Hazardous Materials

Inglewood Basketball and Entertainment Center Project Investigations

28 June 2019

MEMORANDUM

To: Chris Holmquist (Murphy's Bowl LLC)

From: James Yoon, P.E. (EKI Environment & Water, Inc.)

Subject: Inglewood Basketball and Entertainment Center Project Investigations (EKI B71091.00)

In accordance with the Agreement between EKI Environment & Water, Inc. (formerly known as Erler & Kalinowski, Inc.; "EKI") and Murphy's Bowl LLC ("MB"), dated 31 August 2017, EKI has prepared this Technical Memorandum summarizing information for the Inglewood Basketball and Entertainment Center Project ("IBEC Project") site located in Inglewood, California, which includes 43 parcels in the Event Area encompassing 16.75 acres, 5 parcels in the East Side encompassing 5.12 acres, and 27 parcels in the West Side, encompassing 5.36 acres (the "subject property"). The location of the subject property is shown on Figure 1.

The West Side and East Side portions of the subject property are occupied by vacant land owned by the City of Inglewood or City of Inglewood Successor Agency. The majority of the Event Area portion of the subject property is occupied by vacant land owned by the City of Inglewood or City of Inglewood Successor Agency, however, 12 parcels in the Event Area are owned by non-City entities and include existing commercial properties.

The conclusions and recommendations presented herein are our professional opinion and are not a warranty or guaranty as to the presence, absence, or extent of contamination at the subject property or of releases from or near the subject property. The facts presented herein are based on available information obtained by EKI staff and represent existing conditions at the subject property at the time the information was collected.

1.1 Scope of Services

EKI performed the following tasks as part of this assessment:

- Reviewed the physical setting and current land use information for the subject property and surrounding area (see Section 1.2.1);
- Reviewed available historical land use information for the subject property and surrounding area (see Section 1.3), including available topographic maps, aerial photos, Sanborn fire insurance maps, and city directories for the subject property and surrounding area;

- Conducted a site visit and visual observation of subject property areas and surrounding off-site areas on 24 October 2017 (see Section 1.4);
- Reviewed information provided by MB, including chain-of-title documentation (see Section 1.5);
- Reviewed a regulatory agency database report for the subject property and surrounding area provided by Environmental Data Resources, Inc. ("EDR"), dated 5 September 2017 ("2017 EDR Report"; see Section 1.6);
- Where available, reviewed publicly available files for the subject property obtained from the RWQCB, the State Water Resources Control Board ("SWRCB") GeoTracker database, the California Department of Toxic Substances Control ("DTSC"), the EnviroStor database, the Los Angeles County Fire Department Public Health Investigation ("LACPHI"), the Sanitation Districts of Los Angeles County ("LACSD"), the Los Angeles County Department of Public Works ("LADPW"), and the South Coast Air Quality Management District ("SCAQMD") (see Section 1.7); and
- Conducted limited soil sampling in the Event Area and East Side of the subject property (see Section 2).

1.2 Subject Property Setting and Current Ownership

The subject property includes 75 parcels in the City of Inglewood, including 43 parcels in the Event Area encompassing 16.75 acres, 5 parcels in the East Side encompassing 5.12 acres, and 27 parcels in the West Side, encompassing 5.36 acres All portions of the subject property are located south of West Century Boulevard; the West Side of the subject property is located west of South Prairie Avenue, and the Event Area and East Side are located east of South Prairie Avenue. The location of the subject property is shown on Figures 1 and 2. The approximate boundaries of the subject property were estimated during site reconnaissance using available site maps and information provided by MB, and are shown on Figure 2.

1.2.1 Current Use of the Subject Property and the Surrounding Area

EKI staff visually observed the subject property and surrounding areas during a site visit on 24 October 2017, as discussed in Section 1.4. The subject property and identified nearby properties with known chemical releases are shown on Figure 2. The majority of the Event Area portion of the subject property is occupied by vacant land owned by the City of Inglewood or City of Inglewood Successor Agency, however, 12 parcels in the Event Area are owned by non-City entities and include existing commercial properties. The West Side and East Side of the subject property are currently vacant, unpaved lots.

The land uses surrounding the subject property are a mixture of commercial, industrial, and residential properties and include manufacturing facilities, vehicle fueling and service stations, hotels, restaurants, and both single- and multi-family residential properties, as discussed in Section 1.4.2.

1.2.2 Physical Setting

According to the "GeoCheck® - Physical Setting Source Addendum" section of the 2017 EDR Report, the subject property is located at approximately 89 feet above mean sea level ("msl") with a general topographical gradient downward toward the south-southwest (see Attachment A). Based on a review of the United States Geological Survey ("USGS") 7.5-Minute Series Topographic Map, Inglewood Quadrangle, dated 1981 (see Attachment A), the local topographic gradient at the subject property is generally towards the south-southwest.

Subsurface environmental investigations have been conducted on adjoining properties, including installation and sampling of groundwater monitoring wells. The information on local geology and hydrology discussed below is based on information from previous investigations conducted at the subject property and adjoining properties by EKI and others.

1.2.2.1 Geology

According to *Bulletin No. 104 Planned Utilization of the Ground Water Basins of the Coastal Plain of Los Angeles County* ("Bulletin No. 104") prepared by the California Department of Water Resources ("DWR") in 1961 (DWR, 1961), the subject property is located within the Rosecrans Hills physiographic region of Los Angeles County, in the West Coast Basin portion of the Coastal Plain region of Southern California. The shallow sediments that underlie the subject property consist of the Pleistocene Lakewood Formation. Regionally, these sediments comprise sand, silt, silty sand, and sandy clay with occasional gravel lenses. The San Pedro Formation unconformably underlies the Lakewood Formation and generally consists of partially consolidated gravel, sand, silt, and clay (DWR, 1961).

1.2.2.2 Hydrogeology

According to Appendix A of Bulletin No. 104, the West Coast Basin, in which the subject property is located, encompasses the area west and southwest of the Newport-Inglewood uplift to Santa Monica Bay, to the drainage divined on the Palos Verdes Hills, to San Pedro Bay, from the Ballona Escarpment and Baldwin Hills on the northwest to the Los Angeles-Orange County line to the southeast. Water-bearing sediments in the West Coast Basin generally range in age from Recent to Pleistocene, with some fresh water occurring in the underlying Pliocene sediments (DWR, 1961).

The hydrostratigraphy of the West Coast Basin consists of several individual aquifer zones, which have been grouped into three or four aquifer systems by various investigators, as follows, with increasing depth (Reichard et al., 2003):

- the Recent,
- the Lakewood,
- the Upper San Pedro, and
- the Lower San Pedro.

Geologic maps of the region show that the Recent deposits are not present in the vicinity of the Property (Jennings, 1962), and that the Lakewood Formation is the surficial, first unit present below the Property. The Lakewood Formation includes, with increasing depth, the Exposition, Artesia, Gardena, and Gage aquifers. The sediments that make up the Lakewood Formation are unconsolidated to semi-consolidated deposits consisting of a mixture of sand, silty sands, sandy silts, and sands with some gravel towards the base. The Exposition and Artesia aquifers are contemporaneous and fluvial in origin. The Gage and Gardena aquifers are contemporaneous deposits of fluvial to shallow water origin. The San Pedro Formation is present in portions of the West Coast Basin, and thickens along the Inglewood Syncline from 400 feet near Ballona Gap to over 1,000 feet in Dominguez Gap and contains the Lynwood and Silverado aquifers, and reaches a maximum depth of approximately 1,200 feet below msl in Dominguez Gap. The Silverado aquifer is the most productive of the aquifers in the San Pedro Formation and in the West Coast Basin as a whole, reportedly providing 80 to 90 percent of the total water extracted from the basin annually (DWR, 2003).

In the vicinity of the subject property, the stratigraphically higher Exposition and Artesia aquifers are reported to be absent (DWR, 1961). Collectively, in the vicinity of the subject property, the Gardena and Gage aquifers extend from the ground surface to approximately 150 to 250 feet bgs (EKI, 2008a). However, the groundwater beneath the subject property is relatively deep, i.e., at depths of approximately 100 feet bgs or deeper, and is not used as a source of drinking water (EKI, 2008b).

Subject property geologic and hydrogeologic conditions are complicated by the presence of geologic structures and fault zones on or in the vicinity of the subject property. Published historical records suggest that a fault zone may cross on or near the subject property.

Groundwater flow direction on all three portions of the subject property is unknown, however, on the western portion of the former Hollywood Park Racetrack and Casino property, north of the Event Area and East Side of the subject property, the groundwater flow direction was generally towards the northeast, and groundwater was encountered at depths of approximately 92.5 to 120 feet bgs (EKI, 2009). The groundwater flow direction at the Former Unocal Station 5050 property at 4000 West Century Boulevard, which adjoins the West Side of the subject property, was also determined to be to the northeast.

1.3 Historical Uses of the Subject Property and Adjoining and Nearby Properties

EKI obtained from Environmental Data Resources, Inc. (“EDR”) the following historical land use information for the subject property:

- Historical USGS topographic maps for selected years from 1896 to 2012;
- Historical aerial photographs for selected years from 1923 to 2012; and
- Historical city directory information for selected years from 1946 through 2014.

Sanborn fire insurance maps for the subject property are not available, according to EDR. EKI also viewed aerial photographs (for selected years from 2013 to 2016) online via Google Earth. Copies of the historical information provided by EDR showing the approximate subject property are included in Attachment A.

Below is a summary of the historical land uses of the subject property and adjoining properties based on historical information readily available to EKI. The historical land use discussion is broken out into the various sections or sub-areas of the subject property.

The historical USGS topographic map dated 1896 depicts the subject property area generally as undeveloped. West Century Boulevard and South Prairie Avenue, however, are depicted on the map adjacent to the subject property. The City of Inglewood is depicted several miles northwest of the subject property. Land use information for the time period between approximately 1900 and 1920 is not readily available, however, land uses of the subject property during this time period are likely scattered rural residential with possible small-scale agriculture on the vacant parcels.

1.3.1 West Side North ("WSN Area")

1923	WSN Area and adjoining areas to the east, west, and south are vacant. West 101st Street is noted along the southern boundary. Rural residential development is noted north of West Century Boulevard.
1928-1938	WSN Area is in single-family residential land use. Adjoining properties to the west and south are also in residential use. Adjoining property to the east (present-day commercial/ retail) remains vacant.
1947-1952	WSN Area remains residential. Adjoining property to the east apparently developed as a trailer/mobile home park.
1963	WSN Area remains residential – one apparent new motel/apartment building noted (possibly Mardi Gras Motel at 4026 West Century Blvd). Adjoining property to the east is developed as a gasoline service station (former Union Oil at 4000 West Century Boulevard; see Figure 2).
1977-1983	WSN Area remains residential; however, several parcels along West Century Boulevard appear to be converted to commercial/retail. According to City Directory information, "Rattay Printery" and "Century Press" occupied 4020 West Century Boulevard from the 1940s through 2010 (see Figure 2). Adjoining property to east remains a gasoline service station with several additional apparent retail buildings to the south. According to City Directory information, these adjoining buildings were occupied by "Gallup Cleaners" in 1954, "Sav-On Cleaners in 1970", "Damon's Cleaners" in 1975, and "Launderland" and "Coin Laundry" from 1975 to 2000 (see Figure 2).
1989-1994	West portion of WSN Area remains single-family residential; western portion appears to be a mix of apartments and commercial/retail. Adjoining property

	to east remains unchanged with exception of gasoline service station which appears to be demolished. The Union Oil service station reportedly operated between approximately 1970 and 1990.
2005-2013	West portion of WSN Area is vacant; residences have been demolished. East portion of WSN Area remains unchanged and developed as before; however, the buildings look vacant and unused by 2012. New building is constructed in place of former gas station building (former Taco Bell building).
2013-present day	WSN Area is completely vacant and a dirt lot by August 2013; and remains unchanged through present-day.

1.3.2 West Side South ("WSS Area")

1923	WSS Area is vacant with the exception of a small shed located in the central portion of the area, which may be a well pump house. Adjoining properties to the north and west are vacant; properties to the south and east are rural residential.
1928-1938	Single-family residential development is noted in the western two-thirds of the WSS Area. The eastern one-third remains vacant. Additional residential development is noted on adjoining properties.
1947-1952	By 1947, the WSS Area is fully developed with residences. The eastern one-third nearest South Prairie Avenue is now developed with a mobile home/trailer park (Winter Garden Trailer Park at 10117 South Prairie Avenue), according to City Directory information). Surrounding land uses remain predominantly residential.
1963-1994	WSS Area land use remains unchanged during this time period (residential and trailer park). Additional multi-family residential development, e.g., apartments or hotels, is noted east of the WSS Area across South Prairie Avenue.
2002	WSS Area, including the trailer park, is vacant and a dirt lot, with the exception of several remaining residential properties in the north-central portion of the WSS Area along W 101st Street. These remaining units are demolished by 2005.
2005 to present-day	The WSS Area remains a vacant dirt lot. In 2016, the former trailer park area appears to be used as a contractor staging yard, e.g., metals cargo containers, soil and rock piles, equipment, vehicle and materials storage.

1.3.3 Event Area North ("EAN Area")

1923	EAN Area is mixed single-family residential and vacant parcels. Some small-scale agriculture (i.e., orchards) are noted on the vacant parcels. Adjoining properties are also single-family residential with some small-scale agriculture.
1928-1947	EAN Area remains in residential land use, with possible apartment development in the eastern portion of the EAN Area along West Century

	Boulevard by 1947. Adjoining properties remain residential. The former Hollywood Park racetrack and parking area north of the EAN Area across W Century Boulevard is developed by 1938.
1952	EAN Area remains in residential land use with an apparent mobile home/trailer park (Edmunds Trailer Park) noted at 3930 Century Blvd (see Figure 2) , and an apparent gasoline service station noted on the present-day Church's Chicken parcel at 10004 South Prairie Avenue (also 3950 Century Blvd). According to City Directory information, a gasoline service station is reported at this parcel between 1950 and 1970 (see Figure 2). Surrounding properties are a mix of single-family residential and mobile home/ trailer parks.
1963	EAN Area along W Century Boulevard is converted to apartments and/or hotels, as are the parcels along 102nd Street along the southern side of the EAN Area. The gasoline service station remains at the intersection of South Prairie Avenue and W Century Boulevard (Ralph Bantner/Chevron/Hollypark service station at 10004 South Prairie Avenue). Adjoining properties to the east and south are also being converted to apartments and/or hotels (i.e., present-day Airport Parkview Hotel at 3900 West Century Boulevard; see Figure 2).
1977-1994	Land uses of the EAN Area remain relatively unchanged and are predominantly apartments and/or hotels (i.e., Turf and Sky Apartment/Hotel at 3940 West Century Boulevard) with possible smaller commercial. The gasoline service station at 10004 South Prairie Avenue was demolished by 1977, with new development of the present-day Church's Chicken building. The 3915 W 102nd parcel (see Figure 2) is a vacant dirt lot by 1977 but was re-developed by 1994 (see below). Single-family residential is predominant along South Prairie Avenue in the western portion of the EAN Area (10020-10116 South Prairie Avenue). Adjoining land uses to the east and south remain a mix of single-family residential and apartments/hotels. The present-day Century Industrial Center to the adjoining east of the EAN Area at 3800 West Century Boulevard was constructed by 1989.
2002	By 2002, the eastern and southern portions of the EAN Area are demolished and vacant, with a trailer park, apartment/hotel (Rodeway Inn), and Church's Chicken structures remaining. The 3915 W 102nd parcel was re-developed by 1994, and is reported to have been occupied by offices associated with shipping and distribution companies, investment firms, and possible small warehouses. The single-family residential parcels at 10020-10116 South Prairie Avenue are vacant dirt lots by 2002. The adjoining properties to the south across W 102nd Street remain a mix of apartments/hotels and single-family residential.
2005 to present day	By 2005, the only developments remaining in the EAN Area are the hotel at 3940 West Century Boulevard (Rodeway Inn), Church's Chicken at 3950 West

	Century Boulevard, and the commercial building at 3915 W 102nd Street (see Figure 2). The remainder of the EAN Area is vacant dirt lots.

1.3.4 Event Area South ("EAS Area")

1923	EAS Area is mixed single-family residential and vacant parcels. Adjoining properties to the east and south are also single-family residential. Properties to the north and west area vacant and in possible agricultural use.
1928-1952	EAS Area and adjoining properties remain predominantly single-family residential.
1963	EAS Area land use remains relatively unchanged (single-family residential), however, one parcel at 3940 W 102nd Street has been redeveloped into an apartment building. Adjoining land uses are being redeveloped to apartment buildings.
1977-2012	EAS Area land use is predominantly multi-family residential (apartments), with the exception of the parcels along South Prairie Avenue (10200-10226) that remain single-family residential. The 10211 South Prairie Avenue parcel (see Figure 2), however, during this time period appears to be used for businesses, including an iron works business (1946-1960) and a restaurant (1970-1995), according to City Directory information. The off-Site property to the east across South Prairie Avenue at 10225 South Prairie Avenue (see Figure 2) has been used for automobile repair since approximately 1975. The adjoining property at 10300 South Prairie Avenue (see Figure 2) is currently a dry cleaner "Zsack Cleaners", and may have been used for dry cleaning in the past.
2013 to present-day	By 2012 and 2013, the majority of the apartment buildings along W 102nd Street have been demolished and are vacant lots and/or appear abandoned. By 2014, the EAS Area is a vacant lot with the exception of the parcels at 3838 West 102nd Street (commercial building) and 3 or 4 parcels along South Prairie Avenue which remain developed.

1.3.5 East Side North ("ESN Area")

1923-1938	ESN Area is mixed single-family residential and vacant parcels. Some small-scale agriculture and orchards are apparent on the parcels. Adjoining properties to the east, west, and south are also a mix of single-family residential and small-scale agriculture. The property to the north across West Century Boulevard is in large-scale agricultural use, e.g., row crops. By 1938, the former Hollywood Race Track is noted to the north.
1947	Several parcels of the ESN Area are mobile home or trailer parks. The other parcels remain single-family residential. Surrounding land uses to the east, west, and south remain predominantly single-family residential.
1952	The entire ESN Area is made up of several mobile home or trailer parks. Properties to the east and west along W Century Boulevard also appear to be

	trailer parks. Properties to the south along 102nd Street remain single-family residential.
1963	The ESN Area remains unchanged and is occupied predominantly by trailer parks. City Directory information indicates a grocery and electrical service business on the parcels during the 1950s and 1960s. Properties to the east and west appear to be a mix of trailer parks and businesses. Properties to the south along 102nd Street appear to be converting to apartments.
1977-1981	The entire ESN Area is redeveloped into apartments and/or hotel. Surrounding land uses remain trailer parks (west), a motel (east), and residential/apartments (south). The former Hollywood Park Race Track parking lot remains north of West Century Boulevard.
1989	The entire ESN Area is vacant and a dirt lot. The apartment/motel on the parcel was demolished sometime between 1981 and 1989. The present-day UPS facility to the east is constructed and freight/distribution warehouse have been constructed to the west of the parcel. Properties to the south along 102nd Street remain a mix of single-family residential and apartments.
1989 to present-day	The entire ESN Area remains a vacant, dirt lot. Land uses to the east and west remain predominantly distribution/warehouse oriented. In the 1990s, according to City Directory information, uses to the adjoining west of the parcel included: Warner Chemical Mfg; TI Thermal Plastics Mfg; carpentry; and machining. Properties to the south remain residential.

1.3.6 East Side South ("ESS Area")

1923-1952	The ESS Area is a mix of single-family residential and small-scale agriculture. By 1947, the center parcel (3703 102nd Street) appears to be part of a trailer park that extends north to West Century Boulevard. Surrounding properties are also in similar single-family residential land use.
1963	The central portion of the ESS Area remains part of the trailer park that extends north to West Century Boulevard. The eastern portion appears to be converted to apartments. The western portion remains single-family residential. Surrounding properties appear to be converting to apartment use.
1977	The entire ESS Area appears to be developed into residential apartments. Additional apartments are noted off-site to the southwest.
1989	The eastern two-thirds of the ESS Area remain in apartment use. The western one-thirds of the ESS Area is a vacant dirt lot. The present-day UPS facility is noted directly east of the site.
1994 to present-day	The entire ESS Area is a vacant dirt lot. Properties to the south are a mixed of single-family residential and apartments.

1.3.7 Summary of Historical Uses of Adjoining and Nearby Properties

The property to the north of the Event Area and the East Side of the subject property is the former Hollywood Racetrack and Casino property formerly used for agricultural uses prior to development with a horse racetrack, grandstand building, casino, stables, equine hospital, hotel, and other commercial buildings associated with the horse racetrack operations, as described in additional detail in Section 1.7.2.1.

Historical commercial or industrial business operations on adjoining or nearby properties may have involved the use of a wide variety of chemicals, including petroleum hydrocarbons, lubricants, refrigerants, solvents, metals, or other chemicals. Nearby property uses have included oil field operations, dry cleaning, vehicle maintenance and repair, vehicle fueling, metalworking, manufacturing, supermarkets, and other activities.

1.4 Results of Subject Property Site Visit and Visual Observation

On 24 October 2017, Zachary Salin of EKI conducted a site visit and visual observation of the subject property. EKI also observed surrounding properties from the subject property and from adjoining publicly accessible areas. Observations of the subject property and adjoining areas are discussed below. Selected photographs taken during the site visit are presented in Attachment B.

1.4.1 Observation of the Subject Property

The West Side of the subject property is located on the western side of South Prairie Avenue and south of West Century Boulevard, and is currently vacant land. The East Side of the subject property is located between South Doty Avenue and South Yukon Avenue south of West Century Boulevard, and is currently vacant land.

The west side of the EAN Area contains a Church's Chicken fast food restaurant and the Rodeway Inn & Suites hotel, corresponding to the businesses described in Section 1.3.3 above. The eastern side of the EAN Area is currently used a staging area for building materials for a public roadway improvement project on West Century Boulevard. This portion of the EAN Area is occupied by construction trailers and stockpiles of materials including piping, road safety signs, gravel, and other imported fill material.

The central portion of the EAN Area is occupied by a commercial property that EKI did not have access to during the site visit. Based on available public records, the building is occupied by offices for Sugarfina, a candy retailer, and offices for an auto detailing supply company. The building may be used for storage of materials, including auto detailing products.

The majority of the EAS Area is vacant land owned by the City. On the western side of the EAS area along South Prairie Avenue are residential properties at 10204 and 10226 South Prairie Avenue and a catering company at 10212 South Prairie Avenue. Near the center of the EAS

Area is a commercial property at 3838 West 102nd Street, identified as Hollywood Aerial Arts, an athletics facility. The property appeared to be for lease at the time of EKI's site visit. The vacant lot on the eastern side of the EAS Area contained several small soil stockpiles and garbage at the time of EKI's site visit.

1.4.2 Surrounding Land Uses

The area surrounding the subject property currently has commercial and residential land uses. The subject property is adjoined to the north by the former Hollywood Park Racetrack and Casino property, which is currently undergoing redevelopment. Surrounding properties are described below. Locations of identified nearby properties with chemical releases are shown on Figure 2.

1.4.2.1 West Side

Properties around the West Side of the subject property include hotel/residential properties to the west and south. Across West 102nd Street to the southeast is a church property, and the northeastern side of the West Side of the subject property adjoins a liquor store, laundromat, and fast food restaurant. Properties to the north across West Century Boulevard include a gas station, fast food restaurant, hotel, vacant lot, and auto repair facility.

1.4.2.2 Event Area

Properties around the Event Area of the subject property include a hotel and a storage company adjoining the EAN Area to the north and offices/warehouses adjoining the EAN Area to the east. A commercial building possibly used for offices or warehouses adjoins the EAS Area to the east, and the EAS Area adjoins residential properties, a school, and a church to the south. Along South Prairie Avenue to the south is a reported dry cleaning business and sign company.

The former Hollywood Park Racetrack and Casino property is located across West Century Boulevard to the north of the EAN Area.

1.4.2.3 East Side

Properties around the East Side of the subject property include commercial buildings to the east, reportedly occupied by a window covering store and a fish store. A UPS distribution center or depot adjoins the East Side of the subject property to the east, and residential properties are located across West 102nd Street to the south.

The former Hollywood Park Racetrack and Casino property is located across West Century Boulevard to the north of the East Side of the subject property.

1.5 Summary of Information Provided by MB

Chain-of-title information was provided by MB to EKI, these documents are assembled in Attachment C. The available chain-of-title information reviewed by EKI includes property transaction information for subject property parcels, and supports the primarily residential land uses for the subject property described in Section 1.3 above.

1.6 Results of EDR Database Search

To assist in the identification of conditions indicative of releases and threatened releases of hazardous substances on, at, in, or to the subject property, i.e., contamination of soil or groundwater, EKI contracted with EDR to perform a search of available, selected federal, state, and local environmental regulatory agency databases. EDR performed a search for the subject property area and properties located within selected radii of the subject property. A copy of the resulting "radius map report" prepared by EDR, dated 5 September 2017, is provided in Attachment A. Refer to the EDR report for a complete list of the federal, state, and tribal databases searched.

1.6.1 Subject Property

The subject property is listed in three of the environmental databases searched by EDR. Information available from these databases includes the following:

- The property at 3900 102nd Street is listed as "Various City Properties" in the National Pollutant Discharge Elimination System ("NPDES") database for discharges associated with demolition and construction activities.
- The property at 3901 102nd Street is listed as "Well No. 6" in the SWRCB Enforcement Action ("ENF") and SWRCB Waste Discharge System ("WDS") databases, and appears to include a city-owned water supply or monitoring well.
- The property at 10220 South Prairie Avenue is listed as "E & M German Car Repair" in the 1990-1992 historical EDR auto databases. Based on other data sources reviewed by EKI, this address appears to be an error, and the auto repair facility is associated with the 10223 South Prairie Avenue property to the west.
- The property at 3901 West 102nd Street is listed as "Inglewood Redevelopment Agency" in the DTSC Hazardous Waste Manifest ("HAZNET") database, and reported disposal of 33 tons of asbestos-containing waste to a landfill.
- The property at 3822 West Century Boulevard is listed as "Omega Carpet & Uphl Stm Cleani" in the EDR historical cleaner database in 1992; dry cleaners often used solvents such as tetrachloroethene ("PCE") or trichloroethene ("TCE").
- The property at 3901 102nd Street is listed as "Well No. 1NA 2NA 4 & 6" in the Facility Index System ("FINDS") database as a water supply well or wells.

1.6.2 Surrounding Properties

Based on a review of the 2017 EDR Report (Attachment A), the following properties have reported chemical use and/or reported releases and are located upgradient or adjacent to the subject property location within a quarter mile. The pertinent information obtained from the 2017 EDR Report for these properties is summarized below.

- Former Hollywood Park Racetrack and Casino, 1050 South Prairie Avenue, immediately north of subject property across Century Boulevard: This property is a former horse racetrack and casino, currently under redevelopment as a mixed-use commercial/residential property. Portions of the property have used a variety of chemicals, including an auto repair shop, vehicle fueling, dry cleaner, wastewater treatment, and a veterinary hospital. Prior to horse racetrack use, the northeastern portion of the property was part of an oilfield, and total petroleum hydrocarbons ("TPH") compounds have been detected at the property. The chemical uses on this property are not known to have migrated to the subject property.
- LA Custom Finish Inc., 3738 West Century Boulevard, immediately west of East Side of subject property along Century Boulevard: This property is listed with use of unspecified solvent and organic mixtures, and appears to be a painting business.
- Coatings Composites, 10105 Doty Avenue, between Event Area and East Side of subject property: This property is listed as a hazardous waste generator of organic and inorganic chemicals, laboratory wastes, and solvents.
- Emmanuel Perfect Auto, 3742 West Century Boulevard, Suite 4, between Event Area and East Side of subject property: This property is listed as an automotive repair shop in 1995-1996, and could have used TPH-containing compounds and solvents.
- Corner Express, 3750 West Century Boulevard, between Event Area and East Side of subject property: This property is listed as a generator of oil-containing waste, possibly from automotive repair shop operations.
- Imagine Logistics Inc., 3734 West Century Boulevard, Suite 7, between Event Area and East Side of subject property: This property is listed as a generator of organic chemicals, the property use is not listed.
- Sport Tees Inc./Custom Made T's Inc./Miracle Method of the US, 3732 West Century Boulevard, between Event Area and East Side of subject property: This property is listed as a generator of organic chemicals, acids, hydrocarbon solvents, and organic solvents, and is listed as a laundry/dry cleaner.
- Diversified Analytical Service, 3732 West Century Boulevard, Unit 3, between Event Area and East Side of subject property: This property is listed as a generator of aqueous anionic solution, organic solids, contaminated soil from site cleanup, liquids with metals, and oil-water separation sludge.

- Service Station 5050/Lees Union/Unocal Corp SS 5050, 4000 West Century Boulevard, adjoins northeastern side of the West Side of subject property at southwestern corner of South Prairie Avenue and Century Boulevard: This property is a former vehicle fueling and service station with underground storage tanks ("USTs") and is currently occupied by a fast food restaurant. TPH and benzene, toluene, ethylbenzene, and xylenes ("BTEX") were detected in groundwater samples from 1993 to 1996, when the monitoring wells were destroyed and the case was closed by the RWQCB. Residual TPH in groundwater from this site is migrating to the northeast. When last monitored in 1996, concentrations of residual fuel-related compounds in groundwater on the subject property were low and the RWQCB closed the site.
- Chevron Station No 206907, 4015 West Century Boulevard, north of West Side of subject property at northwestern corner of South Prairie Avenue and Century Boulevard: the site is a current vehicle fueling and service station with USTs, and the site is shared with a fast food restaurant. Two USTs were installed in 1998 at the site: a 15,000-gallon gasoline UST and a 20,000-gallon gasoline UST. The available records do not list releases to the subsurface, and no soil or groundwater data are available for this site.
- Dukes Automotive Service/Budget Auto Enterprise/E & M German Car Repair/GES Auto Parts, 10223 South Prairie Avenue, approximately 250 feet south of the West Side of the subject property and across South Prairie Avenue from the Event Area: this site is an auto repair shop with records dating from 1969 to the present. In 1988, the site contained one 2,000-gallon UST and two 4,000-gallon USTs for storage of "product", the construction and installation dates of these USTs is unknown, and it is not known if these USTs remain on the property. The available records do not indicate releases to the subsurface, and no soil or groundwater data are available for this site.
- Auto Performance Team Corp, 10305 South Prairie Avenue, 130 feet southwest of the Event Area: this site is listed as an auto repair shop from 2006 to 2014, and was observed to be an auto repair shop during the site visit on 24 October 2017.
- Milner H W, 10324 South Prairie Avenue/10396 South Prairie Avenue, approximately 90/320 feet south of the Event Area: these addresses listed for the same property listed as a historical gasoline and oil service station in 1927 and 1940, no other records indicating property use are available.
- Rockview Dairy Facility/Mins Dairy, 10411 South Prairie Avenue, 490 feet south of the Event Area: this property is listed as a convenience store from 1988 to 1996, and was part of a RWQCB cleanup site from 1993 to 1997. USTs were reportedly removed from the site. GeoTracker lists the soil impacted by gasoline, and the site was closed in 1997.
- Mirage Cleaners/Bob & Mercys Cleaners & Laundry, 10412 South Prairie Avenue, 490 feet south of the Event Area: this property is listed as a dry cleaner or laundry from 1971 to 2006, and reportedly handled PCE. The site no longer appears to be a cleaner or laundry.

- Yard Auto Repair/Smart Auto Repair, 10421 South Prairie Avenue, 490 feet south of the West Side of the subject property: this site is listed as an auto repair facility from 1987 to 2005, and appeared to be a block with three to four connected auto repair shops.
- New Way Automatic Laundry, 10424 South Prairie Avenue, 430 feet south of the Event Area: this site is listed as a historical laundry or dry cleaner in 1964.
- G & A Auto Repair, 10427 South Prairie Avenue, 450 feet south of the Event Area: this site is listed as an auto repair facility from 1990 to 2014.
- Whelen Elementary School Expansion, 104th/105th Street, 420 feet south of the West Side of the subject property: this school site is listed in the DTSC database, with reported investigation of lead-based paint from demolished residential buildings conducted from 1999 to 2006. The buildings reportedly were built in the 1950s. The lead concentrations in soil were below the DTSC screening level of 255 milligrams per kilogram ("mg/kg"), and the site was closed by the DTSC.
- Universal Transmission/Pro Tires/Hollypark Auto Repair Shop/AAMES Radiator & AC/Sal Transmission/Elite Auto Center/Precision Autowerkz, 1201 South Prairie Avenue, 500 feet north of West Side of subject property: this site is listed as an auto repair facility from 1940 to 2014. 1203 and 1205 South Prairie Avenue have entries for Ralph's Automotive Service and Tri-State Gasoline, and appear to be for the same strip mall property containing multiple auto repair facilities.
- Century Discount Tire/Universal Auto Service/American Automotive Centers/Dr Carfix Inc, 4055 West Century Boulevard, immediately north of the West Side of the subject property across West Century Boulevard: this site is listed as an auto repair facility from 1988 to 2014.
- J & E Bugwagon/Advanced Auto Repair, 4101 West Century Boulevard, 330 feet west of the West Side of the subject property: this site is listed as an auto repair facility from 1988 to 2014.
- Sparkling Cleaners, 4102 West Century Boulevard, 330 feet west of the West Side of the subject property: this site is listed as a historic laundry or dry cleaner in 1964, but no current laundry or dry cleaning facility appears to be present at this property.
- All N Gears/Astro Automotive Service, 4110 West Century Boulevard, 420 feet west of the West Side of the subject property: this site is listed as an auto repair facility from 1986 to 2014.
- ARCO Station #9645/Former Thrifty Oil #251, 4130 West Century Boulevard, 690 feet west of the West Side of the subject property: this site is listed with six USTs: one 8,000-gallon UST for gasoline, one 15,000-gallon UST for gasoline, one 10,000-gallon UST for gasoline, one 6,000-gallon UST for gasoline, one 280-gallon UST for waste oil, and one UST of unknown capacity for waste oil. A different listing of USTs from a different database indicates the site had five USTs: three 12,000-gallon USTs for gasoline, one 15,000-gallon UST for gasoline, and one UST of unknown size and use. The

site is also listed with a leaking UST case currently under regulatory oversight, and as a small quantity hazardous waste generator. The site disposed of aqueous solution with less than 10% organics, organic solids, waste oil, and oil/ water separation sludge. TPH, BTEX, and methyl tertiary butyl ether ("MTBE") were detected in soil samples collected during UST removal activities, and approximately 900 cubic yards of soil were excavated and removed. Groundwater has not been sampled at this site.

- Emery (former Menlo) World Wide, 3600 West Century Boulevard, 360 feet east of the East Side of the subject property: the site has recorded UST use. One 10,000-gallon gasoline UST was removed in July 2002. A 20,000-gallon diesel UST remains at the site and was permitted and in use as of 2007. Diesel fuel was detected in soil samples collected from the surface to 30 feet bgs near the existing diesel UST in 1994. Groundwater at the site has reportedly not been investigated. Diesel fuel in soil at depths of up to 40-50 feet below ground surface were observed in later investigations. The RWQCB closed the case in 2015 after concurring with additional investigations by the responsible party showing groundwater was not affected by releases from the site.

Chemical uses and wastes generated at these properties as identified in the EDR Radius Map Report include: halogenated solvents and hydrocarbon solvents. Based on the property names and suspected uses, fuels, oils, and lubricants would be expected to have been used at some of these properties. Based on the proximity to the subject property and former chemical uses, chemical releases on these surrounding properties, if any have occurred, may have the potential to migrate to the subject property. However, based on available agency records, no known releases likely to migrate to the subject property are currently identified at the surrounding properties listed in this section above. The results of the file reviews are discussed in Section 1.7.2.

1.7 Regulatory and Public Agency Contacts and Results of File Reviews

In addition to the EDR database review, for the subject property and for nearby properties selected from those listed in Section 2.8.2, EKI staff requested information from the following local and state environmental regulatory agencies:

- RWQCB,
- SWRCB GeoTracker database,
- DTSC,
- DOGGR,
- EnviroStor database,
- LACPHI,[1]

[1] The LACPHI provides Los Angeles County Fire Department files for public review.

- SCAQMD,
- LADPW, and
- LACSD.

Information obtained during the additional file reviews is included in Attachment D and summarized below.

1.7.1 Subject Property

EKI submitted requests to each of the agencies listed above for available files for the subject property. Results were provided for subject property address at 3901 West 102nd Street, as described below.

The City of Inglewood Water Well No. 6 is located in a vacant lot at 3901 West 102nd Street, which is located in the EAN Area, and appears to provide potable water. The City of Inglewood had a National Pollutant Discharge Elimination System ("NPDES") permit to discharge water produced by the well to a storm drain, ultimately discharging to the Dominguez Channel. The NPDES permit covering the well was terminated in 2017, due to separate coverage under a Municipal Separate Storm Sewer System permit. The available documents do not describe any releases or discharges from the water well location that would affect soil, soil gas, or groundwater at the subject property.

1.7.2 Nearby Properties

EKI submitted requests to selected regulatory agencies for available files for selected nearby properties. Information was obtained from agencies for the following nearby properties:

- Former Hollywood Park Racetrack and Casino at 1050 South Prairie Avenue
- Prairie Auto Center at 1201 South Prairie Avenue
- 10223 South Prairie Avenue
- Rockview Dairy at 10411 South Prairie Avenue

Pertinent information provided to EKI by the environmental agencies regarding known or possible chemical uses and releases on these nearby properties is summarized below.

1.7.2.1 Former Hollywood Park Racetrack and Casino at 1050 South Prairie Avenue

The former Hollywood Park Racetrack and Casino property is immediately north of the Event Area and East Side of the subject property to the north across West Century Boulevard, as shown on Figure 2.

EKI identified three areas of the former Hollywood Park Racetrack and Casino property where the results of Phase I and subsequent subsurface investigations indicated the presence of chemicals of concern in the subsurface potentially requiring additional assessment or remediation: the Former Dry Cleaning Area, the former Cypress Fee site groundwater plumes, and elevated methane in shallow soil gas at two locations on the property. Environmental findings for these areas are discussed in the Soil Management Plan prepared by EKI (EKI, 2007). Other areas investigated were found to warrant no additional assessment for ongoing commercial uses of these areas, as approved by the RWQCB. A summary report was submitted to the RWQCB that included a work plan for operation of a soil vapor extraction ("SVE") system to remediate residual PCE concentrations in the Former Dry Cleaning Area, which was approved by the RWQCB (EKI, 2006b; RWQCB, 2007).

In 2008, EKI installed four groundwater monitoring wells (HPLCMW-1 through HPLCMW-4) on the former Hollywood Park Racetrack and Casino property. The depths to groundwater on the western portion of the former Hollywood Park Racetrack and Casino property range from 92.5 to 120 feet bgs, as discussed in Section 1.2.2.2. The monitoring wells were sampled for four quarters, i.e., through 7 July 2009, and the results were submitted to the RWQCB (EKI, 2009). The groundwater flow directions on the former Hollywood Park Racetrack and Casino property appear highly variable: on the western portion of the former Hollywood Park Racetrack and Casino property groundwater flow is estimated to be towards the northeast, and it is towards the southwest to southeast on the eastern side of the former Hollywood Park Racetrack and Casino property. Low levels of fuel-related compounds were found to be migrating onto the southwestern portion of the former Hollywood Park Racetrack and Casino property, believed to be from the Unocal #5050 Service Station at 4000 West Century Boulevard. Low concentrations of perchlorate, below the California Maximum Contaminant Level ("MCL") of 0.006 milligrams per liter ("mg/L"), were detected in groundwater samples from all four of the wells. Nitrate as nitrogen was detected in groundwater samples from all four of the wells, at a maximum concentration of 16 mg/L, i.e., slightly above its MCL of 10 mg/L. Nitrite as nitrogen was detected at a maximum concentration of 1.1 mg/L, slightly above its MCL of 1 mg/L, in groundwater samples from only one of the four wells (HPLCMW-4). Monitoring results indicated that these compounds are likely associated with regional plumes resulting from former widespread agricultural land uses in surrounding areas. Following groundwater monitoring activities in the third quarter of 2009, these groundwater monitoring wells were destroyed during June 2014.

1.7.2.2 Prairie Auto Center at 1201 South Prairie Avenue

The Prairie Auto Center is located at 1201 South Prairie Avenue, 500 feet north of the West Side of the subject property. In 1987, the LADPW received an application for a 550-gallon double walled fiberglass tank was for vehicle waste oil. No spills or leaks for the property are reported in available agency files.

1.7.2.3 10223 South Prairie Avenue

E & M German Car Repair, located at 10223 South Prairie Avenue in the EAS Area, reportedly contained four 1,000-gallon steel USTs and two 2,000-gallon steel USTs. These USTs reportedly stored gasoline and were removed in 1987. Soil samples were reportedly collected below the tank inverts, and the LADPW closed the tanks in 1987. The soil sample results were not provided in the LADPW files, and no other soil samples are noted for this property.

1.7.2.4 Rockview Dairy at 10411 South Prairie Avenue

The Rockview Dairy property is located at 10411 South Prairie Avenue, 490 feet south of the West Side of the subject property. The LADPW shows records for two single-walled steel 6,000-gallon USTs installed in 1975 for storage of leaded gasoline removed in 1993. On 22 November 1993, there was an unauthorized release of unleaded gasoline from the tank to soil. There is no final confirmation of the USTs being removed or any remediation activities regarding the release. The RWQCB reported two 10,000-gallon gasoline USTs on the site removed on the same date in November 1993 – these are likely the same tanks, and the capacity was improperly reported. TPH as gasoline and BTEX were detected in soil samples collected from below the former tanks in 1995 from three boreholes at depths up to 50 feet bgs; the RWQCB did not require additional investigation or cleanup and the site was granted closure on 25 April 1997. The RWQCB files include a reference to three groundwater monitoring wells installed at the property to 85 feet bgs; however, no groundwater data was present in the files retrieved from the RWQCB, and the wells may be a reference to soil boreholes installed during investigation of the property in 1995.

2 RESULTS OF SHALLOW SOIL SAMPLING

At the request of Client, EKI implemented shallow soil sampling activities in selected portions of the Event Area and East Side portions of the subject property. The purpose for the sampling was to screen for the presence of TPH, volatile organic compounds ("VOCs"), metals, polynuclear aromatic hydrocarbons ("PAHs"), polychlorinated biphenyls ("PCBs"), pesticides, and herbicides in shallow soil.

2.1 Pre-Field Activities

Prior to commencement of field sampling activities, EKI performed the following tasks:

- Coordinated sampling schedule and access with Client and the current owner.
- Coordinated with a drilling sub-contractor to provide drilling and services, including preparation of a Work Authorization with the sub-contractor.
- Coordinated with the analytical laboratory regarding sample containers, delivery, and schedule.

- Retained a private utility locating company to screen for the presence of buried utilities in the planned drilling locations, and contacted Underground Services Alert, as required by law.

2.2 Collection of Soil Samples

On 11 and 13 October 2017, EKI advanced a total of 18 boreholes on the subject property using a hand auger to collect soil samples in nine sampling areas of City-owned portions of the Event Area and East Side; the areas are labeled PC-1 through PC-9 as shown on Figure 3. Generally, for each borehole, soil samples were collected from depths of 0 to 1 foot bgs and 4 to 5 feet bgs. Sampling at borehole PC-9A encountered refusal at approximately 3 feet bgs, and a sample was collected from depths of 2 to 3 feet bgs instead. For each sampling area, all soil samples collected from 0 to 1 foot bgs from the boreholes were field-composited into a single multi-increment soil sample, and all soil samples collected from 4 to 5 feet bgs were field-composited into a single multi-increment soil sample. In sampling region PC-9, located in the eastern portion of the EAS Area where soil stockpiles were observed on aerial photographs, EKI collected an additional composited soil sample from the stockpiles (PC-9-SP). The soil samples were placed in pre-cleaned glass jars provided by the analytical laboratory, labeled with a unique identification number, and placed in a chilled cooler for transport to Eurofins Calscience, Inc. in Garden Grove, California ("Calscience"). Calscience is a State-certified analytical laboratory. The analytical results for the soil samples are presented in Section 2.3 below.

In addition to samples collected from boreholes, EKI collected surface soil samples from 52 locations within the sampling areas for field screening using a field-portable x-ray fluorescence spectrometer ("FPXRF"). These samples were analyzed using United States Environmental Protection Agency ("U.S. EPA") Method 6200, which included calibration testing of the FPXRF during the sampling event and confirmatory analyses of seven samples by an analytical laboratory as part of quality assurance/quality control ("QA/QC") measures; these QA/QC results are presented in Tables 4 and 5.

2.3 Analytical Results for Soil Samples

The soil samples collected from boreholes in the Event Area and East Side as shown on Figure 3 and the composited stockpile soil sample PC-9-SP were analyzed by Calscience for the following constituents:

- Method 8015BM for gasoline-range TPH with U.S. EPA Method 5035 preparation;
- U.S. EPA Method 8015BM with silica gel extract for diesel- and oil-range TPH;
- U.S. EPA Method 8260B for VOCs and fuel oxygenates, with U.S. EPA Method 5035 preparation;
- U.S. EPA Method 6020 for California Title 22 metals and mercury;
- U.S. EPA Method 7199 for hexavalent chromium;

- U.S. EPA Method 8270C SIM for PAHs with U.S. EPA Method 3540C preparation;
- U.S. EPA Method 8082 for PCBs with U.S. EPA Method 3540C preparation;
- U.S. EPA Method 8081A for organochlorine pesticides with U.S. EPA Method 3545 preparation;
- U.S. EPA Method 8141A for organophosphorus pesticides with U.S. EPA Method 3545 preparation;
- U.S. EPA Method 8151A for chlorinated herbicides;
- ASTM Method D-2216 for moisture content.

The analytical results were compared to the U.S. EPA Regional Screening Levels ("RSLs") for residential and commercial/industrial land use (U.S. EPA, 2019), as modified by DTSC Human and Ecological Risk Office ("HERO") Note 3 (DTSC, 2019). These screening levels are referred to as the "HERO Note 3-modified RSLs".

The laboratory analytical results for TPH in soil samples are presented in Table 1. Diesel-range TPH was detected above the HERO Note 3-modified RSLs for commercial/industrial land use in one sample: the 0 to 1 foot bgs samples in sampling area PC-6 at 940 mg/kg. In addition, diesel- and motor oil-range TPH were detected above the HERO Note 3-modified RSLs for residential land use in three more samples: the 0 to 1 foot bgs samples in sampling areas PC-4 and PC-9, and the stockpile sample in area PC-9. Gasoline-range TPH was not detected above the HERO Note 3-modified RSL for residential land use. The diesel-range TPH detection above the HERO Note 3-modified RSL for commercial/industrial land use may require additional investigation and remediation if required by a regulatory agency.

The laboratory analytical results for metals (including hexavalent chromium and mercury) in soil samples are presented in Table 2. Hexavalent chromium was detected above the HERO Note 3-modified RSLs for residential land use and below the HERO Note 3-modified RSL for commercial/industrial land use in one sample, the 4 to 5 foot bgs sample from region PC-2, at a concentration of 0.490 mg/kg. The reporting limit for hexavalent chromium from the analytical laboratory is above the HERO Note 3-modified RSL for residential land use of 0.3 mg/kg, however, the method detection limit provided by the laboratory is lower than 0.3 mg/kg, and no estimated detections of hexavalent chromium between the reporting limit and the method detection limit are reported by the laboratory. Arsenic was not detected above the DTSC regional background arsenic concentration of 12 mg/kg (DTSC, 2008) in any of the soil samples analyzed by Calscience, and no other metals were detected above the respective HERO Note 3-modified RSLs for residential land use.

The FPXRF analytical results for arsenic and lead in soil samples are presented in Table 3. Arsenic was detected above the DTSC regional background arsenic concentration in one surface sample analyzed using FPXRF, at 12.1 mg/kg in sample PC-2X-1 in area PC-2 (DTSC, 2008). Lead was also detected above the HERO Note 3-modified RSL for residential land use of 80 mg/kg in

11 of the 52 soil samples analyzed using FPXRF, at concentrations up to 221 mg/kg in all areas except PC 6. Lead was not detected above the HERO Note 3-modified RSL for commercial/industrial land use. If shallow soil in the Event Area is expected to be moved or disposed off-site, soil containing lead at concentrations above 50 mg/kg would need to be analyzed using the Toxicity Characteristic Leaching Procedure ("TCLP") or Soluble Threshold Limit Concentration ("STLC") extraction methods to determine if the soil is a hazardous waste requiring special disposal procedures.

VOCs, PAHs, PCBs, organochlorine pesticides, organophosphorus pesticides, and chlorinated herbicides were not detected above the respective HERO Note 3-modified RSLs for residential land use and are not presented in tables. The laboratory reports for all analyses conducted by Calscience are presented in Attachment E.

3 SUMMARY OF FINDINGS AND OPINIONS

EKI's findings regarding conditions indicative of releases and threatened releases of hazardous substances on, at, in, or to the subject property are presented below.

3.1 West Side North

The WSN Area was initially developed in the 1920s to 1930s as single-family residential properties; prior to development, the area was likely used for agriculture. From approximately 1970 to 1990, a vehicle service station was operated on the adjoining property to the northeast at 4000 West Century Boulevard, with a known release of TPH and BTEX from fuel USTs on site. The reported groundwater flow direction at this site is to the northeast, and current impacts to the WSN are not likely. The adjoining properties to the northeast also include a known laundry or dry cleaning property which has operated since at least 1954, no releases have been identified at this property by environmental regulatory agencies, but given the proximity to the WSN Area, releases to soil or groundwater from this property may impact the WSN Area. Dry cleaning chemicals such as PCE or TCE, if present, could necessitate additional investigation, cleanup, and/or vapor mitigation for future development of commercial or residential buildings. EKI did not collect soil samples in the WSN Area during October 2017.

3.2 West Side South

The WSS Area was initially developed in the 1920s to 1930s as single-family residential properties; one portion of the WSS Area included a possible pump house. From approximately 2005 to the present, the eastern portion of the WSS Area has been used as a possible contractor staging yard with storage of building materials and equipment. If fuels, oils, paints, solvents, or other chemicals have been used or stored in this area, additional investigation may be appropriate; no records of chemical use or storage in the WSS Area were reviewed by EKI. EKI did not collect soil samples in the WSS Area during October 2017.

3.3 Event Area North

The EAN Area was predominantly occupied by single-family residential properties and vacant/agricultural land uses around 1923. A vehicle service station was developed in the northwestern corner of the EAN Area by 1952, and operated until the 1970s, when it was demolished and replaced – the corner is currently occupied by a fast food restaurant. A hotel was developed in the 1960s in the EAN Area immediately east of the former service station, and is still present on the subject property. The property at 3822 West Century in the northeastern corner of the EAN Area was identified as a historical cleaner in 1992, and may have used dry cleaning chemicals such as PCE or TCE. The central portion of the EAN Area contains an office/warehouse building and a City of Inglewood water supply well – the building has reportedly been used by an auto detailing company, and solvents or other cleaners may be used or stored at the building.

Most recently, the vacant eastern side of the EAN Area has been used for storage and staging of construction materials for a street improvement project. EKI sampled stockpiles of soil present in the eastern portion of the EAN Area for arsenic and lead using an FPXRF, as described above. Arsenic was not detected in the soil samples at concentrations above the applicable screening level, but lead was detected at concentrations above the residential screening level in surface samples. Possible sources of lead could include lead-based paint from buildings previously located in the EAN Area.

Properties to the east of the EAN Area include warehouse and other commercial facilities, including facilities with known chemical uses. No records for releases or contamination originating from these facilities were reviewed by EKI, but any chemical releases at nearby properties could affect subsurface conditions in the EAN area.

3.4 Event Area South

The EAS Area was predominantly occupied by single-family residential properties and vacant/agricultural land uses around 1923. From the 1920s to the 1950s, the EAS Area was predominantly occupied by residential uses, and by the 1970s, the single-family residential properties were largely replaced by apartment buildings or small commercial buildings. The property to the west across South Prairie Avenue at 10225 has been used for automobile repair since approximately 1975, and the adjoining property to the southwest along South Prairie Avenue at 10300 South Prairie Avenue is currently a dry cleaner. Dry cleaning chemicals such as PCE or TCE, if present, could necessitate additional investigation, cleanup, and/or vapor mitigation for future development. An automobile repair property was listed at 10220 South Prairie Avenue on the west side of the EAS Area in EDR databases, but was not corroborated by public agency records and is likely associated with the 10225 South Prairie Avenue property to the west, which shares the same historical business name. Lead was detected at concentrations above the residential screening level in surface samples. Possible sources of lead could include lead-based paint from buildings previously located in the EAS Area.

3.5 East Side North

The ESN Area was initially developed in the 1920s to 1930s as single-family residential properties and small-scale agricultural properties. From the 1940s to the 1950s, the ESN Area was occupied by mobile home or trailer parks. In the 1960s, the ESN Area was redeveloped with apartments and/or a hotel, which remained until all buildings were demolished by 1989. The property has remained vacant to the present; the adjoining properties to the west include machining, carpentry, and plastic manufacturing facilities.

3.6 East Side South

The ESS Area was initially developed in the 1920s to 1930s as single-family residential properties and small-scale agricultural properties. From the 1940s to the 1950s, the central portion of the ESS Area was occupied by mobile home or trailer parks. In the 1960s, the western portion of the ESS Area was redeveloped with apartments, and the western portion remained as single-family residential properties. By 1977, the entire ESS Area was redeveloped with apartment buildings, which remained until all buildings were demolished by 1989. The property has remained vacant to the present.

Screening Level Criteria for Residential Soil (a)				***82***	***96***	***2,500***
Screening Level Criteria for Industrial Soil (a)				***420***	***440***	***33,000***

Abbreviations:
-- = not applicable
<26 = compound not detected at or above indicated laboratory reporting limit
bgs = below ground surface
C = carbon chain length
DTSC = California Department of Toxic Substances Control
EC = equivalent carbon number
HD = the chromatograph pattern was inconsistent with the profile of the reference fuel standard
mg/kg = milligrams per kilogram
RSLs = U.S. EPA Region 9 Regional Screening Levels
SG = the sample extract was subjected to Silica Gel treatment prior to analysis
TPH = total petroleum hydrocarbons
U.S. EPA = United States Environmental Protection Agency

TABLE 1
TPH Analytical Results for Soil Samples
IBEC Project, Inglewood, California

Notes:

(a) The screening level criteria are presented in *Regional Screening Levels (RSLs) - Generic Tables* (May 2019) (U.S. EPA, 2019). Analytical data detected above residential land use screening criteria are shown in *italics* above and analytical data detected above commercial/industrial land use screenign criteria are shown in **bold** above.

(b) U.S. EPA laboratory analytical methods have not yet been established that differentiate between aliphatic and aromatic hydrocarbons and provide analytical results that can be directly compared to the RSLs. Samples were analyzed using existing U.S. EPA Method 8015 for TPH in the gasoline, diesel, and motor oil ranges, which do not directly correspond to the low, medium, and high aliphatic and aromatic TPH ranges defined by the RSLs due to variations between analytical laboratories and TPH standards, but are compared to these ranges for screening purposes.

(c) Analytical results for TPH in the gasoline range are compared to the RSLs for both TPH aliphatic low (C5-C8, EC5-EC8) and TPH aromatic low (C6-C8, EC6-EC<9).

(d) Analytical results for TPH in the diesel range are compared to the RSLs for both TPH aliphatic medium (C9-C18, EC>8-EC16) and TPH aromatic medium (C9-C16, EC9-EC<22).

(e) Analytical results for TPH in the motor oil range are compared to the RSLs for both TPH aliphatic high (C19-C32, EC>16-EC35) and TPH aromatic high (C17-C32, EC>22-EC35).

Abbreviations:

-- = not applicable
<2.09 = compound not detected at or above indicated laboratory reporting limit
ASTM = American Society for Testing and Materials
bgs = below ground surface
DTSC = California Department of Toxic Substances Control
mg/kg = milligrams per kilogram
RSLs = regional screening levels
U.S. EPA = United States Environmental Protection Agency

Notes:

(a) Samples were analyzed for California Title 22 metals using U.S. EPA Method 6020, chromium VI using U.S. EPA method 7199, mercury using U.S. EPA Method 7471A, and moisture using ASTM D-2216 by Eurofins Calscience, Inc., Garden Grove, CA.

(b) The screening level criteria are presented in *Human Health Risk Assessment Note 3 - DTSC-Modified Screening Levels (DTSC-SLs), April 2019 Update* (DTSC, 2019), which incorporate the *Regional Screening Levels (RSLs) - Generic Tables (May 2019)* (U.S. EPA, 2019). Analytical data detected above residential land use screening criteria are shown in *italics* above.

(c) In 2008, the DTSC published *Determination of a Southern California Regional Background Arsenic Concentration in Soil* (DTSC, 2008), which analyzed data for shallow soil samples collected from 52 school sites distributed across Southern California. This included a total of 1,097 soil samples collected from 19 schools in Los Angeles County. DTSC calculated the upper bound of its data set as the 95% upper confidence limit of the 99th quantile of the arsenic data set excluding outliers. The DTSC also utilized a probability plot of arsenic concentrations to determine an upper bound of background concentrations. The DTSC Report concluded that 12 mg/kg is an appropriate upper bound concentration representative of background concentrations of arsenic for school sites in Southern California.

TABLE 3

Arsenic and Lead Detected in Surface Soil Samples

IBEC Project, Inglewood, California

Notes:

(a) Arsenic and lead were analyzed using U.S. EPA Method 6200 by an Olympus Delta Premium RK field field portable x-ray fluorescence spectrometer.

(b) FPXRF field screening was performed on surface soil samples. The FPXRF automatically adjusts readings using algorithms to correct for moisture content variations.

(c) Analytical data detected above residential land use screening criteria are shown in *italics* above and analytical data detected above commercial/industrial land use screenign criteria are shown in **bold** in above.

(d) In 2008, the DTSC published *Determination of a Southern California Regional Background Arsenic Concentration in Soil* (DTSC, 2008), which analyzed data for shallow soil samples collected from 52 school sites distributed across Southern California. This included a total of 1,097 soil samples collected from 19 schools in Los Angeles County. DTSC calculated the upper bound of its data set as the 95% upper confidence limit of the 99th quantile of the arsenic data set excluding outliers. The DTSC also utilized a probability plot of arsenic concentrations to determine an upper bound of background concentrations. The DTSC Report concluded that 12 mg/kg is an appropriate upper bound concentration representative of background concentrations of arsenic for school sites in Southern California.

(e) The screening level criterion for lead is presented in *Human Health Risk Assessment Note 3 - DTSC-Modified Screening Levels (DTSC-SLs), April 2019 Update* (DTSC, 2019).

TABLE 4

FPXRF Calibration Verification Analyses

IBEC Project, Inglewood, California

Abbreviations:

C&T= Curtis & Tompkins Laboratories
FPXRF = field portable x-ray fluorescence
mg/kg = milligrams per kilogram
N/A = not applicable
NIST = National Institute of Standards and Testing
PD = percent difference
RSD = relative standard deviation
SRM = standard reference material
SSCS = site specific calibration standard
U.S. EPA = United States Environmental Protection Agency

Notes:

(a) Arsenic was analyzed using U.S. EPA Method 6200 by an Olympus Delta Premium RK field portable x-ray fluorescence spectrometer.
(b) Arsenic was analyzed using U.S. EPA Method 6020 by the laboratory indicated.
(c) Percent difference greater than 20% is shown in **bold** in the table above.
(d) Lead was analyzed using U.S. EPA Method 6200 by an Olympus Delta Premium RK field portable x-ray fluorescence spectrometer.
(e) Lead was analyzed using U.S. EPA Method 6020 by the laboratory indicated.
(f) The instrument blank provided by the equipment manufacturer was damaged, thus a purified sand from Olympus Scientific was used as a replacement instrument blank. The actual concentration of arsenic and lead in the purified sand is unknown, but assumed to be near the detection limit of the FPXRF spectrometer.

Abbreviations:

-- = not analyzed
ASTM = American Society for Testing and Materials
DTSC = California Department of Toxic Substances Control
FPXRF = field portable x-ray fluorescence
mg/kg = milligrams per kilogram
RSD = relative standard deviation
U.S. EPA = United States Environmental Protection Agency

Notes:

(a) Soil samples were analyzed for lead and arsenic using U.S. EPA Method 6020 and analyzed for moisture using ASTM D-2216 by Eurofins Calscience, Inc., Garden Grove, CA. These results are presented on a dry-weight basis.
(b) Analytical data detected above residential land use screening criteria are shown in *italics* above, and analytical data detected above commercial/industrial land use screening criteria are shown in **bold** above.
(c) RSD was calculated for each set of eight FPXRF precision sample measurements.
(d) In 2008, the DTSC published *Determination of a Southern California Regional Background Arsenic Concentration in Soil* (DTSC, 2008), which analyzed data for shallow soil samples collected from 52 school sites distributed across Southern California. This included a total of 1,097 soil samples collected from 19 schools in Los Angeles County. DTSC calculated the upper bound of its data set as the 95% upper confidence limit of the 99th quantile of the arsenic data set excluding outliers. The DTSC also utilized a probability plot of arsenic concentrations to determine an upper bound of background concentrations. The DTSC Report concluded that 12 mg/kg is an appropriate upper bound concentration representative of background concentrations of arsenic for school sites in Southern California.
(e) The screening level criterion for lead is presented in *Human Health Risk Assessment Note 3 - DTSC-Modified Screening Levels (DTSC-SLs), April 2019 Update* (DTSC, 2019).

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Erler & Kalinowski, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 2640 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
