment must be considered mot liquid tight. Repairs may be made by the piping manufacturer or authorized representative per the requirements of the local CUPA.

- Containment Sumps and Under Dispenser Containment.

  The containment sump shall be free of dirt, debris and residual petroleum product. Place test fluid in the sump a minimum of 2-inches above any penetration and above any non-contiguous portion of the sump (i.e., above UDC window, and for turbine/fill sumps, if constructed in sections, above the highest seam).

  After test fluid has stabilized for 30 minutes, the liquid level shall be measured using test equipment that has been third party tested. The test period shall consist of one 12-minute test. At the end of each 12-minute test period, the test equipment must confirm a hydrostatic change in level no greater than .002-inches in order to achieve a "pass".

  If the containment sump does not pass the test, the contractor may re-inspect the sump, tighten penetrations/clamps and fitting, and re-test. If after the second test the containment sump does not achieve a "pass", the secondary containment must be considered not liquid tight. Repairs may be made using the sump manufacturer's procedures per abiding by the requirements of the local CUPA.

- Spill Buckets

  The spill bucket shall be free of dirt, debris and residual petroleum product. Place test fluid in the spill bucket 1-inch below the highest portion of the bucket's containment.

  After test fluid has stabilized for 30 minutes, the liquid level shall be measured using test equipment that has been third party tested. The test period shall consist of one 12-minute test. At the end of each 12-minute test period, the test equipment must confirm a hydrostatic change in level no greater than .002-inches in order to achieve a "pass".

  If the spill bucket does not pass the test, the contractor may re-inspect the bucket, tighten drain valve fittings and re-test. If after the second test the spill bucket does not achieve a "pass", the spill bucket must be considered not liquid tight. Repairs may be made using the spill bucket's manufacturer's procedures per abiding by the requirements of the local CUPA.

Reporting:

A final report documenting secondary containment testing shall be submitted to the local CUPA within 30 days of the completion of the test. The report must include all data collected as part of the testing and indicate any deviation from the approved Work Plan. All reports shall be evaluated for the completeness and accuracy. Failure to submit a satisfactory report will result in test results not being accepted and may require additional testing. The Secondary Containment Testing Report Form shall be used.

Date map was drawn: 4/9/14.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

SB989 6 MONTH POST-CONSTRUCTION TEST & NOV RESPONSE

SUBJECT SITE: **SB 989 COMPLIANCE TESTING AT USA PETROLEUM STATION 4130 W. CENTURY BLVD. INGLEWOOD, CA 90304. SITE ID#: 63251.**

Dear Mr. Smith:

Enclosed, please find the 6 month post construction secondary containment testing results for the above-referenced site. These results are being sent to you per the requirement of SB 989 and in response to NOV 753632. NOV# 753632 was issued on 8/12/13 for 91 secondary product piping not being in the 6 o'clock position and for excessive sealant within the 87 Main turbine sump. Permitting was initiated by FASTECH at that time. While permit was under review, the 989 3 year test became due and was performed on 10/17/13. At that time UDC 5&6 failed testing. The repairs to UDC 5&6 were added to the existing permit application under review (permit # A754213). Permitted repairs (A754213) were completed and FASTECH returned on 11/22/13 for the retest with passing results. FASTECH returned on 4/25/14 for the 6 month post construction testing with passing results. A summary of the results is listed below.

Agency Notification Date: 3/12/14 (#9559)

Test Results Overview:

Test performed: Secondary Product Lines-87 M and 91 only	Pass☒ Fail☐
Test performed: Turbine Sumps-87M and 91 only	Pass☒ Fail☐
Test performed: Under Dispenser Containment-5&6 only	Pass☒ Fail☐

FASTECH was contracted by the underground storage tank system owner to insure that this facility complies with all of the rules and regulations that govern the operation of underground storage tanks and their related components.

If you have any questions please call the undersigned at (714) 523-0194, extension 8327.

Sincerely,

Jim Simeone	(714) 296-1509	ICC# 5272455-UT	ELD Cert # F0066-10

Site Safety Officer: Primary Tester
Qualifications:

- FASTECH currently holds business license number CA 794519 – A, Haz, C21
- Information regarding Worker's Compensation and Employers' Liability (available upon request).
- FASTECH provides HAZWOPR training for employees. FASTECH develops a site-specific Health and Safety Plan w/ Confined Space Permit for each testing location (available on-site, day of testing).

Test Equipment:

- FASTECH utilizes third party certified hardware and software for all hydrostatic tests (attached). The primary tester is certified, by the manufacturer of the equipment used (Enhanced Leak Detection Systems, Inc.), to test containment sumps, under dispenser containment, and spill buckets.
- Pressure Gauges, Ametek-U.S. Gauge, 0-15 psi pressure range, 4.5-inch diameter, glycerin filled, .5% span of scale, calibrated every six months.
- Vacuum Gauges, Ametek-U.S. Gauge, 0-30 in-hg vacuum range, 4.5-inch diameter, glycerin filled, .5% span of scale, calibrated every six months.
- Vacuum Pump, Gast Model 2Z866, 120 volt AC. Pump mounted greater than 18-inches (about 3.5-feet) above work surface (surface grade), with outlet tubing terminating outside the work zone.

Test Procedures:

- Local CUPA will be notified of testing schedule a minimum of 48-hours before the test is scheduled to begin. During testing, station's dispensing equipment may remain in operation providing no health and safety concerns arise for either the public or test crews. Testing will be performed within an exclusion zone. If, at any time, the site safety officer or local CUPA deems any situation unsafe, the site safety officer will shut the station's dispensing equipment down. Testing will only be conducted when all health and safety concerns are met.
- Sump Cleaning and Preparation.

  FASTECH will steam clean all turbine sumps, dispenser pans, and spill buckets. The water and waste generated during the cleaning process will be temporarily stored on-site in a labeled drum (dated, Haz Waste Label). The client will classify the drum, and provide transportation for drum disposal in a timely manner. Once the site has been cleaned, it will be ready for testing.

- Use of Test Fluid.

  FASTECH's testing fluid is comprised mostly of water with low concentrations (<2%) of surfactants and stabilizers. California Regulations allow for the transportation and reuse of water that is used as testing fluid. D.O.T. regulations mandate that the test fluid never contain more than 2% by volume of a hazardous material. Because of the extensive cleaning of the sumps prior to the introduction of the test fluid, the test fluid has never been determined to be hazardous.

- Tank Annular Space.

  For tanks less than 20,000 gallons capacity, apply a vacuum of 10" mercury to annular space. After establishing a stable vacuum, maintain this vacuum for 60 minutes. At the end of the test period, if the vacuum reading has not changed from the established test vacuum, the test is complete and has achieved a "pass".

  For tanks greater than or equal to 20,000 gallons capacity, apply a vacuum of 10" mercury to annular space. After establishing a stable vacuum, maintain this vacuum for 120 minutes. At the end of the test period, if the vacuum reading has not changed from the established test vacuum, the test is complete and has achieved a "pass".

  If the tank does not maintain the test vacuum, the contractor may re-test the annular space. If, after the second test the tank does not achieve a "pass", the secondary containment must be considered not liquid tight. Repairs may be made by the tank manufacturer or authorized representative per the requirements of the local CUPA.

- Product, Vent, and Stage II Vapor Piping Secondary Containment.

  An inert gas shall be used. The secondary containment shall be made airtight with either the rubber test boot or fiberglass test fitting installed at time of installation. If the test boot is missing or damaged, an approved replacement test boot or fiberglass test fitting may be installed.

  Pressurize secondary containment piping to 5 psig and allow to stabilize for 10 minutes. Maintain test pressure of 5 psig for 60 minutes. At the end of the test period, if the pressure reading has not changed from the established test pressure, the test is complete and has achieved a "pass".

  If the piping does not maintain the test pressure, the contractor may tighten clamps and fittings, if necessary, and re-test the piping. If, after the second test, the piping does not achieve a "pass", the secondary containment must be considered mot liquid tight. Repairs may be made by the piping manufacturer or authorized representative per the requirements of the local CUPA.

- Containment Sumps and Under Dispenser Containment.

  The containment sump shall be free of dirt, debris and residual petroleum product. Place test fluid in the sump a minimum of 2-inches above any penetration and above any non-contiguous portion of the sump (i.e., above UDC window, and for turbine/fill sumps, if constructed in sections, above the highest seam).

  After test fluid has stabilized for 30 minutes, the liquid level shall be measured using test equipment that has been third party tested. The test period shall consist of one 12-minute test. At the end of each 12-minute test period, the test equipment must confirm a hydrostatic change in level no greater than .002-inches in order to achieve a "pass".

  If the containment sump does not pass the test, the contractor may re-inspect the sump, tighten penetrations/clamps and fitting, and re-test. If after the second test the containment sump does not achieve a "pass", the secondary containment must be considered not liquid tight. Repairs may be made using the sump manufacturer's procedures per abiding by the requirements of the local CUPA.

- Spill Buckets

  The spill bucket shall be free of dirt, debris and residual petroleum product. Place test fluid in the spill bucket 1-inch below the highest portion of the bucket's containment.

  After test fluid has stabilized for 30 minutes, the liquid level shall be measured using test equipment that has been third party tested. The test period shall consist of one 12-minute test. At the end of each 12-minute test period, the test equipment must confirm a hydrostatic change in level no greater than .002-inches in order to achieve a "pass".

  If the spill bucket does not pass the test, the contractor may re-inspect the bucket, tighten drain valve fittings and re-test. If after the second test the spill bucket does not achieve a "pass", the spill bucket must be considered not liquid tight. Repairs may be made using the spill bucket's manufacturer's procedures per abiding by the requirements of the local CUPA.

Reporting:

A final report documenting secondary containment testing shall be submitted to the local CUPA within 30 days of the completion of the test. The report must include all data collected as part of the testing and indicate any deviation from the approved Work Plan. All reports shall be evaluated for the completeness and accuracy. Failure to submit a satisfactory report will result in test results not being accepted and may require additional testing. The Secondary Containment Testing Report Form shall be used.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous materials Underground Storage Tank (UST) facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HMUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HMUSP or UP Permit need not make a separate HMUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of **$463** must be submitted for each addendum. Where a previously unregistered UST is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted upon completion of work.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous materials Underground Storage Tank (UST) facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HMUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HMUSP or UP Permit need not make a separate HMUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous materials stored; change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of $456 must be submitted for each addendum. Where a previously unregistered UST is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted upon completion of work.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous materials Underground Storage Tank (UST) facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HMUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HMUSP or UP Permit need not make a separate HMUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of **$600** must be submitted for each addendum. Where a previously unregistered UST is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form, the Application Supplement forms, and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted within 30 days of completion.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous materials Underground Storage Tank (UST) facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HMUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HMUSP or UP Permit need not make a separate HMUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of **$600** must be submitted for each addendum. Where a previously unregistered UST is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form, the Application Supplement forms, and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted within 30 days of completion.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☒ Yes	☐ No* ☐ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g., modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☒ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e., no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? **90%**
☒ Yes*	☐ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

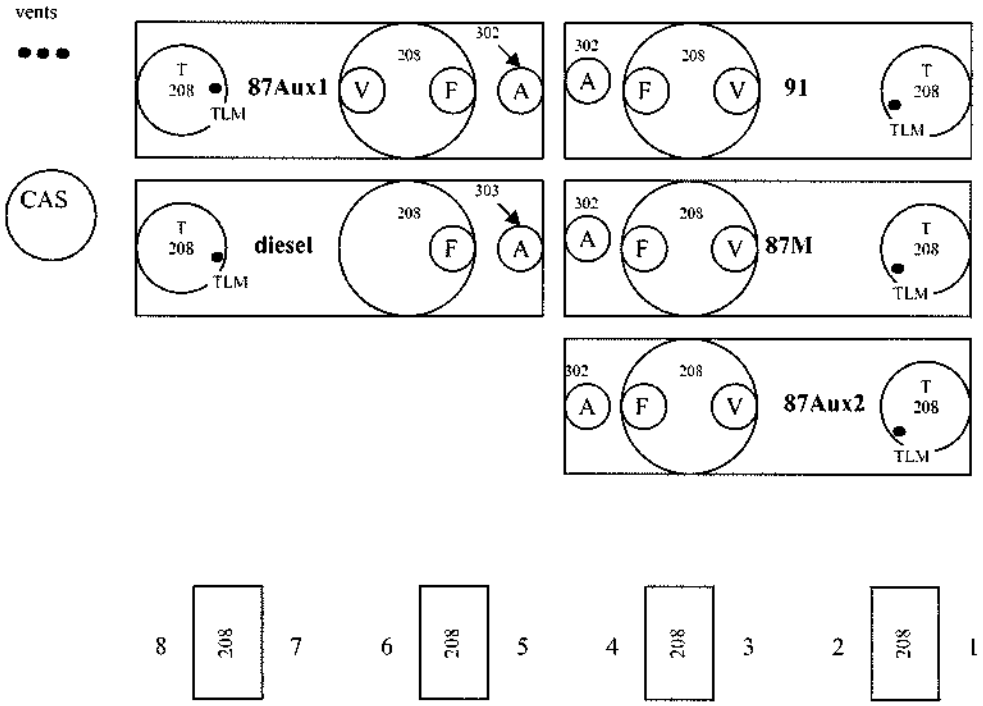
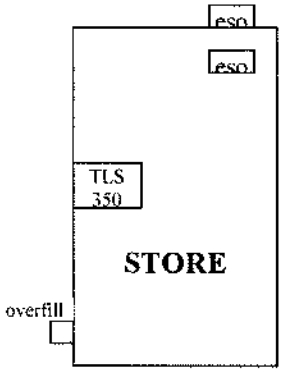
Monitoring System Certification
3801 Sepulveda Blvd., Culver City, CA





Date map was drawn: _3/10/16_.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

C. Certification

- I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; *(check all that apply)*: ☒ **System set-up** ☒ **Alarm history report**

Technician Name (print): **Luis Navarro** Signature: _____

Certification No.: **A28342** License. No.: **794519-A HAZ C21**

Testing Company Name: **Fueling & Service Tech., Inc. (FASTECH)** Phone No.: **(714) 523-0194**

Site Address: **7050 Village Drive, Suite D, Buena Park, CA 90621** Date of Testing/Servicing: **3/10/2016**

D. Results of Testing/Servicing

Software Version Installed: **333.02**

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☒ Yes	☐ No* ☐ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g., modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e., no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? **90%**
☒ Yes*	☐ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☒ Yes*	☐ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☒ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments: On fueling point #1/2, the stand alone VR-001 sensor failed to turn off dispenser. We removed and installed new VR-001 sensor. We have tested the VR-001 sensor with the dispenser shuting down. On all tank top sumps we found water, removed approx. 1 gallon in total and placed it in the 55 gallon drum on site.

F. In-Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☒ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☒ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☒ Yes	☐ No*	Was accuracy of system product level readings tested?
☒ Yes	☐ No*	Was accuracy of system water level readings tested?
☒ Yes	☐ No*	Were all probes reinstalled properly?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h.; ☐ 0.1 g.p.h ; ☐ 0.2 g.p.h.

☒ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☒ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☒ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☒ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

Date map was drawn: _3/10/16_.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Note: Pass = Leak detector reads leak and meters line.
Fail = Leak detector did not read leak.

This letter certifies that the annual leak detector tests were performed at the above referenced facility according to the equipment manufacturers procedures and limitations and the results as listed are to my knowledge true and correct. The mechanical leak test detector test pass/fail is determined using a low flow threshold trip rate of 3 gph at 10 PSI.

INSTRUCTIONS

Hazardous Substances Underground Storage Permit (HSUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HSUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous substances Underground Storage Tank (UST) facilities only. A separate HSUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HSUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HSUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HSUSP or UP Permit need not make a separate HSUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HSUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous substances stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of **$736** must be submitted for each addendum. Where a previously unregistered UST is added to an existing HSUSP, an additional application fee including maintenance fee will be charged.

F This form, the Application Supplement forms, and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program (UP) facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. A representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks, with written authorization to submit the scope of work on behalf of the tank owner, operator or UP facility permit owner or operator.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted within 30 days of completion.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

INSTRUCTIONS

Hazardous Substances Underground Storage Permit (HSUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HSUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous substances Underground Storage Tank (UST) facilities only. A separate HSUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HSUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HSUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HSUSP or UP Permit need not make a separate HSUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HSUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous substances stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of **$736** must be submitted for each addendum. Where a previously unregistered UST is added to an existing HSUSP, an additional application fee including maintenance fee will be charged.

F This form, the Application Supplement forms, and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program (UP) facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. A representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks, with written authorization to submit the scope of work on behalf of the tank owner, operator or UP facility permit owner or operator.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted within 30 days of completion.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

- FASTECH provides HAZWOPR training for employees. FASTECH develops a site-specific Health and Safety Plan w/ Confined Space Permit, and hospital route map to the nearest facility equipped to treat occupational injuries for each testing location (available on-site, day of testing).

Test Equipment:

- FASTECH utilizes third party certified hardware and software for all hydrostatic tests (attached). The primary tester is certified, by the manufacturer of the equipment used (Enhanced Leak Detection Systems, Inc.), to test containment sumps, under dispenser containment, and spill buckets.
- Pressure Gauges, Ametek-U.S. Gauge, 0-15 psi pressure range, 4.5-inch diameter, glycerin filled, .5% span of scale, calibrated every six months. Calibration documentation/certifications are available on site with the test equipment in use.
- Vacuum Gauges, Ametek-U.S. Gauge, 0-30 in-hg vacuum range, 4.5-inch diameter, glycerin filled, .5% span of scale, calibrated every six months. Calibration documentation/certifications are available on site with the test equipment in use.
- Vacuum Pump, Gast Model 2Z866, 120-volt AC. Pump mounted greater than 18-inches (about 3.5-feet) above work surface (surface grade), with outlet tubing terminating outside the work zone.

Test Procedures:

- Local CUPA will be notified of testing schedule a minimum of 48-hours before the test is scheduled to begin. During testing, station's dispensing equipment may remain in operation providing no health and safety concerns arise for either the public or test crews. Testing will be performed within an exclusion zone. If, at any time, the site safety officer or local CUPA deems any situation unsafe, the site safety officer will shut the station's dispensing equipment down. Testing will only be conducted when all health and safety concerns are met.
- **Sump Cleaning and Preparation**

  FASTECH will steam clean all turbine sumps, dispenser pans, and spill buckets. The water and waste generated during the cleaning process will be temporarily stored on-site in a labeled drum (dated, Haz Waste Label). The client will classify the drum, and provide transportation for drum disposal in a timely manner. Once the site has been cleaned, it will be ready for testing.

- **Use of Test Fluid**

  FASTECH's testing fluid is comprised mostly of water with low concentrations (<2%) of surfactants and stabilizers. California Regulations allow for the transportation and reuse of water that is used as testing fluid. D.O.T. regulations mandate that the test fluid never contain more than 2% by volume of a hazardous material. Because of the extensive cleaning of the sumps prior to the introduction of the test fluid, the test fluid has never been determined to be hazardous.

- **Tank Annular Space**

  For tanks less than 20,000-gallon capacity, apply a vacuum of 10" mercury to annular space. After establishing a stable vacuum, maintain this vacuum for 60 minutes. At the end of the test period, if the vacuum reading has not changed from the established test vacuum, the test is complete and has achieved a "pass".

  For tanks greater than or equal to 20,000-gallon capacity, apply a vacuum of 10" mercury to annular space. After establishing a stable vacuum, maintain this vacuum for 120 minutes. At the end of the test period, if the vacuum reading has not changed from the established test vacuum, the test is complete and has achieved a "pass".

  If the tank does not maintain the test vacuum, the contractor may re-test the annular space. If, after the second test the tank does not achieve a "pass", the secondary containment must be considered not liquid tight. Repairs may be made by the tank manufacturer or authorized representative and per the requirements of the local CUPA.

- **Product, Vent, and Stage II Vapor Piping Secondary Containment**

  An inert gas shall be used. The secondary containment shall be made airtight with either the rubber test boot or fiberglass test fitting installed at time of installation. If the test boot is missing or damaged, an approved replacement test boot or fiberglass test fitting may be installed.

  Pressurize secondary containment piping to 5 psig and allow to stabilize for 10 minutes. Maintain test pressure of 5 psig for 60 minutes. At the end of the test period, if the pressure reading has not changed from the established test pressure, the test is complete and has achieved a "pass".

  If the piping does not maintain the test pressure, the contractor may tighten clamps and fittings, if necessary, and re-test the piping. If, after the second test, the piping does not achieve a "pass", the secondary containment must be considered not liquid tight. Repairs may be made by the piping manufacturer or authorized representative and per the requirements of the local CUPA.

- **Containment Sumps and Under Dispenser Containment**

  The containment sump shall be free of dirt, debris and residual petroleum product. Place test fluid in the sump a minimum of 4-inches above any penetration and above any non-contiguous portion of the sump (i.e., above UDC window, and for turbine/fill sumps, if constructed in sections, above the highest seam).

  After test fluid has stabilized for 30 minutes, the liquid level shall be measured using test equipment that has been third party tested. The test period shall consist of **one 12-minute test**. At the end of the 12-minute test period, the test equipment must confirm a hydrostatic change in level no greater than .002-inches in order to achieve a "pass".

  If the containment sump does not pass the test, the contractor may re-inspect the sump, tighten penetrations/clamps and fitting, and re-test. If after the second test the containment sump does not achieve a "pass", the secondary containment must be considered not liquid tight. Repairs may be made using the sump manufacturer's procedures and per the requirements of the local CUPA.

- **Spill Buckets (if required** – some local CUPA's do not require testing of spill buckets provided they are tested annually during the annual monitoring system certification)

  Accelerated Precision "Lake" Test - where required

  The spill bucket shall be free of dirt, debris and residual petroleum product. Place test fluid in the spill bucket no more than 1.5-inch below the highest portion of the bucket's containment.

  After test fluid has stabilized for 30 minutes, the liquid level shall be measured using test equipment that has been third party tested. The test period shall consist of **one 12-minute test**. At the end of the 12-minute test period, the test equipment must confirm a hydrostatic change in level no greater than .002-inches in order to achieve a "pass".

  If the spill bucket does not pass the test, the contractor may re-inspect the bucket, tighten drain valve fittings and re-test. If after the second test the spill bucket does not achieve a "pass", the spill bucket must be considered not liquid tight. Repairs may be made using the spill bucket's manufacturer's procedures per abiding by the requirements of the local CUPA.

  One-Hour Visual "Lake" Test - where required

  For spill buckets contained in a monitored sump, some local CUPAs allow a one-hour visual "lake" test (30 minutes in some jurisdictions). Prior to testing, the drain valve is evaluated for tightness by adding liquid to empty and pre-cleaned spill bucket above the drain line and, if applicable, slightly over the collar of the spill container. If the liquid does not hold, the spill container fails the test. If determined to be tight enough, then proceed with testing.

  Place test fluid in the spill bucket no more than 1.5-inch below the highest portion of the bucket's containment. The spill container's liquid level is recorded with a tape measure. After one-hour, return to the spill container and check the liquid level for any decrease. If there is no observable drop in liquid level, the bucket has achieved a "pass"; if there is an observable drop in the liquid level, the spill container has failed the secondary containment test.

  If the spill bucket does not pass the test, the contractor may re-inspect the bucket, tighten drain valve fittings and re-test. If after the second test the spill bucket does not achieve a "pass", the spill bucket must be considered not liquid tight. Repairs may be made using the spill bucket's manufacturer's procedures per abiding by the requirements of the local CUPA.

Reporting:

A final report documenting secondary containment testing shall be submitted to the local CUPA within 30 days of the completion of the test. The report must include all data collected as part of the testing and indicate any deviation from the approved Work Plan. All reports shall be evaluated for the completeness and accuracy. Failure to submit a satisfactory report will result in test results not being accepted and may require additional testing. The Secondary Containment Testing Report Form shall be used.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

INSTRUCTIONS

Hazardous Substances Underground Storage Permit (HSUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HSUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous substances Underground Storage Tank (UST) facilities only. A separate HSUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HSUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HSUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HSUSP or UP Permit need not make a separate HSUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HSUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous substances stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of **$736** must be submitted for each addendum. Where a previously unregistered UST is added to an existing HSUSP, an additional application fee including maintenance fee will be charged.

F This form, the Application Supplement forms, and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program (UP) facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. A representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks, with written authorization to submit the scope of work on behalf of the tank owner, operator or UP facility permit owner or operator.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted within 30 days of completion.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g., modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e., no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? **90%**
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.

Date map was drawn: __2/28/17_.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

INSTRUCTIONS

Hazardous Substances Underground Storage Permit (HSUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HSUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous substances Underground Storage Tank (UST) facilities only. A separate HSUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HSUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HSUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HSUSP or UP Permit need not make a separate HSUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HSUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous substances stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of **$736** must be submitted for each addendum. Where a previously unregistered UST is added to an existing HSUSP, an additional application fee including maintenance fee will be charged.

F This form, the Application Supplement forms, and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program (UP) facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. A representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks, with written authorization to submit the scope of work on behalf of the tank owner, operator or UP facility permit owner or operator.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted within 30 days of completion.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous materials Underground Storage Tank (UST) facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HMUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HMUSP or UP Permit need not make a separate HMUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of **$456** must be submitted for each addendum. Where a previously unregistered UST is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted upon completion of work.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

TERMINATION OF COVERAGE UNDER GENERAL NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMIT AND WASTE DISCHARGE REQUIREMENTS—CITY OF INGLEWOOD, WELL NOS. 1, 2, 4 AND 6, ONE MANCHESTER BLVD., INGLEWOOD, CALIFORNIA (NPDES NO. CAG994005, CI–8560)

Dear Mr. Atwell:

The subject discharges are regulated under Order No. R4-2003-0108, General National Pollutant Discharge Elimination System and Waste Discharge Requirements for Discharges of *Groundwater from Potable Water Supply Wells to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties*, adopted by this Board on August 7, 2003.

On November 18, 2014, the State Water Resources Control Board (State Water Board) adopted the Statewide National Pollutant Discharge Elimination System (NPDES) Permit for Drinking Water Systems Discharges to Waters of the United States (Order WQ 2014-0194-DWQ, General Order No. CAG140001. The Order provides regulatory coverage for short-term or seasonal planned and emergency (unplanned) discharges resulting from a water purveyor's essential operations and maintenance activities undertaken to comply with the federal Safe Drinking Water Act, the California Health and Safety Code, and the State Water Board's Division of Drinking Water permitting requirements for providing reliable delivery of safe drinking water. The Order became effective on February 26, 2015. The Order WQ 2014-0194-DWQ requires water purveyors to file Notice of Intent (NOI) to enroll under this permit or file Notice of Non Applicability (NONA) if the water purveyor is an Municipal Separate Storm Sewer System (MS4) permittee or co-permittee, named on a State Water Board or a Regional Board issued MS4 permit that also authorizes discharges from drinking water systems, and all drinking water system discharges solely to a municipal separate storm sewer system(s) (MS4).

The City of Inglewood is one of the MS4 permittee named on Los Angeles Regional Water Quality Board issued MS4 permit that also authorizes discharges from City of Inglewood drinking water systems into its own MS4 system. On August 31, 2015, City of Inglewood filed NONA with State Water Board and requested an exemption from enrollment requirements under the Statewide Drinking Water Systems Discharge Permit. Since the City has filed the NONA, General NPDES Permit issued to city by Los Angeles Regional Water Quality Board under Order No. CAG994005, CI-8560 is hereby terminated, except for enforcement purposes.

By signing below and returning this Acceptance of Conditional Resolution and Waiver of Right to Hearing (Acceptance and Waiver) to the Los Angeles Regional Water Quality Control Board (Regional Board), City of Inglewood (Permittee) hereby accepts the "Offer to Participate in Expedited Payment Program" and waives the right to a hearing before the Regional Board to dispute the allegations of violations described in the Notice of Violation (NOV), which is attached hereto as Exhibit "A" and incorporated herein by reference.

The Permittee agrees that the NOV shall serve as a complaint pursuant to Article 2.5 of the California Water Code and that no separate complaint is required for the Regional Board to assert jurisdiction over the alleged violations through its Executive Officer. The Permittee agrees to pay the penalties required by California Water Code section 13385, in the sum of $3,000 (Expedited Payment Amount), which shall be deemed payment in full of any civil liability pursuant to Water Code sections 13385 and 13385.1 that otherwise might be assessed for the violations described in the NOV. The Permittee understands that this Acceptance and Waiver waives the Permittee's right to contest the allegations in the NOV and the amount of civil liability for such violations.

In that circumstance, the Permittee will be advised of the withdrawal and an administrative civil liability complaint may be issued and the matter may be set for a hearing before the Regional Board. Dear Permittee:

NOTICE OF VIOLATION FOR NON-SUBMITTAL OF DISCHARGER MONITORING REPORTS AND REQUIREMENT TO SUBMIT INFORMATION (NPDES NO. CAG994001, ORDER NO. 03-108, CI NO. 8560)

Regional Water Quality Control Board records indicate that you and/or your facility (Permittee) maintain a National Pollutant Discharge Elimination System (NPDES) permit issued by the Regional Board. The NPDES permit contains waste discharge requirements and a monitoring and reporting program for waste discharges from the facility. The Monitoring and Reporting Program provides for monitoring reports to be furnished at regular intervals to this Regional Board.

You are hereby notified that the Permittee is in noncompliance with waste discharge requirements established in the NPDES permit and Monitoring and Reporting Program and has violated California Water Code (CWC) §§ 13376, 13383, and 18835 as follows:

- **Failure to Submit Monitoring Reports in a Timely Manner:**

  The Permittee's Monitoring and Reporting Program requires that monitoring reports be received by the Regional Board by date certain. The Regional Board has not received your monitoring reports due during 1st and/or 2nd Quarters of 2004.

  Sections 13267, 13377 and 13383 of the CWC provide the Regional Board the authority to require a permittee to provide, under penalty of perjury, all technical and monitoring program reports that the Regional Board requires.

The Permittee is required to immediately comply with the following tasks:

1. Submit to this Regional Board all outstanding self-monitoring reports, ATTN: Information Technology Unit, including:

a. all monitoring and lab data as required by the Permittee's Monitoring and Reporting Program;
b. a statement of "no discharge" for each reporting period, if applicable; and
c. a signed perjury declaration statement for each report.

2. Submit each monitoring report or statement of "no discharge" as a separate signed document. Include a perjury declaration with each document.

3. Include a listing of all violations observed during the reporting period in a cover letter.

4. Submit to this Regional Board a letter requesting termination of the permit if the permittee is no longer discharging wastes from the facility, ATTN: NPDES SECTION and cc: Enforcement Unit.

5. Continue to submit future monitoring reports or statements of "no discharge", ATTN: Information Technology Unit, until you have received a letter of termination from the Regional Board.

Failure to submit the required reports may result in the imposition of civil liability penalties by the Regional Board of up to $10,000 per day in which the violation occurs (CWC § 13385(c)(1)) and imposition of a mandatory minimum penalty of $3,000 for each complete period of 30 days following the deadline for submitting the report. These civil liabilities may be assessed by the Regional Board for failure to comply, beginning with the date that the violations first occurred, and without further warning.

Please contact Lala Kabadaian at (213) 620-6370 or Hugh Marley at (213) 620-6375 if you have any questions regarding the matter.

SUBJECT: CITY OF INGLEWOOD – Water Well No. 6
NPDES PERMIT NO. CAG994005, CI NO. 8560
Request for Permit Amendment

Dear Mr. Anijielo:

I would like to amend the referenced NPDES Permit to include the discharge of groundwater from City owned Water Wells Numbers 1, 2, and 4.

Enclosed please find a location map, well site locations with latitude/longitude information for the well sites and respective discharge points, and water quality analysis.

The estimated pump rates and frequency of discharge follows:

Well #	Pump Rate	Discharge Frequency	Annual Discharge
1	800 gpm	every two months	28,800 gallons
2	700 gpm	every two months	25,200 gallons
4	1,200 gpm	every two months	43,200 gallons

In addition to the proposed discharges, the City is in the process of awarding a contract to rehabilitate Water Well #4, which requires the discharge of groundwater to Dominguez Channel in March 2006 for a period of 1.5 weeks at varying flows ranging from 500 to 2000 gallons per minute (gpm).

These water wells are currently permitted under NPDES Permit CAG994002, CI 8336 indicating that the discharge of groundwater drains to Ballona Creek. After reviewing our records, staff determined that these water wells drain to Dominguez Channel.

My goal is to consolidate the discharge of groundwater associated with the operations, sampling, and re-development of City owned water wells into a single permit since the combined discharge of groundwater drains to the same outfall.

Should you have any questions, please call me at (310) 412-5383.

Sincerely,

Eric Escobar
Acting Water Utilities Superintendent-Associate Engineer

This was followed by soil vapor extraction. Soil vapor extraction removed approximately 6, 523 pounds of hydrocarbons from the subsurface. Though the groundwater was not remediated, contaminant concentrations in the groundwater have declined steadily. The remaining concentrations are low. The site is recommended for closure as a low risk site.

SITE QUARTERLY REPORT
October 1 - December 31, 1997

This report summarizes the general environmental activities and the status of the site for this quarter.

BACKGROUND

The site has been under assessment since 1988 when borings were installed as a part of a site assessment. Since that time, the site has been extensively drilled and sampled during subsequent phases of site assessments. The site is currently a vacant fenced lot.

The underground storage tanks (USTs), dispenser islands (DIs), product piping and other equipment were removed from the site in December 1992. Based upon all the soil sampling at the site, the only area of soil contamination at the site was apparently limited to a relatively small area beneath the DIs. This contamination apparently extended to approximately 25 feet below ground surface (bgs). In March of 1993, most of the contaminated soil (approximately 1,100 cubic yards) was excavated to a depth of 28 feet bgs and hauled from the site. Excavation was terminated at 28 feet bgs because of sidewall cave-in concerns.

Samples collected from the bottom of the excavation pit during soil removal indicated that a relatively small amount of soil with possibly up to 2,300 ppm TPH remained beneath the middle and southern DIs at depths between approximately 28 to 35 (estimated maximum) feet bgs.

METHOD OF CLEANUP

1,100 cubic yards of soil were excavated and hauled from the site in March, 1993, as described above. A workplan for verification soil sampling/site closure (dated 6/7/93) was submitted by VET. The drilling and sampling was conducted by VET in August 1993. Results from the drilling and a meeting with Los Angeles County Department of Public Works (DPW) staff on October 13, 1993 indicated that further remediation would be necessary. VET submitted a workplan for vapor extraction remediation dated October 26, 1993.

Based upon the approved workplan, VET installed and operated a vapor extraction system (VES) at the site which began continuous operation on January 10, 1994. Through May 31, 1994 the VES has extracted an estimated total of 6,523 pounds (988 gallons equivalent) of gasoline as vapor. Vapor extraction was suspended at the site because of very low vapor inlet concentrations. Refer to previous quarterly VES operation reports for details.

VET submitted Verification Boring, Soil Remediation Closure, and Groundwater Well Installation Report dated October 5, 1994. Received review letter from LOP dated November 21, 1994.

Received letter dated 1/26/95 from the LADPW stating that the soil at the site requires no further action, based upon the results of the 10/5/94 report. But the groundwater requires further assessment. Submitted workplan for groundwater monitoring dated 2/14/95. Received letter dated 3/20/95 from the LADPW stating that a downgradient well needs to be installed at the site. A workplan dated 5/5/94 to install one down gradient well was submitted by VET. Workplan approval was provided by the LADPW in their letter dated 5/25/95.

All vapor extraction wells and groundwater monitoring well MW-1 were destroyed at the site on 6/22/95 by VET (see Well Destruction Report, 7/13/95).

An offsite groundwater monitoring well was required by the former LA County Department of Public Works LOP. The well was tentatively proposed for the McDonald's restaurant to the north of the site. Plans are on hold for well installation at the McDonalds.

VET submitted low-risk site closure request package to the LARWQCB in October 1996. The LARWQCB closed the site per their letter dated 10/22/96.

DISPOSAL THIS PERIOD

There was no disposal of waste this period.

PROGRESS THIS PERIOD

1. Submitted low-risk site closure request package to LARWQCB.

2. Received site closure letter from LARWQCB dated 10/22/96.

3. Destroyed all three groundwater monitoring wells beginning on 12/9/96.

PLANNED PROGRESS NEXT PERIOD

1. Submit Well Destruction Report.

UNDERGROUND STORAGE TANKS (UST) PROGRAM – CASE CLOSURE
ARCO #9645 / FORMER THRIFTY OIL #251 (PRIORITY C-1)
4130 WEST CENTURY BOULEVARD, INGLEWOOD, CA (CASE NO. R-25030)

Dear Mr. Panaitescu:

This letter confirms the completion of a site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivision (a) and (b) of section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of section 25296.10 of the Health and Safety Code.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

☐ Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or

☐ Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period,

or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

If you have any questions concerning this matter, please contact Ms. Maryam Taidy at (213) 576-6741 or mtaidy@waterboards.ca.gov.

Sincerely,

Samuel Unger, P.E.

VIII. COMMENTS AND JUSTIFICATION FOR RECOMMENDED ACTION

Site History:

The site is an active gasoline station located on the southeast corner of Freeman Avenue and Century Boulevard in Inglewood, CA. The site consists of two 20,000-gallon gasoline underground storage tanks (USTs), two dispensing islands, product piping and a station building.

This case was transferred to the Regional Board by the Los Angeles County Department of Public Works on May 11, 2000.

Data Summary:

In June 1997, a baseline site assessment was performed. Ten soil borings (TDD-1 through TDD-10) were drilled to 55 feet bgs near the USTs and dispensers. In addition eight soil samples (DS-1 through DS-8) were collected from beneath the dispensers. Maximum concentrations of 11,000 mg/kg TPH_G, 1.9 mg/kg benzene, and 18.0 mg/kg MTBE were detected in the soil samples (See Table 1).

In June 1998, one 6,000-gallon, one 8,000-gallon, one 10,000-gallon, and one 15,000-gallon gasoline USTs were removed from the site and were replaced with two 20,000-gallon gasoline USTs. A total of 66 soil samples (Tk-1A, TK-1B, TK-2A, TK-2B, TK-3A, TK-3B, TK-4A, TK-4B, TK-4C, TP-1 through TP-3, Pl-1 through PL-4, and SP-1 through SP-50) were collected from beneath the USTs, product lines, dispensers and soil piles. The maximum depth sampled was 16 feet bgs. Maximum concentrations of 21,000 mg/kg TPH_G, 56 mg/kg benzene, and 67 mg/kg MTBE were detected in the soil samples (See Table 1).

In June 2012, three soil borings (BIB1 through BIB3) were drilled to a maximum depth of 25 feet bgs. Fuel constituents were ND in the soil samples collected from the borings.

Remediation:

In 1998, during UST removal activities soil excavation was conducted and approximately 997 tons of impacted soil were removed from the site and disposed of.

Lithology:

The lithology of the site generally consisted of sand, silt and clay to 55 feet bgs, maximum depth investigated.

Based on the above site assessment data, further soil and/or groundwater investigation is not warranted.

LOW THREAT UST CLOSURE POLICY CRITERIA EVALUATION:

General Criteria:

The site meets all General Criteria of the Low Threat Policy.

A. The water purveyor within the area of the site is the Golden State Water Company;
B. The site is an active gasoline service station (petroleum only);
C. The leaking USTs were removed in June 1997;
D. Free product did not encounter on-site;
E. A site conceptual model was submitted;
F. Secondary source remediation consisted of excavation of approximately 997 tons of impacted soil.
G. Soil was tested for MTBE;
H. The site does not create a nuisance.

Site Name/Address: Arco #9645 / Former Thrifty Oil #251 4130 W Century Boulevard, Inglewood, CA 90304	Staff Initial: MT

Groundwater:
This is a soil only case.

Vapor Intrusion To Indoor Air:
The vapor intrusion section of the Low Threat Policy is not applicable.

A. The site is an active gasoline service station.

Direct Contact and Outdoor Air Exposure
Maximum concentrations of petroleum constituents in soil are less than those listed in the Table1 below, of the policy, for the specified depth below ground surface. Therefore the residual constituents in the soil will have no significant risk of adversely affecting human health.

Chemical	Site Concentrations	Residential		Commercial/Industrial	
		0 to 5 ft bgs mg/kg	Volitalization to outdoor air (0 to 5 ft bgs) mg/kg	0 to 5 ft bgs mg/kg	Volitalization to outdoor air (0 to 5 ft bgs) mg/kg
Benzene	ND	1.9	2.8	8.2	12
Ethylbenzene	ND	21	32	89	134
Naphthalene	NA	9.7	9.7	45	45
PAH	NA	0.063	NA	0.68	NA

FACTORS SUPPORTING LOW RISK CLOSURE:

1. Free product has never been encountered at the site.
2. The extent of the soil and grounwater contamination has been adequately defined.
3. The residual contamination would not cause significant human health and/or environmental risks via major pathways, such as direct contact, drinking water ingestion, groundwater plume migration, and vapor intrusion.

IX. MTBE FATE & TRANSPORT PLUME LENGTH MODELING ANALYSIS

The MTBE Plume Length Model is not applicable because groundwater was not encountered.

- TPH = Total petroleum hydrocarbons.
- BTEX = benzene, toluene, ethylbenzene, and xylenes, respectively. MTBE = methyl tertiary butyl ether.
- Respective MCLs (ppm): B = 0.001, T = 0.15, E = 0.7, X = 1.75, MTBE = 0.013.
- BTEX screening concentrations determined per the attenuation factor method as described in RWQCB Guidance for VOC Impacted Sites (March 1996), with a natural degradation factor of 11 for BTEX and of 3 for MTBE. Table values can be linearly interpolated between distances above groundwater and are proportional to fraction of each lithological thickness.
- Values in Table 4-1 are for soils above drinking water aquifers. All groundwater is considered as drinking water resources unless exempted by one of the criteria as defined under SWRCB Resolution 88-63 (TDS>3000 mg/L, or deliverability <200 gal/day, or existing contamination that cannot be reasonably treated). Regional Board staff will make a determination of potential water use at a particular site considering water quality objectives and beneficial uses. For non-drinking water aquifers, regardless of depth, TPH for ">150 feet" category in the table should be used;
- Distance above groundwater must be measured from the highest anticipated water level. Lithology is based on the USCS scale.
- In areas of naturally-occurring hydrocarbons, Regional Board staff will make determinations on TPH levels.

4130 WEST CENTURY BOULEVARD, INGLEWOOD, CA (CASE NO. R-25030)

Dear Mr. Panaitescu and Mr. Chang:

The California Regional Water Quality Control Board, Los Angeles Region is the public agency with primary responsibility for protection of ground and surface water for all beneficial uses within Los Angeles and Ventura counties. As such, we are the lead agency for overseeing corrective actions and cleanup of releases from leaking underground storage tank systems at the subject facility (the Site). We have completed our review and evaluation of the information provided to this agency for the underground storage tank release(s) at the Site and determined that this case meets the Regional Board's low threat criteria for a case closure.

Pursuant to California Health and Safety Code Section 25296.20(a) and Division 7 of the Porter Cologne Water Quality Control Act, and State Water Resources Control Board Resolution 2012-0016, the Regional Board is required to notify any and all interested parties (water authority or district, building permit agencies, owners and occupants of the properties impacted by the petroleum release, or adjacent properties) as defined in Resolution 2012-0016 prior to considering corrective actions or granting case closure. You are identified as a fee titleholder (Thrifty Oil Company) and the interested water company (Golden State Water Company), respectively. We hereby notify you of our plan to close this low threat underground storage tank case. In order to expedite the review and approval process, we request that you provide us with any comments on the proposed plan to close this case in writing by **June 21, 2013**. If you do not wish to participate, you need not respond. If we do not receive a written response by **June 21, 2013**, the case will be closed and you will be notified of our decision.

If you wish to obtain additional information regarding this site, you may log on http://geotracker.waterboards.ca.gov/ for the subject site address, or arrange to review the case file for this site in our office by mailing in a written request to the address appearing in the bottom of this letter or by emailing a written request to Rb4-Publicrecords@waterboards.ca.gov. Regional Board staff will then contact you and arrange a time and date to visit the Regional Board office and review the files requested.

If you have any questions on this matter, please call Ms. Maryam Taidy at (213) 576-6741or mtaidy@waterboards.ca.gov.

1.0 INTRODUCTION

SECOR International, Inc. (SECOR) was contracted by ARCO Products Company (ARCO) to perform soil sampling during underground storage tank (UST) removal activities at former Thrifty Oil Company (Thrifty) Service Station No. 251, located at 4130 West Century Boulevard in Inglewood, California (the Site). The purpose of the soil sampling was to fulfill local agency requirements. The services provided by SECOR included the following:

- Air monitoring, soil segregation and soil management per ARCO's South Coast Air Quality Management District (SCAQMD) Rule 1166 Contaminated Soil Mitigation Plan; and

- Collecting soil samples following removal of the USTs, product piping, and dispensers as directed by the City of Inglewood Department of Building and Safety and Fire Prevention (IDBSFP).

2.0 SITE INFORMATION

This section summarizes the pertinent information concerning the Site location, Site geology and hydrology.

Site Location: Thrifty Oil Company Service Station No. 251 is located in the City of Inglewood at an elevation of approximately 87 feet above mean sea level (msl). Local topography slopes to the south at approximately 0.008 feet per foot (USGS, 1964).

Site Geology: Strata underlying the site consists of marine and continental gravel, sand, sandy silt, silt, and clay of the Lakewood Formation (CDWR, 1961). Soil types encountered during the subsurface investigation consisted of two primary soil horizons: 1) sand, silty sand, and silt from near surface grade to approximately 19 feet below ground surface (bgs); and 2) interbedded sand, silt, clayey silt, and clay from approximately 19 to 55 feet bgs (maximum depth explored).

Local Hydrology: Based on results of recent subsurface investigations, groundwater was not encountered during drilling to a maximum depth of 55 feet bgs (SECOR, 1997).

3.0 AIR MONITORING

SECOR conducted air monitoring in accordance with ARCO's South Coast Air Quality Management District (SCAQMD) Rule 1166 Contaminated Soil Mitigation Plan. This section summarizes the pertinent information related to the Rule 1166 plan requirements. A copy of the SCAQMD Rule 1166 air monitoring, equipment calibration logs, and soil disposition/treatment plan is included in Appendix A.

Permittee:	ARCO Products Company - Application Number 258945
Instrument(s):	Mini Rae PID, Model No. PGM-76 Heath Tech FID, Model DP-OVD
Calibration Gas:	100 ppmv Hexane
Reference Numbers:	Original Reference No. EE98-0097 Revised Reference No. EE98-0276 (5/29/98)
Records:	Air monitoring records were submitted to the SCAQMD on June 12, 1998

4.0 EXCAVATED SOIL

Excavation activities were performed by the Advanced Petroleum Corporation (Advanced) of Rancho Cucamonga, California. The excavated soil was segregated based on volatile organic compound (VOC) concentrations measured using the monitoring equipment mentioned in Section 3.0. All excavated soil was segregated and stockpiled. To characterize the stockpiled soil, samples were collected from each stockpile and submitted to State-Certified Del Mar Analytical, in Van Nuys, California, for chemical analysis.

This section summarizes the pertinent information concerning the excavated soil, waste characterization, and final disposition of the excavated soil. For the purposes of this report, soil will be labeled "clean" and "impacted" based on results of chemical analysis. Stockpiles for which analytical results of soil samples are reported as non-detectable are considered "clean," and are transported and disposed by ARCO. Stockpiles for which results of soil samples are reported to have detectable concentrations are considered "impacted," and are transported and disposed by Thrifty. Analytical results are presented in Table 1. Soil stockpile location maps are included in Appendix B. Soil disposal documentation is presented in Appendix C.

Approximate Volume of "Clean" Stockpiled Soil:	234 cubic yards/ 351 tons
Number of "Clean" Stockpile Samples:	9
"Clean" Stockpile Sample Names:	SP-12 through SP-14, SP-43 through SP-46, SP-49, and SP-50
Final Disposition of "Clean" Soil:	La Puente (Rose Hills) Landfill, 2800 Workman Mill Road, La Puente California
Approximate Volume of Stockpiled "Impacted" Soil:	665 cubic yards/ 997 tons
Number of "Impacted" Stockpile Samples:	41
"Impacted" Stockpile Sample Names:	SP-1 through SP-11, SP-15 through SP-42, SP-47, and SP-48
Final Disposition of "Impacted" Soil:	American Remedial Technologies (ART), 2680 Seminole Avenue, Lynwood, California

5.0 TANK AND PIPING REMOVAL

Advanced was contracted by ARCO to obtain all necessary tank removal permits, make all required preliminary notifications, and clean, remove, transport, and dispose of the removed USTs. This section summarizes the pertinent information concerning the UST removal activities:

Removed USTs and Associated Piping: On June 2, 1998, one 6,000-gallon, one 8,000-gallon, one 10,000- gallon, single-walled steel, and one 15,000-gallon Plasteel (fiberglass coated single-walled steel) gasoline USTs and their associated product piping were removed from the Site. Product piping was comprised of both single-walled steel and fiberglass. Vapor return piping was comprised of fiberglass.

Installed USTs: On June 8, 1998, two 20,000-gallon double-walled fiberglass reinforced plastic (FRP) USTs were installed at the site. The new UST and piping locations are presented in Figure 2.

6.0 SOIL SAMPLING

SECOR collected soil samples under the direction of Mr. Burman Timberlake, City of Inglewood, Building and Safety and Fire Prevention. Field activities were conducted in accordance with the procedures for soil sampling included in Appendix F. The tankpit, product line, and dispenser sample locations are indicated on Figure 1. This section summarizes the results of the soil sampling activities.

7.0 ANALYTICAL RESULTS

All soil samples were relinquished to Del Mar Analytical of Van Nuys, California (Del Mar). Del Mar is an ARCO-contracted and California Department of Health Services certified laboratory. SECOR and Del Mar adhered to strict chain-of-custody procedures from sample collection to sample analysis. All soil samples were analyzed for the following analytes and in accordance with the appropriate Environmental Protection Agency (EPA) method:

- Total petroleum hydrocarbons as gasoline (TPHg) by EPA Method 8015 Modified;
- Benzene, toluene, ethylbenzene, and xylenes (BTEX) by EPA Method 8020;
- Methyl *tert*-butyl ether (MTBE) by EPA Method 8020 with select samples confirmed for MTBE by EPA Method 8260; and
- Select samples were also analyzed for total lead by EPA Method 6010

Soil sample analytical results are summarized in Table 1. Copies of the chain-of-custody documentation and laboratory analytical reports are included in Appendix G.

8.0 DISCUSSION OF RESULTS

Based on analytical results (Table 1), the following areas as defined by the indicated soil samples are impacted by petroleum hydrocarbons. The impacted soil and other subsurface conditions are the result of operations at former Thrifty Service Station No. 251.

- UST at the former UST basin (TK-1B-14', TK-2A-14', TK-2B-15', TK-3A-16', TK-3B-15', TK-4A-15', TP-2-16', TP-3-16');
- Product piping at the northern pump island (PL-1-3', PL-3-3', PL-4-3'); and
- Fuel dispensers at the eastern dispenser island (DS-5-3' and DS-6-3')

A total of 665 cubic yards/ 997 tons of "impacted" soil was generated during the tank removal and replacement activities and transported off-site to ART for recycling. Approximately 234 cubic yards/ 351 tons of "clean" soil was generated and transported off-site to the La Puente Landfill.

VIII. COMMENTS AND JUSTIFICATION FOR RECOMMENDED ACTION:

Two tanks were removed in 1993. Soil contamination was limited in disperser area. Soil concentratoin decreased below 30 ft. and ND at 50 ft. Due to limited impacted area and low concentration in soil, no soil cleanup is warranted. Groundwater is relatively deep (~110 ft.). Domestic water well is located in 3/4 miles from the site. No MTBE data were available since this is an old case. This case has been through Level 3 MTBE review and determined to be a low risk soil-only case.

Recommend for closure. 4/8/97

6.0 CONCLUSIONS

Chemical analyses of the soil samples indicated that the only area in which some leakage had occurred was beneath the south dispenser (P1S) at a depth of two (2) feet.

7.0 RECOMMENDATIONS

Additional soil samples should be collected and analyzed in the area of the south dispenser to determine the vertical and the horizontal extent of the contamination.

PRE-APPROVAL OF CORRECTIVE ACTION COSTS, CLAIM NO. 9347
SITE ADDRESS: 10411 Prairie Avenue, Lennox, CA 90304

I have reviewed your request, received on December 17, 1997, for cost pre-approval of corrective action costs; I will place these documents in your file for future reference.

With the following provisions, the total cost pre-approved as eligible for reimbursement for completing the proposed corrective action work directed by the RWQCB, Region 4 (Regional Board) in their April 25, 1997 letter, is **$5,859.00** including:

- Task 1 - Abandonment of Three Groundwater Monitoring Wells (85ft. per well): $5,859.00

Be aware that this pre-approval does not constitute a decision on reimbursement: ***all reasonable and necessary*** *corrective action costs for work* ***directed and approved by the Regional Board*** *will be eligible for reimbursement per the terms of your Letter of Commitment at costs consistent with those pre-approved in this letter.*

- The actual costs and scope of work performed must be consistent with the pre-approval for it to remain valid.
- The work products must be acceptable to the Regional Board.
- If a different scope of work becomes necessary, then you must request pre-approval of costs on the new scope of work.
- Please be aware that you will be entering into a private contract: the State of California cannot compel you to sign any specific contract or use any specific contractor. This letter **pre-approves the costs** as presented in HVN Environmental Service Co Inc. proposal dated December 11, 1997 for conducting the corrective action work approved by the Regional Board.

Please remember that it is still necessary to submit the actual costs of the work as explained in the Reimbursement Request Instructions to confirm that the costs are consistent with this pre-approval before you will be reimbursed. ***To make this easier, insure that your consultant prepares his invoices to match the format of the original estimate, and provides reasonable explanations for any changes made in the scope of work or increases in the costs.*** *When the invoices are submitted you must include copies of all:*

- *subcontractor invoices,*
- *technical reports, when available, and*
- *applicable correspondence from the Regional Board.*

Please call if you have any questions; I can be reached at (916) 227-2505.

Work Order Narrative

Work Order: 17-10-0801 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/11/17. They were assigned to Work Order 17-10-0801.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-10-0801 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Work Order Narrative

Work Order: 17-10-1043 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/13/17. They were assigned to Work Order 17-10-1043.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-10-1043 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Work Order Narrative

Work Order: 17-10-1043 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/13/17. They were assigned to Work Order 17-10-1043.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-10-1043 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Inglewood Basketball and Entertainment Center Project Soil and Soil Gas Investigations

28 June 2019

MEMORANDUM

To: Chris Holmquist (Murphy's Bowl LLC)

From: James Yoon, P.E. (EKI Environment & Water, Inc.)

Subject: Inglewood Basketball and Entertainment Center Project Soil and Soil Gas Investigations
(EKI B71091.00)

In accordance with the Agreement between EKI Environment & Water, Inc. (formerly known as Erler & Kalinowski, Inc.; "EKI") and Murphy's Bowl LLC ("MB"), dated 31 August 2017 and Change Order No. 1 to the Agreement dated 19 February 2019, EKI has prepared this Technical Memorandum summarizing environmental sampling activities conducted on portions of the Inglewood Basketball and Entertainment Center Project ("IBEC Project") site located in Inglewood, California (the "subject property"). Soil and soil gas samples were collected by EKI in two portions of the subject property: the Western Parking Structure area comprising 27 parcels and approximately 5.54 acres and the Well Site area comprising two parcels and approximately 0.70 acres. The location of the subject property is shown on Figure 1.

The Western Parking Structure and Well Site portions of the subject property are occupied by vacant land owned by the City of Inglewood or City of Inglewood Successor Agency.

The conclusions and recommendations presented herein are our professional opinion and are not a warranty or guaranty as to the presence, absence, or extent of contamination at the subject property or of releases from or near the subject property. The facts presented herein are based on available information obtained by EKI staff and represent existing conditions at the subject property at the time the information was collected.

1 SCOPE OF SERVICES

EKI conducted limited soil and soil gas sampling in the Western Parking Structure and Well Site portions of the subject property.

1.1 Collection of Soil Samples from Boreholes

On 8 March 2019, EKI advanced a total of eight boreholes on the subject property using a hand auger to collect soil samples in two portions of the Western Parking Structure area and the Well Site area; the areas are labeled PC-10 through PC-12 as shown on Figure 2. Generally, for each

borehole, soil samples were collected from depths of 0 to 1 foot bgs and 4 to 5 feet bgs. For each sampling area, all soil samples collected from 0 to 1 foot bgs from the boreholes were field-composited into a single multi-increment soil sample, and all soil samples collected from 4 to 5 feet bgs were field-composited into a single multi-increment soil sample. In sampling region PC-10, a deeper soil sample was collected from 9 to 5 feet bgs at borehole PC-10-3, located in an area where a print shop was may have been located based on historical records reviewed by EKI during a prior investigation. The soil samples were placed in pre-cleaned glass jars provided by the analytical laboratory, labeled with a unique identification number, and placed in a chilled cooler for transport to Eurofins Calscience, Inc. in Garden Grove, California ("Calscience"). Calscience is a State-certified analytical laboratory. The analytical results for the soil samples are presented in Section 1.2 below.

1.2 Shallow Soil Screening using XRF

In addition to samples collected from boreholes, EKI collected surface soil samples from 25 locations within the sampling areas for field screening using a field-portable x-ray fluorescence spectrometer ("FPXRF"). These samples were analyzed using United States Environmental Protection Agency ("U.S. EPA") Method 6200, which included calibration testing of the FPXRF during the sampling event and confirmatory analyses of seven samples by an analytical laboratory as part of quality assurance/quality control ("QA/QC") measures; these QA/QC results are presented in Tables 4 and 5.

1.3 Collection of Soil Gas Sample

A soil vapor sample was collected from borehole PC-10SV-1 in the Western Parking Structure area (PC-10) at a depth of 5 feet bgs following collection of the soil sample at this depth. A temporary soil vapor probe ("SVP") was constructed within the borehole as described below.

The SVP was constructed in general accordance with the California-Environmental Protection Agency's ("Cal-EPA") July 2015 guidance entitled Advisory – Active Soil Gas Investigations. The SVP was constructed using a 6-inch long, ½-inch diameter stainless-steel wire mesh screen attached to a length of continuous ¼-inch diameter flexible fluorinated ethylene propylene ("FEP") tubing, sealed at the top using a stainless-steel laboratory-grade plug valve with Swagelok-type compression fittings. The SVP screen was suspended using a guide pipe at the approximate center of the filter pack interval, between approximately 5 and 5.5 feet bgs. The borehole annular space around the SVP screen was backfilled with a 1.5-foot vertical filter pack of prewashed silica sand, poured slowly into the borehole. After placement of the filter pack, the guide pipe will be slowly removed from the borehole while maintaining the position and depth of the SVP screen. Above the filter pack, the SVP borehole was backfilled with a six-inch layer of dry medium granular bentonite, per Cal-EPA guidance. Above the dry granular bentonite, the borehole was sealed to existing grade with medium bentonite chips, emplaced and hydrated in approximately 6-inch lifts. Bentonite at the top of the seal was covered with approximately 6 to 8 inches of sand.

1.3.1 SVP Sampling Procedures

Consistent with current Cal-EPA guidance for soil gas wells, the soil gas sample was collected four days after installation of the SVP. The soil gas sample was collected in a laboratory-provided, pre-cleaned (batch certified) and pre-evacuated 1-liter SUMMA-passivated stainless-steel sample canister equipped with a flow controller set at a flow rate of approximately 100 milliliters per minute ("mL/min").

A shroud was maintained around the SVP during sample collection to allow a controlled atmosphere containing the leak-detection compound, 1,1-difluoroethate or "DFA," to be maintained around the SVP and sampling apparatus. The air inside the shroud will be sampled to determine the concentration of DFA around the sampling apparatus.

Immediately before sampling, the SVP will be purged at least three times the volume of the tubing and sand pack. After purging, the SVP, a SUMMA canister and flow controller will be attached to the SVP and a static vacuum check will be conducted. If the sample train holds vacuum, the air inside the shroud will be spiked with DFA to screen for leaks in the sampling system, if any. Soil vapor sampling then will be initiated by opening the SUMMA canister valve.

The sampling canister will be allowed to fill until a small residual vacuum remains, at which point the valve will be closed. The air inside the shroud will be sampled using a separate SUMMA canister and analyzed for DFA, so that the concentration ratio between shroud sample and SVP sample can be used to estimate dilution, in the event of leakage, although no significant leaks are anticipated.

The collected soil vapor and leak-check sample will be labeled with unique identification numbers, the date and time of collection, and other pertinent information, and prepared for shipment to Eurofins laboratory under chain-of-custody procedures.

1.3.2 Abandonment of SVP

Following completion of soil gas sampling, the SVP will be decommissioned by excavating the borehole to approximately one foot below grade and removing the tubing from the SVP. Once the tubing has been removed, the borehole will be grouted to the surface.

1.4 Analytical Results for Soil Samples

The soil samples collected from boreholes as shown on Figure 2 were analyzed by Calscience for the following constituents:

- Method 8015BM for gasoline-range TPH with U.S. EPA Method 5035 preparation;
- U.S. EPA Method 8015BM with silica gel extract for diesel- and oil-range TPH;

- U.S. EPA Method 8260B for VOCs and fuel oxygenates, with U.S. EPA Method 5035 preparation;
- U.S. EPA Method 6020 for California Title 22 metals and mercury;
- U.S. EPA Method 7199 for hexavalent chromium;
- U.S. EPA Method 8270C SIM for PAHs with U.S. EPA Method 3540C preparation;
- U.S. EPA Method 8082 for PCBs with U.S. EPA Method 3540C preparation;
- U.S. EPA Method 8081A for organochlorine pesticides with U.S. EPA Method 3545 preparation;
- U.S. EPA Method 8141A for organophosphorus pesticides with U.S. EPA Method 3545 preparation;
- U.S. EPA Method 8151A for chlorinated herbicides;
- ASTM Method D-2216 for moisture content.

The analytical results were compared to the U.S. EPA Regional Screening Levels ("RSLs") for residential and commercial/industrial land use (U.S. EPA, 2019), as modified by DTSC Human and Ecological Risk Office ("HERO") Note 3 (DTSC, 2019). These screening levels are referred to as the "HERO Note 3-modified RSLs".

The laboratory analytical results for TPH in soil samples are presented in Table 1. No gasoline-, diesel-, or motor oil-range TPH was detected above the HERO Note 3-modified RSLs for residential or commercial/industrial land use in any of the soil samples collected during this investigation.

The laboratory analytical results for detected organochlorine pesticides are presented in Table 1. One compound was detected at a concentration above the HERO Note 3-modified RSL for residential land use: chlordane in the sample collected from 0 to 1 foot bgs in area PC-12, at 990 micrograms per kilogram ("ug/kg"). The residential land use screening level for chlordane is 440 ug/kg. The other organochlorine pesticides detected during the investigation are 4,4'-DDE [1,1'-(2,2-dichloroethene-1,1-diyl)bis(4-chlorobenzene)]; 4,4'-DDT [1,1'-(2,2,2-trichloroethane-1,1-diyl)bis(4-chlorobenzene)]; and heptachlor epoxide; these compounds were all detected at concentrations well below the respective residential land use screening levels.

The laboratory analytical results for metals (including hexavalent chromium and mercury) in soil samples are presented in Table 2. Hexavalent chromium was detected above the HERO Note 3-modified RSLs for residential land use and below the HERO Note 3-modified RSL for commercial/industrial land use in six of the seven soil samples at concentrations from 0.340 to 0.600 mg/kg; the residential land use screening level is 0.30 mg/kg. The laboratory reported that hexavalent chromium was also present in the method blank associated with these samples. Thallium was detected in the sample collected from 0 to 1 foot bgs in area PC-11 at 0.858 mg/kg, just above the residential land use screening level of 0.78 mg/kg. Arsenic was not

detected above the DTSC regional background arsenic concentration of 12 mg/kg (DTSC, 2008) in any of the soil samples analyzed by Calscience, and no other metals were detected above the respective HERO Note 3-modified RSLs for residential land use.

The FPXRF analytical results for arsenic and lead in soil samples are presented in Table 3. Arsenic was not detected above the DTSC regional background arsenic concentration in any of the surface samples analyzed using FPXRF. Lead was detected above the HERO Note 3-modified RSL for residential land use of 80 mg/kg in 2 of the 25 soil samples analyzed using FPXRF, at concentrations of 89 and 126 mg/kg in two sample locations in PC-11. Lead was not detected above the HERO Note 3-modified RSL for commercial/industrial land use. If shallow soil in the PC-11 area is expected to be moved or disposed off-site, soil containing lead at concentrations above 50 mg/kg should be analyzed using the Toxicity Characteristic Leaching Procedure ("TCLP") or Soluble Threshold Limit Concentration ("STLC") extraction methods to determine if the soil is a hazardous waste requiring special disposal procedures.

VOCs, PAHs, PCBs, organophosphorus pesticides, and chlorinated herbicides were not detected above the respective HERO Note 3-modified RSLs for residential land use and are not presented in tables. The laboratory reports for all analyses conducted by Calscience are presented in Attachment E.

1.5 Analytical Results for Soil Gas Sample

The soil gas sample collected from the temporary probe at borehole PC-10-4 as shown on Figure 2 was analyzed by Calscience for VOCs using U.S. EPA Method TO-15. The analytical results were compared to the HERO Note 3-modified RSLs for indoor air, modified using the attenuation factor of 33 for soil gas as recommended by the U.S. EPA (OSWER, 2015).

Acetone, benzene, 2-butanone, carbon disulfide, dichlorodifluoromethane, 1,1-difluoroethane, isopropanol, tetrachloroethene ("PCE"), toluene, trichloroethene ("TCE"), and trichlorofluoromethane were detected at low concentrations in the soil gas sample, below the applicable screening criteria for commercial/industrial land use. The laboratory report for the soil gas analyses conducted by Calscience is presented in Attachment E.

2 SUMMARY OF ANALYTICAL RESULTS

EKI collected shallow soil samples and a soil gas sample to evaluate soil conditions in the Western Parking Structure and Well Site portions of the subject property. Soil samples contained low concentrations of hexavalent chromium above the residential screening level; based on the low concentrations detected, these results do not appear to be indicative of a shallow soil source for hexavalent chromium.

The shallow composite soil sample in area PC-11 contained a low concentration of thallium, approximately 10% above the residential soil screening level. This low detected concentration does not appear to be indicative of a shallow soil source for thallium.

Arsenic was not detected in the soil samples at concentrations above the applicable screening level, but lead was detected at concentrations above the residential screening level in surface samples in area PC-11. Possible sources of lead could include lead-based paint from former buildings or deposition from diesel exhaust from the nearby roadways.

The shallow soil gas sample collected from area PC-10 in the Western Parking Structure area, near a dry cleaning site on the adjoining property to the east, did not contain VOCs at concentrations above residential screening levels. Based on these results, there does not appear to be any significant impact from dry cleaning chemicals at this location.

No compounds were detected above the respective screening criteria for commercial/industrial land use.

Notes:

(a) The screening level criteria are presented in *Regional Screening Levels (RSLs) - Generic Tables (May 2019)* (U.S. EPA, 2019). Analytical data detected above residential land use screening criteria are shown in *italics* above.

(b) U.S. EPA laboratory analytical methods have not yet been established that differentiate between aliphatic and aromatic hydrocarbons and provide analytical results that can be directly compared to the RSLs. Samples were analyzed using existing U.S. EPA Method 8015 for TPH in the gasoline, diesel, and motor oil ranges, which do not directly correspond to the low, medium, and high aliphatic and aromatic TPH ranges defined by the RSLs due to variations between analytical laboratories and TPH standards, but are compared to these ranges for screening purposes.

(c) Samples were analyzed using U.S. EPA Method 8081A with U.S. EPA Method 3545 preparation. Only detected compounds are shown.

(d) Analytical results for TPH in the gasoline range are compared to the RSLs for both TPH aliphatic low (C5-C8, EC5-EC8) and TPH aromatic low (C6-C8, EC6-EC<9).

(e) Analytical results for TPH in the diesel range are compared to the RSLs for both TPH aliphatic medium (C9-C18, EC>8-EC16) and TPH aromatic medium (C9-C16, EC9-EC<22).

(f) Analytical results for TPH in the motor oil range are compared to the RSLs for both TPH aliphatic high (C19-C32, EC>16-EC35) and TPH aromatic high (C17-C32, EC>22-EC35).

DTSC calculated the upper bound of its data set as the 95% upper confidence limit of the 99th quantile of the arsenic data set excluding outliers. The DTSC also utilized a probability plot of arsenic concentrations to determine an upper bound of background concentrations. The DTSC Report concluded that 12 mg/kg is an appropriate upper bound concentration representative of background concentrations of arsenic for school sites in Southern California.

Notes:

(a) Arsenic was analyzed using U.S. EPA Method 6200 by an Olympus Delta Premium RK field portable x-ray fluorescence spectrometer.
(b) Arsenic was analyzed using U.S. EPA Method 6020 by the laboratory indicated.
(c) Percent difference greater than 20% is shown in **bold** in the table above.
(d) Lead was analyzed using U.S. EPA Method 6200 by an Olympus Delta Premium RK field portable x-ray fluorescence spectrometer.
(e) Lead was analyzed using U.S. EPA Method 6020 by the laboratory indicated.
(f) The instrument blank provided by the equipment manufacturer was damaged, thus a purified sand from Olympus Scientific was used as a replacement instrument blank. The actual concentration of arsenic and lead in the purified sand is unknown, but assumed to be near the detection limit of the FPXRF spectrometer.

Notes:

(a) Soil samples were analyzed for lead and arsenic using U.S. EPA Method 6020 by Eurofins Calscience, Inc., Garden Grove, CA.
(b) RSD was calculated for each set of eight FPXRF precision sample measurements.
(c) In 2008, the DTSC published *Determination of a Southern California Regional Background Arsenic Concentration in Soil* (DTSC, 2008), which analyzed data for shallow soil samples collected from 52 school sites distributed across Southern California. This included a total of 1,097 soil samples collected from 19 schools in Los Angeles County. DTSC calculated the upper bound of its data set as the 95% upper confidence limit of the 99th quantile of the arsenic data set excluding outliers. The DTSC also utilized a probability plot of arsenic concentrations to determine an upper bound of background concentrations. The DTSC Report concluded that 12 mg/kg is an appropriate upper bound concentration representative of background concentrations of arsenic for school sites in Southern California.
(d) The screening level criterion for lead is presented in *Human Health Risk Assessment Note 3 - DTSC-Modified Screening Levels (DTSC-SLs), April 2019 Update* (DTSC, 2019).
(c) Analytical data detected above residential land use screening criteria are shown in *italics* above.

Work Order Narrative

Work Order: 19-03-0690 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 03/08/19. They were assigned to Work Order 19-03-0690.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 19-03-0690 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Work Order Narrative

Work Order: 19-03-0866 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 03/12/19. They were assigned to Work Order 19-03-0866.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 19-03-0866 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Work Order Narrative

Work Order: 19-03-0867 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 03/12/19. They were assigned to Work Order 19-03-0867.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 19-03-0867 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.
