Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Target Property Map:	5640440 INGLEWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

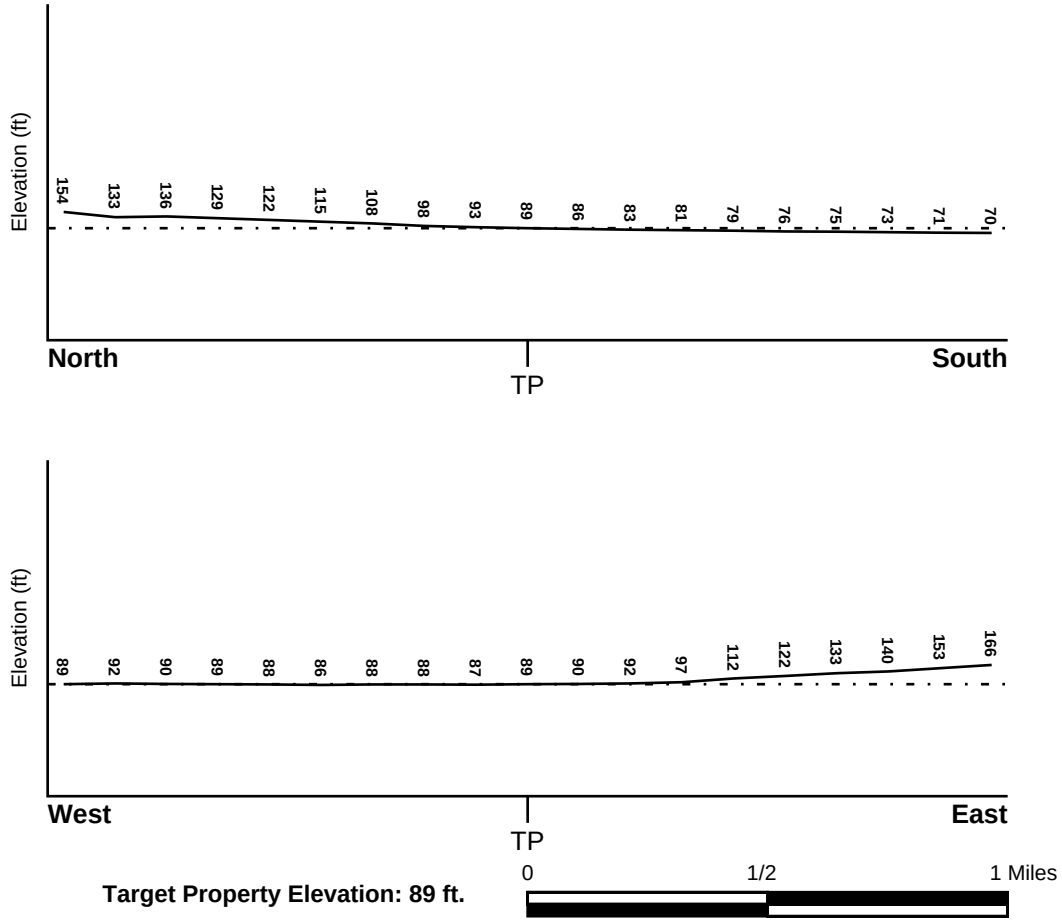
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 89 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

INSTRUCTIONS

HAZARDOUS MATERIALS UNDERGROUND STORAGE PROGRAM
NEW CONSTRUCTION PLAN CLEARANCE OR PERMIT ADDENDUM APPLICATION

DO NOT USE THIS FORM FOR CLOSURE,
TRANSFER OR RENEWAL OF AN EXISTING HMUSP.

This application is for authorization to construct or modify hazardous material storage facilities ONLY. A separate Hazardous Materials Underground Storage Permit (HMUSP) is required to operate the approved system. This application will not be approved unless a valid HMUSP is on file with the Department of Public Works.

(A) Facility name, mailing address and facility address on this form must correspond with information on Part II of the State Application for Permit to Operate Underground Storage Tank.

(B) This application must be submitted for new construction (installation of new tanks) plan clearance or addendum to an existing HMUSP. Specify the number of tanks to be installed and the total number of tanks after installation. A net increase in tanks will require additional State Surcharge fee as noted in Item (C). Existing facilities with a valid operational HMUSP need not make a separate HMUSP application.

(C) Plans and specifications submitted for a new construction plan clearance must conform to Department of Public Works' "Underground Storage of Hazardous Materials Guidelines."

In addition to the plan clearance fee, an HMUSP permit fee will be required when applying to construct a new facility. A State Surcharge fee of $56 per tank will be required for each tank that increases the net number of tanks. No refund of current year HMUSP fees will be allowed for a net decrease in the number of tanks.

(D) Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks or piping, replacement of piping, change or addition of hazardous material stored and change in monitoring equipment and change in overfill protection.

(E) A fee of $120 must be submitted for each addendum.

(F) This form and each State Application for Permit to Operate Underground Storage Tank must be signed by one of the following:

1) A principal executive officer at the level of vice-president or an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
2) A general partner proprietor.
3) A principal executive officer, ranking elected official or authorized representative of a public agency.
4) An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

INSTRUCTIONS

HAZARDOUS MATERIALS UNDERGROUND STORAGE PROGRAM
NEW CONSTRUCTION PLAN CLEARANCE OR PERMIT ADDENDUM APPLICATION

DO NOT USE THIS FORM FOR CLOSURE,
TRANSFER OR RENEWAL OF AN EXISTING HMUSP.

This application is for authorization to construct or modify hazardous material storage facilities ONLY. A separate Hazardous Materials Underground Storage Permit (HMUSP) is required to operate the approved system. This application will not be approved unless a valid HMUSP is on file with the Department of Public Works.

(A) Facility name, mailing address and facility address on this form must correspond with information on Part II of the State Application for Permit to Operate Underground Storage Tank.

(B) This application must be submitted for new construction (installation of new tanks) plan clearance or addendum to an existing HMUSP. Specify the number of tanks to be installed and the total number of tanks after installation. A net increase in tanks will require additional State Surcharge fee as noted in Item (C). Existing facilities with a valid operational HMUSP need not make a separate HMUSP application.

(C) Plans and specifications submitted for a new construction plan clearance must conform to Department of Public Works' "Underground Storage of Hazardous Materials Guidelines."

In addition to the plan clearance fee, an HMUSP permit fee will be required when applying to construct a new facility. A State Surcharge fee of $56 per tank will be required for each tank that increases the net number of tanks. No refund of current year HMUSP fees will be allowed for a net decrease in the number of tanks.

(D) Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks or piping, replacement of piping, change or addition of hazardous material stored and change in monitoring equipment and change in overfill protection.

(E) A fee of $120 must be submitted for each addendum.

(F) This form and each State Application for Permit to Operate Underground Storage Tank must be signed by one of the following:

1) A principal executive officer at the level of vice-president or an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
2) A general partner proprietor.
3) A principal executive officer, ranking elected official or authorized representative of a public agency.
4) An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

RE: **CLOSED UNOCAL SITES**

Dear Mr. Pelayo:

Thank you for meeting with me on August 17, 1994 and discussing your agency's Hazardous Materials Underground Storage Permit (HMUSP) renewal and closure procedures. Your assistance was helpful in resolving issues pertaining to the following permanently closed stations that still have active HMUSPs:

Unocal #	File #	Close Date	Tanks Removed	Closure Permit #
5287	I-11045	07/01/91	08/15/91	8176B
4284	I-5501	05/22/92	02/08/94	0721B
4977	I-6009	03/31/92	08/13/92	7555B, 9281B
5050	I-9966	05/31/92	12/10/92	48042
2529	I-6264	05/28/93	06/08/94	6957B
5842	I-6474	07/31/93	07/06/94	99353B
5894	I-6500	10/31/93	12/15/93	78359
6345	I-9978	06/01/93	07/07/94	99917

As you can see, these are all stations that are closed and have been issued closure permits, yet we are still being billed for annual fees (see enclosed invoices). Please deactivate these operating permits, delete all annual fees due, and discontinue future billing. If there are further unresolved issues for these sites, please call me at (714) 572-7658 and I will work with you to get them resolved. Thank you again for your help.

Dear Mr. Faggouseh:

HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE PERMIT NO. 2679B
FACILITY AT: 10223 South Praire Avenue

This office has reviewed the soil/groundwater assessment report submitted on September 14, 1987 as required as part of the subject closure procedure. Based on the information submitted, the following action is required:

[x] The closure is final and no further action is required.

[ ] The soils removed during the tank excavation are unrestricted and may be used as backfill material. The closure is final and no further action is required.

[ ] The soils are not suitable as fill material and must be manifested and transported to a hazardous waste disposal facility as required by California Health and Safety Code, Division 20, Chapter 6.2, unless evidence is presented indicating that disposal is proper at a less restricted facility. Copies of all completed manifests shall be submitted to this office indicating legal disposal.

[ ] The permanent closure of the tank(s) in place shall comply with requirements set by the local Fire Department. Verification must be submitted to this office indicating proper closure and completion of all work.

CONDITIONS A -- GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer-Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3) business day advance notification.

   b. Permanent closure of a tank in place or a temporary closure shall require a 30 day written notification.

3. The fee is $141 for the first tank plus $38 for each additional tank.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74-81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.

   b. The personnel shall be sufficiently skilled to safely carry out such operation.

   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.

   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B -- TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, "Abandonment or Removal of Underground Tanks," Part A and any other applicable Parts.

2. A temporary closure shall not exceed 90 days.

CONDITIONS C -- PERMANENT, TANK(S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Part B and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tanks shall be transported to a legal disposal point.

6. If the tank had stored materials other than motor fuel, fuel oil, or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be backfilled and recompacted to a relative compaction of 90%.

CONDITIONS D -- PERMANENT, TANK(S) IN PLACE

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test borings may be drilled vertically and the reason stated in the report in 2.h. below.

   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.

   c. For multiple tanks, as a minimum, borings shall be placed at 20 foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.

   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.

   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.

   f. Soil samples shall be capped immediately with teflon or aluminum.

   g. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.

   h. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials -- Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

Hazardous Substances Underground Storage Permit (HSUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HSUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous substances Underground Storage Tank (UST) facilities only. A separate HSUSP or UP Permit, is required to operate the approved system. This authorization will not be approved unless a valid HSUSP or UP Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HSUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HSUSP or UP Permit need not make a separate HSUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HSUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous substances stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of **$736** must be submitted for each addendum. Where a previously unregistered UST is added to an existing HSUSP, an additional application fee including maintenance fee will be charged.

F This form, the Application Supplement forms, and the CERS data must be signed by one of the following:

1. The tank owner, operator, or Unified Program (UP) facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. A representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks, with written authorization to submit the scope of work on behalf of the tank owner, operator or UP facility permit owner or operator.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the uploaded CERS UST INSTALLATION information must be submitted within 30 days of completion.

INCOMPLETE FORMS WILL NOT BE PROCESSED.

ARCO Products Company No. 09645 (Formerly Thrifty Oil Company No. 251)
4130 West Century Boulevard, Inglewood, CA (R-25030)

C 306359

Dear Mr. Panaitescu:

The California Regional Water Quality Control Board, Los Angeles Region, is the public agency with primary responsibility for the protection of ground and surface water quality for all beneficial uses within Los Angeles and Ventura counties. As such, we are the lead regulatory agency for overseeing corrective action (assessment and/or monitoring activities) and cleanup of releases from leaking underground storage tank systems at the subject site. This case was referred to us by the County of Los Angeles Department of Public Works on May 11, 2000.

To facilitate our review, we would appreciate that you provide the following information regarding the subject site:

1. General site history and background including site geology and hydrology.
2. Tank removal and/or repair information, include tank size, contents, and gallons.
3. Tank disposal documentation.
4. Copies of the recent site assessment and/or remediation report(s), if any.
5. All previous soil and groundwater sample analytical results.
6. Depth to drinking water aquifer and a scaled map showing the location and identification of all production wells and water bodies within a one-mile radius of the site.
7. Isoconcentration map for TPHg, MTBE and benzene based on most recent analytical results.
8. Name and telephone number of your environmental consultants.

All copies of the above requested information and site assessments must be submitted to this Regional Board for review and evaluation, no later than **June 26, 2000**.

Additionally, pursuant to recent changes of the California Health and Safety Code Chapter 6.75 (Section 25299.37.2) and Division 7 of the Porter Cologne Water Quality Control Act under AB 681, the Regional Board is required to notify all current fee title holders for the subject site or sites impacted by releases from underground storage tanks prior to considering corrective action and cleanup or case closure. Since you are identified as the current primary or active responsible party for corrective action and/or cleanup at the subject site, we are requesting that you provide us with a complete mailing list of all record fee title holders for the subject site. Therefore, please provide the name, mailing address, and telephone for all record fee title holders for the subject site together with a copy of county record of current ownership (grant trust deed), available from the County Recorder's Office, for verification.

If site assessment and/or monitoring data provided for corrective action work ongoing at the subject site indicate that release(s) from the underground storage tank systems have impacted offsite property, then please provide the name, mailing address, and phone number for all record fee title holders for the subject site and any offsite property(ies) impacted by releases from the subject site, together with a copy of county record of current ownership (grant trust deed), available from the County Recorder's Office, for each property affected for verification.

Please submit the requested information to the Regional Board by **June 26, 2000.** If you have any questions regarding this matter, please contact Michael Yang at (213) 576-6659 or myang@rb4.swrcb.ca.gov.

UNDERGROUND STORAGE TANK CLEANUP FUND (FUND), NOTICE OF INTENDED REMOVAL FROM PRIORITY LIST, CLAIM NUMBER 016628, SITE ADDRESS: 4130 CENTURY BLVD W, INGLEWOOD

This is to notify you that during the detailed review of your application, it has been determined that your claim for the subject site is not eligible for reimbursement in the Underground Storage Tank Cleanup Fund. Therefore, it is being proposed that your claim be removed from the Priority List based on the following reason:

Section 2813.3(2) of the Petroleum Underground Storage Tank Cleanup Fund Regulations provide:

> *A claim that has been place on the priority list may be removed if:....the claimant fails to provide necessary documentation or information...*

The Background Narrative that was submitted to the Fund along with the Letter of Commitment Data Sheet, states that Secor International Inc. (Secor) conducted a subsurface investigation in May, 1997. This report was not submitted to the Fund. The report made available to us is dated August 31, 1998, by Secor, on behalf of ARCO Products Company, which discusses the removal of USTs on June 2, 1998.

Based on the information we have, the release would be considered the responsibility of ARCO Products Company, and not Thrifty.

If you disagree with this Staff Decision, you may appeal to the Division Chief pursuant to Section 2814.1 of the Petroleum Underground Storage Tank Cleanup Fund Regulations. If you would like review of the decision by the Fund Manager, please submit your request along with any additional documentation to:

Allan V. Patton, Fund Manager, Claim #016628
Underground Storage Tank Cleanup Fund
State Water Resources Control Board
Division of Financial Assistance

L248038

P. O. Box 944212
Sacramento, CA 94244-2120

A request to the Fund Manager must include, at a minimum: (1) a statement describing how the claimant is damaged by the prior Staff Decision; (2) a description of the remedy or outcome desired; and (3) an explanation of why the claimant believes the Staff Decision is erroneous, inappropriate or improper.

If you do not request a review by the Fund Manager within thirty (30) calendar days from the date of this letter, the Staff Decision will then become final and conclusive and your claim will be removed from the Priority List at the end of the 30 day period.

If you have any questions, please contact me at (916) 341-5771.

Yvonne Shanks

Subject: **BP America Inc. – Financial Responsibility Documentation Petroleum Containing Underground Storage Tanks – 40 CFR Part 280**

C634116

Dear Sir or Madam:

The enclosed document comprises the financial assurance mechanism by which BP America Inc. demonstrates financial responsibility pursuant to 40 CFR 280 Subpart H for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks.

This document is believed to be complete and accurate. However, considering the number and geographic dispersion of USTs covered by BP America Inc.'s financial responsibility, it is possible that errors of omission have occurred and the tank listings will not always be current as of the date of the review. In any case, it is the intent of BP America Inc. to provide the mandated financial responsibility requirements for all USTs subject to 40 CFR 280 Subpart H.

If you have any questions regarding the information submitted, please contact me at (714) 228-6480.

Sincerely,

Stephen S. Comley

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether or not any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, and supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

RESPONSE PLAN – PAGE 2

VI. LEAK INTERCEPTION AND DETECTION SYSTEM

This information is required only for motor vehicle fuel UST systems constructed per the Alternate Construction Requirements of 23 CCR §2633, and only if the Leak Interception and Detection System (LIDS) does not meet the volumetric requirements of 23 CCR §2631(d)(1) through (5) (i.e., when accounting for rainfall and backfill material, the secondary containment volume is less than 100% of primary tank volume for a single UST; or in the case of multiple USTs in shared secondary containment, 150% of the largest primary tank volume or 10% of aggregate primary tank volume, whichever is greater).

ATTACH AN ADDITIONAL PAGE TO THIS PLAN CONTAINING THE FOLLOWING INFORMATION:

- The volume of the LIDS in relation to the volume of the primary container;
- The amount of time the LIDS shall provide containment related to the time between detection of an unauthorized release and cleanup of the leaked substance;
- The depth from the bottom of the LIDS to the highest anticipated level of groundwater;
- The nature of the unsaturated soils under the LIDS and their ability to absorb contaminants or to allow movement of contaminants;
- The methods and scheduling for removal of all hazardous substances which may have been discharged from primary containment and are located in the unsaturated soils between the primary containment and groundwater, including the LIDS sump.

VII. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This application is for authorization to construct or modify hazardous material UST facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This application will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The Owner/Operator, Facility name, mailing address and facility address on this form must correspond with the information on the UP UST FACILITY INFORMATION form.

B This application must be submitted for new construction (installation of new tanks) plan clearance, piping replacement, or addendum to an existing HMUSP. Specify the number of tanks to be installed and the total number of tanks after installation. Existing facilities with a valid operational HMUSP or UP Permit, need not make a separate HMUSP application to add or modify tanks. Work must commence within 180 days from the date of issuance of plan approval or the application is void. An extension of up to 180 days may be granted at one-half the initial plan check application fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the California Health and Safety Code, Division 20, Chapter 6.7, the California Code of Regulations, Title 23, Division 3, Chapter 16, Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Department of Public Works. Other clearances such as local fire department, building and safety, and either South Coast Air Quality Management District or Antelope Valley Air Quality Management District may also be required.

In addition to the plan clearance fee, an HMUSP permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of tanks. State surcharge or service fees paid on existing or renewed tanks are not transferable to new tanks.

D Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of $429 must be submitted for each addendum. Where a previously unregistered tank is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and each UP UST form must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the completed UNIFIED PROGRAM UST INSTALLATION form must be submitted upon completion of work.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This application is for authorization to construct or modify hazardous material UST facilities only. A separate HMUSP or UP Permit is required to operate the approved system. This application will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The Owner/Operator, Facility name, mailing address and facility address on this form must correspond with the information on the UP UST FACILITY INFORMATION form.

B This application must be submitted for new construction (installation of new tanks), plan clearance, piping replacement, or addendum to an existing HMUSP. Specify the number of tanks to be installed and the total number of tanks after installation. Existing facilities with a valid operational HMUSP or UP Permit, need not make a separate HMUSP application to add or modify tanks. Work must commence within 180 days from the date of issuance of plan approval or the application is void. An extension of up to 180 days may be granted at one-half the initial plan check application fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the California Health and Safety Code Division 20, Chapter 6.7, the California Code of Regulations, Title 23, Division 3, Chapter 16, Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Department of Public Works. Other clearances such as local fire department, building and safety, and either South Coast Air Quality Management District or Antelope Valley Air Quality Management District may also be required.

In addition to the plan clearance fee, an HMUSP permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of tanks. State surcharge or service fees paid on existing or renewed tanks are not transferable to new tanks.

D Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of $429 must be submitted for each addendum. Where a previously unregistered tank is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and each UP UST form must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the completed UNIFIED PROGRAM UST INSTALLATION form must be submitted upon completion of work.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

Subject: **BP America Inc. – Financial Responsibility Documentation Petroleum Containing Underground Storage Tanks – 40 CFR Part 280**

Dear Sir or Madam:

The enclosed document comprises the financial assurance mechanism by which BP America Inc. demonstrates financial responsibility pursuant to 40 CFR 280 Subpart H for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks.

This document is believed to be complete and accurate. However, considering the number and geographic dispersion of USTs covered by BP America Inc.'s financial responsibility, it is possible that errors of omission have occurred and the tank listings will not always be current as of the date of the review. In any case, it is the intent of BP America Inc. to provide the mandated financial responsibility requirements for all USTs subject to 40 CFR 280 Subpart H.

If you have any questions regarding the information submitted, please contact me at (714) 228-6480.

Sincerely,

Lanni Duong
HSSE Manager

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether or not any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, and supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

RESPONSE PLAN – PAGE 2

VI. LEAK INTERCEPTION AND DETECTION SYSTEM

This information is required only for motor vehicle fuel UST systems constructed per the Alternate Construction Requirements of 23 CCR §2633, and only if the Leak Interception and Detection System (LIDS) does not meet the volumetric requirements of 23 CCR §2631(d)(1) through (5) (i.e., when accounting for rainfall and backfill material, the secondary containment volume is less than 100% of primary tank volume for a single UST; or in the case of multiple USTs in shared secondary containment, 150% of the largest primary tank volume or 10% of aggregate primary tank volume, whichever is greater).

ATTACH AN ADDITIONAL PAGE TO THIS PLAN CONTAINING THE FOLLOWING INFORMATION:

- The volume of the LIDS in relation to the volume of the primary container;
- The amount of time the LIDS shall provide containment related to the time between detection of an unauthorized release and cleanup of the leaked substance;
- The depth from the bottom of the LIDS to the highest anticipated level of groundwater;
- The nature of the unsaturated soils under the LIDS and their ability to absorb contaminants or to allow movement of contaminants;
- The methods and scheduling for removal of all hazardous substances which may have been discharged from primary containment and are located in the unsaturated soils between the primary containment and groundwater, including the LIDS sump.

VII. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

Specify the number of tanks to be installed and the total number of tanks after installation. Existing facilities with a valid operational HMUSP or UP Permit, need not make a separate HMUSP application to add or modify tanks. Work must commence within 180 days from the date of issuance of plan approval or the application is void. An extension of up to 180 days may be granted at one-half the initial plan check application fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the California Health and Safety Code, Division 20, Chapter 6.7, the California Code of Regulations, Title 23, Division 3, Chapter 16, Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Department of Public Works. Other clearances such as local fire department, building and safety, and either South Coast Air Quality Management District or Antelope Valley Air Quality Management District may also be required.

In addition to the plan clearance fee, an HMUSP permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of tanks. State surcharge or service fees paid on existing or renewed tanks are not transferable to new tanks.

D Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of $429 must be submitted for each addendum. Where a previously unregistered tank is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and each UP UST form must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the completed UNIFIED PROGRAM UST INSTALLATION form must be submitted upon completion of work.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

C E T Dispatch 33027

Software Version Installed: 331.01

Complete the following checklist:

☑ Yes	☐ No*	Is the audible alarm operational?
☑ Yes	☐ No*	Is the visual alarm operational?
☑ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☑ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☑ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☑ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☑ Sump/Trench Sensors; ☑ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☑ Yes; ☐ No.
☑ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90 %
☑ Yes*	☐ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☑ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☑ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☑ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments: CPU Bd was Replaced on V/R that's why we are doing moniter Cert.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD): ☐ Check this box if LLDs are not installed.

Complete the following checklist:

☐ Yes	☑ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☐ 3 g.p.h.; ☐ 0.1 g.p.h ; ☐ 0.2 g.p.h.
☐ Yes	☑ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☑ No*	Was the testing apparatus properly calibrated?
☐ Yes	☑ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☑ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☑ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☑ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☑ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☑ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

H. Comments: we only testd sensors tied into v/r this is only monitor Cert for v/r not a Full monitor Cert (CPU Replacement!!)

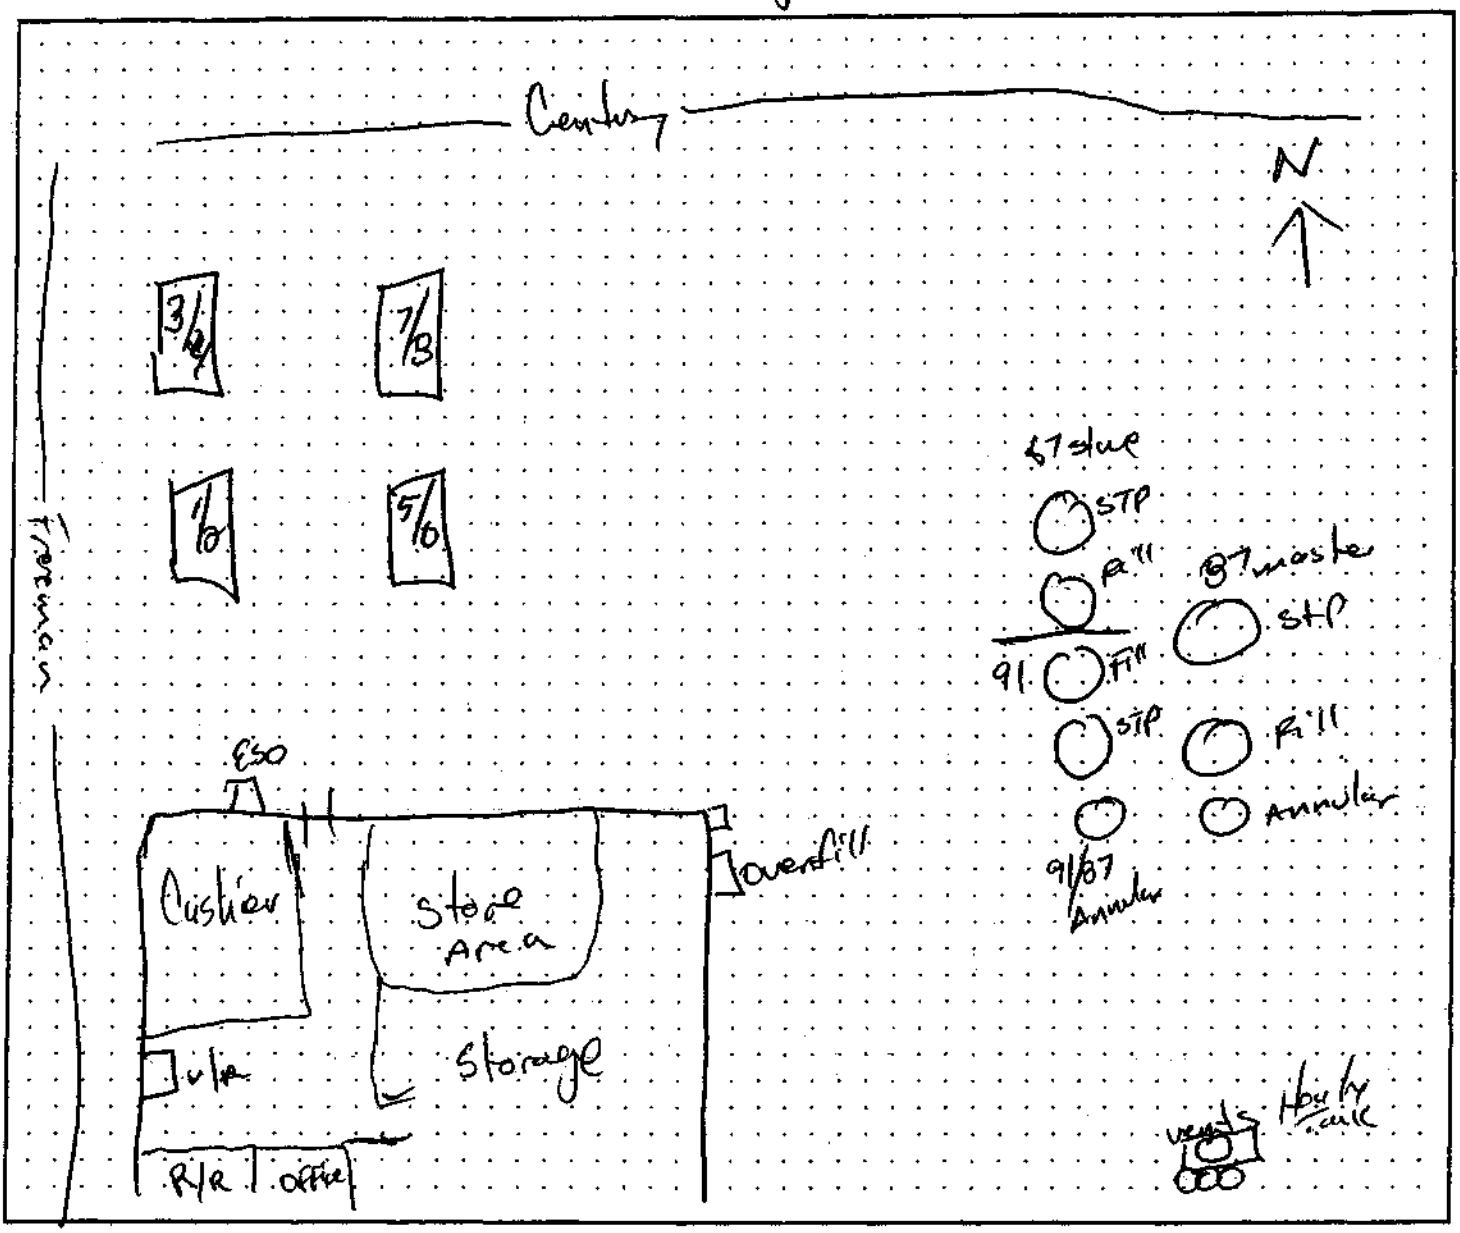
UST Monitoring Site Plan

Site Address: 9645 - 4130 Century Inglewood CA



Date map was drawn: 6/6/11

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

1.0 INTRODUCTION

SECOR International, Inc. (SECOR) was contracted by ARCO Products Company (ARCO) to perform soil sampling during underground storage tank (UST) removal activities at former Thrifty Oil Company (Thrifty) Service Station No. 251, located at 4130 West Century Boulevard in Inglewood, California (the Site). The purpose of the soil sampling was to fulfill local agency requirements. The services provided by SECOR included the following:

- Air monitoring, soil segregation and soil management per ARCO's South Coast Air Quality Management District (SCAQMD) Rule 1166 Contaminated Soil Mitigation Plan; and

- Collecting soil samples following removal of the USTs, product piping, and dispensers as directed by the City of Inglewood Department of Building and Safety and Fire Prevention (IDBSFP).

2.0 SITE INFORMATION

This section summarizes the pertinent information concerning the Site location, Site geology and hydrology.

Site Location: Thrifty Oil Company Service Station No. 251 is located in the City of Inglewood at an elevation of approximately 87 feet above mean sea level (msl). Local topography slopes to the south at approximately 0.008 feet per foot (USGS, 1964).

Site Geology: Strata underlying the site consists of marine and continental gravel, sand, sandy silt, silt, and clay of the Lakewood Formation (CDWR, 1961). Soil types encountered during the subsurface investigation consisted of two primary soil horizons: 1) sand, silty sand, and silt from near surface grade to approximately 19 feet below ground surface (bgs); and 2) interbedded sand, silt, clayey silt, and clay from approximately 19 to 55 feet bgs (maximum depth explored).

Local Hydrology: Based on results of recent subsurface investigations, groundwater was not encountered during drilling to a maximum depth of 55 feet bgs (SECOR, 1997).

3.0 AIR MONITORING

SECOR conducted air monitoring in accordance with ARCO's South Coast Air Quality Management District (SCAQMD) Rule 1166 Contaminated Soil Mitigation Plan. This section summarizes the pertinent information related to the Rule 1166 plan requirements. A copy of the SCAQMD Rule 1166 air monitoring, equipment calibration logs, and soil disposition/treatment plan is included in Appendix A.

Permittee:	ARCO Products Company - Application Number 258945
Instrument(s):	Mini Rae PID, Model No. PGM-76 Heath Tech FID, Model DP-OVD
Calibration Gas:	100 ppmv Hexane
Reference Numbers:	Original Reference No. EE98-0097 Revised Reference No. EE98-0276 (5/29/98)
Records:	Air monitoring records were submitted to the SCAQMD on June 12, 1998

4.0 EXCAVATED SOIL

Excavation activities were performed by the Advanced Petroleum Corporation (Advanced) of Rancho Cucamonga, California. The excavated soil was segregated based on volatile organic compound (VOC) concentrations measured using the monitoring equipment mentioned in Section 3.0. All excavated soil was segregated and stockpiled. To characterize the stockpiled soil, samples were collected from each stockpile and submitted to State-Certified Del Mar Analytical, in Van Nuys, California, for chemical analysis.

This section summarizes the pertinent information concerning the excavated soil, waste characterization, and final disposition of the excavated soil. For the purposes of this report, soil will be labeled "clean" and "impacted" based on results of chemical analysis. Stockpiles for which analytical results of soil samples are reported as non-detectable are considered "clean," and are transported and disposed by ARCO. Stockpiles for which results of soil samples are reported to have detectable concentrations are considered "impacted," and are transported and disposed by Thrifty. Analytical results are presented in Table 1. Soil stockpile location maps are included in Appendix B. Soil disposal documentation is presented in Appendix C.

Approximate Volume of "Clean" Stockpiled Soil:	234 cubic yards/ 351 tons
Number of "Clean" Stockpile Samples:	9
"Clean" Stockpile Sample Names:	SP-12 through SP-14, SP-43 through SP-46, SP-49, and SP-50
Final Disposition of "Clean" Soil:	La Puente (Rose Hills) Landfill, 2800 Workman Mill Road, La Puente California
Approximate Volume of Stockpiled "Impacted" Soil:	665 cubic yards/ 997 tons
Number of "Impacted" Stockpile Samples:	41
"Impacted" Stockpile Sample Names:	SP-1 through SP-11, SP-15 through SP-42, SP-47, and SP-48
Final Disposition of "Impacted" Soil:	American Remedial Technologies (ART), 2680 Seminole Avenue, Lynwood, California

5.0 TANK AND PIPING REMOVAL

Advanced was contracted by ARCO to obtain all necessary tank removal permits, make all required preliminary notifications, and clean, remove, transport, and dispose of the removed USTs. This section summarizes the pertinent information concerning the UST removal activities:

Removed USTs and Associated Piping: On June 2, 1998, one 6,000-gallon, one 8,000-gallon, one 10,000- gallon, single-walled steel, and one 15,000-gallon Plasteel (fiberglass coated single-walled steel) gasoline USTs and their associated product piping were removed from the Site. Product piping was comprised of both single-walled steel and fiberglass. Vapor return piping was comprised of fiberglass.

Installed USTs: On June 8, 1998, two 20,000-gallon double-walled fiberglass reinforced plastic (FRP) USTs were installed at the site. The new UST and piping locations are presented in Figure 2.

6.0 SOIL SAMPLING

SECOR collected soil samples under the direction of Mr. Burman Timberlake, City of Inglewood, Building and Safety and Fire Prevention. Field activities were conducted in accordance with the procedures for soil sampling included in Appendix F. The tankpit, product line, and dispenser sample locations are indicated on Figure 1. This section summarizes the results of the soil sampling activities.

7.0 ANALYTICAL RESULTS

All soil samples were relinquished to Del Mar Analytical of Van Nuys, California (Del Mar). Del Mar is an ARCO-contracted and California Department of Health Services certified laboratory. SECOR and Del Mar adhered to strict chain-of-custody procedures from sample collection to sample analysis. All soil samples were analyzed for the following analytes and in accordance with the appropriate Environmental Protection Agency (EPA) method:

- Total petroleum hydrocarbons as gasoline (TPHg) by EPA Method 8015 Modified;
- Benzene, toluene, ethylbenzene, and xylenes (BTEX) by EPA Method 8020;
- Methyl *tert*-butyl ether (MTBE) by EPA Method 8020 with select samples confirmed for MTBE by EPA Method 8260; and
- Select samples were also analyzed for total lead by EPA Method 6010

Soil sample analytical results are summarized in Table 1. Copies of the chain-of-custody documentation and laboratory analytical reports are included in Appendix G.

8.0 DISCUSSION OF RESULTS

Based on analytical results (Table 1), the following areas as defined by the indicated soil samples are impacted by petroleum hydrocarbons. The impacted soil and other subsurface conditions are the result of operations at former Thrifty Service Station No. 251.

- UST at the former UST basin (TK-1B-14', TK-2A-14', TK-2B-15', TK-3A-16', TK-3B-15', TK-4A-15', TP-2-16', TP-3-16');
- Product piping at the northern pump island (PL-1-3', PL-3-3', PL-4-3'); and
- Fuel dispensers at the eastern dispenser island (DS-5-3' and DS-6-3')

A total of 665 cubic yards/ 997 tons of "impacted" soil was generated during the tank removal and replacement activities and transported off-site to ART for recycling. Approximately 234 cubic yards/ 351 tons of "clean" soil was generated and transported off-site to the La Puente Landfill.

9.0 STANDARD LIMITATIONS

All work was performed under the supervision of a registered geologist as defined in the Registered Geologist Act of the California Code of Regulations. The information contained in this report represents SECOR's professional opinions, and is based in part on information supplied by the client. These opinions are based on currently available information and are arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location. RULE 1166 CONTAMINATED SOIL MITIGATION PLAN

Reference is made to your Application (A/N 258945) received on December 5, 1991, for the excavation and handling of VOC-contaminated soil at various locations within the South Coast Air Quality Management District.

Your excavation and mitigation plan has been approved under the provisions of Rule 1166 of the Rules and Regulations of the SCAQMD and is subject to the following conditions.

PLAN CONDITIONS:

PROPERTY OWNER'S INITIALS

1. AT LEAST 24 HOURS PRIOR TO COMMENCING EXCAVATION OF UNDERGROUND TANKS WHICH HAVE STORED VOLATILE ORGANIC COMPOUNDS (VOC), THE EXECUTIVE OFFICER SHALL BE NOTIFIED OF ALL INFORMATION ITEMS LISTED IN RULE 1166(d)(1)(A) AND THE NAME OF THE COMPANY PERFORMING THE EXCAVATION. (GL)

   IF VOC-CONTAMINATED SOIL IS DETECTED, THE EXECUTIVE OFFICER SHALL BE NOTIFIED AGAIN WITHIN 24 HOURS. BOTH NOTIFICATIONS SHALL BE MADE BY CALLING (909) 396-3886 MONDAY THROUGH FRIDAY, BETWEEN 8 A.M. AND 5 P.M.

2. THIS PLAN IS VALID ONLY FOR THE EXCAVATION AND HANDLING OF A MAXIMUM OF 2000 CUBIC YARDS OF VOC-CONTAMINATED SOIL AT EACH SITE. EXCAVATION OF A GREATER AMOUNT REQUIRES SUBMITTAL OF A SITE SPECIFIC RULE 1166 EXCAVATION PLAN. (GL)

3. ALL VOC-CONTAMINATED SOIL SHALL BE DISPOSED, BACKFILLED, OR REMOVED FROM THE SITE WITHIN 60 DAYS AFTER IT HAS BEEN EXCAVATED FROM THE AFFECTED AREAS. (GR)

   RECORDS OF DISPOSAL OR TREATMENT OF VOC-CONTAMINATED SOIL SHALL BE MAINTAINED FOR A PERIOD OF TWO (2) YEARS AND MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST.

4. THE OWNER OR OPERATOR SHALL PREPARE A WRITTEN PLAN WHICH INCLUDES METHODS TO TREAT THE VOC-CONTAMINATED SOIL, SCHEDULES TO HAUL THE SOIL AWAY, BACKFILL THE SOIL, OR OTHER MEANS OF DISPOSAL. THE PLAN SHALL ALSO INDICATE THAT THE NECESSARY PERMITS HAVE BEEN OBTAINED OR ARE IN THE PROCESS OF BEING OBTAINED. SUCH A PLAN SHALL BE PREPARED NO LATER THAN 5 DAYS AFTER THE COMPLETION OF THE EXCAVATION, AND SHALL BE MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST. (GR)

5. THE EXCAVATION SHALL BE CONDUCTED IN 50 FT. X 50 FT. OR SMALLER SECTIONS TO MINIMIZE EXPOSURE OF SOIL POTENTIALLY CONTAMINATED WITH VOC. (GR)

6. THE EXCAVATION OPERATOR SHALL HAVE ON SITE AN ORGANIC VAPOR ANALYZER (OVA) USING FLAME IONIZATION OR PHOTO IONIZATION OR OTHER ANALYTICAL METHODS COMPLYING WITH 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3.1.1.a., "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS, MONITORING INSTRUMENT SPECIFICATIONS". (GR)

7. THE OVA SHALL BE CAPABLE OF BEING CALIBRATED USING HEXANE AT A RANGE OF 0 PARTS PER MILLION BY VOLUME (PPMV) TO 50 PPMV AND AT A DETECTION RANGE OF AT LEAST 30 PPMV TO 1100 PPMV. THE OVA SHALL BE INITIALLY CALIBRATED USING HEXANE BY THE MANUFACTURER AND CALIBRATED AT LEAST ONCE AT THE BEGINNING OF EACH WORKING DAY WITH THE PROCEDURES SPECIFIED BY THE MANUFACTURER. (GR)

8. DURING EXCAVATION, MONITORING SHALL BE CONDUCTED TO MEASURE VOC'S AT A DISTANCE NO MORE THAN 3 INCHES ABOVE THE FRESHLY DUG SOIL BY USING AN ORGANIC VAPOR ANALYZER (OVA) DESCRIBED UNDER CONDITION 7. THIS MEASUREMENT SHALL BE MADE FOR EVERY LOAD OF SOIL AND SHALL BE TAKEN NO LONGER THAN THREE (3) MINUTES AFTER EACH LOAD OF SOIL IS EXCAVATED. (GR)

9. WRITTEN RECORDS OF OVA MONITORING AND CALIBRATIONS REQUIRED ABOVE SHALL BE KEPT IN A FORMAT APPROVED BY THE DISTRICT. A TYPICAL FORMAT IS ATTACHED WITH THIS PLAN. (GR)

10. VOC-CONTAMINATED SOIL IS A SOIL WHICH REGISTERS 50 PPMV OR MORE WHEN MEASURED WITH AN ORGANIC VAPOR ANALYZER (CALIBRATED USING HEXANE) AT A DISTANCE OF NO MORE THAN THREE INCHES ABOVE EXCAVATED AND EXPOSED SOIL. (GR)

11. IF THE OVA MEASUREMENT IS BETWEEN 50 PPMV AND 1000 PPMV, [GR]

    A) THE WORKING AREA SHALL BE IMMEDIATELY SPRAYED WITH WATER, OR COVERED WITH CLEAN SOIL OR TREATED WITH A DISTRICT APPROVED SUPPRESSANT, AND

    B) EACH VOC-CONTAMINATED LOAD OF SOIL SHALL BE SPRAYED WITH WATER OR TREATED WITH A DISTRICT APPROVED VAPOR SUPPRESSANT AND BE STOCKPILED SEPARATELY.

12. IF THE OVA MEASUREMENT EQUALS OR IS GREATER THAN 1000 PPMV, [GR]

    A) THE WORKING AREA SHALL BE SPRAYED WITH WATER OR DISTRICT APPROVED VAPOR SUPPRESSANTS OR COVERED WITH AT LEAST 4 INCHES OF CLEAN SOIL, AND

    B) THE SOIL DUG UNDER THE ABOVE CONDITIONS SHALL BE STORED IN DISTRICT APPROVED CONTAINERS, AND

    C) IN LIEU OF CONTAINERS, OTHER MITIGATION MEASURES MAY BE SUBSTITUTED WITH PRIOR WRITTEN APPROVAL OF THE EXECUTIVE OFFICER, IF THE OWNER OR OPERATOR CAN DEMONSTRATE THAT AN ALTERNATIVE MEASURE IS EQUALLY OR MORE EFFECTIVE IN REDUCING VOC EMISSIONS. PRIOR TO THE EXECUTIVE OFFICER'S APPROVAL, THE OWNER OR OPERATOR SHALL SUBMIT A COMPREHENSIVE WRITTEN STUDY WHICH COMPARES QUANTITATIVELY THE ESTIMATED VOC EMISSIONS DIFFERENCE BETWEEN THE ALTERNATIVE MITIGATION MEASURES.

13. ALL VOC-CONTAMINATED SOIL SHALL BE STOCKPILED SEPARATELY FROM NON VOC-CONTAMINATED SOIL AND KEPT MOIST, COVERED OR SPRAYED WITH WATER OR WITH A FUME SUPPRESSANT TO PREVENT EMISSIONS OF PARTICULATES OR VOC. [GR]

14. AT THE END OF EACH WORKING DAY, ALL STOCKPILES SHALL BE COVERED WITH A HEAVY DUTY CONTINUOUS PLASTIC SHEET(S), JOINED AT THE SEAMS, AND SECURELY ANCHORED TO PREVENT ANY EXPOSURE OF SOIL TO THE ATMOSPHERE. [GR]

15. A STOCKPILE SHALL NOT CONTAIN MORE THAN 450 CUBIC YARDS OF SOIL. [GR]

16. WITHIN 5 DAYS AFTER THE EXCAVATION IS COMPLETED AT EACH SITE, THE WRITTEN RECORDS UNDER CONDITIONS 4 AND 9 SHALL BE SUBMITTED TO THE DISTRICT AT THE FOLLOWING ADDRESS. [GR]

    9150 FLAIR DR.
    EL MONTE CA. 91731

17. VOC-CONTAMINATED SOIL SHALL NOT BE SPREAD ON-SITE OR OFF-SITE TO CAUSE THE EVAPORATION OF UNCONTROLLED VOC TO THE ATMOSPHERE. [GR]

18. THIS PLAN IS NOT VALID FOR EXCAVATING VOC-CONTAMINATED SOILS AT LANDFILLS OR SITES USED FOR DISPOSAL OF REFUSE OR OTHER TYPES OF WASTE. [GR]

19. THIS PLAN DOES NOT ALLOW ANY TREATMENT OF VOC-CONTAMINATED SOIL. [GR]

20. A COPY OF THIS PLAN SHALL BE PRESENT AT EACH EXCAVATION SITE DURING ALL SOIL HANDLING AND STORAGE PROCESSES. [GR]

21. THIS PLAN IS NOT VALID UNTIL THE VERIFICATION BELOW IS SIGNED. [GR]

Soil Sampling Procedures

SOIL SAMPLING PROCEDURES

Soil samples were collected using either a slide hammer sampling device equipped with brass rings for sample retention or by filling laboratory prepared clean glass jars (grab method). All soil samples were immediately sealed with Teflon™ film, capped, and placed in a chilled cooler for delivery to State-certified Del Mar Analytical of Van Nuys, California for potential chemical analysis. Soil sampling was directed by the associated lead agency representative (See Section 6.0). SECOR initiated Chain-of-Custody protocol immediately following the collection of all soil samples. All sampling equipment was cleaned in an aqueous solution of Liqui-Nox™ cleanser or equivalent (no phosphates), rinsed with tap water, and rinsed a second time with deionized water to prevent cross-contamination between sample intervals.

Subject: BP America, Inc. – Financial Responsibility Documentation for Petroleum Underground Storage Tank Systems (40 CFR Part 280)

Dear Sir or Madam:

The enclosed document comprises the financial assurance mechanism by which BP America, Inc. demonstrates financial responsibility pursuant to 40 CFR 280 Subpart H for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks.

This document is believed to be complete and accurate. However, considering the number and geographic dispersion of USTs covered by BP America, Inc.'s financial responsibility, it is possible that errors of omission have occurred and the tank listings will not always be current as of the date of the review. In any case, it is the intent of BP America Inc. to provide the mandated financial responsibility requirements for all USTs subject to 40 CFR 280 Subpart H.

If you have any questions regarding the information submitted, please contact me at (714) 228-6480.

Sincerely,

Lanni Duong
HSSE Manager

for taking corrective action and/or compensating third parties for bodily injury and property damage caused by either sudden accidental releases or non-sudden accidental releases or accidental releases in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the Policy arising from operating the underground storage tanks identified above.

The Limits of Liability are:

a. $1,000,000 Each Occurrence

exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under policy number UST G2455160A 001. The effective date of said policy is January 1, 2012.

II. The Insurer further certifies the following with respect to the insurance described in Paragraph I:

A. Bankruptcy or insolvency of the insured shall not relieve the Insurer of its obligations under the Policy to which this certificate applies.

B. The Insurer is liable for the payment of amounts within any deductible applicable to the Policy to the provider of corrective action or a damaged third-party, with a right of reimbursement by the insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280.102.

C. Whenever requested by a Director of an implementing agency, the Insurer agrees to furnish to the Director a signed duplicate original of the Policy and all endorsements.

D. Cancellation or any other termination of the insurance by the Insurer, except for non-payment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the Insured.

E. The insurance covers claims otherwise covered by the Policy that are reported to the Insurer within six months of the effective date of cancellation or non-renewal of the Policy except where the new or renewed Policy has the same Retroactive Date or a Retroactive Date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the Policy Retroactive Date, if applicable, and prior to such renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the Policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97 (b) (2) and that the Insurer is eligible to provide insurance as an excess or surplus lines insurer in one or more states.

☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☒ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90 %
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; _ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan (HMBP).

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed of appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a hazardous waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

RESPONSE PLAN – PAGE 2

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

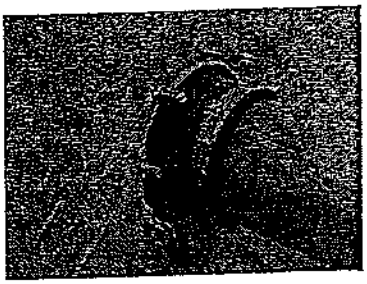
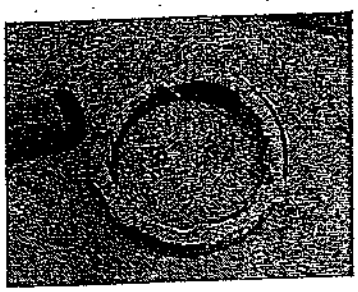
Note: We can supply both curved and flat seals for all sump surfaces. If using the curved seal make sure you rotate the mounting ring to conform to the inside curvature of the sump.



1. Using Acetone, clean the surfaces around the boot that needs to be repaired so that it is free from dirt and oil.

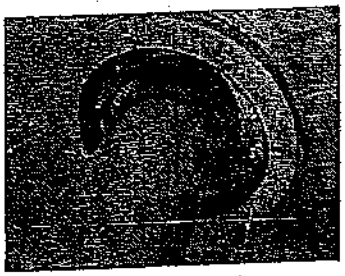
2. Select the split flat or curved mounting ring seal and slip it over the white ring. Spread the mounting ring apart and position it over the pipe.

3. After cleaning the split edge of the mounting ring with acetone apply a bead of Blue Seal glue to the Blue pellethane edge and use a band clamp to keep it together while the glue cures. (the white Poly does not need to bond) Allow forty minutes for the glue to set up.

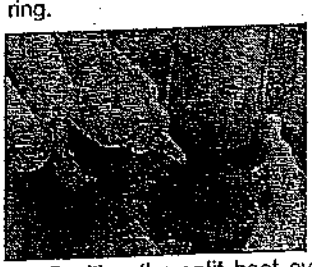


4. Liberally apply a bead of sealant material on the surface of the ring to be attached to the inside of the sump wall. The ring will already be over the pipe

5. Position the mounting ring against the inside sump wall, over the existing, leaking penetration and insert the first Tech screw.



6. Fully tighten all Tech screws, checking that a uniform bead of sealant is squeezed out along the outer edge of the mounting ring.



7. Position the split boot over the pipe and apply a bead of glue to the cut edge. The cut edge must be cleaned with Acetone before applying the glue. Loosely position clamps on the boot to hold the two glued edges in place.

8.Run a bead of the glue onto the outside surface of the mounting ring, where the boot is going to rest. Always make sure that the fill tubes are at 12 o'clock. Install the clamp and tighten the bonded boot to the mounting ring.

9. Leaving the pipe side clamp loose (to allow the air out) completely fill the repair boot. Neatly wipe away any excess sealant on the sump wall or the pipe and tighten all clamps to finish. We always suggest a hydrostatic (can be started immediately the boot is filled) or vacuum test to check that the repair has been correctly installed

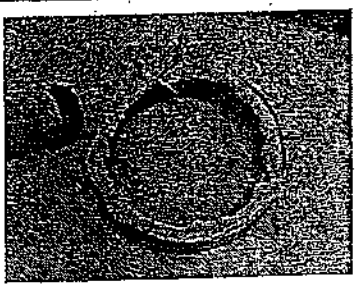
1. Using Acetone, clean the sump surface around the boot that needs to be repaired so that it is free from dirt and oil. Remove the nuts of the existing boots, cut away the old boot and cut all bolts off.

2. Select the split flat or curved mounting ring seal depending on whether it is a flat or curved sump and slip it around the two halves of the mounting ring. Spread the ring apart and position it over the pipe. Clean the edge of the Pellethane ring sleeve with acetone and then use the blue seal glue to bond it together. Use the split boots large band clamp to hold the bonded ring together for 40 mins.

3. Hold the ring against the sump wall in its correct position. Drill a 1/8" pilot hole through each hole in the ring clear through the sump wall and the backing ring in the outside of the sump .



4. Liberally apply a bead of sealant material on the surface of the ring to be attached to the inside of the sump wall. The ring will already be bonded together and hanging over the pipe

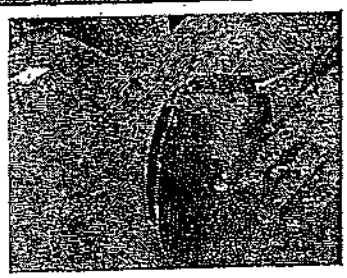
7. Position the split boot over the pipe and apply a bead of glue to the cut edge. The cut edge must be cleaned with Acetone before applying the glue. Loosely position clamps on the boot to hold the two glued edges in place.



8. Once the glue has dried (forty minutes) run another bead of the glue onto the outside surface of the mounting ring, where the boot is going to rest. Always make sure that the fill tubes are at 12 o'clock. Install the clamp and tighten the bonded boot to the mounting ring

Veeder Root Battery Test Prior to Failsafe testing

We have recently seen a number of H8 errors and Warm Cycle loops during "failsafe" testing of the Veeder Root for Monitoring Certifications, resulting in emergency board replacement, reprogramming and cold starts. After review and testing, Veeder Root has determined that most of the failures were due to failure of the battery.

Although battery replacement is an easy procedure, the Veeder Root manual calls for powering down the Veeder Root which generally will require a permit. In order to avoid this process under emergency conditions, the battery should be tested prior to the failsafe test. If the battery fails, the testing should be suspended and rescheduled until the battery can be replaced.

As a reminder, the Veeder Root programming should always be downloaded and saved as a safeguard prior to failsafe testing, regardless of the condition of the battery.

VEEDER-ROOT

ECPU2 Battery Voltage Verification

Step 1: Using a Volt Meter, verify battery voltage by simply putting your positive lead on ***B151*** **(See Illustration A)** and the console chasse. You should read ***3.6 volts DC.***

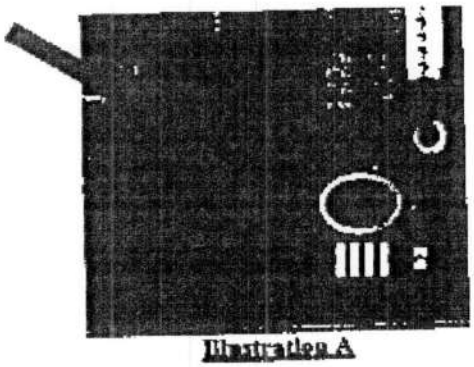

Illustration A

Step 2: Does the Battery Read less than 3.5 volts?
If Yes, **The battery is defective.**

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This application is for authorization to construct or modify hazardous material UST facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This application will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The Owner/Operator, Facility name, mailing address and facility address on this form must correspond with the information on the UP UST FACILITY INFORMATION form.

B This application must be submitted for new construction (installation of new tanks) plan clearance, piping replacement, or addendum to an existing HMUSP. Specify the number of tanks to be installed and the total number of tanks after installation. Existing facilities with a valid operational HMUSP or UP Permit, need not make a separate HMUSP application to add or modify tanks. Work must commence within 180 days from the date of issuance of plan approval or the application is void. An extension of up to 180 days may be granted at one-half the initial plan check application fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the California Health and Safety Code, Division 20, Chapter 6.7, the California Code of Regulations, Title 23, Division 3, Chapter 16, Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Department of Public Works. Other clearances such as local fire department, building and safety, and either South Coast Air Quality Management District or Antelope Valley Air Quality Management District may also be required.

In addition to the plan clearance fee, an HMUSP permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of tanks. State surcharge or service fees paid on existing or renewed tanks are not transferable to new tanks.

D Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of $429 must be submitted for each addendum. Where a previously unregistered tank is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and each UP UST form must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the completed UNIFIED PROGRAM UST INSTALLATION form must be submitted upon completion of work.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This application is for authorization to construct or modify hazardous material UST facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This application will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The Owner/Operator, Facility name, mailing address and facility address on this form must correspond with the information on the UP UST FACILITY INFORMATION form.

B This application must be submitted for new construction (installation of new tanks) plan clearance, piping replacement, or addendum to an existing HMUSP. Specify the number of tanks to be installed and the total number of tanks after installation. Existing facilities with a valid operational HMUSP or UP Permit, need not make a separate HMUSP application to add or modify tanks. Work must commence within 180 days from the date of issuance of plan approval or the application is void. An extension of up to 180 days may be granted at one-half the initial plan check application fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the California Health and Safety Code, Division 20, Chapter 6.7, the California Code of Regulations, Title 23, Division 3, Chapter 16, Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Department of Public Works. Other clearances such as local fire department, building and safety, and either South Coast Air Quality Management District or Antelope Valley Air Quality Management District may also be required.

In addition to the plan clearance fee, an HMUSP permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of tanks. State surcharge or service fees paid on existing or renewed tanks are not transferable to new tanks.

D Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of $444 must be submitted for each addendum. Where a previously unregistered tank is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and each UP UST form must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the completed UNIFIED PROGRAM UST INSTALLATION form must be submitted upon completion of work.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan (HMBP)

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed of appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a hazardous waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur.
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

RESPONSE PLAN – PAGE 2

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water;
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This application is for authorization to construct or modify hazardous material UST facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This application will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The Owner/Operator, Facility name, mailing address and facility address on this form must correspond with the information on the UP UST FACILITY INFORMATION form.

B This application must be submitted for new construction (installation of new tanks) plan clearance, piping replacement, or addendum to an existing HMUSP. Specify the number of tanks to be installed and the total number of tanks after installation. Existing facilities with a valid operational HMUSP or UP Permit, need not make a separate HMUSP application to add or modify tanks. Work must commence within 180 days from the date of issuance of plan approval or the application is void. An extension of up to 180 days may be granted at one-half the initial plan check application fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the California Health and Safety Code, Division 20, Chapter 6.7, the California Code of Regulations, Title 23, Division 3, Chapter 16, Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Department of Public Works. Other clearances such as local fire department, building and safety, and either South Coast Air Quality Management District or Antelope Valley Air Quality Management District may also be required.

In addition to the plan clearance fee, an HMUSP permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of tanks. State surcharge or service fees paid on existing or renewed tanks are not transferable to new tanks.

D Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of $429 must be submitted for each addendum. Where a previously unregistered tank is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and each UP UST form must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the completed UNIFIED PROGRAM UST INSTALLATION form must be submitted upon completion of work.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan (HMBP).

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed of appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a hazardous waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment.
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

RESPONSE PLAN – PAGE 2

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report.

- The UST owner's or operator's name and telephone number,
- A list of the types, quantities, and concentrations of hazardous materials released,
- The approximate date of the release,
- The date on which the release was discovered,
- The date on which the release was stopped,
- A description of actions taken to control and/or stop the release,
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This application is for authorization to construct or modify hazardous material UST facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This application will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The Owner/Operator, Facility name, mailing address and facility address on this form must correspond with the information on the UP UST FACILITY INFORMATION form.

B This application must be submitted for new construction (installation of new tanks) plan clearance, piping replacement, or addendum to an existing HMUSP. Specify the number of tanks to be installed and the total number of tanks after installation. Existing facilities with a valid operational HMUSP or UP Permit, need not make a separate HMUSP application to add or modify tanks. Work must commence within 180 days from the date of issuance of plan approval or the application is void. An extension of up to 180 days may be granted at one-half the initial plan check application fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the California Health and Safety Code, Division 20, Chapter 6.7, the California Code of Regulations, Title 23, Division 3, Chapter 16, Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Department of Public Works. Other clearances such as local fire department, building and safety, and either South Coast Air Quality Management District or Antelope Valley Air Quality Management District may also be required.

In addition to the plan clearance fee, an HMUSP permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of tanks. State surcharge or service fees paid on existing or renewed tanks are not transferable to new tanks.

D Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of $444 must be submitted for each addendum. Where a previously unregistered tank is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and each UP UST form must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the completed UNIFIED PROGRAM UST INSTALLATION form must be submitted upon completion of work.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☒ Yes	☐ No* ☐ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g., modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☒ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☐ Yes	☐ No* ☒ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e., no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? %
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

F. In-Tank Gauging / SIR Equipment:

☒ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer`s maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h.; ☐ 0.1 g.p.h ; ☐ 0.2 g.p.h.
☒ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☒ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☒ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☒ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☒ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☒ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer`s maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

Date map was drawn: _10/22/12_.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan (HMBP)

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc) and, if necessary, safely remove remaining hazardous material from the UST system
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed of appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a hazardous waste determination in accordance with 22 CCR §66262 11 finds that it is non-hazardous. If the water has a petroleum sheen (i e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

RESPONSE PLAN – PAGE 2

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include.

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released,
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection,
- Released hazardous substances are discovered at the UST site or in the surrounding area,
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

Date map was drawn: 10 / 16 / 2013 .

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors, and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

INSTRUCTIONS

Hazardous Materials Underground Storage Permit (HMUSP)
New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HMUSP (Operating Permit) or Unified Program (UP) Permit.

This application is for authorization to construct or modify hazardous material UST facilities only. A separate HMUSP or UP Permit, is required to operate the approved system. This application will not be approved unless a valid HMUSP or UP Permit application is on file with the Department of Public Works.

A The Owner/Operator, Facility name, mailing address and facility address on this form must correspond with the information on the UP UST FACILITY INFORMATION form.

B This application must be submitted for new construction (installation of new tanks) plan clearance, piping replacement, or addendum to an existing HMUSP. Specify the number of tanks to be installed and the total number of tanks after installation. Existing facilities with a valid operational HMUSP or UP Permit, need not make a separate HMUSP application to add or modify tanks. Work must commence within 180 days from the date of issuance of plan approval or the application is void. An extension of up to 180 days may be granted at one-half the initial plan check application fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the California Health and Safety Code, Division 20, Chapter 6.7, the California Code of Regulations, Title 23, Division 3, Chapter 16, Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Department of Public Works. Other clearances such as local fire department, building and safety, and either South Coast Air Quality Management District or Antelope Valley Air Quality Management District may also be required.

In addition to the plan clearance fee, an HMUSP permit application fee will be required when applying to construct a new facility. No refund of current year HMUSP fees due will be allowed for a net decrease in the number of tanks. State surcharge or service fees paid on existing or renewed tanks are not transferable to new tanks.

D Specify the type of modification or change to existing tanks. Types of modifications and changes requiring an addendum include: repair of tanks, replacements of piping, change or addition of hazardous materials stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

E A fee of $429 must be submitted for each addendum. Where a previously unregistered tank is added to an existing HMUSP, an additional application fee including maintenance fee will be charged.

F This form and each UP UST form must be signed by one of the following:

1. The tank owner, operator, or Unified Program facility permit owner or operator.
2. A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the tank(s) are located.
3. A general partner proprietor.
4. A principal executive officer, ranking elected official, or authorized representative of a public agency.
5. An authorized representative, including an architect or contractor responsible for the installation of the new tanks or any modifications or changes to existing tanks.

All post construction requirements such as primary containment testing, secondary containment testing, monitoring system certification, soil sampling closure reports, and the completed UNIFIED PROGRAM UST INSTALLATION form must be submitted upon completion of work.

INCOMPLETE APPLICATIONS WILL NOT BE PROCESSED.

   b. Permanent closure of a tank in place or a temporary closure shall require a 30 day written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74-81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tanks shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

BUILDING AND SAFETY DIVISION

TO: APPLICANTS FOR THE REMOVAL OF UNDERGROUND STORAGE TANKS

When an underground storage tank is removed in the unincorporated area of Los Angeles County or one of the incorporated Cities where the County serves as the Building Official, a building permit (demolition permit) must be obtained before the tank is removed. The permit is issued by the County or City field office having jurisdiction over the area where the tank is located. A list of the field offices is attached for your reference.

To ensure that an over-the-counter permit can be issued, please bring the following to the appropriate County or City field office:

1. A copy of the closure permit issued by Waste Management Division.

2. A copy of the tank removal permit issued by the Fire Department.

3. A Certificate of Worker's Compensation Insurance addressed to the appropriate field office.

4. Permit and processing fees. Please call the office having jurisdiction for fee amounts if needed.

5. A plot plan showing the area of excavation and any structures on the site. Indicate whether or not the backfill will be compacted under the supervision of a Soils Engineer. (Some jurisdictions require the backfill to be compacted. If you are planning on placing uncompacted fill, check with the office having jurisdiction.)

Please be aware that a City business license may be required if the job is located in an incorporated City.

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

RESPONSE PLAN – PAGE 2

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the California Emergency Management Agency at (800) 852-7550.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered,
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether or not any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, and supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

VI. LEAK INTERCEPTION AND DETECTION SYSTEM

This information is required only for motor vehicle fuel UST systems constructed per the Alternate Construction Requirements of 23 CCR §2633, and only if the Leak Interception and Detection System (LIDS) does not meet the volumetric requirements of 23 CCR §2631(d)(1) through (5) (i.e., when accounting for rainfall and backfill material, the secondary containment volume is less than 100% of primary tank volume for a single UST; or in the case of multiple USTs in shared secondary containment, 150% of the largest primary tank volume or 10% of aggregate primary tank volume, whichever is greater).

ATTACH AN ADDITIONAL PAGE TO THIS PLAN CONTAINING THE FOLLOWING INFORMATION:

- The volume of the LIDS in relation to the volume of the primary container;
- The amount of time the LIDS shall provide containment related to the time between detection of an unauthorized release and cleanup of the leaked substance;
- The depth from the bottom of the LIDS to the highest anticipated level of groundwater;
- The nature of the unsaturated soils under the LIDS and their ability to absorb contaminants or to allow movement of contaminants;
- The methods and scheduling for removal of all hazardous substances which may have been discharged from primary containment and are located in the unsaturated soils between the primary containment and groundwater, including the LIDS sump.

VII. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.
